Description: The alarm is raised when a SONET port reports a path error condition because of b3 errors. The alarm corresponds to the prei alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Path B3 error') AND ('Report Alarms'anyBit'Path B3 error'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Path B3 error') AND ('Report Alarms'anyBit'Path B3 error')))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 19-404 SonetPathLossOfCodegroupDelineationError

Alarm	Attributes	Applicable major release
Name: SonetPathLossOfCodegroupDelineationError (248) Type: communicationsAlarm Package: sonetequipment. SonetPathLossOfCodegroupDelineationError Raised on class: sonetequipment. SonetChannelMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: pathLossOfCodegroupDelineationError	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a SONET port reports a PLCD error. The alarm corresponds to the plcd alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Path Loss of Codegroup Delineation Error') AND ('Report Alarms'anyBit'Path Loss of Codegroup Delineation Error'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Path Loss of Codegroup Delineation Error') AND ('Report Alarms'anyBit'Path Loss of Codegroup Delineation Error')))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 19-405 SonetPathLossOfPointer

Alarm	Attributes	Applicable major release
Name: SonetPathLossOfPointer (130) Type: communicationsAlarm Package: sonetequipment.SonetPathLossOfPointer Raised on class: sonetequipment. SonetChannelMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: pathLossOfPointer	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a SONET port reports a PLOP error. The alarm corresponds to the plop alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Path Loss of Pointer') AND ('Report Alarms'anyBit'Path Loss of Pointer'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Path Loss of Pointer') AND ('Report Alarms'anyBit'Path Loss of Pointer')))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 19-406 SonetPathPayloadMismatch

Alarm	Attributes	Applicable major release
Name: SonetPathPayloadMismatch (133) Type: communicationsAlarm Package: sonetequipment.SonetPathPayloadMismatch Raised on class: sonetequipment.SonetChannelMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: pathPayloadMismatch	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a SONET port reports a PPLM error on a channel, after which the channel is set operationally down. The alarm corresponds to the pplm alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Path Payload Mismatch') AND ('Report Alarms'anyBit'Path Payload Mismatch'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Path Payload Mismatch') AND ('Report Alarms'anyBit'Path Payload Mismatch')))		
Remedial action: Informational only.		

Table 19-407 SonetPathRemoteB3Error

Alarm	Attributes	Applicable major release
Name: SonetPathRemoteB3Error (134) Type: communicationsAlarm Package: sonetequipment.SonetPathRemoteB3Error Raised on class: sonetequipment.SonetChannelMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: pathRemoteB3Error	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a SONET port reports a path error condition that a remote NE raises because of b3 errors received from the local NE. The alarm corresponds to the prei alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Path Remote B3 Error') AND ('Report Alarms'anyBit'Path Remote B3 Error'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Path Remote B3 Error') AND ('Report Alarms'anyBit'Path Remote B3 Error')))		
Remedial action: Check the remote NE is configured correctly and its physical layer cabling is operating correctly.		

Table 19-408 SonetPathRemoteDefectIndication

Alarm	Attributes	Applicable major release
Name: SonetPathRemoteDefectIndication (131) Type: communicationsAlarm Package: sonetequipment. SonetPathRemoteDefectIndication Raised on class: sonetequipment. SonetChannelMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: pathRemoteDefectIndication	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a SONET port reports a remote PAIS error. The alarm corresponds to the pais alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Path Remote Defect Indication') AND ('Report Alarms'anyBit'Path Remote Defect Indication'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Path Remote Defect Indication') AND ('Report Alarms'anyBit'Path Remote Defect Indication')))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 19-409 SonetPathUnequippedPathError

Alarm	Attributes	Applicable major release
Name: SonetPathUnequippedPathError (143) Type: communicationsAlarm Package: sonetequipment. SonetPathUnequippedPathError Raised on class: sonetequipment. SonetChannelMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: pathUnequippedPathError	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a SONET port reports a path unequipped error. The alarm corresponds to the Path Alarm Unequipped Path Error alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Path Alarm Unequipped Path Error') AND ('Report Alarms'anyBit'Path Alarm Unequipped Path Error'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Path Alarm Unequipped Path Error') AND ('Report Alarms'anyBit'Path Alarm Unequipped Path Error')))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 19-410 SpbAdjacencyDown

Alarm	Attributes	Applicable major release
Name: SpbAdjacencyDown (4392) Type: adjacencyAlarm Package: spb.SpbAdjacencyDown Raised on class: spb.AbstractInterface	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IsisInterfaceDown	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an SPB IS-IS interface has no adjacencies, for example, because the IS-IS protocol on the remote site is down.		
Raising condition: (('Adjacency Count' EQUAL '0L'))		
Clearing condition: (('Adjacency Count' > '0L'))		
Remedial action: Check remote site to see if corresponding IS-IS interface is configured and admin up.		

Table 19-411 SpbInterfaceDown

Alarm	Attributes	Applicable major release
Name: SpbInterfaceDown (4393) Type: ProtocolAlarm Package: spb.SpbInterfaceDown Raised on class: spb.AbstractInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an SPB IS-IS interface has an Operational State other than Up.		
Raising condition: ('operationalState' EQUAL 'Down')		
Clearing condition: ('operationalState' NOT EQUAL 'Down')		
Remedial action: Check if underlying port is down, or associated network interface is down.		

Table 19-412 SpbSiteDown

Alarm	Attributes	Applicable major release
Name: SpbSiteDown (4396) Type: ProtocolAlarm Package: spb.SpbSiteDown Raised on class: spb.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0

Table 19-412 SpbSiteDown (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when an SPB site has an Operational State other than Up.		
Raising condition: ('Operational State' NOT EQUAL 'Up')		
Clearing condition: ('Operational State' EQUAL 'Up')		
Remedial action: Check if the administrative state is down. If the administrative state is up, then check the ISIS instance associated with the SPB and make sure it is up.		

Table 19-413 StatsRetrieveFailed

Alarm	Attributes	Applicable major release
Name: StatsRetrieveFailed (244) Type: configurationAlarm Package: sw.StatsRetrieveFailed Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: fileTransferFailure	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 19-414 StpExceptionCondition

Alarm	Attributes	Applicable major release
Name: StpExceptionCondition (297) Type: AccessInterfaceAlarm Package: l2fwd.StpExceptionCondition Raised on class: l2fwd.AccessInterfaceStp	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: StpException	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a SAP detects an STP exception condition, for example, one-way communication or a downstream loop. The alarm clears when the STP condition changes.		
Raising condition: (('STP Exception Condition' NOT EQUAL 'None') AND ('Administrative State' EQUAL 'Up'))		
Clearing condition: (('STP Exception Condition' EQUAL 'None') OR ('Administrative State' EQUAL 'Down'))		
Remedial action: Check 'STP Exception Condition' field for more details and fix the STP exception.		

Table 19-415 StpRootGuardViolation

Alarm	Attributes	Applicable major release
Name: StpRootGuardViolation (503) Type: AccessInterfaceAlarm Package: l2fwd.StpRootGuardViolation Raised on class: l2fwd.AccessInterfaceStp	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: spanningTreeTopology-Changed	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a SAP detects an STP root guard violation.		
Raising condition: ('Root Guard Violation' EQUAL 'true')		
Clearing condition: ('Root Guard Violation' NOT EQUAL 'true')		
Remedial action: Set 'Root Guard' to false if not necessary.		

Table 19-416 subHostInconsistentAtmTdOvr

Alarm	Attributes	Applicable major release
Name: subHostInconsistentAtmTdOvr (3685) Type: configurationAlarm Package: ressubscr.subHostInconsistentAtmTdOvr Raised on class: ressubscr.ResidentialSubscriberInstance	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tmnxSubHostInconsistentAtmTdOvr	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an AAA server (e.g. a RADIUS server) specifies an ATM Traffic Descriptor override for a subscriber host while it has already specified another one for another host on the same ATM Virtual Circuit.		
Remedial action: Modify the AAA configuration so that all subscriber hosts sharing the same ATM Virtual circuit use the same ATM Traffic Descriptor Override VSA. If different overrides are required, then the subscribers must be in different ATM Virtual Circuits.		

Table 19-417 SubHostLcktLimitReached

Alarm	Attributes	Applicable major release
Name: SubHostLcktLimitReached (4387) Type: configurationAlarm Package: netw.SubHostLcktLimitReached Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tmnxSubHostLcktLimitReached	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: This alarm is raised when the system wide maximum number of lockout hosts is reached.		

Table 19-417 SubHostLcktLimitReached (continued)

Alarm	Attributes	Applicable major release
Remedial action: Please do one of the following:\n1. Investigate why the hosts are locked out. Possible reasons include authentication failure due to mis-configuration on the host end, mis-configuration on the BNG, missing or invalid configuration on the RADIUS server, session negotiation failure with the client, resource exhaustion on the BNG, unavailability of RADIUS server (and no fallback configured).\n2. Clear the host lockout.		

Table 19-418 SubHostLcktSapLimitReached

Alarm	Attributes	Applicable major release
Name: SubHostLcktSapLimitReached (4391) Type: configurationAlarm Package: service.SubHostLcktSapLimitReached Raised on class: service.AccessInterface	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tmnxSubHostLcktSapLimitReached	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: This alarm is raised when the maximum number of lockout hosts on a given SAP is reached.		
Remedial action: Please do one of the following:\n1. Investigate why the hosts are locked out. Possible reasons include authentication failure due to mis-configuration on the host end, mis-configuration on the BNG, missing or invalid configuration on the RADIUS server, session negotiation failure with the client, resource exhaustion on the BNG, unavailability of RADIUS server (and no fallback configured).\n2. Clear the host lockout on the SAP.\n3. Change the Maximum Lockout Hosts (per SAP).		

Table 19-419 SubMcsRelatedProblem

Alarm	Attributes	Applicable major release
Name: SubMcsRelatedProblem (8404) Type: processingErrorAlarm Package: netw.SubMcsRelatedProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: subMcsRelatedProblem	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: This alarm is raised when a subscriber management specific problem occurs during Multi Chassis Syncing, e.g. of DHCP lease states.		
Remedial action: The recovery action depends on the exact cause of the failure. Please review the Additional Text field to obtain information about the specific failure.		

Table 19-420 SubnetDepleted

Alarm	Attributes	Applicable major release
Name: SubnetDepleted (3953) Type: configurationAlarm Package: dhcp.SubnetDepleted Raised on class: dhcp.Subnet	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: actualFreeAddrDepleted	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: This alarm is generated when the actual number of free addresses in the DHCP Server Subnet becomes zero.		
Remedial action: This alarm is generated when the actual number of free addresses in a subnet becomes zero. Please create another subnet.		

Table 19-421 SubnetMinFreeExc

Alarm	Attributes	Applicable major release
Name: SubnetMinFreeExc (516) Type: configurationAlarm Package: dhcp.SubnetMinFreeExc Raised on class: dhcp.Subnet	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: actualFreeAddrBelowSubnet-Min	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the actual number of free addresses in a subnet falls below the desired minimum number specified in the subnet configuration		
Remedial action: Please ensure that an adequate free address threshold is configured or create a new subnet to meet the system requirements. \nThis warning is raised on IPv4 DHCP servers only.		

Table 19-422 SubRadSapCoAError

Alarm	Attributes	Applicable major release
Name: SubRadSapCoAError (8416) Type: processingErrorAlarm Package: service.SubRadSapCoAError Raised on class: service.ServiceAccessPoint	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: changeOfAddressError	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: This alarm indicates that system was unable to process a Change of Authorization (CoA) request from a Radius server.		
Remedial action: Please ensure that Accept CoA attribute is properly enabled on the subscriber authentication policy defined for the service. Ensure that the object targeted by the CoA request (a subscriber host for example) is present on the router.		

Table 19-423 SubscriberAuthError (vprn)

Alarm	Attributes	Applicable major release
Name: SubscriberAuthError (8387) Type: processingErrorAlarm Package: vprn.SubscriberAuthError Raised on class: vprn.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: subAuthenticationError	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: This alarm indicates that the system encountered a problem while trying to authenticate a subscriber.		
Remedial action: Please review the Additional Text field to obtain information about which subscriber failed the authentication process. Depending on if the subscriber should be allowed or not to access the service, further troubleshooting of the RADIUS server may be required.		

Table 19-424 SubscriberAuthError (ies)

Alarm	Attributes	Applicable major release
Name: SubscriberAuthError (8387) Type: processingErrorAlarm Package: ies.SubscriberAuthError Raised on class: ies.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: subAuthenticationError	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: This alarm indicates that the system encountered a problem while trying to authenticate a subscriber.		
Remedial action: Please review the Additional Text field to obtain information about which subscriber failed the authentication process. Depending on if the subscriber should be allowed or not to access the service, further troubleshooting of the RADIUS server may be required.		

Table 19-425 SubscriberInterfaceDown

Alarm	Attributes	Applicable major release
Name: SubscriberInterfaceDown (440) Type: SubscriberInterfaceAlarm Package: service.SubscriberInterfaceDown Raised on class: service.SubscriberInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceDown	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a subscriber interface is operationally down. The alarm clears when the subscriber interface is operationally up.		
Raising condition: ('operationalState' NOT EQUAL 'Up')		

Table 19-425 SubscriberInterfaceDown (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Check the configuration and the underlying physical interface.		

Table 19-426 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major release
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed Package: netw.SubscriberSystemNextHopUsageHigh Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

Table 19-427 SubSysChassMemoryUsageHi

Alarm	Attributes	Applicable major release
Name: SubSysChassMemoryUsageHi (5656) Type: thresholdCrossed Package: equipment.SubSysChassMemoryUsageHi Raised on class: equipment.Shelf	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: This alarm is raised when the memory usage by subscriber management on this system or chassis reaches its high watermark ('true').		
Raising condition: ('Memory Usage High' EQUAL 'True')		
Clearing condition: (('Memory Usage High' EQUAL 'False') OR ('Memory Usage High' EQUAL 'unspecified'))		
Remedial action: The memory usage by subscriber management on this system has reached its high watermark. Please check your memory usage.		

Table 19-428 svcMacFdbTabelFull

Alarm	Attributes	Applicable major release
Name: svcMacFdbTabelFull (3890) Type: resourceAlarm Package: netw.svcMacFdbTabelFull Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceLimitReached	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the system limit of FDB records is reached.		
Remedial action: The alarm is raised when system limit of FDB records is reached.		

Table 19-429 SysLicenseExpiresSoon

Alarm	Attributes	Applicable major release
Name: SysLicenseExpiresSoon (9049) Type: equipmentAlarm Package: equipment.SysLicenseExpiresSoon Raised on class: equipment.ProcessorCard	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: SystemLicenseExpiresSoon	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the license is due to expire soon.		
Remedial action: Obtain license file: Please contact your Nokia support or sales representative for assistance with obtaining a license file from Nokia Software License Manager (ASLM).		

Table 19-430 SysLicenseInvalid

Alarm	Attributes	Applicable major release
Name: SysLicenseInvalid (9050) Type: equipmentAlarm Package: equipment.SysLicenseInvalid Raised on class: equipment.ProcessorCard	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: SystemLicenseInvalid	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the license becomes invalid for the reason specified in Additional Text.		
Remedial action: Obtain license file: Please contact your Nokia support or sales representative for assistance with obtaining a license file from Nokia Software License Manager (ASLM).		

Table 19-431 TeLinkDown (gmplsuni)

Alarm	Attributes	Applicable major release
Name: TeLinkDown (8386) Type: ProtocolAlarm Package: gmplsuni.TeLinkDown Raised on class: gmplsuni.TeLink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 13.0 • 14.0
Description: The alarm is raised when the GMPLS TE link's Administrative State is Up and the Operational State is Down. The alarm clears when the GMPLS TE link's Operational State changes to Up or the Administrative State changes to Down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The Operational state of the GMPLS TE link is down, despite the Administrative state being up. Check if the associated LMP TE link or the GMPLS tunnel group endpoint is down.		

Table 19-432 TeLinkDown (lmp)

Alarm	Attributes	Applicable major release
Name: TeLinkDown (8386) Type: ProtocolAlarm Package: lmp.TeLinkDown Raised on class: lmp.TeLink	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 13.0 • 14.0
Description: The alarm is raised when a Traffic-Engineering Link has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: A network configuration issue has been detected. Ensure the Traffic-Engineering Link configuration between the local node and the peer node is consistent.		

Table 19-433 TemperatureThresholdCrossed

Alarm	Attributes	Applicable major release
Name: TemperatureThresholdCrossed (7) Type: environmentalAlarm Package: equipment.TemperatureThresholdCrossed Raised on class: equipment.Environment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentOverheated	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a temperature crosses a threshold.		
Raising condition: ('temperatureThresholdCrossed' EQUAL 'true')		

Table 19-433 TemperatureThresholdCrossed (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ('temperatureThresholdCrossed' EQUAL 'false')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 19-434 TmnxEqPortEtherLoopDetected

Alarm	Attributes	Applicable major release
Name: TmnxEqPortEtherLoopDetected (461) Type: portEtherLoopDetected Package: ethernetequipment.TmnxEqPortEtherLoopDetected Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: HighBer	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a device detects a physical loop on an Ethernet port.		
Raising condition: (('Down When Looped Status' EQUAL 'Loop Detected'))		
Clearing condition: (('Down When Looped Status' EQUAL 'No Loop Detected'))		
Remedial action: An Ethernet port has been mis-cabled - please remove the loopback cable on the port.		

Table 19-435 TMSInterfaceDown

Alarm	Attributes	Applicable major release
Name: TMSInterfaceDown (3907) Type: TMSInterfaceDown Package: service.TMSInterfaceDown Raised on class: service.TmsInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceDown	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a TMS interface is operationally down. The alarm clears when the TMS interface is operationally up.		
Raising condition: ('operationalState' NOT EQUAL 'Up')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: This alarm indicates TMS Interface configured is operational down.		

Table 19-436 TPLSPDown

Alarm	Attributes	Applicable major release
Name: TPLSPDown (4900) Type: pathAlarm Package: mplstp.TPLSPDown Raised on class: mplstp.TPLsp	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: TPLSPDown	Release: • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the TP LSP Administrative State is Up and the Operational State is Down. The alarm clears when the TP LSP Operational State changes to Up or the Administrative State changes to Down.		
Raising condition: (('Administrative' EQUAL 'Up') AND ('Operational' NOT EQUAL 'Up'))		
Clearing condition: (('Operational' EQUAL 'Up') OR ('Administrative' NOT EQUAL 'Up'))		
Remedial action: The Operational state of the TP LSP is down, despite the Administrative state being up. Review the configuration and make sure that the destination information is set correctly and that the Administrative state is up.		

Table 19-437 TPLSPPATHDown

Alarm	Attributes	Applicable major release
Name: TPLSPPATHDown (4901) Type: pathAlarm Package: mplstp.TPLSPPATHDown Raised on class: mplstp.TPLspPath	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: TPLSPPATHDown	Release: • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the TP LSP Path Administrative State is Up and the Operational State is Down. The alarm clears when the TP LSP Path Operational State changes to Up or the Administrative State changes to Down.		
Raising condition: (('Administrative' EQUAL 'Up') AND ('Operational' NOT EQUAL 'Up'))		
Clearing condition: (('Operational' EQUAL 'Up') OR ('Administrative' NOT EQUAL 'Up'))		
Remedial action: The Operational state of the TP LSP Path is down, despite the Administrative state being up. Review the configuration and make sure that the Administrative state is up, the egress and ingress labels are set and the Out-Link interface is operationally up.		

Table 19-438 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major release
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm Package: netw.TrapDestinationMisconfigured Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trapDestinationMisconfigured Applicable probable causes: • trapDestinationMisconfigured • duplicateTrapLogId	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 19-439 TrapReceivingFailure

Alarm	Attributes	Applicable major release
Name: TrapReceivingFailure (1083) Type: communications Package: netw.TrapReceivingFailure Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: trapsWillNotBeSent	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		
Raising condition: ((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')))		

Table 19-439 TrapReceivingFailure (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')))) **Remedial action:** A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

Table 19-440 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major release
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications Package: netw. TrapRoutePreferenceRedundancyMissing Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trapsRedundancyMissing	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: ((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')))		
Clearing condition: ((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None')))		
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

Table 19-441 TunnelAdministrativelyDown (mpls)

Alarm	Attributes	Applicable major release
Name: TunnelAdministrativelyDown (523) Type: pathAlarm Package: mpls.TunnelAdministrativelyDown Raised on class: mpls.Tunnel	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tunnelAdministrativelyDown	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 5620 SAM detects that an MPLS path is administratively down.		
Raising condition: ('Administrative' NOT EQUAL 'Up')		
Clearing condition: ('Administrative' EQUAL 'Up')		
Remedial action: Turn up the corresponding MPLS path.		

Table 19-442 TunnelAdministrativelyDown (svt)

Alarm	Attributes	Applicable major release
Name: TunnelAdministrativelyDown (523) Type: pathAlarm Package: svt.TunnelAdministrativelyDown Raised on class: svt.Tunnel	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tunnelAdministrativelyDown	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 5620 SAM detects that a service tunnel is administratively down.		
Raising condition: ('administrativeState' NOT EQUAL 'Up')		
Clearing condition: ('administrativeState' EQUAL 'Up')		
Remedial action: Informational - an operator has manually turned down a service tunnel.		

Table 19-443 TunnelDown (mpls)

Alarm	Attributes	Applicable major release
Name: TunnelDown (30) Type: pathAlarm Package: mpls.TunnelDown Raised on class: mpls.Tunnel	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tunnelDown	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0

Table 19-443 TunnelDown (mpls) (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when an MPLS path has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative' EQUAL 'Up') AND ('Operational' NOT EQUAL 'Up'))		
Clearing condition: (('Operational' EQUAL 'Up') OR ('Administrative' NOT EQUAL 'Up'))		
Remedial action: Check the network resources along the path.		

Table 19-444 TunnelDown (svt)

Alarm	Attributes	Applicable major release
Name: TunnelDown (30) Type: pathAlarm Package: svt.TunnelDown Raised on class: svt.AbstractTunnel	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tunnelDown	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 5620 SAM detects that a service tunnel is operationally down.		
Raising condition: (('Administrative' EQUAL 'Up') AND ('Operational' NOT EQUAL 'Up'))		
Clearing condition: (('Operational' EQUAL 'Up') OR ('Administrative' NOT EQUAL 'Up'))		
Remedial action: This alarm indicates that a problem has been made in the underlying transport network. If the alarm persists or re-occurs frequently then investigation of the underlying transport issues is warranted.		

Table 19-445 TxSectionSynchronizationError

Alarm	Attributes	Applicable major release
Name: TxSectionSynchronizationError (92) Type: communicationsAlarm Package: sonetequipment. TxSectionSynchronizationError Raised on class: sonetequipment. SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: txSectionSynchronizationError	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a SONET port reports an SS1F error. The alarm corresponds to the ss1f alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'TX Section Synchronization Error') AND ('Report Alarms'anyBit'TX Section Synchronization Error'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'TX Section Synchronization Error') AND ('Report Alarms'anyBit'TX Section Synchronization Error')))		

Table 19-445 TxSectionSynchronizationError (continued)

Alarm	Attributes	Applicable major release
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 19-446 UnidentifiedNode

Alarm	Attributes	Applicable major release
Name: UnidentifiedNode (1922) Type: communicationsAlarm Package: netw.UnidentifiedNode Raised on class: netw.DiscoveredNode	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unidentifiedNode	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 19-447 UnmanageFailed

Alarm	Attributes	Applicable major release
Name: UnmanageFailed (300) Type: discoveryControlAlarm Package: netw.UnmanageFailed Raised on class: netw.NodeDiscoveryControl	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unableToDeleteNode	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'Unmanage Failed')		
Clearing condition: ('Site State' NOT EQUAL 'Unmanage Failed')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 19-448 UnrecommendedNAT64DestinationPrefix

Alarm	Attributes	Applicable major release
Name: UnrecommendedNAT64DestinationPrefix (8060) Type: configurationAlarm Package: nat. UnrecommendedNAT64DestinationPrefix Raised on class: nat.Nat64Config	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unrecommendedConfiguration	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: This alarm is raised when the bits [64-71] of NAT64 destination prefix are non-zero for prefix length of 96.		
Raising condition: (('NAT Destination Prefix Length' EQUAL '96') AND ('NAT Destination Prefix' NOT EQUAL '\"([0-9A-F]{1,4}:){4}([0-9A-F]{1,2})(:[0-9A-F]{1,4}){3}\"'))		
Clearing condition: (('NAT Destination Prefix Length' NOT EQUAL '96') OR ('NAT Destination Prefix' EQUAL '\"([0-9A-F]{1,4}:){4}([0-9A-F]{1,2})(:[0-9A-F]{1,4}){3}\"'))		
Remedial action: When using a prefix length 96, set the bits [64-71] of NAT64 Destination Prefix as zero.		

Table 19-449 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major release
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm Package: netw.UpgradedBuildVersionMismatch Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: upgradedImageNotBooted	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 19-450 upgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: upgradedCardAlarm (255) Type: softwareAlarm Package: equipment.upgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: upgradedCard	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 19-451 UplinkDown

Alarm	Attributes	Applicable major release
Name: UplinkDown (11062) Type: virtualSwitchAlarm Package: dctr.UplinkDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsAllDown	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when all connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '2'))		
Clearing condition: (('uplinkState' NOT EQUAL '2'))		
Remedial action: This alarm is raised when all connections associated to the uplink lost connectivity.		

Table 19-452 UplinkPartiallyDown

Alarm	Attributes	Applicable major release
Name: UplinkPartiallyDown (11063) Type: virtualSwitchAlarm Package: dctr.UplinkPartiallyDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsDown	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0

Table 19-452 UplinkPartiallyDown (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when some connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '3'))		
Clearing condition: (('uplinkState' NOT EQUAL '3'))		
Remedial action: This alarm is raised when a connection of the uplink lost connectivity but at least one connection remains connected.		

Table 19-453 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm Package: sw.VersionConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: versionMismatch	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 19-454 VideoInterfaceDown

Alarm	Attributes	Applicable major release
Name: VideoInterfaceDown (794) Type: VideoInterfaceAlarm Package: service.VideoInterfaceDown Raised on class: service.VideoInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceDown	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a video interface is operationally down. The alarm clears when the video interface is operationally up.		
Raising condition: ('Operational State' NOT EQUAL 'Up')		
Clearing condition: ('Operational State' EQUAL 'Up')		
Remedial action: Check the configuration and the underlying physical interface.		

Table 19-455 VirtualLinkDown

Alarm	Attributes	Applicable major release
Name: VirtualLinkDown (122) Type: VirtualLinkAlarm Package: ospf.VirtualLinkDown Raised on class: ospf.VirtualLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: VirtualLinkDown	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a virtual link is Down.		
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' NOT EQUAL 'Down')		
Remedial action: This alarm is raised when the OSPF virtual link is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 19-456 VirtualNeighborDown

Alarm	Attributes	Applicable major release
Name: VirtualNeighborDown (123) Type: VirtualNeighborDown Package: ospf.VirtualNeighborDown Raised on classes: • ospf.ShamLink • ospf.VirtualLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: VirtualNeighborDown	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a neighbor virtual link is operationally down.		
Raising condition: ('neighborCount' EQUAL '0L')		
Clearing condition: ('neighborCount' NOT EQUAL '0L')		
Remedial action: This alarm is raised when the OSPF neighbor virtual link is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 19-457 VRtrIfDDosDynamicExceeded

Alarm	Attributes	Applicable major release
Name: VRtrIfDDosDynamicExceeded (4887) Type: securityServiceOrMechanismViolation Package: rtr.VRtrIfDDosDynamicExceeded Raised on class: rtr.VirtualInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ExceedingPolicingParameters	Release: • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the protocol on a particular network interface has been detected as non-conformant to the associated distributed CPU protection policy parameters (on receiving vRtrIfDcpDynamicExcd trap) and the alarm status is set as non-conformant When the network interface starts hold-down period for an exceeding protocol (on receiving vRtrIfDcpDynamicHold-DownStart trap), the alarm status will change into non-conformant(Hold Down Start). When the network interface completes hold-down period for an exceeding protocol (on receiving vRtrIfDcpDynamicHoldDownEnd trap), the alarm status will be changed into non-conformant(Hold Down End). When the protocol for the network interface has been detected as conformant for a period of the configured detection-time after having been previously detected as exceeding and completed any hold-down period (on receiving vRtrIfDcpDynamicConform trap), the alarm will be cleared.		
Remedial action: Appropriate configuration changes to the distributed CPU protection policy or to the affected network interface may be required.		

Table 19-458 VRtrIfDDosLocMonitorExceeded

Alarm	Attributes	Applicable major release
Name: VRtrIfDDosLocMonitorExceeded (4888) Type: securityServiceOrMechanismViolation Package: rtr.VRtrIfDDosLocMonitorExceeded Raised on class: rtr.VirtualInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ExceedingPolicingParameters	Release: • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the local-monitoring-policer for a particular network interface has transitioned from a conformant state to a non-conformant state and the system will attempt to allocate dynamic enforcement policers (on receiving sapDcpLocMonExcd trap), and the alarm status is set as non-conformant When all dynamic enforcement policers associated with a non-conformant local-monitoring-policer have been successfully allocated for the network interface (on receiving sapDcpLocMonExcdAllDynAlloc trap), the alarm status will be changed into non-conformant(Located All). When the local-monitoring-policer for a particular network interface has transitioned from a conformant state to a non-conformant state and the system cannot allocate all the dynamic enforcement policers associated with the distributed CPU protection policy (on receiving sapDcpLocMonExcdDynResource trap), the alarm status will be changed into non-conformant(Cannot Allocate All). When all the previously allocated dynamic enforcement policers for a particular local-monitoring-policer on the associated distributed CPU protection policy have been freed up and all the protocols are once again being monitored by local-monitor (on receiving sapDcpLocMonExcdAllDynFreed trap), the alarm will be cleared.		
Remedial action: Appropriate configuration changes to the distributed CPU protection policy or to the affected network interface may be required.		

Table 19-459 VRtrIfDDosStaticExceeded

Alarm	Attributes	Applicable major release
Name: VRtrIfDDosStaticExceeded (4889) Type: securityServiceOrMechanismViolation Package: rtr.VRtrIfDDosStaticExceeded Raised on class: rtr.VirtualInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ExceedingPolicingParameters	Release: • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the static-policer on a particular network interface has been detected as non-conformant to the associated distributed CPU protection policy parameters (on receiving vRtrIfDcpStaticExcd trap) and the alarm status is set as non-conformant. When the network interface starts hold-down period for the exceeding static-policer (on receiving vRtrIfDcpStaticHold-DownStart trap), the alarm status will change into non-conformant(Hold Down Start). When the network interface ends hold-down period for the exceeding static-policer (on receiving vRtrIfDcpStaticHoldDownEnd trap), the alarm status will be changed into non-conformant(Hold Down End). When the static-policer for the network interface has been detected as conformant for a period of the configured detection-time after having been previously detected as exceeding and completed any hold-down period (on receiving vRtrIfDcpStaticConform trap), the alarm will be cleared.		
Remedial action: Appropriate configuration changes to the distributed CPU protection policy or to the affected network interface may be required.		

Table 19-460 WaveTrackerEncoderDegrade

Alarm	Attributes	Applicable major release
Name: WaveTrackerEncoderDegrade (821) Type: communicationsAlarm Package: ethernetequipment. WaveTrackerEncoderDegrade Raised on class: ethernetequipment. WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EncoderDegrade	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a device reports an encoder degradation on a wavelength tracker interface.		
Raising condition: (('Configured Alarms'anyBit'Encoder Degrade') AND ('Reported Alarms'anyBit'Encoder Degrade'))		
Clearing condition: NOT ((('Configured Alarms'anyBit'Encoder Degrade') AND ('Reported Alarms'anyBit'Encoder Degrade')))		
Remedial action: The OT or SVAC card has detected a DSP failure and this means that the wavelength tracker encode power control is compromised. If this occurs during steady state operation, there is a high probability that the services carried by this OT or SVAC are unaffected. To clear this alarm, replace the card. The card replacement procedure is service affecting and should be conducted during a maintenance window.		

Table 19-461 WaveTrackerEncoderFailure

Alarm	Attributes	Applicable major release
Name: WaveTrackerEncoderFailure (822) Type: communicationsAlarm Package: ethernetequipment. WaveTrackerEncoderFailure Raised on class: ethernetequipment. WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EncoderFailure	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a device reports an encoder failure on a wavelength tracker interface.		
Raising condition: (('Configured Alarms'anyBit'Encoder Failure') AND ('Reported Alarms'anyBit'Encoder Failure'))		
Clearing condition: NOT ((('Configured Alarms'anyBit'Encoder Failure') AND ('Reported Alarms'anyBit'Encoder Failure')))		
Remedial action: A cold reset, reseat, or replacement of a card is service impacting if the card is currently carrying services. If there are services currently carried over the card, it may be best to wait for a maintenance window before resetting, replacing, or reseating the card.Confirm that replacement OT or SVAC card supports the same band as the alarmed OT or SVAC card and connect all fibers to the replacement OT or SVAC card.		

Table 19-462 WaveTrackerMissingPluggableVOA

Alarm	Attributes	Applicable major release
Name: WaveTrackerMissingPluggableVOA (4618) Type: communicationsAlarm Package: ethernetequipment. WaveTrackerMissingPluggableVOA Raised on class: ethernetequipment. WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MissingPluggableVOA	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a device reports a power control high limit on a wavelength tracker interface.		
Raising condition: (('Configured Alarms'anyBit'Missing Pluggable VOA') AND ('Reported Alarms'anyBit'Missing Pluggable VOA'))		
Clearing condition: NOT ((('Configured Alarms'anyBit'Missing Pluggable VOA') AND ('Reported Alarms'anyBit'Missing Pluggable VOA')))		
Remedial action: Informational - no corrective action required.		

Table 19-463 WaveTrackerPowerControlDegrade

Alarm	Attributes	Applicable major release
Name: WaveTrackerPowerControlDegrade (823) Type: communicationsAlarm Package: ethernetequipment. WaveTrackerPowerControlDegrade Raised on class: ethernetequipment. WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PowerControlDegrade	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a device reports a power control degradation on a wavelength tracker interface.		
Raising condition: (('Configured Alarms'anyBit'Power Control Degrade') AND ('Reported Alarms'anyBit'Power Control Degrade'))		
Clearing condition: NOT ((('Configured Alarms'anyBit'Power Control Degrade') AND ('Reported Alarms'anyBit'Power Control Degrade')))		
Remedial action: check to see that the fibering for that card is correct. Remove the fiber from the Tx port on the transponder card. If the condition clears after 20 seconds, then this is a misfibering problem.		

Table 19-464 WaveTrackerPowerControlFailure

Alarm	Attributes	Applicable major release
Name: WaveTrackerPowerControlFailure (824) Type: communicationsAlarm Package: ethernetequipment. WaveTrackerPowerControlFailure Raised on class: ethernetequipment. WaveLengthTracker	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PowerControlFailure	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a device reports a power control failure on a wavelength tracker interface.		
Raising condition: (('Configured Alarms'anyBit'Power Control Failure') AND ('Reported Alarms'anyBit'Power Control Failure'))		
Clearing condition: NOT ((('Configured Alarms'anyBit'Power Control Failure') AND ('Reported Alarms'anyBit'Power Control Failure')))		
Remedial action: Either alarmed card has detected equipment problem or there is misfibering problem such that a light-emitting fiber has been plugged into the Tx port of aWavelength Tracker encoder-equipped transponder card.If the card is a transponder card that is equipped with aWavelength Tracker encoder, check to see that the fibering for that card is correct. Remove the fiber from the Tx port on the transponder card. If the condition clears after 20 seconds, then this is a misfibering problem.the card is an SVAC, or if there is no fibering problem on the transponder card.Disconnect all fibers on the alarmed card and Replace the card. connect all fibers to the replacement card		

Table 19-465 WaveTrackerPowerControlHighlimit

Alarm	Attributes	Applicable major release
Name: WaveTrackerPowerControlHighlimit (825) Type: communicationsAlarm Package: ethernetequipment. WaveTrackerPowerControlHighlimit Raised on class: ethernetequipment. WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PowerControlHighlimit	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a device reports a power control high limit on a wavelength tracker interface.		
Raising condition: (('Configured Alarms'anyBit'Power Control High limit reached') AND ('Reported Alarms'anyBit'Power Control High limit reached'))		
Clearing condition: NOT ((('Configured Alarms'anyBit'Power Control High limit reached') AND ('Reported Alarms'anyBit'Power Control High limit reached')))		
Remedial action: Informational - no corrective action required.		

Table 19-466 WaveTrackerPowerControllowlimit

Alarm	Attributes	Applicable major release
Name: WaveTrackerPowerControllowlimit (826) Type: communicationsAlarm Package: ethernetequipment. WaveTrackerPowerControllowlimit Raised on class: ethernetequipment. WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PowerControllowlimit	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a device reports a power control low limit on a wavelength tracker interface.		
Raising condition: (('Configured Alarms'anyBit'Power Control Low limit reached') AND ('Reported Alarms'anyBit'Power Control Low limit reached'))		
Clearing condition: NOT ((('Configured Alarms'anyBit'Power Control Low limit reached') AND ('Reported Alarms'anyBit'Power Control Low limit reached')))		
Remedial action: Informational - no corrective action required.		

Table 19-467 WlanGwIsaGrpDegraded

Alarm	Attributes	Applicable major release
Name: WlanGwIsaGrpDegraded (8150) Type: equipmentAlarm Package: wlangw.WlanGwIsaGrpDegraded Raised on class: wlangw.WlanGwIsaGroup	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: WlanGwIsaGrpDegraded	Release: • 12.0 • 13.0 • 14.0

Table 19-467 WlanGwIsaGrpDegraded (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the WLAN GW ISA group is degraded, while operationally still in service.		
Raising condition: (('Degraded State' EQUAL 'True') AND ('Operational State' EQUAL 'Up'))		
Clearing condition: (('Operational State' NOT EQUAL 'Up') OR ('Degraded State' NOT EQUAL 'True'))		
Remedial action: The ISA-WLAN GW Group is degraded. This alarm occurs when the number of active IOMs in the ISA Group fall below the "Active IOM Limit" configured on the ISA Group. Check the assigned IOM and MDA card statuses.		

Table 19-468 WlanGwIsaGrpDown

Alarm	Attributes	Applicable major release
Name: WlanGwIsaGrpDown (3914) Type: equipmentAlarm Package: wlangw.WlanGwIsaGrpDown Raised on class: wlangw.WlanGwIsaGroup	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: WlanGwIsaGrpDown	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the Operational State of an WLAN GW ISA group is Down and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The operational state of the ISA-WLAN GW Group is down, despite the administrative state being up. Check that the configured ISA-WLAN GW Group Member MDA(s) are active and operationally up. There may be a fault with the ISA Application WLAN GW Group.		

Table 19-469 WlanGwResrcProblemDetected

Alarm	Attributes	Applicable major release
Name: WlanGwResrcProblemDetected (3889) Type: resourceAlarm Package: netw.WlanGwResrcProblemDetected Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when there is a resource problem detected while attempting to activate some part of the WLAN Gateway configuration of this system.		
Remedial action: The alarm is raised when there is a resource problem detected while attempting to activate some part of the WLAN Gateway configuration of this system.		

Table 19-470 WlanGwTuQosProblem

Alarm	Attributes	Applicable major release
Name: WlanGwTuQosProblem (3915) Type: resourceAlarm Package: wlangw.WlanGwTuQosProblem Raised on class: wlangw.IsaMember	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a resource issue occurs while creating a WLAN Gateway tunnel QoS infrastructure instance.		
Remedial action: This may be a temporary phenomenon. If it persists, the QoS configuration or the scaling may have to be modified to ensure enough resources are available for the UE QoS.		

Table 19-471 WppHostAuthenticationFailed

Alarm	Attributes	Applicable major release
Name: WppHostAuthenticationFailed (3916) Type: processingErrorAlarm Package: wpp.WppHostAuthenticationFailed Raised on class: wpp.Portal	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: portalWppHostAuthentication-Failure	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a WPP host cannot be authenticated.		
Remedial action: The recovery action will depend on the exact failure cause as given by the failureReason.		

Table 19-472 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major release
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm Package: netw.WrongCpaaSoftwareVersion Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL '\"TiMOS-B-3.0.Generic \"') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Clearing condition: (('Software Version' NOT EQUAL '\"TiMOS-B-3.0.Generic \"') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

Table 19-473 XplError

Alarm	Attributes	Applicable major release
Name: XplError (573) Type: hardwareAnomaly Package: equipment.XplError Raised on class: equipment.DaughterCard	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: xplError	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an MDA reports persistent XPL Errors.		
Raising condition: ('Number Of Notifications' NOT EQUAL '0')		
Clearing condition: ('Number Of Notifications' EQUAL '0')		
Remedial action: Informational - if the condition persists then the MDA indicated in the alarm should be replaced.		

20 7750 SR MG

20.1 Alarms

Alarms

Note: Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see Chapter 39, “Unspecified NE”.

Table 20-1 AaPolicerResourcesExceeded

Alarm	Attributes	Applicable major release
Name: AaPolicerResourcesExceeded (2930) Type: configurationAlarm Package: aapolicy.AaPolicerResourcesExceeded Raised on class: aapolicy.AaSubOvrd	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: AaPolicerResourcesExceeded	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when Application Assurance configured override values exceed policer resources.		
Raising condition: (('Policer Resource Status' EQUAL 'Exceeded'))		
Clearing condition: (('Policer Resource Status' NOT EQUAL 'Exceeded'))		
Remedial action: The Application Assurance Subscriber Policy override(s) configuration has exceeded the policer resources. Remove overrides of a policy configuration for an Application Assurance subscriber where this may be occurring. If the problem persists please contact your Nokia support representative for assistance.		

Table 20-2 AarpDown

Alarm	Attributes	Applicable major release
Name: AarpDown (3704) Type: AarpDown Package: aapolicy.AarpDown Raised on class: aapolicy.Aarp	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: aarpDown	Release: • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM detects that an AARP is operationally down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The application assurance redundancy protocol is down either because it is administratively disabled, faulty or a peer address is not up. Ensure that the AARP is administratively up, and the peer ip address and this ip address points to each other.		

Table 20-3 AarpInterfaceDown

Alarm	Attributes	Applicable major release
Name: AarpInterfaceDown (3904) Type: AarpInterfaceDown Package: service.AarpInterfaceDown Raised on class: service.AarpInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceDown	Release: • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM detects that an AARP interface is operationally down.		
Raising condition: (('administrativeState' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('administrativeState' NOT EQUAL 'Up'))		
Remedial action: The condition exists because the physical interface is down either because it is administratively disabled, faulty or a cabling fault has occurred. Ensure that the interface is administratively up. Check for a poor cable connection to the port or for a faulty cable/fiber. If neither appears to be the problem run diagnostics on the port to determine if it is faulty.		

Table 20-4 AccessInterfaceDown

Alarm	Attributes	Applicable major release
Name: AccessInterfaceDown (249) Type: AccessInterfaceAlarm Package: service.AccessInterfaceDown Raised on class: service.AccessInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an L2 or L3 interface operational state is Down. The alarm is not raised against an L2 access interface that is associated with an MC ring or MC LAG in the standby state.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'Standby For MC-Ring') AND ('State Cause' NOT EQUAL 'Standby For MC Protocol') AND ('State Cause' NOT EQUAL 'Standby For BGP Multi-homing'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'Standby For MC-Ring') OR ('State Cause' EQUAL 'Standby For MC Protocol') OR ('State Cause' EQUAL 'Standby For BGP Multi-homing'))		
Remedial action: The condition exists because the physical interface is down either because it is administratively disabled, faulty or a cabling fault has occurred. Ensure that the interface is administratively up. Check for a poor cable connection to the port or for a faulty cable/fiber. If neither appears to be the problem run diagnostics on the port to determine if it is faulty.		

Table 20-5 ActiveAbnormalCondition

Alarm	Attributes	Applicable major release
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm Package: netw.ActiveAbnormalCondition Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		

Table 20-5 ActiveAbnormalCondition (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

Table 20-6 adjacencyDown

Alarm	Attributes	Applicable major release
Name: adjacencyDown (11462) Type: communicationsAlarm Package: mpr.adjacencyDown Raised on class: mpr.BackhaulAdjacency	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: adjacencyDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the Operational State of a adjacency is Down, for example, because of one of the following conditions: The Operational State of local port pointer is Down.		
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' EQUAL 'Up')		
Remedial action: NE Alarms causing operState down must not exist on the selected adjancency.		

Table 20-7 AggregatedVFLPortDown

Alarm	Attributes	Applicable major release
Name: AggregatedVFLPortDown (5436) Type: equipmentAlarm Package: equipment.AggregatedVFLPortDown Raised on class: equipment.Shelf	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: connectivityIssue	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is generated when the aggregated virtual fabric link on the virtual chassis slot is down.		
Raising condition: (('Shelf Type' EQUAL '7850') AND ('Total Slots' EQUAL '4') AND ('Virtual Fabric Link State' NOT EQUAL 'Up'))		
Clearing condition: (('Shelf Type' EQUAL '7850') AND ('Total Slots' EQUAL '4') AND ('Virtual Fabric Link State' EQUAL 'Up'))		
Remedial action: The alarm is raised when the aggregated virtual fabric link on the virtual chassis is down. Please check the virtual fabric links for the virtual chassis setup.		

Table 20-8 AGWDiameterPeerDown

Alarm	Attributes	Applicable major release
Name: AGWDiameterPeerDown (844) Type: EpcAlarm Package: lte.AGWDiameterPeerDown Raised on class: lte.AGWDiameterPeer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 20-9 AGWGTPPMIPPeerDown

Alarm	Attributes	Applicable major release
Name: AGWGTPPMIPPeerDown (1120) Type: EpcAlarm Package: lte.AGWGTPPMIPPeerDown Raised on class: lte.AGWGTPPMIPPeer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: AGWGTPPMIPPeerDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the pathManagementState of this EPS peer is not Up.		
Raising condition: ('Path Management State' EQUAL 'Fault')		
Clearing condition: ('Path Management State' EQUAL 'Up')		
Remedial action: A GTP/PMIP based reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 20-10 AGWGTPPMIPPeerLastRestartInfo

Alarm	Attributes	Applicable major release
Name: AGWGTPPMIPPeerLastRestartInfo (5189) Type: EpcAlarm Package: lte.AGWGTPPMIPPeerLastRestartInfo Raised on class: lte.AGWGTPPMIPPeer	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: AGWGTPPMIPPeerRestart	Release: • 6.0
Description: The alarm is raised when the pathManagementState of this EPS path is restart and have restart reason and counters information.		
Remedial action: Informational - This alarm give you Peer restart reason and counters information.		

Table 20-11 AGWGTPPMIPPeerRestart

Alarm	Attributes	Applicable major release
Name: AGWGTPPMIPPeerRestart (4415) Type: EpcAlarm Package: lte.AGWGTPPMIPPeerRestart Raised on class: lte.AGWGTPPMIPPeer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: AGWGTPPMIPPeerRestart	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the pathManagementState of this EPS path is restart.		
Raising condition: ('Path Management State' EQUAL 'Restart')		
Clearing condition: ('Path Management State' NOT EQUAL 'Restart')		
Remedial action: A path restart is triggered on GTP/PMIP based peer for various reasons: Card reset, or transport issues between MME and SGW, check that the card is operational and check that the underlying transport network is up.		

Table 20-12 AncillaryPathLimitReached

Alarm	Attributes	Applicable major release
Name: AncillaryPathLimitReached (459) Type: resourceAlarm Package: equipment.AncillaryPathLimitReached Raised on class: equipment.DaughterCard	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceLimitReached	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the Ingress Multicast Path Management ancillary path bandwidth limit is reached.		
Raising condition: (('Ancillary Path Limit Override' > '0') AND ('Ancillary Path In use' >=" (1000 * 'Ancillary Path Limit Override')))"		
Clearing condition: (('Ancillary Path Limit Override' > '0') AND ('Ancillary Path In use' < (1000 * 'Ancillary Path Limit Override')))		
Remedial action: Informational - The alarm is raised when the Ingress Multicast Path Management ancillary path bandwidth limit is reached. This can be remedied by modifying the ancillary path limit located at T1 Paths tab of the multicast bandwidth policy which assigned to the card, or increase the ancillary path limit override located at the Daughter Card tab under Daughter Card Slot form.		

Table 20-13 AreaTypeMismatch

Alarm	Attributes	Applicable major release
Name: AreaTypeMismatch (38) Type: configurationAlarm Package: ospf.AreaTypeMismatch Raised on class: ospf.Area	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: areaTypeMisconfigured	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an OSPF area on one NE is configured as an NSSA and the same OSPF area on another NE is configured as a stub area.		
Raising condition: ('Type Mismatch' EQUAL 'true')		
Clearing condition: ('Type Mismatch' EQUAL 'false')		

Table 20-13 AreaTypeMismatch (continued)

Alarm	Attributes	Applicable major release
Remedial action: A configuration error has been made which must be corrected. The OSPF area type configured for the NE does not match with the same OSPF area configured on another NE. Compare the configuration on the endpoint and correct the mismatch.		

Table 20-14 AsymmetricalConfig (multichassis)

Alarm	Attributes	Applicable major release
Name: AsymmetricalConfig (295) Type: configurationAlarm Package: multichassis.AsymmetricalConfig Raised on classes: • multichassis.MultiChassisLagMember • multichassis.AbstractMultiChassisPeer • multichassis.AbstractMultiChassisLag	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: asymmetricalConfig	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when there is a peer configuration mismatch that prevents MC operation.		
Raising condition: ('Config Mismatches' NOT EQUAL '0L')		
Clearing condition: ('Config Mismatches' EQUAL '0L')		
Remedial action: Check configurations on both members to see anything not matched.		

Table 20-15 AsymmetricalConfig (lag)

Alarm	Attributes	Applicable major release
Name: AsymmetricalConfig (295) Type: configurationAlarm Package: lag.AsymmetricalConfig Raised on classes: • lag.MultiChassisLag • lag.MultiChassisLagMember	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: asymmetricalConfig	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the members of an MC LAG do not have matching configurations.		
Raising condition: ('configMismatches' NOT EQUAL '0L')		
Clearing condition: ('configMismatches' EQUAL '0L')		
Remedial action: Check configurations on both members to see anything not matched.		

Table 20-16 AuthKeyConflict (rsvp)

Alarm	Attributes	Applicable major release
Name: AuthKeyConflict (5188) Type: processingErrorAlarm Package: rsvp.AuthKeyConflict Raised on class: rsvp.AuthenticationKey	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: AuthKeyConflict	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when both Authentication Key and RSVP Keychain are configured. RSVP Keychain will be used.		
Raising condition: (('RSVP Keychain' NOT EQUAL '\"\"') AND ('enableAuthentication' EQUAL 'true'))		
Clearing condition: (('RSVP Keychain' EQUAL '\"\"') OR ('enableAuthentication' NOT EQUAL 'true'))		
Remedial action: Authentication Key and RSVP Keychain are both configured. RSVP Keychain will be used. The alarm is cleared when only one is configured.		

Table 20-17 AuxiliaryServerStatus

Alarm	Attributes	Applicable major release
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm Package: server.AuxiliaryServerStatus Raised on class: server.AuxiliaryServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 20-18 backupScriptInUse

Alarm	Attributes	Applicable major release
Name: backupScriptInUse (274) Type: configurationAlarm Package: subscrident.backupScriptInUse Raised on class: subscrident.Policy	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: backupInUse	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the primary subscriber identification script is operationally down, but one of the other scripts is operationally up.		
Raising condition: (('isLocal' EQUAL 'true') AND ('Primary Script Operational State' NOT EQUAL 'Up') AND (('Secondary Script Operational State' EQUAL 'Up') OR ('Tertiary Script Operational State' EQUAL 'Up')))		

Table 20-18 backupScriptInUse (continued)

Alarm	Attributes	Applicable major release
Clearing condition: (('isLocal' EQUAL 'true') AND (('Primary Script Operational State' EQUAL 'Up') OR (('Secondary Script Operational State' NOT EQUAL 'Up') AND ('Tertiary Script Operational State' NOT EQUAL 'Up'))))		
Remedial action: If the DHCP ACK Python script processing behaviour is desired, please make sure that primary, secondary and tertiary scripts are installed and operationally up.		

Table 20-19 BareMetalReachabilityDown

Alarm	Attributes	Applicable major release
Name: BareMetalReachabilityDown (10273) Type: virtualPortAlarm Package: dctr.BareMetalReachabilityDown Raised on class: dctr.BMDevice	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BareMetalReachability-DownOrDeleted	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when Bare Metal server is reachability down.		
Raising condition: (('bgpReachabilityState' NOT EQUAL '0'))		
Clearing condition: (('bgpReachabilityState' EQUAL '0'))		
Remedial action: This alarm can be cleared when bare metal device BGP prefix is up. Check for virtual switch controller down or virtual switch down or interface/port down in underlay network (hence the BGP prefix not advertised).		

Table 20-20 BerLineSignalDegradation

Alarm	Attributes	Applicable major release
Name: BerLineSignalDegradation (88) Type: communicationsAlarm Package: sonetequipment.BerLineSignalDegradation Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: berLineSignalDegradation	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a SONET port reports a line signal degradation BER error. The alarm corresponds to the lb2er-sd alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'BER Line Signal Degradation') AND ('Report Alarms'anyBit'BER Line Signal Degradation'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'BER Line Signal Degradation') AND ('Report Alarms'anyBit'BER Line Signal Degradation')))		
Remedial action: Informational only.		

Table 20-21 BerLineSignalFailure

Alarm	Attributes	Applicable major release
Name: BerLineSignalFailure (89) Type: communicationsAlarm Package: sonetequipment.BerLineSignalFailure Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: berLineSignalFailure	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a SONET port reports a line signal degradation BER error. The alarm corresponds to the lb2er-sf alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'BER Line Signal Failure') AND ('Report Alarms'anyBit'BER Line Signal Failure'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'BER Line Signal Failure') AND ('Report Alarms'anyBit'BER Line Signal Failure')))		
Remedial action: Informational only.		

Table 20-22 BfdInterfaceConnectionBroken

Alarm	Attributes	Applicable major release
Name: BfdInterfaceConnectionBroken (3329) Type: serviceAlarm Package: vrrp.BfdInterfaceConnectionBroken Raised on class: vrrp.BfdInterface	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bfdSessionConnectionBroken	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the BFD connection to a peer times out.		
Raising condition: ('Operational State' EQUAL 'Timed Out')		
Clearing condition: ('Operational State' NOT EQUAL 'Timed Out')		
Remedial action: Check the peer router, fix the BFD connection		

Table 20-23 BfdInterfaceConnectionDown

Alarm	Attributes	Applicable major release
Name: BfdInterfaceConnectionDown (3330) Type: serviceAlarm Package: vrrp.BfdInterfaceConnectionDown Raised on class: vrrp.BfdInterface	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bfdSessionDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the Operational State of a BFD session is Not Connected.		
Raising condition: ('Operational State' NOT EQUAL 'Operational')		
Clearing condition: ('Operational State' EQUAL 'Operational')		
Remedial action: Check the BFD interface configuration, fix the BFD connection		

Table 20-24 BfdInterfaceConnectionPeerDetectsDown

Alarm	Attributes	Applicable major release
Name: BfdInterfaceConnectionPeerDetectsDown (3331) Type: serviceAlarm Package: vrrp.BfdInterfaceConnectionPeerDetectsDown Raised on class: vrrp.BfdInterface	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bfdSessionConnectionPeer-DetectsDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a BFD peer detects a connection timeout.		
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' NOT EQUAL 'Down')		
Remedial action: Fix the BFD connection		

Table 20-25 BgpDown

Alarm	Attributes	Applicable major release
Name: BgpDown (6) Type: ProtocolAlarm Package: bgp.BgpDown Raised on class: bgp.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a BGP instance has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The BGP protocol entity is down - administratively disable BGP and re-enable. If the problem persists please contact your Nokia support representative for assistance.		

Table 20-26 BITS2NotQualified

Alarm	Attributes	Applicable major release
Name: BITS2NotQualified (1941) Type: communicationsAlarm Package: sonet.BITS2NotQualified Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: timingReferenceNotQualified	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the BITS2 timing reference on an NE is not in the Qualified state.		
Raising condition: (('Qualified For Use' EQUAL 'Not Qualified') AND ('Input Administrative State' NOT EQUAL 'Down'))		
Clearing condition: (('Qualified For Use' NOT EQUAL 'Not Qualified') OR ('Input Administrative State' EQUAL 'Down'))		
Remedial action: Make sure that BITS2 is qualified		

Table 20-27 BITS2ReferenceLossOfSignal

Alarm	Attributes	Applicable major release
Name: BITS2ReferenceLossOfSignal (9002) Type: communicationsAlarm Package: sonet.BITS2ReferenceLossOfSignal Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BITS2ReferenceLossOfSignal	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the BITS2 reference on an NE is not qualified due to Loss of Signal.		
Raising condition: (('Not Qualified Due To'anyBit'LOS'))		
Clearing condition: NOT ((('Not Qualified Due To'anyBit'LOS')))		
Remedial action: Make sure that peer connected to BITS2 is properly configured.		

Table 20-28 BITS2ReferenceOutOfFrequency

Alarm	Attributes	Applicable major release
Name: BITS2ReferenceOutOfFrequency (9003) Type: communicationsAlarm Package: sonet.BITS2ReferenceOutOfFrequency Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BITS2ReferenceOutOfFrequency	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the BITS2 Reference on an NE is not qualified due to Out of frequency.		
Raising condition: (('Not Qualified Due To'anyBit'OOF'))		
Clearing condition: NOT ((('Not Qualified Due To'anyBit'OOF')))		
Remedial action: Make sure that frequency configured for BITS2 is correct.		

Table 20-29 BITS2ReferenceOutOfPollInRange

Alarm	Attributes	Applicable major release
Name: BITS2ReferenceOutOfPollInRange (9004) Type: communicationsAlarm Package: sonet.BITS2ReferenceOutOfPollInRange Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BITS2ReferenceOutOfPollInRange	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the BITS2 Reference on an NE is not qualified state due to Out of poll in range.		
Raising condition: (('Not Qualified Due To'anyBit'OOPIR'))		
Clearing condition: NOT ((('Not Qualified Due To'anyBit'OOPIR')))		
Remedial action: Check the BITS2 is configured correctly. Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary		

Table 20-30 BITSNotQualified

Alarm	Attributes	Applicable major release
Name: BITSNotQualified (547) Type: communicationsAlarm Package: sonet.BITSNotQualified Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: timingReferenceNotQualified	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the BITS/BITS1 timing reference on an NE is not in the Qualified state.		
Raising condition: (('Qualified For Use' EQUAL 'Not Qualified') AND ('Output Administrative State' NOT EQUAL 'Down'))		
Clearing condition: (('Qualified For Use' NOT EQUAL 'Not Qualified') OR ('Output Administrative State' EQUAL 'Down'))		
Remedial action: Make sure that BITS/BITS1 is qualified		

Table 20-31 BITSReferenceLossOfSignal (sonet)

Alarm	Attributes	Applicable major release
Name: BITSReferenceLossOfSignal (1950) Type: communicationsAlarm Package: sonet.BITSReferenceLossOfSignal Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BITSReferenceLossOfSignal	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the BITS/BITS1 reference on an NE is not qualified due to Loss of Signal.		
Raising condition: (('Not Qualified Due To'anyBit'LOS'))		
Clearing condition: NOT ((('Not Qualified Due To'anyBit'LOS')))		
Remedial action: Make sure that peer connected to BITS/BITS1 is properly configured.		

Table 20-32 BITSReferenceOutOfFrequency (sonet)

Alarm	Attributes	Applicable major release
Name: BITSReferenceOutOfFrequency (1951) Type: communicationsAlarm Package: sonet.BITSReferenceOutOfFrequency Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BITSReferenceOutOfFrequency	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the BITS/BITS1 Reference on an NE is not qualified due to Out of frequency.		
Raising condition: (('Not Qualified Due To'anyBit'OOF'))		
Clearing condition: NOT ((('Not Qualified Due To'anyBit'OOF')))		
Remedial action: Make sure that frequency configured for BITS/BITS1 is correct.		

Table 20-33 BITSReferenceOutOfPollInRange (sonet)

Alarm	Attributes	Applicable major release
Name: BITSReferenceOutOfPollInRange (1952) Type: communicationsAlarm Package: sonet.BITSReferenceOutOfPollInRange Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BITSReferenceOutOfPol-lInRange	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the BITS/BITS1 Reference on an NE is not qualified state due to Out of poll in range.		
Raising condition: (('Not Qualified Due To'anyBit'OOPIR'))		
Clearing condition: NOT ((('Not Qualified Due To'anyBit'OOPIR')))		
Remedial action: Check the BITS/BITS1 is configured correctly. Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary		

Table 20-34 BootableConfigBackupFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigBackupFailed (103) Type: configurationAlarm Package: sw.BootableConfigBackupFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 20-35 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm Package: sw.BootableConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		

Table 20-35 BootableConfigRestoreFailed (continued)

Alarm	Attributes	Applicable major release
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 20-36 BootParametersMisconfigured

Alarm	Attributes	Applicable major release
Name: BootParametersMisconfigured (35) Type: configurationAlarm Package: netw.BootParametersMisconfigured Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistentIndexFailure Applicable probable causes: • persistentIndexFailure • configFileBootFailure	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND ((('Config File Status' NOT EQUAL 'Executed Successfully') AND ('Config File Status' NOT EQUAL 'configFileStatus_unspecified')) OR (('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded') AND ('Persistent Index Status' NOT EQUAL 'persistentIndexStatus_unspecified'))))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

Table 20-37 BundleDown

Alarm	Attributes	Applicable major release
Name: BundleDown (152) Type: equipmentAlarm Package: bundle.BundleDown Raised on class: bundle.Interface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bundleDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the bundle Administrative State is Up and the Operational State is Down.		
Raising condition: (('Protection Type' EQUAL 'None') AND ('Administrative State' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up') AND ('specificCardType' NOT EQUAL 'Unsupported ASAP Card'))		
Clearing condition: (('Protection Type' NOT EQUAL 'None') OR ('operationalState' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: Informational - no corrective action required.		

Table 20-38 CcagDown

Alarm	Attributes	Applicable major release
Name: CcagDown (210) Type: equipmentAlarm Package: ccag.CcagDown Raised on class: ccag.CrossConnectAggregationGroup	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: CcagDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the CCAG Administrative State is Up and the Operational State is Down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: Informational - no corrective action required.		

Table 20-39 CesBfrOverrun

Alarm	Attributes	Applicable major release
Name: CesBfrOverrun (448) Type: communicationsAlarm Package: vll.CesBfrOverrun Raised on class: vll.VllCesInterfaceSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bufferOverrun	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM detects a jitter buffer overrun.		
Raising condition: (('Report Alarm Status'anyBit'Buffer Overrun') AND ('Report Alarm'anyBit'Buffer Overrun'))		
Clearing condition: NOT ((('Report Alarm Status'anyBit'Buffer Overrun') AND ('Report Alarm'anyBit'Buffer Overrun')))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 20-40 CesBfrUnderrun

Alarm	Attributes	Applicable major release
Name: CesBfrUnderrun (449) Type: communicationsAlarm Package: vll.CesBfrUnderrun Raised on class: vll.VllCesInterfaceSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bufferOverrun	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM detects a jitter buffer underrun.		
Raising condition: (('Report Alarm Status'anyBit'Buffer Underrun') AND ('Report Alarm'anyBit'Buffer Underrun'))		
Clearing condition: NOT ((('Report Alarm Status'anyBit'Buffer Underrun') AND ('Report Alarm'anyBit'Buffer Underrun')))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 20-41 CesMalformedPkts

Alarm	Attributes	Applicable major release
Name: CesMalformedPkts (446) Type: communicationsAlarm Package: vll.CesMalformedPkts Raised on class: vll.VllCesInterfaceSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: malformedPackets	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM detects one or more malformed packets.		
Raising condition: (('Report Alarm Status'anyBit'Malformed Packets') AND ('Report Alarm'anyBit'Malformed Packets'))		
Clearing condition: NOT ((('Report Alarm Status'anyBit'Malformed Packets') AND ('Report Alarm'anyBit'Malformed Packets')))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 20-42 CesPktLoss

Alarm	Attributes	Applicable major release
Name: CesPktLoss (447) Type: communicationsAlarm Package: vll.CesPktLoss Raised on class: vll.VllCesInterfaceSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lossOfPacket	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM detects a packet loss.		
Raising condition: (('Report Alarm Status'anyBit'Packet Loss') AND ('Report Alarm'anyBit'Packet Loss'))		
Clearing condition: NOT ((('Report Alarm Status'anyBit'Packet Loss') AND ('Report Alarm'anyBit'Packet Loss')))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 20-43 CesRmtPktLoss

Alarm	Attributes	Applicable major release
Name: CesRmtPktLoss (450) Type: communicationsAlarm Package: vll.CesRmtPktLoss Raised on class: vll.VllCesInterfaceSpecifics	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: farEndLossOfPacket	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM detects a remote packet loss.		
Raising condition: (('Report Alarm Status'anyBit'Remote Packet Loss') AND ('Report Alarm'anyBit'Remote Packet Loss'))		
Clearing condition: NOT ((('Report Alarm Status'anyBit'Remote Packet Loss') AND ('Report Alarm'anyBit'Remote Packet Loss')))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 20-44 CesRmtRdi

Alarm	Attributes	Applicable major release
Name: CesRmtRdi (452) Type: configurationAlarm Package: vll.CesRmtRdi Raised on class: vll.VllCesInterfaceSpecifics	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: farEndRdi	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM detects a remote RDI.		
Raising condition: (('Report Alarm Status'anyBit'Remote RDI') AND ('Report Alarm'anyBit'Remote RDI'))		
Clearing condition: NOT ((('Report Alarm Status'anyBit'Remote RDI') AND ('Report Alarm'anyBit'Remote RDI')))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 20-45 CesRmtTdmFault

Alarm	Attributes	Applicable major release
Name: CesRmtTdmFault (451) Type: configurationAlarm Package: vll.CesRmtTdmFault Raised on class: vll.VllCesInterfaceSpecifics	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tdmFarEndFault	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM detects a remote TDM fault.		
Raising condition: (('Report Alarm Status'anyBit'Remote TDM Fault') AND ('Report Alarm'anyBit'Remote TDM Fault'))		
Clearing condition: NOT ((('Report Alarm Status'anyBit'Remote TDM Fault') AND ('Report Alarm'anyBit'Remote TDM Fault')))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 20-46 CesStrayPkts

Alarm	Attributes	Applicable major release
Name: CesStrayPkts (445) Type: communicationsAlarm Package: vll.CesStrayPkts Raised on class: vll.VllCesInterfaceSpecifics	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: strayPackets	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM detects received stray packets.		
Raising condition: (('Report Alarm Status'anyBit'Stray Packets') AND ('Report Alarm'anyBit'Stray Packets'))		
Clearing condition: NOT ((('Report Alarm Status'anyBit'Stray Packets') AND ('Report Alarm'anyBit'Stray Packets')))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 20-47 CircuitStpExceptionCondition

Alarm	Attributes	Applicable major release
Name: CircuitStpExceptionCondition (648) Type: SdpBindingAlarm Package: l2fwd.CircuitStpExceptionCondition Raised on class: l2fwd.CircuitStp	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: StpException	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an NE detects an STP exception condition on a SAP, for example, one-way communication or a downstream loop. The alarm clears when the STP status changes.		
Raising condition: (('STP Exception Condition' NOT EQUAL 'None') AND ('Administrative State' EQUAL 'Up'))		
Clearing condition: (('STP Exception Condition' EQUAL 'None') OR ('Administrative State' EQUAL 'Down'))		
Remedial action: Check 'STP Exception Condition' field for more details and fix the STP exception.		

Table 20-48 ClientDelegateServerStatus

Alarm	Attributes	Applicable major release
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm Package: server.ClientDelegateServerStatus Raised on class: server.ClientDelegateServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 20-49 CmuManagementFailed

Alarm	Attributes	Applicable major release
Name: CmuManagementFailed (10040) Type: communicationsAlarm Package: lte.CmuManagementFailed Raised on class: lte.CompactMobilityUnit	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ftpFailed	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when SAM fails to manage a 9430 Compact Mobility Unit due to an FTP failure.		
Raising condition: ('Management State' EQUAL 'FTP Failed')		
Clearing condition: ('Management State' EQUAL 'Managed')		
Remedial action: Verify FTP connectivity between the 5620 SAM and the 9430 Compact Mobility Unit, then re-attempt to manage.		

Table 20-50 CoherentOpticalModuleFault

Alarm	Attributes	Applicable major release
Name: CoherentOpticalModuleFault (4612) Type: communicationsAlarm Package: ethernetequipment.CoherentOpticalModuleFault Raised on class: ethernetequipment.CoherentOpticalCfg	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ModuleFault	Release: • 7.0 • 8.0
Description: The alarm is raised when a device reports module fault on a coherent optical interface.		
Raising condition: (('Configured Alarms'anyBit'Module Fault') AND ('Reported Alarms'anyBit'Module Fault'))		
Clearing condition: NOT ((('Configured Alarms'anyBit'Module Fault') AND ('Reported Alarms'anyBit'Module Fault')))		
Remedial action: Module Fault occurred.		

Table 20-51 CoherentOpticalModuleHostTxFault

Alarm	Attributes	Applicable major release
Name: CoherentOpticalModuleHostTxFault (4613) Type: communicationsAlarm Package: ethernetequipment.CoherentOpticalModuleHostTxFault Raised on class: ethernetequipment.CoherentOpticalCfg	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: CoherentModuleHostTxFault	Release: • 7.0 • 8.0
Description: The alarm is raised when a device reports Host Tx Fault on a coherent optical interface.		
Raising condition: (('Configured Alarms'anyBit'Host (Electrical Side) Transmit') AND ('Reported Alarms'anyBit'Host (Electrical Side) Transmit'))		
Clearing condition: NOT ((('Configured Alarms'anyBit'Host (Electrical Side) Transmit') AND ('Reported Alarms'anyBit'Host (Electrical Side) Transmit')))		
Remedial action: Module Host Tx Fault occurred.		

Table 20-52 CoherentOpticalModuleReferenceLockLoss

Alarm	Attributes	Applicable major release
Name: CoherentOpticalModuleReferenceLockLoss (4614) Type: communicationsAlarm Package: ethernetequipment.CoherentOpticalModuleReferenceLockLoss Raised on class: ethernetequipment.CoherentOpticalCfg	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReferenceLockLoss	Release: • 7.0 • 8.0
Description: The alarm is raised when a device reports loss of reference lock signal on a coherent optical interface.		
Raising condition: (('Configured Alarms'anyBit'Module') AND ('Reported Alarms'anyBit'Module'))		

Table 20-52 CoherentOpticalModuleReferenceLockLoss (continued)

Alarm	Attributes	Applicable major release
Clearing condition: NOT ((('Configured Alarms'anyBit'Module') AND ('Reported Alarms'anyBit'Module')))		
Remedial action: Loss of reference lock.		

Table 20-53 CoherentOpticalModuleRxFault

Alarm	Attributes	Applicable major release
Name: CoherentOpticalModuleRxFault (4615) Type: communicationsAlarm Package: ethernetequipment. CoherentOpticalModuleRxFault Raised on class: ethernetequipment. CoherentOpticalCfg	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: CoherentModuleRxFault	Release: • 7.0 • 8.0
Description: The alarm is raised when a device reports Rx Fault on a coherent optical interface.		
Raising condition: (('Configured Alarms'anyBit'Network (Optical Side) Receive') AND ('Reported Alarms'anyBit'Network (Optical Side) Receive'))		
Clearing condition: NOT ((('Configured Alarms'anyBit'Network (Optical Side) Receive') AND ('Reported Alarms'anyBit'Network (Optical Side) Receive')))		
Remedial action: Module Rx Fault occurred.		

Table 20-54 CoherentOpticalModuleTxFault

Alarm	Attributes	Applicable major release
Name: CoherentOpticalModuleTxFault (4616) Type: communicationsAlarm Package: ethernetequipment. CoherentOpticalModuleTxFault Raised on class: ethernetequipment. CoherentOpticalCfg	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: CoherentModuleTxFault	Release: • 7.0 • 8.0
Description: The alarm is raised when a device reports Tx Fault on a coherent optical interface.		
Raising condition: (('Configured Alarms'anyBit'Network (Optical Side) Transmit') AND ('Reported Alarms'anyBit'Network (Optical Side) Transmit'))		
Clearing condition: NOT ((('Configured Alarms'anyBit'Network (Optical Side) Transmit') AND ('Reported Alarms'anyBit'Network (Optical Side) Transmit')))		
Remedial action: Module Tx Fault occurred.		

Table 20-55 ConfigurationRescueFileDeleteStatus

Alarm	Attributes	Applicable major release
Name: ConfigurationRescueFileDeleteStatus (3894) Type: configurationRescueAlarm Package: rollback. ConfigurationRescueFileDeleteStatus Raised on class: rollback.RollbackNEInfo	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationRescueFileDeleteOperationPerformed	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a configuration rollback rescue file delete operation is performed.		
Remedial action: Informational - If rollback rescue file deletion status indicates failed, then, the requested rescue file might not be available or check the FTP permission for the rescue location.		

Table 20-56 ConfigurationRescueFileSaveStatus

Alarm	Attributes	Applicable major release
Name: ConfigurationRescueFileSaveStatus (3895) Type: configurationRescueAlarm Package: rollback.ConfigurationRescueFileSaveStatus Raised on class: rollback.RollbackNEInfo	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationRescueFileSaveOperationPerformed	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a configuration rollback rescue save operation is performed.		
Remedial action: Informational - If rollback rescue file creation status indicates failed, then, check the FTP permission for the rescue location.		

Table 20-57 ConfigurationRescueStatus

Alarm	Attributes	Applicable major release
Name: ConfigurationRescueStatus (3896) Type: configurationRescueAlarm Package: rollback.ConfigurationRescueStatus Raised on class: rollback.RollbackNEInfo	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationRescueOperationPerformed	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a configuration rollback rescue operation is performed.		
Remedial action: Informational - If rollback rescue status indicates failed, then, the rescue file might not be available or check the FTP permission for the rescue location.		

Table 20-58 ConfigurationRollBackFileDeleteStatus

Alarm	Attributes	Applicable major release
Name: ConfigurationRollBackFileDeleteStatus (3897) Type: configurationRollBackAlarm Package: rollback. ConfigurationRollBackFileDeleteStatus Raised on class: rollback.RollbackNEInfo	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationRollBackFileDeleteOperationPerformed	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a configuration rollback file delete operation is performed.		
Remedial action: Informational - If rollback file deletion status indicates failed, then, the requested rollback file might not be available or check the FTP permission for the rollback location..		

Table 20-59 ConfigurationRollBackFileSyncStatus

Alarm	Attributes	Applicable major release
Name: ConfigurationRollBackFileSyncStatus (3898) Type: configurationRollBackFileSyncAlarm Package: rollback. ConfigurationRollBackFileSyncStatus Raised on class: rollback.RollbackNEInfo	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationRollBackFileSyncOperationPerformed	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a configuration rollback CPM sync operation is performed.		
Remedial action: Informational - If rollback files CPM Sync status indicates failed, then, check whether standby CPM is up.		

Table 20-60 ConfigurationRollBackSaveStatus

Alarm	Attributes	Applicable major release
Name: ConfigurationRollBackSaveStatus (3899) Type: configurationRollBackAlarm Package: rollback.ConfigurationRollBackSaveStatus Raised on class: rollback.RollbackNEInfo	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationRollBackSaveOperationPerformed	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a configuration rollback save operation is performed.		
Remedial action: Informational - If rollback file creation status indicates failed, then, check the FTP permission for the rollback location.		

Table 20-61 ConfigurationRollBackStatus (rollback)

Alarm	Attributes	Applicable major release
Name: ConfigurationRollBackStatus (3684) Type: configurationRollBackAlarm Package: rollback.ConfigurationRollBackStatus Raised on class: rollback.RollbackNEInfo	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationRollBackOperationPerformed	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a configuration rollback operation is performed.		
Remedial action: Informational - If rollback status indicates failed, then, the requested checkpoint might not be available or NE configuration might need to be restored.		

Table 20-62 ConfigurationRollBackStatus (netw)

Alarm	Attributes	Applicable major release
Name: ConfigurationRollBackStatus (3684) Type: configurationRollBackAlarm Package: netw.ConfigurationRollBackStatus Raised on class: netw.NetworkElement	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationRollBackOperationPerformed	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a configuration rollback operation is performed.		
Remedial action: Informational - If rollback status indicates failed, then, the requested checkpoint might not be available or NE configuration might need to be restored.		

Table 20-63 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm Package: equipment.ContainingEquipmentAdministrativelyDown Raised on class: equipment.Port	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentAdministrativelyDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 20-64 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm Package: equipment.ContainingEquipmentMismatch Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentMismatch	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 20-65 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm Package: equipment. ContainingEquipmentOperationallyDown Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationllyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

Table 20-66 CorruptImageFile

Alarm	Attributes	Applicable major release
Name: CorruptImageFile (171) Type: configurationAlarm Package: mediation.CorruptImageFile Raised on class: mediation. AbstractSoftwareFolderDescriptor	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		

Table 20-66 CorruptImageFile (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 20-67 CpmProtectionExceedEntry

Alarm	Attributes	Applicable major release
Name: CpmProtectionExceedEntry (2925) Type: communications Package: sitesec.CpmProtectionExceedEntry Raised on class: sitesec.CpmProtExcdEntry	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: denialOfService	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a MAC packet stream has exceeded its per-source limit.		
Raising condition: ('Number of Rate Violations' NOT EQUAL '0L')		
Remedial action: A device in the network is sending traffic to the NE at a rate which is higher than expected. The source of the traffic must be identified and if the behavior is undesired then the device should be disabled. It is also possible that the threshold has been configured at a level which is lower that acceptable in which case the configuration should be align with the traffic levels expected.		

Table 20-68 CpmProtectionExceedSapIpEntry

Alarm	Attributes	Applicable major release
Name: CpmProtectionExceedSapIpEntry (3911) Type: communications Package: sitesec.CpmProtectionExceedSapIpEntry Raised on class: sitesec.CpmProtExcdSapIpEntry	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: denialOfService	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an IP packet stream has exceeded the per-source limit.		
Raising condition: ('Number of Rate Violations' NOT EQUAL '0L')		
Remedial action: A device in the network is sending traffic to the NE at a rate which is higher than expected. The source of the traffic must be identified and if the behavior is undesired then the device should be disabled. It is also possible that the threshold has been configured at a level which is lower that acceptable in which case the configuration should be align with the traffic levels expected.		

Table 20-69 CpmProtectionViolationIfEntry

Alarm	Attributes	Applicable major release
Name: CpmProtectionViolationIfEntry (2926) Type: communications Package: sitesec.CpmProtectionViolationIfEntry Raised on class: sitesec.CpmProtVioIIfEntry	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: denialOfService	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the link-specific packet arrival rate limit at the interface is violated.		
Raising condition: ('Number of Rate Violations' NOT EQUAL '0L')		
Remedial action: A device in the network is sending traffic to the NE at a rate which is higher than expected. The source of the traffic must be identified and if the behavior is undesired then the device should be disabled. It is also possible that the threshold has been configured at a level which is lower that acceptable in which case the configuration should be align with the traffic levels expected.		

Table 20-70 CpmProtectionViolationPortEntry

Alarm	Attributes	Applicable major release
Name: CpmProtectionViolationPortEntry (2927) Type: communications Package: sitesec.CpmProtectionViolationPortEntry Raised on class: sitesec.CpmProtViolPortEntry	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: denialOfService	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the link-specific packet arrival rate limit at the port is violated.		
Raising condition: (('Number of Per-port Violations' NOT EQUAL '0L') OR ('Number of Link-specific Violations' NOT EQUAL '0L'))		
Remedial action: A device in the network is sending traffic to the NE at a rate which is higher than expected. The source of the traffic must be identified and if the behavior is undesired then the device should be disabled. It is also possible that the threshold has been configured at a level which is lower that acceptable in which case the configuration should be align with the traffic levels expected.		

Table 20-71 CpmProtectionViolationSAPEntry

Alarm	Attributes	Applicable major release
Name: CpmProtectionViolationSAPEntry (2928) Type: communications Package: sitesec.CpmProtectionViolationSAPEntry Raised on class: sitesec.CpmProtViolSapEntry	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: denialOfService	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the link-specific packet arrival rate limit at the SAP is violated.		
Raising condition: ('Number of Rate Violations' NOT EQUAL '0L')		
Remedial action: A device in the network is sending traffic to the NE at a rate which is higher than expected. The source of the traffic must be identified and if the behavior is undesired then the device should be disabled. It is also possible that the threshold has been configured at a level which is lower that acceptable in which case the configuration should be align with the traffic levels expected.		

Table 20-72 CpmProtectionViolationSDPEntry

Alarm	Attributes	Applicable major release
Name: CpmProtectionViolationSDPEntry (5415) Type: communications Package: sitesec.CpmProtectionViolationSDPEntry Raised on class: sitesec.CpmProtViolSdpEntry	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: denialOfService	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the overall packet arrival rate limit at the SDP is violated.		
Raising condition: ('Number of Rate Violations' NOT EQUAL '0L')		
Remedial action: A device in the network is sending traffic to the NE at a rate which is higher than expected. The source of the traffic must be identified and if the behavior is undesired then the device should be disabled. It is also possible that the threshold has been configured at a level which is lower that acceptable in which case the configuration should be align with the traffic levels expected.		

Table 20-73 CpmProtectionViolationVdoSvcEntry

Alarm	Attributes	Applicable major release
Name: CpmProtectionViolationVdoSvcEntry (11188) Type: communications Package: sitesec.CpmProtectionViolationVdoSvcEntry Raised on class: sitesec.ServiceControlTrafficViolation	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: denialOfService	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a per-source rate limit violation is detected for a client address of a Real-time Control Protocol (RTCP) control traffic in VPLS Service.		
Raising condition: ('Number of Rate Violations' NOT EQUAL '0L')		
Remedial action: A device in the network is sending traffic to the NE at a rate which is higher than expected. The source of the traffic must be identified and if the behavior is undesired then the device should be disabled. It is also possible that the threshold has been configured at a level which is lower than acceptable, in which case the configuration should be aligned with the expected traffic levels.		

Table 20-74 CpmProtectionViolationVdoVrtrClientEntry

Alarm	Attributes	Applicable major release
Name: CpmProtectionViolationVdoVrtrClientEntry (11189) Type: communications Package: sitesec. CpmProtectionViolationVdoVrtrClientEntry Raised on class: sitesec.RouterControlTrafficViolation	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: denialOfService	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a per-source rate limit violation is detected for a client address of a Real-time Control Protocol (RTCP) control traffic in router context.		
Raising condition: ('Number of Rate Violations' NOT EQUAL '0L')		

Table 20-74 CpmProtectionViolationVdoVrtrClientEntry (continued)

Alarm	Attributes	Applicable major release
Remedial action: A device in the network is sending traffic to the NE at a rate which is higher than expected. The source of the traffic must be identified and if the behavior is undesired then the device should be disabled. It is also possible that the threshold has been configured at a level which is lower than acceptable, in which case the configuration should be aligned with the expected traffic levels.		

Table 20-75 DDMAux1HighAlarm

Alarm	Attributes	Applicable major release
Name: DDMAux1HighAlarm (495) Type: thresholdAlarm Package: equipment.DDMAux1HighAlarm Raised on class: equipment.AbstractDDM	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: aux1HighAlarm	Release: • 7.0 • 8.0
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 20-76 DDMAux1HighWarning

Alarm	Attributes	Applicable major release
Name: DDMAux1HighWarning (494) Type: thresholdAlarm Package: equipment.DDMAux1HighWarning Raised on class: equipment.AbstractDDM	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: aux1HighWarning	Release: • 7.0 • 8.0
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 20-77 DDMAux1LowAlarm

Alarm	Attributes	Applicable major release
Name: DDMAux1LowAlarm (493) Type: thresholdAlarm Package: equipment.DDMAux1LowAlarm Raised on class: equipment.AbstractDDM	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: aux1LowAlarm	Release: • 7.0 • 8.0
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP reaches the minimum threshold value.		

Table 20-77 DDMAux1LowAlarm (continued)

Alarm	Attributes	Applicable major release
Raising condition: ('failedThresholds'anyBit'Aux1 Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 20-78 DDMAux1LowWarning

Alarm	Attributes	Applicable major release
Name: DDMAux1LowWarning (492) Type: thresholdAlarm Package: equipment.DDMAux1LowWarning Raised on class: equipment.AbstractDDM	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: aux1LowWarning	Release: • 7.0 • 8.0
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP approaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 20-79 DDMAux2HighAlarm

Alarm	Attributes	Applicable major release
Name: DDMAux2HighAlarm (499) Type: thresholdAlarm Package: equipment.DDMAux2HighAlarm Raised on class: equipment.AbstractDDM	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: aux2HighAlarm	Release: • 7.0 • 8.0
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 20-80 DDMAux2HighWarning

Alarm	Attributes	Applicable major release
Name: DDMAux2HighWarning (498) Type: thresholdAlarm Package: equipment.DDMAux2HighWarning Raised on class: equipment.AbstractDDM	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: aux2HighWarning	Release: • 7.0 • 8.0

Table 20-80 DDMAux2HighWarning (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 20-81 DDMAux2LowAlarm

Alarm	Attributes	Applicable major release
Name: DDMAux2LowAlarm (497) Type: thresholdAlarm Package: equipment.DDMAux2LowAlarm Raised on class: equipment.AbstractDDM	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: aux2LowAlarm	Release: • 7.0 • 8.0
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP reaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 20-82 DDMAux2LowWarning

Alarm	Attributes	Applicable major release
Name: DDMAux2LowWarning (496) Type: communicatiothresholdAlarmnsAlarm Package: equipment.DDMAux2LowWarning Raised on class: equipment.AbstractDDM	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: aux2LowWarning	Release: • 7.0 • 8.0
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP approaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 20-83 DDMRxOpticalPowerHighAlarm

Alarm	Attributes	Applicable major release
Name: DDMRxOpticalPowerHighAlarm (491) Type: thresholdAlarm Package: equipment.DDMRxOpticalPowerHighAlarm Raised on class: equipment.AbstractDDM	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: rxOpticalPowerHighAlarm	Release: • 7.0 • 8.0
Description: The alarm is raised when the received optical power of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Rx Optical Power High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Rx Optical Power High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 20-84 DDMRxOpticalPowerHighWarning

Alarm	Attributes	Applicable major release
Name: DDMRxOpticalPowerHighWarning (490) Type: thresholdAlarm Package: equipment. DDMRxOpticalPowerHighWarning Raised on class: equipment.AbstractDDM	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: rxOpticalPowerHighWarning	Release: • 7.0 • 8.0
Description: The alarm is raised when the received optical power of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Rx Optical Power High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Rx Optical Power High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 20-85 DDMRxOpticalPowerLowAlarm

Alarm	Attributes	Applicable major release
Name: DDMRxOpticalPowerLowAlarm (489) Type: thresholdAlarm Package: equipment.DDMRxOpticalPowerLowAlarm Raised on class: equipment.AbstractDDM	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: rxOpticalPowerLowAlarm	Release: • 7.0 • 8.0
Description: The alarm is raised when the received optical power of an SFP or XFP reaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Rx Optical Power Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Rx Optical Power Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 20-86 DDMRxOpticalPowerLowWarning

Alarm	Attributes	Applicable major release
Name: DDMRxOpticalPowerLowWarning (488) Type: thresholdAlarm Package: equipment.DDMRxOpticalPowerLowWarning Raised on class: equipment.AbstractDDM	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: rxOpticalPowerLowWarning	Release: • 7.0 • 8.0
Description: The alarm is raised when the received optical power of an SFP or XFP approaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Rx Optical Power Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Rx Optical Power Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 20-87 DDMSupplyVoltageHighAlarm

Alarm	Attributes	Applicable major release
Name: DDMSupplyVoltageHighAlarm (479) Type: thresholdAlarm Package: equipment.DDMSupplyVoltageHighAlarm Raised on class: equipment.AbstractDDM	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: supplyVoltageHighAlarm	Release: • 7.0 • 8.0
Description: The alarm is raised when the supply voltage of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Supply Voltage High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Supply Voltage High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 20-88 DDMSupplyVoltageHighWarning

Alarm	Attributes	Applicable major release
Name: DDMSupplyVoltageHighWarning (478) Type: thresholdAlarm Package: equipment.DDMSupplyVoltageHighWarning Raised on class: equipment.AbstractDDM	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: supplyVoltageHighWarning	Release: • 7.0 • 8.0
Description: The alarm is raised when the supply voltage of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Supply Voltage High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Supply Voltage High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 20-89 DDMSupplyVoltageLowAlarm

Alarm	Attributes	Applicable major release
Name: DDMSupplyVoltageLowAlarm (477) Type: thresholdAlarm Package: equipment.DDMSupplyVoltageLowAlarm Raised on class: equipment.AbstractDDM	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: supplyVoltageLowAlarm	Release: • 7.0 • 8.0
Description: The alarm is raised when the supply voltage of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Supply Voltage Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Supply Voltage Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 20-90 DDMSupplyVoltageLowWarning

Alarm	Attributes	Applicable major release
Name: DDMSupplyVoltageLowWarning (476) Type: thresholdAlarm Package: equipment.DDMSupplyVoltageLowWarning Raised on class: equipment.AbstractDDM	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: supplyVoltageLowWarning	Release: • 7.0 • 8.0
Description: The alarm is raised when the supply voltage of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Supply Voltage Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Supply Voltage Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 20-91 DDMTemperatureHighAlarm

Alarm	Attributes	Applicable major release
Name: DDMTemperatureHighAlarm (475) Type: thresholdAlarm Package: equipment.DDMTemperatureHighAlarm Raised on class: equipment.AbstractDDM	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: temperatureHighAlarm	Release: • 7.0 • 8.0
Description: The alarm is raised when the temperature of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 20-92 DDMTemperatureHighWarning

Alarm	Attributes	Applicable major release
Name: DDMTemperatureHighWarning (474) Type: thresholdAlarm Package: equipment.DDMTemperatureHighWarning Raised on class: equipment.AbstractDDM	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: temperatureHighWarning	Release: • 7.0 • 8.0
Description: The alarm is raised when the temperature of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 20-93 DDMTemperatureLowAlarm

Alarm	Attributes	Applicable major release
Name: DDMTemperatureLowAlarm (473) Type: thresholdAlarm Package: equipment.DDMTemperatureLowAlarm Raised on class: equipment.AbstractDDM	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: temperatureLowAlarm	Release: • 7.0 • 8.0
Description: The alarm is raised when the temperature of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 20-94 DDMTemperatureLowWarning

Alarm	Attributes	Applicable major release
Name: DDMTemperatureLowWarning (472) Type: thresholdAlarm Package: equipment.DDMTemperatureLowWarning Raised on class: equipment.AbstractDDM	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: temperatureLowWarning	Release: • 7.0 • 8.0
Description: The alarm is raised when the temperature of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 20-95 DDMTxBiasCurrentHighAlarm

Alarm	Attributes	Applicable major release
Name: DDMTxBiasCurrentHighAlarm (483) Type: thresholdAlarm Package: equipment.DDMTxBiasCurrentHighAlarm Raised on class: equipment.AbstractDDM	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: txBiasCurrentHighAlarm	Release: • 7.0 • 8.0
Description: The alarm is raised when the transmit bias current of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 20-96 DDMTxBiasCurrentHighWarning

Alarm	Attributes	Applicable major release
Name: DDMTxBiasCurrentHighWarning (482) Type: thresholdAlarm Package: equipment.DDMTxBiasCurrentHighWarning Raised on class: equipment.AbstractDDM	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: txBiasCurrentHighWarning	Release: • 7.0 • 8.0
Description: The alarm is raised when the transmit bias current of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 20-97 DDMTxBiasCurrentLowAlarm

Alarm	Attributes	Applicable major release
Name: DDMTxBiasCurrentLowAlarm (481) Type: thresholdAlarm Package: equipment.DDMTxBiasCurrentLowAlarm Raised on class: equipment.AbstractDDM	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: txBiasCurrentLowAlarm	Release: • 7.0 • 8.0
Description: The alarm is raised when the transmit bias current of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 20-98 DDMTxBiasCurrentLowWarning

Alarm	Attributes	Applicable major release
Name: DDMTxBiasCurrentLowWarning (480) Type: thresholdAlarm Package: equipment.DDMTxBiasCurrentLowWarning Raised on class: equipment.AbstractDDM	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: txBiasCurrentLowWarning	Release: • 7.0 • 8.0
Description: The alarm is raised when the transmit bias current of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 20-99 DDMTxOutputPowerHighAlarm

Alarm	Attributes	Applicable major release
Name: DDMTxOutputPowerHighAlarm (487) Type: thresholdAlarm Package: equipment.DDMTxOutputPowerHighAlarm Raised on class: equipment.AbstractDDM	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: txOutputPowerHighAlarm	Release: • 7.0 • 8.0
Description: The alarm is raised when the output power of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 20-100 DDMTxOutputPowerHighWarning

Alarm	Attributes	Applicable major release
Name: DDMTxOutputPowerHighWarning (486) Type: thresholdAlarm Package: equipment.DDMTxOutputPowerHighWarning Raised on class: equipment.AbstractDDM	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: txOutputPowerHighWarning	Release: • 7.0 • 8.0
Description: The alarm is raised when the output power of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 20-101 DDMTxOutputPowerLowAlarm

Alarm	Attributes	Applicable major release
Name: DDMTxOutputPowerLowAlarm (485) Type: thresholdAlarm Package: equipment.DDMTxOutputPowerLowAlarm Raised on class: equipment.AbstractDDM	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: txOutputPowerLowAlarm	Release: • 7.0 • 8.0
Description: The alarm is raised when the output power of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 20-102 DDMTxOutputPowerLowWarning

Alarm	Attributes	Applicable major release
Name: DDMTxOutputPowerLowWarning (484) Type: thresholdAlarm Package: equipment.DDMTxOutputPowerLowWarning Raised on class: equipment.AbstractDDM	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: txOutputPowerLowWarning	Release: • 7.0 • 8.0
Description: The alarm is raised when the output power of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 20-103 DeterministicNatMapOperDown

Alarm	Attributes	Applicable major release
Name: DeterministicNatMapOperDown (9570) Type: equipmentAlarm Package: nat.DeterministicNatMapOperDown Raised on class: nat.DeterministicNatMap	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: DeterministicNatMapOper-Down	Release: • 7.0 • 8.0
Description: The alarm is raised when the Operational State of a Deterministic NAT Map is Down.		
Raising condition: (('Operational State' EQUAL 'Down'))		
Clearing condition: (('Operational State' EQUAL 'Up'))		
Remedial action: Please verify the configuration.		

Table 20-104 DeterministicNatPrefixOperDown

Alarm	Attributes	Applicable major release
Name: DeterministicNatPrefixOperDown (9571) Type: equipmentAlarm Package: nat.DeterministicNatPrefixOperDown Raised on class: nat.DeterministicNatPrefix	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: DeterministicNatPrefixOper-Down	Release: • 7.0 • 8.0
Description: The alarm is raised when the Operational State of a Deterministic NAT Prefix is Down and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'InService') AND ('Operational State' EQUAL 'Down'))		
Clearing condition: (('Operational State' EQUAL 'Up'))		
Remedial action: Please verify the configuration.		

Table 20-105 Df2PeerDown

Alarm	Attributes	Applicable major release
Name: Df2PeerDown (4798) Type: EpcLIAlarm Package: lteli.Df2PeerDown Raised on class: lteli.DFPeerCardGroup	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: Df2PeerDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised on a Delivery Function 2 that is operationally down.		
Raising condition: ('DF2 Operational State' NOT EQUAL 'In Service')		
Clearing condition: ('DF2 Operational State' EQUAL 'In Service')		
Remedial action: A TCP connection failure associated with a Delivery Function 2 has occurred. The underlying transport network is unreliable. Please correct the issue within the transport network.		

Table 20-106 Df3PeerDown

Alarm	Attributes	Applicable major release
Name: Df3PeerDown (4799) Type: EpcLIAlarm Package: lteli.Df3PeerDown Raised on class: lteli.DFPeerCardGroup	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: Df3PeerDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised on a Delivery Function 3 that is operationally down.		
Raising condition: ('DF3 Operational State' NOT EQUAL 'In Service')		
Clearing condition: ('DF3 Operational State' EQUAL 'In Service')		
Remedial action: A TCP connection failure associated with a Delivery Function 3 has occurred. The underlying transport network is unreliable. Please correct the issue within the transport network.		

Table 20-107 DHCPPeerDown

Alarm	Attributes	Applicable major release
Name: DHCPPeerDown (5040) Type: EpcAlarm Package: ltegw.DHCPPeerDown Raised on class: ltegw.PdnDhcpSGPeer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the path management state of a DHCP peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Up')		
Clearing condition: ('Path Management State' EQUAL 'Up')		
Remedial action: A DHCP server group (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 20-108 DHCPPoolFailoverStateChange

Alarm	Attributes	Applicable major release
Name: DHCPPoolFailoverStateChange (5168) Type: configurationAlarm Package: dhcp.DHCPPoolFailoverStateChange Raised on class: dhcp.LocalDhcpPoolFailover	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: DHCPPoolFailoverStateChanged	Release: • 7.0 • 8.0
Description: The alarm is raised when the Local DHCP Pool Failover has a state other than Normal.		
Raising condition: (('state' NOT EQUAL 'Normal'))		
Clearing condition: (('state' EQUAL 'Normal'))		
Remedial action: This alarm is raised when the operational state of a particular Local DHCP Pool Failover is other than Normal.\nThis can occur if the failover configuration is incorrect, disabled or if a pool failover is in progress.\nThis alarm is cleared implicitly when the DHCP Pool Failover state returns to Normal.		

Table 20-109 DHCPServerFailoverStateChange

Alarm	Attributes	Applicable major release
Name: DHCPServerFailoverStateChange (4986) Type: configurationAlarm Package: dhcp.DHCPServerFailoverStateChange Raised on class: dhcp.LocalDhcpServerFailover	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: DHCPServerFailoverStateChanged	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the Local DHCP Server Failover has a state other than Normal.		
Raising condition: (('state' NOT EQUAL 'Normal'))		

Table 20-109 DHCPServerFailoverStateChange (continued)

Alarm	Attributes	Applicable major release
Clearing condition: (('state' EQUAL 'Normal'))		
Remedial action: This alarm is raised when operational state of a particular Local DHCP Server Failover is other than Normal.\nThis can occur if the failover configuration is incorrect, disabled or if a server failover is in progress.\nThis alarm will be cleared implicitly when the DHCP Server Failover state returns to Normal.		

Table 20-110 DHCPSFoLeaseUpdateFailedAddressConflict

Alarm	Attributes	Applicable major release
Name: DHCPSFoLeaseUpdateFailedAddressConflict (4977) Type: configurationAlarm Package: dhcp. DHCPSFoLeaseUpdateFailedAddressConflict Raised on class: dhcp.LocalDhcpServerFailover	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DHCPSFoLeaseUpdate-FailedAddressConflict	Release: • 6.0 • 7.0 • 8.0
Description: This alarm is raised when a address conflict lease update received from the failover peer cannot be processed successfully. This DHCP server instance has already leased another address to this host.		
Remedial action: This alarm indicates the Local DHCP Server Failover lease update has failed. Packet received from the failover peer, cannot be processed successfully. This DHCP server instance has already leased another address to this host. Please ensure all configuration is correct.		

Table 20-111 DHCPSFoLeaseUpdateFailedfoShutdown

Alarm	Attributes	Applicable major release
Name: DHCPSFoLeaseUpdateFailedfoShutdown (4985) Type: configurationAlarm Package: dhcp. DHCPSFoLeaseUpdateFailedfoShutdown Raised on class: dhcp.LocalDhcpServerFailover	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DHCPSFoLeaseUpdate-FailedfoShutdown	Release: • 6.0 • 7.0 • 8.0
Description: This alarm is raised when a shutdown lease update received from the failover peer cannot be processed successfully. The failover state of this DHCP Server instance is 'shutdown'.		
Remedial action: This alarm indicates the Local DHCP Server Failover lease update has failed. Packet received from the failover peer, cannot be processed successfully. The failover state of this DHCP Server instance is 'shutdown'. Please ensure all configuration is correct.		

Table 20-112 DHCPSFoLeaseUpdateFailedHostConflict

Alarm	Attributes	Applicable major release
Name: DHCPSFoLeaseUpdateFailedHostConflict (4978) Type: configurationAlarm Package: dhcp. DHCPSFoLeaseUpdateFailedHostConflict Raised on class: dhcp.LocalDhcpServerFailover	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DHCPSFoLeaseUpdate-FailedHostConflict	Release: • 6.0 • 7.0 • 8.0
Description: This alarm is raised when a host conflict lease update received from the failover peer cannot be processed successfully. This DHCP server instance has already leased this address to another host.		
Remedial action: This alarm indicates the Local DHCP Server Failover lease update has failed. Packet received from the failover peer, cannot be processed successfully. This DHCP server instance has already leased this address to another host. Please ensure all configuration is correct.		

Table 20-113 DHCPSFoLeaseUpdateFailedLeaseExpired

Alarm	Attributes	Applicable major release
Name: DHCPSFoLeaseUpdateFailedLeaseExpired (4979) Type: configurationAlarm Package: dhcp. DHCPSFoLeaseUpdateFailedLeaseExpired Raised on class: dhcp.LocalDhcpServerFailover	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DHCPSFoLeaseUpdate-FailedLeaseExpired	Release: • 6.0 • 7.0 • 8.0
Description: This alarm is raised when a lease expired lease update received from the failover peer cannot be processed successfully. The lease received from the peer has expired.		
Remedial action: This alarm indicates the Local DHCP Server Failover lease update has failed. Packet received from the failover peer, cannot be processed successfully. The lease received from the peer has expired. Please ensure all configuration is correct.		

Table 20-114 DHCPSFoLeaseUpdateFailedMaxLeaseReached

Alarm	Attributes	Applicable major release
Name: DHCPSFoLeaseUpdateFailedMax-LeaseReached (4980) Type: configurationAlarm Package: dhcp. DHCPSFoLeaseUpdateFailedMaxLeaseReached Raised on class: dhcp.LocalDhcpServerFailover	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DHCPSFoLeaseUpdate-FailedMaxLeaseReached	Release: • 6.0 • 7.0 • 8.0
Description: This alarm is raised when a maximum reached lease update received from the failover peer cannot be processed successfully. The maximum number of leases is already reached.		
Remedial action: This alarm indicates the Local DHCP Server Failover lease update has failed. Packet received from the failover peer, cannot be processed successfully. The maximum number of leases is already reached. Please ensure all configuration is correct.		

Table 20-115 DHCPSFoLeaseUpdateFailedPeerConflict

Alarm	Attributes	Applicable major release
Name: DHCPSFoLeaseUpdateFailedPeerConflict (4981) Type: configurationAlarm Package: dhcp. DHCPSFoLeaseUpdateFailedPeerConflict Raised on class: dhcp.LocalDhcpServerFailover	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DHCPSFoLeaseUpdate-FailedPeerConflict	Release: • 6.0 • 7.0 • 8.0
Description: This alarm is raised when a peer conflict lease update received from the failover peer cannot be processed successfully. The failover peer has leased an address within a subnet range of which the failover control is set to 'local' on this local DHCP server instance.		
Remedial action: This alarm indicates the Local DHCP Server Failover lease update has failed. Packet received from the failover peer, cannot be processed successfully. The failover peer has leased an address within a subnet range of which the failover control is set to 'local' on this local DHCP server instance. Please ensure all configuration is correct.		

Table 20-116 DHCPSFoLeaseUpdateFailedPersistenceCongested

Alarm	Attributes	Applicable major release
Name: DHCPSFoLeaseUpdateFailedPer-sistenceCongested (4982) Type: configurationAlarm Package: dhcp. DHCPSFoLeaseUpdateFailedPersistenceCongested Raised on class: dhcp.LocalDhcpServerFailover	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DHCPSFoLeaseUpdate-FailedPersistenceCongested	Release: • 6.0 • 7.0 • 8.0
Description: This alarm is raised when a persistence congested lease update received from the failover peer cannot be processed successfully. The lease received from the peer can not be persistently stored because the persistence subsystem is in overload.		
Remedial action: This alarm indicates the Local DHCP Server Failover lease update has failed. Packet received from the failover peer, cannot be processed successfully. The lease received from the peer can not be persistently stored because the persistence subsystem is in overload. Please ensure all configuration is correct.		

Table 20-117 DHCPSFoLeaseUpdateFailedRangeNotFound

Alarm	Attributes	Applicable major release
Name: DHCPSFoLeaseUpdateFailedRangeNotFound (4983) Type: configurationAlarm Package: dhcp. DHCPSFoLeaseUpdateFailedRangeNotFound Raised on class: dhcp.LocalDhcpServerFailover	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DHCPSFoLeaseUpdateFaile-dRangeNotFound	Release: • 6.0 • 7.0 • 8.0
Description: This alarm is raised when a range not found lease update received from the failover peer cannot be processed successfully. No valid include range for this lease could be found.		
Remedial action: This alarm indicates the Local DHCP Server Failover lease update has failed. Packet received from the failover peer, cannot be processed successfully. No valid include range for this lease could be found. Please ensure all configuration is correct.		

Table 20-118 DHCPSFoLeaseUpdateFailedSubnetNotFound

Alarm	Attributes	Applicable major release
Name: DHCPSFoLeaseUpdateFailedSubnetNotFound (4984) Type: configurationAlarm Package: dhcp. DHCPSFoLeaseUpdateFailedSubnetNotFound Raised on class: dhcp.LocalDhcpServerFailover	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DHCPSFoLeaseUpdate-FailedSubnetNotFound	Release: • 6.0 • 7.0 • 8.0
Description: This alarm is raised when a subnet not found lease update received from the failover peer cannot be processed successfully. No valid subnet for this lease could be found.		
Remedial action: This alarm indicates the Local DHCP Server Failover lease update has failed. Packet received from the failover peer, cannot be processed successfully. No valid subnet for this lease could be found. Please ensure all configuration is correct.		

Table 20-119 DiamAppMessageDropped

Alarm	Attributes	Applicable major release
Name: DiamAppMessageDropped (5175) Type: processingErrorAlarm Package: diameter.DiamAppMessageDropped Raised on class: diameter.DiameterPeer	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: diamAppMessageDropped	Release: • 7.0
Description: The alarm is raised when the Diameter protocol has dropped a message		
Remedial action: The recovery action depends on the exact cause of the failure. See the Additional Text field in the Alarm Info form for a specific cause for the failure.		

Table 20-120 downgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: downgradedCardAlarm (256) Type: softwareAlarm Package: equipment.downgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: downgradedCard	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 20-121 DS1E1AlarmIndicationSignal

Alarm	Attributes	Applicable major release
Name: DS1E1AlarmIndicationSignal (112) Type: communicationsAlarm Package: tdmequipment.DS1E1AlarmIndicationSignal Raised on class: tdmequipment.DS1E1ChannelSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: alarmIndicationSignal	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an NE reports that a specific DS1 or E1 channel has an AIS alarm condition.		
Raising condition: (('Outstanding Alarms'anyBit'Alarm Indication Signal') AND ('Report Alarms'anyBit'Alarm Indication Signal'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Alarm Indication Signal') AND ('Report Alarms'anyBit'Alarm Indication Signal')))		
Remedial action: Informational only.		

Table 20-122 DS1E1Looped

Alarm	Attributes	Applicable major release
Name: DS1E1Looped (126) Type: communicationsAlarm Package: tdmequipment.DS1E1Looped Raised on class: tdmequipment.DS1E1ChannelSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: farEndLoopback	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an NE reports that a specific DS1 or E1 channel has a remote loopback alarm condition.		
Raising condition: (('Outstanding Alarms'anyBit'Far end wants the near end to loopback') AND ('Report Alarms'anyBit'Far end wants the near end to loopback'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Far end wants the near end to loopback') AND ('Report Alarms'anyBit'Far end wants the near end to loopback')))		
Remedial action: Informational only.		

Table 20-123 DS1E1LossOfSignal

Alarm	Attributes	Applicable major release
Name: DS1E1LossOfSignal (124) Type: communicationsAlarm Package: tdmequipment.DS1E1LossOfSignal Raised on class: tdmequipment.DS1E1ChannelSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lossOfSignal	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an NE reports that a specific DS1 or E1 channel has an LOS alarm condition.		
Raising condition: (('Outstanding Alarms'anyBit'Loss of Signal') AND ('Report Alarms'anyBit'Loss of Signal'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Loss of Signal') AND ('Report Alarms'anyBit'Loss of Signal')))		
Remedial action: Informational only.		

Table 20-124 DS1E1OutOfFrame

Alarm	Attributes	Applicable major release
Name: DS1E1OutOfFrame (125) Type: communicationsAlarm Package: tdmequipment.DS1E1OutOfFrame Raised on class: tdmequipment.DS1E1ChannelSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: outOfFrame	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an NE reports that a specific DS1 or E1 channel has an OOF alarm condition.		
Raising condition: (('Outstanding Alarms'anyBit'Out Of Frame') AND ('Report Alarms'anyBit'Out Of Frame'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Out Of Frame') AND ('Report Alarms'anyBit'Out Of Frame')))		
Remedial action: Informational only.		

Table 20-125 DS1E1ResourceAvailabilityIndicator

Alarm	Attributes	Applicable major release
Name: DS1E1ResourceAvailabilityIndicator (114) Type: communicationsAlarm Package: tdmequipment.DS1E1ResourceAvailabilityIndicator Raised on class: tdmequipment.DS1E1ChannelSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceAvailabilityIndicator	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an NE reports that a specific DS1 or E1 channel has an RAI alarm condition.		
Raising condition: (('Outstanding Alarms'anyBit'Resource Availability Indicator') AND ('Report Alarms'anyBit'Resource Availability Indicator'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Resource Availability Indicator') AND ('Report Alarms'anyBit'Resource Availability Indicator')))		
Remedial action: Informational only.		

Table 20-126 DS1E1SignalDegradation

Alarm	Attributes	Applicable major release
Name: DS1E1SignalDegradation (500) Type: communicationsAlarm Package: tdmequipment.DS1E1SignalDegradation Raised on class: tdmequipment.DS1E1ChannelSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: signalDegradation	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an NE reports that a specific DS1 or E1 channel has an SD alarm condition.		
Raising condition: (('Outstanding Alarms'anyBit'Signal Degradation') AND ('Report Alarms'anyBit'Signal Degradation'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Signal Degradation') AND ('Report Alarms'anyBit'Signal Degradation')))		

Table 20-126 DS1E1SignalDegradation (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational only.		

Table 20-127 DS1E1SignalFailure

Alarm	Attributes	Applicable major release
Name: DS1E1SignalFailure (501) Type: communicationsAlarm Package: tdmequipment.DS1E1SignalFailure Raised on class: tdmequipment. DS1E1ChannelSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: signalFailure	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an NE reports that a specific DS1 or E1 channel has an SF alarm condition.		
Raising condition: (('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure')))		
Remedial action: Informational only.		

Table 20-128 DS3E3AlarmIndicationSignal

Alarm	Attributes	Applicable major release
Name: DS3E3AlarmIndicationSignal (115) Type: communicationsAlarm Package: tdmequipment.DS3E3AlarmIndicationSignal Raised on class: tdmequipment. DS3E3ChannelSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: alarmIndicationSignal	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an NE reports that a specific DS3 or E3 channel has an AIS alarm condition.		
Raising condition: (('Outstanding Alarms'anyBit'Alarm Indication Signal') AND ('Report Alarms'anyBit'Alarm Indication Signal'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Alarm Indication Signal') AND ('Report Alarms'anyBit'Alarm Indication Signal')))		
Remedial action: Informational only.		

Table 20-129 DS3E3Looped

Alarm	Attributes	Applicable major release
Name: DS3E3Looped (120) Type: communicationsAlarm Package: tdmequipment.DS3E3Looped Raised on class: tdmequipment. DS3E3ChannelSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: farEndLoopback	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an NE reports that a specific DS3 or E3 channel has a remote loopback alarm condition.		

Table 20-129 DS3E3Looped (continued)

Alarm	Attributes	Applicable major release
Raising condition: (('Outstanding Alarms'anyBit'Far end wants the near end to loopback') AND ('Report Alarms'anyBit'Far end wants the near end to loopback'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Far end wants the near end to loopback') AND ('Report Alarms'anyBit'Far end wants the near end to loopback')))		
Remedial action: Informational only.		

Table 20-130 DS3E3LossOfSignal

Alarm	Attributes	Applicable major release
Name: DS3E3LossOfSignal (116) Type: communicationsAlarm Package: tdmequipment.DS3E3LossOfSignal Raised on class: tdmequipment. DS3E3ChannelSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lossOfSignal	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an NE reports that a specific DS3 or E3 channel has an LOS alarm condition.		
Raising condition: (('Outstanding Alarms'anyBit'Loss of Signal') AND ('Report Alarms'anyBit'Loss of Signal'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Loss of Signal') AND ('Report Alarms'anyBit'Loss of Signal')))		
Remedial action: Informational only.		

Table 20-131 DS3E3OutOfFrame

Alarm	Attributes	Applicable major release
Name: DS3E3OutOfFrame (117) Type: communicationsAlarm Package: tdmequipment.DS3E3OutOfFrame Raised on class: tdmequipment. DS3E3ChannelSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: outOfFrame	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an NE reports that a specific DS3 or E3 channel has an OOF alarm condition.		
Raising condition: (('Outstanding Alarms'anyBit'Out Of Frame') AND ('Report Alarms'anyBit'Out Of Frame'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Out Of Frame') AND ('Report Alarms'anyBit'Out Of Frame')))		
Remedial action: Informational only.		

Table 20-132 DS3E3ResourceAvailability

Alarm	Attributes	Applicable major release
Name: DS3E3ResourceAvailability (119) Type: communicationsAlarm Package: tdmequipment.DS3E3ResourceAvailability Raised on class: tdmequipment.DS3E3ChannelSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceAvailabilityIndicator	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an NE reports that a specific DS3 or E3 channel has an RAI alarm condition.		
Raising condition: (('Outstanding Alarms'anyBit'Resource Availability Indicator') AND ('Report Alarms'anyBit'Resource Availability Indicator'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Resource Availability Indicator') AND ('Report Alarms'anyBit'Resource Availability Indicator')))		
Remedial action: Informational only.		

Table 20-133 EfmOamAlarm

Alarm	Attributes	Applicable major release
Name: EfmOamAlarm (4617) Type: equipmentAlarm Package: ethernetequipment.EfmOamAlarm Raised on class: ethernetequipment.Dot3Oam	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EFMOAMOperationalstate-OutofService	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when EFM Ignore status is Enabled and EFM Operation Status has a fault that is not propagated to the Physical Port Operational State.		
Raising condition: ((('Operational Status' EQUAL 'Link Fault') OR ('Operational Status' EQUAL 'Active Send Local')) AND ('Ignore EFM State' EQUAL 'true'))		
Clearing condition: ((('Operational Status' NOT EQUAL 'Link Fault') AND ('Operational Status' NOT EQUAL 'Active Send Local')) OR ('Ignore EFM State' EQUAL 'false'))		
Remedial action: Informational - The alarm indicates that EFM has detected an error condition but has not affected the operation state of the port.		

Table 20-134 EpcDown

Alarm	Attributes	Applicable major release
Name: EpcDown (743) Type: EpcAlarm Package: lte.EpcDown Raised on class: lte.EPCGateway	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EpcDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an EPC instance is operationally down but administratively up.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('Administrative State' EQUAL 'Up'))		

Table 20-134 EpcDown (continued)

Alarm	Attributes	Applicable major release
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This alarm is an indication that the GW card(s) the EPC instance is running on is operationally down. Ensure that the appropriate number of GW card(s) installed in the chassis and are operational.		

Table 20-135 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm Package: equipment.EquipmentAdministrativelyDown Raised on class: equipment.Equipment	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentAdministratively-Down	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 20-136 EquipmentDegraded

Alarm	Attributes	Applicable major release
Name: EquipmentDegraded (604) Type: equipmentAlarm Package: equipment.EquipmentDegraded Raised on class: equipment.FanTray	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: singleFanFailure	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a single fan fails. The chassis attempts to continue operating within the normal temperature range using only the remaining fans.		
Raising condition: ('Device State' EQUAL 'MinorFailure')		
Clearing condition: ('Device State' NOT EQUAL 'MinorFailure')		
Remedial action: The failed fan unit should be replaced.		

Table 20-137 EquipmentDown

Alarm	Attributes	Applicable major release
Name: EquipmentDown (10) Type: equipmentAlarm Package: equipment.EquipmentDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: inoperableEquipment	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 20-138 EquipmentFailure

Alarm	Attributes	Applicable major release
Name: EquipmentFailure (145) Type: equipmentAlarm Package: equipment.EquipmentFailure Raised on class: equipment.ReplaceableUnit	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cardFailure	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a I/O card or control processor or power-supply tray reports a failure. When the object type is ControlProcessor, a CPM may be unable to boot. When the object type is Power Supply Tray and the alarm is raised during device discovery, a power-supply tray may be out of service. When the object type is a Power Supply Tray and the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: ('operationalState' EQUAL 'Failed')		
Clearing condition: ('operationalState' NOT EQUAL 'Failed')		
Remedial action: If the alarm indicates that the CPM card or I/O card has a fault, remove the card and reset it. If this does not clear the alarm then please contact your Nokia support representative for assistance. If the alarm indicates that the Power Supply tray is out of service ensure that the NE is properly connected to power. If the problem persists please contact your Nokia support representative for assistance.		

Table 20-139 EquipmentInTest

Alarm	Attributes	Applicable major release
Name: EquipmentInTest (11) Type: equipmentAlarm Package: equipment.EquipmentInTest Raised on class: equipment.Equipment	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentInTest	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when equipment enters a diagnostic state.		

Table 20-139 EquipmentInTest (continued)

Alarm	Attributes	Applicable major release
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 20-140 EquipmentMismatch

Alarm	Attributes	Applicable major release
Name: EquipmentMismatch (9) Type: equipmentAlarm Package: equipment.EquipmentMismatch Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentTypeMismatch	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 20-141 EquipmentRemoved

Alarm	Attributes	Applicable major release
Name: EquipmentRemoved (8) Type: equipmentAlarm Package: equipment.EquipmentRemoved Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: ((('isEquipped' EQUAL 'false') OR ('compositeEquipmentState' EQUAL 'Removed')) AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Removed') AND ('isEquipped' EQUAL 'true'))		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 20-142 EthCSF

Alarm	Attributes	Applicable major release
Name: EthCSF (3721) Type: oamAlarm Package: ethernetoam.EthCSF Raised on class: ethernetoam.Mep	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EthCSF	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a MEP receives a CCM frame with an interface status TLV of 'Down'.		
Remedial action: This alarm is raised when a MEP receives a CCM frame with an interface status TLV of Down.		

Table 20-143 EthernetPortConfiguredLoopback

Alarm	Attributes	Applicable major release
Name: EthernetPortConfiguredLoopback (801) Type: configurationAlarm Package: ethernetequipment. EthernetPortConfiguredLoopback Raised on class: ethernetequipment. EthernetPortSpecifics	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ethernetPortConfiguredLoop-back	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a timed loopback is in effect for an Ethernet port.		
Raising condition: (('Type' NOT EQUAL 'None'))		
Clearing condition: (('Type' EQUAL 'None'))		
Remedial action: This alarm has been raised bye the node because "Timed Loopback" option of the specific port's Ethernet property has been enabled. To resolve this problem from "Ethernet" tab of "Physical Port" properties form configure "Timed Loopback" Type property as "None".		

Table 20-144 EthernetPortDuplicateLane

Alarm	Attributes	Applicable major release
Name: EthernetPortDuplicateLane (3557) Type: communicationsAlarm Package: ethernetequipment. EthernetPortDuplicateLane Raised on class: ethernetequipment. EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: DuplicateLane	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a device reports a Duplicate Lane on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane')))		

Table 20-144 EthernetPortDuplicateLane (continued)

Alarm	Attributes	Applicable major release
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 20-145 EthernetPortHighBer

Alarm	Attributes	Applicable major release
Name: EthernetPortHighBer (307) Type: communicationsAlarm Package: ethernetequipment.EthernetPortHighBer Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: HighBer	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a device reports a high bit-error rate on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate')))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 20-146 EthernetPortLocalFault

Alarm	Attributes	Applicable major release
Name: EthernetPortLocalFault (305) Type: communicationsAlarm Package: ethernetequipment.EthernetPortLocalFault Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LocalFault	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a device reports a local fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault')))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 20-147 EthernetPortNoAmLock

Alarm	Attributes	Applicable major release
Name: EthernetPortNoAmLock (3558) Type: communicationsAlarm Package: ethernetequipment.EthernetPortNoAmLock Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NoAmLock	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a device reports a No Am Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock')))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 20-148 EthernetPortNoBlockLock

Alarm	Attributes	Applicable major release
Name: EthernetPortNoBlockLock (3559) Type: communicationsAlarm Package: ethernetequipment.EthernetPortNoBlockLock Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NoBlockLock	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a device reports a No Block Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock')))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 20-149 EthernetPortNoFrameLock

Alarm	Attributes	Applicable major release
Name: EthernetPortNoFrameLock (306) Type: communicationsAlarm Package: ethernetequipment.EthernetPortNoFrameLock Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NoFrameLock	Release: • 6.0 • 7.0 • 8.0

Table 20-149 EthernetPortNoFrameLock (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when a device reports No Frame Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock')))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 20-150 EthernetPortRemoteFault

Alarm	Attributes	Applicable major release
Name: EthernetPortRemoteFault (304) Type: communicationsAlarm Package: ethernetequipment. EthernetPortRemoteFault Raised on class: ethernetequipment. EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: RemoteFault	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a device reports a remote fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault')))		
Remedial action: One of the following conditions exists on the remote physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 20-151 EthernetPortSignalFailure

Alarm	Attributes	Applicable major release
Name: EthernetPortSignalFailure (303) Type: communicationsAlarm Package: ethernetequipment. EthernetPortSignalFailure Raised on class: ethernetequipment. EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SignalFailure	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a device reports a signal failure on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure')))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 20-152 ExternalTimingReferenceNotQualified

Alarm	Attributes	Applicable major release
Name: ExternalTimingReferenceNotQualified (548) Type: communicationsAlarm Package: sonet.ExternalTimingReferenceNotQualified Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: timingReferenceNotQualified	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the External timing reference on an NE is not in the Qualified state.		
Raising condition: (('Qualified For Use' EQUAL 'Not Qualified') AND ('Administrative State' NOT EQUAL 'Down'))		
Clearing condition: (('Qualified For Use' NOT EQUAL 'Not Qualified') OR ('Administrative State' EQUAL 'Down'))		
Remedial action: Informational		

Table 20-153 FanFailure (equipment)

Alarm	Attributes	Applicable major release
Name: FanFailure (624) Type: equipmentAlarm Package: equipment.FanFailure Raised on class: equipment.FanTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fanFailure	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the associated fan is not operationally Up.		
Raising condition: (('Device State' EQUAL 'Failed') OR ('Device State' EQUAL 'Unknown') OR ('Device State' EQUAL 'OutOfservice'))		
Clearing condition: ('Device State' EQUAL 'OK')		
Remedial action: Remove and reset the fan unit. If this does not resolve the problem replace the fan.		

Table 20-154 FanTrayRemoved

Alarm	Attributes	Applicable major release
Name: FanTrayRemoved (569) Type: equipmentAlarm Package: equipment.FanTrayRemoved Raised on class: equipment.FanTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: FanTrayRemoved	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the deviceState attribute has a value of deviceNotEquipped.		
Raising condition: ('Device State' EQUAL 'Not Equipped')		
Clearing condition: ('Device State' NOT EQUAL 'Not Equipped')		
Remedial action: Informational - a fan tray has been removed from the NE.		

Table 20-155 ForwardingTableSizeLimitReached

Alarm	Attributes	Applicable major release
Name: ForwardingTableSizeLimitReached (164) Type: resourceAlarm Package: l2fwd.ForwardingTableSizeLimitReached Raised on class: l2fwd.SiteFib	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceLimitReached	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the number of MAC address entries in the FIB reaches or exceeds the VPLS site high watermark specified by l2fwd.SiteFib.highWatermark. The alarm clears when the number of MAC address entries in the FIB drops below the VPLS site low watermark specified by l2fwd.SiteFib.lowWatermark. The alarm can be raised against a VPLS site, L2 access interface, or spoke SDP binding.		
Raising condition: (('Entries' >=" 'Size') OR ('Entries' >= (('High Watermark' * 'Size') / 100.0)))"		
Clearing condition: (('Entries' < 'Size') AND (('High Watermark' EQUAL '0L') OR ('Entries' < (('Low Watermark' * 'Size') / 100.0))) AND (('Low Watermark' EQUAL '0L') OR ('Entries' < (('Low Watermark' * 'Size') / 100.0))))		
Remedial action: Informational		

Table 20-156 FrameSizeProblem (svt)

Alarm	Attributes	Applicable major release
Name: FrameSizeProblem (37) Type: configurationAlarm Package: svt.FrameSizeProblem Raised on class: svt.SdpBinding	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: frameSizeProblem	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('Operational State' EQUAL 'MTU Mismatch') OR ('Operational State' EQUAL 'Tunnel MTU Too Small') OR ('State Cause'anyBit'Tunnel MTU Too Small') OR ('State Cause'anyBit'Service MTU Mismatch'))		
Clearing condition: (('Operational State' NOT EQUAL 'MTU Mismatch') AND ('Operational State' NOT EQUAL 'Tunnel MTU Too Small') AND NOT ((('State Cause'anyBit'Tunnel MTU Too Small') OR ('State Cause'anyBit'Service MTU Mismatch'))))		
Remedial action: The MTU value must be changed such that is is less than or equal to the supported MTU size value.		

Table 20-157 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major release
Name: FrameSizeProblem (37) Type: configurationAlarm Package: netw.FrameSizeProblem Raised on class: netw.StatefullConnectableInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: frameSizeProblem	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL '0L'))		

Table 20-157 FrameSizeProblem (netw) (continued)

Alarm	Attributes	Applicable major release
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL '0L'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 20-158 GaPeerDown

Alarm	Attributes	Applicable major release
Name: GaPeerDown (3303) Type: EpcAlarm Package: lteggsn.GaPeerDown Raised on class: lteggsn.GaPeer	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 20-159 GRETunnelDown

Alarm	Attributes	Applicable major release
Name: GRETunnelDown (3326) Type: serviceAlarm Package: svt.GRETunnelDown Raised on class: svt.GRETunnel	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tunnelDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the IP/GRE tunnel Operational State changes to Down and the Administrative State is Up.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('Administrative State' EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The situation may occur if the underlying physical port is down either because of administrative disabling or a fault on the port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable.		

Table 20-160 GroupDown

Alarm	Attributes	Applicable major release
Name: GroupDown (69) Type: ProtocolAlarm Package: rip.GroupDown Raised on class: rip.Group	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a RIP group has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('administrativeState' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('administrativeState' NOT EQUAL 'Up'))		
Remedial action: The RIP Group is down while it is administratively up. Please check RIP related configuration e.g., the RIP is not shutdown.		

Table 20-161 GroupInterfaceDown

Alarm	Attributes	Applicable major release
Name: GroupInterfaceDown (441) Type: GroupInterfaceAlarm Package: service.GroupInterfaceDown Raised on class: service.GroupInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM detects that a group interface is operationally down. The alarm clears when the group interface is operationally up.		
Raising condition: ('operationalState' NOT EQUAL 'Up')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Check the configuration and the underlying physical interface.		

Table 20-162 GwCdfDownAlarm

Alarm	Attributes	Applicable major release
Name: GwCdfDownAlarm (2956) Type: communicationsAlarm Package: lte.GwCdfDownAlarm Raised on class: lte.RfReferencePoint	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: connectionDown	Release: • 6.0 • 7.0 • 8.0
Description: A tmnxMobGwCdfDownAlarm notification is generated when both the primary and the secondary Charging Data Functions (CDFs) are down for active Rf diameter sessions		
Remedial action: The Charging Data Functions (primary and secondary) are down for a Rf reference point. The CDF function appears down for one of the following reasons: the underlying IP or physical interface is down, the far end diameter peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end diameter peer is operational and check that the underlying transport network is up.		

Table 20-163 GwCfCapacityAlarmMajor

Alarm	Attributes	Applicable major release
Name: GwCfCapacityAlarmMajor (2957) Type: equipmentAlarm Package: lte.GwCfCapacityAlarmMajor Raised on class: lte.AGWReferencePoint	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: resourceFull	Release: • 6.0 • 7.0 • 8.0
Description: A tmnxMobGwCfCapacityAlarmMajor notification is generated when compact flash capacity reaches 95% limit.		
Remedial action: The compact flash device of the MGW is approaching capacity. The contents of the device must be analysed to identify redundant content which can be deleted.		

Table 20-164 GwCfCapacityAlarmMinor

Alarm	Attributes	Applicable major release
Name: GwCfCapacityAlarmMinor (2958) Type: equipmentAlarm Package: lte.GwCfCapacityAlarmMinor Raised on class: lte.AGWReferencePoint	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: resourceFull	Release: • 6.0 • 7.0 • 8.0
Description: A tmnxMobGwCfCapacityAlarmMinor notification is generated when compact flash capacity reaches 85% limit		
Remedial action: The compact flash device of the MGW is approaching capacity. The contents of the device must be analysed to identify redundant content which can be deleted.		

Table 20-165 GwFqdnGrpCamLimitAlarm

Alarm	Attributes	Applicable major release
Name: GwFqdnGrpCamLimitAlarm (8393) Type: EpcAlarm Package: lte.GwFqdnGrpCamLimitAlarm Raised on class: lte.EPCGateway	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: Threshold	Release: • 6.0 • 7.0 • 8.0
Description: A tmnxMobGwFqdnGrpCamLimitAlarm notification is generated when the CAM resource usage for the DNS resolution of the FQDN group reaches 75% of the CAM resource size. [CAUSE] The CAM resource usage for the DNS resolution of the FQDN group reaches 75% of the CAM resource size because the CAM resource is very close to be exhausted.		
Remedial action: The CAM resource usage for the DNS resolution of the FQDN group reaches 75% of the CAM resource size.Need to look at clearing the resolved filters for the specified FQDN group.		

Table 20-166 GwGtpPriSrvGrpStateChange

Alarm	Attributes	Applicable major release
Name: GwGtpPriSrvGrpStateChange (3635) Type: EpcAlarm Package: lte.GwGtpPriSrvGrpStateChange Raised on class: lte.EPCGateway	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: GwGtpPriSrvGrpDown	Release: • 6.0 • 7.0 • 8.0
Description: An alarm is raised when there has been a change in GPRS Tunneling Protocol (GTP) Prime Server state for all mobile system groups.		
Remedial action: If a GTP Prime server group state is down, CDR packets will be written to CDR files until at least one server becomes available.		

Table 20-167 GwMscpUeIdUsgAlarm

Alarm	Attributes	Applicable major release
Name: GwMscpUeIdUsgAlarm (11002) Type: EpcAlarm Package: lte.GwMscpUeIdUsgAlarm Raised on class: lte.EPCGateway	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: Threshold	Release: • 6.0 • 7.0 • 8.0
Description: A tmnxMobGwMscpUeIdUsgAlarm notification is generated when the User Equipment (UE) ID load count for the MSCP group has crossed the 80% threshold.		
Remedial action: When the User Equipment (UE) ID load count for the MSCP group crosses the 80% threshold, Engage the nokia support team to find out the root cause.		

Table 20-168 GwRadGroupFail

Alarm	Attributes	Applicable major release
Name: GwRadGroupFail (3636) Type: EpcAlarm Package: lte.GwRadGroupFail Raised on class: lte.EPCGateway	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: EPSGroupDown	Release: • 6.0 • 7.0 • 8.0
Description: A tmnxMobGwRadGrpFailAlarm notification is generated when all the radius servers have failed in the radius server group.		
Remedial action: The Radius server(s) which are configured in the Radius Server are unreachable. This problem may occur in a number of different scenarios. The server(s) may have become unresponsive - please refer to the Radius server documentation for assistance. The network connectivity to the server(s) may have been lost - please investigate why the underlying transport network is unreliable.		

Table 20-169 GwRadPeerFail

Alarm	Attributes	Applicable major release
Name: GwRadPeerFail (3682) Type: EpcAlarm Package: lteradius.GwRadPeerFail Raised on class: lteradius.PdnRadiusPeer	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: EPSPeerDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM receives a tmnxMobGwRadPeerFailAlarm notification in response to a RADIUS server failure.		
Remedial action: A Radius peer is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 20-170 HostConnectivityLostRateExceeded

Alarm	Attributes	Applicable major release
Name: HostConnectivityLostRateExceeded (276) Type: communicationsAlarm Package: ressubscr. HostConnectivityLostRateExceeded Raised on class: ressubscr.ShcvSite	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: hostDown Applicable probable causes: • hostDown • trapDropped	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the trapDroppedRaisesAlarm parameter is enabled and the maximum allowed number of SHCV host connectivity loss events on a SAP is exceeded. The SHCV action in response to the alarm is specified by the maxHostLostConnectivityRate parameter. If the specified action is to remove the host information, the host information is removed and the connectivity of the host is not subsequently verified.		
Remedial action: This may be a transient error condition in the network or possible congestion or could be a sign that the SHCV ping interval is too short. Verify the status of the network for those subscribers and the service SHCV configuration.		

Table 20-171 IGHMisconfigured

Alarm	Attributes	Applicable major release
Name: IGHMisconfigured (827) Type: ighAlarm Package: igh.IGHMisconfigured Raised on class: igh.InterfaceGroupHandler	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IGHProtocolMismatch	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the IGH is administratively up but none of the IGH protocols is operationally up.		
Raising condition: (('igh_misconfigured' EQUAL '\"yes\"') AND ('Administrative State' EQUAL 'Up'))		
Clearing condition: (('igh_misconfigured' NOT EQUAL '\"yes\"') OR ('Administrative State' NOT EQUAL 'Up'))		

Table 20-171 IGHMisconfigured (continued)

Alarm	Attributes	Applicable major release
Remedial action: Please check the configuration.		

Table 20-172 IgmpDown

Alarm	Attributes	Applicable major release
Name: IgmpDown (158) Type: ProtocolAlarm Package: igmp.IgmpDown Raised on class: igmp.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an IGMP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: While configured under VPRN, check if VPRN site is admin down, or if route distinguisher is not configured.		

Table 20-173 IgmpMaxGrpSrcsLimitExceeded

Alarm	Attributes	Applicable major release
Name: IgmpMaxGrpSrcsLimitExceeded (4624) Type: configurationAlarm Package: igmp.IgmpMaxGrpSrcsLimitExceeded Raised on class: igmp.Interface	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: IgmpMaxGrpSrcsLimitExceeded	Release: • 7.0
Description: The alarm is raised when an attempt is made to configure an IGMP group source for a group when the number of group sources for this group is equal to 'maxGrpSources', the maximum number of group sources per group supported on the interface.		
Remedial action: Needs to increase 'maxGrpSources' value to allow more sources on this interface.		

Table 20-174 IgmpMaxSrcsLimitExceeded

Alarm	Attributes	Applicable major release
Name: IgmpMaxSrcsLimitExceeded (3742) Type: configurationAlarm Package: igmp.IgmpMaxSrcsLimitExceeded Raised on class: igmp.Interface	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: IgmpMaxSrcsLimitExceeded	Release: • 7.0
Description: The alarm is raised when an attempt is made to configure an IGMP source for a group when the number of sources for this group is equal to 'maxSources', the maximum number of sources per group supported on the interface.		
Remedial action: Needs to increase 'maxSources' value to allow more sources on this interface.		

Table 20-175 IncompleteConfig (multichassis)

Alarm	Attributes	Applicable major release
Name: IncompleteConfig (294) Type: configurationAlarm Package: multichassis.IncompleteConfig Raised on classes: • multichassis.MultiChassisLagMember • multichassis.MultiChassisSync	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompleteConfig	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a peer configuration cannot be found on the peer NE.		
Raising condition: ('mcLagPointer' EQUAL '\"\"')		
Clearing condition: ('mcLagPointer' NOT EQUAL '\"\"')		
Remedial action: Configure the missing peered object.		

Table 20-176 IncompleteConfiguration

Alarm	Attributes	Applicable major release
Name: IncompleteConfiguration (1942) Type: operationalViolation Package: netw.IncompleteConfiguration Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompleteConfig	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a pre-provisioned NE has no objects configured beneath it.		
Raising condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' EQUAL '\"\"'))		
Clearing condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' NOT EQUAL '\"\"'))		
Remedial action: A configuration error has been made which must be corrected. The configuration of the pre-provisioned NE is incomplete. A work order was not associated with the pre-provisioned NE and as a consequence the attempt to auto-configure the NE failed.		

Table 20-177 IncorrectEndPointPeerConfig

Alarm	Attributes	Applicable major release
Name: IncorrectEndPointPeerConfig (1068) Type: configurationAlarm Package: multichassis.IncorrectEndPointPeerConfig Raised on class: multichassis.MultiChassisEndpoint	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompleteEPPeerConfig	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a peer configuration cannot be found on the peer NE.		
Raising condition: ('MC EndPoint Group Pointer' EQUAL '\"\"')		
Clearing condition: ('MC EndPoint Group Pointer' NOT EQUAL '\"\"')		

Table 20-177 IncorrectEndPointPeerConfig (continued)

Alarm	Attributes	Applicable major release
Remedial action: The peered object cannot be found on the peer NE. Either delete this one, or create the missing peer object.		

Table 20-178 IncorrectNeighborConfig

Alarm	Attributes	Applicable major release
Name: IncorrectNeighborConfig (609) Type: configurationAlarm Package: aps.IncorrectNeighborConfig Raised on class: aps.ApsGroup	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incorrectNeighborConfig	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the peer does not exist or the neighbor address does not point to a network interface on the NE that contains the peer object.		
Raising condition: (('Type' EQUAL 'MultiChassis') AND ('Neighbor match' EQUAL 'false'))		
Clearing condition: (('Type' EQUAL 'SingleChassis') OR ('Neighbor match' EQUAL 'true'))		
Remedial action: Make sure a peer exist and the neighbor address points to a network interface on the NE that contains the peer object.		

Table 20-179 IncorrectPeerConfig

Alarm	Attributes	Applicable major release
Name: IncorrectPeerConfig (779) Type: configurationAlarm Package: multichassis.IncorrectPeerConfig Raised on class: multichassis.AbstractPeer	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IncorrectPeerConfig	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an MC peer does not exist, or when an MC peer exists but the peer address is not the address of a network interface on the peer.		
Raising condition: ('peerMatchFound' EQUAL 'false')		
Clearing condition: ('peerMatchFound' EQUAL 'true')		
Remedial action: The peer configuration cannot be found on the peer NE. Either delete this one, or create the missing peer object.		

Table 20-180 IncorrectPeerSynchronizationPortConfig

Alarm	Attributes	Applicable major release
Name: IncorrectPeerSynchronizationPortConfig (780) Type: configurationAlarm Package: multichassis. IncorrectPeerSynchronizationPortConfig Raised on class: multichassis. PeerSynchronizationPort	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IncorrectPeerSynchronization-PortConfig	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the peer port does not exist, or when the peer port exists but the synchronization tags of the peers do not match.		
Raising condition: ('peerMatchFound' EQUAL 'false')		
Clearing condition: ('peerMatchFound' EQUAL 'true')		
Remedial action: Check if the peer port does not exist, or the peer port exists but the synchronization tags do not match.		

Table 20-181 IncorrectPeerSynchronizationPortEncapRangeConfig

Alarm	Attributes	Applicable major release
Name: IncorrectPeerSynchronization-PortEncapRangeConfig (781) Type: configurationAlarm Package: multichassis. IncorrectPeerSynchronizationPortEncapRangeConfig Raised on class: multichassis. PeerSynchronizationPortEncapRange	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IncorrectPeerSynchronization-PortEncapRangeConfig	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the VLAN ranges on the Multi-Chassis synchronization peers do not match.		
Raising condition: ('Neighbor Match' EQUAL 'false')		
Clearing condition: ('Neighbor Match' EQUAL 'true')		
Remedial action: Update the VLAN ranges on the Multi-Chassis synchronization peers to make them matching.		

Table 20-182 InstanceDown (srrp)

Alarm	Attributes	Applicable major release
Name: InstanceDown (284) Type: configurationAlarm Package: srrp.InstanceDown Raised on class: srrp.Instance	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: instanceDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM detects that an SRRP instance is operationally down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' EQUAL 'Initialize'))		
Clearing condition: (('Operational State' NOT EQUAL 'Initialize') OR ('Administrative State' NOT EQUAL 'Up'))		

Table 20-182 InstanceDown (srrp) (continued)

Alarm	Attributes	Applicable major release
Remedial action: Check the configuration of the instance		

Table 20-183 InstanceDown (vrrp)

Alarm	Attributes	Applicable major release
Name: InstanceDown (284) Type: configurationAlarm Package: vrrp.InstanceDown Raised on class: vrrp.AbstractInstance	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: instanceDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM detects that a VRRP instance is operationally down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: Check the instance configuration		

Table 20-184 inSufficientBandwidth

Alarm	Attributes	Applicable major release
Name: inSufficientBandwidth (11464) Type: serviceAlarm Package: mpr.inSufficientBandwidth Raised on class: mpr.BackhaulAdjacency	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: inSufficientBandwidth	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a deployed adjacency doesnt have sufficent bandwidth.		
Raising condition: (('Deployed to Site' EQUAL 'false') AND ('isBandwidthExceeded' EQUAL 'true'))		
Clearing condition: (('Deployed to Site' EQUAL 'true') OR ('isBandwidthExceeded' EQUAL 'false'))		
Remedial action: Increase the bandwidth.		

Table 20-185 InterfaceDown (netw)

Alarm	Attributes	Applicable major release
Name: InterfaceDown (36) Type: InterfaceAlarm Package: netw.InterfaceDown Raised on class: netw.StatefullConnectableInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceDown	Release: • 6.0 • 7.0 • 8.0

Table 20-185 InterfaceDown (netw) (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when an interface or underlying resource fails, as indicated by an interface compositeState attribute value of failed or underlyingResourceFailed.		
Raising condition: (('compositeState' EQUAL 'Inoperable') OR ('compositeState' EQUAL 'Underlying Resource Inoperable'))		
Clearing condition: (('compositeState' NOT EQUAL 'Inoperable') AND ('compositeState' NOT EQUAL 'Underlying Resource Inoperable'))		
Remedial action: A physical port (physical interface, LAG, channel) associated with the network interface in not operational. Ensure that the interface is cabled and there are no configuration errors (i.e. MTU size set incorrectly etc) on the interface.		

Table 20-186 InterfaceDown (service)

Alarm	Attributes	Applicable major release
Name: InterfaceDown (36) Type: configurationAlarm Package: service.InterfaceDown Raised on class: service.RedundantInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM detects that a redundant interface is operationally down.		
Raising condition: (('administrativeState' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('administrativeState' NOT EQUAL 'Up'))		
Remedial action: A physical port (physical interface, LAG, channel) associated with the network interface in not operational. Ensure that the interface is cabled and there are no configuration errors (i.e. MTU size set incorrectly etc) on the interface.		

Table 20-187 InterfaceDown (vpls)

Alarm	Attributes	Applicable major release
Name: InterfaceDown (36) Type: configurationAlarm Package: vpls.InterfaceDown Raised on class: vpls.L2ManagementInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an L2 management interface has an Operational State of Down, and the associated VPLS site has an Administrative State of Up.		
Raising condition: (('administrativeState' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('administrativeState' NOT EQUAL 'Up'))		
Remedial action: The condition exists because the physical interface is down either because it is administratively disabled, faulty or a cabling fault has occurred. Ensure that the interface is administratively up. Check for a poor cable connection to the port or for a faulty cable/fiber. If neither appears to be the problem run diagnostics on the port to determine if it is faulty.		

Table 20-188 InterfaceDown (vprn)

Alarm	Attributes	Applicable major release
Name: InterfaceDown (36) Type: configurationAlarm Package: vprn.InterfaceDown Raised on class: vprn.IPMirrorInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM detects that an interface is operationally down.		
Raising condition: (('administrativeState' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('administrativeState' NOT EQUAL 'Up'))		
Remedial action: A physical port (physical interface, LAG, channel) associated with the network interface in not operational. Ensure that the interface is cabled and there are no configuration errors (i.e. MTU size set incorrectly etc) on the interface.		

Table 20-189 InterfaceNeighborDown

Alarm	Attributes	Applicable major release
Name: InterfaceNeighborDown (661) Type: NeighborDown Package: ospf.InterfaceNeighborDown Raised on class: ospf.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NeighborDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an interface neighbor is operationally down.		
Raising condition: (('Neighbor Count' EQUAL '0L') AND ('interfaceClass' NOT EQUAL 'System') AND ('Passive' NOT EQUAL 'true'))		
Clearing condition: (('Neighbor Count' NOT EQUAL '0L') OR ('Passive' EQUAL 'true'))		
Remedial action: This alarm is raised when the OSPF interface neighbor is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 20-190 IOMEventOverflow

Alarm	Attributes	Applicable major release
Name: IOMEventOverflow (5617) Type: equipmentAlarm Package: equipment.IOMEventOverflow Raised on class: equipment.BaseCard	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IOMEventOverflow	Release: • 7.0
Description: The alarm is generated when tmnxIomResStateClr, tmnxIomResExhausted and tmnxIomResHighLimitReached occur more than 200 times because of resource usage fluctuation. The IOM raises the final trap to indicate overflow and stops logging traps.		
Remedial action: Informational - The alarm will be cleared when the CPM polls the IOM for traps and the overflow is cleared by logging an overflow-clear on a particular card.		

Table 20-191 IOMResUtilizationLimit

Alarm	Attributes	Applicable major release
Name: IOMResUtilizationLimit (5618) Type: equipmentAlarm Package: equipment.IOMResUtilizationLimit Raised on class: equipment.BaseCard	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IOMResHighLimitReached Applicable probable causes: • IOMResHighLimitReached • IOMResExhausted	Release: • 7.0
Description: The alarm is generated when the type of resources on IOM as specified by tmnxIomResourceType has reached the value of tmnxIomResourceLimitPct.		
Remedial action: Informational - The alarm will be cleared when the type of resources on IOM as specified by tmnxIomResourceType has dropped back down below the value of tmnxIomResourceLimitPct.		

Table 20-192 IPSecGatewayDown

Alarm	Attributes	Applicable major release
Name: IPSecGatewayDown (830) Type: serviceAlarm Package: ipsec.IPSecGatewayDown Raised on class: ipsec.IPSecGateway	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: gatewayDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the Operational State of a SAP IPsec gateway changes to Down and the Administrative State is Up.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('Administrative State' EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: Fix the errors indicated in operational flag.		

Table 20-193 IPSecIsaGrpDown

Alarm	Attributes	Applicable major release
Name: IPSecIsaGrpDown (3745) Type: equipmentAlarm Package: isa.IPSecIsaGrpDown Raised on class: isa.IPSecIsaGroup	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IPSecIsaGrpDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the Operational State of an ISA IPSec group is Down and the Administrative State is Up.		
Raising condition: (('administrativeState' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('administrativeState' NOT EQUAL 'Up'))		

Table 20-193 IPSecIsaGrpDown (continued)

Alarm	Attributes	Applicable major release
Remedial action: The operational state of the ISA-Tunnel Group is down, despite the administrative state being up. Check that the configured ISA-Tunnel Group Member MDA(s) are active and operationally up. There may be a fault with the ISA Application IPSec(Tunnel) Group.		

Table 20-194 IPSecTunnelBfdConnectionBroken

Alarm	Attributes	Applicable major release
Name: IPSecTunnelBfdConnectionBroken (831) Type: serviceAlarm Package: ipsec.IPSecTunnelBfdConnectionBroken Raised on class: ipsec.IPSecTunnelBfd	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bfdSessionConnectionBroken	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the BFD connection to a peer times out.		
Raising condition: ('Operational State' EQUAL 'Timed Out')		
Clearing condition: ('Operational State' NOT EQUAL 'Timed Out')		
Remedial action: Check if the route to the BFD peer exist and is up.		

Table 20-195 IPSecTunnelBfdConnectionDown

Alarm	Attributes	Applicable major release
Name: IPSecTunnelBfdConnectionDown (832) Type: serviceAlarm Package: ipsec.IPSecTunnelBfdConnectionDown Raised on class: ipsec.IPSecTunnelBfd	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bfdSessionDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the Operational State of a BFD session is Not Connected.		
Raising condition: ('Operational State' NOT EQUAL 'Operational')		
Clearing condition: ('Operational State' EQUAL 'Operational')		
Remedial action: Check if the route to the BFD peer exist and is up.		

Table 20-196 IPSecTunnelBfdConnectionPeerDetectsDown

Alarm	Attributes	Applicable major release
Name: IPSecTunnelBfdConnectionPeerDetectsDown (833) Type: serviceAlarm Package: ipsec. IPSecTunnelBfdConnectionPeerDetectsDown Raised on class: ipsec.IPSecTunnelBfd	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bfdSessionConnectionPeer-DetectsDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a BFD peer detects a connection timeout.		
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' NOT EQUAL 'Down')		
Remedial action: Check if the route to the BFD peer exist and is up.		

Table 20-197 IPSecTunnelDown

Alarm	Attributes	Applicable major release
Name: IPSecTunnelDown (834) Type: serviceAlarm Package: ipsec.IPSecTunnelDown Raised on class: ipsec.IPSecTunnel	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tunnelDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the IPsec tunnel operational state changes to 'down' and the administrative state is 'up'.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('Administrative State' EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: Fix the errors indicated in operational flag.		

Table 20-198 IsaAaGrpDown

Alarm	Attributes	Applicable major release
Name: IsaAaGrpDown (647) Type: equipmentAlarm Package: isa.IsaAaGrpDown Raised on class: isa.AaGroup	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IsaAaGrpDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an ISA-AA group Operational State is Down, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		

Table 20-198 IsaAaGrpDown (continued)

Alarm	Attributes	Applicable major release
Remedial action: The operational state of the ISA-AA group is down, despite the administrative state being up. Check that the configured ISA-AA Group Member MDA(s) are active and operationally up. There may be a fault with the ISA Application Assurance MDA.		

Table 20-199 IsaAaSubUnassigned

Alarm	Attributes	Applicable major release
Name: IsaAaSubUnassigned (836) Type: equipmentAlarm Package: isa.IsaAaSubUnassigned Raised on class: isa.AaGroup	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IsaAaSubUnassigned	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a subscriber cannot be assigned to an ISA-AA MDA in an AA group because of insufficient service queues, a high AA subscriber count, or a high AA subscriber statistics collection rate. The unassigned subscriber is treated as specified by the Operation Upon Failure parameter in the AA group. Recovery from this condition requires the removal and recreation of the AA subscriber when sufficient resources are available.		
Raising condition: (('Number of Unassigned ESM Subscribers' NOT EQUAL '0L') OR ('Number of Unassigned SAP Subscribers' NOT EQUAL '0L') OR ('Number of Unassigned Spoke SDP Subscribers' NOT EQUAL '0L'))		
Clearing condition: (('Number of Unassigned ESM Subscribers' EQUAL '0L') AND ('Number of Unassigned SAP Subscribers' EQUAL '0L') AND ('Number of Unassigned Spoke SDP Subscribers' EQUAL '0L'))		
Remedial action: The subscriber cannot be assigned to an ISA-AA MDA in an AA group because of insufficient service queues, a high AA subscriber count, or a high AA subscriber statistics collection rate. Remove and recreate the AA subscriber when sufficient resources are available.		

Table 20-200 IsaLnsGrpDown

Alarm	Attributes	Applicable major release
Name: IsaLnsGrpDown (1119) Type: equipmentAlarm Package: isa.IsaLnsGrpDown Raised on class: isa.LnsGroup	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IsaLnsGrpDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the Operational State of an ISA-LNS group is Down and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This alarm is caused by administrative shutdown or equipment failure of the MDA members. Review the status of the underlying ISA MDA group members and ensure they are operational.		

Table 20-201 IsaVideoGrpDown

Alarm	Attributes	Applicable major release
Name: IsaVideoGrpDown (775) Type: equipmentAlarm Package: isa.IsaVideoGrpDown Raised on class: isa.VideoGroup	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IsaVideoGrpDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the Operational State of an ISA video group is Down and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The operational state of the ISA-Video Group is down, despite the administrative state being up. Check that the configured ISA-Video Group Member MDA(s) are active and operationally up. There may be a fault with the ISA Application Video Group.		

Table 20-202 IsisAdjacencyDown

Alarm	Attributes	Applicable major release
Name: IsisAdjacencyDown (153) Type: adjacencyAlarm Package: isis.IsisAdjacencyDown Raised on class: isis.Interface	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IsisInterfaceDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an IS-IS interface has no adjacencies, for example, because the IS-IS protocol on the remote site is down.		
Raising condition: (('Adjacency Count' EQUAL '0L') AND ('interfaceClass' NOT EQUAL 'System') AND ('Passive' NOT EQUAL 'True'))		
Clearing condition: (('Adjacency Count' > '0L') OR ('Passive' EQUAL 'True'))		
Remedial action: Check remote site to see if corresponding IS-IS interface is configured and admin up.		

Table 20-203 IsisDown

Alarm	Attributes	Applicable major release
Name: IsisDown (19) Type: ProtocolAlarm Package: isis.IsisDown Raised on class: isis.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an IS-IS site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The protocol is not working anymore, could be a problem with IP addresses, resources on the device, ...		

Table 20-204 IsisInterfaceDown

Alarm	Attributes	Applicable major release
Name: IsisInterfaceDown (301) Type: ProtocolAlarm Package: isis.IsisInterfaceDown Raised on class: isis.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an IS-IS interface has an Operational State other than Up.		
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' NOT EQUAL 'Down')		
Remedial action: Check if underlying port is down, or associated network interface is down.		

Table 20-205 KeepAliveProblem

Alarm	Attributes	Applicable major release
Name: KeepAliveProblem (100) Type: oamAlarm Package: svt.KeepAliveProblem Raised on class: svt.Tunnel	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: keepAliveFailed	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM detects a keep-alive protocol status of senderIdInvalid or responderIdError.		
Raising condition: (('Keep-Alive State' NOT EQUAL 'Disabled') AND ('Keep-Alive State' NOT EQUAL 'Alive') AND ('Keep-Alive State' NOT EQUAL 'Unknown'))		
Clearing condition: (('Keep-Alive State' EQUAL 'Disabled') OR ('Keep-Alive State' EQUAL 'Alive') OR ('Keep-Alive State' EQUAL 'Unknown'))		
Remedial action: Check the configuration of this tunnel and underlying physical transport.		

Table 20-206 L2TPDown

Alarm	Attributes	Applicable major release
Name: L2TPDown (841) Type: ProtocolAlarm Package: l2tp.L2TPDown Raised on class: l2tp.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an L2TP site becomes administratively down. The alarm clears when the L2TP site becomes administratively up.		
Raising condition: ('Administrative State' EQUAL 'Down')		
Clearing condition: ('Administrative State' EQUAL 'Up')		

Table 20-206 L2TPDown (continued)

Alarm	Attributes	Applicable major release
Remedial action: This alarm indicates that the L2TP protocol administrative state is down. It is cleared automatically when L2TP administrative state is up again. Please verify the L2TP configuration. This alarm can be safely suppressed if L2TP is not used.		

Table 20-207 LabelProblem

Alarm	Attributes	Applicable major release
Name: LabelProblem (98) Type: CircuitAlarm Package: svt.LabelProblem Raised on class: svt.SdpBinding	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: labelProblem	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an ingress or an egress label is missing.		
Raising condition: (('Operational State' EQUAL 'No Egress Label') OR ('Operational State' EQUAL 'No Ingress Label') OR ('Operational State' EQUAL 'No Labels') OR ('State Cause'anyBit'No Egress VC Label') OR ('State Cause'anyBit'No Ingress VC Label') OR ('State Cause'anyBit'Label Manager Has Ran Out Of Labels'))		
Clearing condition: (('Operational State' NOT EQUAL 'No Egress Label') AND ('Operational State' NOT EQUAL 'No Ingress Label') AND ('Operational State' NOT EQUAL 'No Labels') AND NOT ((('State Cause'anyBit'No Egress VC Label') OR ('State Cause'anyBit'No Ingress VC Label') OR ('State Cause'anyBit'Label Manager Has Ran Out Of Labels'))))		
Remedial action: An ingress or egress label is missing for the SDP binding.		

Table 20-208 LagDown

Alarm	Attributes	Applicable major release
Name: LagDown (20) Type: equipmentAlarm Package: lag.LagDown Raised on class: lag.Interface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lagDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when all ports in a LAG are operationally down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This alarm indicates that all physical Ethernet links associated with a LAG are operationally down. The reasons for the links to be down may vary from link to link. The following possible causes of this alarm should be investigated. The physical port (near end or far end may have failed - this can be remedied by replacing the interface card in question. The physical links may have been turned down administratively - re-enable the links. A cable failure or disconnect may have occurred - please ensure that the cables are properly connected to the physical port and and that the cable has not been damaged.		

Table 20-209 LagPortAddFailed

Alarm	Attributes	Applicable major release
Name: LagPortAddFailed (422) Type: equipmentAlarm Package: equipment.LagPortAddFailed Raised on class: equipment.PhysicalPort	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: linkDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the Lag Port Add function Fails.		
Raising condition: (('state' EQUAL 'Link Down') AND ('LAG ID' > '0'))		
Clearing condition: (('state' NOT EQUAL 'Link Down') OR ('LAG ID' EQUAL '0'))		
Remedial action: A configuration error has occurred which must be corrected. The link that was to be added to the LAG group may be of the wrong type (i.e. non ethernet) or the limit of the number of links supported in a LAG may have been reached.		

Table 20-210 LdpDown

Alarm	Attributes	Applicable major release
Name: LdpDown (22) Type: ProtocolAlarm Package: ldp.LdpDown Raised on class: ldp.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an LDP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: Check operational state down reason and update accordingly.		

Table 20-211 LdpSessionNonexistent

Alarm	Attributes	Applicable major release
Name: LdpSessionNonexistent (2954) Type: LdpSessionAlarm Package: ldp.LdpSessionNonexistent Raised on class: ldp.Session	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LdpSessionDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an LDP session is non-existent.		
Raising condition: ('Session State' EQUAL 'Non-existent')		
Clearing condition: ('Session State' EQUAL 'Operational')		
Remedial action: Please check the LDP session path to make sure all associated protocols/interfaces/connections are OK.		

Table 20-212 LdpTargetedPeerDown

Alarm	Attributes	Applicable major release
Name: LdpTargetedPeerDown (23) Type: ProtocolAlarm Package: ldp.LdpTargetedPeerDown Raised on class: ldp.TargetedPeer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an LDP targeted peer is operationally down.		
Raising condition: (('administrativeState' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('administrativeState' NOT EQUAL 'Up'))		
Remedial action: Please check the route to LDP targeted peer to make sure all associated protocols/interfaces/connections are OK.		

Table 20-213 LicensedLimitExceeded

Alarm	Attributes	Applicable major release
Name: LicensedLimitExceeded (127) Type: licensingAlarm Package: security.LicensedLimitExceeded Raised on class: security.SamLicensePoints	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: licensedLimitExceeded	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 20-214 liMirrorLiNatL2awSubOperStateDown

Alarm	Attributes	Applicable major release
Name: liMirrorLiNatL2awSubOperStateDown (9567) Type: equipmentAlarm Package: mirrorli. liMirrorLiNatL2awSubOperStateDown Raised on class: mirrorli.LiNatL2AwareSub	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: liMirrorLiNatL2awSubOperStateDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the Operational State of the NAT L2 Aware subscriber is Down.		
Raising condition: (('Operational State' EQUAL 'Down'))		
Clearing condition: (('Operational State' EQUAL 'Up'))		

Table 20-214 liMirrorLiNatL2awSubOperStateDown (continued)

Alarm	Attributes	Applicable major release
Remedial action: If the ISA MDA reboots successfully, or another ISA MDA takes over, no recovery is required. If more resources become available on the ISA MDA, no recovery is required.		

Table 20-215 LineAlarmIndicationSignal

Alarm	Attributes	Applicable major release
Name: LineAlarmIndicationSignal (84) Type: communicationsAlarm Package: sonetequipment.LineAlarmIndicationSignal Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lineAlarmIndicationSignal	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a SONET port reports an LAIS error. The alarm corresponds to the lais alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Line Alarm Indication Signal') AND ('Report Alarms'anyBit'Line Alarm Indication Signal'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Line Alarm Indication Signal') AND ('Report Alarms'anyBit'Line Alarm Indication Signal')))		
Remedial action: Informational only.		

Table 20-216 LineErrorCondition

Alarm	Attributes	Applicable major release
Name: LineErrorCondition (94) Type: communicationsAlarm Package: sonetequipment.LineErrorCondition Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lineErrorCondition	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a SONET port reports a line error condition that a remote NE raises because of b1 errors received from the local NE. The alarm corresponds to the lrei alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Line Error Condition') AND ('Report Alarms'anyBit'Line Error Condition'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Line Error Condition') AND ('Report Alarms'anyBit'Line Error Condition')))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 20-217 LineRemoteDefectIndication

Alarm	Attributes	Applicable major release
Name: LineRemoteDefectIndication (85) Type: communicationsAlarm Package: sonetequipment.LineRemoteDefectIndication Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lineRemoteDefectIndication	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a SONET port reports a line remote defect indication error caused by an LOF, LOC, or LOS condition. The alarm corresponds to the lrdi alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Line Remote Defect Indication') AND ('Report Alarms'anyBit'Line Remote Defect Indication'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Line Remote Defect Indication') AND ('Report Alarms'anyBit'Line Remote Defect Indication')))		
Remedial action: Informational only.		

Table 20-218 LinkDown (equipment)

Alarm	Attributes	Applicable major release
Name: LinkDown (12) Type: communicationsAlarm Package: equipment.LinkDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: portLinkProblem	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 20-219 LocalRncvOperDown

Alarm	Attributes	Applicable major release
Name: LocalRncvOperDown (521) Type: redundancyAlarm Package: multichassis.LocalRncvOperDown Raised on class: multichassis.MultiChassisRingNode	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: localRncvDisconnected	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the local RNCV Operational State of a ring node is other than Connected or NotTested, which means that the ring node is not connected to the local MC ring group. The alarm clears when the ring node enters the Connected or NotTested state.		

Table 20-219 LocalRncvOperDown (continued)

Alarm	Attributes	Applicable major release
Raising condition: (('Local Operational State' NOT EQUAL 'Connected') AND ('Local Operational State' NOT EQUAL 'Not Tested'))		
Clearing condition: (('Local Operational State' EQUAL 'Connected') OR ('Local Operational State' EQUAL 'Not Tested'))		
Remedial action: Make sure that ring node is properly connected to MC ring group.		

Table 20-220 LossOfClock (sonetequipment)

Alarm	Attributes	Applicable major release
Name: LossOfClock (83) Type: communicationsAlarm Package: sonetequipment.LossOfClock Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lossOfClock	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a SONET port reports an LOC condition, which causes the NE to set the port Operational State to Down.		
Raising condition: (('Outstanding Alarms'anyBit'Loss of Clock') AND ('Report Alarms'anyBit'Loss of Clock'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Loss of Clock') AND ('Report Alarms'anyBit'Loss of Clock')))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected.		

Table 20-221 LowTemperatureDetected

Alarm	Attributes	Applicable major release
Name: LowTemperatureDetected (1127) Type: environmentalAlarm Package: equipment.LowTemperatureDetected Raised on class: equipment.Shelf	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentOvercooled	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the chassis temperature falls below the minimum threshold.		
Raising condition: ('Low Temperature State' EQUAL 'Low')		
Clearing condition: ('Low Temperature State' NOT EQUAL 'Low')		
Remedial action: The NE has detected internal temperatures which are abnormally low. This may happen when the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 20-222 LspDown

Alarm	Attributes	Applicable major release
Name: LspDown (25) Type: pathAlarm Package: mpls.LspDown Raised on class: mpls.Lsp	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lspDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the Operational State of an LSP is Down, but the Administrative State is Up.		
Raising condition: (('administrativeState' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('administrativeState' NOT EQUAL 'Up'))		
Remedial action: So many things can cause LSP down, check if source and destination interfaces are down, LSP path is down and the failure code, or MPLS path is down...		

Table 20-223 LspPathBypassTunnelActive

Alarm	Attributes	Applicable major release
Name: LspPathBypassTunnelActive (264) Type: pathAlarm Package: mpls.LspPathBypassTunnelActive Raised on class: mpls.LspPath	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LspPathReroutedToBypass-Tunnel	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an LSP primary path is rerouted to the bypass tunnel. The alarm clears when the primary path returns to the original tunnel and the actual hop returns to the primary path.		
Raising condition: ('Bypass Tunnel Active' EQUAL 'true')		
Clearing condition: ('Bypass Tunnel Active' EQUAL 'false')		
Remedial action: There is a problem with the original path, check what is the problem and fix it if possible.		

Table 20-224 LspPathDown

Alarm	Attributes	Applicable major release
Name: LspPathDown (26) Type: pathAlarm Package: mpls.LspPathDown Raised on class: mpls.LspPath	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lspPathDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an LSP path is operationally down.		
Raising condition: (('Administrative' EQUAL 'Up') AND ('Operational' NOT EQUAL 'Up') AND ('Type' EQUAL 'Standby'))		
Clearing condition: (('Operational' EQUAL 'Up') OR ('Administrative' NOT EQUAL 'Up') OR ('Type' EQUAL 'Secondary'))		
Remedial action: Check the failure code and update accordingly, e.g. whether MPLS/RSVP interfaces, OSPF interfaces are down.		

Table 20-225 LSRPATHDown

Alarm	Attributes	Applicable major release
Name: LSRPATHDown (4898) Type: pathAlarm Package: mplstp.LSRPATHDown Raised on class: mplstp.TPLSRPath	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LSRPATHDown	Release: • 7.0 • 8.0
Description: The alarm is raised when the TP LSR Path Administrative State is Up and the Operational State is Down. The alarm clears when the TP LSR Path Operational State changes to Up or the Administrative State changes to Down.		
Raising condition: (('Administrative' EQUAL 'Up') AND ('Operational' NOT EQUAL 'Up'))		
Clearing condition: (('Operational' EQUAL 'Up') OR ('Administrative' NOT EQUAL 'Up'))		
Remedial action: The Operational state of the TP LSR Path is down, despite the Administrative state being up. Review the configuration and make sure that the Administrative state is up, the forward and reverse labels are set and the Out-Link interface is operationally up.		

Table 20-226 macMoveRateExceeded (service)

Alarm	Attributes	Applicable major release
Name: macMoveRateExceeded (3690) Type: accessInterfaceAlarm Package: service.macMoveRateExceeded Raised on class: service.AccessInterface	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MacMoveRateExceeded	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the SAP exceeds the MAC Move Frequency of the service site.		
Raising condition: ('State Cause'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('State Cause'anyBit'Relearn Limit Exceeded'))		
Remedial action: Informational.		

Table 20-227 macMoveRateExceeded (svt)

Alarm	Attributes	Applicable major release
Name: macMoveRateExceeded (3690) Type: SpokeSdpBindingAlarm Package: svt.macMoveRateExceeded Raised on class: svt.SpokeSdpBinding	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MacMoveRateExceeded	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the SDP exceeds the Service Site's MAC Move Frequency.		
Raising condition: ('operationalFlags'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('operationalFlags'anyBit'Relearn Limit Exceeded'))		
Remedial action: Check Service Site MAC move frequency or underlying physical link to understand issue.		

Table 20-228 macMoveRateExceededNonBlock (svt)

Alarm	Attributes	Applicable major release
Name: macMoveRateExceededNonBlock (4893) Type: SpokeSdpBindingAlarm Package: svt.macMoveRateExceededNonBlock Raised on class: svt.SpokeSdpBinding	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: MacMoveRateExceededNon-Block	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the SDP exceeds the Service Site's MAC Move Frequency even when limitMacMove(sdp-BindTlsLimitMacMove) is set to 'nonBlocking'.		
Remedial action: Informational - User can adjust the value of 'MAC Move Maximum Rate' to reduce the frequency of this alarm.		

Table 20-229 MaxPdnConnections

Alarm	Attributes	Applicable major release
Name: MaxPdnConnections (4795) Type: EpcAlarm Package: lte.MaxPdnConnections Raised on class: lte.PdnApn	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is generated when the maximum number of Packet Data Network (PDN) connections for this Access Point Name (APN) on the gateway is reached.		
Remedial action: Maximum number of PDN connections for this APN on the gateway is reached.To accept new PDN connections, system has to wait until the number of PDN connections goes below the value of PdnApnMaxPdnConnections.		

Table 20-230 McIPsecPeerTunnelGroupMissing

Alarm	Attributes	Applicable major release
Name: McIPsecPeerTunnelGroupMissing (4815) Type: configurationAlarm Package: multichassis. McIPsecPeerTunnelGroupMissing Raised on class: multichassis. McPeerIPSecTunnelGroup	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IncompleteConfig	Release: • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM cannot find the peer MC IPsec tunnel group. This can be either the peer tunnel group is misconfigured or the local peer group ID is not configured.		
Raising condition: ('peerTunnelGroupPointer' EQUAL '\"\"')		
Clearing condition: ('peerTunnelGroupPointer' NOT EQUAL '\"\"')		
Remedial action: Configure the missing peered MC IPsec tunnel group or check the local tunnel group's peer group ID has been configured, or delete this one if it is not used.		

Table 20-231 McIPsecTunnelGroupDown

Alarm	Attributes	Applicable major release
Name: McIPsecTunnelGroupDown (4816) Type: redundancyAlarm Package: multichassis.McIPsecTunnelGroupDown Raised on class: multichassis. McPeerIPSecTunnelGroup	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ipsecTunnelGroupDown	Release: • 7.0 • 8.0
Description: The alarm is raised when a MC IPsec tunnel group is operationally down while it is administratively up.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('Administrative State' EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: Check if the physical ISA IPsec Tunnel Group or the associated MDA is operationally down.		

Table 20-232 MCLagDown (multichassis)

Alarm	Attributes	Applicable major release
Name: MCLagDown (394) Type: equipmentAlarm Package: multichassis.MCLagDown Raised on class: multichassis. MultiChassisLagPeerSpecifics	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mcLagDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when all ports in an MC LAG are operationally Down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This alarm indicates that all physical Ethernet links associated with a LAG are operationally down. The reasons for the links to be down may vary from link to link. The following possible causes of this alarm should be investigated. The physical port (near end or far end may have failed - this can be remedied by replacing the interface card in question. The physical links may have been turned down administratively - re-enable the links. A cable failure or disconnect may have occurred - please ensure that the cables are properly connected to the physical port and and that the cable has not been damaged.		

Table 20-233 MCLagDown (lag)

Alarm	Attributes	Applicable major release
Name: MCLagDown (394) Type: equipmentAlarm Package: lag.MCLagDown Raised on class: lag.MultiChassisLagSpecifics	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mcLagDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when all ports in an MC LAG are operationally down.		
Raising condition: (('administrativeState' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('administrativeState' NOT EQUAL 'Up'))		

Table 20-233 MCLagDown (lag) (continued)

Alarm	Attributes	Applicable major release
Remedial action: This alarm indicates that all physical Ethernet links associated with a LAG are operationally down. The reasons for the links to be down may vary from link to link. The following possible causes of this alarm should be investigated. The physical port (near end or far end may have failed - this can be remedied by replacing the interface card in question. The physical links may have been turned down administratively - re-enable the links. A cable failure or disconnect may have occurred - please ensure that the cables are properly connected to the physical port and and that the cable has not been damaged.		

Table 20-234 McMobileConfigInfo

Alarm	Attributes	Applicable major release
Name: McMobileConfigInfo (4379) Type: integrityViolation Package: multichassis.McMobileConfigInfo Raised on class: multichassis.MultiChassisPeerMobileGateway	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mismatchPeerSets	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the configuration on the peers are erroneous or if they mismatch		
Raising condition: ('Configuration Mismatch Reason' EQUAL '1')		
Remedial action: Check what caused configuration data between the mobile-gateways mismatch and correct the issue for the geo-redundancy to work.		

Table 20-235 McMobileSwitchOver

Alarm	Attributes	Applicable major release
Name: McMobileSwitchOver (4381) Type: equipmentAlarm Package: multichassis.McMobileSwitchOver Raised on class: multichassis.MultiChassisPeerMobileGateway	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: lossOfRedundancy	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the mobile-gateway participating in geo-redundancy switched over from being a slave to a master or master to a slave		
Raising condition: (('Operational Role' EQUAL '1') OR ('Operational Role' EQUAL '2'))		
Remedial action: Check what caused this switch over and check if the primary mobile-gateway is down.		

Table 20-236 McOmcrStatFailedChanged

Alarm	Attributes	Applicable major release
Name: McOmcrStatFailedChanged (8058) Type: communicationsAlarm Package: multichassis.McOmcrStatFailedChanged Raised on class: multichassis.McOmcrStat	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: McOmcrStatFailedChanged	Release: • 7.0 • 8.0

Table 20-236 McOmcrStatFailedChanged (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the value of the object tmnxMcOmcrStatFailed changes from 'notAct' to any of the other values. The alarm is cleared when the value of the object tmnxMcOmcrStatFailed changes to 'notAct' from any of the other values. A transition from 'notAct' or 'no' to 'yes' means that the traffic of some or all associated client application entries' is being dropped. For example, all traffic from some or all of the IPOE subscriber hosts protected by a failed SRRP instance is dropped by this system. A transition to 'no' means that the system has successfully allocated resources for the traffic of all associated client application entries. A transition to 'notAct' means that this system is not performing the active role anymore for this access protection instance. For example, the value of the object tmnxSrrpOperState has become different from 'master' for the corresponding instance.		
Raising condition: ('Instance Failed' NOT EQUAL 'Not Act')		
Clearing condition: ('Instance Failed' EQUAL 'Not Act')		
Remedial action: There are three recovery actions possible, depending on the reason of the transition of the access protection instance. If it is caused by a problem in the access network, fix that problem, or make additional resources available for this access protection instance. If it is caused by a misconfiguration of this system, correct that, or make additional resources available for this access protection instance.		

Table 20-237 MCPeerEPDown

Alarm	Attributes	Applicable major release
Name: MCPeerEPDown (1069) Type: equipmentAlarm Package: multichassis.MCPeerEPDown Raised on class: multichassis.MultiChassisEndpoint	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MCPeerEPDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an MC endpoint is operationally down.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('Administrative State' EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: Bring up the all End Point Members.		

Table 20-238 MCRedirectThresholdReached (vprn)

Alarm	Attributes	Applicable major release
Name: MCRedirectThresholdReached (8135) Type: communicationsAlarm Package: vprn.MCRedirectThresholdReached Raised on class: vprn.L3AccessInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mCRedirectThreshold-Reached	Release: • 6.0 • 7.0
Description: The alarm is raised when the system detects that the number of monitored packets on the slave node reached high threshold.		
Remedial action: A network configuration issue or a partial network failure has been detected. Diagnose and fix the partial network failure.		

Table 20-239 MCRedirectThresholdReached (rtr)

Alarm	Attributes	Applicable major release
Name: MCRedirectThresholdReached (8135) Type: communicationsAlarm Package: rtr.MCRedirectThresholdReached Raised on class: rtr.NetworkInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mCRedirectThreshold-Reached	Release: • 6.0 • 7.0
Description: The alarm is raised when the system detects that the number of monitored packets on the slave node reached high threshold.		
Remedial action: A network configuration issue or a partial network failure has been detected. Diagnose and fix the partial network failure.		

Table 20-240 MepAISReceivedAlarm

Alarm	Attributes	Applicable major release
Name: MepAISReceivedAlarm (2945) Type: oamAlarm Package: ethernetoam.MepAISReceivedAlarm Raised on class: ethernetoam.Mep	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: missingRemoteMep	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a MEP receives AIS test frames from one or more of its sub-layer MEPs.		
Raising condition: (('AIS Received (AisRx)' EQUAL 'true') AND ('Facility VLAN ID' EQUAL '0'))		
Clearing condition: ('AIS Received (AisRx)' EQUAL 'false')		
Remedial action: This alarm indicates that it has received a MEP fault from a sub-layer MEP, user should investigate the fault cause on the sub-layer MEP and resolve this root cause issue.		

Table 20-241 MgGroupDown

Alarm	Attributes	Applicable major release
Name: MgGroupDown (837) Type: MgGroupAlarm Package: isa.MgGroupDown Raised on class: isa.MgIsaGroup	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MgGroupDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an MG group goes down.		
Raising condition: ('Group Operational State' EQUAL 'Down')		
Clearing condition: ('Group Operational State' NOT EQUAL 'Down')		
Remedial action: The operational state of the ISA-MG Group is down, despite the administrative state being up. Review the status of the underlying ISA-MG Group Members and ensure they are operational.		

Table 20-242 MigrationCompleted

Alarm	Attributes	Applicable major release
Name: MigrationCompleted (753) Type: migrationComplete Package: equipment.MigrationCompleted Raised on class: equipment.NeCardSwapTask	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: migrationComplete	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a card migration event completes.		
Raising condition: ('Status' EQUAL 'Migration completed')		
Remedial action: Informational - no corrective action required.		

Table 20-243 MigrationFailed

Alarm	Attributes	Applicable major release
Name: MigrationFailed (754) Type: migrationFailure Package: equipment.MigrationFailed Raised on class: equipment.NeCardSwapTask	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: migrationFailure	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a card migration event fails.		
Raising condition: (('Status' EQUAL 'Failed - Latest configuration not available') OR ('Status' EQUAL 'Failed - Unable to migrate configuration') OR ('Status' EQUAL 'Failed - Unable to transfer migrated configuration') OR ('Status' EQUAL 'Failed - Unable to reboot network element'))		
Remedial action: This alarm is raised when a card migration fails. The operation has failed for one of the following reasons - a configuration backup could not be created, the configuration transfer failed or the attempt to reboot the card failed. Please re-attempt the migration. If the problem persists please contact your Nokia support representative for assistance.		

Table 20-244 MissingLocalEntry

Alarm	Attributes	Applicable major release
Name: MissingLocalEntry (291) Type: configurationAlarm Package: l2fwd.MissingLocalEntry Raised on class: l2fwd.ServiceMacProtection	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: Protected_Mac_Address_Not_Global	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a protected MAC address is not configured on all sites of a VPLS. This can occur if the protected MAC address is added or removed using a CLI.		
Raising condition: ('isEntryGlobal' EQUAL 'false')		
Clearing condition: ('isEntryGlobal' EQUAL 'true')		
Remedial action: Configure the 'Protected MAC Address' on all the VPLS sites.		

Table 20-245 MldDown

Alarm	Attributes	Applicable major release
Name: MldDown (587) Type: ProtocolAlarm Package: mld.MldDown Raised on class: mld.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an MLD site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: Check the base router and system are configured correctly.		

Table 20-246 MldMaxGrpSrcsLimitExceeded

Alarm	Attributes	Applicable major release
Name: MldMaxGrpSrcsLimitExceeded (5395) Type: configurationAlarm Package: mld.MldMaxGrpSrcsLimitExceeded Raised on class: mld.Interface	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: MldMaxGrpSrcsLimitExceeded	Release: • 7.0
Description: The alarm is raised when an attempt is made to configure an MLD group source for a group when the number of group sources for this group is equal to 'maxGrpSources', the maximum number of group sources per group supported on the interface.		
Remedial action: Increase the value of the 'Maximum Number of Group Sources' attribute in the parent MLD interface so that the number of active MLD group sources stays under the configured threshold.		

Table 20-247 MldMaxSrcsLimitExceeded

Alarm	Attributes	Applicable major release
Name: MldMaxSrcsLimitExceeded (5396) Type: configurationAlarm Package: mld.MldMaxSrcsLimitExceeded Raised on class: mld.Interface	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: MldMaxSrcsLimitExceeded	Release: • 7.0
Description: The alarm is raised when an attempt is made to configure an MLD source for a group when the number of sources for this group is equal to 'maxSources', the Maximum Number of Sources per group supported on the interface.		
Remedial action: Increase 'Maximum Number Of Sources' value to allow more sources on this interface.		

Table 20-248 MobileConnectorDown

Alarm	Attributes	Applicable major release
Name: MobileConnectorDown (1064) Type: EpcAlarm Package: lteservice.MobileConnectorDown Raised on class: lteservice.MobileServiceConnector	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EpcDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL '\"\"')		
Clearing condition: ('EPS Path' NOT EQUAL '\"\"')		
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

Table 20-249 MobileSiteDown

Alarm	Attributes	Applicable major release
Name: MobileSiteDown (1065) Type: EpcAlarm Package: lteservice.MobileSiteDown Raised on class: lteservice.MobileServiceSite	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EpcDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM no longer manages the EPS gateway instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('Evolved Packet System Instance' EQUAL '\"\"')		
Clearing condition: ('Evolved Packet System Instance' NOT EQUAL '\"\"')		
Remedial action: Informational - a topology change due to reconfiguration of the transport network has resulted in deletion of a mobile service site. Regenerate the mobile service site by clicking on the re-calculate button on the mobile service properties form.		

Table 20-250 MplsDown

Alarm	Attributes	Applicable major release
Name: MplsDown (27) Type: ProtocolAlarm Package: mpls.MplsDown Raised on class: mpls.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an MPLS site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		

Table 20-250 MplsDown (continued)

Alarm	Attributes	Applicable major release
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: Check operational down reason and update accordingly.		

Table 20-251 MplsPathUpdateFailed

Alarm	Attributes	Applicable major release
Name: MplsPathUpdateFailed (1066) Type: pathAlarm Package: mpls.MplsPathUpdateFailed Raised on class: mpls.LspPath	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mbbRetryExceeded Applicable probable causes: • mbbRetryExceeded • lspPathGoingDown • startingHighPriMbb • restartingMbb • highPriMbbInProg	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an MPLS path update fails because of an MBB problem. The alarm clears when the MBB status changes to Successful.		
Raising condition: (('mbbStatus' NOT EQUAL 'None') AND ('mbbStatus' NOT EQUAL 'Successful'))		
Clearing condition: (('Last Performed State' EQUAL 'Success') OR ('Administrative' EQUAL 'Down') OR (('Operational' EQUAL 'Up') AND ('Last Performed State' EQUAL 'None')))		
Remedial action: Based on the probable cause, change the parameters and update the path again.		

Table 20-252 MrpAttrTblSizeLimitReached

Alarm	Attributes	Applicable major release
Name: MrpAttrTblSizeLimitReached (574) Type: resourceAlarm Package: l2fwd.MrpAttrTblSizeLimitReached Raised on class: l2fwd.SiteMrp	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceLimitReached	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the number of MRP attribute table entries for a service site exceeds the high watermark specified by l2fwd.SiteMrp.mrpAttrTblHighWatermark. The alarm clears when the number of MRP attribute table entries for the site drops below the low watermark specified by l2fwd.SiteMrp.mrpAttrTblLowWatermark.		
Raising condition: (('MRP Attribute Count' >=" 'MRP Max Attributes') OR ('MRP Attribute Count' >= (('MRP Attribute-Table-High-Watermark' * 'MRP Max Attributes') / 100.0)))"		

Table 20-252 MrpAttrTblSizeLimitReached (continued)

Alarm	Attributes	Applicable major release
Clearing condition: (('MRP Attribute Count' < 'MRP Max Attributes') AND (('MRP Attribute-Table-High-Watermark' EQUAL '0') OR ('MRP Attribute Count' < (('MRP Attribute-Table-Low-Watermark' * 'MRP Max Attributes') / 100.0))) AND (('MRP Attribute-Table-Low-Watermark' EQUAL '0') OR ('MRP Attribute Count' < (('MRP Attribute-Table-Low-Watermark' * 'MRP Max Attributes') / 100.0))))		
Remedial action: Informational		

Table 20-253 MsdpDown

Alarm	Attributes	Applicable major release
Name: MsdpDown (353) Type: ProtocolAlarm Package: msdp.MsdpDown Raised on class: msdp.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an MSDP site is administratively down. The alarm clears when the site is administratively up.		
Raising condition: (('Administrative State' EQUAL 'Down'))		
Clearing condition: (('Administrative State' NOT EQUAL 'Down'))		
Remedial action: Turn up the MSDP site.		

Table 20-254 MsgQueueFull

Alarm	Attributes	Applicable major release
Name: MsgQueueFull (10261) Type: EpcAlarm Package: lte.MsgQueueFull Raised on class: lte.AGWDiameterPeer	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MsgQueueFull	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the diameter message queue utilization reaches 100% %, operator should consider the change of the values for DiameterRateLimProfile::MessageRate, DiameterRateLimProfile::BurstSize or the DiameterRateLimProfile::DelayToler of the diameter rate limit profile.		
Remedial action: If the utilization of the diameter message queue reaches 100%, operator should consider the change of the values for MessageRate, BurstSize or the DelayToler of the diameter rate limit profile.		

Table 20-255 MsgQueueHighThreshold

Alarm	Attributes	Applicable major release
Name: MsgQueueHighThreshold (10262) Type: EpcAlarm Package: lte.MsgQueueHighThreshold Raised on class: lte.AGWDiameterPeer	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MsgQueueHighThreshold	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the diameter message queue utilization reaches the percentage defined by the DiameterRateLimProfile.queThrsHigh, the default value is 80%.		
Remedial action: If the utilization of the diameter message queue reaches 100%,operator should consider the change of the values for MessageRate, BurstSize or the DelayToler of the diameter rate limit profile.		

Table 20-256 MsgQueueLowThreshold

Alarm	Attributes	Applicable major release
Name: MsgQueueLowThreshold (10263) Type: EpcAlarm Package: lte.MsgQueueLowThreshold Raised on class: lte.AGWDiameterPeer	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MsgQueueLowThreshold	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the diameter message queue utilization reaches the percentage defined by the DiameterRateLimProfile.queThrsLow, the default value is 30%.		
Remedial action: If the utilization of the diameter message queue reaches 100%, operator should consider the change of the values for MessageRate, BurstSize or the DelayToler of the diameter rate limit profile.		

Table 20-257 MsPwFecRetryExpired

Alarm	Attributes	Applicable major release
Name: MsPwFecRetryExpired (3694) Type: serviceAlarm Package: svt.MsPwFecRetryExpired Raised on class: svt.SpokeSdpFec	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: msPwFecRetryExpired	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a trap is received because of retry expired. The alarm is cleared when the retry starts again.		
Raising condition: ('Retry Expired' EQUAL 'true')		
Clearing condition: ('Retry Expired' EQUAL 'false')		
Remedial action: May need to shutdown the multi-segment pseudo-wire provider edge to restart the retries.		

Table 20-258 MultiChassisRingDown

Alarm	Attributes	Applicable major release
Name: MultiChassisRingDown (520) Type: redundancyAlarm Package: multichassis.MultiChassisRingDown Raised on class: multichassis.MultiChassisRing	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ringDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a MC ring group Operational State is not in the Connected state. The alarm is cleared when the ring group enters the Connected state.		
Raising condition: ('Operational State' NOT EQUAL 'Connected')		
Clearing condition: ('Operational State' EQUAL 'Connected')		
Remedial action: Check if MC ring is admin down, MC Sync is operational up, In-Band Control Connection is up, ring node is up ...		

Table 20-259 MvrConfiguredFromVplsNotExist

Alarm	Attributes	Applicable major release
Name: MvrConfiguredFromVplsNotExist (219) Type: configurationAlarm Package: vpls.MvrConfiguredFromVplsNotExist Raised on classes: • vpls.L2AccessInterfaceMldMvrCfg • vpls.L2AccessInterfaceMvrCfg	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MvrConfiguredFromVplsNo-tExist	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an MVR source is an MVR VPLS that does not exist. The alarm clears when the MVR VPLS is created.		
Raising condition: ('fromVplsExists' EQUAL 'false')		
Clearing condition: (('fromVplsExists' EQUAL 'true') OR ('fromVplsId' EQUAL '0L'))		
Remedial action: Create the missing MVR VPLS.		

Table 20-260 MvrConfiguredProxySapNotExist

Alarm	Attributes	Applicable major release
Name: MvrConfiguredProxySapNotExist (220) Type: configurationAlarm Package: vpls.MvrConfiguredProxySapNotExist Raised on classes: • vpls.L2AccessInterfaceMldMvrCfg • vpls.L2AccessInterfaceMvrCfg	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MvrConfiguredProxySapNo-tExist	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a configured MVR proxy SAP does not exist. The alarm clears when the proxy SAP is created.		
Raising condition: ('proxySapExists' EQUAL 'false')		

Table 20-260 MvrConfiguredProxySapNotExist (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ('proxySapExists' EQUAL 'true')		
Remedial action: Create the missing proxy SAP.		

Table 20-261 MvrSiteDown

Alarm	Attributes	Applicable major release
Name: MvrSiteDown (162) Type: ProtocolAlarm Package: layer2.MvrSiteDown Raised on class: layer2.MvrSite	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('MVR Admin Status' EQUAL 'Disabled')		
Clearing condition: ('MVR Admin Status' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable MVR Admin Status under the Bridge Instance.		

Table 20-262 NatDeterministicChange

Alarm	Attributes	Applicable major release
Name: NatDeterministicChange (5122) Type: configurationAlarm Package: netw.NatDeterministicChange Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: NatDeterministicMapChanged	Release: • 7.0
Description: The alarm is raised when something changed in the Deterministic NAT map. Such a change may be caused by a modification of the Deterministic NAT Prefix or the Deterministic NAT Map.		
Remedial action: Managers that rely on the offline representation of the Deterministic NAT map should get an updated copy by saving the Deterministic NAT script.		

Table 20-263 NatIsaGrpDegraded

Alarm	Attributes	Applicable major release
Name: NatIsaGrpDegraded (8059) Type: equipmentAlarm Package: nat.NatIsaGrpDegraded Raised on class: nat.NatIsaGroup	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NatIsaGrpDegraded	Release: • 7.0 • 8.0
Description: The alarm is raised when the NAT ISA group is degraded, while operationally still in service.		
Raising condition: (('Degraded State' EQUAL 'True') AND ('Operational State' EQUAL 'Up'))		

Table 20-263 NatIsaGrpDegraded (continued)

Alarm	Attributes	Applicable major release
Clearing condition: (('Operational State' NOT EQUAL 'Up') OR ('Degraded State' NOT EQUAL 'True'))		
Remedial action: The ISA-NAT Group is degraded. Check that the configured ISA-NAT Group Member MDA(s) are active and operationally up. There may be a fault with the ISA Application NAT Group.		

Table 20-264 NatIsaGrpDown

Alarm	Attributes	Applicable major release
Name: NatIsaGrpDown (3887) Type: equipmentAlarm Package: nat.NatIsaGrpDown Raised on class: nat.NatIsaGroup	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NatIsaGrpDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the Operational State of an NAT ISA group is Down and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The operational state of the ISA-NAT Group is down, despite the administrative state being up. Check that the configured ISA-NAT Group Member MDA(s) are active and operationally up. There may be a fault with the ISA Application NAT Group.		

Table 20-265 NatIsaMemberSessionUsageHi

Alarm	Attributes	Applicable major release
Name: NatIsaMemberSessionUsageHi (3937) Type: equipmentAlarm Package: nat.NatIsaMemberSessionUsageHi Raised on class: nat.IsaMember	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the session usage of an ISA-NAT group member reaches the high watermark. The alarm clears when the session usage reaches the low watermark.		
Remedial action: Review the watermarks configuration to make sure it matches the capacity of your network. If required, deploy extra equipment to deal with the demand.		

Table 20-266 NatIsaMemberSessionUsageHigh

Alarm	Attributes	Applicable major release
Name: NatIsaMemberSessionUsageHigh (1070) Type: equipmentAlarm Package: nat.NatIsaMemberSessionUsageHigh Raised on class: nat.IsaMda	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 6.0 • 7.0 • 8.0

Table 20-266 NatIsaMemberSessionUsageHigh (continued)

Alarm	Attributes	Applicable major release
Description: Deprecated in 10.0, Use {NatIsaMemberSessionUsageHi on nat.IsaMember} instead. The alarm is raised when the session usage of an ISA-NAT group member reaches the high watermark. The alarm clears when the session usage reaches the low watermark.		
Remedial action: Review the watermarks configuration to make sure it matches the capacity of your network. If required, deploy extra equipment to deal with the demand.		

Table 20-267 NatL2AwSubIcmpPortUsageHigh

Alarm	Attributes	Applicable major release
Name: NatL2AwSubIcmpPortUsageHigh (1086) Type: equipmentAlarm Package: ressubscr.NatL2AwSubIcmpPortUsageHigh Raised on class: ressubscr. ResidentialSubscriberInstance	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the ICMP port usage of an L2-aware NAT subscriber reaches the high or low watermark.		
Remedial action: Review the watermarks configuration to make sure it matches the capacity of the network. If required, deploy extra equipment to deal with the demand.		

Table 20-268 NatL2AwSubSessionUsageHigh

Alarm	Attributes	Applicable major release
Name: NatL2AwSubSessionUsageHigh (1087) Type: equipmentAlarm Package: ressubscr.NatL2AwSubSessionUsageHigh Raised on class: ressubscr. ResidentialSubscriberInstance	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the session usage of an L2-aware NAT subscriber reaches the high or low watermark.		
Remedial action: Review the watermarks configuration to make sure it matches the capacity of your network. If required, deploy extra equipment to deal with the demand.		

Table 20-269 NatL2AwSubTcpPortUsageHigh

Alarm	Attributes	Applicable major release
Name: NatL2AwSubTcpPortUsageHigh (1088) Type: equipmentAlarm Package: ressubscr.NatL2AwSubTcpPortUsageHigh Raised on class: ressubscr. ResidentialSubscriberInstance	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the TCP port usage of an L2-aware NAT subscriber reaches the high or low watermark.		

Table 20-269 NatL2AwSubTcpPortUsageHigh (continued)

Alarm	Attributes	Applicable major release
Remedial action: Review the watermarks configuration to make sure it matches the capacity of your network. If required, deploy extra equipment to deal with the demand.		

Table 20-270 NatL2AwSubUdpPortUsageHigh

Alarm	Attributes	Applicable major release
Name: NatL2AwSubUdpPortUsageHigh (1089) Type: equipmentAlarm Package: ressubscr.NatL2AwSubUdpPortUsageHigh Raised on class: ressubscr. ResidentialSubscriberInstance	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the UDP port usage of an L2-aware NAT subscriber reaches the high or low watermark.		
Remedial action: Review the watermarks configuration to make sure it matches the capacity of your network. If required, deploy extra equipment to deal with the demand.		

Table 20-271 NatLsnSubscriberIcmpPortUsageHigh

Alarm	Attributes	Applicable major release
Name: NatLsnSubscriberIcmpPortUsageHigh (4860) Type: thresholdCrossed Package: nat.NatLsnSubscriberIcmpPortUsageHigh Raised on class: nat.NatManager	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the ICMP port usage of a large-scale NAT subscriber reaches the high or low watermark.		
Remedial action: Review the watermarks configuration to make sure it matches the capacity of your network. If required, deploy extra equipment to deal with the demand.		

Table 20-272 NatLsnSubscriberIcmpPortUsgHigh

Alarm	Attributes	Applicable major release
Name: NatLsnSubscriberIcmpPortUsgHigh (5397) Type: thresholdCrossed Package: nat.NatLsnSubscriberIcmpPortUsgHigh Raised on class: nat.NatManager	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the ICMP port usage of a large-scale NAT subscriber reaches the high or low watermark.		
Remedial action: Review the watermarks configuration to make sure it matches the capacity of your network. If required, deploy extra equipment to deal with the demand.		

Table 20-273 NatLsnSubscriberSessionUsageHigh

Alarm	Attributes	Applicable major release
Name: NatLsnSubscriberSessionUsageHigh (4861) Type: thresholdCrossed Package: nat.NatLsnSubscriberSessionUsageHigh Raised on class: nat.NatManager	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the session usage of a large-scale NAT subscriber reaches the high watermark. The alarm will be cleared when the session usage of a large-scale NAT subscriber reaches its low watermark again.		
Remedial action: Review the watermarks configuration to make sure it matches the capacity of your network.		

Table 20-274 NatLsnSubscriberSessionUsgHigh

Alarm	Attributes	Applicable major release
Name: NatLsnSubscriberSessionUsgHigh (5398) Type: thresholdCrossed Package: nat.NatLsnSubscriberSessionUsgHigh Raised on class: nat.NatManager	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the session usage of a large-scale NAT subscriber reaches the high watermark. The alarm will be cleared when the session usage of a large-scale NAT subscriber reaches its low watermark again.		
Remedial action: Review the watermarks configuration to make sure it matches the capacity of your network.		

Table 20-275 NatLsnSubscriberTcpPortUsageHigh

Alarm	Attributes	Applicable major release
Name: NatLsnSubscriberTcpPortUsageHigh (4862) Type: thresholdCrossed Package: nat.NatLsnSubscriberTcpPortUsageHigh Raised on class: nat.NatManager	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the TCP port usage of a large-scale NAT subscriber reaches the high or low watermark.		
Remedial action: Review the watermarks configuration to make sure it matches the capacity of your network. If required, deploy extra equipment to deal with the demand.		

Table 20-276 NatLsnSubscriberTcpPortUsgHigh

Alarm	Attributes	Applicable major release
Name: NatLsnSubscriberTcpPortUsgHigh (5399) Type: thresholdCrossed Package: nat.NatLsnSubscriberTcpPortUsgHigh Raised on class: nat.NatManager	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the TCP port usage of a large-scale NAT subscriber reaches the high or low watermark.		
Remedial action: Review the watermarks configuration to make sure it matches the capacity of your network. If required, deploy extra equipment to deal with the demand.		

Table 20-277 NatLsnSubscriberUdpPortUsageHigh

Alarm	Attributes	Applicable major release
Name: NatLsnSubscriberUdpPortUsageHigh (4863) Type: thresholdCrossed Package: nat.NatLsnSubscriberUdpPortUsageHigh Raised on class: nat.NatManager	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the UDP port usage of a large-scale NAT subscriber reaches the high or low watermark.		
Remedial action: Review the watermarks configuration to make sure it matches the capacity of your network. If required, deploy extra equipment to deal with the demand.		

Table 20-278 NatLsnSubscriberUdpPortUsgHigh

Alarm	Attributes	Applicable major release
Name: NatLsnSubscriberUdpPortUsgHigh (5400) Type: thresholdCrossed Package: nat.NatLsnSubscriberUdpPortUsgHigh Raised on class: nat.NatManager	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the UDP port usage of a large-scale NAT subscriber reaches the high or low watermark.		
Remedial action: Review the watermarks configuration to make sure it matches the capacity of your network. If required, deploy extra equipment to deal with the demand.		

Table 20-279 NatMdaDetectsLoadSharingError

Alarm	Attributes	Applicable major release
Name: NatMdaDetectsLoadSharingError (5120) Type: configurationAlarm Package: nat.NatMdaDetectsLoadSharingError Raised on class: nat.IsaMda	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: NatMdaLoadSharingErrorDetected	Release: • 7.0
Description: The alarm is raised when node is sending periodically at most every 10 seconds while a NAT ISA MDA detects that it is receiving packets erroneously, due to incorrect load-balancing by the ingress IOM. The MDA drops all incorrectly load-balanced traffic.		
Remedial action: The ingress IOM hardware does not support a particular NAT function's load-balancing, for example an IOM-2 does not support deterministic NAT. Upgrade the ingress IOM, or change the configuration.		

Table 20-280 NatPcpSrvStateDown

Alarm	Attributes	Applicable major release
Name: NatPcpSrvStateDown (4382) Type: communicationsAlarm Package: nat.NatPcpSrvStateDown Raised on class: nat.PcpServer	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NatPcpSrvStateDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the Operational State of an NAT PCP Server Changes		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('Administrative State' EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This alarm indicates the PCP Server Operational State is Down.\n Please check the State Description on the PCP server for detail information		

Table 20-281 NatPlL2AwBlockUsageHigh

Alarm	Attributes	Applicable major release
Name: NatPlL2AwBlockUsageHigh (1074) Type: equipmentAlarm Package: nat.NatPlL2AwBlockUsageHigh Raised on class: nat.NatPool	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the block usage of an L2-aware NAT address pool reaches the high watermark. The alarm clears when the block usage reaches the low watermark.		
Remedial action: This alarm indicates the block usage of a L2-aware NAT address pool reaches its threshold on a particular member MDA of its ISA group. \nPlease ensure the address pool block usage configuration adequate for the system requirement. \nThis alarm will be cleared automatically once the block usage is below the watermark.		

Table 20-282 NatPlLsnMemberBlockUsageHigh

Alarm	Attributes	Applicable major release
Name: NatPlLsnMemberBlockUsageHigh (1075) Type: equipmentAlarm Package: nat.NatPlLsnMemberBlockUsageHigh Raised on class: nat.NatPool	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the block usage of a large-scale NAT address pool reaches the high watermark. The alarm clears when the block usage reaches the low watermark.		
Remedial action: This alarm indicates the block usage of a Large Scale NAT address pool reaches its threshold on a particular member MDA of its ISA group. \nPlease ensure the address pool block usage configuration adequate for the system requirement. \nThis alarm will be cleared automatically once the block usage is below the watermark.		

Table 20-283 NatResourceProblem

Alarm	Attributes	Applicable major release
Name: NatResourceProblem (9575) Type: equipmentAlarm Package: netw.NatResourceProblem Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: natResourceProblem	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when resource problem is detected while attempting to activate some part of the NAT configuration of a system		
Remedial action: A resource problem was detected while attempting to activate a component of the system NAT configuration. Make sure the ISA card on the NE has sufficient resources available.		

Table 20-284 NeighborDown

Alarm	Attributes	Applicable major release
Name: NeighborDown (121) Type: NeighborDown Package: ospf.NeighborDown Raised on class: ospf.AbstractNeighbor	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NeighborDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an OSPF interface neighbor is operationally Down.		
Raising condition: ('Operational State' NOT EQUAL 'full')		
Clearing condition: ('Operational State' EQUAL 'full')		
Remedial action: This alarm is raised when the OSPF interface neighbor is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 20-285 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major release
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm Package: netw.NeManagementAndTrapManagementMismatch Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: neManagementChange	Release: • 6.0 • 7.0 • 8.0
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		
Raising condition: ((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band')))		
Clearing condition: ((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band')))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

Table 20-286 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major release
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm Package: security.NewSsh2ServerKeyDetected Raised on class: security.KnownHostKey	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 20-287 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major release
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm Package: netw.NodeDatabaseFallbackDetected Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeDatabaseFallback	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 20-288 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major release
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm Package: netw.NodeDatabaseMisalignmentDetected Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

Table 20-289 NodeRebooted

Alarm	Attributes	Applicable major release
Name: NodeRebooted (32) Type: equipmentAlarm Package: netw.NodeRebooted Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: nodeReboot	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM detects an NE reboot based on the latest NE sysUpTime value.		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 20-290 NodeSuspended

Alarm	Attributes	Applicable major release
Name: NodeSuspended (5123) Type: communicationsAlarm Package: netw.NodeSuspended Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NodeSuspend	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element.The alarm will be cleared when the network element is managed back.		

Table 20-291 noFunctioningScript

Alarm	Attributes	Applicable major release
Name: noFunctioningScript (275) Type: configurationAlarm Package: subscrident.noFunctioningScript Raised on class: subscrident.Policy	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: primaryBackupDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when all subscriber identification scripts are operationally down.		
Raising condition: (('isLocal' EQUAL 'true') AND ('Primary Script Operational State' NOT EQUAL 'Up') AND ('Secondary Script Operational State' NOT EQUAL 'Up') AND ('Tertiary Script Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('isLocal' EQUAL 'true') AND (('Primary Script Operational State' EQUAL 'Up') OR ('Secondary Script Operational State' EQUAL 'Up') OR ('Tertiary Script Operational State' EQUAL 'Up')))		
Remedial action: If the DHCP ACK Python script processing behaviour is desired, please make sure that primary, secondary and tertiary scripts are installed and operationally up.		

Table 20-292 nonDeployedAdjacencyExists

Alarm	Attributes	Applicable major release
Name: nonDeployedAdjacencyExists (11465) Type: communicationsAlarm Package: mpr.nonDeployedAdjacencyExists Raised on class: mpr.BackhaulAdjacency	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nonDeployedAdjacencyExists	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a deployed adjacency is deleted on the site.		
Raising condition: (('Deployed to Site' EQUAL 'false') AND ('existedOnSite' EQUAL 'true'))		
Clearing condition: (('Deployed to Site' EQUAL 'true') AND ('existedOnSite' EQUAL 'true'))		

Table 20-292 nonDeployedAdjacencyExists (continued)

Alarm	Attributes	Applicable major release
Remedial action: Deploy the changes made to the service.		

Table 20-293 NoPeerMcRingFound

Alarm	Attributes	Applicable major release
Name: NoPeerMcRingFound (782) Type: configurationAlarm Package: multichassis.NoPeerMcRingFound Raised on class: multichassis.MultiChassisRing	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IncompleteConfig	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM cannot find the peer MC ring.		
Raising condition: ('Peer Multi-Chassis Ring' EQUAL '\"\"')		
Clearing condition: ('Peer Multi-Chassis Ring' NOT EQUAL '\"\"')		
Remedial action: Configure the missing peered MC ring, or delete this one if it is not used.		

Table 20-294 NTPOperDown

Alarm	Attributes	Applicable major release
Name: NTPOperDown (4879) Type: communicationsAlarm Package: ntp.NTPOperDown Raised on class: ntp.NTP	Severity: info Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NTPOperDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is generated when the NTP Operational State is down for NTP.		
Raising condition: (('Operational State' EQUAL 'Down') AND ('NTP State' EQUAL 'Enabled'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('NTP State' EQUAL 'Disabled'))		
Remedial action: Please check if NTP is administratively enabled (Admin State in NTP General Tab). If admin state down, enable it to make NTP operationally up.		

Table 20-295 ObsoleteProtocolInFilter

Alarm	Attributes	Applicable major release
Name: ObsoleteProtocolInFilter (3706) Type: ConfigurationAlarm Package: aapolicy.ObsoleteProtocolInFilter Raised on class: aapolicy.ApplicationFilter	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: obsoleteProtocolInFilter	Release: • 6.0
Description: The alarm is raised when a local application filter refers to an obsolete application assurance protocol.		

Table 20-295 ObsoleteProtocolInFilter (continued)

Alarm	Attributes	Applicable major release
Remedial action: Change the application filter configuration to use a protocol that is not Obsolete.		

Table 20-296 OFFlowEntryDeploymentCreateFailed

Alarm	Attributes	Applicable major release
Name: OFFlowEntryDeploymentCreateFailed (5405) Type: processingErrorAlarm Package: openflow. OFFlowEntryDeploymentCreateFailed Raised on class: openflow.OFAbstractFlowEntry	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OFFlowEntryDeploymentCreateFailed	Release: • 7.0 • 8.0
Description: The notification alarm is raised when the flow entry deployment create has failed.		
Raising condition: (('Deployment Status' EQUAL 'Creation Failed'))		
Clearing condition: (('Deployment Status' NOT EQUAL 'Creation Failed'))		
Remedial action: This alarm is raised when the OpenFlow switch rejects creation of the flow.		

Table 20-297 OFFlowEntryDeploymentDeleteFailed

Alarm	Attributes	Applicable major release
Name: OFFlowEntryDeploymentDeleteFailed (5406) Type: processingErrorAlarm Package: openflow. OFFlowEntryDeploymentDeleteFailed Raised on class: openflow.OFAbstractFlowEntry	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OFFlowEntryDeploymentDeleteFailed	Release: • 7.0 • 8.0
Description: The notification alarm is raised when the flow entry deployment create has failed.		
Raising condition: (('Deployment Status' EQUAL 'Deletion Failed'))		
Clearing condition: (('Deployment Status' NOT EQUAL 'Deletion Failed'))		
Remedial action: This alarm is raised when the OpenFlow switch rejects deletion of the flow.		

Table 20-298 OFLogicalPortStatusMplsTpNotSet

Alarm	Attributes	Applicable major release
Name: OFLogicalPortStatusMplsTpNotSet (5407) Type: equipmentAlarm Package: openflow.OFLogicalPortStatusMplsTpNotSet Raised on class: openflow.OFSwitch	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OFLogicalPortStatusMplsTpNotSet	Release: • 7.0 • 8.0
Description: The alarm is raised when the MPLS-TP flag is not set in the Logical Port Status.		

Table 20-298 OFLogicalPortStatusMplsTpNotSet (continued)

Alarm	Attributes	Applicable major release
Raising condition: (('Logical Port Status' EQUAL '0L') OR ('Logical Port Status' EQUAL 'rsvp-te'))		
Clearing condition: (('Logical Port Status' NOT EQUAL '0L') AND ('Logical Port Status' NOT EQUAL 'rsvp-te'))		
Remedial action: When MPLS-TP is not set, OpenFlow port status will not be received by SAM.		

Table 20-299 OFLogicalPortStatusRsvpTeNotSet

Alarm	Attributes	Applicable major release
Name: OFLogicalPortStatusRsvpTeNotSet (5408) Type: equipmentAlarm Package: openflow.OFLogicalPortStatusRsvpTeNotSet Raised on class: openflow.OFSwitch	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OFLogicalPortStatusRs-vpTeNotSet	Release: • 7.0 • 8.0
Description: The alarm is raised when the RSVP-TE flag is not set in the Logical Port Status.		
Raising condition: (('Logical Port Status' EQUAL '0L') OR ('Logical Port Status' EQUAL 'mpls-tp'))		
Clearing condition: (('Logical Port Status' NOT EQUAL '0L') AND ('Logical Port Status' NOT EQUAL 'mpls-tp'))		
Remedial action: When RSVP-TE is not set, OpenFlow port status will not be received by SAM.		

Table 20-300 OFSwitchDown

Alarm	Attributes	Applicable major release
Name: OFSwitchDown (5409) Type: equipmentAlarm Package: openflow.OFSwitchDown Raised on class: openflow.OFSwitch	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OFSwitchDown	Release: • 7.0 • 8.0
Description: The alarm is raised when the Operational State of an OFSwitch is Down and the Administrative State is Up.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('Administrative State' EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This alarm is raised when the OpenFlow switch has gone down.		

Table 20-301 OspfInterfaceDown

Alarm	Attributes	Applicable major release
Name: OspfInterfaceDown (141) Type: OspfInterfaceDown Package: ospf.OspfInterfaceDown Raised on class: ospf.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OspfInterfaceDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an OSPF interface is operationally down.		
Raising condition: ('operationalState' EQUAL 'Down')		
Clearing condition: ('operationalState' NOT EQUAL 'Down')		
Remedial action: This alarm is raised when the OSPF interface is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 20-302 OverTemperatureDetected

Alarm	Attributes	Applicable major release
Name: OverTemperatureDetected (388) Type: environmentalAlarm Package: equipment.OverTemperatureDetected Raised on class: equipment.Shelf	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentOverheated	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the chassis temperature exceeds the maximum threshold value.		
Raising condition: ('Over Temperature State' EQUAL 'Over')		
Clearing condition: ('Over Temperature State' NOT EQUAL 'Over')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 20-303 P2MPLSPDown

Alarm	Attributes	Applicable major release
Name: P2MPLSPDown (4378) Type: pathAlarm Package: mpls.P2MPLSPDown Raised on class: mpls.P2MPDynamicLsp	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: P2MPLSPDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the P2MP LSP Administrative State is Up and the Operational State is Down. The alarm clears when the P2MP LSP Operational State changes to Up or the Administrative State changes to Down.		
Raising condition: (('Administrative' EQUAL 'Up') AND ('Operational' NOT EQUAL 'Up'))		

Table 20-303 P2MPLSPDown (continued)

Alarm	Attributes	Applicable major release
Clearing condition: (('Operational' EQUAL 'Up') OR ('Administrative' NOT EQUAL 'Up'))		
Remedial action: The operational state of the P2MP LSP is down, despite the administrative state being up. Review the P2MP Primary Instance or S2LPath to make sure it was configured correctly and Administrative state is up. The physical port near end or far end may have failed - this can be remedied by replacing the interface card in question. The physical links may have been turned down administratively - re-enable the links. A cable failure or disconnect may have occurred - please ensure that the cables are properly connected to the physical port and and that the cable has not been damaged.		

Table 20-304 PartialResyncProblem

Alarm	Attributes	Applicable major release
Name: PartialResyncProblem (4401) Type: communicationsAlarm Package: netw.PartialResyncProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: partialResyncProblem	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a partial resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 20-305 PartialVPRNEncryption

Alarm	Attributes	Applicable major release
Name: PartialVPRNEncryption (8992) Type: configurationAlarm Package: nge.PartialVPRNEncryption Raised on class: nge.VprnEncryptService	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConfigMismatch	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when one or more sites are not encryption enabled in a VPRN service.		
Raising condition: (('VPRN Service Encryption Status' EQUAL 'Partial'))		
Clearing condition: (('VPRN Service Encryption Status' NOT EQUAL 'Partial'))		
Remedial action: This site is newly added to the VPRN service, Perform the encrypt operation on the KeyGroup to clear the alarm.		

Table 20-306 PccRuleInsertedFltrEntryDropped

Alarm	Attributes	Applicable major release
Name: PccRuleInsertedFltrEntryDropped (11059) Type: configurationAlarm Package: aclfilter.PccRuleInsertedFltrEntryDropped Raised on class: aclfilter.FilterDefinition	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: FilterEntryDropped	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a request to insert a filter entry is not successful for a PCC rule application.		
Remedial action: A Configuration error has occurred. The request to insert a filter entry was not successful for PCC rule application. Check the configuration filter entry.		

Table 20-307 PccRuleInsertSpaceThresholdAlarm

Alarm	Attributes	Applicable major release
Name: PccRuleInsertSpaceThresholdAlarm (11058) Type: configurationAlarm Package: aclfilter.PccRuleInsertSpaceThresholdAlarm Raised on class: aclfilter.FilterDefinition	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: UtilizationExceedConfigured-Limit	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the utilization of a filter entry range that is reserved for filter entry insertion increases to the configured maximum value for a PCC rule application insert range.		
Remedial action: The filter entry range reserved for filter entry insertion has increased to the configured high watermark for PCC rule application. Make an adjusted to the watermarks or to the filter.		

Table 20-308 PeerConnectionDown (msdp)

Alarm	Attributes	Applicable major release
Name: PeerConnectionDown (2) Type: ProtocolAlarm Package: msdp.PeerConnectionDown Raised on class: msdp.CommonPeer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: connectionDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the connectionState of this peer changes from Established to a state other than Established. The alarm clears when the connectionState of this peer returns to the Established state.		
Raising condition: (('connectionState' NOT EQUAL 'Established') AND ('administrativeState' EQUAL 'Up'))		
Clearing condition: (('connectionState' EQUAL 'Established') OR ('administrativeState' NOT EQUAL 'Up'))		
Remedial action: Check the configurations of the peer routers.		

Table 20-309 PeerConnectionDown (bgp)

Alarm	Attributes	Applicable major release
Name: PeerConnectionDown (2) Type: ProtocolAlarm Package: bgp.PeerConnectionDown Raised on class: bgp.Peer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: connectionDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a BGP peer has a Connection State other than Established, and the Administrative State of the BGP peer is Up.		
Raising condition: (('Connection State' NOT EQUAL 'Established') AND ('Administrative State' EQUAL 'Up'))		
Clearing condition: (('Connection State' EQUAL 'Established') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: A mismatch in configuration may have occurred. Check the configuration of both peers to rule out a mismatched configuration.		

Table 20-310 PeerDown (bgp)

Alarm	Attributes	Applicable major release
Name: PeerDown (1) Type: ProtocolAlarm Package: bgp.PeerDown Raised on class: bgp.Peer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a BGP peer has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The BGP peer entity is down - administratively disable the BGP peer and re-enable it. If toggling the administrative state does not solve the problem check that the physical interface and network connection to the far end peer are up and operational. If the problem persists please contact your Nokia support representative for assistance.		

Table 20-311 PeerDown (msdp)

Alarm	Attributes	Applicable major release
Name: PeerDown (1) Type: ProtocolAlarm Package: msdp.PeerDown Raised on class: msdp.CommonPeer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the Administrative State of a peer changes from Up to Down. The alarm clears when the Administrative State returns to Up.		
Raising condition: (('administrativeState' EQUAL 'Down'))		

Table 20-311 PeerDown (msdp) (continued)

Alarm	Attributes	Applicable major release
Clearing condition: (('administrativeState' NOT EQUAL 'Down'))		
Remedial action: Turn up the Peer.		

Table 20-312 PeerGroupDown (bgp)

Alarm	Attributes	Applicable major release
Name: PeerGroupDown (5) Type: ProtocolAlarm Package: bgp.PeerGroupDown Raised on class: bgp.PeerGroup	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a BGP peer group has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The BGP peer group is down - administratively disable the BGP peer group and re-enable it. If the problem persists please contact your Nokia support representative for assistance.		

Table 20-313 PeerGroupDown (msdp)

Alarm	Attributes	Applicable major release
Name: PeerGroupDown (5) Type: ProtocolAlarm Package: msdp.PeerGroupDown Raised on class: msdp.PeerGroup	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the Administrative State of a peer group changes from Up to Down. The alarm clears when the Administrative State returns to Up.		
Raising condition: (('Administrative State' EQUAL 'Down'))		
Clearing condition: (('Administrative State' NOT EQUAL 'Down'))		
Remedial action: Turn up the Group.		

Table 20-314 PeerLacIngressEgressFault

Alarm	Attributes	Applicable major release
Name: PeerLacIngressEgressFault (2929) Type: PeerLacAlarm Package: svt.PeerLacIngressEgressFault Raised on class: svt.SpokeSdpBinding	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: peerPWStatusBitsChanged	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the Peer Status is Peer LAC Rx Fault and Peer LAC Tx Fault		
Raising condition: (('Peer State Cause'anyBit'Peer LAC Tx Fault') AND ('Peer State Cause'anyBit'Peer LAC Rx Fault'))		
Clearing condition: NOT ((('Peer State Cause'anyBit'Peer LAC Tx Fault') AND ('Peer State Cause'anyBit'Peer LAC Rx Fault')))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 20-315 PeerUnreachable

Alarm	Attributes	Applicable major release
Name: PeerUnreachable (842) Type: ProtocolAlarm Package: l2tp.PeerUnreachable Raised on class: l2tp.Peer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an L2TP peer becomes unreachable.		
Remedial action: This alarm is raised when L2TP peer is unreachable. Please verify the L2TP tunnel profile configuration to ensure that the peer is properly configured. Also verify that the peer is actually reachable from this network element. \nThis alarm is cleared automatically when L2TP Peer becomes reachable.		

Table 20-316 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major release
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm Package: netw. PersistentIndexParametersMisconfigured Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistentIndexConfiguration-Mismatch	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when persistence is set to Off in the NE BOF.		
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		

Table 20-316 PersistentIndexParametersMisconfigured (continued)

Alarm	Attributes	Applicable major release
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

Table 20-317 PimDown

Alarm	Attributes	Applicable major release
Name: PimDown (184) Type: ProtocolAlarm Package: pim.PimDown Raised on class: pim.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a PIM site is administratively Up but operationally Down. The alarm is cleared when the PIM site becomes operationally Up but administratively Down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This should never happen. Contact your Nokia support representative for assistance.		

Table 20-318 PollerProblem

Alarm	Attributes	Applicable major release
Name: PollerProblem (31) Type: communicationsAlarm Package: netw.PollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resyncFailed	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 20-319 PoolDepleted

Alarm	Attributes	Applicable major release
Name: PoolDepleted (3950) Type: configurationAlarm Package: dhcp.PoolDepleted Raised on class: dhcp.AddressPool	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: actualFreeAddrDepleted	Release: • 6.0 • 7.0 • 8.0
Description: This alarm is generated when the actual number of free addresses in the DHCP Server Address pool becomes zero.		
Remedial action: This alarm is generated when the actual number of free addresses in a pool becomes zero. Please increase the pool address range or create another address pool.		

Table 20-320 PortEtherSymMonSDAlarm

Alarm	Attributes	Applicable major release
Name: PortEtherSymMonSDAlarm (5662) Type: communicationsAlarm Package: ethernetequipment. PortEtherSymMonSDAlarm Raised on class: ethernetequipment. EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: etherPortSymMonSDThrehol-dExceededAlarm	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an Ethernet port Symbol Monitor Failure alarm condition is detected (Signal Degradation Threshold exceeded).		
Raising condition: ('Symbol Alarm Reason' EQUAL 'SD Threshold Exceeded')		
Clearing condition: ('Symbol Alarm Reason' NOT EQUAL 'SD Threshold Exceeded')		
Remedial action: Symbol monitor signal degradation alarm could be cleared by changing/disabling the associated threshold/multiplier values or it is self clearing and will clear once the error rate drops below 1/10th of the configured rate.		

Table 20-321 PortEtherSymMonSFAlarm

Alarm	Attributes	Applicable major release
Name: PortEtherSymMonSFAlarm (5663) Type: communicationsAlarm Package: ethernetequipment. PortEtherSymMonSFAlarm Raised on class: ethernetequipment. EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: etherPortSymMonSFThrehold-ExceededAlarm	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an Ethernet port Symbol Monitor Failure alarm condition is detected (Signal Failure Threshold exceeded).		
Raising condition: ('Symbol Alarm Reason' EQUAL 'SF Threshold Exceeded')		
Clearing condition: ('Symbol Alarm Reason' NOT EQUAL 'SF Threshold Exceeded')		

Table 20-321 PortEtherSymMonSFAlarm (continued)

Alarm	Attributes	Applicable major release
Remedial action: Symbol monitor signal failure alarm could be cleared by changing/disabling the associated threshold/multiplier values or by taking the port out of service (eg. shutdown, card/mda reset, physical link loss).		

Table 20-322 PowerSupplyAcFailure

Alarm	Attributes	Applicable major release
Name: PowerSupplyAcFailure (9644) Type: equipmentAlarm Package: equipment.PowerSupplyAcFailure Raised on class: equipment.PowerSupplyTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyAcFailure	Release: • 6.0 • 7.0 • 8.0
Description: This notification is generated when an AC failure occurs on the power supply.		
Raising condition: ('AC Voltage Status' EQUAL 'Out of Range')		
Clearing condition: (('AC Voltage Status' EQUAL 'Not Equipped') OR ('AC Voltage Status' EQUAL 'OK'))		
Remedial action: Insert a new power supply. If the problem persists please contact your Nokia support representative for assistance.		

Table 20-323 PowerSupplyDcFailure

Alarm	Attributes	Applicable major release
Name: PowerSupplyDcFailure (9645) Type: equipmentAlarm Package: equipment.PowerSupplyDcFailure Raised on class: equipment.PowerSupplyTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyDcFailure	Release: • 6.0 • 7.0 • 8.0
Description: This notification is generated when a DC failure occurs on the power supply.		
Raising condition: ('DC Voltage Status' EQUAL 'Out of Range')		
Clearing condition: (('DC Voltage Status' EQUAL 'Not Equipped') OR ('DC Voltage Status' EQUAL 'OK'))		
Remedial action: Insert a new power supply. If the problem persists please contact your Nokia support representative for assistance.		

Table 20-324 PowerSupplyFailure (equipment)

Alarm	Attributes	Applicable major release
Name: PowerSupplyFailure (633) Type: equipmentAlarm Package: equipment.PowerSupplyFailure Raised on class: equipment.PowerSupplyTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyFailure	Release: • 6.0 • 7.0 • 8.0

Table 20-324 PowerSupplyFailure (equipment) (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when a power-supply tray reports a failure. When the alarm is raised during device discovery, a power-supply tray may be out of service. When the alarm is raised while the device is in the managed state, a power-supply tray may be out of service or the AC or DC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: (('Power Supply 1 Status' EQUAL 'Not Equipped') OR ('Power Supply 1 Status' EQUAL 'Failed'))		
Clearing condition: (('Power Supply 1 Status' EQUAL 'OK'))		
Remedial action: Ensure that the NE is properly connected to power. If the problem persists please contact your Nokia support representative for assistance.		

Table 20-325 PowerSupplyInputFailure

Alarm	Attributes	Applicable major release
Name: PowerSupplyInputFailure (9622) Type: equipmentAlarm Package: equipment.PowerSupplyInputFailure Raised on class: equipment.PowerSupplyTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyInputFailure	Release: • 6.0 • 7.0 • 8.0
Description: Generated when one of the chassis's power source supplies fails.		
Raising condition: ('Power Supply Input Status' EQUAL 'Failed')		
Clearing condition: (('Power Supply Input Status' EQUAL 'Not Equipped') OR ('Power Supply Input Status' EQUAL 'OK'))		
Remedial action: Ensure that the NE is properly connected to power. If the problem persists please contact your Nokia support representative for assistance.		

Table 20-326 PowerSupplyInputFeedDown

Alarm	Attributes	Applicable major release
Name: PowerSupplyInputFeedDown (5422) Type: equipmentAlarm Package: equipment.PowerSupplyInputFeedDown Raised on class: equipment.PowerSupplyTray	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyInputFeedDown	Release: • 6.0 • 7.0 • 8.0
Description: This alarm is generated if any one of the input feeds for a given power supply is not supplying power.		
Raising condition: (('inputFeedStatus' EQUAL 'Input A Down') OR ('inputFeedStatus' EQUAL 'Input B Down') OR (('inputFeedStatus'allBits'Input A Down') AND ('inputFeedStatus'allBits'Input B Down')))		
Clearing condition: ('inputFeedStatus' EQUAL 'None')		
Remedial action: Restore all of the input feeds that are not supplying power.		

Table 20-327 PowerSupplyOutputFailure

Alarm	Attributes	Applicable major release
Name: PowerSupplyOutputFailure (9623) Type: equipmentAlarm Package: equipment.PowerSupplyOutputFailure Raised on class: equipment.PowerSupplyTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyOutputFailure	Release: • 6.0 • 7.0 • 8.0
Description: Generated when one of the chassis's power output fails.		
Raising condition: ('Power Supply Output Status' EQUAL 'Failed')		
Clearing condition: (('Power Supply Output Status' EQUAL 'Not Equipped') OR ('Power Supply Output Status' EQUAL 'OK'))		
Remedial action: Ensure that the NE is properly connected to power. If the problem persists please contact your Nokia support representative for assistance.		

Table 20-328 PowerSupplyOverTemperature

Alarm	Attributes	Applicable major release
Name: PowerSupplyOverTemperature (9646) Type: equipmentAlarm Package: equipment.PowerSupplyOverTemperature Raised on class: equipment.PowerSupplyTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyOverTemperature	Release: • 6.0 • 7.0 • 8.0
Description: This notification is generated when a power supply temperature surpasses the threshold of the particular physical chassis.		
Raising condition: ('Temperature Status' EQUAL 'Out of Range')		
Clearing condition: (('Temperature Status' EQUAL 'Not Equipped') OR ('Temperature Status' EQUAL 'OK'))		
Remedial action: Check input feed and/or insert a new power supply. If the problem persists please contact your Nokia support representative for assistance.		

Table 20-329 PowerSupplyRemoved

Alarm	Attributes	Applicable major release
Name: PowerSupplyRemoved (542) Type: equipmentAlarm Package: equipment.PowerSupplyRemoved Raised on class: equipment.PowerSupplyTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PowerSupplyRemoved	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a chassis power supply is removed.		
Raising condition: ('Power Supply 1 Status' EQUAL 'Not Equipped')		
Clearing condition: ('Power Supply 1 Status' NOT EQUAL 'Not Equipped')		
Remedial action: To recover from this event, the customer is requested to add a new power supply to the system, or change a faulty power supply with a working one.		

Table 20-330 PppLoopbackDetected

Alarm	Attributes	Applicable major release
Name: PppLoopbackDetected (362) Type: configurationAlarm Package: ppp.PppLoopbackDetected Raised on class: ppp.Interface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PppLoopbackDetected	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the value of tmnxPppLocalMagicNumber is the same as the value of tmnxPppRemoteMagic-Number, which indicates that the link may be looped back.		
Raising condition: (('Local Magic Number' EQUAL 'Remote Magic Number') AND ('Local Magic Number' NOT EQUAL '0L'))		
Clearing condition: (('Local Magic Number' NOT EQUAL 'Remote Magic Number') OR ('Local Magic Number' EQUAL '0L'))		
Remedial action: Informational.		

Table 20-331 PrimaryImageBootFailure

Alarm	Attributes	Applicable major release
Name: PrimaryImageBootFailure (191) Type: configurationAlarm Package: sw.PrimaryImageBootFailure Raised on class: sw.CardSoftware	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 20-332 PrimaryPathLimitReached

Alarm	Attributes	Applicable major release
Name: PrimaryPathLimitReached (457) Type: resourceAlarm Package: equipment.PrimaryPathLimitReached Raised on class: equipment.DaughterCard	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceLimitReached	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the Ingress Multicast Path Management primary path bandwidth limit is reached.		
Raising condition: (('Primary Path Limit Override' > '0') AND ('Primary Path In use' >=" (1000 * 'Primary Path Limit Override')))"		
Clearing condition: (('Primary Path Limit Override' > '0') AND ('Primary Path In use' < (1000 * 'Primary Path Limit Override')))		

Table 20-332 PrimaryPathLimitReached (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational - The alarm is raised when the Ingress Multicast Path Management primary path bandwidth limit is reached. This can be remedied by modifying the primary path limit located at T1 Paths tab of the multicast bandwidth policy which assigned to the card, or increase the primary path limit override located at the Daughter Card tab under Daughter Card Slot form.		

Table 20-333 PTPClockNoMasterAlarm

Alarm	Attributes	Applicable major release
Name: PTPClockNoMasterAlarm (3604) Type: communicationsAlarm Package: ptp.PTPClockNoMasterAlarm Raised on class: ptp.IEEEPTPClock	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PTPClockNoMaster	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when Precision Timing Protocol (PTP) clock does not support PTP timing master.		
Remedial action: Informational- Please verify master clock configuration for timing.		

Table 20-334 PTPNotQualified

Alarm	Attributes	Applicable major release
Name: PTPNotQualified (3611) Type: communicationsAlarm Package: sonet.PTPNotQualified Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PTPNotQualified	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when PTP on an NE is not in the Qualified state.		
Raising condition: (('Qualified For Use' EQUAL 'Not Qualified') AND ('Administrative State' EQUAL 'Up'))		
Clearing condition: (('Qualified For Use' NOT EQUAL 'Not Qualified') OR ('Administrative State' EQUAL 'Down'))		
Remedial action: Check the communication path is up between the local PTP slave clock and its selected master		

Table 20-335 PTPPeerLossOfAnnounce

Alarm	Attributes	Applicable major release
Name: PTPPeerLossOfAnnounce (3608) Type: communicationsAlarm Package: ptp.PTPPeerLossOfAnnounce Raised on class: ptp.IEEEPTPPeer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PTPPeerLossOfAnnounce	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the PTP peer is in the 'Packet Timing Signal Fail (Loss Announce)' state. This indicates that the PTP announce messages are not received from the remote master.		

Table 20-335 PTPPeerLossOfAnnounce (continued)

Alarm	Attributes	Applicable major release
Raising condition: (('Master GM Alarms'anyBit'Loss of Announce'))		
Clearing condition: NOT ((('Master GM Alarms'anyBit'Loss of Announce')))		
Remedial action: Please check if Configured Peer IP address is reachable (ping <Peer Ip>) from the NE and PTP configuration is proper.		

Table 20-336 PTPPeerLossOfSync

Alarm	Attributes	Applicable major release
Name: PTPPeerLossOfSync (3609) Type: communicationsAlarm Package: ptp.PTPPeerLossOfSync Raised on class: ptp.IEEEPTPPeer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PTPPeerLossOfSync	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the PTP peer is in the 'Packet Timing Signal Fail (Loss Sync)' state. This indicates that the PTP timing messages are not received from the remote master.		
Raising condition: (('Master GM Alarms'anyBit'Loss of Sync'))		
Clearing condition: NOT ((('Master GM Alarms'anyBit'Loss of Sync')))		
Remedial action: Please check if Configured Peer IP address is reachable (ping <Peer Ip>) from the NE and PTP configuration is proper.		

Table 20-337 PTPReferenceLossOfSignal (sonet)

Alarm	Attributes	Applicable major release
Name: PTPReferenceLossOfSignal (3613) Type: communicationsAlarm Package: sonet.PTPReferenceLossOfSignal Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PTPReferenceLossOfSignal	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the PTP reference on an NE is not qualified due to Loss of Signal.		
Raising condition: (('Not Qualified Due To'anyBit'LOS'))		
Clearing condition: NOT ((('Not Qualified Due To'anyBit'LOS')))		
Remedial action: Check the communication path is up between the local PTP slave clock and its selected master		

Table 20-338 PTPReferenceOutOfFrequency (sonet)

Alarm	Attributes	Applicable major release
Name: PTPReferenceOutOfFrequency (3614) Type: communicationsAlarm Package: sonet.PTPReferenceOutOfFrequency Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PTPReferenceOutOfFrequency	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the PTP Reference on an NE is not qualified due to Out of frequency.		
Raising condition: (('Not Qualified Due To'anyBit'OOF'))		
Clearing condition: NOT ((('Not Qualified Due To'anyBit'OOF')))		
Remedial action: Make sure that frequency configured for Reference One is correct.		

Table 20-339 PTPReferenceOutOfPollInRange (sonet)

Alarm	Attributes	Applicable major release
Name: PTPReferenceOutOfPollInRange (3615) Type: communicationsAlarm Package: sonet.PTPReferenceOutOfPollInRange Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PTPReferenceOutOfPollInRange	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the PTP Reference on an NE is not qualified state due to Out of poll in range.		
Raising condition: (('Not Qualified Due To'anyBit'OOPIR'))		
Clearing condition: NOT ((('Not Qualified Due To'anyBit'OOPIR')))		
Remedial action: If there is packet flow, the PTP slave clock is in it's initial acquiring states where the sync-if-timing reference does not qualify just wait.		

Table 20-340 RadiusAcctPlcyFailure

Alarm	Attributes	Applicable major release
Name: RadiusAcctPlcyFailure (363) Type: radiusAccountingPolicyAlarm Package: radiusaccounting.RadiusAcctPlcyFailure Raised on class: radiusaccounting.Policy	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: radiusAccountingRequestFailure	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a RADIUS accounting request is not successfully sent to any of the RADIUS servers specified in the RADIUS accounting policy.		
Remedial action: The Radius server(s) which are configured in the accounting policy are unreachable. This may occur in a number of different scenarios. The server(s) may have become unresponsive - please refer to the Radius server documentation for assistance. The network connectivity to the server(s) may have been lost - please investigate why the underlying transport network is unreliable.		

Table 20-341 RadiusOperStatusDown

Alarm	Attributes	Applicable major release
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm Package: netw.RadiusOperStatusDown Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: radiusOperationStatusDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up.Check the connectivity between SAM server and radius server configured on the Network element.		

Table 20-342 RcaAuditAfterNEUpgradeStatus

Alarm	Attributes	Applicable major release
Name: RcaAuditAfterNEUpgradeStatus (5124) Type: configurationAlarm Package: netw.RcaAuditAfterNEUpgradeStatus Raised on class: netw.NetworkElement	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: rcaAuditStatusAfterNEUp-grade	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM detects an NE software version upgrade and RCA audit performed.		
Remedial action: Information - Check audit results for details		

Table 20-343 ReachabilityProblem

Alarm	Attributes	Applicable major release
Name: ReachabilityProblem (243) Type: communicationsAlarm Package: netw.ReachabilityProblem Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReachabilityTestFailed	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. The polling interval depends on the NE type and is configurable in nms-server.xml. By default, the 5620 SAM polls a managed NE every four minutes. If a poll fails, the alarm is raised. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 20-344 RedundantMepMisconfiguration

Alarm	Attributes	Applicable major release
Name: RedundantMepMisconfiguration (3631) Type: oamAlarm Package: ethernetoam. RedundantMepMisconfiguration Raised on class: ethernetoam.Mep	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: misconfiguredRedundantMep	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an Active and Redundant MEP do not have the same ID, Operational MAC Address or Sub Group configured.		
Raising condition: ('validRedundantMepConfig' EQUAL 'false')		
Clearing condition: ('validRedundantMepConfig' EQUAL 'true')		
Remedial action: MC-LAG redundant MEP configuration (MEP ID or Mac Address) for Active & Standby Interfaces do not match, this could cause issues with CFM or CCM tests if Active interface changes. Delete and Re-create Standby MEP to match Active.		

Table 20-345 RedundantMepMissing

Alarm	Attributes	Applicable major release
Name: RedundantMepMissing (3632) Type: oamAlarm Package: ethernetoam.RedundantMepMissing Raised on class: ethernetoam.Mep	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: missingRedundantMep	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a MEP misses a redundant counterpart on LAG or SAP.		
Raising condition: (('MC-LAG Inactive' NOT EQUAL 'Not Applicable') AND ('Redundant MEP' EQUAL '\"\"'))		
Clearing condition: (('MC-LAG Inactive' EQUAL 'Not Applicable') OR (('MC-LAG Inactive' NOT EQUAL 'Not Applicable') AND ('Redundant MEP' NOT EQUAL '\"\"')))		
Remedial action: MC-LAG redundant MEP is missing Active & Standby Interfaces, this will cause issues with CFM or CCM tests if Active interface changes. Create missing Active/Standby MEP to match existing.		

Table 20-346 RemoteMepCCMAlarm

Alarm	Attributes	Applicable major release
Name: RemoteMepCCMAlarm (502) Type: oamAlarm Package: ethernetoam.RemoteMepCCMAlarm Raised on class: ethernetoam.Mep	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: missingRemoteMep	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a MEP loses connectivity with one or more remote MEPs. The Remote MEP DB State tab on a MEP lists the missing remote MEPs.		
Raising condition: ('High-Priority Defect' NOT EQUAL '0')		

Table 20-346 RemoteMepCCMAlarm (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ('High-Priority Defect' EQUAL '0')		
Remedial action: MEP has lost communication with Remote MEP defined in Maintenance Association (MEG) Remote MEP list, Either Remote MEP list is incorrect or diagnose connection fault and resolve.		

Table 20-347 RemoteRncvOperDown

Alarm	Attributes	Applicable major release
Name: RemoteRncvOperDown (522) Type: redundancyAlarm Package: multichassis.RemoteRncvOperDown Raised on class: multichassis.MultiChassisRingNode	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: remoteRncvDisconnected	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the remote RNCV Operational State of a ring node is other than Connected or NotTested, which means that the ring node is not connected to the local MC ring group. The alarm clears when the ring node enters the Connected or NotTested state.		
Raising condition: (('Remote Operational State' NOT EQUAL 'Connected') AND ('Remote Operational State' NOT EQUAL 'Not Tested'))		
Clearing condition: (('Remote Operational State' EQUAL 'Connected') OR ('Remote Operational State' EQUAL 'Not Tested'))		
Remedial action: Make sure that ring node is properly connected to MC ring group.		

Table 20-348 RipDown

Alarm	Attributes	Applicable major release
Name: RipDown (72) Type: ProtocolAlarm Package: rip.RipDown Raised on class: rip.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a RIP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The RIP Site is down while it is administratively up. Please check the node e.g, IOM is not shutdown or installed.		

Table 20-349 RipInterfaceDown

Alarm	Attributes	Applicable major release
Name: RipInterfaceDown (11187) Type: InterfaceAlarm Package: rip.RipInterfaceDown Raised on class: rip.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: underlyingResourceUnavailable	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an RIP interface is operationally down.		
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' NOT EQUAL 'Down')		
Remedial action: This alarm is raised when the RIP interface is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 20-350 RouteDistinguisherNotConfigured

Alarm	Attributes	Applicable major release
Name: RouteDistinguisherNotConfigured (142) Type: configurationAlarm Package: l3fwd.RouteDistinguisherNotConfigured Raised on class: l3fwd.ServiceSite	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: routeDistinguisherNotConfigured	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when no RD is configured for an L3 service site.		
Raising condition: ('routeDistinguisher' EQUAL '\"00 00 00 00 00 00 00 00\"')		
Clearing condition: ('routeDistinguisher' NOT EQUAL '\"00 00 00 00 00 00 00 00\"')		
Remedial action: A configuration error has occurred which must be corrected. The RD must be configured on the L3 Service Site in question.		

Table 20-351 RPKISessionNotEstablished

Alarm	Attributes	Applicable major release
Name: RPKISessionNotEstablished (8136) Type: communicationsAlarm Package: rtr.RPKISessionNotEstablished Raised on class: rtr.RpkiSession	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: RPKISessionNotEstablished	Release: • 7.0 • 8.0
Description: The notification alarm is raised when the RPKI Session is not established.		
Raising condition: (('Session State' NOT EQUAL 'Established'))		
Clearing condition: (('Session State' EQUAL 'Established'))		

Table 20-351 RPKISessionNotEstablished (continued)

Alarm	Attributes	Applicable major release
Remedial action: Make sure that the Cache server is reachable and is configured properly.		

Table 20-352 RsvpDown

Alarm	Attributes	Applicable major release
Name: RsvpDown (74) Type: ProtocolAlarm Package: rsvp.RsvpDown Raised on class: rsvp.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an RSVP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The RSVP Site is down while it is administratively up. Please check MPLS is enabled and administratively up.		

Table 20-353 RxSectionSynchronizationError

Alarm	Attributes	Applicable major release
Name: RxSectionSynchronizationError (93) Type: communicationsAlarm Package: sonetequipment. RxSectionSynchronizationError Raised on class: sonetequipment. SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: rxSectionSynchronizationError	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a SONET port reports a section synchronization failure. A section synchronization failure occurs when the S1 byte is inconsistent for eight consecutive frames.		
Raising condition: (('Outstanding Alarms'anyBit'RX Section Synchronization Error') AND ('Report Alarms'anyBit'RX Section Synchronization Error'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'RX Section Synchronization Error') AND ('Report Alarms'anyBit'RX Section Synchronization Error')))		
Remedial action: Check the link status between SONET Port and the source.		

Table 20-354 S2LPathBypassTunnelActive

Alarm	Attributes	Applicable major release
Name: S2LPathBypassTunnelActive (777) Type: pathAlarm Package: mpls.S2LPathBypassTunnelActive Raised on class: mpls.S2LPath	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: S2LPathReroutedToBypassTunnel	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the bypass tunnel in an S2L path becomes active. The alarm clears when the bypass tunnel is no longer active, for example, because a primary tunnel failure is resolved or a new path is established.		
Raising condition: ('Bypass Tunnel Active' EQUAL 'true')		
Clearing condition: ('Bypass Tunnel Active' EQUAL 'false')		
Remedial action: Check what caused primary tunnel is down and fix it if possible.		

Table 20-355 S2LPathDown

Alarm	Attributes	Applicable major release
Name: S2LPathDown (778) Type: pathAlarm Package: mpls.S2LPathDown Raised on class: mpls.S2LPath	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: S2LPathDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the S2L path Administrative State is Up and the Operational State is not Up. The alarm clears when the S2L path Operational State changes to Up or the Administrative State changes to Down.		
Raising condition: (('Administrative' EQUAL 'Up') AND ('Operational' NOT EQUAL 'Up'))		
Clearing condition: (('Operational' EQUAL 'Up') OR ('Administrative' NOT EQUAL 'Up'))		
Remedial action: Check the failure code and update accordingly, e.g. whether MPLS/RSVP interfaces, OSPF interfaces are down.		

Table 20-356 SapDDosDynamicExceeded

Alarm	Attributes	Applicable major release
Name: SapDDosDynamicExceeded (4890) Type: securityServiceOrMechanismViolation Package: service.SapDDosDynamicExceeded Raised on class: service.AccessInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ExceedingPolicingParameters	Release: • 7.0
Description: The alarm is raised when the protocol on a particular SAP has been detected as non-conformant to the associated distributed CPU protection policy parameters (on receiving sapDcpDynamicExcd trap) and the alarm status is set as non-conformant When the SAP starts hold-down period for an exceeding protocol (on receiving sapDcpDynamicHoldDownStart trap), the alarm status will change into non-conformant(Hold Down Start). When the SAP completes hold-down period for an exceeding protocol (on receiving sapDcpDynamicHoldDownEnd trap), the alarm status will be changed into non-conformant(Hold Down End). When the protocol for the SAP has been detected as conformant for a period of the configured detection-time after having been previously detected as exceeding and completed any hold-down period (on receiving sapDcpDynamicConform trap), the alarm will be cleared.		

Table 20-356 SapDDosDynamicExceeded (continued)

Alarm	Attributes	Applicable major release
Remedial action: Appropriate configuration changes to the distributed CPU protection policy or to the affected SAP may be required.		

Table 20-357 SapDDosLocMonitorExceeded

Alarm	Attributes	Applicable major release
Name: SapDDosLocMonitorExceeded (4891) Type: securityServiceOrMechanismViolation Package: service.SapDDosLocMonitorExceeded Raised on class: service.AccessInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ExceedingPolicingParameters	Release: • 7.0
Description: The alarm is raised when the local-monitoring-policer for a particular SAP has transitioned from a conformant state to a non-conformant state and the system will attempt to allocate dynamic enforcement policers (on receiving sapDcpLocMonExcd trap), and the alarm status is set as non-conformant When all dynamic enforcement policers associated with a non-conformant local-monitoring-policer have been successfully allocated for the SAP (on receiving sapDcpLocMonExcdAllDynAlloc trap), the alarm status will be changed into non-conformant(Located All). When the local-monitoring-policer for a particular SAP has transitioned from a conformant state to a non-conformant state and the system cannot allocate all the dynamic enforcement policers associated with the distributed CPU protection policy (on receiving sapDcpLocMonExcdDynResource trap), the alarm status will be changed into non-conformant(Cannot Allocate All). When all the previously allocated dynamic enforcement policers for a particular local-monitoring-policer on the associated distributed CPU protection policy have been freed up and all the protocols are once again being monitored by local-monitor (on receiving sapDcpLocMonExcdAllDynFreed trap), the alarm will be cleared.		
Remedial action: Appropriate configuration changes to the distributed CPU protection policy or to the affected SAP may be required.		

Table 20-358 SapDDosStaticExceeded

Alarm	Attributes	Applicable major release
Name: SapDDosStaticExceeded (4892) Type: securityServiceOrMechanismViolation Package: service.SapDDosStaticExceeded Raised on class: service.AccessInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ExceedingPolicingParameters	Release: • 7.0
Description: The alarm is raised when the static-policer on a particular SAP has been detected as non-conformant to the associated distributed CPU protection policy parameters (on receiving sapDcpStaticExcd trap) and the alarm status is set as non-conformant. When the SAP starts hold-down period for the exceeding static-policer (on receiving sapDcpStaticHoldDownStart trap), the alarm status will change into non-conformant(Hold Down Start). When the SAP ends hold-down period for the exceeding static-policer (on receiving sapDcpStaticHoldDownEnd trap), the alarm status will be changed into non-conformant(Hold Down End). When the static-policer for the SAP has been detected as conformant for a period of the configured detection-time after having been previously detected as exceeding and completed any hold-down period (on receiving sapDcpStaticConform trap), the alarm will be cleared.		
Remedial action: Appropriate configuration changes to the distributed CPU protection policy or to the affected SAP may be required.		

Table 20-359 SaveConfigFailed

Alarm	Attributes	Applicable major release
Name: SaveConfigFailed (105) Type: configurationAlarm Package: sw.SaveConfigFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileAccessError	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact your Nokia support representative for assistance.		

Table 20-360 ScheduledPollerProblem

Alarm	Attributes	Applicable major release
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm Package: netw.ScheduledPollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: scheduledResyncFailed	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 20-361 scriptBackupLost

Alarm	Attributes	Applicable major release
Name: scriptBackupLost (273) Type: configurationAlarm Package: subscrident.scriptBackupLost Raised on class: subscrident.Policy	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: backupDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the primary subscriber identification script URL is operationally up, but a lower-priority script or URL is operationally down.		
Raising condition: (('isLocal' EQUAL 'true') AND ('Primary Script Operational State' EQUAL 'Up') AND (('Secondary Script Operational State' NOT EQUAL 'Up') OR ('Tertiary Script Operational State' NOT EQUAL 'Up')))		

Table 20-361 scriptBackupLost (continued)

Alarm	Attributes	Applicable major release
Clearing condition: (('isLocal' EQUAL 'true') AND (('Primary Script Operational State' NOT EQUAL 'Up') OR (('Secondary Script Operational State' EQUAL 'Up') AND ('Tertiary Script Operational State' EQUAL 'Up'))))		
Remedial action: If the DHCP ACK Python script processing behaviour is desired, please make sure that primary, secondary and tertiary scripts are installed and operationally up.		

Table 20-362 SdpBindingDown

Alarm	Attributes	Applicable major release
Name: SdpBindingDown (221) Type: SdpBindingAlarm Package: svt.SdpBindingDown Raised on class: svt.SdpBinding	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SdpBindingNotReady	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an SDP binding has an Operational State other than Up.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'Standby For BGP Multi-Homing'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'Standby For BGP Multi-Homing'))		
Remedial action: To resolve this alarm check the SDP binding to determine if a configuration mismatch exists. If configuration is determined to be correct then the associated network interface may be down. Further investigation is required to determine why the underlying network interface is down.		

Table 20-363 SdpBindingTunnelDown

Alarm	Attributes	Applicable major release
Name: SdpBindingTunnelDown (222) Type: CircuitAlarm Package: svt.SdpBindingTunnelDown Raised on class: svt.SdpBinding	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SdpTunnelNotReady	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an SDP binding tunnel has an Operational State other than Up.		
Raising condition: (('Operational State' EQUAL 'Tunnel Not Ready') OR ('Operational State' EQUAL 'Tunnel Down') OR ('State Cause'anyBit'Tunnel Oper Down'))		
Clearing condition: (('Operational State' NOT EQUAL 'Tunnel Not Ready') AND ('Operational State' NOT EQUAL 'Tunnel Down') AND NOT (('State Cause'anyBit'Tunnel Oper Down')))		
Remedial action: To resolve this alarm check the endpoints of the SDP binding to determine if a configuration mismatch exists. If configuration matches then the underlying network resource between the endpoints of the SDP may be down. Further investigation is required to determine why the underlying transport network is down.		

Table 20-364 SdpEgressIfsNetDomainInConsistent

Alarm	Attributes	Applicable major release
Name: SdpEgressIfsNetDomainInConsistent (3616) Type: resourceAlarm Package: svt.SdpEgressIfsNetDomainInConsistent Raised on class: svt.Tunnel	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: sdpEgressIfsNetDomainIn-Consistent	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the SDP egress interface's consistency state changes to inconsistent.		
Raising condition: ('Egress Interfaces Consistency State' EQUAL '3')		
Clearing condition: ('Egress Interfaces Consistency State' EQUAL '2')		
Remedial action: To resolve this alarm check egress interfaces of the SDP configuration. If configuration is determined to be correct check underlying physical transport. Further investigation is required.		

Table 20-365 SecondaryPathLimitReached

Alarm	Attributes	Applicable major release
Name: SecondaryPathLimitReached (458) Type: resourceAlarm Package: equipment.SecondaryPathLimitReached Raised on class: equipment.DaughterCard	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceLimitReached	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the Ingress Multicast Path Management secondary path bandwidth limit is reached.		
Raising condition: (('Secondary Path Limit Override' > '0') AND ('Secondary Path In use' >=" (1000 * 'Secondary Path Limit Override')))"		
Clearing condition: (('Secondary Path Limit Override' > '0') AND ('Secondary Path In use' < (1000 * 'Secondary Path Limit Override')))		
Remedial action: Informational - The alarm is raised when the Ingress Multicast Path Management secondary path bandwidth limit is reached. This can be remedied by modifying the secondary path limit located at T1 Paths tab of the multicast bandwidth policy which assigned to the card, or increase the secondary path limit override located at the Daughter Card tab under Daughter Card Slot form.		

Table 20-366 SectionB1Error

Alarm	Attributes	Applicable major release
Name: SectionB1Error (87) Type: communicationsAlarm Package: sonetequipment.SectionB1Error Raised on class: sonetequipment. SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: sectionB1Error	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a SONET port reports a section error condition that a remote NE raises because of b1 errors received from the local NE. The alarm corresponds to the lrei alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Section B1 Error') AND ('Report Alarms'anyBit'Section B1 Error'))		

Table 20-366 SectionB1Error (continued)

Alarm	Attributes	Applicable major release
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Section B1 Error') AND ('Report Alarms'anyBit'Section B1 Error')))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 20-367 SectionLossOfFrame

Alarm	Attributes	Applicable major release
Name: SectionLossOfFrame (90) Type: communicationsAlarm Package: sonetequipment.SectionLossOfFrame Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: sectionLossOfFrame	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a SONET port reports a SLOF error. The alarm corresponds to the slof alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Section Loss of Frame') AND ('Report Alarms'anyBit'Section Loss of Frame'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Section Loss of Frame') AND ('Report Alarms'anyBit'Section Loss of Frame')))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected.		

Table 20-368 SectionLossOfSignal

Alarm	Attributes	Applicable major release
Name: SectionLossOfSignal (91) Type: communicationsAlarm Package: sonetequipment.SectionLossOfSignal Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: sectionLossOfSignal	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a SONET port reports a SLOS error. The alarm corresponds to the slos alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Section Loss of Signal') AND ('Report Alarms'anyBit'Section Loss of Signal'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Section Loss of Signal') AND ('Report Alarms'anyBit'Section Loss of Signal')))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected.		

Table 20-369 SectionS1Failure

Alarm	Attributes	Applicable major release
Name: SectionS1Failure (86) Type: communicationsAlarm Package: sonetequipment.SectionS1Failure Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: sectionS1Failure	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a SONET port reports a section synchronization failure. A section synchronization failure occurs when the S1 byte is inconsistent for eight consecutive frames.		
Raising condition: (('Outstanding Alarms'anyBit'Section S1 Failure') AND ('Report Alarms'anyBit'Section S1 Failure'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Section S1 Failure') AND ('Report Alarms'anyBit'Section S1 Failure')))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 20-370 ServerDeclineStaticAddr

Alarm	Attributes	Applicable major release
Name: ServerDeclineStaticAddr (3951) Type: configurationAlarm Package: dhcp.ServerDeclineStaticAddr Raised on class: dhcp.AbstractDhcpServer	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DhcpClientHasStaticIpAddress	Release: • 6.0 • 7.0 • 8.0
Description: The tmnxDhcpSvrDeclineStaticAddr notification is generated when a DHCP decline message is received from a DHCP client that has a static IP address assigned.		
Remedial action: DHCP client has a static IP address. Make sure that the DHCP client has a dynamic IP address		

Table 20-371 ServerLeaseDefaultTimers

Alarm	Attributes	Applicable major release
Name: ServerLeaseDefaultTimers (2937) Type: configurationAlarm Package: dhcp.ServerLeaseDefaultTimers Raised on class: dhcp.AbstractDhcpServer	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: LeaseTimerInconsistent	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the system has reverted to default lease timer values for a particular DHCP client because the configuration of the lease timers was inconsistent.		
Remedial action: This warning is generated when configuration of the lease timers of a particular DHCP client is inconsistent; the system has reverted to default lease timer values. \n The lease renew time T1 and lease rebind time T2 have been reverted to the default value of 1/2 and 2/3 of the lease time.\nPlease check the lease timers configuration on the local DHCP server to ensure the timers are compatible.		

Table 20-372 ServerMaxLeasesReached

Alarm	Attributes	Applicable major release
Name: ServerMaxLeasesReached (3316) Type: configurationAlarm Package: netw.ServerMaxLeasesReached Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DhcpSvrMaxLeasesReached	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the maximum number of leases allocated by local DHCP server is reached.		
Remedial action: Informational - this alarm indicates that the maximum number of leases allocated by a local DHCP server was reached. The address ranges for existing address pools should be extended or a new address pool should be configured for the local DHCP server.		

Table 20-373 ServerMsgTooLong

Alarm	Attributes	Applicable major release
Name: ServerMsgTooLong (2938) Type: configurationAlarm Package: dhcp.ServerMsgTooLong Raised on class: dhcp.AbstractDhcpServer	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DhcpSvrMsgTooLong	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a DHCP message is generated but the message size exceeds either the maximum DHCP message size, or the size provided by the client in the option maximum DHCP message size.		
Remedial action: Review the access network DHCP configuration to ensure all parties send DHCP packets with appropriate message size.		

Table 20-374 ServerUserDatabaseUnknown

Alarm	Attributes	Applicable major release
Name: ServerUserDatabaseUnknown (3952) Type: configurationAlarm Package: dhcp.ServerUserDatabaseUnknown Raised on class: dhcp.AbstractDhcpServer	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: CannotFindUserDatabase	Release: • 6.0 • 7.0 • 8.0
Description: The tmnxDhcpSvrUserDbUnknown notification is generated when the local DHCP server instance drops a DHCP message because a local user database with the name specified for this server instance could not be found.		
Remedial action: Please specify a valid local user database for this server instance.		

Table 20-375 ServiceSiteDown

Alarm	Attributes	Applicable major release
Name: ServiceSiteDown (97) Type: serviceAlarm Package: service.ServiceSiteDown Raised on class: service.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: siteDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when all SAPs on a site are operationally down, or when the service tunnels for the site are operationally down. For Backhaul Sites, this alarm is raised when one or more Backhaul Adjacencies is operationally down.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'All Spoke SDP Bindings are Standby'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'All Spoke SDP Bindings are Standby'))		
Remedial action: The network resources (i.e. physical ports for SAPs or Backhaul Sites, or physical ports/LSP) associated with the service site should be examined to determine if/why they are operationally down. The underlying transport network supporting the site may also be unreliable.		

Table 20-376 SessionDown

Alarm	Attributes	Applicable major release
Name: SessionDown (73) Type: ProtocolAlarm Package: rsvp.SessionDown Raised on class: rsvp.Session	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an RSVP session is operationally down.		
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' EQUAL 'Up')		
Remedial action: Please check the RSVP session path to make sure all associated protocols/interfaces/connections are OK.		

Table 20-377 ShamLinkDown

Alarm	Attributes	Applicable major release
Name: ShamLinkDown (665) Type: ShamLinkAlarm Package: ospf.ShamLinkDown Raised on class: ospf.ShamLink	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ShamLinkDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a sham link is operationally down.		
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' NOT EQUAL 'Down')		

Table 20-377 ShamLinkDown (continued)

Alarm	Attributes	Applicable major release
Remedial action: This alarm is raised when the OSPF sham link is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 20-378 SingleSFMOverloadDetected

Alarm	Attributes	Applicable major release
Name: SingleSFMOverloadDetected (843) Type: ProtocolAlarm Package: l3fwd.SingleSFMOverloadDetected Raised on class: l3fwd.Site	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: signleSfmOverloadDetected	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a device reports a single-SFM overload. The alarm clears when the VR exits the Overload state.		
Raising condition: ('Overload State' EQUAL 'Overload')		
Clearing condition: ('Overload State' EQUAL 'Normal')		
Remedial action: Information - if the the problem persists please contact your Nokia support representative for assistance.		

Table 20-379 SonetPathAlarmIndicationSignal

Alarm	Attributes	Applicable major release
Name: SonetPathAlarmIndicationSignal (129) Type: communicationsAlarm Package: sonetequipment. SonetPathAlarmIndicationSignal Raised on class: sonetequipment. SonetChannelMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: pathAlarmIndicationSignal	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a SONET port reports a PAIS error. The alarm corresponds to the pais alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Path Alarm Indication Signal') AND ('Report Alarms'anyBit'Path Alarm Indication Signal'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Path Alarm Indication Signal') AND ('Report Alarms'anyBit'Path Alarm Indication Signal')))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 20-380 SonetPathB3Error

Alarm	Attributes	Applicable major release
Name: SonetPathB3Error (132) Type: communicationsAlarm Package: sonetequipment.SonetPathB3Error Raised on class: sonetequipment.SonetChannelMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: pathB3Error	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a SONET port reports a path error condition because of b3 errors. The alarm corresponds to the prei alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Path B3 error') AND ('Report Alarms'anyBit'Path B3 error'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Path B3 error') AND ('Report Alarms'anyBit'Path B3 error')))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 20-381 SonetPathLossOfCodegroupDelineationError

Alarm	Attributes	Applicable major release
Name: SonetPathLossOfCodegroupDelineationError (248) Type: communicationsAlarm Package: sonetequipment.SonetPathLossOfCodegroupDelineationError Raised on class: sonetequipment.SonetChannelMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: pathLossOfCodegroupDelineationError	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a SONET port reports a PLCD error. The alarm corresponds to the plcd alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Path Loss of Codegroup Delineation Error') AND ('Report Alarms'anyBit'Path Loss of Codegroup Delineation Error'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Path Loss of Codegroup Delineation Error') AND ('Report Alarms'anyBit'Path Loss of Codegroup Delineation Error')))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 20-382 SonetPathLossOfPointer

Alarm	Attributes	Applicable major release
Name: SonetPathLossOfPointer (130) Type: communicationsAlarm Package: sonetequipment.SonetPathLossOfPointer Raised on class: sonetequipment.SonetChannelMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: pathLossOfPointer	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a SONET port reports a PLOP error. The alarm corresponds to the plop alarm on an NE.		

Table 20-382 SonetPathLossOfPointer (continued)

Alarm	Attributes	Applicable major release
Raising condition: (('Outstanding Alarms'anyBit'Path Loss of Pointer') AND ('Report Alarms'anyBit'Path Loss of Pointer'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Path Loss of Pointer') AND ('Report Alarms'anyBit'Path Loss of Pointer')))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 20-383 SonetPathPayloadMismatch

Alarm	Attributes	Applicable major release
Name: SonetPathPayloadMismatch (133) Type: communicationsAlarm Package: sonetequipment. SonetPathPayloadMismatch Raised on class: sonetequipment. SonetChannelMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: pathPayloadMismatch	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a SONET port reports a PPLM error on a channel, after which the channel is set operationally down. The alarm corresponds to the pplm alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Path Payload Mismatch') AND ('Report Alarms'anyBit'Path Payload Mismatch'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Path Payload Mismatch') AND ('Report Alarms'anyBit'Path Payload Mismatch')))		
Remedial action: Informational only.		

Table 20-384 SonetPathRemoteB3Error

Alarm	Attributes	Applicable major release
Name: SonetPathRemoteB3Error (134) Type: communicationsAlarm Package: sonetequipment.SonetPathRemoteB3Error Raised on class: sonetequipment. SonetChannelMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: pathRemoteB3Error	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a SONET port reports a path error condition that a remote NE raises because of b3 errors received from the local NE. The alarm corresponds to the prei alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Path Remote B3 Error') AND ('Report Alarms'anyBit'Path Remote B3 Error'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Path Remote B3 Error') AND ('Report Alarms'anyBit'Path Remote B3 Error')))		
Remedial action: Check the remote NE is configured correctly and its physical layer cabling is operating correctly.		

Table 20-385 SonetPathRemoteDefectIndication

Alarm	Attributes	Applicable major release
Name: SonetPathRemoteDefectIndication (131) Type: communicationsAlarm Package: sonetequipment.SonetPathRemoteDefectIndication Raised on class: sonetequipment.SonetChannelMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: pathRemoteDefectIndication	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a SONET port reports a remote PAIS error. The alarm corresponds to the pais alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Path Remote Defect Indication') AND ('Report Alarms'anyBit'Path Remote Defect Indication'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Path Remote Defect Indication') AND ('Report Alarms'anyBit'Path Remote Defect Indication')))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 20-386 SonetPathUnequippedPathError

Alarm	Attributes	Applicable major release
Name: SonetPathUnequippedPathError (143) Type: communicationsAlarm Package: sonetequipment.SonetPathUnequippedPathError Raised on class: sonetequipment.SonetChannelMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: pathUnequippedPathError	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a SONET port reports a path unequipped error. The alarm corresponds to the Path Alarm Unequipped Path Error alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Path Alarm Unequipped Path Error') AND ('Report Alarms'anyBit'Path Alarm Unequipped Path Error'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Path Alarm Unequipped Path Error') AND ('Report Alarms'anyBit'Path Alarm Unequipped Path Error')))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 20-387 SpbAdjacencyDown

Alarm	Attributes	Applicable major release
Name: SpbAdjacencyDown (4392) Type: adjacencyAlarm Package: spb.SpbAdjacencyDown Raised on class: spb.AbstractInterface	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IsisInterfaceDown	Release: • 7.0 • 8.0

Table 20-387 SpbAdjacencyDown (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when an SPB IS-IS interface has no adjacencies, for example, because the IS-IS protocol on the remote site is down.		
Raising condition: (('Adjacency Count' EQUAL '0L'))		
Clearing condition: (('Adjacency Count' > '0L'))		
Remedial action: Check remote site to see if corresponding IS-IS interface is configured and admin up.		

Table 20-388 SpbInterfaceDown

Alarm	Attributes	Applicable major release
Name: SpbInterfaceDown (4393) Type: ProtocolAlarm Package: spb.SpbInterfaceDown Raised on class: spb.AbstractInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 7.0 • 8.0
Description: The alarm is raised when an SPB IS-IS interface has an Operational State other than Up.		
Raising condition: ('operationalState' EQUAL 'Down')		
Clearing condition: ('operationalState' NOT EQUAL 'Down')		
Remedial action: Check if underlying port is down, or associated network interface is down.		

Table 20-389 SpbSiteDown

Alarm	Attributes	Applicable major release
Name: SpbSiteDown (4396) Type: ProtocolAlarm Package: spb.SpbSiteDown Raised on class: spb.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 7.0 • 8.0
Description: The alarm is raised when an SPB site has an Operational State other than Up.		
Raising condition: ('Operational State' NOT EQUAL 'Up')		
Clearing condition: ('Operational State' EQUAL 'Up')		
Remedial action: Check if the administrative state is down. If the administrative state is up, then check the ISIS instance associated with the SPB and make sure it is up.		

Table 20-390 StatsRetrieval

Alarm	Attributes	Applicable major release
Name: StatsRetrieval (8069) Type: equipmentAlarm Package: netw.StatsRetrieval Raised on class: netw.NetworkElement	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: trapGapExceeded	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM detects trap Gap Exceeded and MG Stats files are retrieved.		
Remedial action: Informational - no corrective action required.		

Table 20-391 StatsRetrieveFailed

Alarm	Attributes	Applicable major release
Name: StatsRetrieveFailed (244) Type: configurationAlarm Package: sw.StatsRetrieveFailed Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: fileTransferFailure	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 20-392 StpExceptionCondition

Alarm	Attributes	Applicable major release
Name: StpExceptionCondition (297) Type: AccessInterfaceAlarm Package: l2fwd.StpExceptionCondition Raised on class: l2fwd.AccessInterfaceStp	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: StpException	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a SAP detects an STP exception condition, for example, one-way communication or a downstream loop. The alarm clears when the STP condition changes.		
Raising condition: (('STP Exception Condition' NOT EQUAL 'None') AND ('Administrative State' EQUAL 'Up'))		
Clearing condition: (('STP Exception Condition' EQUAL 'None') OR ('Administrative State' EQUAL 'Down'))		
Remedial action: Check 'STP Exception Condition' field for more details and fix the STP exception.		

Table 20-393 StpRootGuardViolation

Alarm	Attributes	Applicable major release
Name: StpRootGuardViolation (503) Type: AccessInterfaceAlarm Package: l2fwd.StpRootGuardViolation Raised on class: l2fwd.AccessInterfaceStp	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: spanningTreeTopology-Changed	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a SAP detects an STP root guard violation.		
Raising condition: ('Root Guard Violation' EQUAL 'true')		
Clearing condition: ('Root Guard Violation' NOT EQUAL 'true')		
Remedial action: Set 'Root Guard' to false if not necessary.		

Table 20-394 subHostInconsistentAtmTdOvr

Alarm	Attributes	Applicable major release
Name: subHostInconsistentAtmTdOvr (3685) Type: configurationAlarm Package: ressubscr.subHostInconsistentAtmTdOvr Raised on class: ressubscr. ResidentialSubscriberInstance	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tmnxSubHostInconsistentAtmTdOvr	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an AAA server (e.g. a RADIUS server) specifies an ATM Traffic Descriptor override for a subscriber host while it has already specified another one for another host on the same ATM Virtual Circuit.		
Remedial action: Modify the AAA configuration so that all subscriber hosts sharing the same ATM Virtual circuit use the same ATM Traffic Descriptor Override VSA. If different overrides are required, then the subscribers must be in different ATM Virtual Circuits.		

Table 20-395 SubHostLcktLimitReached

Alarm	Attributes	Applicable major release
Name: SubHostLcktLimitReached (4387) Type: configurationAlarm Package: netw.SubHostLcktLimitReached Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tmnxSubHostLcktLimitReached	Release: • 7.0
Description: This alarm is raised when the system wide maximum number of lockout hosts is reached.		
Remedial action: Please do one of the following:\n1. Investigate why the hosts are locked out. Possible reasons include authentication failure due to mis-configuration on the host end, mis-configuration on the BNG, missing or invalid configuration on the RADIUS server, session negotiation failure with the client, resource exhaustion on the BNG, unavailability of RADIUS server (and no fallback configured).\n2. Clear the host lockout.		

Table 20-396 SubHostLcktSapLimitReached

Alarm	Attributes	Applicable major release
Name: SubHostLcktSapLimitReached (4391) Type: configurationAlarm Package: service.SubHostLcktSapLimitReached Raised on class: service.AccessInterface	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tmnxSubHostLcktSapLimitReached	Release: • 7.0
Description: This alarm is raised when the maximum number of lockout hosts on a given SAP is reached.		
Remedial action: Please do one of the following:\n1. Investigate why the hosts are locked out. Possible reasons include authentication failure due to mis-configuration on the host end, mis-configuration on the BNG, missing or invalid configuration on the RADIUS server, session negotiation failure with the client, resource exhaustion on the BNG, unavailability of RADIUS server (and no fallback configured).\n2. Clear the host lockout on the SAP.\n3. Change the Maximum Lockout Hosts (per SAP).		

Table 20-397 SubnetDepleted

Alarm	Attributes	Applicable major release
Name: SubnetDepleted (3953) Type: configurationAlarm Package: dhcp.SubnetDepleted Raised on class: dhcp.Subnet	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: actualFreeAddrDepleted	Release: • 6.0 • 7.0 • 8.0
Description: This alarm is generated when the actual number of free addresses in the DHCP Server Subnet becomes zero.		
Remedial action: This alarm is generated when the actual number of free addresses in a subnet becomes zero. Please create another subnet.		

Table 20-398 SubnetMinFreeExc

Alarm	Attributes	Applicable major release
Name: SubnetMinFreeExc (516) Type: configurationAlarm Package: dhcp.SubnetMinFreeExc Raised on class: dhcp.Subnet	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: actualFreeAddrBelowSubnetMin	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the actual number of free addresses in a subnet falls below the desired minimum number specified in the subnet configuration		
Remedial action: Please ensure that an adequate free address threshold is configured or create a new subnet to meet the system requirements. \nThis warning is raised on IPv4 DHCP servers only.		

Table 20-399 SubscriberInterfaceDown

Alarm	Attributes	Applicable major release
Name: SubscriberInterfaceDown (440) Type: SubscriberInterfaceAlarm Package: service.SubscriberInterfaceDown Raised on class: service.SubscriberInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a subscriber interface is operationally down. The alarm clears when the subscriber interface is operationally up.		
Raising condition: ('operationalState' NOT EQUAL 'Up')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Check the configuration and the underlying physical interface.		

Table 20-400 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major release
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed Package: netw.SubscriberSystemNextHopUsageHigh Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

Table 20-401 SubSysChassMemoryUsageHi

Alarm	Attributes	Applicable major release
Name: SubSysChassMemoryUsageHi (5656) Type: thresholdCrossed Package: equipment.SubSysChassMemoryUsageHi Raised on class: equipment.Shelf	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 6.0 • 7.0 • 8.0
Description: This alarm is raised when the memory usage by subscriber management on this system or chassis reaches its high watermark ('true').		
Raising condition: ('Memory Usage High' EQUAL 'True')		

Table 20-401 SubSysChassMemoryUsageHi (continued)

Alarm	Attributes	Applicable major release
Clearing condition: (('Memory Usage High' EQUAL 'False') OR ('Memory Usage High' EQUAL 'unspecified'))		
Remedial action: The memory usage by subscriber management on this system has reached its high watermark. Please check your memory usage.		

Table 20-402 svcMacFdbTabelFull

Alarm	Attributes	Applicable major release
Name: svcMacFdbTabelFull (3890) Type: resourceAlarm Package: netw.svcMacFdbTabelFull Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceLimitReached	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the system limit of FDB records is reached.		
Remedial action: The alarm is raised when system limit of FDB records is reached.		

Table 20-403 SysLicenseExpiresSoon

Alarm	Attributes	Applicable major release
Name: SysLicenseExpiresSoon (9049) Type: equipmentAlarm Package: equipment.SysLicenseExpiresSoon Raised on class: equipment.ProcessorCard	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: SystemLicenseExpiresSoon	Release: • 7.0
Description: The alarm is raised when the license is due to expire soon.		
Remedial action: Obtain license file: Please contact your Nokia support or sales representative for assistance with obtaining a license file from Nokia Software License Manager (ASLM).		

Table 20-404 SysLicenseInvalid

Alarm	Attributes	Applicable major release
Name: SysLicenseInvalid (9050) Type: equipmentAlarm Package: equipment.SysLicenseInvalid Raised on class: equipment.ProcessorCard	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: SystemLicenseInvalid	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the license becomes invalid for the reason specified in Additional Text.		
Remedial action: Obtain license file: Please contact your Nokia support or sales representative for assistance with obtaining a license file from Nokia Software License Manager (ASLM).		

Table 20-405 TemperatureThresholdCrossed

Alarm	Attributes	Applicable major release
Name: TemperatureThresholdCrossed (7) Type: environmentalAlarm Package: equipment.TemperatureThresholdCrossed Raised on class: equipment.Environment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentOverheated	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a temperature crosses a threshold.		
Raising condition: ('temperatureThresholdCrossed' EQUAL 'true')		
Clearing condition: ('temperatureThresholdCrossed' EQUAL 'false')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 20-406 TmnxEqPortEtherLoopDetected

Alarm	Attributes	Applicable major release
Name: TmnxEqPortEtherLoopDetected (461) Type: portEtherLoopDetected Package: ethernetequipment. TmnxEqPortEtherLoopDetected Raised on class: ethernetequipment. EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: HighBer	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a device detects a physical loop on an Ethernet port.		
Raising condition: (('Down When Looped Status' EQUAL 'Loop Detected'))		
Clearing condition: (('Down When Looped Status' EQUAL 'No Loop Detected'))		
Remedial action: An Ethernet port has been mis-cabled - please remove the loopback cable on the port.		

Table 20-407 TMSInterfaceDown

Alarm	Attributes	Applicable major release
Name: TMSInterfaceDown (3907) Type: TMSInterfaceDown Package: service.TMSInterfaceDown Raised on class: service.TmsInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a TMS interface is operationally down. The alarm clears when the TMS interface is operationally up.		
Raising condition: ('operationalState' NOT EQUAL 'Up')		
Clearing condition: ('operationalState' EQUAL 'Up')		

Table 20-407 TMSInterfaceDown (continued)

Alarm	Attributes	Applicable major release
Remedial action: This alarm indicates TMS Interface configured is operational down.		

Table 20-408 TPLSPDown

Alarm	Attributes	Applicable major release
Name: TPLSPDown (4900) Type: pathAlarm Package: mplstp.TPLSPDown Raised on class: mplstp.TPLsp	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: TPLSPDown	Release: • 7.0 • 8.0
Description: The alarm is raised when the TP LSP Administrative State is Up and the Operational State is Down. The alarm clears when the TP LSP Operational State changes to Up or the Administrative State changes to Down.		
Raising condition: (('Administrative' EQUAL 'Up') AND ('Operational' NOT EQUAL 'Up'))		
Clearing condition: (('Operational' EQUAL 'Up') OR ('Administrative' NOT EQUAL 'Up'))		
Remedial action: The Operational state of the TP LSP is down, despite the Administrative state being up. Review the configuration and make sure that the destination information is set correctly and that the Administrative state is up.		

Table 20-409 TPLSPPATHDown

Alarm	Attributes	Applicable major release
Name: TPLSPPATHDown (4901) Type: pathAlarm Package: mplstp.TPLSPPATHDown Raised on class: mplstp.TPLspPath	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: TPLSPPATHDown	Release: • 7.0 • 8.0
Description: The alarm is raised when the TP LSP Path Administrative State is Up and the Operational State is Down. The alarm clears when the TP LSP Path Operational State changes to Up or the Administrative State changes to Down.		
Raising condition: (('Administrative' EQUAL 'Up') AND ('Operational' NOT EQUAL 'Up'))		
Clearing condition: (('Operational' EQUAL 'Up') OR ('Administrative' NOT EQUAL 'Up'))		
Remedial action: The Operational state of the TP LSP Path is down, despite the Administrative state being up. Review the configuration and make sure that the Administrative state is up, the egress and ingress labels are set and the Out-Link interface is operationally up.		

Table 20-410 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major release
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm Package: netw.TrapDestinationMisconfigured Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trapDestinationMisconfigured Applicable probable causes: • trapDestinationMisconfigured • duplicateTrapLogId	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 20-411 TrapReceivingFailure

Alarm	Attributes	Applicable major release
Name: TrapReceivingFailure (1083) Type: communications Package: netw.TrapReceivingFailure Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: trapsWillNotBeSent	Release: • 6.0 • 7.0 • 8.0
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		
Raising condition: ((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')))		
Clearing condition: ((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))))		

Table 20-411 TrapReceivingFailure (continued)

Alarm	Attributes	Applicable major release
Remedial action: A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

Table 20-412 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major release
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications Package: netw. TrapRoutePreferenceRedundancyMissing Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trapsRedundancyMissing	Release: • 6.0 • 7.0 • 8.0
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: ((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')))		
Clearing condition: ((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None')))		
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

Table 20-413 TunnelAdministrativelyDown (mpls)

Alarm	Attributes	Applicable major release
Name: TunnelAdministrativelyDown (523) Type: pathAlarm Package: mpls.TunnelAdministrativelyDown Raised on class: mpls.Tunnel	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tunnelAdministrativelyDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM detects that an MPLS path is administratively down.		
Raising condition: ('Administrative' NOT EQUAL 'Up')		
Clearing condition: ('Administrative' EQUAL 'Up')		
Remedial action: Turn up the corresponding MPLS path.		

Table 20-414 TunnelAdministrativelyDown (svt)

Alarm	Attributes	Applicable major release
Name: TunnelAdministrativelyDown (523) Type: pathAlarm Package: svt.TunnelAdministrativelyDown Raised on class: svt.Tunnel	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tunnelAdministrativelyDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM detects that a service tunnel is administratively down.		
Raising condition: ('administrativeState' NOT EQUAL 'Up')		
Clearing condition: ('administrativeState' EQUAL 'Up')		
Remedial action: Informational - an operator has manually turned down a service tunnel.		

Table 20-415 TunnelDown (mpls)

Alarm	Attributes	Applicable major release
Name: TunnelDown (30) Type: pathAlarm Package: mpls.TunnelDown Raised on class: mpls.Tunnel	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tunnelDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an MPLS path has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative' EQUAL 'Up') AND ('Operational' NOT EQUAL 'Up'))		
Clearing condition: (('Operational' EQUAL 'Up') OR ('Administrative' NOT EQUAL 'Up'))		
Remedial action: Check the network resources along the path.		

Table 20-416 TunnelDown (svt)

Alarm	Attributes	Applicable major release
Name: TunnelDown (30) Type: pathAlarm Package: svt.TunnelDown Raised on class: svt.AbstractTunnel	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tunnelDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 5620 SAM detects that a service tunnel is operationally down.		
Raising condition: (('Administrative' EQUAL 'Up') AND ('Operational' NOT EQUAL 'Up'))		
Clearing condition: (('Operational' EQUAL 'Up') OR ('Administrative' NOT EQUAL 'Up'))		
Remedial action: This alarm indicates that a problem has been made in the underlying transport network. If the alarm persists or re-occurs frequently then investigation of the underlying transport issues is warranted.		

Table 20-417 TxSectionSynchronizationError

Alarm	Attributes	Applicable major release
Name: TxSectionSynchronizationError (92) Type: communicationsAlarm Package: sonetequipment. TxSectionSynchronizationError Raised on class: sonetequipment. SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: txSectionSynchronizationError	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a SONET port reports an SS1F error. The alarm corresponds to the ss1f alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'TX Section Synchronization Error') AND ('Report Alarms'anyBit'TX Section Synchronization Error'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'TX Section Synchronization Error') AND ('Report Alarms'anyBit'TX Section Synchronization Error')))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 20-418 UnidentifiedNode

Alarm	Attributes	Applicable major release
Name: UnidentifiedNode (1922) Type: communicationsAlarm Package: netw.UnidentifiedNode Raised on class: netw.DiscoveredNode	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unidentifiedNode	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 20-419 UnmanageFailed

Alarm	Attributes	Applicable major release
Name: UnmanageFailed (300) Type: discoveryControlAlarm Package: netw.UnmanageFailed Raised on class: netw.NodeDiscoveryControl	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unableToDeleteNode	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'Unmanage Failed')		

Table 20-419 UnmanageFailed (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ('Site State' NOT EQUAL 'Unmanage Failed')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 20-420 UnrecommendedNAT64DestinationPrefix

Alarm	Attributes	Applicable major release
Name: UnrecommendedNAT64DestinationPrefix (8060) Type: configurationAlarm Package: nat. UnrecommendedNAT64DestinationPrefix Raised on class: nat.Nat64Config	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unrecommendedConfiguration	Release: • 6.0 • 7.0 • 8.0
Description: This alarm is raised when the bits [64-71] of NAT64 destination prefix are non-zero for prefix length of 96.		
Raising condition: (('NAT Destination Prefix Length' EQUAL '96') AND ('NAT Destination Prefix' NOT EQUAL '\"([0-9A-F]{1,4}:){4}([0-9A-F]{1,2})(:[0-9A-F]{1,4}){3}\"'))		
Clearing condition: (('NAT Destination Prefix Length' NOT EQUAL '96') OR ('NAT Destination Prefix' EQUAL '\"([0-9A-F]{1,4}:){4}([0-9A-F]{1,2})(:[0-9A-F]{1,4}){3}\"'))		
Remedial action: When using a prefix length 96, set the bits [64-71] of NAT64 Destination Prefix as zero.		

Table 20-421 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major release
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm Package: netw.UpgradedBuildVersionMismatch Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: upgradedImageNotBooted	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 20-422 upgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: upgradedCardAlarm (255) Type: softwareAlarm Package: equipment.upgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: upgradedCard	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 20-423 UplinkDown

Alarm	Attributes	Applicable major release
Name: UplinkDown (11062) Type: virtualSwitchAlarm Package: dctr.UplinkDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsAllDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when all connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '2'))		
Clearing condition: (('uplinkState' NOT EQUAL '2'))		
Remedial action: This alarm is raised when all connections associated to the uplink lost connectivity.		

Table 20-424 UplinkPartiallyDown

Alarm	Attributes	Applicable major release
Name: UplinkPartiallyDown (11063) Type: virtualSwitchAlarm Package: dctr.UplinkPartiallyDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when some connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '3'))		
Clearing condition: (('uplinkState' NOT EQUAL '3'))		
Remedial action: This alarm is raised when a connection of the uplink lost connectivity but at least one connection remains connected.		

Table 20-425 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm Package: sw.VersionConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: versionMismatch	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 20-426 VideoInterfaceDown

Alarm	Attributes	Applicable major release
Name: VideoInterfaceDown (794) Type: VideoInterfaceAlarm Package: service.VideoInterfaceDown Raised on class: service.VideoInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a video interface is operationally down. The alarm clears when the video interface is operationally up.		
Raising condition: ('Operational State' NOT EQUAL 'Up')		
Clearing condition: ('Operational State' EQUAL 'Up')		
Remedial action: Check the configuration and the underlying physical interface.		

Table 20-427 VirtualLinkDown

Alarm	Attributes	Applicable major release
Name: VirtualLinkDown (122) Type: VirtualLinkAlarm Package: ospf.VirtualLinkDown Raised on class: ospf.VirtualLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: VirtualLinkDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a virtual link is Down.		
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' NOT EQUAL 'Down')		

Table 20-427 VirtualLinkDown (continued)

Alarm	Attributes	Applicable major release
Remedial action: This alarm is raised when the OSPF virtual link is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 20-428 VirtualNeighborDown

Alarm	Attributes	Applicable major release
Name: VirtualNeighborDown (123) Type: VirtualNeighborDown Package: ospf.VirtualNeighborDown Raised on classes: • ospf.ShamLink • ospf.VirtualLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: VirtualNeighborDown	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a neighbor virtual link is operationally down.		
Raising condition: ('neighborCount' EQUAL '0L')		
Clearing condition: ('neighborCount' NOT EQUAL '0L')		
Remedial action: This alarm is raised when the OSPF neighbor virtual link is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 20-429 VRtrIfDDosDynamicExceeded

Alarm	Attributes	Applicable major release
Name: VRtrIfDDosDynamicExceeded (4887) Type: securityServiceOrMechanismViolation Package: rtr.VRtrIfDDosDynamicExceeded Raised on class: rtr.VirtualInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ExceedingPolicingParameters	Release: • 7.0
Description: The alarm is raised when the protocol on a particular network interface has been detected as non-conformant to the associated distributed CPU protection policy parameters (on receiving vRtrIfDcpDynamicExcd trap) and the alarm status is set as non-conformant When the network interface starts hold-down period for an exceeding protocol (on receiving vRtrIfDcpDynamicHold-DownStart trap), the alarm status will change into non-conformant(Hold Down Start). When the network interface completes hold-down period for an exceeding protocol (on receiving vRtrIfDcpDynamicHoldDownEnd trap), the alarm status will be changed into non-conformant(Hold Down End). When the protocol for the network interface has been detected as conformant for a period of the configured detection-time after having been previously detected as exceeding and completed any hold-down period (on receiving vRtrIfDcpDynamicConform trap), the alarm will be cleared.		
Remedial action: Appropriate configuration changes to the distributed CPU protection policy or to the affected network interface may be required.		

Table 20-430 VRtrIfDDosLocMonitorExceeded

Alarm	Attributes	Applicable major release
Name: VRtrIfDDosLocMonitorExceeded (4888) Type: securityServiceOrMechanismViolation Package: rtr.VRtrIfDDosLocMonitorExceeded Raised on class: rtr.VirtualInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ExceedingPolicingParameters	Release: • 7.0
Description: The alarm is raised when the local-monitoring-policer for a particular network interface has transitioned from a conformant state to a non-conformant state and the system will attempt to allocate dynamic enforcement policers (on receiving sapDcpLocMonExcd trap), and the alarm status is set as non-conformant When all dynamic enforcement policers associated with a non-conformant local-monitoring-policer have been successfully allocated for the network interface (on receiving sapDcpLocMonExcdAllDynAlloc trap), the alarm status will be changed into non-conformant(Located All). When the local-monitoring-policer for a particular network interface has transitioned from a conformant state to a non-conformant state and the system cannot allocate all the dynamic enforcement policers associated with the distributed CPU protection policy (on receiving sapDcpLocMonExcdDynResource trap), the alarm status will be changed into non-conformant(Cannot Allocate All). When all the previously allocated dynamic enforcement policers for a particular local-monitoring-policer on the associated distributed CPU protection policy have been freed up and all the protocols are once again being monitored by local-monitor (on receiving sapDcpLocMonExcdAllDynFreed trap), the alarm will be cleared.		
Remedial action: Appropriate configuration changes to the distributed CPU protection policy or to the affected network interface may be required.		

Table 20-431 VRtrIfDDosStaticExceeded

Alarm	Attributes	Applicable major release
Name: VRtrIfDDosStaticExceeded (4889) Type: securityServiceOrMechanismViolation Package: rtr.VRtrIfDDosStaticExceeded Raised on class: rtr.VirtualInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ExceedingPolicingParameters	Release: • 7.0
Description: The alarm is raised when the static-policer on a particular network interface has been detected as non-conformant to the associated distributed CPU protection policy parameters (on receiving vRtrIfDcpStaticExcd trap) and the alarm status is set as non-conformant. When the network interface starts hold-down period for the exceeding static-policer (on receiving vRtrIfDcpStaticHold-DownStart trap), the alarm status will change into non-conformant(Hold Down Start). When the network interface ends hold-down period for the exceeding static-policer (on receiving vRtrIfDcpStaticHoldDownEnd trap), the alarm status will be changed into non-conformant(Hold Down End). When the static-policer for the network interface has been detected as conformant for a period of the configured detection-time after having been previously detected as exceeding and completed any hold-down period (on receiving vRtrIfDcpStaticConform trap), the alarm will be cleared.		
Remedial action: Appropriate configuration changes to the distributed CPU protection policy or to the affected network interface may be required.		

Table 20-432 WaveTrackerEncoderDegrade

Alarm	Attributes	Applicable major release
Name: WaveTrackerEncoderDegrade (821) Type: communicationsAlarm Package: ethernetequipment.WaveTrackerEncoderDegrade Raised on class: ethernetequipment.WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EncoderDegrade	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a device reports an encoder degradation on a wavelength tracker interface.		
Raising condition: (('Configured Alarms'anyBit'Encoder Degrade') AND ('Reported Alarms'anyBit'Encoder Degrade'))		
Clearing condition: NOT ((('Configured Alarms'anyBit'Encoder Degrade') AND ('Reported Alarms'anyBit'Encoder Degrade')))		
Remedial action: The OT or SVAC card has detected a DSP failure and this means that the wavelength tracker encode power control is compromised. If this occurs during steady state operation, there is a high probability that the services carried by this OT or SVAC are unaffected. To clear this alarm, replace the card. The card replacement procedure is service affecting and should be conducted during a maintenance window.		

Table 20-433 WaveTrackerEncoderFailure

Alarm	Attributes	Applicable major release
Name: WaveTrackerEncoderFailure (822) Type: communicationsAlarm Package: ethernetequipment.WaveTrackerEncoderFailure Raised on class: ethernetequipment.WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EncoderFailure	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a device reports an encoder failure on a wavelength tracker interface.		
Raising condition: (('Configured Alarms'anyBit'Encoder Failure') AND ('Reported Alarms'anyBit'Encoder Failure'))		
Clearing condition: NOT ((('Configured Alarms'anyBit'Encoder Failure') AND ('Reported Alarms'anyBit'Encoder Failure')))		
Remedial action: A cold reset, reseat, or replacement of a card is service impacting if the card is currently carrying services. If there are services currently carried over the card, it may be best to wait for a maintenance window before resetting, replacing, or reseating the card.Confirm that replacement OT or SVAC card supports the same band as the alarmed OT or SVAC card and connect all fibers to the replacement OT or SVAC card.		

Table 20-434 WaveTrackerMissingPluggableVOA

Alarm	Attributes	Applicable major release
Name: WaveTrackerMissingPluggableVOA (4618) Type: communicationsAlarm Package: ethernetequipment.WaveTrackerMissingPluggableVOA Raised on class: ethernetequipment.WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MissingPluggableVOA	Release: • 6.0 • 7.0 • 8.0

Table 20-434 WaveTrackerMissingPluggableVOA (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when a device reports a power control high limit on a wavelength tracker interface.		
Raising condition: (('Configured Alarms'anyBit'Missing Pluggable VOA') AND ('Reported Alarms'anyBit'Missing Pluggable VOA'))		
Clearing condition: NOT ((('Configured Alarms'anyBit'Missing Pluggable VOA') AND ('Reported Alarms'anyBit'Missing Pluggable VOA')))		
Remedial action: Informational - no corrective action required.		

Table 20-435 WaveTrackerPowerControlDegrade

Alarm	Attributes	Applicable major release
Name: WaveTrackerPowerControlDegrade (823) Type: communicationsAlarm Package: ethernetequipment. WaveTrackerPowerControlDegrade Raised on class: ethernetequipment. WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PowerControlDegrade	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a device reports a power control degradation on a wavelength tracker interface.		
Raising condition: (('Configured Alarms'anyBit'Power Control Degrade') AND ('Reported Alarms'anyBit'Power Control Degrade'))		
Clearing condition: NOT ((('Configured Alarms'anyBit'Power Control Degrade') AND ('Reported Alarms'anyBit'Power Control Degrade')))		
Remedial action: check to see that the fibering for that card is correct. Remove the fiber from the Tx port on the transponder card. If the condition clears after 20 seconds, then this is a misfibering problem.		

Table 20-436 WaveTrackerPowerControlFailure

Alarm	Attributes	Applicable major release
Name: WaveTrackerPowerControlFailure (824) Type: communicationsAlarm Package: ethernetequipment. WaveTrackerPowerControlFailure Raised on class: ethernetequipment. WaveLengthTracker	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PowerControlFailure	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a device reports a power control failure on a wavelength tracker interface.		
Raising condition: (('Configured Alarms'anyBit'Power Control Failure') AND ('Reported Alarms'anyBit'Power Control Failure'))		
Clearing condition: NOT ((('Configured Alarms'anyBit'Power Control Failure') AND ('Reported Alarms'anyBit'Power Control Failure')))		

Table 20-436 WaveTrackerPowerControlFailure (continued)

Alarm	Attributes	Applicable major release
Remedial action: Either alarmed card has detected equipment problem or there is misfibering problem such that a light-emitting fiber has been plugged into the Tx port of aWavelength Tracker encoder-equipped transponder card.If the card is a transponder card that is equipped with aWavelength Tracker encoder, check to see that the fibering for that card is correct. Remove the fiber from the Tx port on the transponder card. If the condition clears after 20 seconds, then this is a misfibering problem.the card is an SVAC, or if there is no fibering problem on the transponder card.Disconnect all fibers on the alarmed card and Replace the card. connect all fibers to the replacement card		

Table 20-437 WaveTrackerPowerControlHighlimit

Alarm	Attributes	Applicable major release
Name: WaveTrackerPowerControlHighlimit (825) Type: communicationsAlarm Package: ethernetequipment. WaveTrackerPowerControlHighlimit Raised on class: ethernetequipment. WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PowerControlHighlimit	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a device reports a power control high limit on a wavelength tracker interface.		
Raising condition: (('Configured Alarms'anyBit'Power Control High limit reached') AND ('Reported Alarms'anyBit'Power Control High limit reached'))		
Clearing condition: NOT ((('Configured Alarms'anyBit'Power Control High limit reached') AND ('Reported Alarms'anyBit'Power Control High limit reached')))		
Remedial action: Informational - no corrective action required.		

Table 20-438 WaveTrackerPowerControllowlimit

Alarm	Attributes	Applicable major release
Name: WaveTrackerPowerControllowlimit (826) Type: communicationsAlarm Package: ethernetequipment. WaveTrackerPowerControllowlimit Raised on class: ethernetequipment. WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PowerControllowlimit	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when a device reports a power control low limit on a wavelength tracker interface.		
Raising condition: (('Configured Alarms'anyBit'Power Control Low limit reached') AND ('Reported Alarms'anyBit'Power Control Low limit reached'))		
Clearing condition: NOT ((('Configured Alarms'anyBit'Power Control Low limit reached') AND ('Reported Alarms'anyBit'Power Control Low limit reached')))		
Remedial action: Informational - no corrective action required.		

Table 20-439 WlanGwResrcProblemDetected

Alarm	Attributes	Applicable major release
Name: WlanGwResrcProblemDetected (3889) Type: resourceAlarm Package: netw.WlanGwResrcProblemDetected Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 7.0
Description: The alarm is raised when there is a resource problem detected while attempting to activate some part of the WLAN Gateway configuration of this system.		
Remedial action: The alarm is raised when there is a resource problem detected while attempting to activate some part of the WLAN Gateway configuration of this system.		

Table 20-440 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major release
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm Package: netw.WrongCpaaSoftwareVersion Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL '\"TiMOS-B-3.0.Generic \"') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Clearing condition: (('Software Version' NOT EQUAL '\"TiMOS-B-3.0.Generic \"') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

Table 20-441 XplError

Alarm	Attributes	Applicable major release
Name: XplError (573) Type: hardwareAnomaly Package: equipment.XplError Raised on class: equipment.DaughterCard	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: xplError	Release: • 6.0 • 7.0 • 8.0
Description: The alarm is raised when an MDA reports persistent XPL Errors.		
Raising condition: ('Number Of Notifications' NOT EQUAL '0')		
Clearing condition: ('Number Of Notifications' EQUAL '0')		
Remedial action: Informational - if the condition persists then the MDA indicated in the alarm should be replaced.		

21 7950 XRS

21.1 Alarms

Alarms

Note: Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see Chapter 39, “Unspecified NE”.

Table 21-1 AccessInterfaceDown

Alarm	Attributes	Applicable major release
Name: AccessInterfaceDown (249) Type: AccessInterfaceAlarm Package: service.AccessInterfaceDown Raised on class: service.AccessInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an L2 or L3 interface operational state is Down. The alarm is not raised against an L2 access interface that is associated with an MC ring or MC LAG in the standby state.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'Standby For MC-Ring') AND ('State Cause' NOT EQUAL 'Standby For MC Protocol') AND ('State Cause' NOT EQUAL 'Standby For BGP Multi-homing'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'Standby For MC-Ring') OR ('State Cause' EQUAL 'Standby For MC Protocol') OR ('State Cause' EQUAL 'Standby For BGP Multi-homing'))		
Remedial action: The condition exists because the physical interface is down either because it is administratively disabled, faulty or a cabling fault has occurred. Ensure that the interface is administratively up. Check for a poor cable connection to the port or for a faulty cable/fiber. If neither appears to be the problem run diagnostics on the port to determine if it is faulty.		

Table 21-2 ActiveAbnormalCondition

Alarm	Attributes	Applicable major release
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm Package: netw.ActiveAbnormalCondition Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

Table 21-3 adjacencyDown

Alarm	Attributes	Applicable major release
Name: adjacencyDown (11462) Type: communicationsAlarm Package: mpr.adjacencyDown Raised on class: mpr.BackhaulAdjacency	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: adjacencyDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the Operational State of a adjacency is Down, for example, because of one of the following conditions: The Operational State of local port pointer is Down.		
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' EQUAL 'Up')		
Remedial action: NE Alarms causing operState down must not exist on the selected adjancency.		

Table 21-4 AggregatedVFLPortDown

Alarm	Attributes	Applicable major release
Name: AggregatedVFLPortDown (5436) Type: equipmentAlarm Package: equipment.AggregatedVFLPortDown Raised on class: equipment.Shelf	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: connectivityIssue	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is generated when the aggregated virtual fabric link on the virtual chassis slot is down.		
Raising condition: (('Shelf Type' EQUAL '7850') AND ('Total Slots' EQUAL '4') AND ('Virtual Fabric Link State' NOT EQUAL 'Up'))		
Clearing condition: (('Shelf Type' EQUAL '7850') AND ('Total Slots' EQUAL '4') AND ('Virtual Fabric Link State' EQUAL 'Up'))		
Remedial action: The alarm is raised when the aggregated virtual fabric link on the virtual chassis is down. Please check the virtual fabric links for the virtual chassis setup.		

Table 21-5 AGWDiameterPeerDown

Alarm	Attributes	Applicable major release
Name: AGWDiameterPeerDown (844) Type: EpcAlarm Package: lte.AGWDiameterPeerDown Raised on class: lte.AGWDiameterPeer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 21-6 AncillaryPathLimitReached

Alarm	Attributes	Applicable major release
Name: AncillaryPathLimitReached (459) Type: resourceAlarm Package: equipment.AncillaryPathLimitReached Raised on class: equipment.DaughterCard	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceLimitReached	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the Ingress Multicast Path Management ancillary path bandwidth limit is reached.		
Raising condition: (('Ancillary Path Limit Override' > '0') AND ('Ancillary Path In use' >=" (1000 * 'Ancillary Path Limit Override')))"		
Clearing condition: (('Ancillary Path Limit Override' > '0') AND ('Ancillary Path In use' < (1000 * 'Ancillary Path Limit Override')))		
Remedial action: Informational - The alarm is raised when the Ingress Multicast Path Management ancillary path bandwidth limit is reached. This can be remedied by modifying the ancillary path limit located at T1 Paths tab of the multicast bandwidth policy which assigned to the card, or increase the ancillary path limit override located at the Daughter Card tab under Daughter Card Slot form.		

Table 21-7 AreaTypeMismatch

Alarm	Attributes	Applicable major release
Name: AreaTypeMismatch (38) Type: configurationAlarm Package: ospf.AreaTypeMismatch Raised on class: ospf.Area	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: areaTypeMisconfigured	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an OSPF area on one NE is configured as an NSSA and the same OSPF area on another NE is configured as a stub area.		
Raising condition: ('Type Mismatch' EQUAL 'true')		
Clearing condition: ('Type Mismatch' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The OSPF area type configured for the NE does not match with the same OSPF area configured on another NE. Compare the configuration on the endpoint and correct the mismatch.		

Table 21-8 AsymmetricalConfig (multichassis)

Alarm	Attributes	Applicable major release
Name: AsymmetricalConfig (295) Type: configurationAlarm Package: multichassis.AsymmetricalConfig Raised on classes: • multichassis.MultiChassisLagMember • multichassis.AbstractMultiChassisPeer • multichassis.AbstractMultiChassisLag	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: asymmetricalConfig	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when there is a peer configuration mismatch that prevents MC operation.		
Raising condition: ('Config Mismatches' NOT EQUAL '0L')		
Clearing condition: ('Config Mismatches' EQUAL '0L')		
Remedial action: Check configurations on both members to see anything not matched.		

Table 21-9 AsymmetricalConfig (lag)

Alarm	Attributes	Applicable major release
Name: AsymmetricalConfig (295) Type: configurationAlarm Package: lag.AsymmetricalConfig Raised on classes: • lag.MultiChassisLag • lag.MultiChassisLagMember	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: asymmetricalConfig	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the members of an MC LAG do not have matching configurations.		
Raising condition: ('configMismatches' NOT EQUAL '0L')		
Clearing condition: ('configMismatches' EQUAL '0L')		
Remedial action: Check configurations on both members to see anything not matched.		

Table 21-10 AtcaPowerSupplyFailure

Alarm	Attributes	Applicable major release
Name: AtcaPowerSupplyFailure (1125) Type: equipmentAlarm Package: equipment.AtcaPowerSupplyFailure Raised on class: equipment.PowerSupply	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fanFailure	Release: • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the associated power supply is not operationally Up.		
Raising condition: (('operationalState' EQUAL 'Disabled'))		
Clearing condition: ('operationalState' EQUAL 'Enabled')		
Remedial action: Check the status of the site power supply.		

Table 21-11 AuthKeyConflict (rsvp)

Alarm	Attributes	Applicable major release
Name: AuthKeyConflict (5188) Type: processingErrorAlarm Package: rsvp.AuthKeyConflict Raised on class: rsvp.AuthenticationKey	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: AuthKeyConflict	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when both Authentication Key and RSVP Keychain are configured. RSVP Keychain will be used.		
Raising condition: (('RSVP Keychain' NOT EQUAL '\"\"') AND ('enableAuthentication' EQUAL 'true'))		
Clearing condition: (('RSVP Keychain' EQUAL '\"\"') OR ('enableAuthentication' NOT EQUAL 'true'))		
Remedial action: Authentication Key and RSVP Keychain are both configured. RSVP Keychain will be used. The alarm is cleared when only one is configured.		

Table 21-12 AuxiliaryServerStatus

Alarm	Attributes	Applicable major release
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm Package: server.AuxiliaryServerStatus Raised on class: server.AuxiliaryServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 21-13 BackPlaneEPROMFailed

Alarm	Attributes	Applicable major release
Name: BackPlaneEPROMFailed (12488) Type: equipmentAlarm Package: netw.BackPlaneEPROMFailed Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EquipmentError	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the active CPM is no longer able to access the backplane EPROM due to a hardware defect.		
Remedial action: The active CPM is at risk of failing to initialize after node reboot due to not being able to access the BP EPROM to read the chassis type. Contact Nokia customer support.		

Table 21-14 BackPlaneEPROMWarning

Alarm	Attributes	Applicable major release
Name: BackPlaneEPROMWarning (12489) Type: equipmentAlarm Package: netw.BackPlaneEPROMWarning Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeReboot	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the active CPM is no longer able to access one backplane EPROM due to a hardware defect but a redundant EPROM is present and accessible.		
Remedial action: There is no effect on system operation.No recovery action required.		

Table 21-15 BareMetalReachabilityDown

Alarm	Attributes	Applicable major release
Name: BareMetalReachabilityDown (10273) Type: virtualPortAlarm Package: dctr.BareMetalReachabilityDown Raised on class: dctr.BMDevice	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BareMetalReachability-DownOrDeleted	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when Bare Metal server is reachability down.		
Raising condition: (('bgpReachabilityState' NOT EQUAL '0'))		
Clearing condition: (('bgpReachabilityState' EQUAL '0'))		
Remedial action: This alarm can be cleared when bare metal device BGP prefix is up. Check for virtual switch controller down or virtual switch down or interface/port down in underlay network (hence the BGP prefix not advertised).		

Table 21-16 BerLineSignalDegradation

Alarm	Attributes	Applicable major release
Name: BerLineSignalDegradation (88) Type: communicationsAlarm Package: sonetequipment.BerLineSignalDegradation Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: berLineSignalDegradation	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a SONET port reports a line signal degradation BER error. The alarm corresponds to the lb2er-sd alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'BER Line Signal Degradation') AND ('Report Alarms'anyBit'BER Line Signal Degradation'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'BER Line Signal Degradation') AND ('Report Alarms'anyBit'BER Line Signal Degradation')))		
Remedial action: Informational only.		

Table 21-17 BerLineSignalFailure

Alarm	Attributes	Applicable major release
Name: BerLineSignalFailure (89) Type: communicationsAlarm Package: sonetequipment.BerLineSignalFailure Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: berLineSignalFailure	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a SONET port reports a line signal degradation BER error. The alarm corresponds to the lb2er-sf alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'BER Line Signal Failure') AND ('Report Alarms'anyBit'BER Line Signal Failure'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'BER Line Signal Failure') AND ('Report Alarms'anyBit'BER Line Signal Failure')))		
Remedial action: Informational only.		

Table 21-18 BfdInterfaceConnectionBroken

Alarm	Attributes	Applicable major release
Name: BfdInterfaceConnectionBroken (3329) Type: serviceAlarm Package: vrrp.BfdInterfaceConnectionBroken Raised on class: vrrp.BfdInterface	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bfdSessionConnectionBroken	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the BFD connection to a peer times out.		
Raising condition: ('Operational State' EQUAL 'Timed Out')		
Clearing condition: ('Operational State' NOT EQUAL 'Timed Out')		
Remedial action: Check the peer router, fix the BFD connection		

Table 21-19 BfdInterfaceConnectionDown

Alarm	Attributes	Applicable major release
Name: BfdInterfaceConnectionDown (3330) Type: serviceAlarm Package: vrrp.BfdInterfaceConnectionDown Raised on class: vrrp.BfdInterface	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bfdSessionDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the Operational State of a BFD session is Not Connected.		
Raising condition: ('Operational State' NOT EQUAL 'Operational')		
Clearing condition: ('Operational State' EQUAL 'Operational')		
Remedial action: Check the BFD interface configuration, fix the BFD connection		

Table 21-20 BfdInterfaceConnectionPeerDetectsDown

Alarm	Attributes	Applicable major release
Name: BfdInterfaceConnectionPeerDetectsDown (3331) Type: serviceAlarm Package: vrrp. BfdInterfaceConnectionPeerDetectsDown Raised on class: vrrp.BfdInterface	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bfdSessionConnectionPeer-DetectsDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a BFD peer detects a connection timeout.		
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' NOT EQUAL 'Down')		
Remedial action: Fix the BFD connection		

Table 21-21 BgpDown

Alarm	Attributes	Applicable major release
Name: BgpDown (6) Type: ProtocolAlarm Package: bgp.BgpDown Raised on class: bgp.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a BGP instance has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The BGP protocol entity is down - administratively disable BGP and re-enable. If the problem persists please contact your Nokia support representative for assistance.		

Table 21-22 BITS2NotQualified

Alarm	Attributes	Applicable major release
Name: BITS2NotQualified (1941) Type: communicationsAlarm Package: sonet.BITS2NotQualified Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: timingReferenceNotQualified	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the BITS2 timing reference on an NE is not in the Qualified state.		
Raising condition: (('Qualified For Use' EQUAL 'Not Qualified') AND ('Input Administrative State' NOT EQUAL 'Down'))		
Clearing condition: (('Qualified For Use' NOT EQUAL 'Not Qualified') OR ('Input Administrative State' EQUAL 'Down'))		
Remedial action: Make sure that BITS2 is qualified		

Table 21-23 BITS2ReferenceLossOfSignal

Alarm	Attributes	Applicable major release
Name: BITS2ReferenceLossOfSignal (9002) Type: communicationsAlarm Package: sonet.BITS2ReferenceLossOfSignal Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BITS2ReferenceLossOfSignal	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the BITS2 reference on an NE is not qualified due to Loss of Signal.		
Raising condition: (('Not Qualified Due To'anyBit'LOS'))		
Clearing condition: NOT ((('Not Qualified Due To'anyBit'LOS')))		
Remedial action: Make sure that peer connected to BITS2 is properly configured.		

Table 21-24 BITS2ReferenceOutOfFrequency

Alarm	Attributes	Applicable major release
Name: BITS2ReferenceOutOfFrequency (9003) Type: communicationsAlarm Package: sonet.BITS2ReferenceOutOfFrequency Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BITS2ReferenceOutOfFrequency	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the BITS2 Reference on an NE is not qualified due to Out of frequency.		
Raising condition: (('Not Qualified Due To'anyBit'OOF'))		
Clearing condition: NOT ((('Not Qualified Due To'anyBit'OOF')))		
Remedial action: Make sure that frequency configured for BITS2 is correct.		

Table 21-25 BITS2ReferenceOutOfPollInRange

Alarm	Attributes	Applicable major release
Name: BITS2ReferenceOutOfPollInRange (9004) Type: communicationsAlarm Package: sonet.BITS2ReferenceOutOfPollInRange Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BITS2ReferenceOutOfPollInRange	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the BITS2 Reference on an NE is not qualified state due to Out of poll in range.		
Raising condition: (('Not Qualified Due To'anyBit'OOPIR'))		
Clearing condition: NOT ((('Not Qualified Due To'anyBit'OOPIR')))		
Remedial action: Check the BITS2 is configured correctly. Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary		

Table 21-26 BITSNotQualified

Alarm	Attributes	Applicable major release
Name: BITSNotQualified (547) Type: communicationsAlarm Package: sonet.BITSNotQualified Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: timingReferenceNotQualified	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the BITS/BITS1 timing reference on an NE is not in the Qualified state.		
Raising condition: (('Qualified For Use' EQUAL 'Not Qualified') AND ('Output Administrative State' NOT EQUAL 'Down'))		
Clearing condition: (('Qualified For Use' NOT EQUAL 'Not Qualified') OR ('Output Administrative State' EQUAL 'Down'))		
Remedial action: Make sure that BITS/BITS1 is qualified		

Table 21-27 BITSReferenceLossOfSignal (sonet)

Alarm	Attributes	Applicable major release
Name: BITSReferenceLossOfSignal (1950) Type: communicationsAlarm Package: sonet.BITSReferenceLossOfSignal Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BITSReferenceLossOfSignal	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the BITS/BITS1 reference on an NE is not qualified due to Loss of Signal.		
Raising condition: (('Not Qualified Due To'anyBit'LOS'))		
Clearing condition: NOT ((('Not Qualified Due To'anyBit'LOS')))		
Remedial action: Make sure that peer connected to BITS/BITS1 is properly configured.		

Table 21-28 BITSReferenceOutOfFrequency (sonet)

Alarm	Attributes	Applicable major release
Name: BITSReferenceOutOfFrequency (1951) Type: communicationsAlarm Package: sonet.BITSReferenceOutOfFrequency Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BITSReferenceOutOfFrequency	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the BITS/BITS1 Reference on an NE is not qualified due to Out of frequency.		
Raising condition: (('Not Qualified Due To'anyBit'OOF'))		
Clearing condition: NOT ((('Not Qualified Due To'anyBit'OOF')))		
Remedial action: Make sure that frequency configured for BITS/BITS1 is correct.		

Table 21-29 BITSReferenceOutOfPollInRange (sonet)

Alarm	Attributes	Applicable major release
Name: BITSReferenceOutOfPollInRange (1952) Type: communicationsAlarm Package: sonet.BITSReferenceOutOfPollInRange Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BITSReferenceOutOfPollInRange	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the BITS/BITS1 Reference on an NE is not qualified state due to Out of poll in range.		
Raising condition: (('Not Qualified Due To'anyBit'OOPIR'))		
Clearing condition: NOT ((('Not Qualified Due To'anyBit'OOPIR')))		
Remedial action: Check the BITS/BITS1 is configured correctly. Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary		

Table 21-30 BootableConfigBackupFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigBackupFailed (103) Type: configurationAlarm Package: sw.BootableConfigBackupFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 21-31 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm Package: sw.BootableConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 21-32 BootParametersMisconfigured

Alarm	Attributes	Applicable major release
Name: BootParametersMisconfigured (35) Type: configurationAlarm Package: netw.BootParametersMisconfigured Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistentIndexFailure Applicable probable causes: • persistentIndexFailure • configFileBootFailure	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND ((('Config File Status' NOT EQUAL 'Executed Successfully') AND ('Config File Status' NOT EQUAL 'configFileStatus_unspecified')) OR (('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded') AND ('Persistent Index Status' NOT EQUAL 'persistentIndexStatus_unspecified'))))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

Table 21-33 CardDegrade

Alarm	Attributes	Applicable major release
Name: CardDegrade (1987) Type: equipmentAlarm Package: equipment.CardDegrade Raised on class: equipment.CardSlot	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EqptDgr	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when Card degrade - device is detected.		
Remedial action: At the end of each step wait to see if the fault clears. If not, continue with the next step.1. Is the alarmed pack a 100G Coherent OT (112SCA1, 112SNA1, 112SCX10 or 112SNX10)? 2. Check the line port information and Line port PM.If the OPT and OPR parameters are blank go to Step 3.3. Check the firmware profile that is currently running on the pack.If not, go to Step 7.If the firmware profile for the card is lower than the versions shown in the table below,then the firmware should be upgraded see - Selecting a Specific Firmware Version 4. Perform a cold reset of the card.5. Reseat the card.6. Replace the card.7. Perform a warm reset of the card.		

Table 21-34 CesBfrOverrun

Alarm	Attributes	Applicable major release
Name: CesBfrOverrun (448) Type: communicationsAlarm Package: vll.CesBfrOverrun Raised on class: vll.VllCesInterfaceSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bufferOverrun	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 5620 SAM detects a jitter buffer overrun.		
Raising condition: (('Report Alarm Status'anyBit'Buffer Overrun') AND ('Report Alarm'anyBit'Buffer Overrun'))		
Clearing condition: NOT ((('Report Alarm Status'anyBit'Buffer Overrun') AND ('Report Alarm'anyBit'Buffer Overrun')))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 21-35 CesBfrUnderrun

Alarm	Attributes	Applicable major release
Name: CesBfrUnderrun (449) Type: communicationsAlarm Package: vll.CesBfrUnderrun Raised on class: vll.VllCesInterfaceSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bufferOverrun	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 5620 SAM detects a jitter buffer underrun.		
Raising condition: (('Report Alarm Status'anyBit'Buffer Underrun') AND ('Report Alarm'anyBit'Buffer Underrun'))		
Clearing condition: NOT ((('Report Alarm Status'anyBit'Buffer Underrun') AND ('Report Alarm'anyBit'Buffer Underrun')))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 21-36 CesMalformedPkts

Alarm	Attributes	Applicable major release
Name: CesMalformedPkts (446) Type: communicationsAlarm Package: vll.CesMalformedPkts Raised on class: vll.VllCesInterfaceSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: malformedPackets	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 5620 SAM detects one or more malformed packets.		
Raising condition: (('Report Alarm Status'anyBit'Malformed Packets') AND ('Report Alarm'anyBit'Malformed Packets'))		
Clearing condition: NOT ((('Report Alarm Status'anyBit'Malformed Packets') AND ('Report Alarm'anyBit'Malformed Packets')))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 21-37 CesPktLoss

Alarm	Attributes	Applicable major release
Name: CesPktLoss (447) Type: communicationsAlarm Package: vll.CesPktLoss Raised on class: vll.VllCesInterfaceSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lossOfPacket	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 5620 SAM detects a packet loss.		
Raising condition: (('Report Alarm Status'anyBit'Packet Loss') AND ('Report Alarm'anyBit'Packet Loss'))		
Clearing condition: NOT ((('Report Alarm Status'anyBit'Packet Loss') AND ('Report Alarm'anyBit'Packet Loss')))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 21-38 CesRmtPktLoss

Alarm	Attributes	Applicable major release
Name: CesRmtPktLoss (450) Type: communicationsAlarm Package: vll.CesRmtPktLoss Raised on class: vll.VllCesInterfaceSpecifics	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: farEndLossOfPacket	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 5620 SAM detects a remote packet loss.		
Raising condition: (('Report Alarm Status'anyBit'Remote Packet Loss') AND ('Report Alarm'anyBit'Remote Packet Loss'))		
Clearing condition: NOT ((('Report Alarm Status'anyBit'Remote Packet Loss') AND ('Report Alarm'anyBit'Remote Packet Loss')))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 21-39 CesRmtRdi

Alarm	Attributes	Applicable major release
Name: CesRmtRdi (452) Type: configurationAlarm Package: vll.CesRmtRdi Raised on class: vll.VllCesInterfaceSpecifics	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: farEndRdi	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 5620 SAM detects a remote RDI.		
Raising condition: (('Report Alarm Status'anyBit'Remote RDI') AND ('Report Alarm'anyBit'Remote RDI'))		
Clearing condition: NOT ((('Report Alarm Status'anyBit'Remote RDI') AND ('Report Alarm'anyBit'Remote RDI')))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 21-40 CesRmtTdmFault

Alarm	Attributes	Applicable major release
Name: CesRmtTdmFault (451) Type: configurationAlarm Package: vll.CesRmtTdmFault Raised on class: vll.VllCesInterfaceSpecifics	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tdmFarEndFault	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 5620 SAM detects a remote TDM fault.		
Raising condition: (('Report Alarm Status'anyBit'Remote TDM Fault') AND ('Report Alarm'anyBit'Remote TDM Fault'))		
Clearing condition: NOT ((('Report Alarm Status'anyBit'Remote TDM Fault') AND ('Report Alarm'anyBit'Remote TDM Fault')))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 21-41 CesStrayPkts

Alarm	Attributes	Applicable major release
Name: CesStrayPkts (445) Type: communicationsAlarm Package: vll.CesStrayPkts Raised on class: vll.VllCesInterfaceSpecifics	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: strayPackets	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 5620 SAM detects received stray packets.		
Raising condition: (('Report Alarm Status'anyBit'Stray Packets') AND ('Report Alarm'anyBit'Stray Packets'))		
Clearing condition: NOT ((('Report Alarm Status'anyBit'Stray Packets') AND ('Report Alarm'anyBit'Stray Packets')))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 21-42 CircuitStpExceptionCondition

Alarm	Attributes	Applicable major release
Name: CircuitStpExceptionCondition (648) Type: SdpBindingAlarm Package: l2fwd.CircuitStpExceptionCondition Raised on class: l2fwd.CircuitStp	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: StpException	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an NE detects an STP exception condition on a SAP, for example, one-way communication or a downstream loop. The alarm clears when the STP status changes.		
Raising condition: (('STP Exception Condition' NOT EQUAL 'None') AND ('Administrative State' EQUAL 'Up'))		
Clearing condition: (('STP Exception Condition' EQUAL 'None') OR ('Administrative State' EQUAL 'Down'))		
Remedial action: Check 'STP Exception Condition' field for more details and fix the STP exception.		

Table 21-43 ClientDelegateServerStatus

Alarm	Attributes	Applicable major release
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm Package: server.ClientDelegateServerStatus Raised on class: server.ClientDelegateServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 21-44 CmuManagementFailed

Alarm	Attributes	Applicable major release
Name: CmuManagementFailed (10040) Type: communicationsAlarm Package: lte.CmuManagementFailed Raised on class: lte.CompactMobilityUnit	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ftpFailed	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when SAM fails to manage a 9430 Compact Mobility Unit due to an FTP failure.		
Raising condition: ('Management State' EQUAL 'FTP Failed')		
Clearing condition: ('Management State' EQUAL 'Managed')		
Remedial action: Verify FTP connectivity between the 5620 SAM and the 9430 Compact Mobility Unit, then re-attempt to manage.		

Table 21-45 CoherentOpticalModuleFault

Alarm	Attributes	Applicable major release
Name: CoherentOpticalModuleFault (4612) Type: communicationsAlarm Package: ethernetequipment. CoherentOpticalModuleFault Raised on class: ethernetequipment. CoherentOpticalCfg	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ModuleFault	Release: • 14.0
Description: The alarm is raised when a device reports module fault on a coherent optical interface.		
Raising condition: (('Configured Alarms'anyBit'Module Fault') AND ('Reported Alarms'anyBit'Module Fault'))		
Clearing condition: NOT ((('Configured Alarms'anyBit'Module Fault') AND ('Reported Alarms'anyBit'Module Fault')))		
Remedial action: Module Fault occurred.		

Table 21-46 CoherentOpticalModuleHostTxFault

Alarm	Attributes	Applicable major release
Name: CoherentOpticalModuleHostTxFault (4613) Type: communicationsAlarm Package: ethernetequipment. CoherentOpticalModuleHostTxFault Raised on class: ethernetequipment. CoherentOpticalCfg	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: CoherentModuleHostTxFault	Release: • 14.0
Description: The alarm is raised when a device reports Host Tx Fault on a coherent optical interface.		

Table 21-46 CoherentOpticalModuleHostTxFault (continued)

Alarm	Attributes	Applicable major release
Raising condition: (('Configured Alarms'anyBit'Host (Electrical Side) Transmit') AND ('Reported Alarms'anyBit'Host (Electrical Side) Transmit'))		
Clearing condition: NOT ((('Configured Alarms'anyBit'Host (Electrical Side) Transmit') AND ('Reported Alarms'anyBit'Host (Electrical Side) Transmit')))		
Remedial action: Module Host Tx Fault occurred.		

Table 21-47 CoherentOpticalModuleReferenceLockLoss

Alarm	Attributes	Applicable major release
Name: CoherentOpticalModuleReferenceLockLoss (4614) Type: communicationsAlarm Package: ethernetequipment. CoherentOpticalModuleReferenceLockLoss Raised on class: ethernetequipment. CoherentOpticalCfg	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReferenceLockLoss	Release: • 14.0
Description: The alarm is raised when a device reports loss of reference lock signal on a coherent optical interface.		
Raising condition: (('Configured Alarms'anyBit'Module') AND ('Reported Alarms'anyBit'Module'))		
Clearing condition: NOT ((('Configured Alarms'anyBit'Module') AND ('Reported Alarms'anyBit'Module')))		
Remedial action: Loss of reference lock.		

Table 21-48 CoherentOpticalModuleRxFault

Alarm	Attributes	Applicable major release
Name: CoherentOpticalModuleRxFault (4615) Type: communicationsAlarm Package: ethernetequipment. CoherentOpticalModuleRxFault Raised on class: ethernetequipment. CoherentOpticalCfg	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: CoherentModuleRxFault	Release: • 14.0
Description: The alarm is raised when a device reports Rx Fault on a coherent optical interface.		
Raising condition: (('Configured Alarms'anyBit'Network (Optical Side) Receive') AND ('Reported Alarms'anyBit'Network (Optical Side) Receive'))		
Clearing condition: NOT ((('Configured Alarms'anyBit'Network (Optical Side) Receive') AND ('Reported Alarms'anyBit'Network (Optical Side) Receive')))		
Remedial action: Module Rx Fault occurred.		

Table 21-49 CoherentOpticalModuleTxFault

Alarm	Attributes	Applicable major release
Name: CoherentOpticalModuleTxFault (4616) Type: communicationsAlarm Package: ethernetequipment.CoherentOpticalModuleTxFault Raised on class: ethernetequipment.CoherentOpticalCfg	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: CoherentModuleTxFault	Release: • 14.0
Description: The alarm is raised when a device reports Tx Fault on a coherent optical interface.		
Raising condition: (('Configured Alarms'anyBit'Network (Optical Side) Transmit') AND ('Reported Alarms'anyBit'Network (Optical Side) Transmit'))		
Clearing condition: NOT ((('Configured Alarms'anyBit'Network (Optical Side) Transmit') AND ('Reported Alarms'anyBit'Network (Optical Side) Transmit')))		
Remedial action: Module Tx Fault occurred.		

Table 21-50 ConfigurationRescueFileDeleteStatus

Alarm	Attributes	Applicable major release
Name: ConfigurationRescueFileDeleteStatus (3894) Type: configurationRescueAlarm Package: rollback.ConfigurationRescueFileDeleteStatus Raised on class: rollback.RollbackNEInfo	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationRescueFileDeleteOperationPerformed	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a configuration rollback rescue file delete operation is performed.		
Remedial action: Informational - If rollback rescue file deletion status indicates failed, then, the requested rescue file might not be available or check the FTP permission for the rescue location.		

Table 21-51 ConfigurationRescueFileSaveStatus

Alarm	Attributes	Applicable major release
Name: ConfigurationRescueFileSaveStatus (3895) Type: configurationRescueAlarm Package: rollback.ConfigurationRescueFileSaveStatus Raised on class: rollback.RollbackNEInfo	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationRescueFileSaveOperationPerformed	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0

Table 21-51 ConfigurationRescueFileSaveStatus (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when a configuration rollback rescue save operation is performed.		
Remedial action: Informational - If rollback rescue file creation status indicates failed, then, check the FTP permission for the rescue location.		

Table 21-52 ConfigurationRescueStatus

Alarm	Attributes	Applicable major release
Name: ConfigurationRescueStatus (3896) Type: configurationRescueAlarm Package: rollback.ConfigurationRescueStatus Raised on class: rollback.RollbackNEInfo	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationRescueOperationPerformed	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a configuration rollback rescue operation is performed.		
Remedial action: Informational - If rollback rescue status indicates failed, then, the rescue file might not be available or check the FTP permission for the rescue location.		

Table 21-53 ConfigurationRollBackFileDeleteStatus

Alarm	Attributes	Applicable major release
Name: ConfigurationRollBackFileDeleteStatus (3897) Type: configurationRollBackAlarm Package: rollback. ConfigurationRollBackFileDeleteStatus Raised on class: rollback.RollbackNEInfo	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationRollBackFileDeleteOperationPerformed	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a configuration rollback file delete operation is performed.		
Remedial action: Informational - If rollback file deletion status indicates failed, then, the requested rollback file might not be available or check the FTP permission for the rollback location..		

Table 21-54 ConfigurationRollBackFileSyncStatus

Alarm	Attributes	Applicable major release
Name: ConfigurationRollBackFileSyncStatus (3898) Type: configurationRollBackFileSyncAlarm Package: rollback. ConfigurationRollBackFileSyncStatus Raised on class: rollback.RollbackNEInfo	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationRollBackFileSyncOperationPerformed	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a configuration rollback CPM sync operation is performed.		
Remedial action: Informational - If rollback files CPM Sync status indicates failed, then, check whether standby CPM is up.		

Table 21-55 ConfigurationRollBackSaveStatus

Alarm	Attributes	Applicable major release
Name: ConfigurationRollBackSaveStatus (3899) Type: configurationRollBackAlarm Package: rollback.ConfigurationRollBackSaveStatus Raised on class: rollback.RollbackNEInfo	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationRollBackSaveOperationPerformed	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a configuration rollback save operation is performed.		
Remedial action: Informational - If rollback file creation status indicates failed, then, check the FTP permission for the rollback location.		

Table 21-56 ConfigurationRollBackStatus (rollback)

Alarm	Attributes	Applicable major release
Name: ConfigurationRollBackStatus (3684) Type: configurationRollBackAlarm Package: rollback.ConfigurationRollBackStatus Raised on class: rollback.RollbackNEInfo	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationRollBackOperationPerformed	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a configuration rollback operation is performed.		

Table 21-56 ConfigurationRollBackStatus (rollback) (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational - If rollback status indicates failed, then, the requested checkpoint might not be available or NE configuration might need to be restored.		

Table 21-57 ConfigurationRollBackStatus (netw)

Alarm	Attributes	Applicable major release
Name: ConfigurationRollBackStatus (3684) Type: configurationRollBackAlarm Package: netw.ConfigurationRollBackStatus Raised on class: netw.NetworkElement	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationRollBackOperationPerformed	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a configuration rollback operation is performed.		
Remedial action: Informational - If rollback status indicates failed, then, the requested checkpoint might not be available or NE configuration might need to be restored.		

Table 21-58 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm Package: equipment.ContainingEquipmentAdministrativelyDown Raised on class: equipment.Port	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentAdministrativelyDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 21-59 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm Package: equipment.ContainingEquipmentMismatch Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentMismatch	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 21-60 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm Package: equipment. ContainingEquipmentOperationallyDown Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationllyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

Table 21-61 ControlChannelDown

Alarm	Attributes	Applicable major release
Name: ControlChannelDown (8390) Type: ProtocolAlarm Package: Imp.ControlChannelDown Raised on class: Imp.ControlChannel	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 13.0 • 14.0

Table 21-61 ControlChannelDown (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when a Control Channel has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: A network configuration issue has been detected. Ensure the Control Channel configuration between the local node and the peer node is consistent.		

Table 21-62 CorruptImageFile

Alarm	Attributes	Applicable major release
Name: CorruptImageFile (171) Type: configurationAlarm Package: mediation.CorruptImageFile Raised on class: mediation.AbstractSoftwareFolderDescriptor	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 21-63 CPMALocalInterConnectPortNotAvailable

Alarm	Attributes	Applicable major release
Name: CPMALocalInterConnectPortNotAvailable (8061) Type: communicationsAlarm Package: netw.CPMALocalInterConnectPortNotAvailable Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: CPMALocalInterConnectPort-NotAvailable	Release: • 12.0 • 13.0 • 14.0
Description: The CPMALocalInterConnectPortNotAvailable alarm is generated by 7950 XRS-40 when the CPM A of Master chassis cannot reach the Extended chassis through local CPM interconnect ports.		
Remedial action: Ensure that all the CPM A interconnect ports of Master and Extended chassis in the system are properly cabled together with working cables.		

Table 21-64 CPMBLocalInterConnectPortNotAvailable

Alarm	Attributes	Applicable major release
Name: CPMBLocalInterConnectPortNotAvailable (8062) Type: communicationsAlarm Package: netw.CPMBLocalInterConnectPortNotAvailable Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: CPMBLocalInterConnectPort-NotAvailable	Release: • 12.0 • 13.0 • 14.0
Description: The CPMBLocalInterConnectPortNotAvailable alarm is generated by 7950 XRS-40 when the CPM B of Master chassis cannot reach the Extended chassis through local CPM interconnect ports.		
Remedial action: Ensure that all the CPM B interconnect ports of Master and Extended chassis in the system are properly cabled together with working cables.		

Table 21-65 CpmProtectionExceedEntry

Alarm	Attributes	Applicable major release
Name: CpmProtectionExceedEntry (2925) Type: communications Package: sitesec.CpmProtectionExceedEntry Raised on class: sitesec.CpmProtExcdEntry	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: denialOfService	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a MAC packet stream has exceeded its per-source limit.		
Raising condition: ('Number of Rate Violations' NOT EQUAL '0L')		
Remedial action: A device in the network is sending traffic to the NE at a rate which is higher than expected. The source of the traffic must be identified and if the behavior is undesired then the device should be disabled. It is also possible that the threshold has been configured at a level which is lower that acceptable in which case the configuration should be align with the traffic levels expected.		

Table 21-66 CpmProtectionExceedSapIpEntry

Alarm	Attributes	Applicable major release
Name: CpmProtectionExceedSapIpEntry (3911) Type: communications Package: sitesec.CpmProtectionExceedSapIpEntry Raised on class: sitesec.CpmProtExcdSapIpEntry	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: denialOfService	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0

Table 21-66 CpmProtectionExceedSapIpEntry (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when an IP packet stream has exceeded the per-source limit.		
Raising condition: ('Number of Rate Violations' NOT EQUAL '0L')		
Remedial action: A device in the network is sending traffic to the NE at a rate which is higher than expected. The source of the traffic must be identified and if the behavior is undesired then the device should be disabled. It is also possible that the threshold has been configured at a level which is lower that acceptable in which case the configuration should be align with the traffic levels expected.		

Table 21-67 CpmProtectionViolationIfEntry

Alarm	Attributes	Applicable major release
Name: CpmProtectionViolationIfEntry (2926) Type: communications Package: sitesec.CpmProtectionViolationIfEntry Raised on class: sitesec.CpmProtVioIIfEntry	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: denialOfService	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the link-specific packet arrival rate limit at the interface is violated.		
Raising condition: ('Number of Rate Violations' NOT EQUAL '0L')		
Remedial action: A device in the network is sending traffic to the NE at a rate which is higher than expected. The source of the traffic must be identified and if the behavior is undesired then the device should be disabled. It is also possible that the threshold has been configured at a level which is lower that acceptable in which case the configuration should be align with the traffic levels expected.		

Table 21-68 CpmProtectionViolationPortEntry

Alarm	Attributes	Applicable major release
Name: CpmProtectionViolationPortEntry (2927) Type: communications Package: sitesec.CpmProtectionViolationPortEntry Raised on class: sitesec.CpmProtViolPortEntry	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: denialOfService	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the link-specific packet arrival rate limit at the port is violated.		
Raising condition: (('Number of Per-port Violations' NOT EQUAL '0L') OR ('Number of Link-specific Violations' NOT EQUAL '0L'))		
Remedial action: A device in the network is sending traffic to the NE at a rate which is higher than expected. The source of the traffic must be identified and if the behavior is undesired then the device should be disabled. It is also possible that the threshold has been configured at a level which is lower that acceptable in which case the configuration should be align with the traffic levels expected.		

Table 21-69 CpmProtectionViolationSAPEntry

Alarm	Attributes	Applicable major release
Name: CpmProtectionViolationSAPEntry (2928) Type: communications Package: sitesec.CpmProtectionViolationSAPEntry Raised on class: sitesec.CpmProtViolSapEntry	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: denialOfService	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the link-specific packet arrival rate limit at the SAP is violated.		
Raising condition: ('Number of Rate Violations' NOT EQUAL '0L')		
Remedial action: A device in the network is sending traffic to the NE at a rate which is higher than expected. The source of the traffic must be identified and if the behavior is undesired then the device should be disabled. It is also possible that the threshold has been configured at a level which is lower that acceptable in which case the configuration should be align with the traffic levels expected.		

Table 21-70 CpmProtectionViolationSDPEntry

Alarm	Attributes	Applicable major release
Name: CpmProtectionViolationSDPEntry (5415) Type: communications Package: sitesec.CpmProtectionViolationSDPEntry Raised on class: sitesec.CpmProtViolSdpEntry	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: denialOfService	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the overall packet arrival rate limit at the SDP is violated.		
Raising condition: ('Number of Rate Violations' NOT EQUAL '0L')		
Remedial action: A device in the network is sending traffic to the NE at a rate which is higher than expected. The source of the traffic must be identified and if the behavior is undesired then the device should be disabled. It is also possible that the threshold has been configured at a level which is lower that acceptable in which case the configuration should be align with the traffic levels expected.		

Table 21-71 CpmProtectionViolationVdoSvcEntry

Alarm	Attributes	Applicable major release
Name: CpmProtectionViolationVdoSvcEntry (11188) Type: communications Package: sitesec.CpmProtectionViolationVdoSvcEntry Raised on class: sitesec.ServiceControlTrafficViolation	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: denialOfService	Release: • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a per-source rate limit violation is detected for a client address of a Real-time Control Protocol (RTCP) control traffic in VPLS Service.		
Raising condition: ('Number of Rate Violations' NOT EQUAL '0L')		
Remedial action: A device in the network is sending traffic to the NE at a rate which is higher than expected. The source of the traffic must be identified and if the behavior is undesired then the device should be disabled. It is also possible that the threshold has been configured at a level which is lower than acceptable, in which case the configuration should be aligned with the expected traffic levels.		

Table 21-72 CpmProtectionViolationVdoVrtrClientEntry

Alarm	Attributes	Applicable major release
Name: CpmProtectionViolationVdoVrtrClientEntry (11189) Type: communications Package: sitesec. CpmProtectionViolationVdoVrtrClientEntry Raised on class: sitesec.RouterControlTrafficViolation	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: denialOfService	Release: • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a per-source rate limit violation is detected for a client address of a Real-time Control Protocol (RTCP) control traffic in router context.		
Raising condition: ('Number of Rate Violations' NOT EQUAL '0L')		
Remedial action: A device in the network is sending traffic to the NE at a rate which is higher than expected. The source of the traffic must be identified and if the behavior is undesired then the device should be disabled. It is also possible that the threshold has been configured at a level which is lower than acceptable, in which case the configuration should be aligned with the expected traffic levels.		

Table 21-73 DDMAux1HighAlarm

Alarm	Attributes	Applicable major release
Name: DDMAux1HighAlarm (495) Type: thresholdAlarm Package: equipment.DDMAux1HighAlarm Raised on class: equipment.AbstractDDM	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: aux1HighAlarm	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 21-74 DDMAux1HighWarning

Alarm	Attributes	Applicable major release
Name: DDMAux1HighWarning (494) Type: thresholdAlarm Package: equipment.DDMAux1HighWarning Raised on class: equipment.AbstractDDM	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: aux1HighWarning	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 21-75 DDMAux1LowAlarm

Alarm	Attributes	Applicable major release
Name: DDMAux1LowAlarm (493) Type: thresholdAlarm Package: equipment.DDMAux1LowAlarm Raised on class: equipment.AbstractDDM	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: aux1LowAlarm	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP reaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 21-76 DDMAux1LowWarning

Alarm	Attributes	Applicable major release
Name: DDMAux1LowWarning (492) Type: thresholdAlarm Package: equipment.DDMAux1LowWarning Raised on class: equipment.AbstractDDM	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: aux1LowWarning	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP approaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 21-77 DDMAux2HighAlarm

Alarm	Attributes	Applicable major release
Name: DDMAux2HighAlarm (499) Type: thresholdAlarm Package: equipment.DDMAux2HighAlarm Raised on class: equipment.AbstractDDM	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: aux2HighAlarm	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 21-78 DDMAux2HighWarning

Alarm	Attributes	Applicable major release
Name: DDMAux2HighWarning (498) Type: thresholdAlarm Package: equipment.DDMAux2HighWarning Raised on class: equipment.AbstractDDM	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: aux2HighWarning	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 21-79 DDMAux2LowAlarm

Alarm	Attributes	Applicable major release
Name: DDMAux2LowAlarm (497) Type: thresholdAlarm Package: equipment.DDMAux2LowAlarm Raised on class: equipment.AbstractDDM	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: aux2LowAlarm	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP reaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 21-80 DDMAux2LowWarning

Alarm	Attributes	Applicable major release
Name: DDMAux2LowWarning (496) Type: communicatiothresholdAlarmnsAlarm Package: equipment.DDMAux2LowWarning Raised on class: equipment.AbstractDDM	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: aux2LowWarning	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP approaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 21-81 DDMRxOpticalPowerHighAlarm

Alarm	Attributes	Applicable major release
Name: DDMRxOpticalPowerHighAlarm (491) Type: thresholdAlarm Package: equipment.DDMRxOpticalPowerHighAlarm Raised on class: equipment.AbstractDDM	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: rxOpticalPowerHighAlarm	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the received optical power of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Rx Optical Power High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Rx Optical Power High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 21-82 DDMRxOpticalPowerHighWarning

Alarm	Attributes	Applicable major release
Name: DDMRxOpticalPowerHighWarning (490) Type: thresholdAlarm Package: equipment. DDMRxOpticalPowerHighWarning Raised on class: equipment.AbstractDDM	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: rxOpticalPowerHighWarning	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the received optical power of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Rx Optical Power High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Rx Optical Power High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 21-83 DDMRxOpticalPowerLowAlarm

Alarm	Attributes	Applicable major release
Name: DDMRxOpticalPowerLowAlarm (489) Type: thresholdAlarm Package: equipment.DDMRxOpticalPowerLowAlarm Raised on class: equipment.AbstractDDM	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: rxOpticalPowerLowAlarm	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the received optical power of an SFP or XFP reaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Rx Optical Power Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Rx Optical Power Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 21-84 DDMRxOpticalPowerLowWarning

Alarm	Attributes	Applicable major release
Name: DDMRxOpticalPowerLowWarning (488) Type: thresholdAlarm Package: equipment.DDMRxOpticalPowerLowWarning Raised on class: equipment.AbstractDDM	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: rxOpticalPowerLowWarning	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the received optical power of an SFP or XFP approaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Rx Optical Power Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Rx Optical Power Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 21-85 DDMSupplyVoltageHighAlarm

Alarm	Attributes	Applicable major release
Name: DDMSupplyVoltageHighAlarm (479) Type: thresholdAlarm Package: equipment.DDMSupplyVoltageHighAlarm Raised on class: equipment.AbstractDDM	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: supplyVoltageHighAlarm	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the supply voltage of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Supply Voltage High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Supply Voltage High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 21-86 DDMSupplyVoltageHighWarning

Alarm	Attributes	Applicable major release
Name: DDMSupplyVoltageHighWarning (478) Type: thresholdAlarm Package: equipment.DDMSupplyVoltageHighWarning Raised on class: equipment.AbstractDDM	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: supplyVoltageHighWarning	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the supply voltage of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Supply Voltage High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Supply Voltage High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 21-87 DDMSupplyVoltageLowAlarm

Alarm	Attributes	Applicable major release
Name: DDMSupplyVoltageLowAlarm (477) Type: thresholdAlarm Package: equipment.DDMSupplyVoltageLowAlarm Raised on class: equipment.AbstractDDM	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: supplyVoltageLowAlarm	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the supply voltage of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Supply Voltage Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Supply Voltage Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 21-88 DDMSupplyVoltageLowWarning

Alarm	Attributes	Applicable major release
Name: DDMSupplyVoltageLowWarning (476) Type: thresholdAlarm Package: equipment.DDMSupplyVoltageLowWarning Raised on class: equipment.AbstractDDM	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: supplyVoltageLowWarning	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the supply voltage of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Supply Voltage Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Supply Voltage Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 21-89 DDMTemperatureHighAlarm

Alarm	Attributes	Applicable major release
Name: DDMTemperatureHighAlarm (475) Type: thresholdAlarm Package: equipment.DDMTemperatureHighAlarm Raised on class: equipment.AbstractDDM	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: temperatureHighAlarm	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the temperature of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 21-90 DDMTemperatureHighWarning

Alarm	Attributes	Applicable major release
Name: DDMTemperatureHighWarning (474) Type: thresholdAlarm Package: equipment.DDMTemperatureHighWarning Raised on class: equipment.AbstractDDM	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: temperatureHighWarning	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the temperature of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 21-91 DDMTemperatureLowAlarm

Alarm	Attributes	Applicable major release
Name: DDMTemperatureLowAlarm (473) Type: thresholdAlarm Package: equipment.DDMTemperatureLowAlarm Raised on class: equipment.AbstractDDM	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: temperatureLowAlarm	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the temperature of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 21-92 DDMTemperatureLowWarning

Alarm	Attributes	Applicable major release
Name: DDMTemperatureLowWarning (472) Type: thresholdAlarm Package: equipment.DDMTemperatureLowWarning Raised on class: equipment.AbstractDDM	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: temperatureLowWarning	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the temperature of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 21-93 DDMTxBiasCurrentHighAlarm

Alarm	Attributes	Applicable major release
Name: DDMTxBiasCurrentHighAlarm (483) Type: thresholdAlarm Package: equipment.DDMTxBiasCurrentHighAlarm Raised on class: equipment.AbstractDDM	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: txBiasCurrentHighAlarm	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the transmit bias current of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 21-94 DDMTxBiasCurrentHighWarning

Alarm	Attributes	Applicable major release
Name: DDMTxBiasCurrentHighWarning (482) Type: thresholdAlarm Package: equipment.DDMTxBiasCurrentHighWarning Raised on class: equipment.AbstractDDM	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: txBiasCurrentHighWarning	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the transmit bias current of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 21-95 DDMTxBiasCurrentLowAlarm

Alarm	Attributes	Applicable major release
Name: DDMTxBiasCurrentLowAlarm (481) Type: thresholdAlarm Package: equipment.DDMTxBiasCurrentLowAlarm Raised on class: equipment.AbstractDDM	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: txBiasCurrentLowAlarm	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the transmit bias current of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 21-96 DDMTxBiasCurrentLowWarning

Alarm	Attributes	Applicable major release
Name: DDMTxBiasCurrentLowWarning (480) Type: thresholdAlarm Package: equipment.DDMTxBiasCurrentLowWarning Raised on class: equipment.AbstractDDM	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: txBiasCurrentLowWarning	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the transmit bias current of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 21-97 DDMTxOutputPowerHighAlarm

Alarm	Attributes	Applicable major release
Name: DDMTxOutputPowerHighAlarm (487) Type: thresholdAlarm Package: equipment.DDMTxOutputPowerHighAlarm Raised on class: equipment.AbstractDDM	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: txOutputPowerHighAlarm	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the output power of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 21-98 DDMTxOutputPowerHighWarning

Alarm	Attributes	Applicable major release
Name: DDMTxOutputPowerHighWarning (486) Type: thresholdAlarm Package: equipment.DDMTxOutputPowerHighWarning Raised on class: equipment.AbstractDDM	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: txOutputPowerHighWarning	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the output power of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 21-99 DDMTxOutputPowerLowAlarm

Alarm	Attributes	Applicable major release
Name: DDMTxOutputPowerLowAlarm (485) Type: thresholdAlarm Package: equipment.DDMTxOutputPowerLowAlarm Raised on class: equipment.AbstractDDM	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: txOutputPowerLowAlarm	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the output power of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 21-100 DDMTxOutputPowerLowWarning

Alarm	Attributes	Applicable major release
Name: DDMTxOutputPowerLowWarning (484) Type: thresholdAlarm Package: equipment.DDMTxOutputPowerLowWarning Raised on class: equipment.AbstractDDM	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: txOutputPowerLowWarning	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the output power of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 21-101 DiscoveredPhysicalLinkMismatch

Alarm	Attributes	Applicable major release
Name: DiscoveredPhysicalLinkMismatch (657) Type: configurationAlarm Package: netw.DiscoveredPhysicalLinkMismatch Raised on class: netw.AbstractPhysicalLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: endPointUsedByNumerou-sLinks	Release: • 14.0

Table 21-101 DiscoveredPhysicalLinkMismatch (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when one endpoint of a physical link is used as an endpoint in another physical link.		
Raising condition: ('physicalLinkMismatchConfigured' EQUAL 'true')		
Clearing condition: ('physicalLinkMismatchConfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. Physical link endpoint (i.e. ports) can only be configured in one link.		

Table 21-102 downgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: downgradedCardAlarm (256) Type: softwareAlarm Package: equipment.downgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: downgradedCard	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 21-103 DuplicatePhysicalLinks

Alarm	Attributes	Applicable major release
Name: DuplicatePhysicalLinks (658) Type: configurationAlarm Package: netw.DuplicatePhysicalLinks Raised on class: netw.AbstractPhysicalLink	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: duplicatePhysicalLinkConfig-ured	Release: • 14.0
Description: The alarm is raised when there is more then one physical link configured between two endpoints.		
Raising condition: ('duplicateLinkConfigured' EQUAL 'true')		
Clearing condition: ('duplicateLinkConfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The duplicated link must be deleted.		

Table 21-104 EfmOamAlarm

Alarm	Attributes	Applicable major release
Name: EfmOamAlarm (4617) Type: equipmentAlarm Package: ethernetequipment.EfmOamAlarm Raised on class: ethernetequipment.Dot3Oam	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EFMOAMOperationalstate-OutofService	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when EFM Ignore status is Enabled and EFM Operation Status has a fault that is not propagated to the Physical Port Operational State.		
Raising condition: ((('Operational Status' EQUAL 'Link Fault') OR ('Operational Status' EQUAL 'Active Send Local')) AND ('Ignore EFM State' EQUAL 'true'))		
Clearing condition: ((('Operational Status' NOT EQUAL 'Link Fault') AND ('Operational Status' NOT EQUAL 'Active Send Local')) OR ('Ignore EFM State' EQUAL 'false'))		
Remedial action: Informational - The alarm indicates that EFM has detected an error condition but has not affected the operation state of the port.		

Table 21-105 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm Package: equipment.EquipmentAdministrativelyDown Raised on class: equipment.Equipment	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentAdministratively-Down	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 21-106 EquipmentDegraded

Alarm	Attributes	Applicable major release
Name: EquipmentDegraded (604) Type: equipmentAlarm Package: equipment.EquipmentDegraded Raised on class: equipment.FanTray	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: singleFanFailure	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a single fan fails. The chassis attempts to continue operating within the normal temperature range using only the remaining fans.		
Raising condition: ('Device State' EQUAL 'MinorFailure')		
Clearing condition: ('Device State' NOT EQUAL 'MinorFailure')		
Remedial action: The failed fan unit should be replaced.		

Table 21-107 EquipmentDown

Alarm	Attributes	Applicable major release
Name: EquipmentDown (10) Type: equipmentAlarm Package: equipment.EquipmentDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: inoperableEquipment	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 21-108 EquipmentFailure

Alarm	Attributes	Applicable major release
Name: EquipmentFailure (145) Type: equipmentAlarm Package: equipment.EquipmentFailure Raised on class: equipment.ReplaceableUnit	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cardFailure	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a I/O card or control processor or power-supply tray reports a failure. When the object type is ControlProcessor, a CPM may be unable to boot. When the object type is Power Supply Tray and the alarm is raised during device discovery, a power-supply tray may be out of service. When the object type is a Power Supply Tray and the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: ('operationalState' EQUAL 'Failed')		
Clearing condition: ('operationalState' NOT EQUAL 'Failed')		
Remedial action: If the alarm indicates that the CPM card or I/O card has a fault, remove the card and reset it. If this does not clear the alarm then please contact your Nokia support representative for assistance. If the alarm indicates that the Power Supply tray is out of service ensure that the NE is properly connected to power. If the problem persists please contact your Nokia support representative for assistance.		

Table 21-109 EquipmentInTest

Alarm	Attributes	Applicable major release
Name: EquipmentInTest (11) Type: equipmentAlarm Package: equipment.EquipmentInTest Raised on class: equipment.Equipment	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentInTest	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 21-110 EquipmentMismatch

Alarm	Attributes	Applicable major release
Name: EquipmentMismatch (9) Type: equipmentAlarm Package: equipment.EquipmentMismatch Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentTypeMismatch	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 21-111 EquipmentRemoved

Alarm	Attributes	Applicable major release
Name: EquipmentRemoved (8) Type: equipmentAlarm Package: equipment.EquipmentRemoved Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: ((('isEquipped' EQUAL 'false') OR ('compositeEquipmentState' EQUAL 'Removed')) AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Removed') AND ('isEquipped' EQUAL 'true'))		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 21-112 EthCSF

Alarm	Attributes	Applicable major release
Name: EthCSF (3721) Type: oamAlarm Package: ethernetoam.EthCSF Raised on class: ethernetoam.Mep	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EthCSF	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a MEP receives a CCM frame with an interface status TLV of 'Down'.		
Remedial action: This alarm is raised when a MEP receives a CCM frame with an interface status TLV of Down.		

Table 21-113 EthernetPortConfiguredLoopback

Alarm	Attributes	Applicable major release
Name: EthernetPortConfiguredLoopback (801) Type: configurationAlarm Package: ethernetequipment. EthernetPortConfiguredLoopback Raised on class: ethernetequipment. EthernetPortSpecifics	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ethernetPortConfiguredLoop-back	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a timed loopback is in effect for an Ethernet port.		
Raising condition: (('Type' NOT EQUAL 'None'))		
Clearing condition: (('Type' EQUAL 'None'))		
Remedial action: This alarm has been raised bye the node because "Timed Loopback" option of the specific port's Ethernet property has been enabled. To resolve this problem from "Ethernet" tab of "Physical Port" properties form configure "Timed Loopback" Type property as "None".		

Table 21-114 EthernetPortDuplicateLane

Alarm	Attributes	Applicable major release
Name: EthernetPortDuplicateLane (3557) Type: communicationsAlarm Package: ethernetequipment.EthernetPortDuplicateLane Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: DuplicateLane	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a device reports a Duplicate Lane on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane')))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 21-115 EthernetPortHighBer

Alarm	Attributes	Applicable major release
Name: EthernetPortHighBer (307) Type: communicationsAlarm Package: ethernetequipment.EthernetPortHighBer Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: HighBer	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a device reports a high bit-error rate on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate')))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 21-116 EthernetPortLocalFault

Alarm	Attributes	Applicable major release
Name: EthernetPortLocalFault (305) Type: communicationsAlarm Package: ethernetequipment.EthernetPortLocalFault Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LocalFault	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a device reports a local fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault')))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 21-117 EthernetPortNoAmLock

Alarm	Attributes	Applicable major release
Name: EthernetPortNoAmLock (3558) Type: communicationsAlarm Package: ethernetequipment.EthernetPortNoAmLock Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NoAmLock	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a device reports a No Am Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock')))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 21-118 EthernetPortNoBlockLock

Alarm	Attributes	Applicable major release
Name: EthernetPortNoBlockLock (3559) Type: communicationsAlarm Package: ethernetequipment. EthernetPortNoBlockLock Raised on class: ethernetequipment. EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NoBlockLock	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a device reports a No Block Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock')))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 21-119 EthernetPortNoFrameLock

Alarm	Attributes	Applicable major release
Name: EthernetPortNoFrameLock (306) Type: communicationsAlarm Package: ethernetequipment. EthernetPortNoFrameLock Raised on class: ethernetequipment. EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NoFrameLock	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a device reports No Frame Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock')))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 21-120 EthernetPortRemoteFault

Alarm	Attributes	Applicable major release
Name: EthernetPortRemoteFault (304) Type: communicationsAlarm Package: ethernetequipment.EthernetPortRemoteFault Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: RemoteFault	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a device reports a remote fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault')))		
Remedial action: One of the following conditions exists on the remote physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 21-121 EthernetPortSignalFailure

Alarm	Attributes	Applicable major release
Name: EthernetPortSignalFailure (303) Type: communicationsAlarm Package: ethernetequipment.EthernetPortSignalFailure Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SignalFailure	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a device reports a signal failure on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure')))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 21-122 ExternalTimingReferenceNotQualified

Alarm	Attributes	Applicable major release
Name: ExternalTimingReferenceNotQualified (548) Type: communicationsAlarm Package: sonet.ExternalTimingReferenceNotQualified Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: timingReferenceNotQualified	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the External timing reference on an NE is not in the Qualified state.		
Raising condition: (('Qualified For Use' EQUAL 'Not Qualified') AND ('Administrative State' NOT EQUAL 'Down'))		
Clearing condition: (('Qualified For Use' NOT EQUAL 'Not Qualified') OR ('Administrative State' EQUAL 'Down'))		
Remedial action: Informational		

Table 21-123 FanFailure (equipment)

Alarm	Attributes	Applicable major release
Name: FanFailure (624) Type: equipmentAlarm Package: equipment.FanFailure Raised on class: equipment.FanTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fanFailure	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the associated fan is not operationally Up.		
Raising condition: (('Device State' EQUAL 'Failed') OR ('Device State' EQUAL 'Unknown') OR ('Device State' EQUAL 'OutOfservice'))		
Clearing condition: ('Device State' EQUAL 'OK')		
Remedial action: Remove and reset the fan unit. If this does not resolve the problem replace the fan.		

Table 21-124 FanTrayRemoved

Alarm	Attributes	Applicable major release
Name: FanTrayRemoved (569) Type: equipmentAlarm Package: equipment.FanTrayRemoved Raised on class: equipment.FanTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: FanTrayRemoved	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the deviceState attribute has a value of deviceNotEquipped.		
Raising condition: ('Device State' EQUAL 'Not Equipped')		
Clearing condition: ('Device State' NOT EQUAL 'Not Equipped')		
Remedial action: Informational - a fan tray has been removed from the NE.		

Table 21-125 ForwardingTableSizeLimitReached

Alarm	Attributes	Applicable major release
Name: ForwardingTableSizeLimitReached (164) Type: resourceAlarm Package: l2fwd.ForwardingTableSizeLimitReached Raised on class: l2fwd.SiteFib	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceLimitReached	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the number of MAC address entries in the FIB reaches or exceeds the VPLS site high watermark specified by l2fwd.SiteFib.highWatermark. The alarm clears when the number of MAC address entries in the FIB drops below the VPLS site low watermark specified by l2fwd.SiteFib.lowWatermark. The alarm can be raised against a VPLS site, L2 access interface, or spoke SDP binding.		
Raising condition: (('Entries' >=" 'Size') OR ('Entries' >= (('High Watermark' * 'Size') / 100.0)))"		
Clearing condition: (('Entries' < 'Size') AND (('High Watermark' EQUAL '0L') OR ('Entries' < (('Low Watermark' * 'Size') / 100.0))) AND (('Low Watermark' EQUAL '0L') OR ('Entries' < (('Low Watermark' * 'Size') / 100.0))))		
Remedial action: Informational		

Table 21-126 FpgaFail

Alarm	Attributes	Applicable major release
Name: FpgaFail (4485) Type: equipmentAlarm Package: equipment.FpgaFail Raised on class: equipment.CardSlot	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: FPGAFAIL	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when FPGA download failure is detected.		
Remedial action: 1 Perform a warm reset on the card where the FPGAFAIL condition is raised.\nFor CLI config card card type shelf slot reset warm.\nFor WEBUI Select the card, click the Reboot tab, select Warm Reboot >Submit.\n2 Contact your Nokia support representative.		

Table 21-127 FpgaTimeout

Alarm	Attributes	Applicable major release
Name: FpgaTimeout (4487) Type: equipmentAlarm Package: equipment.FpgaTimeout Raised on class: equipment.CardSlot	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: FPGATIMEOUT	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when FPGA timeout is detected.		
Remedial action: 1. Perform a warm reset on the card where the FPGATIMEOUT condition is raised.		

Table 21-128 FrameSizeProblem (svt)

Alarm	Attributes	Applicable major release
Name: FrameSizeProblem (37) Type: configurationAlarm Package: svt.FrameSizeProblem Raised on class: svt.SdpBinding	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: frameSizeProblem	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		

Table 21-128 FrameSizeProblem (svt) (continued)

Alarm	Attributes	Applicable major release
Raising condition: (('Operational State' EQUAL 'MTU Mismatch') OR ('Operational State' EQUAL 'Tunnel MTU Too Small') OR ('State Cause'anyBit'Tunnel MTU Too Small') OR ('State Cause'anyBit'Service MTU Mismatch'))		
Clearing condition: (('Operational State' NOT EQUAL 'MTU Mismatch') AND ('Operational State' NOT EQUAL 'Tunnel MTU Too Small') AND NOT ((('State Cause'anyBit'Tunnel MTU Too Small') OR ('State Cause'anyBit'Service MTU Mismatch'))))		
Remedial action: The MTU value must be changed such that is is less than or equal to the supported MTU size value.		

Table 21-129 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major release
Name: FrameSizeProblem (37) Type: configurationAlarm Package: netw.FrameSizeProblem Raised on class: netw.StatefullConnectableInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: frameSizeProblem	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL '0L'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL '0L'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 21-130 GaPeerDown

Alarm	Attributes	Applicable major release
Name: GaPeerDown (3303) Type: EpcAlarm Package: lteggsn.GaPeerDown Raised on class: lteggsn.GaPeer	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		

Table 21-130 GaPeerDown (continued)

Alarm	Attributes	Applicable major release
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 21-131 GmplsLspDown

Alarm	Attributes	Applicable major release
Name: GmplsLspDown (8383) Type: pathAlarm Package: gmplsuni.GmplsLspDown Raised on class: gmplsuni.GmplsLsp	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: GmplsLspDown	Release: • 13.0 • 14.0
Description: The alarm is raised when the GMPLS LSP's Administrative State is Up and the Operational State is Down. The alarm clears when the GMPLS LSP's Operational State changes to Up or the Administrative State changes to Down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The Operational state of the GMPLS LSP is down, despite the Administrative state being up. Check if the GMPLS path, or the LSP-path binding is down.		

Table 21-132 GmplsLspPathBindingDown

Alarm	Attributes	Applicable major release
Name: GmplsLspPathBindingDown (8384) Type: pathAlarm Package: gmplsuni.GmplsLspPathBindingDown Raised on class: gmplsuni.LspPathBinding	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: GmplsLspPathBindingDown	Release: • 13.0 • 14.0
Description: The alarm is raised when the GMPLS LSP-path binding's Administrative State is Up and the Operational State is Down. The alarm clears when the GMPLS LSP-path binding's Operational State changes to Up or the Administrative State changes to Down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The Operational state of the GMPLS LSP-path binding is down, despite the Administrative state being up. Check the failure code and fix accordingly.		

Table 21-133 GRETunnelDown

Alarm	Attributes	Applicable major release
Name: GRETunnelDown (3326) Type: serviceAlarm Package: svt.GRETunnelDown Raised on class: svt.GRETunnel	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tunnelDown	Release: • 14.0
Description: The alarm is raised when the IP/GRE tunnel Operational State changes to Down and the Administrative State is Up.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('Administrative State' EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The situation may occur if the underlying physical port is down either because of administrative disabling or a fault on the port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable.		

Table 21-134 GroupDown

Alarm	Attributes	Applicable major release
Name: GroupDown (69) Type: ProtocolAlarm Package: rip.GroupDown Raised on class: rip.Group	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a RIP group has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('administrativeState' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('administrativeState' NOT EQUAL 'Up'))		
Remedial action: The RIP Group is down while it is administratively up. Please check RIP related configuration e.g., the RIP is not shutdown.		

Table 21-135 IgmpDown

Alarm	Attributes	Applicable major release
Name: IgmpDown (158) Type: ProtocolAlarm Package: igmp.IgmpDown Raised on class: igmp.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0

Table 21-135 IgmpDown (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when an IGMP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: While configured under VPRN, check if VPRN site is admin down, or if route distinguisher is not configured.		

Table 21-136 IgmpMaxGrpSrcsLimitExceeded

Alarm	Attributes	Applicable major release
Name: IgmpMaxGrpSrcsLimitExceeded (4624) Type: configurationAlarm Package: igmp.IgmpMaxGrpSrcsLimitExceeded Raised on class: igmp.Interface	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: IgmpMaxGrpSrcsLimitExceeded	Release: • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an attempt is made to configure an IGMP group source for a group when the number of group sources for this group is equal to 'maxGrpSources', the maximum number of group sources per group supported on the interface.		
Remedial action: Needs to increase 'maxGrpSources' value to allow more sources on this interface.		

Table 21-137 IgmpMaxSrcsLimitExceeded

Alarm	Attributes	Applicable major release
Name: IgmpMaxSrcsLimitExceeded (3742) Type: configurationAlarm Package: igmp.IgmpMaxSrcsLimitExceeded Raised on class: igmp.Interface	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: IgmpMaxSrcsLimitExceeded	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an attempt is made to configure an IGMP source for a group when the number of sources for this group is equal to 'maxSources', the maximum number of sources per group supported on the interface.		
Remedial action: Needs to increase 'maxSources' value to allow more sources on this interface.		

Table 21-138 IncompleteConfig (multichassis)

Alarm	Attributes	Applicable major release
Name: IncompleteConfig (294) Type: configurationAlarm Package: multichassis.IncompleteConfig Raised on classes: • multichassis.MultiChassisLagMember • multichassis.MultiChassisSync	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompleteConfig	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a peer configuration cannot be found on the peer NE.		
Raising condition: ('mcLagPointer' EQUAL '\"\"')		
Clearing condition: ('mcLagPointer' NOT EQUAL '\"\"')		
Remedial action: Configure the missing peered object.		

Table 21-139 IncompleteConfiguration

Alarm	Attributes	Applicable major release
Name: IncompleteConfiguration (1942) Type: operationalViolation Package: netw.IncompleteConfiguration Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompleteConfig	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a pre-provisioned NE has no objects configured beneath it.		
Raising condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' EQUAL '\"\"'))		
Clearing condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' NOT EQUAL '\"\"'))		
Remedial action: A configuration error has been made which must be corrected. The configuration of the pre-provisioned NE is incomplete. A work order was not associated with the pre-provisioned NE and as a consequence the attempt to auto-configure the NE failed.		

Table 21-140 IncorrectEndPointPeerConfig

Alarm	Attributes	Applicable major release
Name: IncorrectEndPointPeerConfig (1068) Type: configurationAlarm Package: multichassis.IncorrectEndPointPeerConfig Raised on class: multichassis.MultiChassisEndpoint	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompleteEPPeerConfig	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a peer configuration cannot be found on the peer NE.		
Raising condition: ('MC EndPoint Group Pointer' EQUAL '\"\"')		
Clearing condition: ('MC EndPoint Group Pointer' NOT EQUAL '\"\"')		
Remedial action: The peered object cannot be found on the peer NE. Either delete this one, or create the missing peer object.		

Table 21-141 IncorrectPeerConfig

Alarm	Attributes	Applicable major release
Name: IncorrectPeerConfig (779) Type: configurationAlarm Package: multichassis.IncorrectPeerConfig Raised on class: multichassis.AbstractPeer	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IncorrectPeerConfig	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an MC peer does not exist, or when an MC peer exists but the peer address is not the address of a network interface on the peer.		
Raising condition: ('peerMatchFound' EQUAL 'false')		
Clearing condition: ('peerMatchFound' EQUAL 'true')		
Remedial action: The peer configuration cannot be found on the peer NE. Either delete this one, or create the missing peer object.		

Table 21-142 IncorrectPeerSynchronizationPortConfig

Alarm	Attributes	Applicable major release
Name: IncorrectPeerSynchronizationPortConfig (780) Type: configurationAlarm Package: multichassis. IncorrectPeerSynchronizationPortConfig Raised on class: multichassis. PeerSynchronizationPort	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IncorrectPeerSynchronization-PortConfig	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the peer port does not exist, or when the peer port exists but the synchronization tags of the peers do not match.		
Raising condition: ('peerMatchFound' EQUAL 'false')		
Clearing condition: ('peerMatchFound' EQUAL 'true')		
Remedial action: Check if the peer port does not exist, or the peer port exists but the synchronization tags do not match.		

Table 21-143 IncorrectPeerSynchronizationPortEncapRangeConfig

Alarm	Attributes	Applicable major release
Name: IncorrectPeerSynchronization-PortEncapRangeConfig (781) Type: configurationAlarm Package: multichassis. IncorrectPeerSynchronizationPortEncapRangeConfig Raised on class: multichassis. PeerSynchronizationPortEncapRange	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IncorrectPeerSynchronization-PortEncapRangeConfig	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the VLAN ranges on the Multi-Chassis synchronization peers do not match.		
Raising condition: ('Neighbor Match' EQUAL 'false')		
Clearing condition: ('Neighbor Match' EQUAL 'true')		
Remedial action: Update the VLAN ranges on the Multi-Chassis synchronization peers to make them matching.		

Table 21-144 InstanceDown (srrp)

Alarm	Attributes	Applicable major release
Name: InstanceDown (284) Type: configurationAlarm Package: srrp.InstanceDown Raised on class: srrp.Instance	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: instanceDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 5620 SAM detects that an SRRP instance is operationally down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' EQUAL 'Initialize'))		
Clearing condition: (('Operational State' NOT EQUAL 'Initialize') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: Check the configuration of the instance		

Table 21-145 InstanceDown (vrrp)

Alarm	Attributes	Applicable major release
Name: InstanceDown (284) Type: configurationAlarm Package: vrrp.InstanceDown Raised on class: vrrp.AbstractInstance	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: instanceDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 5620 SAM detects that a VRRP instance is operationally down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: Check the instance configuration		

Table 21-146 inSufficientBandwidth

Alarm	Attributes	Applicable major release
Name: inSufficientBandwidth (11464) Type: serviceAlarm Package: mpr.inSufficientBandwidth Raised on class: mpr.BackhaulAdjacency	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: inSufficientBandwidth	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a deployed adjacency doesnt have sufficent bandwidth.		
Raising condition: (('Deployed to Site' EQUAL 'false') AND ('isBandwidthExceeded' EQUAL 'true'))		
Clearing condition: (('Deployed to Site' EQUAL 'true') OR ('isBandwidthExceeded' EQUAL 'false'))		
Remedial action: Increase the bandwidth.		

Table 21-147 InterChassisCommunicationDown

Alarm	Attributes	Applicable major release
Name: InterChassisCommunicationDown (8067) Type: communicationsAlarm Package: netw.InterChassisCommunicationDown Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: InterChassisCommunication-Down	Release: • 12.0 • 13.0 • 14.0
Description: The InterChassisCommunicationDown alarm is generated by 7950 XRS-40 when the active CPM of Master chassis cannot reach the Extended (far-end) chassis. The resources on the far-end chassis are not available, this event indicates that the CPM, SFM and XCM cards in the far-end chassis will reboot and remain operationally down Until communications are re-established.		
Remedial action: Ensure that all the CPM (A & B) interconnect ports of Master and Extended chassis in the system are properly cabled together with working cables.		

Table 21-148 InterConnectPortDDMFailure

Alarm	Attributes	Applicable major release
Name: InterConnectPortDDMFailure (5621) Type: communicationsAlarm Package: equipment.InterConnectPortDDMFailure Raised on class: equipment.InterConnectPort	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: InterConnectPortDDMFailure	Release: • 12.0 • 13.0 • 14.0
Description: The InterConnectPortDDMFailure alarm is generated by 7950 XRS-40 when a small form factor (SFF) connector in a inter connect port that supports Digital Diagnostic Monitoring (DDM) enters failed state.		

Table 21-148 InterConnectPortDDMFailure (continued)

Alarm	Attributes	Applicable major release
Remedial action: The InterConnectPortDDMFailure alarm is generated when a small form factor (SFF) connector in a inter connect port that supports Digital Diagnostic Monitoring (DDM) enters failed state, please check whether the SFF is connected properly and it functions properly, rectify any issues it may have.		

Table 21-149 InterConnectPortLinkDown

Alarm	Attributes	Applicable major release
Name: InterConnectPortLinkDown (5622) Type: communicationsAlarm Package: equipment.InterConnectPortLinkDown Raised on class: equipment.InterConnectPort	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: InterConnectPortLinkDown	Release: • 12.0 • 13.0 • 14.0
Description: The InterConnectPortLinkDown alarm is generated by 7950 XRS-40 when the interconnect port is not operational. The reason may be a cable connected incorrectly, a disconnected cable, a faulty cable, or a misbehaving interconnect port.		
Raising condition: (('Operational State' EQUAL 'No Link') AND ('SFF Status' EQUAL 'Operational'))		
Clearing condition: ('Operational State' EQUAL 'Up')		
Remedial action: Ensure that all the interconnect ports of Master and Extended chassis in the system are properly cabled together with working cables also manual verification, testing of each interconnect port and a replacement of cabling may be required for fully functional operation.		

Table 21-150 InterConnectPortMisconnected

Alarm	Attributes	Applicable major release
Name: InterConnectPortMisconnected (5623) Type: communicationsAlarm Package: equipment.InterConnectPortMisconnected Raised on class: equipment.InterConnectPort	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: InterConnectPortMiscon-nected	Release: • 12.0 • 13.0 • 14.0
Description: The InterConnectPortMisconnected alarm is generated by 7950 XRS-40 when interconnect ports are misconnected, master chassis interconnect ports should always be connected to appropriate extended chassis interconnect port, there is a misconnection hence this alarm has been raised.		
Raising condition: ('Operational State' EQUAL 'Invalid Connection')		
Clearing condition: ('Operational State' EQUAL 'Up')		
Remedial action: Inter connect ports connections are invalid, source and target ports are misconnected, please connect appropriate source and target ports. Please refer the nodal documentation to know details about which ports in master and extended chassis should be to be connected.		

Table 21-151 InterConnectPortSFFFailure

Alarm	Attributes	Applicable major release
Name: InterConnectPortSFFFailure (5624) Type: equipmentAlarm Package: equipment.InterConnectPortSFFFailure Raised on class: equipment.InterConnectPort	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: InterConnectPortSFFFailure	Release: • 12.0 • 13.0 • 14.0
Description: The SFFFailure alarm is generated by 7950 XRS-40 when SFF of the interconnect port has failed, this is has been indicated by the field SFFStatus having value read-error.		
Raising condition: (('SFF Status' NOT EQUAL 'Not Equipped') AND ('SFF Status' NOT EQUAL 'Operational') AND ('SFF Status' NOT EQUAL 'SFP Unsupported'))		
Clearing condition: (('SFF Status' EQUAL 'Not Equipped') OR ('SFF Status' EQUAL 'Operational'))		
Remedial action: The Small Form Factor (SFF) used in interconnect port has failed, please use the appropriate SFF which Nokia has recommended, if the SFF is correct please remove and re-insert the SFF device. If the problem persists then replace the SFF device.		

Table 21-152 InterfaceDown (netw)

Alarm	Attributes	Applicable major release
Name: InterfaceDown (36) Type: InterfaceAlarm Package: netw.InterfaceDown Raised on class: netw.StatefullConnectableInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an interface or underlying resource fails, as indicated by an interface compositeState attribute value of failed or underlyingResourceFailed.		
Raising condition: (('compositeState' EQUAL 'Inoperable') OR ('compositeState' EQUAL 'Underlying Resource Inoperable'))		
Clearing condition: (('compositeState' NOT EQUAL 'Inoperable') AND ('compositeState' NOT EQUAL 'Underlying Resource Inoperable'))		
Remedial action: A physical port (physical interface, LAG, channel) associated with the network interface in not operational. Ensure that the interface is cabled and there are no configuration errors (i.e. MTU size set incorrectly etc) on the interface.		

Table 21-153 InterfaceDown (vpls)

Alarm	Attributes	Applicable major release
Name: InterfaceDown (36) Type: configurationAlarm Package: vpls.InterfaceDown Raised on class: vpls.L2ManagementInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an L2 management interface has an Operational State of Down, and the associated VPLS site has an Administrative State of Up.		
Raising condition: (('administrativeState' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('administrativeState' NOT EQUAL 'Up'))		
Remedial action: The condition exists because the physical interface is down either because it is administratively disabled, faulty or a cabling fault has occurred. Ensure that the interface is administratively up. Check for a poor cable connection to the port or for a faulty cable/fiber. If neither appears to be the problem run diagnostics on the port to determine if it is faulty.		

Table 21-154 InterfaceDown (vprn)

Alarm	Attributes	Applicable major release
Name: InterfaceDown (36) Type: configurationAlarm Package: vprn.InterfaceDown Raised on class: vprn.IPMirrorInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 5620 SAM detects that an interface is operationally down.		
Raising condition: (('administrativeState' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('administrativeState' NOT EQUAL 'Up'))		
Remedial action: A physical port (physical interface, LAG, channel) associated with the network interface in not operational. Ensure that the interface is cabled and there are no configuration errors (i.e. MTU size set incorrectly etc) on the interface.		

Table 21-155 InterfaceNeighborDown

Alarm	Attributes	Applicable major release
Name: InterfaceNeighborDown (661) Type: NeighborDown Package: ospf.InterfaceNeighborDown Raised on class: ospf.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NeighborDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an interface neighbor is operationally down.		
Raising condition: (('Neighbor Count' EQUAL '0L') AND ('interfaceClass' NOT EQUAL 'System') AND ('Passive' NOT EQUAL 'true'))		
Clearing condition: (('Neighbor Count' NOT EQUAL '0L') OR ('Passive' EQUAL 'true'))		
Remedial action: This alarm is raised when the OSPF interface neighbor is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 21-156 IntTempLow

Alarm	Attributes	Applicable major release
Name: IntTempLow (3361) Type: equipmentAlarm Package: equipment.IntTempLow Raised on class: equipment.CardSlot	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IntTempLow	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when Card under temperature is detected.		
Remedial action: Ensure that no environmental issues are present where the network element resides.Resolve any existing issues.Verify if other cards in the shelf report temperatures near their lower limit (within 10ï¿½ C).Replace the alarmed card.		

Table 21-157 IOMEventOverflow

Alarm	Attributes	Applicable major release
Name: IOMEventOverflow (5617) Type: equipmentAlarm Package: equipment.IOMEventOverflow Raised on class: equipment.BaseCard	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IOMEventOverflow	Release: • 12.0 • 13.0 • 14.0

Table 21-157 IOMEventOverflow (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is generated when tmnxIomResStateClr, tmnxIomResExhausted and tmnxIomResHighLimitReached occur more than 200 times because of resource usage fluctuation. The IOM raises the final trap to indicate overflow and stops logging traps.		
Remedial action: Informational - The alarm will be cleared when the CPM polls the IOM for traps and the overflow is cleared by logging an overflow-clear on a particular card.		

Table 21-158 IOMResUtilizationLimit

Alarm	Attributes	Applicable major release
Name: IOMResUtilizationLimit (5618) Type: equipmentAlarm Package: equipment.IOMResUtilizationLimit Raised on class: equipment.BaseCard	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IOMResHighLimitReached Applicable probable causes: • IOMResHighLimitReached • IOMResExhausted	Release: • 12.0 • 13.0 • 14.0
Description: The alarm is generated when the type of resources on IOM as specified by tmnxIomResourceType has reached the value of tmnxIomResourceLimitPct.		
Remedial action: Informational - The alarm will be cleared when the type of resources on IOM as specified by tmnxIomResourceType has dropped back down below the value of tmnxIomResourceLimitPct.		

Table 21-159 IsisAdjacencyDown

Alarm	Attributes	Applicable major release
Name: IsisAdjacencyDown (153) Type: adjacencyAlarm Package: isis.IsisAdjacencyDown Raised on class: isis.Interface	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IsisInterfaceDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an IS-IS interface has no adjacencies, for example, because the IS-IS protocol on the remote site is down.		
Raising condition: (('Adjacency Count' EQUAL '0L') AND ('interfaceClass' NOT EQUAL 'System') AND ('Passive' NOT EQUAL 'True'))		
Clearing condition: (('Adjacency Count' > '0L') OR ('Passive' EQUAL 'True'))		
Remedial action: Check remote site to see if corresponding IS-IS interface is configured and admin up.		

Table 21-160 IsisDown

Alarm	Attributes	Applicable major release
Name: IsisDown (19) Type: ProtocolAlarm Package: isis.IsisDown Raised on class: isis.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an IS-IS site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The protocol is not working anymore, could be a problem with IP addresses, resources on the device, ...		

Table 21-161 IsisInterfaceDown

Alarm	Attributes	Applicable major release
Name: IsisInterfaceDown (301) Type: ProtocolAlarm Package: isis.IsisInterfaceDown Raised on class: isis.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an IS-IS interface has an Operational State other than Up.		
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' NOT EQUAL 'Down')		
Remedial action: Check if underlying port is down, or associated network interface is down.		

Table 21-162 KeepAliveProblem

Alarm	Attributes	Applicable major release
Name: KeepAliveProblem (100) Type: oamAlarm Package: svt.KeepAliveProblem Raised on class: svt.Tunnel	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: keepAliveFailed	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 5620 SAM detects a keep-alive protocol status of senderIdInvalid or responderIdError.		
Raising condition: (('Keep-Alive State' NOT EQUAL 'Disabled') AND ('Keep-Alive State' NOT EQUAL 'Alive') AND ('Keep-Alive State' NOT EQUAL 'Unknown'))		
Clearing condition: (('Keep-Alive State' EQUAL 'Disabled') OR ('Keep-Alive State' EQUAL 'Alive') OR ('Keep-Alive State' EQUAL 'Unknown'))		
Remedial action: Check the configuration of this tunnel and underlying physical transport.		

Table 21-163 LabelProblem

Alarm	Attributes	Applicable major release
Name: LabelProblem (98) Type: CircuitAlarm Package: svt.LabelProblem Raised on class: svt.SdpBinding	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: labelProblem	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an ingress or an egress label is missing.		
Raising condition: (('Operational State' EQUAL 'No Egress Label') OR ('Operational State' EQUAL 'No Ingress Label') OR ('Operational State' EQUAL 'No Labels') OR ('State Cause'anyBit'No Egress VC Label') OR ('State Cause'anyBit'No Ingress VC Label') OR ('State Cause'anyBit'Label Manager Has Ran Out Of Labels'))		
Clearing condition: (('Operational State' NOT EQUAL 'No Egress Label') AND ('Operational State' NOT EQUAL 'No Ingress Label') AND ('Operational State' NOT EQUAL 'No Labels') AND NOT ((('State Cause'anyBit'No Egress VC Label') OR ('State Cause'anyBit'No Ingress VC Label') OR ('State Cause'anyBit'Label Manager Has Ran Out Of Labels'))))		
Remedial action: An ingress or egress label is missing for the SDP binding.		

Table 21-164 LagDown

Alarm	Attributes	Applicable major release
Name: LagDown (20) Type: equipmentAlarm Package: lag.LagDown Raised on class: lag.Interface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lagDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when all ports in a LAG are operationally down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This alarm indicates that all physical Ethernet links associated with a LAG are operationally down. The reasons for the links to be down may vary from link to link. The following possible causes of this alarm should be investigated. The physical port (near end or far end may have failed - this can be remedied by replacing the interface card in question. The physical links may have been turned down administratively - re-enable the links. A cable failure or disconnect may have occurred - please ensure that the cables are properly connected to the physical port and and that the cable has not been damaged.		

Table 21-165 LagPortAddFailed

Alarm	Attributes	Applicable major release
Name: LagPortAddFailed (422) Type: equipmentAlarm Package: equipment.LagPortAddFailed Raised on class: equipment.PhysicalPort	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: linkDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the Lag Port Add function Fails.		
Raising condition: (('state' EQUAL 'Link Down') AND ('LAG ID' > '0'))		
Clearing condition: (('state' NOT EQUAL 'Link Down') OR ('LAG ID' EQUAL '0'))		
Remedial action: A configuration error has occurred which must be corrected. The link that was to be added to the LAG group may be of the wrong type (i.e. non ethernet) or the limit of the number of links supported in a LAG may have been reached.		

Table 21-166 LdpDown

Alarm	Attributes	Applicable major release
Name: LdpDown (22) Type: ProtocolAlarm Package: ldp.LdpDown Raised on class: ldp.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an LDP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: Check operational state down reason and update accordingly.		

Table 21-167 LdpSessionNonexistent

Alarm	Attributes	Applicable major release
Name: LdpSessionNonexistent (2954) Type: LdpSessionAlarm Package: ldp.LdpSessionNonexistent Raised on class: ldp.Session	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LdpSessionDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an LDP session is non-existent.		
Raising condition: ('Session State' EQUAL 'Non-existent')		
Clearing condition: ('Session State' EQUAL 'Operational')		
Remedial action: Please check the LDP session path to make sure all associated protocols/interfaces/connections are OK.		

Table 21-168 LdpTargetedPeerDown

Alarm	Attributes	Applicable major release
Name: LdpTargetedPeerDown (23) Type: ProtocolAlarm Package: ldp.LdpTargetedPeerDown Raised on class: ldp.TargetedPeer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an LDP targeted peer is operationally down.		
Raising condition: (('administrativeState' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('administrativeState' NOT EQUAL 'Up'))		
Remedial action: Please check the route to LDP targeted peer to make sure all associated protocols/interfaces/connections are OK.		

Table 21-169 LicensedLimitExceeded

Alarm	Attributes	Applicable major release
Name: LicensedLimitExceeded (127) Type: licensingAlarm Package: security.LicensedLimitExceeded Raised on class: security.SamLicensePoints	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: licensedLimitExceeded	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 21-170 LineAlarmIndicationSignal

Alarm	Attributes	Applicable major release
Name: LineAlarmIndicationSignal (84) Type: communicationsAlarm Package: sonetequipment.LineAlarmIndicationSignal Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lineAlarmIndicationSignal	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a SONET port reports an LAIS error. The alarm corresponds to the lais alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Line Alarm Indication Signal') AND ('Report Alarms'anyBit'Line Alarm Indication Signal'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Line Alarm Indication Signal') AND ('Report Alarms'anyBit'Line Alarm Indication Signal')))		
Remedial action: Informational only.		

Table 21-171 LineErrorCondition

Alarm	Attributes	Applicable major release
Name: LineErrorCondition (94) Type: communicationsAlarm Package: sonetequipment.LineErrorCondition Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lineErrorCondition	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a SONET port reports a line error condition that a remote NE raises because of b1 errors received from the local NE. The alarm corresponds to the lrei alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Line Error Condition') AND ('Report Alarms'anyBit'Line Error Condition'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Line Error Condition') AND ('Report Alarms'anyBit'Line Error Condition')))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 21-172 LineRemoteDefectIndication

Alarm	Attributes	Applicable major release
Name: LineRemoteDefectIndication (85) Type: communicationsAlarm Package: sonetequipment.LineRemoteDefectIndication Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lineRemoteDefectIndication	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a SONET port reports a line remote defect indication error caused by an LOF, LOC, or LOS condition. The alarm corresponds to the lrdi alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Line Remote Defect Indication') AND ('Report Alarms'anyBit'Line Remote Defect Indication'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Line Remote Defect Indication') AND ('Report Alarms'anyBit'Line Remote Defect Indication')))		
Remedial action: Informational only.		

Table 21-173 LinkDown (equipment)

Alarm	Attributes	Applicable major release
Name: LinkDown (12) Type: communicationsAlarm Package: equipment.LinkDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: portLinkProblem	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 21-174 LocalRncvOperDown

Alarm	Attributes	Applicable major release
Name: LocalRncvOperDown (521) Type: redundancyAlarm Package: multichassis.LocalRncvOperDown Raised on class: multichassis.MultiChassisRingNode	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: localRncvDisconnected	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the local RNCV Operational State of a ring node is other than Connected or NotTested, which means that the ring node is not connected to the local MC ring group. The alarm clears when the ring node enters the Connected or NotTested state.		
Raising condition: (('Local Operational State' NOT EQUAL 'Connected') AND ('Local Operational State' NOT EQUAL 'Not Tested'))		
Clearing condition: (('Local Operational State' EQUAL 'Connected') OR ('Local Operational State' EQUAL 'Not Tested'))		
Remedial action: Make sure that ring node is properly connected to MC ring group.		

Table 21-175 LossOfClock (sonetequipment)

Alarm	Attributes	Applicable major release
Name: LossOfClock (83) Type: communicationsAlarm Package: sonetequipment.LossOfClock Raised on class: sonetequipment. SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lossOfClock	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a SONET port reports an LOC condition, which causes the NE to set the port Operational State to Down.		
Raising condition: (('Outstanding Alarms'anyBit'Loss of Clock') AND ('Report Alarms'anyBit'Loss of Clock'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Loss of Clock') AND ('Report Alarms'anyBit'Loss of Clock')))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected.		

Table 21-176 LowTemperatureDetected

Alarm	Attributes	Applicable major release
Name: LowTemperatureDetected (1127) Type: environmentalAlarm Package: equipment.LowTemperatureDetected Raised on class: equipment.Shelf	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentOvercooled	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the chassis temperature falls below the minimum threshold.		
Raising condition: ('Low Temperature State' EQUAL 'Low')		
Clearing condition: ('Low Temperature State' NOT EQUAL 'Low')		
Remedial action: The NE has detected internal temperatures which are abnormally low. This may happen when the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 21-177 LowTemperatureThresholdCrossed

Alarm	Attributes	Applicable major release
Name: LowTemperatureThresholdCrossed (1128) Type: environmentalAlarm Package: equipment. LowTemperatureThresholdCrossed Raised on class: equipment.Environment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentOvercooled	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a low-temperature threshold is crossed.		
Raising condition: ('lowTemperatureThresholdCrossed' EQUAL 'true')		
Clearing condition: ('lowTemperatureThresholdCrossed' EQUAL 'false')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 21-178 LspDown

Alarm	Attributes	Applicable major release
Name: LspDown (25) Type: pathAlarm Package: mpls.LspDown Raised on class: mpls.Lsp	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lspDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the Operational State of an LSP is Down, but the Administrative State is Up.		
Raising condition: (('administrativeState' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('administrativeState' NOT EQUAL 'Up'))		
Remedial action: So many things can cause LSP down, check if source and destination interfaces are down, LSP path is down and the failure code, or MPLS path is down...		

Table 21-179 LspPathBypassTunnelActive

Alarm	Attributes	Applicable major release
Name: LspPathBypassTunnelActive (264) Type: pathAlarm Package: mpls.LspPathBypassTunnelActive Raised on class: mpls.LspPath	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LspPathReroutedToBypass-Tunnel	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an LSP primary path is rerouted to the bypass tunnel. The alarm clears when the primary path returns to the original tunnel and the actual hop returns to the primary path.		
Raising condition: ('Bypass Tunnel Active' EQUAL 'true')		
Clearing condition: ('Bypass Tunnel Active' EQUAL 'false')		
Remedial action: There is a problem with the original path, check what is the problem and fix it if possible.		

Table 21-180 LspPathDown

Alarm	Attributes	Applicable major release
Name: LspPathDown (26) Type: pathAlarm Package: mpls.LspPathDown Raised on class: mpls.LspPath	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lspPathDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an LSP path is operationally down.		
Raising condition: (('Administrative' EQUAL 'Up') AND ('Operational' NOT EQUAL 'Up') AND ('Type' EQUAL 'Standby'))		
Clearing condition: (('Operational' EQUAL 'Up') OR ('Administrative' NOT EQUAL 'Up') OR ('Type' EQUAL 'Secondary'))		
Remedial action: Check the failure code and update accordingly, e.g. whether MPLS/RSVP interfaces, OSPF interfaces are down.		

Table 21-181 LSRPATHDown

Alarm	Attributes	Applicable major release
Name: LSRPATHDown (4898) Type: pathAlarm Package: mplstp.LSRPATHDown Raised on class: mplstp.TPLSRPath	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LSRPATHDown	Release: • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the TP LSR Path Administrative State is Up and the Operational State is Down. The alarm clears when the TP LSR Path Operational State changes to Up or the Administrative State changes to Down.		
Raising condition: (('Administrative' EQUAL 'Up') AND ('Operational' NOT EQUAL 'Up'))		
Clearing condition: (('Operational' EQUAL 'Up') OR ('Administrative' NOT EQUAL 'Up'))		
Remedial action: The Operational state of the TP LSR Path is down, despite the Administrative state being up. Review the configuration and make sure that the Administrative state is up, the forward and reverse labels are set and the Out-Link interface is operationally up.		

Table 21-182 macMoveRateExceeded (service)

Alarm	Attributes	Applicable major release
Name: macMoveRateExceeded (3690) Type: accessInterfaceAlarm Package: service.macMoveRateExceeded Raised on class: service.AccessInterface	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MacMoveRateExceeded	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the SAP exceeds the MAC Move Frequency of the service site.		
Raising condition: ('State Cause'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('State Cause'anyBit'Relearn Limit Exceeded'))		
Remedial action: Informational.		

Table 21-183 macMoveRateExceeded (svt)

Alarm	Attributes	Applicable major release
Name: macMoveRateExceeded (3690) Type: SpokeSdpBindingAlarm Package: svt.macMoveRateExceeded Raised on class: svt.SpokeSdpBinding	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MacMoveRateExceeded	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the SDP exceeds the Service Site's MAC Move Frequency.		
Raising condition: ('operationalFlags'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('operationalFlags'anyBit'Relearn Limit Exceeded'))		
Remedial action: Check Service Site MAC move frequency or underlying physical link to understand issue.		

Table 21-184 macMoveRateExceededNonBlock (svt)

Alarm	Attributes	Applicable major release
Name: macMoveRateExceededNonBlock (4893) Type: SpokeSdpBindingAlarm Package: svt.macMoveRateExceededNonBlock Raised on class: svt.SpokeSdpBinding	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: MacMoveRateExceededNon-Block	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the SDP exceeds the Service Site's MAC Move Frequency even when limitMacMove(sdp-BindTlsLimitMacMove) is set to 'nonBlocking'.		
Remedial action: Informational - User can adjust the value of 'MAC Move Maximum Rate' to reduce the frequency of this alarm.		

Table 21-185 MCLagDown (multichassis)

Alarm	Attributes	Applicable major release
Name: MCLagDown (394) Type: equipmentAlarm Package: multichassis.MCLagDown Raised on class: multichassis.MultiChassisLagPeerSpecifics	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mcLagDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when all ports in an MC LAG are operationally Down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This alarm indicates that all physical Ethernet links associated with a LAG are operationally down. The reasons for the links to be down may vary from link to link. The following possible causes of this alarm should be investigated. The physical port (near end or far end may have failed - this can be remedied by replacing the interface card in question. The physical links may have been turned down administratively - re-enable the links. A cable failure or disconnect may have occurred - please ensure that the cables are properly connected to the physical port and and that the cable has not been damaged.		

Table 21-186 MCLagDown (lag)

Alarm	Attributes	Applicable major release
Name: MCLagDown (394) Type: equipmentAlarm Package: lag.MCLagDown Raised on class: lag.MultiChassisLagSpecifics	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mcLagDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when all ports in an MC LAG are operationally down.		
Raising condition: (('administrativeState' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('administrativeState' NOT EQUAL 'Up'))		
Remedial action: This alarm indicates that all physical Ethernet links associated with a LAG are operationally down. The reasons for the links to be down may vary from link to link. The following possible causes of this alarm should be investigated. The physical port (near end or far end may have failed - this can be remedied by replacing the interface card in question. The physical links may have been turned down administratively - re-enable the links. A cable failure or disconnect may have occurred - please ensure that the cables are properly connected to the physical port and and that the cable has not been damaged.		

Table 21-187 MCPeerEPDown

Alarm	Attributes	Applicable major release
Name: MCPeerEPDown (1069) Type: equipmentAlarm Package: multichassis.MCPeerEPDown Raised on class: multichassis.MultiChassisEndpoint	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MCPeerEPDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an MC endpoint is operationally down.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('Administrative State' EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: Bring up the all End Point Members.		

Table 21-188 MemberDown

Alarm	Attributes	Applicable major release
Name: MemberDown (8385) Type: communicationsAlarm Package: gmplsuni.MemberDown Raised on class: gmplsuni. TunnelGroupEndpointMember	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MemberDown	Release: • 13.0 • 14.0
Description: The alarm is raised when the GMPLS tunnel group endpoint member's Administrative State is Up and the Operational State is Down. The alarm clears when the GMPLS tunnel group endpoint member's Operational State changes to Up or the Administrative State changes to Down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The Operational state of the GMPLS tunnel group endpoint member is down, despite the Administrative state being up. Check with the Reason Down Flags for more details.		

Table 21-189 MepAISReceivedAlarm

Alarm	Attributes	Applicable major release
Name: MepAISReceivedAlarm (2945) Type: oamAlarm Package: ethernetoam.MepAISReceivedAlarm Raised on class: ethernetoam.Mep	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: missingRemoteMep	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a MEP receives AIS test frames from one or more of its sub-layer MEPs.		
Raising condition: (('AIS Received (AisRx)' EQUAL 'true') AND ('Facility VLAN ID' EQUAL '0'))		
Clearing condition: ('AIS Received (AisRx)' EQUAL 'false')		
Remedial action: This alarm indicates that it has received a MEP fault from a sub-layer MEP, user should investigate the fault cause on the sub-layer MEP and resolve this root cause issue.		

Table 21-190 MepFacilityFault (lag)

Alarm	Attributes	Applicable major release
Name: MepFacilityFault (11101) Type: oamAlarm Package: lag.MepFacilityFault Raised on class: lag.Interface	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: MepFacilityFault	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: [CAUSE] The tmnxDot1agCfmMepFcltyFaultRaise notification is generated when the associated facility MEP dot1agCfmMepHighestPrDefect has increased. [EFFECT] This notification can be used to correlate the ETH_CFM dot1agCfmFaultAlarm event and the related IF-MIB::linkDown notification caused by the failure of the facility MEP. [RECOVERY] Follow the recovery for the dot1agCfmFaultAlarm and the related IF-MIB::linkDown caused by the failure of the facility MEP.		
Remedial action: Follow the recovery for the CfmFaultAlarm and the related Interface linkDown caused by the failure of the facility MEP.		

Table 21-191 MepFacilityFault (rtr)

Alarm	Attributes	Applicable major release
Name: MepFacilityFault (11101) Type: oamAlarm Package: rtr.MepFacilityFault Raised on class: rtr.NetworkInterface	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: MepFacilityFault	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: [CAUSE] The tmnxDot1agCfmMepFcltyFaultRaise notification is generated when the associated facility MEP dot1agCfmMepHighestPrDefect has increased. [EFFECT] This notification can be used to correlate the ETH_CFM dot1agCfmFaultAlarm event and the related IF-MIB::linkDown notification caused by the failure of the facility MEP. [RECOVERY] Follow the recovery for the dot1agCfmFaultAlarm and the related IF-MIB::linkDown caused by the failure of the facility MEP.		
Remedial action: Follow the recovery for the CfmFaultAlarm and the related Interface linkDown caused by the failure of the facility MEP.		

Table 21-192 MepFacilityFault (equipment)

Alarm	Attributes	Applicable major release
Name: MepFacilityFault (11101) Type: oamAlarm Package: equipment.MepFacilityFault Raised on class: equipment.PhysicalPort	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: MepFacilityFault	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: [CAUSE] The tmnxDot1agCfmMepFcltyFaultRaise notification is generated when the associated facility MEP dot1agCfmMepHighestPrDefect has increased. [EFFECT] This notification can be used to correlate the ETH_CFM dot1agCfmFaultAlarm event and the related IF-MIB::linkDown notification caused by the failure of the facility MEP. [RECOVERY] Follow the recovery for the dot1agCfmFaultAlarm and the related IF-MIB::linkDown caused by the failure of the facility MEP.		
Remedial action: Follow the recovery for the CfmFaultAlarm and the related Interface linkDown caused by the failure of the facility MEP.		

Table 21-193 MepFacilityFault (service)

Alarm	Attributes	Applicable major release
Name: MepFacilityFault (11101) Type: oamAlarm Package: service.MepFacilityFault Raised on class: service.AccessInterface	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: MepFacilityFault	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: [CAUSE] The tmnxDot1agCfmMepFcltyFaultRaise notification is generated when the associated facility MEP dot1agCfmMepHighestPrDefect has increased. [EFFECT] This notification can be used to correlate the ETH_CFM dot1agCfmFaultAlarm event and the related IF-MIB::linkDown notification caused by the failure of the facility MEP. [RECOVERY] Follow the recovery for the dot1agCfmFaultAlarm and the related IF-MIB::linkDown caused by the failure of the facility MEP.		
Remedial action: Follow the recovery for the CfmFaultAlarm and the related Interface linkDown caused by the failure of the facility MEP.		

Table 21-194 MissingLocalEntry

Alarm	Attributes	Applicable major release
Name: MissingLocalEntry (291) Type: configurationAlarm Package: l2fwd.MissingLocalEntry Raised on class: l2fwd.ServiceMacProtection	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: Protected_Mac_Address_Not_Global	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a protected MAC address is not configured on all sites of a VPLS. This can occur if the protected MAC address is added or removed using a CLI.		
Raising condition: ('isEntryGlobal' EQUAL 'false')		
Clearing condition: ('isEntryGlobal' EQUAL 'true')		
Remedial action: Configure the 'Protected MAC Address' on all the VPLS sites.		

Table 21-195 MldDown

Alarm	Attributes	Applicable major release
Name: MldDown (587) Type: ProtocolAlarm Package: mld.MldDown Raised on class: mld.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an MLD site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: Check the base router and system are configured correctly.		

Table 21-196 MobileConnectorDown

Alarm	Attributes	Applicable major release
Name: MobileConnectorDown (1064) Type: EpcAlarm Package: lteservice.MobileConnectorDown Raised on class: lteservice.MobileServiceConnector	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EpcDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL '\"\"')		
Clearing condition: ('EPS Path' NOT EQUAL '\"\"')		
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

Table 21-197 MplsDown

Alarm	Attributes	Applicable major release
Name: MplsDown (27) Type: ProtocolAlarm Package: mpls.MplsDown Raised on class: mpls.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an MPLS site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: Check operational down reason and update accordingly.		

Table 21-198 MplsPathUpdateFailed

Alarm	Attributes	Applicable major release
Name: MplsPathUpdateFailed (1066) Type: pathAlarm Package: mpls.MplsPathUpdateFailed Raised on class: mpls.LspPath	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mbbRetryExceeded Applicable probable causes: • mbbRetryExceeded • lspPathGoingDown • startingHighPriMbb • restartingMbb • highPriMbbInProg	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an MPLS path update fails because of an MBB problem. The alarm clears when the MBB status changes to Successful.		
Raising condition: (('mbbStatus' NOT EQUAL 'None') AND ('mbbStatus' NOT EQUAL 'Successful'))		
Clearing condition: (('Last Performed State' EQUAL 'Success') OR ('Administrative' EQUAL 'Down') OR (('Operational' EQUAL 'Up') AND ('Last Performed State' EQUAL 'None')))		
Remedial action: Based on the probable cause, change the parameters and update the path again.		

Table 21-199 MrpAttrTblSizeLimitReached

Alarm	Attributes	Applicable major release
Name: MrpAttrTblSizeLimitReached (574) Type: resourceAlarm Package: l2fwd.MrpAttrTblSizeLimitReached Raised on class: l2fwd.SiteMrp	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceLimitReached	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the number of MRP attribute table entries for a service site exceeds the high watermark specified by l2fwd.SiteMrp.mrpAttrTblHighWatermark. The alarm clears when the number of MRP attribute table entries for the site drops below the low watermark specified by l2fwd.SiteMrp.mrpAttrTblLowWatermark.		
Raising condition: (('MRP Attribute Count' >=" 'MRP Max Attributes') OR ('MRP Attribute Count' >= (('MRP Attribute-Table-High-Watermark' * 'MRP Max Attributes') / 100.0)))"		
Clearing condition: (('MRP Attribute Count' < 'MRP Max Attributes') AND (('MRP Attribute-Table-High-Watermark' EQUAL '0') OR ('MRP Attribute Count' < (('MRP Attribute-Table-Low-Watermark' * 'MRP Max Attributes') / 100.0))) AND (('MRP Attribute-Table-Low-Watermark' EQUAL '0') OR ('MRP Attribute Count' < (('MRP Attribute-Table-Low-Watermark' * 'MRP Max Attributes') / 100.0))))		
Remedial action: Informational		

Table 21-200 MsdpDown

Alarm	Attributes	Applicable major release
Name: MsdpDown (353) Type: ProtocolAlarm Package: msdp.MsdpDown Raised on class: msdp.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an MSDP site is administratively down. The alarm clears when the site is administratively up.		
Raising condition: (('Administrative State' EQUAL 'Down'))		
Clearing condition: (('Administrative State' NOT EQUAL 'Down'))		
Remedial action: Turn up the MSDP site.		

Table 21-201 MsPwFecRetryExpired

Alarm	Attributes	Applicable major release
Name: MsPwFecRetryExpired (3694) Type: serviceAlarm Package: svt.MsPwFecRetryExpired Raised on class: svt.SpokeSdpFec	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: msPwFecRetryExpired	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a trap is received because of retry expired. The alarm is cleared when the retry starts again.		
Raising condition: ('Retry Expired' EQUAL 'true')		
Clearing condition: ('Retry Expired' EQUAL 'false')		
Remedial action: May need to shutdown the multi-segment pseudo-wire provider edge to restart the retries.		

Table 21-202 MultiChassisRingDown

Alarm	Attributes	Applicable major release
Name: MultiChassisRingDown (520) Type: redundancyAlarm Package: multichassis.MultiChassisRingDown Raised on class: multichassis.MultiChassisRing	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ringDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a MC ring group Operational State is not in the Connected state. The alarm is cleared when the ring group enters the Connected state.		
Raising condition: ('Operational State' NOT EQUAL 'Connected')		
Clearing condition: ('Operational State' EQUAL 'Connected')		
Remedial action: Check if MC ring is admin down, MC Sync is operational up, In-Band Control Connection is up, ring node is up ...		

Table 21-203 MvrConfiguredFromVplsNotExist

Alarm	Attributes	Applicable major release
Name: MvrConfiguredFromVplsNotExist (219) Type: configurationAlarm Package: vpls.MvrConfiguredFromVplsNotExist Raised on classes: • vpls.L2AccessInterfaceMldMvrCfg • vpls.L2AccessInterfaceMvrCfg	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MvrConfiguredFromVplsNo-tExist	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an MVR source is an MVR VPLS that does not exist. The alarm clears when the MVR VPLS is created.		
Raising condition: ('fromVplsExists' EQUAL 'false')		
Clearing condition: (('fromVplsExists' EQUAL 'true') OR ('fromVplsId' EQUAL '0L'))		
Remedial action: Create the missing MVR VPLS.		

Table 21-204 MvrConfiguredProxySapNotExist

Alarm	Attributes	Applicable major release
Name: MvrConfiguredProxySapNotExist (220) Type: configurationAlarm Package: vpls.MvrConfiguredProxySapNotExist Raised on classes: • vpls.L2AccessInterfaceMldMvrCfg • vpls.L2AccessInterfaceMvrCfg	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MvrConfiguredProxySapNo-tExist	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a configured MVR proxy SAP does not exist. The alarm clears when the proxy SAP is created.		
Raising condition: ('proxySapExists' EQUAL 'false')		
Clearing condition: ('proxySapExists' EQUAL 'true')		
Remedial action: Create the missing proxy SAP.		

Table 21-205 MvrSiteDown

Alarm	Attributes	Applicable major release
Name: MvrSiteDown (162) Type: ProtocolAlarm Package: layer2.MvrSiteDown Raised on class: layer2.MvrSite	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('MVR Admin Status' EQUAL 'Disabled')		
Clearing condition: ('MVR Admin Status' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable MVR Admin Status under the Bridge Instance.		

Table 21-206 NeighborDown

Alarm	Attributes	Applicable major release
Name: NeighborDown (121) Type: NeighborDown Package: ospf.NeighborDown Raised on class: ospf.AbstractNeighbor	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NeighborDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an OSPF interface neighbor is operationally Down.		
Raising condition: ('Operational State' NOT EQUAL 'full')		
Clearing condition: ('Operational State' EQUAL 'full')		
Remedial action: This alarm is raised when the OSPF interface neighbor is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 21-207 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major release
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm Package: netw. NeManagementAndTrapManagementMismatch Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: neManagementChange	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		
Raising condition: ((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band')))		
Clearing condition: ((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band')))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

Table 21-208 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major release
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm Package: security.NewSsh2ServerKeyDetected Raised on class: security.KnownHostKey	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 21-209 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major release
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm Package: netw.NodeDatabaseFallbackDetected Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeDatabaseFallback	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 21-210 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major release
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm Package: netw.NodeDatabaseMisalignmentDetected Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

Table 21-211 NodeRebooted

Alarm	Attributes	Applicable major release
Name: NodeRebooted (32) Type: equipmentAlarm Package: netw.NodeRebooted Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: nodeReboot	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 5620 SAM detects an NE reboot based on the latest NE sysUpTime value.		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 21-212 NodeSuspended

Alarm	Attributes	Applicable major release
Name: NodeSuspended (5123) Type: communicationsAlarm Package: netw.NodeSuspended Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NodeSuspend	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element.The alarm will be cleared when the network element is managed back.		

Table 21-213 nonDeployedAdjacencyExists

Alarm	Attributes	Applicable major release
Name: nonDeployedAdjacencyExists (11465) Type: communicationsAlarm Package: mpr.nonDeployedAdjacencyExists Raised on class: mpr.BackhaulAdjacency	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nonDeployedAdjacencyExists	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a deployed adjacency is deleted on the site.		
Raising condition: (('Deployed to Site' EQUAL 'false') AND ('existedOnSite' EQUAL 'true'))		
Clearing condition: (('Deployed to Site' EQUAL 'true') AND ('existedOnSite' EQUAL 'true'))		
Remedial action: Deploy the changes made to the service.		

Table 21-214 NoPeerMcRingFound

Alarm	Attributes	Applicable major release
Name: NoPeerMcRingFound (782) Type: configurationAlarm Package: multichassis.NoPeerMcRingFound Raised on class: multichassis.MultiChassisRing	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IncompleteConfig	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 5620 SAM cannot find the peer MC ring.		
Raising condition: ('Peer Multi-Chassis Ring' EQUAL '\"\"')		
Clearing condition: ('Peer Multi-Chassis Ring' NOT EQUAL '\"\"')		
Remedial action: Configure the missing peered MC ring, or delete this one if it is not used.		

Table 21-215 NoSFMConfigured

Alarm	Attributes	Applicable major release
Name: NoSFMConfigured (11179) Type: equipmentAlarm Package: netw.NoSFMConfigured Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NoSFMConfigured	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when none of the SFM are configured.		
Remedial action: This alarm indicates that none of the SFM is configured. Please configured a SFM.		

Table 21-216 NTPOperDown

Alarm	Attributes	Applicable major release
Name: NTPOperDown (4879) Type: communicationsAlarm Package: ntp.NTPOperDown Raised on class: ntp.NTP	Severity: info Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NTPOperDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0

Table 21-216 NTPOperDown (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is generated when the NTP Operational State is down for NTP.		
Raising condition: (('Operational State' EQUAL 'Down') AND ('NTP State' EQUAL 'Enabled'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('NTP State' EQUAL 'Disabled'))		
Remedial action: Please check if NTP is administratively enabled (Admin State in NTP General Tab). If admin state down, enable it to make NTP operationally up.		

Table 21-217 OesRedundancyFail

Alarm	Attributes	Applicable major release
Name: OesRedundancyFail (11111) Type: equipmentAlarm Package: equipment.OesRedundancyFail Raised on class: equipment.Shelf	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: RedundancyFail	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when when the inactive equipment controller card in the OES is not providing redundancy protection.		
Remedial action: Check for the Redundancy demerit in the detailed information of the chassis indicated.		

Table 21-218 OFFlowEntryDeploymentCreateFailed

Alarm	Attributes	Applicable major release
Name: OFFlowEntryDeploymentCreateFailed (5405) Type: processingErrorAlarm Package: openflow. OFFlowEntryDeploymentCreateFailed Raised on class: openflow.OFAbstractFlowEntry	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OFFlowEntryDeploymentCreateFailed	Release: • 12.0 • 13.0 • 14.0
Description: The notification alarm is raised when the flow entry deployment create has failed.		
Raising condition: (('Deployment Status' EQUAL 'Creation Failed'))		
Clearing condition: (('Deployment Status' NOT EQUAL 'Creation Failed'))		
Remedial action: This alarm is raised when the OpenFlow switch rejects creation of the flow.		

Table 21-219 OFFlowEntryDeploymentDeleteFailed

Alarm	Attributes	Applicable major release
Name: OFFlowEntryDeploymentDeleteFailed (5406) Type: processingErrorAlarm Package: openflow.OFFlowEntryDeploymentDeleteFailed Raised on class: openflow.OFAbstractFlowEntry	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OFFlowEntryDeployment-DeleteFailed	Release: • 12.0 • 13.0 • 14.0
Description: The notification alarm is raised when the flow entry deployment create has failed.		
Raising condition: (('Deployment Status' EQUAL 'Deletion Failed'))		
Clearing condition: (('Deployment Status' NOT EQUAL 'Deletion Failed'))		
Remedial action: This alarm is raised when the OpenFlow switch rejects deletion of the flow.		

Table 21-220 OFLogicalPortStatusMplsTpNotSet

Alarm	Attributes	Applicable major release
Name: OFLogicalPortStatusMplsTpNotSet (5407) Type: equipmentAlarm Package: openflow.OFLogicalPortStatusMplsTpNotSet Raised on class: openflow.OFSwitch	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OFLogicalPortStatusMplsTp-NotSet	Release: • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the MPLS-TP flag is not set in the Logical Port Status.		
Raising condition: (('Logical Port Status' EQUAL '0L') OR ('Logical Port Status' EQUAL 'rsvp-te'))		
Clearing condition: (('Logical Port Status' NOT EQUAL '0L') AND ('Logical Port Status' NOT EQUAL 'rsvp-te'))		
Remedial action: When MPLS-TP is not set, OpenFlow port status will not be received by SAM.		

Table 21-221 OFLogicalPortStatusRsvpTeNotSet

Alarm	Attributes	Applicable major release
Name: OFLogicalPortStatusRsvpTeNotSet (5408) Type: equipmentAlarm Package: openflow.OFLogicalPortStatusRsvpTeNotSet Raised on class: openflow.OFSwitch	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OFLogicalPortStatusRs-vpTeNotSet	Release: • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the RSVP-TE flag is not set in the Logical Port Status.		
Raising condition: (('Logical Port Status' EQUAL '0L') OR ('Logical Port Status' EQUAL 'mpls-tp'))		
Clearing condition: (('Logical Port Status' NOT EQUAL '0L') AND ('Logical Port Status' NOT EQUAL 'mpls-tp'))		
Remedial action: When RSVP-TE is not set, OpenFlow port status will not be received by SAM.		

Table 21-222 OFSwitchDown

Alarm	Attributes	Applicable major release
Name: OFSwitchDown (5409) Type: equipmentAlarm Package: openflow.OFSwitchDown Raised on class: openflow.OFSwitch	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OFSwitchDown	Release: • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the Operational State of an OFSwitch is Down and the Administrative State is Up.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('Administrative State' EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This alarm is raised when the OpenFlow switch has gone down.		

Table 21-223 OspfInterfaceDown

Alarm	Attributes	Applicable major release
Name: OspfInterfaceDown (141) Type: OspfInterfaceDown Package: ospf.OspfInterfaceDown Raised on class: ospf.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OspfInterfaceDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an OSPF interface is operationally down.		
Raising condition: ('operationalState' EQUAL 'Down')		
Clearing condition: ('operationalState' NOT EQUAL 'Down')		
Remedial action: This alarm is raised when the OSPF interface is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 21-224 OverTemperatureDetected

Alarm	Attributes	Applicable major release
Name: OverTemperatureDetected (388) Type: environmentalAlarm Package: equipment.OverTemperatureDetected Raised on class: equipment.Shelf	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentOverheated	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the chassis temperature exceeds the maximum threshold value.		
Raising condition: ('Over Temperature State' EQUAL 'Over')		
Clearing condition: ('Over Temperature State' NOT EQUAL 'Over')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 21-225 P2MPLSPDown

Alarm	Attributes	Applicable major release
Name: P2MPLSPDown (4378) Type: pathAlarm Package: mpls.P2MPLSPDown Raised on class: mpls.P2MPDynamicLsp	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: P2MPLSPDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the P2MP LSP Administrative State is Up and the Operational State is Down. The alarm clears when the P2MP LSP Operational State changes to Up or the Administrative State changes to Down.		
Raising condition: (('Administrative' EQUAL 'Up') AND ('Operational' NOT EQUAL 'Up'))		
Clearing condition: (('Operational' EQUAL 'Up') OR ('Administrative' NOT EQUAL 'Up'))		
Remedial action: The operational state of the P2MP LSP is down, despite the administrative state being up. Review the P2MP Primary Instance or S2LPath to make sure it was configured correctly and Administrative state is up. The physical port near end or far end may have failed - this can be remedied by replacing the interface card in question. The physical links may have been turned down administratively - re-enable the links. A cable failure or disconnect may have occurred - please ensure that the cables are properly connected to the physical port and and that the cable has not been damaged.		

Table 21-226 PartialResyncProblem

Alarm	Attributes	Applicable major release
Name: PartialResyncProblem (4401) Type: communicationsAlarm Package: netw.PartialResyncProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: partialResyncProblem	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a partial resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 21-227 PartialVPRNEncryption

Alarm	Attributes	Applicable major release
Name: PartialVPRNEncryption (8992) Type: configurationAlarm Package: nge.PartialVPRNEncryption Raised on class: nge.VprnEncryptService	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConfigMismatch	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when one or more sites are not encryption enabled in a VPRN service.		
Raising condition: (('VPRN Service Encryption Status' EQUAL 'Partial'))		
Clearing condition: (('VPRN Service Encryption Status' NOT EQUAL 'Partial'))		
Remedial action: This site is newly added to the VPRN service, Perform the encrypt operation on the KeyGroup to clear the alarm.		

Table 21-228 PccRuleInsertedFltrEntryDropped

Alarm	Attributes	Applicable major release
Name: PccRuleInsertedFltrEntryDropped (11059) Type: configurationAlarm Package: aclfilter.PccRuleInsertedFltrEntryDropped Raised on class: aclfilter.FilterDefinition	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: FilterEntryDropped	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a request to insert a filter entry is not successful for a PCC rule application.		
Remedial action: A Configuration error has occurred. The request to insert a filter entry was not successful for PCC rule application. Check the configuration filter entry.		

Table 21-229 PccRuleInsertSpaceThresholdAlarm

Alarm	Attributes	Applicable major release
Name: PccRuleInsertSpaceThresholdAlarm (11058) Type: configurationAlarm Package: aclfilter.PccRuleInsertSpaceThresholdAlarm Raised on class: aclfilter.FilterDefinition	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: UtilizationExceedConfigured-Limit	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the utilization of a filter entry range that is reserved for filter entry insertion increases to the configured maximum value for a PCC rule application insert range.		
Remedial action: The filter entry range reserved for filter entry insertion has increased to the configured high watermark for PCC rule application. Make an adjusted to the watermarks or to the filter.		

Table 21-230 PeerConnectionDown (msdp)

Alarm	Attributes	Applicable major release
Name: PeerConnectionDown (2) Type: ProtocolAlarm Package: msdp.PeerConnectionDown Raised on class: msdp.CommonPeer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: connectionDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0

Table 21-230 PeerConnectionDown (msdp) (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the connectionState of this peer changes from Established to a state other than Established. The alarm clears when the connectionState of this peer returns to the Established state.		
Raising condition: (('connectionState' NOT EQUAL 'Established') AND ('administrativeState' EQUAL 'Up'))		
Clearing condition: (('connectionState' EQUAL 'Established') OR ('administrativeState' NOT EQUAL 'Up'))		
Remedial action: Check the configurations of the peer routers.		

Table 21-231 PeerConnectionDown (bgp)

Alarm	Attributes	Applicable major release
Name: PeerConnectionDown (2) Type: ProtocolAlarm Package: bgp.PeerConnectionDown Raised on class: bgp.Peer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: connectionDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a BGP peer has a Connection State other than Established, and the Administrative State of the BGP peer is Up.		
Raising condition: (('Connection State' NOT EQUAL 'Established') AND ('Administrative State' EQUAL 'Up'))		
Clearing condition: (('Connection State' EQUAL 'Established') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: A mismatch in configuration may have occurred. Check the configuration of both peers to rule out a mismatched configuration.		

Table 21-232 PeerDown (gmplsuni)

Alarm	Attributes	Applicable major release
Name: PeerDown (1) Type: ProtocolAlarm Package: gmplsuni.PeerDown Raised on class: gmplsuni.Peer	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 13.0 • 14.0
Description: The alarm is raised when the GMPLS peer's Administrative State is Up and the Operational State is Down. The alarm clears when the GMPLS peer's Operational State changes to Up or the Administrative State changes to Down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The Operational state of the GMPLS peer is down, despite the Administrative state being up. Check if the associated LMP peer or the GMPLS tunnel group endpoint is down.		

Table 21-233 PeerDown (bgp)

Alarm	Attributes	Applicable major release
Name: PeerDown (1) Type: ProtocolAlarm Package: bgp.PeerDown Raised on class: bgp.Peer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a BGP peer has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The BGP peer entity is down - administratively disable the BGP peer and re-enable it. If toggling the administrative state does not solve the problem check that the physical interface and network connection to the far end peer are up and operational. If the problem persists please contact your Nokia support representative for assistance.		

Table 21-234 PeerDown (msdp)

Alarm	Attributes	Applicable major release
Name: PeerDown (1) Type: ProtocolAlarm Package: msdp.PeerDown Raised on class: msdp.CommonPeer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the Administrative State of a peer changes from Up to Down. The alarm clears when the Administrative State returns to Up.		
Raising condition: (('administrativeState' EQUAL 'Down'))		
Clearing condition: (('administrativeState' NOT EQUAL 'Down'))		
Remedial action: Turn up the Peer.		

Table 21-235 PeerGroupDown (bgp)

Alarm	Attributes	Applicable major release
Name: PeerGroupDown (5) Type: ProtocolAlarm Package: bgp.PeerGroupDown Raised on class: bgp.PeerGroup	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a BGP peer group has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The BGP peer group is down - administratively disable the BGP peer group and re-enable it. If the problem persists please contact your Nokia support representative for assistance.		

Table 21-236 PeerGroupDown (msdp)

Alarm	Attributes	Applicable major release
Name: PeerGroupDown (5) Type: ProtocolAlarm Package: msdp.PeerGroupDown Raised on class: msdp.PeerGroup	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the Administrative State of a peer group changes from Up to Down. The alarm clears when the Administrative State returns to Up.		
Raising condition: (('Administrative State' EQUAL 'Down'))		
Clearing condition: (('Administrative State' NOT EQUAL 'Down'))		
Remedial action: Turn up the Group.		

Table 21-237 PeerLacIngressEgressFault

Alarm	Attributes	Applicable major release
Name: PeerLacIngressEgressFault (2929) Type: PeerLacAlarm Package: svt.PeerLacIngressEgressFault Raised on class: svt.SpokeSdpBinding	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: peerPWStatusBitsChanged	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the Peer Status is Peer LAC Rx Fault and Peer LAC Tx Fault		
Raising condition: (('Peer State Cause'anyBit'Peer LAC Tx Fault') AND ('Peer State Cause'anyBit'Peer LAC Rx Fault'))		
Clearing condition: NOT ((('Peer State Cause'anyBit'Peer LAC Tx Fault') AND ('Peer State Cause'anyBit'Peer LAC Rx Fault')))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 21-238 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major release
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm Package: netw. PersistentIndexParametersMisconfigured Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistentIndexConfiguration-Mismatch	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when persistence is set to Off in the NE BOF.		
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

Table 21-239 PhysicalLinkPortsMisconfigured

Alarm	Attributes	Applicable major release
Name: PhysicalLinkPortsMisconfigured (239) Type: configurationAlarm Package: netw.PhysicalLinkPortsMisconfigured Raised on class: netw.AbstractPhysicalLink	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: physicalLinkPortsMisconfig-ured	Release: • 14.0
Description: The alarm is raised when there is an MTU size mismatch between a link endpoint and a port. The alarm clears when the MTUs match.		
Raising condition: ('physicalLinkMisconfigured' EQUAL 'true')		
Clearing condition: ('physicalLinkMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The MTU value(s) on the link endpoint and port must be changed such that they match.		

Table 21-240 PimDown

Alarm	Attributes	Applicable major release
Name: PimDown (184) Type: ProtocolAlarm Package: pim.PimDown Raised on class: pim.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a PIM site is administratively Up but operationally Down. The alarm is cleared when the PIM site becomes operationally Up but administratively Down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This should never happen. Contact your Nokia support representative for assistance.		

Table 21-241 PollerProblem

Alarm	Attributes	Applicable major release
Name: PollerProblem (31) Type: communicationsAlarm Package: netw.PollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resyncFailed	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 21-242 PortEtherSymMonSDAlarm

Alarm	Attributes	Applicable major release
Name: PortEtherSymMonSDAlarm (5662) Type: communicationsAlarm Package: ethernetequipment. PortEtherSymMonSDAlarm Raised on class: ethernetequipment. EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: etherPortSymMonSDThrehol-dExceededAlarm	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an Ethernet port Symbol Monitor Failure alarm condition is detected (Signal Degradation Threshold exceeded).		
Raising condition: ('Symbol Alarm Reason' EQUAL 'SD Threshold Exceeded')		
Clearing condition: ('Symbol Alarm Reason' NOT EQUAL 'SD Threshold Exceeded')		
Remedial action: Symbol monitor signal degradation alarm could be cleared by changing/disabling the associated threshold/multiplier values or it is self clearing and will clear once the error rate drops below 1/10th of the configured rate.		

Table 21-243 PortEtherSymMonSFAlarm

Alarm	Attributes	Applicable major release
Name: PortEtherSymMonSFAlarm (5663) Type: communicationsAlarm Package: ethernetequipment. PortEtherSymMonSFAlarm Raised on class: ethernetequipment. EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: etherPortSymMonSFThrehold-ExceededAlarm	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an Ethernet port Symbol Monitor Failure alarm condition is detected (Signal Failure Threshold exceeded).		
Raising condition: ('Symbol Alarm Reason' EQUAL 'SF Threshold Exceeded')		
Clearing condition: ('Symbol Alarm Reason' NOT EQUAL 'SF Threshold Exceeded')		
Remedial action: Symbol monitor signal failure alarm could be cleared by changing/disabling the associated threshold/multiplier values or by taking the port out of service (eg. shutdown, card/mda reset, physical link loss).		

Table 21-244 PowerCapacityExceeded

Alarm	Attributes	Applicable major release
Name: PowerCapacityExceeded (5146) Type: equipmentAlarm Package: equipment.PowerCapacityExceeded Raised on class: equipment.PowerManagementZone	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerCapacityExceeded	Release: • 11.0.R4
Description: The PowerCapacityExceeded alarm is generated when a device needs power to boot, but there is not enough power capacity to support the device.		
Remedial action: To recover from this event, the customer is requested to add a new power supply to the system, or change a faulty power supply with a working one.		

Table 21-245 PowerLostCapacity

Alarm	Attributes	Applicable major release
Name: PowerLostCapacity (5147) Type: equipmentAlarm Package: equipment.PowerLostCapacity Raised on class: equipment.PowerManagementZone	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerLostCapacity	Release: • 11.0.R4
Description: The PowerLostCapacity alarm is generated when a power supply fails or is removed which puts the system in an overloaded situation.		
Remedial action: To recover from this event, the customer is requested to add a new power supply to the system, or change a faulty power supply with a working one.		

Table 21-246 PowerOverloadState

Alarm	Attributes	Applicable major release
Name: PowerOverloadState (5148) Type: equipmentAlarm Package: equipment.PowerOverloadState Raised on class: equipment.PowerManagementZone	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerOverloadState	Release: • 11.0.R4
Description: The PowerOverloadState alarm is generated when the overloaded power capacity can not support the power requirements and there are no further devices that can be powered off.		
Remedial action: To recover from this state, the customer is requested to add power capacity, or to manually shutdown devices until the power capacity meets the power needs.		

Table 21-247 PowerSafetyAlertThreshold

Alarm	Attributes	Applicable major release
Name: PowerSafetyAlertThreshold (5149) Type: thresholdCrossed Package: equipment.PowerSafetyAlertThreshold Raised on class: equipment.PowerManagementZone	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSafetyAlertThreshold-Crossed	Release: • 11.0.R4
Description: The PowerSafetyAlertThreshold notification is generated when the system power capacity drops below the configured safety alert threshold.		
Remedial action: Decrease the safety alert threshold or reduce the power utilization below safety alert threshold.		

Table 21-248 PowerSafetyLevelThreshold

Alarm	Attributes	Applicable major release
Name: PowerSafetyLevelThreshold (5150) Type: thresholdCrossed Package: equipment.PowerSafetyLevelThreshold Raised on class: equipment.PowerManagementZone	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSafetyLevelThreshold-Crossed	Release: • 11.0.R4
Description: The PowerSafetyLevelThreshold notification is generated when the peak nodal power consumption exceeds the configured safety level threshold.		
Remedial action: Increase the safety level threshold or reduce the power utilization below safety level threshold.		

Table 21-249 PowerSupplyAcFailure

Alarm	Attributes	Applicable major release
Name: PowerSupplyAcFailure (9644) Type: equipmentAlarm Package: equipment.PowerSupplyAcFailure Raised on class: equipment.PowerSupplyTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyAcFailure	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: This notification is generated when an AC failure occurs on the power supply.		
Raising condition: ('AC Voltage Status' EQUAL 'Out of Range')		
Clearing condition: (('AC Voltage Status' EQUAL 'Not Equipped') OR ('AC Voltage Status' EQUAL 'OK'))		
Remedial action: Insert a new power supply. If the problem persists please contact your Nokia support representative for assistance.		

Table 21-250 PowerSupplyDcFailure

Alarm	Attributes	Applicable major release
Name: PowerSupplyDcFailure (9645) Type: equipmentAlarm Package: equipment.PowerSupplyDcFailure Raised on class: equipment.PowerSupplyTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyDcFailure	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: This notification is generated when a DC failure occurs on the power supply.		
Raising condition: ('DC Voltage Status' EQUAL 'Out of Range')		
Clearing condition: (('DC Voltage Status' EQUAL 'Not Equipped') OR ('DC Voltage Status' EQUAL 'OK'))		
Remedial action: Insert a new power supply. If the problem persists please contact your Nokia support representative for assistance.		

Table 21-251 PowerSupplyFailure (equipment)

Alarm	Attributes	Applicable major release
Name: PowerSupplyFailure (633) Type: equipmentAlarm Package: equipment.PowerSupplyFailure Raised on class: equipment.PowerSupplyTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyFailure	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a power-supply tray reports a failure. When the alarm is raised during device discovery, a power-supply tray may be out of service. When the alarm is raised while the device is in the managed state, a power-supply tray may be out of service or the AC or DC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: (('Power Supply 1 Status' EQUAL 'Not Equipped') OR ('Power Supply 1 Status' EQUAL 'Failed'))		
Clearing condition: (('Power Supply 1 Status' EQUAL 'OK'))		
Remedial action: Ensure that the NE is properly connected to power. If the problem persists please contact your Nokia support representative for assistance.		

Table 21-252 PowerSupplyInputFailure

Alarm	Attributes	Applicable major release
Name: PowerSupplyInputFailure (9622) Type: equipmentAlarm Package: equipment.PowerSupplyInputFailure Raised on class: equipment.PowerSupplyTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyInputFailure	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: Generated when one of the chassis's power source supplies fails.		
Raising condition: ('Power Supply Input Status' EQUAL 'Failed')		
Clearing condition: (('Power Supply Input Status' EQUAL 'Not Equipped') OR ('Power Supply Input Status' EQUAL 'OK'))		
Remedial action: Ensure that the NE is properly connected to power. If the problem persists please contact your Nokia support representative for assistance.		

Table 21-253 PowerSupplyInputFeedDown

Alarm	Attributes	Applicable major release
Name: PowerSupplyInputFeedDown (5422) Type: equipmentAlarm Package: equipment.PowerSupplyInputFeedDown Raised on class: equipment.PowerSupplyTray	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyInputFeedDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: This alarm is generated if any one of the input feeds for a given power supply is not supplying power.		
Raising condition: (('inputFeedStatus' EQUAL 'Input A Down') OR ('inputFeedStatus' EQUAL 'Input B Down') OR (('inputFeedStatus'allBits'Input A Down') AND ('inputFeedStatus'allBits'Input B Down')))		
Clearing condition: ('inputFeedStatus' EQUAL 'None')		
Remedial action: Restore all of the input feeds that are not supplying power.		

Table 21-254 PowerSupplyInputFeedDownAlarm

Alarm	Attributes	Applicable major release
Name: PowerSupplyInputFeedDownAlarm (5154) Type: equipmentAlarm Package: equipment. PowerSupplyInputFeedDownAlarm Raised on class: equipment.PowerSupply	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyInputFeedDown	Release: • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: This alarm is generated if any one of the input feeds for a given power supply is not supplying power.		
Raising condition: (('Input Feed Status' EQUAL 'Input A Down') OR ('Input Feed Status' EQUAL 'Input B Down') OR (('Input Feed Status'allBits'Input A Down') AND ('Input Feed Status'allBits'Input B Down')))		
Clearing condition: ('Input Feed Status' EQUAL 'None')		
Remedial action: Restore all of the input feeds that are not supplying power		

Table 21-255 PowerSupplyOutputFailure

Alarm	Attributes	Applicable major release
Name: PowerSupplyOutputFailure (9623) Type: equipmentAlarm Package: equipment.PowerSupplyOutputFailure Raised on class: equipment.PowerSupplyTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyOutputFailure	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: Generated when one of the chassis's power output fails.		
Raising condition: ('Power Supply Output Status' EQUAL 'Failed')		
Clearing condition: (('Power Supply Output Status' EQUAL 'Not Equipped') OR ('Power Supply Output Status' EQUAL 'OK'))		
Remedial action: Ensure that the NE is properly connected to power. If the problem persists please contact your Nokia support representative for assistance.		

Table 21-256 PowerSupplyOverTemperature

Alarm	Attributes	Applicable major release
Name: PowerSupplyOverTemperature (9646) Type: equipmentAlarm Package: equipment.PowerSupplyOverTemperature Raised on class: equipment.PowerSupplyTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyOverTemperature	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: This notification is generated when a power supply temperature surpasses the threshold of the particular physical chassis.		
Raising condition: ('Temperature Status' EQUAL 'Out of Range')		
Clearing condition: (('Temperature Status' EQUAL 'Not Equipped') OR ('Temperature Status' EQUAL 'OK'))		
Remedial action: Check input feed and/or insert a new power supply. If the problem persists please contact your Nokia support representative for assistance.		

Table 21-257 PowerSupplyRemoved

Alarm	Attributes	Applicable major release
Name: PowerSupplyRemoved (542) Type: equipmentAlarm Package: equipment.PowerSupplyRemoved Raised on class: equipment.PowerSupplyTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PowerSupplyRemoved	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a chassis power supply is removed.		
Raising condition: ('Power Supply 1 Status' EQUAL 'Not Equipped')		
Clearing condition: ('Power Supply 1 Status' NOT EQUAL 'Not Equipped')		
Remedial action: To recover from this event, the customer is requested to add a new power supply to the system, or change a faulty power supply with a working one.		

Table 21-258 PrimaryImageBootFailure

Alarm	Attributes	Applicable major release
Name: PrimaryImageBootFailure (191) Type: configurationAlarm Package: sw.PrimaryImageBootFailure Raised on class: sw.CardSoftware	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 21-259 PrimaryPathLimitReached

Alarm	Attributes	Applicable major release
Name: PrimaryPathLimitReached (457) Type: resourceAlarm Package: equipment.PrimaryPathLimitReached Raised on class: equipment.DaughterCard	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceLimitReached	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the Ingress Multicast Path Management primary path bandwidth limit is reached.		
Raising condition: (('Primary Path Limit Override' > '0') AND ('Primary Path In use' >=" (1000 * 'Primary Path Limit Override')))"		
Clearing condition: (('Primary Path Limit Override' > '0') AND ('Primary Path In use' < (1000 * 'Primary Path Limit Override')))		
Remedial action: Informational - The alarm is raised when the Ingress Multicast Path Management primary path bandwidth limit is reached. This can be remedied by modifying the primary path limit located at T1 Paths tab of the multicast bandwidth policy which assigned to the card, or increase the primary path limit override located at the Daughter Card tab under Daughter Card Slot form.		

Table 21-260 ProvPowerCapacity

Alarm	Attributes	Applicable major release
Name: ProvPowerCapacity (5182) Type: equipmentAlarm Package: equipment.ProvPowerCapacity Raised on class: equipment.PowerManagementZone	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: provPowerCapacity	Release: • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The ProvisionedPowerCapacity alarm is generated if a power zone's provisioned power capacity can no longer support configured devices.		
Remedial action: The system can no longer support configured devices. Power capacity is not sufficient enough to operate all the configured devices. Add more PEQs or delete some devices		

Table 21-261 PXCAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: PXCAdministrativelyDown (11185) Type: equipmentAlarm Package: pxc.PXCAdministrativelyDown Raised on class: pxc.PortCrossConnect	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: portCrossConnectAdministra-tivelyDown	Release: • 14.0
Description: The alarm is raised when the PXC AdministrativelyDown.		
Raising condition: ('Administrative State' EQUAL 'Down')		

Table 21-261 PXCAdministrativelyDown (continued)

Alarm	Attributes	Applicable major release
Clearing condition: (('Administrative State' EQUAL 'Up'))		
Remedial action: Informational - PortCrossConnect AdministrativelyDown.		

Table 21-262 PXCDown

Alarm	Attributes	Applicable major release
Name: PXCDown (11186) Type: equipmentAlarm Package: pxc.PXCDown Raised on class: pxc.PortCrossConnect	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: inoperablePortCrossConnect	Release: • 14.0
Description: The alarm is raised when the PXC is OperationallyDown.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('Administrative State' EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up'))		
Remedial action: This alarm indicates an inoperable PortCrossConnect. Either the associated PhysicalPort or PortCrossConnectSub-ports are down.		

Table 21-263 RadiusOperStatusDown

Alarm	Attributes	Applicable major release
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm Package: netw.RadiusOperStatusDown Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: radiusOperationStatusDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up.Check the connectivity between SAM server and radius server configured on the Network element.		

Table 21-264 ReachabilityProblem

Alarm	Attributes	Applicable major release
Name: ReachabilityProblem (243) Type: communicationsAlarm Package: netw.ReachabilityProblem Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReachabilityTestFailed	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. The polling interval depends on the NE type and is configurable in nms-server.xml. By default, the 5620 SAM polls a managed NE every four minutes. If a poll fails, the alarm is raised. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 21-265 RedundantMepMisconfiguration

Alarm	Attributes	Applicable major release
Name: RedundantMepMisconfiguration (3631) Type: oamAlarm Package: ethernetoam. RedundantMepMisconfiguration Raised on class: ethernetoam.Mep	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: misconfiguredRedundantMep	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an Active and Redundant MEP do not have the same ID, Operational MAC Address or Sub Group configured.		
Raising condition: ('validRedundantMepConfig' EQUAL 'false')		
Clearing condition: ('validRedundantMepConfig' EQUAL 'true')		
Remedial action: MC-LAG redundant MEP configuration (MEP ID or Mac Address) for Active & Standby Interfaces do not match, this could cause issues with CFM or CCM tests if Active interface changes. Delete and Re-create Standby MEP to match Active.		

Table 21-266 RedundantMepMissing

Alarm	Attributes	Applicable major release
Name: RedundantMepMissing (3632) Type: oamAlarm Package: ethernetoam.RedundantMepMissing Raised on class: ethernetoam.Mep	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: missingRedundantMep	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a MEP misses a redundant counterpart on LAG or SAP.		
Raising condition: (('MC-LAG Inactive' NOT EQUAL 'Not Applicable') AND ('Redundant MEP' EQUAL '\"\"'))		
Clearing condition: (('MC-LAG Inactive' EQUAL 'Not Applicable') OR (('MC-LAG Inactive' NOT EQUAL 'Not Applicable') AND ('Redundant MEP' NOT EQUAL '\"\"')))		
Remedial action: MC-LAG redundant MEP is missing Active & Standby Interfaces, this will cause issues with CFM or CCM tests if Active interface changes. Create missing Active/Standby MEP to match existing.		

Table 21-267 RemoteMepCCMAlarm

Alarm	Attributes	Applicable major release
Name: RemoteMepCCMAlarm (502) Type: oamAlarm Package: ethernetoam.RemoteMepCCMAlarm Raised on class: ethernetoam.Mep	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: missingRemoteMep	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a MEP loses connectivity with one or more remote MEPs. The Remote MEP DB State tab on a MEP lists the missing remote MEPs.		
Raising condition: ('High-Priority Defect' NOT EQUAL '0')		
Clearing condition: ('High-Priority Defect' EQUAL '0')		
Remedial action: MEP has lost communication with Remote MEP defined in Maintenance Association (MEG) Remote MEP list, Either Remote MEP list is incorrect or diagnose connection fault and resolve.		

Table 21-268 RemoteRncvOperDown

Alarm	Attributes	Applicable major release
Name: RemoteRncvOperDown (522) Type: redundancyAlarm Package: multichassis.RemoteRncvOperDown Raised on class: multichassis.MultiChassisRingNode	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: remoteRncvDisconnected	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the remote RNCV Operational State of a ring node is other than Connected or NotTested, which means that the ring node is not connected to the local MC ring group. The alarm clears when the ring node enters the Connected or NotTested state.		
Raising condition: (('Remote Operational State' NOT EQUAL 'Connected') AND ('Remote Operational State' NOT EQUAL 'Not Tested'))		
Clearing condition: (('Remote Operational State' EQUAL 'Connected') OR ('Remote Operational State' EQUAL 'Not Tested'))		
Remedial action: Make sure that ring node is properly connected to MC ring group.		

Table 21-269 RipDown

Alarm	Attributes	Applicable major release
Name: RipDown (72) Type: ProtocolAlarm Package: rip.RipDown Raised on class: rip.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a RIP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The RIP Site is down while it is administratively up. Please check the node e.g, IOM is not shutdown or installed.		

Table 21-270 RipInterfaceDown

Alarm	Attributes	Applicable major release
Name: RipInterfaceDown (11187) Type: InterfaceAlarm Package: rip.RipInterfaceDown Raised on class: rip.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: underlyingResourceUnavailable	Release: • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an RIP interface is operationally down.		
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' NOT EQUAL 'Down')		
Remedial action: This alarm is raised when the RIP interface is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 21-271 RouteDistinguisherNotConfigured

Alarm	Attributes	Applicable major release
Name: RouteDistinguisherNotConfigured (142) Type: configurationAlarm Package: l3fwd.RouteDistinguisherNotConfigured Raised on class: l3fwd.ServiceSite	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: routeDistinguisherNotConfigured	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when no RD is configured for an L3 service site.		
Raising condition: ('routeDistinguisher' EQUAL '\"00 00 00 00 00 00 00 00\"')		
Clearing condition: ('routeDistinguisher' NOT EQUAL '\"00 00 00 00 00 00 00 00\"')		
Remedial action: A configuration error has occurred which must be corrected. The RD must be configured on the L3 Service Site in question.		

Table 21-272 RPKISessionNotEstablished

Alarm	Attributes	Applicable major release
Name: RPKISessionNotEstablished (8136) Type: communicationsAlarm Package: rtr.RPKISessionNotEstablished Raised on class: rtr.RpkiSession	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: RPKISessionNotEstablished	Release: • 12.0 • 13.0 • 14.0
Description: The notification alarm is raised when the RPKI Session is not established.		
Raising condition: (('Session State' NOT EQUAL 'Established'))		
Clearing condition: (('Session State' EQUAL 'Established'))		
Remedial action: Make sure that the Cache server is reachable and is configured properly.		

Table 21-273 RsvpDown

Alarm	Attributes	Applicable major release
Name: RsvpDown (74) Type: ProtocolAlarm Package: rsvp.RsvpDown Raised on class: rsvp.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an RSVP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The RSVP Site is down while it is administratively up. Please check MPLS is enabled and administratively up.		

Table 21-274 RxSectionSynchronizationError

Alarm	Attributes	Applicable major release
Name: RxSectionSynchronizationError (93) Type: communicationsAlarm Package: sonetequipment. RxSectionSynchronizationError Raised on class: sonetequipment. SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: rxSectionSynchronizationError	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0

Table 21-274 RxSectionSynchronizationError (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when a SONET port reports a section synchronization failure. A section synchronization failure occurs when the S1 byte is inconsistent for eight consecutive frames.		
Raising condition: (('Outstanding Alarms'anyBit'RX Section Synchronization Error') AND ('Report Alarms'anyBit'RX Section Synchronization Error'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'RX Section Synchronization Error') AND ('Report Alarms'anyBit'RX Section Synchronization Error')))		
Remedial action: Check the link status between SONET Port and the source.		

Table 21-275 S2LPathBypassTunnelActive

Alarm	Attributes	Applicable major release
Name: S2LPathBypassTunnelActive (777) Type: pathAlarm Package: mpls.S2LPathBypassTunnelActive Raised on class: mpls.S2LPath	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: S2LPathReroutedToBypassTunnel	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the bypass tunnel in an S2L path becomes active. The alarm clears when the bypass tunnel is no longer active, for example, because a primary tunnel failure is resolved or a new path is established.		
Raising condition: ('Bypass Tunnel Active' EQUAL 'true')		
Clearing condition: ('Bypass Tunnel Active' EQUAL 'false')		
Remedial action: Check what caused primary tunnel is down and fix it if possible.		

Table 21-276 S2LPathDown

Alarm	Attributes	Applicable major release
Name: S2LPathDown (778) Type: pathAlarm Package: mpls.S2LPathDown Raised on class: mpls.S2LPath	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: S2LPathDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the S2L path Administrative State is Up and the Operational State is not Up. The alarm clears when the S2L path Operational State changes to Up or the Administrative State changes to Down.		

Table 21-276 S2LPathDown (continued)

Alarm	Attributes	Applicable major release
Raising condition: (('Administrative' EQUAL 'Up') AND ('Operational' NOT EQUAL 'Up'))		
Clearing condition: (('Operational' EQUAL 'Up') OR ('Administrative' NOT EQUAL 'Up'))		
Remedial action: Check the failure code and update accordingly, e.g. whether MPLS/RSVP interfaces, OSPF interfaces are down.		

Table 21-277 SapDDosDynamicExceeded

Alarm	Attributes	Applicable major release
Name: SapDDosDynamicExceeded (4890) Type: securityServiceOrMechanismViolation Package: service.SapDDosDynamicExceeded Raised on class: service.AccessInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ExceedingPolicingParameters	Release: • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the protocol on a particular SAP has been detected as non-conformant to the associated distributed CPU protection policy parameters (on receiving sapDcpDynamicExcd trap) and the alarm status is set as non-conformant When the SAP starts hold-down period for an exceeding protocol (on receiving sapDcpDynamicHoldDownStart trap), the alarm status will change into non-conformant(Hold Down Start). When the SAP completes hold-down period for an exceeding protocol (on receiving sapDcpDynamicHoldDownEnd trap), the alarm status will be changed into non-conformant(Hold Down End). When the protocol for the SAP has been detected as conformant for a period of the configured detection-time after having been previously detected as exceeding and completed any hold-down period (on receiving sapDcpDynamicConform trap), the alarm will be cleared.		
Remedial action: Appropriate configuration changes to the distributed CPU protection policy or to the affected SAP may be required.		

Table 21-278 SapDDosLocMonitorExceeded

Alarm	Attributes	Applicable major release
Name: SapDDosLocMonitorExceeded (4891) Type: securityServiceOrMechanismViolation Package: service.SapDDosLocMonitorExceeded Raised on class: service.AccessInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ExceedingPolicingParameters	Release: • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the local-monitoring-policer for a particular SAP has transitioned from a conformant state to a non-conformant state and the system will attempt to allocate dynamic enforcement policers (on receiving sapDcpLocMonExcd trap), and the alarm status is set as non-conformant When all dynamic enforcement policers associated with a non-conformant local-monitoring-policer have been successfully allocated for the SAP (on receiving sapDcpLocMonExcdAllDynAlloc trap), the alarm status will be changed into non-conformant(Located All). When the local-monitoring-policer for a particular SAP has transitioned from a conformant state to a non-conformant state and the system cannot allocate all the dynamic enforcement policers associated with the distributed CPU protection policy (on receiving sapDcpLocMonExcdDynResource trap), the alarm status will be changed into non-conformant(Cannot Allocate All). When all the previously allocated dynamic enforcement policers for a particular local-monitoring-policer on the associated distributed CPU protection policy have been freed up and all the protocols are once again being monitored by local-monitor (on receiving sapDcpLocMonExcdAllDynFreed trap), the alarm will be cleared.		
Remedial action: Appropriate configuration changes to the distributed CPU protection policy or to the affected SAP may be required.		

Table 21-279 SapDDosStaticExceeded

Alarm	Attributes	Applicable major release
Name: SapDDosStaticExceeded (4892) Type: securityServiceOrMechanismViolation Package: service.SapDDosStaticExceeded Raised on class: service.AccessInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ExceedingPolicingParameters	Release: • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the static-policer on a particular SAP has been detected as non-conformant to the associated distributed CPU protection policy parameters (on receiving sapDcpStaticExcd trap) and the alarm status is set as non-conformant. When the SAP starts hold-down period for the exceeding static-policer (on receiving sapDcpStaticHoldDownStart trap), the alarm status will change into non-conformant(Hold Down Start). When the SAP ends hold-down period for the exceeding static-policer (on receiving sapDcpStaticHoldDownEnd trap), the alarm status will be changed into non-conformant(Hold Down End). When the static-policer for the SAP has been detected as conformant for a period of the configured detection-time after having been previously detected as exceeding and completed any hold-down period (on receiving sapDcpStaticConform trap), the alarm will be cleared.		
Remedial action: Appropriate configuration changes to the distributed CPU protection policy or to the affected SAP may be required.		

Table 21-280 SaveConfigFailed

Alarm	Attributes	Applicable major release
Name: SaveConfigFailed (105) Type: configurationAlarm Package: sw.SaveConfigFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileAccessError	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact your Nokia support representative for assistance.		

Table 21-281 ScheduledPollerProblem

Alarm	Attributes	Applicable major release
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm Package: netw.ScheduledPollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: scheduledResyncFailed	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 21-282 SdpBindingDown

Alarm	Attributes	Applicable major release
Name: SdpBindingDown (221) Type: SdpBindingAlarm Package: svt.SdpBindingDown Raised on class: svt.SdpBinding	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SdpBindingNotReady	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an SDP binding has an Operational State other than Up.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'Standby For BGP Multi-Homing'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'Standby For BGP Multi-Homing'))		
Remedial action: To resolve this alarm check the SDP binding to determine if a configuration mismatch exists. If configuration is determined to be correct then the associated network interface may be down. Further investigation is required to determine why the underlying network interface is down.		

Table 21-283 SdpBindingTunnelDown

Alarm	Attributes	Applicable major release
Name: SdpBindingTunnelDown (222) Type: CircuitAlarm Package: svt.SdpBindingTunnelDown Raised on class: svt.SdpBinding	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SdpTunnelNotReady	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an SDP binding tunnel has an Operational State other than Up.		
Raising condition: (('Operational State' EQUAL 'Tunnel Not Ready') OR ('Operational State' EQUAL 'Tunnel Down') OR ('State Cause'anyBit'Tunnel Oper Down'))		
Clearing condition: (('Operational State' NOT EQUAL 'Tunnel Not Ready') AND ('Operational State' NOT EQUAL 'Tunnel Down') AND NOT (('State Cause'anyBit'Tunnel Oper Down')))		
Remedial action: To resolve this alarm check the endpoints of the SDP binding to determine if a configuration mismatch exists. If configuration matches then the underlying network resource between the endpoints of the SDP may be down. Further investigation is required to determine why the underlying transport network is down.		

Table 21-284 SdpEgressIfsNetDomainInConsistent

Alarm	Attributes	Applicable major release
Name: SdpEgressIfsNetDomainInConsistent (3616) Type: resourceAlarm Package: svt.SdpEgressIfsNetDomainInConsistent Raised on class: svt.Tunnel	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: sdpEgressIfsNetDomainIn-Consistent	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the SDP egress interface's consistency state changes to inconsistent.		
Raising condition: ('Egress Interfaces Consistency State' EQUAL '3')		
Clearing condition: ('Egress Interfaces Consistency State' EQUAL '2')		
Remedial action: To resolve this alarm check egress interfaces of the SDP configuration. If configuration is determined to be correct check underlying physical transport. Further investigation is required.		

Table 21-285 SecondaryPathLimitReached

Alarm	Attributes	Applicable major release
Name: SecondaryPathLimitReached (458) Type: resourceAlarm Package: equipment.SecondaryPathLimitReached Raised on class: equipment.DaughterCard	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceLimitReached	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the Ingress Multicast Path Management secondary path bandwidth limit is reached.		
Raising condition: (('Secondary Path Limit Override' > '0') AND ('Secondary Path In use' >=" (1000 * 'Secondary Path Limit Override')))"		
Clearing condition: (('Secondary Path Limit Override' > '0') AND ('Secondary Path In use' < (1000 * 'Secondary Path Limit Override')))		
Remedial action: Informational - The alarm is raised when the Ingress Multicast Path Management secondary path bandwidth limit is reached. This can be remedied by modifying the secondary path limit located at T1 Paths tab of the multicast bandwidth policy which assigned to the card, or increase the secondary path limit override located at the Daughter Card tab under Daughter Card Slot form.		

Table 21-286 SectionB1Error

Alarm	Attributes	Applicable major release
Name: SectionB1Error (87) Type: communicationsAlarm Package: sonetequipment.SectionB1Error Raised on class: sonetequipment. SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: sectionB1Error	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a SONET port reports a section error condition that a remote NE raises because of b1 errors received from the local NE. The alarm corresponds to the lrei alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Section B1 Error') AND ('Report Alarms'anyBit'Section B1 Error'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Section B1 Error') AND ('Report Alarms'anyBit'Section B1 Error')))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 21-287 SectionLossOfFrame

Alarm	Attributes	Applicable major release
Name: SectionLossOfFrame (90) Type: communicationsAlarm Package: sonetequipment.SectionLossOfFrame Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: sectionLossOfFrame	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a SONET port reports a SLOF error. The alarm corresponds to the slof alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Section Loss of Frame') AND ('Report Alarms'anyBit'Section Loss of Frame'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Section Loss of Frame') AND ('Report Alarms'anyBit'Section Loss of Frame')))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected.		

Table 21-288 SectionLossOfSignal

Alarm	Attributes	Applicable major release
Name: SectionLossOfSignal (91) Type: communicationsAlarm Package: sonetequipment.SectionLossOfSignal Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: sectionLossOfSignal	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a SONET port reports a SLOS error. The alarm corresponds to the slos alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Section Loss of Signal') AND ('Report Alarms'anyBit'Section Loss of Signal'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Section Loss of Signal') AND ('Report Alarms'anyBit'Section Loss of Signal')))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected.		

Table 21-289 SectionS1Failure

Alarm	Attributes	Applicable major release
Name: SectionS1Failure (86) Type: communicationsAlarm Package: sonetequipment.SectionS1Failure Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: sectionS1Failure	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a SONET port reports a section synchronization failure. A section synchronization failure occurs when the S1 byte is inconsistent for eight consecutive frames.		
Raising condition: (('Outstanding Alarms'anyBit'Section S1 Failure') AND ('Report Alarms'anyBit'Section S1 Failure'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Section S1 Failure') AND ('Report Alarms'anyBit'Section S1 Failure')))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 21-290 ServerMaxLeasesReached

Alarm	Attributes	Applicable major release
Name: ServerMaxLeasesReached (3316) Type: configurationAlarm Package: netw.ServerMaxLeasesReached Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DhcpSvrMaxLeasesReached	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the maximum number of leases allocated by local DHCP server is reached.		
Remedial action: Informational - this alarm indicates that the maximum number of leases allocated by a local DHCP server was reached. The address ranges for existing address pools should be extended or a new address pool should be configured for the local DHCP server.		

Table 21-291 ServiceSiteDown

Alarm	Attributes	Applicable major release
Name: ServiceSiteDown (97) Type: serviceAlarm Package: service.ServiceSiteDown Raised on class: service.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: siteDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when all SAPs on a site are operationally down, or when the service tunnels for the site are operationally down. For Backhaul Sites, this alarm is raised when one or more Backhaul Adjacencies is operationally down.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'All Spoke SDP Bindings are Standby'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'All Spoke SDP Bindings are Standby'))		
Remedial action: The network resources (i.e. physical ports for SAPs or Backhaul Sites, or physical ports/LSP) associated with the service site should be examined to determine if/why they are operationally down. The underlying transport network supporting the site may also be unreliable.		

Table 21-292 SessionDown

Alarm	Attributes	Applicable major release
Name: SessionDown (73) Type: ProtocolAlarm Package: rsvp.SessionDown Raised on class: rsvp.Session	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an RSVP session is operationally down.		
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' EQUAL 'Up')		
Remedial action: Please check the RSVP session path to make sure all associated protocols/interfaces/connections are OK.		

Table 21-293 SFMInterconnectPortDegraded

Alarm	Attributes	Applicable major release
Name: SFMInterconnectPortDegraded (5647) Type: communicationsAlarm Package: equipment.SFMInterconnectPortDegraded Raised on class: equipment.SFMInterConnectPort	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SFMInterconnectPortDegraded	Release: • 12.0 • 13.0 • 14.0
Description: The SFMInterconnectPortDegraded alarm is generated by 7950 XRS-40 when the system has detected a reduction in switch fabric capacity because of degrade in a particular SFM interconnect port associated to the switch fabric. This is indicated through the field SfmIcPortDegradeState, the value of the field would not be None in this condition. The value degraded indicates switch fabric capacity on this port is reduced, but SFM interconnect port can still carry some traffic but not all the full capacity of the interconnect port.		
Raising condition: ('Fabric Degrade State' NOT EQUAL 'None')		
Clearing condition: ('Fabric Degrade State' EQUAL 'None')		
Remedial action: Switch fabric capacity is reduced due to the degradation in associated SFM interconnect port, this may not cause any impact to service because of redundancy in the fabric. Although it may not be possible to maintain full service, the SFM interconnection port and attached cable may be the cause for the degradation, replacing the affected components may restore some fabric capacity.		

Table 21-294 ShamLinkDown

Alarm	Attributes	Applicable major release
Name: ShamLinkDown (665) Type: ShamLinkAlarm Package: ospf.ShamLinkDown Raised on class: ospf.ShamLink	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ShamLinkDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a sham link is operationally down.		
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' NOT EQUAL 'Down')		
Remedial action: This alarm is raised when the OSPF sham link is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 21-295 SingleSFMOverloadDetected

Alarm	Attributes	Applicable major release
Name: SingleSFMOverloadDetected (843) Type: ProtocolAlarm Package: l3fwd.SingleSFMOverloadDetected Raised on class: l3fwd.Site	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: signleSfmOverloadDetected	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a device reports a single-SFM overload. The alarm clears when the VR exits the Overload state.		
Raising condition: ('Overload State' EQUAL 'Overload')		
Clearing condition: ('Overload State' EQUAL 'Normal')		
Remedial action: Information - if the the problem persists please contact your Nokia support representative for assistance.		

Table 21-296 SonetPathAlarmIndicationSignal

Alarm	Attributes	Applicable major release
Name: SonetPathAlarmIndicationSignal (129) Type: communicationsAlarm Package: sonetequipment. SonetPathAlarmIndicationSignal Raised on class: sonetequipment. SonetChannelMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: pathAlarmIndicationSignal	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a SONET port reports a PAIS error. The alarm corresponds to the pais alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Path Alarm Indication Signal') AND ('Report Alarms'anyBit'Path Alarm Indication Signal'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Path Alarm Indication Signal') AND ('Report Alarms'anyBit'Path Alarm Indication Signal')))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 21-297 SonetPathB3Error

Alarm	Attributes	Applicable major release
Name: SonetPathB3Error (132) Type: communicationsAlarm Package: sonetequipment.SonetPathB3Error Raised on class: sonetequipment.SonetChannelMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: pathB3Error	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a SONET port reports a path error condition because of b3 errors. The alarm corresponds to the prei alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Path B3 error') AND ('Report Alarms'anyBit'Path B3 error'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Path B3 error') AND ('Report Alarms'anyBit'Path B3 error')))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 21-298 SonetPathLossOfCodegroupDelineationError

Alarm	Attributes	Applicable major release
Name: SonetPathLossOfCodegroupDelineationError (248) Type: communicationsAlarm Package: sonetequipment.SonetPathLossOfCodegroupDelineationError Raised on class: sonetequipment.SonetChannelMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: pathLossOfCodegroupDelineationError	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a SONET port reports a PLCD error. The alarm corresponds to the plcd alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Path Loss of Codegroup Delineation Error') AND ('Report Alarms'anyBit'Path Loss of Codegroup Delineation Error'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Path Loss of Codegroup Delineation Error') AND ('Report Alarms'anyBit'Path Loss of Codegroup Delineation Error')))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 21-299 SonetPathLossOfPointer

Alarm	Attributes	Applicable major release
Name: SonetPathLossOfPointer (130) Type: communicationsAlarm Package: sonetequipment.SonetPathLossOfPointer Raised on class: sonetequipment.SonetChannelMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: pathLossOfPointer	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a SONET port reports a PLOP error. The alarm corresponds to the plop alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Path Loss of Pointer') AND ('Report Alarms'anyBit'Path Loss of Pointer'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Path Loss of Pointer') AND ('Report Alarms'anyBit'Path Loss of Pointer')))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 21-300 SonetPathPayloadMismatch

Alarm	Attributes	Applicable major release
Name: SonetPathPayloadMismatch (133) Type: communicationsAlarm Package: sonetequipment.SonetPathPayloadMismatch Raised on class: sonetequipment.SonetChannelMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: pathPayloadMismatch	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a SONET port reports a PPLM error on a channel, after which the channel is set operationally down. The alarm corresponds to the pplm alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Path Payload Mismatch') AND ('Report Alarms'anyBit'Path Payload Mismatch'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Path Payload Mismatch') AND ('Report Alarms'anyBit'Path Payload Mismatch')))		
Remedial action: Informational only.		

Table 21-301 SonetPathRemoteB3Error

Alarm	Attributes	Applicable major release
Name: SonetPathRemoteB3Error (134) Type: communicationsAlarm Package: sonetequipment.SonetPathRemoteB3Error Raised on class: sonetequipment.SonetChannelMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: pathRemoteB3Error	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a SONET port reports a path error condition that a remote NE raises because of b3 errors received from the local NE. The alarm corresponds to the prei alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Path Remote B3 Error') AND ('Report Alarms'anyBit'Path Remote B3 Error'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Path Remote B3 Error') AND ('Report Alarms'anyBit'Path Remote B3 Error')))		
Remedial action: Check the remote NE is configured correctly and its physical layer cabling is operating correctly.		

Table 21-302 SonetPathRemoteDefectIndication

Alarm	Attributes	Applicable major release
Name: SonetPathRemoteDefectIndication (131) Type: communicationsAlarm Package: sonetequipment.SonetPathRemoteDefectIndication Raised on class: sonetequipment.SonetChannelMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: pathRemoteDefectIndication	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a SONET port reports a remote PAIS error. The alarm corresponds to the pais alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Path Remote Defect Indication') AND ('Report Alarms'anyBit'Path Remote Defect Indication'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Path Remote Defect Indication') AND ('Report Alarms'anyBit'Path Remote Defect Indication')))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 21-303 SonetPathUnequippedPathError

Alarm	Attributes	Applicable major release
Name: SonetPathUnequippedPathError (143) Type: communicationsAlarm Package: sonetequipment. SonetPathUnequippedPathError Raised on class: sonetequipment. SonetChannelMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: pathUnequippedPathError	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a SONET port reports a path unequipped error. The alarm corresponds to the Path Alarm Unequipped Path Error alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Path Alarm Unequipped Path Error') AND ('Report Alarms'anyBit'Path Alarm Unequipped Path Error'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Path Alarm Unequipped Path Error') AND ('Report Alarms'anyBit'Path Alarm Unequipped Path Error')))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 21-304 SpbAdjacencyDown

Alarm	Attributes	Applicable major release
Name: SpbAdjacencyDown (4392) Type: adjacencyAlarm Package: spb.SpbAdjacencyDown Raised on class: spb.AbstractInterface	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IsisInterfaceDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an SPB IS-IS interface has no adjacencies, for example, because the IS-IS protocol on the remote site is down.		
Raising condition: (('Adjacency Count' EQUAL '0L'))		
Clearing condition: (('Adjacency Count' > '0L'))		
Remedial action: Check remote site to see if corresponding IS-IS interface is configured and admin up.		

Table 21-305 SpbInterfaceDown

Alarm	Attributes	Applicable major release
Name: SpbInterfaceDown (4393) Type: ProtocolAlarm Package: spb.SpbInterfaceDown Raised on class: spb.AbstractInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an SPB IS-IS interface has an Operational State other than Up.		
Raising condition: ('operationalState' EQUAL 'Down')		
Clearing condition: ('operationalState' NOT EQUAL 'Down')		
Remedial action: Check if underlying port is down, or associated network interface is down.		

Table 21-306 SpbSiteDown

Alarm	Attributes	Applicable major release
Name: SpbSiteDown (4396) Type: ProtocolAlarm Package: spb.SpbSiteDown Raised on class: spb.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an SPB site has an Operational State other than Up.		
Raising condition: ('Operational State' NOT EQUAL 'Up')		
Clearing condition: ('Operational State' EQUAL 'Up')		
Remedial action: Check if the administrative state is down. If the administrative state is up, then check the ISIS instance associated with the SPB and make sure it is up.		

Table 21-307 StatsRetrieveFailed

Alarm	Attributes	Applicable major release
Name: StatsRetrieveFailed (244) Type: configurationAlarm Package: sw.StatsRetrieveFailed Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: fileTransferFailure	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 21-308 StpExceptionCondition

Alarm	Attributes	Applicable major release
Name: StpExceptionCondition (297) Type: AccessInterfaceAlarm Package: l2fwd.StpExceptionCondition Raised on class: l2fwd.AccessInterfaceStp	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: StpException	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a SAP detects an STP exception condition, for example, one-way communication or a downstream loop. The alarm clears when the STP condition changes.		
Raising condition: (('STP Exception Condition' NOT EQUAL 'None') AND ('Administrative State' EQUAL 'Up'))		
Clearing condition: (('STP Exception Condition' EQUAL 'None') OR ('Administrative State' EQUAL 'Down'))		
Remedial action: Check 'STP Exception Condition' field for more details and fix the STP exception.		

Table 21-309 StpRootGuardViolation

Alarm	Attributes	Applicable major release
Name: StpRootGuardViolation (503) Type: AccessInterfaceAlarm Package: l2fwd.StpRootGuardViolation Raised on class: l2fwd.AccessInterfaceStp	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: spanningTreeTopology-Changed	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a SAP detects an STP root guard violation.		
Raising condition: ('Root Guard Violation' EQUAL 'true')		
Clearing condition: ('Root Guard Violation' NOT EQUAL 'true')		
Remedial action: Set 'Root Guard' to false if not necessary.		

Table 21-310 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major release
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed Package: netw.SubscriberSystemNextHopUsageHigh Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

Table 21-311 SubSysChassMemoryUsageHi

Alarm	Attributes	Applicable major release
Name: SubSysChassMemoryUsageHi (5656) Type: thresholdCrossed Package: equipment.SubSysChassMemoryUsageHi Raised on class: equipment.Shelf	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: This alarm is raised when the memory usage by subscriber management on this system or chassis reaches its high watermark ('true').		
Raising condition: ('Memory Usage High' EQUAL 'True')		
Clearing condition: (('Memory Usage High' EQUAL 'False') OR ('Memory Usage High' EQUAL 'unspecified'))		
Remedial action: The memory usage by subscriber management on this system has reached its high watermark. Please check your memory usage.		

Table 21-312 svcMacFdbTabelFull

Alarm	Attributes	Applicable major release
Name: svcMacFdbTabelFull (3890) Type: resourceAlarm Package: netw.svcMacFdbTabelFull Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceLimitReached	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the system limit of FDB records is reached.		
Remedial action: The alarm is raised when system limit of FDB records is reached.		

Table 21-313 TeLinkDown (gmplsuni)

Alarm	Attributes	Applicable major release
Name: TeLinkDown (8386) Type: ProtocolAlarm Package: gmplsuni.TeLinkDown Raised on class: gmplsuni.TeLink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 13.0 • 14.0
Description: The alarm is raised when the GMPLS TE link's Administrative State is Up and the Operational State is Down. The alarm clears when the GMPLS TE link's Operational State changes to Up or the Administrative State changes to Down.		

Table 21-313 TeLinkDown (gmplsuni) (continued)

Alarm	Attributes	Applicable major release
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The Operational state of the GMPLS TE link is down, despite the Administrative state being up. Check if the associated LMP TE link or the GMPLS tunnel group endpoint is down.		

Table 21-314 TeLinkDown (lmp)

Alarm	Attributes	Applicable major release
Name: TeLinkDown (8386) Type: ProtocolAlarm Package: lmp.TeLinkDown Raised on class: lmp.TeLink	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 13.0 • 14.0
Description: The alarm is raised when a Traffic-Engineering Link has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: A network configuration issue has been detected. Ensure the Traffic-Engineering Link configuration between the local node and the peer node is consistent.		

Table 21-315 TemperatureThresholdCrossed

Alarm	Attributes	Applicable major release
Name: TemperatureThresholdCrossed (7) Type: environmentalAlarm Package: equipment.TemperatureThresholdCrossed Raised on class: equipment.Environment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentOverheated	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a temperature crosses a threshold.		
Raising condition: ('temperatureThresholdCrossed' EQUAL 'true')		
Clearing condition: ('temperatureThresholdCrossed' EQUAL 'false')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 21-316 TmnxEqPortEtherLoopDetected

Alarm	Attributes	Applicable major release
Name: TmnxEqPortEtherLoopDetected (461) Type: portEtherLoopDetected Package: ethernetequipment.TmnxEqPortEtherLoopDetected Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: HighBer	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a device detects a physical loop on an Ethernet port.		
Raising condition: (('Down When Looped Status' EQUAL 'Loop Detected'))		
Clearing condition: (('Down When Looped Status' EQUAL 'No Loop Detected'))		
Remedial action: An Ethernet port has been mis-cabled - please remove the loopback cable on the port.		

Table 21-317 TPLSPDown

Alarm	Attributes	Applicable major release
Name: TPLSPDown (4900) Type: pathAlarm Package: mplstp.TPLSPDown Raised on class: mplstp.TPLsp	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: TPLSPDown	Release: • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the TP LSP Administrative State is Up and the Operational State is Down. The alarm clears when the TP LSP Operational State changes to Up or the Administrative State changes to Down.		
Raising condition: (('Administrative' EQUAL 'Up') AND ('Operational' NOT EQUAL 'Up'))		
Clearing condition: (('Operational' EQUAL 'Up') OR ('Administrative' NOT EQUAL 'Up'))		
Remedial action: The Operational state of the TP LSP is down, despite the Administrative state being up. Review the configuration and make sure that the destination information is set correctly and that the Administrative state is up.		

Table 21-318 TPLSPPATHDown

Alarm	Attributes	Applicable major release
Name: TPLSPPATHDown (4901) Type: pathAlarm Package: mplstp.TPLSPPATHDown Raised on class: mplstp.TPLspPath	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: TPLSPPATHDown	Release: • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the TP LSP Path Administrative State is Up and the Operational State is Down. The alarm clears when the TP LSP Path Operational State changes to Up or the Administrative State changes to Down.		

Table 21-318 TPLSPPATHDown (continued)

Alarm	Attributes	Applicable major release
Raising condition: (('Administrative' EQUAL 'Up') AND ('Operational' NOT EQUAL 'Up'))		
Clearing condition: (('Operational' EQUAL 'Up') OR ('Administrative' NOT EQUAL 'Up'))		
Remedial action: The Operational state of the TP LSP Path is down, despite the Administrative state being up. Review the configuration and make sure that the Administrative state is up, the egress and ingress labels are set and the Out-Link interface is operationally up.		

Table 21-319 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major release
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm Package: netw.TrapDestinationMisconfigured Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trapDestinationMisconfigured Applicable probable causes: • trapDestinationMisconfigured • duplicateTrapLogId	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 21-320 TrapReceivingFailure

Alarm	Attributes	Applicable major release
Name: TrapReceivingFailure (1083) Type: communications Package: netw.TrapReceivingFailure Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: trapsWillNotBeSent	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		

Table 21-320 TrapReceivingFailure (continued)

Alarm	Attributes	Applicable major release
Raising condition: ((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')))		
Clearing condition: ((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

Table 21-321 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major release
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications Package: netw. TrapRoutePreferenceRedundancyMissing Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trapsRedundancyMissing	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: ((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')))		
Clearing condition: ((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None')))		
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

Table 21-322 TunnelAdministrativelyDown (mpls)

Alarm	Attributes	Applicable major release
Name: TunnelAdministrativelyDown (523) Type: pathAlarm Package: mpls.TunnelAdministrativelyDown Raised on class: mpls.Tunnel	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tunnelAdministrativelyDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 5620 SAM detects that an MPLS path is administratively down.		
Raising condition: ('Administrative' NOT EQUAL 'Up')		
Clearing condition: ('Administrative' EQUAL 'Up')		
Remedial action: Turn up the corresponding MPLS path.		

Table 21-323 TunnelAdministrativelyDown (svt)

Alarm	Attributes	Applicable major release
Name: TunnelAdministrativelyDown (523) Type: pathAlarm Package: svt.TunnelAdministrativelyDown Raised on class: svt.Tunnel	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tunnelAdministrativelyDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 5620 SAM detects that a service tunnel is administratively down.		
Raising condition: ('administrativeState' NOT EQUAL 'Up')		
Clearing condition: ('administrativeState' EQUAL 'Up')		
Remedial action: Informational - an operator has manually turned down a service tunnel.		

Table 21-324 TunnelDown (mpls)

Alarm	Attributes	Applicable major release
Name: TunnelDown (30) Type: pathAlarm Package: mpls.TunnelDown Raised on class: mpls.Tunnel	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tunnelDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an MPLS path has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative' EQUAL 'Up') AND ('Operational' NOT EQUAL 'Up'))		
Clearing condition: (('Operational' EQUAL 'Up') OR ('Administrative' NOT EQUAL 'Up'))		
Remedial action: Check the network resources along the path.		

Table 21-325 TunnelDown (svt)

Alarm	Attributes	Applicable major release
Name: TunnelDown (30) Type: pathAlarm Package: svt.TunnelDown Raised on class: svt.AbstractTunnel	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tunnelDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 5620 SAM detects that a service tunnel is operationally down.		
Raising condition: (('Administrative' EQUAL 'Up') AND ('Operational' NOT EQUAL 'Up'))		
Clearing condition: (('Operational' EQUAL 'Up') OR ('Administrative' NOT EQUAL 'Up'))		
Remedial action: This alarm indicates that a problem has been made in the underlying transport network. If the alarm persists or re-occurs frequently then investigation of the underlying transport issues is warranted.		

Table 21-326 TxSectionSynchronizationError

Alarm	Attributes	Applicable major release
Name: TxSectionSynchronizationError (92) Type: communicationsAlarm Package: sonetequipment. TxSectionSynchronizationError Raised on class: sonetequipment. SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: txSectionSynchronizationError	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a SONET port reports an SS1F error. The alarm corresponds to the ss1f alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'TX Section Synchronization Error') AND ('Report Alarms'anyBit'TX Section Synchronization Error'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'TX Section Synchronization Error') AND ('Report Alarms'anyBit'TX Section Synchronization Error')))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 21-327 UnidentifiedNode

Alarm	Attributes	Applicable major release
Name: UnidentifiedNode (1922) Type: communicationsAlarm Package: netw.UnidentifiedNode Raised on class: netw.DiscoveredNode	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unidentifiedNode	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 21-328 UnmanageFailed

Alarm	Attributes	Applicable major release
Name: UnmanageFailed (300) Type: discoveryControlAlarm Package: netw.UnmanageFailed Raised on class: netw.NodeDiscoveryControl	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unableToDeleteNode	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'Unmanage Failed')		
Clearing condition: ('Site State' NOT EQUAL 'Unmanage Failed')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 21-329 UnsupportedSFFinInterConnectPort

Alarm	Attributes	Applicable major release
Name: UnsupportedSFFinInterConnectPort (5659) Type: equipmentAlarm Package: equipment. UnsupportedSFFinInterConnectPort Raised on class: equipment.InterConnectPort	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: UnsupportedSFFinInterConnectPort	Release: • 12.0 • 13.0 • 14.0
Description: The UnsupportedSFFinIntetrConnectPort alarm is generated by 7950 XRS-40 when SFF is not recognized by the system or wrong SFF model different from which Nokia has recommended is used. The SFF device is not operational and the associated interconnect port cannot be used.		
Raising condition: ('Operational State' EQUAL 'Unsupported SFF')		
Clearing condition: ('Operational State' EQUAL 'Up')		
Remedial action: The Small Form Factor (SFF) used in interconnect port seems to be unsupported type, please use the appropriate SFF which Nokia has recommended, if the SFF is correct please remove and re-insert the SFF device. If the problem persists then replace the SFF device.		

Table 21-330 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major release
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm Package: netw.UpgradedBuildVersionMismatch Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: upgradedImageNotBooted	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 21-331 upgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: upgradedCardAlarm (255) Type: softwareAlarm Package: equipment.upgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: upgradedCard	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 21-332 UplinkDown

Alarm	Attributes	Applicable major release
Name: UplinkDown (11062) Type: virtualSwitchAlarm Package: dctr.UplinkDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsAllDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when all connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '2'))		
Clearing condition: (('uplinkState' NOT EQUAL '2'))		
Remedial action: This alarm is raised when all connections associated to the uplink lost connectivity.		

Table 21-333 UplinkPartiallyDown

Alarm	Attributes	Applicable major release
Name: UplinkPartiallyDown (11063) Type: virtualSwitchAlarm Package: dctr.UplinkPartiallyDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when some connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '3'))		
Clearing condition: (('uplinkState' NOT EQUAL '3'))		
Remedial action: This alarm is raised when a connection of the uplink lost connectivity but at least one connection remains connected.		

Table 21-334 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm Package: sw.VersionConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: versionMismatch	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 21-335 VirtualLinkDown

Alarm	Attributes	Applicable major release
Name: VirtualLinkDown (122) Type: VirtualLinkAlarm Package: ospf.VirtualLinkDown Raised on class: ospf.VirtualLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: VirtualLinkDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a virtual link is Down.		
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' NOT EQUAL 'Down')		
Remedial action: This alarm is raised when the OSPF virtual link is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 21-336 VirtualNeighborDown

Alarm	Attributes	Applicable major release
Name: VirtualNeighborDown (123) Type: VirtualNeighborDown Package: ospf.VirtualNeighborDown Raised on classes: • ospf.ShamLink • ospf.VirtualLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: VirtualNeighborDown	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a neighbor virtual link is operationally down.		
Raising condition: ('neighborCount' EQUAL '0L')		
Clearing condition: ('neighborCount' NOT EQUAL '0L')		
Remedial action: This alarm is raised when the OSPF neighbor virtual link is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 21-337 VRtrIfDDosDynamicExceeded

Alarm	Attributes	Applicable major release
Name: VRtrIfDDosDynamicExceeded (4887) Type: securityServiceOrMechanismViolation Package: rtr.VRtrIfDDosDynamicExceeded Raised on class: rtr.VirtualInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ExceedingPolicingParameters	Release: • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the protocol on a particular network interface has been detected as non-conformant to the associated distributed CPU protection policy parameters (on receiving vRtrIfDcpDynamicExcd trap) and the alarm status is set as non-conformant When the network interface starts hold-down period for an exceeding protocol (on receiving vRtrIfDcpDynamicHold-DownStart trap), the alarm status will change into non-conformant(Hold Down Start). When the network interface completes hold-down period for an exceeding protocol (on receiving vRtrIfDcpDynamicHoldDownEnd trap), the alarm status will be changed into non-conformant(Hold Down End). When the protocol for the network interface has been detected as conformant for a period of the configured detection-time after having been previously detected as exceeding and completed any hold-down period (on receiving vRtrIfDcpDynamicConform trap), the alarm will be cleared.		
Remedial action: Appropriate configuration changes to the distributed CPU protection policy or to the affected network interface may be required.		

Table 21-338 VRtrIfDDosLocMonitorExceeded

Alarm	Attributes	Applicable major release
Name: VRtrIfDDosLocMonitorExceeded (4888) Type: securityServiceOrMechanismViolation Package: rtr.VRtrIfDDosLocMonitorExceeded Raised on class: rtr.VirtualInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ExceedingPolicingParameters	Release: • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the local-monitoring-policer for a particular network interface has transitioned from a conformant state to a non-conformant state and the system will attempt to allocate dynamic enforcement policers (on receiving sapDcpLocMonExcd trap), and the alarm status is set as non-conformant When all dynamic enforcement policers associated with a non-conformant local-monitoring-policer have been successfully allocated for the network interface (on receiving sapDcpLocMonExcdAllDynAlloc trap), the alarm status will be changed into non-conformant(Located All). When the local-monitoring-policer for a particular network interface has transitioned from a conformant state to a non-conformant state and the system cannot allocate all the dynamic enforcement policers associated with the distributed CPU protection policy (on receiving sapDcpLocMonExcdDynResource trap), the alarm status will be changed into non-conformant(Cannot Allocate All). When all the previously allocated dynamic enforcement policers for a particular local-monitoring-policer on the associated distributed CPU protection policy have been freed up and all the protocols are once again being monitored by local-monitor (on receiving sapDcpLocMonExcdAllDynFreed trap), the alarm will be cleared.		
Remedial action: Appropriate configuration changes to the distributed CPU protection policy or to the affected network interface may be required.		

Table 21-339 VRtrIfDDosStaticExceeded

Alarm	Attributes	Applicable major release
Name: VRtrIfDDosStaticExceeded (4889) Type: securityServiceOrMechanismViolation Package: rtr.VRtrIfDDosStaticExceeded Raised on class: rtr.VirtualInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ExceedingPolicingParameters	Release: • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the static-policer on a particular network interface has been detected as non-conformant to the associated distributed CPU protection policy parameters (on receiving vRtrIfDcpStaticExcd trap) and the alarm status is set as non-conformant. When the network interface starts hold-down period for the exceeding static-policer (on receiving vRtrIfDcpStaticHold-DownStart trap), the alarm status will change into non-conformant(Hold Down Start). When the network interface ends hold-down period for the exceeding static-policer (on receiving vRtrIfDcpStaticHoldDownEnd trap), the alarm status will be changed into non-conformant(Hold Down End). When the static-policer for the network interface has been detected as conformant for a period of the configured detection-time after having been previously detected as exceeding and completed any hold-down period (on receiving vRtrIfDcpStaticConform trap), the alarm will be cleared.		
Remedial action: Appropriate configuration changes to the distributed CPU protection policy or to the affected network interface may be required.		

Table 21-340 WaveTrackerEncoderDegrade

Alarm	Attributes	Applicable major release
Name: WaveTrackerEncoderDegrade (821) Type: communicationsAlarm Package: ethernetequipment.WaveTrackerEncoderDegrade Raised on class: ethernetequipment.WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EncoderDegrade	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a device reports an encoder degradation on a wavelength tracker interface.		
Raising condition: (('Configured Alarms'anyBit'Encoder Degrade') AND ('Reported Alarms'anyBit'Encoder Degrade'))		
Clearing condition: NOT ((('Configured Alarms'anyBit'Encoder Degrade') AND ('Reported Alarms'anyBit'Encoder Degrade')))		
Remedial action: The OT or SVAC card has detected a DSP failure and this means that the wavelength tracker encode power control is compromised. If this occurs during steady state operation, there is a high probability that the services carried by this OT or SVAC are unaffected. To clear this alarm, replace the card. The card replacement procedure is service affecting and should be conducted during a maintenance window.		

Table 21-341 WaveTrackerEncoderFailure

Alarm	Attributes	Applicable major release
Name: WaveTrackerEncoderFailure (822) Type: communicationsAlarm Package: ethernetequipment.WaveTrackerEncoderFailure Raised on class: ethernetequipment.WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EncoderFailure	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a device reports an encoder failure on a wavelength tracker interface.		
Raising condition: (('Configured Alarms'anyBit'Encoder Failure') AND ('Reported Alarms'anyBit'Encoder Failure'))		
Clearing condition: NOT ((('Configured Alarms'anyBit'Encoder Failure') AND ('Reported Alarms'anyBit'Encoder Failure')))		
Remedial action: A cold reset, reseat, or replacement of a card is service impacting if the card is currently carrying services. If there are services currently carried over the card, it may be best to wait for a maintenance window before resetting, replacing, or reseating the card.Confirm that replacement OT or SVAC card supports the same band as the alarmed OT or SVAC card and connect all fibers to the replacement OT or SVAC card.		

Table 21-342 WaveTrackerMissingPluggableVOA

Alarm	Attributes	Applicable major release
Name: WaveTrackerMissingPluggableVOA (4618) Type: communicationsAlarm Package: ethernetequipment. WaveTrackerMissingPluggableVOA Raised on class: ethernetequipment. WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MissingPluggableVOA	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a device reports a power control high limit on a wavelength tracker interface.		
Raising condition: (('Configured Alarms'anyBit'Missing Pluggable VOA') AND ('Reported Alarms'anyBit'Missing Pluggable VOA'))		
Clearing condition: NOT ((('Configured Alarms'anyBit'Missing Pluggable VOA') AND ('Reported Alarms'anyBit'Missing Pluggable VOA')))		
Remedial action: Informational - no corrective action required.		

Table 21-343 WaveTrackerPowerControlDegrade

Alarm	Attributes	Applicable major release
Name: WaveTrackerPowerControlDegrade (823) Type: communicationsAlarm Package: ethernetequipment. WaveTrackerPowerControlDegrade Raised on class: ethernetequipment. WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PowerControlDegrade	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a device reports a power control degradation on a wavelength tracker interface.		
Raising condition: (('Configured Alarms'anyBit'Power Control Degrade') AND ('Reported Alarms'anyBit'Power Control Degrade'))		
Clearing condition: NOT ((('Configured Alarms'anyBit'Power Control Degrade') AND ('Reported Alarms'anyBit'Power Control Degrade')))		
Remedial action: check to see that the fibering for that card is correct. Remove the fiber from the Tx port on the transponder card. If the condition clears after 20 seconds, then this is a misfibering problem.		

Table 21-344 WaveTrackerPowerControlFailure

Alarm	Attributes	Applicable major release
Name: WaveTrackerPowerControlFailure (824) Type: communicationsAlarm Package: ethernetequipment. WaveTrackerPowerControlFailure Raised on class: ethernetequipment. WaveLengthTracker	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PowerControlFailure	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a device reports a power control failure on a wavelength tracker interface.		
Raising condition: (('Configured Alarms'anyBit'Power Control Failure') AND ('Reported Alarms'anyBit'Power Control Failure'))		
Clearing condition: NOT ((('Configured Alarms'anyBit'Power Control Failure') AND ('Reported Alarms'anyBit'Power Control Failure')))		
Remedial action: Either alarmed card has detected equipment problem or there is misfibering problem such that a light-emitting fiber has been plugged into the Tx port of aWavelength Tracker encoder-equipped transponder card.If the card is a transponder card that is equipped with aWavelength Tracker encoder, check to see that the fibering for that card is correct. Remove the fiber from the Tx port on the transponder card. If the condition clears after 20 seconds, then this is a misfibering problem.the card is an SVAC, or if there is no fibering problem on the transponder card.Disconnect all fibers on the alarmed card and Replace the card. connect all fibers to the replacement card		

Table 21-345 WaveTrackerPowerControlHighlimit

Alarm	Attributes	Applicable major release
Name: WaveTrackerPowerControlHighlimit (825) Type: communicationsAlarm Package: ethernetequipment. WaveTrackerPowerControlHighlimit Raised on class: ethernetequipment. WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PowerControlHighlimit	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a device reports a power control high limit on a wavelength tracker interface.		
Raising condition: (('Configured Alarms'anyBit'Power Control High limit reached') AND ('Reported Alarms'anyBit'Power Control High limit reached'))		
Clearing condition: NOT ((('Configured Alarms'anyBit'Power Control High limit reached') AND ('Reported Alarms'anyBit'Power Control High limit reached')))		
Remedial action: Informational - no corrective action required.		

Table 21-346 WaveTrackerPowerControllowlimit

Alarm	Attributes	Applicable major release
Name: WaveTrackerPowerControllowlimit (826) Type: communicationsAlarm Package: ethernetequipment. WaveTrackerPowerControllowlimit Raised on class: ethernetequipment. WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PowerControllowlimit	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a device reports a power control low limit on a wavelength tracker interface.		
Raising condition: (('Configured Alarms'anyBit'Power Control Low limit reached') AND ('Reported Alarms'anyBit'Power Control Low limit reached'))		
Clearing condition: NOT ((('Configured Alarms'anyBit'Power Control Low limit reached') AND ('Reported Alarms'anyBit'Power Control Low limit reached')))		
Remedial action: Informational - no corrective action required.		

Table 21-347 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major release
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm Package: netw.WrongCpaaSoftwareVersion Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL '\"TiMOS-B-3.0.Generic \"') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Clearing condition: (('Software Version' NOT EQUAL '\"TiMOS-B-3.0.Generic \"') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

Table 21-348 XplError

Alarm	Attributes	Applicable major release
Name: XplError (573) Type: hardwareAnomaly Package: equipment.XplError Raised on class: equipment.DaughterCard	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: xplError	Release: • 10.0 • 11.0 • 11.0.R4 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an MDA reports persistent XPL Errors.		
Raising condition: ('Number Of Notifications' NOT EQUAL '0')		
Clearing condition: ('Number Of Notifications' EQUAL '0')		
Remedial action: Informational - if the condition persists then the MDA indicated in the alarm should be replaced.		

22 8000 MDR

22.1 Alarms

Alarms

Note: Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see Chapter 39, “Unspecified NE”.

Table 22-1 ActiveAbnormalCondition

Alarm	Attributes	Applicable major release
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm Package: netw.ActiveAbnormalCondition Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState	Release: • 2.2.1
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

Table 22-2 AggregatedVFLPortDown

Alarm	Attributes	Applicable major release
Name: AggregatedVFLPortDown (5436) Type: equipmentAlarm Package: equipment.AggregatedVFLPortDown Raised on class: equipment.Shelf	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: connectivityIssue	Release: • 2.2.1
Description: The alarm is generated when the aggregated virtual fabric link on the virtual chassis slot is down.		
Raising condition: (('Shelf Type' EQUAL '7850') AND ('Total Slots' EQUAL '4') AND ('Virtual Fabric Link State' NOT EQUAL 'Up'))		
Clearing condition: (('Shelf Type' EQUAL '7850') AND ('Total Slots' EQUAL '4') AND ('Virtual Fabric Link State' EQUAL 'Up'))		
Remedial action: The alarm is raised when the aggregated virtual fabric link on the virtual chassis is down. Please check the virtual fabric links for the virtual chassis setup.		

Table 22-3 AGWDiameterPeerDown

Alarm	Attributes	Applicable major release
Name: AGWDiameterPeerDown (844) Type: EpcAlarm Package: lte.AGWDiameterPeerDown Raised on class: lte.AGWDiameterPeer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerDown	Release: • 2.2.1
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 22-4 AuxiliaryServerStatus

Alarm	Attributes	Applicable major release
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm Package: server.AuxiliaryServerStatus Raised on class: server.AuxiliaryServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • 2.2.1
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 22-5 BareMetalReachabilityDown

Alarm	Attributes	Applicable major release
Name: BareMetalReachabilityDown (10273) Type: virtualPortAlarm Package: dctr.BareMetalReachabilityDown Raised on class: dctr.BMDevice	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BareMetalReachability-DownOrDeleted	Release: • 2.2.1
Description: The alarm is raised when Bare Metal server is reachability down.		
Raising condition: (('bgpReachabilityState' NOT EQUAL '0'))		
Clearing condition: (('bgpReachabilityState' EQUAL '0'))		

Table 22-5 BareMetalReachabilityDown (continued)

Alarm	Attributes	Applicable major release
Remedial action: This alarm can be cleared when bare metal device BGP prefix is up. Check for virtual switch controller down or virtual switch down or interface/port down in underlay network (hence the BGP prefix not advertised).		

Table 22-6 BootableConfigBackupFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigBackupFailed (103) Type: configurationAlarm Package: sw.BootableConfigBackupFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • 2.2.1
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 22-7 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm Package: sw.BootableConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • 2.2.1
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 22-8 BootParametersMisconfigured

Alarm	Attributes	Applicable major release
Name: BootParametersMisconfigured (35) Type: configurationAlarm Package: netw.BootParametersMisconfigured Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistentIndexFailure Applicable probable causes: • persistentIndexFailure • configFileBootFailure	Release: • 2.2.1
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND ((('Config File Status' NOT EQUAL 'Executed Successfully') AND ('Config File Status' NOT EQUAL 'configFileStatus_unspecified')) OR (('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded') AND ('Persistent Index Status' NOT EQUAL 'persistentIndexStatus_unspecified'))))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

Table 22-9 ClientDelegateServerStatus

Alarm	Attributes	Applicable major release
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm Package: server.ClientDelegateServerStatus Raised on class: server.ClientDelegateServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • 2.2.1
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 22-10 CmuManagementFailed

Alarm	Attributes	Applicable major release
Name: CmuManagementFailed (10040) Type: communicationsAlarm Package: lte.CmuManagementFailed Raised on class: lte.CompactMobilityUnit	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ftpFailed	Release: • 2.2.1

Table 22-10 CmuManagementFailed (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when SAM fails to manage a 9430 Compact Mobility Unit due to an FTP failure.		
Raising condition: ('Management State' EQUAL 'FTP Failed')		
Clearing condition: ('Management State' EQUAL 'Managed')		
Remedial action: Verify FTP connectivity between the 5620 SAM and the 9430 Compact Mobility Unit, then re-attempt to manage.		

Table 22-11 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm Package: equipment. ContainingEquipmentAdministrativelyDown Raised on class: equipment.Port	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentAdminist-rativelyDown	Release: • 2.2.1
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 22-12 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm Package: equipment.ContainingEquipmentMismatch Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentMismatch	Release: • 2.2.1
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 22-13 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm Package: equipment. ContainingEquipmentOperationallyDown Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentDown	Release: • 2.2.1
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationllyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

Table 22-14 CorruptImageFile

Alarm	Attributes	Applicable major release
Name: CorruptImageFile (171) Type: configurationAlarm Package: mediation.CorruptImageFile Raised on class: mediation. AbstractSoftwareFolderDescriptor	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile	Release: • 2.2.1
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 22-15 downgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: downgradedCardAlarm (256) Type: softwareAlarm Package: equipment.downgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: downgradedCard	Release: • 2.2.1
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		

Table 22-15 downgradedCardAlarm (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 22-16 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm Package: equipment.EquipmentAdministrativelyDown Raised on class: equipment.Equipment	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentAdministratively-Down	Release: • 2.2.1
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 22-17 EquipmentDegraded

Alarm	Attributes	Applicable major release
Name: EquipmentDegraded (604) Type: equipmentAlarm Package: equipment.EquipmentDegraded Raised on class: equipment.FanTray	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: singleFanFailure	Release: • 2.2.1
Description: The alarm is raised when a single fan fails. The chassis attempts to continue operating within the normal temperature range using only the remaining fans.		
Raising condition: ('Device State' EQUAL 'MinorFailure')		
Clearing condition: ('Device State' NOT EQUAL 'MinorFailure')		
Remedial action: The failed fan unit should be replaced.		

Table 22-18 EquipmentDown

Alarm	Attributes	Applicable major release
Name: EquipmentDown (10) Type: equipmentAlarm Package: equipment.EquipmentDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: inoperableEquipment	Release: • 2.2.1

Table 22-18 EquipmentDown (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 22-19 EquipmentInTest

Alarm	Attributes	Applicable major release
Name: EquipmentInTest (11) Type: equipmentAlarm Package: equipment.EquipmentInTest Raised on class: equipment.Equipment	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentInTest	Release: • 2.2.1
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 22-20 EquipmentMismatch

Alarm	Attributes	Applicable major release
Name: EquipmentMismatch (9) Type: equipmentAlarm Package: equipment.EquipmentMismatch Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentTypeMismatch	Release: • 2.2.1
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 22-21 EquipmentRemoved

Alarm	Attributes	Applicable major release
Name: EquipmentRemoved (8) Type: equipmentAlarm Package: equipment.EquipmentRemoved Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved	Release: • 2.2.1
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: ((('isEquipped' EQUAL 'false') OR ('compositeEquipmentState' EQUAL 'Removed')) AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Removed') AND ('isEquipped' EQUAL 'true'))		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 22-22 FanFailure (equipment)

Alarm	Attributes	Applicable major release
Name: FanFailure (624) Type: equipmentAlarm Package: equipment.FanFailure Raised on class: equipment.FanTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fanFailure	Release: • 2.2.1
Description: The alarm is raised when the associated fan is not operationally Up.		
Raising condition: (('Device State' EQUAL 'Failed') OR ('Device State' EQUAL 'Unknown') OR ('Device State' EQUAL 'OutOfservice'))		
Clearing condition: ('Device State' EQUAL 'OK')		
Remedial action: Remove and reset the fan unit. If this does not resolve the problem replace the fan.		

Table 22-23 FanTrayRemoved

Alarm	Attributes	Applicable major release
Name: FanTrayRemoved (569) Type: equipmentAlarm Package: equipment.FanTrayRemoved Raised on class: equipment.FanTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: FanTrayRemoved	Release: • 2.2.1
Description: The alarm is raised when the deviceState attribute has a value of deviceNotEquipped.		
Raising condition: ('Device State' EQUAL 'Not Equipped')		
Clearing condition: ('Device State' NOT EQUAL 'Not Equipped')		
Remedial action: Informational - a fan tray has been removed from the NE.		

Table 22-24 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major release
Name: FrameSizeProblem (37) Type: configurationAlarm Package: netw.FrameSizeProblem Raised on class: netw.StatefullConnectableInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: frameSizeProblem	Release: • 2.2.1
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL '0L'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL '0L'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 22-25 GaPeerDown

Alarm	Attributes	Applicable major release
Name: GaPeerDown (3303) Type: EpcAlarm Package: lteggsn.GaPeerDown Raised on class: lteggsn.GaPeer	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerDown	Release: • 2.2.1
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 22-26 IncompleteConfiguration

Alarm	Attributes	Applicable major release
Name: IncompleteConfiguration (1942) Type: operationalViolation Package: netw.IncompleteConfiguration Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompleteConfig	Release: • 2.2.1
Description: The alarm is raised when a pre-provisioned NE has no objects configured beneath it.		
Raising condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' EQUAL '\"\"'))		
Clearing condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' NOT EQUAL '\"\"'))		

Table 22-26 IncompleteConfiguration (continued)

Alarm	Attributes	Applicable major release
Remedial action: A configuration error has been made which must be corrected. The configuration of the pre-provisioned NE is incomplete. A work order was not associated with the pre-provisioned NE and as a consequence the attempt to auto-configure the NE failed.		

Table 22-27 LicensedLimitExceeded

Alarm	Attributes	Applicable major release
Name: LicensedLimitExceeded (127) Type: licensingAlarm Package: security.LicensedLimitExceeded Raised on class: security.SamLicensePoints	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: licensedLimitExceeded	Release: • 2.2.1
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 22-28 LinkDown (equipment)

Alarm	Attributes	Applicable major release
Name: LinkDown (12) Type: communicationsAlarm Package: equipment.LinkDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: portLinkProblem	Release: • 2.2.1
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 22-29 LocalAccessRequested

Alarm	Attributes	Applicable major release
Name: LocalAccessRequested (9631) Type: equipmentAlarm Package: mpr.LocalAccessRequested Raised on class: mpr.MprNeProperties	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lacRequested	Release: • 2.2.1
Description: The alarm is raised when the Local access is requested by CT		
Raising condition: (('Lac state' EQUAL 'Access Requested'))		
Clearing condition: ('Lac state' NOT EQUAL 'Access Requested')		
Remedial action: Alarm is raised when CT requests access to NE. Navigate to System settings and grant local access if needed or ignore the request and wait for the timeout to expire for alarm to clear.		

Table 22-30 LowTemperatureDetected

Alarm	Attributes	Applicable major release
Name: LowTemperatureDetected (1127) Type: environmentalAlarm Package: equipment.LowTemperatureDetected Raised on class: equipment.Shelf	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentOvercooled	Release: • 2.2.1
Description: The alarm is raised when the chassis temperature falls below the minimum threshold.		
Raising condition: ('Low Temperature State' EQUAL 'Low')		
Clearing condition: ('Low Temperature State' NOT EQUAL 'Low')		
Remedial action: The NE has detected internal temperatures which are abnormally low. This may happen when the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 22-31 MobileConnectorDown

Alarm	Attributes	Applicable major release
Name: MobileConnectorDown (1064) Type: EpcAlarm Package: lteservice.MobileConnectorDown Raised on class: lteservice.MobileServiceConnector	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EpcDown	Release: • 2.2.1
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL '\"\"')		
Clearing condition: ('EPS Path' NOT EQUAL '\"\"')		
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

Table 22-32 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major release
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm Package: netw.NeManagementAndTrapManagementMismatch Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: neManagementChange	Release: • 2.2.1
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		
Raising condition: ((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band')))		
Clearing condition: ((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band')))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

Table 22-33 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major release
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm Package: security.NewSsh2ServerKeyDetected Raised on class: security.KnownHostKey	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch	Release: • 2.2.1
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 22-34 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major release
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm Package: netw.NodeDatabaseFallbackDetected Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeDatabaseFallback	Release: • 2.2.1
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 22-35 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major release
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm Package: netw.NodeDatabaseMisalignmentDetected Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment	Release: • 2.2.1
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

Table 22-36 NodeSuspended

Alarm	Attributes	Applicable major release
Name: NodeSuspended (5123) Type: communicationsAlarm Package: netw.NodeSuspended Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NodeSuspend	Release: • 2.2.1
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element.The alarm will be cleared when the network element is managed back.		

Table 22-37 OverTemperatureDetected

Alarm	Attributes	Applicable major release
Name: OverTemperatureDetected (388) Type: environmentalAlarm Package: equipment.OverTemperatureDetected Raised on class: equipment.Shelf	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentOverheated	Release: • 2.2.1
Description: The alarm is raised when the chassis temperature exceeds the maximum threshold value.		
Raising condition: ('Over Temperature State' EQUAL 'Over')		
Clearing condition: ('Over Temperature State' NOT EQUAL 'Over')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 22-38 PartialResyncProblem

Alarm	Attributes	Applicable major release
Name: PartialResyncProblem (4401) Type: communicationsAlarm Package: netw.PartialResyncProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: partialResyncProblem	Release: • 2.2.1
Description: The alarm is raised when a partial resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 22-39 PartialVPRNEncryption

Alarm	Attributes	Applicable major release
Name: PartialVPRNEncryption (8992) Type: configurationAlarm Package: nge.PartialVPRNEncryption Raised on class: nge.VprnEncryptService	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConfigMismatch	Release: • 2.2.1
Description: The alarm is raised when one or more sites are not encryption enabled in a VPRN service.		
Raising condition: (('VPRN Service Encryption Status' EQUAL 'Partial'))		
Clearing condition: (('VPRN Service Encryption Status' NOT EQUAL 'Partial'))		

Table 22-39 PartialVPRNEncryption (continued)

Alarm	Attributes	Applicable major release
Remedial action: This site is newly added to the VPRN service, Perform the encrypt operation on the KeyGroup to clear the alarm.		

Table 22-40 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major release
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm Package: netw. PersistentIndexParametersMisconfigured Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistentIndexConfiguration-Mismatch	Release: • 2.2.1
Description: The alarm is raised when persistence is set to Off in the NE BOF.		
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

Table 22-41 PollerProblem

Alarm	Attributes	Applicable major release
Name: PollerProblem (31) Type: communicationsAlarm Package: netw.PollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resyncFailed	Release: • 2.2.1
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 22-42 PrimaryImageBootFailure

Alarm	Attributes	Applicable major release
Name: PrimaryImageBootFailure (191) Type: configurationAlarm Package: sw.PrimaryImageBootFailure Raised on class: sw.CardSoftware	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured	Release: • 2.2.1
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 22-43 RadiusOperStatusDown

Alarm	Attributes	Applicable major release
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm Package: netw.RadiusOperStatusDown Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: radiusOperationStatusDown	Release: • 2.2.1
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up.Check the connectivity between SAM server and radius server configured on the Network element.		

Table 22-44 ReachabilityProblem

Alarm	Attributes	Applicable major release
Name: ReachabilityProblem (243) Type: communicationsAlarm Package: netw.ReachabilityProblem Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReachabilityTestFailed	Release: • 2.2.1
Description: The alarm is raised when a mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. The polling interval depends on the NE type and is configurable in nms-server.xml. By default, the 5620 SAM polls a managed NE every four minutes. If a poll fails, the alarm is raised. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		

Table 22-44 ReachabilityProblem (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 22-45 ReconfigFailure

Alarm	Attributes	Applicable major release
Name: ReconfigFailure (1949) Type: communicationsAlarm Package: netw.ReconfigFailure Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: failedReconfig	Release: • 2.2.1
Description: This alarm is raised when the reconfig action failed.		
Raising condition: ('State' EQUAL 'Failed')		
Clearing condition: ('State' NOT EQUAL 'Failed')		
Remedial action: Verify that the object is configured as expected.		

Table 22-46 SaveConfigFailed

Alarm	Attributes	Applicable major release
Name: SaveConfigFailed (105) Type: configurationAlarm Package: sw.SaveConfigFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileAccessError	Release: • 2.2.1
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact your Nokia support representative for assistance.		

Table 22-47 ScheduledPollerProblem

Alarm	Attributes	Applicable major release
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm Package: netw.ScheduledPollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: scheduledResyncFailed	Release: • 2.2.1

Table 22-47 ScheduledPollerProblem (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 22-48 StatsRetrieveFailed

Alarm	Attributes	Applicable major release
Name: StatsRetrieveFailed (244) Type: configurationAlarm Package: sw.StatsRetrieveFailed Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: fileTransferFailure	Release: • 2.2.1
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 22-49 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major release
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed Package: netw.SubscriberSystemNextHopUsageHigh Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 2.2.1
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

Table 22-50 SubSysChassMemoryUsageHi

Alarm	Attributes	Applicable major release
Name: SubSysChassMemoryUsageHi (5656) Type: thresholdCrossed Package: equipment.SubSysChassMemoryUsageHi Raised on class: equipment.Shelf	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 2.2.1
Description: This alarm is raised when the memory usage by subscriber management on this system or chassis reaches its high watermark ('true').		
Raising condition: ('Memory Usage High' EQUAL 'True')		
Clearing condition: (('Memory Usage High' EQUAL 'False') OR ('Memory Usage High' EQUAL 'unspecified'))		
Remedial action: The memory usage by subscriber management on this system has reached its high watermark. Please check your memory usage.		

Table 22-51 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major release
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm Package: netw.TrapDestinationMisconfigured Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trapDestinationMisconfigured Applicable probable causes: • trapDestinationMisconfigured • duplicateTrapLogId	Release: • 2.2.1
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 22-52 TrapReceivingFailure

Alarm	Attributes	Applicable major release
Name: TrapReceivingFailure (1083) Type: communications Package: netw.TrapReceivingFailure Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: trapsWillNotBeSent	Release: • 2.2.1
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		

Table 22-52 TrapReceivingFailure (continued)

Alarm	Attributes	Applicable major release
Raising condition: ((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')))		
Clearing condition: ((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

Table 22-53 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major release
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications Package: netw. TrapRoutePreferenceRedundancyMissing Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trapsRedundancyMissing	Release: • 2.2.1
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: ((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')))		
Clearing condition: ((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None')))		
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

Table 22-54 UnidentifiedNode

Alarm	Attributes	Applicable major release
Name: UnidentifiedNode (1922) Type: communicationsAlarm Package: netw.UnidentifiedNode Raised on class: netw.DiscoveredNode	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unidentifiedNode	Release: • 2.2.1
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 22-55 UnmanageFailed

Alarm	Attributes	Applicable major release
Name: UnmanageFailed (300) Type: discoveryControlAlarm Package: netw.UnmanageFailed Raised on class: netw.NodeDiscoveryControl	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unableToDeleteNode	Release: • 2.2.1
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'Unmanage Failed')		
Clearing condition: ('Site State' NOT EQUAL 'Unmanage Failed')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 22-56 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major release
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm Package: netw.UpgradedBuildVersionMismatch Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: upgradedImageNotBooted	Release: • 2.2.1
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 22-57 upgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: upgradedCardAlarm (255) Type: softwareAlarm Package: equipment.upgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: upgradedCard	Release: • 2.2.1
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 22-58 UplinkDown

Alarm	Attributes	Applicable major release
Name: UplinkDown (11062) Type: virtualSwitchAlarm Package: dctr.UplinkDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsAllDown	Release: • 2.2.1
Description: The alarm is raised when all connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '2'))		
Clearing condition: (('uplinkState' NOT EQUAL '2'))		
Remedial action: This alarm is raised when all connections associated to the uplink lost connectivity.		

Table 22-59 UplinkPartiallyDown

Alarm	Attributes	Applicable major release
Name: UplinkPartiallyDown (11063) Type: virtualSwitchAlarm Package: dctr.UplinkPartiallyDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsDown	Release: • 2.2.1
Description: The alarm is raised when some connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '3'))		
Clearing condition: (('uplinkState' NOT EQUAL '3'))		
Remedial action: This alarm is raised when a connection of the uplink lost connectivity but at least one connection remains connected.		

Table 22-60 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm Package: sw.VersionConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: versionMismatch	Release: • 2.2.1
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 22-61 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major release
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm Package: netw.WrongCpaaSoftwareVersion Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion	Release: • 2.2.1
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL '\"TiMOS-B-3.0.Generic \"') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Clearing condition: (('Software Version' NOT EQUAL '\"TiMOS-B-3.0.Generic \"') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

23 936x/996x SC access point

23.1 Alarms

Alarms

Note: Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see Chapter 39, “Unspecified NE”.

Table 23-1 actionsaborted

Alarm	Attributes	Applicable major release
Name: actionsaborted (6248) Type: equipmentAlarm Package: femto.actionsaborted Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of action aborted		
Remedial action: Not available		

Table 23-2 actionsfailed

Alarm	Attributes	Applicable major release
Name: actionsfailed (6249) Type: equipmentAlarm Package: femto.actionsfailed Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of action failed		
Remedial action: Not available		

Table 23-3 actionsqueued

Alarm	Attributes	Applicable major release
Name: actionsqueued (6250) Type: equipmentAlarm Package: femto.actionsqueued Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of action queued		

Table 23-3 actionsqueued (continued)

Alarm	Attributes	Applicable major release
Remedial action: Not available		

Table 23-4 actionsqueuedfunctionsaddobject

Alarm	Attributes	Applicable major release
Name: actionsqueuedfunctionsaddobject (6251) Type: equipmentAlarm Package: femto.actionsqueuedfunctionsaddobject Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of addobject function queued		
Remedial action: Not available		

Table 23-5 actionsqueuedfunctionsbackup

Alarm	Attributes	Applicable major release
Name: actionsqueuedfunctionsbackup (6252) Type: equipmentAlarm Package: femto.actionsqueuedfunctionsbackup Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of backup function queued		
Remedial action: Not available		

Table 23-6 actionsqueuedfunctionsconfigurationdownload

Alarm	Attributes	Applicable major release
Name: actionsqueuedfunctionsconfigurationdownload (6253) Type: equipmentAlarm Package: femto. actionsqueuedfunctionsconfigurationdownload Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of configurationdownload function queued		
Remedial action: Not available		

Table 23-7 actionsqueuedfunctionsconfigurationupload

Alarm	Attributes	Applicable major release
Name: actionsqueuedfunctionsconfigurationupload (6254) Type: equipmentAlarm Package: femto.actionsqueuedfunctionsconfigurationupload Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of configurationupload function queued		
Remedial action: Not available		

Table 23-8 actionsqueuedfunctionsconnect

Alarm	Attributes	Applicable major release
Name: actionsqueuedfunctionsconnect (6255) Type: equipmentAlarm Package: femto.actionsqueuedfunctionsconnect Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of connect function queued		
Remedial action: Not available		

Table 23-9 actionsqueuedfunctionsdeleteobject

Alarm	Attributes	Applicable major release
Name: actionsqueuedfunctionsdeleteobject (6256) Type: equipmentAlarm Package: femto.actionsqueuedfunctionsdeleteobject Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of deleteobject function queued		
Remedial action: Not available		

Table 23-10 actionsqueuedfunctionsfactoryreset

Alarm	Attributes	Applicable major release
Name: actionsqueuedfunctionsfactoryreset (6257) Type: equipmentAlarm Package: femto.actionsqueuedfunctionsfactoryreset Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of factoryreset function queued		

Table 23-10 actionsqueuedfunctionsfactoryreset (continued)

Alarm	Attributes	Applicable major release
Remedial action: Not available		

Table 23-11 actionsqueuedfunctionsfirmwareupdate

Alarm	Attributes	Applicable major release
Name: actionsqueuedfunctionsfirmwareupdate (6258) Type: equipmentAlarm Package: femto.actionsqueuedfunctionsfirmwareupdate Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of firmwareupdate function queued		
Remedial action: Not available		

Table 23-12 actionsqueuedfunctionsgetoptions

Alarm	Attributes	Applicable major release
Name: actionsqueuedfunctionsgetoptions (6259) Type: equipmentAlarm Package: femto.actionsqueuedfunctionsgetoptions Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of getoptions function queued		
Remedial action: Not available		

Table 23-13 actionsqueuedfunctionsgetparameterattributes

Alarm	Attributes	Applicable major release
Name: actionsqueuedfunctionsgetparameterattributes (6260) Type: equipmentAlarm Package: femto.actionsqueuedfunctionsgetparameterattributes Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of getparameterattributes function queued		
Remedial action: Not available		

Table 23-14 actionsqueuedfunctionsgetparameternames

Alarm	Attributes	Applicable major release
Name: actionsqueuedfunctionsgetparameternames (6261) Type: equipmentAlarm Package: femto.actionsqueuedfunctionsgetparameternames Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of getparametervalues function queued		
Remedial action: Not available		

Table 23-15 actionsqueuedfunctionsgetparametervalues

Alarm	Attributes	Applicable major release
Name: actionsqueuedfunctionsgetparametervalues (6262) Type: equipmentAlarm Package: femto.actionsqueuedfunctionsgetparametervalues Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of getqueuedtransfers function queued		
Remedial action: Not available		

Table 23-16 actionsqueuedfunctionsgetqueuedtransfers

Alarm	Attributes	Applicable major release
Name: actionsqueuedfunctionsgetqueuedtransfers (6263) Type: equipmentAlarm Package: femto.actionsqueuedfunctionsgetqueuedtransfers Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of getrpcmethods function queued		
Remedial action: Not available		

Table 23-17 actionsqueuedfunctionsgetrpcmethods

Alarm	Attributes	Applicable major release
Name: actionsqueuedfunctionsgetrpcmethods (6264) Type: equipmentAlarm Package: femto.actionsqueuedfunctionsgetrpcmethods Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of reboot function queued		
Remedial action: Not available		

Table 23-18 actionsqueuedfunctionsreboot

Alarm	Attributes	Applicable major release
Name: actionsqueuedfunctionsreboot (6265) Type: equipmentAlarm Package: femto.actionsqueuedfunctionsreboot Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of restore function queued		
Remedial action: Not available		

Table 23-19 actionsqueuedfunctionsrestore

Alarm	Attributes	Applicable major release
Name: actionsqueuedfunctionsrestore (6266) Type: equipmentAlarm Package: femto.actionsqueuedfunctionsrestore Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of restore function queued		
Remedial action: Not available		

Table 23-20 actionsqueuedfunctionsscheduleinform

Alarm	Attributes	Applicable major release
Name: actionsqueuedfunctionsscheduleinform (6267) Type: equipmentAlarm Package: femto. actionsqueuedfunctionsscheduleinform Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of .scheduleinform function queued		
Remedial action: Not available		

Table 23-21 actionsqueuedfunctionssetparameterattributes

Alarm	Attributes	Applicable major release
Name: actionsqueuedfunctionssetparameterattributes (6268) Type: equipmentAlarm Package: femto.actionsqueuedfunctionssetparameterattributes Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of setparameterattributes function queued		
Remedial action: Not available		

Table 23-22 actionsqueuedfunctionssetparametervalues

Alarm	Attributes	Applicable major release
Name: actionsqueuedfunctionssetparametervalues (6269) Type: equipmentAlarm Package: femto.actionsqueuedfunctionssetparametervalues Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of setparametervalues function queued		
Remedial action: Not available		

Table 23-23 actionsqueuedfunctionssetvouchers

Alarm	Attributes	Applicable major release
Name: actionsqueuedfunctionssetvouchers (6270) Type: equipmentAlarm Package: femto.actionsqueuedfunctionssetvouchers Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of setvouchers function queued		
Remedial action: Not available		

Table 23-24 actionsqueuedfunctionssnmpgetparametervalues

Alarm	Attributes	Applicable major release
Name: actionsqueuedfunctionssn-mpgetparametervalues (6271) Type: equipmentAlarm Package: femto.actionsqueuedfunctionssnmpgetparametervalues Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of snmpgetparametervalues function queued		
Remedial action: Not available		

Table 23-25 actionsqueuedfunctionssnmpsetparametervalues

Alarm	Attributes	Applicable major release
Name: actionsqueuedfunctionssn-mpsetparametervalues (6272) Type: equipmentAlarm Package: femto.actionsqueuedfunctionssnmpsetparametervalues Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of snmpsetparametervalues function queued		
Remedial action: Not available		

Table 23-26 actionssucceeded

Alarm	Attributes	Applicable major release
Name: actionssucceeded (6273) Type: equipmentAlarm Package: femto.actionssucceeded Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of action succeeded		
Remedial action: Not available		

Table 23-27 ActiveAbnormalCondition

Alarm	Attributes	Applicable major release
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm Package: netw.ActiveAbnormalCondition Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState	Release: • 14.2

Table 23-27 ActiveAbnormalCondition (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

Table 23-28 AGPS_agpsServiceFailure

Alarm	Attributes	Applicable major release
Name: AGPS_agpsServiceFailure (5676) Type: processingErrorAlarm Package: femto.AGPS_agpsServiceFailure Raised on class: femto.AGPS	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: Fault is raised if a failure is detected on the Assisted GPS Service		
Remedial action: The alarm will clear automatically when the problem with the interface to the AGPS server is resolved. If the problem persists, contact Nokia customer suppor		

Table 23-29 AGPS_noAGPSInfoinUEBasedAGPS

Alarm	Attributes	Applicable major release
Name: AGPS_noAGPSInfoinUEBasedAGPS (5677) Type: integrityViolation Package: femto.AGPS_noAGPSInfoinUEBasedAGPS Raised on class: femto.AGPS	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: informationMissing	Release: • 14.2
Description: This fault is raised when the CN request a UE based AGPS positioning, and the Small Cell fails to get the AGPS from its AGPS caching proxy.If this happen, Small cell will not be able to forward any AGPS information to UE, and thus will not be able to perform AGPS based localization.		
Remedial action: Check the connection between AP and AGPS caching proxy		

Table 23-30 AGPS_notEnoughAGPSInfo

Alarm	Attributes	Applicable major release
Name: AGPS_notEnoughAGPSInfo (5678) Type: integrityViolation Package: femto.AGPS_notEnoughAGPSInfo Raised on class: femto.AGPS	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: informationMissing	Release: • 14.2

Table 23-30 AGPS_notEnoughAGPSInfo (continued)

Alarm	Attributes	Applicable major release
Description: This fault indicates that the number of GPS satellites for which navigations models are available to the iSMLC is insufficient. This impacts the iSMLC's capability to provide assistance data, if the error persists over a longer period of time.If insufficient amount of GPS navigation data is available, AGPS positioning MIGHT fail and consequently the positioning accuracy are compromised.The iSMLC continuously receives navigation models for less than 4 GPS satellites over a period of 10 minutes.		
Remedial action: Configure more assitance data in AGPS cache proxy.		

Table 23-31 AGWDiameterPeerDown

Alarm	Attributes	Applicable major release
Name: AGWDiameterPeerDown (844) Type: EpcAlarm Package: lte.AGWDiameterPeerDown Raised on class: lte.AGWDiameterPeer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerDown	Release: • 14.2
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 23-32 alarmOverload

Alarm	Attributes	Applicable major release
Name: alarmOverload (11165) Type: equipmentAlarm Package: femto.alarmOverload Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Threshold exceeds for alarms.		
Raising condition: (('Alarm OverLoad' EQUAL 'true'))		
Clearing condition: (('Alarm OverLoad' EQUAL 'false'))		
Remedial action: Threshold exceeds for alarms		

Table 23-33 applicationalarmOverload

Alarm	Attributes	Applicable major release
Name: applicationalarmOverload (11166) Type: equipmentAlarm Package: femto.applicationalarmOverload Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Threshold exceeds for application alarms.		
Remedial action: Threshold exceeds for application alarms		

Table 23-34 AuxiliaryServerStatus

Alarm	Attributes	Applicable major release
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm Package: server.AuxiliaryServerStatus Raised on class: server.AuxiliaryServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • 14.2
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 23-35 AVCNOverload

Alarm	Attributes	Applicable major release
Name: AVCNOverload (11139) Type: equipmentAlarm Package: femto.AVCNOverload Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Threshold exceeds for AVCN.		
Raising condition: (('AVCN OverLoad' EQUAL 'true'))		
Clearing condition: (('AVCN OverLoad' EQUAL 'false'))		
Remedial action: Threshold exceeds for AVCN		

Table 23-36 BareMetalReachabilityDown

Alarm	Attributes	Applicable major release
Name: BareMetalReachabilityDown (10273) Type: virtualPortAlarm Package: dctr.BareMetalReachabilityDown Raised on class: dctr.BMDevice	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BareMetalReachability-DownOrDeleted	Release: • 14.2
Description: The alarm is raised when Bare Metal server is reachability down.		
Raising condition: (('bgpReachabilityState' NOT EQUAL '0'))		
Clearing condition: (('bgpReachabilityState' EQUAL '0'))		
Remedial action: This alarm can be cleared when bare metal device BGP prefix is up. Check for virtual switch controller down or virtual switch down or interface/port down in underlay network (hence the BGP prefix not advertised).		

Table 23-37 BootableConfigBackupFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigBackupFailed (103) Type: configurationAlarm Package: sw.BootableConfigBackupFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • 14.2
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 23-38 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm Package: sw.BootableConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • 14.2
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		

Table 23-38 BootableConfigRestoreFailed (continued)

Alarm	Attributes	Applicable major release
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 23-39 BootParametersMisconfigured

Alarm	Attributes	Applicable major release
Name: BootParametersMisconfigured (35) Type: configurationAlarm Package: netw.BootParametersMisconfigured Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistentIndexFailure Applicable probable causes: • persistentIndexFailure • configFileBootFailure	Release: • 14.2
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND ((('Config File Status' NOT EQUAL 'Executed Successfully') AND ('Config File Status' NOT EQUAL 'configFileStatus_unspecified')) OR (('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded') AND ('Persistent Index Status' NOT EQUAL 'persistentIndexStatus_unspecified'))))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

Table 23-40 BSRlinkloss

Alarm	Attributes	Applicable major release
Name: BSRlinkloss (8173) Type: communicationsAlarm Package: femto.BSRlinkloss Raised on class: femto.Femto	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • 14.2
Description: BSR is not reachable from HDM.		
Remedial action: No particular action is required. This notification may be required by Global Product Support for debugging purposes.		

Table 23-41 BSRSubscriberTraceConfig_subscriberTraceRecordingSessionFailure

Alarm	Attributes	Applicable major release
Name: BSRSubscriberTraceConfig_ subscriberTraceRecordingSessionFailure (5801) Type: processingErrorAlarm Package: femto.BSRSubscriberTraceConfig_ subscriberTraceRecordingSessionFailure Raised on class: femto.FemtoSubscriberTraceConfig	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: Failure to start a trace recording session due to any problem.		
Remedial action: Configure the IMSI attribute of class SubscriberTrace and perform the call trace recording session.Verify the call of the IMSI that to be traced.The alarms gets cleared manually from the OAM system once the call is traced.		

Table 23-42 BSRSubscriberTraceConfig_subscriberTraceUploadFailure

Alarm	Attributes	Applicable major release
Name: BSRSubscriberTraceConfig_ subscriberTraceUploadFailure (5802) Type: communicationsAlarm Package: femto.BSRSubscriberTraceConfig_ subscriberTraceUploadFailure Raised on class: femto.FemtoSubscriberTraceConfig	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: responseTimeExcessive	Release: • 14.2
Description: Failure to transferring SubscriberTrace files even after retries.		
Remedial action: Configure the IMSIattribute of the class SubscriberTrace and perform the call trace recording session.Verify the call of the IMSI to be traced.Verify the subscriber record files that are uploaded to the SFTP server defined by the attributes sftpServer and rootDirectoryof a class SubscriberTraceConfig.		

Table 23-43 BSR_agpsServiceUnavailable

Alarm	Attributes	Applicable major release
Name: BSR_agpsServiceUnavailable (5803) Type: processingErrorAlarm Package: femto.BSR_agpsServiceUnavailable Raised on class: femto.Femto	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: This fault is raised if the AGPS Service is unavailable		
Remedial action: The alarm will clear automatically when the AGPS server becomes available. If the problem persists, contact Nokia customer support.		

Table 23-44 BSR_allReservedFemtoCellsInUse

Alarm	Attributes	Applicable major release
Name: BSR_allReservedFemtoCellsInUse (5804) Type: operationalViolation Package: femto.BSR_allReservedFemtoCellsInUse Raised on class: femto.Femto	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: underlyingResourceUnavail-able	Release: • 14.2
Description: Neighbour determination mechanisms have discovered that all Femto reserved scrambling codes in the neighbourhood of the H-BSR are in use. This is due to Insufficient reserved PSC for the deployment scenario.		
Remedial action: The operator could increase number of reserved Small Cell PSCs. The alarm will clear automatically when the PSC becomes available. If the problem persists, contact Nokia customer support		

Table 23-45 BSR_applicationInsane

Alarm	Attributes	Applicable major release
Name: BSR_applicationInsane (5805) Type: processingErrorAlarm Package: femto.BSR_applicationInsane Raised on class: femto.Femto	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: softwareProgramError	Release: • 14.2
Description: Application software is not functioning properly. - This is raised for persistent audit failures.		
Remedial action: The alarm will be cleared when audit no longer detects a problem. If the problem persists, contact Nokia customer support		

Table 23-46 BSR_autoconfigfailure

Alarm	Attributes	Applicable major release
Name: BSR_autoconfigfailure (5806) Type: operationalViolation Package: femto.BSR_autoconfigfailure Raised on class: femto.Femto	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • 14.2
Description: Auto-configuration failure.		
Remedial action: The alarm will be cleared when the autoconfiguratio succeeds. If the problem persists, contact Nokia customer support.		

Table 23-47 BSR_basebandReconfigfailed

Alarm	Attributes	Applicable major release
Name: BSR_basebandReconfigfailed (5808) Type: processingErrorAlarm Package: femto.BSR_basebandReconfigfailed Raised on class: femto.Femto	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 14.2
Description: Reconfiguration of the baseband array is failed.		
Remedial action: The fault will be cleared automatically when the Small Cell restarts.. Restart the re-configuration of the 3G Network Listening for the Small Cell. If the problem persists, contact Nokia customer support.		

Table 23-48 BSR_bCHGuardTimeExpired

Alarm	Attributes	Applicable major release
Name: BSR_bCHGuardTimeExpired (5807) Type: processingErrorAlarm Package: femto.BSR_bCHGuardTimeExpired Raised on class: femto.Femto	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: BCH Decode guard timer has expired.		
Remedial action: No operator intervention is required.		

Table 23-49 BSR_bsrIdClash

Alarm	Attributes	Applicable major release
Name: BSR_bsrIdClash (5809) Type: operationalViolation Package: femto.BSR_bsrIdClash Raised on class: femto.Femto	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: This fault is generated when the BSR-Id is already used by another BSR.		
Remedial action: Use a different Small Cell Identifier. If the problem persists or for help on the identifier, contact Nokia customer support		

Table 23-50 BSR_cellBroadcastOverload

Alarm	Attributes	Applicable major release
Name: BSR_cellBroadcastOverload (5810) Type: qualityOfServiceAlarm Package: femto.BSR_cellBroadcastOverload Raised on class: femto.Femto	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity	Release: • 14.2

Table 23-50 BSR_cellBroadcastOverload (continued)

Alarm	Attributes	Applicable major release
Description: This fault is raised when CBS messages are rejected due to CBS Admission Control.		
Remedial action: This alarm will be cleared when the subsequent CBS message passes the Admission control		

Table 23-51 BSR_cellSearchGuardTimeExpired

Alarm	Attributes	Applicable major release
Name: BSR_cellSearchGuardTimeExpired (5811) Type: processingErrorAlarm Package: femto.BSR_cellSearchGuardTimeExpired Raised on class: femto.Femto	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: Cell Search function guard timer has expired.		
Remedial action: No operator intervention is required.		

Table 23-52 BSR_conflictingCIO

Alarm	Attributes	Applicable major release
Name: BSR_conflictingCIO (5812) Type: processingErrorAlarm Package: femto.BSR_conflictingCIO Raised on class: femto.Femto	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: This fault is raised when there are multiple neighbour cells which cannot be uniquely identified in UE measurement reports for which different values of Cell Individual Offset will be applied. This shall apply for 3G neighbour cells when there is ARFCN/PSC reuse and 2G neighbour cells where there is ARFCN reuse without BSIC used to identify the cell.This warning shall be automatically cleared when conflicting CIO condition no longer exists.		
Remedial action: No operator intervention required, but alarm will be cleared automatically when conflicting CIO condition no longer exists.		

Table 23-53 BSR_conflictingQoffset

Alarm	Attributes	Applicable major release
Name: BSR_conflictingQoffset (5813) Type: processingErrorAlarm Package: femto.BSR_conflictingQoffset Raised on class: femto.Femto	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: This fault is raised when there are multiple neighbour cells which cannot be uniquely identified for which different values of Qoffset have been configured. This shall apply for 3G neighbour cells when there is ARFCN/PSC reuse.This warning shall be automatically cleared when conflicting offset condition no longer exists.		

Table 23-53 BSR_conflictingQoffset (continued)

Alarm	Attributes	Applicable major release
Remedial action: No operator intervention required, but alarm will be cleared automatically when conflicting offset condition no longer exists.		

Table 23-54 BSR_constraintsCheckFailure

Alarm	Attributes	Applicable major release
Name: BSR_constraintsCheckFailure (8470) Type: processingErrorAlarm Package: femto.BSR_constraintsCheckFailure Raised on class: femto.Femto	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: This fault is raised when there is one or more constraints failure at BSR start-up. Even though this fault is raised, Femto may offer service. The fault shall be cleared if all the constraints pass later which may be due to online modification of parameters.		
Remedial action: Identify the constraints that fail. Modify the value of the parameters to satisfy the constraints		

Table 23-55 BSR_creationOfSecondSAFailed

Alarm	Attributes	Applicable major release
Name: BSR_creationOfSecondSAFailed (5814) Type: operationalViolation Package: femto.BSR_creationOfSecondSAFailed Raised on class: femto.Femto	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: The creation of the second Child SA on 1st IPsec tunnel failed. Femto BSR goes to disabled/degraded state. This fault can be cleared by a local or remote Femto BSR reset or if the IPsec tunnel #1 will be established during a fault handling procedure; i.e. handling of IPsec Tunnel down.		
Remedial action: No operator intervention is required.		

Table 23-56 BSR_detectedCollapsingLAI

Alarm	Attributes	Applicable major release
Name: BSR_detectedCollapsingLAI (5815) Type: processingErrorAlarm Package: femto.BSR_detectedCollapsingLAI Raised on class: femto.Femto	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: LAI value conflicts with another one in use already.		
Remedial action: The operator should reconfigure the LAC on one of conflicting BSRs as described in the additional text associated with the alarm. If the problem persists, contact Nokia customer support.		

Table 23-57 BSR_deviceAuthenticationFailure

Alarm	Attributes	Applicable major release
Name: BSR_deviceAuthenticationFailure (5816) Type: securityServiceOrMechanismViolation Package: femto.BSR_deviceAuthenticationFailure Raised on class: femto.Femto	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: authenticationFailure	Release: • 14.2
Description: This fault is raised if device authentication fails.		
Remedial action: Contact Nokia customer support for help in resolving the authentication issue. The alarm will be cleared automatically when the authentication of the Small Cell is successful.		

Table 23-58 BSR_downloadSwDiffThanTargetSw

Alarm	Attributes	Applicable major release
Name: BSR_downloadSwDiffThanTargetSw (12397) Type: processingErrorAlarm Package: femto.BSR_downloadSwDiffThanTargetSw Raised on class: femto.Femto	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: This fault is raised when AP receives the TR-069 download command and identifies that the target SW image URL is different than the already downloaded SW image URL.		
Remedial action: Operator needs to ensure that the software image version in Step 1 and Step 2 of Two Step Upgrade Feature (227490) is same.		

Table 23-59 BSR_frequencyOutOfSync

Alarm	Attributes	Applicable major release
Name: BSR_frequencyOutOfSync (5817) Type: equipmentAlarm Package: femto.BSR_frequencyOutOfSync Raised on class: femto.Femto	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lossOfSynchronisation	Release: • 14.2
Description: Alarm triggered when frequency goes out of sync		
Remedial action: NA		

Table 23-60 BSR_gatewayConnectivityProblemsStandbyNode

Alarm	Attributes	Applicable major release
Name: BSR_ gatewayConnectivityProblemsStandbyNode (5819) Type: operationalViolation Package: femto.BSR_ gatewayConnectivityProblemsStandbyNode Raised on class: femto.Femto	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: This fault is raised if the number of times the connection to the standby node has been dropped exceeds the defined threshold over the PM granularity period.		
Remedial action: Check the standby SCGW IP address and connectivity.		

Table 23-61 BSR_gatewayConnectivityProblemsStandyNode

Alarm	Attributes	Applicable major release
Name: BSR_ gatewayConnectivityProblemsStandyNode (5820) Type: operationalViolation Package: femto.BSR_ gatewayConnectivityProblemsStandyNode Raised on class: femto.Femto	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: This fault is raised if the number of times the connection to the standby node has been dropped exceeds the defined threshold over the PM granularity period.		
Remedial action: NA		

Table 23-62 BSR_gGSNselectionFailure

Alarm	Attributes	Applicable major release
Name: BSR_gGSNselectionFailure (5818) Type: processingErrorAlarm Package: femto.BSR_gGSNselectionFailure Raised on class: femto.Femto	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: This fault is raised if PDP Context Activation attempt by UE that received GGSN selection support resulted in a PDP Context Rejection by the SGSN. Likely invalid Replacement APN configured in attribute BSR::gGSNselectionReplacementAPN.		
Remedial action: Check the Replacement APN configured in the attribute BSR::gGSNselectionReplacementAPN. If the problem persists, contact Nokia customer support.		

Table 23-63 BSR_gsmBandNotSupported

Alarm	Attributes	Applicable major release
Name: BSR_gsmBandNotSupported (5822) Type: equipmentAlarm Package: femto.BSR_gsmBandNotSupported Raised on class: femto.Femto	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 14.2
Description: Hardware is not compatible with the gsm band configured.		
Remedial action: The operator should configure the supported bands or set the parameter gsmListenerPicoBasedEnabled to false. If the problem persists, contact Nokia customer support		

Table 23-64 BSR_gsmBCCHDecodeGuardTimerExpired

Alarm	Attributes	Applicable major release
Name: BSR_gsmBCCHDecodeGuardTimerExpired (5821) Type: processingErrorAlarm Package: femto.BSR_ gsmBCCHDecodeGuardTimerExpired Raised on class: femto.Femto	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: BCCH Decode guard timer has expired for 2G Network Listening (Baseband based).		
Remedial action: No operator intervention is required.		

Table 23-65 BSR_gsmCellSearchGuardTimerExpired

Alarm	Attributes	Applicable major release
Name: BSR_gsmCellSearchGuardTimerExpired (5823) Type: processingErrorAlarm Package: femto.BSR_ gsmCellSearchGuardTimerExpired Raised on class: femto.Femto	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: Cell Search function guard timer has expired for 2G Network Listening (Baseband based).		
Remedial action: No operator intervention is required.		

Table 23-66 BSR_gsmThresholdCriteriaNotMet

Alarm	Attributes	Applicable major release
Name: BSR_gsmThresholdCriteriaNotMet (5824) Type: processingErrorAlarm Package: femto.BSR_gsmThresholdCriteriaNotMet Raised on class: femto.Femto	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: The threshold criteria for detection of gsm cells has not been met and this has resulted in an open search for more cells.		
Remedial action: The operator could change threshold criteria MIM Parameters		

Table 23-67 BSR_gTPULocalPortWCDMAFailure

Alarm	Attributes	Applicable major release
Name: BSR_gTPULocalPortWCDMAFailure (8169) Type: communicationsAlarm Package: femto.BSR_gTPULocalPortWCDMAFailure Raised on class: femto.Femto	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: This fault is sent when the MS-MCI AP fails to use the local GTP-U port defined by attribute BSR:gTPULocalPortWCDMA.		
Remedial action: Operator could check configuration of attribute BSR:gTPULocalPortWCDMA		

Table 23-68 BSR_hostingPartyAuthenticationFailure

Alarm	Attributes	Applicable major release
Name: BSR_hostingPartyAuthenticationFailure (5825) Type: securityServiceOrMechanismViolation Package: femto.BSR_ hostingPartyAuthenticationFailure Raised on class: femto.Femto	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: authenticationFailure	Release: • 14.2
Description: This fault is raised if hosting party authentication fails.		
Remedial action: The alarm will clear automatically when the hosting party authentication is successful. If the problem persists, contact Nokia customer support.		

Table 23-69 BSR_hsimNotPresent

Alarm	Attributes	Applicable major release
Name: BSR_hsimNotPresent (5826) Type: securityServiceOrMechanismViolation Package: femto.BSR_hsimNotPresent Raised on class: femto.Femto	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: otherSecurityService	Release: • 14.2

Table 23-69 BSR_hsimNotPresent (continued)

Alarm	Attributes	Applicable major release
Description: This fault is raised if no HSIM is present on the UICC and the SecGW requires Hosting Party authentication.		
Remedial action: Contact Nokia customer support for help		

Table 23-70 BSR_invalidDatabaseDetected

Alarm	Attributes	Applicable major release
Name: BSR_invalidDatabaseDetected (5827) Type: operationalViolation Package: femto.BSR_invalidDatabaseDetected Raised on class: femto.Femto	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: The BSR detects an invalid database e.g. due to a consistency error.		
Remedial action: Fix the provisioning errors		

Table 23-71 BSR_invalidMocnConfiguration

Alarm	Attributes	Applicable major release
Name: BSR_invalidMocnConfiguration (5828) Type: operationalViolation Package: femto.BSR_invalidMocnConfiguration Raised on class: femto.Femto	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: This fault is raised when default operator is not configured when required to select MOCN operator for nonsupporting UE.Alarm data shall include 'Neighbour cells not found' when mocnOperatorSelection is set to 'macroPLMN' and macro cellsare not detected and default MOCN operator is not configured.		
Remedial action: Operator is required to configure default MOCN operator in BSR::defaultMocnOperatorRef		

Table 23-72 BSR_ipsecConfigurationAlarm

Alarm	Attributes	Applicable major release
Name: BSR_ipsecConfigurationAlarm (5829) Type: operationalViolation Package: femto.BSR_ipsecConfigurationAlarm Raised on class: femto.Femto	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: The Femto BSR detected a SW-incompatibility on IPsec Router for the requested IPsec configuration. Femto BSR goes to disabled/degraded state. This fault can be cleared by a local or remote Femto BSR reset or if the IPsec tunnel #1 will be established during a fault handling procedure; i.e. handling of IPsec Tunnel down.		

Table 23-72 BSR_ipsecConfigurationAlarm (continued)

Alarm	Attributes	Applicable major release
Remedial action: Operator could update the Ipsec router to support the second SA feature or disable the feature on BSR (enableTwoSA="false"		

Table 23-73 BSR_ipsecTunnelAlarm

Alarm	Attributes	Applicable major release
Name: BSR_ipsecTunnelAlarm (5830) Type: operationalViolation Package: femto.BSR_ipsecTunnelAlarm Raised on class: femto.Femto	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: The establishment of 2nd IPSec tunnel failed.or 2nd IPsec tunnel goes down. Femto BSR goes to disabled/failed state but OA and M is still active. This fault can be cleared after a successful tunnel establishment during a fault handling procedure.		
Remedial action: Operator should check configuration of the 2nd (high priority) tunnel and the network or disable the two Ipsec tunnels feature (enableTwoIpsecTunnels="false)."		

Table 23-74 BSR_ipsecTunnelFailureNoResponse

Alarm	Attributes	Applicable major release
Name: BSR_ipsecTunnelFailureNoResponse (5831) Type: communicationsAlarm Package: femto.BSR_ipsecTunnelFailureNoResponse Raised on class: femto.Femto	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: responseTimeExcessive	Release: • 14.2
Description: This fault is raised if the Femto BSR did not receive a response to IKE_INIT or IKE_AUTH, if Dead Peer Detection (DPD) encountered an unresponsive SeGW, or if the Femto BSR could not resolve the SeGW FQDN to an IP address (when/if FQDN was used).		
Remedial action: For standalone AP, this is because of SA_INIT failure or DNS lookup failure. Check network connectivity.		

Table 23-75 BSR_ipsecTunnelFailureUnknownCause

Alarm	Attributes	Applicable major release
Name: BSR_ipsecTunnelFailureUnknownCause (5832) Type: processingErrorAlarm Package: femto.BSR_ipsecTunnelFailureUnknownCause Raised on class: femto.Femto	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: This fault indicates a failure to connect to the SeGW which could not be classified. It is used only if none of the more specific error types is suitable. Additional alarm text could be provided to qualify the fault.		

Table 23-75 BSR_ipsecTunnelFailureUnknownCause (continued)

Alarm	Attributes	Applicable major release
Remedial action: For MSAP this error occurs if there is a SA_INIT failure response. Check network connectivity.		

Table 23-76 BSR_isolatedCellOverlapped

Alarm	Attributes	Applicable major release
Name: BSR_isolatedCellOverlapped (5833) Type: processingErrorAlarm Package: femto.BSR_isolatedCellOverlapped Raised on class: femto.Femto	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: If the isolated cell detects any other isolated cells or Femtos, this fault is raised to indicate an overlap with at least another cell.		
Remedial action: No operator intervention is required. The alarm will be cleared by the Small Cell when the overlap is resolved. If the problem persists, contact Nokia customer support.		

Table 23-77 BSR_lmcFailure

Alarm	Attributes	Applicable major release
Name: BSR_lmcFailure (5834) Type: equipmentAlarm Package: femto.BSR_lmcFailure Raised on class: femto.Femto	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 14.2
Description: This fault is created when either or all of the Location, Movement and National Location Lock check failed.		
Remedial action: The Small Cell MO is disabled. Check that the Small Cell is in correct location. Use MIM parameters to determine the failed tests and change the various parameters to relax the criteria or disable the test. If the problem persists, contact Nokia customer support.		

Table 23-78 BSR_lossOfSyncSourceGps

Alarm	Attributes	Applicable major release
Name: BSR_lossOfSyncSourceGps (5835) Type: equipmentAlarm Package: femto.BSR_lossOfSyncSourceGps Raised on class: femto.Femto	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: synchronizationSourceMis-match	Release: • 14.2
Description: Alarm triggered when sync source is lost via GPS		
Remedial action: NA		

Table 23-79 BSR_lossOfSyncSourceNtp

Alarm	Attributes	Applicable major release
Name: BSR_lossOfSyncSourceNtp (5836) Type: equipmentAlarm Package: femto.BSR_lossOfSyncSourceNtp Raised on class: femto.Femto	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: synchronizationSourceMis-match	Release: • 14.2
Description: Alarm triggered when sync source is lost via NTP		
Remedial action: NA		

Table 23-80 BSR_lteServiceUnavailable

Alarm	Attributes	Applicable major release
Name: BSR_lteServiceUnavailable (5837) Type: qualityOfServiceAlarm Package: femto.BSR_lteServiceUnavailable Raised on class: femto.Femto	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • 14.2
Description: This fault is created when the one or more 4G subsystems have some unrecoverable error or failed.		
Remedial action: MS-MCI AP should be rebooted to clear the Alarm.		

Table 23-81 BSR_misConfigurationWarmStandby

Alarm	Attributes	Applicable major release
Name: BSR_misConfigurationWarmStandby (5838) Type: operationalViolation Package: femto.BSR_misConfigurationWarmStandby Raised on class: femto.Femto	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: This fault is raised if the IP addresses and warm standby feature are configured in an inconsistent fashion (e.g. using Active warm standby feature on Femto with the floating IP address configured).		
Remedial action: The alarm will be cleared by the Small Cell when the configuration is correct. If the problem persists, contact Nokia customer support.		

Table 23-82 BSR_missedTriggeringSelfOpt

Alarm	Attributes	Applicable major release
Name: BSR_missedTriggeringSelfOpt (11140) Type: processingErrorAlarm Package: femto.BSR_missedTriggeringSelfOpt Raised on class: femto.Femto	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: This fault is raised when the AP fails to run self optimization in the last 24 hours.		
Remedial action: If the service level KPIs are degraded, trigger an on-demand self-optimation to clear the alarm. Check if the self-optimzation schedule is running appropriately for the AP.		

Table 23-83 BSR_mnoDataUpdateFailure

Alarm	Attributes	Applicable major release
Name: BSR_mnoDataUpdateFailure (11141) Type: operationalViolation Package: femto.BSR_mnoDataUpdateFailure Raised on class: femto.Femto	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: This fault indicates that an MNO Data update for MS-AP or SeGW certificate update for standalone 3G was attempted and failed. Either the prospective MNO Data was not valid or there was an operational failure during an attempt to deploy the data.		
Remedial action: Root cause isolate the problem and resolve, then repeat the procedure.		

Table 23-84 BSR_msAPoutOfMemory

Alarm	Attributes	Applicable major release
Name: BSR_msAPoutOfMemory (11142) Type: processingErrorAlarm Package: femto.BSR_msAPoutOfMemory Raised on class: femto.Femto	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: outOfMemory	Release: • 14.2
Description: MSAP has run out memory. It could be either RAM or disk space.		
Remedial action: MS AP could be running on low memory. If the service level KPIs are degraded, reboot the AP.		

Table 23-85 BSR_noCarrierSelected

Alarm	Attributes	Applicable major release
Name: BSR_noCarrierSelected (5839) Type: operationalViolation Package: femto.BSR_noCarrierSelected Raised on class: femto.Femto	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: The fault is raised when no carrier for the FBSR can be selected under different situations, which are detailed in AdditionalText.		
Remedial action: ReConfigure the candidate list of carriers and other parameters		

Table 23-86 BSR_noMacroCellFound

Alarm	Attributes	Applicable major release
Name: BSR_noMacroCellFound (5840) Type: processingErrorAlarm Package: femto.BSR_noMacroCellFound Raised on class: femto.Femto	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: This fault is raised if no macro cells were found and dynamic LAC-SAC is enabled and there is no previsioning to fallback on.		
Remedial action: This fault is raised if no macro cells were found and dynamic LAC-SAC is enabled and there is no previsioning to fallback on.		

Table 23-87 BSR_ntpDrift

Alarm	Attributes	Applicable major release
Name: BSR_ntpDrift (5841) Type: equipmentAlarm Package: femto.BSR_ntpDrift Raised on class: femto.Femto	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: timingProblem	Release: • 14.2
Description: This fault is raised when either forward or backward NTP drift is greater than one minute.		
Remedial action: Adjust the NTP drift.		

Table 23-88 BSR_pwdLoginFailure

Alarm	Attributes	Applicable major release
Name: BSR_pwdLoginFailure (12739) Type: operationalViolation Package: femto.BSR_pwdLoginFailure Raised on class: femto.Femto	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: Indicates Account lockdown after maximum number of unsuccessful login attempts. The type of account locked is explained in additional text.		
Remedial action: Password reset procedure should be triggered to enable the account again on which the alarm will be cleared.		

Table 23-89 BSR_pwdNokiaSupportAccountOperationFailure

Alarm	Attributes	Applicable major release
Name: BSR_ pwdNokiaSupportAccountOperationFailure (12740) Type: operationalViolation Package: femto.BSR_ pwdNokiaSupportAccountOperationFailure Raised on class: femto.Femto	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: Indicates a failure in password login account operation like creation/update/deletion of Nokia Support team account. The details of failure are available in additional text field.		
Remedial action: Identify the root cause based on the failure description and take appropriate action. Repeat the procedure again.		

Table 23-90 BSR_pwdNokiaSupportLoginFailure

Alarm	Attributes	Applicable major release
Name: BSR_pwdNokiaSupportLoginFailure (12967) Type: operationalViolation Package: femto.BSR_pwdNokiaSupportLoginFailure Raised on class: femto.Femto	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: Indicates Nokia Support Account lockdown after maximum number of unsuccessful login attempts.		
Remedial action: Password reset procedure should be triggered to enable the Nokia support account again.		

Table 23-91 BSR_pwdServiceProviderAccountOperationFailure

Alarm	Attributes	Applicable major release
Name: BSR_ pwdServiceProviderAccountOperationFailure (12741) Type: operationalViolation Package: femto.BSR_ pwdServiceProviderAccountOperationFailure Raised on class: femto.Femto	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: Indicates a failure in password login account operation like creation/update/deletion of Service Provider account. The details of failure are available in additional text field.		
Remedial action: Identify the root cause based on the failure description and take appropriate action. Repeat the procedure again.		

Table 23-92 BSR_pwdServiceProviderLoginFailure

Alarm	Attributes	Applicable major release
Name: BSR_pwdServiceProviderLoginFailure (12968) Type: operationalViolation Package: femto.BSR_pwdServiceProviderLoginFailure Raised on class: femto.Femto	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: Indicates Service Provider Account lockdown after maximum number of unsuccessful login attempts.		
Remedial action: Password reset procedure should be triggered to enable the service provider account again.		

Table 23-93 BSR_queueOverload

Alarm	Attributes	Applicable major release
Name: BSR_queueOverload (5842) Type: qualityOfServiceAlarm Package: femto.BSR_queueOverload Raised on class: femto.Femto	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity	Release: • 14.2
Description: This is reported when no free paging occasion is found for scheduling a paging record.		
Remedial action: The alarm will be cleared by the Small Cell when the paging queue is freed up. If the problem persists, contact Nokia customer support.		

Table 23-94 BSR_resetCompleted

Alarm	Attributes	Applicable major release
Name: BSR_resetCompleted (5843) Type: processingErrorAlarm Package: femto.BSR_resetCompleted Raised on class: femto.Femto	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: This fault is generated when a reset was successfully performed and BSR is 'stable' for a certain time after the reset.		
Remedial action: No operator intervention is required		

Table 23-95 BSR_resetFailed

Alarm	Attributes	Applicable major release
Name: BSR_resetFailed (5844) Type: processingErrorAlarm Package: femto.BSR_resetFailed Raised on class: femto.Femto	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: This fault is generated when the reset action is failed by platform.		
Remedial action: No operator intervention is required		

Table 23-96 BSR_resetInitiated

Alarm	Attributes	Applicable major release
Name: BSR_resetInitiated (5845) Type: processingErrorAlarm Package: femto.BSR_resetInitiated Raised on class: femto.Femto	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: This fault is generated short before the BSR resets (reset will be delayed for a few seconds). It contains the reset cause 'manually initiated' or 'autonomously initiated'.		
Remedial action: No operator intervention is required		

Table 23-97 BSR_sameLaRaMacroAutoConfigFail

Alarm	Attributes	Applicable major release
Name: BSR_sameLaRaMacroAutoConfigFail (5846) Type: operationalViolation Package: femto.BSR_sameLaRaMacroAutoConfigFail Raised on class: femto.Femto	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: This fault is raised if the same LAC/RAC Macro auto configuration fails, but the BSR Femto remains in service.		

Table 23-97 BSR_sameLaRaMacroAutoConfigFail (continued)

Alarm	Attributes	Applicable major release
Remedial action: The alarm will be cleared by the Small Cell when the auto-configuration succeeds. If the problem persists, contact Nokia customer support		

Table 23-98 BSR_sameLaRaMacroAutoConfigFailOutOfService

Alarm	Attributes	Applicable major release
Name: BSR_ sameLaRaMacroAutoConfigFailOutOfService (5847) Type: operationalViolation Package: femto.BSR_ sameLaRaMacroAutoConfigFailOutOfService Raised on class: femto.Femto	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: This fault is raised if the Femto BSR has been configured to set its LAC/RAC from the macro cell and the BSR cannot find one and results in the BSR Femto being taken out of service.		
Remedial action: The fault will be cleared automatically when the Small Cell finds a macro cell from which to set its LAC/RAC. If the problem persists, contact Nokia customer support.		

Table 23-99 BSR_scepInvalidConfiguration

Alarm	Attributes	Applicable major release
Name: BSR_scepInvalidConfiguration (11143) Type: integrityViolation Package: femto.BSR_scepInvalidConfiguration Raised on class: femto.Femto	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: informationMissing	Release: • 14.2
Description: This fault indicates that the SCEP protocol is enabled for use but one or more provisioned or configured parameters are missing, incorrect, incomplete, or inconsistent.		
Remedial action: Determine whether configured or provisioned parameter is involved. Make correction to parameter and activate with corrected parameter.		

Table 23-100 BSR_scepProtocolError

Alarm	Attributes	Applicable major release
Name: BSR_scepProtocolError (11144) Type: operationalViolation Package: femto.BSR_scepProtocolError Raised on class: femto.Femto	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: proceduralError	Release: • 14.2
Description: This fault indicates that an SCEP protocol error was detected.		
Remedial action: Check configuration of protocol engine on both client and server side to RCA interop issue.		

Table 23-101 BSR_scepProvisionedCertMismatch

Alarm	Attributes	Applicable major release
Name: BSR_scepProvisionedCertMismatch (11145) Type: integrityViolation Package: femto.BSR_scepProvisionedCertMismatch Raised on class: femto.Femto	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: informationModificationDetected	Release: • 14.2
Description: This fault indicates that the operational certificates were compared with the operator CMS provided certificates and these certificates do not match.		
Remedial action: Check each certificate, update the incorrect instance, RCA to determine how mismatch occurred.		

Table 23-102 BSR_securityViolation

Alarm	Attributes	Applicable major release
Name: BSR_securityViolation (5848) Type: securityServiceOrMechanismViolation Package: femto.BSR_securityViolation Raised on class: femto.Femto	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unauthorizedAccessAttempt	Release: • 14.2
Description: This fault is created when the BSR-OAM detects an un-authorised interface access of BSR.		
Remedial action: Investigate the security violation. The fault will be cleared automatically when the Small Cell is reset. If the problem persists, contact Nokia customer support		

Table 23-103 BSR_selfoptNotRun

Alarm	Attributes	Applicable major release
Name: BSR_selfoptNotRun (5849) Type: operationalViolation Package: femto.BSR_selfoptNotRun Raised on class: femto.Femto	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: underlyingResourceUnavailable	Release: • 14.2
Description: Self optimization has not been run during the quiet period allotted as active calls present.		
Remedial action: The alarm will be cleared by the Small Cell next time the self optimization runs. If the problem persists, contact Nokia customer support		

Table 23-104 BSR_softwareCompatibilityError

Alarm	Attributes	Applicable major release
Name: BSR_softwareCompatibilityError (5850) Type: processingErrorAlarm Package: femto.BSR_softwareCompatibilityError Raised on class: femto.Femto	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: BSR has received an Error Indication in BSRAP protocol.		
Remedial action: Ensure that all the femtos in one group operate in same software version		

Table 23-105 BSR_spareBSRAlarm1

Alarm	Attributes	Applicable major release
Name: BSR_spareBSRAlarm1 (8170) Type: processingErrorAlarm Package: femto.BSR_spareBSRAlarm1 Raised on class: femto.Femto	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: Spare alarm 1		
Remedial action: Refer to customer documentation for alarm details.		

Table 23-106 BSR_spareBSRAlarm2

Alarm	Attributes	Applicable major release
Name: BSR_spareBSRAlarm2 (8171) Type: processingErrorAlarm Package: femto.BSR_spareBSRAlarm2 Raised on class: femto.Femto	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: Spare alarm 2		
Remedial action: Refer to customer documentation for alarm details.		

Table 23-107 BSR_spareBSRAlarm3

Alarm	Attributes	Applicable major release
Name: BSR_spareBSRAlarm3 (8172) Type: processingErrorAlarm Package: femto.BSR_spareBSRAlarm3 Raised on class: femto.Femto	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: Spare alarm 3		
Remedial action: Refer to customer documentation for alarm details.		

Table 23-108 BSR_systemOverload

Alarm	Attributes	Applicable major release
Name: BSR_systemOverload (5851) Type: qualityOfServiceAlarm Package: femto.BSR_systemOverload Raised on class: femto.Femto	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity	Release: • 14.2
Description: This fault is raised for CPU overload and Memory overload.		
Remedial action: The alarm will be cleared by the Small Cell when the overload clears. If the problem persists, contact Nokia customer support.		

Table 23-109 BSR_tamperDetected

Alarm	Attributes	Applicable major release
Name: BSR_tamperDetected (5852) Type: securityServiceOrMechanismViolation Package: femto.BSR_tamperDetected Raised on class: femto.Femto	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unauthorizedAccessAttempt	Release: • 14.2
Description: This fault is raised if tampering access has been detected by the Femto BSR.		
Remedial action: Contact Nokia customer support for help in clearing the tamperDetected alarm		

Table 23-110 BSR_thresholdCriteriaNotMet

Alarm	Attributes	Applicable major release
Name: BSR_thresholdCriteriaNotMet (5853) Type: processingErrorAlarm Package: femto.BSR_thresholdCriteriaNotMet Raised on class: femto.Femto	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: The threshold criteria for detection of cells has not been met and this has resulted in an open search for more cells.		
Remedial action: The operator could reconfigure the threshold criteria MIM Parameters (macroCellRSCPthreshold, macroCellEcNo-Threshold, RatioMacroCellbelowThreshold). If the problem persists, contact Nokia customer support.		

Table 23-111 BSR_timeOutOfSync

Alarm	Attributes	Applicable major release
Name: BSR_timeOutOfSync (5854) Type: equipmentAlarm Package: femto.BSR_timeOutOfSync Raised on class: femto.Femto	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lossOfSynchronisation	Release: • 14.2
Description: Alarm triggered when time goes out of sync as a result of failing to synchronize with timing source.		

Table 23-111 BSR_timeOutOfSync (continued)

Alarm	Attributes	Applicable major release
Remedial action: NA		

Table 23-112 BSR_txPowerConfigurationWarning

Alarm	Attributes	Applicable major release
Name: BSR_txPowerConfigurationWarning (5855) Type: qualityOfServiceAlarm Package: femto.BSR_txPowerConfigurationWarning Raised on class: femto.Femto	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: This fault is raised if a BSR spends greater than thrJCOOverload percent of time at reduced power output.		
Remedial action: This alarm is cleared if a subsequent PM reporting period has a percentage of time spent in a reduced Tx Power state less thanthrJCOOverload		

Table 23-113 BSR_txPowerLimitReached

Alarm	Attributes	Applicable major release
Name: BSR_txPowerLimitReached (5856) Type: qualityOfServiceAlarm Package: femto.BSR_txPowerLimitReached Raised on class: femto.Femto	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: This fault is raised if a BSR calculates that a power change required as part of JCO algorithm would make the Femto operate outside of its configured Tx Power limits.		
Remedial action: This alarm shall be cleared when the transaction associated with this power change is either rejected or revoked.		

Table 23-114 BSR_umtsBandNotSupported

Alarm	Attributes	Applicable major release
Name: BSR_umtsBandNotSupported (5857) Type: equipmentAlarm Package: femto.BSR_umtsBandNotSupported Raised on class: femto.Femto	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 14.2
Description: Hardware is not compatible with the umts band configured.		
Remedial action: The operator should configure the supported UMTS bands. If the problem persists, contact Nokia customer support		

Table 23-115 BSR_unknownTimeOfDay

Alarm	Attributes	Applicable major release
Name: BSR_unknownTimeOfDay (5858) Type: processingErrorAlarm Package: femto.BSR_unknownTimeOfDay Raised on class: femto.Femto	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: This fault is raised if following a reset the FemtoBSR is able to establish a connection to the Mobile Operator's network but is unable to set the time of day from the SNTP server. It is also raised if the FemtoBSR is able to set the time of day, but is subsequently unable to update it from the SNTP server for a period of 7 days.		
Remedial action: Check to see if the SNTP Server is reachable from the Femto via tunnel.		

Table 23-116 BSR_unsecureTimeOfDay

Alarm	Attributes	Applicable major release
Name: BSR_unsecureTimeOfDay (8471) Type: timeDomainViolation Package: femto.BSR_unsecureTimeOfDay Raised on class: femto.Femto	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: otherSecurityService	Release: • 14.2
Description: Time Of Day offered by the active timing reference source (such as GPS or NTP or PTP) is different than the time of day read from network's secure SNTP/PTP server.		
Remedial action: Operator should check phase reference sources (GPS or PTP (future)) for possible incorrect time spoofing or other incorrect behavior.		

Table 23-117 BSR_wcdmaServiceUnavailable

Alarm	Attributes	Applicable major release
Name: BSR_wcdmaServiceUnavailable (5859) Type: qualityOfServiceAlarm Package: femto.BSR_wcdmaServiceUnavailable Raised on class: femto.Femto	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • 14.2
Description: This fault is created when the one or more 3G subsystems have some unrecoverable error or failed.		
Remedial action: The alarm will clear automatically when the MS-MCI AP is rebooted. If the operating Mode is wcdmaAndLTE, LTE service could be operational, so MS-MCI AP should be rebooted with least impact to service.		

Table 23-118 bulkoperationresultOverload

Alarm	Attributes	Applicable major release
Name: bulkoperationresultOverload (11167) Type: equipmentAlarm Package: femto.bulkoperationresultOverload Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Threshold exceeds for bulk operation result events.		
Remedial action: Threshold exceeds for bulk operation result events		

Table 23-119 CECTL_layer1CommunicationFailure

Alarm	Attributes	Applicable major release
Name: CECTL_layer1CommunicationFailure (5881) Type: equipmentAlarm Package: femto.CECTL_layer1CommunicationFailure Raised on class: femto.CECTL	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 14.2
Description: Layer1 fails to respond.		
Remedial action: The alarm will clear automatically when the MS-MCI AP is rebooted.If the problem persists, contact Nokia customer support.		

Table 23-120 CECTL_layerOneResetFailure

Alarm	Attributes	Applicable major release
Name: CECTL_layerOneResetFailure (5882) Type: equipmentAlarm Package: femto.CECTL_layerOneResetFailure Raised on class: femto.CECTL	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: Reset of layer one failed.		
Remedial action: The MSAP automatically reset when the alarm is triggered. If this alarm persists, reset the MSAP. If the problem persists, contact Nokia customer support.		

Table 23-121 CECTL_picoArrayCommunicationFailure

Alarm	Attributes	Applicable major release
Name: CECTL_picoArrayCommunicationFailure (5883) Type: equipmentAlarm Package: femto.CECTL_ picoArrayCommunicationFailure Raised on class: femto.CECTL	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 14.2

Table 23-121 CECTL_picoArrayCommunicationFailure (continued)

Alarm	Attributes	Applicable major release
Description: Picoarray fails to respond.		
Remedial action: NA		

Table 23-122 CertificateEnrollment_certificateEnrollmentFailure

Alarm	Attributes	Applicable major release
Name: CertificateEnrollment_ certificateEnrollmentFailure (8174) Type: processingErrorAlarm Package: femto.CertificateEnrollment_ certificateEnrollmentFailure Raised on class: femto.CertificateEnrollment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: CMPv2 enrolment to operator PKI failed		
Remedial action: Contact Nokia customer support for help inidentifying the problem		

Table 23-123 ClientDelegateServerStatus

Alarm	Attributes	Applicable major release
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm Package: server.ClientDelegateServerStatus Raised on class: server.ClientDelegateServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • 14.2
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 23-124 CmuManagementFailed

Alarm	Attributes	Applicable major release
Name: CmuManagementFailed (10040) Type: communicationsAlarm Package: lte.CmuManagementFailed Raised on class: lte.CompactMobilityUnit	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ftpFailed	Release: • 14.2
Description: The alarm is raised when SAM fails to manage a 9430 Compact Mobility Unit due to an FTP failure.		
Raising condition: ('Management State' EQUAL 'FTP Failed')		

Table 23-124 CmuManagementFailed (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ('Management State' EQUAL 'Managed')		
Remedial action: Verify FTP connectivity between the 5620 SAM and the 9430 Compact Mobility Unit, then re-attempt to manage.		

Table 23-125 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm Package: equipment.ContainingEquipmentAdministrativelyDown Raised on class: equipment.Port	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentAdministratively Down	Release: • 14.2
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 23-126 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm Package: equipment.ContainingEquipmentMismatch Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentMismatch	Release: • 14.2
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 23-127 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm Package: equipment. ContainingEquipmentOperationallyDown Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentDown	Release: • 14.2
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationllyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

Table 23-128 CorruptImageFile

Alarm	Attributes	Applicable major release
Name: CorruptImageFile (171) Type: configurationAlarm Package: mediation.CorruptImageFile Raised on class: mediation. AbstractSoftwareFolderDescriptor	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile	Release: • 14.2
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 23-129 cpeauthactiveconnectionscurrentcount

Alarm	Attributes	Applicable major release
Name: cpeauthactiveconnectionscurrentcount (6274) Type: equipmentAlarm Package: femto.cpeauthactiveconnectionscurrentcount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: HDM CPE Authentication Active Connections Current Count		
Remedial action: Not available		

Table 23-130 cpeauthactiveconnectionshighcount

Alarm	Attributes	Applicable major release
Name: cpeauthactiveconnectionshighcount (6275) Type: equipmentAlarm Package: femto.cpeauthactiveconnectionshighcount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: HDM CPE Authentication Active Connections High Count		
Remedial action: Not available		

Table 23-131 cpeauthcurrcapacity

Alarm	Attributes	Applicable major release
Name: cpeauthcurrcapacity (6276) Type: equipmentAlarm Package: femto.cpeauthcurrcapacity Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: HDM CPE Authentication current capacity		
Remedial action: Not available		

Table 23-132 cpeauthfailedreserverequestcount

Alarm	Attributes	Applicable major release
Name: cpeauthfailedreserverequestcount (6277) Type: equipmentAlarm Package: femto.cpeauthfailedreserverequestcount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: HDM CPE Authentication failed reserve request count		
Remedial action: Not available		

Table 23-133 cpeauthleakedconnectioncount

Alarm	Attributes	Applicable major release
Name: cpeauthleakedconnectioncount (6278) Type: equipmentAlarm Package: femto.cpeauthleakedconnectioncount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: HDM CPE Authentication leaked connection count		
Remedial action: Not available		

Table 23-134 cpeauthwaitingforconnectioncurrentcount

Alarm	Attributes	Applicable major release
Name: cpeauthwaitingforconnectioncurrentcount (6279) Type: equipmentAlarm Package: femto.cpeauthwaitingforconnectioncurrentcount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: HDM CPE Authentication waiting for connection count		
Remedial action: Not available		

Table 23-135 deviceactionresultOverload

Alarm	Attributes	Applicable major release
Name: deviceactionresultOverload (11168) Type: equipmentAlarm Package: femto.deviceactionresultOverload Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Threshold exceeds for device action result events.		
Remedial action: Threshold exceeds for device action result event		

Table 23-136 devicedeletionnotificationOverload

Alarm	Attributes	Applicable major release
Name: devicedeletionnotificationOverload (11169) Type: equipmentAlarm Package: femto.devicedeletionnotificationOverload Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Threshold exceeds for device deletion notification.		
Remedial action: Threshold exceeds for device deletion notification		

Table 23-137 deviceinformeventOverload

Alarm	Attributes	Applicable major release
Name: deviceinformeventOverload (11170) Type: equipmentAlarm Package: femto.deviceinformeventOverload Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Threshold exceeds for device inform events.		

Table 23-137 deviceinformeventOverload (continued)

Alarm	Attributes	Applicable major release
Remedial action: Threshold exceeds for device inform events		

Table 23-138 deviceregistrationOverload

Alarm	Attributes	Applicable major release
Name: deviceregistrationOverload (11171) Type: equipmentAlarm Package: femto.deviceregistrationOverload Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Threshold exceeds for device registration events.		
Raising condition: (('Registration Events OverLoad' EQUAL 'true'))		
Clearing condition: (('Registration Events OverLoad' EQUAL 'false'))		
Remedial action: Threshold exceeds for device registration events		

Table 23-139 downgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: downgradedCardAlarm (256) Type: softwareAlarm Package: equipment.downgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: downgradedCard	Release: • 14.2
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 23-140 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm Package: equipment.EquipmentAdministrativelyDown Raised on class: equipment.Equipment	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentAdministratively-Down	Release: • 14.2
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		

Table 23-140 EquipmentAdministrativelyDown (continued)

Alarm	Attributes	Applicable major release
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 23-141 EquipmentDown

Alarm	Attributes	Applicable major release
Name: EquipmentDown (10) Type: equipmentAlarm Package: equipment.EquipmentDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: inoperableEquipment	Release: • 14.2
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 23-142 EquipmentInTest

Alarm	Attributes	Applicable major release
Name: EquipmentInTest (11) Type: equipmentAlarm Package: equipment.EquipmentInTest Raised on class: equipment.Equipment	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentInTest	Release: • 14.2
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 23-143 EquipmentMismatch

Alarm	Attributes	Applicable major release
Name: EquipmentMismatch (9) Type: equipmentAlarm Package: equipment.EquipmentMismatch Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentTypeMismatch	Release: • 14.2

Table 23-143 EquipmentMismatch (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 23-144 EquipmentRemoved

Alarm	Attributes	Applicable major release
Name: EquipmentRemoved (8) Type: equipmentAlarm Package: equipment.EquipmentRemoved Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved	Release: • 14.2
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: ((('isEquipped' EQUAL 'false') OR ('compositeEquipmentState' EQUAL 'Removed')) AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Removed') AND ('isEquipped' EQUAL 'true'))		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 23-145 FemtoUpgradeRulesFileAlarm

Alarm	Attributes	Applicable major release
Name: FemtoUpgradeRulesFileAlarm (12743) Type: processingErrorAlarm Package: femto.FemtoUpgradeRulesFileAlarm Raised on class: femto.SmallCellProfileUpgradeActions	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationOrCustomizationError	Release: • 14.2
Description: The alarm is raised when there is any issue with the Upgrade Rules File.		
Remedial action: Please provide a valid Femto Upgrade Rules File		

Table 23-146 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major release
Name: FrameSizeProblem (37) Type: configurationAlarm Package: netw.FrameSizeProblem Raised on class: netw.StatefullConnectableInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: frameSizeProblem	Release: • 14.2
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL '0L'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL '0L'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 23-147 functionsaddobject

Alarm	Attributes	Applicable major release
Name: functionsaddobject (6280) Type: equipmentAlarm Package: femto.functionsaddobject Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of addobject function		
Remedial action: Not available		

Table 23-148 functionsbackup

Alarm	Attributes	Applicable major release
Name: functionsbackup (6281) Type: equipmentAlarm Package: femto.functionsbackup Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of backup function		
Remedial action: Not available		

Table 23-149 functionsconfigurationdownload

Alarm	Attributes	Applicable major release
Name: functionsconfigurationdownload (6282) Type: equipmentAlarm Package: femto.functionsconfigurationdownload Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2

Table 23-149 functionsconfigurationdownload (continued)

Alarm	Attributes	Applicable major release
Description: The number of configurationdownload function		
Remedial action: Not available		

Table 23-150 functionsconfigurationupload

Alarm	Attributes	Applicable major release
Name: functionsconfigurationupload (6283) Type: equipmentAlarm Package: femto.functionsconfigurationupload Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of configurationupload function		
Remedial action: Not available		

Table 23-151 functionsconnect

Alarm	Attributes	Applicable major release
Name: functionsconnect (6284) Type: equipmentAlarm Package: femto.functionsconnect Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of connect function		
Remedial action: Not available		

Table 23-152 functionsdeleteobject

Alarm	Attributes	Applicable major release
Name: functionsdeleteobject (6285) Type: equipmentAlarm Package: femto.functionsdeleteobject Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of deleteobject function		
Remedial action: Not available		

Table 23-153 functionsfactoryreset

Alarm	Attributes	Applicable major release
Name: functionsfactoryreset (6286) Type: equipmentAlarm Package: femto.functionsfactoryreset Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of factoryreset function		
Remedial action: Not available		

Table 23-154 functionsfirmwareupdate

Alarm	Attributes	Applicable major release
Name: functionsfirmwareupdate (6287) Type: equipmentAlarm Package: femto.functionsfirmwareupdate Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of firmwareupdate function		
Remedial action: Not available		

Table 23-155 functionsgetoptions

Alarm	Attributes	Applicable major release
Name: functionsgetoptions (6288) Type: equipmentAlarm Package: femto.functionsgetoptions Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of getoptions function		
Remedial action: Not available		

Table 23-156 functionsgetparameterattributes

Alarm	Attributes	Applicable major release
Name: functionsgetparameterattributes (6289) Type: equipmentAlarm Package: femto.functionsgetparameterattributes Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of getparameterattributes function		
Remedial action: Not available		

Table 23-157 functionsgetparameternames

Alarm	Attributes	Applicable major release
Name: functionsgetparameternames (6290) Type: equipmentAlarm Package: femto.functionsgetparameternames Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of getparameternames function		
Remedial action: Not available		

Table 23-158 functionsgetparametervalues

Alarm	Attributes	Applicable major release
Name: functionsgetparametervalues (6291) Type: equipmentAlarm Package: femto.functionsgetparametervalues Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of getparametervalues function		
Remedial action: Not available		

Table 23-159 functionsgetqueuedtransfers

Alarm	Attributes	Applicable major release
Name: functionsgetqueuedtransfers (6292) Type: equipmentAlarm Package: femto.functionsgetqueuedtransfers Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of getqueuedtransfers function		
Remedial action: Not available		

Table 23-160 functionsgetrpcmethods

Alarm	Attributes	Applicable major release
Name: functionsgetrpcmethods (6293) Type: equipmentAlarm Package: femto.functionsgetrpcmethods Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of getrpcmethods function		
Remedial action: Not available		

Table 23-161 functionsreboot

Alarm	Attributes	Applicable major release
Name: functionsreboot (6294) Type: equipmentAlarm Package: femto.functionsreboot Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of reboot function		
Remedial action: Not available		

Table 23-162 functionsrestore

Alarm	Attributes	Applicable major release
Name: functionsrestore (6295) Type: equipmentAlarm Package: femto.functionsrestore Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of restore function		
Remedial action: Not available		

Table 23-163 functionsscheduleinform

Alarm	Attributes	Applicable major release
Name: functionsscheduleinform (6296) Type: equipmentAlarm Package: femto.functionsscheduleinform Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of scheduleinform function		
Remedial action: Not available		

Table 23-164 functionssetparameterattributes

Alarm	Attributes	Applicable major release
Name: functionssetparameterattributes (6297) Type: equipmentAlarm Package: femto.functionssetparameterattributes Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of setparameterattributes function		
Remedial action: Not available		

Table 23-165 functionssetparametervalues

Alarm	Attributes	Applicable major release
Name: functionssetparametervalues (6298) Type: equipmentAlarm Package: femto.functionssetparametervalues Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of setparametervalues function		
Remedial action: Not available		

Table 23-166 functionssnmpgetparametervalues

Alarm	Attributes	Applicable major release
Name: functionssnmpgetparametervalues (6299) Type: equipmentAlarm Package: femto.functionssnmpgetparametervalues Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of snmpgetparametervalues function		
Remedial action: Not available		

Table 23-167 functionssnmpsetparametervalues

Alarm	Attributes	Applicable major release
Name: functionssnmpsetparametervalues (6300) Type: equipmentAlarm Package: femto.functionssnmpsetparametervalues Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of snmpsetparametervalues function		
Remedial action: Not available		

Table 23-168 GaPeerDown

Alarm	Attributes	Applicable major release
Name: GaPeerDown (3303) Type: EpcAlarm Package: lteggsn.GaPeerDown Raised on class: lteggsn.GaPeer	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerDown	Release: • 14.2
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		

Table 23-168 GaPeerDown (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 23-169 gccollectiontimeavg

Alarm	Attributes	Applicable major release
Name: gccollectiontimeavg (6301) Type: equipmentAlarm Package: femto.gccollectiontimeavg Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The average GC collection time		
Remedial action: Not available		

Table 23-170 gccount

Alarm	Attributes	Applicable major release
Name: gccount (6302) Type: equipmentAlarm Package: femto.gccount Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The GC count		
Remedial action: Not available		

Table 23-171 gcfullcollectiontimeavg

Alarm	Attributes	Applicable major release
Name: gcfullcollectiontimeavg (6303) Type: equipmentAlarm Package: femto.gcfullcollectiontimeavg Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The average full GC collection time		
Remedial action: Not available		

Table 23-172 gcfullcount

Alarm	Attributes	Applicable major release
Name: gcfullcount (6304) Type: equipmentAlarm Package: femto.gcfullcount Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Full GC time		
Remedial action: Not available		

Table 23-173 GPS_femtoNotInAuthorizedAreaGPS

Alarm	Attributes	Applicable major release
Name: GPS_femtoNotInAuthorizedAreaGPS (5992) Type: equipmentAlarm Package: femto.GPS_femtoNotInAuthorizedAreaGPS Raised on class: femto.GPS	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: Femto location detected by GPS not in the authorized location.		
Remedial action: The operator will need to disable/override the check to get BSR enabled. If the problem persists, contact Nokia customer support.		

Table 23-174 GPS_gpsHardwareFailure

Alarm	Attributes	Applicable major release
Name: GPS_gpsHardwareFailure (5993) Type: equipmentAlarm Package: femto.GPS_gpsHardwareFailure Raised on class: femto.GPS	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 14.2
Description: GPS module HW Failed.		
Remedial action: Contact Nokia customer support for replacement of the GPS module		

Table 23-175 GPS_gpsLocationFailure

Alarm	Attributes	Applicable major release
Name: GPS_gpsLocationFailure (5994) Type: equipmentAlarm Package: femto.GPS_gpsLocationFailure Raised on class: femto.GPS	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: responseTimeExcessive	Release: • 14.2
Description: GPS receiver failed to return a location to the requested accuracy within the allowed duration.		

Table 23-175 GPS_gpsLocationFailure (continued)

Alarm	Attributes	Applicable major release
Remedial action: The alarm will be cleared by the Small Cell when the GPS receiver is supplying accurateinformation. If the problem persists, contact Nokia customer support		

Table 23-176 GSMListener_gsmATCmdFail

Alarm	Attributes	Applicable major release
Name: GSMListener_gsmATCmdFail (5995) Type: equipmentAlarm Package: femto.GSMListener_gsmATCmdFail Raised on class: femto.GSMListener	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 14.2
Description: AT command has failed.		
Remedial action: The MSAP automatically reset when the alarm is triggered. If this alarm persists, reset the MSAP. If the problem persists, contact Nokia customer support.		

Table 23-177 GSMListener_gsmModuleATCmdTimeoutError

Alarm	Attributes	Applicable major release
Name: GSMListener_gsmModuleATCmdTimeoutError (5996) Type: equipmentAlarm Package: femto.GSMListener_ gsmModuleATCmdTimeoutError Raised on class: femto.GSMListener	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 14.2
Description: Failure to receive a response from an AT command.		
Remedial action: The alarm will be cleared by the Small Cell when it resets. If the problem persists, contact Nokia customer support.		

Table 23-178 GSMListener_gsmModuleFailtoInit

Alarm	Attributes	Applicable major release
Name: GSMListener_gsmModuleFailtoInit (5997) Type: equipmentAlarm Package: femto.GSMListener_gsmModuleFailtoInit Raised on class: femto.GSMListener	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 14.2
Description: GSMListener module fails to initialize.		
Remedial action: The alarm will be cleared by the Small Cell when it resets. If the problem persists, contact Nokia customer support.		

Table 23-179 GSMListener_gsmNoCellsFound

Alarm	Attributes	Applicable major release
Name: GSMListener_gsmNoCellsFound (5998) Type: equipmentAlarm Package: femto.GSMListener_gsmNoCellsFound Raised on class: femto.GSMListener	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: No GSM cells have been found during a search.		
Remedial action: No operatorintervention is required.		

Table 23-180 hdmAlarmListenerFailure

Alarm	Attributes	Applicable major release
Name: hdmAlarmListenerFailure (6305) Type: communicationsAlarm Package: femto.hdmAlarmListenerFailure Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • 14.2
Description: This alarm indicates a communication issue with JMS Listener for Alarm notification in SAM and HDM.		
Remedial action: No particular action is required. This notification may be required by Global Product Support for debugging purposes		

Table 23-181 hdmDashboardAlarmListenerFailure

Alarm	Attributes	Applicable major release
Name: hdmDashboardAlarmListenerFailure (6306) Type: communicationsAlarm Package: femto.hdmDashboardAlarmListenerFailure Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • 14.2
Description: This alarm indicates a communication issue with JMS Listener for HDM Dashboard Alarm notification in SAM and HDM.		
Remedial action: No particular action is required. This notification may be required by Global Product Support for debugging purposes		

Table 23-182 hdmRegistrationListenerFailure

Alarm	Attributes	Applicable major release
Name: hdmRegistrationListenerFailure (6308) Type: communicationsAlarm Package: femto.hdmRegistrationListenerFailure Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • 14.2

Table 23-182 hdmRegistrationListenerFailure (continued)

Alarm	Attributes	Applicable major release
Description: This alarm indicates a communication issue with JMS Listener for Registration notification in SAM and HDM.		
Remedial action: No particular action is required. This notification may be required by Global Product Support for debugging purposes		

Table 23-183 hdmReRegistrationListenerFailure

Alarm	Attributes	Applicable major release
Name: hdmReRegistrationListenerFailure (6307) Type: communicationsAlarm Package: femto.hdmReRegistrationListenerFailure Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • 14.2
Description: This alarm indicates a communication issue with JMS Listener for ReRegistration notification in SAM and HDM.		
Remedial action: No particular action is required. This notification may be required by Global Product Support for debugging purposes		

Table 23-184 hdmResynchroListenerFailure

Alarm	Attributes	Applicable major release
Name: hdmResynchroListenerFailure (6309) Type: communicationsAlarm Package: femto.hdmResynchroListenerFailure Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • 14.2
Description: This alarm indicates a communication issue with JMS Listener for ReSynch notification in SAM and HDM.		
Remedial action: No particular action is required. This notification may be required by Global Product Support for debugging purposes		

Table 23-185 hdmWebservicesFailure

Alarm	Attributes	Applicable major release
Name: hdmWebservicesFailure (6310) Type: communicationsAlarm Package: femto.hdmWebservicesFailure Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • 14.2
Description: This alarm indicates a communication issue with Webservices client in SAM and HDM.		
Remedial action: No particular action is required. This notification may be required by Global Product Support for debugging purposes		

Table 23-186 hdmworkmanagercwmpservletcompletedrequests

Alarm	Attributes	Applicable major release
Name: hdmworkmanagercwmpservlet-completedrequests (6311) Type: equipmentAlarm Package: femto.hdmworkmanagercwmpservletcompletedrequests Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: HDM CWMP Servelt workmanager completed request rate		
Remedial action: Not available		

Table 23-187 hdmworkmanagercwmpservletpendingrequests

Alarm	Attributes	Applicable major release
Name: hdmworkmanagercwmpservletpendingrequests (6312) Type: equipmentAlarm Package: femto.hdmworkmanagercwmpservletpendingrequests Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: HDM CWMP Servelt workmanager pending request count		
Remedial action: Not available		

Table 23-188 hdmworkmanagerdefaultcompletedrequests

Alarm	Attributes	Applicable major release
Name: hdmworkmanagerdefaultcompletedrequests (6313) Type: equipmentAlarm Package: femto.hdmworkmanagerdefaultcompletedrequests Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: HDM default workmanager completed request rate		
Remedial action: Not available		

Table 23-189 hdmworkmanagerdefaultpendingrequests

Alarm	Attributes	Applicable major release
Name: hdmworkmanagerdefaultpendingrequests (6314) Type: equipmentAlarm Package: femto.hdmworkmanagerdefaultpendingrequests Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: HDM default workmanager pending request count		
Remedial action: Not available		

Table 23-190 hdmworkmanagernbiservicecompletedrequests

Alarm	Attributes	Applicable major release
Name: hdmworkmanagernbiservicecompletedrequests (6315) Type: equipmentAlarm Package: femto.hdmworkmanagernbiservicecompletedrequests Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: HDM NBI Service workmanager completed request rate		
Remedial action: Not available		

Table 23-191 hdmworkmanagernbiservicependingrequests

Alarm	Attributes	Applicable major release
Name: hdmworkmanagernbiservicependingrequests (6316) Type: equipmentAlarm Package: femto.hdmworkmanagernbiservicependingrequests Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: HDM NBI workmanager pending request count		
Remedial action: Not available		

Table 23-192 healthcheckstatuscluster

Alarm	Attributes	Applicable major release
Name: healthcheckstatuscluster (12506) Type: equipmentAlarm Package: femto.healthcheckstatuscluster Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: This alarm indicates that HDM cluster is not in a healthy state. One or more managed servers could be overloaded or failed.		
Remedial action: Not available		

Table 23-193 HeNB_errorContactingBalmCalibrationServer

Alarm	Attributes	Applicable major release
Name: HeNB_errorContactingBalmCalibrationServer (11150) Type: processingErrorAlarm Package: femto.HeNB_ errorContactingBalmCalibrationServer Raised on class: femto.HeNB	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: This alarm is generated by SON, when the balm calibration server is unreachable and it is not cleared		
Remedial action: Fix Provision (for correct BALM v1 operation)		

Table 23-194 HeNB_errorContactingBalmThroughputSamplingServer

Alarm	Attributes	Applicable major release
Name: HeNB_ errorContactingBalmThroughputSamplingServer (11151) Type: processingErrorAlarm Package: femto.HeNB_ errorContactingBalmThroughputSamplingServer Raised on class: femto.HeNB	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: This alarm is generated by SON, when the balm throughput sampling server is unreachable and it is not cleared		
Remedial action: Fix Provision (for correct BALM v1 operation)		

Table 23-195 HeNB_errorCrmUnableToProvideLteuService

Alarm	Attributes	Applicable major release
Name: HeNB_errorCrmUnableToProvideLteuService (11152) Type: processingErrorAlarm Package: femto.HeNB_ errorCrmUnableToProvideLteuService Raised on class: femto.HeNB	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: This alarm is generated by CrM during initialization at bootup if LTEU operation is provisioned but CrM is unable to provide LTEU service, and if it is not cleared.		
Remedial action: If LTEU service is intended, make sure the correct 802.11 drivers, firmware, and hardware are installed. Check the logs (at /var/log/messages) to see if there was a configuration or Network Listen Initialization error. Provision the system correctly for the intended service.		

Table 23-196 HeNB_lteOamConfigurationFailure

Alarm	Attributes	Applicable major release
Name: HeNB_lteOamConfigurationFailure (12402) Type: processingErrorAlarm Package: femto.HeNB_lteOamConfigurationFailure Raised on class: femto.HeNB	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: LTE OAM configuration failure alarm		
Remedial action: Fix provisioning accordingly		

Table 23-197 HeNB_lteOamConfigurationWarning

Alarm	Attributes	Applicable major release
Name: HeNB_lteOamConfigurationWarning (12403) Type: processingErrorAlarm Package: femto.HeNB_lteOamConfigurationWarning Raised on class: femto.HeNB	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: This alarm is generated by LTE stack when it finds that the current database doesn't satisfy the constraints. . Even though this alarm is raised, Femto may offer service. The alarm shall be cleared if all the constraints pass later which may be due to online modification of parameters.		
Remedial action: Identify the constraints that fail by analysing the logs. Modify the value of the parameters to satisfy the constraints		

Table 23-198 HeNB_lteRrcSctpAssociationFailure

Alarm	Attributes	Applicable major release
Name: HeNB_lteRrcSctpAssociationFailure (12404) Type: communicationsAlarm Package: femto.HeNB_lteRrcSctpAssociationFailure Raised on class: femto.HeNB	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: connectionEstablishmentError	Release: • 14.2
Description: RRC/SCTP association failure alarm. This alarm is triggered by: 1) eNB receives an ErrorInd from MME with Criticality Diagnostics; 2) S1Setup response timer expires and maximum retries exhausted; 3) receive S1Setup Failure from MME and maximum retries exhausted; 4) during S1Setup, SCTP conn failure; 5) SCTP s1 setup req send fails; 6) upon expiration of sctp connection recovery timer; 7) gets sctp shutdown from mme when cell is up.		
Remedial action: Depending on fault condition, the cell may need reboot to recover SCTP association. Look MME IP address in the Additional Text field of this alarm message for SCTP association.		

Table 23-199 HeNB_mmeS1SetupResponseInconsistency

Alarm	Attributes	Applicable major release
Name: HeNB_mmeS1SetupResponseInconsistency (8491) Type: processingErrorAlarm Package: femto.HeNB_ mmeS1SetupResponseInconsistency Raised on class: femto.HeNB	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: All MME related to an operator (PLMN) are not reachable. PLMN that are requested to be broadcasted in SIB1 are not received in the served GUMMEI provided in S1 SETUP Responses.		
Remedial action: Fix configuration accordingly		

Table 23-200 HeNB_spareHeNBAlarm1

Alarm	Attributes	Applicable major release
Name: HeNB_spareHeNBAlarm1 (8176) Type: processingErrorAlarm Package: femto.HeNB_spareHeNBAlarm1 Raised on class: femto.HeNB	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: Spare alarm 1		
Remedial action: Refer to customer documentation for alarm details.		

Table 23-201 HeNB_spareHeNBAlarm2

Alarm	Attributes	Applicable major release
Name: HeNB_spareHeNBAlarm2 (8177) Type: processingErrorAlarm Package: femto.HeNB_spareHeNBAlarm2 Raised on class: femto.HeNB	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: Spare alarm 2		
Remedial action: Refer to customer documentation for alarm details.		

Table 23-202 HeNB_spareHeNBAlarm3

Alarm	Attributes	Applicable major release
Name: HeNB_spareHeNBAlarm3 (8178) Type: processingErrorAlarm Package: femto.HeNB_spareHeNBAlarm3 Raised on class: femto.HeNB	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: Spare alarm 3		
Remedial action: Refer to customer documentation for alarm details.		

Table 23-203 HeNB_spareHeNBAlarm4

Alarm	Attributes	Applicable major release
Name: HeNB_spareHeNBAlarm4 (11153) Type: processingErrorAlarm Package: femto.HeNB_spareHeNBAlarm4 Raised on class: femto.HeNB	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: Spare alarm 4		
Remedial action: Refer to customer documentation for alarm details.		

Table 23-204 HeNB_spareHeNBAlarm5

Alarm	Attributes	Applicable major release
Name: HeNB_spareHeNBAlarm5 (11154) Type: processingErrorAlarm Package: femto.HeNB_spareHeNBAlarm5 Raised on class: femto.HeNB	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: Spare alarm 5		
Remedial action: Refer to customer documentation for alarm details.		

Table 23-205 HeNB_spareHeNBAlarm6

Alarm	Attributes	Applicable major release
Name: HeNB_spareHeNBAlarm6 (11155) Type: processingErrorAlarm Package: femto.HeNB_spareHeNBAlarm6 Raised on class: femto.HeNB	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: Spare alarm 6		
Remedial action: Refer to customer documentation for alarm details.		

Table 23-206 httpacceptcount

Alarm	Attributes	Applicable major release
Name: httpacceptcount (6317) Type: equipmentAlarm Package: femto.httpacceptcount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number if http accept		
Remedial action: Not available		

Table 23-207 httpconnectionscount

Alarm	Attributes	Applicable major release
Name: httpconnectionscount (6318) Type: equipmentAlarm Package: femto.httpconnectionscount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of http connection		
Remedial action: Not available		

Table 23-208 httpmessagessentrate

Alarm	Attributes	Applicable major release
Name: httpmessagessentrate (6319) Type: equipmentAlarm Package: femto.httpmessagessentrate Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The rate of http message sent		
Remedial action: Not available		

Table 23-209 httpreceivedmessagesrate

Alarm	Attributes	Applicable major release
Name: httpreceivedmessagesrate (6320) Type: equipmentAlarm Package: femto.httpreceivedmessagesrate Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The rate of http message reciption		
Remedial action: Not available		

Table 23-210 httpsacceptcount

Alarm	Attributes	Applicable major release
Name: httpsacceptcount (6321) Type: equipmentAlarm Package: femto.httpsacceptcount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number if https accept		
Remedial action: Not available		

Table 23-211 httpsconnectionscount

Alarm	Attributes	Applicable major release
Name: httpsconnectionscount (6322) Type: equipmentAlarm Package: femto.httpsconnectionscount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of https connection		
Remedial action: Not available		

Table 23-212 httpsmessagessentrate

Alarm	Attributes	Applicable major release
Name: httpsmessagessentrate (6323) Type: equipmentAlarm Package: femto.httpsmessagessentrate Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The rate of https message sent		
Remedial action: Not available		

Table 23-213 httpsreceivedmessagesrate

Alarm	Attributes	Applicable major release
Name: httpsreceivedmessagesrate (6324) Type: equipmentAlarm Package: femto.httpsreceivedmessagesrate Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The rate of https message reciption		
Remedial action: Not available		

Table 23-214 IKESAPair_tunnelConfigFailure

Alarm	Attributes	Applicable major release
Name: IKESAPair_tunnelConfigFailure (8179) Type: communicationsAlarm Package: femto.IKESAPair_tunnelConfigFailure Raised on class: femto.IKESAPair	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: responseTimeExcessive	Release: • 14.2
Description: This fault is raised if the Femto BSR did not receive a response to IKE_INIT or IKE_AUTH, if Dead Peer Detection (DPD) encountered an unresponsive SeGW, or if the Femto BSR could not resolve the SeGW FQDN to an IP address (when/if FQDN was used).		
Remedial action: This alarm is applicable for MS AP and occurs when we have SA_INIT or DNS lookup fail.		

Table 23-215 informall

Alarm	Attributes	Applicable major release
Name: informall (6325) Type: equipmentAlarm Package: femto.informall Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of inform all		
Remedial action: Not available		

Table 23-216 informboot

Alarm	Attributes	Applicable major release
Name: informboot (6326) Type: equipmentAlarm Package: femto.informboot Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of inform boot		

Table 23-216 informboot (continued)

Alarm	Attributes	Applicable major release
Remedial action: Not available		

Table 23-217 informbootstrap

Alarm	Attributes	Applicable major release
Name: informbootstrap (6327) Type: equipmentAlarm Package: femto.informbootstrap Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of inform bootstrap		
Remedial action: Not available		

Table 23-218 informconnectionrequest

Alarm	Attributes	Applicable major release
Name: informconnectionrequest (6328) Type: equipmentAlarm Package: femto.informconnectionrequest Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of inform connectionrequest		
Remedial action: Not available		

Table 23-219 informdiagnosticscomplete

Alarm	Attributes	Applicable major release
Name: informdiagnosticscomplete (6329) Type: equipmentAlarm Package: femto.informdiagnosticscomplete Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of inform diagnosticsComplete		
Remedial action: Not available		

Table 23-220 informdownload

Alarm	Attributes	Applicable major release
Name: informdownload (6330) Type: equipmentAlarm Package: femto.informdownload Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of inform download		
Remedial action: Not available		

Table 23-221 informkicked

Alarm	Attributes	Applicable major release
Name: informkicked (6331) Type: equipmentAlarm Package: femto.informkicked Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of inform kicked		
Remedial action: Not available		

Table 23-222 informlatency

Alarm	Attributes	Applicable major release
Name: informlatency (6332) Type: equipmentAlarm Package: femto.informlatency Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of inform latency		
Remedial action: Not available		

Table 23-223 informlatencymax

Alarm	Attributes	Applicable major release
Name: informlatencymax (6333) Type: equipmentAlarm Package: femto.informlatencymax Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of inform latency.max		
Remedial action: Not available		

Table 23-224 informlatencymin

Alarm	Attributes	Applicable major release
Name: informlatencymin (6334) Type: equipmentAlarm Package: femto.informlatencymin Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of inform latency.min		
Remedial action: Not available		

Table 23-225 informperiodic

Alarm	Attributes	Applicable major release
Name: informperiodic (6335) Type: equipmentAlarm Package: femto.informperiodic Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of inform periodic		
Remedial action: Not available		

Table 23-226 informreboot

Alarm	Attributes	Applicable major release
Name: informreboot (6336) Type: equipmentAlarm Package: femto.informreboot Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of inform reboot		
Remedial action: Not available		

Table 23-227 informrequestdownload

Alarm	Attributes	Applicable major release
Name: informrequestdownload (6337) Type: equipmentAlarm Package: femto.informrequestdownload Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of inform requestDownload		
Remedial action: Not available		

Table 23-228 informscheduled

Alarm	Attributes	Applicable major release
Name: informscheduled (6338) Type: equipmentAlarm Package: femto.informscheduled Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of inform scheduled		
Remedial action: Not available		

Table 23-229 informscheduleinform

Alarm	Attributes	Applicable major release
Name: informscheduleinform (6339) Type: equipmentAlarm Package: femto.informscheduleinform Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of inform scheduleInform		
Remedial action: Not available		

Table 23-230 informtransfercomplete

Alarm	Attributes	Applicable major release
Name: informtransfercomplete (6340) Type: equipmentAlarm Package: femto.informtransfercomplete Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of inform transferComplete		
Remedial action: Not available		

Table 23-231 informupload

Alarm	Attributes	Applicable major release
Name: informupload (6341) Type: equipmentAlarm Package: femto.informupload Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of inform upload		
Remedial action: Not available		

Table 23-232 informvaluechange

Alarm	Attributes	Applicable major release
Name: informvaluechange (6342) Type: equipmentAlarm Package: femto.informvaluechange Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of inform valueChange		
Remedial action: Not available		

Table 23-233 invalidloginattemptstotalcount

Alarm	Attributes	Applicable major release
Name: invalidloginattemptstotalcount (6343) Type: equipmentAlarm Package: femto.invalidloginattemptstotalcount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Invalid login attempt occured on the current server		
Remedial action: Not available		

Table 23-234 ItfBGWY_itfBSGdnsFailure

Alarm	Attributes	Applicable major release
Name: ItfBGWY_itfBSGdnsFailure (6010) Type: communicationsAlarm Package: femto.ItfBGWY_itfBSGdnsFailure Raised on class: femto.ItfBGWY	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: This fault is sent when ItfBGWY link failure is detected when no response is received to DNS messages attempting to resolve the FGW FQDN. This maybe caused by timeout or a protocol error.		
Remedial action: NA		

Table 23-235 ItfBGWY_itfFGWfailure

Alarm	Attributes	Applicable major release
Name: ItfBGWY_itfFGWfailure (6012) Type: communicationsAlarm Package: femto.ItfBGWY_itfFGWfailure Raised on class: femto.ItfBGWY	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: This fault indicates that FBSR registration in FGW is failed due to reasons other than overload.		

Table 23-235 ItfBGWY_itfFGWfailure (continued)

Alarm	Attributes	Applicable major release
Remedial action: If the problem persists, contact Nokia customer support		

Table 23-236 ItfBGWY_itfFGWoverload

Alarm	Attributes	Applicable major release
Name: ItfBGWY_itfFGWoverload (6013) Type: equipmentAlarm Package: femto.ItfBGWY_itfFGWoverload Raised on class: femto.ItfBGWY	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: congestion	Release: • 14.2
Description: This fault indicates that FGW is overloaded and FBSR should be re-registered.		
Remedial action: The alarm will be cleared by the Small Cell when it successfully re-registers with the SCGW		

Table 23-237 ItfBGWY_itfFGWRegistrationFailure

Alarm	Attributes	Applicable major release
Name: ItfBGWY_itfFGWRegistrationFailure (6011) Type: operationalViolation Package: femto.ItfBGWY_itfFGWRegistrationFailure Raised on class: femto.ItfBGWY	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: This fault is generated when the Iu' BSR fails to register with the FGW following SCTP establishment, or update the registration for any reason other than BSR Id Clash.		
Remedial action: The alarm will be cleared by the Small Cell when it successfully re-registers with the		

Table 23-238 ItfBGWY_noResponseFromBGWY

Alarm	Attributes	Applicable major release
Name: ItfBGWY_noResponseFromBGWY (6014) Type: communicationsAlarm Package: femto.ItfBGWY_noResponseFromBGWY Raised on class: femto.ItfBGWY	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: responseTimeExcessive	Release: • 14.2
Description: This fault indicates that communication on the interface to BSR Gateway is interrupted. It is raised when a request from BSR application on interface to BSR Gateway timed out (typically the SCTP association is up).		
Remedial action: The alarm will be cleared by the Small Cell when the registration with BSR Gateway is successful. If the problem persists, contact Nokia customer support		

Table 23-239 ItfBPG_itfBPGdnsFailure

Alarm	Attributes	Applicable major release
Name: ItfBPG_itfBPGdnsFailure (6016) Type: communicationsAlarm Package: femto.ItfBPG_itfBPGdnsFailure Raised on class: femto.ItfBPG	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: This fault is sent when ItfBPG link failure is detected when no response is received to DNS messages attempting to resolve the BPG FQDN. This maybe caused by timeout or a protocol error.		
Remedial action: The operator should check configuration of BPG FQDN. The DNS servers must be provisioned in the Small Cell. During the IPsec tunnel establishment, the DNS servers must be reachable from the Small Cell. The DNS servers must contain Resource Records for the BPG FQDN. If the problem persists, contact Nokia customer support.		

Table 23-240 ItfBPG_itfBPGLinkFailure

Alarm	Attributes	Applicable major release
Name: ItfBPG_itfBPGLinkFailure (6015) Type: communicationsAlarm Package: femto.ItfBPG_itfBPGLinkFailure Raised on class: femto.ItfBPG	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: responseTimeExcessive	Release: • 14.2
Description: This fault is sent when ItfBPG link failure is detected when no response is received for a special DPAT procedure with version ="10 after exhausting all retries, or when no response received after 6 attempts at initialization."		
Remedial action: The alarm will be cleared by the Small Cell when the DPAT bind request succeeds. If the problem persists, contact Nokia customer support.		

Table 23-241 ItfBVG_itfBVGdnsFailure

Alarm	Attributes	Applicable major release
Name: ItfBVG_itfBVGdnsFailure (6018) Type: communicationsAlarm Package: femto.ItfBVG_itfBVGdnsFailure Raised on class: femto.ItfBVG	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: This fault is raised when ItfBVG link failure is detected when no response is received to DNS messages attempting to resolve the BVG FQDN. This maybe caused by timeout or a protocol error.		
Remedial action: Operator could check configuration of BVG FQDN, ensure operator DNS servers are provisioned in FBSR at IPsec tunnel establishment, ensure operator DNS servers are reachable from FBSR, ensure operator DNS servers contain Resource Records for the BVG FQDN. If the problem persists, contact Nokia customer support		

Table 23-242 ItfBVG_itfBVGLinkFailure

Alarm	Attributes	Applicable major release
Name: ItfBVG_itfBVGLinkFailure (6017) Type: communicationsAlarm Package: femto.ItfBVG_itfBVGLinkFailure Raised on class: femto.ItfBVG	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: responseTimeExcessive	Release: • 14.2
Description: This fault is raised when ItfBVG link failure is detected when no response id is received for keepalive messages on the BSR - BVG interface. This alarm is also sent when the initialising BVG binding update is not successful.		
Remedial action: Operator could check configuration of BVG IP address. If the problem persists, contact Nokia customer suppor		

Table 23-243 IuCSPrime_csCnConnectivityLost

Alarm	Attributes	Applicable major release
Name: IuCSPrime_csCnConnectivityLost (6023) Type: communicationsAlarm Package: femto.IuCSPrime_csCnConnectivityLost Raised on class: femto.IuCSPrime	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: remoteNodeTransmissionError	Release: • 14.2
Description: The BSR has detected a loss of connectivity to the CS Core Network, even though the transport layer is still connected.		
Remedial action: The alarm is cleared by the Small Cell when connectivity to the CS Core Network is re-established. If the problem persists, contact Nokia customer support.		

Table 23-244 IuPSUplane_gTPEchoFailure

Alarm	Attributes	Applicable major release
Name: IuPSUplane_gTPEchoFailure (6043) Type: communicationsAlarm Package: femto.IuPSUplane_gTPEchoFailure Raised on class: femto.IuPSUplane	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: responseTimeExcessive	Release: • 14.2
Description: Echo failure on the IuPS interface.		
Remedial action: No operator intervention is required. If the problem persists, contact Nokia customer support.		

Table 23-245 jdbcactivecurrentconnectionscount

Alarm	Attributes	Applicable major release
Name: jdbcactivecurrentconnectionscount (6344) Type: equipmentAlarm Package: femto.jdbcactivecurrentconnectionscount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of connections currently in use by applications		

Table 23-245 jdbcactivecurrentconnectionscount (continued)

Alarm	Attributes	Applicable major release
Remedial action: Not available		

Table 23-246 jdbcactivehighconnectionscount

Alarm	Attributes	Applicable major release
Name: jdbcactivehighconnectionscount (6345) Type: equipmentAlarm Package: femto.jdbcactivehighconnectionscount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Highest number of active database connections in this instance of the data source since the data source was instantiated		
Remedial action: Not available		

Table 23-247 jdbccurrcapacity

Alarm	Attributes	Applicable major release
Name: jdbccurrcapacity (6346) Type: equipmentAlarm Package: femto.jdbccurrcapacity Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Current database capacity		
Remedial action: Not available		

Table 23-248 jdbcdbsize

Alarm	Attributes	Applicable major release
Name: jdbcdbsize (6347) Type: equipmentAlarm Package: femto.jdbcdbsize Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: hdm database storage in use		
Remedial action: Not available		

Table 23-249 jdbcdevicecount

Alarm	Attributes	Applicable major release
Name: jdbcdevicecount (6348) Type: equipmentAlarm Package: femto.jdbcdevicecount Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Number of devices defined in Home Device Manager		
Remedial action: Not available		

Table 23-250 jdbcenabledetpolicycount

Alarm	Attributes	Applicable major release
Name: jdbcenabledetpolicycount (6349) Type: equipmentAlarm Package: femto.jdbcenabledetpolicycount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Number of enabled and pending event-triggered policies defined in Home Device Manager		
Remedial action: Not available		

Table 23-251 jdbcenableditpolicycount

Alarm	Attributes	Applicable major release
Name: jdbcenableditpolicycount (6350) Type: equipmentAlarm Package: femto.jdbcenableditpolicycount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Number of enabled instant-triggered policies defined in Home Device Manager		
Remedial action: Not available		

Table 23-252 jdbcfailedactications

Alarm	Attributes	Applicable major release
Name: jdbcfailedactications (6351) Type: equipmentAlarm Package: femto.jdbcfailedactications Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Number of devices stated as activation failed in Home Device Manager		
Remedial action: Not available		

Table 23-253 jdbcfailedloginrate

Alarm	Attributes	Applicable major release
Name: jdbcfailedloginrate (6352) Type: equipmentAlarm Package: femto.jdbcfailedloginrate Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Number of failed attempts of devices to Home Device Manager		
Remedial action: Not available		

Table 23-254 jdbcfailedreserverequestcount

Alarm	Attributes	Applicable major release
Name: jdbcfailedreserverequestcount (6353) Type: equipmentAlarm Package: femto.jdbcfailedreserverequestcount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The Number of reserve request failed.		
Remedial action: Not available		

Table 23-255 jdbcleakedconnectioncount

Alarm	Attributes	Applicable major release
Name: jdbcleakedconnectioncount (6354) Type: equipmentAlarm Package: femto.jdbcleakedconnectioncount Raised on class: femto.HDMCluster	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of leaked database connection		
Remedial action: Not available		

Table 23-256 jdbcmanagementpolicycount

Alarm	Attributes	Applicable major release
Name: jdbcmanagementpolicycount (6355) Type: equipmentAlarm Package: femto.jdbcmanagementpolicycount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Number of management policies defined in Home Device Manager		
Remedial action: Not available		

Table 23-257 jdbcpendingactivations

Alarm	Attributes	Applicable major release
Name: jdbcpendingactivations (6356) Type: equipmentAlarm Package: femto.jdbcpendingactivations Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Number of devices stated as activation pending in Home Device Manager		
Remedial action: Not available		

Table 23-258 jdbcwaitingcurrentconnectionscount

Alarm	Attributes	Applicable major release
Name: jdbcwaitingcurrentconnectionscount (6357) Type: equipmentAlarm Package: femto.jdbcwaitingcurrentconnectionscount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of connection requests waiting for a database connection		
Remedial action: Not available		

Table 23-259 jmsconnectionrequestcurrentcount

Alarm	Attributes	Applicable major release
Name: jmsconnectionrequestcurrentcount (6358) Type: equipmentAlarm Package: femto.jmsconnectionrequestcurrentcount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The current number of messages stored on connectionRequestQueue JMS destination for the current server		
Remedial action: Not available		

Table 23-260 jmsconnectionrequestpendingcount

Alarm	Attributes	Applicable major release
Name: jmsconnectionrequestpendingcount (6359) Type: equipmentAlarm Package: femto.jmsconnectionrequestpendingcount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The current number of messages pending (unacknowledged or uncommitted) stored on connectionRequestQueue JMS destination for the current server		
Remedial action: Not available		

Table 23-261 jmsconnectionrequestrate

Alarm	Attributes	Applicable major release
Name: jmsconnectionrequestrate (6360) Type: equipmentAlarm Package: femto.jmsconnectionrequestrate Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The current number of received Connection Request rate stored on connectionRequestQueue JMS destination for the current server		
Remedial action: Not available		

Table 23-262 jmsdarcurrentcount

Alarm	Attributes	Applicable major release
Name: jmsdarcurrentcount (6361) Type: equipmentAlarm Package: femto.jmsdarcurrentcount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The current number of messages stored on deviceActionResultQueue JMS destination for the current server		
Remedial action: Not available		

Table 23-263 jmsdarpendingcount

Alarm	Attributes	Applicable major release
Name: jmsdarpendingcount (6362) Type: equipmentAlarm Package: femto.jmsdarpendingcount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The current number of messages pending (unacknowledged or uncommitted) stored on deviceActionResultQueue JMS destination for the current server		
Remedial action: Not available		

Table 23-264 jmsdarrate

Alarm	Attributes	Applicable major release
Name: jmsdarrate (6363) Type: equipmentAlarm Package: femto.jmsdarrate Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Received device action result rate		

Table 23-264 jmsdarrate (continued)

Alarm	Attributes	Applicable major release
Remedial action: Not available		

Table 23-265 jmseventsrate

Alarm	Attributes	Applicable major release
Name: jmseventsrate (6364) Type: equipmentAlarm Package: femto.jmseventsrate Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Received inform event rate		
Remedial action: Not available		

Table 23-266 jmsinformeventscurrentcount

Alarm	Attributes	Applicable major release
Name: jmsinformeventscurrentcount (6365) Type: equipmentAlarm Package: femto.jmsinformeventscurrentcount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The current number of messages stored on deviceEventQueue JMS destination for the current server		
Remedial action: Not available		

Table 23-267 jmsinformeventspendingcount

Alarm	Attributes	Applicable major release
Name: jmsinformeventspendingcount (6366) Type: equipmentAlarm Package: femto.jmsinformeventspendingcount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The current number of messages pending (unacknowledged or uncommitted) stored on deviceEventQueue JMS destination for the current server		
Remedial action: Not available		

Table 23-268 jmsnbiinternalcurrentcount

Alarm	Attributes	Applicable major release
Name: jmsnbiinternalcurrentcount (6367) Type: equipmentAlarm Package: femto.jmsnbiinternalcurrentcount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The current number of messages stored on nbiInternalQueue JMS destination for the current server		
Remedial action: Not available		

Table 23-269 jmsnbiinternalpendingcount

Alarm	Attributes	Applicable major release
Name: jmsnbiinternalpendingcount (6368) Type: equipmentAlarm Package: femto.jmsnbiinternalpendingcount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The current number of messages pending (unacknowledged or uncommitted) stored on nbiInternalQueue JMS destination for the current server		
Remedial action: Not available		

Table 23-270 jmsnbiinternalrate

Alarm	Attributes	Applicable major release
Name: jmsnbiinternalrate (6369) Type: equipmentAlarm Package: femto.jmsnbiinternalrate Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The current number of received NBI Out Bound Event rate stored on nbiInternalQueue JMS destination for the current server		
Remedial action: Not available		

Table 23-271 jmsnbiobalarmcurrentcount

Alarm	Attributes	Applicable major release
Name: jmsnbiobalarmcurrentcount (6370) Type: equipmentAlarm Package: femto.jmsnbiobalarmcurrentcount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The current number of messages stored on nbiOutBoundAlarmTopic JMS destination for the current server		

Table 23-271 jmsnbiobalarmcurrentcount (continued)

Alarm	Attributes	Applicable major release
Remedial action: Not available		

Table 23-272 jmsnbiobalarmpendingcount

Alarm	Attributes	Applicable major release
Name: jmsnbiobalarmpendingcount (6371) Type: equipmentAlarm Package: femto.jmsnbiobalarmpendingcount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The current number of messages pending (unacknowledged or uncommitted) stored on nbiOutBoundAlarmTopic JMS destination for the current server		
Remedial action: Not available		

Table 23-273 jmsnbiobalarmrate

Alarm	Attributes	Applicable major release
Name: jmsnbiobalarmrate (6372) Type: equipmentAlarm Package: femto.jmsnbiobalarmrate Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The current number of received NBI Out Bound Alarm rate stored on nbiOutBoundAlarmTopic JMS destination for the current server		
Remedial action: Not available		

Table 23-274 jmsnbiobcurrentcount

Alarm	Attributes	Applicable major release
Name: jmsnbiobcurrentcount (6373) Type: equipmentAlarm Package: femto.jmsnbiobcurrentcount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The current number of messages stored on nbiOutBoundQueue JMS destination for the current server		
Remedial action: Not available		

Table 23-275 jmsnbiobeventcurrentcount

Alarm	Attributes	Applicable major release
Name: jmsnbiobeventcurrentcount (6374) Type: equipmentAlarm Package: femto.jmsnbiobeventcurrentcount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The current number of messages stored on nbiOutBoundEventTopic JMS destination for the current server		
Remedial action: Not available		

Table 23-276 jmsnbiobeventpendingcount

Alarm	Attributes	Applicable major release
Name: jmsnbiobeventpendingcount (6375) Type: equipmentAlarm Package: femto.jmsnbiobeventpendingcount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The current number of messages pending (unacknowledged or uncommitted) stored on nbiOutBoundEventTopic JMS destination for the current server		
Remedial action: Not available		

Table 23-277 jmsnbiobeventrate

Alarm	Attributes	Applicable major release
Name: jmsnbiobeventrate (6376) Type: equipmentAlarm Package: femto.jmsnbiobeventrate Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The current number of received NBI Out Bound Event rate stored on nbiOutBoundEventTopic JMS destination for the current server		
Remedial action: Not available		

Table 23-278 jmsnbiobpendingcount

Alarm	Attributes	Applicable major release
Name: jmsnbiobpendingcount (6377) Type: equipmentAlarm Package: femto.jmsnbiobpendingcount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2

Table 23-278 jmsnbiobpendingcount (continued)

Alarm	Attributes	Applicable major release
Description: The current number of messages pending (unacknowledged or uncommitted) stored on nbiOutBoundQueue JMS destination for the current server		
Remedial action: Not available		

Table 23-279 jmsnbiobrate

Alarm	Attributes	Applicable major release
Name: jmsnbiobrate (6378) Type: equipmentAlarm Package: femto.jmsnbiobrate Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The current number of received NBI Out Bound Event rate stored on nbiOutBoundQueue JMS destination for the current server		
Remedial action: Not available		

Table 23-280 jmsnbiobresultcurrentcount

Alarm	Attributes	Applicable major release
Name: jmsnbiobresultcurrentcount (6379) Type: equipmentAlarm Package: femto.jmsnbiobresultcurrentcount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The current number of messages stored on nbiOutBoundResultTopic JMS destination for the current server		
Remedial action: Not available		

Table 23-281 jmsnbiobresultpendingcount

Alarm	Attributes	Applicable major release
Name: jmsnbiobresultpendingcount (6380) Type: equipmentAlarm Package: femto.jmsnbiobresultpendingcount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The current number of messages pending (unacknowledged or uncommitted) stored on nbiOutBoundResultTopic JMS destination for the current server		
Remedial action: Not available		

Table 23-282 jmsnbiobresultrate

Alarm	Attributes	Applicable major release
Name: jmsnbiobresultrate (6381) Type: equipmentAlarm Package: femto.jmsnbiobresultrate Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The current number of received NBI Out Bound Result rate stored on nbiOutBoundResultTopic JMS destination for the current server		
Remedial action: Not available		

Table 23-283 jtaactivetxcount

Alarm	Attributes	Applicable major release
Name: jtaactivetxcount (6382) Type: equipmentAlarm Package: femto.jtaactivetxcount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The total number of active transacions on the server		
Remedial action: Not available		

Table 23-284 jtacommittedtxrate

Alarm	Attributes	Applicable major release
Name: jtacommittedtxrate (6383) Type: equipmentAlarm Package: femto.jtacommittedtxrate Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Total number of transactions committed by this server		
Remedial action: Not available		

Table 23-285 jtarolledbacktxrate

Alarm	Attributes	Applicable major release
Name: jtarolledbacktxrate (6384) Type: equipmentAlarm Package: femto.jtarolledbacktxrate Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Total number of transactions rolled back by this server		
Remedial action: Not available		

Table 23-286 jvmfreeheapsize

Alarm	Attributes	Applicable major release
Name: jvmfreeheapsize (6385) Type: equipmentAlarm Package: femto.jvmfreeheapsize Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of free heap size availabe in JVM		
Remedial action: Not available		

Table 23-287 jvmheapfreepercent

Alarm	Attributes	Applicable major release
Name: jvmheapfreepercent (6386) Type: equipmentAlarm Package: femto.jvmheapfreepercent Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The percentage of free heap available in JVM		
Remedial action: Not available		

Table 23-288 jvmheapsize

Alarm	Attributes	Applicable major release
Name: jvmheapsize (6387) Type: equipmentAlarm Package: femto.jvmheapsize Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The heap size of JVM		
Remedial action: Not available		

Table 23-289 jvmmaxheapsize

Alarm	Attributes	Applicable major release
Name: jvmmaxheapsize (6388) Type: equipmentAlarm Package: femto.jvmmaxheapsize Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The maximum heap size of JVM		
Remedial action: Not available		

Table 23-290 LBO_lboServiceUnavailable

Alarm	Attributes	Applicable major release
Name: LBO_lboServiceUnavailable (12994) Type: processingErrorAlarm Package: femto.LBO_lboServiceUnavailable Raised on class: femto.LBO	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • 14.2
Description: This fault is created when one or more LBO subsystems have some unrecoverable error or failed.		
Remedial action: Operator needs to initiate the FAP reboot to clear the alarm.		

Table 23-291 LBO_lgwIpPoolExhausted

Alarm	Attributes	Applicable major release
Name: LBO_lgwIpPoolExhausted (12995) Type: processingErrorAlarm Package: femto.LBO_lgwIpPoolExhausted Raised on class: femto.LBO	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: underlyingResourceUnavail-able	Release: • 14.2
Description: LGW has exhausted IP addresses and no new UEs can use LBO service.		
Remedial action: No operator action required. The alarm will be cleared as soon as some of the existing UEs are detached resulting in release of allocated IP addresses		

Table 23-292 LBO_lgwS5GtpEchoFailure

Alarm	Attributes	Applicable major release
Name: LBO_lgwS5GtpEchoFailure (12996) Type: qualityOfServiceAlarm Package: femto.LBO_lgwS5GtpEchoFailure Raised on class: femto.LBO	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: responseTimeExcessive	Release: • 14.2
Description: Echo failure on all the S5 interfaces.		
Remedial action: Operator intervention is not required. The alarm will be cleared by the Femtocell following a successful S5 GTP Echo response atleast from one SGW.		

Table 23-293 LBO_lgwS5SgwExceeded

Alarm	Attributes	Applicable major release
Name: LBO_lgwS5SgwExceeded (12997) Type: processingErrorAlarm Package: femto.LBO_lgwS5SgwExceeded Raised on class: femto.LBO	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: underlyingResourceUnavail-able	Release: • 14.2

Table 23-293 LBO_lgwS5SgwExceeded (continued)

Alarm	Attributes	Applicable major release
Description: LGW could not allocate new SGW Context as max number of SGWs exceeded		
Remedial action: The alarm will be cleared as-soon-as all UEs belonging to an existing SGW are deallocated resulting in SGW context deletion		

Table 23-294 LCell_candidateNeighbourIdentified

Alarm	Attributes	Applicable major release
Name: LCell_candidateNeighbourIdentified (6059) Type: processingErrorAlarm Package: femto.LCell_candidateNeighbourIdentified Raised on class: femto.LCell	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: In static mode neighbour list optimisation, on evaluation that a cell should be added to the neighbour list as per dynamic mode checks, the Small Cell AP shall raise an alarm, containing relevant additional information. This alarm shall be cleared by a reboot or manual addition of the candidate as a neighbour.		
Remedial action: Operator to verify if the cell reported in the alarm should be added manually to neighbor list. If it is added manually, this alarm gets cleared. Else, this alarm is cleared on next reboot. This is also an indication to operator if nloEnableDynamicNLO has to be changed to true from false. nloEnableDynamicNLO when set to false is static mode neighbor list optimisation, else it is dynamic mod		

Table 23-295 LCell_carrierReSelectionNotPossible

Alarm	Attributes	Applicable major release
Name: LCell_carrierReSelectionNotPossible (6060) Type: operationalViolation Package: femto.LCell_carrierReSelectionNotPossible Raised on class: femto.LCell	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: The fault is raised when no carrier for the FBSR could be selected under different situations, which are detailed in AdditionalText.		
Remedial action: No operator intervention is required		

Table 23-296 LCell_centralisedAssignmentFailed

Alarm	Attributes	Applicable major release
Name: LCell_centralisedAssignmentFailed (8494) Type: processingErrorAlarm Package: femto.LCell_centralisedAssignmentFailed Raised on class: femto.LCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2

Table 23-296 LCell_centralisedAssignmentFailed (continued)

Alarm	Attributes	Applicable major release
Description: The SCGW associated with this Access Point has refused to assign a PSC to this access point		
Remedial action: Check the Access Point and Gateway PSC's femto group configuration to make sure they are consistent.		

Table 23-297 LCell_centralisedAssignmentFailedNoPSC

Alarm	Attributes	Applicable major release
Name: LCell_centralisedAssignmentFailedNoPSC (8495) Type: processingErrorAlarm Package: femto.LCell_ centralisedAssignmentFailedNoPSC Raised on class: femto.LCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: The SCGW associated with this Access Point has refused to assign a PSC to this access point, however, the Access Point does not have a valid PSC assigned		
Remedial action: Check the Access Point's configuration to see why no PSC was assigned. If necessary, assign a valid PSC manually.		

Table 23-298 LCell_channelConfigBCHFailed

Alarm	Attributes	Applicable major release
Name: LCell_channelConfigBCHFailed (6061) Type: operationalViolation Package: femto.LCell_channelConfigBCHFailed Raised on class: femto.LCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: The configuration of the Common Channel BCH failed.		
Remedial action: This alarm is cleared by the Small Cell after the Small Cell resets. If the problem persists, contact Nokia customer support.		

Table 23-299 LCell_channelConfigFACHFailed

Alarm	Attributes	Applicable major release
Name: LCell_channelConfigFACHFailed (6062) Type: operationalViolation Package: femto.LCell_channelConfigFACHFailed Raised on class: femto.LCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: The configuration of the Common Transport Channel for FACH failed.		
Remedial action: This alarm is cleared by the Small Cell after the Small Cell resets. If the problem persists, contact Nokia customer support.		

Table 23-300 LCell_channelConfigPCHFailed

Alarm	Attributes	Applicable major release
Name: LCell_channelConfigPCHFailed (6063) Type: operationalViolation Package: femto.LCell_channelConfigPCHFailed Raised on class: femto.LCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: The configuration of the Common Transport Channel for PCH failed.		
Remedial action: This alarm is cleared by the Small Cell after the Small Cell resets. If the problem persists, contact Nokia customer support.		

Table 23-301 LCell_channelConfigPRACHFailed

Alarm	Attributes	Applicable major release
Name: LCell_channelConfigPRACHFailed (6064) Type: operationalViolation Package: femto.LCell_channelConfigPRACHFailed Raised on class: femto.LCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: The configuration of the Common Transport Channel for PRACH failed.		
Remedial action: This alarm is cleared by the Small Cell after the Small Cell resets. If the problem persists, contact Nokia customer support.		

Table 23-302 LCell_codeAllocationFailure

Alarm	Attributes	Applicable major release
Name: LCell_codeAllocationFailure (6065) Type: processingErrorAlarm Package: femto.LCell_codeAllocationFailure Raised on class: femto.LCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • 14.2
Description: Channelisation code allocation failure.		
Remedial action: The alarm will be cleared by the Small Cell following reset. If the problem persists, contact Nokia customer support.		

Table 23-303 LCell_commonMeasInitTimeout

Alarm	Attributes	Applicable major release
Name: LCell_commonMeasInitTimeout (6066) Type: processingErrorAlarm Package: femto.LCell_commonMeasInitTimeout Raised on class: femto.LCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: responseTimeExcessive	Release: • 14.2
Description: No response from BRRC on the initiation of a common measurement.		

Table 23-303 LCell_commonMeasInitTimeout (continued)

Alarm	Attributes	Applicable major release
Remedial action: No operator intervention is required. If the problem persists, contact Nokia customer support		

Table 23-304 LCell_cpBlockRequestTimeout

Alarm	Attributes	Applicable major release
Name: LCell_cpBlockRequestTimeout (6067) Type: processingErrorAlarm Package: femto.LCell_cpBlockRequestTimeout Raised on class: femto.LCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: responseTimeExcessive	Release: • 14.2
Description: No response from BRRM to a Block Resource Request received from BRRC.		
Remedial action: The alarm will be cleared by the Small Cell following reset. If the problem persists, contact Nokia customer support.		

Table 23-305 LCell_dLCongestion

Alarm	Attributes	Applicable major release
Name: LCell_dLCongestion (6068) Type: qualityOfServiceAlarm Package: femto.LCell_dLCongestion Raised on class: femto.LCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity	Release: • 14.2
Description: This fault is raised when the condition for DL congestion is met. The BSR starts the DL congestion control algorithm to clear the congestion.		
Remedial action: The alarm will be cleared by the Small Cell once the DL congestion has been cleared by the DL congestion control algorithm. If the problem persists, contact Nokia customer support.		

Table 23-306 LCell_dpdTraining

Alarm	Attributes	Applicable major release
Name: LCell_dpdTraining (8496) Type: processingErrorAlarm Package: femto.LCell_dpdTraining Raised on class: femto.LCell	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: transmitterFailure	Release: • 14.2
Description: DPD training failure. SW detects either of the two following conditions for five training requests in a row; The DPD training request returns a failure status or the measured ACLR does not meet the thresholds defined in the hardware config file.		
Remedial action: MS MCI logs the fault. This fault may be caued by hardware failure. If the problem persists, contact Nokia customer support		

Table 23-307 LCell_hsbitratemeasInitFail

Alarm	Attributes	Applicable major release
Name: LCell_hsbitratemeasInitFail (6070) Type: operationalViolation Package: femto.LCell_hsbitratemeasInitFail Raised on class: femto.LCell	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: The initiation of the HS-DSCH provided bit rate measurement failed.		
Remedial action: This alarm does not require operator intervention.		

Table 23-308 LCell_hsbitratemeasStop

Alarm	Attributes	Applicable major release
Name: LCell_hsbitratemeasStop (6071) Type: operationalViolation Package: femto.LCell_hsbitratemeasStop Raised on class: femto.LCell	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: The HS-DSCH provided bit rate measurement discontinued.		
Remedial action: This alarm does not require operator intervention.		

Table 23-309 LCell_hsTxCarrierPowermeasInitFail

Alarm	Attributes	Applicable major release
Name: LCell_hsTxCarrierPowermeasInitFail (6069) Type: operationalViolation Package: femto.LCell_hsTxCarrierPowermeasInitFail Raised on class: femto.LCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: The initiation of the common measurements of the transmitted carrier power of all codes not used for HS-PDSCH or HS-SCCH transmission failed.		
Remedial action: This alarm does not require operator intervention		

Table 23-310 LCell_inconsistentDetectedCellInfo

Alarm	Attributes	Applicable major release
Name: LCell_inconsistentDetectedCellInfo (6072) Type: processingErrorAlarm Package: femto.LCell_inconsistentDetectedCellInfo Raised on class: femto.LCell	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2

Table 23-310 LCell_inconsistentDetectedCellInfo (continued)

Alarm	Attributes	Applicable major release
Description: The Small Cell AP shall raise an alarm if it detects via network listening that a manually configured neighbour has incorrect configuration data. This alarm shall be cleared on reboot and/or any change to manually configured neighbours.Note: This was previously only SysLogged in BCR4.3. It is triggered if there are inconsistencies between the femtos own data and the detected BSRid, FDD Freq band, uARFCN uplink and downlink or RNCid. It is also triggered if the sniffed data is incomplete.		
Remedial action: Operator to verify the reported inconsistency in uARFCNDl/Ul and / or Frequency Band and / or RNCId, and if required, manually change the inconsistency. When inconsistency is corrected manually, this alarm is cleared, else this alarm gets cleared on next reboot.		

Table 23-311 LCell_invalidSIBParameter

Alarm	Attributes	Applicable major release
Name: LCell_invalidSIBParameter (6073) Type: processingErrorAlarm Package: femto.LCell_invalidSIBParameter Raised on class: femto.LCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: CSIB has detected an invalid SIB parameter, and no update of SIBs is performed towards CCC.		
Remedial action: This alarm is cleared by the Small Cell after the Small Cell resets. If the problem persists, contact Nokia customer support.		

Table 23-312 LCell_invalidSIBSchedule

Alarm	Attributes	Applicable major release
Name: LCell_invalidSIBSchedule (6074) Type: processingErrorAlarm Package: femto.LCell_invalidSIBSchedule Raised on class: femto.LCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: CSIB has detected an invalid SIB schedule, and no update of SIBs is performed towards CCC.		
Remedial action: This alarm is cleared by the Small Cell after the Small Cell resets. If the problem persists, contact Nokia customer support.		

Table 23-313 LCell_neighbourListUpdate

Alarm	Attributes	Applicable major release
Name: LCell_neighbourListUpdate (6075) Type: processingErrorAlarm Package: femto.LCell_neighbourListUpdate Raised on class: femto.LCell	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2

Table 23-313 LCell_neighbourListUpdate (continued)

Alarm	Attributes	Applicable major release
Description: On evaluation of a new neighbour list, the Small Cell AP shall send an informational, non-critical alarm to the OAM system detailing the old and the new lists.Note: Alarm payload is limited to 250 characters, so the alarm with detail the complete new list, with a sequence of adds and subtractions detailing the change from the previous list. The Small Cell AP shall raise one alarm for intra-frequency neighbours, and one for inter-frequency neighbours		
Remedial action: No operator action is required. Just an informational alarm, giving list of cells newly added and / or removed from neighbor lists. This alarm gets cleared after reboot		

Table 23-314 LCell_neighbourNotMeetingQualityCriteria

Alarm	Attributes	Applicable major release
Name: LCell_neighbourNotMeetingQualityCriteria (6076) Type: processingErrorAlarm Package: femto.LCell_ neighbourNotMeetingQualityCriteria Raised on class: femto.LCell	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: On a neighbour cell failing quality checks, either at the end of a monitoring period or on the daily check, the Small Cell AP shall raise an alarm, detailing the failing cell ID and performance metric. This alarm shall be cleared automatically if the neighbour is removed by the operator or a subsequent operation of this algorithm in 'dynamic' mode.		
Remedial action: No operator intervention required, but alarm will be cleared automatically when it gets re-evaluated next day. If issue persists, a new alarm will be raised. This alarm is an informational alarm.Or this alarm gets cleared at the next reboot. This alarm is applicable for all type of cells, viz., Configured, Detected, Informed, UE Detected. Not applicable for UE Detected Pending		

Table 23-315 LCell_rACHmeasInitFail

Alarm	Attributes	Applicable major release
Name: LCell_rACHmeasInitFail (6077) Type: operationalViolation Package: femto.LCell_rACHmeasInitFail Raised on class: femto.LCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: The initiation of the RACH measurement failed.		
Remedial action: This alarm is cleared by the Small Cell once the measurement initialization succeeds. If the problem persists, contact Nokia customer support.		

Table 23-316 LCell_rACHmeasStop

Alarm	Attributes	Applicable major release
Name: LCell_rACHmeasStop (6078) Type: operationalViolation Package: femto.LCell_rACHmeasStop Raised on class: femto.LCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: The RACH measurement discontinued.		
Remedial action: This alarm does not require operator intervention.		

Table 23-317 LCell_rfCalibrationFailure

Alarm	Attributes	Applicable major release
Name: LCell_rfCalibrationFailure (8180) Type: processingErrorAlarm Package: femto.LCell_rfCalibrationFailure Raised on class: femto.LCell	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: The cell configuration is attempting to use an RF path that has not been calibrated.		
Remedial action: The cell configuration parameters must be modified to align with the RF capabilities. If the cell configuration is correct then the MS MCI may need RF calibration.		

Table 23-318 LCell_rfConfigurationFailure

Alarm	Attributes	Applicable major release
Name: LCell_rfConfigurationFailure (8181) Type: processingErrorAlarm Package: femto.LCell_rfConfigurationFailure Raised on class: femto.LCell	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: The cell configuration is not compatible with the MS MCI RF hardware.		
Remedial action: The cell configuration parameters must be modified to align with the RF capabilities. For example, the configured ARFCN/Band or transmit power settings must be within the supported range of the MS MCI.		

Table 23-319 LCell_rfRxDiversityFailure

Alarm	Attributes	Applicable major release
Name: LCell_rfRxDiversityFailure (8182) Type: equipmentAlarm Package: femto.LCell_rfRxDiversityFailure Raised on class: femto.LCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 14.2

Table 23-319 LCell_rfRxDiversityFailure (continued)

Alarm	Attributes	Applicable major release
Description: Diversity reception is enabled and there is an imbalance between the receive signal levels.		
Remedial action: MS MCI logs the fault. The fault may be due to an RF hardware failure, damage to the integrated antenna or its RF connections, or (if used) any external antenna or antenna cable or connector. If the problem persists, contact Nokia customer support		

Table 23-320 LCell_rfRxFailure

Alarm	Attributes	Applicable major release
Name: LCell_rfRxFailure (8183) Type: equipmentAlarm Package: femto.LCell_rfRxFailure Raised on class: femto.LCell	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 14.2
Description: The RF receiver for this cell has failed.		
Remedial action: MS MCI logs the fault. The fault may be due to an RF hardware failure or possibly to a timing problem.		

Table 23-321 LCell_rfTemperatureCritical

Alarm	Attributes	Applicable major release
Name: LCell_rfTemperatureCritical (8184) Type: environmentalAlarm Package: femto.LCell_rfTemperatureCritical Raised on class: femto.LCell	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • 14.2
Description: RF components supporting this cell are outside operating temperature limits.		
Remedial action: The unit is currently too cold or too warm, move it to location within the specified operating temperature range.		

Table 23-322 LCell_rfTemperatureWarning

Alarm	Attributes	Applicable major release
Name: LCell_rfTemperatureWarning (8185) Type: environmentalAlarm Package: femto.LCell_rfTemperatureWarning Raised on class: femto.LCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • 14.2
Description: RF components supporting this cell are near operating temperature limits.		
Remedial action: The unit is currently too cold or too warm, move it to location within the specified operating temperature range.		

Table 23-323 LCell_rfTxFailure

Alarm	Attributes	Applicable major release
Name: LCell_rfTxFailure (8186) Type: equipmentAlarm Package: femto.LCell_rfTxFailure Raised on class: femto.LCell	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 14.2
Description: The RF transmitter for this cell has failed.		
Remedial action: MS MCI logs the fault. The fault may be due to an RF hardware failure or possibly to a timing problem. If the problem persists, contact Nokia customer support		

Table 23-324 LCell_rfTxPowerCritical

Alarm	Attributes	Applicable major release
Name: LCell_rfTxPowerCritical (8187) Type: equipmentAlarm Package: femto.LCell_rfTxPowerCritical Raised on class: femto.LCell	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: transmitterFailure	Release: • 14.2
Description: RF transmit power for this cell exceeds hardware operating limits.		
Remedial action: The cell power is too high, configure a lower transmit power.		

Table 23-325 LCell_rfTxPowerWarning

Alarm	Attributes	Applicable major release
Name: LCell_rfTxPowerWarning (8188) Type: equipmentAlarm Package: femto.LCell_rfTxPowerWarning Raised on class: femto.LCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: transmitterFailure	Release: • 14.2
Description: RF transmit power for this cell is higher than expected.		
Remedial action: The cell power is too high, configure a lower transmit power.		

Table 23-326 LCell_rSSImeasInitFail

Alarm	Attributes	Applicable major release
Name: LCell_rSSImeasInitFail (6079) Type: operationalViolation Package: femto.LCell_rSSImeasInitFail Raised on class: femto.LCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: The initiation of the RSSI measurement failed.		

Table 23-326 LCell_rSSImeasInitFail (continued)

Alarm	Attributes	Applicable major release
Remedial action: This alarm is cleared by the Small Cell after the Small Cell resets. If the problem persists, contact Nokia customer support.		

Table 23-327 LCell_rSSImeasStop

Alarm	Attributes	Applicable major release
Name: LCell_rSSImeasStop (6080) Type: operationalViolation Package: femto.LCell_rSSImeasStop Raised on class: femto.LCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: The RSSI measurement discontinued.		
Remedial action: This alarm does not require operator intervention.		

Table 23-328 LCell_sharedChannelConfigHSPAFailed

Alarm	Attributes	Applicable major release
Name: LCell_sharedChannelConfigHSPAFailed (6082) Type: operationalViolation Package: femto.LCell_ sharedChannelConfigHSPAFailed Raised on class: femto.LCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: The initiation of the Shared Channel for HSDPA/HSUPA failed.		
Remedial action: This alarm is cleared by the Small Cell after the Small Cell resets. If the problem persists, contact Nokia customer support.If the problem persists, contact Nokia customer support		

Table 23-329 LCell_sIBUpdateCCCError

Alarm	Attributes	Applicable major release
Name: LCell_sIBUpdateCCCError (6081) Type: operationalViolation Package: femto.LCell_sIBUpdateCCCError Raised on class: femto.LCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: The SIB update was not performed within CCC, the CCC specific error cause is returned.		
Remedial action: No operator intervention is required. If the problem persists, contact Nokia customer support		

Table 23-330 LCell_sleepingCellDetected

Alarm	Attributes	Applicable major release
Name: LCell_sleepingCellDetected (11156) Type: processingErrorAlarm Package: femto.LCell_sleepingCellDetected Raised on class: femto.LCell	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: performanceDegraded	Release: • 14.2
Description: This alarm reports sleeping cell detected state, which is triggered when cell is not serving traffic or serving reduced traffic when it should be operational.		
Remedial action: In some case, MSAP automatically reset when the alarm is triggered. If this alarm persists, reset the MSAP.		

Table 23-331 LCell_spareLCellAlarm1

Alarm	Attributes	Applicable major release
Name: LCell_spareLCellAlarm1 (8189) Type: processingErrorAlarm Package: femto.LCell_spareLCellAlarm1 Raised on class: femto.LCell	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: Spare alarm 1		
Remedial action: Refer to customer documentation for alarm details.		

Table 23-332 LCell_spareLCellAlarm2

Alarm	Attributes	Applicable major release
Name: LCell_spareLCellAlarm2 (8190) Type: processingErrorAlarm Package: femto.LCell_spareLCellAlarm2 Raised on class: femto.LCell	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: Spare alarm 2		
Remedial action: Refer to customer documentation for alarm details.		

Table 23-333 LCell_spareLCellAlarm3

Alarm	Attributes	Applicable major release
Name: LCell_spareLCellAlarm3 (8191) Type: processingErrorAlarm Package: femto.LCell_spareLCellAlarm3 Raised on class: femto.LCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: Spare alarm 3		
Remedial action: Refer to customer documentation for alarm details.		

Table 23-334 LCell_tpapReleaseIndFACH

Alarm	Attributes	Applicable major release
Name: LCell_tpapReleaseIndFACH (6085) Type: operationalViolation Package: femto.LCell_tpapReleaseIndFACH Raised on class: femto.LCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: Tpap release indication for FACH was received by BRRM.		
Remedial action: This alarm does not require operator intervention. If the problem persists, contact Nokia customer support		

Table 23-335 LCell_tpapReleaseIndPCH

Alarm	Attributes	Applicable major release
Name: LCell_tpapReleaseIndPCH (6086) Type: operationalViolation Package: femto.LCell_tpapReleaseIndPCH Raised on class: femto.LCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: Tpap release indication for PCH was received by BRRM.		
Remedial action: This alarm does not require operator intervention. If the problem persists, contact Nokia customer support		

Table 23-336 LCell_tpapReleaseIndRACH

Alarm	Attributes	Applicable major release
Name: LCell_tpapReleaseIndRACH (6087) Type: operationalViolation Package: femto.LCell_tpapReleaseIndRACH Raised on class: femto.LCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: Tpap release indication for RACH was received by BRRM.		
Remedial action: This alarm does not require operator intervention. If the problem persists, contact Nokia customer support		

Table 23-337 LCell_tSSImeasInitFail

Alarm	Attributes	Applicable major release
Name: LCell_tSSImeasInitFail (6083) Type: operationalViolation Package: femto.LCell_tSSImeasInitFail Raised on class: femto.LCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: The initiation of the TSSI measurement failed.		
Remedial action: This alarm does not require operator intervention. If the problem persists, contact Nokia customer support.		

Table 23-338 LCell_tSSImeasStop

Alarm	Attributes	Applicable major release
Name: LCell_tSSImeasStop (6084) Type: operationalViolation Package: femto.LCell_tSSImeasStop Raised on class: femto.LCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: The TSSI measurement discontinued.		
Remedial action: This alarm does not require operator intervention.		

Table 23-339 LCell_uLCongestion

Alarm	Attributes	Applicable major release
Name: LCell_uLCongestion (6088) Type: qualityOfServiceAlarm Package: femto.LCell_uLCongestion Raised on class: femto.LCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity	Release: • 14.2
Description: This fault is raised when the condition for UL congestion is met. The BSR starts the UL congestion control algorithm to clear the congestion.		
Remedial action: This alarm does not require operator intervention. If the problem persists, contact Nokia customer support.		

Table 23-340 LCell_unknownCandidateNeighboursPSC

Alarm	Attributes	Applicable major release
Name: LCell_unknownCandidateNeighboursPSC (6089) Type: processingErrorAlarm Package: femto.LCell_ unknownCandidateNeighboursPSC Raised on class: femto.LCell	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: If no candidate cells are identified, or if all candidates fail the quality checks after their monitoring periods, the Small Cell AP shall raise the alarm, containing the PSC and any candidate cell list as additional information.This alarm is cleared by reboot or the modification of manually configured neighbours for this Small Cell AP. The Small Cell AP shall maintain the received information until the alarm has been cleared to prevent raising the same alarm multiple times for the same PSC.		
Remedial action: Operator can manually add the UE reported candidate cells, that failed HO quality check criteria, to neighbor lists. If they are added manually, this alarm gets cleared. Else, this alarm is cleared on next reboot.		

Table 23-341 LicensedLimitExceeded

Alarm	Attributes	Applicable major release
Name: LicensedLimitExceeded (127) Type: licensingAlarm Package: security.LicensedLimitExceeded Raised on class: security.SamLicensePoints	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: licensedLimitExceeded	Release: • 14.2
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 23-342 LinkDown (equipment)

Alarm	Attributes	Applicable major release
Name: LinkDown (12) Type: communicationsAlarm Package: equipment.LinkDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: portLinkProblem	Release: • 14.2
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 23-343 LteCell_collidingPciSelected

Alarm	Attributes	Applicable major release
Name: LteCell_collidingPciSelected (11157) Type: processingErrorAlarm Package: femto.LteCell_collidingPciSelected Raised on class: femto.LteCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: This alarm is raised to indicate that SON was unable to select a clean PCI and is now operating in a PCI that is in collision		
Remedial action: NA		

Table 23-344 LteCell_lteOamCellOperationFailure

Alarm	Attributes	Applicable major release
Name: LteCell_lteOamCellOperationFailure (12405) Type: processingErrorAlarm Package: femto.LteCell_lteOamCellOperationFailure Raised on class: femto.LteCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • 14.2
Description: This alarm is generated, when internal cell related autonomous operations (such as cell config/delete/start/stop, RF enable/disable, acquiring resource from FTRM) fails. These autonomous operations are caused by events such S1 link loss, PCI reselection, OSDL starting unlicensed cell etc. This alarm is raised on certain internal fault conditions. This alarm is added for timely recovery of the FAP, if it ever gets into this condition.		
Remedial action: No action needed from the operator. AP is rebooted by Nokia OAM		

Table 23-345 LteCell_lteOamConfigurationFailure

Alarm	Attributes	Applicable major release
Name: LteCell_lteOamConfigurationFailure (6092) Type: processingErrorAlarm Package: femto.LteCell_lteOamConfigurationFailure Raised on class: femto.LteCell	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: LTE OAM configuration failure alarm		
Remedial action: NA		

Table 23-346 LteCell_lteRfCalibrationFailure

Alarm	Attributes	Applicable major release
Name: LteCell_lteRfCalibrationFailure (8192) Type: processingErrorAlarm Package: femto.LteCell_lteRfCalibrationFailure Raised on class: femto.LteCell	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: The cell configuration is attempting to use an RF path that has not been calibrated.		
Remedial action: The cell configuration parameters must be modified to align with the RF capabilities. If the cell configuration is correct then the MS MCI may need RF calibration.		

Table 23-347 LteCell_lteRfConfigurationFailure

Alarm	Attributes	Applicable major release
Name: LteCell_lteRfConfigurationFailure (8193) Type: processingErrorAlarm Package: femto.LteCell_lteRfConfigurationFailure Raised on class: femto.LteCell	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: The cell configuration is not compatible with the MS MCI RF hardware.		
Remedial action: The cell configuration parameters must be modified to align with the RF capabilities. For example, the configured ARFCN/Band or transmit power settings must be within the supported range of the MS MCI.		

Table 23-348 LteCell_lteRfRxDiversityFailure

Alarm	Attributes	Applicable major release
Name: LteCell_lteRfRxDiversityFailure (8194) Type: equipmentAlarm Package: femto.LteCell_lteRfRxDiversityFailure Raised on class: femto.LteCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 14.2
Description: Diversity reception is enabled and there is an imbalance between the receive signal levels.		
Remedial action: MS MCI logs the fault. The fault may be due to an RF hardware failure, damage to the integrated antenna or its RF connections, or (if used) any external antenna or antenna cable or connector.		

Table 23-349 LteCell_lteRfRxFailure

Alarm	Attributes	Applicable major release
Name: LteCell_lteRfRxFailure (8195) Type: equipmentAlarm Package: femto.LteCell_lteRfRxFailure Raised on class: femto.LteCell	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 14.2
Description: The RF receiver for this cell has failed.		
Remedial action: MS MCI logs the fault. The fault may be due to an RF hardware failure or possibly to a timing problem.		

Table 23-350 LteCell_lteRfTemperatureCritical

Alarm	Attributes	Applicable major release
Name: LteCell_lteRfTemperatureCritical (8196) Type: environmentalAlarm Package: femto.LteCell_lteRfTemperatureCritical Raised on class: femto.LteCell	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • 14.2

Table 23-350 LteCell_lteRfTemperatureCritical (continued)

Alarm	Attributes	Applicable major release
Description: RF components supporting this cell are outside operating temperature limits.		
Remedial action: The unit is currently too cold or too warm, move it to location within the specified operating temperature range.		

Table 23-351 LteCell_lteRfTemperatureWarning

Alarm	Attributes	Applicable major release
Name: LteCell_lteRfTemperatureWarning (8197) Type: environmentalAlarm Package: femto.LteCell_lteRfTemperatureWarning Raised on class: femto.LteCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • 14.2
Description: RF components supporting this cell are near operating temperature limits.		
Remedial action: The unit is currently too cold or too warm, move it to location within the specified operating temperature range.#		

Table 23-352 LteCell_lteRfTxFailure

Alarm	Attributes	Applicable major release
Name: LteCell_lteRfTxFailure (8198) Type: equipmentAlarm Package: femto.LteCell_lteRfTxFailure Raised on class: femto.LteCell	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 14.2
Description: The RF transmitter for this cell has failed.		
Remedial action: MS MCI logs the fault. The fault may be due to an RF hardware failure or possibly to a timing problem.		

Table 23-353 LteCell_lteRfTxPowerCritical

Alarm	Attributes	Applicable major release
Name: LteCell_lteRfTxPowerCritical (8199) Type: equipmentAlarm Package: femto.LteCell_lteRfTxPowerCritical Raised on class: femto.LteCell	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: transmitterFailure	Release: • 14.2
Description: RF transmit power for this cell exceeds hardware operating limits.		
Remedial action: The cell power is too high, configure a lower transmit power.		

Table 23-354 LteCell_lteRfTxPowerWarning

Alarm	Attributes	Applicable major release
Name: LteCell_lteRfTxPowerWarning (8200) Type: equipmentAlarm Package: femto.LteCell_lteRfTxPowerWarning Raised on class: femto.LteCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: transmitterFailure	Release: • 14.2
Description: RF transmit power for this cell is higher than expected.		
Remedial action: The cell power is too high, configure a lower transmit power.		

Table 23-355 LteCell_lteRrcSctpAssociationFailure

Alarm	Attributes	Applicable major release
Name: LteCell_lteRrcSctpAssociationFailure (6093) Type: communicationsAlarm Package: femto.LteCell_lteRrcSctpAssociationFailure Raised on class: femto.LteCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: connectionEstablishmentError	Release: • 14.2
Description: RRC/SCTP association failure alarm. This alarm is triggered by: 1) eNB receives an ErrorInd from MME with Criticality Diagnostics; 2) S1Setup response timer expires and maximum retries exhausted; 3) receive S1Setup Failure from MME and maximum retries exhausted; 4) during S1Setup, SCTP conn failure; 5) SCTP s1 setup req send fails; 6) upon expiration of sctp connection recovery timer; 7) gets sctp shutdown from mme when cell is up.		
Remedial action: NA		

Table 23-356 LteCell_lteSleepingCellDetected

Alarm	Attributes	Applicable major release
Name: LteCell_lteSleepingCellDetected (11158) Type: processingErrorAlarm Package: femto.LteCell_lteSleepingCellDetected Raised on class: femto.LteCell	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: performanceDegraded	Release: • 14.2
Description: This alarm reports sleeping cell detected, which is triggered when cell is not serving traffic or serving reduced traffic when it should be operational.		
Remedial action: In some case, MSAP automatically reset when the alarm is triggered. If this alarm persists, reset the MSAP.		

Table 23-357 LteCell_pciCollisionResolutionInProgress

Alarm	Attributes	Applicable major release
Name: LteCell_pciCollisionResolutionInProgress (8201) Type: processingErrorAlarm Package: femto.LteCell_ pciCollisionResolutionInProgress Raised on class: femto.LteCell	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: A PCI collision between the cell and a neighbor one has been detected and a resolution attempt is in progress.		
Remedial action: No operator intervention is needed. A separate alarm will be generated if the resolution attempt fails.		

Table 23-358 LteCell_pciConfusionDetected

Alarm	Attributes	Applicable major release
Name: LteCell_pciConfusionDetected (12406) Type: processingErrorAlarm Package: femto.LteCell_pciConfusionDetected Raised on class: femto.LteCell	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: This alarm is raised when AP identifies that two serving cell neighbors share the same PCI.The alarm shall be cleared when the MS-AP reboots.		
Remedial action: No action needed from the operator. The two serving cells which have the same PCI are informed and hence, they can choose different PCI		

Table 23-359 LteCell_pciSelectionFailure

Alarm	Attributes	Applicable major release
Name: LteCell_pciSelectionFailure (6094) Type: processingErrorAlarm Package: femto.LteCell_pciSelectionFailure Raised on class: femto.LteCell	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: PCI selection failure alarm. SON detects no free PCI to be used from the provisioned list. Detected unused PCI. No RSI found for selected PCI.		
Remedial action: Reprovision PCI list		

Table 23-360 LteCell_spareLteCellAlarm1

Alarm	Attributes	Applicable major release
Name: LteCell_spareLteCellAlarm1 (8202) Type: processingErrorAlarm Package: femto.LteCell_spareLteCellAlarm1 Raised on class: femto.LteCell	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: Spare alarm 1		
Remedial action: Refer to customer documentation for alarm details		

Table 23-361 LteCell_spareLteCellAlarm2

Alarm	Attributes	Applicable major release
Name: LteCell_spareLteCellAlarm2 (8203) Type: processingErrorAlarm Package: femto.LteCell_spareLteCellAlarm2 Raised on class: femto.LteCell	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: Spare alarm 2		
Remedial action: Refer to customer documentation for alarm details		

Table 23-362 LteCell_spareLteCellAlarm3

Alarm	Attributes	Applicable major release
Name: LteCell_spareLteCellAlarm3 (8204) Type: processingErrorAlarm Package: femto.LteCell_spareLteCellAlarm3 Raised on class: femto.LteCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: Spare alarm 3		
Remedial action: Refer to customer documentation for alarm details		

Table 23-363 LteCell_ueAuditContextMismatch

Alarm	Attributes	Applicable major release
Name: LteCell_ueAuditContextMismatch (11159) Type: processingErrorAlarm Package: femto.LteCell_ueAuditContextMismatch Raised on class: femto.LteCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: softwareError	Release: • 14.2
Description: This alarm is raised when detects mismatched UE context between RRM-RRC or RRC internal modules UECC-LLIM, UECC-S1AP, UECC-X2AP, LLIM-S1U for mismatch threshold audit attempts. (This alarm is reserved for future use.)		
Remedial action: Reboot MSAP		

Table 23-364 LteCell_ueAuditGbrUsageMismatch

Alarm	Attributes	Applicable major release
Name: LteCell_ueAuditGbrUsageMismatch (11160) Type: processingErrorAlarm Package: femto.LteCell_ueAuditGbrUsageMismatch Raised on class: femto.LteCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: softwareError	Release: • 14.2
Description: This alarm is raised when GBR usage limit threshold is reached and there are no active UEs currently in the system but used_dl_bitrate/used_ul_bitrate still has some value. (This alarm is reserved for future use.)		
Remedial action: Reboot MSAP		

Table 23-365 MetroDock_metroDockHWFailure

Alarm	Attributes	Applicable major release
Name: MetroDock_metroDockHWFailure (6101) Type: equipmentAlarm Package: femto.MetroDock_metroDockHWFailure Raised on class: femto.MetroDock	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 14.2
Description: This fault is raised when HW failure was detected in MetroDock or SFPs.		
Remedial action: Replace the metro dock connection box		

Table 23-366 MetroDock_metroDockReceivePathFailure

Alarm	Attributes	Applicable major release
Name: MetroDock_metroDockReceivePathFailure (6102) Type: communicationsAlarm Package: femto.MetroDock_ metroDockReceivePathFailure Raised on class: femto.MetroDock	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: This fault is raised in case of fault in receive path.		
Remedial action: Replace the metro dock connection box		

Table 23-367 MetroDock_wifiNoSignalDetected

Alarm	Attributes	Applicable major release
Name: MetroDock_wifiNoSignalDetected (6103) Type: communicationsAlarm Package: femto.MetroDock_wifiNoSignalDetected Raised on class: femto.MetroDock	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2

Table 23-367 MetroDock_wifiNoSignalDetected (continued)

Alarm	Attributes	Applicable major release
Description: This fault is raised if signal of link status is not detected on the Wi-Fi Ethernet port.		
Remedial action: NA		

Table 23-368 MobileConnectorDown

Alarm	Attributes	Applicable major release
Name: MobileConnectorDown (1064) Type: EpcAlarm Package: lteservice.MobileConnectorDown Raised on class: lteservice.MobileServiceConnector	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EpcDown	Release: • 14.2
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL '\"\"')		
Clearing condition: ('EPS Path' NOT EQUAL '\"\"')		
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

Table 23-369 multicastclustermessageslostcount

Alarm	Attributes	Applicable major release
Name: multicastclustermessageslostcount (6390) Type: equipmentAlarm Package: femto.multicastclustermessageslostcount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Cluster Multicast lost message rate		
Remedial action: Not available		

Table 23-370 multicastcompletedrequests

Alarm	Attributes	Applicable major release
Name: multicastcompletedrequests (6391) Type: equipmentAlarm Package: femto.multicastcompletedrequests Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Multicast completed request count		
Remedial action: Not available		

Table 23-371 multicastpendingrequests

Alarm	Attributes	Applicable major release
Name: multicastpendingrequests (6392) Type: equipmentAlarm Package: femto.multicastpendingrequests Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Multicast pending request count		
Remedial action: Not available		

Table 23-372 multipleBSRlinkloss

Alarm	Attributes	Applicable major release
Name: multipleBSRlinkloss (8212) Type: communicationsAlarm Package: femto.multipleBSRlinkloss Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • 14.2
Description: Multiple BSR are not reachable from HDM.		
Remedial action: No particular action is required. This notification may be required by Global Product Support for debugging purposes.		

Table 23-373 nbicapturedevice

Alarm	Attributes	Applicable major release
Name: nbicapturedevice (6393) Type: equipmentAlarm Package: femto.nbicapturedevice Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi captureDevice		
Remedial action: Not available		

Table 23-374 nbicapturedeviceavg

Alarm	Attributes	Applicable major release
Name: nbicapturedeviceavg (6394) Type: equipmentAlarm Package: femto.nbicapturedeviceavg Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi captureDevice.avg		
Remedial action: Not available		

Table 23-375 nbiclearalarm

Alarm	Attributes	Applicable major release
Name: nbiclearalarm (6395) Type: equipmentAlarm Package: femto.nbiclearalarm Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi clearAlarm		
Remedial action: Not available		

Table 23-376 nbiclearalarmavg

Alarm	Attributes	Applicable major release
Name: nbiclearalarmavg (6396) Type: equipmentAlarm Package: femto.nbiclearalarmavg Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi clearAlarm.avg		
Remedial action: Not available		

Table 23-377 nbicreatedevice

Alarm	Attributes	Applicable major release
Name: nbicreatedevice (6397) Type: equipmentAlarm Package: femto.nbicreatedevice Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi createDevice		
Remedial action: Not available		

Table 23-378 nbicreatedeviceavg

Alarm	Attributes	Applicable major release
Name: nbicreatedeviceavg (6398) Type: equipmentAlarm Package: femto.nbicreatedeviceavg Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi createDevice.avg		
Remedial action: Not available		

Table 23-379 nbicreatesingledeviceoperation

Alarm	Attributes	Applicable major release
Name: nbicreatesingledeviceoperation (6399) Type: equipmentAlarm Package: femto.nbicreatesingledeviceoperation Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi createSingleDeviceOperation		
Remedial action: Not available		

Table 23-380 nbicreatesingledeviceoperationavg

Alarm	Attributes	Applicable major release
Name: nbicreatesingledeviceoperationavg (6400) Type: equipmentAlarm Package: femto.nbicreatesingledeviceoperationavg Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi createSingleDeviceOperation.avg		
Remedial action: Not available		

Table 23-381 nbicreatesingledeviceoperationbydeviceguid

Alarm	Attributes	Applicable major release
Name: nbicreatesingledeviceoperationbydeviceguid (6401) Type: equipmentAlarm Package: femto. nbicreatesingledeviceoperationbydeviceguid Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi createSingleDeviceOperationByDeviceGUID		
Remedial action: Not available		

Table 23-382 nbicreatesingledeviceoperationbydeviceguidavg

Alarm	Attributes	Applicable major release
Name: nbicreatesingledeviceopera-tionbydeviceguidavg (6402) Type: equipmentAlarm Package: femto. nbicreatesingledeviceoperationbydeviceguidavg Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2

Table 23-382 nbicreatesingledeviceoperationbydeviceguidavg (continued)

Alarm	Attributes	Applicable major release
Description: number of nbi createSingleDeviceOperationByDeviceGUID.avg		
Remedial action: Not available		

Table 23-383 nbifinddevicebyguid

Alarm	Attributes	Applicable major release
Name: nbifinddevicebyguid (6403) Type: equipmentAlarm Package: femto.nbifinddevicebyguid Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi findDeviceByGUID		
Remedial action: Not available		

Table 23-384 nbifinddevicebyguidavg

Alarm	Attributes	Applicable major release
Name: nbifinddevicebyguidavg (6404) Type: equipmentAlarm Package: femto.nbifinddevicebyguidavg Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi findDeviceByGUID.avg		
Remedial action: Not available		

Table 23-385 nbifinddevices

Alarm	Attributes	Applicable major release
Name: nbifinddevices (6405) Type: equipmentAlarm Package: femto.nbifinddevices Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi findDevices		
Remedial action: Not available		

Table 23-386 nbifinddevicesavg

Alarm	Attributes	Applicable major release
Name: nbifinddevicesavg (6406) Type: equipmentAlarm Package: femto.nbifinddevicesavg Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi findDevices.avg		
Remedial action: Not available		

Table 23-387 nbigetactivealarms

Alarm	Attributes	Applicable major release
Name: nbigetactivealarms (6407) Type: equipmentAlarm Package: femto.nbigetactivealarms Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi getActiveAlarms		
Remedial action: Not available		

Table 23-388 nbigetactivealarmsavg

Alarm	Attributes	Applicable major release
Name: nbigetactivealarmsavg (6408) Type: equipmentAlarm Package: femto.nbigetactivealarmsavg Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi getActiveAlarms.avg		
Remedial action: Not available		

Table 23-389 nbigetcacheddatamodelparameters

Alarm	Attributes	Applicable major release
Name: nbigetcacheddatamodelparameters (6409) Type: equipmentAlarm Package: femto.nbigetcacheddatamodelparameters Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi getCachedDataModelParameters		
Remedial action: Not available		

Table 23-390 nbigetcacheddatamodelparametersavg

Alarm	Attributes	Applicable major release
Name: nbigetcacheddatamodelparametersavg (6410) Type: equipmentAlarm Package: femto. nbigetcacheddatamodelparametersavg Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi getCachedDataModelParameters.avg		
Remedial action: Not available		

Table 23-391 nbiinitiateconnectionrequest

Alarm	Attributes	Applicable major release
Name: nbiinitiateconnectionrequest (6411) Type: equipmentAlarm Package: femto.nbiinitiateconnectionrequest Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi initiateConnectionRequest		
Remedial action: Not available		

Table 23-392 nbiinitiateconnectionrequestavg

Alarm	Attributes	Applicable major release
Name: nbiinitiateconnectionrequestavg (6412) Type: equipmentAlarm Package: femto.nbiinitiateconnectionrequestavg Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi initiateConnectionRequest.avg		
Remedial action: Not available		

Table 23-393 NBIoTLTECell_lteNbIotRrcSctpAssociationFailure

Alarm	Attributes	Applicable major release
Name: NBIoTLTECell_ lteNbIotRrcSctpAssociationFailure (12744) Type: communicationsAlarm Package: femto.NBIoTLTECell_ lteNbIotRrcSctpAssociationFailure Raised on class: femto.NBIoTLTECell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: connectionEstablishmentError	Release: • 14.2

Table 23-393 NBIoTLTECell_lteNbIotRrcSctpAssociationFailure (continued)

Alarm	Attributes	Applicable major release
Description: RRC/SCTP association failure alarm. This alarm is triggered by: 1) eNB receives an ErrorInd from MME with Criticality Diagnostics; 2) S1Setup response timer expires and maximum retries exhausted; 3) receive S1Setup Failure from MME and maximum retries exhausted; 4) during S1Setup, SCTP conn failure; 5) SCTP s1 setup req send fails; 6) upon expiration of sctp connection recovery timer; 7) gets sctp shutdown from mme when cell is up.		
Remedial action: Depending on fault condition, the cell may need reboot to recover SCTP association. Look MME IP address in the Additional Text field of this alarm message for SCTP association.		

Table 23-394 NBIoTLTECell_nbCellOperationFailure

Alarm	Attributes	Applicable major release
Name: NBIoTLTECell_nbCellOperationFailure (12971) Type: processingErrorAlarm Package: femto.NBIoTLTECell_ nbCellOperationFailure Raised on class: femto.NBIoTLTECell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • 14.2
Description: This alarm is generated, when internal NB-IOT cell related autonomous operations (like Block/Unblock) fails.		
Remedial action: No action needed from the operator. AP is rebooted by Nokia OAM after 4 hours if NB auto recovery is enabled.		

Table 23-395 NBIoTLTECell_spareNbIotCellAlarm1

Alarm	Attributes	Applicable major release
Name: NBIoTLTECell_spareNbIotCellAlarm1 (12745) Type: processingErrorAlarm Package: femto.NBIoTLTECell_spareNbIotCellAlarm1 Raised on class: femto.NBIoTLTECell	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: Spare alarm 1		
Remedial action: Refer to customer documentation for alarm details		

Table 23-396 NBIoTLTECell_spareNbIotCellAlarm2

Alarm	Attributes	Applicable major release
Name: NBIoTLTECell_spareNbIotCellAlarm2 (12746) Type: processingErrorAlarm Package: femto.NBIoTLTECell_spareNbIotCellAlarm2 Raised on class: femto.NBIoTLTECell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: Spare alarm 2		
Remedial action: Refer to customer documentation for alarm details		

Table 23-397 NBIoTLTECell_spareNbIotCellAlarm3

Alarm	Attributes	Applicable major release
Name: NBIoTLTECell_spareNbIotCellAlarm3 (12747) Type: processingErrorAlarm Package: femto.NBIoTLTECell_spareNbIotCellAlarm3 Raised on class: femto.NBIoTLTECell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: Spare alarm 3		
Remedial action: Refer to customer documentation for alarm details		

Table 23-398 nbiraisealarm

Alarm	Attributes	Applicable major release
Name: nbiraisealarm (6413) Type: equipmentAlarm Package: femto.nbiraisealarm Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi raiseAlarm		
Remedial action: Not available		

Table 23-399 nbiraisealarmavg

Alarm	Attributes	Applicable major release
Name: nbiraisealarmavg (6414) Type: equipmentAlarm Package: femto.nbiraisealarmavg Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi raiseAlarm.avg		
Remedial action: Not available		

Table 23-400 nbiregisterdevice

Alarm	Attributes	Applicable major release
Name: nbiregisterdevice (6415) Type: equipmentAlarm Package: femto.nbiregisterdevice Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi registerDevice		
Remedial action: Not available		

Table 23-401 nbiregisterdeviceavg

Alarm	Attributes	Applicable major release
Name: nbiregisterdeviceavg (6416) Type: equipmentAlarm Package: femto.nbiregisterdeviceavg Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi registerDevice.avg		
Remedial action: Not available		

Table 23-402 nbireleasedevice

Alarm	Attributes	Applicable major release
Name: nbireleasedevice (6417) Type: equipmentAlarm Package: femto.nbireleasedevice Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi releaseDevice		
Remedial action: Not available		

Table 23-403 nbireleasedeviceavg

Alarm	Attributes	Applicable major release
Name: nbireleasedeviceavg (6418) Type: equipmentAlarm Package: femto.nbireleasedeviceavg Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi releaseDevice.avg		
Remedial action: Not available		

Table 23-404 nbireruneventtriggeredpolicy

Alarm	Attributes	Applicable major release
Name: nbireruneventtriggeredpolicy (6419) Type: equipmentAlarm Package: femto.nbireruneventtriggeredpolicy Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi rerunEventTriggeredPolicy		
Remedial action: Not available		

Table 23-405 nbireruneventtriggeredpolicyavg

Alarm	Attributes	Applicable major release
Name: nbireruneventtriggeredpolicyavg (6420) Type: equipmentAlarm Package: femto.nbireruneventtriggeredpolicyavg Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi rerunEventTriggeredPolicy.avg		
Remedial action: Not available		

Table 23-406 nbiruneventtriggeredpolicies

Alarm	Attributes	Applicable major release
Name: nbiruneventtriggeredpolicies (6421) Type: equipmentAlarm Package: femto.nbiruneventtriggeredpolicies Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi runEventTriggeredPolicies		
Remedial action: Not available		

Table 23-407 nbiruneventtriggeredpoliciesavg

Alarm	Attributes	Applicable major release
Name: nbiruneventtriggeredpoliciesavg (6422) Type: equipmentAlarm Package: femto.nbiruneventtriggeredpoliciesavg Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi runEventTriggeredPolicies.avg		
Remedial action: Not available		

Table 23-408 nbiupdatedevicebydeviceid

Alarm	Attributes	Applicable major release
Name: nbiupdatedevicebydeviceid (6423) Type: equipmentAlarm Package: femto.nbiupdatedevicebydeviceid Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi updateDeviceByDeviceID		
Remedial action: Not available		

Table 23-409 nbiupdatedevicebydeviceidavg

Alarm	Attributes	Applicable major release
Name: nbiupdatedevicebydeviceidavg (6424) Type: equipmentAlarm Package: femto.nbiupdatedevicebydeviceidavg Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi updateDeviceByDeviceID.avg		
Remedial action: Not available		

Table 23-410 nbiupdatedevicebyguid

Alarm	Attributes	Applicable major release
Name: nbiupdatedevicebyguid (6425) Type: equipmentAlarm Package: femto.nbiupdatedevicebyguid Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi updateDeviceByGUID		
Remedial action: Not available		

Table 23-411 nbiupdatedevicebyguidavg

Alarm	Attributes	Applicable major release
Name: nbiupdatedevicebyguidavg (6426) Type: equipmentAlarm Package: femto.nbiupdatedevicebyguidavg Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: number of nbi updateDeviceByGUID.avg		
Remedial action: Not available		

Table 23-412 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major release
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm Package: netw. NeManagementAndTrapManagementMismatch Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: neManagementChange	Release: • 14.2

Table 23-412 NeManagementAndTrapManagementMismatch (continued)

Alarm	Attributes	Applicable major release
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		
Raising condition: ((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band')))		
Clearing condition: ((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band')))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

Table 23-413 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major release
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm Package: security.NewSsh2ServerKeyDetected Raised on class: security.KnownHostKey	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch	Release: • 14.2
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 23-414 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major release
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm Package: netw.NodeDatabaseFallbackDetected Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeDatabaseFallback	Release: • 14.2
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		

Table 23-414 NodeDatabaseFallbackDetected (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 23-415 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major release
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm Package: netw.NodeDatabaseMisalignmentDetected Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment	Release: • 14.2
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

Table 23-416 NodeSuspended

Alarm	Attributes	Applicable major release
Name: NodeSuspended (5123) Type: communicationsAlarm Package: netw.NodeSuspended Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NodeSuspend	Release: • 14.2
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element.The alarm will be cleared when the network element is managed back.		

Table 23-417 OAM_160

Alarm	Attributes	Applicable major release
Name: OAM_160 (6158) Type: communicationsAlarm Package: femto.OAM_160 Raised on class: femto.FemtoCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • 14.2
Description: Loss of OAM link between OMC and HNM.		
Remedial action: No particular action is required. This notification may be required by Global Product Support for debugging purposes		

Table 23-418 OAM_161

Alarm	Attributes	Applicable major release
Name: OAM_161 (6159) Type: qualityOfServiceAlarm Package: femto.OAM_161 Raised on class: femto.Femto	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: underlyingResourceUnavail-able	Release: • 14.2
Description: BSR is not operational or the OSI state is degraded		
Remedial action: Check the operationalState and availabilityStatus of the BSR MO on HDM		

Table 23-419 OAM_162

Alarm	Attributes	Applicable major release
Name: OAM_162 (6160) Type: communicationsAlarm Package: femto.OAM_162 Raised on class: femto.FemtoCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • 14.2
Description: Loss of communication link between WMS and FileServer		
Remedial action: Check the communication link between WMS and FileServer. This notification may be required by Global Product Support for debugging purposes		

Table 23-420 OAM_163

Alarm	Attributes	Applicable major release
Name: OAM_163 (6161) Type: equipmentAlarm Package: femto.OAM_163 Raised on class: femto.Femto	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: underlyingResourceUnavailable	Release: • 14.2
Description: Allocated license issue.		
Remedial action: Check WLM Web GUI to get more information on the current license settings.		

Table 23-421 OAM_164

Alarm	Attributes	Applicable major release
Name: OAM_164 (6162) Type: processingErrorAlarm Package: femto.OAM_164 Raised on class: femto.Femto	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomizationError	Release: • 14.2
Description: Self optimization operation not triggerred for the Femto Network Element.		
Remedial action: NA		

Table 23-422 OAM_165

Alarm	Attributes	Applicable major release
Name: OAM_165 (6163) Type: operationalViolation Package: femto.OAM_165 Raised on class: femto.Femto	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: underlyingResourceUnavailable	Release: • 14.2
Description: Self optimization was not successfull for Femto		
Remedial action: NA		

Table 23-423 OAM_222

Alarm	Attributes	Applicable major release
Name: OAM_222 (11161) Type: communicationsAlarm Package: femto.OAM_222 Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsSubsystemFailure	Release: • 14.2

Table 23-423 OAM_222 (continued)

Alarm	Attributes	Applicable major release
Description: Loss of OAM link between SCMS and HDM.		
Remedial action: No particular action is required. This notification may be required by Global Product Support for debugging purposes		

Table 23-424 OAM_225

Alarm	Attributes	Applicable major release
Name: OAM_225 (11162) Type: communicationsAlarm Package: femto.OAM_225 Raised on class: femto.HDMCluster	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: The OAMLinkAdministrativeState parameter (HDMCluster object) is set to locked.		
Remedial action: Find out why the OAMLinkAdministrativeState was locked in the first place. Set the OAMLinkAdministrativeState parameter (HDMCluster object) to unlocked.		

Table 23-425 OAM_LCellDown

Alarm	Attributes	Applicable major release
Name: OAM_LCellDown (9624) Type: qualityOfServiceAlarm Package: femto.OAM_LCellDown Raised on class: femto.LCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: underlyingResourceUnavail-able	Release: • 14.2
Description: LCell is not operational or the OSI state is degraded		
Raising condition: (('availabilityStatus' NOT EQUAL 'inTest') OR ('operationalState' NOT EQUAL 'enabled'))		
Clearing condition: (('availabilityStatus' EQUAL 'inTest') AND ('operationalState' EQUAL 'enabled'))		
Remedial action: Check the operationalState and availabilityStatus of the LCell MO on HDM		

Table 23-426 OAM_LteCellDown

Alarm	Attributes	Applicable major release
Name: OAM_LteCellDown (9625) Type: qualityOfServiceAlarm Package: femto.OAM_LteCellDown Raised on class: femto.LteCell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: underlyingResourceUnavail-able	Release: • 14.2
Description: LteCell is not operational or the OSI state is degraded		

Table 23-426 OAM_LteCellDown (continued)

Alarm	Attributes	Applicable major release
Raising condition: (('availabilityStatus' NOT EQUAL 'inTest') OR ('operationalState' NOT EQUAL 'enabled'))		
Clearing condition: (('availabilityStatus' EQUAL 'inTest') AND ('operationalState' EQUAL 'enabled'))		
Remedial action: Check the operationalState and availabilityStatus of the LteCell MO on HDM		

Table 23-427 OAM_NBIoTLTECellDown

Alarm	Attributes	Applicable major release
Name: OAM_NBIoTLTECellDown (12748) Type: qualityOfServiceAlarm Package: femto.OAM_NBIoTLTECellDown Raised on class: femto.NBIoTLTECell	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: underlyingResourceUnavailable	Release: • 14.2
Description: NBIoTLTECell is not operational or the OSI state is degraded.		
Raising condition: (('availabilityStatus' NOT EQUAL 'inTest') OR ('operationalState' NOT EQUAL 'enabled'))		
Clearing condition: (('availabilityStatus' EQUAL 'inTest') AND ('operationalState' EQUAL 'enabled'))		
Remedial action: Check the operationalState and availabilityStatus of the NBIoTLTECell MO on HDM.		

Table 23-428 operationresultOverload

Alarm	Attributes	Applicable major release
Name: operationresultOverload (11172) Type: equipmentAlarm Package: femto.operationresultOverload Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Threshold exceeds for operation result events.		
Remedial action: Threshold exceeds for operation result events		

Table 23-429 osavailableprocessercount

Alarm	Attributes	Applicable major release
Name: osavailableprocessercount (6427) Type: equipmentAlarm Package: femto.osavailableprocessercount Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of processer available to os		
Remedial action: Not available		

Table 23-430 oscommittedvirtualmemory

Alarm	Attributes	Applicable major release
Name: oscommittedvirtualmemory (6428) Type: equipmentAlarm Package: femto.oscommittedvirtualmemory Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The Number of committed virtual memory		
Remedial action: Not available		

Table 23-431 oscpuutil

Alarm	Attributes	Applicable major release
Name: oscpuutil (12507) Type: equipmentAlarm Package: femto.oscpuutil Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Current CPU utilization percentage of physical box hosting the current managed server. If the value goes above 90 percent it might be an indication of overloading scenario.		
Remedial action: Not available		

Table 23-432 osfreephysicalmemory

Alarm	Attributes	Applicable major release
Name: osfreephysicalmemory (6429) Type: equipmentAlarm Package: femto.osfreephysicalmemory Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The Number of free memory		
Remedial action: Not available		

Table 23-433 osfreeswapspace

Alarm	Attributes	Applicable major release
Name: osfreeswapspace (6430) Type: equipmentAlarm Package: femto.osfreeswapspace Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Free swap space size		
Remedial action: Not available		

Table 23-434 osmaxfiledescriptor

Alarm	Attributes	Applicable major release
Name: osmaxfiledescriptor (6431) Type: equipmentAlarm Package: femto.osmaxfiledescriptor Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Maximum file secriptor		
Remedial action: Not available		

Table 23-435 osopenfiledescriptor

Alarm	Attributes	Applicable major release
Name: osopenfiledescriptor (6432) Type: equipmentAlarm Package: femto.osopenfiledescriptor Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of open file descriptor		
Remedial action: Not available		

Table 23-436 osprocesscputime

Alarm	Attributes	Applicable major release
Name: osprocesscputime (6433) Type: equipmentAlarm Package: femto.osprocesscputime Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The CPU time		
Remedial action: Not available		

Table 23-437 ostotalphysicalmemory

Alarm	Attributes	Applicable major release
Name: ostotalphysicalmemory (6434) Type: equipmentAlarm Package: femto.ostotalphysicalmemory Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Total Physical memory		
Remedial action: Not available		

Table 23-438 ostotalswapspace

Alarm	Attributes	Applicable major release
Name: ostotalswapspace (6435) Type: equipmentAlarm Package: femto.ostotalswapspace Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Total number of free sawp space		
Remedial action: Not available		

Table 23-439 PartialResyncProblem

Alarm	Attributes	Applicable major release
Name: PartialResyncProblem (4401) Type: communicationsAlarm Package: netw.PartialResyncProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: partialResyncProblem	Release: • 14.2
Description: The alarm is raised when a partial resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 23-440 PartialVPRNEncryption

Alarm	Attributes	Applicable major release
Name: PartialVPRNEncryption (8992) Type: configurationAlarm Package: nge.PartialVPRNEncryption Raised on class: nge.VprnEncryptService	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConfigMismatch	Release: • 14.2
Description: The alarm is raised when one or more sites are not encryption enabled in a VPRN service.		
Raising condition: (('VPRN Service Encryption Status' EQUAL 'Partial'))		
Clearing condition: (('VPRN Service Encryption Status' NOT EQUAL 'Partial'))		
Remedial action: This site is newly added to the VPRN service, Perform the encrypt operation on the KeyGroup to clear the alarm.		

Table 23-441 periodicinformpercentage

Alarm	Attributes	Applicable major release
Name: periodicinformpercentage (6436) Type: equipmentAlarm Package: femto.periodicinformpercentage Raised on class: femto.HDMCluster	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Percentage of periodic informs		
Remedial action: Not available		

Table 23-442 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major release
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm Package: netw. PersistentIndexParametersMisconfigured Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistentIndexConfiguration-Mismatch	Release: • 14.2
Description: The alarm is raised when persistence is set to Off in the NE BOF.		
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

Table 23-443 PM_pmAuthenticationError

Alarm	Attributes	Applicable major release
Name: PM_pmAuthenticationError (6168) Type: communicationsAlarm Package: femto.PM_pmAuthenticationError Raised on class: femto.PM	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unauthorizedAccessAttempt	Release: • 14.2
Description: The authentication error when transferring PM files.		
Remedial action: The operator should check SFTP server and related configuration. If the problem persists, contact Nokia customer support		

Table 23-444 PM_pmCommunicationError

Alarm	Attributes	Applicable major release
Name: PM_pmCommunicationError (6169) Type: communicationsAlarm Package: femto.PM_pmCommunicationError Raised on class: femto.PM	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: responseTimeExcessive	Release: • 14.2
Description: Failure to transferring PM files even after retries.		
Remedial action: This alarm does not require operator intervention. If the problem persists, contact Nokia customer support.		

Table 23-445 PollerProblem

Alarm	Attributes	Applicable major release
Name: PollerProblem (31) Type: communicationsAlarm Package: netw.PollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resyncFailed	Release: • 14.2
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 23-446 PrimaryImageBootFailure

Alarm	Attributes	Applicable major release
Name: PrimaryImageBootFailure (191) Type: configurationAlarm Package: sw.PrimaryImageBootFailure Raised on class: sw.CardSoftware	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured	Release: • 14.2
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 23-447 Radio_clockSynchronisationFailure

Alarm	Attributes	Applicable major release
Name: Radio_clockSynchronisationFailure (6195) Type: equipmentAlarm Package: femto.Radio_clockSynchronisationFailure Raised on class: femto.Radio	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: timingProblem	Release: • 14.2
Description: This fault is raised if discipline process fails, i.e. the convergence does not occur within 4 hours of convergence time. The NTP/PTP servers are reachable but the NTP/PTP Client is not in 'synced' state.		
Remedial action: Operator could check configuration and status of NTP server.		

Table 23-448 Radio_freqSynchronisationFailure

Alarm	Attributes	Applicable major release
Name: Radio_freqSynchronisationFailure (8205) Type: equipmentAlarm Package: femto.Radio_freqSynchronisationFailure Raised on class: femto.Radio	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: timingProblem	Release: • 14.2
Description: This fault is raised if no discipline source is available and the oscillator holdover period has been exceeded such that frequency may no longer meet system requirements. (A separate alarm is defined for reporting phase synchronization failure).		
Remedial action: This alarm does not require operator intervention. If the problem persists, contact Nokia customer support		

Table 23-449 Radio_gpsServiceUnavailable

Alarm	Attributes	Applicable major release
Name: Radio_gpsServiceUnavailable (8206) Type: equipmentAlarm Package: femto.Radio_gpsServiceUnavailable Raised on class: femto.Radio	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: timingProblem	Release: • 14.2
Description: The fault is raised if the GPS timing signal is not available.		
Remedial action: Check if GPS is connected		

Table 23-450 Radio_nlRfFailure

Alarm	Attributes	Applicable major release
Name: Radio_nlRfFailure (8207) Type: equipmentAlarm Package: femto.Radio_nlRfFailure Raised on class: femto.Radio	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 14.2
Description: The Network Listen hardware has a receive path failure.		

Table 23-450 Radio_nlRfFailure (continued)

Alarm	Attributes	Applicable major release
Remedial action: This is generally due to a hardware failure, the MS MCI may need to be replaced. contact Nokia customer support.		

Table 23-451 Radio_ntpServiceUnavailable

Alarm	Attributes	Applicable major release
Name: Radio_ntpServiceUnavailable (6196) Type: equipmentAlarm Package: femto.Radio_ntpServiceUnavailable Raised on class: femto.Radio	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: timingProblem	Release: • 14.2
Description: This fault is raised if NTP servers are initially not reachable within 5 minutes and verification of calibration value is impossible in this timeframe. This fault is also raised if the discipline process fails due to the NTP servers being unreachable. The nature of the failure will be provided in the additional text.		
Remedial action: Check whether primary/secondary NTP servers are reachable		

Table 23-452 Radio_oscillatorAdjustFail

Alarm	Attributes	Applicable major release
Name: Radio_oscillatorAdjustFail (8208) Type: equipmentAlarm Package: femto.Radio_oscillatorAdjustFail Raised on class: femto.Radio	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 14.2
Description: The timing oscillator has reached its adjustment limit.		
Remedial action: This is a hardware failure and the MS MCI must be replaced.		

Table 23-453 Radio_otaServiceUnavailable

Alarm	Attributes	Applicable major release
Name: Radio_otaServiceUnavailable (13001) Type: equipmentAlarm Package: femto.Radio_otaServiceUnavailable Raised on class: femto.Radio	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: timingProblem	Release: • 14.2
Description: This fault is raised if the discipline process fails due to OTA sync source not available		
Remedial action: Check whether proper macro neighbour frequencies are configured for OTA sync		

Table 23-454 Radio_outOfOperatingCondition

Alarm	Attributes	Applicable major release
Name: Radio_outOfOperatingCondition (6197) Type: equipmentAlarm Package: femto.Radio_outOfOperatingCondition Raised on class: femto.Radio	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 14.2
Description: This fault is raised if out of operating condition is detected. It is related to critical hardware checks on LightRadio Metro Cells, for example power amplifier 28V supply and current monitoring on LightRadio 2100 and 1900 Metro Outdoor Cells.		
Remedial action: This fault is related to critical hardware failure. If the problem persists, contact Nokia customer support.		

Table 23-455 Radio_overTemperature

Alarm	Attributes	Applicable major release
Name: Radio_overTemperature (6198) Type: environmentalAlarm Package: femto.Radio_overTemperature Raised on class: femto.Radio	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • 14.2
Description: The temperature is over the specified limit. For Multi-Standard MS-HC v1 boards, if zone 0 to 7 sensors cross the threshold temperature of 98 C, the alarm would be raised with the additional text WARNING and if PA sensors cross the threshold temperature of 90 C, the alarm would be raised with the additional text CRITICAL		
Remedial action: The alarm will be cleared by the Small Cell once the temperature has fallen below the specified limit. The operator should investigate why the temperature rose over the limit. If the problem persists, contact Nokia customer support.		

Table 23-456 Radio_phaseSynchronisationFailure

Alarm	Attributes	Applicable major release
Name: Radio_phaseSynchronisationFailure (8498) Type: equipmentAlarm Package: femto.Radio_phaseSynchronisationFailure Raised on class: femto.Radio	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: timingProblem	Release: • 14.2
Description: This fault is raised if the current phase error may exceed the operating limits of any currently provisioned phase-dependent functions.		
Remedial action: Operator should check status of phase reference sources (GPS or PTP (future)).		

Table 23-457 Radio_rxDiversityMalfunction

Alarm	Attributes	Applicable major release
Name: Radio_rxDiversityMalfunction (6199) Type: equipmentAlarm Package: femto.Radio_rxDiversityMalfunction Raised on class: femto.Radio	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 14.2
Description: Raised when one of the two Rx path fails when receive diversity is active.		
Remedial action: This alarm does not require operator intervention. If the problem persists, contact Nokia customer support.		

Table 23-458 Radio_rxMalfunction

Alarm	Attributes	Applicable major release
Name: Radio_rxMalfunction (6200) Type: equipmentAlarm Package: femto.Radio_rxMalfunction Raised on class: femto.Radio	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 14.2
Description: Malfunction in the radio receiver.		
Remedial action: This alarm does not require operator intervention. If the problem persists, contact Nokia customer support.		

Table 23-459 Radio_spareRadioAlarm1

Alarm	Attributes	Applicable major release
Name: Radio_spareRadioAlarm1 (8209) Type: processingErrorAlarm Package: femto.Radio_spareRadioAlarm1 Raised on class: femto.Radio	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: Spare alarm 1		
Remedial action: Refer to customer documentation for alarm details.		

Table 23-460 Radio_spareRadioAlarm2

Alarm	Attributes	Applicable major release
Name: Radio_spareRadioAlarm2 (8210) Type: processingErrorAlarm Package: femto.Radio_spareRadioAlarm2 Raised on class: femto.Radio	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: Spare alarm 2		
Remedial action: Refer to customer documentation for alarm details.		

Table 23-461 Radio_spareRadioAlarm3

Alarm	Attributes	Applicable major release
Name: Radio_spareRadioAlarm3 (8211) Type: processingErrorAlarm Package: femto.Radio_spareRadioAlarm3 Raised on class: femto.Radio	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: Spare alarm 3		
Remedial action: Refer to customer documentation for alarm details.		

Table 23-462 Radio_txMalfunction

Alarm	Attributes	Applicable major release
Name: Radio_txMalfunction (6201) Type: equipmentAlarm Package: femto.Radio_txMalfunction Raised on class: femto.Radio	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 14.2
Description: The Radio has failed to activate the transmitter, or malfunction in the radio transmitter.		
Remedial action: If the problem persists, contact Nokia customer support		

Table 23-463 Radio_underTemperature

Alarm	Attributes	Applicable major release
Name: Radio_underTemperature (6202) Type: environmentalAlarm Package: femto.Radio_underTemperature Raised on class: femto.Radio	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • 14.2
Description: The temperature is below the specified limit.		
Remedial action: The alarm will be cleared by the Small Cell once the temperature has risen above the specified limit. The operator should investigate the reason for the excessively low temperature. If the problem persists, contact Nokia customer support.		

Table 23-464 RadiusOperStatusDown

Alarm	Attributes	Applicable major release
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm Package: netw.RadiusOperStatusDown Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: radiusOperationStatusDown	Release: • 14.2
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		

Table 23-464 RadiusOperStatusDown (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up.Check the connectivity between SAM server and radius server configured on the Network element.		

Table 23-465 ReachabilityProblem

Alarm	Attributes	Applicable major release
Name: ReachabilityProblem (243) Type: communicationsAlarm Package: netw.ReachabilityProblem Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReachabilityTestFailed	Release: • 14.2
Description: The alarm is raised when a mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. The polling interval depends on the NE type and is configurable in nms-server.xml. By default, the 5620 SAM polls a managed NE every four minutes. If a poll fails, the alarm is raised. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 23-466 reachabledevicecount

Alarm	Attributes	Applicable major release
Name: reachabledevicecount (6437) Type: equipmentAlarm Package: femto.reachabledevicecount Raised on class: femto.HDMCluster	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Count of reachable devices		
Remedial action: Not available		

Table 23-467 ReconfigFailure

Alarm	Attributes	Applicable major release
Name: ReconfigFailure (1949) Type: communicationsAlarm Package: netw.ReconfigFailure Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: failedReconfig	Release: • 14.2

Table 23-467 ReconfigFailure (continued)

Alarm	Attributes	Applicable major release
Description: This alarm is raised when the reconfig action failed.		
Raising condition: ('State' EQUAL 'Failed')		
Clearing condition: ('State' NOT EQUAL 'Failed')		
Remedial action: Verify that the object is configured as expected.		

Table 23-468 resyncEventsOverload

Alarm	Attributes	Applicable major release
Name: resyncEventsOverload (11173) Type: equipmentAlarm Package: femto.resyncEventsOverload Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Threshold exceeds for Resync events.		
Raising condition: (('Resync Event OverLoad' EQUAL 'true'))		
Clearing condition: (('Resync Event OverLoad' EQUAL 'false'))		
Remedial action: Threshold exceeds for resync events		

Table 23-469 RFTrace_rfTraceDedicatedFailure

Alarm	Attributes	Applicable major release
Name: RFTrace_rfTraceDedicatedFailure (6189) Type: operationalViolation Package: femto.RFTrace_rfTraceDedicatedFailure Raised on class: femto.RFTrace	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: This fault is raised during RF Trace operation if all dedicated measurement (excluding HSDPA and EDCH) configurations are failed.		
Remedial action: This alarm does not require operator intervention. It will affect only RF Trace operation as it will blocked because of the failure. If the problem persists, contact Nokia customer support.		

Table 23-470 RFTrace_rfTraceHsdpaFailure

Alarm	Attributes	Applicable major release
Name: RFTrace_rfTraceHsdpaFailure (6190) Type: operationalViolation Package: femto.RFTrace_rfTraceHsdpaFailure Raised on class: femto.RFTrace	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: This fault is raised during RF Trace operation if all HSDPA measurement configurations are failed.		
Remedial action: This alarm does not require operator intervention. It will affect only RF Trace operation as it will blocked because of the failure. If the problem persists, contact Nokia customer support.		

Table 23-471 RFTrace_rfTraceRssiFailure

Alarm	Attributes	Applicable major release
Name: RFTrace_rfTraceRssiFailure (8497) Type: operationalViolation Package: femto.RFTrace_rfTraceRssiFailure Raised on class: femto.RFTrace	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: proceduralError	Release: • 14.2
Description: This fault is raised during RF Trace operation if RSSI data collection fails.		
Remedial action: The alarm is cleared when the operator unlocks (administrative state) the RFTrace MO.		

Table 23-472 SaveConfigFailed

Alarm	Attributes	Applicable major release
Name: SaveConfigFailed (105) Type: configurationAlarm Package: sw.SaveConfigFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileAccessError	Release: • 14.2
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact your Nokia support representative for assistance.		

Table 23-473 ScheduledPollerProblem

Alarm	Attributes	Applicable major release
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm Package: netw.ScheduledPollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: scheduledResyncFailed	Release: • 14.2
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 23-474 SCTPASSOC_associationEstablishmentFailure

Alarm	Attributes	Applicable major release
Name: SCTPASSOC_associationEstablishmentFailure (6203) Type: communicationsAlarm Package: femto.SCTPASSOC_ associationEstablishmentFailure Raised on class: femto.SCTPASSOC	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: This fault is raised after the number of INIT retries configured by maxInitRetransmits has failed. After the fault is raised there will be further retries after maxDelaySctpReEst delay		
Remedial action: The alarm is cleared by the Small Cell once the SCTP association is made. If the problem persists, contact Nokia customer support.		

Table 23-475 SCTPASSOC_sctpAssocAssociationDownAlarm

Alarm	Attributes	Applicable major release
Name: SCTPASSOC_ sctpAssocAssociationDownAlarm (6204) Type: communicationsAlarm Package: femto.SCTPASSOC_ sctpAssocAssociationDownAlarm Raised on class: femto.SCTPASSOC	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • 14.2
Description: This fault is raised when all SCTP associations with the BSG are down.		
Remedial action: The operator should check the configuration of BSG IP address and whether the BSG is operational. If the problem persists, contact Nokia customer support.		

Table 23-476 SCTPASSOC_sctpAssocDnsFailure

Alarm	Attributes	Applicable major release
Name: SCTPASSOC_sctpAssocDnsFailure (6205) Type: communicationsAlarm Package: femto.SCTPASSOC_sctpAssocDnsFailure Raised on class: femto.SCTPASSOC	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: This fault is sent when link failure is detected when no response is received to DNS messages attempting to resolve the FGW FQDN. This maybe caused by timeout or a protocol error.		
Remedial action: Operator could check configuration of BSG FQDN, ensure operator DNS servers are provisioned in FBSR at IPsec tunnel establishment, ensure operator DNS servers are reachable from FBSR, and ensure operator DNS servers contain Resource Records for the BSG FQDN.		

Table 23-477 SCTPASSOC_unstableSCTPAssociation

Alarm	Attributes	Applicable major release
Name: SCTPASSOC_unstableSCTPAssociation (8499) Type: communicationsAlarm Package: femto.SCTPASSOC_unstableSCTPAssociation Raised on class: femto.SCTPASSOC	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • 14.2
Description: This fault is raised if the SCTP association to the SCGW has been unstable with many short term interruptions- Probable Cause: communicationsSubsystemFailure		
Remedial action: Operator can investigate the stability of the backhaul links between the BSR and SCGW		

Table 23-478 SDM_dbDownloadFailure

Alarm	Attributes	Applicable major release
Name: SDM_dbDownloadFailure (6209) Type: processingErrorAlarm Package: femto.SDM_dbDownloadFailure Raised on class: femto.SDM	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: softwareError	Release: • 14.2
Description: This fault is created when the database download fails.		
Remedial action: This alarm does not require operator intervention. If the problem persists, contact Nokia customer support.		

Table 23-479 SDM_suActivationFailure

Alarm	Attributes	Applicable major release
Name: SDM_suActivationFailure (6210) Type: processingErrorAlarm Package: femto.SDM_suActivationFailure Raised on class: femto.SDM	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: softwareError	Release: • 14.2
Description: This fault is created when activation of a software image fails.		
Remedial action: The alarm will be cleared by the Small Cell once the software activation has succeeded. If the problem persists, contact Nokia customer support		

Table 23-480 SDM_suDownloadFailure

Alarm	Attributes	Applicable major release
Name: SDM_suDownloadFailure (6211) Type: processingErrorAlarm Package: femto.SDM_suDownloadFailure Raised on class: femto.SDM	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: softwareError	Release: • 14.2
Description: This fault is created when download of a software image fails.		
Remedial action: The alarm will be cleared by the Small Cell when the database has been successfully downloaded. If the problem persists, contact Nokia customer support		

Table 23-481 SDM_toneFileCorrupt

Alarm	Attributes	Applicable major release
Name: SDM_toneFileCorrupt (6212) Type: processingErrorAlarm Package: femto.SDM_toneFileCorrupt Raised on class: femto.SDM	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: A downloaded tone file has invalid format.		
Remedial action: Check the tone file and retry the download.If the problem persists, contact Nokia customer support.		

Table 23-482 SDM_toneFileDownloadFailure

Alarm	Attributes	Applicable major release
Name: SDM_toneFileDownloadFailure (6213) Type: processingErrorAlarm Package: femto.SDM_toneFileDownloadFailure Raised on class: femto.SDM	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: softwareError	Release: • 14.2
Description: This fault is created when download of a tone file fails.		

Table 23-482 SDM_toneFileDownloadFailure (continued)

Alarm	Attributes	Applicable major release
Remedial action: Retry the download. If the problem persists, contact Nokia customer support		

Table 23-483 socketcount

Alarm	Attributes	Applicable major release
Name: socketcount (6438) Type: equipmentAlarm Package: femto.socketcount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of socket		
Remedial action: Not available		

Table 23-484 StatsRetrieveFailed

Alarm	Attributes	Applicable major release
Name: StatsRetrieveFailed (244) Type: configurationAlarm Package: sw.StatsRetrieveFailed Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: fileTransferFailure	Release: • 14.2
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 23-485 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major release
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed Package: netw.SubscriberSystemNextHopUsageHigh Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 14.2
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		

Table 23-485 SubscriberSystemNextHopUsageHigh (continued)

Alarm	Attributes	Applicable major release
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

Table 23-486 threadidlecount

Alarm	Attributes	Applicable major release
Name: threadidlecount (6439) Type: equipmentAlarm Package: femto.threadidlecount Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of idel threads		
Remedial action: Not available		

Table 23-487 threadpendingrequestcount

Alarm	Attributes	Applicable major release
Name: threadpendingrequestcount (6440) Type: equipmentAlarm Package: femto.threadpendingrequestcount Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of thread in pending request state		
Remedial action: Not available		

Table 23-488 threadqueuelength

Alarm	Attributes	Applicable major release
Name: threadqueuelength (6441) Type: equipmentAlarm Package: femto.threadqueuelength Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of thread queue		
Remedial action: Not available		

Table 23-489 threadstandbycount

Alarm	Attributes	Applicable major release
Name: threadstandbycount (6442) Type: equipmentAlarm Package: femto.threadstandbycount Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: The number of thread in stand by state.		
Remedial action: Not available		

Table 23-490 threadthroughput

Alarm	Attributes	Applicable major release
Name: threadthroughput (6443) Type: equipmentAlarm Package: femto.threadthroughput Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Thread throughput		
Remedial action: Not available		

Table 23-491 threadtotalcount

Alarm	Attributes	Applicable major release
Name: threadtotalcount (6444) Type: equipmentAlarm Package: femto.threadtotalcount Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Total number of Threads		
Remedial action: Not available		

Table 23-492 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major release
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm Package: netw.TrapDestinationMisconfigured Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trapDestinationMisconfigured Applicable probable causes: • trapDestinationMisconfigured • duplicateTrapLogId	Release: • 14.2

Table 23-492 TrapDestinationMisconfigured (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 23-493 TrapReceivingFailure

Alarm	Attributes	Applicable major release
Name: TrapReceivingFailure (1083) Type: communications Package: netw.TrapReceivingFailure Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: trapsWillNotBeSent	Release: • 14.2
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		
Raising condition: ((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')))		
Clearing condition: ((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

Table 23-494 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major release
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications Package: netw.TrapRoutePreferenceRedundancyMissing Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trapsRedundancyMissing	Release: • 14.2
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: ((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')))		
Clearing condition: ((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None')))		
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

Table 23-495 UnidentifiedNode

Alarm	Attributes	Applicable major release
Name: UnidentifiedNode (1922) Type: communicationsAlarm Package: netw.UnidentifiedNode Raised on class: netw.DiscoveredNode	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unidentifiedNode	Release: • 14.2
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 23-496 UnmanageFailed

Alarm	Attributes	Applicable major release
Name: UnmanageFailed (300) Type: discoveryControlAlarm Package: netw.UnmanageFailed Raised on class: netw.NodeDiscoveryControl	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unableToDeleteNode	Release: • 14.2

Table 23-496 UnmanageFailed (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'Unmanage Failed')		
Clearing condition: ('Site State' NOT EQUAL 'Unmanage Failed')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 23-497 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major release
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm Package: netw.UpgradedBuildVersionMismatch Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: upgradedImageNotBooted	Release: • 14.2
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 23-498 upgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: upgradedCardAlarm (255) Type: softwareAlarm Package: equipment.upgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: upgradedCard	Release: • 14.2
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 23-499 UpgradeRulesFileAlarm

Alarm	Attributes	Applicable major release
Name: UpgradeRulesFileAlarm (9019) Type: processingErrorAlarm Package: femto.UpgradeRulesFileAlarm Raised on class: femto.SmallCellProfileUpgradeActions	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • 14.2
Description: The alarm is raised when there is any issue with the Upgrade Rules File.		
Remedial action: Please provide a valid Upgrade Rules File		

Table 23-500 UplinkDown

Alarm	Attributes	Applicable major release
Name: UplinkDown (11062) Type: virtualSwitchAlarm Package: dctr.UplinkDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsAllDown	Release: • 14.2
Description: The alarm is raised when all connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '2'))		
Clearing condition: (('uplinkState' NOT EQUAL '2'))		
Remedial action: This alarm is raised when all connections associated to the uplink lost connectivity.		

Table 23-501 UplinkPartiallyDown

Alarm	Attributes	Applicable major release
Name: UplinkPartiallyDown (11063) Type: virtualSwitchAlarm Package: dctr.UplinkPartiallyDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsDown	Release: • 14.2
Description: The alarm is raised when some connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '3'))		
Clearing condition: (('uplinkState' NOT EQUAL '3'))		
Remedial action: This alarm is raised when a connection of the uplink lost connectivity but at least one connection remains connected.		

Table 23-502 userlockouttotalcount

Alarm	Attributes	Applicable major release
Name: userlockouttotalcount (6445) Type: equipmentAlarm Package: femto.userlockouttotalcount Raised on class: femto.HDMCluster	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • 14.2
Description: Indicates how many user locking out process is executed on the current server		
Remedial action: Not available		

Table 23-503 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm Package: sw.VersionConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: versionMismatch	Release: • 14.2
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 23-504 WiFi_wifiNoSignalDetected

Alarm	Attributes	Applicable major release
Name: WiFi_wifiNoSignalDetected (6247) Type: communicationsAlarm Package: femto.WiFi_wifiNoSignalDetected Raised on class: femto.WiFi	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 14.2
Description: This fault is raised if signal of link status is not detected on the Wi-Fi Ethernet port.		
Remedial action: Check whether Wi-Fi AP is attached to the main box of LightRadio MCOs		

Table 23-505 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major release
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm Package: netw.WrongCpaaSoftwareVersion Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion	Release: • 14.2
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL '\"TiMOS-B-3.0.Generic \"') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Clearing condition: (('Software Version' NOT EQUAL '\"TiMOS-B-3.0.Generic \"') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

24 9471 WMM

24.1 Alarms

Alarms

Note: Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see Chapter 39, “Unspecified NE”.

Table 24-1 AggregatedVFLPortDown

Alarm	Attributes	Applicable major release
Name: AggregatedVFLPortDown (5436) Type: equipmentAlarm Package: equipment.AggregatedVFLPortDown Raised on class: equipment.Shelf	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: connectivityIssue	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is generated when the aggregated virtual fabric link on the virtual chassis slot is down.		
Raising condition: (('Shelf Type' EQUAL '7850') AND ('Total Slots' EQUAL '4') AND ('Virtual Fabric Link State' NOT EQUAL 'Up'))		
Clearing condition: (('Shelf Type' EQUAL '7850') AND ('Total Slots' EQUAL '4') AND ('Virtual Fabric Link State' EQUAL 'Up'))		
Remedial action: The alarm is raised when the aggregated virtual fabric link on the virtual chassis is down. Please check the virtual fabric links for the virtual chassis setup.		

Table 24-2 AuxiliaryServerStatus

Alarm	Attributes	Applicable major release
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm Package: server.AuxiliaryServerStatus Raised on class: server.AuxiliaryServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 24-3 BareMetalReachabilityDown

Alarm	Attributes	Applicable major release
Name: BareMetalReachabilityDown (10273) Type: virtualPortAlarm Package: dctr.BareMetalReachabilityDown Raised on class: dctr.BMDevice	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BareMetalReachability-DownOrDeleted	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when Bare Metal server is reachability down.		
Raising condition: (('bgpReachabilityState' NOT EQUAL '0'))		
Clearing condition: (('bgpReachabilityState' EQUAL '0'))		
Remedial action: This alarm can be cleared when bare metal device BGP prefix is up. Check for virtual switch controller down or virtual switch down or interface/port down in underlay network (hence the BGP prefix not advertised).		

Table 24-4 BootParametersMisconfigured

Alarm	Attributes	Applicable major release
Name: BootParametersMisconfigured (35) Type: configurationAlarm Package: netw.BootParametersMisconfigured Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistentIndexFailure Applicable probable causes: • persistentIndexFailure • configFileBootFailure	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND ((('Config File Status' NOT EQUAL 'Executed Successfully') AND ('Config File Status' NOT EQUAL 'configFileStatus_unspecified')) OR (('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded') AND ('Persistent Index Status' NOT EQUAL 'persistentIndexStatus_unspecified'))))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

Table 24-5 ClientDelegateServerStatus

Alarm	Attributes	Applicable major release
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm Package: server.ClientDelegateServerStatus Raised on class: server.ClientDelegateServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 24-6 CmuManagementFailed

Alarm	Attributes	Applicable major release
Name: CmuManagementFailed (10040) Type: communicationsAlarm Package: lte.CmuManagementFailed Raised on class: lte.CompactMobilityUnit	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ftpFailed	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when SAM fails to manage a 9430 Compact Mobility Unit due to an FTP failure.		
Raising condition: ('Management State' EQUAL 'FTP Failed')		
Clearing condition: ('Management State' EQUAL 'Managed')		
Remedial action: Verify FTP connectivity between the 5620 SAM and the 9430 Compact Mobility Unit, then re-attempt to manage.		

Table 24-7 Connected2GUEsExceeded

Alarm	Attributes	Applicable major release
Name: Connected2GUEsExceeded (5041) Type: communicationsAlarm Package: ltemme.Connected2GUEsExceeded Raised on class: ltemme.MmeInstance	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ThresholdExceeded	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the number of Connected 2G UEs exceeds the threshold that has been set by the operator.		
Raising condition: (('2G Connected UEs Threshold' NOT EQUAL '0L') AND ('2G Connected UEs' > '2G Connected UEs Threshold'))		
Remedial action: Informational - no corrective action required.		

Table 24-8 Connected3GUEsExceeded

Alarm	Attributes	Applicable major release
Name: Connected3GUEsExceeded (5042) Type: communicationsAlarm Package: Itemme.Connected3GUEsExceeded Raised on class: Itemme.MmeInstance	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ThresholdExceeded	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the number of Connected 3G UEs exceeds the threshold that has been set by the operator.		
Raising condition: (('3G Connected UEs Threshold' NOT EQUAL '0L') AND ('3G Idle UEs' > '3G Connected UEs Threshold'))		
Remedial action: Informational - no corrective action required.		

Table 24-9 Connected4GUEsExceeded

Alarm	Attributes	Applicable major release
Name: Connected4GUEsExceeded (5043) Type: communicationsAlarm Package: Itemme.Connected4GUEsExceeded Raised on class: Itemme.MmeInstance	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ThresholdExceeded	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the number of 4G Connected UEs exceeds the threshold that has been set by the operator.		
Raising condition: (('4G Connected UEs Threshold' NOT EQUAL '0L') AND ('4G Connected UEs' > '4G Connected UEs Threshold'))		
Remedial action: Informational - no corrective action required.		

Table 24-10 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm Package: equipment. ContainingEquipmentAdministrativelyDown Raised on class: equipment.Port	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentAdminist-rativelyDown	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 24-11 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm Package: equipment.ContainingEquipmentMismatch Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentMismatch	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 24-12 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm Package: equipment.ContainingEquipmentOperationallyDown Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentDown	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationllyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

Table 24-13 CorruptImageFile

Alarm	Attributes	Applicable major release
Name: CorruptImageFile (171) Type: configurationAlarm Package: mediation.CorruptImageFile Raised on class: mediation.AbstractSoftwareFolderDescriptor	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 24-14 criticalErrorAlarm (ltemme)

Alarm	Attributes	Applicable major release
Name: criticalErrorAlarm (3681) Type: communicationsAlarm Package: ltemme.criticalErrorAlarm Raised on class: ltemme.MmeInstance	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: MmeInternalProcessingError	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: This alarm is raised when receiving critical-error message from the network element's NetConf interface. The operator must connect to the network element using its CLI interface and verify the consistency of the network element's database and configuration and then do a full node resync once the manual intervention has been completed.		
Remedial action: The operator must connect to the network element (MME) using its CLI interface and verify the consistency of the network element's database and configuration and then do a full node resync once the manual intervention has been completed.		

Table 24-15 Deregistered4GUEsExceeded

Alarm	Attributes	Applicable major release
Name: Deregistered4GUEsExceeded (5044) Type: communicationsAlarm Package: ltemme.Deregistered4GUEsExceeded Raised on class: ltemme.MmeInstance	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ThresholdExceeded	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the number of 4G Deregistered UEs exceeds the threshold that has been set by the operator.		
Raising condition: (('4G Deregistered UEs Threshold' NOT EQUAL '0L') AND ('4G Deregistered UEs' > '4G Deregistered UEs Threshold'))		
Remedial action: Informational - no corrective action required.		

Table 24-16 EPSPeerLocked

Alarm	Attributes	Applicable major release
Name: EPSPeerLocked (3747) Type: communicationsAlarm Package: lte.EPSPeerLocked Raised on class: lte.AbstractMmeEpsPeer	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerLocked	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when an EPS Peer link goes into a locked state. The alarm clears when the EPS Peer Link changes to an unlocked state.		
Raising condition: (('Administrative State' EQUAL 'Locked'))		
Clearing condition: (('Administrative State' EQUAL 'Unlocked'))		
Remedial action: Informational: The EPS Peer has been manually locked.		

Table 24-17 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm Package: equipment.EquipmentAdministrativelyDown Raised on class: equipment.Equipment	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentAdministratively-Down	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 24-18 EquipmentDegraded

Alarm	Attributes	Applicable major release
Name: EquipmentDegraded (604) Type: equipmentAlarm Package: equipment.EquipmentDegraded Raised on class: equipment.FanTray	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: singleFanFailure	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when a single fan fails. The chassis attempts to continue operating within the normal temperature range using only the remaining fans.		
Raising condition: ('Device State' EQUAL 'MinorFailure')		
Clearing condition: ('Device State' NOT EQUAL 'MinorFailure')		
Remedial action: The failed fan unit should be replaced.		

Table 24-19 EquipmentDown

Alarm	Attributes	Applicable major release
Name: EquipmentDown (10) Type: equipmentAlarm Package: equipment.EquipmentDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: inoperableEquipment	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 24-20 EquipmentFailure

Alarm	Attributes	Applicable major release
Name: EquipmentFailure (145) Type: equipmentAlarm Package: equipment.EquipmentFailure Raised on class: equipment.ReplaceableUnit	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cardFailure	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when a I/O card or control processor or power-supply tray reports a failure. When the object type is ControlProcessor, a CPM may be unable to boot. When the object type is Power Supply Tray and the alarm is raised during device discovery, a power-supply tray may be out of service. When the object type is a Power Supply Tray and the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: ('operationalState' EQUAL 'Failed')		
Clearing condition: ('operationalState' NOT EQUAL 'Failed')		
Remedial action: If the alarm indicates that the CPM card or I/O card has a fault, remove the card and reset it. If this does not clear the alarm then please contact your Nokia support representative for assistance. If the alarm indicates that the Power Supply tray is out of service ensure that the NE is properly connected to power. If the problem persists please contact your Nokia support representative for assistance.		

Table 24-21 EquipmentInTest

Alarm	Attributes	Applicable major release
Name: EquipmentInTest (11) Type: equipmentAlarm Package: equipment.EquipmentInTest Raised on class: equipment.Equipment	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentInTest	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 24-22 EquipmentMismatch

Alarm	Attributes	Applicable major release
Name: EquipmentMismatch (9) Type: equipmentAlarm Package: equipment.EquipmentMismatch Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentTypeMismatch	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 24-23 EquipmentRemoved

Alarm	Attributes	Applicable major release
Name: EquipmentRemoved (8) Type: equipmentAlarm Package: equipment.EquipmentRemoved Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: ((('isEquipped' EQUAL 'false') OR ('compositeEquipmentState' EQUAL 'Removed')) AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Removed') AND ('isEquipped' EQUAL 'true'))		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 24-24 FanFailure (equipment)

Alarm	Attributes	Applicable major release
Name: FanFailure (624) Type: equipmentAlarm Package: equipment.FanFailure Raised on class: equipment.FanTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fanFailure	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the associated fan is not operationally Up.		
Raising condition: (('Device State' EQUAL 'Failed') OR ('Device State' EQUAL 'Unknown') OR ('Device State' EQUAL 'OutOfservice'))		
Clearing condition: ('Device State' EQUAL 'OK')		
Remedial action: Remove and reset the fan unit. If this does not resolve the problem replace the fan.		

Table 24-25 FanTrayRemoved

Alarm	Attributes	Applicable major release
Name: FanTrayRemoved (569) Type: equipmentAlarm Package: equipment.FanTrayRemoved Raised on class: equipment.FanTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: FanTrayRemoved	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the deviceState attribute has a value of deviceNotEquipped.		
Raising condition: ('Device State' EQUAL 'Not Equipped')		
Clearing condition: ('Device State' NOT EQUAL 'Not Equipped')		
Remedial action: Informational - a fan tray has been removed from the NE.		

Table 24-26 Idle2GUEsExceeded

Alarm	Attributes	Applicable major release
Name: Idle2GUEsExceeded (5045) Type: communicationsAlarm Package: Itemme.Idle2GUEsExceeded Raised on class: Itemme.MmeInstance	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ThresholdExceeded	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the number of Idle 2G UEs exceeds the threshold that has been set by the operator.		
Raising condition: (('2G Idle UEs Threshold' NOT EQUAL '0L') AND ('2G Idle UEs' > '2G Idle UEs Threshold'))		
Remedial action: Informational - no corrective action required.		

Table 24-27 Idle3GUEsExceeded

Alarm	Attributes	Applicable major release
Name: Idle3GUEsExceeded (5046) Type: communicationsAlarm Package: Itemme.Idle3GUEsExceeded Raised on class: Itemme.MmeInstance	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ThresholdExceeded	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the number of Idle 3G UEs exceeds the threshold that has been set by the operator.		
Raising condition: (('3G Idle UEs Threshold' NOT EQUAL '0L') AND ('3G Idle UEs' > '3G Idle UEs Threshold'))		
Remedial action: Informational - no corrective action required.		

Table 24-28 Idle4GUEsExceeded

Alarm	Attributes	Applicable major release
Name: Idle4GUEsExceeded (5047) Type: communicationsAlarm Package: Itemme.Idle4GUEsExceeded Raised on class: Itemme.MmeInstance	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ThresholdExceeded	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the number of 4G Idle UEs exceeds the threshold that has been set by the operator.		
Raising condition: (('4G Idle UEs Threshold' NOT EQUAL '0L') AND ('4G Idle UEs' > '4G Idle UEs Threshold'))		
Remedial action: Informational - no corrective action required.		

Table 24-29 LicensedLimitExceeded

Alarm	Attributes	Applicable major release
Name: LicensedLimitExceeded (127) Type: licensingAlarm Package: security.LicensedLimitExceeded Raised on class: security.SamLicensePoints	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: licensedLimitExceeded	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 24-30 LinkDown (equipment)

Alarm	Attributes	Applicable major release
Name: LinkDown (12) Type: communicationsAlarm Package: equipment.LinkDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: portLinkProblem	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 24-31 maintenanceStateAlarm

Alarm	Attributes	Applicable major release
Name: maintenanceStateAlarm (4812) Type: operationalViolation Package: ltemme.maintenanceStateAlarm Raised on class: ltemme.MmeInstance	Severity: info Specific problem: Not Applicable Implicitly cleared: true Default probable cause: WmmMaintenanceState	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: This alarm is raised when the 9471 WMM is put into maintenance state as part of a software upgrade. While the 9471 WMM is in maintenance mode, 5620 SAM will not process any notifications other than alarms and PM file notifications. In addition, 5620 SAM will not trigger full node resyncs when it receives a Cold Start trap, when it detects that the 9471 WMM has rebooted, or when it detects that the software version of the 9471 WMM has changed. Once the 9471 WMM goes out of maintenance state, 5620 SAM will trigger a full node resync.		
Raising condition: ('Maintenance State' EQUAL 'True')		
Clearing condition: ('Maintenance State' EQUAL 'False')		
Remedial action: Informational - no corrective action required.		

Table 24-32 netconfEventReplayFailure

Alarm	Attributes	Applicable major release
Name: netconfEventReplayFailure (5389) Type: communicationsAlarm Package: ltemme.netconfEventReplayFailure Raised on class: ltemme.MmeInstance	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: MmeInternalProcessingError	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: Replay of the NETCONF notification event buffer has failed and 5620 SAM is no longer attempting to replay old events. Any Performance Measurement Statistics files that 5620 SAM was trying to replay must be manually retrieved from the 9471 WMM. The additionalText field of the alarm displays the timestamp of the last successful NETCONF notification that 5620 SAM has processed after server startup. If the additionalText field is empty, we have not processed any NETCONF notifications since the 5620 SAM started and any missing files need to be manually retrieved from the 9471 WMM. New NETCONF event notifications are still processed as normal.		
Remedial action: Replay of the NETCONF notification event buffer has failed and 5620 SAM is no longer attempting to replay old events. Any Performance Measurement Statistics files that 5620 SAM was trying to replay must be manually retrieved from the 9471 WMM. The additionalText field of the alarm displays the timestamp of the last successful NETCONF notification that 5620 SAM has processed after server startup. If the additionalText field is empty, we have not processed any NETCONF notifications since the 5620 SAM started and any missing files need to be manually retrieved from the 9471 WMM. New NETCONF event notifications are still processed as normal.		

Table 24-33 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major release
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm Package: security.NewSsh2ServerKeyDetected Raised on class: security.KnownHostKey	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 24-34 NodeRebooted

Alarm	Attributes	Applicable major release
Name: NodeRebooted (32) Type: equipmentAlarm Package: netw.NodeRebooted Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: nodeReboot	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the 5620 SAM detects an NE reboot based on the latest NE sysUpTime value.		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 24-35 NodeSuspended

Alarm	Attributes	Applicable major release
Name: NodeSuspended (5123) Type: communicationsAlarm Package: netw.NodeSuspended Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NodeSuspend	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element.The alarm will be cleared when the network element is managed back.		

Table 24-36 PartialResyncProblem

Alarm	Attributes	Applicable major release
Name: PartialResyncProblem (4401) Type: communicationsAlarm Package: netw.PartialResyncProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: partialResyncProblem	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when a partial resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 24-37 partialSupportAlarm

Alarm	Attributes	Applicable major release
Name: partialSupportAlarm (9566) Type: operationalViolation Package: ltemme.partialSupportAlarm Raised on class: ltemme.MmeInstance	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: WmmPartialSupport	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: This alarm is raised when the 9471 WMM is running a version of software only partially supported by 5620 SAM. With such a version of 9471 WMM, 5620 SAM only supports alarms and their associated objects as well as PM file collection. No configuration or related operations are supported from 5620 SAM. It will not be possible to upgrade 5620 SAM unless all partially supported 9471 WMM nodes are unmanaged.		
Raising condition: ('Partial Support' EQUAL 'true')		
Remedial action: Informational - no corrective action required.		

Table 24-38 PartialVPRNEncryption

Alarm	Attributes	Applicable major release
Name: PartialVPRNEncryption (8992) Type: configurationAlarm Package: nge.PartialVPRNEncryption Raised on class: nge.VprnEncryptService	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConfigMismatch	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when one or more sites are not encryption enabled in a VPRN service.		
Raising condition: (('VPRN Service Encryption Status' EQUAL 'Partial'))		
Clearing condition: (('VPRN Service Encryption Status' NOT EQUAL 'Partial'))		
Remedial action: This site is newly added to the VPRN service, Perform the encrypt operation on the KeyGroup to clear the alarm.		

Table 24-39 PollerProblem

Alarm	Attributes	Applicable major release
Name: PollerProblem (31) Type: communicationsAlarm Package: netw.PollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resyncFailed	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 24-40 RcaAuditAfterNEUpgradeStatus

Alarm	Attributes	Applicable major release
Name: RcaAuditAfterNEUpgradeStatus (5124) Type: configurationAlarm Package: netw.RcaAuditAfterNEUpgradeStatus Raised on class: netw.NetworkElement	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: rcaAuditStatusAfterNEUpgrade	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the 5620 SAM detects an NE software version upgrade and RCA audit performed.		
Remedial action: Information - Check audit results for details		

Table 24-41 ReachabilityProblem

Alarm	Attributes	Applicable major release
Name: ReachabilityProblem (243) Type: communicationsAlarm Package: netw.ReachabilityProblem Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReachabilityTestFailed	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when a mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. The polling interval depends on the NE type and is configurable in nms-server.xml. By default, the 5620 SAM polls a managed NE every four minutes. If a poll fails, the alarm is raised. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 24-42 Registered4GUEsExceeded

Alarm	Attributes	Applicable major release
Name: Registered4GUEsExceeded (5048) Type: communicationsAlarm Package: Itemme.Registered4GUEsExceeded Raised on class: Itemme.MmeInstance	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ThresholdExceeded	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the number of 4G Registered UEs exceeds the threshold that has been set by the operator.		
Raising condition: (('4G Registered UEs Threshold' NOT EQUAL '0L') AND ('4G Registered UEs' > '4G Registered UEs Threshold'))		
Remedial action: Informational - no corrective action required.		

Table 24-43 RegisteredIdle4GUEsExceeded

Alarm	Attributes	Applicable major release
Name: RegisteredIdle4GUEsExceeded (5049) Type: communicationsAlarm Package: Itemme.RegisteredIdle4GUEsExceeded Raised on class: Itemme.MmeInstance	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ThresholdExceeded	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the number of 4G Registered Idle UEs exceeds the threshold that has been set by the operator.		
Raising condition: (('4G Registered Idle UEs Threshold' NOT EQUAL '0L') AND ('4G Registered Idle UEs' > '4G Registered Idle UEs Threshold'))		
Remedial action: Informational - no corrective action required.		

Table 24-44 ScheduledPollerProblem

Alarm	Attributes	Applicable major release
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm Package: netw.ScheduledPollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: scheduledResyncFailed	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 24-45 StatsRetrieveFailed

Alarm	Attributes	Applicable major release
Name: StatsRetrieveFailed (244) Type: configurationAlarm Package: sw.StatsRetrieveFailed Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: fileTransferFailure	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 24-46 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major release
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed Package: netw.SubscriberSystemNextHopUsageHigh Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

Table 24-47 SubSysChassMemoryUsageHi

Alarm	Attributes	Applicable major release
Name: SubSysChassMemoryUsageHi (5656) Type: thresholdCrossed Package: equipment.SubSysChassMemoryUsageHi Raised on class: equipment.Shelf	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: This alarm is raised when the memory usage by subscriber management on this system or chassis reaches its high watermark ('true').		
Raising condition: ('Memory Usage High' EQUAL 'True')		
Clearing condition: (('Memory Usage High' EQUAL 'False') OR ('Memory Usage High' EQUAL 'unspecified'))		
Remedial action: The memory usage by subscriber management on this system has reached its high watermark. Please check your memory usage.		

Table 24-48 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major release
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm Package: netw.TrapDestinationMisconfigured Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trapDestinationMisconfigured Applicable probable causes: • trapDestinationMisconfigured • duplicateTrapLogId	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 24-49 UnidentifiedNode

Alarm	Attributes	Applicable major release
Name: UnidentifiedNode (1922) Type: communicationsAlarm Package: netw.UnidentifiedNode Raised on class: netw.DiscoveredNode	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unidentifiedNode	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 24-50 UnmanageFailed

Alarm	Attributes	Applicable major release
Name: UnmanageFailed (300) Type: discoveryControlAlarm Package: netw.UnmanageFailed Raised on class: netw.NodeDiscoveryControl	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unableToDeleteNode	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'Unmanage Failed')		
Clearing condition: ('Site State' NOT EQUAL 'Unmanage Failed')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 24-51 UplinkDown

Alarm	Attributes	Applicable major release
Name: UplinkDown (11062) Type: virtualSwitchAlarm Package: dctr.UplinkDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsAllDown	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when all connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '2'))		
Clearing condition: (('uplinkState' NOT EQUAL '2'))		
Remedial action: This alarm is raised when all connections associated to the uplink lost connectivity.		

Table 24-52 UplinkPartiallyDown

Alarm	Attributes	Applicable major release
Name: UplinkPartiallyDown (11063) Type: virtualSwitchAlarm Package: dctr.UplinkPartiallyDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsDown	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when some connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '3'))		
Clearing condition: (('uplinkState' NOT EQUAL '3'))		
Remedial action: This alarm is raised when a connection of the uplink lost connectivity but at least one connection remains connected.		

Table 24-53 VNFCAutoHealFailed

Alarm	Attributes	Applicable major release
Name: VNFCAutoHealFailed (9632) Type: configurationAlarm Package: nfv.VNFCAutoHealFailed Raised on class: nfv.VNFComponent	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: vmRebootFailed	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the Auto Heal operation on a given VNF Component fails		
Remedial action: SAM was unable to auto heal the target host residing on the VNF Component. Please contact your Nokia support representative for further assistance.		

Table 24-54 WmmATCA_AggregatePowerSensor

Alarm	Attributes	Applicable major release
Name: WmmATCA_AggregatePowerSensor (4171) Type: mmeAlarm Package: ltemme.WmmATCA_AggregatePowerSensor Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The aggregate power sensor alarm provides a summary status of all power related conditions adversely affecting a resource. When this alarm occurs, in most cases, there will be another power related alarm that provides more details about the exact resource power sensor that is reporting the condition. From the MI GUI, alarms on a resource may be retrieved by selecting the managed object for that resource and then selecting the right-click operation to display related alarms.		
Remedial action: Investigate all other temperature and power related alarms on the resource and follow those alarms fault recovery procedures. Once all of these related alarms are cleared, this alarm will clear.		

Table 24-55 WmmATCA_AggregateTemperatureSensor

Alarm	Attributes	Applicable major release
Name: WmmATCA_AggregateTemperatureSensor (4172) Type: mmeAlarm Package: ltemme.WmmATCA_AggregateTemperatureSensor Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The aggregate temperatures sensor alarm provides a summary status of all temperature related conditions adversely affecting a resource. When this alarm occurs, in most cases, there will be another temperature related alarm that provides more details about the exact resource temperature sensor that is reporting the condition. From the MI GUI, alarms on a resource may be retrieved by selecting the managed object for that resource and then selecting the right-click operation to display related alarms.		
Remedial action: Investigate all other temperature and power related alarms on the resource and follow those alarms fault recovery procedures. Once all of these related alarms are cleared, this alarm will clear.		

Table 24-56 WmmATCA_BoardPower

Alarm	Attributes	Applicable major release
Name: WmmATCA_BoardPower (4173) Type: mmeAlarm Package: ltemme.WmmATCA_BoardPower Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: A board is either in the inactive or not present state. This means that the board has been powered down.		
Remedial action: Verify that the blade is powered on. This can be performed remotely using CLI on the shelf manager or locally by observing specific LEDs and their status\nVerify that the blade is seated correctly in the chassis. Try to re-seat the blade in the chassis.\nReplace the blade if necessary, refer to FRU procedure. Contact your Nokia support representative.		

Table 24-57 WmmATCA_CPLDState

Alarm	Attributes	Applicable major release
Name: WmmATCA_CPLDState (4174) Type: mmeAlarm Package: ltemme.WmmATCA_CPLDState Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates a change in the redundancy status of the shelf management cards. The specific problem of the alarm contains the specific redundancy state of the shelf management card.		
Remedial action: Verify that the shelf management card is inserted properly.\nIf the shelf management card is inserted, reseat the shelf management card\nIf reseating the shelf management card does not correct the problem, replace the shelf management card		

Table 24-58 WmmATCA_DS75Temperature

Alarm	Attributes	Applicable major release
Name: WmmATCA_DS75Temperature (4175) Type: mmeAlarm Package: ltemme.WmmATCA_DS75Temperature Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0

Table 24-58 WmmATCA_DS75Temperature (continued)

Alarm	Attributes	Applicable major release
Description: This alarm indicates that the AMC (Advanced Mezzanine Card) temperature monitoring sensor has detected a threshold being crossed.		
Remedial action: There is a condition in which this alarm, with minor severity, is being erroneously reported by the hardware, so ignore any minor alarms pertaining to this sensor.\nCheck if there are other alarms that could explain the rise in temperature, especially fan alarms. If there are, troubleshoot these alarms first.\nCheck that the room air conditioning system is operating properly.\nCheck that the fan units of the suspect chassis are operating correctly. If they are not, replace the fan units according to the replacement procedure.\nIf fans are operating properly and if there is no other alarm, replace faulty FRU according to the appropriate replacement procedure.\nIf the problem persists, contact your Nokia support representative.		

Table 24-59 WmmATCA_ExhaustTemp

Alarm	Attributes	Applicable major release
Name: WmmATCA_ExhaustTemp (4176) Type: mmeAlarm Package: Itemme.WmmATCA_ExhaustTemp Raised on class: Itemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates that the ASS7BF AMC (Advanced Mezzanine Card) temperature monitoring sensor has detected a threshold being crossed.		
Remedial action: There is a condition in which this alarm, with minor severity, is being erroneously reported by the hardware, so ignore any minor alarms pertaining to this sensor.\nCheck if there are other alarms that could explain the rise in temperature, especially fan alarms. If there are, troubleshoot these alarms first.\nCheck that the room air conditioning system is operating properly.\nCheck that the fan units of the suspect chassis are operating correctly. If they are not, replace the fan units according to the replacement procedure.\nIf fans are operating properly and if there is no other alarm, replace faulty FRU according to the appropriate replacement procedure.\nIf the problem persists, contact your Nokia support representative.		

Table 24-60 WmmATCA_FanSpeed

Alarm	Attributes	Applicable major release
Name: WmmATCA_FanSpeed (4178) Type: mmeAlarm Package: Itemme.WmmATCA_FanSpeed Raised on class: Itemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates that a fan's speed has crossed a threshold.		

Table 24-60 WmmATCA_FanSpeed (continued)

Alarm	Attributes	Applicable major release
Remedial action: Replace the faulty fan unit according to the appropriate replacement procedure.		

Table 24-61 WmmATCA_FanTrayPresence

Alarm	Attributes	Applicable major release
Name: WmmATCA_FanTrayPresence (4179) Type: mmeAlarm Package: ltemme.WmmATCA_FanTrayPresence Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates that one of the fan trays is not present in the chassis. The fan tray in question will be identified in the additonalText field of the alarm.		
Remedial action: Insert the fan tray.		

Table 24-62 WmmATCA_FanTraysFRU

Alarm	Attributes	Applicable major release
Name: WmmATCA_FanTraysFRU (4180) Type: mmeAlarm Package: ltemme.WmmATCA_FanTraysFRU Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates a problem with one or more of the fan trays.		
Remedial action: Verify that all Fan Trays are properly seated in the chassis.\nVerify that the type of Fan Trays are compatible. Contact your Nokia support representative if incompatible.\nVerify that the cooling parameters are set correctly. Contact your Nokia support representative to adjust parameters.		

Table 24-63 WmmATCA_FilterPresence

Alarm	Attributes	Applicable major release
Name: WmmATCA_FilterPresence (4181) Type: mmeAlarm Package: ltemme.WmmATCA_FilterPresence Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: A filter is not present in the chassis. The additional text field of the alarm will indicate which filter is not present.		
Remedial action: Insert the filter that is not present.		

Table 24-64 WmmATCA_FPGATemp

Alarm	Attributes	Applicable major release
Name: WmmATCA_FPGATemp (4177) Type: mmeAlarm Package: ltemme.WmmATCA_FPGATemp Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates that the DCI AMC (Advanced Mezzanine Card) FPGA Temp monitoring sensor has detected a threshold being crossed. This indicates there is a problem with the die temperature of the DCI FPGA.		
Remedial action: Check if there are other alarms that could explain the rise in temperature, especially fan alarms. If there are, troubleshoot these alarms first.\nCheck that the room air conditioning system is operating properly.\nCheck that the fan units of the suspect chassis are operating correctly. If they are not, replace the fan units according to the replacement procedure.\nIf fans are operating properly and if there is no other alarm, replace faulty FRU according to the appropriate replacement procedure.\nIf the problem persists, contact your Nokia support representative.		

Table 24-65 WmmATCA_I2CLocalBus

Alarm	Attributes	Applicable major release
Name: WmmATCA_I2CLocalBus (4182) Type: mmeAlarm Package: Itemme.WmmATCA_I2CLocalBus Raised on class: Itemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm reports an abnormal condition in the hardware state of the I2C Local Bus.		
Remedial action: If the condition does not clear, contact your Nokia support representative		

Table 24-66 WmmATCA_InletTemp

Alarm	Attributes	Applicable major release
Name: WmmATCA_InletTemp (4184) Type: mmeAlarm Package: Itemme.WmmATCA_InletTemp Raised on class: Itemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates that the AMC (Advanced Mezzanine Card) Inlet Temp monitoring sensor at the upper edge of the AMC has detected a threshold being crossed.		
Remedial action: Check if there are other alarms that could explain the rise in temperature, especially fan alarms. If there are, troubleshoot these alarms first.\nCheck that the room air conditioning system is operating properly.\nCheck that the fan units of the suspect chassis are operating correctly. If they are not, replace the fan units according to the replacement procedure.\nIf fans are operating properly and if there is no other alarm, replace faulty FRU according to the appropriate replacement procedure.\nIf the problem persists, contact your Nokia support representative.		

Table 24-67 WmmATCA_IPMBLink

Alarm	Attributes	Applicable major release
Name: WmmATCA_IPMBLink (4183) Type: mmeAlarm Package: Itemme.WmmATCA_IPMBLink Raised on class: Itemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates a problem with the IPMB(Intelligent Platform Management Bus) Link between the shelf manager and the board. This alarm may be reported by the shelf manager for the portion of the link that it monitors, or by the board for the portion of the link it monitors.		
Remedial action: If the Link has been manually disabled, try to enable the link from the active shelf manager card with the command, 'clia setipmbstate <IPMB address> [AB] 1'.\nIf the board is reporting a link failure, replace the board.\nIf the shelf is reporting a link failure, replace the shelf management card.\nIf replacing the board and shelf management card do not solve the problem, replace the shelf. Contact your Nokia support representative.		

Table 24-68 WmmATCA_LM75Temperature

Alarm	Attributes	Applicable major release
Name: WmmATCA_LM75Temperature (4185) Type: mmeAlarm Package: Itemme.WmmATCA_LM75Temperature Raised on class: Itemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates a temperature problem with a board.		
Remedial action: There is a condition in which this alarm, with minor severity, is being erroneously reported by the hardware, so ignore any minor alarms pertaining to this sensor.\nCheck if there are other alarms that could explain the rise in temperature, especially fan alarms. If there are, troubleshoot these alarms first.\nCheck that the room air conditioning system is operating properly.\nCheck that the fan units of the suspect chassis are operating correctly. If they are not, replace the fan units according to the replacement procedure.\nIf fans are operating properly and if there is no other alarm, replace faulty FRU according to the appropriate replacement procedure.\nIf the problem persists, contact your Nokia support representative.		

Table 24-69 WmmATCA_LM83Temperature

Alarm	Attributes	Applicable major release
Name: WmmATCA_LM83Temperature (4186) Type: mmeAlarm Package: ltemme.WmmATCA_LM83Temperature Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates a temperature problem with a board. There are 5 LM83 sensors(LM83_1 Local,LM83_1 DBG,LM83_1 BASE,LM83_1 LSI,LM83_2 Local) that monitor the temperature of the board.		
Remedial action: There is a condition in which this alarm, with minor severity, is being erroneously reported by the hardware, so ignore any minor alarms pertaining to this sensor.\nCheck if there are other alarms that could explain the rise in temperature, especially fan alarms. If there are, troubleshoot these alarms first.\nCheck that the room air conditioning system is operating properly.\nCheck that the fan units of the suspect chassis are operating correctly. If they are not, replace the fan units according to the replacement procedure.\nIf fans are operating properly and if there is no other alarm, replace faulty FRU according to the appropriate replacement procedure.\nIf the problem persists, contact your Nokia support representative.		

Table 24-70 WmmATCA_LMeUC75Temperature

Alarm	Attributes	Applicable major release
Name: WmmATCA_LMeUC75Temperature (4188) Type: mmeAlarm Package: ltemme.WmmATCA_LMeUC75Temperature Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates that the ASS7NB AMC (Advanced Mezzanine Card) temperature monitoring sensor has detected a threshold being crossed.		
Remedial action: There is a condition in which this alarm, with minor severity, is being erroneously reported by the hardware, so ignore any minor alarms pertaining to this sensor.\nCheck if there are other alarms that could explain the rise in temperature, especially fan alarms. If there are, troubleshoot these alarms first.\nCheck that the room air conditioning system is operating properly.\nCheck that the fan units of the suspect chassis are operating correctly. If they are not, replace the fan units according to the replacement procedure.\nIf fans are operating properly and if there is no other alarm, replace faulty FRU according to the appropriate replacement procedure.\nIf the problem persists, contact your Nokia support representative.		

Table 24-71 WmmATCA_LMeUC75TopRig

Alarm	Attributes	Applicable major release
Name: WmmATCA_LMeUC75TopRig (4404) Type: mmeAlarm Package: ltemme.WmmATCA_LMeUC75TopRig Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates that the ASS7BN AMC (Advanced Mezzanine Card) temperature monitoring sensor has detected a threshold being crossed.		
Remedial action: Check if there are other alarms that could explain the rise in temperature, especially fan alarms. If there are, troubleshoot these alarms first.\nCheck that the room air conditioning system is operating properly.\nCheck that the fan units of the suspect chassis are operating correctly. If they are not, replace the fan units according to the replacement procedure.\nIf fans are operating properly and if there is no other alarm, replace faulty FRU according to the appropriate replacement procedure.\nIf the problem persists, contact your Nokia support representative.		

Table 24-72 WmmATCA_LocalTemperature

Alarm	Attributes	Applicable major release
Name: WmmATCA_LocalTemperature (4189) Type: mmeAlarm Package: ltemme.WmmATCA_LocalTemperature Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates a temperature problem with a board.		
Remedial action: Check if there are other alarms that could explain the rise in temperature, especially fan alarms. If there are, troubleshoot these alarms first.\nCheck that the room air conditioning system is operating properly.\nCheck that the fan units of the suspect chassis are operating correctly. If they are not, replace the fan units according to the replacement procedure.\nIf fans are operating properly and if there is no other alarm, replace faulty FRU according to the appropriate replacement procedure.\nIf the problem persists, contact your Nokia support representative.		

Table 24-73 WmmATCA_m48vSensor

Alarm	Attributes	Applicable major release
Name: WmmATCA_m48vSensor (4198) Type: mmeAlarm Package: ltemme.WmmATCA_m48vSensor Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates a problem with the -48V shelf power supply A and/or B feeds.		
Remedial action: Check the top rack power distribution unit's LED and circuit breakers.\nReplace the faulty power supply according to the appropriate replacement procedures.\nIf the problem persists, contact your Nokia support representative.		

Table 24-74 WmmATCA_MMCTemp

Alarm	Attributes	Applicable major release
Name: WmmATCA_MMCTemp (4190) Type: mmeAlarm Package: ltemme.WmmATCA_MMCTemp Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates that the DCI AMC (Advanced Mezzanine Card) MMC Temp monitoring sensor has detected a threshold being crossed. This indicates there is a problem with the die temperature of the MMC FPGA.		
Remedial action: Check if there are other alarms that could explain the rise in temperature, especially fan alarms. If there are, troubleshoot these alarms first.\nCheck that the room air conditioning system is operating properly.\nCheck that the fan units of the suspect chassis are operating correctly. If they are not, replace the fan units according to the replacement procedure.\nIf fans are operating properly and if there is no other alarm, replace faulty FRU according to the appropriate replacement procedure.\nIf the problem persists, contact your Nokia support representative.		

Table 24-75 WmmATCA_OcteonTemperature

Alarm	Attributes	Applicable major release
Name: WmmATCA_OcteonTemperature (4191) Type: mmeAlarm Package: ltemme.WmmATCA_OcteonTemperature Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates a temperature problem with the Octeon module.		
Remedial action: Check if there are other alarms that could explain the rise in temperature, especially fan alarms. If there are, troubleshoot these alarms first.\nCheck that the room air conditioning system is operating properly.\nCheck that the fan units of the suspect chassis are operating correctly. If they are not, replace the fan units according to the replacement procedure.\nIf fans are operating properly and if there is no other alarm, replace faulty FRU according to the appropriate replacement procedure.\nIf the problem persists, contact your Nokia support representative.		

Table 24-76 WmmATCA_OutletTemp

Alarm	Attributes	Applicable major release
Name: WmmATCA_OutletTemp (4192) Type: mmeAlarm Package: ltemme.WmmATCA_OutletTemp Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates that the AMC (Advanced Mezzanine Card) Outlet Temp monitoring sensor at the lower edge of the AMC has detected a threshold being crossed.		
Remedial action: Check if there are other alarms that could explain the rise in temperature, especially fan alarms. If there are, troubleshoot these alarms first.\nCheck that the room air conditioning system is operating properly.\nCheck that the fan units of the suspect chassis are operating correctly. If they are not, replace the fan units according to the replacement procedure.\nIf fans are operating properly and if there is no other alarm, replace faulty FRU according to the appropriate replacement procedure.\nIf the problem persists, contact your Nokia support representative.		

Table 24-77 WmmATCA_PayloadCurrent

Alarm	Attributes	Applicable major release
Name: WmmATCA_PayloadCurrent (4193) Type: mmeAlarm Package: ltemme.WmmATCA_PayloadCurrent Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates a current problem on a board, resulting from the Payload Amps sensor threshold being crossed.		
Remedial action: Check if other cards in the chassis have a similar alarm. If this is the case, there may be a problem with the power supply unit(s).\nReplace the faulty card according to the appropriate replacement procedure.\nReplace the interface unit located behind the faulty card according to the appropriate replacement procedure.\nIf the problem persists, contact your Nokia support representative.		

Table 24-78 WmmATCA_PayloadVoltage

Alarm	Attributes	Applicable major release
Name: WmmATCA_PayloadVoltage (4194) Type: mmeAlarm Package: ltemme.WmmATCA_PayloadVoltage Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates a voltage problem with a board.		
Remedial action: Check if all of the cards in the chassis have the same alarm. If this is the case, replace the power supply unit(s) according to the appropriate replacement procedure.\nReplace the faulty card according to the appropriate replacement procedure.\nReplace the interface unit located behind the faulty card according to the appropriate replacement procedure.\nIf the problem persists, contact your Nokia support representative.		

Table 24-79 WmmATCA_PowerOk

Alarm	Attributes	Applicable major release
Name: WmmATCA_PowerOk (4195) Type: mmeAlarm Package: ltemme.WmmATCA_PowerOk Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates state of power ok signal from ISPPAC.		
Remedial action: Verify that the blade is powered on.\nVerify that the blade is seated correctly in the chassis. Try to re-seat the blade in the chassis.\nReplace the blade if necessary, refer to FRU procedure. Contact your Nokia support representative.		

Table 24-80 WmmATCA_ShelfFRUs

Alarm	Attributes	Applicable major release
Name: WmmATCA_ShelfFRUs (4196) Type: mmeAlarm Package: ltemme.WmmATCA_ShelfFRUs Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates a problem with the shelf FRU information stored in the EEPROMSs (located on the NFATCAV2 back panel and accessed via the I2C local bus). The EEPROMS contents are validated when a shelf manager is initialized as the active shelf manager, and periodically by the active shelf manager.		
Remedial action: A firmware upgrade may be needed, contact your Nokia support representative.		

Table 24-81 WmmATCA_UnexpectedDeact

Alarm	Attributes	Applicable major release
Name: WmmATCA_UnexpectedDeact (4197) Type: mmeAlarm Package: ltemme.WmmATCA_UnexpectedDeact Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0

Table 24-81 WmmATCA_UnexpectedDeact (continued)

Alarm	Attributes	Applicable major release
Description: This sensor reports unexpected deactivation (transition to INACTIVE state) origin. It is asserted		
Remedial action: Look at sensor alarms to see why the card was deactivated and resolve underlying problems.		

Table 24-82 WmmLSS_cardConnectionLost

Alarm	Attributes	Applicable major release
Name: WmmLSS_cardConnectionLost (4199) Type: mmeAlarm Package: Itemme.WmmLSS_cardConnectionLost Raised on class: Itemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: REM detected a problem with its connectivity to a service member under its control, or a service member has missed a heartbeat to REM.		
Remedial action: Verify the status on the service on the MI GUI. It should be 'Out of Service'. If it is active, or standby hot, with its mate being active, or manually out-of-service (unlocked/disabled/idle) then the alarm condition is not valid.\nIf communication to the service does not come back within several minutes (e.g. the cardConnectionLost alarm does not clear), it may be necessary to connect to the card's console-port to get the status of the service. Consult card specific documentation about the console commands to obtain the card service state.\nIf you are not successful in connecting to the console, this could be due to either a networking problem, or a fault in the card. If the card is inaccessible via console, it can be recovered via the reset button, or by power cycling. Continued trouble may mean the card is having some hardware difficulty; please contact your Nokia support representative to determine the next step(s).\nTry to ping the internal fixed service ip address of the service member from the host which is running the active CNFG service. If pinging the service member from the CNFG host succeeds, then go to Step 4; else go to Step 5.\nDetermine if REM has a connection to the service member via the use of the netstat command on the host which has the active CNFG service The following command will give a list of IP addresses that REM has connected to via well-known port 20000:\nnetstat -a | grep 20000\nLook for an 'Established' connection to the service's IP address in the output of the above command. If the service's IP address is not found in the output and this is the first time you have visited this step, then go to Step 6. If the service's IP address is not found in the output and this is the second time you have visited this step, then go to Step 7.\nCheck the IP connections from the host that has the active CNFG service member to the switches and the routers. Check the connection to the card. If connection problems are found, they must be fixed. One can also verify that the appropriate service IP addresses have been plumbed and the appropriate service image has been downloaded to the card.\nTry switching the CNFG service to its currently standby hot member via MI GUI.\nStop and start the CNFG service via the stopCNFG and startCNFG commands, respectively. This will stop the REM process and restart it, among others within the CNFG service. Once the CNFG service is active, the virtual cluster can be switched back. Note that error recovery and provisioning ability will be affected if the CNFG service is not operational.\nRestart/reload the service. This may be done via the MI GUI.		

Table 24-83 WmmLSS_cardError

Alarm	Attributes	Applicable major release
Name: WmmLSS_cardError (4200) Type: mmeAlarm Package: ltemme.WmmLSS_cardError Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates that a hardware diagnostic failure has been detected. Depending on the criticality of the checks, alarms with various severities are generated.		
Remedial action: For the Critical Alarm, the card should be taken OOS and replaced.\nFor the Major Alarm, the card should be taken OOS and rebooted to see if the alarm clears. If it does not clear or there are other reports from the card (such as Asserts) reporting problems, leave the card OOS and contact your Nokia support representative.\nFor the Minor Alarm, contact your Nokia support representative for the correction procedure.		

Table 24-84 WmmLSS_cdrFileStorageSpaceThreshold

Alarm	Attributes	Applicable major release
Name: WmmLSS_cdrFileStorageSpaceThreshold (5388) Type: mmeAlarm Package: ltemme.WmmLSS_ cdrFileStorageSpaceThreshold Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: CDRs file storage space threshold reached		
Remedial action: Continue to the next action only if the system does not clear the alarm:\ntest the accessibility to the Charging Gateway (ping command);\ntrace the route to the Charging Gateway (traceroute command).\nIf the problem persists, contact your Nokia support representative.		

Table 24-85 WmmLSS_cdrStorageSpaceThreshold

Alarm	Attributes	Applicable major release
Name: WmmLSS_cdrStorageSpaceThreshold (4405) Type: mmeAlarm Package: ltemme.WmmLSS_ cdrStorageSpaceThreshold Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: CDRs storage space threshold reached		
Remedial action: Continue to the next action only if the system does not clear the alarm:\ntest the accessibility to the Charging Gateway (ping command);\ntrace the route to the Charging Gateway (traceroute command).\nIf the problem persists, contact your Nokia support representative.		

Table 24-86 WmmLSS_cgfNotResponding

Alarm	Attributes	Applicable major release
Name: WmmLSS_cgfNotResponding (4406) Type: mmeAlarm Package: ltemme.WmmLSS_cgfNotResponding Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: SGSN/CGF interface: CGF not responding		
Remedial action: Continue to the next action only if the system does not clear the alarm:\ntest the accessibility to the Charging Gateway (ping command);\ntrace the route to the Charging Gateway (traceroute command);\nIf the problem persists, contact your Nokia support representative.		

Table 24-87 WmmLSS_cgfServiceNotSupported

Alarm	Attributes	Applicable major release
Name: WmmLSS_cgfServiceNotSupported (4407) Type: mmeAlarm Package: ltemme.WmmLSS_cgfServiceNotSupported Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0

Table 24-87 WmmLSS_cgfServiceNotSupported (continued)

Alarm	Attributes	Applicable major release
Description: The Charging Gateway is not able to process the CDRs transmitted by the SGSN		
Remedial action: Continue to the next action only if the system does not clear the alarm:\n If the problem persists, contact your Nokia support representative.		

Table 24-88 WmmLSS_cgfSystemFailure

Alarm	Attributes	Applicable major release
Name: WmmLSS_cgfSystemFailure (4408) Type: mmeAlarm Package: ltemme.WmmLSS_cgfSystemFailure Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: SGSN/CGF interface: 'system failure' response		
Remedial action: Continue to the next action only if the system does not clear the alarm:\nIf the problem persists, contact your Nokia support representative.		

Table 24-89 WmmLSS_cgfVersionNotSupported

Alarm	Attributes	Applicable major release
Name: WmmLSS_cgfVersionNotSupported (4409) Type: mmeAlarm Package: ltemme.WmmLSS_cgfVersionNotSupported Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The version of GTP' supported by the SGSN is not supported by the Charging Gateway.		
Remedial action: Continue to the next action only if the system does not clear the alarm:\ncheck GTP' version at Charging Gateway.\nIf the problem persists, contact your Nokia support representative.		

Table 24-90 WmmLSS_cmasFailure

Alarm	Attributes	Applicable major release
Name: WmmLSS_cmasFailure (4800) Type: mmeAlarm Package: ltemme.WmmLSS_cmasFailure Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates that there is software failure in s1mme or sbc modules, related to CMAS.		
Remedial action: Contact your Nokia support representative.		

Table 24-91 WmmLSS_cmasReceiveFailure

Alarm	Attributes	Applicable major release
Name: WmmLSS_cmasReceiveFailure (4801) Type: mmeAlarm Package: ltemme.WmmLSS_cmasReceiveFailure Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates that MME failed to receive an acknowledgement to a CMAS message.		
Remedial action: Verify that the S1mme links are up.\nAlarm can only be cleared manually by running 'alarm_cli --clear alarmName="LSS_cmasReceiveFailure' from the active MI.\nIf condition persists, contact your Nokia support representative."		

Table 24-92 WmmLSS_cmasSendFailure

Alarm	Attributes	Applicable major release
Name: WmmLSS_cmasSendFailure (4802) Type: mmeAlarm Package: ltemme.WmmLSS_cmasSendFailure Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates that there is a failure in sending a CMAS message over s1mme or sbc interfaces.		

Table 24-92 WmmLSS_cmasSendFailure (continued)

Alarm	Attributes	Applicable major release
Remedial action: Verify that the S1mme and sbc links are up.\nAlarm can only be cleared manually by running 'alarm_cli --clear alarmName="LSS_cmasSendFailure' from the active MI.\nIf condition persists, contact your Nokia support representative."		

Table 24-93 WmmLSS_connectionLostToLDPpeer

Alarm	Attributes	Applicable major release
Name: WmmLSS_connectionLostToLDPpeer (5151) Type: mmeAlarm Package: ltemme.WmmLSS_connectionLostToLDPpeer Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: There is no LDP session with a peer (SDP far-end).		
Remedial action: Check configuration: SDP administrative state, SDP far-end IP address. Check IP connectivity between SAF and LDP peer IP address.\nManually clear the alarm.		

Table 24-94 WmmLSS_cpiAlrmCritical

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiAlrmCritical (4201) Type: mmeAlarm Package: ltemme.WmmLSS_cpiAlrmCritical Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm LSS_cpiAlrmCritical indicates the value of the VS.alrmCritical measurement monitored by the Critical Alarms Count CPI exceeded a threshold in the last 15 minute interval.		
Remedial action: Using the Maintenance Interface, examine the set of critical alarms or any other alarms recently raised and address them.\nThis alarm will clear automatically if the rate of critical alarm generation drops below the threshold.		

Table 24-95 WmmLSS_cpiAlrmMajor

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiAlrmMajor (4202) Type: mmeAlarm Package: ltemme.WmmLSS_cpiAlrmMajor Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm LSS_cpiAlrmMajor indicates the value of the VS.alrmMajor measurement monitored by the Major Alarms Count CPI exceeded a threshold in the last 15 minute interval.		
Remedial action: Using the Maintenance Interface, examine the set of major alarms or any other alarms recently raised and address them.\nThis alarm will clear automatically if the rate of major alarm generation drops below the threshold.		

Table 24-96 WmmLSS_cpiAlrmMinor

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiAlrmMinor (4203) Type: mmeAlarm Package: ltemme.WmmLSS_cpiAlrmMinor Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm LSS_cpiAlrmMinor indicates the value of the VS.alrmMinor measurement monitored by the Minor Alarms Count CPI exceeded a threshold in the last 15 minute interval.		
Remedial action: Using the Maintenance Interface, examine the set of minor alarms or any other alarms recently raised and address them.\nThis alarm will clear automatically if the rate of minor alarm generation drops below the threshold.		

Table 24-97 WmmLSS_cpiAlrmWarning

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiAlrmWarning (4204) Type: mmeAlarm Package: ltemme.WmmLSS_cpiAlrmWarning Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0

Table 24-97 WmmLSS_cpiAlrmWarning (continued)

Alarm	Attributes	Applicable major release
Description: The raised alarm LSS_cpiAlrmWarning indicates the value of the VS.alrmWarning measurement monitored by the Warning Alarms Count CPI exceeded a threshold in the last 15 minute interval.		
Remedial action: Using the Maintenance Interface, examine the set of warning alarms or any other alarms recently raised and address them.\nThis alarm will clear automatically if the rate of warning alarm generation drops below the threshold.		

Table 24-98 WmmLSS_cpiAsrtEsc

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiAsrtEsc (4205) Type: mmeAlarm Package: ltemme.WmmLSS_cpiAsrtEsc Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm LSS_cpiAsrtEsc indicates the value of the VS.asrtESC measurement monitored by the Escalating Asserts CPI exceeded a threshold in the last 15 minute interval.		
Remedial action: This alarm will clear automatically if the rate of escalating assert generation drops below the threshold. An automatic escalation would result in a switch over and should also drop the rate of assert generation.\nDetermine if any other alarms have been recently raised on the resource reported and address them.\nExamine the recent Performance (PM) counts on the resource reported; they may suggest more regarding this issue.\nIf a provisioning or configuration change was executed just before the alarm was raised, consider that the change is causing the problem.\nIf a Software Update (SU) or Patch is being soaked, then this could indicate a problem with the software delivered; immediately contact your Nokia support representative.\nIf the PM counts indicates degradation of service and a switch over has not occurred, switch the service to its redundant mate.\nIf the situation persists after a switch-over, be sure that the prior active host of the service was removed from service and restored completely. Attempt another switch over to the original active host for the service.\nIn all cases, contact your Nokia support representative regarding this alarm.		

Table 24-99 WmmLSS_cpiAsrtNonEsc

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiAsrtNonEsc (4206) Type: mmeAlarm Package: ltemme.WmmLSS_cpiAsrtNonEsc Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm LSS_cpiAsrtNonEsc indicates the value of the VS.asrtNonESC measurement monitored by the Non-Escalating Asserts CPI exceeded a threshold in the last 15 minute interval.		

Table 24-99 WmmLSS_cpiAsrtNonEsc (continued)

Alarm	Attributes	Applicable major release
Remedial action: This alarm will clear automatically if the rate of non-escalating assert generation drops below the threshold.\ nDetermine if any other alarms have been recently raised on the resource reported and address them.\nExamine the recent Performance (PM) counts on the resource reported; they may suggest more regarding this issue.\nIf a provisioning or configuration change was executed just before the alarm was raised, consider that the change is causing the problem.\nIf a Software Update (SU) or Patch is being soaked, then this could indicate a problem with the software delivered; immediately contact your Nokia support representative.\nIf the PM counts indicates degradation of service, switch the service to its redundant mate.\nIf the situation persists after a switch-over, be sure that the prior active host of the service was removed from service and restored completely. Attempt another switch over to the original active host for the service.\nIn all cases, contact your Nokia support representative regarding this alarm.		

Table 24-100 WmmLSS_cpiAsrtNonEscCritical

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiAsrtNonEscCritical (4207) Type: mmeAlarm Package: ltemme.WmmLSS_cpiAsrtNonEscCritical Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm LSS_cpiAsrtNonEscCritical indicates the value of the VS.asrtNonESCCritical measurement monitored by the Critical Non-Escalating Asserts CPI exceeded a threshold in the last 15 minute interval.		
Remedial action: This alarm will clear automatically if the rate of non-escalating assert generation drops below the threshold.\ nDetermine if any other alarms have been recently raised on the resource reported and address them.\nExamine the recent Performance (PM) counts on the resource reported; they may suggest more regarding this issue.\nIf a provisioning or configuration change was executed just before the alarm was raised, consider that the change is causing the problem.\nIf a Software Update (SU) or Patch is being soaked, then this could indicate a problem with the software delivered; immediately contact your Nokia support representative.\nIf the PM counts indicates degradation of service, switch the service to its redundant mate.\nIf the situation persists after a switch-over, be sure that the prior active host of the service was removed from service and restored completely. Attempt another switch over to the original active host for the service.\nIn all cases, contact your Nokia support representative regarding this alarm.		

Table 24-101 WmmLSS_cpiAsrtNonEscMajor

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiAsrtNonEscMajor (4208) Type: mmeAlarm Package: ltemme.WmmLSS_cpiAsrtNonEscMajor Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0

Table 24-101 WmmLSS_cpiAsrtNonEscMajor (continued)

Alarm	Attributes	Applicable major release
Description: The raised alarm LSS_cpiAsrtNonEscMajor indicates the value of the VS.asrtNonESCMajor measurement monitored by the Major Non-Escalating Asserts CPI exceeded a threshold in the last 15 minute interval.		
Remedial action: This alarm will clear automatically if the rate of non-escalating assert generation drops below the threshold.\ nDetermine if any other alarms have been recently raised on the resource reported and address them.\nExamine the recent Performance (PM) counts on the resource reported; they may suggest more regarding this issue.\nIf a provisioning or configuration change was executed just before the alarm was raised, consider that the change is causing the problem.\nIf a Software Update (SU) or Patch is being soaked, then this could indicate a problem with the software delivered; immediately contact your Nokia support representative.\nIf the PM counts indicates degradation of service, switch the service to its redundant mate.\nIf the situation persists after a switch-over, be sure that the prior active host of the service was removed from service and restored completely. Attempt another switch over to the original active host for the service.\nIn all cases, contact your Nokia support representative regarding this alarm.		

Table 24-102 WmmLSS_cpiAsrtNonEscMinor

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiAsrtNonEscMinor (4209) Type: mmeAlarm Package: Itemme.WmmLSS_cpiAsrtNonEscMinor Raised on class: Itemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm LSS_cpiAsrtNonEscMinor indicates the value of the VS.asrtNonESCMinor measurement monitored by the Minor Non-Escalating Asserts CPI exceeded a threshold in the last 15 minute interval.		
Remedial action: This alarm will clear automatically if the rate of non-escalating assert generation drops below the threshold.\ nDetermine if any other alarms have been recently raised on the resource reported and address them.\nExamine the recent Performance (PM) counts on the resource reported; they may suggest more regarding this issue.\nIf a provisioning or configuration change was executed just before the alarm was raised, consider that the change is causing the problem.\nIf a Software Update (SU) or Patch is being soaked, then this could indicate a problem with the software delivered; immediately contact your Nokia support representative.\nIf the PM counts indicates degradation of service, switch the service to its redundant mate.\nIf the situation persists after a switch-over, be sure that the prior active host of the service was removed from service and restored completely. Attempt another switch over to the original active host for the service.\nIn all cases, contact your Nokia support representative regarding this alarm.		

Table 24-103 WmmLSS_cpiAudErrCount

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiAudErrCount (4210) Type: mmeAlarm Package: ltemme.WmmLSS_cpiAudErrCount Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm LSS_cpiAudErrCount indicates the value of the VS.audErrCount measurement monitored by the Audit Errors CPI exceeded a threshold in the last 15 minute interval. Audits run at low priority to recover lost or stuck resources. Audits generate error reports describing any problems they find. The VS.audErrCnt measurement reports the number of individual errors found by audits during the interval.		
Remedial action: Although audits take recovery for each error they find, use the Maintenance Interface to examine the set of audit errors reported. If this alarm recurs or is ongoing due to the same set of audits, contact your Nokia support representative. If this alarm is new and coincides with the introduction of a software update, contact your Nokia support representative immediately.\nThis alarm will clear automatically if the rate of audit detected errors drops below the threshold.		

Table 24-104 WmmLSS_cpiAudManAct

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiAudManAct (4211) Type: mmeAlarm Package: ltemme.WmmLSS_cpiAudManAct Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiAudManAct, indicates the value of the VS.audManAct measurement monitored by the Audit Errors Requiring Manual Action CPI exceeded a threshold in the last 15 minute interval. Audits run at low priority to recover lost or stuck resources. Audits generate error reports describing any problems they find.. The VS.audManAct measurement reports the number of individual errors found by audits during the interval that require manual action for recovery.		
Remedial action: Using the Maintenance Interface, examine the set of audit errors reported and address them. Audit error reports requiring manual action should specify the actions needed to perform recovery. If this alarm is new and coincides with the introduction of a software update, contact your Nokia support representative immediately.\nThis alarm will clear automatically if the rate of audit detected errors requiring manual action drops below the threshold. However, this will not happen until the required manual recovery steps have been taken.		

Table 24-105 WmmLSS_cpiAudNewEvent

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiAudNewEvent (4212) Type: mmeAlarm Package: ltemme.WmmLSS_cpiAudNewEvent Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm LSS_cpiAudNewEvent indicates the value of the VS.audNewEvent measurement monitored by the Audit Initiated Events CPI exceeded a threshold in the last 15 minute interval. Audits run at low priority to recover lost or stuck resources. Audits generate error reports describing any problems they find..The VS.audNewEvent measurement reports the number of times during the interval that an audit that ran without being part of an escalated recovery and found at least one error.		
Remedial action: Although audits take recovery for each error they find, use the Maintenance Interface to examine the set of audit errors reported. If this alarm recurs or is ongoing due to the same set of audits, contact your Nokia support representative. If this alarm is new and coincides with the introduction of a software update, contact your Nokia support representative immediately.\nThis alarm will clear automatically if the rate of audit invocations that detect errors drops below the threshold.		

Table 24-106 WmmLSS_cpiDropMGAllocConnReq

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiDropMGAllocConnReq (10264) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiDropMGAllocConnReq Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiDropMGAllocConnReq, indicates the value of the switch health count measurement, monitored when the number of allocated connection requests drops. CPI exceeded a threshold in the last 15 minute interval.		
Remedial action: Check media gateway logs for errors.		

Table 24-107 WmmLSS_cpiExceptionService

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiExceptionService (4213) Type: mmeAlarm Package: ltemme.WmmLSS_cpiExceptionService Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0

Table 24-107 WmmLSS_cpiExceptionService (continued)

Alarm	Attributes	Applicable major release
Description: The raised alarm LSS_cpiExceptionService indicates the value of the VS.exceptionService measurement monitored by the Service Exceptions CPI exceeded a threshold in the last 15 minute interval.		
Remedial action: The value of the VS.exceptionService measurement monitored by the Service Exceptions CPI exceeded a threshold in the last 15 minute interval. This alarm will clear automatically if the rate of exceptions drops below the threshold.\nDetermine if any other alarms have been recently raised on the resource reported and address them.\nExamine the recent Performance (PM) counts on the resource reported; they may suggest more regarding this issue.\nIf a provisioning or configuration change was executed just before the alarm was raised, consider that the change is causing the problem.\nIf a Software Update (SU) or Patch is being soaked, then this could indicate a problem with the software delivered; immediately contact your Nokia support representative.\nIf the PM counts indicates degradation of service and a switch-over has not already occurred, switch the service to its redundant mate.\nIf the situation persists after a switch-over, be sure that the prior active host of the service was removed from service and restored completely. Attempt another switch over to the original active host for the service.\nIf the situation persists after two or more switch-overs of the pair within the service, then attempt to duplex fail the service.\nIn all cases, contact your Nokia support representative regarding this alarm.		

Table 24-108 WmmLSS_cpiFileSysUsage

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiFileSysUsage (4214) Type: mmeAlarm Package: ltemme.WmmLSS_cpiFileSysUsage Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm LSS_cpiFileSysUsage indicates the value of resource usage count VS.fileSysUsage monitored by the File System Usage CPI exceeded a threshold in the last 5-minute interval.		
Remedial action: Remove outdated and obsolete files to free the file system space.\nMove the important data files to other disks to free the file system space.\nWhen CPI alarm LSS_cpiFileSysUsage is fired for CDR host, don't remove CDR record files (under /app1/data0/cdrdata) and PCMD record files (under /app1/data0/pcmddata). Furthermore, double check timestamp of CDR records files under /app1/data0/cdrdata/app2/charging/stream1/primary. If many files are older than two PULL/PUSH intervals, then there might be CDR records file transfer issue, which should be fixed firstly. For non-CDR record or non-PCMD record files, follow step 1 or step 2.		

Table 24-109 WmmLSS_cpiGTPcResponseTOGn

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiGTPcResponseTOGn (4215) Type: mmeAlarm Package: ltemme.WmmLSS_cpiGTPcResponseTOGn Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiGTPcResponseTOGn, indicates that the value of VS.cpiGTPcResponseTOGn has exceeded a threshold in the last 15 minute interval. This counter monitors the percentage of GTP Requests sent over a Gn interface for which no Response is received by the MME. The Gn interface connects the MME with one or more SGSNs. The calculated percentage is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Check neighboring SGSNs for error conditions or ongoing problems. Verify network connectivity and proper configuration between MME and SGSNs. If SGSNs and network connectivity are verified, examine all the GTP failure counters to determine if one failure cause predominates, and check fs.log to determine if errors related to the Gn interface have been reported. Contact your Nokia support representative.		

Table 24-110 WmmLSS_cpiGTPcResponseTOS3

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiGTPcResponseTOS3 (4216) Type: mmeAlarm Package: ltemme.WmmLSS_cpiGTPcResponseTOS3 Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiGTPcResponseTOS3, indicates meeting a threshold of GTP response failure rate in the last 5 minute interval. This failure rate monitors the percentage of GTP Requests sent over an S3 interface for which no Response is received by the MME. The S3 interface connects the MME with one or more SGSNs. The calculated percentage is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Check neighboring SGSNs for error conditions or ongoing problems. Verify network connectivity and proper configuration between MME and SGSNs. If SGSNs and network connectivity are verified, examine all the GTP failure counters to determine if one failure cause predominates, and check fs.log to determine if errors related to the S3 interface have been reported. Contact your Nokia support representative.		

Table 24-111 WmmLSS_cpiGTPcResponseTOSv

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiGTPcResponseTOSv (4217) Type: mmeAlarm Package: ltemme.WmmLSS_cpiGTPcResponseTOSv Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm LSS_cpiGTPcResponseTOSv indicates meeting a threshold of the GTPc Response Time out over Sv CPI (requests sent over an Sv interface for which no response is received).		
Remedial action: Check neighboring LVI(s) for error conditions or ongoing problems. Verify network connectivity and proper configuration between MME and LVI(s). If LVI(s) and network connectivity are verified, examine all the GTP failure counters to determine if one failure cause predominates, and check fs.log to determine if errors related to the Gn interface have been reported. Contact your Nokia support representative.		

Table 24-112 WmmLSS_cpiHOfailuresFrom2g3goverGn

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiHOfailuresFrom2g3goverGn (8028) Type: mmeAlarm Package: ltemme.WmmLSS_cpiHOfailuresFrom2g3goverGn Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiHOfailuresFrom2g3goverGn, indicates that the value of (100 - (100 * (VS. NbrHOtoLTESuccessGn / VS.AttNbrHOtoLTEGn)) has has exceeded a threshold in the last 5 minute interval. This value monitors the percentage of failure rate of attempted handovers from GERAN/UTRAN to MME using the Gn interface. The calculated percentage is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: For failures attributed to the SGSN, check the target UTRAN/GERAN network for errors related to inter-system mobility procedures.\nFor failures attributed to the MME, check the Gn link status and MME service status.\nCheck fs.log for error indications related to Gn interface procedures, contact your Nokia support representative if internal MME errors are indicated.		

Table 24-113 WmmLSS_cpiHOfailuresFromGERANoverS3

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiHOfailuresFromGERANoverS3 (4219) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiHOfailuresFromGERANoverS3 Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiHOfailuresFromGERANoverS3, indicates that the value of VS. cpiHOfailuresFromGERANoverS3 has exceeded a threshold in the last 5 minute interval. This counter monitors the failure rate of attempted handovers from GERAN to a E-UTRAN SGSN using the S3 interface. The failure rate is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: For failures attributed to the SGSN, check the target UTRAN/GERAN network for errors related to inter-system mobility procedures.\nFor failures attributed to the MME, check the S3 link status and MME service status.\nCheck fs.log for error indications related to S3 interface procedures, contact your Nokia support representative if internal MME errors are indicated.		

Table 24-114 WmmLSS_cpiHOfailuresFromUTRANoverS3

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiHOfailuresFromUTRANoverS3 (4220) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiHOfailuresFromUTRANoverS3 Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiHOfailuresFromUTRANoverS3, indicates that the value of VS. cpiHOfailuresFromUTRANoverS3 has exceeded a threshold in the last 5 minute interval. This counter monitors the failure rate of attempted handovers from UTRAN to a E-UTRAN SGSN using the S3 interface. The failure rate is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: For failures attributed to the SGSN, check the target UTRAN/GERAN network for errors related to inter-system mobility procedures.\nFor failures attributed to the MME, check the S3 link status and MME service status.\nCheck fs.log for error indications related to S3 interface procedures, contact your Nokia support representative if internal MME errors are indicated.		

Table 24-115 WmmLSS_cpiHOfailuresRAUto2G3GnewSgwOverS3

Alarm	Attributes	Applicable major release
Name: WmmLSS_ cpiHOfailuresRAUto2G3GnewSgwOverS3 (4222) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiHOfailuresRAUto2G3GnewSgwOverS3 Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiHOfailuresRAUto2G3GnewSgwOverS3, indicates that the value of VS. cpiHOfailuresRAUto2G3GnewSgwOverS3 has exceeded a threshold in the last 5 minute interval. This counter monitors the failure rate of attempted RAU-based handovers from E-UTRAN to a UTRAN/GERAN SGSN using the S3 interface with SGW Relocation. This is Routing Area Update procedures. The failure rate is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: For failures attributed to the SGSN, check the target UTRAN/GERAN network for errors related to inter-system mobility procedures.\nFor failures attributed to the MME, check the S3 link status and MME service status.\nCheck fs.log for error indications related to S3 interface procedures, contact your Nokia support representative if internal MME errors are indicated.		

Table 24-116 WmmLSS_cpiHOfailuresRAUto2G3GOverS3

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiHOfailuresRAUto2G3GOverS3 (4221) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiHOfailuresRAUto2G3GOverS3 Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiHOfailuresRAUto2G3GOverS3, indicates the failure rate of attempted Routing Area Update (RAU) procedures from E-UTRAN to a UTRAN/GERAN SGSN using the S3 interface has exceeded a threshold in the last 5 minute interval. Failures encountered during the entire duration of the RAU procedure are included. Therefore, failures encountered both prior to and after SGW change determination are included. The failure rate is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: For failures attributed to the SGSN, check the target UTRAN/GERAN network for errors related to inter-system mobility procedures.\nFor failures attributed to the MME, check the S3 link status and MME service status.\nCheck fs.log for error indications related to S3 interface procedures, contact your Nokia support representative if internal MME errors are indicated.		

Table 24-117 WmmLSS_cpiHOfailuresRAUto2G3GsameSgwOverS3

Alarm	Attributes	Applicable major release
Name: WmmLSS_ cpiHOfailuresRAUto2G3GsameSgwOverS3 (4223) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiHOfailuresRAUto2G3GsameSgwOverS3 Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiHOfailuresRAUto2G3GsameSgwOverS3, indicates that the value of VS. cpiHOfailuresRAUto2G3GsameSgwOverS3 has exceeded a threshold in the last 5 minute interval. This counter monitors the failure rate of attempted handovers from E-UTRAN to a UTRAN/GERAN SGSN using the S3 interface without SGW Relocation. This is Routing Area Update procedures. The failure rate is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: For failures attributed to the SGSN, check the target UTRAN/GERAN network for errors related to inter-system mobility procedures.\nFor failures attributed to the MME, check the S3 link status and MME service status.\nCheck fs.log for error indications related to S3 interface procedures, contact your Nokia support representative if internal MME errors are indicated.		

Table 24-118 WmmLSS_cpiHOFailuresTo3G2GOverGn

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiHOFailuresTo3G2GOverGn (4218) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiHOFailuresTo3G2GOverGn Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiHOFailuresTo3G2GOverGn, indicates that the value of VS.cpiHOFailuresto3G2GOverGn has exceeded a threshold in the last 15 minute interval. This counter monitors the failure rate of attempted handovers from E-UTRAN to a UTRAN/GERAN SGSN using the Gn interface. This includes Routing Area Update procedures. The failure rate is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: For failures attributed to the SGSN, check the target UTRAN/GERAN network for errors related to inter-system mobility procedures.\nFor failures attributed to the MME, check the Gn link status and MME service status.\nCheck fs.log for error indications related to Gn interface procedures, contact your Nokia support representative if internal MME errors are indicated.		

Table 24-119 WmmLSS_cpiHOfailuresToGERANoverS3

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiHOfailuresToGERANoverS3 (4224) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiHOfailuresToGERANoverS3 Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiHOfailuresToGERANoverS3, indicates that the value of VS.cpiHOfailuresToGERANoverS3 has exceeded a threshold in the last 5 minute interval. This counter monitors the failure rate of attempted handovers from E-UTRAN to a GERAN SGSN using the S3 interface. The failure rate is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: For failures attributed to the SGSN, check the target UTRAN/GERAN network for errors related to inter-system mobility procedures.\nFor failures attributed to the MME, check the S3 link status and MME service status.\nCheck fs.log for error indications related to S3 interface procedures, contact your Nokia support representative if internal MME errors are indicated.		

Table 24-120 WmmLSS_cpiHOfailuresToUTRANoverS3

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiHOfailuresToUTRANoverS3 (4225) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiHOfailuresToUTRANoverS3 Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiHOfailuresToUTRANoverS3, indicates that the value of VS.cpiHOfailuresToUTRANoverS3 has exceeded a threshold in the last 5 minute interval. This counter monitors the failure rate of attempted handovers from E-UTRAN to a UTRAN SGSN using the S3 interface. The failure rate is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: For failures attributed to the SGSN, check the target UTRAN/GERAN network for errors related to inter-system mobility procedures.\nFor failures attributed to the MME, check the S3 link status and MME service status.\nCheck fs.log for error indications related to S3 interface procedures, contact your Nokia support representative if internal MME errors are indicated.		

Table 24-121 WmmLSS_cpiInterSgsn2GrauFailures

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiInterSgsn2GrauFailures (8029) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiInterSgsn2GrauFailures Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiInterSgsn2GrauFailures, indicates that the 2G value of VS.Gmm_succInterSgsnRaUpdate has crossed a threshold in the last 15 minute interval. This counter monitors the percentage of failed Inter SGSN RAU Procedure. The calculated percentage is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Check WMM for internal error conditions or ongoing problems. Verify network connectivity and proper configuration between WMMs. If WMMs and network connectivity are verified, examine all the GTP failure counters to determine if one failure cause predominates, and check fs.log to determine if errors related to the Gn interface have been reported. Contact your Nokia support representative.		

Table 24-122 WmmLSS_cpiInterSgsn3GrauFailures

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiInterSgsn3GrauFailures (8030) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiInterSgsn3GrauFailures Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiInterSgsn3GrauFailures, indicates that the 3G value of VS.Gmm_succInterSgsnRaUpdate has crossed a threshold in the last 15 minute interval. This counter monitors the percentage of failed Inter SGSN RAU Procedure. The calculated percentage is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Check WMM for internal error conditions or ongoing problems. Verify network connectivity and proper configuration between WMMs. If WMMs and network connectivity are verified, examine all the GTP failure counters to determine if one failure cause predominates, and check fs.log to determine if errors related to the Gn interface have been reported. Contact your Nokia support representative.		

Table 24-123 WmmLSS_cpiInterSgsnSrnsFailures

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiInterSgsnSrnsFailures (8031) Type: mmeAlarm Package: ltemme.WmmLSS_cpiInterSgsnSrnsFailures Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiInterSgsnSrnsFailures, indicates that the value of VS.Gmm_succInterSgsnRelocation_U has crossed a threshold in the last 15 minute interval. This counter monitors the percentage of failed Inter SGSN SRNS Procedure. The calculated percentage is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Check WMM for internal error conditions or ongoing problems. Verify network connectivity and proper configuration between WMMs and SGSNs. If WMMs and network connectivity are verified, examine all the GTP failure counters to determine if one failure cause predominates, and check fs.log to determine if errors related to the Gn interface have been reported. Contact your Nokia support representative.		

Table 24-124 WmmLSS_cpiIntraSgsn2GrauFailures

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiIntraSgsn2GrauFailures (8032) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiIntraSgsn2GrauFailures Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiIntraSgsn2GrauFailures, indicates that the 2G value of VS.Gmm_succIntraSgsnRaUpdate has crossed a threshold in the last 15 minute interval. This counter monitors the percentage of failed SGSN RAU Procedure. The calculated percentage is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Check WMM for internal error conditions or ongoing problems. Examine all the GTP failure counters to determine if one failure cause predominates, and check fs.log to determine if errors related to the Gn interface have been reported. Contact your Nokia support representative.		

Table 24-125 WmmLSS_cpiIntraSgsn3GrauFailures

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiIntraSgsn3GrauFailures (8033) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiIntraSgsn3GrauFailures Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiIntraSgsn3GrauFailures, indicates that the 3G value of VS.Gmm_succIntraSgsnRaUpdate has crossed a threshold in the last 15 minute interval. This counter monitors the percentage of failed SGSN RAU Procedure. The calculated percentage is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Check WMM for internal error conditions or ongoing problems. Examine all the GTP failure counters to determine if one failure cause predominates, and check fs.log to determine if errors related to the Gn interface have been reported. Contact your Nokia support representative.		

Table 24-126 WmmLSS_cpiIntraSgsnSrnsFailures

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiIntraSgsnSrnsFailures (8034) Type: mmeAlarm Package: ltemme.WmmLSS_cpiIntraSgsnSrnsFailures Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiIntraSgsnSrnsFailures, indicates that the value of VS.Gmm_succIntraSgsnRelocation_U has crossed a threshold in the last 15 minute interval. This counter monitors the percentage of failed Intra SGSN SRNS Procedure. The calculated percentage is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Check WMM for internal error conditions or ongoing problems. Examine all the GTP failure counters to determine if one failure cause predominates, and check fs.log to determine if errors related to the Gn interface have been reported. Contact your Nokia support representative.		

Table 24-127 WmmLSS_cpiMafAttachFailuresSysRelated

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiMafAttachFailuresSysRelated (4233) Type: mmeAlarm Package: ltemme.WmmLSS_cpiMafAttachFailuresSysRelated Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiMafAttachFailuresSysRelated, indicates meeting/exceeding a threshold of the rate of system-related failures for Attach procedures, which is calculated every 5 minutes.		
Remedial action: Verify that the S1, S6a and S11 links are in-service/normal, using the link_cli command.\nVerify that no overload alarms exist on the MME.\nContact your Nokia support representative		

Table 24-128 WmmLSS_cpiMafAttachWithPGWreselection

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiMafAttachWithPGWreselection (4803) Type: mmeAlarm Package: ltemme.WmmLSS_cpiMafAttachWithPGWreselection Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm cpiAttachWithPGWreselection indicates meeting a threshold of the rate of PGW reselection during Attach procedures CPI.		
Remedial action: Contact your Nokia support representative.		

Table 24-129 WmmLSS_cpiMafAttachWithSGWreselection

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiMafAttachWithSGWreselection (4804) Type: mmeAlarm Package: ltemme.WmmLSS_cpiMafAttachWithSGWreselection Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0

Table 24-129 WmmLSS_cpiMafAttachWithSGWreselection (continued)

Alarm	Attributes	Applicable major release
Description: The raised alarm cpiAttachWithSGWreselection indicates meeting a threshold of the rate of SGW reselection during Attach procedures CPI.		
Remedial action: Contact your Nokia support representative.		

Table 24-130 WmmLSS_cpiMAFCommunicationFailureRate

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiMAFCommunicationFailureRate (4226) Type: mmeAlarm Package: Itemme.WmmLSS_ cpiMAFCommunicationFailureRate Raised on class: Itemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0
Description: The raised alarm, cpiMAFCommunicationFailureRate, indicates meeting a threshold of MAF communication failure rate on a per MAF service basis in the last 5 minutes. The failure rate is calculated from the measurement count VS.TotalMsgsRcvdFromMAF and VS.TotalMsgsSentToMAF in every interval of 5 minutes. On the MI GUI the alarm resource will indicate which MAF service has the problem in the MAF pool.		
Remedial action: Check the overload status of the MAF service firing this alarm.\nCheck if there is any hung process in the MAF service firing this alarm.\nIf the MAF service is duplex, try to switch the active MAF service.\nContact your Nokia support representative if problem still persists.		

Table 24-131 WmmLSS_cpiMafEIRfailuresS13

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiMafEIRfailuresS13 (4234) Type: mmeAlarm Package: Itemme.WmmLSS_cpiMafEIRfailuresS13 Raised on class: Itemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiMafEIRfailuresS13, indicates that the value of VS.LSS_cpiMafEIRfailuresS13 has exceeded a threshold in the last 5 minute interval. This counter monitors the percentage of unsuccessful EquipmentCheckRequest (ECR) to the number of ECRs attempted. The calculated percentage is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Verify the far end HSS (EIR) is functioning properly. Check fs.log for any ECR/ECA/S13 related errors to aid in determining the cause. Contact your Nokia support representative.		

Table 24-132 WmmLSS_cpiMafExtServiceReqFailuresSysRelated

Alarm	Attributes	Applicable major release
Name: WmmLSS_ cpiMafExtServiceReqFailuresSysRelated (4235) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiMafExtServiceReqFailuresSysRelated Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm LSS_cpiMafExtServiceReqFailuresSysRelated indicates meeting a threshold of the Extended Service Request System Related Failure CPI.		
Remedial action: Verify that S1, S6a, S11 and SGs links are Unlocked/Enabled using link_cli\nVerify that there are no overload alarms on MME\nContact Your Nokia support representative		

Table 24-133 WmmLSS_cpiMafExtServiceRequestFailures

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiMafExtServiceRequestFailures (4236) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiMafExtServiceRequestFailures Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm LSS_cpiMafExtServiceRequestFailures indicates meeting a threshold of the Extended Service Request Failure CPI.		
Remedial action: Verify MME provisioning data, especially PLMN, TAI-LAI-Mapping, LAI tables\nVerify that S1, S6a, S11 and SGs links are Unlocked/Enabled using link_cli\nVerify that there are no overload alarms on MME\nContact your Nokia support representative		

Table 24-134 WmmLSS_cpiMafFailuresOverSGs

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiMafFailuresOverSGs (4237) Type: mmeAlarm Package: ltemme.WmmLSS_cpiMafFailuresOverSGs Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0

Table 24-134 WmmLSS_cpiMafFailuresOverSGs (continued)

Alarm	Attributes	Applicable major release
Description: The raised alarm, LSS_cpiMafFailuresOverSGs, indicates meeting/exceeding a threshold of the rate of failure for handling messages from the SGs interface, which is calculated every 5 minutes.		
Remedial action: Verify that the SGs links are in-service/normal, using the link_cli command.\nContact your Nokia support representative		

Table 24-135 WmmLSS_cpiMafHLRAuthFail

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiMafHLRAuthFail (4238) Type: mmeAlarm Package: ltemme.WmmLSS_cpiMafHLRAuthFail Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiMafHLRAuthFail, indicates meeting/exceeding a threshold of the rate of failure for handling Authentication failure messages from the HLR, which is calculated every 5 minutes.		
Remedial action: Verify that the Gr link is in-service/normal, using the link_cli command.\nContact your Nokia support representative		

Table 24-136 WmmLSS_cpiMafHSSreselection

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiMafHSSreselection (4805) Type: mmeAlarm Package: ltemme.WmmLSS_cpiMafHSSreselection Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm cpiHSSreselection indicates meeting a threshold of the rate of HSS reselection during Authentication or Update Location procedures CPI.		
Remedial action: Contact your Nokia support representative.		

Table 24-137 WmmLSS_cpiMafPDNconnWithPGWreselection

Alarm	Attributes	Applicable major release
Name: WmmLSS_ cpiMafPDNconnWithPGWreselection (4806) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiMafPDNconnWithPGWreselection Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm cpiPDNconnWithPGWreselection indicates meeting a threshold of the rate of PGW reselection during PDN connectivity procedures CPI.		
Remedial action: Contact your Nokia support representative.		

Table 24-138 WmmLSS_cpiMafServiceReqFailuresSysRelated

Alarm	Attributes	Applicable major release
Name: WmmLSS_ cpiMafServiceReqFailuresSysRelated (4239) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiMafServiceReqFailuresSysRelated Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiMafServiceReqFailuresSysRelated, indicates meeting/exceeding a threshold of the rate of system-related failures for UE Service Request procedures, which is calculated every 5 minutes.		
Remedial action: Verify that the S1, S6a and S11 links are in-service/normal, using the link_cli command.\nVerify that no overload alarms exist on the MME.\nContact your Nokia support representative		

Table 24-139 WmmLSS_cpiMafTauFailuresInterMme

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiMafTauFailuresInterMme (4240) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiMafTauFailuresInterMme Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0

Table 24-139 WmmLSS_cpiMafTauFailuresInterMme (continued)

Alarm	Attributes	Applicable major release
Description: The raised alarm, LSS_cpiMafTauFailuresInterMme, indicates meeting/exceeding a threshold of the rate of failure of Tracking Area Update procedures involving MME relocation which is calculated every 5 minutes.		
Remedial action: Verify that the eNB, and MME links are in-service/normal, using the link_cli command.\nContact your Nokia support representative to determine the status of the serving eNB and the MME groups serving the eNB that is involved in the TAU procedure		

Table 24-140 WmmLSS_cpiMafTauFailuresInterMmeInterSgw

Alarm	Attributes	Applicable major release
Name: WmmLSS_ cpiMafTauFailuresInterMmeInterSgw (4241) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiMafTauFailuresInterMmeInterSgw Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiMafTauFailuresInterMmeInterSgw, indicates meeting/exceeding a threshold of the rate of failure of Tracking Area Update procedures involving MME relocation and SGW relocation which is calculated every 5 minutes.		
Remedial action: Verify that the HSS, eNB, SGW, and MME links are in-service/normal, using link_cli.\nVerify UE subscription information in HSS.\nContact your Nokia support representative to determine the status of the serving eNB, MME groups, and SGW Pools serving the eNB that are involved in the TAU procedure.		

Table 24-141 WmmLSS_cpiMafTauFailuresInterSgw

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiMafTauFailuresInterSgw (4242) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiMafTauFailuresInterSgw Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiMafTauFailuresInterSgw, indicates meeting/exceeding a threshold of the rate of failure of Tracking Area Update procedures involving SGW relocation, which is calculated every 5 minutes.		
Remedial action: Verify that the eNB, and SGW links are in-service/normal, using the link_cli command.\nContact your Nokia support representative to determine the status of the serving eNB and the SGW Pools serving the eNB that is involved in the TAU procedure		

Table 24-142 WmmLSS_cpiMBMSSessionStartM3FailureRate

Alarm	Attributes	Applicable major release
Name: WmmLSS_ cpiMBMSSessionStartM3FailureRate (4227) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiMBMSSessionStartM3FailureRate Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm LSS_cpiMBMSSessionStartM3FailureRate indicates meeting a threshold of the MBMS Session Start M3 Failure Rate CPI.		
Remedial action: For failures attributed to the MCE, check the MCE/eNB and network connections for errors.\nFor failures attributed to the MME, check the M3 link status and MME service status.\nCheck fs.log for error indications related to M3 interface procedures, contact your Nokia support representative if internal MME errors are indicated.		

Table 24-143 WmmLSS_cpiMBMSSessionStartSmFailureRate

Alarm	Attributes	Applicable major release
Name: WmmLSS_ cpiMBMSSessionStartSmFailureRate (4228) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiMBMSSessionStartSmFailureRate Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm LSS_cpiMBMSSessionStartSmFailureRate indicates meeting a threshold of the MBMS Session Start Sm Failure Rate CPI.		
Remedial action: For failures attributed to the MBMS-GW, check the MBMS-GW and network for errors.\nFor failures attributed to the MME, check the Sm link status and MME service status.\nCheck fs.log for error indications related to Sm interface procedures, contact your Nokia support representative if internal MME errors are indicated.		

Table 24-144 WmmLSS_cpiMBMSSessionStopM3FailureRate

Alarm	Attributes	Applicable major release
Name: WmmLSS_ cpiMBMSSessionStopM3FailureRate (4229) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiMBMSSessionStopM3FailureRate Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm LSS_cpiMBMSSessionStopM3FailureRate indicates meeting a threshold of the MBMS Session Stop M3 Failure Rate CPI.		
Remedial action: For failures attributed to the MCE, check the MCE/eNB and network connections for errors.\nFor failures attributed to the MME, check the M3 link status and MME service status.\nCheck fs.log for error indications related to M3 interface procedures, contact your Nokia support representative if internal MME errors are indicated.		

Table 24-145 WmmLSS_cpiMBMSSessionStopSmFailureRate

Alarm	Attributes	Applicable major release
Name: WmmLSS_ cpiMBMSSessionStopSmFailureRate (4230) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiMBMSSessionStopSmFailureRate Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm LSS_cpiMBMSSessionStopSmFailureRate indicates meeting a threshold of the MBMS Session Stop Sm Failure Rate CPI.		
Remedial action: For failures attributed to the MBMS-GW, check the MBMS-GW and network for errors.\nFor failures attributed to the MME, check the Sm link status and MME service status.\nCheck fs.log for error indications related to Sm interface procedures, contact your Nokia support representative if internal MME errors are indicated.		

Table 24-146 WmmLSS_cpiMBMSSessionUpdateM3FailureRate

Alarm	Attributes	Applicable major release
Name: WmmLSS_ cpiMBMSSessionUpdateM3FailureRate (4231) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiMBMSSessionUpdateM3FailureRate Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm LSS_cpiMBMSSessionUpdateM3FailureRate indicates meeting a threshold of the MBMS Session Update M3 Failure Rate CPI.		
Remedial action: For failures attributed to the MCE, check the MCE/eNB and network connections for errors.\nFor failures attributed to the MME, check the M3 link status and MME service status.\nCheck fs.log for error indications related to M3 interface procedures, contact your Nokia support representative if internal MME errors are indicated.		

Table 24-147 WmmLSS_cpiMBMSSessionUpdateSmFailureRate

Alarm	Attributes	Applicable major release
Name: WmmLSS_ cpiMBMSSessionUpdateSmFailureRate (4232) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiMBMSSessionUpdateSmFailureRate Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm LSS_cpiMBMSSessionUpdateSmFailureRate indicates meeting a threshold of the MBMS Session Update Sm Failure Rate CPI.		
Remedial action: For failures attributed to the MBMS-GW, check the MBMS-GW and network for errors.\nFor failures attributed to the MME, check the Sm link status and MME service status.\nCheck fs.log for error indications related to Sm interface procedures, contact your Nokia support representative if internal MME errors are indicated.		

Table 24-148 WmmLSS_cpiMemAllocFail

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiMemAllocFail (4243) Type: mmeAlarm Package: ltemme.WmmLSS_cpiMemAllocFail Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiMemAllocFail, indicates the value of the VS.memAllocFail measurement monitored by the failed memory allocation attempts CPI exceeded a threshold in the last 15 minute interval.		
Remedial action: Investigate the amount of load being handled by this service and take steps to reduce it if it is excessive. Otherwise contact your Nokia support representative. If this alarm coincides with the introduction of a software update, contact your Nokia support representative immediately.\nThis alarm will clear automatically if the rate of memory allocation failures drops below the threshold.		

Table 24-149 WmmLSS_cpiNoPSHOFailuresOverSv

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiNoPSHOFailuresOverSv (4244) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiNoPSHOFailuresOverSv Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm LSS_cpiNoPSHOFailuresOverSv indicates meeting a threshold of the Hand Down to UTRAN/GERAN via the Sv interface without PSHO Failure Rate CPI.		
Remedial action: Check counters and alarms related to the Sv interface. Verify network connectivity and proper configuration between the MME and LVI(s).\nCheck the target UTRAN/GERAN network for configuration problems that could cause the handover preparation attempts to be rejected.\nCheck the source E-UTRAN network and target UTRAN/GERAN network for handover failure conditions.\nCheck fs.log for error indications related to Sv interface procedures. Contact your Nokia support representative if internal MME errors are indicated.		

Table 24-150 WmmLSS_cpiPSHOFailuresOverSv

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiPSHOFailuresOverSv (4245) Type: mmeAlarm Package: ltemme.WmmLSS_cpiPSHOFailuresOverSv Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm LSS_cpiPSHOFailuresOverSv indicates meeting a threshold of the Hand Down to UTRAN/GERAN via the Sv interface with PSHO Failure Rate CPI.		
Remedial action: Check counters and alarms related to the Sv interface. Verify network connectivity and proper configuration between the MME and MSC(s).\nCheck the target UTRAN/GERAN network for configuration problems that could cause the handover preparation attempts to be rejected.\nCheck the source E-UTRAN network and target UTRAN/GERAN network for handover failure conditions.\nCheck fs.log for error indications related to Sv interface procedures. Contact your Nokia support representative if internal MME errors are indicated.		

Table 24-151 WmmLSS_cpiReinitServiceSelf

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiReinitServiceSelf (4246) Type: mmeAlarm Package: ltemme.WmmLSS_cpiReinitServiceSelf Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm LSS_cpiReinitServiceSelf indicates the value of the VS.reinitServiceSelf measurement monitored by the Automatic Service Re-initialization CPI exceeded a threshold in the last 15 minute interval.		
Remedial action: This alarm will clear automatically if the rate of re-initializations drops below the threshold.\nCheck that a switch over has successfully occurred.\nDetermine if any other alarms have been recently raised on the resource reported and address them. As this is likely the result of recovery escalation, one or more of these alarms may also be raised: LSS_cpiAsrtEsc, LSS_cpiExceptionService, LSS_cpiRestartTask\nIf a provisioning or configuration change was executed just before the alarm was raised, consider that the change is causing the problem.\nIf a Software Update (SU) or Patch is being soaked, then this could indicate a problem with the software delivered; immediately contact your Nokia support representative.\nIf the situation persists after a switch-over, be sure that the prior active host of the service was removed from service and restored completely. Attempt another switch over to the original active host for the service if that has not already occurred.\nIf the situation persists after two or more switch-overs of the pair within the service, then attempt to duplex fail the service.\nAttempt to power down the card providing the service and then restore it. If the problem clears, this suggests faulty hardware.\nIn all cases, contact your Nokia support representative regarding this alarm.		

Table 24-152 WmmLSS_cpiS3TauFailures

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiS3TauFailures (4247) Type: mmeAlarm Package: ltemme.WmmLSS_cpiS3TauFailures Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiS3TauFailures, indicates meeting/exceeding a threshold of the rate of failure of Tracking Area Update procedures from an SGSN to the MME over an S3 link.		
Remedial action: Verify that the eNB, SGW, HSS, and SGSN S3 links are in-service/normal, using link_cli.\nVerify the operational status of the SGSN and that the SGSN is responding to messages over the S3 link.\nVerify the operational status of the DNS server and that the DNS entries for the SGW are correct.\nContact your Nokia support representative to determine the status of the serving eNB, the HSS and the SGW serving the eNB that is involved in the TAU procedure.		

Table 24-153 WmmLSS_cpiS3TauFailuresInterSgw

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiS3TauFailuresInterSgw (4248) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiS3TauFailuresInterSgw Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiS3TauFailuresInterSGW, indicates meeting/exceeding a threshold of the rate of failure of Tracking Area Update procedures from an SGSN to the MME over an S3 link that involves a change of serving SGW.		
Remedial action: Verify that the eNB, SGW, HSS, and SGSN S3 links are in-service/normal, using link_cli.\nVerify the operational status of the SGSN and that the SGSN is responding to messages over the S3 link.\nVerify the operational status of the DNS server and that the DNS entries for the SGW are correct.\nContact your Nokia support representative to determine the status of the serving eNB, the HSS and the SGW serving the eNB that is involved in the TAU procedure.		

Table 24-154 WmmLSS_cpiS3TauFailuresIntraSGW

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiS3TauFailuresIntraSGW (4249) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiS3TauFailuresIntraSGW Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiS3TauFailuresIntraSGW, indicates meeting/exceeding a threshold of the rate of failure of Tracking Area Update procedures from an SGSN to the MME over an S3 link that do not involve a change of serving SGW.		
Remedial action: Verify that the eNB, SGW, HSS, and SGSN S3 links are in-service/normal, using link_cli.\nVerify the operational status of the SGSN and that the SGSN is responding to messages over the S3 link.\nVerify the operational status of the DNS server and that the DNS entries for the SGW are correct.\nContact your Nokia support representative to determine the status of the serving eNB, the HSS and the SGW serving the eNB that is involved in the TAU procedure.		

Table 24-155 WmmLSS_cpiSgsn2GattachFailures

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiSgsn2GattachFailures (8037) Type: mmeAlarm Package: ltemme.WmmLSS_cpiSgsn2GattachFailures Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiSgsn2GattachFailures, indicates that the 2G value of VS.Gmm_succGprsAttach has crossed a threshold in the last 15 minute interval. This counter monitors the percentage of failed SGSN Attach Procedure. The calculated percentage is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Check EIR and/or HSS for error conditions or ongoing problems. Verify network connectivity and proper configuration between WMM and EIR and/or HSS. Examine all the GTP failure counters to determine if one failure cause predominates, and check fs.log to determine if errors related to the Gn interface have been reported. Contact your Nokia support representative.		

Table 24-156 WmmLSS_cpiSgsn2GpagingFailures

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiSgsn2GpagingFailures (8038) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiSgsn2GpagingFailures Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiSgsn2GpagingFailures, indicates that the 2G value of VS.Gmm_unsuccPacketSwitchingPaging has crossed a threshold in the last 15 minute interval. This counter monitors the percentage of failed SGSN Paging Procedure. The calculated percentage is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Check GERAN for error conditions or ongoing problems. Verify network connectivity and proper configuration between WMM and GERAN. Contact your Nokia support representative.		

Table 24-157 WmmLSS_cpiSgsn2GpdpActivationFailures

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiSgsn2GpdpActivationFailures (8039) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiSgsn2GpdpActivationFailures Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiSgsn2GpdpActivationFailures, indicates that the 2G value of VS.Sm_ succActPDPCtxMSPerSgsn has crossed a threshold in the last 15 minute interval. This counter monitors the percentage of failed SGSN PDP Context Activation. The calculated percentage is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Check neighboring SGW and GGSN for error conditions or ongoing problems. Verify network connectivity and proper configuration between WMM and SGW and GGSN. If WMM and network connectivity are verified, examine all the GTP failure counters to determine if one failure cause predominates, and check fs.log to determine if errors related to the Gn interface have been reported. Contact your Nokia support representative.		

Table 24-158 WmmLSS_cpiSgsn2GpdpDeactNwFailures

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiSgsn2GpdpDeactNwFailures (8040) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiSgsn2GpdpDeactNwFailures Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiSgsn2GpdpDeactNwFailures, indicates that the 2G sum of VS.Sm_succGgsnDeactPDPCtx_G and VS.Sm_succSgsnDeactPDPCtx_G has crossed a threshold in the last 15 minute interval. This counter monitors the percentage of failed SGSN PDP Context Deactivation NW. The calculated percentage is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Check neighboring GERANs for error conditions or ongoing problems. Verify network connectivity and proper configuration between WMM and GERANs. If WMMs and network connectivity are verified, examine all the GTP failure counters to determine if one failure cause predominates, and check fs.log to determine if errors related to the Gn interface have been reported. Contact your Nokia support representative.		

Table 24-159 WmmLSS_cpiSgsn3GattachFailures

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiSgsn3GattachFailures (8041) Type: mmeAlarm Package: ltemme.WmmLSS_cpiSgsn3GattachFailures Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiSgsn3GattachFailures, indicates that the 3G value of VS.Gmm_succGprsAttach has crossed a threshold in the last 15 minute interval. This counter monitors the percentage of failed SGSN Attach Procedure. The calculated percentage is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Check EIR and/or HSS for error conditions or ongoing problems. Verify network connectivity and proper configuration between WMM and EIR and/or HSS. Examine all the GTP failure counters to determine if one failure cause predominates, and check fs.log to determine if errors related to the Gn interface have been reported. Contact your Nokia support representative.		

Table 24-160 WmmLSS_cpiSgsn3GpagingFailures

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiSgsn3GpagingFailures (8042) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiSgsn3GpagingFailures Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiSgsn3GpagingFailures, indicates that the 3G value of VS.Gmm_unsuccPacketSwitchingPaging has crossed a threshold in the last 15 minute interval. This counter monitors the percentage of failed SGSN Paging Procedure. The calculated percentage is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Check UTRAN for error conditions or ongoing problems. Verify network connectivity and proper configuration between WMM and UTRAN. Contact your Nokia support representative.		

Table 24-161 WmmLSS_cpiSgsn3GpdpActivationFailures

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiSgsn3GpdpActivationFailures (8043) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiSgsn3GpdpActivationFailures Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiSgsn3GpdpActivationFailures, indicates that the 3G value of VS.Sm_ succActPDPCtxMSPerSgsn has crossed a threshold in the last 15 minute interval. This counter monitors the percentage of failed SGSN PDP Context Activation. The calculated percentage is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Check neighboring SGW and GGSN for error conditions or ongoing problems. Verify network connectivity and proper configuration between WMM and SGW and GGSN. If WMM and network connectivity are verified, examine all the GTP failure counters to determine if one failure cause predominates, and check fs.log to determine if errors related to the Gn interface have been reported. Contact your Nokia support representative.		

Table 24-162 WmmLSS_cpiSgsn3GpdpDeactNwFailures

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiSgsn3GpdpDeactNwFailures (8044) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiSgsn3GpdpDeactNwFailures Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiSgsn3GpdpDeactNwFailures, indicates that the 3G sum of VS.Sm_succGgsnDeactPDPCtx_U and VS.Sm_succSgsnDeactPDPCtx_U has crossed a threshold in the last 15 minute interval. This counter monitors the percentage of failed SGSN PDP Context Deactivation NW. The calculated percentage is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Check neighboring UTRANs for error conditions or ongoing problems. Verify network connectivity and proper configuration between WMM and UTRANs. If WMMs and network connectivity are verified, examine all the GTP failure counters to determine if one failure cause predominates, and check fs.log to determine if errors related to the Gn interface have been reported. Contact your Nokia support representative.		

Table 24-163 WmmLSS_cpiSgsnPdpDeact2GmsFailures

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiSgsnPdpDeact2GmsFailures (8045) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiSgsnPdpDeact2GmsFailures Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiSgsnPdpDeact2GmsFailures, indicates that the value of VS.Sm_succMSDeactPDPCtx_G has crossed a threshold in the last 15 minute interval. This counter monitors the percentage of failed SGSN PDP Context Deactivation 2G MS. The calculated percentage is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Check neighboring GGSN and SGW for error conditions or ongoing problems. Verify network connectivity and proper configuration between WMM and GERANs. If WMM and network connectivity are verified, examine all the GTP failure counters to determine if one failure cause predominates, and check fs.log to determine if errors related to the Gn interface have been reported. Contact your Nokia support representative.		

Table 24-164 WmmLSS_cpiSgsnPdpDeact3GmsFailures

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiSgsnPdpDeact3GmsFailures (8046) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiSgsnPdpDeact3GmsFailures Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiSgsnPdpDeact3GmsFailures, indicates that the value of VS.Sm_succMSDeactPDPCtx_U has crossed a threshold in the last 15 minute interval. This counter monitors the percentage of failed SGSN PDP Context Deactivation 3G MS. The calculated percentage is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Check neighboring GGSN and SGW for error conditions or ongoing problems. Verify network connectivity and proper configuration between WMM and UTRANs. If WMMs and network connectivity are verified, examine all the GTP failure counters to determine if one failure cause predominates, and check fs.log to determine if errors related to the Gn interface have been reported. Contact your Nokia support representative.		

Table 24-165 WmmLSS_cpiSgsnPdpMod3GmsFailures

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiSgsnPdpMod3GmsFailures (8047) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiSgsnPdpMod3GmsFailures Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiSgsnPdpMod3GmsFailures, indicates that the value of VS.Sm_succModPDPCtxMs_U has crossed a threshold in the last 15 minute interval. This counter monitors the percentage of failed SGSN PDP Context Modification 3G MS. The calculated percentage is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Check neighboring GGSN and SGW for error conditions or ongoing problems. Verify network connectivity and proper configuration between WMM and UTRANs. If WMMs and network connectivity are verified, examine all the GTP failure counters to determine if one failure cause predominates, and check fs.log to determine if errors related to the Gn interface have been reported. Contact your Nokia support representative.		

Table 24-166 WmmLSS_cpiSgsnPdpMod3GnwFailures

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiSgsnPdpMod3GnwFailures (8048) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiSgsnPdpMod3GnwFailures Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_cpiSgsnPdpMod3GnwFailures, indicates that the value of VS.Sm_succModPDPCtxSgsn_U has crossed a threshold in the last 15 minute interval. This counter monitors the percentage of failed SGSN PDP Context Modification 3G NW. The calculated percentage is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Check neighboring UTRANs for error conditions or ongoing problems. Verify network connectivity and proper configuration between WMM, SGW and GGSN. If WMMs and network connectivity are verified, examine all the GTP failure counters to determine if one failure cause predominates, and check fs.log to determine if errors related to the Gn interface have been reported. Contact your Nokia support representative.		

Table 24-167 WmmLSS_cpiSS7DropSCTPPktsRcvd

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiSS7DropSCTPPktsRcvd (8035) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiSS7DropSCTPPktsRcvd Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm, LSS_cpiSS7DropSCTPPktsRcvd, indicates the drop rate for transmitting SCTP packets (VS. SctpInSCTPPacks).		
Remedial action: Check to see if the IP network is experiencing congestion. If so, resolve the congestion and check if the alarm clear.\nIf the alarm is not cleared, there is possibly an inconsistency with the provisioned data for the SS7 connections. Verify the consistency of the provisioned data on the local system and the remote system.\nIf the alarm is not cleared, contact your Nokia support representative. It is possible that there is data corruption which may require deleting and re-growing the SS7 connections or initializing the SS7 card		

Table 24-168 WmmLSS_cpiSS7FailSCTPFastRetransRate

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiSS7FailSCTPFastRetransRate (8036) Type: mmeAlarm Package: ltemme.WmmLSS_cpiSS7FailSCTPFastRetransRate Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates the SCTP Fast Retransmit Count on a given card, is in a high percentage of the total outgoing SCTP packet count. The SCTP Fast Retransmit Rate CPI (Component Performance Indicator), is calculated every 5 minutes.		
Remedial action: Check to see if the IP network is experiencing congestion. If so, resolve the congestion and check if the alarm clear.\nIf the alarm is not cleared, contact your Nokia support representative.		

Table 24-169 WmmLSS_cpiStopWarnMsgDeliveryS1MMEFailureRate

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiStopWarnMsgDeliveryS1MMEFailureRate (4250) Type: mmeAlarm Package: ltemme.WmmLSS_cpiStopWarnMsgDeliveryS1MMEFailureRate Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm LSS_cpiStopWarnMsgDeliveryS1MMEFailureRate indicates meeting a threshold of the Stop Warning Message Delivery S1MME Failure Rate CPI.		
Remedial action: Verify that the S1MME links are in-service/normal, using link_cli.\nVerify the operational status of the eNBs and that the eNBs are responding to messages over the S1MME link.\nContact your Nokia support representative to determine the status of the eNBs that are involved in the Stop Warning Message procedure.		

Table 24-170 WmmLSS_cpiStopWarnMsgDeliverySBcFailureRate

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiStopWarnMsgDeliverySBcFailureRate (4251) Type: mmeAlarm Package: ltemme.WmmLSS_cpiStopWarnMsgDeliverySBcFailureRate Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0

Table 24-170 WmmLSS_cpiStopWarnMsgDeliverySBcFailureRate (continued)

Alarm	Attributes	Applicable major release
Description: The raised alarm LSS_cpiStopWarnMsgDeliverySBcFailureRate indicates meeting a threshold of the Stop Warning Message Delivery SBc Failure Rate CPI.		
Remedial action: Verify that the SBC links are in-service/normal, using link_cli.\nVerify that the S1MME links are in-service/normal, using link_cli.\nVerify the operational status of the CBC.\nVerify the operational status of the eNBs and that the eNBs are responding to messages over the S1MME link.\nContact your Nokia support representative to determine the status of the CBC and eNBs that are involved in the Stop Warning Message procedure.		

Table 24-171 WmmLSS_cpiUECapacityUsage

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpiUECapacityUsage (4252) Type: mmeAlarm Package: ltemme.WmmLSS_cpiUECapacityUsage Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, cpiUECapacityUsage, indicates meeting a threshold of a UE capacity utilization rate on a per MAF service basis in the last 5 minutes.		
Remedial action: Check how many MAF services the MME has and consider to install more MAF services to increase the MME capacity.		

Table 24-172 WmmLSS_cpiWarnMsgDeliveryS1MMEFailureRate

Alarm	Attributes	Applicable major release
Name: WmmLSS_ cpiWarnMsgDeliveryS1MMEFailureRate (4253) Type: mmeAlarm Package: ltemme.WmmLSS_ cpiWarnMsgDeliveryS1MMEFailureRate Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm LSS_cpiWarnMsgDeliveryS1MMEFailureRate indicates meeting a threshold of the Warning Message Delivery S1MME Failure Rate CPI.		
Remedial action: Verify that the S1MME links are in-service/normal, using link_cli.\nVerify the operational status of the eNBs and that the eNBs are responding to messages over the S1MME link.\nContact your Nokia support representative to determine the status of the eNBs that are involved in the Write Replace Warning Message procedure.		

Table 24-173 WmmLSS_cpiWarnMsgDeliverySBcFailureRate

Alarm	Attributes	Applicable major release
Name: WmmLSS_ cpiWarnMsgDeliverySBcFailureRate (4254) Type: mmeAlarm Package: Itemme.WmmLSS_ cpiWarnMsgDeliverySBcFailureRate Raised on class: Itemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm LSS_cpiWarnMsgDeliverySBcFailureRate indicates meeting a threshold of the Warning Message Delivery SBc Failure Rate CPI.		
Remedial action: Verify that the SBC links are in-service/normal, using link_cli.\nVerify that the S1MME links are in-service/normal, using link_cli.\nVerify the operational status of the CBC.\nVerify the operational status of the eNBs and that the eNBs are responding to messages over the S1MME link.\nContact your Nokia support representative to determine the status of the CBC and eNBs that are involved in the Write Replace Warning Message procedure.		

Table 24-174 WmmLSS_cpuOverload

Alarm	Attributes	Applicable major release
Name: WmmLSS_cpuOverload (4255) Type: mmeAlarm Package: Itemme.WmmLSS_cpuOverload Raised on class: Itemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates that the CPU utilization on a service has exceeded the threshold. The overload could be caused by one or more of the following reasons: base overload, per-service quota restriction overload or thread level CPU overload. The 'Additional Info' field of the alarm report will list the contributing causes. When thread level CPU overload level changes, a corresponding profile report is also generated.		
Remedial action: Verify that no running debug or testing tool is running that uses a lot of CPU.\nIf CPU utilization regularly exceeds thresholds, investigate how the call traffic load can be reduced:\nReengineer so less traffic is directed to this office or card.\nIf your application supports higher-capacity cards, consider replacing them\nVerify if there are enough call servers, device servers, etc., to handle the expected load and add additional cards as appropriate.		

Table 24-175 WmmLSS_databaseConnectionLost

Alarm	Attributes	Applicable major release
Name: WmmLSS_databaseConnectionLost (4257) Type: mmeAlarm Package: ltemme.WmmLSS_databaseConnectionLost Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm can be displayed during the initiation of CNFG server (startFS or startCNFG), when the host_manager fails to connect to the database.		
Remedial action: Stop and restart the database using the following commands:\nstopFS\nsudo RCCmachoffine -u\nsudo RCCmachonline\nstartFS\nIf this alarm is fired from CDR host and not cleared, contact your Nokia support representative.		

Table 24-176 WmmLSS_databaseReplicationLinkDown

Alarm	Attributes	Applicable major release
Name: WmmLSS_databaseReplicationLinkDown (4258) Type: mmeAlarm Package: ltemme.WmmLSS_databaseReplicationLinkDown Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm will be displayed when a database replication link is down.		
Remedial action: The host on one end of the bad link should be brought gracefully offline and online. Any active services on the blade should be switched to the mate host prior to bring the host offline. When the host is back online check replications links using 'lss login, type dbcli -R'.		

Table 24-177 WmmLSS_databaseSizeExhausted

Alarm	Attributes	Applicable major release
Name: WmmLSS_databaseSizeExhausted (4259) Type: mmeAlarm Package: ltemme.WmmLSS_databaseSizeExhausted Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0

Table 24-177 WmmLSS_databaseSizeExhausted (continued)

Alarm	Attributes	Applicable major release
Description: This alarm is raised when a database approaches full capacity.		
Remedial action: If the alarm is a warning (84% full), the system impact on the specified database reaching capacity should be investigated. In some instances, a database at 84% capacity is acceptable. Contact your Nokia support representative for additional details.\nIf the alarm becomes Major (96% full), field support should be contacted. In most cases, steps to reduce the size of the database should be implemented. Contact your Nokia support representative to assist in the investigation to reduce the size of the impacted database.		

Table 24-178 WmmLSS_dataMismatch

Alarm	Attributes	Applicable major release
Name: WmmLSS_dataMismatch (4256) Type: mmeAlarm Package: ltemme.WmmLSS_dataMismatch Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: A data mismatch has been detected, which indicates that there has been an error in provisioning. The additionalText field of the event provides the details of the data mismatch.		
Remedial action: A data mismatch has been detected, which indicates that there has been an error in provisioning. The mismatch is most probably between the configurations of the SCTP profile and Interface profile and between the network interface types. Another probable cause is that provisioned for an interface do not match the IP addresses learned from the remote end in the SCTP INIT-ACK message. \nThis alarm must be manually cleared after the provisioned data is corrected.		

Table 24-179 WmmLSS_dbHighCpuUtilization

Alarm	Attributes	Applicable major release
Name: WmmLSS_dbHighCpuUtilization (4260) Type: mmeAlarm Package: ltemme.WmmLSS_dbHighCpuUtilization Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates very high CPU time usage by a database system process.		
Remedial action: The host and pid of the process are printed in the alarm. Monitor CPU usage of this pid and contact your Nokia support representative. This condition can generally be cleared by stopping and then starting RCC VM on the affected host.		

Table 24-180 WmmLSS_dbOffline

Alarm	Attributes	Applicable major release
Name: WmmLSS_dbOffline (4261) Type: mmeAlarm Package: ltemme.WmmLSS_dbOffline Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm will be displayed when the database is offline.		
Remedial action: Normally the alarm will be cleared automatically when Datablitz servers recover; If this alarm is not cleared, please contact your Nokia support representative.		

Table 24-181 WmmLSS_dbStatusUnexpected

Alarm	Attributes	Applicable major release
Name: WmmLSS_dbStatusUnexpected (4262) Type: mmeAlarm Package: ltemme.WmmLSS_dbStatusUnexpected Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm will be displayed when the DataBlitz database can not be accessed.		
Remedial action: Normally the alarm will be cleared automatically when Datablitz database(s) becomes accessible. If this alarm is not cleared, please contact your Nokia support representative.		

Table 24-182 WmmLSS_degradedResource

Alarm	Attributes	Applicable major release
Name: WmmLSS_degradedResource (4263) Type: mmeAlarm Package: ltemme.WmmLSS_degradedResource Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0

Table 24-182 WmmLSS_degradedResource (continued)

Alarm	Attributes	Applicable major release
Description: A Critical Application Resource (CAR) has reached a degraded condition that indicates some aspect of the switch is not performing as expected. The affected service member is indicated in the alarm by the PoolType, PoolId, and PoolMemberId.		
Remedial action: The root cause depends on the specific resource that is degraded.\nFrom the alarm, determine the service member that is degraded, as shown by the PoolType, PoolId, and PoolMemberId.\nOn the MI GUI, go to the Management Interface window. Under the appropriate shelf, click Service Members. In the Service Members window, right click the appropriate service member, and choose Display Degraded Critical Resources. A pop-up window will display the 'Resource name' for each resource that is causing the service member to be degraded.\nIn most cases, when a resource is degraded, the associated alarm will be firing.\nSee the entry for this alarm in the '9471 Mobility Management Entity Alarm Dictionary 418-111-208' for a list of resources and the associated alarms.		

Table 24-183 WmmLSS_degrow

Alarm	Attributes	Applicable major release
Name: WmmLSS_degrow (4264) Type: mmeAlarm Package: ltemme.WmmLSS_degrow Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: When performing SIM degrow procedure, failures that occur will result in the generation of DEGROW alarm.		
Remedial action: Based on the type of failure encountered, recovery actions may vary. If the DEGROW alarm is generated, contact your Nokia support representative. Once the failure is corrected, a resumption of the SIM procedures will automatically clear the alarm.		

Table 24-184 WmmLSS_deviceServerCxnLost

Alarm	Attributes	Applicable major release
Name: WmmLSS_deviceServerCxnLost (5077) Type: mmeAlarm Package: ltemme.WmmLSS_deviceServerCxnLost Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm is generated when the mate-to-mate connection is lost for some service instance pairs. The service instance pairs that this alarm applies to includes: AMMS, H248, IMS, and the MPH.		
Remedial action: The alarm clears automatically when the switch-over is completed.\nIf the alarm is not the result of a manual action, then the alarm will automatically clear within a minute. Customer Technical Support should be contacted if the alarm does not clear automatically.\nIf the alarm is the result of a manual action, such as taking a host out of service, then the alarm will clear when the host is manually placed back into service.		

Table 24-185 WmmLSS_diskGoingDown

Alarm	Attributes	Applicable major release
Name: WmmLSS_diskGoingDown (4265) Type: mmeAlarm Package: ltemme.WmmLSS_diskGoingDown Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates that the Smart Monitor Tool Set (smartmontools) has determined that the Disk Drive for this LCP Host is going down, and is predicting failure in the next 24 hours.		
Remedial action: Backup Recovery actions for this LCP Host should be immediately executed.\nContact your Nokia support representative immediately.		

Table 24-186 WmmLSS_diskMirrorFailure

Alarm	Attributes	Applicable major release
Name: WmmLSS_diskMirrorFailure (8394) Type: mmeAlarm Package: ltemme.WmmLSS_diskMirrorFailure Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm will be displayed when Disk Mirroring Setup for 2G/3G Charging Records fails.		
Remedial action: Reboot the OAM blade hosting the safcha service. Once the reboot has completed, switch the active safcha service back onto this blade. If the alarm persists, contact your Nokia support representative.		

Table 24-187 WmmLSS_diskSector

Alarm	Attributes	Applicable major release
Name: WmmLSS_diskSector (4266) Type: mmeAlarm Package: ltemme.WmmLSS_diskSector Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates that the Smart Monitor Tool Set (smartmontools) has determined that the Disk Drive for this LCP Host has a bad sector.		

Table 24-187 WmmLSS_diskSector (continued)

Alarm	Attributes	Applicable major release
Remedial action: The card reporting the problem should be replaced, following the card replacement procedures.		

Table 24-188 WmmLSS_dnsThreshold

Alarm	Attributes	Applicable major release
Name: WmmLSS_dnsThreshold (4267) Type: mmeAlarm Package: ltemme.WmmLSS_dnsThreshold Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates returned number of IP addresses in DNS query of diameter fully-qualified domain name (FQDN) exceeds its number threshold.		
Remedial action: Verify that destination FQDN is correctly provisioned on the GUI\nVerify that FQDN is correctly provisioned on the external DNS server(IP addresses count should be less than threshold value).		

Table 24-189 WmmLSS_ethernetError

Alarm	Attributes	Applicable major release
Name: WmmLSS_ethernetError (4268) Type: mmeAlarm Package: ltemme.WmmLSS_ethernetError Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: One of the two Ethernet Links on a Service Host has failed.		
Remedial action: Regardless of the cause of the Ethernet Link alarm, integrity software running on the affected Service Host should automatically initiate a switch to redundant hardware to ensure that the effects of the failure are minimized. The following recovery actions may, in fact, be automatically initiated:\nService Host switch, if multiple Ethernet Links are affected\nEthernet Link switch, if a single Active Ethernet Link is affected\nNone, if the hardware failure affects a Standby Ethernet Link\nThe reason for the failure needs to be understood and corrected. It is possible that the Service Host Ethernet Port failed, the cabling that interconnects the Ethernet Port to the network is cut, the Routers and/or Ethernet Switches that make up the SoftSwitch Network failed. Investigate each of these reasons and discount or correct. Once corrected, the alarm will be cleared.		

Table 24-190 WmmLSS_ethernetLinkDown

Alarm	Attributes	Applicable major release
Name: WmmLSS_ethernetLinkDown (4269) Type: mmeAlarm Package: ltemme.WmmLSS_ethernetLinkDown Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The redundant Ethernet link has gone down on one of the diskless hosts. A link switchover may have occurred to move communication for that host to the remaining link, which is now simplex.		
Remedial action: Determine if any related alarms are also present, such as on the ESC, chassis, or board itself. Correct those alarms first and see if this alarm clears as a result.\nOn CP 1000: Verify that the cable from the corresponding faceplate port to the external Ethernet router is connected and is good. Replace as necessary.\nOn other Nokia Products: Verify that the ESC corresponding to this link is operational by viewing its status at MI, and by telnet to the ESC card. Correct or replace ESC as necessary.\nOn 5400 LCP: Verify that the hub corresponding to this link is operational by viewing its status at MI, and by telnet to the Hub. Correct or replace Hub as necessary.\nOn CP 1000: Verify that the external Ethernet router is operational. Correct or replace as necessary.\nOn other Nokia Products: On the ESC verify that the Ethernet port corresponding to the card for this host is operational. Re-enable port as necessary.\nOn 5400 LCP: On the hub verify that the Ethernet port corresponding to the card for this host is operational. Re-enable port as necessary. Replace the card used for this host using the appropriate FRU procedure as necessary.\nOn CP 1000: Replace the card used for this host using the appropriate FRU procedure.\nIf the above steps do not clear the alarm, contact your Nokia support representative.		

Table 24-191 WmmLSS_excessiveExternalLinksDown

Alarm	Attributes	Applicable major release
Name: WmmLSS_excessiveExternalLinksDown (4807) Type: mmeAlarm Package: ltemme.WmmLSS_excessiveExternalLinksDown Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: An excessive number of links of a given type (e.g. s1mme, s11, etc.) are down. This is usually due to a network connectivity problem and not the individual links between the WMM and the external entity. Once this alarm is triggered the WMM will stop reporting alarms and status for links of the given type. Once the network problem is resolved and the number of links down is no longer excessive, this alarm will clear and the status of all links of the given type will be updated. This alarm is raised when at least 100 links of a given type are down. This alarm clears when 95 or fewer links are down.		
Remedial action: Determine that there are no errors within the IP network.\nIf the network entity data is provisioned on MME, verify the data is correct.\nVerify the network entity that MME fails to communicate with is in service.		

Table 24-192 WmmLSS_externalConnectivity

Alarm	Attributes	Applicable major release
Name: WmmLSS_externalConnectivity (4270) Type: mmeAlarm Package: ltemme.WmmLSS_externalConnectivity Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The system detected a problem or a state change to external connectivity.		
Remedial action: For INFO alarm, there is no action needed.\nFor MAJOR and CRITICAL alarm, verify the cable connections from both HUB cards to customer layer 2 switches, check if the cables are plugged properly.\nFor MAJOR and CRITIAL alarm, verify the port status on HUB cards, the port connect to the customer network should be in service.\nFor MAJOR and CRITIAL alarm, verify the individual Ethernet port status on the HUB card for the given host with the alarm.\nFor the CRITIAL alarm, verify connectivity to/from each of the IPs listed in the ARP list from the given host with the alarm.\nCheck the next hop reported as failing.\nContact your Nokia support representative for the correction procedure if previous steps do not correct it.		

Table 24-193 WmmLSS_externalLinkConfigurationLimit

Alarm	Attributes	Applicable major release
Name: WmmLSS_externalLinkConfigurationLimit (4410) Type: mmeAlarm Package: ltemme.WmmLSS_externalLinkConfigurationLimit Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The maximum number of links for a given link type has been reached. When this limit is reached, it is not possible to create any new links of the given link type. Every 15 minutes a check will be performed in an attempt to recover any links which have not been used or have been disabled due to lack of far-end response. A configurable parameter, TdynMO , is used to control the aging algorithm for link recovery.		
Remedial action: Wait at least TdynMO time interval to allow the system to recover inactive or disabled links.\nIf the system does not recover any links after TdynMO time interval, contact your Nokia support representative.		

Table 24-194 WmmLSS_externalLinkDown

Alarm	Attributes	Applicable major release
Name: WmmLSS_externalLinkDown (4271) Type: mmeAlarm Package: ltemme.WmmLSS_externalLinkDown Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: Communication between WMM and another network entity can not be established.		
Remedial action: Verify the network entity that WMM fails to communicate with is in service.\nDetermine that there are no errors within the IP network.\nIf the network entity data is provisioned on WMM, verify the data is correct.\nIf multiple links that terminate on the MIF (X1_1 or X2) are down, try switching MIF to hot-standby mate.\nIf multiple links that terminate on the MPH (non-X1_1 and non-X2) are down, try switching MPH to hot-standby mate.		

Table 24-195 WmmLSS_failedAttachReqsRateExceeded

Alarm	Attributes	Applicable major release
Name: WmmLSS_failedAttachReqsRateExceeded (4272) Type: mmeAlarm Package: ltemme.WmmLSS_ failedAttachReqsRateExceeded Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_failedAttachReqsRateExceeded, indicates the value of the VS.cpiAttachFailures measurement, monitored when failure Attach request CPI exceeded a threshold in the last 15 minute interval. This value computes the failure rate for the UE Attach procedure, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions		
Remedial action: Verify that the eNB, HSS and SGW links are in-service/normal, using the link_cli command.\nIf the links look normal, and the alarm persists, contact your Nokia support representative.		

Table 24-196 WmmLSS_failedAuthRequestsHSSRateExceeded

Alarm	Attributes	Applicable major release
Name: WmmLSS_ failedAuthRequestsHSSRateExceeded (4273) Type: mmeAlarm Package: ltemme.WmmLSS_ failedAuthRequestsHSSRateExceeded Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_failedAuthRequestsHSSRateExceeded, indicates the value of VS.cpiHSSauthFailures measurement, monitored when HSS failed Authentication requests exceeded a threshold in the last 15 minute interval. This value computes the failure rate for the Authentication procedure between the MME and the HSS, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions		
Remedial action: Clearance options include:\nEnsure communication between the MME and HSS (ping)\nIf the HSS (S6a) link looks normal (using the link_cli command), and alarm persists, contact your Nokia support representative.		

Table 24-197 WmmLSS_failedAuthRequestsUERateExceeded

Alarm	Attributes	Applicable major release
Name: WmmLSS_ failedAuthRequestsUERateExceeded (4274) Type: mmeAlarm Package: ltemme.WmmLSS_ failedAuthRequestsUERateExceeded Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_failedAuthRequestsUERateExceeded, indicates the value of VS.cpiUEauthFailures measurement, monitored when UE failed Authentication requests exceeded a threshold in the last 15 minute interval. This value computes the failure rate for the Authentication procedure between the MME and the UE and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Verify HSS and UE authentication data, using ueadmin_cli.\nIf the authentication data looks good, and the alarm persists, contact your Nokia support representative.		

Table 24-198 WmmLSS_failedCrDedBearerReqsRateExceeded

Alarm	Attributes	Applicable major release
Name: WmmLSS_ failedCrDedBearerReqsRateExceeded (4275) Type: mmeAlarm Package: ltemme.WmmLSS_ failedCrDedBearerReqsRateExceeded Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_failedCrDedBearerReqsRateExceeded, indicates the value of VS. cpiCreateDedicatedBearerFailures measurement, monitored when failure on Create Dedicated Bearer request exceeded a threshold in the last 15 minute interval. This value computes the failure rate for the Create Dedicated Bearer procedure, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Contact your Nokia support representative.		

Table 24-199 WmmLSS_failedDeactDedBearerReqsRateExceeded

Alarm	Attributes	Applicable major release
Name: WmmLSS_ failedDeactDedBearerReqsRateExceeded (4276) Type: mmeAlarm Package: ltemme.WmmLSS_ failedDeactDedBearerReqsRateExceeded Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_failedDeactDedBearerReqsRateExceeded, indicates the value of VS. cpiDeactivateDedBearerFailures measurement, monitored when failure on Deactivate Dedicated Bearer request exceeded a threshold in the last 15 minute interval. This value computes the failure rate for the Deactivate Dedicated Bearer procedure, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Contact your Nokia support representative.		

Table 24-200 WmmLSS_failedHRPDhandoverRateExceeded

Alarm	Attributes	Applicable major release
Name: WmmLSS_failedHRPDhandoverRateExceeded (4277) Type: mmeAlarm Package: ltemme.WmmLSS_ failedHRPDhandoverRateExceeded Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_failedHRPDhandoverRateExceeded, indicates the value of VS.cpiHRPDHoFailures measurement, monitored when failure on a HRPD Handover request exceeded a threshold in the last 15 minute interval. This value computes the failure rate for the Handover to HRPD procedure , and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Look at all the failure counters for the Handover to HRPD procedure in the PMC XML files to determine if one failure cause predominates. If one is found, check User Documentation for any remedies specific to the found cause.		

Table 24-201 WmmLSS_failedMobileTermLocRequestRateExceeded

Alarm	Attributes	Applicable major release
Name: WmmLSS_ failedMobileTermLocRequestRateExceeded (4278) Type: mmeAlarm Package: ltemme.WmmLSS_ failedMobileTermLocRequestRateExceeded Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm LSS_failedMobileTermLocRequestRateExceeded indicates meeting a threshold of the Mobile Termination Location Request Failure CPI.		
Remedial action: Verify that the S1-MME and SLs links are in-service/normal, using link_cli.\nRefer to the Location Based Services failure counters to get a more specific failure reason.\nContact your Nokia support representative to determine the status of the SMLC that are involved in the LCS procedure.		

Table 24-202 WmmLSS_failedNetwrkInducedLocRequestRateExceeded

Alarm	Attributes	Applicable major release
Name: WmmLSS_ failedNetwrkInducedLocRequestRateExceeded (4279) Type: mmeAlarm Package: ltemme.WmmLSS_ failedNetwrkInducedLocRequestRateExceeded Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm LSS_failedNetwrkInducedLocRequestRateExceeded indicates meeting a threshold of the Network Induced Location Request Failure CPI.		
Remedial action: Verify that the S1-MME and SLs links are in-service/normal, using link_cli.\nRefer to the Location Based Services failure counters to get a more specific failure reason.\nContact your Nokia support representative to determine the status of the SMLC that are involved in the LCS procedure.		

Table 24-203 WmmLSS_failedNumHOFwdRelocRateExceeded

Alarm	Attributes	Applicable major release
Name: WmmLSS_ failedNumHOFwdRelocRateExceeded (4280) Type: mmeAlarm Package: ltemme.WmmLSS_ failedNumHOFwdRelocRateExceeded Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_failedNumHOFwdRelocRateExceeded, indicates the value of VS.cpiHOwMMErelocFailures_ atTarget measurement, monitored when failure on Handover request, with MME forward relocation, exceeded a threshold in the last 15 minute interval. This value computes the failure rate at the Target MME for the Handover procedure with MME relocation, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Look at all the failure counters for the Handover procedure with MME relocation (at the Target MME) in the PMC XML files to determine if one failure cause predominates. If one is found, check User Documentation for any remedies specific to the found cause.		

Table 24-204 WmmLSS_failedNumHOPathSwNewSgwRateExceeded

Alarm	Attributes	Applicable major release
Name: WmmLSS_ failedNumHOPathSwNewSgwRateExceeded (4281) Type: mmeAlarm Package: ltemme.WmmLSS_ failedNumHOPathSwNewSgwRateExceeded Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_failedNumHOPathSwNewSgwRateExceeded, indicates the value of VS.cpiHOwSGWrelocFailures measurement, monitored when failure on Handover Path Switch request, to a different Serving Gateway, exceeded a threshold in the last 15 minute interval. This value computes the failure rate for the Handover procedure without MME relocation and with SGW relocation, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Look at all the failure counters for the Handover procedure without MME relocation and with SGW relocation in the PMC XML files to determine if one failure cause predominates. If one is found, check User Documentation for any remedies specific to the found cause.		

Table 24-205 WmmLSS_failedNumHOPathSwSameSgwRateExceeded

Alarm	Attributes	Applicable major release
Name: WmmLSS_ failedNumHOPathSwSameSgwRateExceeded (4282) Type: mmeAlarm Package: ltemme.WmmLSS_ failedNumHOPathSwSameSgwRateExceeded Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_failedNumHOPathSwSameSgwRateExceeded, indicates the value of VS.cpiHOwNoRelocFailures measurement, monitored when failure on Handover Path Switch request, to same Serving Gateway, exceeded a threshold in the last 15 minute interval. This value computes the failure rate for the Handover procedure without MME relocation and without SGW relocation, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Contact your Nokia support representative.		

Table 24-206 WmmLSS_failedNumHORequiredRateExceeded

Alarm	Attributes	Applicable major release
Name: WmmLSS_ failedNumHORequiredRateExceeded (4283) Type: mmeAlarm Package: ltemme.WmmLSS_ failedNumHORequiredRateExceeded Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_failedNumHORequiredRateExceeded, indicates the value of VS.cpiHOwMMErelocFailures_ atSource measurement, monitored when failure on Handover request, with MME relocation, exceeded a threshold in the last 15 minute interval. This value computes the failure rate at the source MME for the Handover procedure with MME relocation, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Look at all the failure counters for the Handover procedure with MME relocation (at the Source MME) in the PMC XML files to determine if one failure cause predominates. If one is found, check User Documentation for any remedies specific to the found cause.		

Table 24-207 WmmLSS_failedS1MMEconnEstRateExceeded

Alarm	Attributes	Applicable major release
Name: WmmLSS_ failedS1MMEconnEstRateExceeded (4284) Type: mmeAlarm Package: ltemme.WmmLSS_ failedS1MMEconnEstRateExceeded Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_failedS1MMEconnEstRateExceeded, indicates the value of VS.cpiS1MMEconnFailures measurement, monitored when failed S1MME Connect request exceeded a threshold in the last 15 minute interval. This value computes the failure rate for the eNB connection over S1-MME, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Verify PLMN or TAI provisioning data, via the MME provisioning GUI. After validation of the data, if the problem persists, contact your Nokia support representative.		

Table 24-208 WmmLSS_failedServiceReqsRateExceeded

Alarm	Attributes	Applicable major release
Name: WmmLSS_failedServiceReqsRateExceeded (4285) Type: mmeAlarm Package: ltemme.WmmLSS_ failedServiceReqsRateExceeded Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_failedServiceReqsRateExceeded, indicates the value of cpiServiceRequestFailures measurement, monitored when failure on Service request exceeded a threshold in the last 15 minute interval. This value computes the failure rate for the UE Service Request procedure, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Ensure the S11 links to the SGW are normal, using the link_cli command. If the links look normal, and the alarm persists, contact your Nokia support representative.		

Table 24-209 WmmLSS_failedTAURateExceeded

Alarm	Attributes	Applicable major release
Name: WmmLSS_failedTAURateExceeded (4286) Type: mmeAlarm Package: ltemme.WmmLSS_failedTAURateExceeded Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_failedTAURateExceeded, indicates the value of VS.cpiTauFailures measurement, monitored when failure on Tracking Area Update request exceeded a threshold in the last 15 minute interval. This value computes the failure rate for the TAU procedure, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Contact your Nokia support representative.		

Table 24-210 WmmLSS_failedUpdBearerReqsRateExceeded

Alarm	Attributes	Applicable major release
Name: WmmLSS_ failedUpdBearerReqsRateExceeded (4287) Type: mmeAlarm Package: ltemme.WmmLSS_ failedUpdBearerReqsRateExceeded Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_failedUpdBearerReqsRateExceeded, indicates the value of cpiUpdateBearerFailures measurement, monitored when failure on Update Bearer request exceeded a threshold in the last 15 minute interval. This value computes the failure rate for the Update Bearer procedure, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Ensure S11 links are normal, using the link_cli command. If the links are normal, and the alarm persists, contact your Nokia support representative.		

Table 24-211 WmmLSS_failedUpdDedBearerReqsRateExceeded

Alarm	Attributes	Applicable major release
Name: WmmLSS_ failedUpdDedBearerReqsRateExceeded (4288) Type: mmeAlarm Package: ltemme.WmmLSS_ failedUpdDedBearerReqsRateExceeded Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_failedUpdDedBearerReqsRateExceeded, indicates the value of VS. cpiUpdateDedicatedBearerFailures measurement, monitored when failure on Update Dedicated Bearer request exceeded a threshold in the last 15 minute interval. This value computes the failure rate for the Update Dedicated Bearer procedure, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Verify that S11 links are normal, using the link_cli command. If links are normal, and the alarm persists, contact your Nokia support representative.		

Table 24-212 WmmLSS_fru

Alarm	Attributes	Applicable major release
Name: WmmLSS_fru (4289) Type: mmeAlarm Package: ltemme.WmmLSS_fru Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: When performing SIM fru procedure, failures that occur will result in the generation of FRU alarm.		
Remedial action: Based on the type of failure encountered, recovery actions may vary. If the FRU alarm is generated, contact your Nokia support representative. Once the failure is corrected, a resumption of the SIM procedures will automatically clear the alarm.		

Table 24-213 WmmLSS_ggsnDnsError

Alarm	Attributes	Applicable major release
Name: WmmLSS_ggsnDnsError (4290) Type: mmeAlarm Package: ltemme.WmmLSS_ggsnDnsError Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: GGSN DNS Selection unable to retrieve IP Address. This alarm must be manually cleared.		
Remedial action: Verify that the GGSN IP Address is provisioned correctly on DNS server.\nManually clear the alarm.		

Table 24-214 WmmLSS_grow

Alarm	Attributes	Applicable major release
Name: WmmLSS_grow (4291) Type: mmeAlarm Package: ltemme.WmmLSS_grow Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: When performing SIM grow procedure, failures that occur will result in the generation of GROW alarm.		

Table 24-214 WmmLSS_grow (continued)

Alarm	Attributes	Applicable major release
Remedial action: Based on the type of failure encountered, recovery actions may vary. If the GROW alarm is generated, contact your Nokia support representative. Once the failure is corrected, a resumption of the SIM procedures will automatically clear the alarm.		

Table 24-215 WmmLSS_hostDown

Alarm	Attributes	Applicable major release
Name: WmmLSS_hostDown (4292) Type: mmeAlarm Package: ltemme.WmmLSS_hostDown Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: A Service Host abnormally transitioned to an out-of-service state. (Note, this alarm will only be generated if the mate Service Host is in-service.)		
Remedial action: In general, the first few occurrences of the abnormal termination is automatically recovered by integrity software on the Service Host, in which case no manual action is necessary. When automatic recovery occurs the alarm clears automatically as well. However, if the unexpected event causing the abnormal termination occurs at a frequent enough rate, the Service Host can be left in a permanent Unavailable state. If in this state the alarm will not be cleared automatically and manual action is necessary to restore the Service Host. Bringing a Service Host software back to an In-Service state can be initiated from the MI.\nUltimately, the reason for the abnormal termination needs to be determined and a fix provided. Fortunately, debugging output is sent to the MI Log File and core files are typically generated when these conditions occur. To aid Nokia support in providing a fix, the storage of the MI Log File and the collection of any core files at the time the error occurred should be done and made available. The location of generated core files is /var/core on the Service host that experienced the abnormal termination.		

Table 24-216 WmmLSS_hostReset

Alarm	Attributes	Applicable major release
Name: WmmLSS_hostReset (8395) Type: mmeAlarm Package: ltemme.WmmLSS_hostReset Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The Redundancy Manager is requesting a host reset. This will occur when one or more services on a host do not initialize properly and local recovery attempts have been unsuccessful.		
Remedial action: No manual action is needed for this alarm. It will be cleared automatically when services start to initialize.		

Table 24-217 WmmLSS_internalCommunicationFailure

Alarm	Attributes	Applicable major release
Name: WmmLSS_internalCommunicationFailure (4293) Type: mmeAlarm Package: ltemme.WmmLSS_ internalCommunicationFailure Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: Communication between active MIF member and active MAF/SAF member failed or communications between active MIF member and active MPH member failed.		
Remedial action: Verfiy MPH, MIF and/or MAF have not been forced out-of-service.\nIf communication is lost between the MPH and the MIF and it does not come back automatically, and MPH pool is in Active / Hot-standby state, try switching MPH to the standby member.\nIf communication is lost between the MAF and the MIF and it does not come back automatically, and MAF pool is in Active / Hot-standby state, try switching MAF to the standby member.\nIf communication is lost between the MIF and MPH and the MIF and MAFs and it does not come back automatically, and MIF pool is in Active / Hot-standby state, try switching MIF to the standby member.		

Table 24-218 WmmLSS_ippuBusError

Alarm	Attributes	Applicable major release
Name: WmmLSS_ippuBusError (4294) Type: mmeAlarm Package: ltemme.WmmLSS_ippuBusError Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: There is a bus error on the indicated host between the HSPP4 hardware (iPPU) in the AMC slot and the host hardware.		
Remedial action: Determine if any related alarms are also present, such as on the ESC, chassis, or board itself. Correct those alarms first and see if this alarm clears as a result.\nOn 9471 WMM: Utilize ippu_cli to print the status of the board on the OAM host.\nOn 9471 WMM: Verify the appropriate FRUID via shelf manager is present in the given ShelfId CardId.\nOn 9471 WMM: Visually verify HSPP4 hardware is present in the AMC slot of the alarm indicated with a ShelfId and cardId.\nOn 9471 WMM: On the Shelf Manager, verify the shelf and card in the alarm has an HSPP4 iPPU in the AMC slot. If HSPP4 is not detected, attempt to powercycle the card.\nOn 9471 WMM: On the Shelf Manager, verify the shelf and card in the alarm has an HSPP4 iPPU in the AMC slot. If HSPP4 is not detected, attempt to re-seat the card in the alarm by ShelfId and CardId.\nOn 9471 WMM: On the Shelf Manager, verify the shelf and card in the alarm has an HSPP4 iPPU in the AMC slot. If HSPP4 is not detected, replace the card used for this host using the appropriate FRU procedure as necessary.\nOn 9471 WMM: Attempt to reset the entire host (ShelfId/CardId) via appropriate CLI or MI. Before attempting this action, verify that there is an ACTIVE or STANDBY mate present in the system.\nIf the above steps do not clear the alarm, contact your Nokia support representative.		

Table 24-219 WmmLSS_ippuDegraded

Alarm	Attributes	Applicable major release
Name: WmmLSS_ippuDegraded (8049) Type: mmeAlarm Package: ltemme.WmmLSS_ippuDegraded Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm will be displayed when the IPPU is either not working or incorrectly configured.		
Remedial action: Reboot the MAF blade hosting the IPPU. If the alarm persists after 30 minutes, contact your Nokia support representative.		

Table 24-220 WmmLSS_ippuResourceReset

Alarm	Attributes	Applicable major release
Name: WmmLSS_ippuResourceReset (4295) Type: mmeAlarm Package: ltemme.WmmLSS_ippuResourceReset Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: There was a software reset on the iPPU in the HSPP4 AMC or a restart by the PMB process in the host identified by ShelfId and CardId.		
Remedial action: Determine if any related alarms are present. Correct those alarms first and see if this alarm clears as a result.\nOn 9471 WMM: Utilize ippu_cli to print the status of the board on the OAM host.\nOn 9471 WMM: Before attempting this action, verify that there is an ACTIVE or STANDBY mate present in the system. Attempt to reset the entire card (shelf/slot) via appropriate CLI interface or MI.\nIf the above steps do not clear the alarm, contact your Nokia support representative.		

Table 24-221 WmmLSS_laiFqdnError

Alarm	Attributes	Applicable major release
Name: WmmLSS_laiFqdnError (8396) Type: mmeAlarm Package: ltemme.WmmLSS_laiFqdnError Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason	Release: • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: MME DNS Selection unable to retrieve SGW IP Address associated with FQDN. this alarm must be manually cleared.		
Remedial action: Verify that the FQDN is provisioned correctly in DNS server.\nManually clear the alarm.		

Table 24-222 WmmLSS_liNearingCapacityLimit

Alarm	Attributes	Applicable major release
Name: WmmLSS_liNearingCapacityLimit (4296) Type: mmeAlarm Package: Itemme.WmmLSS_liNearingCapacityLimit Raised on class: Itemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The number of lawful interceptions has reached 80% of MAF/SAF capacity.		
Remedial action: Use the query option of the li_target_cli command to verify that the appropriate set of UEs are selected for lawful interception.		

Table 24-223 WmmLSS_logRotateThreshold

Alarm	Attributes	Applicable major release
Name: WmmLSS_logRotateThreshold (10265) Type: mmeAlarm Package: Itemme.WmmLSS_logRotateThreshold Raised on class: Itemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason	Release: • 10.0.0 • 10.1.0
Description: A log file has exceeded the number of rotations that are expected. The name of the log file can be identified in the message field of the alarm. The log rotate threshold(normally 75%, such as 3 log rotate times reached while the total log rotate times is 4).		
Remedial action: If this alarm generated, customer need to pull/move the logs to their own server to avoid the log is overwritten as the rotate threshold reached.\nThis alarm must be manually cleared from the MI GUI or alarm_cli once the number of logs have been reduced to be below the log rotate threshold.\nIf the problem persists, contact your Nokia support representative.		

Table 24-224 WmmLSS_lostOfSDP

Alarm	Attributes	Applicable major release
Name: WmmLSS_lostOfSDP (5152) Type: mmeAlarm Package: Itemme.WmmLSS_lostOfSDP Raised on class: Itemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: SDP is operationally down.		
Remedial action: Check SDP configuration. Use sdp-ping to check accessibility far-end.\nManually clear the alarm.		

Table 24-225 WmmLSS_lostOfSpokeSDP

Alarm	Attributes	Applicable major release
Name: WmmLSS_lostOfSpokeSDP (5153) Type: mmeAlarm Package: ltemme.WmmLSS_lostOfSpokeSDP Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: Spoke-SDP is operationally down.		
Remedial action: Check ingress and egress label mapping.\nManually clear the alarm.		

Table 24-226 WmmLSS_maxDurationExpiredOnHRPDhandover

Alarm	Attributes	Applicable major release
Name: WmmLSS_ maxDurationExpiredOnHRPDhandover (4297) Type: mmeAlarm Package: ltemme.WmmLSS_ maxDurationExpiredOnHRPDhandover Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_maxDurationExpiredOnHRPDhandover, indicates the value of VS.cpiMaxDurationHRPDhandover measurement, monitored when timed out on HRPD handover request exceeded a threshold in the last 15 minute interval. This value is the maximum time taken to perform a Handover to HRPD.		
Remedial action: Check the network routers for possible network delay. When the MME is programmed to include internal delay measurements, check these PMC values.		

Table 24-227 WmmLSS_memoryOverload

Alarm	Attributes	Applicable major release
Name: WmmLSS_memoryOverload (4298) Type: mmeAlarm Package: ltemme.WmmLSS_memoryOverload Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0

Table 24-227 WmmLSS_memoryOverload (continued)

Alarm	Attributes	Applicable major release
Description: This alarm indicates the memory utilization on a diskless service has exceeded a threshold or a memory allocation failure has occurred. The current default thresholds are: Minor - 80, Major - 85, Critical - 90.		
Remedial action: If memory usage regularly exceeds thresholds, investigate how the call traffic load can be reduced.\nIf it does not clear after step 1, contact your Nokia support representative to check if there is a memory leak occurring.		

Table 24-228 WmmLSS_mmeDnsError

Alarm	Attributes	Applicable major release
Name: WmmLSS_mmeDnsError (4299) Type: mmeAlarm Package: ltemme.WmmLSS_mmeDnsError Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: MME DNS Selection unable to retrieve MME IP Address associated with FQDN. This alarm must be manually cleared.		
Remedial action: Verify that the FQDN is provisioned correctly in DNS server.\nManually clear the alarm.		

Table 24-229 WmmLSS_msThreshold

Alarm	Attributes	Applicable major release
Name: WmmLSS_msThreshold (4411) Type: mmeAlarm Package: ltemme.WmmLSS_msThreshold Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: Number of attached MS or UE threshold reached		
Remedial action: If the problem persists, contact your Nokia support representative.		

Table 24-230 WmmLSS_nonCompliantFaultGroupMemberState

Alarm	Attributes	Applicable major release
Name: WmmLSS_ nonCompliantFaultGroupMemberState (8397) Type: mmeAlarm Package: ltemme.WmmLSS_ nonCompliantFaultGroupMemberState Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates that a service member of a Fault Group is not in the same state as the rest of the members of that Fault Group. Because of that the Fault Group may become locked. If not corrected this can lead to issues with switching over services in that Fault Group.		
Remedial action: REM will attempt to correct the situation itself. If REM is unable to correct the situation Technical Support will need to be contacted for further analysis.		

Table 24-231 WmmLSS_noResetAckReceived

Alarm	Attributes	Applicable major release
Name: WmmLSS_noResetAckReceived (4305) Type: mmeAlarm Package: ltemme.WmmLSS_noResetAckReceived Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: No RESET ACKNOWLEDGEMENT message was received from the RNC after the WMM has sent and resent a RESET message.		
Remedial action: Verify the RNC that WMM fails to get the message from with is in service.\nDetermine that there are no errors within the IP network.		

Table 24-232 WmmLSS_nseBandwidthThreshold

Alarm	Attributes	Applicable major release
Name: WmmLSS_nseBandwidthThreshold (4412) Type: mmeAlarm Package: ltemme.WmmLSS_nseBandwidthThreshold Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: NSE bandwidth threshold reached		

Table 24-232 WmmLSS_nseBandwidthThreshold (continued)

Alarm	Attributes	Applicable major release
Remedial action: Analyze the operation context of the alarm. Determine if this alarm is structural or conjectural.\nAnalyze the figures reported by the observation counters to evaluate how quick the NSE bandwidth has increased.Depending on the result of the investigations:\nIf the NSE bandwidth remains over this threshold most of the time, and if alarm with major severity also appears, upgrade of the SGSN configuration must be performed. Please contact your Nokia support representative.		

Table 24-233 WmmLSS_numberOfTuplesInUse

Alarm	Attributes	Applicable major release
Name: WmmLSS_numberOfTuplesInUse (4309) Type: mmeAlarm Package: Itemme.WmmLSS_numberOfTuplesInUse Raised on class: Itemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm LSS_numberOfTuplesInUse indicates that the number of tuples currently in use in a DA (data access) table used to store dynamic database information, has reached a threshold. The DA table in question is specified in the 'Resource'. The threshold is indicated in the 'Additional Information'.		
Remedial action: Contact your Nokia support representative.		

Table 24-234 WmmLSS_numTOS10gtpcRateExceeded

Alarm	Attributes	Applicable major release
Name: WmmLSS_numTOS10gtpcRateExceeded (4306) Type: mmeAlarm Package: Itemme.WmmLSS_numTOS10gtpcRateExceeded Raised on class: Itemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_numTOS10gtpcRateExceeded, indicates the value of VS.cpiGTPcResponseTO_S10 measurement, monitored when missing replies to S10(gtpc) request exceeded a threshold in the last 15 minute interval. This value computes the cpiage of Response messages that are not received over S10, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Check the network routers for any problems. Check to determine if any other MME elements are having problems.		

Table 24-235 WmmLSS_numTOS11gtpcRateExceeded

Alarm	Attributes	Applicable major release
Name: WmmLSS_numTOS11gtpcRateExceeded (4307) Type: mmeAlarm Package: ltemme.WmmLSS_ numTOS11gtpcRateExceeded Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_numTOS11gtpcRateExceeded, indicates the value of VS.cpiGTPcResponseTO_S11 measurement, monitored when missing replies to S11(gtpc) request exceeded a threshold in the last 15 minute interval. This value computes the cpiage of Response messages that are not received over S11, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Verify that S11 links are normal, using the link_cli command. If links are normal, and the alarm persists, contact your Nokia support representative.		

Table 24-236 WmmLSS_numTOS3gtpcRateExceeded

Alarm	Attributes	Applicable major release
Name: WmmLSS_numTOS3gtpcRateExceeded (4308) Type: mmeAlarm Package: ltemme.WmmLSS_ numTOS3gtpcRateExceeded Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm, LSS_numTOS3gtpcRateExceeded, indicates the value of VS.numTOS3gtpcRateExceeded measurement, monitored when missing replies to S3(gtpc) request exceeded a threshold in the last 5 minute interval. This value computes the percentage of Response messages that are not received over S3, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Verify that S3 links are normal, using the link_cli command. If links are normal, and the alarm persists, contact your Nokia support representative.		

Table 24-237 WmmLSS_osSecInfoModificationDetected

Alarm	Attributes	Applicable major release
Name: WmmLSS_osSecInfoModificationDetected (4310) Type: mmeAlarm Package: ltemme.WmmLSS_osSecInfoModificationDetected Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates that an unexpected modification on the security information of a host operating system has been detected by the security audit program.		
Remedial action: Access MI GUI for the detailed information of this security alarm.\nInvestigate the problematic file identified in the additionalText string. Correct any errors found during the investigation the problem. Contact your Nokia support representative as needed.\nOnce the error has been corrected, clear the alarm from the MI GUI.		

Table 24-238 WmmLSS_osSecInformationMissing

Alarm	Attributes	Applicable major release
Name: WmmLSS_osSecInformationMissing (4311) Type: mmeAlarm Package: ltemme.WmmLSS_osSecInformationMissing Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates that the security information Golden copy of a host operating system has been deleted. The Golden copy is the initial snapshot of the host operating system, which is used by the security audit program to identify possible security violations of the host operating system.		
Remedial action: Access MI GUI for the detailed information of this security alarm.\nInvestigate the problematic file identified in the additionalText string. Correct the problem by performing a Security Audit on this host from MI GUI to re-create the Golden copy. Contact your Nokia support representative as needed.\nOnce the error has been corrected, clear the alarm from MI GUI.		

Table 24-239 WmmLSS_osSecUnexpectedInformation

Alarm	Attributes	Applicable major release
Name: WmmLSS_osSecUnexpectedInformation (4312) Type: mmeAlarm Package: ltemme.WmmLSS_osSecUnexpectedInformation Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates that security audit program has detected an unexpected program currently running on a host.		
Remedial action: First access MI GUI for the detailed information about this security alarm. Investigation is needed to find out how the offending service/program got installed. The alarm can be manually cleared after removing the service/program and verifying the system integrity.		

Table 24-240 WmmLSS_patch

Alarm	Attributes	Applicable major release
Name: WmmLSS_patch (4313) Type: mmeAlarm Package: ltemme.WmmLSS_patch Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0
Description: When performing SIM patch procedure, failures that occur will result in the generation of PATCH alarm.		
Remedial action: Based on the type of failure encountered, recovery actions may vary. If the PATCH alarm is generated, contact your Nokia support representative. Once the failure is corrected, a resumption of the SIM procedures will automatically clear the alarm.		

Table 24-241 WmmLSS_pathAvailability

Alarm	Attributes	Applicable major release
Name: WmmLSS_pathAvailability (4314) Type: mmeAlarm Package: ltemme.WmmLSS_pathAvailability Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0

Table 24-241 WmmLSS_pathAvailability (continued)

Alarm	Attributes	Applicable major release
Description: This alarm is raised when SCTP path becomes unavailable. The local and remote provisioned addresses need to be checked for use of the correct 2 sub-networks provided. If the provisioned addresses match the 2 physical subnets, and if all address provisioned are also correct, then the physical network that carries the subnet used in the path 'unavailable' alarm needs to be investigated for trouble. The specifics of the path are documented in the 'additionalText' field of the alarm. These alarms may need to be cleared manually: as alarms are reported when path connectivity is established, however their contents are a function of provisioned addresses (paths) that may be wrong and changed when the connection is down, and may no longer match with the path that was originally alarmed.		
Remedial action: Verify that the endpoints IP addresses on the MME are the remote entity are provisioned correctly.\nVerify that the network between the MME and the remote entity is functioning correctly.		

Table 24-242 WmmLSS_pdpThreshold

Alarm	Attributes	Applicable major release
Name: WmmLSS_pdpThreshold (4413) Type: mmeAlarm Package: ltemme.WmmLSS_pdpThreshold Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: Number of activated PDP context threshold reached.		
Remedial action: Analyze the operation context of the alarm. Determine if this alarm is structural or conjectural.\nAnalyze the observation counters values to evaluate how quick the number of activated PDP contexts has increased. Depending on the result of the investigations:\nIf the activated PDP contexts overload corresponds to a specific peak, you don't need to perform any upgrade of the SGSN. If alarm LSS_pdpThreshold is present as major, the activated PDP contexts overload is constant. There is a gap between the demand of PS services and the SGSN processing capacity. You need to upgrade the SGSN configuration. Please contact your Nokia support representative.		

Table 24-243 WmmLSS_pgwDnsError

Alarm	Attributes	Applicable major release
Name: WmmLSS_pgwDnsError (4315) Type: mmeAlarm Package: ltemme.WmmLSS_pgwDnsError Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: MME DNS Selection unable to retrieve PGW IP Address associated with FQDN. This alarm must be manually cleared.		

Table 24-243 WmmLSS_pgwDnsError (continued)

Alarm	Attributes	Applicable major release
Remedial action: Verify that the FQDN is provisioned correctly in DNS server.\nManually clear the alarm.		

Table 24-244 WmmLSS_pktCorruptionDetectedViaRCCLANCheck

Alarm	Attributes	Applicable major release
Name: WmmLSS_ pktCorruptionDetectedViaRCCLANCheck (4316) Type: mmeAlarm Package: ltemme.WmmLSS_ pktCorruptionDetectedViaRCCLANCheck Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The LANCHECK audit has identified corrupted packets being transmitted through the network.		
Remedial action: The reason for the data corruption needs to be understood and corrected. It is possible that the Service Host Ethernet Port failed, the cabling that interconnects the Ethernet Port to the network is damaged, the Routers and/or Ethernet Switches that make up the SoftSwitch Network failed. Investigate each of these reasons and discount or correct. Once corrected, the alarm will be cleared.		

Table 24-245 WmmLSS_platformCommandFailure

Alarm	Attributes	Applicable major release
Name: WmmLSS_platformCommandFailure (4317) Type: mmeAlarm Package: ltemme.WmmLSS_platformCommandFailure Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates that a linux command started via crond has failed to execute on a host.		
Remedial action: Access MI GUI for the detailed information of this security alarm.\nInvestigate the specific offending file identified in additionalText string and correct the problem. Contact your Nokia support representative as needed.\nOnce the file has been corrected, clear the alarm from the MI GUI.		

Table 24-246 WmmLSS_pmDataNotCollected

Alarm	Attributes	Applicable major release
Name: WmmLSS_pmDataNotCollected (4318) Type: mmeAlarm Package: ltemme.WmmLSS_pmDataNotCollected Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised alarm LSS_pmDataNotCollected indicates that the PM process on CNFG card could not receive PM data from a service in a interval(5 minutes).		
Remedial action: Check if the card is in the network congestion status. if it could not be pinged through, please restart the card.\nCheck if the card is in the init status. if yes, please wait for a while.\nIf the above steps do not correct the problem, contact your Nokia support representative.		

Table 24-247 WmmLSS_processDown

Alarm	Attributes	Applicable major release
Name: WmmLSS_processDown (4319) Type: mmeAlarm Package: ltemme.WmmLSS_processDown Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates that an application process that should be running has terminated.		
Remedial action: Recovery software should automatically recover from the abnormal or maintenance event that has caused the process termination, without any manual involvement. The automatic recovery will restart just that process or will reboot the card as necessary.\nIf the alarm does not clear or if it occurs repeatedly, contact your Nokia support representative.		

Table 24-248 WmmLSS_processNotStarted

Alarm	Attributes	Applicable major release
Name: WmmLSS_processNotStarted (4320) Type: mmeAlarm Package: ltemme.WmmLSS_processNotStarted Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm is LSS_processNotStarted as raised by the MME system		
Remedial action: IPM: Based on the type of failure encountered, recovery actions may vary. If the ipmStartupFailure is generated, contact your Nokia support representative. Once the failure is corrected, the startup of the ipm process will automatically clear the alarm.\nDHCPD: Based on the type of failure encountered, recovery actions vary. If the dhcpdStartupFailure is generated, contact your Nokia support representative. Once the failure is correct, the startup of the dhcpd process will automatically clear the alarm.\ nDNSPROXY: Based on the type of failure encountered, recovery actions may vary. If the dnsproxyStartupFailure is generated, contact your Nokia support representative. Once the failure is corrected, the startup of the dnsproxy process will automatically clear the alarm.\nPDNS SERVER: Based on the type of failure encountered, recovery actions may vary. If the pdnsStartupFailure is generated, contact your Nokia support representative. Once the failure is corrected, the startup of the pdns process will automatically clear the alarm.\nUNBOUND: Based on the type of failure encountered, recovery actions may vary. If the unboundStartupFailure is generated, contact your Nokia support representative. Once the failure is corrected, the startup of the unbound process will automatically clear the alarm.\nLIGHTTPD: Based on the type of failure encountered, recovery actions may vary. If the lighttpdStartupFailure is generated, contact your Nokia support representative. Once the failure is corrected, the startup of the lighttpd process will automatically clear the alarm.\nSSHD: Based on the type of failure encountered, recovery actions may vary. If the sshdStartupFailure is generated, contact your Nokia support representative. Once the failure is corrected, the startup of the sshd process will automatically clear the alarm.\nNTPD: Based on the type of failure encountered, recovery actions may vary. If the ntpdStartupFailure is generated, contact your Nokia support representative. Once the failure is corrected, the startup of the ntpd process will automatically clear the alarm.		

Table 24-249 WmmLSS_provisioningError

Alarm	Attributes	Applicable major release
Name: WmmLSS_provisioningError (4321) Type: mmeAlarm Package: ltemme.WmmLSS_provisioningError Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: Missing provisioning of TAI-to-LAI mapping to MSC in 2G/3G operator for SGS based CSFB/SMS.		
Remedial action: Provision missing entries in TAI-LAI mapping table utilizing LAI in 2G/3G operator. Refer to user text in alarm.		

Table 24-250 WmmLSS_remotedbLinkDown

Alarm	Attributes	Applicable major release
Name: WmmLSS_remotedbLinkDown (4323) Type: mmeAlarm Package: ltemme.WmmLSS_remotedbLinkDown Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm will be displayed when the remotedb trigger function connection does not exist.		
Remedial action: Normally the alarm will be cleared automatically when a remote service restarts and re-connects to the remotedb database; If this alarm is not cleared, please contact your Nokia support representative.		

Table 24-251 WmmLSS_remoteQueryServerFailure

Alarm	Attributes	Applicable major release
Name: WmmLSS_remoteQueryServerFailure (4322) Type: mmeAlarm Package: ltemme.WmmLSS_ remoteQueryServerFailure Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates that a host has lost connection to a remote DNS/ENUM server.		
Remedial action: The user needs to check the failed DNS server as to the nature of the server failure		

Table 24-252 WmmLSS_restore

Alarm	Attributes	Applicable major release
Name: WmmLSS_restore (4324) Type: mmeAlarm Package: ltemme.WmmLSS_restore Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: When performing SIM restore procedure, failures that occur will result in the generation of RESTORE alarm.		

Table 24-252 WmmLSS_restore (continued)

Alarm	Attributes	Applicable major release
Remedial action: Based on the type of failure encountered, recovery actions may vary. If the RESTORE alarm is generated, contact your Nokia support representative. Once the failure is corrected, a resumption of the SIM procedures will automatically clear the alarm.		

Table 24-253 WmmLSS_serviceCFGDataTimestampError

Alarm	Attributes	Applicable major release
Name: WmmLSS_serviceCFGDataTimestampError (10266) Type: mmeAlarm Package: ltemme.WmmLSS_serviceCFGDataTimestampError Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason	Release: • 10.0.0 • 10.1.0
Description: A mismatch in the configuration timestamp has been detected between the configuration server and the service indicated in the alarm.		
Remedial action: For the REM controlled services, with the exception of IWF, NGSS, and FS5K, the associated service pool must be initialized to clear this alarm. The IWF, NGSS, and FS5K can be recovered by switching the service (promoting the standby side to active). For the other services, the state of the service needs to be assessed prior to taking recovery. If the service is working without any observable failures, the duplex recovery should be scheduled in off hours to minimize service impacts from the initialization. Otherwise, the service should be initialized, which will result in a duplex failure.\nContact your Nokia support representative		

Table 24-254 WmmLSS_serviceOnewayCommunication

Alarm	Attributes	Applicable major release
Name: WmmLSS_serviceOnewayCommunication (4325) Type: mmeAlarm Package: ltemme.WmmLSS_serviceOnewayCommunication Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: A service might have one way communication to the Redundancy Manager and possibly other network elements.		
Remedial action: Wait approximately 1 minute 30 seconds; if the alarm does not clear autonomously, one will need to investigate why the alarm does not clear.\nCheck and see if there are other outstanding alarms on this service that might trump the onewayCommunication alarm. Those alarms would be of type connectionLost; or any other alarms associated to the state of the service. Other alarms would indicate that a more severe problem exists on the service; and onewayCommunication could optionally be cleared at this point; as the other service based alarms most likely supersede the onewayCommunication alarm.		

Table 24-255 WmmLSS_sgsnDnsError

Alarm	Attributes	Applicable major release
Name: WmmLSS_sgsnDnsError (4326) Type: mmeAlarm Package: ltemme.WmmLSS_sgsnDnsError Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: SGSN DNS Selection unable to retrieve SGSN IP Address associated with FQDN. This alarm must be manually cleared.		
Remedial action: Verify that the FQDN is provisioned correctly in DNS server.\nManually clear the alarm.		

Table 24-256 WmmLSS_sgwResourceDegraded

Alarm	Attributes	Applicable major release
Name: WmmLSS_sgwResourceDegraded (8050) Type: mmeAlarm Package: ltemme.WmmLSS_sgwResourceDegraded Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The raised LSS_sgwResourceDegraded alarm indicates the WMM selection on SGW or SGW-PGW pair has been degraded.		
Remedial action: Determine that there are no errors within the IP network.\nDetermine that the SGW and/or SGW PGW pair are in service.\nCheck if the invocation of wmm_cli tool was intentional.		

Table 24-257 WmmLSS_sgwSelectionFailure

Alarm	Attributes	Applicable major release
Name: WmmLSS_sgwSelectionFailure (5106) Type: mmeAlarm Package: ltemme.WmmLSS_sgwSelectionFailure Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0
Description: SGSN fails to select a SGW either due to failure to select SGW S5 service, SGW S8 service, or SGW S4 service. This alarm shall be manually cleared.		
Remedial action: Verfiy that the SGW is provisioned, configured correctly.\nManually clear the alarm.		

Table 24-258 WmmLSS_sheddingOverload

Alarm	Attributes	Applicable major release
Name: WmmLSS_sheddingOverload (4327) Type: mmeAlarm Package: ltemme.WmmLSS_sheddingOverload Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates the message shedding severity under system overload. The two severity levels indicate the degree of shedding severity. The types of messages/calls that are shed is specific to the application and there tends to be additional types of messages impacted by the shedding as the severity increases. Currently the default thresholds between Major and Critical is 70.		
Remedial action: Verify that there is no running debug or testing tool that uses a lot of CPU/memory.\nIf CPU or memory utilization regularly exceeds thresholds, investigate how the call traffic load can be reduced:\nReengineer so less traffic is directed to this office or card.\nConsider replacing the overloaded card pair with higher-capacity cards.\nVerify if there are enough cards to handle the expected load and add additional cards as appropriate.		

Table 24-259 WmmLSS_shmcEthernetError

Alarm	Attributes	Applicable major release
Name: WmmLSS_shmcEthernetError (4328) Type: mmeAlarm Package: ltemme.WmmLSS_shmcEthernetError Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The Ethernet link to the Shelf Management Card (ShMC) has failed.		
Remedial action: Verify the hub port corresponding to this server by telnet to the hub card. Correct or replace the hub as necessary.\nVerify that the shelf management cards are running on active/standby status by 'clia shmstatus' command on shelf management card. Correct the status as necessary.		

Table 24-260 WmmLSS_simxml

Alarm	Attributes	Applicable major release
Name: WmmLSS_simxml (4329) Type: mmeAlarm Package: ltemme.WmmLSS_simxml Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: When performing simxml procedure, failures that occur will result in the generation of SIMXML alarm.		
Remedial action: Based on the type of failure encountered, recovery actions may vary. If the SIMXML alarm is generated, contact your Nokia support representative. Once the failure is corrected, a resumption of the SIM procedures will automatically clear the alarm.		

Table 24-261 WmmLSS_softwareAllocatedResourceOverload

Alarm	Attributes	Applicable major release
Name: WmmLSS_ softwareAllocatedResourceOverload (4330) Type: mmeAlarm Package: ltemme.WmmLSS_ softwareAllocatedResourceOverload Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates that the utilization of a pre-allocated resource by software has exceeded thresholds. The resource could be internal buffer, data structure array, table entries, etc.		
Remedial action: Consider reengineering so that less traffic is directed to this service.\nIf condition persists, contact your Nokia support representative.		

Table 24-262 WmmLSS_softwareComponentDown

Alarm	Attributes	Applicable major release
Name: WmmLSS_softwareComponentDown (5145) Type: mmeAlarm Package: ltemme.WmmLSS_ softwareComponentDown Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0

Table 24-262 WmmLSS_softwareComponentDown (continued)

Alarm	Attributes	Applicable major release
Description: Software that is executing on the Service Host has terminated abnormally.		
Remedial action: Generally, no manual action is necessary.\nIntegrity software on the Service Host takes care of automatic recovery from the abnormal termination. When automatic recovery occurs the alarm will be cleared automatically as well.\nThe affected software gets in a permanent unavailable state after frequent abnormal terminations. In this state, the alarm will not be cleared automatically and manual action will be necessary to restore the software.\nBringing Service Host software back to an in-service state can be initiated from the MI. Use the MI GUI virtual host screen, initialization control option.\nIf the problem reoccurs, contact your Nokia support representative.		

Table 24-263 WmmLSS_softwareComponentStandbyNotReady

Alarm	Attributes	Applicable major release
Name: WmmLSS_ softwareComponentStandbyNotReady (4331) Type: mmeAlarm Package: ltemme.WmmLSS_ softwareComponentStandbyNotReady Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The state of the software component, Virtual Machine (VM) that is executing on the Service Host is standby-cold or standby-cool		
Remedial action: Generally, no manual action is necessary. Integrity software on the Service Host takes care of automatic recovery from the standby-cold/standby-cool state. When automatic recovery occurs the alarm clears automatically as well. The timing for each VM to come up is different. Since this alarm will fire during the NORMAL init time, it should not treat as a problem until 10 minutes later.\nIf the alarm does not clear after one interval, contact your Nokia support representative.		

Table 24-264 WmmLSS_svcdegrow

Alarm	Attributes	Applicable major release
Name: WmmLSS_svcdegrow (4332) Type: mmeAlarm Package: ltemme.WmmLSS_svcdegrow Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: When performing SIM service degrow (svcdegrow) procedure, failures that occur will result in the generation of SVCDEGROW alarm.		

Table 24-264 WmmLSS_svcdegrow (continued)

Alarm	Attributes	Applicable major release
Remedial action: Based on the type of failure encountered, recovery actions may vary. If the SVCDEGROW alarm is generated, contact your Nokia support representative. Once the failure is corrected, a resumption of the SIM procedures will automatically clear the alarm.		

Table 24-265 WmmLSS_svcgrow

Alarm	Attributes	Applicable major release
Name: WmmLSS_svcgrow (4333) Type: mmeAlarm Package: ltemme.WmmLSS_svcgrow Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: When performing SIM service grow (svcgrow) procedure, failures that occur will result in the generation of SVCGROW alarm.		
Remedial action: Based on the type of failure encountered, recovery actions may vary. If the SVCGROW alarm is generated, contact your Nokia support representative. Once the failure is corrected, a resumption of the SIM procedures will automatically clear the alarm.		

Table 24-266 WmmLSS_swVersionMismatch

Alarm	Attributes	Applicable major release
Name: WmmLSS_swVersionMismatch (4334) Type: mmeAlarm Package: ltemme.WmmLSS_swVersionMismatch Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The software version running on this service member does not match the version that should be running according to the database table IPCFG_POOL_MEMBERS, field build_sec.		
Remedial action: On the MI, run the remVersCheck command. It should show that for this service member, build_sec disagrees between the database and the running binary. Check whether either of them agrees with the service zip file.\nIf the database and zip agree, initialize the service member. Otherwise, contact your Nokia support representative.		

Table 24-267 WmmLSS_taiFqdnError

Alarm	Attributes	Applicable major release
Name: WmmLSS_taiFqdnError (4335) Type: mmeAlarm Package: ltemme.WmmLSS_taiFqdnError Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: MME DNS Selection unable to retrieve SGW IP Address associated with FQDN. this alarm must be manually cleared.		
Remedial action: Verify that the FQDN is provisioned correctly in DNS server.\nManually clear the alarm.		

Table 24-268 WmmLSS_tftpDownloadCorrupt

Alarm	Attributes	Applicable major release
Name: WmmLSS_tftpDownloadCorrupt (4336) Type: mmeAlarm Package: ltemme.WmmLSS_tftpDownloadCorrupt Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm can be fired due to two different problems. Alarm information is given specific sub-section below.		
Remedial action: If the Additional Info field looks like TftpOpen() Failure Ret(hexadecimal error number), IORet(hexadecimal error number), File(service application zip file name and path), IP(hexadecimal version of the CNFG host IP) continue on to step 2. Otherwise, go to step 3.\nCheck the file name and path on the indicated CNFG host and ensure that is readable by all. If not performing SU or Path, recover file from mate CNFG host.\nreboot the host issuing the alarm\nIf the alarm persists. Contact your Nokia support representative.		

Table 24-269 WmmLSS_threadsExhausted

Alarm	Attributes	Applicable major release
Name: WmmLSS_threadsExhausted (5111) Type: mmeAlarm Package: ltemme.WmmLSS_threadsExhausted Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0

Table 24-269 WmmLSS_threadsExhausted (continued)

Alarm	Attributes	Applicable major release
Description: One or more critical CP Tasks have been un-responsive to regular Integrity Monitor - IMON Heartbeats. IMON attempted to restart them and multiple restarts have escalated to a Process Init on the Standby Card or a Switch Over to the Standby Card from the Active Card where the target stuck task was running.		
Remedial action: NOT APPLICABLE		

Table 24-270 WmmLSS_upgrade

Alarm	Attributes	Applicable major release
Name: WmmLSS_upgrade (4337) Type: mmeAlarm Package: ltemme.WmmLSS_upgrade Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: When performing Software Upgrade (SU) related activities (which includes bkupSys and SIM upgrade procedure), failures that occur will result in generation of SU alarm.		
Remedial action: Based on the type of failure encountered, recovery actions may vary. If the SU alarm is generated, contact your Nokia support representative. Once the failure is corrected, a resume of the SIM procedures will automatically clear the alarm. For bkupSys, once the failure is corrected re-executing bkupSys will automatically clear the alarm.		

Table 24-271 WmmLSS_virtualClusterDown

Alarm	Attributes	Applicable major release
Name: WmmLSS_virtualClusterDown (4338) Type: mmeAlarm Package: ltemme.WmmLSS_virtualClusterDown Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: A Virtual Cluster spanning a pair of Service Hosts abnormally transitioned to an out-of-service state. (Note, a Virtual Cluster is a logical grouping of a pair of Software Components. Each Software Component executes on a separate Service Host and typically runs Active and Standby.)		
Remedial action: If this alarm persists, contact your Nokia support representative.		

Table 24-272 WmmLSS_wmmExcessiveExtCommFailure

Alarm	Attributes	Applicable major release
Name: WmmLSS_wmmExcessiveExtCommFailure (9564) Type: mmeAlarm Package: ltemme.WmmLSS_wmmExcessiveExtCommFailure Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 9.1.0 • 10.0.0 • 10.1.0
Description: An excessive number of network elements of a given type (e.g. RNC) are having communication failure with the WMM. This is usually due to a network connectivity problem and not the individual external network element. Once this alarm is triggered the WMM will stop reporting alarms for the network element of the given type. Once the network problem is resolved and the alarm no longer excessive, this alarm will clear. This alarm is raised when at least 100 network elements of a given type having communication failure. This alarm clears when 95 or fewer are having communication failure.		
Remedial action: Determine that there are no errors within the IP network.\nIf the network entity data is provisioned on WMM, verify the data is correct.\nVerify the network entity that WMM fails to communicate with is in service.		

Table 24-273 WmmLSS_wmmExternalCommFailure

Alarm	Attributes	Applicable major release
Name: WmmLSS_wmmExternalCommFailure (9565) Type: mmeAlarm Package: ltemme.WmmLSS_wmmExternalCommFailure Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 9.1.0 • 10.0.0 • 10.1.0
Description: Communication between WMM and another network entity can not be established. The additional text field indiactes the specific entity involved.		
Remedial action: Verify the network entity that WMM fails to communicate with is in service.\nDetermine that there are no errors within the IP network.\nIf the network entity data is provisioned on WMM, verify the data is correct.\nIf multiple links that terminate on the MIF are down, try switching MIF to hot-standby mate.\nIf multiple links that terminate on the MPH are down, try switching MPH to hot-standby mate.		

Table 24-274 WmmLSS_wmmLicenseKeyExpiration

Alarm	Attributes	Applicable major release
Name: WmmLSS_wmmLicenseKeyExpiration (8398) Type: mmeAlarm Package: ltemme.WmmLSS_wmmLicenseKeyExpiration Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: License has expired.		

Table 24-274 WmmLSS_wmmLicenseKeyExpiration (continued)

Alarm	Attributes	Applicable major release
Remedial action: Obtain license file: Please contact your Nokia support or sales representative for assistance with obtaining a license file from Nokia Software License Manager (NSLM).\nTransfer and Install license file: Create a staging /storage/TEMP directory with following command if it does not exist. mkdir -m755 -p /storage/TEMP Transfer the obtained license file named 'license' to the staging /storage/TEMP directory in both OAM side-A and side-B. Install the staged license file by logging on as root to both side-A and side-B using the following commands: mkdir -p /storage/lic/ cp /storage/TEMP/license /storage/lic/ chmod 500 /storage/lic/license\nUnlock system running WMM on HP C7000 or WMM on VMM: If the LSS_wmmLicenseKeyValidationError or the LSS_ wmmLicenseKeyExpiration alarm is outstanding for more than 60 minutes, the licensing enforcement has locked the WMM system. The following command must be performed to unlock the system. The corresponding alarm will clear after the successful execution of the unlock request. For SRS application use rsm_cli -o unlock -e srsaggsvc otherwise use rsm_cli -o unlock -e mmeaggsvc If the above command execution has no output, it indicates the newly installed license is valid and the unlock request of MME/SRS aggregate service was successful. If the above command execution has the following output: 'rsm_cli RSM result: Aggregate service unlock request denied due to missing or invalid license file' then the installed license file is still invalid. Verify if step 1 and 2 were done correctly. Verify if the licensed system ID in the license file matches the provisioned system ID. If the above command execution has the following output: 'rsm_cli RSM result: UELB CLI (tools perform ue-loadbalancing) has locked the WMM. Can not execute requested command' then the installed license file is valid now, but the UELB procedure was performed and also locked the MME/SRS aggregate service. Perform UELB unlock MME/SRS aggregate service admin state via wmm_cli: tools perform ue-loadbalancing shutdown		

Table 24-275 WmmLSS_wmmLicenseKeyNearExpiration

Alarm	Attributes	Applicable major release
Name: WmmLSS_wmmLicenseKeyNearExpiration (8399) Type: mmeAlarm Package: ltemme.WmmLSS_ wmmLicenseKeyNearExpiration Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: License is near expiration. If the license's expiration is within 30 days, a minor alarm is raised. If the license's expiration is within 14 days, a major alarm is raised. If the license's expiration is within 3 days, a critical alarm is raised.		
Remedial action: Obtain license file: Please contact your Nokia support or sales representative for assistance with obtaining a license file from Nokia Software License Manager (NSLM).\nTransfer and Install license file: Create a staging /storage/TEMP directory with following command if it does not exist. mkdir -m755 -p /storage/TEMP Transfer the obtained license file named 'license' to the staging /storage/TEMP directory in both OAM side-A and side-B. Install the staged license file by logging on as root to both side-A and side-B using the following commands: mkdir -p /storage/lic/ cp /storage/TEMP/license /storage/lic/ chmod 500 /storage/lic/license		

Table 24-276 WmmLSS_wmmLicenseKeyValidationError

Alarm	Attributes	Applicable major release
Name: WmmLSS_wmmLicenseKeyValidationError (8400) Type: mmeAlarm Package: ltemme.WmmLSS_ wmmLicenseKeyValidationError Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: License file is missing or invalid.		

Table 24-276 WmmLSS_wmmLicenseKeyValidationError (continued)

Alarm	Attributes	Applicable major release
Remedial action: Obtain license file: Please contact your Nokia support or sales representative for assistance with obtaining a license file from Nokia Software License Manager (NSLM).\nTransfer and Install license file: Create a staging /storage/TEMP directory with following command if it does not exist. mkdir -m755 -p /storage/TEMP Transfer the obtained license file named 'license' to the staging /storage/TEMP directory in both OAM side-A and side-B. Install the staged license file by logging on as root to both side-A and side-B using the following commands: mkdir -p /storage/lic/ cp /storage/TEMP/license /storage/lic/ chmod 500 /storage/lic/license\nUnlock system running WMM on HP C7000 or WMM on VMM: If the LSS_wmmLicenseKeyValidationError or the LSS_ wmmLicenseKeyExpiration alarm is outstanding for more than 60 minutes, the licensing enforcement has locked the WMM system. The following command must be performed to unlock the system. The corresponding alarm will clear after the successful execution of the unlock request. For SRS application use rsm_cli -o unlock -e srsaggsvc otherwise use rsm_cli -o unlock -e mmeaggsvc If the above command execution has no output, it indicates the newly installed license is valid and the unlock request of MME/SRS aggregate service was successful. If the above command execution has the following output: 'rsm_cli RSM result: Aggregate service unlock request denied due to missing or invalid license file' then the installed license file is still invalid. Verify if step 1 and 2 were done correctly. Verify if the licensed system ID in the license file matches the provisioned system ID. If the above command execution has the following output: 'rsm_cli RSM result: UELB CLI (tools perform ue-loadbalancing) has locked the WMM. Can not execute requested command' then the installed license file is valid now, but the UELB procedure was performed and also locked the MME/SRS aggregate service. Perform UELB unlock MME/SRS aggregate service admin state via wmm_cli: tools perform ue-loadbalancing shutdown		

Table 24-277 WMMPMFileNotificationMissing

Alarm	Attributes	Applicable major release
Name: WMMPMFileNotificationMissing (5387) Type: communicationsAlarm Package: Itemme.WMMPMFileNotificationMissing Raised on class: Itemme.MmeInstance	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: PMFileNotificationMissing	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: This alarm is raised when a PM File notification is expected from the node, but has not been received after a certain period of time.		
Remedial action: SAM has not received a PM File notification from the node, and may have missed retrieving PM Files. Ensure that the node has PMEnabled and PMFileEvent values set to true. Ensure a PM job is active with an intended schedule. If the problem persists please contact your Nokia support representative for assistance. This alarm notification can be turned off under the General tab in the MME Instance.		

Table 24-278 WmmRALARM_Loop

Alarm	Attributes	Applicable major release
Name: WmmRALARM_Loop (4339) Type: mmeAlarm Package: ltemme.WmmRALARM_Loop Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm is RALARM_Loop as raised by the MME system		
Remedial action: loop 1 - Verify/replace circuit breakers/fuses.\nloop 2 - Depends on what device (e.g. temperature sensor) is connected to the external input.\nloops unavailable - contact your Nokia support representative.\nIf the problem persists, contact your Nokia support representative.		

Table 24-279 WmmRALARM_Power

Alarm	Attributes	Applicable major release
Name: WmmRALARM_Power (4340) Type: mmeAlarm Package: ltemme.WmmRALARM_Power Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm indicates a problem with the -48V, A feed or B feed, power to the Power Distribution Unit.		
Remedial action: Check the Power Distribution Units LEDs, circuit breakers, fuses, and power feeds.\nReplace the faulty alarm card, circuit breakers, fuses, or power feeds.\nIf the problem persists, contact your Nokia support representative.		

Table 24-280 WMMSnapshotException

Alarm	Attributes	Applicable major release
Name: WMMSnapshotException (10272) Type: communicationsAlarm Package: ltemme.WMMSnapshotException Raised on class: ltemme.WmmSnapshot	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: WMMSnapshotException	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: This alarm is raised when a probable corrupted file could not be deleted when performing a snapshot.		
Remedial action: An error was ecountered while performing WMM Snapshot. Certain files have not been creeated.		

Table 24-281 WmmSYS_BackupFailure

Alarm	Attributes	Applicable major release
Name: WmmSYS_BackupFailure (4341) Type: mmeAlarm Package: ltemme.WmmSYS_BackupFailure Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The backup of an SNE has failed. On the next successful backup, this alarm will clear.		
Remedial action: If the additionalText of the alarm states 'Fail to get AccessKey for ESCHost/LNG application...', you need to set up userid/password on corresponding esc/lng in 'Configuration Management' --> 'Backup Management' --> 'Login Administration' panel on MI GUI first.\nAttempt another backup.\nIf the problem persists, contact your Nokia support representative.		

Table 24-282 WmmSYS_Configuration

Alarm	Attributes	Applicable major release
Name: WmmSYS_Configuration (4344) Type: mmeAlarm Package: ltemme.WmmSYS_Configuration Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0

Table 24-282 WmmSYS_Configuration (continued)

Alarm	Attributes	Applicable major release
Description: A possible configuration problem has been detected on the MI.		
Remedial action: If the specificProblem is MissingScheduledBackups: Run mi_audit -a sched_backups on the active MI to get a list of the devices that do not have a scheduled backup. For those devices, schedule a backup job using the MI GUI, Configuration Management->Backup Management->Scheduling Run mi_audit -a sched_backups on the active MI to clear the alarm once all required backups are scheduled.\nIf the specificProblem is PMDisabled: Run PMcontrol --master start on the active MI to enable PM collection This will enable PM collection on the MI and automatically clear this alarm.\nIf the specificProblem is NTPServerNotConfigured: Configure at least one NTP server. For ATCA, to add and configure an NTP server, refer to the section 'To add or delete remote NTP servers IP addresses' in the 5400 Linux Control Platform Configuration Management, 270-702-014 and 'To setup secure NTP configuration' in the 5400 Linux Control Platform Security Management, 270-702-015. For CPSB, to add and configure an NTP server, refer to the section 'To add or delete NTP server IP address' and 'Setup secure NTP configuration' in the Control Platform 1800 Operations, Administration, Maintenance and Provisioning, 270-900-872. Run mi_audit -a ntp on the active MI to clear the alarm.\nIf the specificProblem is NTPServerNotReachable: Run ntpconf_adm --action show_server to see the configured NTP server IP address(es). Resolve the connectivity problem to the intended NTP server. The NTP server should be pingable from the MI. Run mi_audit -a ntp on the active MI to clear the alarm.\nIf the specificProblem is MaintModeEnabled: This alarm will be raised when the MI is placed into maintenance mode for any maintenance activity using the mi_maint on cmd. It will be cleared when taken out of maintenance mode, using the mi_maint off cmd. If for some reason the alarm is not cleared and the maintenance flag is off (verify with mi_maint status cmd), run mi_audit -a maint_mode on the active MI to clear the alarm.		

Table 24-283 WmmSYS_CPM_USERDATA_INCONSITENCY

Alarm	Attributes	Applicable major release
Name: WmmSYS_CPM_USERDATA_ INCONSITENCY (4342) Type: mmeAlarm Package: Itemme.WmmSYS_CPM_USERDATA_ INCONSITENCY Raised on class: Itemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: A possible CPM user data inconsistency problem has been detected on the MI.		
Remedial action: Login to active MI as root execute 'mividstat -a'\nMake sure CPM is enabled and Connection Health Check is Yes. If not, please refer to CDOC 270-702-015 section 'CPM and RBAC' to enable CPM.\nIf CPM status is OK and there is such alarm. Please contact your Nokia support representative for further support.\nOnce the issue is resolved, this alarm should be cleared manually from the MI GUI.		

Table 24-284 WmmSYS_CPM_USERDATA_RESTORED

Alarm	Attributes	Applicable major release
Name: WmmSYS_CPM_USERDATA_RESTORED (4343) Type: mmeAlarm Package: ltemme.WmmSYS_CPM_USERDATA_RESTORED Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: CPM audit restore user's data after it finds issue.		
Remedial action: Login to active MI as root execute 'mividstat -a'\nMake sure CPM is enabled and Connection Health Check is Yes. If not, please refer to CDOC 270-702-015 section 'CPM and RBAC' to enable CPM.\nIf CPM status is OK and there is such alarm. Please contact your Nokia support representative for further support.\nOnce the issue is resolved, this alarm should be cleared manually from the MI GUI.		

Table 24-285 WmmSYS_EventQueueCapacity

Alarm	Attributes	Applicable major release
Name: WmmSYS_EventQueueCapacity (4345) Type: mmeAlarm Package: ltemme.WmmSYS_EventQueueCapacity Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The MI event queue is nearing or has exceeded it's capacity.		
Remedial action: If the problem persists, contact your Nokia support representative.		

Table 24-286 WmmSYS_ICMPFailure

Alarm	Attributes	Applicable major release
Name: WmmSYS_ICMPFailure (4346) Type: mmeAlarm Package: ltemme.WmmSYS_ICMPFailure Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0

Table 24-286 WmmSYS_ICMPFailure (continued)

Alarm	Attributes	Applicable major release
Description: The MI was unable to communicate to a host via its IP interface.		
Remedial action: Verify that the ethernet cable is connected and in working order.\nVerify that the routers/switches are configured correctly.\nIf the problem persists over several polling cycles, contact your Nokia support representative.		

Table 24-287 WmmSYS_IPsecConfig

Alarm	Attributes	Applicable major release
Name: WmmSYS_IPsecConfig (4347) Type: mmeAlarm Package: Itemme.WmmSYS_IPsecConfig Raised on class: Itemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: Missing or obsolete SNMP Trap subnets found in the IPsec configuration file on the MI-Agent.		
Remedial action: A change to the IPsec configuration is needed. Please refer to the procedure described in the section titled 'To configure IPsec SNMP trap entries' in the '5400 Linux Control Platform, Security Management' guide for the ATCA platform, or in the 'Control Platform 1800 OAMP' guide for the CPSB platform.		

Table 24-288 WmmSYS_LinkDown

Alarm	Attributes	Applicable major release
Name: WmmSYS_LinkDown (4348) Type: mmeAlarm Package: Itemme.WmmSYS_LinkDown Raised on class: Itemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: A linkDown alarm signifies that the operational status for one of the communication links is about to enter the down state. The name/index of the interface is identified in the specificProblem of the alarm.		
Remedial action: Verify the cabling.\nVerify the far-end of the link.		

Table 24-289 WmmSYS_NotifyDisabled

Alarm	Attributes	Applicable major release
Name: WmmSYS_NotifyDisabled (4349) Type: mmeAlarm Package: ltemme.WmmSYS_NotifyDisabled Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm occurs when a user login is temporarily disabled, yet the user during this period attempts to login with the correct userid and password. User Intervention by a Security Administrator is not required when an user is temporarily disabled as long as no more logins are attempted within fifteen minutes interval. If a user becomes locked then an additional alarm (SYS_NotifyLocked) will be generated thus Security Administrator intervention will be required.		
Remedial action: Contact the user of this userid to determine if they are aware of these attempts to log on to the system using this userid.\nDetermine whether any security violations occurred and report accordingly. Manually clear this alarm from the MI Alarm Browser.		

Table 24-290 WmmSYS_NotifyLocked

Alarm	Attributes	Applicable major release
Name: WmmSYS_NotifyLocked (4350) Type: mmeAlarm Package: ltemme.WmmSYS_NotifyLocked Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm occurs when a user is locked out from being able to Log in due to repeated consecutive login failures. User Intervention by a Security Administrator is required to unlock the account.		
Remedial action: Contact the user of this userid to determine if they are aware of these attempts to log on to the system using this userid.\nDetermine whether any security violations occurred and report accordingly Log onto NavisID GUI and unlock this user's account if appropriate. Manually clear this alarm from the MI Alarm Browser.		

Table 24-291 WmmSYS_RADIUS_TO_LDAP_FAILURE

Alarm	Attributes	Applicable major release
Name: WmmSYS_RADIUS_TO_LDAP_FAILURE (4351) Type: mmeAlarm Package: Itemme.WmmSYS_RADIUS_TO_LDAP_FAILURE Raised on class: Itemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm occurs when RADIUS fails to connect to LDAP during user authentication attempt		
Remedial action: This Alarm clears automatically when the fault condition is no longer present.\nLog in to active MI (ATCA) as root execute 'mividstat -a'\nMake sure that Radius/LDAP Connection Health Check is Yes\nCheck the /var/log/auth.log for detailed information. You may also use the Security and Audit Trail Log Viewer on the MI-agent GUI to view this log.		

Table 24-292 WmmSYS_ROOT_ACCESS_DENIED

Alarm	Attributes	Applicable major release
Name: WmmSYS_ROOT_ACCESS_DENIED (4352) Type: mmeAlarm Package: Itemme.WmmSYS_ROOT_ACCESS_DENIED Raised on class: Itemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm occurs when a user makes three attempts within a 30 minute period to log onto the LCP hosts as root userid from a restricted domain. This alarm must be manually cleared		
Remedial action: This Alarm should be cleared manually.\nNeed to find out where the user is trying to log in from to further verify whether this is a legitimate user.\nCheck the /var/log/auth.log for detailed information. You may also use the Security and Audit Trail Log Viewer on the MI-agent GUI to view this log.		

Table 24-293 WmmSYS_ROOT_FTP_VIOLATION

Alarm	Attributes	Applicable major release
Name: WmmSYS_ROOT_FTP_VIOLATION (4353) Type: mmeAlarm Package: ltemme.WmmSYS_ROOT_FTP_VIOLATION Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm occurs when an user try to login the system three times as root with wrong password in less 30 seconds. This alarm must be manually cleared.		
Remedial action: Need to find out where is the user attempted to log in.\nCheck the /var/log/auth.log for detailed information.		

Table 24-294 WmmSYS_ROOT_LOGIN_VIOLATION

Alarm	Attributes	Applicable major release
Name: WmmSYS_ROOT_LOGIN_VIOLATION (4354) Type: mmeAlarm Package: ltemme.WmmSYS_ROOT_LOGIN_VIOLATION Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm occurs when an user try to login the system three times as root with wrong password in less 30 seconds. This alarm must be manually cleared.		
Remedial action: Need to find out where is the user attempted to log in.\nCheck the /var/log/auth.log for detailed information.		

Table 24-295 WmmSYS_ROOT_SSH_LOGIN_VIOLATION

Alarm	Attributes	Applicable major release
Name: WmmSYS_ROOT_SSH_LOGIN_VIOLATION (4355) Type: mmeAlarm Package: ltemme.WmmSYS_ROOT_SSH_LOGIN_VIOLATION Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0

Table 24-295 WmmSYS_ROOT_SSH_LOGIN_VIOLATION (continued)

Alarm	Attributes	Applicable major release
Description: This alarm occurs when a user unsuccessfully attempts to ssh as root user onto the LCP host three times within 30 minutes. NOTE: If Disable Root SSH External Access feature is enabled, any external ssh as root attempt to the LCP host will be rejected and treated as a login failure. This alarm must be manually cleared.		
Remedial action: Need to check the /var/log/auth.log to identify the IP of the originating ssh request and attempt to identify the user attempting access the LCP host as root userid.\nCheck the /var/log/auth.log for detailed information.\nThe alarm must be manually cleared on the MI GUI.		

Table 24-296 WmmSYS_SetupAAAFailure

Alarm	Attributes	Applicable major release
Name: WmmSYS_SetupAAAFailure (4361) Type: mmeAlarm Package: ltemme.WmmSYS_SetupAAAFailure Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: A possible CPM configuration problem has been detected on the MI.		
Remedial action: Login to active MI as root execute 'mividstat -a'\nMake sure CPM is enabled and Connection Health Check is Yes. If not, please refer to CDOC 270-702-015 section 'CPM and RBAC' to enable CPM.\nCheck all the diskful and diskless blades are in service.\nPlease contact your Nokia support representative for further support.\nOnce the issue is resolved, this alarm should be cleared manually from the MI GUI.		

Table 24-297 WmmSYS_SNETrapOverload

Alarm	Attributes	Applicable major release
Name: WmmSYS_SNETrapOverload (4356) Type: mmeAlarm Package: ltemme.WmmSYS_SNETrapOverload Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The SNMP trap rate threshold for a particular SNE to the MI-Agent has been exceeded.		
Remedial action: Verify the sanity of the SNE to determine what is causing it to send excessive SNMP traps to the MI-Agent.\nAs the cause for excessive traps can vary by instance, use standard fault detection techniques such as viewing alarms and/or network events at the MI-Agent, visual inspection of the SNE for external alarms and/or loose cables, and running diagnostic test to assist in determining the cause.		

Table 24-298 WmmSYS_SNMPAuthenticationFailure

Alarm	Attributes	Applicable major release
Name: WmmSYS_SNMPAuthenticationFailure (4357) Type: mmeAlarm Package: ltemme.WmmSYS_ SNMPAuthenticationFailure Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: Signifies that an SNE managed by the MI is the addressee of an improperly authenticated network protocol message. SNMP community name and client authentication failures cause the Element Manager to generate this trap.		
Remedial action: Verify that the individual trying to access the system is a legitimate user, and that the SNMP community strings are set correctly. This alarm may be disabled by turning off the SNMP authentication traps on the SNE (providing the SNE supports this capability).		

Table 24-299 WmmSYS_SNMPFailure

Alarm	Attributes	Applicable major release
Name: WmmSYS_SNMPFailure (4358) Type: mmeAlarm Package: ltemme.WmmSYS_SNMPFailure Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The MI was unable to communicate to a host via its SNMP interface.		
Remedial action: Verify that the ethernet cable is connected and in working order.\nVerify that the SNE may be ICMP-pinged over the same interface to determine whether it is an SNMP problem or a more general IP problem.\nIf the problem is an IP problem, verify that the routers/switches are configured correctly.\nIf the problem is only an SNMP problem and persists over several polling cycles, contact your Nokia support representative.		

Table 24-300 WmmSYS_SU_TO_ROOT_FAILURE

Alarm	Attributes	Applicable major release
Name: WmmSYS_SU_TO_ROOT_FAILURE (4359) Type: mmeAlarm Package: ltemme.WmmSYS_SU_TO_ROOT_ FAILURE Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm occurs when a user makes three failed attempts within a 30 minute period to su to become root userid. This alarm will occur if you entered the wrong password for root three times during the 30 minute interval when attempting to su to root userid.		
Remedial action: This Alarm should be cleared manually.\nNeed to find out where the user is trying to log in from to further verify whether this is a legitimate user. Need to check the user's CLI shell history to investigate for possible suspicious activity.\nCheck the /var/log/auth.log for detailed access information. Check the /var/log/bash.log to investigate the user's cli activity. You may also use the Security and Audit Trail Log Viewer on the MI-agent GUI to view these logs.		

Table 24-301 WmmSYS_SYSTEMTrapOverload

Alarm	Attributes	Applicable major release
Name: WmmSYS_SYSTEMTrapOverload (4360) Type: mmeAlarm Package: ltemme.WmmSYS_SYSTEMTrapOverload Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The SNMP trap rate threshold for a collection of SNEs to the MI-Agent has been exceeded.		
Remedial action: Verify the sanity of all SNEs in the system to determine which ones are sending excessive SNMP traps to the MI-Agent.\nAs the cause for excessive traps can vary by instance, use standard fault detection techniques such as viewing alarms and/or network events at the MI-Agent, visual inspection of the SNE for external alarms and/or loose cables, and running diagnostic test to assist in determining the cause.		

Table 24-302 WmmSYS_TestAlarm

Alarm	Attributes	Applicable major release
Name: WmmSYS_TestAlarm (4362) Type: mmeAlarm Package: ltemme.WmmSYS_TestAlarm Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: This alarm is for testing only. There is no problem being reported. It is used to test the alarm handling functionality on the MI, from creation of an alarm on the MI to forwarding out through the MI's northbound interface. This alarm should be manually cleared when testing is completed.		
Remedial action: There is no recovery needed, as this is just a test alarm. The alarm can be cleared manually on the MI GUI, or by running mi_testalarm -s Clear on the active MI.		

Table 24-303 WmmSYS_ThresholdCrossed

Alarm	Attributes	Applicable major release
Name: WmmSYS_ThresholdCrossed (4363) Type: mmeAlarm Package: ltemme.WmmSYS_ThresholdCrossed Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The measurement data is not meeting the specified performance thresholds and the measurement data has reported errors that may indicate loss or degradation of functionality or capacity.		
Remedial action: Pay attention to the measurement data for which the alarm is reported.\nStudy the state of the system to decide on a course of action.		

Table 24-304 WmmSYS_UndiscoveredObject

Alarm	Attributes	Applicable major release
Name: WmmSYS_UndiscoveredObject (4364) Type: mmeAlarm Package: Itemme.WmmSYS_UndiscoveredObject Raised on class: Itemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: One or more undiscovered objects have been detected on the MI.		
Remedial action: On the MI GUI, run Tools->Global Discovery. If this does not clear the alarm, run the following command on the active MI host: If specificProblem is MissingSNE:<ip address>: mi_audit -a disc_sne If specificProblem is MissingHardware: mi_audit -a disc_hw If specificProblem is MissingServices: mi_audit -a disc_services If specificProblem is MissingHosts: mi_audit -a disc_hosts contact your Nokia support representative with the alarm details and the output of the mi_audit cmd.		

Table 24-305 WmmSYS_WriteAAAFailure

Alarm	Attributes	Applicable major release
Name: WmmSYS_WriteAAAFailure (4365) Type: mmeAlarm Package: Itemme.WmmSYS_WriteAAAFailure Raised on class: Itemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: CPM tools failed to create scripts that are used for pump data into blades.		
Remedial action: Login to active MI (ATCA) as root execute 'mividstat -a'\nMake sure CPM is enabled and Connection Health Check is Yes. If not, please refer to CDOC 270-702-015 section 'CPM and RBAC' to enable CPM.\nCheck all the diskful and diskless blades are in service.\nCheck existence and permission(Owner:root, permission:755) for the directory /var/opt/lib/cpm/fg on active MI.\nPlease contact your Nokia support representative for further support.\nOnce the issue is resolved, this alarm should be cleared manually from the MI GUI.		

Table 24-306 WMMUEOccupiedSlotsExceeded

Alarm	Attributes	Applicable major release
Name: WMMUEOccupiedSlotsExceeded (5050) Type: communicationsAlarm Package: ltemme.WMMUEOccupiedSlotsExceeded Raised on class: ltemme.MmeInstance	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ThresholdExceeded	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 9.11.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when the number of WMM UE Occupied Slots exceeds the threshold that has been set by the operator.		
Raising condition: (('WMM UE Occupied Slots Threshold' NOT EQUAL '0L') AND ('WMM UE Occupied Slots' > 'WMM UE Occupied Slots Threshold'))		
Remedial action: Informational - no corrective action required.		

Table 24-307 WmmUnknownAlarm

Alarm	Attributes	Applicable major release
Name: WmmUnknownAlarm (4366) Type: mmeAlarm Package: ltemme.WmmUnknownAlarm Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: alarmIndicationSignal	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when an unknown alarm is received from the WMM system.		
Remedial action: Obtain the native WMM alarm name from the additional text field. Open the 9471 WMM MI GUI and locate the corresponding WMM alarm. Refer to the Fault Clearance Procedure in the help documentation for the alarm.		

Table 24-308 WmmUnknownCommunicationsAlarm

Alarm	Attributes	Applicable major release
Name: WmmUnknownCommunicationsAlarm (4367) Type: communicationsAlarm Package: ltemme. WmmUnknownCommunicationsAlarm Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: UnspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when an unknown communications alarm is received from the WMM system.		
Remedial action: Obtain the native WMM alarm name from the additional text field. Open the 9471 WMM MI GUI and locate the corresponding WMM alarm. Refer to the Fault Clearance Procedure in the help documentation for the alarm.		

Table 24-309 WmmUnknownEnvironmentalAlarm

Alarm	Attributes	Applicable major release
Name: WmmUnknownEnvironmentalAlarm (4368) Type: environmentalAlarm Package: ltemme.WmmUnknownEnvironmentalAlarm Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: unspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when an unknown environmental alarm is received from the WMM system.		
Remedial action: Obtain the native WMM alarm name from the additional text field. Open the 9471 WMM MI GUI and locate the corresponding WMM alarm. Refer to the Fault Clearance Procedure in the help documentation for the alarm.		

Table 24-310 WmmUnknownEquipmentAlarm

Alarm	Attributes	Applicable major release
Name: WmmUnknownEquipmentAlarm (4369) Type: equipmentAlarm Package: ltemme.WmmUnknownEquipmentAlarm Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: unspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when an unknown equipment alarm is received from the WMM system.		

Table 24-310 WmmUnknownEquipmentAlarm (continued)

Alarm	Attributes	Applicable major release
Remedial action: Obtain the native WMM alarm name from the additional text field. Open the 9471 WMM MI GUI and locate the corresponding WMM alarm. Refer to the Fault Clearance Procedure in the help documentation for the alarm.		

Table 24-311 WmmUnknownIntegrityViolationAlarm

Alarm	Attributes	Applicable major release
Name: WmmUnknownIntegrityViolationAlarm (4370) Type: integrityViolationAlarm Package: ltemme. WmmUnknownIntegrityViolationAlarm Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: unspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when an unknown integrity violation alarm is received from the WMM system.		
Remedial action: Obtain the native WMM alarm name from the additional text field. Open the 9471 WMM MI GUI and locate the corresponding WMM alarm. Refer to the Fault Clearance Procedure in the help documentation for the alarm.		

Table 24-312 WmmUnknownOperationalViolationAlarm

Alarm	Attributes	Applicable major release
Name: WmmUnknownOperationalViolationAlarm (4371) Type: operationalViolationAlarm Package: ltemme. WmmUnknownOperationalViolationAlarm Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: unspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when an unknown operational alarm is received from the WMM system.		
Remedial action: Obtain the native WMM alarm name from the additional text field. Open the 9471 WMM MI GUI and locate the corresponding WMM alarm. Refer to the Fault Clearance Procedure in the help documentation for the alarm.		

Table 24-313 WmmUnknownPhysicalViolationAlarm

Alarm	Attributes	Applicable major release
Name: WmmUnknownPhysicalViolationAlarm (4372) Type: physicalViolationAlarm Package: ltemme.WmmUnknownPhysicalViolationAlarm Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: unspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when an unknown physical violation alarm is received from the WMM system.		
Remedial action: Obtain the native WMM alarm name from the additional text field. Open the 9471 WMM MI GUI and locate the corresponding WMM alarm. Refer to the Fault Clearance Procedure in the help documentation for the alarm.		

Table 24-314 WmmUnknownProcessingErrorAlarm

Alarm	Attributes	Applicable major release
Name: WmmUnknownProcessingErrorAlarm (4373) Type: processingErrorAlarm Package: ltemme.WmmUnknownProcessingErrorAlarm Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: unspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when an unknown processing error alarm is received from the WMM system.		
Remedial action: Obtain the native WMM alarm name from the additional text field. Open the 9471 WMM MI GUI and locate the corresponding WMM alarm. Refer to the Fault Clearance Procedure in the help documentation for the alarm.		

Table 24-315 WmmUnknownQualityOfServiceAlarm

Alarm	Attributes	Applicable major release
Name: WmmUnknownQualityOfServiceAlarm (4374) Type: qualityOfServiceAlarm Package: ltemme.WmmUnknownQualityOfServiceAlarm Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: unspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when an unknown quality of service alarm is received from the WMM system.		

Table 24-315 WmmUnknownQualityOfServiceAlarm (continued)

Alarm	Attributes	Applicable major release
Remedial action: Obtain the native WMM alarm name from the additional text field. Open the 9471 WMM MI GUI and locate the corresponding WMM alarm. Refer to the Fault Clearance Procedure in the help documentation for the alarm.		

Table 24-316 WmmUnknownSecurityServiceOrMechanismViolationAlarm

Alarm	Attributes	Applicable major release
Name: WmmUnknownSecurityServiceOr-MechanismViolationAlarm (4375) Type: securityServiceOrMechanismViolationAlarm Package: ltemme.WmmUnknownSecurityServiceOr-MechanismViolationAlarm Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: unspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when an unknown mechanical violation alarm is received from the WMM system.		
Remedial action: Obtain the native WMM alarm name from the additional text field. Open the 9471 WMM MI GUI and locate the corresponding WMM alarm. Refer to the Fault Clearance Procedure in the help documentation for the alarm.		

Table 24-317 WmmUnknownTimeDomainViolationAlarm

Alarm	Attributes	Applicable major release
Name: WmmUnknownTimeDomainViolationAlarm (4376) Type: timeDomainViolationAlarm Package: ltemme.WmmUnknownTimeDomainViolationAlarm Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: unspecifiedReason	Release: • 8.0.0 • 8.1.0 • 9.0.0 • 9.1.0 • 10.0.0 • 10.1.0
Description: The alarm is raised when an unknown time domain violation alarm is received from the WMM system.		
Remedial action: Obtain the native WMM alarm name from the additional text field. Open the 9471 WMM MI GUI and locate the corresponding WMM alarm. Refer to the Fault Clearance Procedure in the help documentation for the alarm.		

25 9500 MPR

25.1 Alarms

Alarms

Note: Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see Chapter 39, “Unspecified NE”.

Table 25-1 ActiveAbnormalCondition

Alarm	Attributes	Applicable major release
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm Package: netw.ActiveAbnormalCondition Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

Table 25-2 adjacencyDown

Alarm	Attributes	Applicable major release
Name: adjacencyDown (11462) Type: communicationsAlarm Package: mpr.adjacencyDown Raised on class: mpr.BackhaulAdjacency	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: adjacencyDown	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the Operational State of a adjacency is Down, for example, because of one of the following conditions: The Operational State of local port pointer is Down.		
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' EQUAL 'Up')		
Remedial action: NE Alarms causing operState down must not exist on the selected adjancency.		

Table 25-3 AesFipsFail

Alarm	Attributes	Applicable major release
Name: AesFipsFail (11279) Type: equipmentAlarm Package: equipment.AesFipsFail Raised on class: equipment.PhysicalPort	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: AesFipsFailure	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when AES FIPS Failure occurs.		
Remedial action: Please refer to node Troubleshooting guide for detailed steps for corrective action.		

Table 25-4 AreaTypeMismatch

Alarm	Attributes	Applicable major release
Name: AreaTypeMismatch (38) Type: configurationAlarm Package: ospf.AreaTypeMismatch Raised on class: ospf.Area	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: areaTypeMisconfigured	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an OSPF area on one NE is configured as an NSSA and the same OSPF area on another NE is configured as a stub area.		
Raising condition: ('Type Mismatch' EQUAL 'true')		
Clearing condition: ('Type Mismatch' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The OSPF area type configured for the NE does not match with the same OSPF area configured on another NE. Compare the configuration on the endpoint and correct the mismatch.		

Table 25-5 AtpcLoopProblem (equipment)

Alarm	Attributes	Applicable major release
Name: AtpcLoopProblem (1142) Type: communicationsAlarm Package: equipment.AtpcLoopProblem Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: atpcLoopProblem	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a local transmitter was operating continuously at full power for 5-minutes, and the transmitter power is reduced to its minimum power setting.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-6 AtpcLoopProblem (radioequipment)

Alarm	Attributes	Applicable major release
Name: AtpcLoopProblem (1142) Type: communicationsAlarm Package: radioequipment.AtpcLoopProblem Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: atpcLoopProblem	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a local transmitter was operating continuously at full power for 5-minutes, and the transmitter power is reduced to its minimum power setting.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-7 ATPCTimeout (equipment)

Alarm	Attributes	Applicable major release
Name: ATPCTimeout (3939) Type: communicationsAlarm Package: equipment.ATPCTimeout Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: atpcTimeout	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a the ATPC timeout defect raise.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-8 ATPCTimeout (radioequipment)

Alarm	Attributes	Applicable major release
Name: ATPCTimeout (3939) Type: communicationsAlarm Package: radioequipment.ATPCTimeout Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: atpcTimeout	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a the ATPC timeout defect raise.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-9 AuxiliaryServerStatus

Alarm	Attributes	Applicable major release
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm Package: server.AuxiliaryServerStatus Raised on class: server.AuxiliaryServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 25-10 BandwidthDegradeForProtectionSwitch

Alarm	Attributes	Applicable major release
Name: BandwidthDegradeForProtectionSwitch (4414) Type: equipmentAlarm Package: ethring. BandwidthDegradeForProtectionSwitch Raised on class: ethring.Element	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bandwidthDegradeERP	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised on Element instance for 9500 when there are two instance per Radio Component (topology) and when one of the instance is enabled.		
Remedial action: Operator has Unconfigure the protection on ERPS instance.		

Table 25-11 BandwidthOverFlow (radioequipment)

Alarm	Attributes	Applicable major release
Name: BandwidthOverFlow (1143) Type: communicationsAlarm Package: radioequipment.BandwidthOverFlow Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bandwidthOverFlow	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a MPT is on-line and the cross-connections occupation overcomes the MPT net capacity bandwidth.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-12 BandwidthOverFlow (equipment)

Alarm	Attributes	Applicable major release
Name: BandwidthOverFlow (1143) Type: communicationsAlarm Package: equipment.BandwidthOverFlow Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bandwidthOverFlow	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a MPT is on-line and the cross-connections occupation overcomes the MPT net capacity bandwidth.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-13 BatteryFail (mpr)

Alarm	Attributes	Applicable major release
Name: BatteryFail (616) Type: equipmentAlarm Package: mpr.BatteryFail Raised on class: mpr.SubRackElements	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: batteryFail	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the battery fails or is missing.		
Remedial action: The battery on the subrack element should be replaced or re-installed.		

Table 25-14 BerLineSignalDegradation

Alarm	Attributes	Applicable major release
Name: BerLineSignalDegradation (88) Type: communicationsAlarm Package: sonetequipment.BerLineSignalDegradation Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: berLineSignalDegradation	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a SONET port reports a line signal degradation BER error. The alarm corresponds to the lb2er-sd alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'BER Line Signal Degradation') AND ('Report Alarms'anyBit'BER Line Signal Degradation'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'BER Line Signal Degradation') AND ('Report Alarms'anyBit'BER Line Signal Degradation')))		
Remedial action: Informational only.		

Table 25-15 BerLineSignalFailure

Alarm	Attributes	Applicable major release
Name: BerLineSignalFailure (89) Type: communicationsAlarm Package: sonetequipment.BerLineSignalFailure Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: berLineSignalFailure	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a SONET port reports a line signal degradation BER error. The alarm corresponds to the lb2er-sf alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'BER Line Signal Failure') AND ('Report Alarms'anyBit'BER Line Signal Failure'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'BER Line Signal Failure') AND ('Report Alarms'anyBit'BER Line Signal Failure')))		
Remedial action: Informational only.		

Table 25-16 BITS2NotQualified

Alarm	Attributes	Applicable major release
Name: BITS2NotQualified (1941) Type: communicationsAlarm Package: sonet.BITS2NotQualified Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: timingReferenceNotQualified	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the BITS2 timing reference on an NE is not in the Qualified state.		
Raising condition: (('Qualified For Use' EQUAL 'Not Qualified') AND ('Input Administrative State' NOT EQUAL 'Down'))		
Clearing condition: (('Qualified For Use' NOT EQUAL 'Not Qualified') OR ('Input Administrative State' EQUAL 'Down'))		
Remedial action: Make sure that BITS2 is qualified		

Table 25-17 BITS2ReferenceLossOfSignal

Alarm	Attributes	Applicable major release
Name: BITS2ReferenceLossOfSignal (9002) Type: communicationsAlarm Package: sonet.BITS2ReferenceLossOfSignal Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BITS2ReferenceLossOfSignal	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the BITS2 reference on an NE is not qualified due to Loss of Signal.		
Raising condition: (('Not Qualified Due To'anyBit'LOS'))		
Clearing condition: NOT ((('Not Qualified Due To'anyBit'LOS')))		
Remedial action: Make sure that peer connected to BITS2 is properly configured.		

Table 25-18 BITS2ReferenceOutOfFrequency

Alarm	Attributes	Applicable major release
Name: BITS2ReferenceOutOfFrequency (9003) Type: communicationsAlarm Package: sonet.BITS2ReferenceOutOfFrequency Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BITS2ReferenceOutOfFrequency	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the BITS2 Reference on an NE is not qualified due to Out of frequency.		
Raising condition: (('Not Qualified Due To'anyBit'OOF'))		
Clearing condition: NOT ((('Not Qualified Due To'anyBit'OOF')))		
Remedial action: Make sure that frequency configured for BITS2 is correct.		

Table 25-19 BITS2ReferenceOutOfPollInRange

Alarm	Attributes	Applicable major release
Name: BITS2ReferenceOutOfPollInRange (9004) Type: communicationsAlarm Package: sonet.BITS2ReferenceOutOfPollInRange Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BITS2ReferenceOutOfPollInRange	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the BITS2 Reference on an NE is not qualified state due to Out of poll in range.		
Raising condition: (('Not Qualified Due To'anyBit'OOPIR'))		
Clearing condition: NOT ((('Not Qualified Due To'anyBit'OOPIR')))		
Remedial action: Check the BITS2 is configured correctly. Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary		

Table 25-20 BITSNotQualified

Alarm	Attributes	Applicable major release
Name: BITSNotQualified (547) Type: communicationsAlarm Package: sonet.BITSNotQualified Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: timingReferenceNotQualified	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the BITS/BITS1 timing reference on an NE is not in the Qualified state.		
Raising condition: (('Qualified For Use' EQUAL 'Not Qualified') AND ('Output Administrative State' NOT EQUAL 'Down'))		
Clearing condition: (('Qualified For Use' NOT EQUAL 'Not Qualified') OR ('Output Administrative State' EQUAL 'Down'))		
Remedial action: Make sure that BITS/BITS1 is qualified		

Table 25-21 BITSReferenceLossOfSignal (sonet)

Alarm	Attributes	Applicable major release
Name: BITSReferenceLossOfSignal (1950) Type: communicationsAlarm Package: sonet.BITSReferenceLossOfSignal Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BITSReferenceLossOfSignal	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the BITS/BITS1 reference on an NE is not qualified due to Loss of Signal.		
Raising condition: (('Not Qualified Due To'anyBit'LOS'))		
Clearing condition: NOT ((('Not Qualified Due To'anyBit'LOS')))		
Remedial action: Make sure that peer connected to BITS/BITS1 is properly configured.		

Table 25-22 BITSReferenceOutOfFrequency (sonet)

Alarm	Attributes	Applicable major release
Name: BITSReferenceOutOfFrequency (1951) Type: communicationsAlarm Package: sonet.BITSReferenceOutOfFrequency Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BITSReferenceOutOfFrequency	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the BITS/BITS1 Reference on an NE is not qualified due to Out of frequency.		
Raising condition: (('Not Qualified Due To'anyBit'OOF'))		
Clearing condition: NOT ((('Not Qualified Due To'anyBit'OOF')))		
Remedial action: Make sure that frequency configured for BITS/BITS1 is correct.		

Table 25-23 BITSReferenceOutOfPollInRange (sonet)

Alarm	Attributes	Applicable major release
Name: BITSReferenceOutOfPollInRange (1952) Type: communicationsAlarm Package: sonet.BITSReferenceOutOfPollInRange Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BITSReferenceOutOfPollInRange	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the BITS/BITS1 Reference on an NE is not qualified state due to Out of poll in range.		
Raising condition: (('Not Qualified Due To'anyBit'OOPIR'))		
Clearing condition: NOT ((('Not Qualified Due To'anyBit'OOPIR')))		
Remedial action: Check the BITS/BITS1 is configured correctly. Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary		

Table 25-24 BootableConfigBackupFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigBackupFailed (103) Type: configurationAlarm Package: sw.BootableConfigBackupFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 25-25 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm Package: sw.BootableConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 25-26 BootParametersMisconfigured

Alarm	Attributes	Applicable major release
Name: BootParametersMisconfigured (35) Type: configurationAlarm Package: netw.BootParametersMisconfigured Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistentIndexFailure Applicable probable causes: • persistentIndexFailure • configFileBootFailure	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND ((('Config File Status' NOT EQUAL 'Executed Successfully') AND ('Config File Status' NOT EQUAL 'configFileStatus_unspecified')) OR (('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded') AND ('Persistent Index Status' NOT EQUAL 'persistentIndexStatus_unspecified'))))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

Table 25-27 CableLOS (radioequipment)

Alarm	Attributes	Applicable major release
Name: CableLOS (678) Type: communicationsAlarm Package: radioequipment.CableLOS Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cableLOS	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an MSS detects a cable LOS event.		
Remedial action: The alarm is raised when an MSS detects a cable LOS event. Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-28 CableLOS (equipment)

Alarm	Attributes	Applicable major release
Name: CableLOS (678) Type: communicationsAlarm Package: equipment.CableLOS Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cableLOS	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an MSS detects a cable LOS event.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-29 ClientDelegateServerStatus

Alarm	Attributes	Applicable major release
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm Package: server.ClientDelegateServerStatus Raised on class: server.ClientDelegateServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 25-30 ClockFailure

Alarm	Attributes	Applicable major release
Name: ClockFailure (1162) Type: communicationsAlarm Package: equipment.ClockFailure Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: clockFailure	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an MPT radio clock failure occurs.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-31 CmuManagementFailed

Alarm	Attributes	Applicable major release
Name: CmuManagementFailed (10040) Type: communicationsAlarm Package: lte.CmuManagementFailed Raised on class: lte.CompactMobilityUnit	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ftpFailed	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when SAM fails to manage a 9430 Compact Mobility Unit due to an FTP failure.		
Raising condition: ('Management State' EQUAL 'FTP Failed')		
Clearing condition: ('Management State' EQUAL 'Managed')		
Remedial action: Verify FTP connectivity between the 5620 SAM and the 9430 Compact Mobility Unit, then re-attempt to manage.		

Table 25-32 CombinerLossOfAlignment (equipment)

Alarm	Attributes	Applicable major release
Name: CombinerLossOfAlignment (5604) Type: equipmentAlarm Package: equipment.CombinerLossOfAlignment Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: CombinerLossOfAlignment	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when there is no alignment between Main and Diversity signal.		
Remedial action: Please refer MPR documentation for Corrective actions.		

Table 25-33 CombinerLossOfAlignment (mpr)

Alarm	Attributes	Applicable major release
Name: CombinerLossOfAlignment (5604) Type: equipmentAlarm Package: mpr.CombinerLossOfAlignment Raised on class: mpr.SubRackElements	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: CombinerLossOfAlignment	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when there is no alignment between Main and Diversity signal.		
Remedial action: Please refer MPR documentation for Corrective actions.		

Table 25-34 CommonLOS

Alarm	Attributes	Applicable major release
Name: CommonLOS (3621) Type: equipmentAlarm Package: equipment.CommonLOS Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: commonLOS	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a radio interface CLA detects a loss of signal.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-35 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm Package: equipment. ContainingEquipmentAdministrativelyDown Raised on class: equipment.Port	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentAdminist-rativelyDown	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 25-36 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm Package: equipment.ContainingEquipmentMismatch Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentMismatch	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 25-37 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm Package: equipment. ContainingEquipmentOperationallyDown Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentDown	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationllyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

Table 25-38 CorruptImageFile

Alarm	Attributes	Applicable major release
Name: CorruptImageFile (171) Type: configurationAlarm Package: mediation.CorruptImageFile Raised on class: mediation.AbstractSoftwareFolderDescriptor	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 25-39 CrossconnectDown

Alarm	Attributes	Applicable major release
Name: CrossconnectDown (744) Type: CrossconnectAlarm Package: mpr.CrossconnectDown Raised on class: mpr.Crossconnect	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: crossconnectDown	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the Operational State of an L2 or L3 interface is Down, and the Administrative State of the associated site is Up. The alarm is not raised against an L2 access interface that is in the MC ring standby state.		
Raising condition: ('xcRowStatus' NOT EQUAL 'Active')		
Clearing condition: ('xcRowStatus' EQUAL 'Active')		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-40 CrossConnectionFail (equipment)

Alarm	Attributes	Applicable major release
Name: CrossConnectionFail (679) Type: communicationsAlarm Package: equipment.CrossConnectionFail Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: crossConnectionFail	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an MSS TDM cross-connection fails.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-41 CrossConnectionFail (radioequipment)

Alarm	Attributes	Applicable major release
Name: CrossConnectionFail (679) Type: communicationsAlarm Package: radioequipment.CrossConnectionFail Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: crossConnectionFail	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an MSS TDM cross-connection fails.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-42 DAD

Alarm	Attributes	Applicable major release
Name: DAD (4416) Type: communicationsAlarm Package: equipment.DAD Raised on class: equipment.Shelf	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: duplicatedAddressDetected	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is reported when MPR 9500 detects a duplicated IP address.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-43 DemFail (radioequipment)

Alarm	Attributes	Applicable major release
Name: DemFail (680) Type: communicationsAlarm Package: radioequipment.DemFail Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: demFail	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an MSS demodulation function fails.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-44 DemFail (equipment)

Alarm	Attributes	Applicable major release
Name: DemFail (680) Type: communicationsAlarm Package: equipment.DemFail Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: demFail	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an MSS demodulation function fails.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-45 DemXpicLOS (equipment)

Alarm	Attributes	Applicable major release
Name: DemXpicLOS (3622) Type: equipmentAlarm Package: equipment.DemXpicLOS Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: demXpicLos	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a loss of signal occurs during XPIC demodulation.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-46 DemXpicLOS (mpr)

Alarm	Attributes	Applicable major release
Name: DemXpicLOS (3622) Type: communicationsAlarm Package: mpr.DemXpicLOS Raised on class: mpr.SubRackElements	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: demXpicLos	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a loss of signal occurs during XPIC demodulation.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-47 DialogFailure (mpr)

Alarm	Attributes	Applicable major release
Name: DialogFailure (1163) Type: equipmentAlarm Package: mpr.DialogFailure Raised on class: mpr.SubRackElements	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: dialogFailure	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an MPT has a temporary communication failure.		
Remedial action: The alarm is raised upon temporary loss of communication with MPT. Refer to the 9500 Node Maintenance manual for remedial action information		

Table 25-48 DialogFailure (equipment)

Alarm	Attributes	Applicable major release
Name: DialogFailure (1163) Type: equipmentAlarm Package: equipment.DialogFailure Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: dialogFailure	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an MPT has a temporary communication failure.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-49 downgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: downgradedCardAlarm (256) Type: softwareAlarm Package: equipment.downgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: downgradedCard	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 25-50 DS1E1AlarmIndicationSignal

Alarm	Attributes	Applicable major release
Name: DS1E1AlarmIndicationSignal (112) Type: communicationsAlarm Package: tdmequipment.DS1E1AlarmIndicationSignal Raised on class: tdmequipment.DS1E1ChannelSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: alarmIndicationSignal	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an NE reports that a specific DS1 or E1 channel has an AIS alarm condition.		
Raising condition: (('Outstanding Alarms'anyBit'Alarm Indication Signal') AND ('Report Alarms'anyBit'Alarm Indication Signal'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Alarm Indication Signal') AND ('Report Alarms'anyBit'Alarm Indication Signal')))		
Remedial action: Informational only.		

Table 25-51 DS1E1Looped

Alarm	Attributes	Applicable major release
Name: DS1E1Looped (126) Type: communicationsAlarm Package: tdmequipment.DS1E1Looped Raised on class: tdmequipment.DS1E1ChannelSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: farEndLoopback	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an NE reports that a specific DS1 or E1 channel has a remote loopback alarm condition.		
Raising condition: (('Outstanding Alarms'anyBit'Far end wants the near end to loopback') AND ('Report Alarms'anyBit'Far end wants the near end to loopback'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Far end wants the near end to loopback') AND ('Report Alarms'anyBit'Far end wants the near end to loopback')))		
Remedial action: Informational only.		

Table 25-52 DS1E1LossOfSignal

Alarm	Attributes	Applicable major release
Name: DS1E1LossOfSignal (124) Type: communicationsAlarm Package: tdmequipment.DS1E1LossOfSignal Raised on class: tdmequipment.DS1E1ChannelSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lossOfSignal	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an NE reports that a specific DS1 or E1 channel has an LOS alarm condition.		
Raising condition: (('Outstanding Alarms'anyBit'Loss of Signal') AND ('Report Alarms'anyBit'Loss of Signal'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Loss of Signal') AND ('Report Alarms'anyBit'Loss of Signal')))		
Remedial action: Informational only.		

Table 25-53 DS1E1OutOfFrame

Alarm	Attributes	Applicable major release
Name: DS1E1OutOfFrame (125) Type: communicationsAlarm Package: tdmequipment.DS1E1OutOfFrame Raised on class: tdmequipment.DS1E1ChannelSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: outOfFrame	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an NE reports that a specific DS1 or E1 channel has an OOF alarm condition.		
Raising condition: (('Outstanding Alarms'anyBit'Out Of Frame') AND ('Report Alarms'anyBit'Out Of Frame'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Out Of Frame') AND ('Report Alarms'anyBit'Out Of Frame')))		
Remedial action: Informational only.		

Table 25-54 DS1E1ResourceAvailabilityIndicator

Alarm	Attributes	Applicable major release
Name: DS1E1ResourceAvailabilityIndicator (114) Type: communicationsAlarm Package: tdmequipment. DS1E1ResourceAvailabilityIndicator Raised on class: tdmequipment. DS1E1ChannelSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceAvailabilityIndicator	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an NE reports that a specific DS1 or E1 channel has an RAI alarm condition.		
Raising condition: (('Outstanding Alarms'anyBit'Resource Availability Indicator') AND ('Report Alarms'anyBit'Resource Availability Indicator'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Resource Availability Indicator') AND ('Report Alarms'anyBit'Resource Availability Indicator')))		
Remedial action: Informational only.		

Table 25-55 DS1E1SignalDegradation

Alarm	Attributes	Applicable major release
Name: DS1E1SignalDegradation (500) Type: communicationsAlarm Package: tdmequipment.DS1E1SignalDegradation Raised on class: tdmequipment. DS1E1ChannelSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: signalDegradation	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an NE reports that a specific DS1 or E1 channel has an SD alarm condition.		
Raising condition: (('Outstanding Alarms'anyBit'Signal Degradation') AND ('Report Alarms'anyBit'Signal Degradation'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Signal Degradation') AND ('Report Alarms'anyBit'Signal Degradation')))		
Remedial action: Informational only.		

Table 25-56 DS1E1SignalFailure

Alarm	Attributes	Applicable major release
Name: DS1E1SignalFailure (501) Type: communicationsAlarm Package: tdmequipment.DS1E1SignalFailure Raised on class: tdmequipment. DS1E1ChannelSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: signalFailure	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an NE reports that a specific DS1 or E1 channel has an SF alarm condition.		
Raising condition: (('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure')))		
Remedial action: Informational only.		

Table 25-57 EarlyWarning (radioequipment)

Alarm	Attributes	Applicable major release
Name: EarlyWarning (681) Type: communicationsAlarm Package: radioequipment.EarlyWarning Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: earlyWarning	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an MSS detects an early warning event.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-58 EarlyWarning (equipment)

Alarm	Attributes	Applicable major release
Name: EarlyWarning (681) Type: communicationsAlarm Package: equipment.EarlyWarning Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: earlyWarning	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an MSS detects an early warning event.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-59 EfmOamAlarm

Alarm	Attributes	Applicable major release
Name: EfmOamAlarm (4617) Type: equipmentAlarm Package: ethernetequipment.EfmOamAlarm Raised on class: ethernetequipment.Dot3Oam	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EFMOAMOperationalstate-OutofService	Release: • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when EFM Ignore status is Enabled and EFM Operation Status has a fault that is not propagated to the Physical Port Operational State.		
Raising condition: ((('Operational Status' EQUAL 'Link Fault') OR ('Operational Status' EQUAL 'Active Send Local')) AND ('Ignore EFM State' EQUAL 'true'))		
Clearing condition: ((('Operational Status' NOT EQUAL 'Link Fault') AND ('Operational Status' NOT EQUAL 'Active Send Local')) OR ('Ignore EFM State' EQUAL 'false'))		
Remedial action: Informational - The alarm indicates that EFM has detected an error condition but has not affected the operation state of the port.		

Table 25-60 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm Package: equipment.EquipmentAdministrativelyDown Raised on class: equipment.Equipment	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentAdministratively-Down	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 25-61 EquipmentDegraded

Alarm	Attributes	Applicable major release
Name: EquipmentDegraded (604) Type: equipmentAlarm Package: equipment.EquipmentDegraded Raised on class: equipment.FanTray	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: singleFanFailure	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a single fan fails. The chassis attempts to continue operating within the normal temperature range using only the remaining fans.		
Raising condition: ('Device State' EQUAL 'MinorFailure')		
Clearing condition: ('Device State' NOT EQUAL 'MinorFailure')		
Remedial action: The failed fan unit should be replaced.		

Table 25-62 EquipmentDown

Alarm	Attributes	Applicable major release
Name: EquipmentDown (10) Type: equipmentAlarm Package: equipment.EquipmentDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: inoperableEquipment	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 25-63 EquipmentInTest

Alarm	Attributes	Applicable major release
Name: EquipmentInTest (11) Type: equipmentAlarm Package: equipment.EquipmentInTest Raised on class: equipment.Equipment	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentInTest	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 25-64 EquipmentMismatch

Alarm	Attributes	Applicable major release
Name: EquipmentMismatch (9) Type: equipmentAlarm Package: equipment.EquipmentMismatch Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentTypeMismatch	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 25-65 EquipmentRemoved

Alarm	Attributes	Applicable major release
Name: EquipmentRemoved (8) Type: equipmentAlarm Package: equipment.EquipmentRemoved Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: ((('isEquipped' EQUAL 'false') OR ('compositeEquipmentState' EQUAL 'Removed')) AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Removed') AND ('isEquipped' EQUAL 'true'))		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 25-66 EthernetPortConfiguredLoopback

Alarm	Attributes	Applicable major release
Name: EthernetPortConfiguredLoopback (801) Type: configurationAlarm Package: ethernetequipment.EthernetPortConfiguredLoopback Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ethernetPortConfiguredLoopback	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a timed loopback is in effect for an Ethernet port.		
Raising condition: (('Type' NOT EQUAL 'None'))		
Clearing condition: (('Type' EQUAL 'None'))		
Remedial action: This alarm has been raised bye the node because "Timed Loopback" option of the specific port's Ethernet property has been enabled. To resolve this problem from "Ethernet" tab of "Physical Port" properties form configure "Timed Loopback" Type property as "None".		

Table 25-67 EthernetPortDuplicateLane

Alarm	Attributes	Applicable major release
Name: EthernetPortDuplicateLane (3557) Type: communicationsAlarm Package: ethernetequipment.EthernetPortDuplicateLane Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: DuplicateLane	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a device reports a Duplicate Lane on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane')))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 25-68 EthernetPortHighBer

Alarm	Attributes	Applicable major release
Name: EthernetPortHighBer (307) Type: communicationsAlarm Package: ethernetequipment.EthernetPortHighBer Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: HighBer	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a device reports a high bit-error rate on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate')))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 25-69 EthernetPortLocalFault

Alarm	Attributes	Applicable major release
Name: EthernetPortLocalFault (305) Type: communicationsAlarm Package: ethernetequipment.EthernetPortLocalFault Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LocalFault	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a device reports a local fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault')))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 25-70 EthernetPortNoAmLock

Alarm	Attributes	Applicable major release
Name: EthernetPortNoAmLock (3558) Type: communicationsAlarm Package: ethernetequipment.EthernetPortNoAmLock Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NoAmLock	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a device reports a No Am Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock')))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 25-71 EthernetPortNoBlockLock

Alarm	Attributes	Applicable major release
Name: EthernetPortNoBlockLock (3559) Type: communicationsAlarm Package: ethernetequipment.EthernetPortNoBlockLock Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NoBlockLock	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a device reports a No Block Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock')))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 25-72 EthernetPortNoFrameLock

Alarm	Attributes	Applicable major release
Name: EthernetPortNoFrameLock (306) Type: communicationsAlarm Package: ethernetequipment.EthernetPortNoFrameLock Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NoFrameLock	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a device reports No Frame Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock')))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 25-73 EthernetPortRemoteFault

Alarm	Attributes	Applicable major release
Name: EthernetPortRemoteFault (304) Type: communicationsAlarm Package: ethernetequipment.EthernetPortRemoteFault Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: RemoteFault	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a device reports a remote fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault')))		
Remedial action: One of the following conditions exists on the remote physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 25-74 EthernetPortSignalFailure

Alarm	Attributes	Applicable major release
Name: EthernetPortSignalFailure (303) Type: communicationsAlarm Package: ethernetequipment.EthernetPortSignalFailure Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SignalFailure	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a device reports a signal failure on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure')))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 25-75 ExcessiveEnvironmentTemparature (equipment)

Alarm	Attributes	Applicable major release
Name: ExcessiveEnvironmentTemparature (1118) Type: environmentalAlarm Package: equipment.ExcessiveEnvironmentTemparature Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: excessiveEnvironmentTemp	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when MPT is overheated.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-76 ExcessiveEnvironmentTemparature (mpr)

Alarm	Attributes	Applicable major release
Name: ExcessiveEnvironmentTemparature (1118) Type: communicationsAlarm Package: mpr.ExcessiveEnvironmentTemparature Raised on class: mpr.SubRackElements	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: excessiveEnvironmentTemp	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when MPT is overheated.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-77 ExternalTimingReferenceNotQualified

Alarm	Attributes	Applicable major release
Name: ExternalTimingReferenceNotQualified (548) Type: communicationsAlarm Package: sonet.ExternalTimingReferenceNotQualified Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: timingReferenceNotQualified	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the External timing reference on an NE is not in the Qualified state.		
Raising condition: (('Qualified For Use' EQUAL 'Not Qualified') AND ('Administrative State' NOT EQUAL 'Down'))		
Clearing condition: (('Qualified For Use' NOT EQUAL 'Not Qualified') OR ('Administrative State' EQUAL 'Down'))		
Remedial action: Informational		

Table 25-78 FanCommunicationProblem

Alarm	Attributes	Applicable major release
Name: FanCommunicationProblem (5424) Type: communicationsAlarm Package: mpr.FanCommunicationProblem Raised on class: mpr.SubRackElements	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fanCommunicationProblem	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a communication problem with fan is detected.		
Remedial action: The alarm is raised when FAN communication Problem is detected on the subrack. Refer 9500 Node Maintenance manual for remedial action information		

Table 25-79 FanFail

Alarm	Attributes	Applicable major release
Name: FanFail (5609) Type: equipmentAlarm Package: equipment.FanFail Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: FanFail	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when there is fan fail for MPTHLC.		
Remedial action: The alarm is raised when MPTHLC fan fails. Refer 9500 Node Maintenance manual for remedial action information.		

Table 25-80 FanFailure (equipment)

Alarm	Attributes	Applicable major release
Name: FanFailure (624) Type: equipmentAlarm Package: equipment.FanFailure Raised on class: equipment.FanTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fanFailure	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the associated fan is not operationally Up.		
Raising condition: (('Device State' EQUAL 'Failed') OR ('Device State' EQUAL 'Unknown') OR ('Device State' EQUAL 'OutOfservice'))		
Clearing condition: ('Device State' EQUAL 'OK')		
Remedial action: Remove and reset the fan unit. If this does not resolve the problem replace the fan.		

Table 25-81 FanTrayRemoved

Alarm	Attributes	Applicable major release
Name: FanTrayRemoved (569) Type: equipmentAlarm Package: equipment.FanTrayRemoved Raised on class: equipment.FanTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: FanTrayRemoved	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the deviceState attribute has a value of deviceNotEquipped.		
Raising condition: ('Device State' EQUAL 'Not Equipped')		
Clearing condition: ('Device State' NOT EQUAL 'Not Equipped')		
Remedial action: Informational - a fan tray has been removed from the NE.		

Table 25-82 FirmwareDownloadOnGoing (mpr)

Alarm	Attributes	Applicable major release
Name: FirmwareDownloadOnGoing (626) Type: equipmentAlarm Package: mpr.FirmwareDownloadOnGoing Raised on class: mpr.SubRackElements	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: firmwareDownloadOnGoing	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a firmware download is in progress.		
Remedial action: Informational - Firmware for the equipment is downloading.		

Table 25-83 FlashCardFailure

Alarm	Attributes	Applicable major release
Name: FlashCardFailure (8161) Type: equipmentAlarm Package: equipment.FlashCardFailure Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: flashCardFailure	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when there is Flash card failure.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-84 FlashCardRealignmentInProgress

Alarm	Attributes	Applicable major release
Name: FlashCardRealignmentInProgress (8162) Type: equipmentAlarm Package: equipment. FlashCardRealignmentInProgress Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: flashCardRealignmentIn-Progress	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when MPR Flash card realignment is in progress.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-85 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major release
Name: FrameSizeProblem (37) Type: configurationAlarm Package: netw.FrameSizeProblem Raised on class: netw.StatefullConnectableInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: frameSizeProblem	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL '0L'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL '0L'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 25-86 GaPeerDown

Alarm	Attributes	Applicable major release
Name: GaPeerDown (3303) Type: EpcAlarm Package: lteggsn.GaPeerDown Raised on class: lteggsn.GaPeer	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerDown	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 25-87 HighBER (radioequipment)

Alarm	Attributes	Applicable major release
Name: HighBER (682) Type: communicationsAlarm Package: radioequipment.HighBER Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: highBER	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an MSS detects a high BER.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-88 HouseKeeping (mpr)

Alarm	Attributes	Applicable major release
Name: HouseKeeping (1165) Type: equipmentAlarm Package: mpr.HouseKeeping Raised on class: mpr.AbstractMprAux	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: HouseKeeping	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: Defect detected by an house-keeping interface on AUX card.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-89 HouseKeeping (equipment)

Alarm	Attributes	Applicable major release
Name: HouseKeeping (1165) Type: equipmentAlarm Package: equipment.HouseKeeping Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: houseKeeping	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a HouseKeeping trap is received.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-90 IncompatibleFrequency (equipment)

Alarm	Attributes	Applicable major release
Name: IncompatibleFrequency (683) Type: communicationsAlarm Package: equipment.IncompatibleFrequency Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompatibleFrequency	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a provisioned MSS frequency is incompatible with the MSS hardware.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-91 IncompatibleFrequency (radioequipment)

Alarm	Attributes	Applicable major release
Name: IncompatibleFrequency (683) Type: communicationsAlarm Package: radioequipment.IncompatibleFrequency Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompatibleFrequency	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a provisioned MSS frequency is incompatible with the MSS hardware.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-92 IncompatibleModulation (radioequipment)

Alarm	Attributes	Applicable major release
Name: IncompatibleModulation (4417) Type: communicationsAlarm Package: radioequipment.IncompatibleModulation Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompatibleModulation	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an incompatibility of the modulation value defect raise.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-93 IncompatibleModulation (equipment)

Alarm	Attributes	Applicable major release
Name: IncompatibleModulation (4417) Type: communicationsAlarm Package: equipment.IncompatibleModulation Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompatibleModulation	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an incompatibility of the modulation value defect raise.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-94 IncompatibleModulationParam (equipment)

Alarm	Attributes	Applicable major release
Name: IncompatibleModulationParam (1144) Type: communicationsAlarm Package: equipment.IncompatibleModulationParam Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompatibleModulation	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the configured modulation parameters are not supported by MPT (or) when XPIC is configured on an MPT that does not allow XPIC capability.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-95 IncompatibleModulationParam (radioequipment)

Alarm	Attributes	Applicable major release
Name: IncompatibleModulationParam (1144) Type: communicationsAlarm Package: radioequipment. IncompatibleModulationParam Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompatibleModulation	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the configured modulation parameters are not supported by MPT (or) when XPIC is configured on an MPT that does not allow XPIC capability.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-96 IncompatiblePower (equipment)

Alarm	Attributes	Applicable major release
Name: IncompatiblePower (3940) Type: communicationsAlarm Package: equipment.IncompatiblePower Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompatiblePower	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a incompatibility of the power value defect raise.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-97 IncompatiblePower (radioequipment)

Alarm	Attributes	Applicable major release
Name: IncompatiblePower (3940) Type: communicationsAlarm Package: radioequipment.IncompatiblePower Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompatiblePower	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a incompatibility of the power value defect raise.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-98 IncompatibleProtection (equipment)

Alarm	Attributes	Applicable major release
Name: IncompatibleProtection (4824) Type: equipmentAlarm Package: equipment.IncompatibleProtection Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompatibleProtection	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised in case of hardware incompatibility for 1+1 radio configuration i.e. MPT-HCv2 without RPS or XPIC equipped.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-99 IncompatiblePTX (radioequipment)

Alarm	Attributes	Applicable major release
Name: IncompatiblePTX (684) Type: communicationsAlarm Package: radioequipment.IncompatiblePTX Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompatiblePTX	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the provisioned MSS transmit power is incompatible with the MSS hardware.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-100 IncompatiblePTX (equipment)

Alarm	Attributes	Applicable major release
Name: IncompatiblePTX (684) Type: communicationsAlarm Package: equipment.IncompatiblePTX Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompatiblePTX	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the provisioned MSS transmit power is incompatible with the MSS hardware.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-101 IncompatibleShifter (radioequipment)

Alarm	Attributes	Applicable major release
Name: IncompatibleShifter (685) Type: communicationsAlarm Package: radioequipment.IncompatibleShifter Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompatibleShifter	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the provisioned MSS shifter parameters are incompatible with the MSS hardware.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-102 IncompatibleShifter (equipment)

Alarm	Attributes	Applicable major release
Name: IncompatibleShifter (685) Type: communicationsAlarm Package: equipment.IncompatibleShifter Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompatibleShifter	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the provisioned MSS shifter parameters are incompatible with the MSS hardware.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-103 IncompleteConfiguration

Alarm	Attributes	Applicable major release
Name: IncompleteConfiguration (1942) Type: operationalViolation Package: netw.IncompleteConfiguration Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompleteConfig	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a pre-provisioned NE has no objects configured beneath it.		
Raising condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' EQUAL '\"\"'))		
Clearing condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' NOT EQUAL '\"\"'))		
Remedial action: A configuration error has been made which must be corrected. The configuration of the pre-provisioned NE is incomplete. A work order was not associated with the pre-provisioned NE and as a consequence the attempt to auto-configure the NE failed.		

Table 25-104 inSufficientBandwidth

Alarm	Attributes	Applicable major release
Name: inSufficientBandwidth (11464) Type: serviceAlarm Package: mpr.inSufficientBandwidth Raised on class: mpr.BackhaulAdjacency	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: inSufficientBandwidth	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a deployed adjacency doesnt have sufficent bandwidth.		
Raising condition: (('Deployed to Site' EQUAL 'false') AND ('isBandwidthExceeded' EQUAL 'true'))		
Clearing condition: (('Deployed to Site' EQUAL 'true') OR ('isBandwidthExceeded' EQUAL 'false'))		
Remedial action: Increase the bandwidth.		

Table 25-105 InterfaceDown (netw)

Alarm	Attributes	Applicable major release
Name: InterfaceDown (36) Type: InterfaceAlarm Package: netw.InterfaceDown Raised on class: netw.StatefullConnectableInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceDown	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an interface or underlying resource fails, as indicated by an interface compositeState attribute value of failed or underlyingResourceFailed.		
Raising condition: (('compositeState' EQUAL 'Inoperable') OR ('compositeState' EQUAL 'Underlying Resource Inoperable'))		
Clearing condition: (('compositeState' NOT EQUAL 'Inoperable') AND ('compositeState' NOT EQUAL 'Underlying Resource Inoperable'))		
Remedial action: A physical port (physical interface, LAG, channel) associated with the network interface in not operational. Ensure that the interface is cabled and there are no configuration errors (i.e. MTU size set incorrectly etc) on the interface.		

Table 25-106 InternalCommunicationProblem (equipment)

Alarm	Attributes	Applicable major release
Name: InternalCommunicationProblem (627) Type: equipmentAlarm Package: equipment.InternalCommunicationProblem Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: internalCommunicationProblem	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an ODU is unresponsive.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-107 InternalCommunicationProblem (mpr)

Alarm	Attributes	Applicable major release
Name: InternalCommunicationProblem (627) Type: equipmentAlarm Package: mpr.InternalCommunicationProblem Raised on class: mpr.SubRackElements	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: internalCommunicationProblem	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an MPTHLv2 is unresponsive.		
Remedial action: The alarm is raised when there is a loss of communication with MPT. Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-108 KeyUnavailable

Alarm	Attributes	Applicable major release
Name: KeyUnavailable (11291) Type: communicationsAlarm Package: equipment.KeyUnavailable Raised on class: equipment.PhysicalPort	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: KeyUnavailable	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when Key Unavailable is there for secure certified mode.		
Remedial action: Please refer to node Troubleshooting guide for detailed steps for corrective action.		

Table 25-109 LagDown

Alarm	Attributes	Applicable major release
Name: LagDown (20) Type: equipmentAlarm Package: lag.LagDown Raised on class: lag.Interface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lagDown	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when all ports in a LAG are operationally down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This alarm indicates that all physical Ethernet links associated with a LAG are operationally down. The reasons for the links to be down may vary from link to link. The following possible causes of this alarm should be investigated. The physical port (near end or far end may have failed - this can be remedied by replacing the interface card in question. The physical links may have been turned down administratively - re-enable the links. A cable failure or disconnect may have occurred - please ensure that the cables are properly connected to the physical port and and that the cable has not been damaged.		

Table 25-110 LagPortAddFailed

Alarm	Attributes	Applicable major release
Name: LagPortAddFailed (422) Type: equipmentAlarm Package: equipment.LagPortAddFailed Raised on class: equipment.PhysicalPort	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: linkDown	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the Lag Port Add function Fails.		
Raising condition: (('state' EQUAL 'Link Down') AND ('LAG ID' > '0'))		
Clearing condition: (('state' NOT EQUAL 'Link Down') OR ('LAG ID' EQUAL '0'))		
Remedial action: A configuration error has occurred which must be corrected. The link that was to be added to the LAG group may be of the wrong type (i.e. non ethernet) or the limit of the number of links supported in a LAG may have been reached.		

Table 25-111 LagPortDown

Alarm	Attributes	Applicable major release
Name: LagPortDown (10275) Type: communicationsAlarm Package: equipment.LagPortDown Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lagPortDown	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the lag port is down.		
Remedial action: Please refer MPR documentation for Corrective actions.		

Table 25-112 LicensedLimitExceeded

Alarm	Attributes	Applicable major release
Name: LicensedLimitExceeded (127) Type: licensingAlarm Package: security.LicensedLimitExceeded Raised on class: security.SamLicensePoints	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: licensedLimitExceeded	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 25-113 LineAlarmIndicationSignal

Alarm	Attributes	Applicable major release
Name: LineAlarmIndicationSignal (84) Type: communicationsAlarm Package: sonetequipment.LineAlarmIndicationSignal Raised on class: sonetequipment. SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lineAlarmIndicationSignal	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a SONET port reports an LAIS error. The alarm corresponds to the lais alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Line Alarm Indication Signal') AND ('Report Alarms'anyBit'Line Alarm Indication Signal'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Line Alarm Indication Signal') AND ('Report Alarms'anyBit'Line Alarm Indication Signal')))		
Remedial action: Informational only.		

Table 25-114 LineErrorCondition

Alarm	Attributes	Applicable major release
Name: LineErrorCondition (94) Type: communicationsAlarm Package: sonetequipment.LineErrorCondition Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lineErrorCondition	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a SONET port reports a line error condition that a remote NE raises because of b1 errors received from the local NE. The alarm corresponds to the lrei alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Line Error Condition') AND ('Report Alarms'anyBit'Line Error Condition'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Line Error Condition') AND ('Report Alarms'anyBit'Line Error Condition')))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 25-115 LineRemoteDefectIndication

Alarm	Attributes	Applicable major release
Name: LineRemoteDefectIndication (85) Type: communicationsAlarm Package: sonetequipment.LineRemoteDefectIndication Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lineRemoteDefectIndication	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a SONET port reports a line remote defect indication error caused by an LOF, LOC, or LOS condition. The alarm corresponds to the lrdi alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Line Remote Defect Indication') AND ('Report Alarms'anyBit'Line Remote Defect Indication'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Line Remote Defect Indication') AND ('Report Alarms'anyBit'Line Remote Defect Indication')))		
Remedial action: Informational only.		

Table 25-116 LinkCle

Alarm	Attributes	Applicable major release
Name: LinkCle (8437) Type: communicationsAlarm Package: equipment.LinkCle Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: linkcle	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: This alarm is raised when at least one of the Critical Link Event flags is received.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-117 LinkDown (equipment)

Alarm	Attributes	Applicable major release
Name: LinkDown (12) Type: communicationsAlarm Package: equipment.LinkDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: portLinkProblem	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 25-118 LinkIdentifierMismatch (radioequipment)

Alarm	Attributes	Applicable major release
Name: LinkIdentifierMismatch (686) Type: communicationsAlarm Package: radioequipment.LinkIdentifierMismatch Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: linkIdentifierMismatch	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an MSS detects a link identifier mismatch.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-119 LinkIdentifierMismatch (equipment)

Alarm	Attributes	Applicable major release
Name: LinkIdentifierMismatch (686) Type: communicationsAlarm Package: equipment.LinkIdentifierMismatch Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: linkIdentifierMismatch	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an MSS detects a link identifier mismatch.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-120 LinkOdnc

Alarm	Attributes	Applicable major release
Name: LinkOdnc (8438) Type: communicationsAlarm Package: equipment.LinkOdnc Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: linkodnc	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: This alarm is raised when a OAM Discovery is not completed.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-121 LocalAccessRequested

Alarm	Attributes	Applicable major release
Name: LocalAccessRequested (9631) Type: equipmentAlarm Package: mpr.LocalAccessRequested Raised on class: mpr.MprNeProperties	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lacRequested	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the Local access is requested by CT		
Raising condition: (('Lac state' EQUAL 'Access Requested'))		
Clearing condition: ('Lac state' NOT EQUAL 'Access Requested')		
Remedial action: Alarm is raised when CT requests access to NE. Navigate to System settings and grant local access if needed or ignore the request and wait for the timeout to expire for alarm to clear.		

Table 25-122 LoopProblem (equipment)

Alarm	Attributes	Applicable major release
Name: LoopProblem (1145) Type: communicationsAlarm Package: equipment.LoopProblem Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: loopProblem	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when there is a loss of communication command path between far end transmitter and local receiver .		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-123 LoopProblem (radioequipment)

Alarm	Attributes	Applicable major release
Name: LoopProblem (1145) Type: communicationsAlarm Package: radioequipment.LoopProblem Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: loopProblem	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when there is a loss of communication command path between far end transmitter and local receiver .		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-124 LossOfCESoEthFrames

Alarm	Attributes	Applicable major release
Name: LossOfCESoEthFrames (1168) Type: communicationsAlarm Package: equipment.LossOfCESoEthFrames Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lossOfCESoEthFrames	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an Ethernet frame loss is detected on a CES.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-125 LossOfClock (sonetequipment)

Alarm	Attributes	Applicable major release
Name: LossOfClock (83) Type: communicationsAlarm Package: sonetequipment.LossOfClock Raised on class: sonetequipment. SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lossOfClock	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a SONET port reports an LOC condition, which causes the NE to set the port Operational State to Down.		
Raising condition: (('Outstanding Alarms'anyBit'Loss of Clock') AND ('Report Alarms'anyBit'Loss of Clock'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Loss of Clock') AND ('Report Alarms'anyBit'Loss of Clock')))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected.		

Table 25-126 LossOfFrame (equipment)

Alarm	Attributes	Applicable major release
Name: LossOfFrame (630) Type: communicationsAlarm Package: equipment.LossOfFrame Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lossOfFrame	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an LOF is detected on a port.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-127 LossOfMultiFrame (equipment)

Alarm	Attributes	Applicable major release
Name: LossOfMultiFrame (3930) Type: communicationsAlarm Package: equipment.LossOfMultiFrame Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lossOfMultiFrame	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: This alarm is raised when a loss of multiple frames occurs on the SDH port.		
Remedial action: This alarm is raised when there is a loss of multiple frames on the SDH port.		

Table 25-128 LossOfProtection

Alarm	Attributes	Applicable major release
Name: LossOfProtection (1169) Type: communicationsAlarm Package: equipment.LossOfProtection Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lossOfProtection	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an MPT radio protection loss occurs.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-129 LossOfSignal (equipment)

Alarm	Attributes	Applicable major release
Name: LossOfSignal (631) Type: communicationsAlarm Package: equipment.LossOfSignal Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lossOfSignal	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a Loss of Signal is detected on a port.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-130 LowInputVoltage

Alarm	Attributes	Applicable major release
Name: LowInputVoltage (9619) Type: environmentalAlarm Package: equipment.LowInputVoltage Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lowInputVoltage	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when Low input voltage is detected.		
Remedial action: Please refer MPR documentation for Corrective actions.		

Table 25-131 LowTemperatureDetected

Alarm	Attributes	Applicable major release
Name: LowTemperatureDetected (1127) Type: environmentalAlarm Package: equipment.LowTemperatureDetected Raised on class: equipment.Shelf	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentOvercooled	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the chassis temperature falls below the minimum threshold.		
Raising condition: ('Low Temperature State' EQUAL 'Low')		
Clearing condition: ('Low Temperature State' NOT EQUAL 'Low')		
Remedial action: The NE has detected internal temperatures which are abnormally low. This may happen when the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 25-132 MobileConnectorDown

Alarm	Attributes	Applicable major release
Name: MobileConnectorDown (1064) Type: EpcAlarm Package: lteservice.MobileConnectorDown Raised on class: lteservice.MobileServiceConnector	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EpcDown	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL '\"\"')		
Clearing condition: ('EPS Path' NOT EQUAL '\"\"')		
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

Table 25-133 MvrSiteDown

Alarm	Attributes	Applicable major release
Name: MvrSiteDown (162) Type: ProtocolAlarm Package: layer2.MvrSiteDown Raised on class: layer2.MvrSite	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('MVR Admin Status' EQUAL 'Disabled')		
Clearing condition: ('MVR Admin Status' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable MVR Admin Status under the Bridge Instance.		

Table 25-134 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major release
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm Package: netw.NeManagementAndTrapManagementMismatch Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: neManagementChange	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		
Raising condition: ((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band')))		
Clearing condition: ((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band')))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

Table 25-135 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major release
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm Package: security.NewSsh2ServerKeyDetected Raised on class: security.KnownHostKey	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		

Table 25-135 NewSsh2ServerKeyDetected (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 25-136 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major release
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm Package: netw.NodeDatabaseFallbackDetected Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeDatabaseFallback	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 25-137 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major release
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm Package: netw.NodeDatabaseMisalignmentDetected Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0

Table 25-137 NodeDatabaseMisalignmentDetected (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

Table 25-138 NodeSuspended

Alarm	Attributes	Applicable major release
Name: NodeSuspended (5123) Type: communicationsAlarm Package: netw.NodeSuspended Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NodeSuspend	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element.The alarm will be cleared when the network element is managed back.		

Table 25-139 nonDeployedAdjacencyExists

Alarm	Attributes	Applicable major release
Name: nonDeployedAdjacencyExists (11465) Type: communicationsAlarm Package: mpr.nonDeployedAdjacencyExists Raised on class: mpr.BackhaulAdjacency	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nonDeployedAdjacencyExists	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a deployed adjacency is deleted on the site.		
Raising condition: (('Deployed to Site' EQUAL 'false') AND ('existedOnSite' EQUAL 'true'))		
Clearing condition: (('Deployed to Site' EQUAL 'true') AND ('existedOnSite' EQUAL 'true'))		
Remedial action: Deploy the changes made to the service.		

Table 25-140 OverTemperatureDetected

Alarm	Attributes	Applicable major release
Name: OverTemperatureDetected (388) Type: environmentalAlarm Package: equipment.OverTemperatureDetected Raised on class: equipment.Shelf	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentOverheated	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the chassis temperature exceeds the maximum threshold value.		
Raising condition: ('Over Temperature State' EQUAL 'Over')		
Clearing condition: ('Over Temperature State' NOT EQUAL 'Over')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 25-141 PartialResyncProblem

Alarm	Attributes	Applicable major release
Name: PartialResyncProblem (4401) Type: communicationsAlarm Package: netw.PartialResyncProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: partialResyncProblem	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a partial resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 25-142 PartialVPRNEncryption

Alarm	Attributes	Applicable major release
Name: PartialVPRNEncryption (8992) Type: configurationAlarm Package: nge.PartialVPRNEncryption Raised on class: nge.VprnEncryptService	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConfigMismatch	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when one or more sites are not encryption enabled in a VPRN service.		
Raising condition: (('VPRN Service Encryption Status' EQUAL 'Partial'))		
Clearing condition: (('VPRN Service Encryption Status' NOT EQUAL 'Partial'))		
Remedial action: This site is newly added to the VPRN service, Perform the encrypt operation on the KeyGroup to clear the alarm.		

Table 25-143 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major release
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm Package: netw. PersistentIndexParametersMisconfigured Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistentIndexConfiguration-Mismatch	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when persistence is set to Off in the NE BOF.		
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

Table 25-144 PollerProblem

Alarm	Attributes	Applicable major release
Name: PollerProblem (31) Type: communicationsAlarm Package: netw.PollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resyncFailed	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 25-145 PortEtherSymMonSDAlarm

Alarm	Attributes	Applicable major release
Name: PortEtherSymMonSDAlarm (5662) Type: communicationsAlarm Package: ethernetequipment. PortEtherSymMonSDAlarm Raised on class: ethernetequipment. EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: etherPortSymMonSDThrehol-dExceededAlarm	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an Ethernet port Symbol Monitor Failure alarm condition is detected (Signal Degradation Threshold exceeded).		
Raising condition: ('Symbol Alarm Reason' EQUAL 'SD Threshold Exceeded')		
Clearing condition: ('Symbol Alarm Reason' NOT EQUAL 'SD Threshold Exceeded')		
Remedial action: Symbol monitor signal degradation alarm could be cleared by changing/disabling the associated threshold/multiplier values or it is self clearing and will clear once the error rate drops below 1/10th of the configured rate.		

Table 25-146 PortEtherSymMonSFAlarm

Alarm	Attributes	Applicable major release
Name: PortEtherSymMonSFAlarm (5663) Type: communicationsAlarm Package: ethernetequipment. PortEtherSymMonSFAlarm Raised on class: ethernetequipment. EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: etherPortSymMonSFThrehold-ExceededAlarm	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an Ethernet port Symbol Monitor Failure alarm condition is detected (Signal Failure Threshold exceeded).		
Raising condition: ('Symbol Alarm Reason' EQUAL 'SF Threshold Exceeded')		
Clearing condition: ('Symbol Alarm Reason' NOT EQUAL 'SF Threshold Exceeded')		
Remedial action: Symbol monitor signal failure alarm could be cleared by changing/disabling the associated threshold/multiplier values or by taking the port out of service (eg. shutdown, card/mda reset, physical link loss).		

Table 25-147 PPPFail

Alarm	Attributes	Applicable major release
Name: PPPFail (632) Type: communicationsAlarm Package: equipment.PPPFail Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: pppFail	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a PPP IP Fail condition is detected.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-148 PrimaryImageBootFailure

Alarm	Attributes	Applicable major release
Name: PrimaryImageBootFailure (191) Type: configurationAlarm Package: sw.PrimaryImageBootFailure Raised on class: sw.CardSoftware	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 25-149 ProvisioningMismatch

Alarm	Attributes	Applicable major release
Name: ProvisioningMismatch (634) Type: equipmentAlarm Package: equipment.ProvisioningMismatch Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: provisioningMismatch	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a license mismatch is detected for provisioned equipment.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-150 PTP1588TCFail

Alarm	Attributes	Applicable major release
Name: PTP1588TCFail (9621) Type: communicationsAlarm Package: equipment.PTP1588TCFail Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ptp1588tcFail	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when ptp failure is detected.		
Remedial action: Please refer MPR documentation for Corrective actions.		

Table 25-151 PTPClockclassDEG

Alarm	Attributes	Applicable major release
Name: PTPClockclassDEG (11511) Type: communicationsAlarm Package: ptp.PTPClockclassDEG Raised on class: ptp.IEEEPTPClock	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PTPClockclassDEG	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised if PTP clockclass is smaller than the value of the specific threshold.		
Remedial action: Please check if the configured Peer PTP clockclass configuration is correct.		

Table 25-152 PTPPeerDelayRespPkt

Alarm	Attributes	Applicable major release
Name: PTPPeerDelayRespPkt (11512) Type: communicationsAlarm Package: ptp.PTPPeerDelayRespPkt Raised on class: ptp.IEEEPTPPeer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PTPPeerDelayRespPkt	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised if the 1588 Delay_resp packet is not received.		
Remedial action: Please check if Configured Peer IP address is reachable (ping <Peer Ip>) from the NE and PTP configuration is correct.		

Table 25-153 PTPPeerLossOfAnnounce

Alarm	Attributes	Applicable major release
Name: PTPPeerLossOfAnnounce (3608) Type: communicationsAlarm Package: ptp.PTPPeerLossOfAnnounce Raised on class: ptp.IEEEPTPPeer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PTPPeerLossOfAnnounce	Release: • 7.1.0
Description: The alarm is raised when the PTP peer is in the 'Packet Timing Signal Fail (Loss Announce)' state. This indicates that the PTP announce messages are not received from the remote master.		

Table 25-153 PTPPeerLossOfAnnounce (continued)

Alarm	Attributes	Applicable major release
Raising condition: (('Master GM Alarms'anyBit'Loss of Announce'))		
Clearing condition: NOT ((('Master GM Alarms'anyBit'Loss of Announce')))		
Remedial action: Please check if Configured Peer IP address is reachable (ping <Peer Ip>) from the NE and PTP configuration is proper.		

Table 25-154 PTPPeerLossOfSync

Alarm	Attributes	Applicable major release
Name: PTPPeerLossOfSync (3609) Type: communicationsAlarm Package: ptp.PTPPeerLossOfSync Raised on class: ptp.IEEEPTPPeer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PTPPeerLossOfSync	Release: • 7.1.0
Description: The alarm is raised when the PTP peer is in the 'Packet Timing Signal Fail (Loss Sync)' state. This indicates that the PTP timing messages are not received from the remote master.		
Raising condition: (('Master GM Alarms'anyBit'Loss of Sync'))		
Clearing condition: NOT ((('Master GM Alarms'anyBit'Loss of Sync')))		
Remedial action: Please check if Configured Peer IP address is reachable (ping <Peer Ip>) from the NE and PTP configuration is proper.		

Table 25-155 PTPReferenceLossOfSignal (sonet)

Alarm	Attributes	Applicable major release
Name: PTPReferenceLossOfSignal (3613) Type: communicationsAlarm Package: sonet.PTPReferenceLossOfSignal Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PTPReferenceLossOfSignal	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the PTP reference on an NE is not qualified due to Loss of Signal.		
Raising condition: (('Not Qualified Due To'anyBit'LOS'))		
Clearing condition: NOT ((('Not Qualified Due To'anyBit'LOS')))		
Remedial action: Check the communication path is up between the local PTP slave clock and its selected master		

Table 25-156 PTPReferenceOutOfFrequency (sonet)

Alarm	Attributes	Applicable major release
Name: PTPReferenceOutOfFrequency (3614) Type: communicationsAlarm Package: sonet.PTPReferenceOutOfFrequency Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PTPReferenceOutOfFrequency	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the PTP Reference on an NE is not qualified due to Out of frequency.		
Raising condition: (('Not Qualified Due To'anyBit'OOF'))		
Clearing condition: NOT ((('Not Qualified Due To'anyBit'OOF')))		
Remedial action: Make sure that frequency configured for Reference One is correct.		

Table 25-157 PTPReferenceOutOfPollInRange (sonet)

Alarm	Attributes	Applicable major release
Name: PTPReferenceOutOfPollInRange (3615) Type: communicationsAlarm Package: sonet.PTPReferenceOutOfPollInRange Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PTPReferenceOutOfPollInRange	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the PTP Reference on an NE is not qualified state due to Out of poll in range.		
Raising condition: (('Not Qualified Due To'anyBit'OOPIR'))		
Clearing condition: NOT ((('Not Qualified Due To'anyBit'OOPIR')))		
Remedial action: If there is packet flow, the PTP slave clock is in it's initial acquiring states where the sync-if-timing reference does not qualify just wait.		

Table 25-158 RadioEncryptionMismatch (radioequipment)

Alarm	Attributes	Applicable major release
Name: RadioEncryptionMismatch (8969) Type: communicationsAlarm Package: radioequipment.RadioEncryptionMismatch Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: radioEncryptionMismatch	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an AES encryption is diffrent between local and remote NE facing on Radio link.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-159 RadioEncryptionMismatch (equipment)

Alarm	Attributes	Applicable major release
Name: RadioEncryptionMismatch (8969) Type: communicationsAlarm Package: equipment.RadioEncryptionMismatch Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: radioEncryptionMismatch	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an AES encryption is diffrent between local and remote NE facing on Radio link.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-160 RadiusOperStatusDown

Alarm	Attributes	Applicable major release
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm Package: netw.RadiusOperStatusDown Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: radiusOperationStatusDown	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up.Check the connectivity between SAM server and radius server configured on the Network element.		

Table 25-161 ReachabilityProblem

Alarm	Attributes	Applicable major release
Name: ReachabilityProblem (243) Type: communicationsAlarm Package: netw.ReachabilityProblem Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReachabilityTestFailed	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. The polling interval depends on the NE type and is configurable in nms-server.xml. By default, the 5620 SAM polls a managed NE every four minutes. If a poll fails, the alarm is raised. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 25-162 RemoteDefectIndication

Alarm	Attributes	Applicable major release
Name: RemoteDefectIndication (2942) Type: communicationsAlarm Package: equipment.RemoteDefectIndication Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: remoteDefectIndication	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a RDI occurs.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-163 ReplaceableUnitMissing (equipment)

Alarm	Attributes	Applicable major release
Name: ReplaceableUnitMissing (635) Type: equipmentAlarm Package: equipment.ReplaceableUnitMissing Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cardMissing	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a device detects that a provisioned card is not physically present.		
Remedial action: Informational - no corrective action required.		

Table 25-164 ReplaceableUnitMissing (mpr)

Alarm	Attributes	Applicable major release
Name: ReplaceableUnitMissing (635) Type: equipmentAlarm Package: mpr.ReplaceableUnitMissing Raised on class: mpr.SubRackElements	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cardMissing	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a device detects that a provisioned MPT is not physically present.		
Remedial action: The alarm is raised when a device detects that a provisioned card is not physically present.		

Table 25-165 ReplaceableUnitProblem (equipment)

Alarm	Attributes	Applicable major release
Name: ReplaceableUnitProblem (636) Type: equipmentAlarm Package: equipment.ReplaceableUnitProblem Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cardFail	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a card fails.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-166 ReplaceableUnitProblem (mpr)

Alarm	Attributes	Applicable major release
Name: ReplaceableUnitProblem (636) Type: equipmentAlarm Package: mpr.ReplaceableUnitProblem Raised on class: mpr.SubRackElements	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cardFail	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a card fails.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-167 ReplaceableUnitTypeMismatch (mpr)

Alarm	Attributes	Applicable major release
Name: ReplaceableUnitTypeMismatch (637) Type: equipmentAlarm Package: mpr.ReplaceableUnitTypeMismatch Raised on class: mpr.SubRackElements	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMismatch	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when there is a mismatch between the installed equipment type and the expected equipment type.		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 25-168 ReplaceableUnitTypeMismatch (equipment)

Alarm	Attributes	Applicable major release
Name: ReplaceableUnitTypeMismatch (637) Type: equipmentAlarm Package: equipment.ReplaceableUnitTypeMismatch Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMismatch	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when there is a mismatch between the installed card type and the expected card type.		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 25-169 RetimingBufferOverFlow

Alarm	Attributes	Applicable major release
Name: RetimingBufferOverFlow (1130) Type: communicationsAlarm Package: equipment.RetimingBufferOverFlow Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bufferOverFlow	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an retiming buffer overflow occurs.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-170 RFSwitchFail (equipment)

Alarm	Attributes	Applicable major release
Name: RFSwitchFail (5425) Type: equipmentAlarm Package: equipment.RFSwitchFail Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: rFSwitchFail	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a RF switch failure is detected.		
Remedial action: The alarm is raised when RF switch failure is detected. Refer 9500 Node Maintenance manual for remedial action information		

Table 25-171 RFSwitchFail (mpr)

Alarm	Attributes	Applicable major release
Name: RFSwitchFail (5425) Type: equipmentAlarm Package: mpr.RFSwitchFail Raised on class: mpr.SubRackElements	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: rFSwitchFail	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a RF switch failure is detected.		
Remedial action: The alarm is raised when RF switch failure is detected. Refer 9500 Node Maintenance manual for remedial action information		

Table 25-172 RPSPathFail (equipment)

Alarm	Attributes	Applicable major release
Name: RPSPathFail (8133) Type: equipmentAlarm Package: equipment.RPSPathFail Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: receiverProtectionFail	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a receiver protection switchover fails.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-173 RPSPathFail (radioequipment)

Alarm	Attributes	Applicable major release
Name: RPSPathFail (8133) Type: equipmentAlarm Package: radioequipment.RPSPathFail Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: receiverProtectionFail	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a receiver protection switchover fails.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-174 RxDivMissing

Alarm	Attributes	Applicable major release
Name: RxDivMissing (5646) Type: equipmentAlarm Package: equipment.RxDivMissing Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: RxDivMissing	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an MPT is attached with combiner enabled and Rx Diversity module is missing.		
Remedial action: Please refer MPR documentation for Corrective actions.		

Table 25-175 rxDivMissing

Alarm	Attributes	Applicable major release
Name: rxDivMissing (8372) Type: equipmentAlarm Package: mpr.rxDivMissing Raised on class: mpr.SubRackElements	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: RxDivMissing	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an MPT is attached with combiner enabled and Rx Diversity module is missing.		
Remedial action: Please refer MPR documentation for Corrective actions.		

Table 25-176 RxFail (equipment)

Alarm	Attributes	Applicable major release
Name: RxFail (687) Type: communicationsAlarm Package: equipment.RxFail Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: rxFail	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an MSS detects a receive failure.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-177 RxFail (radioequipment)

Alarm	Attributes	Applicable major release
Name: RxFail (687) Type: communicationsAlarm Package: radioequipment.RxFail Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: rxFail	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an MSS detects a receive failure.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-178 RxProblem

Alarm	Attributes	Applicable major release
Name: RxProblem (10276) Type: communicationsAlarm Package: equipment.RxProblem Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: rxProblem	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when Receiver of a lag has problem.		
Remedial action: Please refer MPR documentation for Corrective actions.		

Table 25-179 RxSectionSynchronizationError

Alarm	Attributes	Applicable major release
Name: RxSectionSynchronizationError (93) Type: communicationsAlarm Package: sonetequipment. RxSectionSynchronizationError Raised on class: sonetequipment. SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: rxSectionSynchronizationError	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a SONET port reports a section synchronization failure. A section synchronization failure occurs when the S1 byte is inconsistent for eight consecutive frames.		
Raising condition: (('Outstanding Alarms'anyBit'RX Section Synchronization Error') AND ('Report Alarms'anyBit'RX Section Synchronization Error'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'RX Section Synchronization Error') AND ('Report Alarms'anyBit'RX Section Synchronization Error')))		
Remedial action: Check the link status between SONET Port and the source.		

Table 25-180 SaveConfigFailed

Alarm	Attributes	Applicable major release
Name: SaveConfigFailed (105) Type: configurationAlarm Package: sw.SaveConfigFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileAccessError	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact your Nokia support representative for assistance.		

Table 25-181 ScheduledPollerProblem

Alarm	Attributes	Applicable major release
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm Package: netw.ScheduledPollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: scheduledResyncFailed	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 25-182 SecondaryBatteryFail (mpr)

Alarm	Attributes	Applicable major release
Name: SecondaryBatteryFail (3624) Type: equipmentAlarm Package: mpr.SecondaryBatteryFail Raised on class: mpr.SubRackElements	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: secondaryBatteryFail	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a secondary battery failure is detected.		
Remedial action: The battery on the subrack element(MPT) should be replaced or re-installed.		

Table 25-183 SectionB1Error

Alarm	Attributes	Applicable major release
Name: SectionB1Error (87) Type: communicationsAlarm Package: sonetequipment.SectionB1Error Raised on class: sonetequipment. SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: sectionB1Error	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a SONET port reports a section error condition that a remote NE raises because of b1 errors received from the local NE. The alarm corresponds to the lrei alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Section B1 Error') AND ('Report Alarms'anyBit'Section B1 Error'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Section B1 Error') AND ('Report Alarms'anyBit'Section B1 Error')))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 25-184 SectionLossOfFrame

Alarm	Attributes	Applicable major release
Name: SectionLossOfFrame (90) Type: communicationsAlarm Package: sonetequipment.SectionLossOfFrame Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: sectionLossOfFrame	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a SONET port reports a SLOF error. The alarm corresponds to the slof alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Section Loss of Frame') AND ('Report Alarms'anyBit'Section Loss of Frame'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Section Loss of Frame') AND ('Report Alarms'anyBit'Section Loss of Frame')))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected.		

Table 25-185 SectionLossOfSignal

Alarm	Attributes	Applicable major release
Name: SectionLossOfSignal (91) Type: communicationsAlarm Package: sonetequipment.SectionLossOfSignal Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: sectionLossOfSignal	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a SONET port reports a SLOS error. The alarm corresponds to the slos alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Section Loss of Signal') AND ('Report Alarms'anyBit'Section Loss of Signal'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Section Loss of Signal') AND ('Report Alarms'anyBit'Section Loss of Signal')))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected.		

Table 25-186 SectionS1Failure

Alarm	Attributes	Applicable major release
Name: SectionS1Failure (86) Type: communicationsAlarm Package: sonetequipment.SectionS1Failure Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: sectionS1Failure	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a SONET port reports a section synchronization failure. A section synchronization failure occurs when the S1 byte is inconsistent for eight consecutive frames.		
Raising condition: (('Outstanding Alarms'anyBit'Section S1 Failure') AND ('Report Alarms'anyBit'Section S1 Failure'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Section S1 Failure') AND ('Report Alarms'anyBit'Section S1 Failure')))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 25-187 SectionTraceMismatch

Alarm	Attributes	Applicable major release
Name: SectionTraceMismatch (2943) Type: communicationsAlarm Package: equipment.SectionTraceMismatch Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: sectionTraceMismatch	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a trace mismatch is detected on a SONET section.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-188 ServiceSiteDown

Alarm	Attributes	Applicable major release
Name: ServiceSiteDown (97) Type: serviceAlarm Package: service.ServiceSiteDown Raised on class: service.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: siteDown	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when all SAPs on a site are operationally down, or when the service tunnels for the site are operationally down. For Backhaul Sites, this alarm is raised when one or more Backhaul Adjacencies is operationally down.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'All Spoke SDP Bindings are Standby'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'All Spoke SDP Bindings are Standby'))		
Remedial action: The network resources (i.e. physical ports for SAPs or Backhaul Sites, or physical ports/LSP) associated with the service site should be examined to determine if/why they are operationally down. The underlying transport network supporting the site may also be unreliable.		

Table 25-189 StandbyVersionMismatch (mpr)

Alarm	Attributes	Applicable major release
Name: StandbyVersionMismatch (1174) Type: equipmentAlarm Package: mpr.StandbyVersionMismatch Raised on class: mpr.SubRackElements	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: standbyVersionMismatch	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a standby device software version mismatch is detected.		
Remedial action: This alarm is raised when standby Software version on the MPT does not match the software version on the core. Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-190 StandbyVersionMismatch (equipment)

Alarm	Attributes	Applicable major release
Name: StandbyVersionMismatch (1174) Type: equipmentAlarm Package: equipment.StandbyVersionMismatch Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: standbyVersionMismatch	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a standby device software version mismatch is detected.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-191 StatsRetrieveFailed

Alarm	Attributes	Applicable major release
Name: StatsRetrieveFailed (244) Type: configurationAlarm Package: sw.StatsRetrieveFailed Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: fileTransferFailure	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 25-192 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major release
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed Package: netw.SubscriberSystemNextHopUsageHigh Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

Table 25-193 SubSysChassMemoryUsageHi

Alarm	Attributes	Applicable major release
Name: SubSysChassMemoryUsageHi (5656) Type: thresholdCrossed Package: equipment.SubSysChassMemoryUsageHi Raised on class: equipment.Shelf	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: This alarm is raised when the memory usage by subscriber management on this system or chassis reaches its high watermark ('true').		
Raising condition: ('Memory Usage High' EQUAL 'True')		
Clearing condition: (('Memory Usage High' EQUAL 'False') OR ('Memory Usage High' EQUAL 'unspecified'))		
Remedial action: The memory usage by subscriber management on this system has reached its high watermark. Please check your memory usage.		

Table 25-194 SynchronizationSignalFailure

Alarm	Attributes	Applicable major release
Name: SynchronizationSignalFailure (2944) Type: communicationsAlarm Package: equipment.SynchronizationSignalFailure Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: synchronizationSignalFailure	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a synchronization signal failure is detected.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-195 TmnxEqPortEtherLoopDetected

Alarm	Attributes	Applicable major release
Name: TmnxEqPortEtherLoopDetected (461) Type: portEtherLoopDetected Package: ethernetequipment. TmnxEqPortEtherLoopDetected Raised on class: ethernetequipment. EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: HighBer	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a device detects a physical loop on an Ethernet port.		
Raising condition: (('Down When Looped Status' EQUAL 'Loop Detected'))		
Clearing condition: (('Down When Looped Status' EQUAL 'No Loop Detected'))		
Remedial action: An Ethernet port has been mis-cabled - please remove the loopback cable on the port.		

Table 25-196 TrafficDown

Alarm	Attributes	Applicable major release
Name: TrafficDown (10277) Type: communicationsAlarm Package: equipment.TrafficDown Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trafficDown	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: This alarm is raised when Traffic is down.		
Remedial action: Please refer MPR documentation for Corrective actions.		

Table 25-197 TrafficLoss

Alarm	Attributes	Applicable major release
Name: TrafficLoss (10278) Type: communicationsAlarm Package: equipment.TrafficLoss Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trafficLoss	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: This alarm is raised when a loss is detected in traffic.		
Remedial action: Please refer MPR documentation for Corrective actions.		

Table 25-198 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major release
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm Package: netw.TrapDestinationMisconfigured Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trapDestinationMisconfigured Applicable probable causes: • trapDestinationMisconfigured • duplicateTrapLogId	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 25-199 TrapReceivingFailure

Alarm	Attributes	Applicable major release
Name: TrapReceivingFailure (1083) Type: communications Package: netw.TrapReceivingFailure Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: trapsWillNotBeSent	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		
Raising condition: ((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')))		

Table 25-199 TrapReceivingFailure (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')))) **Remedial action:** A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

Table 25-200 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major release
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications Package: netw. TrapRoutePreferenceRedundancyMissing Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trapsRedundancyMissing	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: ((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')))		
Clearing condition: ((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None')))		
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

Table 25-201 TxProblem

Alarm	Attributes	Applicable major release
Name: TxProblem (10279) Type: communicationsAlarm Package: equipment.TxProblem Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: txProblem	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when Trasmitter of a lag has problem.		
Remedial action: Please refer MPR documentation for Corrective actions.		

Table 25-202 TxSectionSynchronizationError

Alarm	Attributes	Applicable major release
Name: TxSectionSynchronizationError (92) Type: communicationsAlarm Package: sonetequipment. TxSectionSynchronizationError Raised on class: sonetequipment. SonetPortMonitorSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: txSectionSynchronizationError	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a SONET port reports an SS1F error. The alarm corresponds to the ss1f alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'TX Section Synchronization Error') AND ('Report Alarms'anyBit'TX Section Synchronization Error'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'TX Section Synchronization Error') AND ('Report Alarms'anyBit'TX Section Synchronization Error')))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 25-203 UnderlyingResourceUnavailable

Alarm	Attributes	Applicable major release
Name: UnderlyingResourceUnavailable (1131) Type: communicationsAlarm Package: equipment.UnderlyingResourceUnavailable Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: underlyingResourceUnavailable	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an underlying resource is unavailable on an E1, radio, or Ethernet interface.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-204 UnderlyingResourceUnavailableService

Alarm	Attributes	Applicable major release
Name: UnderlyingResourceUnavailableService (1177) Type: communicationsAlarm Package: equipment. UnderlyingResourceUnavailableService Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: underlyingResourceUnavailableService	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an underlying E1, radio, or Ethernet interface resource service is unavailable.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-205 UnidentifiedNode

Alarm	Attributes	Applicable major release
Name: UnidentifiedNode (1922) Type: communicationsAlarm Package: netw.UnidentifiedNode Raised on class: netw.DiscoveredNode	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unidentifiedNode	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 25-206 UnmanageFailed

Alarm	Attributes	Applicable major release
Name: UnmanageFailed (300) Type: discoveryControlAlarm Package: netw.UnmanageFailed Raised on class: netw.NodeDiscoveryControl	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unableToDeleteNode	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'Unmanage Failed')		
Clearing condition: ('Site State' NOT EQUAL 'Unmanage Failed')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 25-207 unsupportedPortUsage

Alarm	Attributes	Applicable major release
Name: unsupportedPortUsage (5184) Type: equipmentAlarm Package: equipment.unsupportedPortUsage Raised on class: equipment.Port	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompatiblePortUsage	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised in case unsupported port type is configured		
Remedial action: This alarm indicates unsupported port usage. Port usage configured on the NE is not supported by SAM.		

Table 25-208 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major release
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm Package: netw.UpgradedBuildVersionMismatch Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: upgradedImageNotBooted	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 25-209 upgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: upgradedCardAlarm (255) Type: softwareAlarm Package: equipment.upgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: upgradedCard	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 25-210 UplinkDown

Alarm	Attributes	Applicable major release
Name: UplinkDown (11062) Type: virtualSwitchAlarm Package: dctr.UplinkDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsAllDown	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when all connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '2'))		
Clearing condition: (('uplinkState' NOT EQUAL '2'))		
Remedial action: This alarm is raised when all connections associated to the uplink lost connectivity.		

Table 25-211 UplinkPartiallyDown

Alarm	Attributes	Applicable major release
Name: UplinkPartiallyDown (11063) Type: virtualSwitchAlarm Package: dctr.UplinkPartiallyDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsDown	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when some connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '3'))		
Clearing condition: (('uplinkState' NOT EQUAL '3'))		
Remedial action: This alarm is raised when a connection of the uplink lost connectivity but at least one connection remains connected.		

Table 25-212 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm Package: sw.VersionConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: versionMismatch	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 25-213 VersionMismatch (mpr)

Alarm	Attributes	Applicable major release
Name: VersionMismatch (646) Type: equipmentAlarm Package: mpr.VersionMismatch Raised on class: mpr.SubRackElements	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: versionMismatch	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an ODU software version mismatch is detected.		
Remedial action: This alarm is raised when the software version on the MPT does not match the software version on the core. Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-214 VersionMismatch (equipment)

Alarm	Attributes	Applicable major release
Name: VersionMismatch (646) Type: equipmentAlarm Package: equipment.VersionMismatch Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: versionMismatch	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an ODU software version mismatch is detected.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 25-215 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major release
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm Package: netw.WrongCpaaSoftwareVersion Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion	Release: • 4.1.0 • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL '\"TiMOS-B-3.0.Generic \"') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Clearing condition: (('Software Version' NOT EQUAL '\"TiMOS-B-3.0.Generic \"') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

26 9500 MPRe

26.1 Alarms

Alarms

Note: Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see Chapter 39, “Unspecified NE”.

Table 26-1 ActiveAbnormalCondition

Alarm	Attributes	Applicable major release
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm Package: netw.ActiveAbnormalCondition Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

Table 26-2 adjacencyDown

Alarm	Attributes	Applicable major release
Name: adjacencyDown (11462) Type: communicationsAlarm Package: mpr.adjacencyDown Raised on class: mpr.BackhaulAdjacency	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: adjacencyDown	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the Operational State of a adjacency is Down, for example, because of one of the following conditions: The Operational State of local port pointer is Down.		

Table 26-2 adjacencyDown (continued)

Alarm	Attributes	Applicable major release
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' EQUAL 'Up')		
Remedial action: NE Alarms causing operState down must not exist on the selected adjancency.		

Table 26-3 AisRx

Alarm	Attributes	Applicable major release
Name: AisRx (1157) Type: communicationsAlarm Package: equipment.AisRx Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: aisRx	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when there is a receiver alarm indication signal.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-4 AisTx

Alarm	Attributes	Applicable major release
Name: AisTx (1158) Type: communicationsAlarm Package: equipment.AisTx Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: aisTx	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when there is a transmission alarm indication signal.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-5 ATPCTimeout (equipment)

Alarm	Attributes	Applicable major release
Name: ATPCTimeout (3939) Type: communicationsAlarm Package: equipment.ATPCTimeout Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: atpcTimeout	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a the ATPC timeout defect raise.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-6 ATPCTimeout (radioequipment)

Alarm	Attributes	Applicable major release
Name: ATPCTimeout (3939) Type: communicationsAlarm Package: radioequipment.ATPCTimeout Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: atpcTimeout	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a the ATPC timeout defect raise.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-7 AuxiliaryServerStatus

Alarm	Attributes	Applicable major release
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm Package: server.AuxiliaryServerStatus Raised on class: server.AuxiliaryServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0

Table 26-7 AuxiliaryServerStatus (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 26-8 BandwidthOverFlow (radioequipment)

Alarm	Attributes	Applicable major release
Name: BandwidthOverFlow (1143) Type: communicationsAlarm Package: radioequipment.BandwidthOverFlow Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bandwidthOverFlow	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a MPT is on-line and the cross-connections occupation overcomes the MPT net capacity bandwidth.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-9 BandwidthOverFlow (equipment)

Alarm	Attributes	Applicable major release
Name: BandwidthOverFlow (1143) Type: communicationsAlarm Package: equipment.BandwidthOverFlow Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bandwidthOverFlow	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a MPT is on-line and the cross-connections occupation overcomes the MPT net capacity bandwidth.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-10 BootableConfigBackupFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigBackupFailed (103) Type: configurationAlarm Package: sw.BootableConfigBackupFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 26-11 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm Package: sw.BootableConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 26-12 BootParametersMisconfigured

Alarm	Attributes	Applicable major release
Name: BootParametersMisconfigured (35) Type: configurationAlarm Package: netw.BootParametersMisconfigured Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistentIndexFailure Applicable probable causes: • persistentIndexFailure • configFileBootFailure	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND ((('Config File Status' NOT EQUAL 'Executed Successfully') AND ('Config File Status' NOT EQUAL 'configFileStatus_unspecified')) OR (('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded') AND ('Persistent Index Status' NOT EQUAL 'persistentIndexStatus_unspecified'))))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

Table 26-13 ClientDelegateServerStatus

Alarm	Attributes	Applicable major release
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm Package: server.ClientDelegateServerStatus Raised on class: server.ClientDelegateServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 26-14 ClockFailure

Alarm	Attributes	Applicable major release
Name: ClockFailure (1162) Type: communicationsAlarm Package: equipment.ClockFailure Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: clockFailure	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an MPT radio clock failure occurs.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-15 CmuManagementFailed

Alarm	Attributes	Applicable major release
Name: CmuManagementFailed (10040) Type: communicationsAlarm Package: lte.CmuManagementFailed Raised on class: lte.CompactMobilityUnit	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ftpFailed	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when SAM fails to manage a 9430 Compact Mobility Unit due to an FTP failure.		
Raising condition: ('Management State' EQUAL 'FTP Failed')		
Clearing condition: ('Management State' EQUAL 'Managed')		
Remedial action: Verify FTP connectivity between the 5620 SAM and the 9430 Compact Mobility Unit, then re-attempt to manage.		

Table 26-16 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm Package: equipment.ContainingEquipmentAdministrativelyDown Raised on class: equipment.Port	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentAdministrativelyDown	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 26-17 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm Package: equipment.ContainingEquipmentMismatch Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentMismatch	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 26-18 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm Package: equipment. ContainingEquipmentOperationallyDown Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentDown	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationllyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

Table 26-19 CorruptImageFile

Alarm	Attributes	Applicable major release
Name: CorruptImageFile (171) Type: configurationAlarm Package: mediation.CorruptImageFile Raised on class: mediation. AbstractSoftwareFolderDescriptor	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 26-20 CrossConnectionFail (equipment)

Alarm	Attributes	Applicable major release
Name: CrossConnectionFail (679) Type: communicationsAlarm Package: equipment.CrossConnectionFail Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: crossConnectionFail	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an MSS TDM cross-connection fails.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-21 CrossConnectionFail (radioequipment)

Alarm	Attributes	Applicable major release
Name: CrossConnectionFail (679) Type: communicationsAlarm Package: radioequipment.CrossConnectionFail Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: crossConnectionFail	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an MSS TDM cross-connection fails.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-22 DemFail (radioequipment)

Alarm	Attributes	Applicable major release
Name: DemFail (680) Type: communicationsAlarm Package: radioequipment.DemFail Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: demFail	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0

Table 26-22 DemFail (radioequipment) (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when an MSS demodulation function fails.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-23 DemFail (equipment)

Alarm	Attributes	Applicable major release
Name: DemFail (680) Type: communicationsAlarm Package: equipment.DemFail Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: demFail	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an MSS demodulation function fails.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-24 DemXpicLOS (equipment)

Alarm	Attributes	Applicable major release
Name: DemXpicLOS (3622) Type: equipmentAlarm Package: equipment.DemXpicLOS Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: demXpicLos	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a loss of signal occurs during XPIC demodulation.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-25 DemXpicLOS (mpr)

Alarm	Attributes	Applicable major release
Name: DemXpicLOS (3622) Type: communicationsAlarm Package: mpr.DemXpicLOS Raised on class: mpr.SubRackElements	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: demXpicLos	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a loss of signal occurs during XPIC demodulation.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-26 downgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: downgradedCardAlarm (256) Type: softwareAlarm Package: equipment.downgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: downgradedCard	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 26-27 EarlyWarning (radioequipment)

Alarm	Attributes	Applicable major release
Name: EarlyWarning (681) Type: communicationsAlarm Package: radioequipment.EarlyWarning Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: earlyWarning	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an MSS detects an early warning event.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-28 EarlyWarning (equipment)

Alarm	Attributes	Applicable major release
Name: EarlyWarning (681) Type: communicationsAlarm Package: equipment.EarlyWarning Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: earlyWarning	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an MSS detects an early warning event.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-29 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm Package: equipment.EquipmentAdministrativelyDown Raised on class: equipment.Equipment	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentAdministratively-Down	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0

Table 26-29 EquipmentAdministrativelyDown (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 26-30 EquipmentDegraded

Alarm	Attributes	Applicable major release
Name: EquipmentDegraded (604) Type: equipmentAlarm Package: equipment.EquipmentDegraded Raised on class: equipment.FanTray	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: singleFanFailure	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a single fan fails. The chassis attempts to continue operating within the normal temperature range using only the remaining fans.		
Raising condition: ('Device State' EQUAL 'MinorFailure')		
Clearing condition: ('Device State' NOT EQUAL 'MinorFailure')		
Remedial action: The failed fan unit should be replaced.		

Table 26-31 EquipmentDown

Alarm	Attributes	Applicable major release
Name: EquipmentDown (10) Type: equipmentAlarm Package: equipment.EquipmentDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: inoperableEquipment	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		

Table 26-31 EquipmentDown (continued)

Alarm	Attributes	Applicable major release
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 26-32 EquipmentInTest

Alarm	Attributes	Applicable major release
Name: EquipmentInTest (11) Type: equipmentAlarm Package: equipment.EquipmentInTest Raised on class: equipment.Equipment	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentInTest	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 26-33 EquipmentMismatch

Alarm	Attributes	Applicable major release
Name: EquipmentMismatch (9) Type: equipmentAlarm Package: equipment.EquipmentMismatch Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentTypeMismatch	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 26-34 EquipmentRemoved

Alarm	Attributes	Applicable major release
Name: EquipmentRemoved (8) Type: equipmentAlarm Package: equipment.EquipmentRemoved Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: ((('isEquipped' EQUAL 'false') OR ('compositeEquipmentState' EQUAL 'Removed')) AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Removed') AND ('isEquipped' EQUAL 'true'))		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 26-35 FanFailure (equipment)

Alarm	Attributes	Applicable major release
Name: FanFailure (624) Type: equipmentAlarm Package: equipment.FanFailure Raised on class: equipment.FanTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fanFailure	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the associated fan is not operationally Up.		
Raising condition: (('Device State' EQUAL 'Failed') OR ('Device State' EQUAL 'Unknown') OR ('Device State' EQUAL 'OutOfservice'))		
Clearing condition: ('Device State' EQUAL 'OK')		
Remedial action: Remove and reset the fan unit. If this does not resolve the problem replace the fan.		

Table 26-36 FanTrayRemoved

Alarm	Attributes	Applicable major release
Name: FanTrayRemoved (569) Type: equipmentAlarm Package: equipment.FanTrayRemoved Raised on class: equipment.FanTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: FanTrayRemoved	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the deviceState attribute has a value of deviceNotEquipped.		
Raising condition: ('Device State' EQUAL 'Not Equipped')		
Clearing condition: ('Device State' NOT EQUAL 'Not Equipped')		
Remedial action: Informational - a fan tray has been removed from the NE.		

Table 26-37 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major release
Name: FrameSizeProblem (37) Type: configurationAlarm Package: netw.FrameSizeProblem Raised on class: netw.StatefullConnectableInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: frameSizeProblem	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL '0L'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL '0L'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 26-38 GaPeerDown

Alarm	Attributes	Applicable major release
Name: GaPeerDown (3303) Type: EpcAlarm Package: lteggsn.GaPeerDown Raised on class: lteggsn.GaPeer	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerDown	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 26-39 HighBER (radioequipment)

Alarm	Attributes	Applicable major release
Name: HighBER (682) Type: communicationsAlarm Package: radioequipment.HighBER Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: highBER	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an MSS detects a high BER.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-40 IncompatibleChannelSpacing (radioequipment)

Alarm	Attributes	Applicable major release
Name: IncompatibleChannelSpacing (1167) Type: communicationsAlarm Package: radioequipment. IncompatibleChannelSpacing Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompatibleChannelSpacing	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a incompatibility of channel spacing value defect raise.		
Remedial action: The alarm is raised when a incompatibility of channel spacing value defect raise.		

Table 26-41 IncompatibleChannelSpacing (equipment)

Alarm	Attributes	Applicable major release
Name: IncompatibleChannelSpacing (1167) Type: communicationsAlarm Package: equipment.IncompatibleChannelSpacing Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompatibleChannelSpacing	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a incompatibility of channel spacing value defect raise.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-42 IncompatibleFrequency (equipment)

Alarm	Attributes	Applicable major release
Name: IncompatibleFrequency (683) Type: communicationsAlarm Package: equipment.IncompatibleFrequency Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompatibleFrequency	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0

Table 26-42 IncompatibleFrequency (equipment) (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when a provisioned MSS frequency is incompatible with the MSS hardware.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-43 IncompatibleFrequency (radioequipment)

Alarm	Attributes	Applicable major release
Name: IncompatibleFrequency (683) Type: communicationsAlarm Package: radioequipment.IncompatibleFrequency Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompatibleFrequency	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a provisioned MSS frequency is incompatible with the MSS hardware.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-44 IncompatibleModulationParam (equipment)

Alarm	Attributes	Applicable major release
Name: IncompatibleModulationParam (1144) Type: communicationsAlarm Package: equipment.IncompatibleModulationParam Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompatibleModulation	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the configured modulation parameters are not supported by MPT (or) when XPIC is configured on an MPT that does not allow XPIC capability.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-45 IncompatibleModulationParam (radioequipment)

Alarm	Attributes	Applicable major release
Name: IncompatibleModulationParam (1144) Type: communicationsAlarm Package: radioequipment. IncompatibleModulationParam Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompatibleModulation	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the configured modulation parameters are not supported by MPT (or) when XPIC is configured on an MPT that does not allow XPIC capability.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-46 IncompatiblePower (equipment)

Alarm	Attributes	Applicable major release
Name: IncompatiblePower (3940) Type: communicationsAlarm Package: equipment.IncompatiblePower Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompatiblePower	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a incompatibility of the power value defect raise.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-47 IncompatiblePower (radioequipment)

Alarm	Attributes	Applicable major release
Name: IncompatiblePower (3940) Type: communicationsAlarm Package: radioequipment.IncompatiblePower Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompatiblePower	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a incompatibility of the power value defect raise.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-48 IncompatiblePTX (radioequipment)

Alarm	Attributes	Applicable major release
Name: IncompatiblePTX (684) Type: communicationsAlarm Package: radioequipment.IncompatiblePTX Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompatiblePTX	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the provisioned MSS transmit power is incompatible with the MSS hardware.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-49 IncompatiblePTX (equipment)

Alarm	Attributes	Applicable major release
Name: IncompatiblePTX (684) Type: communicationsAlarm Package: equipment.IncompatiblePTX Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompatiblePTX	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0

Table 26-49 IncompatiblePTX (equipment) (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the provisioned MSS transmit power is incompatible with the MSS hardware.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-50 IncompatibleShifter (radioequipment)

Alarm	Attributes	Applicable major release
Name: IncompatibleShifter (685) Type: communicationsAlarm Package: radioequipment.IncompatibleShifter Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompatibleShifter	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the provisioned MSS shifter parameters are incompatible with the MSS hardware.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-51 IncompatibleShifter (equipment)

Alarm	Attributes	Applicable major release
Name: IncompatibleShifter (685) Type: communicationsAlarm Package: equipment.IncompatibleShifter Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompatibleShifter	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the provisioned MSS shifter parameters are incompatible with the MSS hardware.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-52 IncompleteConfiguration

Alarm	Attributes	Applicable major release
Name: IncompleteConfiguration (1942) Type: operationalViolation Package: netw.IncompleteConfiguration Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompleteConfig	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a pre-provisioned NE has no objects configured beneath it.		
Raising condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' EQUAL '\"\"'))		
Clearing condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' NOT EQUAL '\"\"'))		
Remedial action: A configuration error has been made which must be corrected. The configuration of the pre-provisioned NE is incomplete. A work order was not associated with the pre-provisioned NE and as a consequence the attempt to auto-configure the NE failed.		

Table 26-53 inSufficientBandwidth

Alarm	Attributes	Applicable major release
Name: inSufficientBandwidth (11464) Type: serviceAlarm Package: mpr.inSufficientBandwidth Raised on class: mpr.BackhaulAdjacency	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: inSufficientBandwidth	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a deployed adjacency doesnt have sufficent bandwidth.		
Raising condition: (('Deployed to Site' EQUAL 'false') AND ('isBandwidthExceeded' EQUAL 'true'))		
Clearing condition: (('Deployed to Site' EQUAL 'true') OR ('isBandwidthExceeded' EQUAL 'false'))		
Remedial action: Increase the bandwidth.		

Table 26-54 LagPortAddFailed

Alarm	Attributes	Applicable major release
Name: LagPortAddFailed (422) Type: equipmentAlarm Package: equipment.LagPortAddFailed Raised on class: equipment.PhysicalPort	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: linkDown	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the Lag Port Add function Fails.		
Raising condition: (('state' EQUAL 'Link Down') AND ('LAG ID' > '0'))		
Clearing condition: (('state' NOT EQUAL 'Link Down') OR ('LAG ID' EQUAL '0'))		
Remedial action: A configuration error has occurred which must be corrected. The link that was to be added to the LAG group may be of the wrong type (i.e. non ethernet) or the limit of the number of links supported in a LAG may have been reached.		

Table 26-55 LicensedLimitExceeded

Alarm	Attributes	Applicable major release
Name: LicensedLimitExceeded (127) Type: licensingAlarm Package: security.LicensedLimitExceeded Raised on class: security.SamLicensePoints	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: licensedLimitExceeded	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 26-56 LinkDown (equipment)

Alarm	Attributes	Applicable major release
Name: LinkDown (12) Type: communicationsAlarm Package: equipment.LinkDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: portLinkProblem	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 26-57 LinkIdentifierMismatch (radioequipment)

Alarm	Attributes	Applicable major release
Name: LinkIdentifierMismatch (686) Type: communicationsAlarm Package: radioequipment.LinkIdentifierMismatch Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: linkIdentifierMismatch	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an MSS detects a link identifier mismatch.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-58 LinkIdentifierMismatch (equipment)

Alarm	Attributes	Applicable major release
Name: LinkIdentifierMismatch (686) Type: communicationsAlarm Package: equipment.LinkIdentifierMismatch Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: linkIdentifierMismatch	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an MSS detects a link identifier mismatch.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-59 LoopProblem (equipment)

Alarm	Attributes	Applicable major release
Name: LoopProblem (1145) Type: communicationsAlarm Package: equipment.LoopProblem Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: loopProblem	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when there is a loss of communication command path between far end transmitter and local receiver .		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-60 LoopProblem (radioequipment)

Alarm	Attributes	Applicable major release
Name: LoopProblem (1145) Type: communicationsAlarm Package: radioequipment.LoopProblem Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: loopProblem	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0

Table 26-60 LoopProblem (radioequipment) (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when there is a loss of communication command path between far end transmitter and local receiver .		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-61 LossOfFrame (equipment)

Alarm	Attributes	Applicable major release
Name: LossOfFrame (630) Type: communicationsAlarm Package: equipment.LossOfFrame Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lossOfFrame	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an LOF is detected on a port.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-62 LossOfSignal (equipment)

Alarm	Attributes	Applicable major release
Name: LossOfSignal (631) Type: communicationsAlarm Package: equipment.LossOfSignal Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lossOfSignal	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a Loss of Signal is detected on a port.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-63 LowInputVoltage

Alarm	Attributes	Applicable major release
Name: LowInputVoltage (9619) Type: environmentalAlarm Package: equipment.LowInputVoltage Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lowInputVoltage	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when Low input voltage is detected.		
Remedial action: Please refer MPR documentation for Corrective actions.		

Table 26-64 LowTemperatureDetected

Alarm	Attributes	Applicable major release
Name: LowTemperatureDetected (1127) Type: environmentalAlarm Package: equipment.LowTemperatureDetected Raised on class: equipment.Shelf	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentOvercooled	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the chassis temperature falls below the minimum threshold.		
Raising condition: ('Low Temperature State' EQUAL 'Low')		
Clearing condition: ('Low Temperature State' NOT EQUAL 'Low')		
Remedial action: The NE has detected internal temperatures which are abnormally low. This may happen when the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 26-65 MobileConnectorDown

Alarm	Attributes	Applicable major release
Name: MobileConnectorDown (1064) Type: EpcAlarm Package: lteservice.MobileConnectorDown Raised on class: lteservice.MobileServiceConnector	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EpcDown	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL '\"\"')		
Clearing condition: ('EPS Path' NOT EQUAL '\"\"')		
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

Table 26-66 MvrSiteDown

Alarm	Attributes	Applicable major release
Name: MvrSiteDown (162) Type: ProtocolAlarm Package: layer2.MvrSiteDown Raised on class: layer2.MvrSite	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('MVR Admin Status' EQUAL 'Disabled')		
Clearing condition: ('MVR Admin Status' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable MVR Admin Status under the Bridge Instance.		

Table 26-67 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major release
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm Package: netw. NeManagementAndTrapManagementMismatch Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: neManagementChange	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		
Raising condition: ((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band')))		
Clearing condition: ((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band')))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

Table 26-68 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major release
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm Package: security.NewSsh2ServerKeyDetected Raised on class: security.KnownHostKey	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 26-69 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major release
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm Package: netw.NodeDatabaseFallbackDetected Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeDatabaseFallback	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 26-70 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major release
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm Package: netw.NodeDatabaseMisalignmentDetected Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

Table 26-71 NodeSuspended

Alarm	Attributes	Applicable major release
Name: NodeSuspended (5123) Type: communicationsAlarm Package: netw.NodeSuspended Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NodeSuspend	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element.The alarm will be cleared when the network element is managed back.		

Table 26-72 nonDeployedAdjacencyExists

Alarm	Attributes	Applicable major release
Name: nonDeployedAdjacencyExists (11465) Type: communicationsAlarm Package: mpr.nonDeployedAdjacencyExists Raised on class: mpr.BackhaulAdjacency	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nonDeployedAdjacencyExists	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a deployed adjacency is deleted on the site.		
Raising condition: (('Deployed to Site' EQUAL 'false') AND ('existedOnSite' EQUAL 'true'))		
Clearing condition: (('Deployed to Site' EQUAL 'true') AND ('existedOnSite' EQUAL 'true'))		
Remedial action: Deploy the changes made to the service.		

Table 26-73 OverTemperatureDetected

Alarm	Attributes	Applicable major release
Name: OverTemperatureDetected (388) Type: environmentalAlarm Package: equipment.OverTemperatureDetected Raised on class: equipment.Shelf	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentOverheated	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the chassis temperature exceeds the maximum threshold value.		
Raising condition: ('Over Temperature State' EQUAL 'Over')		
Clearing condition: ('Over Temperature State' NOT EQUAL 'Over')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 26-74 PartialResyncProblem

Alarm	Attributes	Applicable major release
Name: PartialResyncProblem (4401) Type: communicationsAlarm Package: netw.PartialResyncProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: partialResyncProblem	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a partial resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 26-75 PartialVPRNEncryption

Alarm	Attributes	Applicable major release
Name: PartialVPRNEncryption (8992) Type: configurationAlarm Package: nge.PartialVPRNEncryption Raised on class: nge.VprnEncryptService	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConfigMismatch	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when one or more sites are not encryption enabled in a VPRN service.		
Raising condition: (('VPRN Service Encryption Status' EQUAL 'Partial'))		
Clearing condition: (('VPRN Service Encryption Status' NOT EQUAL 'Partial'))		
Remedial action: This site is newly added to the VPRN service, Perform the encrypt operation on the KeyGroup to clear the alarm.		

Table 26-76 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major release
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm Package: netw. PersistentIndexParametersMisconfigured Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistentIndexConfiguration-Mismatch	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when persistence is set to Off in the NE BOF.		
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

Table 26-77 PollerProblem

Alarm	Attributes	Applicable major release
Name: PollerProblem (31) Type: communicationsAlarm Package: netw.PollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resyncFailed	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 26-78 PPPFail

Alarm	Attributes	Applicable major release
Name: PPPFail (632) Type: communicationsAlarm Package: equipment.PPPFail Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: pppFail	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a PPP IP Fail condition is detected.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-79 PrimaryImageBootFailure

Alarm	Attributes	Applicable major release
Name: PrimaryImageBootFailure (191) Type: configurationAlarm Package: sw.PrimaryImageBootFailure Raised on class: sw.CardSoftware	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 26-80 PTP1588TCFail

Alarm	Attributes	Applicable major release
Name: PTP1588TCFail (9621) Type: communicationsAlarm Package: equipment.PTP1588TCFail Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ptp1588tcFail	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when ptp failure is detected.		
Remedial action: Please refer MPR documentation for Corrective actions.		

Table 26-81 RadioEncryptionMismatch (radioequipment)

Alarm	Attributes	Applicable major release
Name: RadioEncryptionMismatch (8969) Type: communicationsAlarm Package: radioequipment.RadioEncryptionMismatch Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: radioEncryptionMismatch	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an AES encryption is diffrent between local and remote NE facing on Radio link.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-82 RadioEncryptionMismatch (equipment)

Alarm	Attributes	Applicable major release
Name: RadioEncryptionMismatch (8969) Type: communicationsAlarm Package: equipment.RadioEncryptionMismatch Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: radioEncryptionMismatch	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an AES encryption is diffrent between local and remote NE facing on Radio link.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-83 RadiusOperStatusDown

Alarm	Attributes	Applicable major release
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm Package: netw.RadiusOperStatusDown Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: radiusOperationStatusDown	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0

Table 26-83 RadiusOperStatusDown (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up.Check the connectivity between SAM server and radius server configured on the Network element.		

Table 26-84 ReachabilityProblem

Alarm	Attributes	Applicable major release
Name: ReachabilityProblem (243) Type: communicationsAlarm Package: netw.ReachabilityProblem Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReachabilityTestFailed	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. The polling interval depends on the NE type and is configurable in nms-server.xml. By default, the 5620 SAM polls a managed NE every four minutes. If a poll fails, the alarm is raised. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 26-85 RemoteDefectIndication

Alarm	Attributes	Applicable major release
Name: RemoteDefectIndication (2942) Type: communicationsAlarm Package: equipment.RemoteDefectIndication Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: remoteDefectIndication	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0

Table 26-85 RemoteDefectIndication (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when a RDI occurs.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-86 ReplaceableUnitMissing (equipment)

Alarm	Attributes	Applicable major release
Name: ReplaceableUnitMissing (635) Type: equipmentAlarm Package: equipment.ReplaceableUnitMissing Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cardMissing	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a device detects that a provisioned card is not physically present.		
Remedial action: Informational - no corrective action required.		

Table 26-87 ReplaceableUnitMissing (mpr)

Alarm	Attributes	Applicable major release
Name: ReplaceableUnitMissing (635) Type: equipmentAlarm Package: mpr.ReplaceableUnitMissing Raised on class: mpr.SubRackElements	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cardMissing	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a device detects that a provisioned MPT is not physically present.		
Remedial action: The alarm is raised when a device detects that a provisioned card is not physically present.		

Table 26-88 ReplaceableUnitProblem (equipment)

Alarm	Attributes	Applicable major release
Name: ReplaceableUnitProblem (636) Type: equipmentAlarm Package: equipment.ReplaceableUnitProblem Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cardFail	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a card fails.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-89 ReplaceableUnitProblem (mpr)

Alarm	Attributes	Applicable major release
Name: ReplaceableUnitProblem (636) Type: equipmentAlarm Package: mpr.ReplaceableUnitProblem Raised on class: mpr.SubRackElements	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cardFail	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a card fails.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-90 RxFail (equipment)

Alarm	Attributes	Applicable major release
Name: RxFail (687) Type: communicationsAlarm Package: equipment.RxFail Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: rxFail	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0

Table 26-90 RxFail (equipment) (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when an MSS detects a receive failure.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-91 RxFail (radioequipment)

Alarm	Attributes	Applicable major release
Name: RxFail (687) Type: communicationsAlarm Package: radioequipment.RxFail Raised on class: radioequipment.RadioPortSpecifics	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: rxFail	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an MSS detects a receive failure.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-92 SaveConfigFailed

Alarm	Attributes	Applicable major release
Name: SaveConfigFailed (105) Type: configurationAlarm Package: sw.SaveConfigFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileAccessError	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact your Nokia support representative for assistance.		

Table 26-93 ScheduledPollerProblem

Alarm	Attributes	Applicable major release
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm Package: netw.ScheduledPollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: scheduledResyncFailed	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 26-94 ServiceSiteDown

Alarm	Attributes	Applicable major release
Name: ServiceSiteDown (97) Type: serviceAlarm Package: service.ServiceSiteDown Raised on class: service.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: siteDown	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when all SAPs on a site are operationally down, or when the service tunnels for the site are operationally down. For Backhaul Sites, this alarm is raised when one or more Backhaul Adjacencies is operationally down.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'All Spoke SDP Bindings are Standby'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'All Spoke SDP Bindings are Standby'))		
Remedial action: The network resources (i.e. physical ports for SAPs or Backhaul Sites, or physical ports/LSP) associated with the service site should be examined to determine if/why they are operationally down. The underlying transport network supporting the site may also be unreliable.		

Table 26-95 StatsRetrieveFailed

Alarm	Attributes	Applicable major release
Name: StatsRetrieveFailed (244) Type: configurationAlarm Package: sw.StatsRetrieveFailed Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: fileTransferFailure	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 26-96 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major release
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed Package: netw.SubscriberSystemNextHopUsageHigh Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

Table 26-97 SubSysChassMemoryUsageHi

Alarm	Attributes	Applicable major release
Name: SubSysChassMemoryUsageHi (5656) Type: thresholdCrossed Package: equipment.SubSysChassMemoryUsageHi Raised on class: equipment.Shelf	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: This alarm is raised when the memory usage by subscriber management on this system or chassis reaches its high watermark ('true').		
Raising condition: ('Memory Usage High' EQUAL 'True')		
Clearing condition: (('Memory Usage High' EQUAL 'False') OR ('Memory Usage High' EQUAL 'unspecified'))		
Remedial action: The memory usage by subscriber management on this system has reached its high watermark. Please check your memory usage.		

Table 26-98 SynchronizationSignalFailure

Alarm	Attributes	Applicable major release
Name: SynchronizationSignalFailure (2944) Type: communicationsAlarm Package: equipment.SynchronizationSignalFailure Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: synchronizationSignalFailure	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a synchronization signal failure is detected.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-99 TMNLossofSignal (netw)

Alarm	Attributes	Applicable major release
Name: TMNLossofSignal (1920) Type: communicationsAlarm Package: netw.TMNLossofSignal Raised on class: netw.NetworkElement	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tmnLOS	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when a Loss of Signal occurs on the TMN Interface.		
Remedial action: Please refer to the 9500-1C/SA Node Maintenance manual for remedial action information.		

Table 26-100 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major release
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm Package: netw.TrapDestinationMisconfigured Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trapDestinationMisconfigured Applicable probable causes: • trapDestinationMisconfigured • duplicateTrapLogId	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 26-101 TrapReceivingFailure

Alarm	Attributes	Applicable major release
Name: TrapReceivingFailure (1083) Type: communications Package: netw.TrapReceivingFailure Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: trapsWillNotBeSent	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		
Raising condition: ((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')))		
Clearing condition: ((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

Table 26-102 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major release
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications Package: netw. TrapRoutePreferenceRedundancyMissing Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trapsRedundancyMissing	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0

Table 26-102 TrapRoutePreferenceRedundancyMissing (continued)

Alarm	Attributes	Applicable major release
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: ((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')))		
Clearing condition: ((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None')))		
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

Table 26-103 UnidentifiedNode

Alarm	Attributes	Applicable major release
Name: UnidentifiedNode (1922) Type: communicationsAlarm Package: netw.UnidentifiedNode Raised on class: netw.DiscoveredNode	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unidentifiedNode	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 26-104 UnmanageFailed

Alarm	Attributes	Applicable major release
Name: UnmanageFailed (300) Type: discoveryControlAlarm Package: netw.UnmanageFailed Raised on class: netw.NodeDiscoveryControl	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unableToDeleteNode	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'Unmanage Failed')		
Clearing condition: ('Site State' NOT EQUAL 'Unmanage Failed')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 26-105 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major release
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm Package: netw.UpgradedBuildVersionMismatch Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: upgradedImageNotBooted	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 26-106 upgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: upgradedCardAlarm (255) Type: softwareAlarm Package: equipment.upgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: upgradedCard	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 26-107 UplinkDown

Alarm	Attributes	Applicable major release
Name: UplinkDown (11062) Type: virtualSwitchAlarm Package: dctr.UplinkDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsAllDown	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when all connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '2'))		
Clearing condition: (('uplinkState' NOT EQUAL '2'))		
Remedial action: This alarm is raised when all connections associated to the uplink lost connectivity.		

Table 26-108 UplinkPartiallyDown

Alarm	Attributes	Applicable major release
Name: UplinkPartiallyDown (11063) Type: virtualSwitchAlarm Package: dctr.UplinkPartiallyDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsDown	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when some connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '3'))		
Clearing condition: (('uplinkState' NOT EQUAL '3'))		
Remedial action: This alarm is raised when a connection of the uplink lost connectivity but at least one connection remains connected.		

Table 26-109 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm Package: sw.VersionConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: versionMismatch	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 26-110 VersionMismatch (equipment)

Alarm	Attributes	Applicable major release
Name: VersionMismatch (646) Type: equipmentAlarm Package: equipment.VersionMismatch Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: versionMismatch	Release: • 5.0.0 • 5.1.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when an ODU software version mismatch is detected.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 26-111 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major release
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm Package: netw.WrongCpaaSoftwareVersion Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion	Release: • 5.0.0 • 5.2.0 • 6.0.0 • 6.1.0 • 7.0.0 • 7.1.0
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL '\"TiMOS-B-3.0.Generic \"') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Clearing condition: (('Software Version' NOT EQUAL '\"TiMOS-B-3.0.Generic \"') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

27 9774 LMG

27.1 Alarms

Alarms

Note: Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see Chapter 39, “Unspecified NE”.

Table 27-1 ActiveAbnormalCondition

Alarm	Attributes	Applicable major release
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm Package: netw.ActiveAbnormalCondition Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

Table 27-2 AGWDiameterPeerDown

Alarm	Attributes	Applicable major release
Name: AGWDiameterPeerDown (844) Type: EpcAlarm Package: lte.AGWDiameterPeerDown Raised on class: lte.AGWDiameterPeer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerDown	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 27-3 AuxiliaryServerStatus

Alarm	Attributes	Applicable major release
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm Package: server.AuxiliaryServerStatus Raised on class: server.AuxiliaryServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 27-4 BareMetalReachabilityDown

Alarm	Attributes	Applicable major release
Name: BareMetalReachabilityDown (10273) Type: virtualPortAlarm Package: dctr.BareMetalReachabilityDown Raised on class: dctr.BMDevice	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BareMetalReachability-DownOrDeleted	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when Bare Metal server is reachability down.		
Raising condition: (('bgpReachabilityState' NOT EQUAL '0'))		
Clearing condition: (('bgpReachabilityState' EQUAL '0'))		
Remedial action: This alarm can be cleared when bare metal device BGP prefix is up. Check for virtual switch controller down or virtual switch down or interface/port down in underlay network (hence the BGP prefix not advertised).		

Table 27-5 BootableConfigBackupFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigBackupFailed (103) Type: configurationAlarm Package: sw.BootableConfigBackupFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		

Table 27-5 BootableConfigBackupFailed (continued)

Alarm	Attributes	Applicable major release
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 27-6 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm Package: sw.BootableConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 27-7 BootParametersMisconfigured

Alarm	Attributes	Applicable major release
Name: BootParametersMisconfigured (35) Type: configurationAlarm Package: netw.BootParametersMisconfigured Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistentIndexFailure Applicable probable causes: • persistentIndexFailure • configFileBootFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND ((('Config File Status' NOT EQUAL 'Executed Successfully') AND ('Config File Status' NOT EQUAL 'configFileStatus_unspecified')) OR (('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded') AND ('Persistent Index Status' NOT EQUAL 'persistentIndexStatus_unspecified'))))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

Table 27-8 ClientDelegateServerStatus

Alarm	Attributes	Applicable major release
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm Package: server.ClientDelegateServerStatus Raised on class: server.ClientDelegateServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 27-9 CmuManagementFailed

Alarm	Attributes	Applicable major release
Name: CmuManagementFailed (10040) Type: communicationsAlarm Package: lte.CmuManagementFailed Raised on class: lte.CompactMobilityUnit	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ftpFailed	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when SAM fails to manage a 9430 Compact Mobility Unit due to an FTP failure.		
Raising condition: ('Management State' EQUAL 'FTP Failed')		
Clearing condition: ('Management State' EQUAL 'Managed')		
Remedial action: Verify FTP connectivity between the 5620 SAM and the 9430 Compact Mobility Unit, then re-attempt to manage.		

Table 27-10 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm Package: equipment.ContainingEquipmentAdministrativelyDown Raised on class: equipment.Port	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentAdministrativelyDown	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		

Table 27-10 ContainingEquipmentAdministrativelyDown (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational - no corrective action required.		

Table 27-11 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm Package: equipment.ContainingEquipmentMismatch Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentMismatch	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 27-12 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm Package: equipment. ContainingEquipmentOperationallyDown Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentDown	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationllyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

Table 27-13 CorruptImageFile

Alarm	Attributes	Applicable major release
Name: CorruptImageFile (171) Type: configurationAlarm Package: mediation.CorruptImageFile Raised on class: mediation. AbstractSoftwareFolderDescriptor	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG

Table 27-13 CorruptImageFile (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 27-14 downgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: downgradedCardAlarm (256) Type: softwareAlarm Package: equipment.downgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: downgradedCard	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 27-15 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm Package: equipment.EquipmentAdministrativelyDown Raised on class: equipment.Equipment	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentAdministratively-Down	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 27-16 EquipmentDown

Alarm	Attributes	Applicable major release
Name: EquipmentDown (10) Type: equipmentAlarm Package: equipment.EquipmentDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: inoperableEquipment	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 27-17 EquipmentInTest

Alarm	Attributes	Applicable major release
Name: EquipmentInTest (11) Type: equipmentAlarm Package: equipment.EquipmentInTest Raised on class: equipment.Equipment	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentInTest	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 27-18 EquipmentMismatch

Alarm	Attributes	Applicable major release
Name: EquipmentMismatch (9) Type: equipmentAlarm Package: equipment.EquipmentMismatch Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentTypeMismatch	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 27-19 EquipmentRemoved

Alarm	Attributes	Applicable major release
Name: EquipmentRemoved (8) Type: equipmentAlarm Package: equipment.EquipmentRemoved Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: ((('isEquipped' EQUAL 'false') OR ('compositeEquipmentState' EQUAL 'Removed')) AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Removed') AND ('isEquipped' EQUAL 'true'))		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 27-20 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major release
Name: FrameSizeProblem (37) Type: configurationAlarm Package: netw.FrameSizeProblem Raised on class: netw.StatefullConnectableInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: frameSizeProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL '0L'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL '0L'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 27-21 GaPeerDown

Alarm	Attributes	Applicable major release
Name: GaPeerDown (3303) Type: EpcAlarm Package: lteggsn.GaPeerDown Raised on class: lteggsn.GaPeer	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerDown	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		

Table 27-21 GaPeerDown (continued)

Alarm	Attributes	Applicable major release
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 27-22 IK8000001

Alarm	Attributes	Applicable major release
Name: IK8000001 (6450) Type: processingErrorAlarm Package: lmg.IK8000001 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: I/O NAS access error Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: This alarm is raised in case of right access problem, full disk or network error. Alarm to be cleared by the operator at the management system.\nReason: applicationSubsystemFailure		
Remedial action: Check the directory right or NAS status		

Table 27-23 IK8000002

Alarm	Attributes	Applicable major release
Name: IK8000002 (6451) Type: processingErrorAlarm Package: lmg.IK8000002 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: DataBase access error Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: This alarm is raised in case there is no connection with the database. Alarm is cleared by the system.\nReason: applicationSubsystemFailure		
Remedial action: Check the state of the database		

Table 27-24 IK8000003

Alarm	Attributes	Applicable major release
Name: IK8000003 (6452) Type: communicationsAlarm Package: lmg.IK8000003 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: HTTP communication failure Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: This alarm is raised in case of connection failure to the remote module. Alarm is cleared by the system.\nReason: communicationsSubsystemFailure		
Remedial action: Check the status of the target server		

Table 27-25 IK8000005

Alarm	Attributes	Applicable major release
Name: IK8000005 (6453) Type: processingErrorAlarm Package: Img.IK8000005 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Provision Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG
Description: This is a spare for future use\nReason: configurationOrCustomizationError		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-26 IK8000006

Alarm	Attributes	Applicable major release
Name: IK8000006 (8250) Type: processingErrorAlarm Package: Img.IK8000006 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Max allowed resources reached Implicitly cleared: false Default probable cause: underlyingResourceUnavail-able	Release: • LR14.3.MG
Description: This alarm is raised in case there are no more resource available. Alarm to be cleared by the operator at the management system.\nReason: resourceAtOrNearingCapacity		
Remedial action: Check licence or provisioning file		

Table 27-27 IK8000008

Alarm	Attributes	Applicable major release
Name: IK8000008 (6454) Type: processingErrorAlarm Package: Img.IK8000008 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Session preparation error Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: This alarm is raised in case of bearer activation error. Alarm to be cleared by the operator at the management system.\nReason: applicationSubsystemFailure		
Remedial action: Check method used, other alarms for further info		

Table 27-28 IK8000012

Alarm	Attributes	Applicable major release
Name: IK8000012 (6455) Type: processingErrorAlarm Package: Img.IK8000012 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Data Backup Failure Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG

Table 27-28 IK8000012 (continued)

Alarm	Attributes	Applicable major release
Description: This alarm is raised when a scheduled lmgbackup fails.. Alarm is cleared by the system.\nReason: applicationSubsystem-Failure		
Remedial action: See the Backup log file to have details on the Data backup operation failure, correct the potential error before retrying the operation or contact Nokia Technical Support.		

Table 27-29 IK8000013

Alarm	Attributes	Applicable major release
Name: IK8000013 (8251) Type: processingErrorAlarm Package: lmg.IK8000013 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: This is a spare for future use\nReason: communicationsSubsystemFailure		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-30 IK8000014

Alarm	Attributes	Applicable major release
Name: IK8000014 (8252) Type: processingErrorAlarm Package: lmg.IK8000014 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: This is a spare for future use\nReason: communicationsSubsystemFailure		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-31 IK8000015

Alarm	Attributes	Applicable major release
Name: IK8000015 (8253) Type: processingErrorAlarm Package: lmg.IK8000015 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: This is a spare for future use\nReason: communicationsSubsystemFailure		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-32 IK8000100

Alarm	Attributes	Applicable major release
Name: IK8000100 (6456) Type: environmentalAlarm Package: lmg.IK8000100 Raised on class: lmg.LMGMngElement	Severity: minor Specific problem: MME not responding Implicitly cleared: true Default probable cause: externalEquipmentFailure	Release: • LR14.3.MG
Description: This alarm is raised in case of no response from primary MME. Alarm is cleared by the system.\nReason: externalEquipmentFailure		
Remedial action: Check MME and network status		

Table 27-33 IK8000101

Alarm	Attributes	Applicable major release
Name: IK8000101 (8254) Type: environmentalAlarm Package: lmg.IK8000101 Raised on class: lmg.CPlaneProxy	Severity: major Specific problem: MME not responding Implicitly cleared: true Default probable cause: externalEquipmentFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm is raised in case of no response from all MME of a pool. Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: MME not responding (all)		
Remedial action: Check MME and network status		

Table 27-34 IK8000102

Alarm	Attributes	Applicable major release
Name: IK8000102 (6457) Type: environmentalAlarm Package: lmg.IK8000102 Raised on class: lmg.CPlane	Severity: major Specific problem: Connection failure on SG-mb interface Implicitly cleared: true Default probable cause: externalEquipmentFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm is raised when diameter peer failure is detected by BMSC on SG-mb interface. Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: Connection failure on SG-mb interface (BMSC)		
Remedial action: Check Diameter configuration and network access		

Table 27-35 IK8000103

Alarm	Attributes	Applicable major release
Name: IK8000103 (6458) Type: environmentalAlarm Package: lmg.IK8000103 Raised on class: lmg.CPlaneProxy	Severity: major Specific problem: Connection failure on SG-mb interface Implicitly cleared: true Default probable cause: externalEquipmentFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm is raised when diameter peer failure is detected by MBMS-GW on SG-mb interface. Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: Connection failure on SG-mb interface (MBMS-GW)		
Remedial action: Check Diameter configuration and network access		

Table 27-36 IK8000105

Alarm	Attributes	Applicable major release
Name: IK8000105 (9648) Type: communicationsAlarm Package: lmg.IK8000105 Raised on class: lmg.SmLink	Severity: indeterminate Specific problem: MME restart counter increment detected Implicitly cleared: true Default probable cause: unavailable	Release: • LR16.1.MG
Description: This event is raised when MME restart counter increment on the Sm interface has been detected\nReason: MME restart counter increment detected		
Remedial action: No action is required.		

Table 27-37 IK8000106

Alarm	Attributes	Applicable major release
Name: IK8000106 (6459) Type: environmentalAlarm Package: lmg.IK8000106 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Provision Implicitly cleared: true Default probable cause: externalEquipmentFailure	Release: • LR14.3.MG
Description: This is a spare for future use\nReason: externalEquipmentFailure		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-38 IK8000107

Alarm	Attributes	Applicable major release
Name: IK8000107 (6460) Type: processingErrorAlarm Package: lmg.IK8000107 Raised on class: lmg.DownloadAgent	Severity: minor Specific problem: OnDemand file download failure Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm is raised in case of failure to download OnDemand file. Alarm to be cleared by the operator at the management system.\nReason: OnDemand file download failure		
Remedial action: Check the URI file access		

Table 27-39 IK8000108

Alarm	Attributes	Applicable major release
Name: IK8000108 (6461) Type: processingErrorAlarm Package: lmg.IK8000108 Raised on class: lmg.UPlaneProxy	Severity: major Specific problem: Missing socket Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm is raised when there are no more socket available for SGi-mb interface. Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: Missing socket		
Remedial action: Check system resources on the MBMS-GW		

Table 27-40 IK8000109

Alarm	Attributes	Applicable major release
Name: IK8000109 (9057) Type: processingErrorAlarm Package: lmg.IK8000109 Raised on class: lmg.CPlane	Severity: major Specific problem: eMBMS session delete failure Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: This alarm is raised when the BM-SC is unable to remove an eMBMS session. Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: eMBMS session delete failure		
Remedial action: Check for other LMG alarms conditions that may have caused the session delete operation to fail. Session will need to be manually deleted.		

Table 27-41 IK8000110

Alarm	Attributes	Applicable major release
Name: IK8000110 (6462) Type: securityServiceOrMechanismViolation Package: Img.IK8000110 Raised on class: Img.DownloadAgent	Severity: major Specific problem: HTTP basic authentication error Implicitly cleared: true Default probable cause: authenticationFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm is raised in case of authentication error - DownloadAgent. Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: HTTP basic authentication error		
Remedial action: Check right or authentication parameters		

Table 27-42 IK8000112

Alarm	Attributes	Applicable major release
Name: IK8000112 (9058) Type: processingErrorAlarm Package: Img.IK8000112 Raised on class: Img.CPlane	Severity: major Specific problem: Session Audit Failure Implicitly cleared: true Default probable cause: corruptData	Release: • LR15.1.MG • LR16.1.MG
Description: This alarm is raised when the BM-SC has detected a session error. Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: Session Audit Failure		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-43 IK8000113

Alarm	Attributes	Applicable major release
Name: IK8000113 (6463) Type: processingErrorAlarm Package: Img.IK8000113 Raised on class: Img.DownloadAgent	Severity: minor Specific problem: Problem with File Uri, or unreachable DNS Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm is raised when the File Uri domain name cannot be resolved, or the file Uri cannot be found. Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: Problem with File Uri, or unreachable DNS		
Remedial action: Check DNS status, check content server or file availability		

Table 27-44 IK8000114

Alarm	Attributes	Applicable major release
Name: IK8000114 (9649) Type: communicationsAlarm Package: lmg.IK8000114 Raised on class: lmg.CPlaneProxy	Severity: indeterminate Specific problem: Session Start Failure in an MME pool Implicitly cleared: true Default probable cause: callSetUpFailure	Release: • LR16.1.MG
Description: This event is raised when MBMS-GW is unable to start a session in an MME pool\nReason: Session Start Failure in an MME pool		
Remedial action: No action is required.		

Table 27-45 IK8000115

Alarm	Attributes	Applicable major release
Name: IK8000115 (9059) Type: processingErrorAlarm Package: lmg.IK8000115 Raised on class: lmg.CPlaneProxy	Severity: major Specific problem: Configuration file error on MBMS-GW Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR15.1.MG
Description: This alarm is raised when the LMG detects a configuration file error. Alarm is cleared by the system.\nReason: Configuration file error on MBMS-GW		
Remedial action: Check the LMG logs for error details		

Table 27-46 IK8000116

Alarm	Attributes	Applicable major release
Name: IK8000116 (9650) Type: processingErrorAlarm Package: lmg.IK8000116 Raised on class: lmg.CPlane	Severity: indeterminate Specific problem: Session Audit Failure Implicitly cleared: true Default probable cause: corruptData	Release: • LR16.1.MG
Description: This event is raised when the BM-SC has detected a session error\nReason: Session Audit Failure		
Remedial action: No action is required.		

Table 27-47 IK8000117

Alarm	Attributes	Applicable major release
Name: IK8000117 (6464) Type: environmentalAlarm Package: lmg.IK8000117 Raised on class: lmg.CPlane	Severity: minor Specific problem: No successful RAA Diameter message received Implicitly cleared: true Default probable cause: externalEquipmentFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm is raised when no successful RAA (start session/stop session) Diameter message is received from MBMS-GW. Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: No successful RAA Diameter message received		
Remedial action: Check MBMS-GW and network status		

Table 27-48 IK8000118

Alarm	Attributes	Applicable major release
Name: IK8000118 (9060) Type: processingErrorAlarm Package: lmg.IK8000118 Raised on class: lmg.NetworkPlanning	Severity: major Specific problem: Configuration file error on BM-SC MDF Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR15.1.MG
Description: This alarm is raised when the LMG detects a configuration file error. Alarm is cleared by the system.\nReason: Configuration file error on BM-SC MDF		
Remedial action: Check the LMG logs for error details		

Table 27-49 IK8000119

Alarm	Attributes	Applicable major release
Name: IK8000119 (9061) Type: processingErrorAlarm Package: lmg.IK8000119 Raised on class: lmg.CPlaneProxy	Severity: major Specific problem: Session Audit Failure Implicitly cleared: true Default probable cause: corruptData	Release: • LR15.1.MG
Description: This alarm is raised when the MBMS-GW has detected a session error. Alarm is cleared by the system.\nReason: Session Audit Failure		
Remedial action: Contact Nokia technical support if the problem persists		

Table 27-50 IK8000120

Alarm	Attributes	Applicable major release
Name: IK8000120 (8255) Type: processingErrorAlarm Package: lmg.IK8000120 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: This is a spare for future use\nReason: excessiveErrorRate		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-51 IK8000121

Alarm	Attributes	Applicable major release
Name: IK8000121 (8256) Type: processingErrorAlarm Package: lmg.IK8000121 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: This is a spare for future use\nReason: excessiveErrorRate		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-52 IK8000122

Alarm	Attributes	Applicable major release
Name: IK8000122 (8257) Type: processingErrorAlarm Package: lmg.IK8000122 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: This is a spare for future use\nReason: excessiveErrorRate		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-53 IK8000123

Alarm	Attributes	Applicable major release
Name: IK8000123 (8258) Type: processingErrorAlarm Package: lmg.IK8000123 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: This is a spare for future use\nReason: excessiveErrorRate		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-54 IK8000124

Alarm	Attributes	Applicable major release
Name: IK8000124 (8259) Type: processingErrorAlarm Package: Img.IK8000124 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: This is a spare for future use\nReason: excessiveErrorRate		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-55 IK8000130

Alarm	Attributes	Applicable major release
Name: IK8000130 (9062) Type: environmentalAlarm Package: Img.IK8000130 Raised on class: Img.SmLink	Severity: minor Specific problem: MME not responding Implicitly cleared: true Default probable cause: externalEquipmentFailure	Release: • LR15.1.MG
Description: This alarm is raised in case of no response from primary MME. Alarm is cleared by the system.\nReason: MME not responding (primary)		
Remedial action: Check MME and network status		

Table 27-56 IK8000160

Alarm	Attributes	Applicable major release
Name: IK8000160 (10281) Type: processingErrorAlarm Package: Img.IK8000160 Raised on class: Img.LMGLM	Severity: warning Specific problem: License expiration approaching in next weeks Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG
Description: This alarm is raised when the expiration date of a temporary license approaches (between 30 to 7 days). Alarm is cleared by the system when a new license is installed, or when a more sever alarm is raised, or when the service is restarted.\nReason: License expiration approaching in next weeks		
Remedial action: Install a new license		

Table 27-57 IK8000161

Alarm	Attributes	Applicable major release
Name: IK8000161 (10282) Type: processingErrorAlarm Package: lmg.IK8000161 Raised on class: lmg.LMGLM	Severity: major Specific problem: License expiration approaching in few days Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG
Description: This alarm is raised when the expiration date of a temporary license approaches (between 7 to 1 days). Alarm is cleared by the system when a new license is installed, or when a more sever alarm is raised, or when the service is restarted.\nReason: License expiration approaching in few days		
Remedial action: Install a new license		

Table 27-58 IK8000162

Alarm	Attributes	Applicable major release
Name: IK8000162 (10283) Type: processingErrorAlarm Package: lmg.IK8000162 Raised on class: lmg.LMGLM	Severity: critical Specific problem: License expired Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG
Description: This alarm is raised when a temporary license expires. Alarm is cleared by the system when a new license is installed, or when the service is restarted.\nReason: License expired		
Remedial action: Install a new license		

Table 27-59 IK8000163

Alarm	Attributes	Applicable major release
Name: IK8000163 (10284) Type: processingErrorAlarm Package: lmg.IK8000163 Raised on class: lmg.LMGLM	Severity: indeterminate Specific problem: The installation of capacity is over the HW capacity limit Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG
Description: This event is raised when there is an attempt to activate a capacity over the limit authorized by the HW\nReason: The installation of capacity is over the HW capacity limit		
Remedial action: No action is required.		

Table 27-60 IK8000164

Alarm	Attributes	Applicable major release
Name: IK8000164 (10285) Type: processingErrorAlarm Package: Img.IK8000164 Raised on class: Img.LMGLM	Severity: warning Specific problem: The number of type1 sessions is approaching the limit Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG
Description: This alarm is raised when the number of delivery session instances for type1 session is approaching the limit activated in the LMG. Alarm is cleared by the system when load is under the threshold, or when a more sever alarm is raised, or when the service is restarted.\nReason: The number of type1 sessions is approaching the limit		
Remedial action: Purchase and activate additional capacity		

Table 27-61 IK8000165

Alarm	Attributes	Applicable major release
Name: IK8000165 (10286) Type: processingErrorAlarm Package: Img.IK8000165 Raised on class: Img.LMGLM	Severity: warning Specific problem: The number of type2 sessions is approaching the limit Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG
Description: This alarm is raised when the number of delivery session instances for type2 session is approaching the limit activated in the LMG. Alarm is cleared by the system when load is under the threshold, or when a more sever alarm is raised, or when the service is restarted.\nReason: The number of type2 sessions is approaching the limit		
Remedial action: Purchase and activate additional capacity		

Table 27-62 IK8000166

Alarm	Attributes	Applicable major release
Name: IK8000166 (10287) Type: processingErrorAlarm Package: Img.IK8000166 Raised on class: Img.LMGLM	Severity: warning Specific problem: The number of type3 sessions is approaching the limit Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG
Description: This alarm is raised when the number of delivery session instances for type3 session is approaching the limit activated in the LMG. Alarm is cleared by the system when load is under the threshold, or when a more sever alarm is raised, or when the service is restarted.\nReason: The number of type3 sessions is approaching the limit		
Remedial action: Purchase and activate additional capacity		

Table 27-63 IK8000167

Alarm	Attributes	Applicable major release
Name: IK8000167 (10288) Type: processingErrorAlarm Package: lmg.IK8000167 Raised on class: lmg.LMGLM	Severity: warning Specific problem: The number of simultaneous sessions is approaching the limit Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG
Description: This alarm is raised when the number of simultaneous delivery session instances is approaching the limit activated in the LMG. Alarm is cleared by the system when load is under the threshold, or when a more sever alarm is raised, or when the service is restarted.\nReason: The number of simultaneous sessions is approaching the limit		
Remedial action: Purchase and activate additional capacity		

Table 27-64 IK8000169

Alarm	Attributes	Applicable major release
Name: IK8000169 (10289) Type: processingErrorAlarm Package: lmg.IK8000169 Raised on class: lmg.LMGLM	Severity: major Specific problem: The number of type1 sessions exceeds the limit Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG
Description: This alarm is raised when the number of delivery session instances for type1 session is exceeding the limit activated in the LMG. Alarm is cleared by the system when load is decreasing or when capacity is increased, or when the service is restarted.\nReason: The number of type1 sessions exceeds the limit		
Remedial action: Purchase and activate additional capacity		

Table 27-65 IK8000170

Alarm	Attributes	Applicable major release
Name: IK8000170 (10290) Type: processingErrorAlarm Package: lmg.IK8000170 Raised on class: lmg.LMGLM	Severity: major Specific problem: The number of type2 sessions exceeds the limit Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG
Description: This alarm is raised when the number of delivery session instances for type2 session is exceeding the limit activated in the LMG. Alarm is cleared by the system when load is decreasing or when capacity is increased, or when the service is restarted.\nReason: The number of type2 sessions exceeds the limit		
Remedial action: Purchase and activate additional capacity		

Table 27-66 IK8000171

Alarm	Attributes	Applicable major release
Name: IK8000171 (10291) Type: processingErrorAlarm Package: lmg.IK8000171 Raised on class: lmg.LMGLM	Severity: major Specific problem: The number of type3 sessions exceeds the limit Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG
Description: This alarm is raised when the number of delivery session instances for type3 session is exceeding the limit activated in the LMG. Alarm is cleared by the system when load is decreasing or when capacity is increased, or when the service is restarted.\nReason: The number of type3 sessions exceeds the limit		
Remedial action: Purchase and activate additional capacity		

Table 27-67 IK8000172

Alarm	Attributes	Applicable major release
Name: IK8000172 (10292) Type: processingErrorAlarm Package: lmg.IK8000172 Raised on class: lmg.LMGLM	Severity: major Specific problem: The number of simultaneous sessions exceeds the limit Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG
Description: This alarm is raised when the number of simultaneous delivery session instances exceeds the limit activated in the LMG. Alarm is cleared by the system when load is decreasing or when capacity is increased, or when the service is restarted.\nReason: The number of simultaneous sessions exceeds the limit		
Remedial action: Purchase and activate additional capacity		

Table 27-68 IK8000174

Alarm	Attributes	Applicable major release
Name: IK8000174 (10293) Type: processingErrorAlarm Package: lmg.IK8000174 Raised on class: lmg.LMGLM	Severity: major Specific problem: The number of repair requests received per second exceeds the limit Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG
Description: This alarm is raised when the number of repair requests received per second exceeds the limit activated in the LMG. Alarm is cleared by the system when load is decreasing or when capacity is increased, or when the service is restarted.\nReason: The number of repair requests received per second exceeds the limit		
Remedial action: Purchase and activate additional capacity		

Table 27-69 IK8000175

Alarm	Attributes	Applicable major release
Name: IK8000175 (10294) Type: processingErrorAlarm Package: lmg.IK8000175 Raised on class: lmg.LMGLM	Severity: major Specific problem: The number of report requests received per second exceeds the limit Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG
Description: This alarm is raised when the number of report requests received per second exceeds the limit activated in the LMG. Alarm is cleared by the system when load is decreasing or when capacity is increased, or when the service is restarted.\nReason: The number of report requests received per second exceeds the limit		
Remedial action: Purchase and activate additional capacity		

Table 27-70 IK8000176

Alarm	Attributes	Applicable major release
Name: IK8000176 (10295) Type: processingErrorAlarm Package: lmg.IK8000176 Raised on class: lmg.LMGLM	Severity: major Specific problem: The number of repair/report requests received per second exceeds the limit Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG
Description: This alarm is raised when the number of repair/report requests received per second exceeds the limit activated in the LMG. Alarm is cleared by the system when load is decreasing or when capacity is increased, or when the service is restarted.\nReason: The number of repair/report requests received per second exceeds the limit		
Remedial action: Purchase and activate additional capacity		

Table 27-71 IK8000190

Alarm	Attributes	Applicable major release
Name: IK8000190 (9652) Type: processingErrorAlarm Package: lmg.IK8000190 Raised on class: lmg.SessionAudit	Severity: major Specific problem: Inactive eMBMS session detected on MBMS-GW Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This alarm is raised when no traffic is detected for a session on the MBMS-GW. The interface (SGi-mb or M1) is indicated in the alarm. Alarm is cleared by the system when the eMBMS session is stopped or traffic is restored, or when the service is restarted.\nReason: Inactive eMBMS session detected on MBMS-GW		
Remedial action: Delete the eMBMS session or check the traffic source for the session		

Table 27-72 IK8000191

Alarm	Attributes	Applicable major release
Name: IK8000191 (9653) Type: processingErrorAlarm Package: Img.IK8000191 Raised on class: Img.SessionAudit	Severity: major Specific problem: Orphan eMBMS session detected Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This alarm is raised when an orphan eMBMS session is detected. Alarm is cleared by the system when the orphan session is deleted, or when the service is restarted.\nReason: Orphan eMBMS session detected		
Remedial action: The orphan eMBMS session has to be deleted from UPlane		

Table 27-73 IK8000192

Alarm	Attributes	Applicable major release
Name: IK8000192 (9654) Type: processingErrorAlarm Package: Img.IK8000192 Raised on class: Img.SessionAudit	Severity: major Specific problem: Orphan FLUTE delivery session detected Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This alarm is raised when an orphan FLUTE delivery session is detected. Alarm is cleared by the system when the orphan FLUTE delivery session is deleted, or when the service is restarted.\nReason: Orphan FLUTE delivery session detected		
Remedial action: The orphan FLUTE delivery session has to be deleted from FLUTE		

Table 27-74 IK8000193

Alarm	Attributes	Applicable major release
Name: IK8000193 (9655) Type: processingErrorAlarm Package: Img.IK8000193 Raised on class: Img.SessionAudit	Severity: major Specific problem: Orphan FLUTE delivery instance detected Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This alarm is raised when an orphan FLUTE delivery instance is detected. Alarm is cleared by the system when the orphan delivery instance is deleted, or when the service is restarted.\nReason: Orphan FLUTE delivery instance detected		
Remedial action: The orphan FLUTE delivery instance has to be deleted from FLUTE		

Table 27-75 IK8000196

Alarm	Attributes	Applicable major release
Name: IK8000196 (9658) Type: processingErrorAlarm Package: lmg.IK8000196 Raised on class: lmg.SessionAudit	Severity: major Specific problem: Inactive eMBMS session detected on BM-SC SGi-mb interface Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This alarm is raised when an eMBMS session has no traffic for an amount of time on SGi-mb interface of BMSC MDF side. Alarm is cleared by the system when the eMBMS session is stopped or traffic is restored, or when the service is restarted.\ nReason: Inactive eMBMS session detected on BM-SC SGi-mb interface		
Remedial action: Delete the eMBMS session or check the traffic source for the session		

Table 27-76 IK8000197

Alarm	Attributes	Applicable major release
Name: IK8000197 (9659) Type: processingErrorAlarm Package: lmg.IK8000197 Raised on class: lmg.SessionAudit	Severity: major Specific problem: Inactive delivery session instance on BMSC MDF WebDAV interface Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This alarm is raised when no ingress traffic is detected for a delivery session instance on the BMSC node interface with the encoder. Alarm is cleared by the system when the delivery session instance is stopped, on remove content request, or when traffic is restored, or when the service is restarted.\nReason: Inactive delivery session instance on BMSC MDF WebDAV interface		
Remedial action: Stop the delivery session instance, remove content request or check the traffic source for the session		

Table 27-77 IK8000199

Alarm	Attributes	Applicable major release
Name: IK8000199 (9660) Type: communicationsAlarm Package: lmg.IK8000199 Raised on class: lmg.Orchestration	Severity: indeterminate Specific problem: NBI received with unrecognized PLMN ID Implicitly cleared: true Default probable cause: invalidMessageReceived	Release: • LR16.1.MG
Description: This event is sent when BMSC receives an NBI message containing unrecognized PLMN ID. The event identifies the unrecognized PLMN ID\nReason: NBI received with unrecognized PLMN ID		
Remedial action: No action is required.		

Table 27-78 IK8000200

Alarm	Attributes	Applicable major release
Name: IK8000200 (9661) Type: communicationsAlarm Package: lmg.IK8000200 Raised on class: lmg.SmLink	Severity: indeterminate Specific problem: Sm Link session re-location trigger timer expired Implicitly cleared: true Default probable cause: communicationsReceiveFailure	Release: • LR16.1.MG
Description: This event is raised when due to an Sm Link failure, the LMG may be removing active sessions from this MME. Check MME and network status\nReason: Sm Link session re-location trigger timer expired		
Remedial action: No action is required.		

Table 27-79 IK8000201

Alarm	Attributes	Applicable major release
Name: IK8000201 (9662) Type: communicationsAlarm Package: lmg.IK8000201 Raised on class: lmg.SmLink	Severity: indeterminate Specific problem: Sm Link non-transient failure timer expired Implicitly cleared: true Default probable cause: communicationsReceiveFailure	Release: • LR16.1.MG
Description: This event is raised when the Sm Link MME status is Inactive. Check MME and network status\nReason: Sm Link non-transient failure timer expired		
Remedial action: No action is required.		

Table 27-80 IK8000203

Alarm	Attributes	Applicable major release
Name: IK8000203 (10296) Type: communicationsAlarm Package: lmg.IK8000203 Raised on class: lmg.SmLink	Severity: minor Specific problem: MME not responding Implicitly cleared: true Default probable cause: communicationsReceiveFailure	Release: • LR16.1.MG
Description: This alarm is raised in case of no response from this MME. Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: MME not responding (primary)		
Remedial action: Check MME and network status		

Table 27-81 IK8000500

Alarm	Attributes	Applicable major release
Name: IK8000500 (9063) Type: processingErrorAlarm Package: lmg.IK8000500 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-82 IK8000501

Alarm	Attributes	Applicable major release
Name: IK8000501 (9064) Type: processingErrorAlarm Package: lmg.IK8000501 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-83 IK8000502

Alarm	Attributes	Applicable major release
Name: IK8000502 (9065) Type: processingErrorAlarm Package: lmg.IK8000502 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-84 IK8000503

Alarm	Attributes	Applicable major release
Name: IK8000503 (9066) Type: processingErrorAlarm Package: lmg.IK8000503 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-85 IK8000504

Alarm	Attributes	Applicable major release
Name: IK8000504 (9067) Type: processingErrorAlarm Package: lmg.IK8000504 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-86 IK8000505

Alarm	Attributes	Applicable major release
Name: IK8000505 (9068) Type: processingErrorAlarm Package: lmg.IK8000505 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-87 IK8000506

Alarm	Attributes	Applicable major release
Name: IK8000506 (9069) Type: processingErrorAlarm Package: lmg.IK8000506 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-88 IK8000507

Alarm	Attributes	Applicable major release
Name: IK8000507 (9070) Type: processingErrorAlarm Package: lmg.IK8000507 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-89 IK8000508

Alarm	Attributes	Applicable major release
Name: IK8000508 (9071) Type: processingErrorAlarm Package: lmg.IK8000508 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-90 IK8000509

Alarm	Attributes	Applicable major release
Name: IK8000509 (9072) Type: processingErrorAlarm Package: lmg.IK8000509 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-91 IK8000510

Alarm	Attributes	Applicable major release
Name: IK8000510 (9073) Type: processingErrorAlarm Package: lmg.IK8000510 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-92 IK8000511

Alarm	Attributes	Applicable major release
Name: IK8000511 (9074) Type: processingErrorAlarm Package: lmg.IK8000511 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-93 IK8000512

Alarm	Attributes	Applicable major release
Name: IK8000512 (9075) Type: processingErrorAlarm Package: Img.IK8000512 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-94 IK8000513

Alarm	Attributes	Applicable major release
Name: IK8000513 (9076) Type: processingErrorAlarm Package: Img.IK8000513 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-95 IK8000514

Alarm	Attributes	Applicable major release
Name: IK8000514 (9077) Type: processingErrorAlarm Package: Img.IK8000514 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-96 IK8000515

Alarm	Attributes	Applicable major release
Name: IK8000515 (9078) Type: processingErrorAlarm Package: Img.IK8000515 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-97 IK8000516

Alarm	Attributes	Applicable major release
Name: IK8000516 (9079) Type: processingErrorAlarm Package: lmg.IK8000516 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-98 IK8000517

Alarm	Attributes	Applicable major release
Name: IK8000517 (9080) Type: processingErrorAlarm Package: lmg.IK8000517 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-99 IK8000518

Alarm	Attributes	Applicable major release
Name: IK8000518 (9081) Type: processingErrorAlarm Package: lmg.IK8000518 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-100 IK8000519

Alarm	Attributes	Applicable major release
Name: IK8000519 (9082) Type: processingErrorAlarm Package: lmg.IK8000519 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-101 IK8000520

Alarm	Attributes	Applicable major release
Name: IK8000520 (9083) Type: processingErrorAlarm Package: Img.IK8000520 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-102 IK8000521

Alarm	Attributes	Applicable major release
Name: IK8000521 (9084) Type: processingErrorAlarm Package: Img.IK8000521 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-103 IK8000522

Alarm	Attributes	Applicable major release
Name: IK8000522 (9085) Type: processingErrorAlarm Package: Img.IK8000522 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-104 IK8000523

Alarm	Attributes	Applicable major release
Name: IK8000523 (9086) Type: processingErrorAlarm Package: Img.IK8000523 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-105 IK8000524

Alarm	Attributes	Applicable major release
Name: IK8000524 (9087) Type: processingErrorAlarm Package: lmg.IK8000524 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-106 IK8000525

Alarm	Attributes	Applicable major release
Name: IK8000525 (9088) Type: processingErrorAlarm Package: lmg.IK8000525 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-107 IK8000526

Alarm	Attributes	Applicable major release
Name: IK8000526 (9089) Type: processingErrorAlarm Package: lmg.IK8000526 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-108 IK8000527

Alarm	Attributes	Applicable major release
Name: IK8000527 (9090) Type: processingErrorAlarm Package: lmg.IK8000527 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-109 IK8000528

Alarm	Attributes	Applicable major release
Name: IK8000528 (9091) Type: processingErrorAlarm Package: lmg.IK8000528 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-110 IK8000529

Alarm	Attributes	Applicable major release
Name: IK8000529 (9092) Type: processingErrorAlarm Package: lmg.IK8000529 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-111 IK8000530

Alarm	Attributes	Applicable major release
Name: IK8000530 (9093) Type: processingErrorAlarm Package: lmg.IK8000530 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-112 IK8000531

Alarm	Attributes	Applicable major release
Name: IK8000531 (9094) Type: processingErrorAlarm Package: lmg.IK8000531 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-113 IK8000532

Alarm	Attributes	Applicable major release
Name: IK8000532 (9095) Type: processingErrorAlarm Package: lmg.IK8000532 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-114 IK8000533

Alarm	Attributes	Applicable major release
Name: IK8000533 (9096) Type: processingErrorAlarm Package: lmg.IK8000533 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-115 IK8000534

Alarm	Attributes	Applicable major release
Name: IK8000534 (9097) Type: processingErrorAlarm Package: lmg.IK8000534 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-116 IK8000535

Alarm	Attributes	Applicable major release
Name: IK8000535 (9098) Type: processingErrorAlarm Package: lmg.IK8000535 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-117 IK8000536

Alarm	Attributes	Applicable major release
Name: IK8000536 (9099) Type: processingErrorAlarm Package: Img.IK8000536 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-118 IK8000537

Alarm	Attributes	Applicable major release
Name: IK8000537 (9100) Type: processingErrorAlarm Package: Img.IK8000537 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-119 IK8000538

Alarm	Attributes	Applicable major release
Name: IK8000538 (9101) Type: processingErrorAlarm Package: Img.IK8000538 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-120 IK8000539

Alarm	Attributes	Applicable major release
Name: IK8000539 (9102) Type: processingErrorAlarm Package: Img.IK8000539 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-121 IK8000540

Alarm	Attributes	Applicable major release
Name: IK8000540 (9103) Type: processingErrorAlarm Package: lmg.IK8000540 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-122 IK8000541

Alarm	Attributes	Applicable major release
Name: IK8000541 (9104) Type: processingErrorAlarm Package: lmg.IK8000541 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-123 IK8000542

Alarm	Attributes	Applicable major release
Name: IK8000542 (9105) Type: processingErrorAlarm Package: lmg.IK8000542 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-124 IK8000543

Alarm	Attributes	Applicable major release
Name: IK8000543 (9106) Type: processingErrorAlarm Package: lmg.IK8000543 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-125 IK8000544

Alarm	Attributes	Applicable major release
Name: IK8000544 (9107) Type: processingErrorAlarm Package: Img.IK8000544 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-126 IK8000545

Alarm	Attributes	Applicable major release
Name: IK8000545 (9108) Type: processingErrorAlarm Package: Img.IK8000545 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-127 IK8000546

Alarm	Attributes	Applicable major release
Name: IK8000546 (9109) Type: processingErrorAlarm Package: Img.IK8000546 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-128 IK8000547

Alarm	Attributes	Applicable major release
Name: IK8000547 (9110) Type: processingErrorAlarm Package: Img.IK8000547 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-129 IK8000548

Alarm	Attributes	Applicable major release
Name: IK8000548 (9111) Type: processingErrorAlarm Package: lmg.IK8000548 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-130 IK8000549

Alarm	Attributes	Applicable major release
Name: IK8000549 (9112) Type: processingErrorAlarm Package: lmg.IK8000549 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-131 IK8000550

Alarm	Attributes	Applicable major release
Name: IK8000550 (9663) Type: processingErrorAlarm Package: lmg.IK8000550 Raised on class: lmg.LMGMngElement	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-132 IK8000551

Alarm	Attributes	Applicable major release
Name: IK8000551 (9664) Type: processingErrorAlarm Package: lmg.IK8000551 Raised on class: lmg.LMGMngElement	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-133 IK8000552

Alarm	Attributes	Applicable major release
Name: IK8000552 (9665) Type: processingErrorAlarm Package: lmg.IK8000552 Raised on class: lmg.LMGMngElement	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-134 IK8000553

Alarm	Attributes	Applicable major release
Name: IK8000553 (9666) Type: processingErrorAlarm Package: lmg.IK8000553 Raised on class: lmg.LMGMngElement	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-135 IK8000554

Alarm	Attributes	Applicable major release
Name: IK8000554 (9667) Type: processingErrorAlarm Package: lmg.IK8000554 Raised on class: lmg.LMGMngElement	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-136 IK8000555

Alarm	Attributes	Applicable major release
Name: IK8000555 (9668) Type: processingErrorAlarm Package: lmg.IK8000555 Raised on class: lmg.LMGMngElement	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-137 IK8000556

Alarm	Attributes	Applicable major release
Name: IK8000556 (9669) Type: processingErrorAlarm Package: Img.IK8000556 Raised on class: Img.LMGMngElement	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-138 IK8000557

Alarm	Attributes	Applicable major release
Name: IK8000557 (9670) Type: processingErrorAlarm Package: Img.IK8000557 Raised on class: Img.LMGMngElement	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-139 IK8000558

Alarm	Attributes	Applicable major release
Name: IK8000558 (9671) Type: processingErrorAlarm Package: Img.IK8000558 Raised on class: Img.LMGMngElement	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-140 IK8000559

Alarm	Attributes	Applicable major release
Name: IK8000559 (9672) Type: processingErrorAlarm Package: Img.IK8000559 Raised on class: Img.LMGMngElement	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-141 IK8000560

Alarm	Attributes	Applicable major release
Name: IK8000560 (9673) Type: processingErrorAlarm Package: lmg.IK8000560 Raised on class: lmg.LMGMngElement	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-142 IK8000561

Alarm	Attributes	Applicable major release
Name: IK8000561 (9674) Type: processingErrorAlarm Package: lmg.IK8000561 Raised on class: lmg.LMGMngElement	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-143 IK8000562

Alarm	Attributes	Applicable major release
Name: IK8000562 (10297) Type: processingErrorAlarm Package: lmg.IK8000562 Raised on class: lmg.LMGMngElement	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-144 IK8000563

Alarm	Attributes	Applicable major release
Name: IK8000563 (10298) Type: processingErrorAlarm Package: lmg.IK8000563 Raised on class: lmg.LMGMngElement	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-145 IK8000564

Alarm	Attributes	Applicable major release
Name: IK8000564 (10299) Type: processingErrorAlarm Package: lmg.IK8000564 Raised on class: lmg.LMGMngElement	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-146 IK8000565

Alarm	Attributes	Applicable major release
Name: IK8000565 (10300) Type: processingErrorAlarm Package: lmg.IK8000565 Raised on class: lmg.LMGMngElement	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-147 IK8000566

Alarm	Attributes	Applicable major release
Name: IK8000566 (9675) Type: processingErrorAlarm Package: lmg.IK8000566 Raised on class: lmg.LMGMngElement	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-148 IK8000567

Alarm	Attributes	Applicable major release
Name: IK8000567 (9676) Type: processingErrorAlarm Package: lmg.IK8000567 Raised on class: lmg.LMGMngElement	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-149 IK8000568

Alarm	Attributes	Applicable major release
Name: IK8000568 (9677) Type: processingErrorAlarm Package: lmg.IK8000568 Raised on class: lmg.LMGMngElement	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-150 IK8000569

Alarm	Attributes	Applicable major release
Name: IK8000569 (9678) Type: processingErrorAlarm Package: lmg.IK8000569 Raised on class: lmg.LMGMngElement	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-151 IK8000570

Alarm	Attributes	Applicable major release
Name: IK8000570 (9679) Type: processingErrorAlarm Package: lmg.IK8000570 Raised on class: lmg.CPlane	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-152 IK8000571

Alarm	Attributes	Applicable major release
Name: IK8000571 (9680) Type: processingErrorAlarm Package: lmg.IK8000571 Raised on class: lmg.CPlane	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-153 IK8000572

Alarm	Attributes	Applicable major release
Name: IK8000572 (9681) Type: processingErrorAlarm Package: lmg.IK8000572 Raised on class: lmg.CPlane	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-154 IK8000573

Alarm	Attributes	Applicable major release
Name: IK8000573 (9682) Type: processingErrorAlarm Package: lmg.IK8000573 Raised on class: lmg.CPlane	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-155 IK8000574

Alarm	Attributes	Applicable major release
Name: IK8000574 (9683) Type: processingErrorAlarm Package: lmg.IK8000574 Raised on class: lmg.DownloadAgent	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-156 IK8000575

Alarm	Attributes	Applicable major release
Name: IK8000575 (9684) Type: processingErrorAlarm Package: lmg.IK8000575 Raised on class: lmg.DownloadAgent	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-157 IK8000576

Alarm	Attributes	Applicable major release
Name: IK8000576 (9685) Type: processingErrorAlarm Package: Img.IK8000576 Raised on class: Img.DownloadAgent	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-158 IK8000577

Alarm	Attributes	Applicable major release
Name: IK8000577 (9686) Type: processingErrorAlarm Package: Img.IK8000577 Raised on class: Img.DownloadAgent	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-159 IK8000578

Alarm	Attributes	Applicable major release
Name: IK8000578 (9687) Type: processingErrorAlarm Package: Img.IK8000578 Raised on class: Img.FRepairAndReport	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This alarm is raised when the disk space dedicated to daily reporting is full. Alarm is cleared when there is enough disk space for the daily reporting.\nReason: Disk space dedicated to daily reporting is full		
Remedial action: Free disk space		

Table 27-160 IK8000579

Alarm	Attributes	Applicable major release
Name: IK8000579 (9688) Type: processingErrorAlarm Package: Img.IK8000579 Raised on class: Img.FRepairAndReport	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG

Table 27-160 IK8000579 (continued)

Alarm	Attributes	Applicable major release
Description: This alarm is raised when disk space dedicated to daily reporting has reached a threshold, percentage of the maximum value. Alarm is cleared when disk space dedicated to daily reporting is under 10% of the threshold.\nReason: Disk space dedicated to daily reporting has reached a threshold		
Remedial action: Free disk space		

Table 27-161 IK8000580

Alarm	Attributes	Applicable major release
Name: IK8000580 (9689) Type: processingErrorAlarm Package: lmg.IK8000580 Raised on class: lmg.FRepairAndReport	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-162 IK8000581

Alarm	Attributes	Applicable major release
Name: IK8000581 (9690) Type: processingErrorAlarm Package: lmg.IK8000581 Raised on class: lmg.FRepairAndReport	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-163 IK8000582

Alarm	Attributes	Applicable major release
Name: IK8000582 (9691) Type: processingErrorAlarm Package: lmg.IK8000582 Raised on class: lmg.LMGLM	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-164 IK8000583

Alarm	Attributes	Applicable major release
Name: IK8000583 (9692) Type: processingErrorAlarm Package: lmg.IK8000583 Raised on class: lmg.LMGLM	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-165 IK8000584

Alarm	Attributes	Applicable major release
Name: IK8000584 (9693) Type: processingErrorAlarm Package: lmg.IK8000584 Raised on class: lmg.LMGLM	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-166 IK8000585

Alarm	Attributes	Applicable major release
Name: IK8000585 (9694) Type: processingErrorAlarm Package: lmg.IK8000585 Raised on class: lmg.LMGLM	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-167 IK8000586

Alarm	Attributes	Applicable major release
Name: IK8000586 (9695) Type: processingErrorAlarm Package: lmg.IK8000586 Raised on class: lmg.NetworkPlanning	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-168 IK8000587

Alarm	Attributes	Applicable major release
Name: IK8000587 (9696) Type: processingErrorAlarm Package: lmg.IK8000587 Raised on class: lmg.NetworkPlanning	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-169 IK8000588

Alarm	Attributes	Applicable major release
Name: IK8000588 (9697) Type: processingErrorAlarm Package: lmg.IK8000588 Raised on class: lmg.NetworkPlanning	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-170 IK8000589

Alarm	Attributes	Applicable major release
Name: IK8000589 (9698) Type: processingErrorAlarm Package: lmg.IK8000589 Raised on class: lmg.NetworkPlanning	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-171 IK8000590

Alarm	Attributes	Applicable major release
Name: IK8000590 (9699) Type: processingErrorAlarm Package: lmg.IK8000590 Raised on class: lmg.OAM	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-172 IK8000591

Alarm	Attributes	Applicable major release
Name: IK8000591 (9700) Type: processingErrorAlarm Package: Img.IK8000591 Raised on class: Img.OAM	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-173 IK8000592

Alarm	Attributes	Applicable major release
Name: IK8000592 (9701) Type: processingErrorAlarm Package: Img.IK8000592 Raised on class: Img.OAM	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-174 IK8000593

Alarm	Attributes	Applicable major release
Name: IK8000593 (9702) Type: processingErrorAlarm Package: Img.IK8000593 Raised on class: Img.OAM	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-175 IK8000594

Alarm	Attributes	Applicable major release
Name: IK8000594 (9703) Type: processingErrorAlarm Package: Img.IK8000594 Raised on class: Img.Orchestration	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This event is raised when total throughput reached a threshold, percentage of the maximum authorized throughput\ nReason: Total throughput reached a threshold for specific broadcast window		
Remedial action: none		

Table 27-176 IK8000595

Alarm	Attributes	Applicable major release
Name: IK8000595 (9704) Type: processingErrorAlarm Package: lmg.IK8000595 Raised on class: lmg.Orchestration	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This event is raised when the number of active delivery sessions instances authorized by the license has reached a threshold, percentage of the maximum value\nReason: Total number of active delivery sessions instances reached a threshold for a broadcast window		
Remedial action: none		

Table 27-177 IK8000596

Alarm	Attributes	Applicable major release
Name: IK8000596 (9705) Type: processingErrorAlarm Package: lmg.IK8000596 Raised on class: lmg.Orchestration	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-178 IK8000597

Alarm	Attributes	Applicable major release
Name: IK8000597 (9706) Type: processingErrorAlarm Package: lmg.IK8000597 Raised on class: lmg.Orchestration	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-179 IK8000598

Alarm	Attributes	Applicable major release
Name: IK8000598 (9707) Type: processingErrorAlarm Package: lmg.IK8000598 Raised on class: lmg.SANEServiceProvider	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		

Table 27-179 IK8000598 (continued)

Alarm	Attributes	Applicable major release
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-180 IK8000599

Alarm	Attributes	Applicable major release
Name: IK8000599 (9708) Type: processingErrorAlarm Package: Img.IK8000599 Raised on class: Img.SANEServiceProvider	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-181 IK8000600

Alarm	Attributes	Applicable major release
Name: IK8000600 (9709) Type: processingErrorAlarm Package: Img.IK8000600 Raised on class: Img.SANEServiceProvider	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-182 IK8000601

Alarm	Attributes	Applicable major release
Name: IK8000601 (9710) Type: processingErrorAlarm Package: Img.IK8000601 Raised on class: Img.SANEServiceProvider	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-183 IK8000602

Alarm	Attributes	Applicable major release
Name: IK8000602 (9711) Type: processingErrorAlarm Package: lmg.IK8000602 Raised on class: lmg.SmLink	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-184 IK8000603

Alarm	Attributes	Applicable major release
Name: IK8000603 (9712) Type: processingErrorAlarm Package: lmg.IK8000603 Raised on class: lmg.SmLink	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-185 IK8000604

Alarm	Attributes	Applicable major release
Name: IK8000604 (9713) Type: processingErrorAlarm Package: lmg.IK8000604 Raised on class: lmg.SmLink	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-186 IK8000605

Alarm	Attributes	Applicable major release
Name: IK8000605 (9714) Type: processingErrorAlarm Package: lmg.IK8000605 Raised on class: lmg.SmLink	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-187 IK8000606

Alarm	Attributes	Applicable major release
Name: IK8000606 (9715) Type: processingErrorAlarm Package: Img.IK8000606 Raised on class: Img.UPlaneProxy	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-188 IK8000607

Alarm	Attributes	Applicable major release
Name: IK8000607 (9716) Type: processingErrorAlarm Package: Img.IK8000607 Raised on class: Img.UPlaneProxy	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-189 IK8000608

Alarm	Attributes	Applicable major release
Name: IK8000608 (9717) Type: processingErrorAlarm Package: Img.IK8000608 Raised on class: Img.UPlaneProxy	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-190 IK8000609

Alarm	Attributes	Applicable major release
Name: IK8000609 (9718) Type: processingErrorAlarm Package: Img.IK8000609 Raised on class: Img.UPlaneProxy	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-191 IK8000610

Alarm	Attributes	Applicable major release
Name: IK8000610 (9719) Type: processingErrorAlarm Package: lmg.IK8000610 Raised on class: lmg.SessionAudit	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-192 IK8000611

Alarm	Attributes	Applicable major release
Name: IK8000611 (9720) Type: processingErrorAlarm Package: lmg.IK8000611 Raised on class: lmg.SessionAudit	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.

Alarm	Attributes	Applicable major release
Name: IK8000615 (10302) Type: processingErrorAlarm Package: Img.IK8000615 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-197 IK8000616

Alarm	Attributes	Applicable major release
Name: IK8000616 (10303) Type: processingErrorAlarm Package: Img.IK8000616 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-198 IK8000617

Alarm	Attributes	Applicable major release
Name: IK8000617 (10304) Type: processingErrorAlarm Package: Img.IK8000617 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-199 IK8000618

Alarm	Attributes	Applicable major release
Name: IK8000618 (10305) Type: processingErrorAlarm Package: lmg.IK8000618 Raised on class: lmg.GwNetworkPlanning	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-200 IK8000619

Alarm	Attributes	Applicable major release
Name: IK8000619 (10306) Type: processingErrorAlarm Package: lmg.IK8000619 Raised on class: lmg.GwNetworkPlanning	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-201 IK8000620

Alarm	Attributes	Applicable major release
Name: IK8000620 (10307) Type: processingErrorAlarm Package: lmg.IK8000620 Raised on class: lmg.GwNetworkPlanning	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-202 IK8000621

Alarm	Attributes	Applicable major release
Name: IK8000621 (10308) Type: processingErrorAlarm Package: lmg.IK8000621 Raised on class: lmg.GwNetworkPlanning	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-203 IK8000622

Alarm	Attributes	Applicable major release
Name: IK8000622 (10309) Type: processingErrorAlarm Package: Img.IK8000622 Raised on class: Img.CPlaneProxy	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-204 IK8000623

Alarm	Attributes	Applicable major release
Name: IK8000623 (10310) Type: processingErrorAlarm Package: Img.IK8000623 Raised on class: Img.CPlaneProxy	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-205 IK8000624

Alarm	Attributes	Applicable major release
Name: IK8000624 (10311) Type: processingErrorAlarm Package: Img.IK8000624 Raised on class: Img.CPlaneProxy	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-206 IK8000625

Alarm	Attributes	Applicable major release
Name: IK8000625 (10312) Type: processingErrorAlarm Package: Img.IK8000625 Raised on class: Img.CPlaneProxy	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-207 IK8010106

Alarm	Attributes	Applicable major release
Name: IK8010106 (9113) Type: environmentalAlarm Package: Img.IK8010106 Raised on class: Img.Orchestration	Severity: major Specific problem: Service Provisioning Platform not responding Implicitly cleared: true Default probable cause: externalEquipmentFailure	Release: • LR15.1.MG • LR16.1.MG
Description: This alarm is raised in case of no response from BPS on NBI interface. Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: Service Provisioning Platform not responding		
Remedial action: Check Web services or Provisioning platform status		

Table 27-208 IK8010107

Alarm	Attributes	Applicable major release
Name: IK8010107 (10313) Type: processingErrorAlarm Package: Img.IK8010107 Raised on class: Img.DownloadAgent	Severity: minor Specific problem: OnDemand file download failure Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This alarm is raised in case of failure to download OnDemand file. Alarm is cleared by the system if the file can be downloaded or once the associated deliveryInstance is deleted, or when the service is restarted.\nReason: OnDemand file download failure		
Remedial action: Check the URI file access		

Table 27-209 IK8010120

Alarm	Attributes	Applicable major release
Name: IK8010120 (9114) Type: communicationsAlarm Package: Img.IK8010120 Raised on class: Img.DownloadAgent	Severity: warning Specific problem: Transaction error high for on demand content ingest Implicitly cleared: true Default probable cause: excessiveErrorRate	Release: • LR15.1.MG • LR16.1.MG
Description: This alarm is raised when transaction error for on-demand content ingest is higher that requested threshold (success rate is defined as number of 200OK compared to number of addContent requests). Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: Transaction error high for on demand content ingest		
Remedial action: Diagnose Problem		

Table 27-210 IK8010121

Alarm	Attributes	Applicable major release
Name: IK8010121 (9115) Type: communicationsAlarm Package: lmg.IK8010121 Raised on class: lmg.DownloadAgent	Severity: warning Specific problem: Transaction error high for continuous content ingest Implicitly cleared: true Default probable cause: excessiveErrorRate	Release: • LR15.1.MG • LR16.1.MG
Description: This alarm is raised when transaction error for continuous content ingest is higher that requested threshold (success rate is defined as number of 200OK compared to number of http PUT requests). Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: Transaction error high for continuous content ingest		
Remedial action: Diagnose Problem		

Table 27-211 IK8010122

Alarm	Attributes	Applicable major release
Name: IK8010122 (9116) Type: communicationsAlarm Package: lmg.IK8010122 Raised on class: lmg.CPlane	Severity: warning Specific problem: Transaction error high for SGmb transaction Implicitly cleared: true Default probable cause: excessiveErrorRate	Release: • LR15.1.MG • LR16.1.MG
Description: This alarm is raised when transaction error for SGmb transaction is higher that requested threshold (success rate is defined as number of successful diameter RAA compared to number of RAR Start or Stop). Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: Transaction error high for SGmb transaction		
Remedial action: Diagnose Problem		

Table 27-212 IK8010123

Alarm	Attributes	Applicable major release
Name: IK8010123 (9117) Type: communicationsAlarm Package: lmg.IK8010123 Raised on class: lmg.FRepairAndReport	Severity: warning Specific problem: Repair error high Implicitly cleared: true Default probable cause: excessiveErrorRate	Release: • LR15.1.MG • LR16.1.MG
Description: This alarm is raised when repair error is higher that requested threshold (success rate is defined as number of 200 OK compared to number of http GET from Ues). Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: Repair error high		
Remedial action: Diagnose Problem		

Table 27-213 IK8010124

Alarm	Attributes	Applicable major release
Name: IK8010124 (9118) Type: communicationsAlarm Package: lmg.IK8010124 Raised on class: lmg.FRepairAndReport	Severity: warning Specific problem: Reporting error high Implicitly cleared: true Default probable cause: excessiveErrorRate	Release: • LR15.1.MG • LR16.1.MG
Description: This alarm is raised when reporting error is higher that requested threshold (success rate is defined as number of 200 OK compared to number of http PUT from Ues). Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: Reporting error high		
Remedial action: Diagnose Problem		

Table 27-214 IK8010510

Alarm	Attributes	Applicable major release
Name: IK8010510 (9119) Type: processingErrorAlarm Package: lmg.IK8010510 Raised on class: lmg.DownloadAgent	Severity: critical Specific problem: I/O NAS access error Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: This alarm is raised in case of right access problem, full disk or network error. Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: I/O NAS access error		
Remedial action: Check the directory right or NAS status		

Table 27-215 IK8010520

Alarm	Attributes	Applicable major release
Name: IK8010520 (9120) Type: processingErrorAlarm Package: lmg.IK8010520 Raised on class: lmg.Orchestration	Severity: major Specific problem: DataBase access error Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: This alarm is raised in case there is no connection with the database. Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: DataBase access error		
Remedial action: Check the state of the database		

Table 27-216 IK8010521

Alarm	Attributes	Applicable major release
Name: IK8010521 (9121) Type: processingErrorAlarm Package: lmg.IK8010521 Raised on class: lmg.CPlane	Severity: major Specific problem: DataBase access error Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG

Table 27-216 IK8010521 (continued)

Alarm	Attributes	Applicable major release
Description: This alarm is raised in case there is no connection with the database. Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: DataBase access error		
Remedial action: Check the state of the database		

Table 27-217 IK8010522

Alarm	Attributes	Applicable major release
Name: IK8010522 (9122) Type: processingErrorAlarm Package: lmg.IK8010522 Raised on class: lmg.NetworkPlanning	Severity: major Specific problem: DataBase access error Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: This alarm is raised in case there is no connection with the database. Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: DataBase access error		
Remedial action: Check the state of the database		

Table 27-218 IK8010531

Alarm	Attributes	Applicable major release
Name: IK8010531 (9123) Type: communicationsAlarm Package: lmg.IK8010531 Raised on class: lmg.CPlane	Severity: major Specific problem: HTTP communication failure Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG • LR16.1.MG
Description: This alarm is raised in case of connection failure to the remote module. Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: HTTP communication failure		
Remedial action: Check the status of the target server		

Table 27-219 IK8010532

Alarm	Attributes	Applicable major release
Name: IK8010532 (9124) Type: communicationsAlarm Package: lmg.IK8010532 Raised on class: lmg.Orchestration	Severity: major Specific problem: HTTP communication failure Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG • LR16.1.MG
Description: This alarm is raised in case of connection failure to the remote module. Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: HTTP communication failure		
Remedial action: Check the status of the target server		

Table 27-220 IK8010550

Alarm	Attributes	Applicable major release
Name: IK8010550 (9125) Type: processingErrorAlarm Package: lmg.IK8010550 Raised on class: lmg.NetworkPlanning	Severity: major Specific problem: Provisioning error Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR15.1.MG • LR16.1.MG
Description: This alarm is raised in case of inconsistent or missing provisioning file. Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: Provisioning error		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-221 IK8010551

Alarm	Attributes	Applicable major release
Name: IK8010551 (9126) Type: processingErrorAlarm Package: lmg.IK8010551 Raised on class: lmg.CPlaneProxy	Severity: major Specific problem: Provisioning error Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR15.1.MG
Description: This alarm is raised in case of inconsistent or missing provisioning file. Alarm is cleared by the system.\nReason: Provisioning error		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-222 IK8010552

Alarm	Attributes	Applicable major release
Name: IK8010552 (10314) Type: processingErrorAlarm Package: lmg.IK8010552 Raised on class: lmg.GwNetworkPlanning	Severity: major Specific problem: Provisioning error Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG
Description: This alarm is raised in case of inconsistent or missing provisioning file. Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: Provisioning error		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-223 IK8010560

Alarm	Attributes	Applicable major release
Name: IK8010560 (9127) Type: qualityOfServiceAlarm Package: Img.IK8010560 Raised on class: Img.NetworkPlanning	Severity: major Specific problem: Max allowed resources reached Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity	Release: • LR15.1.MG • LR16.1.MG
Description: This alarm is raised in case there are no more resource available. Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: Max allowed resources reached		
Remedial action: Check licence or provisioning file		

Table 27-224 IK8010561

Alarm	Attributes	Applicable major release
Name: IK8010561 (9128) Type: qualityOfServiceAlarm Package: Img.IK8010561 Raised on class: Img.CPlaneProxy	Severity: major Specific problem: Max allowed resources reached Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity	Release: • LR15.1.MG
Description: This alarm is raised in case there are no more resource available. Alarm is cleared by the system.\nReason: Max allowed resources reached		
Remedial action: Check licence or provisioning file		

Table 27-225 IK8010562

Alarm	Attributes	Applicable major release
Name: IK8010562 (10315) Type: qualityOfServiceAlarm Package: Img.IK8010562 Raised on class: Img.GwNetworkPlanning	Severity: major Specific problem: Max allowed resources reached Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity	Release: • LR16.1.MG
Description: This alarm is raised in case there are no more resource available. Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: Max allowed resources reached		
Remedial action: Check licence or provisioning file		

Table 27-226 IK8010580

Alarm	Attributes	Applicable major release
Name: IK8010580 (9129) Type: processingErrorAlarm Package: Img.IK8010580 Raised on class: Img.CPlane	Severity: major Specific problem: Session preparation error Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG

Table 27-226 IK8010580 (continued)

Alarm	Attributes	Applicable major release
Description: This alarm is raised in case of bearer activation error. Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: Session preparation error		
Remedial action: Check for other alarms and delete the bearer		

Table 27-227 IK8010581

Alarm	Attributes	Applicable major release
Name: IK8010581 (9130) Type: processingErrorAlarm Package: lmg.IK8010581 Raised on class: lmg.CPlaneProxy	Severity: major Specific problem: Session preparation error Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This alarm is raised in case of bearer activation error. Alarm is cleared by the system.\nReason: Session preparation error		
Remedial action: Check for other alarms and delete the bearer		

Table 27-228 IK8010610

Alarm	Attributes	Applicable major release
Name: IK8010610 (9131) Type: securityServiceOrMechanismViolation Package: lmg.IK8010610 Raised on class: lmg.DownloadAgent	Severity: critical Specific problem: LMG X509 certificate has expired Implicitly cleared: false Default probable cause: nonRepudiationFailure	Release: • LR15.1.MG
Description: This alarm is raised when the X509 certificate has just expired. Certificate variables parameters are indicated in the alarm (e. G. Standard Version, Serial Number, Subject Info (Common name, CountryName, StateOrProvinceName, localityName, organizationName, organizationalUnitName, emailAddress), Issuer Info (Common name, CountryName, StateOrProvinceName, localityName, organizationName, organizationalUnitName, emailAddress), Expiration Date). Alarm to be cleared by the operator at the management system.\nReason: LMG X509 certificate has expired		
Remedial action: Update the LMG X509 certificate		

Table 27-229 IK8010611

Alarm	Attributes	Applicable major release
Name: IK8010611 (10316) Type: securityServiceOrMechanismViolation Package: lmg.IK8010611 Raised on class: lmg.DownloadAgent	Severity: critical Specific problem: LMG X509 certificate has expired Implicitly cleared: true Default probable cause: nonRepudiationFailure	Release: • LR16.1.MG
Description: This alarm is raised when the X509 certificate has just expired. Certificate variables parameters Standard Version, Serial Number, Subject Info, Issuer Info, and Expiration Date are indicated in the alarm.. Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: LMG X509 certificate has expired		

Table 27-229 IK8010611 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Update the LMG X509 certificate		

Table 27-230 IK8010620

Alarm	Attributes	Applicable major release
Name: IK8010620 (9132) Type: processingErrorAlarm Package: lmg.IK8010620 Raised on class: lmg.OAM	Severity: major Specific problem: Data Backup Failure Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: This alarm is raised when a scheduled lmgbackup fails.. Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: Data Backup Failure		
Remedial action: See the Backup log file to have details on the Data backup operation failure, correct the potential error before retrying the operation or contact NOKIA customer support		

Table 27-231 IK8010630

Alarm	Attributes	Applicable major release
Name: IK8010630 (9133) Type: communicationsAlarm Package: lmg.IK8010630 Raised on class: lmg.SANEServiceProvider	Severity: critical Specific problem: Connection failure between GUI and server Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG • LR16.1.MG
Description: This alarm is raised in case of connection failure between ServiceProvider and server (server can be CACTI, BPS, U-Plane, GSEM). Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: Connection failure between GUI and server		
Remedial action: Verify if the ServiceProvider module is activated and well configured. Verify also if the server is on and well configured		

Table 27-232 IK8010640

Alarm	Attributes	Applicable major release
Name: IK8010640 (9134) Type: communicationsAlarm Package: lmg.IK8010640 Raised on class: lmg.SANEServiceProvider	Severity: critical Specific problem: Connection failure between LMG and SANE Implicitly cleared: false Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG

Table 27-232 IK8010640 (continued)

Alarm	Attributes	Applicable major release
Description: This alarm is raised in case of connection failure between LMG and SANE. Alarm to be cleared by the operator at the management system.\nReason: Connection failure between LMG and SANE		
Remedial action: Verify if the ServiceProvider module is activated and well configured. Verify also if the SANE servers and UDDI server is on and well configured		

Table 27-233 IK8010641

Alarm	Attributes	Applicable major release
Name: IK8010641 (10317) Type: communicationsAlarm Package: lmg.IK8010641 Raised on class: lmg.SANEServiceProvider	Severity: critical Specific problem: Connection failure between LMG and SANE Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG
Description: This alarm is raised in case of connection failure between LMG and SANE. Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: Connection failure between LMG and SANE		
Remedial action: Verify if the ServiceProvider module is activated and well configured. Verify also if the SANE servers and UDDI server is on and well configured		

Table 27-234 IK8010650

Alarm	Attributes	Applicable major release
Name: IK8010650 (9135) Type: communicationsAlarm Package: lmg.IK8010650 Raised on class: lmg.SANEServiceProvider	Severity: critical Specific problem: non synchronization between SANE and service provider databases Implicitly cleared: false Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG
Description: This alarm is raised in case of non synchronization between service provider and SANE roles and users. Alarm to be cleared by the operator at the management system.\nReason: non synchronization between SANE and service provider databases		
Remedial action: Verify if the database of service provider module is well configured		

Table 27-235 IK8010651

Alarm	Attributes	Applicable major release
Name: IK8010651 (10318) Type: communicationsAlarm Package: lmg.IK8010651 Raised on class: lmg.SANEServiceProvider	Severity: critical Specific problem: non synchronization between SANE and service provider databases Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG
Description: This alarm is raised in case of non synchronization between service provider and SANE roles and users. Alarm is cleared by the system when alarmCode and MOI criterias are fulfilled, or when the service is restarted.\nReason: non synchronization between SANE and service provider databases		
Remedial action: Verify if the database of service provider module is well configured		

Table 27-236 IK8010750

Alarm	Attributes	Applicable major release
Name: IK8010750 (9136) Type: processingErrorAlarm Package: lmg.IK8010750 Raised on class: lmg.CPlaneProxy	Severity: major Specific problem: Missing IP address in M1 interface configuration Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR15.1.MG • LR16.1.MG
Description: This alarm is raised in case of missing IPv4 or IPv6 address in the M1 interface configuration with dual stack enabled. Alarm is cleared by the system when the service is restarted.\nReason: Missing IP address in M1 interface configuration		
Remedial action: Configure MBMS-GW with missing IP address		

Table 27-237 IK8020002

Alarm	Attributes	Applicable major release
Name: IK8020002 (8260) Type: securityServiceOrMechanismViolation Package: lmg.IK8020002 Raised on class: lmg.BpsFunction	Severity: minor Specific problem: Operator login failure Implicitly cleared: true Default probable cause: unauthorizedAccessAttempt	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm is raised in case of login failure after number of authorized failures. Alarm is cleared only after BPS restart.\nReason: Operator login failure		
Remedial action: Check BPS logs.		

Table 27-238 IK8020003

Alarm	Attributes	Applicable major release
Name: IK8020003 (8261) Type: communicationsAlarm Package: lmg.IK8020003 Raised on class: lmg.BpsFunction	Severity: major Specific problem: Unexpected major event at service execution Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm is raised when an unexpected BM-SC event occurs at least for an eMBMS session involving the complete (delivery) stop of the eMBMS service. Alarm is cleared only after BPS restart.\nReason: Unexpected major event at service execution		
Remedial action: check also alarms at BM-SC		

Table 27-239 IK8020004

Alarm	Attributes	Applicable major release
Name: IK8020004 (8262) Type: communicationsAlarm Package: lmg.IK8020004 Raised on class: lmg.BpsFunction	Severity: minor Specific problem: Unexpected minor event at service execution Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm is raised when an unexpected BM-SC event occurs during an eMBMS session (e. G time-out on notification event) without disrupting the delivery of the eMBMS service. Alarm is cleared only after BPS restart.\nReason: Unexpected minor event at service execution		
Remedial action: check also alarms at BM-SC		

Table 27-240 IK8020005

Alarm	Attributes	Applicable major release
Name: IK8020005 (8263) Type: processingErrorAlarm Package: lmg.IK8020005 Raised on class: lmg.BpsFunction	Severity: minor Specific problem: File scheduling overlap Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm is raised when the start date of the next file to deliver is overlapping the delivery end date of the previous file. Alarm is cleared only after BPS restart.\nReason: File scheduling overlap		
Remedial action: The operator shall take care of the file size (and the delivery bitrate) when scheduling file delivery		

Table 27-241 IK8020006

Alarm	Attributes	Applicable major release
Name: IK8020006 (8264) Type: processingErrorAlarm Package: Img.IK8020006 Raised on class: Img.BpsFunction	Severity: major Specific problem: Service template not found Implicitly cleared: true Default probable cause: softwareProgramError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm is raised when the associated service template can not be found or opened. Alarm is cleared only after BPS restart.\nReason: Service template not found		
Remedial action: Restore the service template file		

Table 27-242 IK8020007

Alarm	Attributes	Applicable major release
Name: IK8020007 (8265) Type: processingErrorAlarm Package: Img.IK8020007 Raised on class: Img.BpsFunction	Severity: major Specific problem: Service template parsing error Implicitly cleared: true Default probable cause: corruptData	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm is raised when the associated service template can not be interpreted successfullly. Alarm is cleared only after BPS restart.\nReason: Service template parsing error		
Remedial action: Restore the service template file		

Table 27-243 IK8020008

Alarm	Attributes	Applicable major release
Name: IK8020008 (8266) Type: processingErrorAlarm Package: Img.IK8020008 Raised on class: Img.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-244 IK8020009

Alarm	Attributes	Applicable major release
Name: IK8020009 (8267) Type: communicationsAlarm Package: lmg.IK8020009 Raised on class: lmg.BpsFunction	Severity: major Specific problem: BM-SC unavailable Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm is raised in case all TCP connections (1 connection per active eMBMS session) with BM-SC fail. Alarm is cleared by the system.\nReason: BM-SC unavailable		
Remedial action: Check configured BM-SC within BPS		

Table 27-245 IK8020010

Alarm	Attributes	Applicable major release
Name: IK8020010 (8268) Type: communicationsAlarm Package: lmg.IK8020010 Raised on class: lmg.BpsFunction	Severity: major Specific problem: HTTP transaction error on NBI Implicitly cleared: true Default probable cause: callSetUpFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm is raised when BPS receives something other than 200-OK/201-Created in HTTP response from BMSC, for anything BPS initiates over the NBI.. Alarm is cleared only after BPS restart.\nReason: HTTP transaction error on NBI		
Remedial action: Check also alarms at BM-SC		

Table 27-246 IK8020011

Alarm	Attributes	Applicable major release
Name: IK8020011 (8269) Type: communicationsAlarm Package: lmg.IK8020011 Raised on class: lmg.BpsFunction	Severity: major Specific problem: BEARER CHECK TIME failure Implicitly cleared: true Default probable cause: timeoutExpired	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm is raised when BEARER CHECK TIME check failed. Alarm is cleared only after BPS restart.\nReason: BEARER CHECK TIME failure		
Remedial action: Check also alarms at BM-SC		

Table 27-247 IK8020012

Alarm	Attributes	Applicable major release
Name: IK8020012 (8270) Type: communicationsAlarm Package: lmg.IK8020012 Raised on class: lmg.BpsFunction	Severity: major Specific problem: BEARER CHECK TIME missing Implicitly cleared: true Default probable cause: timeoutExpired	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm is raised when BEARER CHECK TIME indication failed to arrive from BM-SC. Alarm is cleared only after BPS restart.\nReason: BEARER CHECK TIME missing		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-248 IK8020013

Alarm	Attributes	Applicable major release
Name: IK8020013 (8271) Type: processingErrorAlarm Package: lmg.IK8020013 Raised on class: lmg.BpsFunction	Severity: major Specific problem: Session database synchronization error Implicitly cleared: true Default probable cause: corruptData	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm is raised when an error is encountered while session database synchronization. Alarm is cleared only after BPS restart.\nReason: Session database synchronization error		
Remedial action: Manual corrective action via the BPS service provisioning. If the problem persists, contact NOKIA customer support.		

Table 27-249 IK8020014

Alarm	Attributes	Applicable major release
Name: IK8020014 (8272) Type: processingErrorAlarm Package: lmg.IK8020014 Raised on class: lmg.BpsFunction	Severity: minor Specific problem: On demand file size unknown Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm is raised when file size cannot be determined to see if file can be delivered within specified time window. Alarm is cleared only after BPS restart.\nReason: On demand file size unknown		
Remedial action: Operator dependent. contact NOKIA customer support.		

Table 27-250 IK8020015

Alarm	Attributes	Applicable major release
Name: IK8020015 (8273) Type: processingErrorAlarm Package: lmg.IK8020015 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: This is a spare for future use\nReason: applicationSubsystemFailure		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-251 IK8020016

Alarm	Attributes	Applicable major release
Name: IK8020016 (8274) Type: processingErrorAlarm Package: lmg.IK8020016 Raised on class: lmg.BpsFunction	Severity: major Specific problem: Session removed due to service area removal Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm is raised when session is removed because new service area database retrieved from SAM no longer contains one or more service areas that the session was scheduled to broadcast in. Alarm is cleared only after BPS restart.\nReason: Session removed due to service area removal		
Remedial action: Confirm SAI configuration		

Table 27-252 IK8020017

Alarm	Attributes	Applicable major release
Name: IK8020017 (8275) Type: processingErrorAlarm Package: lmg.IK8020017 Raised on class: lmg.BpsFunction	Severity: minor Specific problem: Session may be impacted due to service area property change Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm is raised when session is impacted by discrepancy in new service area database retrieved from SAM. Alarm is cleared only after BPS restart.\nReason: Session may be impacted due to service area property change		
Remedial action: Confirm SAI configuration		

Table 27-253 IK8020018

Alarm	Attributes	Applicable major release
Name: IK8020018 (8276) Type: processingErrorAlarm Package: Img.IK8020018 Raised on class: Img.BpsFunction	Severity: critical Specific problem: BPS license not found Implicitly cleared: true Default probable cause: underlayingResourceUnavailable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The license file is not found. Alarm is cleared only after BPS restart.\nReason: BPS license not found		
Remedial action: Check . Lic file existence in and configDirPath		

Table 27-254 IK8020019

Alarm	Attributes	Applicable major release
Name: IK8020019 (8277) Type: processingErrorAlarm Package: Img.IK8020019 Raised on class: Img.BpsFunction	Severity: critical Specific problem: Problem with the BPS license Implicitly cleared: true Default probable cause: underlayingResourceUnavailable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The license file can not be parsed. Alarm is cleared only after BPS restart.\nReason: Problem with the BPS license		
Remedial action: Check that . Lic file is correct		

Table 27-255 IK8020020

Alarm	Attributes	Applicable major release
Name: IK8020020 (8278) Type: processingErrorAlarm Package: Img.IK8020020 Raised on class: Img.BpsFunction	Severity: critical Specific problem: USB key protection error Implicitly cleared: true Default probable cause: underlayingResourceUnavailable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: usb dongle check failed. Alarm is cleared only after BPS restart.\nReason: USB key protection error		
Remedial action: Check logs for more details.		

Table 27-256 IK8020021

Alarm	Attributes	Applicable major release
Name: IK8020021 (8279) Type: processingErrorAlarm Package: Img.IK8020021 Raised on class: Img.BpsFunction	Severity: critical Specific problem: BPS license invalid Implicitly cleared: true Default probable cause: underlayingResourceUnavailable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG

Table 27-256 IK8020021 (continued)

Alarm	Attributes	Applicable major release
Description: The license file is not valid for this server and/or software. Alarm is cleared only after BPS restart.\nReason: BPS license invalid		
Remedial action: Check that . Lic file is correct		

Table 27-257 IK8020022

Alarm	Attributes	Applicable major release
Name: IK8020022 (8280) Type: processingErrorAlarm Package: lmg.IK8020022 Raised on class: lmg.BpsFunction	Severity: critical Specific problem: BPS license expiration Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The license file is expired. Alarm is cleared only after BPS restart.\nReason: BPS license expiration		
Remedial action: Renew the license		

Table 27-258 IK8020023

Alarm	Attributes	Applicable major release
Name: IK8020023 (8281) Type: processingErrorAlarm Package: lmg.IK8020023 Raised on class: lmg.BpsFunction	Severity: critical Specific problem: Problem with the database. Implicitly cleared: true Default probable cause: underlayingResourceUnavailable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Can not open a database connection. Alarm is cleared only after BPS restart.\nReason: Problem with the database.		
Remedial action: Check that the database is started		

Table 27-259 IK8020024

Alarm	Attributes	Applicable major release
Name: IK8020024 (8282) Type: processingErrorAlarm Package: lmg.IK8020024 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: USB key protection warning Implicitly cleared: true Default probable cause: underlayingResourceUnavailable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Entering grace period. Alarm is cleared by the system.\nReason: USB key protection warning		
Remedial action: Check that the dongle is plugged		

Table 27-260 IK8020025

Alarm	Attributes	Applicable major release
Name: IK8020025 (8283) Type: processingErrorAlarm Package: Img.IK8020025 Raised on class: Img.BpsFunction	Severity: critical Specific problem: Problem with a database request Implicitly cleared: true Default probable cause: softwareError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A request can not be performed. Alarm is cleared only after BPS restart.\nReason: Problem with a database request		
Remedial action: Check that the database has been correctly installed.		

Table 27-261 IK8020026

Alarm	Attributes	Applicable major release
Name: IK8020026 (8284) Type: processingErrorAlarm Package: Img.IK8020026 Raised on class: Img.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-262 IK8020027

Alarm	Attributes	Applicable major release
Name: IK8020027 (8285) Type: communicationsAlarm Package: Img.IK8020027 Raised on class: Img.BpsFunction	Severity: major Specific problem: SAM ingestion timeout Implicitly cleared: true Default probable cause: timeoutExpired	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Getting data from SAM exceeds defined time limitation. Alarm is cleared by the system.\nReason: SAM ingestion timeout		
Remedial action: Check the server. Log file		

Table 27-263 IK8020028

Alarm	Attributes	Applicable major release
Name: IK8020028 (8286) Type: communicationsAlarm Package: Img.IK8020028 Raised on class: Img.BpsFunction	Severity: major Specific problem: SAM-O connection error Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG

Table 27-263 IK8020028 (continued)

Alarm	Attributes	Applicable major release
Description: Cannot retrieve data from SAM server. Alarm is cleared by the system.\nReason: SAM-O connection error		
Remedial action: Check the server. Log file		

Table 27-264 IK8020029

Alarm	Attributes	Applicable major release
Name: IK8020029 (8287) Type: communicationsAlarm Package: Img.IK8020029 Raised on class: Img.BpsFunction	Severity: major Specific problem: Interface of BPS for SAM ingestion error Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Cannot post data to BPS server. Alarm is cleared by the system.\nReason: Interface of BPS for SAM ingestion error		
Remedial action: Check the server. Log file		

Table 27-265 IK8020030

Alarm	Attributes	Applicable major release
Name: IK8020030 (9137) Type: processingErrorAlarm Package: Img.IK8020030 Raised on class: Img.BpsFunction	Severity: minor Specific problem: eMBMS session not admitted Implicitly cleared: true Default probable cause: systemResourcesOverload	Release: • LR15.1.MG
Description: This alarm is raised when a MCE failed to admit an eMBMS session. Alarm is cleared by the system.\nReason: eMBMS session not admitted		
Remedial action: Operator should investigate potential impact to session quality		

Table 27-266 IK8020031

Alarm	Attributes	Applicable major release
Name: IK8020031 (9138) Type: communicationsAlarm Package: Img.IK8020031 Raised on class: Img.BpsFunction	Severity: minor Specific problem: eMBMS session cell down Implicitly cleared: true Default probable cause: unavailable	Release: • LR15.1.MG • LR16.1.MG
Description: This alarm is raised when a cell handling eMBMS session is down. Alarm is cleared by the system.\nReason: eMBMS session cell down		
Remedial action: Operator should investigate potential impact to session quality		

Table 27-267 IK8020032

Alarm	Attributes	Applicable major release
Name: IK8020032 (9139) Type: communicationsAlarm Package: lmg.IK8020032 Raised on class: lmg.BpsFunction	Severity: minor Specific problem: eMBMS session excessive M1 error Implicitly cleared: true Default probable cause: excessiveErrorRate	Release: • LR15.1.MG • LR16.1.MG
Description: This alarm is raised when a eMBMS session is experiencing excessive M1 error. Alarm is cleared by the system.\ nReason: eMBMS session excessive M1 error		
Remedial action: Operator should investigate potential impact to session quality		

Table 27-268 IK8020033

Alarm	Attributes	Applicable major release
Name: IK8020033 (9140) Type: communicationsAlarm Package: lmg.IK8020033 Raised on class: lmg.BpsFunction	Severity: minor Specific problem: M3 error Implicitly cleared: true Default probable cause: unavailable	Release: • LR15.1.MG • LR16.1.MG
Description: This alarm is raised when a MCE sees M3 error. Alarm is cleared by the system.\nReason: M3 error		
Remedial action: Operator should investigate potential impact to session quality		

Table 27-269 IK8020034

Alarm	Attributes	Applicable major release
Name: IK8020034 (9141) Type: communicationsAlarm Package: lmg.IK8020034 Raised on class: lmg.BpsFunction	Severity: minor Specific problem: SAM interface down Implicitly cleared: true Default probable cause: unavailable	Release: • LR15.1.MG • LR16.1.MG
Description: This alarm is raised when JMS or SAM-O interface is down towards a SAM. Alarm is cleared by the system.\nReason: SAM interface down		
Remedial action: Operator should investigate the SAM or the network to SAM		

Table 27-270 IK8020035

Alarm	Attributes	Applicable major release
Name: IK8020035 (9142) Type: qualityOfServiceAlarm Package: lmg.IK8020035 Raised on class: lmg.BpsFunction	Severity: minor Specific problem: Unicast consumption high Implicitly cleared: true Default probable cause: congestion	Release: • LR15.1.MG • LR16.1.MG

Table 27-270 IK8020035 (continued)

Alarm	Attributes	Applicable major release
Description: This alarm is raised when current unicast consumption in the cell is too high to safely support eMBMS sessions. Alarm is cleared by the system.\nReason: Unicast consumption high		
Remedial action: Operator should investigate if there is a need to manually cancel a session		

Table 27-271 IK8020036

Alarm	Attributes	Applicable major release
Name: IK8020036 (9143) Type: processingErrorAlarm Package: Img.IK8020036 Raised on class: Img.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-272 IK8020037

Alarm	Attributes	Applicable major release
Name: IK8020037 (9144) Type: processingErrorAlarm Package: Img.IK8020037 Raised on class: Img.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-273 IK8020038

Alarm	Attributes	Applicable major release
Name: IK8020038 (9145) Type: processingErrorAlarm Package: Img.IK8020038 Raised on class: Img.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-274 IK8020039

Alarm	Attributes	Applicable major release
Name: IK8020039 (9146) Type: processingErrorAlarm Package: lmg.IK8020039 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-275 IK8020040

Alarm	Attributes	Applicable major release
Name: IK8020040 (9147) Type: processingErrorAlarm Package: lmg.IK8020040 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-276 IK8020041

Alarm	Attributes	Applicable major release
Name: IK8020041 (9148) Type: processingErrorAlarm Package: lmg.IK8020041 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-277 IK8020042

Alarm	Attributes	Applicable major release
Name: IK8020042 (9149) Type: processingErrorAlarm Package: lmg.IK8020042 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-278 IK8020043

Alarm	Attributes	Applicable major release
Name: IK8020043 (9150) Type: processingErrorAlarm Package: lmg.IK8020043 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-279 IK8020044

Alarm	Attributes	Applicable major release
Name: IK8020044 (9151) Type: processingErrorAlarm Package: lmg.IK8020044 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-280 IK8020045

Alarm	Attributes	Applicable major release
Name: IK8020045 (9152) Type: processingErrorAlarm Package: lmg.IK8020045 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-281 IK8020046

Alarm	Attributes	Applicable major release
Name: IK8020046 (9153) Type: processingErrorAlarm Package: lmg.IK8020046 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-282 IK8020047

Alarm	Attributes	Applicable major release
Name: IK8020047 (9154) Type: processingErrorAlarm Package: lmg.IK8020047 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-283 IK8020048

Alarm	Attributes	Applicable major release
Name: IK8020048 (9155) Type: processingErrorAlarm Package: lmg.IK8020048 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-284 IK8020049

Alarm	Attributes	Applicable major release
Name: IK8020049 (9156) Type: processingErrorAlarm Package: lmg.IK8020049 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-285 IK8020050

Alarm	Attributes	Applicable major release
Name: IK8020050 (9157) Type: processingErrorAlarm Package: lmg.IK8020050 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-286 IK8020051

Alarm	Attributes	Applicable major release
Name: IK8020051 (9158) Type: processingErrorAlarm Package: lmg.IK8020051 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-287 IK8020052

Alarm	Attributes	Applicable major release
Name: IK8020052 (9159) Type: processingErrorAlarm Package: lmg.IK8020052 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-288 IK8020053

Alarm	Attributes	Applicable major release
Name: IK8020053 (9160) Type: processingErrorAlarm Package: lmg.IK8020053 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-289 IK8020054

Alarm	Attributes	Applicable major release
Name: IK8020054 (9161) Type: processingErrorAlarm Package: lmg.IK8020054 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-290 IK8020055

Alarm	Attributes	Applicable major release
Name: IK8020055 (9162) Type: processingErrorAlarm Package: Img.IK8020055 Raised on class: Img.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-291 IK8020056

Alarm	Attributes	Applicable major release
Name: IK8020056 (9163) Type: processingErrorAlarm Package: Img.IK8020056 Raised on class: Img.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.

Alarm	Attributes	Applicable major release
Name: IK8020067 (9174) Type: processingErrorAlarm Package: lmg.IK8020067 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-303 IK8020068

Alarm	Attributes	Applicable major release
Name: IK8020068 (9175) Type: processingErrorAlarm Package: lmg.IK8020068 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-304 IK8020069

Alarm	Attributes	Applicable major release
Name: IK8020069 (9176) Type: processingErrorAlarm Package: lmg.IK8020069 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-305 IK8020070

Alarm	Attributes	Applicable major release
Name: IK8020070 (9177) Type: processingErrorAlarm Package: lmg.IK8020070 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-306 IK8020071

Alarm	Attributes	Applicable major release
Name: IK8020071 (9178) Type: processingErrorAlarm Package: lmg.IK8020071 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-307 IK8020072

Alarm	Attributes	Applicable major release
Name: IK8020072 (9179) Type: processingErrorAlarm Package: lmg.IK8020072 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-308 IK8020073

Alarm	Attributes	Applicable major release
Name: IK8020073 (9180) Type: processingErrorAlarm Package: lmg.IK8020073 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-309 IK8020074

Alarm	Attributes	Applicable major release
Name: IK8020074 (9181) Type: processingErrorAlarm Package: lmg.IK8020074 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-310 IK8020075

Alarm	Attributes	Applicable major release
Name: IK8020075 (9182) Type: processingErrorAlarm Package: lmg.IK8020075 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-311 IK8020076

Alarm	Attributes	Applicable major release
Name: IK8020076 (9183) Type: processingErrorAlarm Package: lmg.IK8020076 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-312 IK8020077

Alarm	Attributes	Applicable major release
Name: IK8020077 (9184) Type: processingErrorAlarm Package: lmg.IK8020077 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-313 IK8020078

Alarm	Attributes	Applicable major release
Name: IK8020078 (9185) Type: processingErrorAlarm Package: lmg.IK8020078 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-314 IK8020079

Alarm	Attributes	Applicable major release
Name: IK8020079 (9186) Type: processingErrorAlarm Package: Img.IK8020079 Raised on class: Img.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-315 IK8020080

Alarm	Attributes	Applicable major release
Name: IK8020080 (9187) Type: processingErrorAlarm Package: Img.IK8020080 Raised on class: Img.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-316 IK8020081

Alarm	Attributes	Applicable major release
Name: IK8020081 (9188) Type: processingErrorAlarm Package: Img.IK8020081 Raised on class: Img.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-317 IK8020082

Alarm	Attributes	Applicable major release
Name: IK8020082 (9189) Type: processingErrorAlarm Package: Img.IK8020082 Raised on class: Img.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-318 IK8020083

Alarm	Attributes	Applicable major release
Name: IK8020083 (9190) Type: processingErrorAlarm Package: lmg.IK8020083 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-319 IK8020084

Alarm	Attributes	Applicable major release
Name: IK8020084 (9191) Type: processingErrorAlarm Package: lmg.IK8020084 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-320 IK8020085

Alarm	Attributes	Applicable major release
Name: IK8020085 (9192) Type: processingErrorAlarm Package: lmg.IK8020085 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-321 IK8020086

Alarm	Attributes	Applicable major release
Name: IK8020086 (9193) Type: processingErrorAlarm Package: lmg.IK8020086 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-322 IK8020087

Alarm	Attributes	Applicable major release
Name: IK8020087 (9194) Type: processingErrorAlarm Package: lmg.IK8020087 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-323 IK8020088

Alarm	Attributes	Applicable major release
Name: IK8020088 (9195) Type: processingErrorAlarm Package: lmg.IK8020088 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-324 IK8020089

Alarm	Attributes	Applicable major release
Name: IK8020089 (9196) Type: processingErrorAlarm Package: lmg.IK8020089 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-325 IK8020090

Alarm	Attributes	Applicable major release
Name: IK8020090 (9197) Type: processingErrorAlarm Package: lmg.IK8020090 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-326 IK8020091

Alarm	Attributes	Applicable major release
Name: IK8020091 (9198) Type: processingErrorAlarm Package: lmg.IK8020091 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-327 IK8020092

Alarm	Attributes	Applicable major release
Name: IK8020092 (9199) Type: processingErrorAlarm Package: lmg.IK8020092 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-328 IK8020093

Alarm	Attributes	Applicable major release
Name: IK8020093 (9200) Type: processingErrorAlarm Package: lmg.IK8020093 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-329 IK8020094

Alarm	Attributes	Applicable major release
Name: IK8020094 (9201) Type: processingErrorAlarm Package: lmg.IK8020094 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-330 IK8020095

Alarm	Attributes	Applicable major release
Name: IK8020095 (9202) Type: processingErrorAlarm Package: lmg.IK8020095 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-331 IK8020096

Alarm	Attributes	Applicable major release
Name: IK8020096 (9203) Type: processingErrorAlarm Package: lmg.IK8020096 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-332 IK8020097

Alarm	Attributes	Applicable major release
Name: IK8020097 (9204) Type: processingErrorAlarm Package: lmg.IK8020097 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-333 IK8020098

Alarm	Attributes	Applicable major release
Name: IK8020098 (9205) Type: processingErrorAlarm Package: lmg.IK8020098 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-334 IK8020099

Alarm	Attributes	Applicable major release
Name: IK8020099 (9206) Type: processingErrorAlarm Package: lmg.IK8020099 Raised on class: lmg.BpsFunction	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-335 IK8020100

Alarm	Attributes	Applicable major release
Name: IK8020100 (9723) Type: processingErrorAlarm Package: lmg.IK8020100 Raised on class: lmg.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-336 IK8020101

Alarm	Attributes	Applicable major release
Name: IK8020101 (9724) Type: processingErrorAlarm Package: lmg.IK8020101 Raised on class: lmg.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-337 IK8020102

Alarm	Attributes	Applicable major release
Name: IK8020102 (9725) Type: processingErrorAlarm Package: lmg.IK8020102 Raised on class: lmg.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-338 IK8020103

Alarm	Attributes	Applicable major release
Name: IK8020103 (9726) Type: processingErrorAlarm Package: Img.IK8020103 Raised on class: Img.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-339 IK8020104

Alarm	Attributes	Applicable major release
Name: IK8020104 (9727) Type: processingErrorAlarm Package: Img.IK8020104 Raised on class: Img.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-340 IK8020105

Alarm	Attributes	Applicable major release
Name: IK8020105 (9728) Type: processingErrorAlarm Package: Img.IK8020105 Raised on class: Img.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-341 IK8020106

Alarm	Attributes	Applicable major release
Name: IK8020106 (9729) Type: processingErrorAlarm Package: Img.IK8020106 Raised on class: Img.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-342 IK8020107

Alarm	Attributes	Applicable major release
Name: IK8020107 (9730) Type: processingErrorAlarm Package: lmg.IK8020107 Raised on class: lmg.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-343 IK8020108

Alarm	Attributes	Applicable major release
Name: IK8020108 (9731) Type: processingErrorAlarm Package: lmg.IK8020108 Raised on class: lmg.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-344 IK8020109

Alarm	Attributes	Applicable major release
Name: IK8020109 (9732) Type: processingErrorAlarm Package: lmg.IK8020109 Raised on class: lmg.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-345 IK8020110

Alarm	Attributes	Applicable major release
Name: IK8020110 (9733) Type: processingErrorAlarm Package: lmg.IK8020110 Raised on class: lmg.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-346 IK8020111

Alarm	Attributes	Applicable major release
Name: IK8020111 (9734) Type: processingErrorAlarm Package: Img.IK8020111 Raised on class: Img.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-347 IK8020112

Alarm	Attributes	Applicable major release
Name: IK8020112 (9735) Type: processingErrorAlarm Package: Img.IK8020112 Raised on class: Img.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-348 IK8020113

Alarm	Attributes	Applicable major release
Name: IK8020113 (9736) Type: processingErrorAlarm Package: Img.IK8020113 Raised on class: Img.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-349 IK8020114

Alarm	Attributes	Applicable major release
Name: IK8020114 (9737) Type: processingErrorAlarm Package: Img.IK8020114 Raised on class: Img.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-350 IK8020115

Alarm	Attributes	Applicable major release
Name: IK8020115 (9738) Type: processingErrorAlarm Package: lmg.IK8020115 Raised on class: lmg.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-351 IK8020116

Alarm	Attributes	Applicable major release
Name: IK8020116 (9739) Type: processingErrorAlarm Package: lmg.IK8020116 Raised on class: lmg.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-352 IK8020117

Alarm	Attributes	Applicable major release
Name: IK8020117 (9740) Type: processingErrorAlarm Package: lmg.IK8020117 Raised on class: lmg.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-353 IK8020118

Alarm	Attributes	Applicable major release
Name: IK8020118 (9741) Type: processingErrorAlarm Package: lmg.IK8020118 Raised on class: lmg.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-354 IK8020119

Alarm	Attributes	Applicable major release
Name: IK8020119 (9742) Type: processingErrorAlarm Package: Img.IK8020119 Raised on class: Img.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-355 IK8020120

Alarm	Attributes	Applicable major release
Name: IK8020120 (9743) Type: processingErrorAlarm Package: Img.IK8020120 Raised on class: Img.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-356 IK8020121

Alarm	Attributes	Applicable major release
Name: IK8020121 (9744) Type: processingErrorAlarm Package: Img.IK8020121 Raised on class: Img.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-357 IK8020122

Alarm	Attributes	Applicable major release
Name: IK8020122 (9745) Type: processingErrorAlarm Package: Img.IK8020122 Raised on class: Img.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-358 IK8020123

Alarm	Attributes	Applicable major release
Name: IK8020123 (9746) Type: processingErrorAlarm Package: Img.IK8020123 Raised on class: Img.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-359 IK8020124

Alarm	Attributes	Applicable major release
Name: IK8020124 (9747) Type: processingErrorAlarm Package: Img.IK8020124 Raised on class: Img.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-360 IK8020125

Alarm	Attributes	Applicable major release
Name: IK8020125 (9748) Type: processingErrorAlarm Package: Img.IK8020125 Raised on class: Img.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-361 IK8020126

Alarm	Attributes	Applicable major release
Name: IK8020126 (9749) Type: processingErrorAlarm Package: Img.IK8020126 Raised on class: Img.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-362 IK8020127

Alarm	Attributes	Applicable major release
Name: IK8020127 (9750) Type: processingErrorAlarm Package: Img.IK8020127 Raised on class: Img.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-363 IK8020128

Alarm	Attributes	Applicable major release
Name: IK8020128 (9751) Type: processingErrorAlarm Package: Img.IK8020128 Raised on class: Img.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-364 IK8020129

Alarm	Attributes	Applicable major release
Name: IK8020129 (9752) Type: processingErrorAlarm Package: Img.IK8020129 Raised on class: Img.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-365 IK8020130

Alarm	Attributes	Applicable major release
Name: IK8020130 (9753) Type: processingErrorAlarm Package: Img.IK8020130 Raised on class: Img.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-366 IK8020131

Alarm	Attributes	Applicable major release
Name: IK8020131 (9754) Type: processingErrorAlarm Package: lmg.IK8020131 Raised on class: lmg.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-367 IK8020132

Alarm	Attributes	Applicable major release
Name: IK8020132 (9755) Type: processingErrorAlarm Package: lmg.IK8020132 Raised on class: lmg.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-368 IK8020133

Alarm	Attributes	Applicable major release
Name: IK8020133 (9756) Type: processingErrorAlarm Package: lmg.IK8020133 Raised on class: lmg.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-369 IK8020134

Alarm	Attributes	Applicable major release
Name: IK8020134 (9757) Type: processingErrorAlarm Package: lmg.IK8020134 Raised on class: lmg.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-370 IK8020135

Alarm	Attributes	Applicable major release
Name: IK8020135 (9758) Type: processingErrorAlarm Package: Img.IK8020135 Raised on class: Img.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-371 IK8020136

Alarm	Attributes	Applicable major release
Name: IK8020136 (9759) Type: processingErrorAlarm Package: Img.IK8020136 Raised on class: Img.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-372 IK8020137

Alarm	Attributes	Applicable major release
Name: IK8020137 (9760) Type: processingErrorAlarm Package: Img.IK8020137 Raised on class: Img.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-373 IK8020138

Alarm	Attributes	Applicable major release
Name: IK8020138 (9761) Type: processingErrorAlarm Package: Img.IK8020138 Raised on class: Img.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-374 IK8020139

Alarm	Attributes	Applicable major release
Name: IK8020139 (9762) Type: processingErrorAlarm Package: lmg.IK8020139 Raised on class: lmg.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-375 IK8020140

Alarm	Attributes	Applicable major release
Name: IK8020140 (9763) Type: processingErrorAlarm Package: lmg.IK8020140 Raised on class: lmg.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-376 IK8020141

Alarm	Attributes	Applicable major release
Name: IK8020141 (9764) Type: processingErrorAlarm Package: lmg.IK8020141 Raised on class: lmg.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-377 IK8020142

Alarm	Attributes	Applicable major release
Name: IK8020142 (9765) Type: processingErrorAlarm Package: lmg.IK8020142 Raised on class: lmg.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-378 IK8020143

Alarm	Attributes	Applicable major release
Name: IK8020143 (9766) Type: processingErrorAlarm Package: Img.IK8020143 Raised on class: Img.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-379 IK8020144

Alarm	Attributes	Applicable major release
Name: IK8020144 (9767) Type: processingErrorAlarm Package: Img.IK8020144 Raised on class: Img.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-380 IK8020145

Alarm	Attributes	Applicable major release
Name: IK8020145 (9768) Type: processingErrorAlarm Package: Img.IK8020145 Raised on class: Img.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-381 IK8020146

Alarm	Attributes	Applicable major release
Name: IK8020146 (9769) Type: processingErrorAlarm Package: Img.IK8020146 Raised on class: Img.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-382 IK8020147

Alarm	Attributes	Applicable major release
Name: IK8020147 (9770) Type: processingErrorAlarm Package: lmg.IK8020147 Raised on class: lmg.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-383 IK8020148

Alarm	Attributes	Applicable major release
Name: IK8020148 (9771) Type: processingErrorAlarm Package: lmg.IK8020148 Raised on class: lmg.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-384 IK8020149

Alarm	Attributes	Applicable major release
Name: IK8020149 (9772) Type: processingErrorAlarm Package: lmg.IK8020149 Raised on class: lmg.BpsFunction	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-385 IK8020201

Alarm	Attributes	Applicable major release
Name: IK8020201 (10319) Type: processingErrorAlarm Package: lmg.IK8020201 Raised on class: lmg.BpsFunction	Severity: indeterminate Specific problem: Session state discrepancy Implicitly cleared: true Default probable cause: databaseInconsistency	Release: • LR16.1.MG
Description: This event is raised when BPS discovers session state discrepancy at a BMSC\nReason: Session state discrepancy		
Remedial action: No action is required.		

Table 27-386 IK8020205

Alarm	Attributes	Applicable major release
Name: IK8020205 (9774) Type: communicationsAlarm Package: lmg.IK8020205 Raised on class: lmg.BpsFunction	Severity: indeterminate Specific problem: Unauthorized BPS REST interface access Implicitly cleared: true Default probable cause: invalidMessageReceived	Release: • LR16.1.MG
Description: This event is raised when BPS detects unauthorized access to the REST interface\nReason: Unauthorized BPS REST interface access		
Remedial action: No action is required.		

Table 27-387 IK8020230

Alarm	Attributes	Applicable major release
Name: IK8020230 (10320) Type: qualityOfServiceAlarm Package: lmg.IK8020230 Raised on class: lmg.BpsFunction	Severity: minor Specific problem: eMBMS session not admitted Implicitly cleared: true Default probable cause: systemResourcesOverload	Release: • LR16.1.MG
Description: This alarm is raised when a MCE failed to admit an eMBMS session. Alarm is cleared by the system.\nReason: eMBMS session not admitted		
Remedial action: Operator should investigate potential impact to session quality		

Table 27-388 IK8100004

Alarm	Attributes	Applicable major release
Name: IK8100004 (6465) Type: communicationsAlarm Package: lmg.IK8100004 Raised on class: lmg.GSEM	Severity: critical Specific problem: GSEM cannot interrogate this equipment Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm is raised when there is a problem in the procedure and/or process that requires conveying information from one point to another. Alarm is cleared by the system.\nReason: GSEM cannot interrogate this equipment		
Remedial action: Check the equipment status and the GSEM/NE connection		

Table 27-389 IK8100005

Alarm	Attributes	Applicable major release
Name: IK8100005 (6466) Type: processingErrorAlarm Package: lmg.IK8100005 Raised on class: lmg.GSEM	Severity: indeterminate Specific problem: Monitored object status change Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG
Description: a configurable string is displayed. Alarm is cleared by the system.\nReason: Monitored object status change		
Remedial action: Check the object		

Table 27-390 IK8100006

Alarm	Attributes	Applicable major release
Name: IK8100006 (6467) Type: processingErrorAlarm Package: lmg.IK8100006 Raised on class: lmg.GSEM	Severity: indeterminate Specific problem: Change of consolidated status of a submap Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Map Name and new status are displayed. Alarm is cleared by the system.\nReason: Map Status Change		
Remedial action: Check the submap		

Table 27-391 IK8100007

Alarm	Attributes	Applicable major release
Name: IK8100007 (6468) Type: processingErrorAlarm Package: lmg.IK8100007 Raised on class: lmg.GSEM	Severity: indeterminate Specific problem: Change of Icon status Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Icon Name and status change reason are displayed. Alarm is cleared by the system.\nReason: Icon Status Change		
Remedial action: Check the object attached to the icon		

Table 27-392 IK8100046

Alarm	Attributes	Applicable major release
Name: IK8100046 (6469) Type: processingErrorAlarm Package: lmg.IK8100046 Raised on class: lmg.GSEM	Severity: warning Specific problem: GSEM starts Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG

Table 27-392 IK8100046 (continued)

Alarm	Attributes	Applicable major release
Description: Security log for different cases, see alarm content to know which case is encountered. The alarm is managed through the Auto-Clear feature so that it is cleared automatically by the system after a delay.\nReason: Add equipment , Apply Configuration, Authorization created, Authorization deleted, Authorization modified, Auto-load Map, AutoLoad Map added, AutoLoad Map removed, Automatic Account Unlock, Automatic History Purge, Automatic Pending Event Purge, Automatic Restart after connection loss, Cannot apply configuration, Cannot register as alarm destination, Cut-through activated, Delete equipment, Event Processing configuration created, Event Processing configuration deleted, Event Processing configuration modified, Event Processing configuration saved, File export, File Lookup Load, File transfer error, Filter deleted, Filter saved, Light Client connected, Light Client disconnected, Light Client ejected, Log File Received, Login failure, Map FAD updated, Modify equipment, NAD created, NAD deleted, NAD modified, NeReporterPlugin modified, No free row to register as alarm destination, Object Locked, Object Unlocked, Password modified, Perf polling started, Perf polling stopped, Remote User login, Remote User login Failure, Remote User logout, Server shutdown, Server startup, Starting plugin, StatsPlugin modified, User Account Locked, User Account UnLocked, User Ejected, User list modified, User login, User logout Reason:Add equipment , Apply Configuration, Authorization created, Authorization deleted, Authorization modified, Auto-load Map, AutoLoad Map added, AutoLoad Map removed, Automatic Account Unlock, Automatic History Purge, Automatic Pending Event Purge, Automatic Restart after connection loss, Cannot apply configuration, Cannot register as alarm destination, Cut-through activated, Delete equipment, Event Processing configuration created, Event Processing configuration deleted, Event Processing configuration modified, Event Processing configuration saved, File export, File Lookup Load, File transfer error, Filter deleted, Filter saved, Light Client connected, Light Client disconnected, Light Client ejected, Log File Received, Login failure, Map FAD updated, Modify equipment, NAD created, NAD deleted, NAD modified, NeReporterPlugin modified, No free row to register as alarm destination, Object Locked, Object Unlocked, Password modified, Perf polling started, Perf polling stopped, Remote User ...		
Remedial action: Check GSEM alarm content		

Table 27-393 IK8100068

Alarm	Attributes	Applicable major release
Name: IK8100068 (6470) Type: processingErrorAlarm Package: Img.IK8100068 Raised on class: Img.GSEM	Severity: major Specific problem: Information - GSEM Server Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The GSEM server licence will expire - the date information is available on GSEM alarm. Alarm is cleared by the system when the service is restarted.\nReason: Licence trap		
Remedial action: Check the date, order a licence		

Table 27-394 IK8100075

Alarm	Attributes	Applicable major release
Name: IK8100075 (9207) Type: processingErrorAlarm Package: Img.IK8100075 Raised on class: Img.GSEM	Severity: warning Specific problem: Self care information - perf data directory Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: Self care information - perf data directory. Alarm is cleared by the system.\nReason: Perf Data Size Overflow		
Remedial action: Check the configured perf directory (by default /space/GSEM/Server/Main/etc/data/Perf/[ne_type])>		

Table 27-395 IK8100076

Alarm	Attributes	Applicable major release
Name: IK8100076 (6471) Type: processingErrorAlarm Package: lmg.IK8100076 Raised on class: lmg.GSEM	Severity: warning Specific problem: Self care information -graph data directory Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Self care information -graph data directory. Alarm is cleared by the system.\nReason: Graph Data Size Overflow		
Remedial action: Check the configured graph data directory (by default /space/GSEM/Server/Main/etc/graphData)		

Table 27-396 IK8100077

Alarm	Attributes	Applicable major release
Name: IK8100077 (6472) Type: processingErrorAlarm Package: lmg.IK8100077 Raised on class: lmg.GSEM	Severity: warning Specific problem: Self care information - log directory Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Self care information - log directory. Alarm is cleared by the system.\nReason: Log Data Size Overflow		
Remedial action: Check the log directory (by default /space/GSEM/Server/Main/etc/log)		

Table 27-397 IK8100080

Alarm	Attributes	Applicable major release
Name: IK8100080 (9208) Type: communicationsAlarm Package: lmg.IK8100080 Raised on class: lmg.GSEM	Severity: indeterminate Specific problem: SAM-GSEM-LMGOAM interface issue Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG • LR16.1.MG
Description: This alarm is raised in case of LMG interface issue for Inventory or conf. Mgt files (e. G. LMG node name/version, LMG inventory file cannot be retrieved, or configuration operation failure). See detailed cause in the alarm.. Alarm is cleared by the system.\nReason: Get LMG Node name and version, Get LMG Inventory file version, Get Inventory file: failure, Configuration operation request, Configuration operation partially failed in LMGOaM, Configuration operation failed in LMGOaM		
Remedial action: Check configuration		

Table 27-398 IK8100081

Alarm	Attributes	Applicable major release
Name: IK8100081 (10321) Type: processingErrorAlarm Package: lmg.IK8100081 Raised on class: lmg.GSEM	Severity: indeterminate Specific problem: Debouncing statistics Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This event is raised in case of LMG alarm bouncing. AlarmId of the transient alarm, and occurences number is indicated in the trap\nReason: Transient LMG alarms		
Remedial action: No action is required.		

Table 27-399 IK8100104

Alarm	Attributes	Applicable major release
Name: IK8100104 (10322) Type: communicationsAlarm Package: lmg.IK8100104 Raised on class: lmg.FRU	Severity: critical Specific problem: GSEM cannot interrogate this equipment Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG
Description: This alarm is raised when there is a problem in the procedure and/or process that requires conveying information from one point to another. Alarm is cleared by the system.\nReason: Communication problem with equipment		
Remedial action: Check the equipment status and the GSEM/NE connection		

Table 27-400 IK8100105

Alarm	Attributes	Applicable major release
Name: IK8100105 (10323) Type: processingErrorAlarm Package: lmg.IK8100105 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Monitored object status change Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG
Description: a configurable string is displayed. Alarm is cleared by the system.\nReason: Monitoring		
Remedial action: Check the object		

Table 27-401 IK8100500

Alarm	Attributes	Applicable major release
Name: IK8100500 (9209) Type: processingErrorAlarm Package: lmg.IK8100500 Raised on class: lmg.GSEM	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-402 IK8100501

Alarm	Attributes	Applicable major release
Name: IK8100501 (9210) Type: processingErrorAlarm Package: lmg.IK8100501 Raised on class: lmg.GSEM	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-403 IK8100502

Alarm	Attributes	Applicable major release
Name: IK8100502 (9211) Type: processingErrorAlarm Package: lmg.IK8100502 Raised on class: lmg.GSEM	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-404 IK8100503

Alarm	Attributes	Applicable major release
Name: IK8100503 (9212) Type: processingErrorAlarm Package: lmg.IK8100503 Raised on class: lmg.GSEM	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-405 IK8100504

Alarm	Attributes	Applicable major release
Name: IK8100504 (9213) Type: processingErrorAlarm Package: Img.IK8100504 Raised on class: Img.GSEM	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-406 IK8100505

Alarm	Attributes	Applicable major release
Name: IK8100505 (9214) Type: processingErrorAlarm Package: Img.IK8100505 Raised on class: Img.GSEM	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-407 IK8100506

Alarm	Attributes	Applicable major release
Name: IK8100506 (9215) Type: processingErrorAlarm Package: Img.IK8100506 Raised on class: Img.GSEM	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-408 IK8100507

Alarm	Attributes	Applicable major release
Name: IK8100507 (9216) Type: processingErrorAlarm Package: Img.IK8100507 Raised on class: Img.GSEM	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-409 IK8100508

Alarm	Attributes	Applicable major release
Name: IK8100508 (9217) Type: processingErrorAlarm Package: lmg.IK8100508 Raised on class: lmg.GSEM	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-410 IK8100509

Alarm	Attributes	Applicable major release
Name: IK8100509 (9218) Type: processingErrorAlarm Package: lmg.IK8100509 Raised on class: lmg.GSEM	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-411 IK8100510

Alarm	Attributes	Applicable major release
Name: IK8100510 (9219) Type: processingErrorAlarm Package: lmg.IK8100510 Raised on class: lmg.GSEM	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-412 IK8100511

Alarm	Attributes	Applicable major release
Name: IK8100511 (9220) Type: processingErrorAlarm Package: lmg.IK8100511 Raised on class: lmg.GSEM	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-413 IK8100512

Alarm	Attributes	Applicable major release
Name: IK8100512 (9221) Type: processingErrorAlarm Package: Img.IK8100512 Raised on class: Img.GSEM	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-414 IK8100513

Alarm	Attributes	Applicable major release
Name: IK8100513 (9222) Type: processingErrorAlarm Package: Img.IK8100513 Raised on class: Img.GSEM	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-415 IK8100514

Alarm	Attributes	Applicable major release
Name: IK8100514 (9223) Type: processingErrorAlarm Package: Img.IK8100514 Raised on class: Img.GSEM	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-416 IK8100515

Alarm	Attributes	Applicable major release
Name: IK8100515 (9224) Type: processingErrorAlarm Package: Img.IK8100515 Raised on class: Img.GSEM	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-417 IK8100520

Alarm	Attributes	Applicable major release
Name: IK8100520 (9775) Type: processingErrorAlarm Package: Img.IK8100520 Raised on class: Img.GSEM	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-418 IK8100521

Alarm	Attributes	Applicable major release
Name: IK8100521 (9776) Type: processingErrorAlarm Package: Img.IK8100521 Raised on class: Img.GSEM	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-419 IK8100522

Alarm	Attributes	Applicable major release
Name: IK8100522 (9777) Type: processingErrorAlarm Package: Img.IK8100522 Raised on class: Img.GSEM	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-420 IK8100523

Alarm	Attributes	Applicable major release
Name: IK8100523 (9778) Type: processingErrorAlarm Package: Img.IK8100523 Raised on class: Img.GSEM	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-421 IK8100524

Alarm	Attributes	Applicable major release
Name: IK8100524 (9779) Type: processingErrorAlarm Package: Img.IK8100524 Raised on class: Img.GSEM	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-422 IK8100525

Alarm	Attributes	Applicable major release
Name: IK8100525 (9780) Type: processingErrorAlarm Package: Img.IK8100525 Raised on class: Img.GSEM	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-423 IK8100526

Alarm	Attributes	Applicable major release
Name: IK8100526 (9781) Type: processingErrorAlarm Package: Img.IK8100526 Raised on class: Img.GSEM	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-424 IK8100527

Alarm	Attributes	Applicable major release
Name: IK8100527 (9782) Type: processingErrorAlarm Package: Img.IK8100527 Raised on class: Img.GSEM	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-425 IK8100528

Alarm	Attributes	Applicable major release
Name: IK8100528 (9783) Type: processingErrorAlarm Package: lmg.IK8100528 Raised on class: lmg.GSEM	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-426 IK8100529

Alarm	Attributes	Applicable major release
Name: IK8100529 (9784) Type: processingErrorAlarm Package: lmg.IK8100529 Raised on class: lmg.GSEM	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-427 IK8100530

Alarm	Attributes	Applicable major release
Name: IK8100530 (9785) Type: processingErrorAlarm Package: lmg.IK8100530 Raised on class: lmg.GSEM	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-428 IK8200982

Alarm	Attributes	Applicable major release
Name: IK8200982 (6473) Type: equipmentAlarm Package: lmg.IK8200982 Raised on class: lmg.FRU	Severity: major Specific problem: Cluster Node Failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a node in the cluster becomes failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterNodeFailed		
Remedial action: Make a note of the cluster node name then check the node for the cause of the failure.		

Table 27-429 IK8200984

Alarm	Attributes	Applicable major release
Name: IK8200984 (6474) Type: processingErrorAlarm Package: Img.IK8200984 Raised on class: Img.FRU	Severity: major Specific problem: Cluster Resource Failed Implicitly cleared: true Default probable cause: underlyingResourceUnavail-able	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a cluster resource becomes failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterResourceFailed		
Remedial action: Make a note of the cluster resource name then check the resource for the cause of the failure.		

Table 27-430 IK8200986

Alarm	Attributes	Applicable major release
Name: IK8200986 (6475) Type: equipmentAlarm Package: Img.IK8200986 Raised on class: Img.FRU	Severity: major Specific problem: Cluster Network Failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a cluster network becomes failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterNetworkFailed		
Remedial action: Make a note of the cluster network name then check the network for the cause of the failure.		

Table 27-431 IK8201008

Alarm	Attributes	Applicable major release
Name: IK8201008 (6476) Type: equipmentAlarm Package: Img.IK8201008 Raised on class: Img.FRU	Severity: major Specific problem: The primary controller in the subsytem has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The primary controller in the subsystem has failed. Details: The primary Controller has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrController1FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 27-432 IK8201010

Alarm	Attributes	Applicable major release
Name: IK8201010 (6477) Type: equipmentAlarm Package: lmg.IK8201010 Raised on class: lmg.FRU	Severity: major Specific problem: The secondary controller in the subsytem has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The secondary controller in the subsystem has failed. Details: The secondary controller has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrController2FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 27-433 IK8201013

Alarm	Attributes	Applicable major release
Name: IK8201013 (6478) Type: equipmentAlarm Package: lmg.IK8201013 Raised on class: lmg.FRU	Severity: major Specific problem: A RAIDset has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: A RAIDset has failed. Details: The RAIDset has failed and is off-line.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrLogDriveFailureTrap		
Remedial action: Possible cause is too many failed disk drives that make up the RAIDset, the OS can no longer communicate with the RAIDset for other reasons.		

Table 27-434 IK8201018

Alarm	Attributes	Applicable major release
Name: IK8201018 (6479) Type: processingErrorAlarm Package: lmg.IK8201018 Raised on class: lmg.FRU	Severity: major Specific problem: A disk drive has failed Implicitly cleared: true Default probable cause: storageCapacityProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system.\nReason: cpqCrDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 27-435 IK8201023

Alarm	Attributes	Applicable major release
Name: IK8201023 (6480) Type: processingErrorAlarm Package: lmg.IK8201023 Raised on class: lmg.FRU	Severity: major Specific problem: A disk drive has failed Implicitly cleared: true Default probable cause: storageCapacityProblem	Release: • LR14.3.MG • LR15.1.MG

Table 27-435 IK8201023 (continued)

Alarm	Attributes	Applicable major release
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrPhyDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 27-436 IK8201030

Alarm	Attributes	Applicable major release
Name: IK8201030 (6481) Type: equipmentAlarm Package: lmg.IK8201030 Raised on class: lmg.FRU	Severity: major Specific problem: Power supply has failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power supply has failed. Details: One of the power supplies in the primary enclosure has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrEMUPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 27-437 IK8201033

Alarm	Attributes	Applicable major release
Name: IK8201033 (6482) Type: equipmentAlarm Package: lmg.IK8201033 Raised on class: lmg.FRU	Severity: critical Specific problem: Primary enclosure temperature critical! Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Primary enclosure temperature critical!. Details: The temperature in the primary enclosure has triggered a critical condition detected by the controller.\nAlarm is cleared by the system.\nReason: cpqCrEMUTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the primary enclosure.		

Table 27-438 IK8201037

Alarm	Attributes	Applicable major release
Name: IK8201037 (6483) Type: equipmentAlarm Package: lmg.IK8201037 Raised on class: lmg.FRU	Severity: major Specific problem: Power supply has failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power supply has failed. Details: One of the power supplies in the expansion cabinet has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrExpCabPowerSupplyFailureTrap		

Table 27-438 IK8201037 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 27-439 IK8201040

Alarm	Attributes	Applicable major release
Name: IK8201040 (6484) Type: environmentalAlarm Package: lmg.IK8201040 Raised on class: lmg.FRU	Severity: critical Specific problem: cpqCrExpCabTemperatureCriti-calTrap Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: Expansion cabinet temperature critical! Details: The temperature in the expansion cabinet has triggered a critical condition detected by the controller.\nAlarm is cleared by the system.\nReason: cpqCrExpCabTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the expansion cabinet.		

Table 27-440 IK8201060

Alarm	Attributes	Applicable major release
Name: IK8201060 (6485) Type: environmentalAlarm Package: lmg.IK8201060 Raised on class: lmg.FRU	Severity: major Specific problem: External Array Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqFcaAccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 27-441 IK8201073

Alarm	Attributes	Applicable major release
Name: IK8201073 (6486) Type: environmentalAlarm Package: lmg.IK8201073 Raised on class: lmg.FRU	Severity: major Specific problem: External Array Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqFca2AccelBatteryFailed		

Table 27-441 IK8201073 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Replace the Accelerator Cache Board.		

Table 27-442 IK8201091

Alarm	Attributes	Applicable major release
Name: IK8201091 (9225) Type: environmentalAlarm Package: Img.IK8201091 Raised on class: Img.FRU	Severity: major Specific problem: System Fan Failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR15.1.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHeThermalSystemFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-443 IK8201098

Alarm	Attributes	Applicable major release
Name: IK8201098 (6487) Type: equipmentAlarm Package: Img.IK8201098 Raised on class: Img.LMGMngElement	Severity: major Specific problem: POST Errors Occurred Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHePostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 27-444 IK8201102

Alarm	Attributes	Applicable major release
Name: IK8201102 (6488) Type: environmentalAlarm Package: Img.IK8201102 Raised on class: Img.FRU	Severity: major Specific problem: Thermal Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: The temperature status has been set to failed. The system will be shutdown due to this thermal condition.\nAlarm is cleared by the system.\nReason: cpqHe3ThermalTempFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 27-445 IK8201105

Alarm	Attributes	Applicable major release
Name: IK8201105 (6489) Type: environmentalAlarm Package: Img.IK8201105 Raised on class: Img.FRU	Severity: major Specific problem: System Fan Failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHe3ThermalSystemFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-446 IK8201112

Alarm	Attributes	Applicable major release
Name: IK8201112 (6490) Type: equipmentAlarm Package: Img.IK8201112 Raised on class: Img.FRU	Severity: major Specific problem: POST Errors Occurred Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process. Details of the POST error messages can be found in Integrated Management Log\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3PostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 27-447 IK8201116

Alarm	Attributes	Applicable major release
Name: IK8201116 (6491) Type: equipmentAlarm Package: Img.IK8201116 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Power Supply Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe3FltTolPowerSupplyFailed		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-448 IK8201121

Alarm	Attributes	Applicable major release
Name: IK8201121 (6492) Type: environmentalAlarm Package: Img.IK8201121 Raised on class: Img.FRU	Severity: major Specific problem: Fan Failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The Fault Tolerant Fan condition has been set to failed for the specified chassis and fan.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3FltTolFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-449 IK8201125

Alarm	Attributes	Applicable major release
Name: IK8201125 (6493) Type: environmentalAlarm Package: Img.IK8201125 Raised on class: Img.FRU	Severity: major Specific problem: Thermal Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: The temperature status has been set to failed in the specified chassis and location. The system will be shutdown due to this condition.\nAlarm is cleared by the system.\nReason: cpqHe3TemperatureFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 27-450 IK8201129

Alarm	Attributes	Applicable major release
Name: IK8201129 (6494) Type: equipmentAlarm Package: Img.IK8201129 Raised on class: Img.FRU	Severity: major Specific problem: Power Converter Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The DC-DC Power Converter condition has been set to failed for the specified chassis, slot and socket.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3PowerConverterFailed		
Remedial action: Replace the failed power converter.		

Table 27-451 IK8201135

Alarm	Attributes	Applicable major release
Name: IK8201135 (6495) Type: equipmentAlarm Package: Img.IK8201135 Raised on class: Img.FRU	Severity: major Specific problem: Power Supply Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG

Table 27-451 IK8201135 (continued)

Alarm	Attributes	Applicable major release
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FltTolPowerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

Table 27-452 IK8201144

Alarm	Attributes	Applicable major release
Name: IK8201144 (6496) Type: processingErrorAlarm Package: lmg.IK8201144 Raised on class: lmg.FRU	Severity: major Specific problem: Memory Board or Cartridge Bus Error Detected Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Memory board or cartridge bus error detected. An Advanced Memory Protection sub-system board or cartridge bus error has been detected.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge.		

Table 27-453 IK8201148

Alarm	Attributes	Applicable major release
Name: IK8201148 (6497) Type: equipmentAlarm Package: lmg.IK8201148 Raised on class: lmg.FRU	Severity: major Specific problem: Management processor failed reset Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The Management processor failed reset The management processor was not successfully reset and is not operational.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeManagementProcFailedReset		
Remedial action: Reset the management procesessor again or re-flash the management processor firmware.		

Table 27-454 IK8201152

Alarm	Attributes	Applicable major release
Name: IK8201152 (6498) Type: processingErrorAlarm Package: lmg.IK8201152 Raised on class: lmg.FRU	Severity: major Specific problem: Memory Board or Cartridge or Riser Bus Error Detected Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Memory board or cartridge or Riser bus error detected. An Advanced Memory Protection sub-system board or cartridge or Riser bus error has been detected. Value 0 for CPU means memory is not processor based.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe5ResMemBoardBusError		

Table 27-454 IK8201152 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Replace the indicated board or cartridge or Riser.		

Table 27-455 IK8201154

Alarm	Attributes	Applicable major release
Name: IK8201154 (6499) Type: equipmentAlarm Package: lmg.IK8201154 Raised on class: lmg.FRU	Severity: major Specific problem: Power Supply AC Power Loss Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The fault tolerant power supply AC power loss for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FltTolPowerSupplyACpowerloss		
Remedial action: Check the power source for the specified power supply.		

Table 27-456 IK8201156

Alarm	Attributes	Applicable major release
Name: IK8201156 (6500) Type: processingErrorAlarm Package: lmg.IK8201156 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Application Error Trap Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHoAppErrorTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-457 IK8201158

Alarm	Attributes	Applicable major release
Name: IK8201158 (6501) Type: processingErrorAlarm Package: lmg.IK8201158 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Application Error Trap Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2AppErrorTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-458 IK8201160

Alarm	Attributes	Applicable major release
Name: IK8201160 (9226) Type: communicationsAlarm Package: lmg.IK8201160 Raised on class: lmg.FRU	Severity: major Specific problem: Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition.\nAlarm is cleared by the system.\nReason: cpqHo2NicStatusFailed		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 27-459 IK8201163

Alarm	Attributes	Applicable major release
Name: IK8201163 (6502) Type: communicationsAlarm Package: lmg.IK8201163 Raised on class: lmg.FRU	Severity: major Specific problem: Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition.\nAlarm is cleared by the system.\nReason: cpqHo2NicStatusFailed2		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 27-460 IK8201172

Alarm	Attributes	Applicable major release
Name: IK8201172 (6503) Type: qualityOfServiceAlarm Package: lmg.IK8201172 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Power Threshold Exceeded Implicitly cleared: false Default probable cause: resourceAtOrNearingCapacity	Release: • LR14.3.MG
Description: This alarm notifies user of a power threshold breach. Power threshold exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2PowerThresholdTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-461 IK8202265

Alarm	Attributes	Applicable major release
Name: IK8202265 (6504) Type: environmentalAlarm Package: Img.IK8202265 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDaAccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 27-462 IK8202272

Alarm	Attributes	Applicable major release
Name: IK8202272 (6505) Type: environmentalAlarm Package: Img.IK8202272 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa2AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 27-463 IK8202279

Alarm	Attributes	Applicable major release
Name: IK8202279 (6506) Type: environmentalAlarm Package: Img.IK8202279 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa3AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 27-464 IK8202291

Alarm	Attributes	Applicable major release
Name: IK8202291 (6507) Type: equipmentAlarm Package: lmg.IK8202291 Raised on class: lmg.FRU	Severity: major Specific problem: Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Accelerator Board Bad Data. This alarm signifies that the agent has detected an array accelerator cache board that has lost battery power. If data was being stored in the accelerator cache memory when the server lost power, that data has been lost.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqDa5AccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 27-465 IK8202292

Alarm	Attributes	Applicable major release
Name: IK8202292 (6508) Type: environmentalAlarm Package: lmg.IK8202292 Raised on class: lmg.FRU	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqDa5AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 27-466 IK8202295

Alarm	Attributes	Applicable major release
Name: IK8202295 (6509) Type: equipmentAlarm Package: lmg.IK8202295 Raised on class: lmg.FRU	Severity: major Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm is cleared by the system when the device is restarted.\ nReason: cpqDa5PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 27-467 IK8202302

Alarm	Attributes	Applicable major release
Name: IK8202302 (6510) Type: equipmentAlarm Package: Img.IK8202302 Raised on class: Img.FRU	Severity: major Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm is cleared by the system when the device is restarted.\ nReason: cpqDa6PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 27-468 IK8202337

Alarm	Attributes	Applicable major release
Name: IK8202337 (6511) Type: communicationsAlarm Package: Img.IK8202337 Raised on class: Img.FRU	Severity: major Specific problem: NIC Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNicConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-469 IK8202341

Alarm	Attributes	Applicable major release
Name: IK8202341 (6512) Type: communicationsAlarm Package: Img.IK8202341 Raised on class: Img.FRU	Severity: major Specific problem: NIC Connectivity Lost Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-470 IK8202343

Alarm	Attributes	Applicable major release
Name: IK8202343 (6513) Type: communicationsAlarm Package: lmg.IK8202343 Raised on class: lmg.FRU	Severity: major Specific problem: NIC Redundancy Reduced Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2RedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-471 IK8202347

Alarm	Attributes	Applicable major release
Name: IK8202347 (6514) Type: communicationsAlarm Package: lmg.IK8202347 Raised on class: lmg.FRU	Severity: major Specific problem: NIC Connectivity Lost Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqNic3ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-472 IK8202349

Alarm	Attributes	Applicable major release
Name: IK8202349 (6515) Type: communicationsAlarm Package: lmg.IK8202349 Raised on class: lmg.FRU	Severity: major Specific problem: NIC Redundancy Reduced Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic3RedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-473 IK8202360

Alarm	Attributes	Applicable major release
Name: IK8202360 (6516) Type: equipmentAlarm Package: Img.IK8202360 Raised on class: Img.FRU	Severity: major Specific problem: Enclosure temperature failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The enclosure temperature status has been set to failed. This alarm signifies that a enclosure temperature sensor has been tripped indicating an overheat condition.\nAlarm is cleared by the system.\nReason: cpqRackEnclosureTempFailed		
Remedial action: Shutdown the enclosure and possibly the rack as soon as possible. Ensure all fans are working properly and that air flow in the rack has not been blocked.		

Table 27-474 IK8202363

Alarm	Attributes	Applicable major release
Name: IK8202363 (6517) Type: environmentalAlarm Package: Img.IK8202363 Raised on class: Img.FRU	Severity: major Specific problem: Enclosure fan failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The enclosure fan status has been set to failed. This alarm signifies that an enclosure fan has failed and no other fans in the redundant fan group are operating. This may result in overheating of the enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackEnclosureFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-475 IK8202368

Alarm	Attributes	Applicable major release
Name: IK8202368 (6518) Type: equipmentAlarm Package: Img.IK8202368 Raised on class: Img.FRU	Severity: critical Specific problem: Rack power supply failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The power supply status has been set to failed. This alarm signifies that a power supply has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

Table 27-476 IK8202369

Alarm	Attributes	Applicable major release
Name: IK8202369 (6519) Type: equipmentAlarm Package: lmg.IK8202369 Raised on class: lmg.FRU	Severity: major Specific problem: Rack power supply degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The power supply status has been set to degraded. This alarm signifies that a power supply has degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSupplyDegraded		
Remedial action: Replace the power supply as soon as possible.		

Table 27-477 IK8202374

Alarm	Attributes	Applicable major release
Name: IK8202374 (6520) Type: equipmentAlarm Package: lmg.IK8202374 Raised on class: lmg.FRU	Severity: major Specific problem: Rack power supply input voltage problem Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The rack power supply detected an input line voltage problem.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSubsystemLineVoltageProblem		
Remedial action: Check the power input for the power supply or replace any failed power supplies as soon as possible.		

Table 27-478 IK8202375

Alarm	Attributes	Applicable major release
Name: IK8202375 (6521) Type: equipmentAlarm Package: lmg.IK8202375 Raised on class: lmg.FRU	Severity: major Specific problem: Rack power subsystem overload condition Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The rack power subsystem overload condition.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSubsystemOverloadCondition		
Remedial action: Replace any failed power supplies as soon as possible to return the system to a redundant state.		

Table 27-479 IK8202376

Alarm	Attributes	Applicable major release
Name: IK8202376 (6522) Type: equipmentAlarm Package: Img.IK8202376 Raised on class: Img.FRU	Severity: critical Specific problem: Server shutdown due to power shedding Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Server shutdown due to power shedding. The server blade was shutdown due to a lack of power.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerShedAutoShutdown		
Remedial action: Check power connections or add power supplies.		

Table 27-480 IK8202377

Alarm	Attributes	Applicable major release
Name: IK8202377 (6523) Type: equipmentAlarm Package: Img.IK8202377 Raised on class: Img.FRU	Severity: critical Specific problem: Server power on prevented to preserve redundancy Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Server power on prevented to preserve redundancy. There is not enough power to power on the server blade and maintain redundancy for the other blades in the enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailedNotRedundant		
Remedial action: Check power connections or add power supplies.		

Table 27-481 IK8202378

Alarm	Attributes	Applicable major release
Name: IK8202378 (6524) Type: equipmentAlarm Package: Img.IK8202378 Raised on class: Img.FRU	Severity: critical Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailedNotEnoughPower		
Remedial action: Check power connections or add power supplies.		

Table 27-482 IK8202379

Alarm	Attributes	Applicable major release
Name: IK8202379 (6525) Type: equipmentAlarm Package: Img.IK8202379 Raised on class: Img.FRU	Severity: critical Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The server enclosure micro-controller was not found.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFaile-dEnclosureNotFound		
Remedial action: Check server enclosure connections or add power supplies.		

Table 27-483 IK8202380

Alarm	Attributes	Applicable major release
Name: IK8202380 (6526) Type: equipmentAlarm Package: Img.IK8202380 Raised on class: Img.FRU	Severity: critical Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The power enclosure micro-controller was not found.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailed-PowerChassisNotFound		
Remedial action: Check power enclosure connections or add power supplies.		

Table 27-484 IK8202382

Alarm	Attributes	Applicable major release
Name: IK8202382 (6527) Type: environmentalAlarm Package: Img.IK8202382 Raised on class: Img.FRU	Severity: major Specific problem: Fuse open Implicitly cleared: true Default probable cause: enclosureDoorOpen	Release: • LR14.3.MG • LR15.1.MG
Description: Fuse open. The fuse has been tripped.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackFuseOpen		
Remedial action: Check enclosure and / or blade power connections and reset the fuse.		

Table 27-485 IK8202386

Alarm	Attributes	Applicable major release
Name: IK8202386 (6528) Type: equipmentAlarm Package: Img.IK8202386 Raised on class: Img.FRU	Severity: major Specific problem: Power subsystem DC power problem Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem DC power problem. There is a power subsystem DC power problem for this power enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisDcPowerProblem		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 27-486 IK8202387

Alarm	Attributes	Applicable major release
Name: IK8202387 (6529) Type: equipmentAlarm Package: Img.IK8202387 Raised on class: Img.FRU	Severity: major Specific problem: Power subsystem AC facility input power exceeded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem AC facility input power exceeded. There is a power subsystem Power subsystem AC facility input power exceeded for this power enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisAc-FacilityPowerExceeded		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 27-487 IK8202388

Alarm	Attributes	Applicable major release
Name: IK8202388 (6530) Type: equipmentAlarm Package: Img.IK8202388 Raised on class: Img.FRU	Severity: major Specific problem: Unknown power consumption Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Unknown power consumption. There is an unknown power consumer drawing power.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerUnknownPowerConsumption		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 27-488 IK8202391

Alarm	Attributes	Applicable major release
Name: IK8202391 (6531) Type: processingErrorAlarm Package: lmg.IK8202391 Raised on class: lmg.FRU	Severity: major Specific problem: Power subsystem improperly configured Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem improperly configured. The power subsystem has been improperly configured.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisConfigError		
Remedial action: Check the cabling of the power enclosure.		

Table 27-489 IK8202401

Alarm	Attributes	Applicable major release
Name: IK8202401 (6532) Type: communicationsAlarm Package: lmg.IK8202401 Raised on class: lmg.FRU	Severity: critical Specific problem: Interconnect failed Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: The interconnect status has been set to failed. This alarm signifies that a interconnect has failed.\nAlarm is cleared by the system.\nReason: cpqRackNetConnectorFailed		
Remedial action: Replace the interconnect as soon as possible.		

Table 27-490 IK8202408

Alarm	Attributes	Applicable major release
Name: IK8202408 (6533) Type: qualityOfServiceAlarm Package: lmg.IK8202408 Raised on class: lmg.FRU	Severity: major Specific problem: Server blade health status degraded Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR14.3.MG • LR15.1.MG
Description: Server blade health status Degraded. The server blade health status has changed to Degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerBladeStatusDegraded		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-491 IK8202409

Alarm	Attributes	Applicable major release
Name: IK8202409 (6534) Type: processingErrorAlarm Package: Img.IK8202409 Raised on class: Img.FRU	Severity: critical Specific problem: Server blade health status critical Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG
Description: Server blade health status Critical. The server blade health status has changed to Critical.\nAlarm is cleared by the system.\nReason: cpqRackServerBladeStatusCritical		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-492 IK8202411

Alarm	Attributes	Applicable major release
Name: IK8202411 (6535) Type: equipmentAlarm Package: Img.IK8202411 Raised on class: Img.FRU	Severity: major Specific problem: Server blade unexpected shutdown Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Server blade shutdown unexpectadly. An unexpected shutdown event has occurred for this server blade.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerBladeUnexpectedShutdown		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-493 IK8202428

Alarm	Attributes	Applicable major release
Name: IK8202428 (6536) Type: equipmentAlarm Package: Img.IK8202428 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Generic EAE Major trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: EAE Major trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackMajorEAETrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-494 IK8202429

Alarm	Attributes	Applicable major release
Name: IK8202429 (6537) Type: equipmentAlarm Package: Img.IK8202429 Raised on class: Img.LMGMngElement	Severity: critical Specific problem: Generic EAE Critical trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: EAE Critical trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackCriticalEAETrap		

Table 27-494 IK8202429 (continued)

Alarm	Attributes	Applicable major release
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-495 IK8202431

Alarm	Attributes	Applicable major release
Name: IK8202431 (6538) Type: equipmentAlarm Package: lmg.IK8202431 Raised on class: lmg.FRU	Severity: major Specific problem: Generic Power Subsystem EAE Major trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: FlexFabric Cmdr Power Subsystem Major trap.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerMajorEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 27-496 IK8202432

Alarm	Attributes	Applicable major release
Name: IK8202432 (6539) Type: equipmentAlarm Package: lmg.IK8202432 Raised on class: lmg.FRU	Severity: critical Specific problem: Generic Power Subsystem EAE Critical trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: FlexFabric Cmdr Power Subsystem Critical trap.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerCriticalEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 27-497 IK8202436

Alarm	Attributes	Applicable major release
Name: IK8202436 (6540) Type: equipmentAlarm Package: lmg.IK8202436 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Generic WSMAN Major trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: WSMAN Major trap\nReason: cpqRackMajorWSMANTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-498 IK8202437

Alarm	Attributes	Applicable major release
Name: IK8202437 (6541) Type: equipmentAlarm Package: lmg.IK8202437 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Generic WSMAN Critical trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: WSMAN Critical trap\nReason: cpqRackCriticalWSMANTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-499 IK8202439

Alarm	Attributes	Applicable major release
Name: IK8202439 (6542) Type: communicationsAlarm Package: lmg.IK8202439 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Standby Recovery Server Interconnect Failure Implicitly cleared: false Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: Recovery Server serial interconnect failure. The Standby Recovery Agent reports that the local serial interconnect is not connected or has failed. The primary server is being shutdown in anticipation of the startup of the standby server.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRsStandbyCableFailure		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-500 IK8202559

Alarm	Attributes	Applicable major release
Name: IK8202559 (6543) Type: equipmentAlarm Package: lmg.IK8202559 Raised on class: lmg.FRU	Severity: critical Specific problem: Critical Alarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: A critical alarm has occurred.\nAlarm is cleared by the system.\nReason: cpqPMTrapCritical		
Remedial action: Check the Trap Details for more information.		

Table 27-501 IK8202609

Alarm	Attributes	Applicable major release
Name: IK8202609 (6544) Type: processingErrorAlarm Package: lmg.IK8202609 Raised on class: lmg.FRU	Severity: major Specific problem: Monitor Condition Failed Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG

Table 27-501 IK8202609 (continued)

Alarm	Attributes	Applicable major release
Description: A fault reporting feature has exceeded normal limits in the monitor indicated by the cpqSiMonitorIndex. The monitor's condition has been set to failed due to an operational feature exceeding normal operating limits. The monitor will not be useable and should be replaced.\nAlarm is cleared by the system.\nReason: cpqSiMonitorConditionFailed		
Remedial action: Make a note of the monitor model number and serial number. Replace the monitor. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 27-502 IK8202610

Alarm	Attributes	Applicable major release
Name: IK8202610 (6545) Type: processingErrorAlarm Package: lmg.IK8202610 Raised on class: lmg.FRU	Severity: major Specific problem: Excessive Correctable Memory Errors Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Correctable memory error count has exceeded the threshold for the memory module indicated by the 'cpqSiMemErrorIndex' variable. The appropriate cpqSiMemModuleECCStatus has been set to degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiCorrMemErrStatusDegraded		
Remedial action: For Desktops, the System Administrator should run the F10 Diagnostics on this system and select RAM LONG TEST. If it is determined that a module needs replacing, schedule maintenance for the system and replace the failed memory module. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 27-503 IK8202615

Alarm	Attributes	Applicable major release
Name: IK8202615 (6546) Type: equipmentAlarm Package: lmg.IK8202615 Raised on class: lmg.FRU	Severity: major Specific problem: Hot Plug Slot Board Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Hot Plug Slot Board Failed Power-Up. A Hot Plug Slot Board has failed to power-up in the specified chassis and slot.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiHotPlugSlotPowerUpFailed		
Remedial action: Insure the board and all cables are installed correctly and the board type and revision are the same as the replaced board.		

Table 27-504 IK8202616

Alarm	Attributes	Applicable major release
Name: IK8202616 (6547) Type: environmentalAlarm Package: Img.IK8202616 Raised on class: Img.FRU	Severity: major Specific problem: Battery Failure Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The battery indicated by cpqSiSysBatteryIndex has failed and must be replaced.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiSysBatteryFailure		
Remedial action: Contact your System Administrator or Authorized Reseller to order a replacement battery. Recycle your old battery. For proper disposal information, refer to the documentation that came with your computer.		

Table 27-505 IK8202617

Alarm	Attributes	Applicable major release
Name: IK8202617 (6548) Type: environmentalAlarm Package: Img.IK8202617 Raised on class: Img.FRU	Severity: major Specific problem: Battery Charging Degradation Implicitly cleared: true Default probable cause: lowBatteryThreshold	Release: • LR14.3.MG • LR15.1.MG
Description: Significant battery degradation has occurred with battery indicated by cpqSiSysBatteryIndex. The battery can no longer be fully recharged.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiSysBatteryChargingDegraded		
Remedial action: If using multiple batteries, run the Power Conservation Utility to identify the battery location. Contact your System Administrator or Authorized Reseller to order a replacement battery.		

Table 27-506 IK8202620

Alarm	Attributes	Applicable major release
Name: IK8202620 (6549) Type: equipmentAlarm Package: Img.IK8202620 Raised on class: Img.FRU	Severity: major Specific problem: Server Power Outage Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Server Power Outage. The Remote Insight/ Integrated Lights-Out firmware has detected server power failure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSm2ServerPowerOutage		
Remedial action: Check the server's power source.		

Table 27-507 IK8202622

Alarm	Attributes	Applicable major release
Name: IK8202622 (6550) Type: environmentalAlarm Package: Img.IK8202622 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Remote Insight Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Remote Insight Battery Failed. The Remote Insight battery has failed and needs to be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2BatteryFailed		
Remedial action: replace the failing Remote Insight battery.		

Table 27-508 IK8202628

Alarm	Attributes	Applicable major release
Name: IK8202628 (6551) Type: equipmentAlarm Package: Img.IK8202628 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Remote Insight external power cable disconnected Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: External Power Cable Disconnected. The Remote Insight external power cable has been disconnected.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ExternalPowerCableDisconnected		
Remedial action: check External Power Cable		

Table 27-509 IK8202632

Alarm	Attributes	Applicable major release
Name: IK8202632 (6552) Type: processingErrorAlarm Package: Img.IK8202632 Raised on class: Img.LMGMngElement	Severity: critical Specific problem: Server Fatal Error Detected Implicitly cleared: false Default probable cause: softwareError	Release: • LR14.3.MG
Description: Server Fatal Error Detected. The Remote Insight/ Integrated Lights-Out firmware has detected a server fatal error.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerFatalError		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-510 IK8202633

Alarm	Attributes	Applicable major release
Name: IK8202633 (6553) Type: communicationsAlarm Package: Img.IK8202633 Raised on class: Img.FRU	Severity: major Specific problem: The iLO NIC Link is Down Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: The iLO NIC Link is Down. The Remote Insight/ Integrated Lights-Out firmware has detected the loss of network link.\nAlarm is cleared by the system.\nReason: cpqSm2NicLinkDown		
Remedial action: Check the network connections for the iLO.		

Table 27-511 IK8202636

Alarm	Attributes	Applicable major release
Name: IK8202636 (9227) Type: equipmentAlarm Package: Img.IK8202636 Raised on class: Img.FRU	Severity: major Specific problem: Server powered off Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: The server has been powered off. This will be sent once the server has been powered off, either by OS, or the power button.\nAlarm is cleared by the system.\nReason: cpqSm2ServerPowerOff		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-512 IK8202648

Alarm	Attributes	Applicable major release
Name: IK8202648 (6554) Type: qualityOfServiceAlarm Package: Img.IK8202648 Raised on class: Img.FRU	Severity: major Specific problem: PC Card Thermal Failure Status Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm is sent when the PC Card Slot Thermal Sensor threshold has been exceeded for degraded operations thereby causing failed operations. This alarm will be sent when cpqSePCCardStatus transitions from Thermal Degraded (2) to Thermal Failure (3). The manufacturer and product information strings as well as the slot number for the failed PC Card is provided as parameters for this trap.\nAlarm is cleared by the system.\nReason: cpqSePCCardThermalFailure		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-513 IK8202657

Alarm	Attributes	Applicable major release
Name: IK8202657 (6555) Type: environmentalAlarm Package: lmg.IK8202657 Raised on class: lmg.FRU	Severity: major Specific problem: Storage System Temperature Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.\nAlarm is cleared by the system.\nReason: cpqSsTempFailed		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-514 IK8204762

Alarm	Attributes	Applicable major release
Name: IK8204762 (6556) Type: communicationsAlarm Package: lmg.IK8204762 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: linkDown Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: A linkDown alarm signifies that the SNMP entity, acting in an agent role, has detected that the ifOperStatus object for one of its communication links is about to enter the down state from some other state (but not from the notPresent state). This other state is indicated by the included value of ifOperStatus.\nAlarm is cleared by the system.\nReason: linkDown		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-515 IK8250982

Alarm	Attributes	Applicable major release
Name: IK8250982 (6557) Type: equipmentAlarm Package: lmg.IK8250982 Raised on class: lmg.FRU	Severity: major Specific problem: Cluster Node Failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a node in the cluster becomes failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterNodeFailed		
Remedial action: Make a note of the cluster node name then check the node for the cause of the failure.		

Table 27-516 IK8250984

Alarm	Attributes	Applicable major release
Name: IK8250984 (6558) Type: processingErrorAlarm Package: Img.IK8250984 Raised on class: Img.FRU	Severity: major Specific problem: Cluster Resource Failed Implicitly cleared: true Default probable cause: underlyingResourceUnavail-able	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a cluster resource becomes failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterResourceFailed		
Remedial action: Make a note of the cluster resource name then check the resource for the cause of the failure.		

Table 27-517 IK8250986

Alarm	Attributes	Applicable major release
Name: IK8250986 (6559) Type: equipmentAlarm Package: Img.IK8250986 Raised on class: Img.FRU	Severity: major Specific problem: Cluster Network Failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a cluster network becomes failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterNetworkFailed		
Remedial action: Make a note of the cluster network name then check the network for the cause of the failure.		

Table 27-518 IK8251008

Alarm	Attributes	Applicable major release
Name: IK8251008 (6560) Type: equipmentAlarm Package: Img.IK8251008 Raised on class: Img.FRU	Severity: major Specific problem: The primary controller in the subsytem has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The primary controller in the subsystem has failed. Details: The primary Controller has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrController1FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 27-519 IK8251010

Alarm	Attributes	Applicable major release
Name: IK8251010 (6561) Type: equipmentAlarm Package: lmg.IK8251010 Raised on class: lmg.FRU	Severity: major Specific problem: The secondary controller in the subsytem has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The secondary controller in the subsystem has failed. Details: The secondary controller has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrController2FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 27-520 IK8251013

Alarm	Attributes	Applicable major release
Name: IK8251013 (6562) Type: equipmentAlarm Package: lmg.IK8251013 Raised on class: lmg.FRU	Severity: major Specific problem: A RAIDset has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: A RAIDset has failed. Details: The RAIDset has failed and is off-line.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrLogDriveFailureTrap		
Remedial action: Possible cause is too many failed disk drives that make up the RAIDset, the OS can no longer communicate with the RAIDset for other reasons.		

Table 27-521 IK8251018

Alarm	Attributes	Applicable major release
Name: IK8251018 (6563) Type: processingErrorAlarm Package: lmg.IK8251018 Raised on class: lmg.FRU	Severity: major Specific problem: A disk drive has failed Implicitly cleared: true Default probable cause: storageCapacityProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system.\nReason: cpqCrDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 27-522 IK8251023

Alarm	Attributes	Applicable major release
Name: IK8251023 (6564) Type: processingErrorAlarm Package: lmg.IK8251023 Raised on class: lmg.FRU	Severity: major Specific problem: A disk drive has failed Implicitly cleared: true Default probable cause: storageCapacityProblem	Release: • LR14.3.MG • LR15.1.MG

Table 27-522 IK8251023 (continued)

Alarm	Attributes	Applicable major release
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrPhyDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 27-523 IK8251030

Alarm	Attributes	Applicable major release
Name: IK8251030 (6565) Type: equipmentAlarm Package: Img.IK8251030 Raised on class: Img.FRU	Severity: major Specific problem: Power supply has failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power supply has failed. Details: One of the power supplies in the primary enclosure has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrEMUPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 27-524 IK8251033

Alarm	Attributes	Applicable major release
Name: IK8251033 (6566) Type: equipmentAlarm Package: Img.IK8251033 Raised on class: Img.FRU	Severity: critical Specific problem: Primary enclosure temperature critical! Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Primary enclosure temperature critical!. Details: The temperature in the primary enclosure has triggered a critical condition detected by the controller.\nAlarm is cleared by the system.\nReason: cpqCrEMUTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the primary enclosure.		

Table 27-525 IK8251037

Alarm	Attributes	Applicable major release
Name: IK8251037 (6567) Type: equipmentAlarm Package: Img.IK8251037 Raised on class: Img.FRU	Severity: major Specific problem: Power supply has failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power supply has failed. Details: One of the power supplies in the expansion cabinet has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrExpCabPowerSupplyFailureTrap		

Table 27-525 IK8251037 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 27-526 IK8251040

Alarm	Attributes	Applicable major release
Name: IK8251040 (6568) Type: environmentalAlarm Package: lmg.IK8251040 Raised on class: lmg.FRU	Severity: critical Specific problem: cpqCrExpCabTemperatureCriti-calTrap Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: Expansion cabinet temperature critical! Details: The temperature in the expansion cabinet has triggered a critical condition detected by the controller.\nAlarm is cleared by the system.\nReason: cpqCrExpCabTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the expansion cabinet.		

Table 27-527 IK8251060

Alarm	Attributes	Applicable major release
Name: IK8251060 (6569) Type: environmentalAlarm Package: lmg.IK8251060 Raised on class: lmg.FRU	Severity: major Specific problem: External Array Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqFcaAccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 27-528 IK8251073

Alarm	Attributes	Applicable major release
Name: IK8251073 (6570) Type: environmentalAlarm Package: lmg.IK8251073 Raised on class: lmg.FRU	Severity: major Specific problem: External Array Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqFca2AccelBatteryFailed		

Table 27-528 IK8251073 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Replace the Accelerator Cache Board.		

Table 27-529 IK8251091

Alarm	Attributes	Applicable major release
Name: IK8251091 (9228) Type: environmentalAlarm Package: Img.IK8251091 Raised on class: Img.FRU	Severity: major Specific problem: System Fan Failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR15.1.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHeThermalSystemFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-530 IK8251098

Alarm	Attributes	Applicable major release
Name: IK8251098 (6571) Type: equipmentAlarm Package: Img.IK8251098 Raised on class: Img.LMGMngElement	Severity: major Specific problem: POST Errors Occurred Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHePostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 27-531 IK8251102

Alarm	Attributes	Applicable major release
Name: IK8251102 (6572) Type: environmentalAlarm Package: Img.IK8251102 Raised on class: Img.FRU	Severity: major Specific problem: Thermal Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: The temperature status has been set to failed. The system will be shutdown due to this thermal condition.\nAlarm is cleared by the system.\nReason: cpqHe3ThermalTempFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 27-532 IK8251105

Alarm	Attributes	Applicable major release
Name: IK8251105 (6573) Type: environmentalAlarm Package: Img.IK8251105 Raised on class: Img.FRU	Severity: major Specific problem: System Fan Failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHe3ThermalSystemFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-533 IK8251112

Alarm	Attributes	Applicable major release
Name: IK8251112 (6574) Type: equipmentAlarm Package: Img.IK8251112 Raised on class: Img.FRU	Severity: major Specific problem: POST Errors Occurred Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process. Details of the POST error messages can be found in Integrated Management Log\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3PostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 27-534 IK8251116

Alarm	Attributes	Applicable major release
Name: IK8251116 (6575) Type: equipmentAlarm Package: Img.IK8251116 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Power Supply Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe3FltTolPowerSupplyFailed		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-535 IK8251121

Alarm	Attributes	Applicable major release
Name: IK8251121 (6576) Type: environmentalAlarm Package: Img.IK8251121 Raised on class: Img.FRU	Severity: major Specific problem: Fan Failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The Fault Tolerant Fan condition has been set to failed for the specified chassis and fan.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3FltTolFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-536 IK8251125

Alarm	Attributes	Applicable major release
Name: IK8251125 (6577) Type: environmentalAlarm Package: Img.IK8251125 Raised on class: Img.FRU	Severity: major Specific problem: Thermal Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: The temperature status has been set to failed in the specified chassis and location. The system will be shutdown due to this condition.\nAlarm is cleared by the system.\nReason: cpqHe3TemperatureFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 27-537 IK8251129

Alarm	Attributes	Applicable major release
Name: IK8251129 (6578) Type: equipmentAlarm Package: Img.IK8251129 Raised on class: Img.FRU	Severity: major Specific problem: Power Converter Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The DC-DC Power Converter condition has been set to failed for the specified chassis, slot and socket.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3PowerConverterFailed		
Remedial action: Replace the failed power converter.		

Table 27-538 IK8251135

Alarm	Attributes	Applicable major release
Name: IK8251135 (6579) Type: equipmentAlarm Package: Img.IK8251135 Raised on class: Img.FRU	Severity: major Specific problem: Power Supply Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG

Table 27-538 IK8251135 (continued)

Alarm	Attributes	Applicable major release
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FltTolPowerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

Table 27-539 IK8251144

Alarm	Attributes	Applicable major release
Name: IK8251144 (6580) Type: processingErrorAlarm Package: Img.IK8251144 Raised on class: Img.FRU	Severity: major Specific problem: Memory Board or Cartridge Bus Error Detected Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Memory board or cartridge bus error detected. An Advanced Memory Protection sub-system board or cartridge bus error has been detected.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge.		

Table 27-540 IK8251148

Alarm	Attributes	Applicable major release
Name: IK8251148 (6581) Type: equipmentAlarm Package: Img.IK8251148 Raised on class: Img.FRU	Severity: major Specific problem: Management processor failed reset Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The Management processor failed reset The management processor was not successfully reset and is not operational.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeManagementProcFailedReset		
Remedial action: Reset the management procesessor again or re-flash the management processor firmware.		

Table 27-541 IK8251152

Alarm	Attributes	Applicable major release
Name: IK8251152 (6582) Type: processingErrorAlarm Package: Img.IK8251152 Raised on class: Img.FRU	Severity: major Specific problem: Memory Board or Cartridge or Riser Bus Error Detected Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Memory board or cartridge or Riser bus error detected. An Advanced Memory Protection sub-system board or cartridge or Riser bus error has been detected. Value 0 for CPU means memory is not processor based.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe5ResMemBoardBusError		

Table 27-541 IK8251152 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Replace the indicated board or cartridge or Riser.		

Table 27-542 IK8251154

Alarm	Attributes	Applicable major release
Name: IK8251154 (6583) Type: equipmentAlarm Package: Img.IK8251154 Raised on class: Img.FRU	Severity: major Specific problem: Power Supply AC Power Loss Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The fault tolerant power supply AC power loss for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FltTolPowerSupplyACpowerloss		
Remedial action: Check the power source for the specified power supply.		

Table 27-543 IK8251156

Alarm	Attributes	Applicable major release
Name: IK8251156 (6584) Type: processingErrorAlarm Package: Img.IK8251156 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Application Error Trap Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHoAppErrorTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-544 IK8251158

Alarm	Attributes	Applicable major release
Name: IK8251158 (6585) Type: processingErrorAlarm Package: Img.IK8251158 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Application Error Trap Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2AppErrorTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-545 IK8251160

Alarm	Attributes	Applicable major release
Name: IK8251160 (9229) Type: communicationsAlarm Package: lmg.IK8251160 Raised on class: lmg.FRU	Severity: major Specific problem: Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition.\nAlarm is cleared by the system.\nReason: cpqHo2NicStatusFailed		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 27-546 IK8251163

Alarm	Attributes	Applicable major release
Name: IK8251163 (6586) Type: communicationsAlarm Package: lmg.IK8251163 Raised on class: lmg.FRU	Severity: major Specific problem: Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition.\nAlarm is cleared by the system.\nReason: cpqHo2NicStatusFailed2		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 27-547 IK8251172

Alarm	Attributes	Applicable major release
Name: IK8251172 (6587) Type: qualityOfServiceAlarm Package: lmg.IK8251172 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Power Threshold Exceeded Implicitly cleared: false Default probable cause: resourceAtOrNearingCapacity	Release: • LR14.3.MG
Description: This alarm notifies user of a power threshold breach. Power threshold exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2PowerThresholdTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-548 IK8252265

Alarm	Attributes	Applicable major release
Name: IK8252265 (6588) Type: environmentalAlarm Package: lmg.IK8252265 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDaAccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 27-549 IK8252272

Alarm	Attributes	Applicable major release
Name: IK8252272 (6589) Type: environmentalAlarm Package: lmg.IK8252272 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa2AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 27-550 IK8252279

Alarm	Attributes	Applicable major release
