Name: IK8252279 (6590) Type: environmentalAlarm Package: lmg.IK8252279 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa3AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 27-551 IK8252291

Alarm	Attributes	Applicable major release
Name: IK8252291 (6591) Type: equipmentAlarm Package: lmg.IK8252291 Raised on class: lmg.FRU	Severity: major Specific problem: Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Accelerator Board Bad Data. This alarm signifies that the agent has detected an array accelerator cache board that has lost battery power. If data was being stored in the accelerator cache memory when the server lost power, that data has been lost.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqDa5AccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 27-552 IK8252292

Alarm	Attributes	Applicable major release
Name: IK8252292 (6592) Type: environmentalAlarm Package: lmg.IK8252292 Raised on class: lmg.FRU	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqDa5AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 27-553 IK8252295

Alarm	Attributes	Applicable major release
Name: IK8252295 (6593) Type: equipmentAlarm Package: lmg.IK8252295 Raised on class: lmg.FRU	Severity: major Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm is cleared by the system when the device is restarted.\ nReason: cpqDa5PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 27-554 IK8252302

Alarm	Attributes	Applicable major release
Name: IK8252302 (6594) Type: equipmentAlarm Package: Img.IK8252302 Raised on class: Img.FRU	Severity: major Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm is cleared by the system when the device is restarted.\ nReason: cpqDa6PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 27-555 IK8252337

Alarm	Attributes	Applicable major release
Name: IK8252337 (6595) Type: communicationsAlarm Package: Img.IK8252337 Raised on class: Img.FRU	Severity: major Specific problem: NIC Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNicConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-556 IK8252341

Alarm	Attributes	Applicable major release
Name: IK8252341 (6596) Type: communicationsAlarm Package: Img.IK8252341 Raised on class: Img.FRU	Severity: major Specific problem: NIC Connectivity Lost Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-557 IK8252343

Alarm	Attributes	Applicable major release
Name: IK8252343 (6597) Type: communicationsAlarm Package: lmg.IK8252343 Raised on class: lmg.FRU	Severity: major Specific problem: NIC Redundancy Reduced Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2RedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-558 IK8252347

Alarm	Attributes	Applicable major release
Name: IK8252347 (6598) Type: communicationsAlarm Package: lmg.IK8252347 Raised on class: lmg.FRU	Severity: major Specific problem: NIC Connectivity Lost Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqNic3ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-559 IK8252349

Alarm	Attributes	Applicable major release
Name: IK8252349 (6599) Type: communicationsAlarm Package: lmg.IK8252349 Raised on class: lmg.FRU	Severity: major Specific problem: NIC Redundancy Reduced Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic3RedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-560 IK8252360

Alarm	Attributes	Applicable major release
Name: IK8252360 (6600) Type: equipmentAlarm Package: Img.IK8252360 Raised on class: Img.FRU	Severity: major Specific problem: Enclosure temperature failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The enclosure temperature status has been set to failed. This alarm signifies that a enclosure temperature sensor has been tripped indicating an overheat condition.\nAlarm is cleared by the system.\nReason: cpqRackEnclosureTempFailed		
Remedial action: Shutdown the enclosure and possibly the rack as soon as possible. Ensure all fans are working properly and that air flow in the rack has not been blocked.		

Table 27-561 IK8252363

Alarm	Attributes	Applicable major release
Name: IK8252363 (6601) Type: environmentalAlarm Package: Img.IK8252363 Raised on class: Img.FRU	Severity: major Specific problem: Enclosure fan failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The enclosure fan status has been set to failed. This alarm signifies that an enclosure fan has failed and no other fans in the redundant fan group are operating. This may result in overheating of the enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackEnclosureFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-562 IK8252368

Alarm	Attributes	Applicable major release
Name: IK8252368 (6602) Type: equipmentAlarm Package: Img.IK8252368 Raised on class: Img.FRU	Severity: critical Specific problem: Rack power supply failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The power supply status has been set to failed. This alarm signifies that a power supply has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

Table 27-563 IK8252369

Alarm	Attributes	Applicable major release
Name: IK8252369 (6603) Type: equipmentAlarm Package: lmg.IK8252369 Raised on class: lmg.FRU	Severity: major Specific problem: Rack power supply degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The power supply status has been set to degraded. This alarm signifies that a power supply has degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSupplyDegraded		
Remedial action: Replace the power supply as soon as possible.		

Table 27-564 IK8252374

Alarm	Attributes	Applicable major release
Name: IK8252374 (6604) Type: equipmentAlarm Package: lmg.IK8252374 Raised on class: lmg.FRU	Severity: major Specific problem: Rack power supply input voltage problem Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The rack power supply detected an input line voltage problem.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSubsystemLineVoltageProblem		
Remedial action: Check the power input for the power supply or replace any failed power supplies as soon as possible.		

Table 27-565 IK8252375

Alarm	Attributes	Applicable major release
Name: IK8252375 (6605) Type: equipmentAlarm Package: lmg.IK8252375 Raised on class: lmg.FRU	Severity: major Specific problem: Rack power subsystem overload condition Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The rack power subsystem overload condition.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSubsystemOverloadCondition		
Remedial action: Replace any failed power supplies as soon as possible to return the system to a redundant state.		

Table 27-566 IK8252376

Alarm	Attributes	Applicable major release
Name: IK8252376 (6606) Type: equipmentAlarm Package: Img.IK8252376 Raised on class: Img.FRU	Severity: critical Specific problem: Server shutdown due to power shedding Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Server shutdown due to power shedding. The server blade was shutdown due to a lack of power.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerShedAutoShutdown		
Remedial action: Check power connections or add power supplies.		

Table 27-567 IK8252377

Alarm	Attributes	Applicable major release
Name: IK8252377 (6607) Type: equipmentAlarm Package: Img.IK8252377 Raised on class: Img.FRU	Severity: critical Specific problem: Server power on prevented to preserve redundancy Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Server power on prevented to preserve redundancy. There is not enough power to power on the server blade and maintain redundancy for the other blades in the enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailedNotRedundant		
Remedial action: Check power connections or add power supplies.		

Table 27-568 IK8252378

Alarm	Attributes	Applicable major release
Name: IK8252378 (6608) Type: equipmentAlarm Package: Img.IK8252378 Raised on class: Img.FRU	Severity: critical Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailedNotEnoughPower		
Remedial action: Check power connections or add power supplies.		

Table 27-569 IK8252379

Alarm	Attributes	Applicable major release
Name: IK8252379 (6609) Type: equipmentAlarm Package: Img.IK8252379 Raised on class: Img.FRU	Severity: critical Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The server enclosure micro-controller was not found.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFaile-dEnclosureNotFound		
Remedial action: Check server enclosure connections or add power supplies.		

Table 27-570 IK8252380

Alarm	Attributes	Applicable major release
Name: IK8252380 (6610) Type: equipmentAlarm Package: Img.IK8252380 Raised on class: Img.FRU	Severity: critical Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The power enclosure micro-controller was not found.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailed-PowerChassisNotFound		
Remedial action: Check power enclosure connections or add power supplies.		

Table 27-571 IK8252382

Alarm	Attributes	Applicable major release
Name: IK8252382 (6611) Type: environmentalAlarm Package: Img.IK8252382 Raised on class: Img.FRU	Severity: major Specific problem: Fuse open Implicitly cleared: true Default probable cause: enclosureDoorOpen	Release: • LR14.3.MG • LR15.1.MG
Description: Fuse open. The fuse has been tripped.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackFuseOpen		
Remedial action: Check enclosure and / or blade power connections and reset the fuse.		

Table 27-572 IK8252386

Alarm	Attributes	Applicable major release
Name: IK8252386 (6612) Type: equipmentAlarm Package: Img.IK8252386 Raised on class: Img.FRU	Severity: major Specific problem: Power subsystem DC power problem Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem DC power problem. There is a power subsystem DC power problem for this power enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisDcPowerProblem		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 27-573 IK8252387

Alarm	Attributes	Applicable major release
Name: IK8252387 (6613) Type: equipmentAlarm Package: Img.IK8252387 Raised on class: Img.FRU	Severity: major Specific problem: Power subsystem AC facility input power exceeded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem AC facility input power exceeded. There is a power subsystem Power subsystem AC facility input power exceeded for this power enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisAc-FacilityPowerExceeded		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 27-574 IK8252388

Alarm	Attributes	Applicable major release
Name: IK8252388 (6614) Type: equipmentAlarm Package: Img.IK8252388 Raised on class: Img.FRU	Severity: major Specific problem: Unknown power consumption Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Unknown power consumption. There is an unknown power consumer drawing power.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerUnknownPowerConsumption		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 27-575 IK8252391

Alarm	Attributes	Applicable major release
Name: IK8252391 (6615) Type: processingErrorAlarm Package: lmg.IK8252391 Raised on class: lmg.FRU	Severity: major Specific problem: Power subsystem improperly configured Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem improperly configured. The power subsystem has been improperly configured.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisConfigError		
Remedial action: Check the cabling of the power enclosure.		

Table 27-576 IK8252401

Alarm	Attributes	Applicable major release
Name: IK8252401 (6616) Type: communicationsAlarm Package: lmg.IK8252401 Raised on class: lmg.FRU	Severity: critical Specific problem: Interconnect failed Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: The interconnect status has been set to failed. This alarm signifies that a interconnect has failed.\nAlarm is cleared by the system.\nReason: cpqRackNetConnectorFailed		
Remedial action: Replace the interconnect as soon as possible.		

Table 27-577 IK8252408

Alarm	Attributes	Applicable major release
Name: IK8252408 (6617) Type: qualityOfServiceAlarm Package: lmg.IK8252408 Raised on class: lmg.FRU	Severity: major Specific problem: Server blade health status degraded Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR14.3.MG • LR15.1.MG
Description: Server blade health status Degraded. The server blade health status has changed to Degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerBladeStatusDegraded		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-578 IK8252409

Alarm	Attributes	Applicable major release
Name: IK8252409 (6618) Type: processingErrorAlarm Package: Img.IK8252409 Raised on class: Img.FRU	Severity: critical Specific problem: Server blade health status critical Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG
Description: Server blade health status Critical. The server blade health status has changed to Critical.\nAlarm is cleared by the system.\nReason: cpqRackServerBladeStatusCritical		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-579 IK8252411

Alarm	Attributes	Applicable major release
Name: IK8252411 (6619) Type: equipmentAlarm Package: Img.IK8252411 Raised on class: Img.FRU	Severity: major Specific problem: Server blade unexpected shutdown Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Server blade shutdown unexpectadly. An unexpected shutdown event has occurred for this server blade.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerBladeUnexpectedShutdown		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-580 IK8252428

Alarm	Attributes	Applicable major release
Name: IK8252428 (6620) Type: equipmentAlarm Package: Img.IK8252428 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Generic EAE Major trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: EAE Major trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackMajorEAETrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-581 IK8252429

Alarm	Attributes	Applicable major release
Name: IK8252429 (6621) Type: equipmentAlarm Package: Img.IK8252429 Raised on class: Img.LMGMngElement	Severity: critical Specific problem: Generic EAE Critical trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: EAE Critical trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackCriticalEAETrap		

Table 27-581 IK8252429 (continued)

Alarm	Attributes	Applicable major release
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-582 IK8252431

Alarm	Attributes	Applicable major release
Name: IK8252431 (6622) Type: equipmentAlarm Package: lmg.IK8252431 Raised on class: lmg.FRU	Severity: major Specific problem: Generic Power Subsystem EAE Major trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: FlexFabric Cmdr Power Subsystem Major trap.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerMajorEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 27-583 IK8252432

Alarm	Attributes	Applicable major release
Name: IK8252432 (6623) Type: equipmentAlarm Package: lmg.IK8252432 Raised on class: lmg.FRU	Severity: critical Specific problem: Generic Power Subsystem EAE Critical trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: FlexFabric Cmdr Power Subsystem Critical trap.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerCriticalEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 27-584 IK8252436

Alarm	Attributes	Applicable major release
Name: IK8252436 (6624) Type: equipmentAlarm Package: lmg.IK8252436 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Generic WSMAN Major trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: WSMAN Major trap\nReason: cpqRackMajorWSMANTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-585 IK8252437

Alarm	Attributes	Applicable major release
Name: IK8252437 (6625) Type: equipmentAlarm Package: lmg.IK8252437 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Generic WSMAN Critical trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: WSMAN Critical trap\nReason: cpqRackCriticalWSMANTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-586 IK8252439

Alarm	Attributes	Applicable major release
Name: IK8252439 (6626) Type: communicationsAlarm Package: lmg.IK8252439 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Standby Recovery Server Interconnect Failure Implicitly cleared: false Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: Recovery Server serial interconnect failure. The Standby Recovery Agent reports that the local serial interconnect is not connected or has failed. The primary server is being shutdown in anticipation of the startup of the standby server.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRsStandbyCableFailure		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-587 IK8252559

Alarm	Attributes	Applicable major release
Name: IK8252559 (6627) Type: equipmentAlarm Package: lmg.IK8252559 Raised on class: lmg.FRU	Severity: critical Specific problem: Critical Alarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: A critical alarm has occurred.\nAlarm is cleared by the system.\nReason: cpqPMTrapCritical		
Remedial action: Check the Trap Details for more information.		

Table 27-588 IK8252609

Alarm	Attributes	Applicable major release
Name: IK8252609 (6628) Type: processingErrorAlarm Package: lmg.IK8252609 Raised on class: lmg.FRU	Severity: major Specific problem: Monitor Condition Failed Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG

Table 27-588 IK8252609 (continued)

Alarm	Attributes	Applicable major release
Description: A fault reporting feature has exceeded normal limits in the monitor indicated by the cpqSiMonitorIndex. The monitor's condition has been set to failed due to an operational feature exceeding normal operating limits. The monitor will not be useable and should be replaced.\nAlarm is cleared by the system.\nReason: cpqSiMonitorConditionFailed		
Remedial action: Make a note of the monitor model number and serial number. Replace the monitor. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 27-589 IK8252610

Alarm	Attributes	Applicable major release
Name: IK8252610 (6629) Type: processingErrorAlarm Package: lmg.IK8252610 Raised on class: lmg.FRU	Severity: major Specific problem: Excessive Correctable Memory Errors Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Correctable memory error count has exceeded the threshold for the memory module indicated by the 'cpqSiMemErrorIndex' variable. The appropriate cpqSiMemModuleECCStatus has been set to degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiCorrMemErrStatusDegraded		
Remedial action: For Desktops, the System Administrator should run the F10 Diagnostics on this system and select RAM LONG TEST. If it is determined that a module needs replacing, schedule maintenance for the system and replace the failed memory module. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 27-590 IK8252615

Alarm	Attributes	Applicable major release
Name: IK8252615 (6630) Type: equipmentAlarm Package: lmg.IK8252615 Raised on class: lmg.FRU	Severity: major Specific problem: Hot Plug Slot Board Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Hot Plug Slot Board Failed Power-Up. A Hot Plug Slot Board has failed to power-up in the specified chassis and slot.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiHotPlugSlotPowerUpFailed		
Remedial action: Insure the board and all cables are installed correctly and the board type and revision are the same as the replaced board.		

Table 27-591 IK8252616

Alarm	Attributes	Applicable major release
Name: IK8252616 (6631) Type: environmentalAlarm Package: Img.IK8252616 Raised on class: Img.FRU	Severity: major Specific problem: Battery Failure Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The battery indicated by cpqSiSysBatteryIndex has failed and must be replaced.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiSysBatteryFailure		
Remedial action: Contact your System Administrator or Authorized Reseller to order a replacement battery. Recycle your old battery. For proper disposal information, refer to the documentation that came with your computer.		

Table 27-592 IK8252617

Alarm	Attributes	Applicable major release
Name: IK8252617 (6632) Type: environmentalAlarm Package: Img.IK8252617 Raised on class: Img.FRU	Severity: major Specific problem: Battery Charging Degradation Implicitly cleared: true Default probable cause: lowBatteryThreshold	Release: • LR14.3.MG • LR15.1.MG
Description: Significant battery degradation has occurred with battery indicated by cpqSiSysBatteryIndex. The battery can no longer be fully recharged.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiSysBatteryChargingDegraded		
Remedial action: If using multiple batteries, run the Power Conservation Utility to identify the battery location. Contact your System Administrator or Authorized Reseller to order a replacement battery.		

Table 27-593 IK8252620

Alarm	Attributes	Applicable major release
Name: IK8252620 (6633) Type: equipmentAlarm Package: Img.IK8252620 Raised on class: Img.FRU	Severity: major Specific problem: Server Power Outage Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Server Power Outage. The Remote Insight/ Integrated Lights-Out firmware has detected server power failure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSm2ServerPowerOutage		
Remedial action: Check the server's power source.		

Table 27-594 IK8252622

Alarm	Attributes	Applicable major release
Name: IK8252622 (6634) Type: environmentalAlarm Package: Img.IK8252622 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Remote Insight Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Remote Insight Battery Failed. The Remote Insight battery has failed and needs to be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2BatteryFailed		
Remedial action: replace the failing Remote Insight battery.		

Table 27-595 IK8252628

Alarm	Attributes	Applicable major release
Name: IK8252628 (6635) Type: equipmentAlarm Package: Img.IK8252628 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Remote Insight external power cable disconnected Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: External Power Cable Disconnected. The Remote Insight external power cable has been disconnected.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ExternalPowerCableDisconnected		
Remedial action: check External Power Cable		

Table 27-596 IK8252632

Alarm	Attributes	Applicable major release
Name: IK8252632 (6636) Type: processingErrorAlarm Package: Img.IK8252632 Raised on class: Img.LMGMngElement	Severity: critical Specific problem: Server Fatal Error Detected Implicitly cleared: false Default probable cause: softwareError	Release: • LR14.3.MG
Description: Server Fatal Error Detected. The Remote Insight/ Integrated Lights-Out firmware has detected a server fatal error.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerFatalError		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-597 IK8252633

Alarm	Attributes	Applicable major release
Name: IK8252633 (6637) Type: communicationsAlarm Package: Img.IK8252633 Raised on class: Img.FRU	Severity: major Specific problem: The iLO NIC Link is Down Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: The iLO NIC Link is Down. The Remote Insight/ Integrated Lights-Out firmware has detected the loss of network link.\nAlarm is cleared by the system.\nReason: cpqSm2NicLinkDown		
Remedial action: Check the network connections for the iLO.		

Table 27-598 IK8252636

Alarm	Attributes	Applicable major release
Name: IK8252636 (9230) Type: equipmentAlarm Package: Img.IK8252636 Raised on class: Img.FRU	Severity: major Specific problem: Server powered off Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: The server has been powered off. This will be sent once the server has been powered off, either by OS, or the power button.\nAlarm is cleared by the system.\nReason: cpqSm2ServerPowerOff		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-599 IK8252648

Alarm	Attributes	Applicable major release
Name: IK8252648 (6638) Type: qualityOfServiceAlarm Package: Img.IK8252648 Raised on class: Img.FRU	Severity: major Specific problem: PC Card Thermal Failure Status Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm is sent when the PC Card Slot Thermal Sensor threshold has been exceeded for degraded operations thereby causing failed operations. This alarm will be sent when cpqSePCCardStatus transitions from Thermal Degraded (2) to Thermal Failure (3). The manufacturer and product information strings as well as the slot number for the failed PC Card is provided as parameters for this trap.\nAlarm is cleared by the system.\nReason: cpqSePCCardThermalFailure		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-600 IK8252657

Alarm	Attributes	Applicable major release
Name: IK8252657 (6639) Type: environmentalAlarm Package: lmg.IK8252657 Raised on class: lmg.FRU	Severity: major Specific problem: Storage System Temperature Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.\nAlarm is cleared by the system.\nReason: cpqSsTempFailed		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-601 IK8254762

Alarm	Attributes	Applicable major release
Name: IK8254762 (6640) Type: communicationsAlarm Package: lmg.IK8254762 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: linkDown Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: A linkDown alarm signifies that the SNMP entity, acting in an agent role, has detected that the ifOperStatus object for one of its communication links is about to enter the down state from some other state (but not from the notPresent state). This other state is indicated by the included value of ifOperStatus.\nAlarm is cleared by the system.\nReason: linkDown		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-602 IK8300982

Alarm	Attributes	Applicable major release
Name: IK8300982 (6641) Type: equipmentAlarm Package: lmg.IK8300982 Raised on class: lmg.FRU	Severity: major Specific problem: Cluster Node Failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a node in the cluster becomes failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterNodeFailed		
Remedial action: Make a note of the cluster node name then check the node for the cause of the failure.		

Table 27-603 IK8300984

Alarm	Attributes	Applicable major release
Name: IK8300984 (6642) Type: processingErrorAlarm Package: Img.IK8300984 Raised on class: Img.FRU	Severity: major Specific problem: Cluster Resource Failed Implicitly cleared: true Default probable cause: underlyingResourceUnavail-able	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a cluster resource becomes failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterResourceFailed		
Remedial action: Make a note of the cluster resource name then check the resource for the cause of the failure.		

Table 27-604 IK8300986

Alarm	Attributes	Applicable major release
Name: IK8300986 (6643) Type: equipmentAlarm Package: Img.IK8300986 Raised on class: Img.FRU	Severity: major Specific problem: Cluster Network Failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a cluster network becomes failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterNetworkFailed		
Remedial action: Make a note of the cluster network name then check the network for the cause of the failure.		

Table 27-605 IK8301008

Alarm	Attributes	Applicable major release
Name: IK8301008 (6644) Type: equipmentAlarm Package: Img.IK8301008 Raised on class: Img.FRU	Severity: major Specific problem: The primary controller in the subsytem has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The primary controller in the subsystem has failed. Details: The primary Controller has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrController1FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 27-606 IK8301010

Alarm	Attributes	Applicable major release
Name: IK8301010 (6645) Type: equipmentAlarm Package: lmg.IK8301010 Raised on class: lmg.FRU	Severity: major Specific problem: The secondary controller in the subsytem has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The secondary controller in the subsystem has failed. Details: The secondary controller has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrController2FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 27-607 IK8301013

Alarm	Attributes	Applicable major release
Name: IK8301013 (6646) Type: equipmentAlarm Package: lmg.IK8301013 Raised on class: lmg.FRU	Severity: major Specific problem: A RAIDset has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: A RAIDset has failed. Details: The RAIDset has failed and is off-line.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrLogDriveFailureTrap		
Remedial action: Possible cause is too many failed disk drives that make up the RAIDset, the OS can no longer communicate with the RAIDset for other reasons.		

Table 27-608 IK8301018

Alarm	Attributes	Applicable major release
Name: IK8301018 (6647) Type: processingErrorAlarm Package: lmg.IK8301018 Raised on class: lmg.FRU	Severity: major Specific problem: A disk drive has failed Implicitly cleared: true Default probable cause: storageCapacityProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system.\nReason: cpqCrDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 27-609 IK8301023

Alarm	Attributes	Applicable major release
Name: IK8301023 (6648) Type: processingErrorAlarm Package: lmg.IK8301023 Raised on class: lmg.FRU	Severity: major Specific problem: A disk drive has failed Implicitly cleared: true Default probable cause: storageCapacityProblem	Release: • LR14.3.MG • LR15.1.MG

Table 27-609 IK8301023 (continued)

Alarm	Attributes	Applicable major release
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrPhyDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 27-610 IK8301030

Alarm	Attributes	Applicable major release
Name: IK8301030 (6649) Type: equipmentAlarm Package: lmg.IK8301030 Raised on class: lmg.FRU	Severity: major Specific problem: Power supply has failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power supply has failed. Details: One of the power supplies in the primary enclosure has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrEMUPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 27-611 IK8301033

Alarm	Attributes	Applicable major release
Name: IK8301033 (6650) Type: equipmentAlarm Package: lmg.IK8301033 Raised on class: lmg.FRU	Severity: critical Specific problem: Primary enclosure temperature critical! Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Primary enclosure temperature critical!. Details: The temperature in the primary enclosure has triggered a critical condition detected by the controller.\nAlarm is cleared by the system.\nReason: cpqCrEMUTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the primary enclosure.		

Table 27-612 IK8301037

Alarm	Attributes	Applicable major release
Name: IK8301037 (6651) Type: equipmentAlarm Package: lmg.IK8301037 Raised on class: lmg.FRU	Severity: major Specific problem: Power supply has failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power supply has failed. Details: One of the power supplies in the expansion cabinet has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrExpCabPowerSupplyFailureTrap		

Table 27-612 IK8301037 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 27-613 IK8301040

Alarm	Attributes	Applicable major release
Name: IK8301040 (6652) Type: environmentalAlarm Package: lmg.IK8301040 Raised on class: lmg.FRU	Severity: critical Specific problem: cpqCrExpCabTemperatureCriti-calTrap Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: Expansion cabinet temperature critical! Details: The temperature in the expansion cabinet has triggered a critical condition detected by the controller.\nAlarm is cleared by the system.\nReason: cpqCrExpCabTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the expansion cabinet.		

Table 27-614 IK8301060

Alarm	Attributes	Applicable major release
Name: IK8301060 (6653) Type: environmentalAlarm Package: lmg.IK8301060 Raised on class: lmg.FRU	Severity: major Specific problem: External Array Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqFcaAccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 27-615 IK8301073

Alarm	Attributes	Applicable major release
Name: IK8301073 (6654) Type: environmentalAlarm Package: lmg.IK8301073 Raised on class: lmg.FRU	Severity: major Specific problem: External Array Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqFca2AccelBatteryFailed		

Table 27-615 IK8301073 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Replace the Accelerator Cache Board.		

Table 27-616 IK8301091

Alarm	Attributes	Applicable major release
Name: IK8301091 (9231) Type: environmentalAlarm Package: Img.IK8301091 Raised on class: Img.FRU	Severity: major Specific problem: System Fan Failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR15.1.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHeThermalSystemFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-617 IK8301098

Alarm	Attributes	Applicable major release
Name: IK8301098 (6655) Type: equipmentAlarm Package: Img.IK8301098 Raised on class: Img.LMGMngElement	Severity: major Specific problem: POST Errors Occurred Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHePostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 27-618 IK8301102

Alarm	Attributes	Applicable major release
Name: IK8301102 (6656) Type: environmentalAlarm Package: Img.IK8301102 Raised on class: Img.FRU	Severity: major Specific problem: Thermal Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: The temperature status has been set to failed. The system will be shutdown due to this thermal condition.\nAlarm is cleared by the system.\nReason: cpqHe3ThermalTempFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 27-619 IK8301105

Alarm	Attributes	Applicable major release
Name: IK8301105 (6657) Type: environmentalAlarm Package: Img.IK8301105 Raised on class: Img.FRU	Severity: major Specific problem: System Fan Failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHe3ThermalSystemFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-620 IK8301112

Alarm	Attributes	Applicable major release
Name: IK8301112 (6658) Type: equipmentAlarm Package: Img.IK8301112 Raised on class: Img.FRU	Severity: major Specific problem: POST Errors Occurred Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process. Details of the POST error messages can be found in Integrated Management Log\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3PostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 27-621 IK8301116

Alarm	Attributes	Applicable major release
Name: IK8301116 (6659) Type: equipmentAlarm Package: Img.IK8301116 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Power Supply Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe3FltTolPowerSupplyFailed		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-622 IK8301121

Alarm	Attributes	Applicable major release
Name: IK8301121 (6660) Type: environmentalAlarm Package: Img.IK8301121 Raised on class: Img.FRU	Severity: major Specific problem: Fan Failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The Fault Tolerant Fan condition has been set to failed for the specified chassis and fan.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3FltTolFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-623 IK8301125

Alarm	Attributes	Applicable major release
Name: IK8301125 (6661) Type: environmentalAlarm Package: Img.IK8301125 Raised on class: Img.FRU	Severity: major Specific problem: Thermal Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: The temperature status has been set to failed in the specified chassis and location. The system will be shutdown due to this condition.\nAlarm is cleared by the system.\nReason: cpqHe3TemperatureFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 27-624 IK8301129

Alarm	Attributes	Applicable major release
Name: IK8301129 (6662) Type: equipmentAlarm Package: Img.IK8301129 Raised on class: Img.FRU	Severity: major Specific problem: Power Converter Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The DC-DC Power Converter condition has been set to failed for the specified chassis, slot and socket.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3PowerConverterFailed		
Remedial action: Replace the failed power converter.		

Table 27-625 IK8301135

Alarm	Attributes	Applicable major release
Name: IK8301135 (6663) Type: equipmentAlarm Package: Img.IK8301135 Raised on class: Img.FRU	Severity: major Specific problem: Power Supply Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG

Table 27-625 IK8301135 (continued)

Alarm	Attributes	Applicable major release
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FltTolPowerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

Table 27-626 IK8301144

Alarm	Attributes	Applicable major release
Name: IK8301144 (6664) Type: processingErrorAlarm Package: Img.IK8301144 Raised on class: Img.FRU	Severity: major Specific problem: Memory Board or Cartridge Bus Error Detected Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Memory board or cartridge bus error detected. An Advanced Memory Protection sub-system board or cartridge bus error has been detected.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge.		

Table 27-627 IK8301148

Alarm	Attributes	Applicable major release
Name: IK8301148 (6665) Type: equipmentAlarm Package: Img.IK8301148 Raised on class: Img.FRU	Severity: major Specific problem: Management processor failed reset Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The Management processor failed reset The management processor was not successfully reset and is not operational.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeManagementProcFailedReset		
Remedial action: Reset the management procesessor again or re-flash the management processor firmware.		

Table 27-628 IK8301152

Alarm	Attributes	Applicable major release
Name: IK8301152 (6666) Type: processingErrorAlarm Package: Img.IK8301152 Raised on class: Img.FRU	Severity: major Specific problem: Memory Board or Cartridge or Riser Bus Error Detected Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Memory board or cartridge or Riser bus error detected. An Advanced Memory Protection sub-system board or cartridge or Riser bus error has been detected. Value 0 for CPU means memory is not processor based.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe5ResMemBoardBusError		

Table 27-628 IK8301152 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Replace the indicated board or cartridge or Riser.		

Table 27-629 IK8301154

Alarm	Attributes	Applicable major release
Name: IK8301154 (6667) Type: equipmentAlarm Package: Img.IK8301154 Raised on class: Img.FRU	Severity: major Specific problem: Power Supply AC Power Loss Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The fault tolerant power supply AC power loss for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FltTolPowerSupplyACpowerloss		
Remedial action: Check the power source for the specified power supply.		

Table 27-630 IK8301156

Alarm	Attributes	Applicable major release
Name: IK8301156 (6668) Type: processingErrorAlarm Package: Img.IK8301156 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Application Error Trap Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHoAppErrorTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-631 IK8301158

Alarm	Attributes	Applicable major release
Name: IK8301158 (6669) Type: processingErrorAlarm Package: Img.IK8301158 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Application Error Trap Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2AppErrorTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-632 IK8301160

Alarm	Attributes	Applicable major release
Name: IK8301160 (9232) Type: communicationsAlarm Package: lmg.IK8301160 Raised on class: lmg.FRU	Severity: major Specific problem: Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition.\nAlarm is cleared by the system.\nReason: cpqHo2NicStatusFailed		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 27-633 IK8301163

Alarm	Attributes	Applicable major release
Name: IK8301163 (6670) Type: communicationsAlarm Package: lmg.IK8301163 Raised on class: lmg.FRU	Severity: major Specific problem: Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition.\nAlarm is cleared by the system.\nReason: cpqHo2NicStatusFailed2		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 27-634 IK8301172

Alarm	Attributes	Applicable major release
Name: IK8301172 (6671) Type: qualityOfServiceAlarm Package: lmg.IK8301172 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Power Threshold Exceeded Implicitly cleared: false Default probable cause: resourceAtOrNearingCapacity	Release: • LR14.3.MG
Description: This alarm notifies user of a power threshold breach. Power threshold exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2PowerThresholdTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-635 IK8302265

Alarm	Attributes	Applicable major release
Name: IK8302265 (6672) Type: environmentalAlarm Package: Img.IK8302265 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDaAccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 27-636 IK8302272

Alarm	Attributes	Applicable major release
Name: IK8302272 (6673) Type: environmentalAlarm Package: Img.IK8302272 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa2AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 27-637 IK8302279

Alarm	Attributes	Applicable major release
Name: IK8302279 (6674) Type: environmentalAlarm Package: Img.IK8302279 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa3AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 27-638 IK8302291

Alarm	Attributes	Applicable major release
Name: IK8302291 (6675) Type: equipmentAlarm Package: lmg.IK8302291 Raised on class: lmg.FRU	Severity: major Specific problem: Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Accelerator Board Bad Data. This alarm signifies that the agent has detected an array accelerator cache board that has lost battery power. If data was being stored in the accelerator cache memory when the server lost power, that data has been lost.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqDa5AccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 27-639 IK8302292

Alarm	Attributes	Applicable major release
Name: IK8302292 (6676) Type: environmentalAlarm Package: lmg.IK8302292 Raised on class: lmg.FRU	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqDa5AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 27-640 IK8302295

Alarm	Attributes	Applicable major release
Name: IK8302295 (6677) Type: equipmentAlarm Package: lmg.IK8302295 Raised on class: lmg.FRU	Severity: major Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm is cleared by the system when the device is restarted.\ nReason: cpqDa5PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 27-641 IK8302302

Alarm	Attributes	Applicable major release
Name: IK8302302 (6678) Type: equipmentAlarm Package: Img.IK8302302 Raised on class: Img.FRU	Severity: major Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm is cleared by the system when the device is restarted.\ nReason: cpqDa6PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 27-642 IK8302337

Alarm	Attributes	Applicable major release
Name: IK8302337 (6679) Type: communicationsAlarm Package: Img.IK8302337 Raised on class: Img.FRU	Severity: major Specific problem: NIC Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNicConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-643 IK8302341

Alarm	Attributes	Applicable major release
Name: IK8302341 (6680) Type: communicationsAlarm Package: Img.IK8302341 Raised on class: Img.FRU	Severity: major Specific problem: NIC Connectivity Lost Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-644 IK8302343

Alarm	Attributes	Applicable major release
Name: IK8302343 (6681) Type: communicationsAlarm Package: lmg.IK8302343 Raised on class: lmg.FRU	Severity: major Specific problem: NIC Redundancy Reduced Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2RedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-645 IK8302347

Alarm	Attributes	Applicable major release
Name: IK8302347 (6682) Type: communicationsAlarm Package: lmg.IK8302347 Raised on class: lmg.FRU	Severity: major Specific problem: NIC Connectivity Lost Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqNic3ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-646 IK8302349

Alarm	Attributes	Applicable major release
Name: IK8302349 (6683) Type: communicationsAlarm Package: lmg.IK8302349 Raised on class: lmg.FRU	Severity: major Specific problem: NIC Redundancy Reduced Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic3RedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-647 IK8302360

Alarm	Attributes	Applicable major release
Name: IK8302360 (6684) Type: equipmentAlarm Package: lmg.IK8302360 Raised on class: lmg.FRU	Severity: major Specific problem: Enclosure temperature failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The enclosure temperature status has been set to failed. This alarm signifies that a enclosure temperature sensor has been tripped indicating an overheat condition.\nAlarm is cleared by the system.\nReason: cpqRackEnclosureTempFailed		
Remedial action: Shutdown the enclosure and possibly the rack as soon as possible. Ensure all fans are working properly and that air flow in the rack has not been blocked.		

Table 27-648 IK8302363

Alarm	Attributes	Applicable major release
Name: IK8302363 (6685) Type: environmentalAlarm Package: lmg.IK8302363 Raised on class: lmg.FRU	Severity: major Specific problem: Enclosure fan failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The enclosure fan status has been set to failed. This alarm signifies that an enclosure fan has failed and no other fans in the redundant fan group are operating. This may result in overheating of the enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackEnclosureFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-649 IK8302368

Alarm	Attributes	Applicable major release
Name: IK8302368 (6686) Type: equipmentAlarm Package: lmg.IK8302368 Raised on class: lmg.FRU	Severity: critical Specific problem: Rack power supply failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The power supply status has been set to failed. This alarm signifies that a power supply has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

Table 27-650 IK8302369

Alarm	Attributes	Applicable major release
Name: IK8302369 (6687) Type: equipmentAlarm Package: lmg.IK8302369 Raised on class: lmg.FRU	Severity: major Specific problem: Rack power supply degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The power supply status has been set to degraded. This alarm signifies that a power supply has degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSupplyDegraded		
Remedial action: Replace the power supply as soon as possible.		

Table 27-651 IK8302374

Alarm	Attributes	Applicable major release
Name: IK8302374 (6688) Type: equipmentAlarm Package: lmg.IK8302374 Raised on class: lmg.FRU	Severity: major Specific problem: Rack power supply input voltage problem Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The rack power supply detected an input line voltage problem.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSubsystemLineVoltageProblem		
Remedial action: Check the power input for the power supply or replace any failed power supplies as soon as possible.		

Table 27-652 IK8302375

Alarm	Attributes	Applicable major release
Name: IK8302375 (6689) Type: equipmentAlarm Package: lmg.IK8302375 Raised on class: lmg.FRU	Severity: major Specific problem: Rack power subsystem overload condition Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The rack power subsystem overload condition.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSubsystemOverloadCondition		
Remedial action: Replace any failed power supplies as soon as possible to return the system to a redundant state.		

Table 27-653 IK8302376

Alarm	Attributes	Applicable major release
Name: IK8302376 (6690) Type: equipmentAlarm Package: Img.IK8302376 Raised on class: Img.FRU	Severity: critical Specific problem: Server shutdown due to power shedding Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Server shutdown due to power shedding. The server blade was shutdown due to a lack of power.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerShedAutoShutdown		
Remedial action: Check power connections or add power supplies.		

Table 27-654 IK8302377

Alarm	Attributes	Applicable major release
Name: IK8302377 (6691) Type: equipmentAlarm Package: Img.IK8302377 Raised on class: Img.FRU	Severity: critical Specific problem: Server power on prevented to preserve redundancy Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Server power on prevented to preserve redundancy. There is not enough power to power on the server blade and maintain redundancy for the other blades in the enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailedNotRedundant		
Remedial action: Check power connections or add power supplies.		

Table 27-655 IK8302378

Alarm	Attributes	Applicable major release
Name: IK8302378 (6692) Type: equipmentAlarm Package: Img.IK8302378 Raised on class: Img.FRU	Severity: critical Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailedNotEnoughPower		
Remedial action: Check power connections or add power supplies.		

Table 27-656 IK8302379

Alarm	Attributes	Applicable major release
Name: IK8302379 (6693) Type: equipmentAlarm Package: Img.IK8302379 Raised on class: Img.FRU	Severity: critical Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The server enclosure micro-controller was not found.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFaile-dEnclosureNotFound		
Remedial action: Check server enclosure connections or add power supplies.		

Table 27-657 IK8302380

Alarm	Attributes	Applicable major release
Name: IK8302380 (6694) Type: equipmentAlarm Package: Img.IK8302380 Raised on class: Img.FRU	Severity: critical Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The power enclosure micro-controller was not found.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailed-PowerChassisNotFound		
Remedial action: Check power enclosure connections or add power supplies.		

Table 27-658 IK8302382

Alarm	Attributes	Applicable major release
Name: IK8302382 (6695) Type: environmentalAlarm Package: Img.IK8302382 Raised on class: Img.FRU	Severity: major Specific problem: Fuse open Implicitly cleared: true Default probable cause: enclosureDoorOpen	Release: • LR14.3.MG • LR15.1.MG
Description: Fuse open. The fuse has been tripped.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackFuseOpen		
Remedial action: Check enclosure and / or blade power connections and reset the fuse.		

Table 27-659 IK8302386

Alarm	Attributes	Applicable major release
Name: IK8302386 (6696) Type: equipmentAlarm Package: Img.IK8302386 Raised on class: Img.FRU	Severity: major Specific problem: Power subsystem DC power problem Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem DC power problem. There is a power subsystem DC power problem for this power enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisDcPowerProblem		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 27-660 IK8302387

Alarm	Attributes	Applicable major release
Name: IK8302387 (6697) Type: equipmentAlarm Package: Img.IK8302387 Raised on class: Img.FRU	Severity: major Specific problem: Power subsystem AC facility input power exceeded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem AC facility input power exceeded. There is a power subsystem Power subsystem AC facility input power exceeded for this power enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisAc-FacilityPowerExceeded		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 27-661 IK8302388

Alarm	Attributes	Applicable major release
Name: IK8302388 (6698) Type: equipmentAlarm Package: Img.IK8302388 Raised on class: Img.FRU	Severity: major Specific problem: Unknown power consumption Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Unknown power consumption. There is an unknown power consumer drawing power.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerUnknownPowerConsumption		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 27-662 IK8302391

Alarm	Attributes	Applicable major release
Name: IK8302391 (6699) Type: processingErrorAlarm Package: lmg.IK8302391 Raised on class: lmg.FRU	Severity: major Specific problem: Power subsystem improperly configured Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem improperly configured. The power subsystem has been improperly configured.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisConfigError		
Remedial action: Check the cabling of the power enclosure.		

Table 27-663 IK8302401

Alarm	Attributes	Applicable major release
Name: IK8302401 (6700) Type: communicationsAlarm Package: lmg.IK8302401 Raised on class: lmg.FRU	Severity: critical Specific problem: Interconnect failed Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: The interconnect status has been set to failed. This alarm signifies that a interconnect has failed.\nAlarm is cleared by the system.\nReason: cpqRackNetConnectorFailed		
Remedial action: Replace the interconnect as soon as possible.		

Table 27-664 IK8302408

Alarm	Attributes	Applicable major release
Name: IK8302408 (6701) Type: qualityOfServiceAlarm Package: lmg.IK8302408 Raised on class: lmg.FRU	Severity: major Specific problem: Server blade health status degraded Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR14.3.MG • LR15.1.MG
Description: Server blade health status Degraded. The server blade health status has changed to Degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerBladeStatusDegraded		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-665 IK8302409

Alarm	Attributes	Applicable major release
Name: IK8302409 (6702) Type: processingErrorAlarm Package: Img.IK8302409 Raised on class: Img.FRU	Severity: critical Specific problem: Server blade health status critical Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG
Description: Server blade health status Critical. The server blade health status has changed to Critical.\nAlarm is cleared by the system.\nReason: cpqRackServerBladeStatusCritical		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-666 IK8302411

Alarm	Attributes	Applicable major release
Name: IK8302411 (6703) Type: equipmentAlarm Package: Img.IK8302411 Raised on class: Img.FRU	Severity: major Specific problem: Server blade unexpected shutdown Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Server blade shutdown unexpectadly. An unexpected shutdown event has occurred for this server blade.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerBladeUnexpectedShutdown		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-667 IK8302428

Alarm	Attributes	Applicable major release
Name: IK8302428 (6704) Type: equipmentAlarm Package: Img.IK8302428 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Generic EAE Major trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: EAE Major trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackMajorEAETrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-668 IK8302429

Alarm	Attributes	Applicable major release
Name: IK8302429 (6705) Type: equipmentAlarm Package: Img.IK8302429 Raised on class: Img.LMGMngElement	Severity: critical Specific problem: Generic EAE Critical trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: EAE Critical trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackCriticalEAETrap		

Table 27-668 IK8302429 (continued)

Alarm	Attributes	Applicable major release
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-669 IK8302431

Alarm	Attributes	Applicable major release
Name: IK8302431 (6706) Type: equipmentAlarm Package: lmg.IK8302431 Raised on class: lmg.FRU	Severity: major Specific problem: Generic Power Subsystem EAE Major trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: FlexFabric Cmdr Power Subsystem Major trap.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerMajorEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 27-670 IK8302432

Alarm	Attributes	Applicable major release
Name: IK8302432 (6707) Type: equipmentAlarm Package: lmg.IK8302432 Raised on class: lmg.FRU	Severity: critical Specific problem: Generic Power Subsystem EAE Critical trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: FlexFabric Cmdr Power Subsystem Critical trap.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerCriticalEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 27-671 IK8302436

Alarm	Attributes	Applicable major release
Name: IK8302436 (6708) Type: equipmentAlarm Package: lmg.IK8302436 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Generic WSMAN Major trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: WSMAN Major trap\nReason: cpqRackMajorWSMANTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-672 IK8302437

Alarm	Attributes	Applicable major release
Name: IK8302437 (6709) Type: equipmentAlarm Package: lmg.IK8302437 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Generic WSMAN Critical trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: WSMAN Critical trap\nReason: cpqRackCriticalWSMANTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-673 IK8302439

Alarm	Attributes	Applicable major release
Name: IK8302439 (6710) Type: communicationsAlarm Package: lmg.IK8302439 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Standby Recovery Server Interconnect Failure Implicitly cleared: false Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: Recovery Server serial interconnect failure. The Standby Recovery Agent reports that the local serial interconnect is not connected or has failed. The primary server is being shutdown in anticipation of the startup of the standby server.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRsStandbyCableFailure		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-674 IK8302559

Alarm	Attributes	Applicable major release
Name: IK8302559 (6711) Type: equipmentAlarm Package: lmg.IK8302559 Raised on class: lmg.FRU	Severity: critical Specific problem: Critical Alarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: A critical alarm has occurred.\nAlarm is cleared by the system.\nReason: cpqPMTrapCritical		
Remedial action: Check the Trap Details for more information.		

Table 27-675 IK8302609

Alarm	Attributes	Applicable major release
Name: IK8302609 (6712) Type: processingErrorAlarm Package: lmg.IK8302609 Raised on class: lmg.FRU	Severity: major Specific problem: Monitor Condition Failed Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG

Table 27-675 IK8302609 (continued)

Alarm	Attributes	Applicable major release
Description: A fault reporting feature has exceeded normal limits in the monitor indicated by the cpqSiMonitorIndex. The monitor's condition has been set to failed due to an operational feature exceeding normal operating limits. The monitor will not be useable and should be replaced.\nAlarm is cleared by the system.\nReason: cpqSiMonitorConditionFailed		
Remedial action: Make a note of the monitor model number and serial number. Replace the monitor. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 27-676 IK8302610

Alarm	Attributes	Applicable major release
Name: IK8302610 (6713) Type: processingErrorAlarm Package: lmg.IK8302610 Raised on class: lmg.FRU	Severity: major Specific problem: Excessive Correctable Memory Errors Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Correctable memory error count has exceeded the threshold for the memory module indicated by the 'cpqSiMemErrorIndex' variable. The appropriate cpqSiMemModuleECCStatus has been set to degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiCorrMemErrStatusDegraded		
Remedial action: For Desktops, the System Administrator should run the F10 Diagnostics on this system and select RAM LONG TEST. If it is determined that a module needs replacing, schedule maintenance for the system and replace the failed memory module. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 27-677 IK8302615

Alarm	Attributes	Applicable major release
Name: IK8302615 (6714) Type: equipmentAlarm Package: lmg.IK8302615 Raised on class: lmg.FRU	Severity: major Specific problem: Hot Plug Slot Board Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Hot Plug Slot Board Failed Power-Up. A Hot Plug Slot Board has failed to power-up in the specified chassis and slot.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiHotPlugSlotPowerUpFailed		
Remedial action: Insure the board and all cables are installed correctly and the board type and revision are the same as the replaced board.		

Table 27-678 IK8302616

Alarm	Attributes	Applicable major release
Name: IK8302616 (6715) Type: environmentalAlarm Package: lmg.IK8302616 Raised on class: lmg.FRU	Severity: major Specific problem: Battery Failure Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The battery indicated by cpqSiSysBatteryIndex has failed and must be replaced.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiSysBatteryFailure		
Remedial action: Contact your System Administrator or Authorized Reseller to order a replacement battery. Recycle your old battery. For proper disposal information, refer to the documentation that came with your computer.		

Table 27-679 IK8302617

Alarm	Attributes	Applicable major release
Name: IK8302617 (6716) Type: environmentalAlarm Package: lmg.IK8302617 Raised on class: lmg.FRU	Severity: major Specific problem: Battery Charging Degradation Implicitly cleared: true Default probable cause: lowBatteryThreshold	Release: • LR14.3.MG • LR15.1.MG
Description: Significant battery degradation has occurred with battery indicated by cpqSiSysBatteryIndex. The battery can no longer be fully recharged.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiSysBatteryChargingDegraded		
Remedial action: If using multiple batteries, run the Power Conservation Utility to identify the battery location. Contact your System Administrator or Authorized Reseller to order a replacement battery.		

Table 27-680 IK8302620

Alarm	Attributes	Applicable major release
Name: IK8302620 (6717) Type: equipmentAlarm Package: lmg.IK8302620 Raised on class: lmg.FRU	Severity: major Specific problem: Server Power Outage Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Server Power Outage. The Remote Insight/ Integrated Lights-Out firmware has detected server power failure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSm2ServerPowerOutage		
Remedial action: Check the server's power source.		

Table 27-681 IK8302622

Alarm	Attributes	Applicable major release
Name: IK8302622 (6718) Type: environmentalAlarm Package: Img.IK8302622 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Remote Insight Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Remote Insight Battery Failed. The Remote Insight battery has failed and needs to be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2BatteryFailed		
Remedial action: replace the failing Remote Insight battery.		

Table 27-682 IK8302628

Alarm	Attributes	Applicable major release
Name: IK8302628 (6719) Type: equipmentAlarm Package: Img.IK8302628 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Remote Insight external power cable disconnected Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: External Power Cable Disconnected. The Remote Insight external power cable has been disconnected.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ExternalPowerCableDisconnected		
Remedial action: check External Power Cable		

Table 27-683 IK8302632

Alarm	Attributes	Applicable major release
Name: IK8302632 (6720) Type: processingErrorAlarm Package: Img.IK8302632 Raised on class: Img.LMGMngElement	Severity: critical Specific problem: Server Fatal Error Detected Implicitly cleared: false Default probable cause: softwareError	Release: • LR14.3.MG
Description: Server Fatal Error Detected. The Remote Insight/ Integrated Lights-Out firmware has detected a server fatal error.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerFatalError		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-684 IK8302633

Alarm	Attributes	Applicable major release
Name: IK8302633 (6721) Type: communicationsAlarm Package: Img.IK8302633 Raised on class: Img.FRU	Severity: major Specific problem: The iLO NIC Link is Down Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: The iLO NIC Link is Down. The Remote Insight/ Integrated Lights-Out firmware has detected the loss of network link.\nAlarm is cleared by the system.\nReason: cpqSm2NicLinkDown		
Remedial action: Check the network connections for the iLO.		

Table 27-685 IK8302636

Alarm	Attributes	Applicable major release
Name: IK8302636 (9233) Type: equipmentAlarm Package: Img.IK8302636 Raised on class: Img.FRU	Severity: major Specific problem: Server powered off Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: The server has been powered off. This will be sent once the server has been powered off, either by OS, or the power button.\nAlarm is cleared by the system.\nReason: cpqSm2ServerPowerOff		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-686 IK8302648

Alarm	Attributes	Applicable major release
Name: IK8302648 (6722) Type: qualityOfServiceAlarm Package: Img.IK8302648 Raised on class: Img.FRU	Severity: major Specific problem: PC Card Thermal Failure Status Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm is sent when the PC Card Slot Thermal Sensor threshold has been exceeded for degraded operations thereby causing failed operations. This alarm will be sent when cpqSePCCardStatus transitions from Thermal Degraded (2) to Thermal Failure (3). The manufacturer and product information strings as well as the slot number for the failed PC Card is provided as parameters for this trap.\nAlarm is cleared by the system.\nReason: cpqSePCCardThermalFailure		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-687 IK8302657

Alarm	Attributes	Applicable major release
Name: IK8302657 (6723) Type: environmentalAlarm Package: lmg.IK8302657 Raised on class: lmg.FRU	Severity: major Specific problem: Storage System Temperature Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.\nAlarm is cleared by the system.\nReason: cpqSsTempFailed		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-688 IK8304762

Alarm	Attributes	Applicable major release
Name: IK8304762 (6724) Type: communicationsAlarm Package: lmg.IK8304762 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: linkDown Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: A linkDown alarm signifies that the SNMP entity, acting in an agent role, has detected that the ifOperStatus object for one of its communication links is about to enter the down state from some other state (but not from the notPresent state). This other state is indicated by the included value of ifOperStatus.\nAlarm is cleared by the system.\nReason: linkDown		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-689 IK8350982

Alarm	Attributes	Applicable major release
Name: IK8350982 (6725) Type: equipmentAlarm Package: lmg.IK8350982 Raised on class: lmg.FRU	Severity: major Specific problem: Cluster Node Failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a node in the cluster becomes failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterNodeFailed		
Remedial action: Make a note of the cluster node name then check the node for the cause of the failure.		

Table 27-690 IK8350984

Alarm	Attributes	Applicable major release
Name: IK8350984 (6726) Type: processingErrorAlarm Package: Img.IK8350984 Raised on class: Img.FRU	Severity: major Specific problem: Cluster Resource Failed Implicitly cleared: true Default probable cause: underlyingResourceUnavail-able	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a cluster resource becomes failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterResourceFailed		
Remedial action: Make a note of the cluster resource name then check the resource for the cause of the failure.		

Table 27-691 IK8350986

Alarm	Attributes	Applicable major release
Name: IK8350986 (6727) Type: equipmentAlarm Package: Img.IK8350986 Raised on class: Img.FRU	Severity: major Specific problem: Cluster Network Failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a cluster network becomes failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterNetworkFailed		
Remedial action: Make a note of the cluster network name then check the network for the cause of the failure.		

Table 27-692 IK8351008

Alarm	Attributes	Applicable major release
Name: IK8351008 (6728) Type: equipmentAlarm Package: Img.IK8351008 Raised on class: Img.FRU	Severity: major Specific problem: The primary controller in the subsytem has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The primary controller in the subsystem has failed. Details: The primary Controller has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrController1FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 27-693 IK8351010

Alarm	Attributes	Applicable major release
Name: IK8351010 (6729) Type: equipmentAlarm Package: lmg.IK8351010 Raised on class: lmg.FRU	Severity: major Specific problem: The secondary controller in the subsytem has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The secondary controller in the subsystem has failed. Details: The secondary controller has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrController2FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 27-694 IK8351013

Alarm	Attributes	Applicable major release
Name: IK8351013 (6730) Type: equipmentAlarm Package: lmg.IK8351013 Raised on class: lmg.FRU	Severity: major Specific problem: A RAIDset has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: A RAIDset has failed. Details: The RAIDset has failed and is off-line.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrLogDriveFailureTrap		
Remedial action: Possible cause is too many failed disk drives that make up the RAIDset, the OS can no longer communicate with the RAIDset for other reasons.		

Table 27-695 IK8351018

Alarm	Attributes	Applicable major release
Name: IK8351018 (6731) Type: processingErrorAlarm Package: lmg.IK8351018 Raised on class: lmg.FRU	Severity: major Specific problem: A disk drive has failed Implicitly cleared: true Default probable cause: storageCapacityProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system.\nReason: cpqCrDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 27-696 IK8351023

Alarm	Attributes	Applicable major release
Name: IK8351023 (6732) Type: processingErrorAlarm Package: lmg.IK8351023 Raised on class: lmg.FRU	Severity: major Specific problem: A disk drive has failed Implicitly cleared: true Default probable cause: storageCapacityProblem	Release: • LR14.3.MG • LR15.1.MG

Table 27-696 IK8351023 (continued)

Alarm	Attributes	Applicable major release
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrPhyDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 27-697 IK8351030

Alarm	Attributes	Applicable major release
Name: IK8351030 (6733) Type: equipmentAlarm Package: lmg.IK8351030 Raised on class: lmg.FRU	Severity: major Specific problem: Power supply has failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power supply has failed. Details: One of the power supplies in the primary enclosure has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrEMUPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 27-698 IK8351033

Alarm	Attributes	Applicable major release
Name: IK8351033 (6734) Type: equipmentAlarm Package: lmg.IK8351033 Raised on class: lmg.FRU	Severity: critical Specific problem: Primary enclosure temperature critical! Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Primary enclosure temperature critical!. Details: The temperature in the primary enclosure has triggered a critical condition detected by the controller.\nAlarm is cleared by the system.\nReason: cpqCrEMUTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the primary enclosure.		

Table 27-699 IK8351037

Alarm	Attributes	Applicable major release
Name: IK8351037 (6735) Type: equipmentAlarm Package: lmg.IK8351037 Raised on class: lmg.FRU	Severity: major Specific problem: Power supply has failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power supply has failed. Details: One of the power supplies in the expansion cabinet has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrExpCabPowerSupplyFailureTrap		

Table 27-699 IK8351037 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 27-700 IK8351040

Alarm	Attributes	Applicable major release
Name: IK8351040 (6736) Type: environmentalAlarm Package: lmg.IK8351040 Raised on class: lmg.FRU	Severity: critical Specific problem: cpqCrExpCabTemperatureCriti-calTrap Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: Expansion cabinet temperature critical! Details: The temperature in the expansion cabinet has triggered a critical condition detected by the controller.\nAlarm is cleared by the system.\nReason: cpqCrExpCabTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the expansion cabinet.		

Table 27-701 IK8351060

Alarm	Attributes	Applicable major release
Name: IK8351060 (6737) Type: environmentalAlarm Package: lmg.IK8351060 Raised on class: lmg.FRU	Severity: major Specific problem: External Array Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqFcaAccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 27-702 IK8351073

Alarm	Attributes	Applicable major release
Name: IK8351073 (6738) Type: environmentalAlarm Package: lmg.IK8351073 Raised on class: lmg.FRU	Severity: major Specific problem: External Array Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqFca2AccelBatteryFailed		

Table 27-702 IK8351073 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Replace the Accelerator Cache Board.		

Table 27-703 IK8351091

Alarm	Attributes	Applicable major release
Name: IK8351091 (9234) Type: environmentalAlarm Package: Img.IK8351091 Raised on class: Img.FRU	Severity: major Specific problem: System Fan Failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR15.1.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHeThermalSystemFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-704 IK8351098

Alarm	Attributes	Applicable major release
Name: IK8351098 (6739) Type: equipmentAlarm Package: Img.IK8351098 Raised on class: Img.LMGMngElement	Severity: major Specific problem: POST Errors Occurred Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHePostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 27-705 IK8351102

Alarm	Attributes	Applicable major release
Name: IK8351102 (6740) Type: environmentalAlarm Package: Img.IK8351102 Raised on class: Img.FRU	Severity: major Specific problem: Thermal Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: The temperature status has been set to failed. The system will be shutdown due to this thermal condition.\nAlarm is cleared by the system.\nReason: cpqHe3ThermalTempFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 27-706 IK8351105

Alarm	Attributes	Applicable major release
Name: IK8351105 (6741) Type: environmentalAlarm Package: lmg.IK8351105 Raised on class: lmg.FRU	Severity: major Specific problem: System Fan Failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHe3ThermalSystemFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-707 IK8351112

Alarm	Attributes	Applicable major release
Name: IK8351112 (6742) Type: equipmentAlarm Package: lmg.IK8351112 Raised on class: lmg.FRU	Severity: major Specific problem: POST Errors Occurred Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process. Details of the POST error messages can be found in Integrated Management Log\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3PostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 27-708 IK8351116

Alarm	Attributes	Applicable major release
Name: IK8351116 (6743) Type: equipmentAlarm Package: lmg.IK8351116 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Power Supply Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe3FltTolPowerSupplyFailed		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-709 IK8351121

Alarm	Attributes	Applicable major release
Name: IK8351121 (6744) Type: environmentalAlarm Package: Img.IK8351121 Raised on class: Img.FRU	Severity: major Specific problem: Fan Failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The Fault Tolerant Fan condition has been set to failed for the specified chassis and fan.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3FltTolFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-710 IK8351125

Alarm	Attributes	Applicable major release
Name: IK8351125 (6745) Type: environmentalAlarm Package: Img.IK8351125 Raised on class: Img.FRU	Severity: major Specific problem: Thermal Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: The temperature status has been set to failed in the specified chassis and location. The system will be shutdown due to this condition.\nAlarm is cleared by the system.\nReason: cpqHe3TemperatureFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 27-711 IK8351129

Alarm	Attributes	Applicable major release
Name: IK8351129 (6746) Type: equipmentAlarm Package: Img.IK8351129 Raised on class: Img.FRU	Severity: major Specific problem: Power Converter Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The DC-DC Power Converter condition has been set to failed for the specified chassis, slot and socket.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3PowerConverterFailed		
Remedial action: Replace the failed power converter.		

Table 27-712 IK8351135

Alarm	Attributes	Applicable major release
Name: IK8351135 (6747) Type: equipmentAlarm Package: Img.IK8351135 Raised on class: Img.FRU	Severity: major Specific problem: Power Supply Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG

Table 27-712 IK8351135 (continued)

Alarm	Attributes	Applicable major release
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FltTolPowerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

Table 27-713 IK8351144

Alarm	Attributes	Applicable major release
Name: IK8351144 (6748) Type: processingErrorAlarm Package: lmg.IK8351144 Raised on class: lmg.FRU	Severity: major Specific problem: Memory Board or Cartridge Bus Error Detected Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Memory board or cartridge bus error detected. An Advanced Memory Protection sub-system board or cartridge bus error has been detected.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge.		

Table 27-714 IK8351148

Alarm	Attributes	Applicable major release
Name: IK8351148 (6749) Type: equipmentAlarm Package: lmg.IK8351148 Raised on class: lmg.FRU	Severity: major Specific problem: Management processor failed reset Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The Management processor failed reset The management processor was not successfully reset and is not operational.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeManagementProcFailedReset		
Remedial action: Reset the management procesessor again or re-flash the management processor firmware.		

Table 27-715 IK8351152

Alarm	Attributes	Applicable major release
Name: IK8351152 (6750) Type: processingErrorAlarm Package: lmg.IK8351152 Raised on class: lmg.FRU	Severity: major Specific problem: Memory Board or Cartridge or Riser Bus Error Detected Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Memory board or cartridge or Riser bus error detected. An Advanced Memory Protection sub-system board or cartridge or Riser bus error has been detected. Value 0 for CPU means memory is not processor based.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe5ResMemBoardBusError		

Table 27-715 IK8351152 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Replace the indicated board or cartridge or Riser.		

Table 27-716 IK8351154

Alarm	Attributes	Applicable major release
Name: IK8351154 (6751) Type: equipmentAlarm Package: lmg.IK8351154 Raised on class: lmg.FRU	Severity: major Specific problem: Power Supply AC Power Loss Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The fault tolerant power supply AC power loss for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FltTolPowerSupplyACpowerloss		
Remedial action: Check the power source for the specified power supply.		

Table 27-717 IK8351156

Alarm	Attributes	Applicable major release
Name: IK8351156 (6752) Type: processingErrorAlarm Package: lmg.IK8351156 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Application Error Trap Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHoAppErrorTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-718 IK8351158

Alarm	Attributes	Applicable major release
Name: IK8351158 (6753) Type: processingErrorAlarm Package: lmg.IK8351158 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Application Error Trap Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2AppErrorTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-719 IK8351160

Alarm	Attributes	Applicable major release
Name: IK8351160 (9235) Type: communicationsAlarm Package: lmg.IK8351160 Raised on class: lmg.FRU	Severity: major Specific problem: Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition.\nAlarm is cleared by the system.\nReason: cpqHo2NicStatusFailed		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 27-720 IK8351163

Alarm	Attributes	Applicable major release
Name: IK8351163 (6754) Type: communicationsAlarm Package: lmg.IK8351163 Raised on class: lmg.FRU	Severity: major Specific problem: Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition.\nAlarm is cleared by the system.\nReason: cpqHo2NicStatusFailed2		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 27-721 IK8351172

Alarm	Attributes	Applicable major release
Name: IK8351172 (6755) Type: qualityOfServiceAlarm Package: lmg.IK8351172 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Power Threshold Exceeded Implicitly cleared: false Default probable cause: resourceAtOrNearingCapacity	Release: • LR14.3.MG
Description: This alarm notifies user of a power threshold breach. Power threshold exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2PowerThresholdTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-722 IK8352265

Alarm	Attributes	Applicable major release
Name: IK8352265 (6756) Type: environmentalAlarm Package: lmg.IK8352265 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDaAccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 27-723 IK8352272

Alarm	Attributes	Applicable major release
Name: IK8352272 (6757) Type: environmentalAlarm Package: lmg.IK8352272 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa2AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 27-724 IK8352279

Alarm	Attributes	Applicable major release
Name: IK8352279 (6758) Type: environmentalAlarm Package: lmg.IK8352279 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa3AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 27-725 IK8352291

Alarm	Attributes	Applicable major release
Name: IK8352291 (6759) Type: equipmentAlarm Package: lmg.IK8352291 Raised on class: lmg.FRU	Severity: major Specific problem: Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Accelerator Board Bad Data. This alarm signifies that the agent has detected an array accelerator cache board that has lost battery power. If data was being stored in the accelerator cache memory when the server lost power, that data has been lost.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqDa5AccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 27-726 IK8352292

Alarm	Attributes	Applicable major release
Name: IK8352292 (6760) Type: environmentalAlarm Package: lmg.IK8352292 Raised on class: lmg.FRU	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqDa5AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 27-727 IK8352295

Alarm	Attributes	Applicable major release
Name: IK8352295 (6761) Type: equipmentAlarm Package: lmg.IK8352295 Raised on class: lmg.FRU	Severity: major Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm is cleared by the system when the device is restarted.\ nReason: cpqDa5PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 27-728 IK8352302

Alarm	Attributes	Applicable major release
Name: IK8352302 (6762) Type: equipmentAlarm Package: Img.IK8352302 Raised on class: Img.FRU	Severity: major Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm is cleared by the system when the device is restarted.\ nReason: cpqDa6PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 27-729 IK8352337

Alarm	Attributes	Applicable major release
Name: IK8352337 (6763) Type: communicationsAlarm Package: Img.IK8352337 Raised on class: Img.FRU	Severity: major Specific problem: NIC Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNicConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-730 IK8352341

Alarm	Attributes	Applicable major release
Name: IK8352341 (6764) Type: communicationsAlarm Package: Img.IK8352341 Raised on class: Img.FRU	Severity: major Specific problem: NIC Connectivity Lost Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-731 IK8352343

Alarm	Attributes	Applicable major release
Name: IK8352343 (6765) Type: communicationsAlarm Package: lmg.IK8352343 Raised on class: lmg.FRU	Severity: major Specific problem: NIC Redundancy Reduced Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2RedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-732 IK8352347

Alarm	Attributes	Applicable major release
Name: IK8352347 (6766) Type: communicationsAlarm Package: lmg.IK8352347 Raised on class: lmg.FRU	Severity: major Specific problem: NIC Connectivity Lost Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqNic3ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-733 IK8352349

Alarm	Attributes	Applicable major release
Name: IK8352349 (6767) Type: communicationsAlarm Package: lmg.IK8352349 Raised on class: lmg.FRU	Severity: major Specific problem: NIC Redundancy Reduced Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic3RedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-734 IK8352360

Alarm	Attributes	Applicable major release
Name: IK8352360 (6768) Type: equipmentAlarm Package: lmg.IK8352360 Raised on class: lmg.FRU	Severity: major Specific problem: Enclosure temperature failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The enclosure temperature status has been set to failed. This alarm signifies that a enclosure temperature sensor has been tripped indicating an overheat condition.\nAlarm is cleared by the system.\nReason: cpqRackEnclosureTempFailed		
Remedial action: Shutdown the enclosure and possibly the rack as soon as possible. Ensure all fans are working properly and that air flow in the rack has not been blocked.		

Table 27-735 IK8352363

Alarm	Attributes	Applicable major release
Name: IK8352363 (6769) Type: environmentalAlarm Package: lmg.IK8352363 Raised on class: lmg.FRU	Severity: major Specific problem: Enclosure fan failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The enclosure fan status has been set to failed. This alarm signifies that an enclosure fan has failed and no other fans in the redundant fan group are operating. This may result in overheating of the enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackEnclosureFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-736 IK8352368

Alarm	Attributes	Applicable major release
Name: IK8352368 (6770) Type: equipmentAlarm Package: lmg.IK8352368 Raised on class: lmg.FRU	Severity: critical Specific problem: Rack power supply failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The power supply status has been set to failed. This alarm signifies that a power supply has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

Table 27-737 IK8352369

Alarm	Attributes	Applicable major release
Name: IK8352369 (6771) Type: equipmentAlarm Package: lmg.IK8352369 Raised on class: lmg.FRU	Severity: major Specific problem: Rack power supply degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The power supply status has been set to degraded. This alarm signifies that a power supply has degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSupplyDegraded		
Remedial action: Replace the power supply as soon as possible.		

Table 27-738 IK8352374

Alarm	Attributes	Applicable major release
Name: IK8352374 (6772) Type: equipmentAlarm Package: lmg.IK8352374 Raised on class: lmg.FRU	Severity: major Specific problem: Rack power supply input voltage problem Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The rack power supply detected an input line voltage problem.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSubsystemLineVoltageProblem		
Remedial action: Check the power input for the power supply or replace any failed power supplies as soon as possible.		

Table 27-739 IK8352375

Alarm	Attributes	Applicable major release
Name: IK8352375 (6773) Type: equipmentAlarm Package: lmg.IK8352375 Raised on class: lmg.FRU	Severity: major Specific problem: Rack power subsystem overload condition Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The rack power subsystem overload condition.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSubsystemOverloadCondition		
Remedial action: Replace any failed power supplies as soon as possible to return the system to a redundant state.		

Table 27-740 IK8352376

Alarm	Attributes	Applicable major release
Name: IK8352376 (6774) Type: equipmentAlarm Package: Img.IK8352376 Raised on class: Img.FRU	Severity: critical Specific problem: Server shutdown due to power shedding Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Server shutdown due to power shedding. The server blade was shutdown due to a lack of power.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerShedAutoShutdown		
Remedial action: Check power connections or add power supplies.		

Table 27-741 IK8352377

Alarm	Attributes	Applicable major release
Name: IK8352377 (6775) Type: equipmentAlarm Package: Img.IK8352377 Raised on class: Img.FRU	Severity: critical Specific problem: Server power on prevented to preserve redundancy Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Server power on prevented to preserve redundancy. There is not enough power to power on the server blade and maintain redundancy for the other blades in the enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailedNotRedundant		
Remedial action: Check power connections or add power supplies.		

Table 27-742 IK8352378

Alarm	Attributes	Applicable major release
Name: IK8352378 (6776) Type: equipmentAlarm Package: Img.IK8352378 Raised on class: Img.FRU	Severity: critical Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailedNotEnoughPower		
Remedial action: Check power connections or add power supplies.		

Table 27-743 IK8352379

Alarm	Attributes	Applicable major release
Name: IK8352379 (6777) Type: equipmentAlarm Package: lmg.IK8352379 Raised on class: lmg.FRU	Severity: critical Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The server enclosure micro-controller was not found.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFaile-dEnclosureNotFound		
Remedial action: Check server enclosure connections or add power supplies.		

Table 27-744 IK8352380

Alarm	Attributes	Applicable major release
Name: IK8352380 (6778) Type: equipmentAlarm Package: lmg.IK8352380 Raised on class: lmg.FRU	Severity: critical Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The power enclosure micro-controller was not found.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailed-PowerChassisNotFound		
Remedial action: Check power enclosure connections or add power supplies.		

Table 27-745 IK8352382

Alarm	Attributes	Applicable major release
Name: IK8352382 (6779) Type: environmentalAlarm Package: lmg.IK8352382 Raised on class: lmg.FRU	Severity: major Specific problem: Fuse open Implicitly cleared: true Default probable cause: enclosureDoorOpen	Release: • LR14.3.MG • LR15.1.MG
Description: Fuse open. The fuse has been tripped.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackFuseOpen		
Remedial action: Check enclosure and / or blade power connections and reset the fuse.		

Table 27-746 IK8352386

Alarm	Attributes	Applicable major release
Name: IK8352386 (6780) Type: equipmentAlarm Package: Img.IK8352386 Raised on class: Img.FRU	Severity: major Specific problem: Power subsystem DC power problem Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem DC power problem. There is a power subsystem DC power problem for this power enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisDcPowerProblem		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 27-747 IK8352387

Alarm	Attributes	Applicable major release
Name: IK8352387 (6781) Type: equipmentAlarm Package: Img.IK8352387 Raised on class: Img.FRU	Severity: major Specific problem: Power subsystem AC facility input power exceeded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem AC facility input power exceeded. There is a power subsystem Power subsystem AC facility input power exceeded for this power enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisAc-FacilityPowerExceeded		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 27-748 IK8352388

Alarm	Attributes	Applicable major release
Name: IK8352388 (6782) Type: equipmentAlarm Package: Img.IK8352388 Raised on class: Img.FRU	Severity: major Specific problem: Unknown power consumption Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Unknown power consumption. There is an unknown power consumer drawing power.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerUnknownPowerConsumption		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 27-749 IK8352391

Alarm	Attributes	Applicable major release
Name: IK8352391 (6783) Type: processingErrorAlarm Package: lmg.IK8352391 Raised on class: lmg.FRU	Severity: major Specific problem: Power subsystem improperly configured Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem improperly configured. The power subsystem has been improperly configured.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisConfigError		
Remedial action: Check the cabling of the power enclosure.		

Table 27-750 IK8352401

Alarm	Attributes	Applicable major release
Name: IK8352401 (6784) Type: communicationsAlarm Package: lmg.IK8352401 Raised on class: lmg.FRU	Severity: critical Specific problem: Interconnect failed Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: The interconnect status has been set to failed. This alarm signifies that a interconnect has failed.\nAlarm is cleared by the system.\nReason: cpqRackNetConnectorFailed		
Remedial action: Replace the interconnect as soon as possible.		

Table 27-751 IK8352408

Alarm	Attributes	Applicable major release
Name: IK8352408 (6785) Type: qualityOfServiceAlarm Package: lmg.IK8352408 Raised on class: lmg.FRU	Severity: major Specific problem: Server blade health status degraded Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR14.3.MG • LR15.1.MG
Description: Server blade health status Degraded. The server blade health status has changed to Degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerBladeStatusDegraded		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-752 IK8352409

Alarm	Attributes	Applicable major release
Name: IK8352409 (6786) Type: processingErrorAlarm Package: Img.IK8352409 Raised on class: Img.FRU	Severity: critical Specific problem: Server blade health status critical Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG
Description: Server blade health status Critical. The server blade health status has changed to Critical.\nAlarm is cleared by the system.\nReason: cpqRackServerBladeStatusCritical		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-753 IK8352411

Alarm	Attributes	Applicable major release
Name: IK8352411 (6787) Type: equipmentAlarm Package: Img.IK8352411 Raised on class: Img.FRU	Severity: major Specific problem: Server blade unexpected shutdown Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Server blade shutdown unexpectadly. An unexpected shutdown event has occurred for this server blade.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerBladeUnexpectedShutdown		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-754 IK8352428

Alarm	Attributes	Applicable major release
Name: IK8352428 (6788) Type: equipmentAlarm Package: Img.IK8352428 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Generic EAE Major trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: EAE Major trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackMajorEAETrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-755 IK8352429

Alarm	Attributes	Applicable major release
Name: IK8352429 (6789) Type: equipmentAlarm Package: Img.IK8352429 Raised on class: Img.LMGMngElement	Severity: critical Specific problem: Generic EAE Critical trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: EAE Critical trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackCriticalEAETrap		

Table 27-755 IK8352429 (continued)

Alarm	Attributes	Applicable major release
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-756 IK8352431

Alarm	Attributes	Applicable major release
Name: IK8352431 (6790) Type: equipmentAlarm Package: lmg.IK8352431 Raised on class: lmg.FRU	Severity: major Specific problem: Generic Power Subsystem EAE Major trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: FlexFabric Cmdr Power Subsystem Major trap.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerMajorEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 27-757 IK8352432

Alarm	Attributes	Applicable major release
Name: IK8352432 (6791) Type: equipmentAlarm Package: lmg.IK8352432 Raised on class: lmg.FRU	Severity: critical Specific problem: Generic Power Subsystem EAE Critical trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: FlexFabric Cmdr Power Subsystem Critical trap.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerCriticalEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 27-758 IK8352436

Alarm	Attributes	Applicable major release
Name: IK8352436 (6792) Type: equipmentAlarm Package: lmg.IK8352436 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Generic WSMAN Major trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: WSMAN Major trap\nReason: cpqRackMajorWSMANTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-759 IK8352437

Alarm	Attributes	Applicable major release
Name: IK8352437 (6793) Type: equipmentAlarm Package: lmg.IK8352437 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Generic WSMAN Critical trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: WSMAN Critical trap\nReason: cpqRackCriticalWSMANTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-760 IK8352439

Alarm	Attributes	Applicable major release
Name: IK8352439 (6794) Type: communicationsAlarm Package: lmg.IK8352439 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Standby Recovery Server Interconnect Failure Implicitly cleared: false Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: Recovery Server serial interconnect failure. The Standby Recovery Agent reports that the local serial interconnect is not connected or has failed. The primary server is being shutdown in anticipation of the startup of the standby server.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRsStandbyCableFailure		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-761 IK8352559

Alarm	Attributes	Applicable major release
Name: IK8352559 (6795) Type: equipmentAlarm Package: lmg.IK8352559 Raised on class: lmg.FRU	Severity: critical Specific problem: Critical Alarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: A critical alarm has occurred.\nAlarm is cleared by the system.\nReason: cpqPMTrapCritical		
Remedial action: Check the Trap Details for more information.		

Table 27-762 IK8352609

Alarm	Attributes	Applicable major release
Name: IK8352609 (6796) Type: processingErrorAlarm Package: lmg.IK8352609 Raised on class: lmg.FRU	Severity: major Specific problem: Monitor Condition Failed Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG

Table 27-762 IK8352609 (continued)

Alarm	Attributes	Applicable major release
Description: A fault reporting feature has exceeded normal limits in the monitor indicated by the cpqSiMonitorIndex. The monitor's condition has been set to failed due to an operational feature exceeding normal operating limits. The monitor will not be useable and should be replaced.\nAlarm is cleared by the system.\nReason: cpqSiMonitorConditionFailed		
Remedial action: Make a note of the monitor model number and serial number. Replace the monitor. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 27-763 IK8352610

Alarm	Attributes	Applicable major release
Name: IK8352610 (6797) Type: processingErrorAlarm Package: lmg.IK8352610 Raised on class: lmg.FRU	Severity: major Specific problem: Excessive Correctable Memory Errors Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Correctable memory error count has exceeded the threshold for the memory module indicated by the 'cpqSiMemErrorIndex' variable. The appropriate cpqSiMemModuleECCStatus has been set to degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiCorrMemErrStatusDegraded		
Remedial action: For Desktops, the System Administrator should run the F10 Diagnostics on this system and select RAM LONG TEST. If it is determined that a module needs replacing, schedule maintenance for the system and replace the failed memory module. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 27-764 IK8352615

Alarm	Attributes	Applicable major release
Name: IK8352615 (6798) Type: equipmentAlarm Package: lmg.IK8352615 Raised on class: lmg.FRU	Severity: major Specific problem: Hot Plug Slot Board Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Hot Plug Slot Board Failed Power-Up. A Hot Plug Slot Board has failed to power-up in the specified chassis and slot.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiHotPlugSlotPowerUpFailed		
Remedial action: Insure the board and all cables are installed correctly and the board type and revision are the same as the replaced board.		

Table 27-765 IK8352616

Alarm	Attributes	Applicable major release
Name: IK8352616 (6799) Type: environmentalAlarm Package: lmg.IK8352616 Raised on class: lmg.FRU	Severity: major Specific problem: Battery Failure Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The battery indicated by cpqSiSysBatteryIndex has failed and must be replaced.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiSysBatteryFailure		
Remedial action: Contact your System Administrator or Authorized Reseller to order a replacement battery. Recycle your old battery. For proper disposal information, refer to the documentation that came with your computer.		

Table 27-766 IK8352617

Alarm	Attributes	Applicable major release
Name: IK8352617 (6800) Type: environmentalAlarm Package: lmg.IK8352617 Raised on class: lmg.FRU	Severity: major Specific problem: Battery Charging Degradation Implicitly cleared: true Default probable cause: lowBatteryThreshold	Release: • LR14.3.MG • LR15.1.MG
Description: Significant battery degradation has occurred with battery indicated by cpqSiSysBatteryIndex. The battery can no longer be fully recharged.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiSysBatteryChargingDegraded		
Remedial action: If using multiple batteries, run the Power Conservation Utility to identify the battery location. Contact your System Administrator or Authorized Reseller to order a replacement battery.		

Table 27-767 IK8352620

Alarm	Attributes	Applicable major release
Name: IK8352620 (6801) Type: equipmentAlarm Package: lmg.IK8352620 Raised on class: lmg.FRU	Severity: major Specific problem: Server Power Outage Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Server Power Outage. The Remote Insight/ Integrated Lights-Out firmware has detected server power failure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSm2ServerPowerOutage		
Remedial action: Check the server's power source.		

Table 27-768 IK8352622

Alarm	Attributes	Applicable major release
Name: IK8352622 (6802) Type: environmentalAlarm Package: Img.IK8352622 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Remote Insight Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Remote Insight Battery Failed. The Remote Insight battery has failed and needs to be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2BatteryFailed		
Remedial action: replace the failing Remote Insight battery.		

Table 27-769 IK8352628

Alarm	Attributes	Applicable major release
Name: IK8352628 (6803) Type: equipmentAlarm Package: Img.IK8352628 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Remote Insight external power cable disconnected Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: External Power Cable Disconnected. The Remote Insight external power cable has been disconnected.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ExternalPowerCableDisconnected		
Remedial action: check External Power Cable		

Table 27-770 IK8352632

Alarm	Attributes	Applicable major release
Name: IK8352632 (6804) Type: processingErrorAlarm Package: Img.IK8352632 Raised on class: Img.LMGMngElement	Severity: critical Specific problem: Server Fatal Error Detected Implicitly cleared: false Default probable cause: softwareError	Release: • LR14.3.MG
Description: Server Fatal Error Detected. The Remote Insight/ Integrated Lights-Out firmware has detected a server fatal error.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerFatalError		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-771 IK8352633

Alarm	Attributes	Applicable major release
Name: IK8352633 (6805) Type: communicationsAlarm Package: Img.IK8352633 Raised on class: Img.FRU	Severity: major Specific problem: The iLO NIC Link is Down Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: The iLO NIC Link is Down. The Remote Insight/ Integrated Lights-Out firmware has detected the loss of network link.\nAlarm is cleared by the system.\nReason: cpqSm2NicLinkDown		
Remedial action: Check the network connections for the iLO.		

Table 27-772 IK8352636

Alarm	Attributes	Applicable major release
Name: IK8352636 (9236) Type: equipmentAlarm Package: Img.IK8352636 Raised on class: Img.FRU	Severity: major Specific problem: Server powered off Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: The server has been powered off. This will be sent once the server has been powered off, either by OS, or the power button.\nAlarm is cleared by the system.\nReason: cpqSm2ServerPowerOff		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-773 IK8352648

Alarm	Attributes	Applicable major release
Name: IK8352648 (6806) Type: qualityOfServiceAlarm Package: Img.IK8352648 Raised on class: Img.FRU	Severity: major Specific problem: PC Card Thermal Failure Status Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm is sent when the PC Card Slot Thermal Sensor threshold has been exceeded for degraded operations thereby causing failed operations. This alarm will be sent when cpqSePCCardStatus transitions from Thermal Degraded (2) to Thermal Failure (3). The manufacturer and product information strings as well as the slot number for the failed PC Card is provided as parameters for this trap.\nAlarm is cleared by the system.\nReason: cpqSePCCardThermalFailure		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-774 IK8352657

Alarm	Attributes	Applicable major release
Name: IK8352657 (6807) Type: environmentalAlarm Package: lmg.IK8352657 Raised on class: lmg.FRU	Severity: major Specific problem: Storage System Temperature Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.\nAlarm is cleared by the system.\nReason: cpqSsTempFailed		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-775 IK8354762

Alarm	Attributes	Applicable major release
Name: IK8354762 (6808) Type: communicationsAlarm Package: lmg.IK8354762 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: linkDown Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: A linkDown alarm signifies that the SNMP entity, acting in an agent role, has detected that the ifOperStatus object for one of its communication links is about to enter the down state from some other state (but not from the notPresent state). This other state is indicated by the included value of ifOperStatus.\nAlarm is cleared by the system.\nReason: linkDown		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-776 IK8360000

Alarm	Attributes	Applicable major release
Name: IK8360000 (9790) Type: processingErrorAlarm Package: lmg.IK8360000 Raised on class: lmg.FRU	Severity: critical Specific problem: Critical service or resource not available during initialization Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: The server is not able to provide service due to a process or interface failure, or a missing file. Alarm is cleared by the system on server restart.\nReason: Critical service or resource not available during initialization		
Remedial action: Check the LMG log files to determine the root cause		

Table 27-777 IK8360001

Alarm	Attributes	Applicable major release
Name: IK8360001 (9791) Type: processingErrorAlarm Package: lmg.IK8360001 Raised on class: lmg.FRU	Severity: critical Specific problem: Server health check audit detected critical service or resource not available Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: The server is not able to provide service due to a process or interface failure, or a missing file. Alarm is cleared by the system on server restart or if the server health check audit runs successfully, or when the service is restarted.\nReason: Server health check audit detected critical service or resource not available		
Remedial action: Check the LMG log files to determine the root cause		

Table 27-778 IK8360005

Alarm	Attributes	Applicable major release
Name: IK8360005 (9795) Type: processingErrorAlarm Package: lmg.IK8360005 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: mcdp alarm trap v1 Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: mcdp alarm alarm v1.\nAlarm is cleared by the system.\nReason: alarmTrapV1		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-779 IK8360006

Alarm	Attributes	Applicable major release
Name: IK8360006 (9796) Type: processingErrorAlarm Package: lmg.IK8360006 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Trap associated to an alarm of the managed element Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: Trap associated to an alarm of the managed element.\nAlarm is cleared by the system when the device is restarted.\nReason: alarmTrap		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-780 IK8360007

Alarm	Attributes	Applicable major release
Name: IK8360007 (9797) Type: processingErrorAlarm Package: lmg.IK8360007 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: softwareFailure Implicitly cleared: true Default probable cause: softwareError	Release: • LR16.1.MG
Description: Trap associated to an alarm while executing software operation (download, activation, validation, reject, backup).\nAlarm is cleared by the system.\nReason: softwareFailure		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-781 IK8361018

Alarm	Attributes	Applicable major release
Name: IK8361018 (10324) Type: processingErrorAlarm Package: lmg.IK8361018 Raised on class: lmg.FRU	Severity: major Specific problem: A disk drive has failed Implicitly cleared: true Default probable cause: storageCapacityProblem	Release: • LR16.1.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system.\nReason: cpqCrDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 27-782 IK8361033

Alarm	Attributes	Applicable major release
Name: IK8361033 (10325) Type: equipmentAlarm Package: lmg.IK8361033 Raised on class: lmg.FRU	Severity: critical Specific problem: Primary enclosure temperature critical! Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Primary enclosure temperature critical!. Details: The temperature in the primary enclosure has triggered a critical condition detected by the controller.\nAlarm is cleared by the system.\nReason: cpqCrEMUTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the primary enclosure.		

Table 27-783 IK8361040

Alarm	Attributes	Applicable major release
Name: IK8361040 (10326) Type: environmentalAlarm Package: lmg.IK8361040 Raised on class: lmg.FRU	Severity: critical Specific problem: cpqCrExpCabTemperatureCriti-calTrap Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR16.1.MG

Table 27-783 IK8361040 (continued)

Alarm	Attributes	Applicable major release
Description: Expansion cabinet temperature critical! Details: The temperature in the expansion cabinet has triggered a critical condition detected by the controller.\nAlarm is cleared by the system.\nReason: cpqCrExpCabTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the expansion cabinet.		

Table 27-784 IK8361091

Alarm	Attributes	Applicable major release
Name: IK8361091 (10327) Type: environmentalAlarm Package: lmg.IK8361091 Raised on class: lmg.FRU	Severity: major Specific problem: System Fan Failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHeThermalSystemFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-785 IK8361102

Alarm	Attributes	Applicable major release
Name: IK8361102 (10328) Type: environmentalAlarm Package: lmg.IK8361102 Raised on class: lmg.FRU	Severity: major Specific problem: Thermal Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR16.1.MG
Description: The temperature status has been set to failed. The system will be shutdown due to this thermal condition.\nAlarm is cleared by the system.\nReason: cpqHe3ThermalTempFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 27-786 IK8361105

Alarm	Attributes	Applicable major release
Name: IK8361105 (10329) Type: environmentalAlarm Package: lmg.IK8361105 Raised on class: lmg.FRU	Severity: major Specific problem: System Fan Failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHe3ThermalSystemFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-787 IK8361125

Alarm	Attributes	Applicable major release
Name: IK8361125 (10330) Type: environmentalAlarm Package: lmg.IK8361125 Raised on class: lmg.FRU	Severity: major Specific problem: Thermal Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR16.1.MG
Description: The temperature status has been set to failed in the specified chassis and location. The system will be shutdown due to this condition.\nAlarm is cleared by the system.\nReason: cpqHe3TemperatureFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 27-788 IK8361135

Alarm	Attributes	Applicable major release
Name: IK8361135 (10331) Type: equipmentAlarm Package: lmg.IK8361135 Raised on class: lmg.FRU	Severity: major Specific problem: Power Supply Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FltTolPowerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

Table 27-789 IK8361154

Alarm	Attributes	Applicable major release
Name: IK8361154 (10332) Type: equipmentAlarm Package: lmg.IK8361154 Raised on class: lmg.FRU	Severity: major Specific problem: Power Supply AC Power Loss Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The fault tolerant power supply AC power loss for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FltTolPowerSupplyACpowerloss		
Remedial action: Check the power source for the specified power supply.		

Table 27-790 IK8361160

Alarm	Attributes	Applicable major release
Name: IK8361160 (10333) Type: communicationsAlarm Package: lmg.IK8361160 Raised on class: lmg.FRU	Severity: major Specific problem: Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG

Table 27-790 IK8361160 (continued)

Alarm	Attributes	Applicable major release
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition.\nAlarm is cleared by the system.\nReason: cpqHo2NicStatusFailed		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 27-791 IK8361163

Alarm	Attributes	Applicable major release
Name: IK8361163 (10334) Type: communicationsAlarm Package: lmg.IK8361163 Raised on class: lmg.FRU	Severity: major Specific problem: Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition.\nAlarm is cleared by the system.\nReason: cpqHo2NicStatusFailed2		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 27-792 IK8362337

Alarm	Attributes	Applicable major release
Name: IK8362337 (10335) Type: communicationsAlarm Package: lmg.IK8362337 Raised on class: lmg.FRU	Severity: major Specific problem: NIC Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNicConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-793 IK8362341

Alarm	Attributes	Applicable major release
Name: IK8362341 (10336) Type: communicationsAlarm Package: lmg.IK8362341 Raised on class: lmg.FRU	Severity: major Specific problem: NIC Connectivity Lost Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG

Table 27-793 IK8362341 (continued)

Alarm	Attributes	Applicable major release
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-794 IK8362343

Alarm	Attributes	Applicable major release
Name: IK8362343 (10337) Type: communicationsAlarm Package: lmg.IK8362343 Raised on class: lmg.FRU	Severity: major Specific problem: NIC Redundancy Reduced Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2RedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-795 IK8362349

Alarm	Attributes	Applicable major release
Name: IK8362349 (10338) Type: communicationsAlarm Package: lmg.IK8362349 Raised on class: lmg.FRU	Severity: major Specific problem: NIC Redundancy Reduced Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic3RedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-796 IK8362360

Alarm	Attributes	Applicable major release
Name: IK8362360 (10339) Type: equipmentAlarm Package: lmg.IK8362360 Raised on class: lmg.FRU	Severity: major Specific problem: Enclosure temperature failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: The enclosure temperature status has been set to failed. This alarm signifies that a enclosure temperature sensor has been tripped indicating an overheat condition.\nAlarm is cleared by the system.\nReason: cpqRackEnclosureTempFailed		
Remedial action: Shutdown the enclosure and possibly the rack as soon as possible. Ensure all fans are working properly and that air flow in the rack has not been blocked.		

Table 27-797 IK8362401

Alarm	Attributes	Applicable major release
Name: IK8362401 (10340) Type: communicationsAlarm Package: lmg.IK8362401 Raised on class: lmg.FRU	Severity: critical Specific problem: Interconnect failed Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG
Description: The interconnect status has been set to failed. This alarm signifies that a interconnect has failed.\nAlarm is cleared by the system.\nReason: cpqRackNetConnectorFailed		
Remedial action: Replace the interconnect as soon as possible.		

Table 27-798 IK8362409

Alarm	Attributes	Applicable major release
Name: IK8362409 (10341) Type: processingErrorAlarm Package: lmg.IK8362409 Raised on class: lmg.FRU	Severity: critical Specific problem: Server blade health status critical Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: Server blade health status Critical. The server blade health status has changed to Critical.\nAlarm is cleared by the system.\nReason: cpqRackServerBladeStatusCritical		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-799 IK8362462

Alarm	Attributes	Applicable major release
Name: IK8362462 (10342) Type: environmentalAlarm Package: lmg.IK8362462 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: CMC Smoke Detected Implicitly cleared: true Default probable cause: smoke	Release: • LR16.1.MG
Description: A CMC device is reporting smoke detected.\nAlarm is cleared by the system.\nReason: cpqRPMTrapCMCSmokeDetected		
Remedial action: Investigate CMC Device for an over temperature condition.		

Table 27-800 IK8362464

Alarm	Attributes	Applicable major release
Name: IK8362464 (10343) Type: equipmentAlarm Package: lmg.IK8362464 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: CMC Shock Detected Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A CMC device is reporting shock detected.\nAlarm is cleared by the system.\nReason: cpqRPMTrapCMCShockDetected		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-801 IK8362468

Alarm	Attributes	Applicable major release
Name: IK8362468 (10344) Type: equipmentAlarm Package: lmg.IK8362468 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: CMC Aux 2 Alarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A CMC device has entered an alarm condition for auxiliary input 2.\nAlarm is cleared by the system.\nReason: cpqRPMTrapCMCAux2Alarm		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-802 IK8362494

Alarm	Attributes	Applicable major release
Name: IK8362494 (10345) Type: equipmentAlarm Package: lmg.IK8362494 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: UPS Output Overload Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A UPS device is reporting an overload condition.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSOutpu-tOverload		

Table 27-802 IK8362494 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Perform the following steps to clear the alarm: 1. Reduce the load on the UPS by moving some of the load to another UPS. 2. Consider moving to a larger UPS to support the current load.		

Table 27-803 IK8362496

Alarm	Attributes	Applicable major release
Name: IK8362496 (10346) Type: environmentalAlarm Package: lmg.IK8362496 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: UPS Battery Low Implicitly cleared: true Default probable cause: lowBatteryThreshold	Release: • LR16.1.MG
Description: A UPS device is reporting low battery.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBatteryLow		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. 2. When utility power is restored, charge the battery to it's full capacity. If the battery level continues to decrease, the UPS will not be able to sustain the output load!		

Table 27-804 IK8362508

Alarm	Attributes	Applicable major release
Name: IK8362508 (10347) Type: equipmentAlarm Package: lmg.IK8362508 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: UPS Internal Failure Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A UPS device is reporting a general UPS failure.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSInternal-Failure		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If the problem persists, contact NOKIA customer support.		

Table 27-805 IK8362510

Alarm	Attributes	Applicable major release
Name: IK8362510 (10348) Type: environmentalAlarm Package: lmg.IK8362510 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: UPS Battery Failure Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG
Description: A UPS device is reporting a battery failure.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBatteryFailure		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If the problem persists, contact NOKIA customer support. 3. Your battery may need to be replaced. The UPS may not be capable of supporting it's load if utility power fails!		

Table 27-806 IK8362518

Alarm	Attributes	Applicable major release
Name: IK8362518 (10349) Type: equipmentAlarm Package: lmg.IK8362518 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Bypass Not Available Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A UPS device is reporting bypass not avaliable.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBypassNotAvailable		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If the problem persists, contact NOKIA customer support.		

Table 27-807 IK8362531

Alarm	Attributes	Applicable major release
Name: IK8362531 (10350) Type: equipmentAlarm Package: lmg.IK8362531 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: The UPS was started without utility power Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device has been started while on battery power. AC input power is not present.\nAlarm is cleared by the system.\nReason: cppqRPMtrapUPSStartedOnBattery		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. If the UPS remains on battery for an extended time it will not be able to sustain the output load.		

Table 27-808 IK8362533

Alarm	Attributes	Applicable major release
Name: IK8362533 (10351) Type: equipmentAlarm Package: lmg.IK8362533 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Input voltage is out of range Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting input voltage is out of range.\nAlarm is cleared by the system.\nReason: cpqRPMtrapUPSInputOutofRange		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. 2. If the UPS remains on battery for an extended period of time it will not be able to sustain the load.		

Table 27-809 IK8362534

Alarm	Attributes	Applicable major release
Name: IK8362534 (10352) Type: environmentalAlarm Package: lmg.IK8362534 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: UPS temperature out of range Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR16.1.MG
Description: A UPS device is reporting temperature is out of range.\nAlarm is cleared by the system.\nReason: cpqRPMtrapUPSTemperatureOutOfRange		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is in a well ventilated area. 2. Lower the ambient temperature in the area where the UPS is located.		

Table 27-810 IK8362536

Alarm	Attributes	Applicable major release
Name: IK8362536 (10353) Type: equipmentAlarm Package: lmg.IK8362536 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: The UPS is on automatic bypass Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is operating in auto bypass mode.\nAlarm is cleared by the system.\nReason: cpqRPMtrapUPSBypassOnAuto		
Remedial action: Perform the following steps to clear the alarm: 1. In bypass mode, the UPS cannot support devices if there is a power failure. 2. Once maintenance has been performed return the UPS to normal mode.		

Table 27-811 IK8362539

Alarm	Attributes	Applicable major release
Name: IK8362539 (10354) Type: equipmentAlarm Package: lmg.IK8362539 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: One or more UPS batteries have been disconnected Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A UPS device is reporting batteries are not connected to the UPS.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBatteriesDisconnected		
Remedial action: Perform the following steps to clear the alarm: 1. Connect the UPS Batteries. The UPS will not be capable of supporting it's load if the utility power fails!		

Table 27-812 IK8362541

Alarm	Attributes	Applicable major release
Name: IK8362541 (10355) Type: environmentalAlarm Package: lmg.IK8362541 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: The UPS batteries are in a discharged condition Implicitly cleared: true Default probable cause: batteryDischarging	Release: • LR16.1.MG
Description: A UPS device is reporting batteries are completely discharged.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBatteryDischarged		
Remedial action: Perform the following steps to clear the alarm: 1. Connect the UPS to utility power to charge the batteries. The UPS will not be able to support it's load if the utility power fails!		

Table 27-813 IK8362543

Alarm	Attributes	Applicable major release
Name: IK8362543 (10356) Type: equipmentAlarm Package: lmg.IK8362543 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: A UPS circuit breaker needs attention Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A UPS device is reporting an output Breaker or Relay has failed or may be stuck open or closed with this alarm.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSCheckBreaker		
Remedial action: Perform the following steps to clear the alarm: 1. Check all breakers on the UPS. 2. If the problem persists, contact NOKIA customer support.		

Table 27-814 IK8362546

Alarm	Attributes	Applicable major release
Name: IK8362546 (10357) Type: equipmentAlarm Package: lmg.IK8362546 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: UPS output has been manually turned off Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The UPS has been powered off with user interaction.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSManualLoadDumped		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-815 IK8362548

Alarm	Attributes	Applicable major release
Name: IK8362548 (10358) Type: environmentalAlarm Package: lmg.IK8362548 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: A cover panel has been removed Implicitly cleared: true Default probable cause: enclosureDoorOpen	Release: • LR16.1.MG
Description: A UPS device is reporting a cover panel has been removed while utility power is present.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSCabinetDoorOpen		
Remedial action: Perform the following steps to clear the alarm: 1. Reinstall all panels. 2. If the problem persists, contact NOKIA customer support.		

Table 27-816 IK8362550

Alarm	Attributes	Applicable major release
Name: IK8362550 (10359) Type: environmentalAlarm Package: lmg.IK8362550 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: The UPS has encountered an fan failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: A UPS device is reporting a fan failure has occurred.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSFan-Failure		
Remedial action: Perform the following steps to clear the alarm: 1. If the problem persists, contact NOKIA customer support.		

Table 27-817 IK8362552

Alarm	Attributes	Applicable major release
Name: IK8362552 (10360) Type: processingErrorAlarm Package: lmg.IK8362552 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: The UPS N+1 load has been exceeded Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG
Description: A UPS device is reporting a loss of redundancy due to one of the following. 1. One or more of the Electronics Modules has failed 2. One or more of the electronics modules has been manually removed. 3. The amount of load on the UPS has increased to the point that the UPS is no longer able to support an N+1 configuration.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSLos-sOfRedundancy		
Remedial action: Perform the following steps to clear the alarm: 1. Check the UPS to see if one of the modules has failed. 2. Make sure that all modules are securely plugged in. 3. Reduce the load to return the N+1 configuration. 4. If the amount of load is now going to exceed and N+1 configuration permanently, change the configuration on the front panel of the UPS to Capacity instead of Parallel N+1.		

Table 27-818 IK8362554

Alarm	Attributes	Applicable major release
Name: IK8362554 (10361) Type: equipmentAlarm Package: lmg.IK8362554 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: A UPS shutdown is imminent Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting a shutdown imminent condition.\nAlarm is cleared by the system.\nReason: cpqRPMTrap-UPSShutdownImminent		
Remedial action: Perform the following steps to clear the alarm: 1. Immediately restore power to the UPS. The UPS will not continue to supply power to devices following the shutdown!		

Table 27-819 IK8362556

Alarm	Attributes	Applicable major release
Name: IK8362556 (10362) Type: equipmentAlarm Package: lmg.IK8362556 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: A UPS shutdown is pending Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting shutdown pending condition.\nAlarm is cleared by the system.\nReason: cpqRPMTrap-UPSShutdownPending		
Remedial action: Perform the following steps to clear the alarm: 1. Immediately restore power to the UPS. The UPS will not continue to supply power to devices following the shutdown!		

Table 27-820 IK8362559

Alarm	Attributes	Applicable major release
Name: IK8362559 (10363) Type: equipmentAlarm Package: lmg.IK8362559 Raised on class: lmg.FRU	Severity: critical Specific problem: Critical Alarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A critical alarm has occurred.\nAlarm is cleared by the system.\nReason: cpqPMTrapCritical		
Remedial action: Check the Trap Details for more information.		

Table 27-821 IK8362609

Alarm	Attributes	Applicable major release
Name: IK8362609 (10364) Type: processingErrorAlarm Package: lmg.IK8362609 Raised on class: lmg.FRU	Severity: major Specific problem: Monitor Condition Failed Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG

Table 27-821 IK8362609 (continued)

Alarm	Attributes	Applicable major release
Description: A fault reporting feature has exceeded normal limits in the monitor indicated by the cpqSiMonitorIndex. The monitor's condition has been set to failed due to an operational feature exceeding normal operating limits. The monitor will not be useable and should be replaced.\nAlarm is cleared by the system.\nReason: cpqSiMonitorConditionFailed		
Remedial action: Make a note of the monitor model number and serial number. Replace the monitor. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 27-822 IK8362633

Alarm	Attributes	Applicable major release
Name: IK8362633 (10365) Type: communicationsAlarm Package: lmg.IK8362633 Raised on class: lmg.FRU	Severity: major Specific problem: The iLO NIC Link is Down Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG
Description: The iLO NIC Link is Down. The Remote Insight/ Integrated Lights-Out firmware has detected the loss of network link.\nAlarm is cleared by the system.\nReason: cpqSm2NicLinkDown		
Remedial action: Check the network connections for the iLO.		

Table 27-823 IK8362636

Alarm	Attributes	Applicable major release
Name: IK8362636 (10366) Type: equipmentAlarm Package: lmg.IK8362636 Raised on class: lmg.FRU	Severity: major Specific problem: Server powered off Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The server has been powered off. This will be sent once the server has been powered off, either by OS, or the power button.\nAlarm is cleared by the system.\nReason: cpqSm2ServerPowerOff		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-824 IK8362648

Alarm	Attributes	Applicable major release
Name: IK8362648 (10367) Type: qualityOfServiceAlarm Package: lmg.IK8362648 Raised on class: lmg.FRU	Severity: major Specific problem: PC Card Thermal Failure Status Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR16.1.MG

Table 27-824 IK8362648 (continued)

Alarm	Attributes	Applicable major release
Description: This alarm is sent when the PC Card Slot Thermal Sensor threshold has been exceeded for degraded operations thereby causing failed operations. This alarm will be sent when cpqSePCCardStatus transitions from Thermal Degraded (2) to Thermal Failure (3). The manufacturer and product information strings as well as the slot number for the failed PC Card is provided as parameters for this trap.\nAlarm is cleared by the system.\nReason: cpqSePCCardThermalFailure		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-825 IK8362657

Alarm	Attributes	Applicable major release
Name: IK8362657 (10368) Type: environmentalAlarm Package: lmg.IK8362657 Raised on class: lmg.FRU	Severity: major Specific problem: Storage System Temperature Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR16.1.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.\nAlarm is cleared by the system.\nReason: cpqSsTempFailed		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-826 IK8362748

Alarm	Attributes	Applicable major release
Name: IK8362748 (10369) Type: equipmentAlarm Package: lmg.IK8362748 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: fluteModuleAlarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Alarm notification\nAlarm is cleared by the system.\nReason: fluteModuleAlarm		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-827 IK8367481

Alarm	Attributes	Applicable major release
Name: IK8367481 (10370) Type: equipmentAlarm Package: lmg.IK8367481 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: The primary controller in the subsytem has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: The primary controller in the subsystem has failed. Details: The primary Controller has failed.		
Remedial action: No action is required.		

Table 27-828 IK8367482

Alarm	Attributes	Applicable major release
Name: IK8367482 (10371) Type: equipmentAlarm Package: Img.IK8367482 Raised on class: Img.FRU	Severity: indeterminate Specific problem: The secondary controller in the subsytem has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: The secondary controller in the subsystem has failed. Details: The secondary controller has failed.		
Remedial action: No action is required.		

Table 27-829 IK8367483

Alarm	Attributes	Applicable major release
Name: IK8367483 (10372) Type: equipmentAlarm Package: Img.IK8367483 Raised on class: Img.FRU	Severity: indeterminate Specific problem: A RAIDset has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A RAIDset has failed. Details: The RAIDset has failed and is off-line.		
Remedial action: No action is required.		

Table 27-830 IK8367484

Alarm	Attributes	Applicable major release
Name: IK8367484 (10373) Type: equipmentAlarm Package: Img.IK8367484 Raised on class: Img.FRU	Severity: indeterminate Specific problem: A RAIDset has become degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A RAIDset has become degraded. Details: A RAIDset has become degraded due to a member disk device failure.		
Remedial action: No action is required.		

Table 27-831 IK8367485

Alarm	Attributes	Applicable major release
Name: IK8367485 (10374) Type: equipmentAlarm Package: Img.IK8367485 Raised on class: Img.FRU	Severity: indeterminate Specific problem: A disk drive has failed Implicitly cleared: true Default probable cause: storageCapacityProblem	Release: • LR16.1.MG
Description: A disk drive has failed. Details: A disk device has failed.		
Remedial action: No action is required.		

Table 27-832 IK8367486

Alarm	Attributes	Applicable major release
Name: IK8367486 (10375) Type: equipmentAlarm Package: lmg.IK8367486 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Fan has failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: Fan has failed. Details: One of the cooling fans in the primary enclosure has failed.		
Remedial action: No action is required.		

Table 27-833 IK8367487

Alarm	Attributes	Applicable major release
Name: IK8367487 (10376) Type: equipmentAlarm Package: lmg.IK8367487 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Power supply has failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power supply has failed. Details: One of the power supplies in the primary enclosure has failed.		
Remedial action: No action is required.		

Table 27-834 IK8367488

Alarm	Attributes	Applicable major release
Name: IK8367488 (10377) Type: equipmentAlarm Package: lmg.IK8367488 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Primary enclosure temperature warning Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Primary enclosure temperature warning. Details: The temperature in the primary enclosure has triggered a warning condition detected by the controller.		
Remedial action: No action is required.		

Table 27-835 IK8367489

Alarm	Attributes	Applicable major release
Name: IK8367489 (10378) Type: equipmentAlarm Package: lmg.IK8367489 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Fan has failed in expansion cabinet Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: Fan has failed in expansion cabinet. Details: One of the cooling fans in the expansion cabinet has failed.		

Table 27-835 IK8367489 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-836 IK8367490

Alarm	Attributes	Applicable major release
Name: IK8367490 (10379) Type: equipmentAlarm Package: Img.IK8367490 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Power supply has failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power supply has failed. Details: One of the power supplies in the expansion cabinet has failed.		
Remedial action: No action is required.		

Table 27-837 IK8367491

Alarm	Attributes	Applicable major release
Name: IK8367491 (10380) Type: equipmentAlarm Package: Img.IK8367491 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Expansion cabinet temperature warning Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR16.1.MG
Description: Expansion cabinet temperature warning. Details: The temperature in the expansion cabinet has triggered a warning condition detected by the controller.		
Remedial action: No action is required.		

Table 27-838 IK8367500

Alarm	Attributes	Applicable major release
Name: IK8367500 (10381) Type: equipmentAlarm Package: Img.IK8367500 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Cluster Node Degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: This event will be sent any time the condition of a node in the cluster becomes degraded.		
Remedial action: No action is required.		

Table 27-839 IK8367501

Alarm	Attributes	Applicable major release
Name: IK8367501 (10382) Type: equipmentAlarm Package: lmg.IK8367501 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Cluster Node Failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: This event will be sent any time the condition of a node in the cluster becomes failed.		
Remedial action: No action is required.		

Table 27-840 IK8367502

Alarm	Attributes	Applicable major release
Name: IK8367502 (10383) Type: equipmentAlarm Package: lmg.IK8367502 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Cluster Resource Degraded Implicitly cleared: true Default probable cause: underlyingResourceUnavail-able	Release: • LR16.1.MG
Description: This event will be sent any time the condition of a cluster resource becomes degraded.		
Remedial action: No action is required.		

Table 27-841 IK8367503

Alarm	Attributes	Applicable major release
Name: IK8367503 (10384) Type: equipmentAlarm Package: lmg.IK8367503 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Cluster Resource Failed Implicitly cleared: true Default probable cause: underlyingResourceUnavail-able	Release: • LR16.1.MG
Description: This event will be sent any time the condition of a cluster resource becomes failed.		
Remedial action: No action is required.		

Table 27-842 IK8367504

Alarm	Attributes	Applicable major release
Name: IK8367504 (10385) Type: equipmentAlarm Package: lmg.IK8367504 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Cluster Network Degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: This event will be sent any time the condition of a cluster network becomes degraded.		

Table 27-842 IK8367504 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-843 IK8367505

Alarm	Attributes	Applicable major release
Name: IK8367505 (10386) Type: equipmentAlarm Package: lmg.IK8367505 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Cluster Network Failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: This event will be sent any time the condition of a cluster network becomes failed.		
Remedial action: No action is required.		

Table 27-844 IK8367508

Alarm	Attributes	Applicable major release
Name: IK8367508 (10387) Type: equipmentAlarm Package: lmg.IK8367508 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: External Array Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: External Array Accelerator Board Bad Data. This event signifies that the agent has detected a Array Accelerator Cache Board that has lost battery power. If data was being stored in the accelerator memory when the system lost power, that data has been lost.		
Remedial action: No action is required.		

Table 27-845 IK8367509

Alarm	Attributes	Applicable major release
Name: IK8367509 (10388) Type: equipmentAlarm Package: lmg.IK8367509 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: External Array Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG
Description: External Array Accelerator Board Battery Failed. This event signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.		
Remedial action: No action is required.		

Table 27-846 IK8367510

Alarm	Attributes	Applicable major release
Name: IK8367510 (10389) Type: equipmentAlarm Package: lmg.IK8367510 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: External Array Redundant Controller Active Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: External Array Redundant Controller Active. This event signifies that the Storage Agent has detected that a backup array controller in a duplexed pair has switched over to the active role. The variable cpqFcaCntlrBoxIoSlot indicates the new active controller index.		
Remedial action: No action is required.		

Table 27-847 IK8367511

Alarm	Attributes	Applicable major release
Name: IK8367511 (10390) Type: equipmentAlarm Package: lmg.IK8367511 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: External Array Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: External Array Accelerator Board Bad Data. This event signifies that the agent has detected a Array Accelerator Cache Board that has lost battery power. If data was being stored in the accelerator memory when the system lost power, that data has been lost.		
Remedial action: No action is required.		

Table 27-848 IK8367512

Alarm	Attributes	Applicable major release
Name: IK8367512 (10391) Type: equipmentAlarm Package: lmg.IK8367512 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: External Array Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG
Description: External Array Accelerator Board Battery Failed. This event signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.		
Remedial action: No action is required.		

Table 27-849 IK8367513

Alarm	Attributes	Applicable major release
Name: IK8367513 (10392) Type: equipmentAlarm Package: Img.IK8367513 Raised on class: Img.FRU	Severity: indeterminate Specific problem: POST Errors Occurred Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process. Details of the POST error messages can be found in Integrated Management Log		
Remedial action: No action is required.		

Table 27-850 IK8367514

Alarm	Attributes	Applicable major release
Name: IK8367514 (10393) Type: equipmentAlarm Package: Img.IK8367514 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Server Power Supply Degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The fault tolerant power supply sub-system condition has been set to degraded.		
Remedial action: No action is required.		

Table 27-851 IK8367515

Alarm	Attributes	Applicable major release
Name: IK8367515 (10394) Type: equipmentAlarm Package: Img.IK8367515 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Fan Degraded Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: The Fault Tolerant Fan condition has been set to degraded for the specified chassis and fan.		
Remedial action: No action is required.		

Table 27-852 IK8367516

Alarm	Attributes	Applicable major release
Name: IK8367516 (10395) Type: equipmentAlarm Package: Img.IK8367516 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Fan Failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: The Fault Tolerant Fan condition has been set to failed for the specified chassis and fan.		
Remedial action: No action is required.		

Table 27-853 IK8367517

Alarm	Attributes	Applicable major release
Name: IK8367517 (10396) Type: equipmentAlarm Package: lmg.IK8367517 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Power Converter Degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The DC-DC Power Converter condition has been set to degraded for the specified chassis, slot and socket.		
Remedial action: No action is required.		

Table 27-854 IK8367518

Alarm	Attributes	Applicable major release
Name: IK8367518 (10397) Type: equipmentAlarm Package: lmg.IK8367518 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Power Converter Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The DC-DC Power Converter condition has been set to failed for the specified chassis, slot and socket.		
Remedial action: No action is required.		

Table 27-855 IK8367519

Alarm	Attributes	Applicable major release
Name: IK8367519 (10398) Type: equipmentAlarm Package: lmg.IK8367519 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Power Converter Redundancy Lost Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The DC-DC Power Converters have lost redundancy for the specified chassis.		
Remedial action: No action is required.		

Table 27-856 IK8367520

Alarm	Attributes	Applicable major release
Name: IK8367520 (10399) Type: equipmentAlarm Package: lmg.IK8367520 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Cache Accel Parity Errors may require a module Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • LR16.1.MG
Description: A cache accelerator parity error indicates a cache module needs to be replaced. The error information is reported in the variable cpqHeEventLogErrorDesc.		

Table 27-856 IK8367520 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-857 IK8367521

Alarm	Attributes	Applicable major release
Name: IK8367521 (10400) Type: equipmentAlarm Package: Img.IK8367521 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Online Spare Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Advanced Memory Protection Online Spare Engaged. The Advanced Memory Protection subsystem has detected a memory fault. The Online Spare Memory has been activated.		
Remedial action: No action is required.		

Table 27-858 IK8367522

Alarm	Attributes	Applicable major release
Name: IK8367522 (10401) Type: equipmentAlarm Package: Img.IK8367522 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Mirrored Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Advanced Memory Protection Mirrored Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. Mirrored Memory has been activated.		
Remedial action: No action is required.		

Table 27-859 IK8367523

Alarm	Attributes	Applicable major release
Name: IK8367523 (10402) Type: equipmentAlarm Package: Img.IK8367523 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Advanced ECC Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Advanced Memory Protection Advanced ECC Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. Advanced ECC has been activated.		
Remedial action: No action is required.		

Table 27-860 IK8367524

Alarm	Attributes	Applicable major release
Name: IK8367524 (10403) Type: equipmentAlarm Package: lmg.IK8367524 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Advanced XOR Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Advanced Memory Protection XOR Engine Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. The XOR engine has been activated.		
Remedial action: No action is required.		

Table 27-861 IK8367525

Alarm	Attributes	Applicable major release
Name: IK8367525 (10404) Type: equipmentAlarm Package: lmg.IK8367525 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Memory Board or Cartridge Removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Memory board or cartridge removed. An Advanced Memory Protection sub-system board or cartridge has been removed from the system.		
Remedial action: No action is required.		

Table 27-862 IK8367526

Alarm	Attributes	Applicable major release
Name: IK8367526 (10405) Type: equipmentAlarm Package: lmg.IK8367526 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Memory Board or Cartridge Bus Error Detected Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Memory board or cartridge bus error detected. An Advanced Memory Protection sub-system board or cartridge bus error has been detected.		
Remedial action: No action is required.		

Table 27-863 IK8367527

Alarm	Attributes	Applicable major release
Name: IK8367527 (10406) Type: equipmentAlarm Package: Img.IK8367527 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Management processor failed reset Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: The Management processor failed reset The management processor was not successfully reset and is not operational.		
Remedial action: No action is required.		

Table 27-864 IK8367528

Alarm	Attributes	Applicable major release
Name: IK8367528 (10407) Type: equipmentAlarm Package: Img.IK8367528 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Memory Board or Cartridge or Riser Removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Memory board or cartridge or riser removed. An Advanced Memory Protection sub-system board or cartridge or riser has been removed from the system. Value 0 for CPU means memory is not processor based.		
Remedial action: No action is required.		

Table 27-865 IK8367529

Alarm	Attributes	Applicable major release
Name: IK8367529 (10408) Type: equipmentAlarm Package: Img.IK8367529 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Memory Board or Cartridge or Riser Bus Error Detected Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Memory board or cartridge or Riser bus error detected. An Advanced Memory Protection sub-system board or cartridge or Riser bus error has been detected. Value 0 for CPU means memory is not processor based.		
Remedial action: No action is required.		

Table 27-866 IK8367530

Alarm	Attributes	Applicable major release
Name: IK8367530 (10409) Type: equipmentAlarm Package: lmg.IK8367530 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Advanced LockStep Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Advanced Memory Protection LockStep Engine Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. The LockStep engine has been activated.		
Remedial action: No action is required.		

Table 27-867 IK8367531

Alarm	Attributes	Applicable major release
Name: IK8367531 (10410) Type: equipmentAlarm Package: lmg.IK8367531 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG
Description: This event will be sent any time the configured redundant NIC becomes the active NIC.		
Remedial action: No action is required.		

Table 27-868 IK8367532

Alarm	Attributes	Applicable major release
Name: IK8367532 (10411) Type: equipmentAlarm Package: lmg.IK8367532 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Critical Software update Notification Trap Implicitly cleared: true Default probable cause: softwareProgramError	Release: • LR16.1.MG
Description: This event is a send to the user to notify him of a Critical Software Update.		
Remedial action: No action is required.		

Table 27-869 IK8367533

Alarm	Attributes	Applicable major release
Name: IK8367533 (10412) Type: equipmentAlarm Package: lmg.IK8367533 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Duplex Controller Active Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG

Table 27-869 IK8367533 (continued)

Alarm	Attributes	Applicable major release
Description: Controller Active. This event signifies that the agent has detected that a backup array controller in a duplexed pair has switched over to the active role. The variable cpqDaCntlrSlot indicates the active controller slot and cpqDaCntlrPartnerSlot indicates the backup.		
Remedial action: No action is required.		

Table 27-870 IK8367534

Alarm	Attributes	Applicable major release
Name: IK8367534 (10413) Type: equipmentAlarm Package: lmg.IK8367534 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Physical Drive Threshold Passed. This event signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.		
Remedial action: No action is required.		

Table 27-871 IK8367535

Alarm	Attributes	Applicable major release
Name: IK8367535 (10414) Type: equipmentAlarm Package: lmg.IK8367535 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Accelerator Board Bad Data. This event signifies that the agent has detected an array accelerator cache board that has lost battery power. If data was being stored in the accelerator cache memory when the server lost power, that data has been lost.		
Remedial action: No action is required.		

Table 27-872 IK8367536

Alarm	Attributes	Applicable major release
Name: IK8367536 (10415) Type: equipmentAlarm Package: lmg.IK8367536 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG
Description: Accelerator Board Battery Failed. This event signifies that the agent has detected a battery failure associated with the array accelerator cache board.		
Remedial action: No action is required.		

Table 27-873 IK8367537

Alarm	Attributes	Applicable major release
Name: IK8367537 (10416) Type: equipmentAlarm Package: Img.IK8367537 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Physical Drive Threshold Passed. This event signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.		
Remedial action: No action is required.		

Table 27-874 IK8367538

Alarm	Attributes	Applicable major release
Name: IK8367538 (10417) Type: equipmentAlarm Package: Img.IK8367538 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Physical Drive Threshold Passed. This event signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.		
Remedial action: No action is required.		

Table 27-875 IK8367539

Alarm	Attributes	Applicable major release
Name: IK8367539 (10418) Type: equipmentAlarm Package: Img.IK8367539 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Cache Module Board Bad Data. This event signifies that the agent has detected a cache module board that has lost backup power. If data was being stored in the cache module memory when the server lost power, that data has been lost. The backup power source is indicated by cpqDaAccelBackupPowerSource.		
Remedial action: No action is required.		

Table 27-876 IK8367540

Alarm	Attributes	Applicable major release
Name: IK8367540 (10419) Type: equipmentAlarm Package: Img.IK8367540 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG

Table 27-876 IK8367540 (continued)

Alarm	Attributes	Applicable major release
Description: Cache Module Board Backup Power Source Failed. This event signifies that the agent has detected a backup power source failure associated with the cache module board. The backup power source is indicated by cpqDaAccelBackupPowerSource.		
Remedial action: No action is required.		

Table 27-877 IK8367541

Alarm	Attributes	Applicable major release
Name: IK8367541 (10420) Type: equipmentAlarm Package: lmg.IK8367541 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Tape Drive Cleaning Required Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG
Description: Tape Drive Cleaning Required trap. The agent has detected a tape drive that needs to have a cleaning tape inserted and run. This will cause the tape drive heads to be cleaned.		
Remedial action: No action is required.		

Table 27-878 IK8367542

Alarm	Attributes	Applicable major release
Name: IK8367542 (10421) Type: equipmentAlarm Package: lmg.IK8367542 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Tape Drive Cleaning Tape Needs Replacing Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape.		
Remedial action: No action is required.		

Table 27-879 IK8367543

Alarm	Attributes	Applicable major release
Name: IK8367543 (10422) Type: equipmentAlarm Package: lmg.IK8367543 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: IDE Drive Ultra ATA Degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: An IDE drive detects an excessive number of Ultra ATA data transmission errors between the hard drive and the processor.		
Remedial action: No action is required.		

Table 27-880 IK8367545

Alarm	Attributes	Applicable major release
Name: IK8367545 (10423) Type: equipmentAlarm Package: lmg.IK8367545 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: NIC Connectivity Lost Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG
Description: This event will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.		
Remedial action: No action is required.		

Table 27-881 IK8367546

Alarm	Attributes	Applicable major release
Name: IK8367546 (10424) Type: equipmentAlarm Package: lmg.IK8367546 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Enclosure fan failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: The enclosure fan status has been set to failed. This event signifies that an enclosure fan has failed and no other fans in the redundant fan group are operating. This may result in overheating of the enclosure.		
Remedial action: No action is required.		

Table 27-882 IK8367547

Alarm	Attributes	Applicable major release
Name: IK8367547 (10425) Type: equipmentAlarm Package: lmg.IK8367547 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Enclosure fan degraded Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: The enclosure fan status has been set to degraded. This event signifies that an enclosure fan has failed but other fans in the redundant fan group are still operating. This may result in overheating of the enclosure.		
Remedial action: No action is required.		

Table 27-883 IK8367548

Alarm	Attributes	Applicable major release
Name: IK8367548 (10426) Type: equipmentAlarm Package: Img.IK8367548 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Rack power supply failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The power supply status has been set to failed. This event signifies that a power supply has failed.		
Remedial action: No action is required.		

Table 27-884 IK8367549

Alarm	Attributes	Applicable major release
Name: IK8367549 (10427) Type: equipmentAlarm Package: Img.IK8367549 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Rack power supply degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The power supply status has been set to degraded. This event signifies that a power supply has degraded.		
Remedial action: No action is required.		

Table 27-885 IK8367550

Alarm	Attributes	Applicable major release
Name: IK8367550 (10428) Type: equipmentAlarm Package: Img.IK8367550 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Rack power subsystem not redundant Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The rack power subsystem is no longer in a redundant state.		
Remedial action: No action is required.		

Table 27-886 IK8367551

Alarm	Attributes	Applicable major release
Name: IK8367551 (10429) Type: equipmentAlarm Package: Img.IK8367551 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Rack power supply input voltage problem Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The rack power supply detected an input line voltage problem.		

Table 27-886 IK8367551 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-887 IK8367552

Alarm	Attributes	Applicable major release
Name: IK8367552 (10430) Type: equipmentAlarm Package: lmg.IK8367552 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Rack power subsystem overload condition Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The rack power subsystem overload condition.		
Remedial action: No action is required.		

Table 27-888 IK8367553

Alarm	Attributes	Applicable major release
Name: IK8367553 (10431) Type: equipmentAlarm Package: lmg.IK8367553 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Server shutdown due to power shedding Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Server shutdown due to power shedding. The server blade was shutdown due to a lack of power.		
Remedial action: No action is required.		

Table 27-889 IK8367554

Alarm	Attributes	Applicable major release
Name: IK8367554 (10432) Type: equipmentAlarm Package: lmg.IK8367554 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Server power on prevented to preserve redundancy Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Server power on prevented to preserve redundancy. There is not enough power to power on the server blade and maintain redundancy for the other blades in the enclosure.		
Remedial action: No action is required.		

Table 27-890 IK8367555

Alarm	Attributes	Applicable major release
Name: IK8367555 (10433) Type: equipmentAlarm Package: Img.IK8367555 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade.		
Remedial action: No action is required.		

Table 27-891 IK8367556

Alarm	Attributes	Applicable major release
Name: IK8367556 (10434) Type: equipmentAlarm Package: Img.IK8367556 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The server enclosure micro-controller was not found.		
Remedial action: No action is required.		

Table 27-892 IK8367557

Alarm	Attributes	Applicable major release
Name: IK8367557 (10435) Type: equipmentAlarm Package: Img.IK8367557 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The power enclosure micro-controller was not found.		
Remedial action: No action is required.		

Table 27-893 IK8367558

Alarm	Attributes	Applicable major release
Name: IK8367558 (10436) Type: equipmentAlarm Package: Img.IK8367558 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Fuse open Implicitly cleared: true Default probable cause: enclosureDoorOpen	Release: • LR16.1.MG
Description: Fuse open. The fuse has been tripped.		

Table 27-893 IK8367558 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-894 IK8367559

Alarm	Attributes	Applicable major release
Name: IK8367559 (10437) Type: equipmentAlarm Package: lmg.IK8367559 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Power subsystem not load balanced Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power subsystem not load balanced. The power subsystem is out of balance for this power enclosure.		
Remedial action: No action is required.		

Table 27-895 IK8367560

Alarm	Attributes	Applicable major release
Name: IK8367560 (10438) Type: equipmentAlarm Package: lmg.IK8367560 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Power subsystem DC power problem Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power subsystem DC power problem. There is a power subsystem DC power problem for this power enclosure.		
Remedial action: No action is required.		

Table 27-896 IK8367561

Alarm	Attributes	Applicable major release
Name: IK8367561 (10439) Type: equipmentAlarm Package: lmg.IK8367561 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Power subsystem AC facility input power exceeded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power subsystem AC facility input power exceeded. There is a power subsystem Power subsystem AC facility input power exceeded for this power enclosure.		
Remedial action: No action is required.		

Table 27-897 IK8367562

Alarm	Attributes	Applicable major release
Name: IK8367562 (10440) Type: equipmentAlarm Package: Img.IK8367562 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Unknown power consumption Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Unknown power consumption. There is an unknown power consumer drawing power.		
Remedial action: No action is required.		

Table 27-898 IK8367563

Alarm	Attributes	Applicable major release
Name: IK8367563 (10441) Type: equipmentAlarm Package: Img.IK8367563 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Power subsystem load balancing wire missing Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power subsystem load balancing wire missing. The power subsystem load balancing wire missing.		
Remedial action: No action is required.		

Table 27-899 IK8367564

Alarm	Attributes	Applicable major release
Name: IK8367564 (10442) Type: equipmentAlarm Package: Img.IK8367564 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Power subsystem has too may power enclosures Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power subsystem has too may power enclosures. The maximum number of power enclosures has been exceeded.		
Remedial action: No action is required.		

Table 27-900 IK8367565

Alarm	Attributes	Applicable major release
Name: IK8367565 (10443) Type: equipmentAlarm Package: Img.IK8367565 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Power subsystem improperly configured Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG

Table 27-900 IK8367565 (continued)

Alarm	Attributes	Applicable major release
Description: Power subsystem improperly configured. The power subsystem has been improperly configured.		
Remedial action: No action is required.		

Table 27-901 IK8367566

Alarm	Attributes	Applicable major release
Name: IK8367566 (10444) Type: equipmentAlarm Package: Img.IK8367566 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Server blade health status degraded Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR16.1.MG
Description: Server blade health status Degraded. The server blade health status has changed to Degraded.		
Remedial action: No action is required.		

Table 27-902 IK8367567

Alarm	Attributes	Applicable major release
Name: IK8367567 (10445) Type: equipmentAlarm Package: Img.IK8367567 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Server blade not responding to group capping requests Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: The server blade is not responding to the group capper. The server blade is not responding to capping requests from the enclosure group capper		
Remedial action: No action is required.		

Table 27-903 IK8367568

Alarm	Attributes	Applicable major release
Name: IK8367568 (10446) Type: equipmentAlarm Package: Img.IK8367568 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Server blade unexpected shutdown Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Server blade shutdown unexpectadly. An unexpected shutdown event has occurred for this server blade.		
Remedial action: No action is required.		

Table 27-904 IK8367569

Alarm	Attributes	Applicable major release
Name: IK8367569 (10447) Type: equipmentAlarm Package: Img.IK8367569 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Generic Power Subsystem EAE Minor trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: FlexFabric Cmdr Power Subsystem Minor trap.		
Remedial action: No action is required.		

Table 27-905 IK8367570

Alarm	Attributes	Applicable major release
Name: IK8367570 (10448) Type: equipmentAlarm Package: Img.IK8367570 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Generic Power Subsystem EAE Major trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: FlexFabric Cmdr Power Subsystem Major trap.		
Remedial action: No action is required.		

Table 27-906 IK8367571

Alarm	Attributes	Applicable major release
Name: IK8367571 (10449) Type: equipmentAlarm Package: Img.IK8367571 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Generic Power Subsystem EAE Critical trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: FlexFabric Cmdr Power Subsystem Critical trap.		
Remedial action: No action is required.		

Table 27-907 IK8367572

Alarm	Attributes	Applicable major release
Name: IK8367572 (10450) Type: equipmentAlarm Package: Img.IK8367572 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Generic WSMAN Major trap Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG

Table 27-907 IK8367572 (continued)

Alarm	Attributes	Applicable major release
Description: WSMAN Major trap		
Remedial action: No action is required.		

Table 27-908 IK8367573

Alarm	Attributes	Applicable major release
Name: IK8367573 (10451) Type: equipmentAlarm Package: Img.IK8367573 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Generic WSMAN Critical trap Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: WSMAN Critical trap		
Remedial action: No action is required.		

Table 27-909 IK8367574

Alarm	Attributes	Applicable major release
Name: IK8367574 (10452) Type: equipmentAlarm Package: Img.IK8367574 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Device Connected Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG
Description: A UPS device is reporting a Connection Lost due to one of the following. 1. The serial cable connected to the UPS has been unplugged. 2. The Network cable connected to the UPS has been unplugged.		
Remedial action: No action is required.		

Table 27-910 IK8367575

Alarm	Attributes	Applicable major release
Name: IK8367575 (10453) Type: equipmentAlarm Package: Img.IK8367575 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Connection Lost Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG
Description: A UPS device is reporting a Connection Lost due to one of the following. 1. The serial cable connected to the UPS has been unplugged. 2. The Network cable connected to the UPS has been unplugged.		
Remedial action: No action is required.		

Table 27-911 IK8367576

Alarm	Attributes	Applicable major release
Name: IK8367576 (10454) Type: equipmentAlarm Package: Img.IK8367576 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS Input Voltage Normal Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting input voltage is out of range.		
Remedial action: No action is required.		

Table 27-912 IK8367577

Alarm	Attributes	Applicable major release
Name: IK8367577 (10455) Type: equipmentAlarm Package: Img.IK8367577 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS Output Voltage Normal Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting output voltage is out of Range.		
Remedial action: No action is required.		

Table 27-913 IK8367578

Alarm	Attributes	Applicable major release
Name: IK8367578 (10456) Type: equipmentAlarm Package: Img.IK8367578 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS Battery Level Normal Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting low battery.		
Remedial action: No action is required.		

Table 27-914 IK8367579

Alarm	Attributes	Applicable major release
Name: IK8367579 (10457) Type: equipmentAlarm Package: Img.IK8367579 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS On Battery Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting on battery condition.		
Remedial action: No action is required.		

Table 27-915 IK8367580

Alarm	Attributes	Applicable major release
Name: IK8367580 (10458) Type: equipmentAlarm Package: Img.IK8367580 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS On Buck Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting an On Buck condition due to the following. 1. Utility power has increased above recommended utility input levels.		
Remedial action: No action is required.		

Table 27-916 IK8367581

Alarm	Attributes	Applicable major release
Name: IK8367581 (10459) Type: equipmentAlarm Package: Img.IK8367581 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS On Boost Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting an On Boost condition due to the following. 1. Utility power has dropped below recommended utility input levels.		
Remedial action: No action is required.		

Table 27-917 IK8367582

Alarm	Attributes	Applicable major release
Name: IK8367582 (10460) Type: equipmentAlarm Package: Img.IK8367582 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS On Utility Power Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting on battery condition.		
Remedial action: No action is required.		

Table 27-918 IK8367583

Alarm	Attributes	Applicable major release
Name: IK8367583 (10461) Type: equipmentAlarm Package: Img.IK8367583 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS Temperature Normal Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR16.1.MG
Description: A UPS device is reporting temperature is out of range.		

Table 27-918 IK8367583 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-919 IK8367584

Alarm	Attributes	Applicable major release
Name: IK8367584 (10462) Type: equipmentAlarm Package: lmg.IK8367584 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: UPS Diagnostic Test Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting a diagnostic test failed.		
Remedial action: No action is required.		

Table 27-920 IK8367585

Alarm	Attributes	Applicable major release
Name: IK8367585 (10463) Type: equipmentAlarm Package: lmg.IK8367585 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: UPS Diagnostic Test Succeeded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting a diagnostic test failed.		
Remedial action: No action is required.		

Table 27-921 IK8367586

Alarm	Attributes	Applicable major release
Name: IK8367586 (10464) Type: equipmentAlarm Package: lmg.IK8367586 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Site Wiring Fault Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A UPS device is reporting a fault in the input wiring, other than Phase Rotation: e.g., Ground/Neutral reversed.		
Remedial action: No action is required.		

Table 27-922 IK8367587

Alarm	Attributes	Applicable major release
Name: IK8367587 (10465) Type: equipmentAlarm Package: Img.IK8367587 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Site Wiring Fault Cleared Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A UPS device is reporting a fault in the input wiring, other than Phase Rotation: e.g., Ground/Neutral reversed.		
Remedial action: No action is required.		

Table 27-923 IK8367588

Alarm	Attributes	Applicable major release
Name: IK8367588 (10466) Type: equipmentAlarm Package: Img.IK8367588 Raised on class: Img.FRU	Severity: indeterminate Specific problem: The UPS is no longer on manual bypass Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is operating in manual bypass mode.		
Remedial action: No action is required.		

Table 27-924 IK8367589

Alarm	Attributes	Applicable major release
Name: IK8367589 (10467) Type: equipmentAlarm Package: Img.IK8367589 Raised on class: Img.FRU	Severity: indeterminate Specific problem: The UPS is on manual bypass Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is operating in manual bypass mode.		
Remedial action: No action is required.		

Table 27-925 IK8367590

Alarm	Attributes	Applicable major release
Name: IK8367590 (10468) Type: equipmentAlarm Package: Img.IK8367590 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Output voltage is out of range Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting output voltage is out of Range.		
Remedial action: No action is required.		

Table 27-926 IK8367591

Alarm	Attributes	Applicable major release
Name: IK8367591 (10469) Type: equipmentAlarm Package: Img.IK8367591 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Emergency Power Off activated Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting an Emergency Power Off (EPO) command has been received to shutdown the UPS immediately with out delay. This command may come from a local control panel or from a remote source.		
Remedial action: No action is required.		

Table 27-927 IK8367592

Alarm	Attributes	Applicable major release
Name: IK8367592 (10470) Type: equipmentAlarm Package: Img.IK8367592 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Warning Alarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A warning alarm has occurred.		
Remedial action: No action is required.		

Table 27-928 IK8367593

Alarm	Attributes	Applicable major release
Name: IK8367593 (10471) Type: equipmentAlarm Package: Img.IK8367593 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Tape Drive Cleaning Required Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG
Description: Tape Drive Cleaning Required trap. The agent has detected a tape drive that needs to have a cleaning tape inserted and run. This will cause the tape drive heads to be cleaned.		
Remedial action: No action is required.		

Table 27-929 IK8367594

Alarm	Attributes	Applicable major release
Name: IK8367594 (10472) Type: equipmentAlarm Package: Img.IK8367594 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Tape Drive Cleaning Tape Needs Replacing Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG

Table 27-929 IK8367594 (continued)

Alarm	Attributes	Applicable major release
Description: Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape.		
Remedial action: No action is required.		

Table 27-930 IK8367595

Alarm	Attributes	Applicable major release
Name: IK8367595 (10473) Type: equipmentAlarm Package: lmg.IK8367595 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Tape Library Door Opened Implicitly cleared: true Default probable cause: enclosureDoorOpen	Release: • LR16.1.MG
Description: Tape Library Door Open The agent has detected that the door on an autoloader is open so the unit is not operational.		
Remedial action: No action is required.		

Table 27-931 IK8367596

Alarm	Attributes	Applicable major release
Name: IK8367596 (10474) Type: equipmentAlarm Package: lmg.IK8367596 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: System hood is removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: System hood is removed. The hood status has been set to removed. The system's hood is not in a properly installed state. This situation may result in improper cooling of the system due to air flow changes caused by the missing hood.		
Remedial action: No action is required.		

Table 27-932 IK8367597

Alarm	Attributes	Applicable major release
Name: IK8367597 (10475) Type: equipmentAlarm Package: lmg.IK8367597 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Excessive Correctable Memory Errors Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Correctable memory error count has exceeded the threshold for the memory module indicated by the 'cpqSiMemErrorIndex' variable. The appropriate cpqSiMemModuleECCStatus has been set to degraded.		
Remedial action: No action is required.		

Table 27-933 IK8367598

Alarm	Attributes	Applicable major release
Name: IK8367598 (10476) Type: equipmentAlarm Package: Img.IK8367598 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Memory modules have changed Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: A memory configuration change has occurred. CpqSiMemConfigChangeData will indicate which memory modules slots have changed.		
Remedial action: No action is required.		

Table 27-934 IK8367599

Alarm	Attributes	Applicable major release
Name: IK8367599 (10477) Type: equipmentAlarm Package: Img.IK8367599 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Hot Plug Slot Board Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Hot Plug Slot Board Failed Power-Up. A Hot Plug Slot Board has failed to power-up in the specified chassis and slot.		
Remedial action: No action is required.		

Table 27-935 IK8367600

Alarm	Attributes	Applicable major release
Name: IK8367600 (10478) Type: equipmentAlarm Package: Img.IK8367600 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Battery Failure Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG
Description: The battery indicated by cpqSiSysBatteryIndex has failed and must be replaced.		
Remedial action: No action is required.		

Table 27-936 IK8367601

Alarm	Attributes	Applicable major release
Name: IK8367601 (10479) Type: equipmentAlarm Package: Img.IK8367601 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Battery Charging Degradation Implicitly cleared: true Default probable cause: lowBatteryThreshold	Release: • LR16.1.MG
Description: Significant battery degradation has occurred with battery indicated by cpqSiSysBatteryIndex. The battery can no longer be fully recharged.		

Table 27-936 IK8367601 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-937 IK8367602

Alarm	Attributes	Applicable major release
Name: IK8367602 (10480) Type: equipmentAlarm Package: lmg.IK8367602 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Battery Calibration Error Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG
Description: Calibration is needed with battery indicated by cpqSiSysBatteryIndex. The battery can not correctly indicate capacity.		
Remedial action: No action is required.		

Table 27-938 IK8367603

Alarm	Attributes	Applicable major release
Name: IK8367603 (10481) Type: equipmentAlarm Package: lmg.IK8367603 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Server Power Outage Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Server Power Outage. The Remote Insight/ Integrated Lights-Out firmware has detected server power failure.		
Remedial action: No action is required.		

Table 27-939 IK8367604

Alarm	Attributes	Applicable major release
Name: IK8367604 (10482) Type: equipmentAlarm Package: lmg.IK8367604 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Storage System Temperature Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR16.1.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.		
Remedial action: No action is required.		

Table 27-940 IK8367605

Alarm	Attributes	Applicable major release
Name: IK8367605 (10483) Type: equipmentAlarm Package: lmg.IK8367605 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Storage System Temp Degraded Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR16.1.MG
Description: Storage System temperature degraded. The agent has detected a temperature status that has been set to degraded. The storage system's temperature is outside of the normal operating range.		
Remedial action: No action is required.		

Table 27-941 IK8367606

Alarm	Attributes	Applicable major release
Name: IK8367606 (10484) Type: equipmentAlarm Package: lmg.IK8367606 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Storage System side panel is removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Storage System side panel is removed. The side panel status has been set to removed. The storage system's side panel is not in a properly installed state. This situation may result in improper cooling of the drives in the storage system due to air flow changes caused by the missing side panel.		
Remedial action: No action is required.		

Table 27-942 IK8367607

Alarm	Attributes	Applicable major release
Name: IK8367607 (10485) Type: equipmentAlarm Package: lmg.IK8367607 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Power Supply Degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A storage system power supply status has been set to degraded.		
Remedial action: No action is required.		

Table 27-943 IK8400982

Alarm	Attributes	Applicable major release
Name: IK8400982 (6809) Type: equipmentAlarm Package: lmg.IK8400982 Raised on class: lmg.FRU	Severity: major Specific problem: Cluster Node Failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG

Table 27-943 IK8400982 (continued)

Alarm	Attributes	Applicable major release
Description: This alarm will be sent any time the condition of a node in the cluster becomes failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterNodeFailed		
Remedial action: Make a note of the cluster node name then check the node for the cause of the failure.		

Table 27-944 IK8400984

Alarm	Attributes	Applicable major release
Name: IK8400984 (6810) Type: processingErrorAlarm Package: lmg.IK8400984 Raised on class: lmg.FRU	Severity: major Specific problem: Cluster Resource Failed Implicitly cleared: true Default probable cause: underlyingResourceUnavail-able	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a cluster resource becomes failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterResourceFailed		
Remedial action: Make a note of the cluster resource name then check the resource for the cause of the failure.		

Table 27-945 IK8400986

Alarm	Attributes	Applicable major release
Name: IK8400986 (6811) Type: equipmentAlarm Package: lmg.IK8400986 Raised on class: lmg.FRU	Severity: major Specific problem: Cluster Network Failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a cluster network becomes failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterNetworkFailed		
Remedial action: Make a note of the cluster network name then check the network for the cause of the failure.		

Table 27-946 IK8401008

Alarm	Attributes	Applicable major release
Name: IK8401008 (6812) Type: equipmentAlarm Package: lmg.IK8401008 Raised on class: lmg.FRU	Severity: major Specific problem: The primary controller in the subsytem has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The primary controller in the subsystem has failed. Details: The primary Controller has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrController1FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 27-947 IK8401010

Alarm	Attributes	Applicable major release
Name: IK8401010 (6813) Type: equipmentAlarm Package: Img.IK8401010 Raised on class: Img.FRU	Severity: major Specific problem: The secondary controller in the subsytem has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The secondary controller in the subsystem has failed. Details: The secondary controller has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrController2FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 27-948 IK8401013

Alarm	Attributes	Applicable major release
Name: IK8401013 (6814) Type: equipmentAlarm Package: Img.IK8401013 Raised on class: Img.FRU	Severity: major Specific problem: A RAIDset has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: A RAIDset has failed. Details: The RAIDset has failed and is off-line.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrLogDriveFailureTrap		
Remedial action: Possible cause is too many failed disk drives that make up the RAIDset, the OS can no longer communicate with the RAIDset for other reasons.		

Table 27-949 IK8401018

Alarm	Attributes	Applicable major release
Name: IK8401018 (6815) Type: processingErrorAlarm Package: Img.IK8401018 Raised on class: Img.FRU	Severity: major Specific problem: A disk drive has failed Implicitly cleared: true Default probable cause: storageCapacityProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system.\nReason: cpqCrDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 27-950 IK8401023

Alarm	Attributes	Applicable major release
Name: IK8401023 (6816) Type: processingErrorAlarm Package: Img.IK8401023 Raised on class: Img.FRU	Severity: major Specific problem: A disk drive has failed Implicitly cleared: true Default probable cause: storageCapacityProblem	Release: • LR14.3.MG • LR15.1.MG

Table 27-950 IK8401023 (continued)

Alarm	Attributes	Applicable major release
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrPhyDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 27-951 IK8401030

Alarm	Attributes	Applicable major release
Name: IK8401030 (6817) Type: equipmentAlarm Package: lmg.IK8401030 Raised on class: lmg.FRU	Severity: major Specific problem: Power supply has failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power supply has failed. Details: One of the power supplies in the primary enclosure has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrEMUPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 27-952 IK8401033

Alarm	Attributes	Applicable major release
Name: IK8401033 (6818) Type: equipmentAlarm Package: lmg.IK8401033 Raised on class: lmg.FRU	Severity: critical Specific problem: Primary enclosure temperature critical! Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Primary enclosure temperature critical!. Details: The temperature in the primary enclosure has triggered a critical condition detected by the controller.\nAlarm is cleared by the system.\nReason: cpqCrEMUTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the primary enclosure.		

Table 27-953 IK8401037

Alarm	Attributes	Applicable major release
Name: IK8401037 (6819) Type: equipmentAlarm Package: lmg.IK8401037 Raised on class: lmg.FRU	Severity: major Specific problem: Power supply has failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power supply has failed. Details: One of the power supplies in the expansion cabinet has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrExpCabPowerSupplyFailureTrap		

Table 27-953 IK8401037 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 27-954 IK8401040

Alarm	Attributes	Applicable major release
Name: IK8401040 (6820) Type: environmentalAlarm Package: lmg.IK8401040 Raised on class: lmg.FRU	Severity: critical Specific problem: cpqCrExpCabTemperatureCriti-calTrap Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: Expansion cabinet temperature critical! Details: The temperature in the expansion cabinet has triggered a critical condition detected by the controller.\nAlarm is cleared by the system.\nReason: cpqCrExpCabTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the expansion cabinet.		

Table 27-955 IK8401060

Alarm	Attributes	Applicable major release
Name: IK8401060 (6821) Type: environmentalAlarm Package: lmg.IK8401060 Raised on class: lmg.FRU	Severity: major Specific problem: External Array Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqFcaAccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 27-956 IK8401073

Alarm	Attributes	Applicable major release
Name: IK8401073 (6822) Type: environmentalAlarm Package: lmg.IK8401073 Raised on class: lmg.FRU	Severity: major Specific problem: External Array Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqFca2AccelBatteryFailed		

Table 27-956 IK8401073 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Replace the Accelerator Cache Board.		

Table 27-957 IK8401091

Alarm	Attributes	Applicable major release
Name: IK8401091 (9237) Type: environmentalAlarm Package: lmg.IK8401091 Raised on class: lmg.FRU	Severity: major Specific problem: System Fan Failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR15.1.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHeThermalSystemFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-958 IK8401098

Alarm	Attributes	Applicable major release
Name: IK8401098 (6823) Type: equipmentAlarm Package: lmg.IK8401098 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: POST Errors Occurred Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHePostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 27-959 IK8401102

Alarm	Attributes	Applicable major release
Name: IK8401102 (6824) Type: environmentalAlarm Package: lmg.IK8401102 Raised on class: lmg.FRU	Severity: major Specific problem: Thermal Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: The temperature status has been set to failed. The system will be shutdown due to this thermal condition.\nAlarm is cleared by the system.\nReason: cpqHe3ThermalTempFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 27-960 IK8401105

Alarm	Attributes	Applicable major release
Name: IK8401105 (6825) Type: environmentalAlarm Package: lmg.IK8401105 Raised on class: lmg.FRU	Severity: major Specific problem: System Fan Failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHe3ThermalSystemFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-961 IK8401112

Alarm	Attributes	Applicable major release
Name: IK8401112 (6826) Type: equipmentAlarm Package: lmg.IK8401112 Raised on class: lmg.FRU	Severity: major Specific problem: POST Errors Occurred Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process. Details of the POST error messages can be found in Integrated Management Log\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3PostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 27-962 IK8401116

Alarm	Attributes	Applicable major release
Name: IK8401116 (6827) Type: equipmentAlarm Package: lmg.IK8401116 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Power Supply Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe3FltTolPowerSupplyFailed		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-963 IK8401121

Alarm	Attributes	Applicable major release
Name: IK8401121 (6828) Type: environmentalAlarm Package: lmg.IK8401121 Raised on class: lmg.FRU	Severity: major Specific problem: Fan Failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The Fault Tolerant Fan condition has been set to failed for the specified chassis and fan.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3FltTolFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-964 IK8401125

Alarm	Attributes	Applicable major release
Name: IK8401125 (6829) Type: environmentalAlarm Package: lmg.IK8401125 Raised on class: lmg.FRU	Severity: major Specific problem: Thermal Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: The temperature status has been set to failed in the specified chassis and location. The system will be shutdown due to this condition.\nAlarm is cleared by the system.\nReason: cpqHe3TemperatureFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 27-965 IK8401129

Alarm	Attributes	Applicable major release
Name: IK8401129 (6830) Type: equipmentAlarm Package: lmg.IK8401129 Raised on class: lmg.FRU	Severity: major Specific problem: Power Converter Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The DC-DC Power Converter condition has been set to failed for the specified chassis, slot and socket.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3PowerConverterFailed		
Remedial action: Replace the failed power converter.		

Table 27-966 IK8401135

Alarm	Attributes	Applicable major release
Name: IK8401135 (6831) Type: equipmentAlarm Package: lmg.IK8401135 Raised on class: lmg.FRU	Severity: major Specific problem: Power Supply Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG

Table 27-966 IK8401135 (continued)

Alarm	Attributes	Applicable major release
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FltTolPowerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

Table 27-967 IK8401144

Alarm	Attributes	Applicable major release
Name: IK8401144 (6832) Type: processingErrorAlarm Package: lmg.IK8401144 Raised on class: lmg.FRU	Severity: major Specific problem: Memory Board or Cartridge Bus Error Detected Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Memory board or cartridge bus error detected. An Advanced Memory Protection sub-system board or cartridge bus error has been detected.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge.		

Table 27-968 IK8401148

Alarm	Attributes	Applicable major release
Name: IK8401148 (6833) Type: equipmentAlarm Package: lmg.IK8401148 Raised on class: lmg.FRU	Severity: major Specific problem: Management processor failed reset Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The Management processor failed reset The management processor was not successfully reset and is not operational.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeManagementProcFailedReset		
Remedial action: Reset the management procesessor again or re-flash the management processor firmware.		

Table 27-969 IK8401152

Alarm	Attributes	Applicable major release
Name: IK8401152 (6834) Type: processingErrorAlarm Package: lmg.IK8401152 Raised on class: lmg.FRU	Severity: major Specific problem: Memory Board or Cartridge or Riser Bus Error Detected Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Memory board or cartridge or Riser bus error detected. An Advanced Memory Protection sub-system board or cartridge or Riser bus error has been detected. Value 0 for CPU means memory is not processor based.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe5ResMemBoardBusError		

Table 27-969 IK8401152 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Replace the indicated board or cartridge or Riser.		

Table 27-970 IK8401154

Alarm	Attributes	Applicable major release
Name: IK8401154 (6835) Type: equipmentAlarm Package: lmg.IK8401154 Raised on class: lmg.FRU	Severity: major Specific problem: Power Supply AC Power Loss Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The fault tolerant power supply AC power loss for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FltTolPowerSupplyACpowerloss		
Remedial action: Check the power source for the specified power supply.		

Table 27-971 IK8401156

Alarm	Attributes	Applicable major release
Name: IK8401156 (6836) Type: processingErrorAlarm Package: lmg.IK8401156 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Application Error Trap Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHoAppErrorTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-972 IK8401158

Alarm	Attributes	Applicable major release
Name: IK8401158 (6837) Type: processingErrorAlarm Package: lmg.IK8401158 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Application Error Trap Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2AppErrorTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-973 IK8401160

Alarm	Attributes	Applicable major release
Name: IK8401160 (9238) Type: communicationsAlarm Package: lmg.IK8401160 Raised on class: lmg.FRU	Severity: major Specific problem: Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition.\nAlarm is cleared by the system.\nReason: cpqHo2NicStatusFailed		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 27-974 IK8401163

Alarm	Attributes	Applicable major release
Name: IK8401163 (6838) Type: communicationsAlarm Package: lmg.IK8401163 Raised on class: lmg.FRU	Severity: major Specific problem: Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition.\nAlarm is cleared by the system.\nReason: cpqHo2NicStatusFailed2		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 27-975 IK8401172

Alarm	Attributes	Applicable major release
Name: IK8401172 (6839) Type: qualityOfServiceAlarm Package: lmg.IK8401172 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Power Threshold Exceeded Implicitly cleared: false Default probable cause: resourceAtOrNearingCapacity	Release: • LR14.3.MG
Description: This alarm notifies user of a power threshold breach. Power threshold exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2PowerThresholdTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-976 IK8402265

Alarm	Attributes	Applicable major release
Name: IK8402265 (6840) Type: environmentalAlarm Package: lmg.IK8402265 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDaAccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 27-977 IK8402272

Alarm	Attributes	Applicable major release
Name: IK8402272 (6841) Type: environmentalAlarm Package: lmg.IK8402272 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa2AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 27-978 IK8402279

Alarm	Attributes	Applicable major release
Name: IK8402279 (6842) Type: environmentalAlarm Package: lmg.IK8402279 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa3AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 27-979 IK8402291

Alarm	Attributes	Applicable major release
Name: IK8402291 (6843) Type: equipmentAlarm Package: lmg.IK8402291 Raised on class: lmg.FRU	Severity: major Specific problem: Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Accelerator Board Bad Data. This alarm signifies that the agent has detected an array accelerator cache board that has lost battery power. If data was being stored in the accelerator cache memory when the server lost power, that data has been lost.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqDa5AccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 27-980 IK8402292

Alarm	Attributes	Applicable major release
Name: IK8402292 (6844) Type: environmentalAlarm Package: lmg.IK8402292 Raised on class: lmg.FRU	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqDa5AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 27-981 IK8402295

Alarm	Attributes	Applicable major release
Name: IK8402295 (6845) Type: equipmentAlarm Package: lmg.IK8402295 Raised on class: lmg.FRU	Severity: major Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm is cleared by the system when the device is restarted.\ nReason: cpqDa5PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 27-982 IK8402302

Alarm	Attributes	Applicable major release
Name: IK8402302 (6846) Type: equipmentAlarm Package: lmg.IK8402302 Raised on class: lmg.FRU	Severity: major Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm is cleared by the system when the device is restarted.\ nReason: cpqDa6PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 27-983 IK8402337

Alarm	Attributes	Applicable major release
Name: IK8402337 (6847) Type: communicationsAlarm Package: lmg.IK8402337 Raised on class: lmg.FRU	Severity: major Specific problem: NIC Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNicConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-984 IK8402341

Alarm	Attributes	Applicable major release
Name: IK8402341 (6848) Type: communicationsAlarm Package: lmg.IK8402341 Raised on class: lmg.FRU	Severity: major Specific problem: NIC Connectivity Lost Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-985 IK8402343

Alarm	Attributes	Applicable major release
Name: IK8402343 (6849) Type: communicationsAlarm Package: lmg.IK8402343 Raised on class: lmg.FRU	Severity: major Specific problem: NIC Redundancy Reduced Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2RedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-986 IK8402347

Alarm	Attributes	Applicable major release
Name: IK8402347 (6850) Type: communicationsAlarm Package: lmg.IK8402347 Raised on class: lmg.FRU	Severity: major Specific problem: NIC Connectivity Lost Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqNic3ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-987 IK8402349

Alarm	Attributes	Applicable major release
Name: IK8402349 (6851) Type: communicationsAlarm Package: lmg.IK8402349 Raised on class: lmg.FRU	Severity: major Specific problem: NIC Redundancy Reduced Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic3RedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-988 IK8402360

Alarm	Attributes	Applicable major release
Name: IK8402360 (6852) Type: equipmentAlarm Package: lmg.IK8402360 Raised on class: lmg.FRU	Severity: major Specific problem: Enclosure temperature failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The enclosure temperature status has been set to failed. This alarm signifies that a enclosure temperature sensor has been tripped indicating an overheat condition.\nAlarm is cleared by the system.\nReason: cpqRackEnclosureTempFailed		
Remedial action: Shutdown the enclosure and possibly the rack as soon as possible. Ensure all fans are working properly and that air flow in the rack has not been blocked.		

Table 27-989 IK8402363

Alarm	Attributes	Applicable major release
Name: IK8402363 (6853) Type: environmentalAlarm Package: lmg.IK8402363 Raised on class: lmg.FRU	Severity: major Specific problem: Enclosure fan failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The enclosure fan status has been set to failed. This alarm signifies that an enclosure fan has failed and no other fans in the redundant fan group are operating. This may result in overheating of the enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackEnclosureFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-990 IK8402368

Alarm	Attributes	Applicable major release
Name: IK8402368 (6854) Type: equipmentAlarm Package: lmg.IK8402368 Raised on class: lmg.FRU	Severity: critical Specific problem: Rack power supply failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The power supply status has been set to failed. This alarm signifies that a power supply has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

Table 27-991 IK8402369

Alarm	Attributes	Applicable major release
Name: IK8402369 (6855) Type: equipmentAlarm Package: Img.IK8402369 Raised on class: Img.FRU	Severity: major Specific problem: Rack power supply degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The power supply status has been set to degraded. This alarm signifies that a power supply has degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSupplyDegraded		
Remedial action: Replace the power supply as soon as possible.		

Table 27-992 IK8402374

Alarm	Attributes	Applicable major release
Name: IK8402374 (6856) Type: equipmentAlarm Package: Img.IK8402374 Raised on class: Img.FRU	Severity: major Specific problem: Rack power supply input voltage problem Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The rack power supply detected an input line voltage problem.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSubsystemLineVoltageProblem		
Remedial action: Check the power input for the power supply or replace any failed power supplies as soon as possible.		

Table 27-993 IK8402375

Alarm	Attributes	Applicable major release
Name: IK8402375 (6857) Type: equipmentAlarm Package: Img.IK8402375 Raised on class: Img.FRU	Severity: major Specific problem: Rack power subsystem overload condition Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The rack power subsystem overload condition.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSubsystemOverloadCondition		
Remedial action: Replace any failed power supplies as soon as possible to return the system to a redundant state.		

Table 27-994 IK8402376

Alarm	Attributes	Applicable major release
Name: IK8402376 (6858) Type: equipmentAlarm Package: lmg.IK8402376 Raised on class: lmg.FRU	Severity: critical Specific problem: Server shutdown due to power shedding Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Server shutdown due to power shedding. The server blade was shutdown due to a lack of power.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerShedAutoShutdown		
Remedial action: Check power connections or add power supplies.		

Table 27-995 IK8402377

Alarm	Attributes	Applicable major release
Name: IK8402377 (6859) Type: equipmentAlarm Package: lmg.IK8402377 Raised on class: lmg.FRU	Severity: critical Specific problem: Server power on prevented to preserve redundancy Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Server power on prevented to preserve redundancy. There is not enough power to power on the server blade and maintain redundancy for the other blades in the enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailedNotRedundant		
Remedial action: Check power connections or add power supplies.		

Table 27-996 IK8402378

Alarm	Attributes	Applicable major release
Name: IK8402378 (6860) Type: equipmentAlarm Package: lmg.IK8402378 Raised on class: lmg.FRU	Severity: critical Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailedNotEnoughPower		
Remedial action: Check power connections or add power supplies.		

Table 27-997 IK8402379

Alarm	Attributes	Applicable major release
Name: IK8402379 (6861) Type: equipmentAlarm Package: Img.IK8402379 Raised on class: Img.FRU	Severity: critical Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The server enclosure micro-controller was not found.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFaile-dEnclosureNotFound		
Remedial action: Check server enclosure connections or add power supplies.		

Table 27-998 IK8402380

Alarm	Attributes	Applicable major release
Name: IK8402380 (6862) Type: equipmentAlarm Package: Img.IK8402380 Raised on class: Img.FRU	Severity: critical Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The power enclosure micro-controller was not found.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailed-PowerChassisNotFound		
Remedial action: Check power enclosure connections or add power supplies.		

Table 27-999 IK8402382

Alarm	Attributes	Applicable major release
Name: IK8402382 (6863) Type: environmentalAlarm Package: Img.IK8402382 Raised on class: Img.FRU	Severity: major Specific problem: Fuse open Implicitly cleared: true Default probable cause: enclosureDoorOpen	Release: • LR14.3.MG • LR15.1.MG
Description: Fuse open. The fuse has been tripped.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackFuseOpen		
Remedial action: Check enclosure and / or blade power connections and reset the fuse.		

Table 27-1000 IK8402386

Alarm	Attributes	Applicable major release
Name: IK8402386 (6864) Type: equipmentAlarm Package: lmg.IK8402386 Raised on class: lmg.FRU	Severity: major Specific problem: Power subsystem DC power problem Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem DC power problem. There is a power subsystem DC power problem for this power enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisDcPowerProblem		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 27-1001 IK8402387

Alarm	Attributes	Applicable major release
Name: IK8402387 (6865) Type: equipmentAlarm Package: lmg.IK8402387 Raised on class: lmg.FRU	Severity: major Specific problem: Power subsystem AC facility input power exceeded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem AC facility input power exceeded. There is a power subsystem Power subsystem AC facility input power exceeded for this power enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisAc-FacilityPowerExceeded		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 27-1002 IK8402388

Alarm	Attributes	Applicable major release
Name: IK8402388 (6866) Type: equipmentAlarm Package: lmg.IK8402388 Raised on class: lmg.FRU	Severity: major Specific problem: Unknown power consumption Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Unknown power consumption. There is an unknown power consumer drawing power.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerUnknownPowerConsumption		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 27-1003 IK8402391

Alarm	Attributes	Applicable major release
Name: IK8402391 (6867) Type: processingErrorAlarm Package: Img.IK8402391 Raised on class: Img.FRU	Severity: major Specific problem: Power subsystem improperly configured Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem improperly configured. The power subsystem has been improperly configured.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisConfigError		
Remedial action: Check the cabling of the power enclosure.		

Table 27-1004 IK8402401

Alarm	Attributes	Applicable major release
Name: IK8402401 (6868) Type: communicationsAlarm Package: Img.IK8402401 Raised on class: Img.FRU	Severity: critical Specific problem: Interconnect failed Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: The interconnect status has been set to failed. This alarm signifies that a interconnect has failed.\nAlarm is cleared by the system.\nReason: cpqRackNetConnectorFailed		
Remedial action: Replace the interconnect as soon as possible.		

Table 27-1005 IK8402408

Alarm	Attributes	Applicable major release
Name: IK8402408 (6869) Type: qualityOfServiceAlarm Package: Img.IK8402408 Raised on class: Img.FRU	Severity: major Specific problem: Server blade health status degraded Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR14.3.MG • LR15.1.MG
Description: Server blade health status Degraded. The server blade health status has changed to Degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerBladeStatusDegraded		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-1006 IK8402409

Alarm	Attributes	Applicable major release
Name: IK8402409 (6870) Type: processingErrorAlarm Package: lmg.IK8402409 Raised on class: lmg.FRU	Severity: critical Specific problem: Server blade health status critical Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG
Description: Server blade health status Critical. The server blade health status has changed to Critical.\nAlarm is cleared by the system.\nReason: cpqRackServerBladeStatusCritical		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-1007 IK8402411

Alarm	Attributes	Applicable major release
Name: IK8402411 (6871) Type: equipmentAlarm Package: lmg.IK8402411 Raised on class: lmg.FRU	Severity: major Specific problem: Server blade unexpected shutdown Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Server blade shutdown unexpectadly. An unexpected shutdown event has occurred for this server blade.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerBladeUnexpectedShutdown		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-1008 IK8402428

Alarm	Attributes	Applicable major release
Name: IK8402428 (6872) Type: equipmentAlarm Package: lmg.IK8402428 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Generic EAE Major trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: EAE Major trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackMajorEAETrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1009 IK8402429

Alarm	Attributes	Applicable major release
Name: IK8402429 (6873) Type: equipmentAlarm Package: lmg.IK8402429 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Generic EAE Critical trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: EAE Critical trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackCriticalEAETrap		

Table 27-1009 IK8402429 (continued)

Alarm	Attributes	Applicable major release
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1010 IK8402431

Alarm	Attributes	Applicable major release
Name: IK8402431 (6874) Type: equipmentAlarm Package: lmg.IK8402431 Raised on class: lmg.FRU	Severity: major Specific problem: Generic Power Subsystem EAE Major trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: FlexFabric Cmdr Power Subsystem Major trap.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerMajorEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 27-1011 IK8402432

Alarm	Attributes	Applicable major release
Name: IK8402432 (6875) Type: equipmentAlarm Package: lmg.IK8402432 Raised on class: lmg.FRU	Severity: critical Specific problem: Generic Power Subsystem EAE Critical trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: FlexFabric Cmdr Power Subsystem Critical trap.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerCriticalEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 27-1012 IK8402436

Alarm	Attributes	Applicable major release
Name: IK8402436 (6876) Type: equipmentAlarm Package: lmg.IK8402436 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Generic WSMAN Major trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: WSMAN Major trap\nReason: cpqRackMajorWSMANTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1013 IK8402437

Alarm	Attributes	Applicable major release
Name: IK8402437 (6877) Type: equipmentAlarm Package: lmg.IK8402437 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Generic WSMAN Critical trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: WSMAN Critical trap\nReason: cpqRackCriticalWSMANTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1014 IK8402439

Alarm	Attributes	Applicable major release
Name: IK8402439 (6878) Type: communicationsAlarm Package: lmg.IK8402439 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Standby Recovery Server Interconnect Failure Implicitly cleared: false Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: Recovery Server serial interconnect failure. The Standby Recovery Agent reports that the local serial interconnect is not connected or has failed. The primary server is being shutdown in anticipation of the startup of the standby server.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRsStandbyCableFailure		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1015 IK8402559

Alarm	Attributes	Applicable major release
Name: IK8402559 (6879) Type: equipmentAlarm Package: lmg.IK8402559 Raised on class: lmg.FRU	Severity: critical Specific problem: Critical Alarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: A critical alarm has occurred.\nAlarm is cleared by the system.\nReason: cpqPMTrapCritical		
Remedial action: Check the Trap Details for more information.		

Table 27-1016 IK8402609

Alarm	Attributes	Applicable major release
Name: IK8402609 (6880) Type: processingErrorAlarm Package: lmg.IK8402609 Raised on class: lmg.FRU	Severity: major Specific problem: Monitor Condition Failed Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG

Table 27-1016 IK8402609 (continued)

Alarm	Attributes	Applicable major release
Description: A fault reporting feature has exceeded normal limits in the monitor indicated by the cpqSiMonitorIndex. The monitor's condition has been set to failed due to an operational feature exceeding normal operating limits. The monitor will not be useable and should be replaced.\nAlarm is cleared by the system.\nReason: cpqSiMonitorConditionFailed		
Remedial action: Make a note of the monitor model number and serial number. Replace the monitor. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 27-1017 IK8402610

Alarm	Attributes	Applicable major release
Name: IK8402610 (6881) Type: processingErrorAlarm Package: lmg.IK8402610 Raised on class: lmg.FRU	Severity: major Specific problem: Excessive Correctable Memory Errors Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Correctable memory error count has exceeded the threshold for the memory module indicated by the 'cpqSiMemErrorIndex' variable. The appropriate cpqSiMemModuleECCStatus has been set to degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiCorrMemErrStatusDegraded		
Remedial action: For Desktops, the System Administrator should run the F10 Diagnostics on this system and select RAM LONG TEST. If it is determined that a module needs replacing, schedule maintenance for the system and replace the failed memory module. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 27-1018 IK8402615

Alarm	Attributes	Applicable major release
Name: IK8402615 (6882) Type: equipmentAlarm Package: lmg.IK8402615 Raised on class: lmg.FRU	Severity: major Specific problem: Hot Plug Slot Board Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Hot Plug Slot Board Failed Power-Up. A Hot Plug Slot Board has failed to power-up in the specified chassis and slot.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiHotPlugSlotPowerUpFailed		
Remedial action: Insure the board and all cables are installed correctly and the board type and revision are the same as the replaced board.		

Table 27-1019 IK8402616

Alarm	Attributes	Applicable major release
Name: IK8402616 (6883) Type: environmentalAlarm Package: lmg.IK8402616 Raised on class: lmg.FRU	Severity: major Specific problem: Battery Failure Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The battery indicated by cpqSiSysBatteryIndex has failed and must be replaced.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiSysBatteryFailure		
Remedial action: Contact your System Administrator or Authorized Reseller to order a replacement battery. Recycle your old battery. For proper disposal information, refer to the documentation that came with your computer.		

Table 27-1020 IK8402617

Alarm	Attributes	Applicable major release
Name: IK8402617 (6884) Type: environmentalAlarm Package: lmg.IK8402617 Raised on class: lmg.FRU	Severity: major Specific problem: Battery Charging Degradation Implicitly cleared: true Default probable cause: lowBatteryThreshold	Release: • LR14.3.MG • LR15.1.MG
Description: Significant battery degradation has occurred with battery indicated by cpqSiSysBatteryIndex. The battery can no longer be fully recharged.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiSysBatteryChargingDegraded		
Remedial action: If using multiple batteries, run the Power Conservation Utility to identify the battery location. Contact your System Administrator or Authorized Reseller to order a replacement battery.		

Table 27-1021 IK8402620

Alarm	Attributes	Applicable major release
Name: IK8402620 (6885) Type: equipmentAlarm Package: lmg.IK8402620 Raised on class: lmg.FRU	Severity: major Specific problem: Server Power Outage Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Server Power Outage. The Remote Insight/ Integrated Lights-Out firmware has detected server power failure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSm2ServerPowerOutage		
Remedial action: Check the server's power source.		

Table 27-1022 IK8402622

Alarm	Attributes	Applicable major release
Name: IK8402622 (6886) Type: environmentalAlarm Package: Img.IK8402622 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Remote Insight Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Remote Insight Battery Failed. The Remote Insight battery has failed and needs to be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2BatteryFailed		
Remedial action: replace the failing Remote Insight battery.		

Table 27-1023 IK8402628

Alarm	Attributes	Applicable major release
Name: IK8402628 (6887) Type: equipmentAlarm Package: Img.IK8402628 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Remote Insight external power cable disconnected Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: External Power Cable Disconnected. The Remote Insight external power cable has been disconnected.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ExternalPowerCableDisconnected		
Remedial action: check External Power Cable		

Table 27-1024 IK8402632

Alarm	Attributes	Applicable major release
Name: IK8402632 (6888) Type: processingErrorAlarm Package: Img.IK8402632 Raised on class: Img.LMGMngElement	Severity: critical Specific problem: Server Fatal Error Detected Implicitly cleared: false Default probable cause: softwareError	Release: • LR14.3.MG
Description: Server Fatal Error Detected. The Remote Insight/ Integrated Lights-Out firmware has detected a server fatal error.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerFatalError		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1025 IK8402633

Alarm	Attributes	Applicable major release
Name: IK8402633 (6889) Type: communicationsAlarm Package: lmg.IK8402633 Raised on class: lmg.FRU	Severity: major Specific problem: The iLO NIC Link is Down Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: The iLO NIC Link is Down. The Remote Insight/ Integrated Lights-Out firmware has detected the loss of network link.\nAlarm is cleared by the system.\nReason: cpqSm2NicLinkDown		
Remedial action: Check the network connections for the iLO.		

Table 27-1026 IK8402636

Alarm	Attributes	Applicable major release
Name: IK8402636 (9239) Type: equipmentAlarm Package: lmg.IK8402636 Raised on class: lmg.FRU	Severity: major Specific problem: Server powered off Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: The server has been powered off. This will be sent once the server has been powered off, either by OS, or the power button.\nAlarm is cleared by the system.\nReason: cpqSm2ServerPowerOff		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1027 IK8402648

Alarm	Attributes	Applicable major release
Name: IK8402648 (6890) Type: qualityOfServiceAlarm Package: lmg.IK8402648 Raised on class: lmg.FRU	Severity: major Specific problem: PC Card Thermal Failure Status Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm is sent when the PC Card Slot Thermal Sensor threshold has been exceeded for degraded operations thereby causing failed operations. This alarm will be sent when cpqSePCCardStatus transitions from Thermal Degraded (2) to Thermal Failure (3). The manufacturer and product information strings as well as the slot number for the failed PC Card is provided as parameters for this trap.\nAlarm is cleared by the system.\nReason: cpqSePCCardThermalFailure		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1028 IK8402657

Alarm	Attributes	Applicable major release
Name: IK8402657 (6891) Type: environmentalAlarm Package: lmg.IK8402657 Raised on class: lmg.FRU	Severity: major Specific problem: Storage System Temperature Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.\nAlarm is cleared by the system.\nReason: cpqSsTempFailed		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1029 IK8404762

Alarm	Attributes	Applicable major release
Name: IK8404762 (6892) Type: communicationsAlarm Package: lmg.IK8404762 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: linkDown Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: A linkDown alarm signifies that the SNMP entity, acting in an agent role, has detected that the ifOperStatus object for one of its communication links is about to enter the down state from some other state (but not from the notPresent state). This other state is indicated by the included value of ifOperStatus.\nAlarm is cleared by the system.\nReason: linkDown		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1030 IK8450919

Alarm	Attributes	Applicable major release
Name: IK8450919 (9240) Type: communicationsAlarm Package: lmg.IK8450919 Raised on class: lmg.FRU	Severity: major Specific problem: bt2SwDefGwDown Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG • LR16.1.MG
Description: A bt2SwDefGwDown alarm signifies that the default gateway is down.\nAlarm is cleared by the system.\nReason: bt2SwDefGwDown		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1031 IK8450921

Alarm	Attributes	Applicable major release
Name: IK8450921 (9241) Type: processingErrorAlarm Package: lmg.IK8450921 Raised on class: lmg.FRU	Severity: major Specific problem: bt2SwDefGwNotInService Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: A bt2SwDefGwDisabled alarm signifies that the default gateway is alive but not in service.\nAlarm is cleared by the system.\nReason: bt2SwDefGwNotInService		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1032 IK8450931

Alarm	Attributes	Applicable major release
Name: IK8450931 (6893) Type: processingErrorAlarm Package: lmg.IK8450931 Raised on class: lmg.FRU	Severity: major Specific problem: bt2SwFwDownloadFailure Implicitly cleared: true Default probable cause: softwareError	Release: • LR14.3.MG • LR15.1.MG
Description: A bt2SwFwDownloadFailure signifies that firmware downloaded failed to [image1|image2|boot image].\nAlarm is cleared by the system.\nReason: bt2SwFwDownloadFailure		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1033 IK8450935

Alarm	Attributes	Applicable major release
Name: IK8450935 (9242) Type: communicationsAlarm Package: lmg.IK8450935 Raised on class: lmg.FRU	Severity: major Specific problem: bt2SwUfdfoLtMFailure Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG • LR16.1.MG
Description: A bt2SwUfdfoLtMFailure alarm signifies that a LtM link is down.\nAlarm is cleared by the system.\nReason: bt2SwUfdfoLtMFailure		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1034 IK8450938

Alarm	Attributes	Applicable major release
Name: IK8450938 (9243) Type: processingErrorAlarm Package: lmg.IK8450938 Raised on class: lmg.FRU	Severity: major Specific problem: bt2SwUfdfoGlobalDis Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG

Table 27-1034 IK8450938 (continued)

Alarm	Attributes	Applicable major release
Description: A bt2SwUfdfoGlobalDis alarm signifies that Global UFD is disabled.\nAlarm is cleared by the system.\nReason: bt2SwUfdfoGlobalDis		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1035 IK8450940

Alarm	Attributes	Applicable major release
Name: IK8450940 (9244) Type: communicationsAlarm Package: lmg.IK8450940 Raised on class: lmg.FRU	Severity: major Specific problem: bt2SwUfdfoLtDAutoDis Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG • LR16.1.MG
Description: A bt2SwUfdfoLtDAutoDis alarm signifies that a LtD link is Auto Disabled.\nAlarm is cleared by the system.\nReason: bt2SwUfdfoLtDAutoDis		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1036 IK8450948

Alarm	Attributes	Applicable major release
Name: IK8450948 (9245) Type: communicationsAlarm Package: lmg.IK8450948 Raised on class: lmg.FRU	Severity: major Specific problem: bt2SwHotlinksMasterDn Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG • LR16.1.MG
Description: A bt2SwHotlinksMasterDn alarm signifies that the Master interface is not active.\nAlarm is cleared by the system.\nReason: bt2SwHotlinksMasterDn		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1037 IK8450950

Alarm	Attributes	Applicable major release
Name: IK8450950 (9246) Type: communicationsAlarm Package: lmg.IK8450950 Raised on class: lmg.FRU	Severity: major Specific problem: bt2SwHotlinksBackupDn Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG • LR16.1.MG
Description: A bt2SwHotlinksBackupDn alarm signifies that the Backup interface is not active.\nAlarm is cleared by the system.\nReason: bt2SwHotlinksBackupDn		

Table 27-1037 IK8450950 (continued)

Alarm	Attributes	Applicable major release
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1038 IK8450959

Alarm	Attributes	Applicable major release
Name: IK8450959 (6894) Type: communicationsAlarm Package: lmg.IK8450959 Raised on class: lmg.FRU	Severity: major Specific problem: The switch has failed a TFTP transfer Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The switch has failed a TFTP transfer.\nAlarm is cleared by the system.\nReason: switchTFTPTransferFailed		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1039 IK8450961

Alarm	Attributes	Applicable major release
Name: IK8450961 (6895) Type: environmentalAlarm Package: lmg.IK8450961 Raised on class: lmg.FRU	Severity: major Specific problem: The switch fan has failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The switch fan has failed.\nAlarm is cleared by the system.\nReason: switchFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-1040 IK8450963

Alarm	Attributes	Applicable major release
Name: IK8450963 (6896) Type: environmentalAlarm Package: lmg.IK8450963 Raised on class: lmg.FRU	Severity: major Specific problem: switchTempSensorDegraded Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The switch temperature sensor indicates a high temperature condition.\nAlarm is cleared by the system.\nReason: switchTempSensorDegraded		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1041 IK8450964

Alarm	Attributes	Applicable major release
Name: IK8450964 (9247) Type: environmentalAlarm Package: Img.IK8450964 Raised on class: Img.FRU	Severity: critical Specific problem: switchTempSensorFailed Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR15.1.MG • LR16.1.MG
Description: The switch temperature sensor indicates an over-temperature condition.\nAlarm is cleared by the system.\nReason: switchTempSensorFailed		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1042 IK8450971

Alarm	Attributes	Applicable major release
Name: IK8450971 (6897) Type: equipmentAlarm Package: Img.IK8450971 Raised on class: Img.LMGMngElement	Severity: major Specific problem: overheat Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: A overheat alarm indicates that the on board temperature sensor has reported a overheat condition. System will shutdown until unit has sufficiently cooled such that operation may begin again. A cold start alarm will be issued when the unit has come back on line.\nAlarm to be cleared by the operator at the management system.\nReason: overheat		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1043 IK8450975

Alarm	Attributes	Applicable major release
Name: IK8450975 (6898) Type: equipmentAlarm Package: Img.IK8450975 Raised on class: Img.FRU	Severity: major Specific problem: powerSupplyFail Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: One or more sources of power to this agent has failed. Presumably a redundant power-supply has taken over.\nAlarm is cleared by the system.\nReason: powerSupplyFail		
Remedial action: Replace the power supply as soon as possible.		

Table 27-1044 IK8450977

Alarm	Attributes	Applicable major release
Name: IK8450977 (6899) Type: equipmentAlarm Package: lmg.IK8450977 Raised on class: lmg.FRU	Severity: major Specific problem: rpsAlrm Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Attached Redundant Power Supply device is indicating an alarm condition.\nAlarm is cleared by the system.\nReason: rpsAlarm		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1045 IK8450982

Alarm	Attributes	Applicable major release
Name: IK8450982 (6900) Type: equipmentAlarm Package: lmg.IK8450982 Raised on class: lmg.FRU	Severity: major Specific problem: Cluster Node Failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a node in the cluster becomes failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterNodeFailed		
Remedial action: Make a note of the cluster node name then check the node for the cause of the failure.		

Table 27-1046 IK8450984

Alarm	Attributes	Applicable major release
Name: IK8450984 (6901) Type: processingErrorAlarm Package: lmg.IK8450984 Raised on class: lmg.FRU	Severity: major Specific problem: Cluster Resource Failed Implicitly cleared: true Default probable cause: underlyingResourceUnavailable	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a cluster resource becomes failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterResourceFailed		
Remedial action: Make a note of the cluster resource name then check the resource for the cause of the failure.		

Table 27-1047 IK8450986

Alarm	Attributes	Applicable major release
Name: IK8450986 (6902) Type: equipmentAlarm Package: Img.IK8450986 Raised on class: Img.FRU	Severity: major Specific problem: Cluster Network Failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a cluster network becomes failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterNetworkFailed		
Remedial action: Make a note of the cluster network name then check the network for the cause of the failure.		

Table 27-1048 IK8451008

Alarm	Attributes	Applicable major release
Name: IK8451008 (6903) Type: equipmentAlarm Package: Img.IK8451008 Raised on class: Img.FRU	Severity: major Specific problem: The primary controller in the subsytem has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The primary controller in the subsystem has failed. Details: The primary Controller has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrController1FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 27-1049 IK8451010

Alarm	Attributes	Applicable major release
Name: IK8451010 (6904) Type: equipmentAlarm Package: Img.IK8451010 Raised on class: Img.FRU	Severity: major Specific problem: The secondary controller in the subsytem has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The secondary controller in the subsystem has failed. Details: The secondary controller has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrController2FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 27-1050 IK8451013

Alarm	Attributes	Applicable major release
Name: IK8451013 (6905) Type: equipmentAlarm Package: lmg.IK8451013 Raised on class: lmg.FRU	Severity: major Specific problem: A RAIDset has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: A RAIDset has failed. Details: The RAIDset has failed and is off-line.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrLogDriveFailureTrap		
Remedial action: Possible cause is too many failed disk drives that make up the RAIDset, the OS can no longer communicate with the RAIDset for other reasons.		

Table 27-1051 IK8451018

Alarm	Attributes	Applicable major release
Name: IK8451018 (6906) Type: processingErrorAlarm Package: lmg.IK8451018 Raised on class: lmg.FRU	Severity: major Specific problem: A disk drive has failed Implicitly cleared: true Default probable cause: storageCapacityProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system.\nReason: cpqCrDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 27-1052 IK8451023

Alarm	Attributes	Applicable major release
Name: IK8451023 (6907) Type: processingErrorAlarm Package: lmg.IK8451023 Raised on class: lmg.FRU	Severity: major Specific problem: A disk drive has failed Implicitly cleared: true Default probable cause: storageCapacityProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrPhyDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 27-1053 IK8451030

Alarm	Attributes	Applicable major release
Name: IK8451030 (6908) Type: equipmentAlarm Package: lmg.IK8451030 Raised on class: lmg.FRU	Severity: major Specific problem: Power supply has failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG

Table 27-1053 IK8451030 (continued)

Alarm	Attributes	Applicable major release
Description: Power supply has failed. Details: One of the power supplies in the primary enclosure has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrEMUPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 27-1054 IK8451033

Alarm	Attributes	Applicable major release
Name: IK8451033 (6909) Type: equipmentAlarm Package: lmg.IK8451033 Raised on class: lmg.FRU	Severity: critical Specific problem: Primary enclosure temperature critical! Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Primary enclosure temperature critical!. Details: The temperature in the primary enclosure has triggered a critical condition detected by the controller.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrEMUTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the primary enclosure.		

Table 27-1055 IK8451037

Alarm	Attributes	Applicable major release
Name: IK8451037 (6910) Type: equipmentAlarm Package: lmg.IK8451037 Raised on class: lmg.FRU	Severity: major Specific problem: Power supply has failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power supply has failed. Details: One of the power supplies in the expansion cabinet has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrExpCabPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 27-1056 IK8451040

Alarm	Attributes	Applicable major release
Name: IK8451040 (6911) Type: environmentalAlarm Package: lmg.IK8451040 Raised on class: lmg.FRU	Severity: critical Specific problem: cpqCrExpCabTemperatureCriti-calTrap Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG

Table 27-1056 IK8451040 (continued)

Alarm	Attributes	Applicable major release
Description: Expansion cabinet temperature critical! Details: The temperature in the expansion cabinet has triggered a critical condition detected by the controller.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrExpCabTemperatureCriti-calTrap		
Remedial action: Check the cooling fans in the expansion cabinet.		

Table 27-1057 IK8451042

Alarm	Attributes	Applicable major release
Name: IK8451042 (6912) Type: equipmentAlarm Package: Img.IK8451042 Raised on class: Img.FRU	Severity: major Specific problem: High Priority Alert Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: A high priority alert has occurred.\nAlarm is cleared by the system when the device is restarted.\nReason: trapDceoHighPriority		
Remedial action: Check the Trap Details for more information.		

Table 27-1058 IK8451052

Alarm	Attributes	Applicable major release
Name: IK8451052 (6913) Type: equipmentAlarm Package: Img.IK8451052 Raised on class: Img.FRU	Severity: critical Specific problem: Critical Alarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: A critical alarm has occurred.\nAlarm is cleared by the system when the device is restarted.\nReason: trapDscCritical		
Remedial action: Check the Trap Description for more information.		

Table 27-1059 IK8451060

Alarm	Attributes	Applicable major release
Name: IK8451060 (6914) Type: environmentalAlarm Package: Img.IK8451060 Raised on class: Img.FRU	Severity: major Specific problem: External Array Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqFcaAccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 27-1060 IK8451073

Alarm	Attributes	Applicable major release
Name: IK8451073 (6915) Type: environmentalAlarm Package: Img.IK8451073 Raised on class: Img.FRU	Severity: major Specific problem: External Array Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqFca2AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 27-1061 IK8451091

Alarm	Attributes	Applicable major release
Name: IK8451091 (9248) Type: environmentalAlarm Package: Img.IK8451091 Raised on class: Img.FRU	Severity: major Specific problem: System Fan Failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR15.1.MG • LR16.1.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHeThermalSystemFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-1062 IK8451098

Alarm	Attributes	Applicable major release
Name: IK8451098 (6916) Type: equipmentAlarm Package: Img.IK8451098 Raised on class: Img.LMGMngElement	Severity: major Specific problem: POST Errors Occurred Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHePostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 27-1063 IK8451102

Alarm	Attributes	Applicable major release
Name: IK8451102 (6917) Type: environmentalAlarm Package: lmg.IK8451102 Raised on class: lmg.FRU	Severity: major Specific problem: Thermal Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The temperature status has been set to failed. The system will be shutdown due to this thermal condition.\nAlarm is cleared by the system.\nReason: cpqHe3ThermalTempFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 27-1064 IK8451105

Alarm	Attributes	Applicable major release
Name: IK8451105 (6918) Type: environmentalAlarm Package: lmg.IK8451105 Raised on class: lmg.FRU	Severity: major Specific problem: System Fan Failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHe3ThermalSystemFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-1065 IK8451112

Alarm	Attributes	Applicable major release
Name: IK8451112 (6919) Type: equipmentAlarm Package: lmg.IK8451112 Raised on class: lmg.FRU	Severity: major Specific problem: POST Errors Occurred Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process. Details of the POST error messages can be found in Integrated Management Log\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3PostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 27-1066 IK8451116

Alarm	Attributes	Applicable major release
Name: IK8451116 (6920) Type: equipmentAlarm Package: Img.IK8451116 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Power Supply Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe3FltTolPowerSupplyFailed		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1067 IK8451121

Alarm	Attributes	Applicable major release
Name: IK8451121 (6921) Type: environmentalAlarm Package: Img.IK8451121 Raised on class: Img.FRU	Severity: major Specific problem: Fan Failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The Fault Tolerant Fan condition has been set to failed for the specified chassis and fan.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3FltTolFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-1068 IK8451125

Alarm	Attributes	Applicable major release
Name: IK8451125 (6922) Type: environmentalAlarm Package: Img.IK8451125 Raised on class: Img.FRU	Severity: major Specific problem: Thermal Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The temperature status has been set to failed in the specified chassis and location. The system will be shutdown due to this condition.\nAlarm is cleared by the system.\nReason: cpqHe3TemperatureFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 27-1069 IK8451129

Alarm	Attributes	Applicable major release
Name: IK8451129 (6923) Type: equipmentAlarm Package: Img.IK8451129 Raised on class: Img.FRU	Severity: major Specific problem: Power Converter Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG

Table 27-1069 IK8451129 (continued)

Alarm	Attributes	Applicable major release
Description: The DC-DC Power Converter condition has been set to failed for the specified chassis, slot and socket.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3PowerConverterFailed		
Remedial action: Replace the failed power converter.		

Table 27-1070 IK8451135

Alarm	Attributes	Applicable major release
Name: IK8451135 (6924) Type: equipmentAlarm Package: Img.IK8451135 Raised on class: Img.FRU	Severity: major Specific problem: Power Supply Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FltTolPowerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

Table 27-1071 IK8451144

Alarm	Attributes	Applicable major release
Name: IK8451144 (6925) Type: processingErrorAlarm Package: Img.IK8451144 Raised on class: Img.FRU	Severity: major Specific problem: Memory Board or Cartridge Bus Error Detected Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Memory board or cartridge bus error detected. An Advanced Memory Protection sub-system board or cartridge bus error has been detected.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge.		

Table 27-1072 IK8451148

Alarm	Attributes	Applicable major release
Name: IK8451148 (6926) Type: equipmentAlarm Package: Img.IK8451148 Raised on class: Img.FRU	Severity: major Specific problem: Management processor failed reset Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The Management processor failed reset The management processor was not successfully reset and is not operational.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeManagementProcFailedReset		
Remedial action: Reset the management procesessor again or re-flash the management processor firmware.		

Table 27-1073 IK8451152

Alarm	Attributes	Applicable major release
Name: IK8451152 (6927) Type: processingErrorAlarm Package: Img.IK8451152 Raised on class: Img.FRU	Severity: major Specific problem: Memory Board or Cartridge or Riser Bus Error Detected Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Memory board or cartridge or Riser bus error detected. An Advanced Memory Protection sub-system board or cartridge or Riser bus error has been detected. Value 0 for CPU means memory is not processor based.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe5ResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge or Riser.		

Table 27-1074 IK8451154

Alarm	Attributes	Applicable major release
Name: IK8451154 (6928) Type: equipmentAlarm Package: Img.IK8451154 Raised on class: Img.FRU	Severity: major Specific problem: Power Supply AC Power Loss Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The fault tolerant power supply AC power loss for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FltTolPowerSupplyACpowerloss		
Remedial action: Check the power source for the specified power supply.		

Table 27-1075 IK8451156

Alarm	Attributes	Applicable major release
Name: IK8451156 (6929) Type: processingErrorAlarm Package: Img.IK8451156 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Application Error Trap Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHoAppErrorTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1076 IK8451158

Alarm	Attributes	Applicable major release
Name: IK8451158 (6930) Type: processingErrorAlarm Package: lmg.IK8451158 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Application Error Trap Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2AppErrorTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1077 IK8451160

Alarm	Attributes	Applicable major release
Name: IK8451160 (9249) Type: communicationsAlarm Package: lmg.IK8451160 Raised on class: lmg.FRU	Severity: major Specific problem: Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG • LR16.1.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition.\nAlarm is cleared by the system.\nReason: cpqHo2NicStatusFailed		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 27-1078 IK8451163

Alarm	Attributes	Applicable major release
Name: IK8451163 (6931) Type: communicationsAlarm Package: lmg.IK8451163 Raised on class: lmg.FRU	Severity: major Specific problem: Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition.\nAlarm is cleared by the system.\nReason: cpqHo2NicStatusFailed2		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 27-1079 IK8451172

Alarm	Attributes	Applicable major release
Name: IK8451172 (6932) Type: qualityOfServiceAlarm Package: lmg.IK8451172 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Power Threshold Exceeded Implicitly cleared: false Default probable cause: resourceAtOrNearingCapacity	Release: • LR14.3.MG
Description: This alarm notifies user of a power threshold breach. Power threshold exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2PowerThresholdTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1080 IK8451182

Alarm	Attributes	Applicable major release
Name: IK8451182 (6933) Type: processingErrorAlarm Package: lmg.IK8451182 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: StorageCell Event Implicitly cleared: false Default probable cause: softwareProgramError	Release: • LR14.3.MG
Description: The physical disk drive identified by the device field has been rendered inoperable. If the flags.quorum_disk flag is nonzero, the physical disk drive is the Storage System Quorum disk identified in the quorum_sequence field. . If the flags.inq_state flag is nonzero, the content of the inq_data and capacity fields is valid. . If the rss_flags.member_abnormal flag is nonzero, the content of the member_state field is valid. . The rack_num field will not be valid until a future release. The reason_code field contains a code giving the reason the physical disk drive has been rendered inoperable: . 0x001 =" CS IO failure . 0x002 = Scrubber IO failure . 0x003 = Attempt to set CBIT on normal drive . 0x004 = Attempt to set CBIT on merging drive . 0x100 = The Target Discovery Service Descriptor retry count has been exceeded . 0x101 = Inoperable for Bad Block Replacement . 0x102 = The soft error count has been exceeded . 0x103 = The number of exchange timeouts permitted was exceeded . 0x104 = Communication with drive has failed an excessive number of times . 0x105 = The number of retries has been exceeded . 0x106 = Medium/Hardware Errors encountered on this physical disk drive . 0x107 = The number of Directed LIP's has surpassed the threshold . 0x200 = Smart event from a physical disk drive not in Storage System . 0x201 = Smart event from a physical disk drive not a Volume . 0x202 = Smart event from a physical disk drive not a RSS . 0x203 = Failure predicted from physical disk drive . 0x204 = Can't read from physical disk drive from the poll . 0x205 = Failure predicted from physical disk drive while deleting Disk Group . 0x206 = physical disk drive forced inoperative from maintenance command for temporary POID . 0x207 = physical disk drive forced inoperative from maintenance command for POID . 0x208 = Bad block recovery failed or can't read FPAB . 0x209 = Failure to remove volume from Storage System . 0x20A = Failure to update metadata .\nAlarm to be cleared by the operator at the management system.\nReason: sCellEventTrap_3_1"		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1081 IK8451192

Alarm	Attributes	Applicable major release
Name: IK8451192 (6934) Type: processingErrorAlarm Package: lmg.IK8451192 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: StorageCell Event Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG

Table 27-1081 IK8451192 (continued)

Alarm	Attributes	Applicable major release
Description: A machine check occurred while a termination event was being processed. The post-termination operation being performed at the time the event occurred can be derived from the Iter.reuea_index field. Note: The Iteihd and Iter fields may not describe the event that caused the HSV110 controller to terminate operation depending on how far termination processing got before the machine check occurred.\nAlarm to be cleared by the operator at the management system.\nReason: sCellEventTrap_4_2		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1082 IK8451202

Alarm	Attributes	Applicable major release
Name: IK8451202 (6935) Type: equipmentAlarm Package: lmg.IK8451202 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: StorageCell Event Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: The Fault Manager on the Storage System Master received an invalid Event Information Packet from the remote Fault Manager. The header information from the invalid Event Information Packet is contained in the ainfo.remote_event field. Note: The content of the ainfo.quiesce_type field, ainfo.events_not_reported field, cinfo.scelcbi structure, cinfo.sctelcbi structure, minfo.scelmi structure, and minfo.sctelmi structure is undefined.\nAlarm to be cleared by the operator at the management system.\nReason: sCellEventTrap_4_c		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1083 IK8451208

Alarm	Attributes	Applicable major release
Name: IK8451208 (6936) Type: equipmentAlarm Package: lmg.IK8451208 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: StorageCell Event Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG

Table 27-1083 IK8451208 (continued)

Alarm	Attributes	Applicable major release
Description: A physical disk drive has reported that it has exceeded its failure prediction threshold. The identity of the physical disk drive is contained in the device field. The Fibre Channel port used to communicate with the physical disk drive is contained in the cerp_id field. The HSV110 controller internal Fibre Channel port number used to communicate with the physical disk drive is contained in the port field. The arbitrated loop physical address of the physical disk drive is contained in the al_pa field. The location of the physical disk drive is determined by the content of the dencl_num field as follows: . If dencl_num is less than 99, the location is as indicated by the content of the rack_num, dencl_num, and bay fields. . If dencl_num is equal to 99, the location is unknown. Note that the content of the rack_num and bay fields is undefined in this case. . If dencl_num is greater than 99, the HSV110 controller does not have proof of the current location but the last known location is indicated by the content of the rack_num, dencl_num, and bay fields. Subtract 100 from the content of those fields to determine the actual last known location. If there have been no configuration changes, the last known location values will be accurate. The identity contained in the device field should be used to confirm the last known location values. . Note that the content of the rack_num field will not be valid until a future release. The Fibre Channel Exchange Descriptor class is contained in the fed_class field. The command issued to the physical disk drive is contained in the cmd field. The sense data obtained from the physical disk drive as a result of the failure prediction threshold exceeded error is contained in the error field. The enclosures array shows the drive enclosures available on the Fibre Channel port identified in the cerp_id field. The location of an available drive enclosure is determined by the content of the enclosures.dencl_num field as follows: . If enclosures.dencl_num is less than 99, the location is as indicated by the content of the enclosures.rack_num and enclosures.dencl_num fields. . If enclosures.dencl_num is equal to 99, the enclosures array entry is not used. Note that the content of the enclosures.rack_num field is undefined in this case. . If enclosures.dencl_num is greater than 99, the HSV110 controller does not have proof of the current location but the last known location is indicated by the content of the enclosures.rack_num and enclosures.dencl_num fields. Subtract 100 from the content of those fields to determine the actual last known location. If there have been no configuration changes, the last known location values will be accurate. . Note that the content of the enclosures.rack_num field will not be valid until a future release.\nAlarm to be cleared by the operator at the management system.\nReason: sCellEventTrap_6_0		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1084 IK8451216

Alarm	Attributes	Applicable major release
Name: IK8451216 (6937) Type: equipmentAlarm Package: lmg.IK8451216 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: StorageCell Event Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG

Table 27-1084 IK8451216 (continued)

Alarm	Attributes	Applicable major release
Description: A physical disk drive has reported numerous failure prediction threshold exceeded errors. The identity of the physical disk drive is contained in the device field. The Fibre Channel port used to communicate with the physical disk drive is contained in the cerp_id field. The HSV110 controller internal Fibre Channel port number used to communicate with the physical disk drive is contained in the port field. The arbitrated loop physical address of the physical disk drive is contained in the al_pa field. The missing_port and missing_cerp_id fields are unused. The location of the physical disk drive is determined by the content of the dencl_num field as follows: . If dencl_num is less than 99, the location is as indicated by the content of the rack_num, dencl_num, and bay fields. . If dencl_num is equal to 99, the location is unknown. Note that the content of the rack_num and bay fields is undefined in this case. . If dencl_num is greater than 99, the HSV110 controller does not have proof of the current location but the last known location is indicated by the content of the rack_num, dencl_num, and bay fields. Subtract 100 from the content of those fields to determine the actual last known location. If there have been no configuration changes, the last known location values will be accurate. The identity contained in the device field should be used to confirm the last known location values. . Note that the content of the rack_num field will not be valid until a future release. The Fibre Channel Exchange Descriptor class is contained in the fed_class field. The num_times field is the number of failure prediction threshold exceeded errors reported by the physical disk drive in the previous minute. The enclosures array shows the drive enclosures available on the Fibre Channel port identified in the cerp_id field. The location of an available drive enclosure is determined by the content of the enclosures.dencl_num field as follows: . If enclosures.dencl_num is less than 99, the location is as indicated by the content of the enclosures.rack_num and enclosures.dencl_num fields. . If enclosures.dencl_num is equal to 99, the enclosures array entry is not used. Note that the content of the enclosures.rack_num field is undefined in this case. . If enclosures.dencl_num is greater than 99, the HSV110 controller does not have proof of the current location but the last known location is indicated by the content of the enclosures.rack_num and enclosures.dencl_num fields. Subtract 100 from the content of those fields to determine the actual last known location. If there have been no configuration changes, the last known location values will be accurate. . Note that the content of the enclosures.rack_num field will not be valid until a future release.\nAlarm to be cleared by the operator at the management system.\nReason: sCellEventTrap_6_9		
Remedial action: If the problem persists, contact Nokia customer support.

Description: A physical disk drive was bypassed rendering it unusable. The physical disk drive is unusable because a Drive Enclosure Environmental Monitoring Unit bypassed a drive bay or the physical disk drive left itself bypassed. The physical disk drive is not available to the HSV110 controllers and will not be displayed by the HSV element manager GUI. The physical disk drive fault led will be lit to indicate that it is unusable. The Fibre Channel port over which this condition was detected is identified in the cerp_id field. The HSV110 controller internal Fibre Channel port over which this condition was detected is contained in the port field. The al_pa field is invalid. The location of the physical disk drive is as indicated by the content of the rack_num, dencl_num, and bay fields. Note that the content of the rack_num field will not be valid until a future release. The bypass_reason field is used to indicate how the physical disk drive was bypassed: . 1 =" The physical disk drive left itself bypassed . 2 = The Drive Enclosure Environmental Monitoring Unit bypassed the drive bay . The Drive Enclosure Environmental Monitoring Unit is identified in the device field. Additionally, the content of the pid, rev, and enclosures array fields is undefined in this case.\nAlarm to be cleared by the operator at the management system.\nReason: sCellEventTrap_6_2b"		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1097 IK8451251

Alarm	Attributes	Applicable major release
Name: IK8451251 (6950) Type: equipmentAlarm Package: lmg.IK8451251 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: StorageCell Event Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: A HSV110 controller has detected only one port of all Fibre Channel devices in an enclosure. These Fibre Channel devices have entered the Single Port on Fibre state which should be corrected as soon as possible. The identity of the Fibre Channel device enclosure is contained in the device field. The Fibre Channel port still able to communicate with the Fibre Channel device is contained in the cerp_id field. The HSV110 controller internal Fibre Channel port number able to communicate with the Fibre Channel device is contained in the port field. The Fibre Channel port unable to communicate with the Fibre Channel device is contained in the missing_cerp_id field. The HSV110 controller internal Fibre Channel port number unable to communicate with the Fibre Channel device is contained in the missing_port field. The al_pa and bay fields are invalid. The location of the Fibre Channel enclosure is determined by the content of the dencl_num field as follows: . If dencl_num is less than 99, the location is as indicated by the content of the rack_num and dencl_num fields. . If dencl_num is equal to 99, the location is unknown. Note that the content of the rack_num field is undefined in this case. . If dencl_num is greater than 99, the HSV110 controller does not have proof of the current location but the last known location is indicated by the content of the rack_num and dencl_num fields. Subtract 100 from the content of those fields to determine the actual last known location. If there have been no configuration changes, the last known location values will be accurate. The identity contained in the device field should be used to confirm the last known location values. . Note that the content of the rack_num field will not be valid until a future release. Note also that in this case the content of the fed_class, and num_times fields is undefined. The enclosures array shows the drive enclosures available on the Fibre Channel port identified in the cerp_id field. The location of an available drive enclosure is determined by the content of the enclosures.dencl_num field as follows: . If enclosures.dencl_num is less than 99, the location is as indicated by the content of the enclosures.rack_num and enclosures.dencl_num fields. . If enclosures.dencl_num is equal to 99, the enclosures array entry is not used. Note that the content of the enclosures.rack_num field is undefined in this case. . If enclosures.dencl_num is greater than 99, the HSV110 controller does not have proof of the current location but the last known location is indicated by the content of the enclosures.rack_num and enclosures.dencl_num fields. Subtract 100 from the content of those fields to determine the actual last known location. If there have been no configuration changes, the last known location values will be accurate. . Note that the content of the enclosures.rack_num field will not be valid until a future release.\nAlarm to be cleared by the operator at the management system.\nReason: sCellEventTrap_6_30		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1098 IK8451253

Alarm	Attributes	Applicable major release
Name: IK8451253 (6951) Type: communicationsAlarm Package: lmg.IK8451253 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: StorageCell Event Implicitly cleared: false Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: A HSV110 controller has detected only one port of all Fibre Channel devices on a loop. These Fibre Channel devices have entered the Single Port on Fibre state which should be corrected as soon as possible. The device, al_pa, dencl_num, and bay fields are all invalid. The Fibre Channel port still able to communicate with the Fibre Channel device is contained in the cerp_id field. The HSV110 controller internal Fibre Channel port number able to communicate with the Fibre Channel device is contained in the port field. The Fibre Channel port unable to communicate with the Fibre Channel device is contained in the missing_cerp_id field. The HSV110 controller internal Fibre Channel port number unable to communicate with the Fibre Channel device is contained in the missing_port field.\nAlarm to be cleared by the operator at the management system.\nReason: sCellEventTrap_6_32		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1099 IK8451256

Alarm	Attributes	Applicable major release
Name: IK8451256 (6952) Type: equipmentAlarm Package: lmg.IK8451256 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: StorageCell Event Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: An unrecognized Fibre Channel physical disk drive firmware revision has been detected by the physical disk drive firmware load process. The identity of the physical disk drive is contained in the device field. The Fibre Channel port used to communicate with the physical disk drive is contained in the cerp_id field. The HSV110 controller internal Fibre Channel port number used to communicate with the physical disk drive is contained in the port field. The arbitrated loop physical address of the physical disk drive is contained in the al_pa field. The bypass_reason field is invalid. The location of the physical disk drive is determined by the content of the dencl_num field as follows: . If dencl_num is less than 99, the location is as indicated by the content of the rack_num, dencl_num, and bay fields. . If dencl_num is equal to 99, the location is unknown. Note that the content of the rack_num, al_pa and bay fields is undefined in this case. . If dencl_num is greater than 99, the HSV110 controller does not have proof of the current location but the last known location is indicated by the content of the rack_num, dencl_num, and bay fields. Subtract 100 from the content of those fields to determine the actual last known location. If there have been no configuration changes, the last known location values will be accurate. The identity contained in the device field should be used to confirm the last known location values. . Note that the content of the rack_num field will not be valid until a future release. The pid field contains the SCSI Inquiry Product Identification obtained from the physical disk drive. The rev field contains the current firmware revision obtained from the physical disk drive. The new_rev field contains the latest firmware version known to the controller, or blanks if the isn't a known version. The enclosures array shows the drive enclosures available on the Fibre Channel port identified in the cerp_id field. The location of an available drive enclosure is determined by the content of the enclosures.dencl_num field as follows: . If enclosures.dencl_num is less than 99, the location is as indicated by the content of the enclosures.rack_num and enclosures.dencl_num fields. . If enclosures.dencl_num is equal to 99, the enclosures array entry is not used. Note that the content of the enclosures.rack_num field is undefined in this case. . If enclosures.dencl_num is greater than 99, the HSV110 controller does not have proof of the current location but the last known location is indicated by the content of the enclosures.rack_num and enclosures.dencl_num fields. Subtract 100 from the content of those fields to determine the actual last known location. If there have been no configuration changes, the last known location values will be accurate. . Note that the content of the enclosures.rack_num field will not be valid until a future release.\nAlarm to be cleared by the operator at the management system.\nReason: sCellEventTrap_6_35		
Remedial action: If the problem persists, contact Nokia customer support.

If enclosures.dencl_num is less than 99, the location is as indicated by the content of the enclosures.rack_num and enclosures.dencl_num fields. . If enclosures.dencl_num is equal to 99, the enclosures array entry is not used. Note that the content of the enclosures.rack_num field is undefined in this case. . If enclosures.dencl_num is greater than 99, the HSV110 controller does not have proof of the current location but the last known location is indicated by the content of the enclosures.rack_num and enclosures.dencl_num fields. Subtract 100 from the content of those fields to determine the actual last known location. If there have been no configuration changes, the last known location values will be accurate. . Note that the content of the enclosures.rack_num field will not be valid until a future release.\nAlarm to be cleared by the operator at the management system.\nReason: sCellEventTrap_6_36		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1101 IK8451265

Alarm	Attributes	Applicable major release
Name: IK8451265 (6954) Type: equipmentAlarm Package: lmg.IK8451265 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: StorageCell Event Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: The HSV110 controller has detected an enclosure on the Fibre Channel but is unable to communicate with the EMU on the CAB bus or the EMU is reporting an invalid enclosure number. All fields except port and rack are invalid. other fields are invalid.\nAlarm to be cleared by the operator at the management system.\nReason: sCellEventTrap_6_3e		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1102 IK8451287

Alarm	Attributes	Applicable major release
Name: IK8451287 (6955) Type: environmentalAlarm Package: lmg.IK8451287 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: StorageCell Event Implicitly cleared: false Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG

Table 27-1102 IK8451287 (continued)

Alarm	Attributes	Applicable major release
Description: The temperature trip point for a temperature sensor located within an HSV110 controller has been reached. The HSV110 controller is identified in the handle field. The value.ul1 field contains the current temperature reading from I2C sensor 1 in degrees celsius while the value.ul2 field contains the adjusted reading from I2C sensor 2. The set temperature trip point is contained in the secondary_id field.\nAlarm to be cleared by the operator at the management system.\nReason: sCellEventTrap_9_e		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1103 IK8451290

Alarm	Attributes	Applicable major release
Name: IK8451290 (6956) Type: equipmentAlarm Package: lmg.IK8451290 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: StorageCell Event Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: The '1' blower located within the HSV110 controller identified in the handle field is running slower than the lowest acceptable speed. The secondary_id field contains the '1' blower assembly internal identifier value: 1. The value.ul1 field contains the current speed of the '1' blower. The value.ul2 field contains the lowest acceptable speed for the '1' blower.\nAlarm to be cleared by the operator at the management system.\nReason: sCellEventTrap_9_12		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1104 IK8451295

Alarm	Attributes	Applicable major release
Name: IK8451295 (6957) Type: environmentalAlarm Package: lmg.IK8451295 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: StorageCell Event Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: An HSV110 controller's battery assembly has been removed. The Battery Present flag for battery assembly '1' located within the HSV110 controller identified in the handle field has changed from PRESENT to NOT PRESENT indicating that the battery assembly was removed. The secondary_id field contains the battery assembly '1' internal identifier value: 1. The value.ul1 field contains the new state of the Battery Present flag: 0 (NOT PRESENT). The value.ul2 field contains the old state of the Battery Present flag: 1 (PRESENT).\nAlarm to be cleared by the operator at the management system.\nReason: sCellEventTrap_9_17		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1105 IK8451301

Description: The specified Source Virtual Disk has transitioned to the Logging state because the Destination Virtual Disk is not accessible. The following fields are not valid: status, blocks, vda, port, cerp_id, side.\nAlarm to be cleared by the operator at the management system.\nReason: sCellEventTrap_c_2		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1121 IK8451387

Alarm	Attributes	Applicable major release
Name: IK8451387 (6974) Type: processingErrorAlarm Package: lmg.IK8451387 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: StorageCell Event Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: A Data Replication Group has entered the Failsafe Locked state due to an inaccessible or inoperative destination. Either the Destination Virtual Disk is not accessible or a Virtual Disk in the Data Replication Group is inoperative. The following fields are not valid: status, blocks, vda, port, cerp_id, side.\nAlarm to be cleared by the operator at the management system.\nReason: sCellEventTrap_c_4		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1122 IK8451388

Alarm	Attributes	Applicable major release
Name: IK8451388 (6975) Type: processingErrorAlarm Package: lmg.IK8451388 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: StorageCell Event Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: A Data Replication Group has entered the Failsafe Locked state due to an inoperative source. Either the Source Virtual Disk is not accessible or a Virtual Disk in the Data Replication Group is inoperative. The following fields are not valid: status, blocks, vda, port, cerp_id, side.\nAlarm to be cleared by the operator at the management system.\nReason: sCellEventTrap_c_5		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1123 IK8451389

Alarm	Attributes	Applicable major release
Name: IK8451389 (6976) Type: processingErrorAlarm Package: Img.IK8451389 Raised on class: Img.LMGMngElement	Severity: critical Specific problem: StorageCell Event Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: An unrecoverable read error occurred on the specified Source Virtual Disk during the Full Copy. The Virtual Disk address specified in the vda field indicates the first block in error. The Full Copy was terminated.\nAlarm to be cleared by the operator at the management system.\nReason: sCellEventTrap_c_6		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1124 IK8451390

Alarm	Attributes	Applicable major release
Name: IK8451390 (6977) Type: processingErrorAlarm Package: Img.IK8451390 Raised on class: Img.LMGMngElement	Severity: critical Specific problem: StorageCell Event Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: A Full Copy terminated prior to completion. A remote copy error occurred due to an inaccessible alternate Storage System. The Virtual Disk address specified in the vda field indicates the first block in error. The Full Copy will continue when the Data Replication Destination is restored.\nAlarm to be cleared by the operator at the management system.\nReason: sCellEventTrap_c_7		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1125 IK8451391

Alarm	Attributes	Applicable major release
Name: IK8451391 (6978) Type: processingErrorAlarm Package: Img.IK8451391 Raised on class: Img.LMGMngElement	Severity: critical Specific problem: StorageCell Event Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: A Full Copy terminated prior to completion. A remote copy error occurred due to an inaccessible Destination Virtual Disk. The Virtual Disk address specified in the vda field indicates the first block in error. The Full Copy will continue when the Data Replication Destination is restored.\nAlarm to be cleared by the operator at the management system.\nReason: sCellEventTrap_c_8		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1126 IK8451400

Alarm	Attributes	Applicable major release
Name: IK8451400 (6979) Type: equipmentAlarm Package: lmg.IK8451400 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: StorageCell Event Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: Unrecognized event reported by a Drive Enclosure Environmental Monitoring Unit. The handle field contains the WWN of the drive enclosure containing the Drive Enclosure Environmental Monitoring Unit. The event was reported by the Drive Enclosure Environmental Monitoring Unit located in the drive enclosure determined by the content of the dencl_num field as follows: . If dencl_num is less than 99, the location is as indicated by the content of the rack_num and dencl_num fields. . If dencl_num is equal to 99, the location is unknown. Note that the content of the rack_num field is undefined in this case. . If dencl_num is greater than 99, the HSV110 controller does not have proof of the current location but the last known location is indicated by the content of the rack_num and dencl_num fields. Subtract 100 from the content of those fields to determine the actual last known location. If there have been no configuration changes, the last known location values will be accurate. . Note that the content of the rack_num field will not be valid until a future release. The content of the alarm_error_code field could not be translated into a known event. The enclosures array shows the drive enclosures available on the Fibre Channel loop pair (0 =" Loop A, 1 = Loop B) identified in the loop field. The location of an available drive enclosure is determined by the content of the enclosures.dencl_num field as follows: . If enclosures.dencl_num is less than 99, the location is as indicated by the content of the enclosures.rack_num and enclosures.dencl_num fields. . If enclosures.dencl_num is equal to 99, the enclosures array entry is not used. Note that the content of the enclosures.rack_num field is undefined in this case. . If enclosures.dencl_num is greater than 99, the HSV110 controller does not have proof of the current location but the last known location is indicated by the content of the enclosures.rack_num and enclosures.dencl_num fields. Subtract 100 from the content of those fields to determine the actual last known location. If there have been no configuration changes, the last known location values will be accurate. . Note that the content of the enclosures.rack_num field will not be valid until a future release.\nAlarm to be cleared by the operator at the management system.\nReason: sCellEventTrap_d_0"		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1127 IK8451401

Alarm	Attributes	Applicable major release
Name: IK8451401 (6980) Type: communicationsAlarm Package: lmg.IK8451401 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: StorageCell Event Implicitly cleared: false Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG

Table 27-1127 IK8451401 (continued)

Alarm	Attributes	Applicable major release
Description: A physical disk drive that is not Fibre Channel compatible or cannot operate at the link rate established by the drive enclosure I/O modules was detected. The handle field contains the WWN of the drive enclosure containing the Drive Enclosure Environmental Monitoring Unit. This problem was detected by the Drive Enclosure Environmental Monitoring Unit located in the drive enclosure determined by the content of the dencl_num field as follows: . If dencl_num is less than 99, the location is as indicated by the content of the rack_num and dencl_num fields. . If dencl_num is equal to 99, the location is unknown. Note that the content of the rack_num field is undefined in this case. . If dencl_num is greater than 99, the HSV110 controller does not have proof of the current location but the last known location is indicated by the content of the rack_num and dencl_num fields. Subtract 100 from the content of those fields to determine the actual last known location. If there have been no configuration changes, the last known location values will be accurate. . Note that the content of the rack_num field will not be valid until a future release. This problem was detected during spin up of the physical disk drive installed in the drive enclosure bay identified in the alarm_error_code.field.en field. The enclosures array shows the drive enclosures available on the Fibre Channel loop pair (0 =" Loop A, 1 = Loop B) identified in the loop field. The location of an available drive enclosure is determined by the content of the enclosures.dencl_num field as follows: . If enclosures.dencl_num is less than 99, the location is as indicated by the content of the enclosures.rack_num and enclosures.dencl_num fields. . If enclosures.dencl_num is equal to 99, the enclosures array entry is not used. Note that the content of the enclosures.rack_num field is undefined in this case. . If enclosures.dencl_num is greater than 99, the HSV110 controller does not have proof of the current location but the last known location is indicated by the content of the enclosures.rack_num and enclosures.dencl_num fields. Subtract 100 from the content of those fields to determine the actual last known location. If there have been no configuration changes, the last known location values will be accurate. . Note that the content of the enclosures.rack_num field will not be valid until a future release.\nAlarm to be cleared by the operator at the management system.\nReason: sCellEventTrap_d_1"		
Remedial action: If the problem persists, contact Nokia customer support.

Table 27-1131 IK8451408

Alarm	Attributes	Applicable major release
Name: IK8451408 (6984) Type: equipmentAlarm Package: lmg.IK8451408 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: StorageCell Event Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: A drive enclosure blower is not operating properly. This could affect the drive enclosure air flow and cause an over temperature condition. The handle field contains the WWN of the drive enclosure containing the Drive Enclosure Environmental Monitoring Unit. This problem was detected by the Drive Enclosure Environmental Monitoring Unit located in the drive enclosure determined by the content of the dencl_num field as follows: . If dencl_num is less than 99, the location is as indicated by the content of the rack_num and dencl_num fields. . If dencl_num is equal to 99, the location is unknown. Note that the content of the rack_num field is undefined in this case. . If dencl_num is greater than 99, the HSV110 controller does not have proof of the current location but the last known location is indicated by the content of the rack_num and dencl_num fields. Subtract 100 from the content of those fields to determine the actual last known location. If there have been no configuration changes, the last known location values will be accurate. . Note that the content of the rack_num field will not be valid until a future release. The location of the affected blower (1 or 2) is identified in the alarm_error_code.field.en field. The cause of the improper operation is described by the content of the alarm_error_code.field.ec field as follows: . 1 =" The blower is operating at a speed that is outside of the Drive Enclosure Environmental Monitoring Unit specified range, possibly because of a bearing problem. . 2 = The blower is operating at a speed that is significantly outside of the Drive Enclosure Environmental Monitoring Unit specified range, possibly because of a bearing problem. . 3 = The blower has stopped. NOTE: The other blower (if operational) now operates at high speed and is a single point of failure. A single blower operating at high speed can provide sufficient air flow to cool an enclosure and the elements for up to 100 hours. However, operating an enclosure at temperatures approaching an overheating threshold can damage elements and may reduce the MTBF of a specific element. Hewlett-Packard therefore recommends immediate replacement of the defective blower. . 4 = The power supply reported an internal blower error. . The enclosures array shows the drive enclosures available on the Fibre Channel loop pair (0 = Loop A, 1 = Loop B) identified in the loop field. The location of an available drive enclosure is determined by the content of the enclosures.dencl_num field as follows: . If enclosures.dencl_num is less than 99, the location is as indicated by the content of the enclosures.rack_num and enclosures.dencl_ num fields. . If enclosures.dencl_num is equal to 99, the enclosures array entry is not used. Note that the content of the enclosures.rack_num field is undefined in this case. . If enclosures.dencl_num is greater than 99, the HSV110 controller does not have proof of the current location but the last known location is indicated by the content of the enclosures.rack_num and enclosures.dencl_ num fields. Subtract 100 from the content of those fields to determine the actual last known location. If there have been no configuration changes, the last known location values will be accurate. . Table 27-1135 IK8451419 (continued)

Alarm	Attributes	Applicable major release
Description: A Drive Enclosure Environmental Monitoring Unit has experienced a hardware failure. The handle field contains the WWN of the drive enclosure containing the Drive Enclosure Environmental Monitoring Unit. This problem was detected by the Drive Enclosure Environmental Monitoring Unit located in the drive enclosure determined by the content of the dencl_num field as follows: . If dencl_num is less than 99, the location is as indicated by the content of the rack_num and dencl_num fields. . If dencl_num is equal to 99, the location is unknown. Note that the content of the rack_num field is undefined in this case. . If dencl_num is greater than 99, the HSV110 controller does not have proof of the current location but the last known location is indicated by the content of the rack_num and dencl_num fields. Subtract 100 from the content of those fields to determine the actual last known location. If there have been no configuration changes, the last known location values will be accurate. . Note that the content of the rack_num field will not be valid until a future release. The alarm_error_code.field.en field contains the value 1 signifying that the Drive Enclosure Environmental Monitoring Unit is the affected element. The enclosures array shows the drive enclosures available on the Fibre Channel loop pair (0 =" Loop A, 1 = Loop B) identified in the loop field. The The location of an available drive enclosure is determined by the content of the enclosures. dencl_num field as follows: . If enclosures.dencl_num is less than 99, the location is as indicated by the content of the enclosures.rack_num and enclosures.dencl_num fields. . If enclosures.dencl_num is equal to 99, the enclosures array entry is not used. Note that the content of the enclosures.rack_num field is undefined in this case. . If enclosures.dencl_num is greater than 99, the HSV110 controller does not have proof of the current location but the last known location is indicated by the content of the enclosures.rack_num and enclosures.dencl_num fields. Subtract 100 from the content of those fields to determine the actual last known location. If there have been no configuration changes, the last known location values will be accurate. . Note that the content of the enclosures.rack_num field will not be valid until a future release. The cause of the improper operation is described by the content of the alarm_error_code.field.ec field as follows: . 15 = Drive Enclosure Environmental Monitoring Unit hardware failure DP. . 18 = Drive Enclosure Environmental Monitoring Unit hardware failed BT. . 19 = Drive Enclosure Environmental Monitoring Unit ESI driver failure. .\nAlarm to be cleared by the operator at the management system.\nReason: sCellEventTrap_d_83"		
Remedial action: If the problem persists, contact Nokia customer support.

Alarm	Attributes	Applicable major release
Name: IK8452334 (7010) Type: equipmentAlarm Package: lmg.IK8452334 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: PortTxPktCongestionTrap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: The SNMP alarm that is generated when an alarm entry crosses its rising or falling threshold and generates an event that is configured for sending SNMP traps.\nAlarm to be cleared by the operator at the management system.\nReason: cpqb52nnPortTxPktCongestionTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1158 IK8452335

Alarm	Attributes	Applicable major release
Name: IK8452335 (7011) Type: equipmentAlarm Package: lmg.IK8452335 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: PortRxMemCongestionTrap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: The SNMP alarm that is generated when an alarm entry crosses its rising or falling threshold and generates an event that is configured for sending SNMP traps.\nAlarm to be cleared by the operator at the management system.\nReason: cpqb52nnPortRxMemCongestionTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1159 IK8452337

Alarm	Attributes	Applicable major release
Name: IK8452337 (7012) Type: communicationsAlarm Package: lmg.IK8452337 Raised on class: lmg.FRU	Severity: major Specific problem: NIC Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNicConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-1160 IK8452341

Alarm	Attributes	Applicable major release
Name: IK8452341 (7013) Type: communicationsAlarm Package: lmg.IK8452341 Raised on class: lmg.FRU	Severity: major Specific problem: NIC Connectivity Lost Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-1161 IK8452343

Alarm	Attributes	Applicable major release
Name: IK8452343 (7014) Type: communicationsAlarm Package: lmg.IK8452343 Raised on class: lmg.FRU	Severity: major Specific problem: NIC Redundancy Reduced Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2RedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-1162 IK8452347

Alarm	Attributes	Applicable major release
Name: IK8452347 (7015) Type: communicationsAlarm Package: lmg.IK8452347 Raised on class: lmg.FRU	Severity: major Specific problem: NIC Connectivity Lost Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqNic3ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-1163 IK8452349

Alarm	Attributes	Applicable major release
Name: IK8452349 (7016) Type: communicationsAlarm Package: lmg.IK8452349 Raised on class: lmg.FRU	Severity: major Specific problem: NIC Redundancy Reduced Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic3RedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-1164 IK8452350

Alarm	Attributes	Applicable major release
Name: IK8452350 (7017) Type: processingErrorAlarm Package: Img.IK8452350 Raised on class: Img.FRU	Severity: critical Specific problem: Critical Alarm Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A critical alarm has occurred.\nAlarm is cleared by the system.\nReason: trapCritical		
Remedial action: Check the Trap Details for more information.		

Table 27-1165 IK8452360

Alarm	Attributes	Applicable major release
Name: IK8452360 (7018) Type: equipmentAlarm Package: Img.IK8452360 Raised on class: Img.FRU	Severity: major Specific problem: Enclosure temperature failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The enclosure temperature status has been set to failed. This alarm signifies that a enclosure temperature sensor has been tripped indicating an overheat condition.\nAlarm is cleared by the system.\nReason: cpqRackEnclosureTempFailed		
Remedial action: Shutdown the enclosure and possibly the rack as soon as possible. Ensure all fans are working properly and that air flow in the rack has not been blocked.		

Table 27-1166 IK8452363

Alarm	Attributes	Applicable major release
Name: IK8452363 (7019) Type: environmentalAlarm Package: Img.IK8452363 Raised on class: Img.FRU	Severity: major Specific problem: Enclosure fan failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The enclosure fan status has been set to failed. This alarm signifies that an enclosure fan has failed and no other fans in the redundant fan group are operating. This may result in overheating of the enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackEnclosureFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-1167 IK8452368

Alarm	Attributes	Applicable major release
Name: IK8452368 (7020) Type: equipmentAlarm Package: lmg.IK8452368 Raised on class: lmg.FRU	Severity: critical Specific problem: Rack power supply failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The power supply status has been set to failed. This alarm signifies that a power supply has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

Table 27-1168 IK8452369

Alarm	Attributes	Applicable major release
Name: IK8452369 (7021) Type: equipmentAlarm Package: lmg.IK8452369 Raised on class: lmg.FRU	Severity: major Specific problem: Rack power supply degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The power supply status has been set to degraded. This alarm signifies that a power supply has degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSupplyDegraded		
Remedial action: Replace the power supply as soon as possible.		

Table 27-1169 IK8452374

Alarm	Attributes	Applicable major release
Name: IK8452374 (7022) Type: equipmentAlarm Package: lmg.IK8452374 Raised on class: lmg.FRU	Severity: major Specific problem: Rack power supply input voltage problem Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The rack power supply detected an input line voltage problem.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSubsystemLineVoltageProblem		
Remedial action: Check the power input for the power supply or replace any failed power supplies as soon as possible.		

Table 27-1170 IK8452375

Alarm	Attributes	Applicable major release
Name: IK8452375 (7023) Type: equipmentAlarm Package: lmg.IK8452375 Raised on class: lmg.FRU	Severity: major Specific problem: Rack power subsystem overload condition Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The rack power subsystem overload condition.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSubsystemOverloadCondition		
Remedial action: Replace any failed power supplies as soon as possible to return the system to a redundant state.		

Table 27-1171 IK8452376

Alarm	Attributes	Applicable major release
Name: IK8452376 (7024) Type: equipmentAlarm Package: lmg.IK8452376 Raised on class: lmg.FRU	Severity: critical Specific problem: Server shutdown due to power shedding Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Server shutdown due to power shedding. The server blade was shutdown due to a lack of power.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerShedAutoShutdown		
Remedial action: Check power connections or add power supplies.		

Table 27-1172 IK8452377

Alarm	Attributes	Applicable major release
Name: IK8452377 (7025) Type: equipmentAlarm Package: lmg.IK8452377 Raised on class: lmg.FRU	Severity: critical Specific problem: Server power on prevented to preserve redundancy Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Server power on prevented to preserve redundancy. There is not enough power to power on the server blade and maintain redundancy for the other blades in the enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailedNotRedundant		
Remedial action: Check power connections or add power supplies.		

Table 27-1173 IK8452378

Alarm	Attributes	Applicable major release
Name: IK8452378 (7026) Type: equipmentAlarm Package: lmg.IK8452378 Raised on class: lmg.FRU	Severity: critical Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailedNotEnoughPower		
Remedial action: Check power connections or add power supplies.		

Table 27-1174 IK8452379

Alarm	Attributes	Applicable major release
Name: IK8452379 (7027) Type: equipmentAlarm Package: lmg.IK8452379 Raised on class: lmg.FRU	Severity: critical Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The server enclosure micro-controller was not found.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFaile-dEnclosureNotFound		
Remedial action: Check server enclosure connections or add power supplies.		

Table 27-1175 IK8452380

Alarm	Attributes	Applicable major release
Name: IK8452380 (7028) Type: equipmentAlarm Package: lmg.IK8452380 Raised on class: lmg.FRU	Severity: critical Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The power enclosure micro-controller was not found.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailed-PowerChassisNotFound		
Remedial action: Check power enclosure connections or add power supplies.		

Table 27-1176 IK8452382

Alarm	Attributes	Applicable major release
Name: IK8452382 (7029) Type: environmentalAlarm Package: Img.IK8452382 Raised on class: Img.FRU	Severity: major Specific problem: Fuse open Implicitly cleared: true Default probable cause: enclosureDoorOpen	Release: • LR14.3.MG • LR15.1.MG
Description: Fuse open. The fuse has been tripped.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackFuseOpen		
Remedial action: Check enclosure and / or blade power connections and reset the fuse.		

Table 27-1177 IK8452386

Alarm	Attributes	Applicable major release
Name: IK8452386 (7030) Type: equipmentAlarm Package: Img.IK8452386 Raised on class: Img.FRU	Severity: major Specific problem: Power subsystem DC power problem Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem DC power problem. There is a power subsystem DC power problem for this power enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisDcPowerProblem		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 27-1178 IK8452387

Alarm	Attributes	Applicable major release
Name: IK8452387 (7031) Type: equipmentAlarm Package: Img.IK8452387 Raised on class: Img.FRU	Severity: major Specific problem: Power subsystem AC facility input power exceeded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem AC facility input power exceeded. There is a power subsystem Power subsystem AC facility input power exceeded for this power enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisAc-FacilityPowerExceeded		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 27-1179 IK8452388

Alarm	Attributes	Applicable major release
Name: IK8452388 (7032) Type: equipmentAlarm Package: lmg.IK8452388 Raised on class: lmg.FRU	Severity: major Specific problem: Unknown power consumption Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Unknown power consumption. There is an unknown power consumer drawing power.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerUnknownPowerConsumption		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 27-1180 IK8452391

Alarm	Attributes	Applicable major release
Name: IK8452391 (7033) Type: processingErrorAlarm Package: lmg.IK8452391 Raised on class: lmg.FRU	Severity: major Specific problem: Power subsystem improperly configured Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem improperly configured. The power subsystem has been improperly configured.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisConfigError		
Remedial action: Check the cabling of the power enclosure.		

Table 27-1181 IK8452401

Alarm	Attributes	Applicable major release
Name: IK8452401 (7034) Type: communicationsAlarm Package: lmg.IK8452401 Raised on class: lmg.FRU	Severity: critical Specific problem: Interconnect failed Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The interconnect status has been set to failed. This alarm signifies that a interconnect has failed.\nAlarm is cleared by the system.\nReason: cpqRackNetConnectorFailed		
Remedial action: Replace the interconnect as soon as possible.		

Table 27-1182 IK8452408

Alarm	Attributes	Applicable major release
Name: IK8452408 (7035) Type: qualityOfServiceAlarm Package: Img.IK8452408 Raised on class: Img.FRU	Severity: major Specific problem: Server blade health status degraded Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR14.3.MG • LR15.1.MG
Description: Server blade health status Degraded. The server blade health status has changed to Degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerBladeStatusDegraded		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-1183 IK8452409

Alarm	Attributes	Applicable major release
Name: IK8452409 (7036) Type: processingErrorAlarm Package: Img.IK8452409 Raised on class: Img.FRU	Severity: critical Specific problem: Server blade health status critical Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Server blade health status Critical. The server blade health status has changed to Critical.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerBladeStatusCritical		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-1184 IK8452411

Alarm	Attributes	Applicable major release
Name: IK8452411 (7037) Type: equipmentAlarm Package: Img.IK8452411 Raised on class: Img.FRU	Severity: major Specific problem: Server blade unexpected shutdown Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Server blade shutdown unexpectadly. An unexpected shutdown event has occurred for this server blade.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerBladeUnexpectedShutdown		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-1185 IK8452428

Alarm	Attributes	Applicable major release
Name: IK8452428 (7038) Type: equipmentAlarm Package: Img.IK8452428 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Generic EAE Major trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG

Table 27-1185 IK8452428 (continued)

Alarm	Attributes	Applicable major release
Description: EAE Major trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackMajorEAETrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1186 IK8452429

Alarm	Attributes	Applicable major release
Name: IK8452429 (7039) Type: equipmentAlarm Package: lmg.IK8452429 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Generic EAE Critical trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: EAE Critical trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackCriticalEAETrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1187 IK8452431

Alarm	Attributes	Applicable major release
Name: IK8452431 (7040) Type: equipmentAlarm Package: lmg.IK8452431 Raised on class: lmg.FRU	Severity: major Specific problem: Generic Power Subsystem EAE Major trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: FlexFabric Cmdr Power Subsystem Major trap.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerMajorEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 27-1188 IK8452432

Alarm	Attributes	Applicable major release
Name: IK8452432 (7041) Type: equipmentAlarm Package: lmg.IK8452432 Raised on class: lmg.FRU	Severity: critical Specific problem: Generic Power Subsystem EAE Critical trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: FlexFabric Cmdr Power Subsystem Critical trap.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerCriticalEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 27-1189 IK8452436

Alarm	Attributes	Applicable major release
Name: IK8452436 (7042) Type: equipmentAlarm Package: lmg.IK8452436 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Generic WSMAN Major trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: WSMAN Major trap\nReason: cpqRackMajorWSMANTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1190 IK8452437

Alarm	Attributes	Applicable major release
Name: IK8452437 (7043) Type: equipmentAlarm Package: lmg.IK8452437 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Generic WSMAN Critical trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: WSMAN Critical trap\nReason: cpqRackCriticalWSMANTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1191 IK8452439

Alarm	Attributes	Applicable major release
Name: IK8452439 (7044) Type: communicationsAlarm Package: lmg.IK8452439 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Standby Recovery Server Interconnect Failure Implicitly cleared: false Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: Recovery Server serial interconnect failure. The Standby Recovery Agent reports that the local serial interconnect is not connected or has failed. The primary server is being shutdown in anticipation of the startup of the standby server.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRsStandbyCableFailure		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1192 IK8452462

Alarm	Attributes	Applicable major release
Name: IK8452462 (9918) Type: environmentalAlarm Package: lmg.IK8452462 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: CMC Smoke Detected Implicitly cleared: true Default probable cause: smoke	Release: • LR16.1.MG

Table 27-1192 IK8452462 (continued)

Alarm	Attributes	Applicable major release
Description: A CMC device is reporting smoke detected.\nAlarm is cleared by the system.\nReason: cpqRPMTrapCMCSmokeDetected		
Remedial action: Investigate CMC Device for an over temperature condition.		

Table 27-1193 IK8452464

Alarm	Attributes	Applicable major release
Name: IK8452464 (9919) Type: equipmentAlarm Package: Img.IK8452464 Raised on class: Img.FRU	Severity: indeterminate Specific problem: CMC Shock Detected Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A CMC device is reporting shock detected.\nAlarm is cleared by the system.\nReason: cpqRPMTrapCMCShockDetected		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1194 IK8452468

Alarm	Attributes	Applicable major release
Name: IK8452468 (9920) Type: equipmentAlarm Package: Img.IK8452468 Raised on class: Img.FRU	Severity: indeterminate Specific problem: CMC Aux 2 Alarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A CMC device has entered an alarm condition for auxiliary input 2.\nAlarm is cleared by the system.\nReason: cpqRPMTrapCMCAux2Alarm		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1195 IK8452494

Alarm	Attributes	Applicable major release
Name: IK8452494 (9923) Type: equipmentAlarm Package: Img.IK8452494 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS Output Overload Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A UPS device is reporting an overload condition.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSOutpu-tOverload		
Remedial action: Perform the following steps to clear the alarm: 1. Reduce the load on the UPS by moving some of the load to another UPS. 2. Consider moving to a larger UPS to support the current load.		

Table 27-1196 IK8452496

Alarm	Attributes	Applicable major release
Name: IK8452496 (9924) Type: environmentalAlarm Package: Img.IK8452496 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS Battery Low Implicitly cleared: true Default probable cause: lowBatteryThreshold	Release: • LR16.1.MG
Description: A UPS device is reporting low battery.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBatteryLow		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. 2. When utility power is restored, charge the battery to it's full capacity. If the battery level continues to decrease, the UPS will not be able to sustain the output load!		

Table 27-1197 IK8452508

Alarm	Attributes	Applicable major release
Name: IK8452508 (9931) Type: equipmentAlarm Package: Img.IK8452508 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS Internal Failure Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A UPS device is reporting a general UPS failure.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSInternal-Failure		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If the problem persists, contact NOKIA customer support.		

Table 27-1198 IK8452510

Alarm	Attributes	Applicable major release
Name: IK8452510 (9932) Type: environmentalAlarm Package: Img.IK8452510 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS Battery Failure Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG
Description: A UPS device is reporting a battery failure.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBatteryFailure		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If the problem persists, contact NOKIA customer support. 3. Your battery may need to be replaced. The UPS may not be capable of supporting it's load if utility power fails!		

Table 27-1199 IK8452518

Alarm	Attributes	Applicable major release
Name: IK8452518 (9935) Type: equipmentAlarm Package: lmg.IK8452518 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Bypass Not Available Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A UPS device is reporting bypass not avaliable.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBypassNotAvailable		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If the problem persists, contact NOKIA customer support.		

Table 27-1200 IK8452531

Alarm	Attributes	Applicable major release
Name: IK8452531 (9940) Type: equipmentAlarm Package: lmg.IK8452531 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: The UPS was started without utility power Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device has been started while on battery power. AC input power is not present.\nAlarm is cleared by the system.\nReason: cppqRPMtrapUPSStartedOnBattery		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. If the UPS remains on battery for an extended time it will not be able to sustain the output load.		

Table 27-1201 IK8452533

Alarm	Attributes	Applicable major release
Name: IK8452533 (9941) Type: equipmentAlarm Package: lmg.IK8452533 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Input voltage is out of range Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting input voltage is out of range.\nAlarm is cleared by the system.\nReason: cpqRPMtrapUPSInputOutofRange		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. 2. If the UPS remains on battery for an extended period of time it will not be able to sustain the load.		

Table 27-1202 IK8452534

Alarm	Attributes	Applicable major release
Name: IK8452534 (9942) Type: environmentalAlarm Package: lmg.IK8452534 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: UPS temperature out of range Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR16.1.MG
Description: A UPS device is reporting temperature is out of range.\nAlarm is cleared by the system.\nReason: cpqRPMtrapUPSTemperatureOutOfRange		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is in a well ventilated area. 2. Lower the ambient temperature in the area where the UPS is located.		

Table 27-1203 IK8452536

Alarm	Attributes	Applicable major release
Name: IK8452536 (9943) Type: equipmentAlarm Package: lmg.IK8452536 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: The UPS is on automatic bypass Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is operating in auto bypass mode.\nAlarm is cleared by the system.\nReason: cpqRPMtrapUPSBypassOnAuto		
Remedial action: Perform the following steps to clear the alarm: 1. In bypass mode, the UPS cannot support devices if there is a power failure. 2. Once maintenance has been performed return the UPS to normal mode.		

Table 27-1204 IK8452539

Alarm	Attributes	Applicable major release
Name: IK8452539 (9945) Type: equipmentAlarm Package: lmg.IK8452539 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: One or more UPS batteries have been disconnected Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A UPS device is reporting batteries are not connected to the UPS.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBatteriesDisconnected		
Remedial action: Perform the following steps to clear the alarm: 1. Connect the UPS Batteries. The UPS will not be capable of supporting it's load if the utility power fails!		

Table 27-1205 IK8452541

Alarm	Attributes	Applicable major release
Name: IK8452541 (9946) Type: environmentalAlarm Package: lmg.IK8452541 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: The UPS batteries are in a discharged condition Implicitly cleared: true Default probable cause: batteryDischarging	Release: • LR16.1.MG
Description: A UPS device is reporting batteries are completely discharged.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBatteryDischarged		
Remedial action: Perform the following steps to clear the alarm: 1. Connect the UPS to utility power to charge the batteries. The UPS will not be able to support it's load if the utility power fails!		

Table 27-1206 IK8452543

Alarm	Attributes	Applicable major release
Name: IK8452543 (9947) Type: equipmentAlarm Package: lmg.IK8452543 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: A UPS circuit breaker needs attention Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A UPS device is reporting an output Breaker or Relay has failed or may be stuck open or closed with this alarm.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSCheckBreaker		
Remedial action: Perform the following steps to clear the alarm: 1. Check all breakers on the UPS. 2. If the problem persists, contact NOKIA customer support.		

Table 27-1207 IK8452546

Alarm	Attributes	Applicable major release
Name: IK8452546 (9949) Type: equipmentAlarm Package: lmg.IK8452546 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: UPS output has been manually turned off Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The UPS has been powered off with user interaction.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSManualLoadDumped		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1208 IK8452548

Alarm	Attributes	Applicable major release
Name: IK8452548 (9950) Type: environmentalAlarm Package: Img.IK8452548 Raised on class: Img.FRU	Severity: indeterminate Specific problem: A cover panel has been removed Implicitly cleared: true Default probable cause: enclosureDoorOpen	Release: • LR16.1.MG
Description: A UPS device is reporting a cover panel has been removed while utility power is present.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSCabinetDoorOpen		
Remedial action: Perform the following steps to clear the alarm: 1. Reinstall all panels. 2. If the problem persists, contact NOKIA customer support.		

Table 27-1209 IK8452550

Alarm	Attributes	Applicable major release
Name: IK8452550 (9951) Type: environmentalAlarm Package: Img.IK8452550 Raised on class: Img.FRU	Severity: indeterminate Specific problem: The UPS has encountered an fan failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: A UPS device is reporting a fan failure has occurred.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSFan-Failure		
Remedial action: Perform the following steps to clear the alarm: 1. If the problem persists, contact NOKIA customer support.		

Table 27-1210 IK8452552

Alarm	Attributes	Applicable major release
Name: IK8452552 (9952) Type: processingErrorAlarm Package: Img.IK8452552 Raised on class: Img.FRU	Severity: indeterminate Specific problem: The UPS N+1 load has been exceeded Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG
Description: A UPS device is reporting a loss of redundancy due to one of the following. 1. One or more of the Electronics Modules has failed 2. One or more of the electronics modules has been manually removed. 3. The amount of load on the UPS has increased to the point that the UPS is no longer able to support an N+1 configuration.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSLos-sOfRedundancy		
Remedial action: Perform the following steps to clear the alarm: 1. Check the UPS to see if one of the modules has failed. 2. Make sure that all modules are securely plugged in. 3. Reduce the load to return the N+1 configuration. 4. If the amount of load is now going to exceed and N+1 configuration permanently, change the configuration on the front panel of the UPS to Capacity instead of Parallel N+1.		

Table 27-1211 IK8452554

Alarm	Attributes	Applicable major release
Name: IK8452554 (9953) Type: equipmentAlarm Package: lmg.IK8452554 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: A UPS shutdown is imminent Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting a shutdown imminent condition.\nAlarm is cleared by the system.\nReason: cpqRPMTrap-UPSShutdownImminent		
Remedial action: Perform the following steps to clear the alarm: 1. Immediately restore power to the UPS. The UPS will not continue to supply power to devices following the shutdown!		

Table 27-1212 IK8452556

Alarm	Attributes	Applicable major release
Name: IK8452556 (9954) Type: equipmentAlarm Package: lmg.IK8452556 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: A UPS shutdown is pending Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting shutdown pending condition.\nAlarm is cleared by the system.\nReason: cpqRPMTrap-UPSShutdownPending		
Remedial action: Perform the following steps to clear the alarm: 1. Immediately restore power to the UPS. The UPS will not continue to supply power to devices following the shutdown!		

Table 27-1213 IK8452559

Alarm	Attributes	Applicable major release
Name: IK8452559 (7045) Type: equipmentAlarm Package: lmg.IK8452559 Raised on class: lmg.FRU	Severity: critical Specific problem: Critical Alarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A critical alarm has occurred.\nAlarm is cleared by the system.\nReason: cpqPMTrapCritical		
Remedial action: Check the Trap Details for more information.		

Table 27-1214 IK8452609

Alarm	Attributes	Applicable major release
Name: IK8452609 (7046) Type: processingErrorAlarm Package: Img.IK8452609 Raised on class: Img.FRU	Severity: major Specific problem: Monitor Condition Failed Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A fault reporting feature has exceeded normal limits in the monitor indicated by the cpqSiMonitorIndex. The monitor's condition has been set to failed due to an operational feature exceeding normal operating limits. The monitor will not be useable and should be replaced.\nAlarm is cleared by the system.\nReason: cpqSiMonitorConditionFailed		
Remedial action: Make a note of the monitor model number and serial number. Replace the monitor. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 27-1215 IK8452610

Alarm	Attributes	Applicable major release
Name: IK8452610 (7047) Type: processingErrorAlarm Package: Img.IK8452610 Raised on class: Img.FRU	Severity: major Specific problem: Excessive Correctable Memory Errors Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Correctable memory error count has exceeded the threshold for the memory module indicated by the 'cpqSiMemErrorIndex' variable. The appropriate cpqSiMemModuleECCStatus has been set to degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiCorrMemErrStatusDegraded		
Remedial action: For Desktops, the System Administrator should run the F10 Diagnostics on this system and select RAM LONG TEST. If it is determined that a module needs replacing, schedule maintenance for the system and replace the failed memory module. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 27-1216 IK8452615

Alarm	Attributes	Applicable major release
Name: IK8452615 (7048) Type: equipmentAlarm Package: Img.IK8452615 Raised on class: Img.FRU	Severity: major Specific problem: Hot Plug Slot Board Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Hot Plug Slot Board Failed Power-Up. A Hot Plug Slot Board has failed to power-up in the specified chassis and slot.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiHotPlugSlotPowerUpFailed		
Remedial action: Insure the board and all cables are installed correctly and the board type and revision are the same as the replaced board.		

Table 27-1217 IK8452616

Alarm	Attributes	Applicable major release
Name: IK8452616 (7049) Type: environmentalAlarm Package: lmg.IK8452616 Raised on class: lmg.FRU	Severity: major Specific problem: Battery Failure Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The battery indicated by cpqSiSysBatteryIndex has failed and must be replaced.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiSysBatteryFailure		
Remedial action: Contact your System Administrator or Authorized Reseller to order a replacement battery. Recycle your old battery. For proper disposal information, refer to the documentation that came with your computer.		

Table 27-1218 IK8452617

Alarm	Attributes	Applicable major release
Name: IK8452617 (7050) Type: environmentalAlarm Package: lmg.IK8452617 Raised on class: lmg.FRU	Severity: major Specific problem: Battery Charging Degradation Implicitly cleared: true Default probable cause: lowBatteryThreshold	Release: • LR14.3.MG • LR15.1.MG
Description: Significant battery degradation has occurred with battery indicated by cpqSiSysBatteryIndex. The battery can no longer be fully recharged.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiSysBatteryChargingDegraded		
Remedial action: If using multiple batteries, run the Power Conservation Utility to identify the battery location. Contact your System Administrator or Authorized Reseller to order a replacement battery.		

Table 27-1219 IK8452620

Alarm	Attributes	Applicable major release
Name: IK8452620 (7051) Type: equipmentAlarm Package: lmg.IK8452620 Raised on class: lmg.FRU	Severity: major Specific problem: Server Power Outage Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Server Power Outage. The Remote Insight/ Integrated Lights-Out firmware has detected server power failure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSm2ServerPowerOutage		
Remedial action: Check the server's power source.		

Table 27-1220 IK8452622

Alarm	Attributes	Applicable major release
Name: IK8452622 (7052) Type: environmentalAlarm Package: Img.IK8452622 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Remote Insight Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Remote Insight Battery Failed. The Remote Insight battery has failed and needs to be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2BatteryFailed		
Remedial action: replace the failing Remote Insight battery.		

Table 27-1221 IK8452628

Alarm	Attributes	Applicable major release
Name: IK8452628 (7053) Type: equipmentAlarm Package: Img.IK8452628 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Remote Insight external power cable disconnected Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: External Power Cable Disconnected. The Remote Insight external power cable has been disconnected.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ExternalPowerCableDisconnected		
Remedial action: check External Power Cable		

Table 27-1222 IK8452632

Alarm	Attributes	Applicable major release
Name: IK8452632 (7054) Type: processingErrorAlarm Package: Img.IK8452632 Raised on class: Img.LMGMngElement	Severity: critical Specific problem: Server Fatal Error Detected Implicitly cleared: false Default probable cause: softwareError	Release: • LR14.3.MG
Description: Server Fatal Error Detected. The Remote Insight/ Integrated Lights-Out firmware has detected a server fatal error.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerFatalError		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1223 IK8452633

Alarm	Attributes	Applicable major release
Name: IK8452633 (7055) Type: communicationsAlarm Package: lmg.IK8452633 Raised on class: lmg.FRU	Severity: major Specific problem: The iLO NIC Link is Down Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The iLO NIC Link is Down. The Remote Insight/ Integrated Lights-Out firmware has detected the loss of network link.\nAlarm is cleared by the system.\nReason: cpqSm2NicLinkDown		
Remedial action: Check the network connections for the iLO.		

Table 27-1224 IK8452636

Alarm	Attributes	Applicable major release
Name: IK8452636 (9250) Type: equipmentAlarm Package: lmg.IK8452636 Raised on class: lmg.FRU	Severity: major Specific problem: Server powered off Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG • LR16.1.MG
Description: The server has been powered off. This will be sent once the server has been powered off, either by OS, or the power button.\nAlarm is cleared by the system.\nReason: cpqSm2ServerPowerOff		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1225 IK8452648

Alarm	Attributes	Applicable major release
Name: IK8452648 (7056) Type: qualityOfServiceAlarm Package: lmg.IK8452648 Raised on class: lmg.FRU	Severity: major Specific problem: PC Card Thermal Failure Status Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm is sent when the PC Card Slot Thermal Sensor threshold has been exceeded for degraded operations thereby causing failed operations. This alarm will be sent when cpqSePCCardStatus transitions from Thermal Degraded (2) to Thermal Failure (3). The manufacturer and product information strings as well as the slot number for the failed PC Card is provided as parameters for this trap.\nAlarm is cleared by the system.\nReason: cpqSePCCardThermalFailure		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1226 IK8452657

Alarm	Attributes	Applicable major release
Name: IK8452657 (7057) Type: environmentalAlarm Package: lmg.IK8452657 Raised on class: lmg.FRU	Severity: major Specific problem: Storage System Temperature Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.\nAlarm is cleared by the system.\nReason: cpqSsTempFailed		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1227 IK8452707

Alarm	Attributes	Applicable major release
Name: IK8452707 (7058) Type: environmentalAlarm Package: lmg.IK8452707 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: UPS Battery Low Implicitly cleared: false Default probable cause: lowBatteryThreshold	Release: • LR14.3.MG
Description: UPS Battery Low. The server will soon lose power.\nAlarm to be cleared by the operator at the management system.\nReason: cpqUpsBatteryLow		
Remedial action: Check the UPS Battery		

Table 27-1228 IK8452708

Alarm	Attributes	Applicable major release
Name: IK8452708 (9251) Type: equipmentAlarm Package: lmg.IK8452708 Raised on class: lmg.FRU	Severity: major Specific problem: AC Line Failure Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG • LR16.1.MG
Description: AC Line power failure. The UPS reports that the AC line power has failed.\nAlarm is cleared by the system.\nReason: cpqUps2LineFailed		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1229 IK8452712

Alarm	Attributes	Applicable major release
Name: IK8452712 (7059) Type: environmentalAlarm Package: lmg.IK8452712 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: UPS Battery Low Implicitly cleared: false Default probable cause: lowBatteryThreshold	Release: • LR14.3.MG

Table 27-1229 IK8452712 (continued)

Alarm	Attributes	Applicable major release
Description: UPS Battery Low. The server will soon lose power.\nAlarm to be cleared by the operator at the management system.\nReason: cpqUps2BatteryLow		
Remedial action: Check the UPS Battery		

Table 27-1230 IK8452714

Alarm	Attributes	Applicable major release
Name: IK8452714 (7060) Type: environmentalAlarm Package: lmg.IK8452714 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: UPS Pending Battery Failure Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: The UPS battery is about to fail. Replace as soon as possible.\nAlarm to be cleared by the operator at the management system.\nReason: cpqUpsPendingBatteryFailure		
Remedial action: Replace the failing UPS batery		

Table 27-1231 IK8452715

Alarm	Attributes	Applicable major release
Name: IK8452715 (7061) Type: equipmentAlarm Package: lmg.IK8452715 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: UPS Critical Alarm Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: Generic UPS critical alarm.\nAlarm to be cleared by the operator at the management system.\nReason: cpqUpsGeneric-Critical		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1232 IK8452919

Alarm	Attributes	Applicable major release
Name: IK8452919 (9252) Type: communicationsAlarm Package: lmg.IK8452919 Raised on class: lmg.FRU	Severity: major Specific problem: bntSwDefGwDown Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG • LR16.1.MG
Description: A bntSwDefGwDown alarm signifies that the default gateway is down.\nAlarm is cleared by the system.\nReason: bntSwDefGwDown		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1233 IK8452921

Alarm	Attributes	Applicable major release
Name: IK8452921 (9253) Type: equipmentAlarm Package: Img.IK8452921 Raised on class: Img.FRU	Severity: major Specific problem: bntSwDefGwNotInService Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: A bntSwDefGwDisabled alarm signifies that the default gateway is alive but not in service.\nAlarm is cleared by the system.\nReason: bntSwDefGwNotInService		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1234 IK8452927

Alarm	Attributes	Applicable major release
Name: IK8452927 (9254) Type: processingErrorAlarm Package: Img.IK8452927 Raised on class: Img.FRU	Severity: major Specific problem: bntSwFwDownloadFailure Implicitly cleared: true Default probable cause: softwareError	Release: • LR15.1.MG • LR16.1.MG
Description: A bntSwFwDownloadFailure signifies that firmware downloaded failed to [image1|image2|boot image].\nAlarm is cleared by the system.\nReason: bntSwFwDownloadFailure		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1235 IK8452929

Alarm	Attributes	Applicable major release
Name: IK8452929 (9255) Type: communicationsAlarm Package: Img.IK8452929 Raised on class: Img.FRU	Severity: major Specific problem: bntSwUfdfoLtMFailure Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG • LR16.1.MG
Description: A bntSwUfdfoLtMFailure alarm signifies that a LtM link is down.\nAlarm is cleared by the system.\nReason: bntSwUfdfoLtMFailure		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1236 IK8452932

Alarm	Attributes	Applicable major release
Name: IK8452932 (9256) Type: equipmentAlarm Package: Img.IK8452932 Raised on class: Img.FRU	Severity: major Specific problem: bntSwUfdfoGlobalDis Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG

Table 27-1236 IK8452932 (continued)

Alarm	Attributes	Applicable major release
Description: A bntSwUfdfoGlobalDis alarm signifies that Global UFD is disabled.\nAlarm is cleared by the system.\nReason: bntSwUfdfoGlobalDis		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1237 IK8452934

Alarm	Attributes	Applicable major release
Name: IK8452934 (9257) Type: communicationsAlarm Package: lmg.IK8452934 Raised on class: lmg.FRU	Severity: major Specific problem: bntSwUfdfoLtDAutoDis Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG • LR16.1.MG
Description: A bntSwUfdfoLtDAutoDis alarm signifies that a LtD link is Auto Disabled.\nAlarm is cleared by the system.\nReason: bntSwUfdfoLtDAutoDis		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1238 IK8452940

Alarm	Attributes	Applicable major release
Name: IK8452940 (9258) Type: equipmentAlarm Package: lmg.IK8452940 Raised on class: lmg.FRU	Severity: major Specific problem: A bntSFPRemoved trap signifies that a SFP is removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: A bntSFPRemoved alarm signifies that a SFP is removed.\nAlarm is cleared by the system.\nReason: bntSFPRemoved		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1239 IK8452986

Alarm	Attributes	Applicable major release
Name: IK8452986 (7062) Type: environmentalAlarm Package: lmg.IK8452986 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: hpTempHighCritical753 Implicitly cleared: false Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG
Description: One of the temperature sensors crossed its upper critical threshold.\nAlarm to be cleared by the operator at the management system.\nReason: hpTempHighCritical753		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1240 IK8452989

Alarm	Attributes	Applicable major release
Name: IK8452989 (7063) Type: environmentalAlarm Package: lmg.IK8452989 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Temperature Emergency Implicitly cleared: false Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG
Description: One of the temperature sensors crossed its upper critical threshold.\nAlarm to be cleared by the operator at the management system.\nReason: hPTemperature5		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1241 IK8452992

Alarm	Attributes	Applicable major release
Name: IK8452992 (7064) Type: environmentalAlarm Package: lmg.IK8452992 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: hpTemperature756 Implicitly cleared: false Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG
Description: One of the temperature sensors crossed its upper critical threshold.\nAlarm to be cleared by the operator at the management system.\nReason: hpTemperature756		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1242 IK8452998

Alarm	Attributes	Applicable major release
Name: IK8452998 (7065) Type: equipmentAlarm Package: lmg.IK8452998 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Voltage reached critical level Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: Voltage degraded to critical level from less severe -\nAlarm to be cleared by the operator at the management system.\nReason: hpEnvironment728		
Remedial action: Check all boards with this voltage		

Table 27-1243 IK8453000

Alarm	Attributes	Applicable major release
Name: IK8453000 (7066) Type: equipmentAlarm Package: lmg.IK8453000 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Power Pod Voltage Fault Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG

Table 27-1243 IK8453000 (continued)

Alarm	Attributes	Applicable major release
Description: Voltage becomes non-recoverable from either critical level or less severe level -\nAlarm to be cleared by the operator at the management system.\nReason: hpEnvironment706		
Remedial action: Check all boards with this voltage		

Table 27-1244 IK8453025

Alarm	Attributes	Applicable major release
Name: IK8453025 (7067) Type: equipmentAlarm Package: lmg.IK8453025 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: time critical shutdown Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: OS run-time critical shutdown\nAlarm to be cleared by the operator at the management system.\nReason: hpSystemHW748		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1245 IK8454220

Alarm	Attributes	Applicable major release
Name: IK8454220 (7068) Type: processingErrorAlarm Package: lmg.IK8454220 Raised on class: lmg.FRU	Severity: critical Specific problem: N The device's health has changed to critical Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: N The device's health has changed to critical.\nAlarm is cleared by the system.\nReason: hpHttpMgCriticalHealthTrap		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1246 IK8454221

Alarm	Attributes	Applicable major release
Name: IK8454221 (7069) Type: processingErrorAlarm Package: lmg.IK8454221 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Recoverable Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: N The device's health has changed to Non-Recoverable.\nAlarm to be cleared by the operator at the management system.\nReason: hpHttpMgNonRecoverableHealthTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1247 IK8454239

Alarm	Attributes	Applicable major release
Name: IK8454239 (9259) Type: equipmentAlarm Package: Img.IK8454239 Raised on class: Img.FRU	Severity: major Specific problem: hpmcSGSubnetDown Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: Sent when ServiceGuard detects that a previously operational subnet is now down.\nAlarm is cleared by the system.\nReason: hpmcSGSubnetDown		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1248 IK8454246

Alarm	Attributes	Applicable major release
Name: IK8454246 (9260) Type: equipmentAlarm Package: Img.IK8454246 Raised on class: Img.FRU	Severity: major Specific problem: hpmcSGSubnet6Down Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: Sent when ServiceGuard detects that a previously operational IPv6 subnet is now down.\nAlarm is cleared by the system.\nReason: hpmcSGSubnet6Down		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1249 IK8454295

Alarm	Attributes	Applicable major release
Name: IK8454295 (9955) Type: communicationsAlarm Package: Img.IK8454295 Raised on class: Img.FRU	Severity: indeterminate Specific problem: hpSwitch516733-B21trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG
Description: A general event log for 516733-B21 HP Networking E6120-XG Switch.\nReason: hpSwitch516733_B21trap		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1250 IK8454370

Alarm	Attributes	Applicable major release
Name: IK8454370 (7070) Type: processingErrorAlarm Package: Img.IK8454370 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Corrupt Devices File Implicitly cleared: false Default probable cause: corruptData	Release: • LR14.3.MG

Table 27-1250 IK8454370 (continued)

Alarm	Attributes	Applicable major release
Description: Device Database has been corrupted.\nAlarm to be cleared by the operator at the management system.\nReason: adaptecSCSI1		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1251 IK8454371

Alarm	Attributes	Applicable major release
Name: IK8454371 (7071) Type: processingErrorAlarm Package: lmg.IK8454371 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Corrupt Devices File Implicitly cleared: false Default probable cause: corruptData	Release: • LR14.3.MG
Description: Device Database has been corrupted.\nAlarm to be cleared by the operator at the management system.\nReason: adaptecSCSI2		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1252 IK8454418

Alarm	Attributes	Applicable major release
Name: IK8454418 (7072) Type: equipmentAlarm Package: lmg.IK8454418 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: HPDA Logical Drive: Critical Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: HPDA Logical Drive: Critical\nAlarm to be cleared by the operator at the management system.\nReason: hPRaid3		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1253 IK8454423

Alarm	Attributes	Applicable major release
Name: IK8454423 (7073) Type: equipmentAlarm Package: lmg.IK8454423 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: HPDA Hard Disk Failed Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: HPDA Hard Disk Failed\nAlarm to be cleared by the operator at the management system.\nReason: hPRaid8		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1254 IK8454424

Alarm	Attributes	Applicable major release
Name: IK8454424 (7074) Type: equipmentAlarm Package: Img.IK8454424 Raised on class: Img.LMGMngElement	Severity: major Specific problem: HPDA Hard Disk Failed Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: HPDA Hard Disk Failed\nAlarm to be cleared by the operator at the management system.\nReason: hPRaid9		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1255 IK8454429

Alarm	Attributes	Applicable major release
Name: IK8454429 (7075) Type: equipmentAlarm Package: Img.IK8454429 Raised on class: Img.LMGMngElement	Severity: major Specific problem: HPDA Threshold Exceeded: Hardware Errors Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: HPDA Threshold Exceeded: Hardware Errors\nAlarm to be cleared by the operator at the management system.\nReason: hPRaid14		
Remedial action: check HPDA		

Table 27-1256 IK8454430

Alarm	Attributes	Applicable major release
Name: IK8454430 (7076) Type: equipmentAlarm Package: Img.IK8454430 Raised on class: Img.LMGMngElement	Severity: major Specific problem: HPDA Threshold Exceeded: Hardware Errors Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: HPDA Threshold Exceeded: Hardware Errors\nAlarm to be cleared by the operator at the management system.\nReason: hPRaid15		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1257 IK8454441

Alarm	Attributes	Applicable major release
Name: IK8454441 (7077) Type: equipmentAlarm Package: Img.IK8454441 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Voltage Warning Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG

Table 27-1257 IK8454441 (continued)

Alarm	Attributes	Applicable major release
Description: One of the voltage sensors crossed its upper non-critical threshold.\nAlarm to be cleared by the operator at the management system.\nReason: hPEnvironment4		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1258 IK8454442

Alarm	Attributes	Applicable major release
Name: IK8454442 (7078) Type: equipmentAlarm Package: lmg.IK8454442 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Voltage Emergency Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: One of the voltage sensors crossed its upper critical threshold.\nAlarm to be cleared by the operator at the management system.\nReason: hPEnvironment5		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1259 IK8454443

Alarm	Attributes	Applicable major release
Name: IK8454443 (7079) Type: equipmentAlarm Package: lmg.IK8454443 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Voltage Emergency Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: One of the voltage sensors crossed its upper non-recoverable threshold.\nAlarm to be cleared by the operator at the management system.\nReason: hPEnvironment6		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1260 IK8454444

Alarm	Attributes	Applicable major release
Name: IK8454444 (7080) Type: equipmentAlarm Package: lmg.IK8454444 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Voltage Regulating Module Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: Voltage Regulating Module (VRM) on the indicated processor module had failed.\nAlarm to be cleared by the operator at the management system.\nReason: hPEnvironment7		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1261 IK8454449

Alarm	Attributes	Applicable major release
Name: IK8454449 (7081) Type: environmentalAlarm Package: lmg.IK8454449 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Fan Emergency Implicitly cleared: false Default probable cause: coolingFanFailure	Release: • LR14.3.MG
Description: One of the fan sensors crossed its upper critical threshold.\nAlarm to be cleared by the operator at the management system.\nReason: hPFan5		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1262 IK8454450

Alarm	Attributes	Applicable major release
Name: IK8454450 (7082) Type: environmentalAlarm Package: lmg.IK8454450 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Fan Emergency Implicitly cleared: false Default probable cause: coolingFanFailure	Release: • LR14.3.MG
Description: One of the fan sensors crossed its upper non-recoverable threshold.\nAlarm to be cleared by the operator at the management system.\nReason: hPFan6		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1263 IK8454452

Alarm	Attributes	Applicable major release
Name: IK8454452 (7083) Type: environmentalAlarm Package: lmg.IK8454452 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Processor/PCI Fan Tray failure Implicitly cleared: false Default probable cause: coolingFanFailure	Release: • LR14.3.MG
Description: Two or more of the fans in the Processor/PCI Fan Tray have stopped or have been removed.\nAlarm to be cleared by the operator at the management system.\nReason: hPFan8		
Remedial action: Check the fans in the Processor/PCI Fan Tray		

Table 27-1264 IK8454454

Alarm	Attributes	Applicable major release
Name: IK8454454 (7084) Type: environmentalAlarm Package: lmg.IK8454454 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Memory Fan Error Implicitly cleared: false Default probable cause: coolingFanFailure	Release: • LR14.3.MG

Table 27-1264 IK8454454 (continued)

Alarm	Attributes	Applicable major release
Description: One of the fans in the Memory Fan Tray stopped.\nAlarm to be cleared by the operator at the management system.\nReason: hPFan10		
Remedial action: check the fans in the Memory Fan Tray		

Table 27-1265 IK8454455

Alarm	Attributes	Applicable major release
Name: IK8454455 (7085) Type: environmentalAlarm Package: lmg.IK8454455 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Memory Fan Failure Implicitly cleared: false Default probable cause: coolingFanFailure	Release: • LR14.3.MG
Description: Two or more of the fans in the Memory Fan Tray have stopped or been removed.\nAlarm to be cleared by the operator at the management system.\nReason: hPFan11		
Remedial action: Check the fans in the Memory Fan Tray		

Table 27-1266 IK8454481

Alarm	Attributes	Applicable major release
Name: IK8454481 (7086) Type: processingErrorAlarm Package: lmg.IK8454481 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Alignment Errors exceeded threshold Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: The total number of alignment and CRC errors has exceeded the threshold.\nAlarm to be cleared by the operator at the management system.\nReason: networkCard13		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1267 IK8454541

Alarm	Attributes	Applicable major release
Name: IK8454541 (7087) Type: equipmentAlarm Package: lmg.IK8454541 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Warning NOS hang Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: ASR has stopped notifying the HP Remote Assistant Card that the system is running correctly (the server probably hung or crashed).\nAlarm to be cleared by the operator at the management system.\nReason: rAASR1		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1268 IK8454560

Alarm	Attributes	Applicable major release
Name: IK8454560 (7088) Type: equipmentAlarm Package: Img.IK8454560 Raised on class: Img.LMGMngElement	Severity: critical Specific problem: Automatic power shutdown due to critical condition Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: Automatic power shutdown due to critical condition.\nAlarm to be cleared by the operator at the management system.\nReason: rAOther15		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1269 IK8454591

Alarm	Attributes	Applicable major release
Name: IK8454591 (7089) Type: equipmentAlarm Package: Img.IK8454591 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Remote Control Card battery low Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: The TopTools Remote Control backup battery has discharged to a level where it will not be able to power the card\nAlarm to be cleared by the operator at the management system.\nReason: rAOther46		
Remedial action: check the TopTools Remote Control backup battery		

Table 27-1270 IK8454595

Alarm	Attributes	Applicable major release
Name: IK8454595 (7090) Type: environmentalAlarm Package: Img.IK8454595 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Temperature Graceful Shutdown Implicitly cleared: false Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG
Description: The server temperature measured on the HP Remote Assistant Card has exceeded the configured threshold and the server has been automatically shut down.\nAlarm to be cleared by the operator at the management system.\nReason: rATemp2		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1271 IK8454596

Alarm	Attributes	Applicable major release
Name: IK8454596 (7091) Type: environmentalAlarm Package: Img.IK8454596 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Automatic graceful shutdown of NOS Implicitly cleared: false Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG

Table 27-1271 IK8454596 (continued)

Alarm	Attributes	Applicable major release
Description: The server temperature or voltage levels measured by the remote management hardware has exceeded the configured threshold. The server has been automatically shut down.\nAlarm to be cleared by the operator at the management system.\nReason: rATemp3		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1272 IK8454597

Alarm	Attributes	Applicable major release
Name: IK8454597 (7092) Type: environmentalAlarm Package: lmg.IK8454597 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Temperature Critical Implicitly cleared: false Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG
Description: The server temperature measured on the HP Remote Assistant Card has exceeded the configured Graceful Shutdown threshold value by 5 degrees C and the server has been automatically shut down.\nAlarm to be cleared by the operator at the management system.\nReason: rATemp4		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1273 IK8454598

Alarm	Attributes	Applicable major release
Name: IK8454598 (7093) Type: equipmentAlarm Package: lmg.IK8454598 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Server power failure Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: The server has lost the power completely.\nAlarm to be cleared by the operator at the management system.\nReason: rAVoltage1		
Remedial action: check the server power		

Table 27-1274 IK8454599

Alarm	Attributes	Applicable major release
Name: IK8454599 (7094) Type: equipmentAlarm Package: lmg.IK8454599 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: 12V Upper Threshold upper threshold warning Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: Voltage measured in the server has gone outside of -12V Upper Threshold.\nAlarm to be cleared by the operator at the management system.\nReason: rAVoltage2		

Table 27-1274 IK8454599 (continued)

Alarm	Attributes	Applicable major release
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1275 IK8454600

Alarm	Attributes	Applicable major release
Name: IK8454600 (7095) Type: equipmentAlarm Package: lmg.IK8454600 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: +33 Upper Threshold Warning Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: Voltage measured in the server has gone outside of +3.3V Upper Threshold.\nAlarm to be cleared by the operator at the management system.\nReason: rAVoltage3		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1276 IK8454601

Alarm	Attributes	Applicable major release
Name: IK8454601 (7096) Type: equipmentAlarm Package: lmg.IK8454601 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: +5V Upper Threshold Warning Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: Voltage measured in the server has gone outside of +5V Upper Threshold.\nAlarm to be cleared by the operator at the management system.\nReason: rAVoltage4		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1277 IK8454602

Alarm	Attributes	Applicable major release
Name: IK8454602 (7097) Type: equipmentAlarm Package: lmg.IK8454602 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: +12V Upper Threshold Warning Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: Voltage measured in the server has gone outside of +12V Upper Threshold.\nAlarm to be cleared by the operator at the management system.\nReason: rAVoltage5		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1278 IK8454621

Alarm	Attributes	Applicable major release
Name: IK8454621 (7098) Type: equipmentAlarm Package: Img.IK8454621 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Power System failure A/C Lost Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: Power System failure A/C Lost\nAlarm to be cleared by the operator at the management system.\nReason: redundantPower14		
Remedial action: Check Power system AC		

Table 27-1279 IK8454623

Alarm	Attributes	Applicable major release
Name: IK8454623 (7099) Type: environmentalAlarm Package: Img.IK8454623 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Power Supply Over Temperature Implicitly cleared: false Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG
Description: Temperature alert on designated Power Supply.\nAlarm to be cleared by the operator at the management system.\nReason: redundantPower16		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1280 IK8454624

Alarm	Attributes	Applicable major release
Name: IK8454624 (7100) Type: environmentalAlarm Package: Img.IK8454624 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Power Supply Over Temperature Implicitly cleared: false Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG
Description: Temperature alert on designated Power Supply.\nAlarm to be cleared by the operator at the management system.\nReason: redundantPower17		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1281 IK8454625

Alarm	Attributes	Applicable major release
Name: IK8454625 (7101) Type: equipmentAlarm Package: Img.IK8454625 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Power Supply Fan Failed Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG

Table 27-1281 IK8454625 (continued)

Alarm	Attributes	Applicable major release
Description: Fan failure on designated Power Supply.\nAlarm to be cleared by the operator at the management system.\nReason: redundantPower18		
Remedial action: Check the fan of the Power Supply		

Table 27-1282 IK8454626

Alarm	Attributes	Applicable major release
Name: IK8454626 (7102) Type: equipmentAlarm Package: lmg.IK8454626 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Power Supply Fan Failed Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: Fan failure on designated Power Supply.\nAlarm to be cleared by the operator at the management system.\nReason: redundantPower19		
Remedial action: Check the fan of the Power Supply		

Table 27-1283 IK8454630

Alarm	Attributes	Applicable major release
Name: IK8454630 (7103) Type: equipmentAlarm Package: lmg.IK8454630 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Power Supply 33 volts bad Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: A power supply's 3.3 volt supply has gone bad\nAlarm to be cleared by the operator at the management system.\ nReason: redundantPower23		
Remedial action: check the 3.3V power supply		

Table 27-1284 IK8454631

Alarm	Attributes	Applicable major release
Name: IK8454631 (7104) Type: equipmentAlarm Package: lmg.IK8454631 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Power Supply 5 volts bad Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: A power supply's 5 volt supply has gone bad\nAlarm to be cleared by the operator at the management system.\nReason: redundantPower24		
Remedial action: check the 5V power supply		

Table 27-1285 IK8454632

Alarm	Attributes	Applicable major release
Name: IK8454632 (7105) Type: equipmentAlarm Package: Img.IK8454632 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Power Supply 12 volts bad Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: A power supply's 12 volt supply has gone bad\nAlarm to be cleared by the operator at the management system.\nReason: redundantPower25		
Remedial action: check the 12V power supply		

Table 27-1286 IK8454633

Alarm	Attributes	Applicable major release
Name: IK8454633 (7106) Type: equipmentAlarm Package: Img.IK8454633 Raised on class: Img.LMGMngElement	Severity: major Specific problem: 12 volts bad Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: A power supply's -12 volt supply has gone bad\nAlarm to be cleared by the operator at the management system.\ nReason: redundantPower26		
Remedial action: check the -12V power supply		

Table 27-1287 IK8454634

Alarm	Attributes	Applicable major release
Name: IK8454634 (7107) Type: equipmentAlarm Package: Img.IK8454634 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Power Supply Removed Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: Indicated Power Supply has been removed or is not connected properly.\nAlarm to be cleared by the operator at the management system.\nReason: redundantPower27		
Remedial action: check the Power Supply		

Table 27-1288 IK8454638

Alarm	Attributes	Applicable major release
Name: IK8454638 (7108) Type: equipmentAlarm Package: Img.IK8454638 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Power Supply Unit power has failed Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG

Table 27-1288 IK8454638 (continued)

Alarm	Attributes	Applicable major release
Description: The indicated Power Supply Unit power has failed.\nAlarm to be cleared by the operator at the management system.\nReason: redundantPower31		
Remedial action: check the indicated Power Supply Unit power		

Table 27-1289 IK8454650

Alarm	Attributes	Applicable major release
Name: IK8454650 (7109) Type: processingErrorAlarm Package: lmg.IK8454650 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Capacity major level Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: Volume Storage Capacity has exceeded the major threshold level.\nAlarm to be cleared by the operator at the management system.\nReason: storageCap5		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1290 IK8454651

Alarm	Attributes	Applicable major release
Name: IK8454651 (7110) Type: processingErrorAlarm Package: lmg.IK8454651 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Capacity major level Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: Volume Storage Capacity has exceeded the major threshold level.\nAlarm to be cleared by the operator at the management system.\nReason: storageCap6		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1291 IK8454659

Alarm	Attributes	Applicable major release
Name: IK8454659 (7111) Type: equipmentAlarm Package: lmg.IK8454659 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: VRM failure Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: VRM failure\nAlarm to be cleared by the operator at the management system.\nReason: systemHW7s		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1292 IK8454680

Alarm	Attributes	Applicable major release
Name: IK8454680 (7112) Type: equipmentAlarm Package: Img.IK8454680 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Processor startup/initialization failed Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: Processor startup/initialization failed\nAlarm to be cleared by the operator at the management system.\nReason: systemHW26		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1293 IK8454681

Alarm	Attributes	Applicable major release
Name: IK8454681 (7113) Type: equipmentAlarm Package: Img.IK8454681 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Fan failure Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: Multiple Fan Failure\nAlarm to be cleared by the operator at the management system.\nReason: systemHW27		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1294 IK8454698

Alarm	Attributes	Applicable major release
Name: IK8454698 (7114) Type: equipmentAlarm Package: Img.IK8454698 Raised on class: Img.LMGMngElement	Severity: critical Specific problem: System critical limit exceeded Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: An event of critical severity has occurred in the system. For example, both system fans have failed\nAlarm to be cleared by the operator at the management system.\nReason: systemHW44		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1295 IK8454708

Alarm	Attributes	Applicable major release
Name: IK8454708 (7115) Type: equipmentAlarm Package: Img.IK8454708 Raised on class: Img.LMGMngElement	Severity: critical Specific problem: Control Board System reset Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG

Table 27-1295 IK8454708 (continued)

Alarm	Attributes	Applicable major release
Description: The system has been reset because Control Board detected a critical error.\nAlarm to be cleared by the operator at the management system.\nReason: systemHW54		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1296 IK8454710

Alarm	Attributes	Applicable major release
Name: IK8454710 (7116) Type: equipmentAlarm Package: Img.IK8454710 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Processor Card Missing or not terminated Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: The Processor Card is missing or not properly terminated in indicated processor module.\nAlarm to be cleared by the operator at the management system.\nReason: systemHW56		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1297 IK8454712

Alarm	Attributes	Applicable major release
Name: IK8454712 (7117) Type: equipmentAlarm Package: Img.IK8454712 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Violation Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: Front Panel Button Violation\nAlarm to be cleared by the operator at the management system.\nReason: systemHW58		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1298 IK8454730

Alarm	Attributes	Applicable major release
Name: IK8454730 (7118) Type: equipmentAlarm Package: Img.IK8454730 Raised on class: Img.LMGMngElement	Severity: major Specific problem: ACPI hardware failure Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: ACPI hardware failure\nAlarm to be cleared by the operator at the management system.\nReason: systemHW77		
Remedial action: check ACPI		

Table 27-1299 IK8454735

Alarm	Attributes	Applicable major release
Name: IK8454735 (7119) Type: environmentalAlarm Package: lmg.IK8454735 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: The battery cycles have gone beyond the upper critical range Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Battery cycles have gone beyond the upper critical range\nAlarm to be cleared by the operator at the management system.\nReason: systemHW81		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1300 IK8454743

Alarm	Attributes	Applicable major release
Name: IK8454743 (7120) Type: processingErrorAlarm Package: lmg.IK8454743 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Generic trap for Critical or Fatal type E0 event from system firmware Implicitly cleared: false Default probable cause: softwareError	Release: • LR14.3.MG
Description: Generic alarm for Critical or Fatal type E0 event from system firmware\nAlarm to be cleared by the operator at the management system.\nReason: systemFW1		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1301 IK8454749

Alarm	Attributes	Applicable major release
Name: IK8454749 (7121) Type: environmentalAlarm Package: lmg.IK8454749 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Temperature Emergency Implicitly cleared: false Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG
Description: Server temperature has exceeded the emergency temperature threshold.\nAlarm to be cleared by the operator at the management system.\nReason: temperature3		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1302 IK8454752

Alarm	Attributes	Applicable major release
Name: IK8454752 (7122) Type: environmentalAlarm Package: Img.IK8454752 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Hot Swap: Temperature emergency Implicitly cleared: false Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG
Description: Hot Swap Cage : Emergency temperature exceeded!\nAlarm to be cleared by the operator at the management system.\nReason: temperature6		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1303 IK8454755

Alarm	Attributes	Applicable major release
Name: IK8454755 (7123) Type: environmentalAlarm Package: Img.IK8454755 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Hot Swap Cage: Temperature emergency Implicitly cleared: false Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG
Description: Hot Swap Cage : Emergency temperature exceeded!\nAlarm to be cleared by the operator at the management system.\nReason: temperature9		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1304 IK8454762

Alarm	Attributes	Applicable major release
Name: IK8454762 (7124) Type: communicationsAlarm Package: Img.IK8454762 Raised on class: Img.LMGMngElement	Severity: major Specific problem: linkDown Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: A linkDown alarm signifies that the SNMP entity, acting in an agent role, has detected that the ifOperStatus object for one of its communication links is about to enter the down state from some other state (but not from the notPresent state). This other state is indicated by the included value of ifOperStatus.\nAlarm is cleared by the system.\nReason: linkDown		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1305 IK8456033

Alarm	Attributes	Applicable major release
Name: IK8456033 (7125) Type: equipmentAlarm Package: lmg.IK8456033 Raised on class: lmg.FRU	Severity: major Specific problem: hpOVISMajorAlarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Major alarm\nAlarm is cleared by the system.\nReason: hpOVISMajorAlarm		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1306 IK8456034

Alarm	Attributes	Applicable major release
Name: IK8456034 (7126) Type: equipmentAlarm Package: lmg.IK8456034 Raised on class: lmg.FRU	Severity: critical Specific problem: hpOVISCriticalAlarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Critical alarm\nAlarm is cleared by the system.\nReason: hpOVISCriticalAlarm		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1307 IK8457327

Alarm	Attributes	Applicable major release
Name: IK8457327 (7127) Type: environmentalAlarm Package: lmg.IK8457327 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: hh3cEntityExtTemperatureThresholdNotification Implicitly cleared: false Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG
Description: The hh3cEntityExtTemperatureThresholdNotification indicates the temperature exceeded the threshold.\nAlarm to be cleared by the operator at the management system.\nReason: hh3cEntityExtTemperatureThresholdNotification		
Remedial action: Check the status and the environment of the entity, sometimes it happens because of the failure of air-condition.		

Table 27-1308 IK8457329

Alarm	Attributes	Applicable major release
Name: IK8457329 (7128) Type: equipmentAlarm Package: lmg.IK8457329 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: hh3cEntityExtVoltageHighThresholdNotification Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG

Table 27-1308 IK8457329 (continued)

Alarm	Attributes	Applicable major release
Description: The hh3cEntityExtVoltageHighThresholdNotification indicates the voltage is higher than the threshold. If the voltage is higher too much than the entity needs, The entity may be damaged by the high voltage.\nAlarm to be cleared by the operator at the management system.\nReason: hh3cEntityExtVoltageHighThresholdNotification		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1309 IK8457330

Alarm	Attributes	Applicable major release
Name: IK8457330 (9261) Type: equipmentAlarm Package: lmg.IK8457330 Raised on class: lmg.FRU	Severity: major Specific problem: hh3cEntityExtCpuUsageThresholdNotfication Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: The hh3cEntityExtCpuUsageThresholdNotfication indicates the entity is overloaded.\nAlarm is cleared by the system.\nReason: hh3cEntityExtCpuUsageThresholdNotfication		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1310 IK8457331

Alarm	Attributes	Applicable major release
Name: IK8457331 (7129) Type: processingErrorAlarm Package: lmg.IK8457331 Raised on class: lmg.FRU	Severity: major Specific problem: hh3cEntityExtMemUsageThresholdNotification Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The hh3cEntityExtMemUsageThresholdNotification indicates the entity is overloaded.\nAlarm is cleared by the system.\nReason: hh3cEntityExtMemUsageThresholdNotification		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1311 IK8457333

Alarm	Attributes	Applicable major release
Name: IK8457333 (9262) Type: equipmentAlarm Package: lmg.IK8457333 Raised on class: lmg.FRU	Severity: major Specific problem: The trap indicates the entity is not operable at present Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: The alarm indicates the entity is not operable at present.\nAlarm is cleared by the system.\nReason: hh3cEntityExtOperDisabled		

Table 27-1311 IK8457333 (continued)

Alarm	Attributes	Applicable major release
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1312 IK8457334

Alarm	Attributes	Applicable major release
Name: IK8457334 (7130) Type: environmentalAlarm Package: lmg.IK8457334 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: hh3cEntityExtCriticalTemperatureThresholdNotification Implicitly cleared: false Default probable cause: highTemperature	Release: • LR14.3.MG
Description: The hh3cEntityExtCriticalTemperatureThresholdNotification indicates the temperature exceeds the critical temperature.\nAlarm to be cleared by the operator at the management system.\nReason: hh3cEntityExtCriticalTemperatureThresholdNotification		
Remedial action: Check the status and the environment of the entity, sometimes it happens because of the failure of air-condition.		

Table 27-1313 IK8457335

Alarm	Attributes	Applicable major release
Name: IK8457335 (9263) Type: equipmentAlarm Package: lmg.IK8457335 Raised on class: lmg.FRU	Severity: major Specific problem: hh3cEntityExtSFPAlarmOn Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: The alarm is generated when the SFP module fails or runs abnormally for some particular reason.\nAlarm is cleared by the system.\nReason: hh3cEntityExtSFPAlarmOn		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1314 IK8457340

Alarm	Attributes	Applicable major release
Name: IK8457340 (9264) Type: equipmentAlarm Package: lmg.IK8457340 Raised on class: lmg.FRU	Severity: major Specific problem: The trap indicates the entity is forced to power off Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: The alarm indicates the entity is forced to power off.\nAlarm is cleared by the system.\nReason: hh3cEntityExtForcedPowerOff		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1315 IK8457342

Alarm	Attributes	Applicable major release
Name: IK8457342 (9265) Type: equipmentAlarm Package: lmg.IK8457342 Raised on class: lmg.FRU	Severity: major Specific problem: The trap indicates a fault occures on the specified entity Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: The alarm indicates a fault occures on the specified entity.\nAlarm is cleared by the system.\nReason: hh3cEntityExtFaultAlarmOn		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1316 IK8457344

Alarm	Attributes	Applicable major release
Name: IK8457344 (9266) Type: equipmentAlarm Package: lmg.IK8457344 Raised on class: lmg.FRU	Severity: major Specific problem: hh3cEntityExtResourceLack Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: The alarm indicates that a kind of resource is not enough on the specified entity.\nAlarm is cleared by the system.\nReason: hh3cEntityExtResourceLack		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1317 IK8457346

Alarm	Attributes	Applicable major release
Name: IK8457346 (7131) Type: environmentalAlarm Package: lmg.IK8457346 Raised on class: lmg.FRU	Severity: major Specific problem: hh3cEntityExtTemperatureLower Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm indicates the temperature of a specified entity is under the lower threshold. In this condition, user should check the status and the environment of the entity, sometimes it goes wrong for some reason.\nAlarm is cleared by the system.\nReason: hh3cEntityExtTemperatureLower		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1318 IK8457347

Alarm	Attributes	Applicable major release
Name: IK8457347 (7132) Type: environmentalAlarm Package: lmg.IK8457347 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: hh3cEntityExtTemperatureTooUp Implicitly cleared: false Default probable cause: highTemperature	Release: • LR14.3.MG
Description: The alarm indicates the temperature of a specified entity exceeded the shutdown threshold.\nAlarm to be cleared by the operator at the management system.\nReason: hh3cEntityExtTemperatureTooUp		
Remedial action: Check the status and the environment of the entity, sometimes it goes wrong for some reason.		

Table 27-1319 IK8457349

Alarm	Attributes	Applicable major release
Name: IK8457349 (9267) Type: equipmentAlarm Package: lmg.IK8457349 Raised on class: lmg.FRU	Severity: major Specific problem: hh3cEntityExternalAlarmOccur Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: The alarm is generated when the monitored device connected to the specified entity fails.\nAlarm is cleared by the system.\nReason: hh3cEntityExternalAlarmOccur		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1320 IK8457354

Alarm	Attributes	Applicable major release
Name: IK8457354 (7133) Type: communicationsAlarm Package: lmg.IK8457354 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: hh3cEntityExtECCParityAlarm Implicitly cleared: false Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: The alarm indicates the ECC(Error Correction Code) parity error alarm.\nAlarm to be cleared by the operator at the management system.\nReason: hh3cEntityExtECCParityAlarm		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1321 IK8457364

Alarm	Attributes	Applicable major release
Name: IK8457364 (9268) Type: communicationsAlarm Package: lmg.IK8457364 Raised on class: lmg.FRU	Severity: major Specific problem: hh3cAggPortInactiveNotification2 Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG • LR16.1.MG
Description: This event will be triggered whenever the port in aggregator is made inactive.\nAlarm is cleared by the system.\nReason: hh3cAggPortInactiveNotification2		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1322 IK8457366

Alarm	Attributes	Applicable major release
Name: IK8457366 (9269) Type: equipmentAlarm Package: lmg.IK8457366 Raised on class: lmg.FRU	Severity: major Specific problem: Trap message is generated when the interface is looped Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: Trap message is generated when the interface is looped.\nAlarm is cleared by the system.\nReason: hh3cLpbkdtTrapLoopbacked		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1323 IK8457368

Alarm	Attributes	Applicable major release
Name: IK8457368 (9270) Type: equipmentAlarm Package: lmg.IK8457368 Raised on class: lmg.FRU	Severity: major Specific problem: hh3cLpbkdtTrapPerVlanLoopbacked Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: Trap message is generated when the interface is looped in the VLAN.\nAlarm is cleared by the system.\nReason: hh3cLpbkdtTrapPerVlanLoopbacked		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1324 IK8457370

Alarm	Attributes	Applicable major release
Name: IK8457370 (9271) Type: communicationsAlarm Package: lmg.IK8457370 Raised on class: lmg.FRU	Severity: major Specific problem: hh3cSlaveSwitchOver Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG • LR16.1.MG
Description: An hh3cSlaveSwitchOver alarm signifies that the action of standby mpu switching to master has completed.\nAlarm is cleared by the system.\nReason: hh3cSlaveSwitchOver		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1325 IK8457377

Alarm	Attributes	Applicable major release
Name: IK8457377 (7134) Type: equipmentAlarm Package: lmg.IK8457377 Raised on class: lmg.FRU	Severity: major Specific problem: hh3cpowerfailure Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Power supply failure\nAlarm is cleared by the system.\nReason: hh3cpowerfailure		
Remedial action: Replace the power supply as soon as possible.		

Table 27-1326 IK8457381

Alarm	Attributes	Applicable major release
Name: IK8457381 (9272) Type: equipmentAlarm Package: lmg.IK8457381 Raised on class: lmg.FRU	Severity: major Specific problem: hh3cPowerRemoved Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: Power removed\nAlarm is cleared by the system.\nReason: hh3cPowerRemoved		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1327 IK8457386

Alarm	Attributes	Applicable major release
Name: IK8457386 (7135) Type: equipmentAlarm Package: lmg.IK8457386 Raised on class: lmg.FRU	Severity: major Specific problem: hh3cBoardFailure Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG

Table 27-1327 IK8457386 (continued)

Alarm	Attributes	Applicable major release
Description: Board failed\nAlarm is cleared by the system.\nReason: hh3cBoardFailure		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1328 IK8457390

Alarm	Attributes	Applicable major release
Name: IK8457390 (9273) Type: environmentalAlarm Package: Img.IK8457390 Raised on class: Img.FRU	Severity: major Specific problem: hh3cBoardTemperatureLower Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR15.1.MG • LR16.1.MG
Description: Board temperature low\nAlarm is cleared by the system.\nReason: hh3cBoardTemperatureLower		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1329 IK8457391

Alarm	Attributes	Applicable major release
Name: IK8457391 (7136) Type: environmentalAlarm Package: Img.IK8457391 Raised on class: Img.FRU	Severity: major Specific problem: hh3cBoardTemperatureHigher Implicitly cleared: true Default probable cause: highTemperature	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Board temperature high\nAlarm is cleared by the system.\nReason: hh3cBoardTemperatureHigher		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1330 IK8457394

Alarm	Attributes	Applicable major release
Name: IK8457394 (7137) Type: equipmentAlarm Package: Img.IK8457394 Raised on class: Img.LMGMngElement	Severity: major Specific problem: hh3cLoadFailure Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: Board load failure\nAlarm to be cleared by the operator at the management system.\nReason: hh3cLoadFailure		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1331 IK8457396

Alarm	Attributes	Applicable major release
Name: IK8457396 (9274) Type: equipmentAlarm Package: lmg.IK8457396 Raised on class: lmg.FRU	Severity: major Specific problem: hh3cBackBoardModeSetFuilure Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: Back board mode set failure\nAlarm is cleared by the system.\nReason: hh3cBackBoardModeSetFuilure		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1332 IK8457404

Alarm	Attributes	Applicable major release
Name: IK8457404 (9275) Type: equipmentAlarm Package: lmg.IK8457404 Raised on class: lmg.FRU	Severity: major Specific problem: hh3cStormRising Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: This alarm message is generated when any type of the flux exceeds its upper limit on a port.\nAlarm is cleared by the system.\nReason: hh3cStormRising		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1333 IK8457480

Alarm	Attributes	Applicable major release
Name: IK8457480 (9276) Type: processingErrorAlarm Package: lmg.IK8457480 Raised on class: lmg.FRU	Severity: critical Specific problem: N The device's health has changed to Non-Recoverable Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: N The device's health has changed to Non-Recoverable.\nAlarm is cleared by the system.\nReason: hpHttpMgNonRecoverableHealthTrap		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1334 IK8457481

Alarm	Attributes	Applicable major release
Name: IK8457481 (10486) Type: equipmentAlarm Package: lmg.IK8457481 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: The primary controller in the subsytem has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG

Table 27-1334 IK8457481 (continued)

Alarm	Attributes	Applicable major release
Description: The primary controller in the subsystem has failed. Details: The primary Controller has failed.		
Remedial action: No action is required.		

Table 27-1335 IK8457482

Alarm	Attributes	Applicable major release
Name: IK8457482 (10487) Type: equipmentAlarm Package: Img.IK8457482 Raised on class: Img.FRU	Severity: indeterminate Specific problem: The secondary controller in the subsytem has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: The secondary controller in the subsystem has failed. Details: The secondary controller has failed.		
Remedial action: No action is required.		

Table 27-1336 IK8457483

Alarm	Attributes	Applicable major release
Name: IK8457483 (10488) Type: equipmentAlarm Package: Img.IK8457483 Raised on class: Img.FRU	Severity: indeterminate Specific problem: A RAIDset has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A RAIDset has failed. Details: The RAIDset has failed and is off-line.		
Remedial action: No action is required.		

Table 27-1337 IK8457484

Alarm	Attributes	Applicable major release
Name: IK8457484 (10489) Type: equipmentAlarm Package: Img.IK8457484 Raised on class: Img.FRU	Severity: indeterminate Specific problem: A RAIDset has become degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A RAIDset has become degraded. Details: A RAIDset has become degraded due to a member disk device failure.		
Remedial action: No action is required.		

Table 27-1338 IK8457485

Alarm	Attributes	Applicable major release
Name: IK8457485 (10490) Type: equipmentAlarm Package: lmg.IK8457485 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: A disk drive has failed Implicitly cleared: true Default probable cause: storageCapacityProblem	Release: • LR16.1.MG
Description: A disk drive has failed. Details: A disk device has failed.		
Remedial action: No action is required.		

Table 27-1339 IK8457486

Alarm	Attributes	Applicable major release
Name: IK8457486 (10491) Type: equipmentAlarm Package: lmg.IK8457486 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Fan has failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: Fan has failed. Details: One of the cooling fans in the primary enclosure has failed.		
Remedial action: No action is required.		

Table 27-1340 IK8457487

Alarm	Attributes	Applicable major release
Name: IK8457487 (10492) Type: equipmentAlarm Package: lmg.IK8457487 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Power supply has failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power supply has failed. Details: One of the power supplies in the primary enclosure has failed.		
Remedial action: No action is required.		

Table 27-1341 IK8457488

Alarm	Attributes	Applicable major release
Name: IK8457488 (10493) Type: equipmentAlarm Package: lmg.IK8457488 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Primary enclosure temperature warning Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Primary enclosure temperature warning. Details: The temperature in the primary enclosure has triggered a warning condition detected by the controller.		

Table 27-1341 IK8457488 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-1342 IK8457489

Alarm	Attributes	Applicable major release
Name: IK8457489 (10494) Type: equipmentAlarm Package: Img.IK8457489 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Fan has failed in expansion cabinet Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: Fan has failed in expansion cabinet. Details: One of the cooling fans in the expansion cabinet has failed.		
Remedial action: No action is required.		

Table 27-1343 IK8457490

Alarm	Attributes	Applicable major release
Name: IK8457490 (10495) Type: equipmentAlarm Package: Img.IK8457490 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Power supply has failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power supply has failed. Details: One of the power supplies in the expansion cabinet has failed.		
Remedial action: No action is required.		

Table 27-1344 IK8457491

Alarm	Attributes	Applicable major release
Name: IK8457491 (10496) Type: equipmentAlarm Package: Img.IK8457491 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Expansion cabinet temperature warning Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR16.1.MG
Description: Expansion cabinet temperature warning. Details: The temperature in the expansion cabinet has triggered a warning condition detected by the controller.		
Remedial action: No action is required.		

Table 27-1345 IK8457492

Alarm	Attributes	Applicable major release
Name: IK8457492 (10497) Type: equipmentAlarm Package: lmg.IK8457492 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: High Priority Alert Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A high priority alert has occurred.		
Remedial action: No action is required.		

Table 27-1346 IK8457493

Alarm	Attributes	Applicable major release
Name: IK8457493 (10498) Type: equipmentAlarm Package: lmg.IK8457493 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Medium Priority Alert Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A medium priority alert has occurred.		
Remedial action: No action is required.		

Table 27-1347 IK8457494

Alarm	Attributes	Applicable major release
Name: IK8457494 (10499) Type: equipmentAlarm Package: lmg.IK8457494 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Low Priority Alert Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A low priority alert has occurred.		
Remedial action: No action is required.		

Table 27-1348 IK8457495

Alarm	Attributes	Applicable major release
Name: IK8457495 (10500) Type: equipmentAlarm Package: lmg.IK8457495 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: DMI Non-Critical trap Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: This event will be sent whenever a DMI Indication occurs which is Non-Critical level.		
Remedial action: No action is required.		

Table 27-1349 IK8457496

Alarm	Attributes	Applicable major release
Name: IK8457496 (10501) Type: equipmentAlarm Package: Img.IK8457496 Raised on class: Img.FRU	Severity: indeterminate Specific problem: DMI Critical trap Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: This event will be sent whenever a DMI Indication occurs which is Critical level.		
Remedial action: No action is required.		

Table 27-1350 IK8457497

Alarm	Attributes	Applicable major release
Name: IK8457497 (10502) Type: equipmentAlarm Package: Img.IK8457497 Raised on class: Img.FRU	Severity: indeterminate Specific problem: DMI Non-Recoverable trap Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: This event will be sent whenever a DMI Indication occurs which is Non-Recoverable level.		
Remedial action: No action is required.		

Table 27-1351 IK8457498

Alarm	Attributes	Applicable major release
Name: IK8457498 (10503) Type: equipmentAlarm Package: Img.IK8457498 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Critical Alarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A critical alarm has occurred.		
Remedial action: No action is required.		

Table 27-1352 IK8457500

Alarm	Attributes	Applicable major release
Name: IK8457500 (10504) Type: equipmentAlarm Package: Img.IK8457500 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Cluster Node Degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: This event will be sent any time the condition of a node in the cluster becomes degraded.		
Remedial action: No action is required.		

Table 27-1353 IK8457501

Alarm	Attributes	Applicable major release
Name: IK8457501 (10505) Type: equipmentAlarm Package: lmg.IK8457501 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Cluster Node Failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: This event will be sent any time the condition of a node in the cluster becomes failed.		
Remedial action: No action is required.		

Table 27-1354 IK8457502

Alarm	Attributes	Applicable major release
Name: IK8457502 (10506) Type: equipmentAlarm Package: lmg.IK8457502 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Cluster Resource Degraded Implicitly cleared: true Default probable cause: underlyingResourceUnavail-able	Release: • LR16.1.MG
Description: This event will be sent any time the condition of a cluster resource becomes degraded.		
Remedial action: No action is required.		

Table 27-1355 IK8457503

Alarm	Attributes	Applicable major release
Name: IK8457503 (10507) Type: equipmentAlarm Package: lmg.IK8457503 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Cluster Resource Failed Implicitly cleared: true Default probable cause: underlyingResourceUnavail-able	Release: • LR16.1.MG
Description: This event will be sent any time the condition of a cluster resource becomes failed.		
Remedial action: No action is required.		

Table 27-1356 IK8457504

Alarm	Attributes	Applicable major release
Name: IK8457504 (10508) Type: equipmentAlarm Package: lmg.IK8457504 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Cluster Network Degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: This event will be sent any time the condition of a cluster network becomes degraded.		

Table 27-1356 IK8457504 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-1357 IK8457505

Alarm	Attributes	Applicable major release
Name: IK8457505 (10509) Type: equipmentAlarm Package: Img.IK8457505 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Cluster Network Failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: This event will be sent any time the condition of a cluster network becomes failed.		
Remedial action: No action is required.		

Table 27-1358 IK8457506

Alarm	Attributes	Applicable major release
Name: IK8457506 (10510) Type: equipmentAlarm Package: Img.IK8457506 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Warning Alarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A warning alarm has occurred.		
Remedial action: No action is required.		

Table 27-1359 IK8457507

Alarm	Attributes	Applicable major release
Name: IK8457507 (10511) Type: equipmentAlarm Package: Img.IK8457507 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Information Alarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: An informational alarm has occurred.		
Remedial action: No action is required.		

Table 27-1360 IK8457508

Alarm	Attributes	Applicable major release
Name: IK8457508 (10512) Type: equipmentAlarm Package: lmg.IK8457508 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: External Array Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: External Array Accelerator Board Bad Data. This event signifies that the agent has detected a Array Accelerator Cache Board that has lost battery power. If data was being stored in the accelerator memory when the system lost power, that data has been lost.		
Remedial action: No action is required.		

Table 27-1361 IK8457509

Alarm	Attributes	Applicable major release
Name: IK8457509 (10513) Type: equipmentAlarm Package: lmg.IK8457509 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: External Array Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG
Description: External Array Accelerator Board Battery Failed. This event signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.		
Remedial action: No action is required.		

Table 27-1362 IK8457510

Alarm	Attributes	Applicable major release
Name: IK8457510 (10514) Type: equipmentAlarm Package: lmg.IK8457510 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: External Array Redundant Controller Active Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: External Array Redundant Controller Active. This event signifies that the Storage Agent has detected that a backup array controller in a duplexed pair has switched over to the active role. The variable cpqFcaCntlrBoxIoSlot indicates the new active controller index.		
Remedial action: No action is required.		

Table 27-1363 IK8457511

Alarm	Attributes	Applicable major release
Name: IK8457511 (10515) Type: equipmentAlarm Package: lmg.IK8457511 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: External Array Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: External Array Accelerator Board Bad Data. This event signifies that the agent has detected a Array Accelerator Cache Board that has lost battery power. If data was being stored in the accelerator memory when the system lost power, that data has been lost.		
Remedial action: No action is required.		

Table 27-1364 IK8457512

Alarm	Attributes	Applicable major release
Name: IK8457512 (10516) Type: equipmentAlarm Package: lmg.IK8457512 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: External Array Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG
Description: External Array Accelerator Board Battery Failed. This event signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.		
Remedial action: No action is required.		

Table 27-1365 IK8457513

Alarm	Attributes	Applicable major release
Name: IK8457513 (10517) Type: equipmentAlarm Package: lmg.IK8457513 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: POST Errors Occurred Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process. Details of the POST error messages can be found in Integrated Management Log		
Remedial action: No action is required.		

Table 27-1366 IK8457514

Alarm	Attributes	Applicable major release
Name: IK8457514 (10518) Type: equipmentAlarm Package: lmg.IK8457514 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Server Power Supply Degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The fault tolerant power supply sub-system condition has been set to degraded.		
Remedial action: No action is required.		

Table 27-1367 IK8457515

Alarm	Attributes	Applicable major release
Name: IK8457515 (10519) Type: equipmentAlarm Package: lmg.IK8457515 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Fan Degraded Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: The Fault Tolerant Fan condition has been set to degraded for the specified chassis and fan.		
Remedial action: No action is required.		

Table 27-1368 IK8457516

Alarm	Attributes	Applicable major release
Name: IK8457516 (10520) Type: equipmentAlarm Package: lmg.IK8457516 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Fan Failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: The Fault Tolerant Fan condition has been set to failed for the specified chassis and fan.		
Remedial action: No action is required.		

Table 27-1369 IK8457517

Alarm	Attributes	Applicable major release
Name: IK8457517 (10521) Type: equipmentAlarm Package: lmg.IK8457517 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Power Converter Degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The DC-DC Power Converter condition has been set to degraded for the specified chassis, slot and socket.		
Remedial action: No action is required.		

Table 27-1370 IK8457518

Alarm	Attributes	Applicable major release
Name: IK8457518 (10522) Type: equipmentAlarm Package: Img.IK8457518 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Power Converter Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The DC-DC Power Converter condition has been set to failed for the specified chassis, slot and socket.		
Remedial action: No action is required.		

Table 27-1371 IK8457519

Alarm	Attributes	Applicable major release
Name: IK8457519 (10523) Type: equipmentAlarm Package: Img.IK8457519 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Power Converter Redundancy Lost Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The DC-DC Power Converters have lost redundancy for the specified chassis.		
Remedial action: No action is required.		

Table 27-1372 IK8457520

Alarm	Attributes	Applicable major release
Name: IK8457520 (10524) Type: equipmentAlarm Package: Img.IK8457520 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Cache Accel Parity Errors may require a module Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • LR16.1.MG
Description: A cache accelerator parity error indicates a cache module needs to be replaced. The error information is reported in the variable cpqHeEventLogErrorDesc.		
Remedial action: No action is required.		

Table 27-1373 IK8457521

Alarm	Attributes	Applicable major release
Name: IK8457521 (10525) Type: equipmentAlarm Package: Img.IK8457521 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Online Spare Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG

Table 27-1373 IK8457521 (continued)

Alarm	Attributes	Applicable major release
Description: Advanced Memory Protection Online Spare Engaged. The Advanced Memory Protection subsystem has detected a memory fault. The Online Spare Memory has been activated.		
Remedial action: No action is required.		

Table 27-1374 IK8457522

Alarm	Attributes	Applicable major release
Name: IK8457522 (10526) Type: equipmentAlarm Package: lmg.IK8457522 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Mirrored Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Advanced Memory Protection Mirrored Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. Mirrored Memory has been activated.		
Remedial action: No action is required.		

Table 27-1375 IK8457523

Alarm	Attributes	Applicable major release
Name: IK8457523 (10527) Type: equipmentAlarm Package: lmg.IK8457523 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Advanced ECC Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Advanced Memory Protection Advanced ECC Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. Advanced ECC has been activated.		
Remedial action: No action is required.		

Table 27-1376 IK8457524

Alarm	Attributes	Applicable major release
Name: IK8457524 (10528) Type: equipmentAlarm Package: lmg.IK8457524 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Advanced XOR Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Advanced Memory Protection XOR Engine Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. The XOR engine has been activated.		
Remedial action: No action is required.		

Table 27-1377 IK8457525

Alarm	Attributes	Applicable major release
Name: IK8457525 (10529) Type: equipmentAlarm Package: Img.IK8457525 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Memory Board or Cartridge Removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Memory board or cartridge removed. An Advanced Memory Protection sub-system board or cartridge has been removed from the system.		
Remedial action: No action is required.		

Table 27-1378 IK8457526

Alarm	Attributes	Applicable major release
Name: IK8457526 (10530) Type: equipmentAlarm Package: Img.IK8457526 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Memory Board or Cartridge Bus Error Detected Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Memory board or cartridge bus error detected. An Advanced Memory Protection sub-system board or cartridge bus error has been detected.		
Remedial action: No action is required.		

Table 27-1379 IK8457527

Alarm	Attributes	Applicable major release
Name: IK8457527 (10531) Type: equipmentAlarm Package: Img.IK8457527 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Management processor failed reset Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: The Management processor failed reset The management processor was not successfully reset and is not operational.		
Remedial action: No action is required.		

Table 27-1380 IK8457528

Alarm	Attributes	Applicable major release
Name: IK8457528 (10532) Type: equipmentAlarm Package: lmg.IK8457528 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Memory Board or Cartridge or Riser Removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Memory board or cartridge or riser removed. An Advanced Memory Protection sub-system board or cartridge or riser has been removed from the system. Value 0 for CPU means memory is not processor based.		
Remedial action: No action is required.		

Table 27-1381 IK8457529

Alarm	Attributes	Applicable major release
Name: IK8457529 (10533) Type: equipmentAlarm Package: lmg.IK8457529 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Memory Board or Cartridge or Riser Bus Error Detected Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Memory board or cartridge or Riser bus error detected. An Advanced Memory Protection sub-system board or cartridge or Riser bus error has been detected. Value 0 for CPU means memory is not processor based.		
Remedial action: No action is required.		

Table 27-1382 IK8457530

Alarm	Attributes	Applicable major release
Name: IK8457530 (10534) Type: equipmentAlarm Package: lmg.IK8457530 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Advanced LockStep Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Advanced Memory Protection LockStep Engine Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. The LockStep engine has been activated.		
Remedial action: No action is required.		

Table 27-1383 IK8457531

Alarm	Attributes	Applicable major release
Name: IK8457531 (10535) Type: equipmentAlarm Package: Img.IK8457531 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG
Description: This event will be sent any time the configured redundant NIC becomes the active NIC.		
Remedial action: No action is required.		

Table 27-1384 IK8457532

Alarm	Attributes	Applicable major release
Name: IK8457532 (10536) Type: equipmentAlarm Package: Img.IK8457532 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Critical Software update Notification Trap Implicitly cleared: true Default probable cause: softwareProgramError	Release: • LR16.1.MG
Description: This event is a send to the user to notify him of a Critical Software Update.		
Remedial action: No action is required.		

Table 27-1385 IK8457533

Alarm	Attributes	Applicable major release
Name: IK8457533 (10537) Type: equipmentAlarm Package: Img.IK8457533 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Duplex Controller Active Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: Controller Active. This event signifies that the agent has detected that a backup array controller in a duplexed pair has switched over to the active role. The variable cpqDaCntlrSlot indicates the active controller slot and cpqDaCntlrPartnerSlot indicates the backup.		
Remedial action: No action is required.		

Table 27-1386 IK8457534

Alarm	Attributes	Applicable major release
Name: IK8457534 (10538) Type: equipmentAlarm Package: Img.IK8457534 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG

Table 27-1386 IK8457534 (continued)

Alarm	Attributes	Applicable major release
Description: Physical Drive Threshold Passed. This event signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.		
Remedial action: No action is required.		

Table 27-1387 IK8457535

Alarm	Attributes	Applicable major release
Name: IK8457535 (10539) Type: equipmentAlarm Package: lmg.IK8457535 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Accelerator Board Bad Data. This event signifies that the agent has detected an array accelerator cache board that has lost battery power. If data was being stored in the accelerator cache memory when the server lost power, that data has been lost.		
Remedial action: No action is required.		

Table 27-1388 IK8457536

Alarm	Attributes	Applicable major release
Name: IK8457536 (10540) Type: equipmentAlarm Package: lmg.IK8457536 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG
Description: Accelerator Board Battery Failed. This event signifies that the agent has detected a battery failure associated with the array accelerator cache board.		
Remedial action: No action is required.		

Table 27-1389 IK8457537

Alarm	Attributes	Applicable major release
Name: IK8457537 (10541) Type: equipmentAlarm Package: lmg.IK8457537 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Physical Drive Threshold Passed. This event signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.		
Remedial action: No action is required.		

Table 27-1390 IK8457538

Alarm	Attributes	Applicable major release
Name: IK8457538 (10542) Type: equipmentAlarm Package: Img.IK8457538 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Physical Drive Threshold Passed. This event signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.		
Remedial action: No action is required.		

Table 27-1391 IK8457539

Alarm	Attributes	Applicable major release
Name: IK8457539 (10543) Type: equipmentAlarm Package: Img.IK8457539 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Cache Module Board Bad Data. This event signifies that the agent has detected a cache module board that has lost backup power. If data was being stored in the cache module memory when the server lost power, that data has been lost. The backup power source is indicated by cpqDaAccelBackupPowerSource.		
Remedial action: No action is required.		

Table 27-1392 IK8457540

Alarm	Attributes	Applicable major release
Name: IK8457540 (10544) Type: equipmentAlarm Package: Img.IK8457540 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG
Description: Cache Module Board Backup Power Source Failed. This event signifies that the agent has detected a backup power source failure associated with the cache module board. The backup power source is indicated by cpqDaAccelBackupPowerSource.		
Remedial action: No action is required.		

Table 27-1393 IK8457541

Alarm	Attributes	Applicable major release
Name: IK8457541 (10545) Type: equipmentAlarm Package: lmg.IK8457541 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Tape Drive Cleaning Required Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG
Description: Tape Drive Cleaning Required trap. The agent has detected a tape drive that needs to have a cleaning tape inserted and run. This will cause the tape drive heads to be cleaned.		
Remedial action: No action is required.		

Table 27-1394 IK8457542

Alarm	Attributes	Applicable major release
Name: IK8457542 (10546) Type: equipmentAlarm Package: lmg.IK8457542 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Tape Drive Cleaning Tape Needs Replacing Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape.		
Remedial action: No action is required.		

Table 27-1395 IK8457543

Alarm	Attributes	Applicable major release
Name: IK8457543 (10547) Type: equipmentAlarm Package: lmg.IK8457543 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: IDE Drive Ultra ATA Degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: An IDE drive detects an excessive number of Ultra ATA data transmission errors between the hard drive and the processor.		
Remedial action: No action is required.		

Table 27-1396 IK8457544

Alarm	Attributes	Applicable major release
Name: IK8457544 (10548) Type: equipmentAlarm Package: Img.IK8457544 Raised on class: Img.FRU	Severity: indeterminate Specific problem: cpqIoDrvNonWritableTrap Implicitly cleared: true Default probable cause: inputOutputDeviceError	Release: • LR16.1.MG
Description: IO Drive is not writeable due to excessive wear This event signifies that IO Drive configured with system is not writeable due to excessive wear.		
Remedial action: No action is required.		

Table 27-1397 IK8457545

Alarm	Attributes	Applicable major release
Name: IK8457545 (10549) Type: equipmentAlarm Package: Img.IK8457545 Raised on class: Img.FRU	Severity: indeterminate Specific problem: NIC Connectivity Lost Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG
Description: This event will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.		
Remedial action: No action is required.		

Table 27-1398 IK8457546

Alarm	Attributes	Applicable major release
Name: IK8457546 (10550) Type: equipmentAlarm Package: Img.IK8457546 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Enclosure fan failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: The enclosure fan status has been set to failed. This event signifies that an enclosure fan has failed and no other fans in the redundant fan group are operating. This may result in overheating of the enclosure.		
Remedial action: No action is required.		

Table 27-1399 IK8457547

Alarm	Attributes	Applicable major release
Name: IK8457547 (10551) Type: equipmentAlarm Package: lmg.IK8457547 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Enclosure fan degraded Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: The enclosure fan status has been set to degraded. This event signifies that an enclosure fan has failed but other fans in the redundant fan group are still operating. This may result in overheating of the enclosure.		
Remedial action: No action is required.		

Table 27-1400 IK8457548

Alarm	Attributes	Applicable major release
Name: IK8457548 (10552) Type: equipmentAlarm Package: lmg.IK8457548 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Rack power supply failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The power supply status has been set to failed. This event signifies that a power supply has failed.		
Remedial action: No action is required.		

Table 27-1401 IK8457549

Alarm	Attributes	Applicable major release
Name: IK8457549 (10553) Type: equipmentAlarm Package: lmg.IK8457549 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Rack power supply degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The power supply status has been set to degraded. This event signifies that a power supply has degraded.		
Remedial action: No action is required.		

Table 27-1402 IK8457550

Alarm	Attributes	Applicable major release
Name: IK8457550 (10554) Type: equipmentAlarm Package: lmg.IK8457550 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Rack power subsystem not redundant Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The rack power subsystem is no longer in a redundant state.		

Table 27-1402 IK8457550 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-1403 IK8457551

Alarm	Attributes	Applicable major release
Name: IK8457551 (10555) Type: equipmentAlarm Package: lmg.IK8457551 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Rack power supply input voltage problem Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The rack power supply detected an input line voltage problem.		
Remedial action: No action is required.		

Table 27-1404 IK8457552

Alarm	Attributes	Applicable major release
Name: IK8457552 (10556) Type: equipmentAlarm Package: lmg.IK8457552 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Rack power subsystem overload condition Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The rack power subsystem overload condition.		
Remedial action: No action is required.		

Table 27-1405 IK8457553

Alarm	Attributes	Applicable major release
Name: IK8457553 (10557) Type: equipmentAlarm Package: lmg.IK8457553 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Server shutdown due to power shedding Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Server shutdown due to power shedding. The server blade was shutdown due to a lack of power.		
Remedial action: No action is required.		

Table 27-1406 IK8457554

Alarm	Attributes	Applicable major release
Name: IK8457554 (10558) Type: equipmentAlarm Package: lmg.IK8457554 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Server power on prevented to preserve redundancy Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Server power on prevented to preserve redundancy. There is not enough power to power on the server blade and maintain redundancy for the other blades in the enclosure.		
Remedial action: No action is required.		

Table 27-1407 IK8457555

Alarm	Attributes	Applicable major release
Name: IK8457555 (10559) Type: equipmentAlarm Package: lmg.IK8457555 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade.		
Remedial action: No action is required.		

Table 27-1408 IK8457556

Alarm	Attributes	Applicable major release
Name: IK8457556 (10560) Type: equipmentAlarm Package: lmg.IK8457556 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The server enclosure micro-controller was not found.		
Remedial action: No action is required.		

Table 27-1409 IK8457557

Alarm	Attributes	Applicable major release
Name: IK8457557 (10561) Type: equipmentAlarm Package: lmg.IK8457557 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG

Table 27-1409 IK8457557 (continued)

Alarm	Attributes	Applicable major release
Description: Inadequate power to power on. There is not enough power to power on the server blade. The power enclosure micro-controller was not found.		
Remedial action: No action is required.		

Table 27-1410 IK8457558

Alarm	Attributes	Applicable major release
Name: IK8457558 (10562) Type: equipmentAlarm Package: Img.IK8457558 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Fuse open Implicitly cleared: true Default probable cause: enclosureDoorOpen	Release: • LR16.1.MG
Description: Fuse open. The fuse has been tripped.		
Remedial action: No action is required.		

Table 27-1411 IK8457559

Alarm	Attributes	Applicable major release
Name: IK8457559 (10563) Type: equipmentAlarm Package: Img.IK8457559 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Power subsystem not load balanced Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power subsystem not load balanced. The power subsystem is out of balance for this power enclosure.		
Remedial action: No action is required.		

Table 27-1412 IK8457560

Alarm	Attributes	Applicable major release
Name: IK8457560 (10564) Type: equipmentAlarm Package: Img.IK8457560 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Power subsystem DC power problem Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power subsystem DC power problem. There is a power subsystem DC power problem for this power enclosure.		
Remedial action: No action is required.		

Table 27-1413 IK8457561

Alarm	Attributes	Applicable major release
Name: IK8457561 (10565) Type: equipmentAlarm Package: Img.IK8457561 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Power subsystem AC facility input power exceeded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power subsystem AC facility input power exceeded. There is a power subsystem Power subsystem AC facility input power exceeded for this power enclosure.		
Remedial action: No action is required.		

Table 27-1414 IK8457562

Alarm	Attributes	Applicable major release
Name: IK8457562 (10566) Type: equipmentAlarm Package: Img.IK8457562 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Unknown power consumption Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Unknown power consumption. There is an unknown power consumer drawing power.		
Remedial action: No action is required.		

Table 27-1415 IK8457563

Alarm	Attributes	Applicable major release
Name: IK8457563 (10567) Type: equipmentAlarm Package: Img.IK8457563 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Power subsystem load balancing wire missing Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power subsystem load balancing wire missing. The power subsystem load balancing wire missing.		
Remedial action: No action is required.		

Table 27-1416 IK8457564

Alarm	Attributes	Applicable major release
Name: IK8457564 (10568) Type: equipmentAlarm Package: Img.IK8457564 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Power subsystem has too may power enclosures Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG

Table 27-1416 IK8457564 (continued)

Alarm	Attributes	Applicable major release
Description: Power subsystem has too may power enclosures. The maximum number of power enclosures has been exceeded.		
Remedial action: No action is required.		

Table 27-1417 IK8457565

Alarm	Attributes	Applicable major release
Name: IK8457565 (10569) Type: equipmentAlarm Package: Img.IK8457565 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Power subsystem improperly configured Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG
Description: Power subsystem improperly configured. The power subsystem has been improperly configured.		
Remedial action: No action is required.		

Table 27-1418 IK8457566

Alarm	Attributes	Applicable major release
Name: IK8457566 (10570) Type: equipmentAlarm Package: Img.IK8457566 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Server blade health status degraded Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR16.1.MG
Description: Server blade health status Degraded. The server blade health status has changed to Degraded.		
Remedial action: No action is required.		

Table 27-1419 IK8457567

Alarm	Attributes	Applicable major release
Name: IK8457567 (10571) Type: equipmentAlarm Package: Img.IK8457567 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Server blade not responding to group capping requests Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: The server blade is not responding to the group capper. The server blade is not responding to capping requests from the enclosure group capper		
Remedial action: No action is required.		

Table 27-1420 IK8457568

Alarm	Attributes	Applicable major release
Name: IK8457568 (10572) Type: equipmentAlarm Package: lmg.IK8457568 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Server blade unexpected shutdown Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Server blade shutdown unexpectadly. An unexpected shutdown event has occurred for this server blade.		
Remedial action: No action is required.		

Table 27-1421 IK8457569

Alarm	Attributes	Applicable major release
Name: IK8457569 (10573) Type: equipmentAlarm Package: lmg.IK8457569 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Generic Power Subsystem EAE Minor trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: FlexFabric Cmdr Power Subsystem Minor trap.		
Remedial action: No action is required.		

Table 27-1422 IK8457570

Alarm	Attributes	Applicable major release
Name: IK8457570 (10574) Type: equipmentAlarm Package: lmg.IK8457570 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Generic Power Subsystem EAE Major trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: FlexFabric Cmdr Power Subsystem Major trap.		
Remedial action: No action is required.		

Table 27-1423 IK8457571

Alarm	Attributes	Applicable major release
Name: IK8457571 (10575) Type: equipmentAlarm Package: lmg.IK8457571 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Generic Power Subsystem EAE Critical trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG

Table 27-1423 IK8457571 (continued)

Alarm	Attributes	Applicable major release
Description: FlexFabric Cmdr Power Subsystem Critical trap.		
Remedial action: No action is required.		

Table 27-1424 IK8457572

Alarm	Attributes	Applicable major release
Name: IK8457572 (10576) Type: equipmentAlarm Package: Img.IK8457572 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Generic WSMAN Major trap Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: WSMAN Major trap		
Remedial action: No action is required.		

Table 27-1425 IK8457573

Alarm	Attributes	Applicable major release
Name: IK8457573 (10577) Type: equipmentAlarm Package: Img.IK8457573 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Generic WSMAN Critical trap Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: WSMAN Critical trap		
Remedial action: No action is required.		

Table 27-1426 IK8457574

Alarm	Attributes	Applicable major release
Name: IK8457574 (10578) Type: equipmentAlarm Package: Img.IK8457574 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Device Connected Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG
Description: A UPS device is reporting a Connection Lost due to one of the following. 1. The serial cable connected to the UPS has been unplugged. 2. The Network cable connected to the UPS has been unplugged.		
Remedial action: No action is required.		

Table 27-1427 IK8457575

Alarm	Attributes	Applicable major release
Name: IK8457575 (10579) Type: equipmentAlarm Package: Img.IK8457575 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Connection Lost Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG
Description: A UPS device is reporting a Connection Lost due to one of the following. 1. The serial cable connected to the UPS has been unplugged. 2. The Network cable connected to the UPS has been unplugged.		
Remedial action: No action is required.		

Table 27-1428 IK8457576

Alarm	Attributes	Applicable major release
Name: IK8457576 (10580) Type: equipmentAlarm Package: Img.IK8457576 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS Input Voltage Normal Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting input voltage is out of range.		
Remedial action: No action is required.		

Table 27-1429 IK8457577

Alarm	Attributes	Applicable major release
Name: IK8457577 (10581) Type: equipmentAlarm Package: Img.IK8457577 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS Output Voltage Normal Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting output voltage is out of Range.		
Remedial action: No action is required.		

Table 27-1430 IK8457578

Alarm	Attributes	Applicable major release
Name: IK8457578 (10582) Type: equipmentAlarm Package: Img.IK8457578 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS Battery Level Normal Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting low battery.		

Table 27-1430 IK8457578 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-1431 IK8457579

Alarm	Attributes	Applicable major release
Name: IK8457579 (10583) Type: equipmentAlarm Package: Img.IK8457579 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS On Battery Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting on battery condition.		
Remedial action: No action is required.		

Table 27-1432 IK8457580

Alarm	Attributes	Applicable major release
Name: IK8457580 (10584) Type: equipmentAlarm Package: Img.IK8457580 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS On Buck Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting an On Buck condition due to the following. 1. Utility power has increased above recommended utility input levels.		
Remedial action: No action is required.		

Table 27-1433 IK8457581

Alarm	Attributes	Applicable major release
Name: IK8457581 (10585) Type: equipmentAlarm Package: Img.IK8457581 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS On Boost Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting an On Boost condition due to the following. 1. Utility power has dropped below recommended utility input levels.		
Remedial action: No action is required.		

Table 27-1434 IK8457582

Alarm	Attributes	Applicable major release
Name: IK8457582 (10586) Type: equipmentAlarm Package: Img.IK8457582 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS On Utility Power Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting on battery condition.		
Remedial action: No action is required.		

Table 27-1435 IK8457583

Alarm	Attributes	Applicable major release
Name: IK8457583 (10587) Type: equipmentAlarm Package: Img.IK8457583 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS Temperature Normal Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR16.1.MG
Description: A UPS device is reporting temperature is out of range.		
Remedial action: No action is required.		

Table 27-1436 IK8457584

Alarm	Attributes	Applicable major release
Name: IK8457584 (10588) Type: equipmentAlarm Package: Img.IK8457584 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS Diagnostic Test Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting a diagnostic test failed.		
Remedial action: No action is required.		

Table 27-1437 IK8457585

Alarm	Attributes	Applicable major release
Name: IK8457585 (10589) Type: equipmentAlarm Package: Img.IK8457585 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS Diagnostic Test Succeeded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting a diagnostic test failed.		
Remedial action: No action is required.		

Table 27-1438 IK8457586

Alarm	Attributes	Applicable major release
Name: IK8457586 (10590) Type: equipmentAlarm Package: Img.IK8457586 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Site Wiring Fault Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A UPS device is reporting a fault in the input wiring, other than Phase Rotation: e.g., Ground/Neutral reversed.		
Remedial action: No action is required.		

Table 27-1439 IK8457587

Alarm	Attributes	Applicable major release
Name: IK8457587 (10591) Type: equipmentAlarm Package: Img.IK8457587 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Site Wiring Fault Cleared Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A UPS device is reporting a fault in the input wiring, other than Phase Rotation: e.g., Ground/Neutral reversed.		
Remedial action: No action is required.		

Table 27-1440 IK8457588

Alarm	Attributes	Applicable major release
Name: IK8457588 (10592) Type: equipmentAlarm Package: Img.IK8457588 Raised on class: Img.FRU	Severity: indeterminate Specific problem: The UPS is no longer on manual bypass Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is operating in manual bypass mode.		
Remedial action: No action is required.		

Table 27-1441 IK8457589

Alarm	Attributes	Applicable major release
Name: IK8457589 (10593) Type: equipmentAlarm Package: Img.IK8457589 Raised on class: Img.FRU	Severity: indeterminate Specific problem: The UPS is on manual bypass Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is operating in manual bypass mode.		
Remedial action: No action is required.		

Table 27-1442 IK8457590

Alarm	Attributes	Applicable major release
Name: IK8457590 (10594) Type: equipmentAlarm Package: Img.IK8457590 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Output voltage is out of range Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting output voltage is out of Range.		
Remedial action: No action is required.		

Table 27-1443 IK8457591

Alarm	Attributes	Applicable major release
Name: IK8457591 (10595) Type: equipmentAlarm Package: Img.IK8457591 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Emergency Power Off activated Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting an Emergency Power Off (EPO) command has been received to shutdown the UPS immediately with out delay. This command may come from a local control panel or from a remote source.		
Remedial action: No action is required.		

Table 27-1444 IK8457592

Alarm	Attributes	Applicable major release
Name: IK8457592 (10596) Type: equipmentAlarm Package: Img.IK8457592 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Warning Alarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A warning alarm has occurred.		
Remedial action: No action is required.		

Table 27-1445 IK8457593

Alarm	Attributes	Applicable major release
Name: IK8457593 (10597) Type: equipmentAlarm Package: Img.IK8457593 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Tape Drive Cleaning Required Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG

Table 27-1445 IK8457593 (continued)

Alarm	Attributes	Applicable major release
Description: Tape Drive Cleaning Required trap. The agent has detected a tape drive that needs to have a cleaning tape inserted and run. This will cause the tape drive heads to be cleaned.		
Remedial action: No action is required.		

Table 27-1446 IK8457594

Alarm	Attributes	Applicable major release
Name: IK8457594 (10598) Type: equipmentAlarm Package: Img.IK8457594 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Tape Drive Cleaning Tape Needs Replacing Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape.		
Remedial action: No action is required.		

Table 27-1447 IK8457595

Alarm	Attributes	Applicable major release
Name: IK8457595 (10599) Type: equipmentAlarm Package: Img.IK8457595 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Tape Library Door Opened Implicitly cleared: true Default probable cause: enclosureDoorOpen	Release: • LR16.1.MG
Description: Tape Library Door Open The agent has detected that the door on an autoloader is open so the unit is not operational.		
Remedial action: No action is required.		

Table 27-1448 IK8457596

Alarm	Attributes	Applicable major release
Name: IK8457596 (10600) Type: equipmentAlarm Package: Img.IK8457596 Raised on class: Img.FRU	Severity: indeterminate Specific problem: System hood is removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: System hood is removed. The hood status has been set to removed. The system's hood is not in a properly installed state. This situation may result in improper cooling of the system due to air flow changes caused by the missing hood.		
Remedial action: No action is required.		

Table 27-1449 IK8457597

Alarm	Attributes	Applicable major release
Name: IK8457597 (10601) Type: equipmentAlarm Package: lmg.IK8457597 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Excessive Correctable Memory Errors Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Correctable memory error count has exceeded the threshold for the memory module indicated by the 'cpqSiMemErrorIndex' variable. The appropriate cpqSiMemModuleECCStatus has been set to degraded.		
Remedial action: No action is required.		

Table 27-1450 IK8457598

Alarm	Attributes	Applicable major release
Name: IK8457598 (10602) Type: equipmentAlarm Package: lmg.IK8457598 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Memory modules have changed Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: A memory configuration change has occurred. CpqSiMemConfigChangeData will indicate which memory modules slots have changed.		
Remedial action: No action is required.		

Table 27-1451 IK8457599

Alarm	Attributes	Applicable major release
Name: IK8457599 (10603) Type: equipmentAlarm Package: lmg.IK8457599 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Hot Plug Slot Board Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Hot Plug Slot Board Failed Power-Up. A Hot Plug Slot Board has failed to power-up in the specified chassis and slot.		
Remedial action: No action is required.		

Table 27-1452 IK8457600

Alarm	Attributes	Applicable major release
Name: IK8457600 (10604) Type: equipmentAlarm Package: lmg.IK8457600 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Battery Failure Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG

Table 27-1452 IK8457600 (continued)

Alarm	Attributes	Applicable major release
Description: The battery indicated by cpqSiSysBatteryIndex has failed and must be replaced.		
Remedial action: No action is required.		

Table 27-1453 IK8457601

Alarm	Attributes	Applicable major release
Name: IK8457601 (10605) Type: equipmentAlarm Package: Img.IK8457601 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Battery Charging Degradation Implicitly cleared: true Default probable cause: lowBatteryThreshold	Release: • LR16.1.MG
Description: Significant battery degradation has occurred with battery indicated by cpqSiSysBatteryIndex. The battery can no longer be fully recharged.		
Remedial action: No action is required.		

Table 27-1454 IK8457602

Alarm	Attributes	Applicable major release
Name: IK8457602 (10606) Type: equipmentAlarm Package: Img.IK8457602 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Battery Calibration Error Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG
Description: Calibration is needed with battery indicated by cpqSiSysBatteryIndex. The battery can not correctly indicate capacity.		
Remedial action: No action is required.		

Table 27-1455 IK8457603

Alarm	Attributes	Applicable major release
Name: IK8457603 (10607) Type: equipmentAlarm Package: Img.IK8457603 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Server Power Outage Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Server Power Outage. The Remote Insight/ Integrated Lights-Out firmware has detected server power failure.		
Remedial action: No action is required.		

Table 27-1456 IK8457604

Alarm	Attributes	Applicable major release
Name: IK8457604 (10608) Type: equipmentAlarm Package: lmg.IK8457604 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Storage System Temperature Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR16.1.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.		
Remedial action: No action is required.		

Table 27-1457 IK8457605

Alarm	Attributes	Applicable major release
Name: IK8457605 (10609) Type: equipmentAlarm Package: lmg.IK8457605 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Storage System Temp Degraded Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR16.1.MG
Description: Storage System temperature degraded. The agent has detected a temperature status that has been set to degraded. The storage system's temperature is outside of the normal operating range.		
Remedial action: No action is required.		

Table 27-1458 IK8457606

Alarm	Attributes	Applicable major release
Name: IK8457606 (10610) Type: equipmentAlarm Package: lmg.IK8457606 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Storage System side panel is removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Storage System side panel is removed. The side panel status has been set to removed. The storage system's side panel is not in a properly installed state. This situation may result in improper cooling of the drives in the storage system due to air flow changes caused by the missing side panel.		
Remedial action: No action is required.		

Table 27-1459 IK8457607

Alarm	Attributes	Applicable major release
Name: IK8457607 (10611) Type: equipmentAlarm Package: lmg.IK8457607 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Power Supply Degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A storage system power supply status has been set to degraded.		
Remedial action: No action is required.		

Table 27-1460 IK8500002

Alarm	Attributes	Applicable major release
Name: IK8500002 (7138) Type: environmentalAlarm Package: lmg.IK8500002 Raised on class: lmg.UPlane	Severity: warning Specific problem: Temperature Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Temperature exceeds the max user temperature level. Alarm is cleared by the system.\nReason: Temperature		
Remedial action: Check that the fans of the device are working properly. Check also that configured temperature threshold is not too low (under normal running conditions; approximately 45C when ambiant is at 25C). Finally, check that ambiant temperature is not too high.		

Table 27-1461 IK8500006

Alarm	Attributes	Applicable major release
Name: IK8500006 (7139) Type: communicationsAlarm Package: lmg.IK8500006 Raised on class: lmg.UPlane	Severity: major Specific problem: VRRP failure Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: VRRP Failure Alarm ON. Alarm is cleared by the system.\nReason: VRRP failure		
Remedial action: Connect another user-plane device with the same VRRP Id and parameters on the appropriate IP interface.		

Table 27-1462 IK8500103

Alarm	Attributes	Applicable major release
Name: IK8500103 (7140) Type: communicationsAlarm Package: lmg.IK8500103 Raised on class: lmg.UPlane	Severity: major Specific problem: NTP Server Locked Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: NTP server unreachable. Alarm is cleared by the system.\nReason: NTP Server Locked		
Remedial action: Connect a NTP server with an appropriate IP address on OA&M network (reachable by the user-plane on eth0)		

Table 27-1463 IK8500501

Alarm	Attributes	Applicable major release
Name: IK8500501 (7141) Type: communicationsAlarm Package: lmg.IK8500501 Raised on class: lmg.UPlane	Severity: critical Specific problem: Internal 10MHz not locked Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Internal 10MHz OCXO is not locked. Alarm is cleared by the system.\nReason: Internal 10MHz not locked		
Remedial action: Verify the quality of the GPS antenna connection.		

Table 27-1464 IK8500503

Alarm	Attributes	Applicable major release
Name: IK8500503 (7142) Type: communicationsAlarm Package: lmg.IK8500503 Raised on class: lmg.UPlane	Severity: major Specific problem: Internal GPS not locked Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Internal GPS is not locked. Alarm is cleared by the system.\nReason: Internal GPS not locked		
Remedial action: Connect a GPS antenna (3. 3V) on the appropriate device input (TNC connector).		

Table 27-1465 IK8501061

Alarm	Attributes	Applicable major release
Name: IK8501061 (7143) Type: communicationsAlarm Package: lmg.IK8501061 Raised on class: lmg.UPlane	Severity: critical Specific problem: IP Data 1 link Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG

Table 27-1465 IK8501061 (continued)

Alarm	Attributes	Applicable major release
Description: IP Data 1 link failure. Alarm is cleared by the system.\nReason: IP Data 1 link		
Remedial action: Connect eth2 ethernet port to the production network.		

Table 27-1466 IK8501062

Alarm	Attributes	Applicable major release
Name: IK8501062 (7144) Type: communicationsAlarm Package: Img.IK8501062 Raised on class: Img.UPlane	Severity: minor Specific problem: IP Data 2 link Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: IP Data 2 link failure. Alarm is cleared by the system.\nReason: IP Data 2 link		
Remedial action: Connect eth3 ethernet port to the production network.		

Table 27-1467 IK8505555

Alarm	Attributes	Applicable major release
Name: IK8505555 (7145) Type: communicationsAlarm Package: Img.IK8505555 Raised on class: Img.UPlane	Severity: major Specific problem: Output Overflow Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Output Overflow. Alarm is cleared by the system.\nReason: Output Overflow		
Remedial action: Reduce the overall bit rate of the user-plane by : 1) removing some bearers, 2) removing some multi-unicast outputs, 3) decreasing the GBR parameters for one or several bearers.		

Table 27-1468 IK8505556

Alarm	Attributes	Applicable major release
Name: IK8505556 (7146) Type: communicationsAlarm Package: Img.IK8505556 Raised on class: Img.UPlane	Severity: major Specific problem: MTU of Input Stream Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: MTU of Input Stream. Alarm is cleared by the system.\nReason: MTU of Input Stream		
Remedial action: Reduce the maximum size (in number of bytes) of IP packets at the input of the user-plane.		

Table 27-1469 IK8505557

Alarm	Attributes	Applicable major release
Name: IK8505557 (7147) Type: communicationsAlarm Package: lmg.IK8505557 Raised on class: lmg.UPlane	Severity: major Specific problem: Bearer Output Overflow Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Bearer Output Overflow (please note that BearerId is indicated in case less than 3 bearers are in overflow). Alarm is cleared by the system.\nReason: Bearer Output Overflow		
Remedial action: Reduce the bit rate of the corresponding MBMS bearers (see the list in log file)		

Table 27-1470 IK8505558

Alarm	Attributes	Applicable major release
Name: IK8505558 (7148) Type: communicationsAlarm Package: lmg.IK8505558 Raised on class: lmg.UPlane	Severity: minor Specific problem: Bearer Input Missing Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Bearer Input Missing (please note that BearerId is indicated in case less than 3 bearers are missing). Alarm is cleared by the system.\nReason: Bearer Input Missing		
Remedial action: Check that a corresponding IP stream is available on the production network (Check also for possible VLAN configuration)		

Table 27-1471 IK8510001

Alarm	Attributes	Applicable major release
Name: IK8510001 (9277) Type: processingErrorAlarm Package: lmg.IK8510001 Raised on class: lmg.UPlane	Severity: major Specific problem: NTP Server Locked Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This alarm is raised when SW UPlane looses NTP synchronization. Alarm is cleared by the system.\nReason: NTP Server Locked		
Remedial action: Verify Uplane NTP client configuration		

Table 27-1472 IK8510002

Alarm	Attributes	Applicable major release
Name: IK8510002 (9278) Type: processingErrorAlarm Package: Img.IK8510002 Raised on class: Img.UPlane	Severity: major Specific problem: MTU of Input Stream Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This alarm is raised when some ingress traffic packets are too long to add SYNC header during a specific period. Alarm is cleared by the system.\nReason: MTU of Input Stream		
Remedial action: Reduce the maximum size (in number of bytes) of IP packets at the input of the user-plane		

Table 27-1473 IK8510003

Alarm	Attributes	Applicable major release
Name: IK8510003 (9279) Type: processingErrorAlarm Package: Img.IK8510003 Raised on class: Img.UPlane	Severity: major Specific problem: Bearer Output Overflow Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This alarm is raised when Uplane has a Bearer Output Overflow during a specific period. The output overflow is defined by a percentage. Alarm is cleared by the system.\nReason: Bearer Output Overflow		
Remedial action: Reduce the input rate of the corresponding MBMS bearers		

Table 27-1474 IK8510011

Alarm	Attributes	Applicable major release
Name: IK8510011 (9956) Type: communicationsAlarm Package: Img.IK8510011 Raised on class: Img.UPlane	Severity: major Specific problem: NTP Server Locked Implicitly cleared: true Default probable cause: communicationsReceiveFail-ure	Release: • LR16.1.MG
Description: This alarm is raised when SW UPlane loses NTP synchronization. Alarm is cleared by the system.\nReason: NTP Server Locked		
Remedial action: Verify Uplane NTP client configuration		

Table 27-1475 IK8510012

Alarm	Attributes	Applicable major release
Name: IK8510012 (9957) Type: qualityOfServiceAlarm Package: Img.IK8510012 Raised on class: Img.UPlane	Severity: major Specific problem: MTU of Input Stream Implicitly cleared: true Default probable cause: bandwidthReduced	Release: • LR16.1.MG

Table 27-1475 IK8510012 (continued)

Alarm	Attributes	Applicable major release
Description: This alarm is raised when some ingress traffic packets are too long to add SYNC header during a specific period. Alarm is cleared by the system.\nReason: MTU of Input Stream		
Remedial action: Reduce the maximum size (in number of bytes) of IP packets at the input of the user-plane		

Table 27-1476 IK8510013

Alarm	Attributes	Applicable major release
Name: IK8510013 (9958) Type: qualityOfServiceAlarm Package: Img.IK8510013 Raised on class: Img.UPlane	Severity: major Specific problem: Bearer Output Overflow Implicitly cleared: true Default probable cause: bandwidthReduced	Release: • LR16.1.MG
Description: This alarm is raised when Uplane has a Bearer Output Overflow during a specific period. The output overflow is defined by a percentage. Alarm is cleared by the system.\nReason: Bearer Output Overflow		
Remedial action: Reduce the input rate of the corresponding MBMS bearers		

Table 27-1477 IK8550005

Alarm	Attributes	Applicable major release
Name: IK8550005 (7149) Type: processingErrorAlarm Package: Img.IK8550005 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: mcdp alarm trap v1 Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: mcdp alarm alarm v1.\nAlarm is cleared by the system.\nReason: alarmTrapV1		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1478 IK8550006

Alarm	Attributes	Applicable major release
Name: IK8550006 (7150) Type: processingErrorAlarm Package: Img.IK8550006 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Trap associated to an alarm of the managed element Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Trap associated to an alarm of the managed element.\nAlarm is cleared by the system when the device is restarted.\nReason: alarmTrap		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1479 IK8550007

Alarm	Attributes	Applicable major release
Name: IK8550007 (7151) Type: processingErrorAlarm Package: Img.IK8550007 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: softwareFailure Implicitly cleared: true Default probable cause: softwareError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Trap associated to an alarm while executing software operation (download, activation, validation, reject, backup).\nAlarm is cleared by the system.\nReason: softwareFailure		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1480 IK8550981

Alarm	Attributes	Applicable major release
Name: IK8550981 (7152) Type: equipmentAlarm Package: Img.IK8550981 Raised on class: Img.FilePrepare	Severity: minor Specific problem: Cluster Node Degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a node in the cluster becomes degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterNodeDegraded		
Remedial action: Make a note of the cluster node name then check the node for the cause of the degraded condition.		

Table 27-1481 IK8550982

Alarm	Attributes	Applicable major release
Name: IK8550982 (7153) Type: equipmentAlarm Package: Img.IK8550982 Raised on class: Img.FilePrepare	Severity: major Specific problem: Cluster Node Failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a node in the cluster becomes failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterNodeFailed		
Remedial action: Make a note of the cluster node name then check the node for the cause of the failure.		

Table 27-1482 IK8550983

Alarm	Attributes	Applicable major release
Name: IK8550983 (7154) Type: processingErrorAlarm Package: lmg.IK8550983 Raised on class: lmg.FilePrepare	Severity: minor Specific problem: Cluster Resource Degraded Implicitly cleared: true Default probable cause: underlyingResourceUnavail-able	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a cluster resource becomes degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterResourceDegraded		
Remedial action: Make a note of the cluster resource name then check the resource for the cause of the degraded condition.		

Table 27-1483 IK8550984

Alarm	Attributes	Applicable major release
Name: IK8550984 (7155) Type: processingErrorAlarm Package: lmg.IK8550984 Raised on class: lmg.FilePrepare	Severity: major Specific problem: Cluster Resource Failed Implicitly cleared: true Default probable cause: underlyingResourceUnavail-able	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a cluster resource becomes failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterResourceFailed		
Remedial action: Make a note of the cluster resource name then check the resource for the cause of the failure.		

Table 27-1484 IK8550985

Alarm	Attributes	Applicable major release
Name: IK8550985 (7156) Type: equipmentAlarm Package: lmg.IK8550985 Raised on class: lmg.FilePrepare	Severity: minor Specific problem: Cluster Network Degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a cluster network becomes degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterNetworkDegraded		
Remedial action: Make a note of the cluster network name then check the network for the cause of the degraded condition.		

Table 27-1485 IK8550986

Alarm	Attributes	Applicable major release
Name: IK8550986 (7157) Type: equipmentAlarm Package: Img.IK8550986 Raised on class: Img.FilePrepare	Severity: major Specific problem: Cluster Network Failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a cluster network becomes failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterNetworkFailed		
Remedial action: Make a note of the cluster network name then check the network for the cause of the failure.		

Table 27-1486 IK8550987

Alarm	Attributes	Applicable major release
Name: IK8550987 (7158) Type: environmentalAlarm Package: Img.IK8550987 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG
Description: The temperature at rack sensor 1 is outside the specified threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmTemp1		
Remedial action: Check the air handling system for the rack and refer to Trap Details for more information.		

Table 27-1487 IK8550988

Alarm	Attributes	Applicable major release
Name: IK8550988 (7159) Type: environmentalAlarm Package: Img.IK8550988 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG
Description: The temperature at rack sensor 2 is outside the specified threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmTemp2		
Remedial action: Check the air handling system for the rack and refer to Trap Details for more information.		

Table 27-1488 IK8550989

Alarm	Attributes	Applicable major release
Name: IK8550989 (7160) Type: environmentalAlarm Package: Img.IK8550989 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: coolingFanFailure	Release: • LR14.3.MG

Table 27-1488 IK8550989 (continued)

Alarm	Attributes	Applicable major release
Description: The status of Fan 1 has changed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmFan1		
Remedial action: Refer to Trap Details for more information.		

Table 27-1489 IK8550990

Alarm	Attributes	Applicable major release
Name: IK8550990 (7161) Type: environmentalAlarm Package: lmg.IK8550990 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: coolingFanFailure	Release: • LR14.3.MG
Description: The status of Fan 2 has changed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmFan2		
Remedial action: Refer to Trap Details for more information.		

Table 27-1490 IK8550991

Alarm	Attributes	Applicable major release
Name: IK8550991 (7162) Type: equipmentAlarm Package: lmg.IK8550991 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: The AC voltage of the rack is outside the specified threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmVoltage		
Remedial action: Check the incoming power source and ensure all cables are inserted correctly.		

Table 27-1491 IK8550992

Alarm	Attributes	Applicable major release
Name: IK8550992 (7163) Type: environmentalAlarm Package: lmg.IK8550992 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: humidityUnacceptable	Release: • LR14.3.MG
Description: The humidity of the rack is outside the specified threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmHumidity		
Remedial action: Check the air handling system for the rack and refer to Trap Details for more information.		

Table 27-1492 IK8550993

Alarm	Attributes	Applicable major release
Name: IK8550993 (7164) Type: environmentalAlarm Package: Img.IK8550993 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: intrusionDetection	Release: • LR14.3.MG
Description: The door or sidepanel of the rack has been opened (access point #1).\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmInput1		
Remedial action: Check for unauthorized intrusion and refer to Trap Details for more information.		

Table 27-1493 IK8550994

Alarm	Attributes	Applicable major release
Name: IK8550994 (7165) Type: environmentalAlarm Package: Img.IK8550994 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: intrusionDetection	Release: • LR14.3.MG
Description: The door or sidepanel of the rack has been opened (access point #2).\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmInput2		
Remedial action: Check for unauthorized intrusion and refer to Trap Details for more information.		

Table 27-1494 IK8550995

Alarm	Attributes	Applicable major release
Name: IK8550995 (7166) Type: environmentalAlarm Package: Img.IK8550995 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: intrusionDetection	Release: • LR14.3.MG
Description: The door or sidepanel of the rack has been opened (access point #3).\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmInput3		
Remedial action: Check for unauthorized intrusion and refer to Trap Details for more information.		

Table 27-1495 IK8550996

Alarm	Attributes	Applicable major release
Name: IK8550996 (7167) Type: environmentalAlarm Package: Img.IK8550996 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: intrusionDetection	Release: • LR14.3.MG

Table 27-1495 IK8550996 (continued)

Alarm	Attributes	Applicable major release
Description: The door or sidepanel of the rack has been opened (access point #4).\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmInput4		
Remedial action: Check for unauthorized intrusion and refer to Trap Details for more information.		

Table 27-1496 IK8550997

Alarm	Attributes	Applicable major release
Name: IK8550997 (7168) Type: processingErrorAlarm Package: lmg.IK8550997 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: locking-alarm Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG
Description: Rack door lock #1 alarm.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmLock1		
Remedial action: Ensure the door is completely closed and check for unauthorized intrusion and refer to Trap Details for more information.		

Table 27-1497 IK8550998

Alarm	Attributes	Applicable major release
Name: IK8550998 (7169) Type: processingErrorAlarm Package: lmg.IK8550998 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: locking-alarm Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG
Description: Rack door lock #2 alarm.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmLock2		
Remedial action: Ensure the door is completely closed and check for unauthorized intrusion and refer to Trap Details for more information.		

Table 27-1498 IK8550999

Alarm	Attributes	Applicable major release
Name: IK8550999 (7170) Type: environmentalAlarm Package: lmg.IK8550999 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: smoke	Release: • LR14.3.MG
Description: The rack smoke detector has detected smoke.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmSmoke		
Remedial action: Investigate rack for an over temperature condition and refer to Trap Details for more information.		

Table 27-1499 IK8551000

Alarm	Attributes	Applicable major release
Name: IK8551000 (7171) Type: environmentalAlarm Package: lmg.IK8551000 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: excessiveVibration	Release: • LR14.3.MG
Description: The rack shock detector has detected a vibration to the rack.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmShock		
Remedial action: Investigate rack.		

Table 27-1500 IK8551001

Alarm	Attributes	Applicable major release
Name: IK8551001 (7172) Type: equipmentAlarm Package: lmg.IK8551001 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: The rack auxiliary alarm input #1 has been triggered.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmAux1		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1501 IK8551002

Alarm	Attributes	Applicable major release
Name: IK8551002 (7173) Type: equipmentAlarm Package: lmg.IK8551002 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: The rack auxiliary alarm input #2 has been triggered.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmAux2		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1502 IK8551003

Alarm	Attributes	Applicable major release
Name: IK8551003 (7174) Type: communicationsAlarm Package: lmg.IK8551003 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG

Table 27-1502 IK8551003 (continued)

Alarm	Attributes	Applicable major release
Description: Alarm 1, set from Network management\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarm1		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1503 IK8551004

Alarm	Attributes	Applicable major release
Name: IK8551004 (7175) Type: communicationsAlarm Package: lmg.IK8551004 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: Alarm 2, set from Network management\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarm2		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1504 IK8551005

Alarm	Attributes	Applicable major release
Name: IK8551005 (7176) Type: processingErrorAlarm Package: lmg.IK8551005 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: locking-alarm of device Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG
Description: The rack door locking device #1 has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmLock1Dev		
Remedial action: Check the device lock cable or failed battery and refer to Trap Details for more information.		

Table 27-1505 IK8551006

Alarm	Attributes	Applicable major release
Name: IK8551006 (7177) Type: processingErrorAlarm Package: lmg.IK8551006 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: locking-alarm of device Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG
Description: The rack door locking device #2 has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmLock2Dev		

Table 27-1505 IK8551006 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Check the device lock cable or failed battery and refer to Trap Details for more information.		

Table 27-1506 IK8551008

Alarm	Attributes	Applicable major release
Name: IK8551008 (7178) Type: equipmentAlarm Package: Img.IK8551008 Raised on class: Img.FilePrepare	Severity: major Specific problem: The primary controller in the subsytem has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The primary controller in the subsystem has failed. Details: The primary Controller has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrController1FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 27-1507 IK8551010

Alarm	Attributes	Applicable major release
Name: IK8551010 (7179) Type: equipmentAlarm Package: Img.IK8551010 Raised on class: Img.FilePrepare	Severity: major Specific problem: The secondary controller in the subsytem has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The secondary controller in the subsystem has failed. Details: The secondary controller has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrController2FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 27-1508 IK8551013

Alarm	Attributes	Applicable major release
Name: IK8551013 (7180) Type: equipmentAlarm Package: Img.IK8551013 Raised on class: Img.FilePrepare	Severity: major Specific problem: A RAIDset has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: A RAIDset has failed. Details: The RAIDset has failed and is off-line.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrLogDriveFailureTrap		
Remedial action: Possible cause is too many failed disk drives that make up the RAIDset, the OS can no longer communicate with the RAIDset for other reasons.		

Table 27-1509 IK8551015

Alarm	Attributes	Applicable major release
Name: IK8551015 (7181) Type: equipmentAlarm Package: lmg.IK8551015 Raised on class: lmg.FilePrepare	Severity: minor Specific problem: A RAIDset has become degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: A RAIDset has become degraded. Details: A RAIDset has become degraded due to a member disk device failure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrLogDriveReducedTrap		
Remedial action: Replace the failed disk device; add a spare to the system to cause a reconstruct.		

Table 27-1510 IK8551018

Alarm	Attributes	Applicable major release
Name: IK8551018 (7182) Type: processingErrorAlarm Package: lmg.IK8551018 Raised on class: lmg.FilePrepare	Severity: major Specific problem: A disk drive has failed Implicitly cleared: true Default probable cause: storageCapacityProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system.\nReason: cpqCrDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 27-1511 IK8551023

Alarm	Attributes	Applicable major release
Name: IK8551023 (7183) Type: processingErrorAlarm Package: lmg.IK8551023 Raised on class: lmg.FilePrepare	Severity: major Specific problem: A disk drive has failed Implicitly cleared: true Default probable cause: storageCapacityProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrPhyDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 27-1512 IK8551028

Alarm	Attributes	Applicable major release
Name: IK8551028 (7184) Type: environmentalAlarm Package: lmg.IK8551028 Raised on class: lmg.FilePrepare	Severity: minor Specific problem: Fan has failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG

Table 27-1512 IK8551028 (continued)

Alarm	Attributes	Applicable major release
Description: Fan has failed. Details: One of the cooling fans in the primary enclosure has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrEMUFanFailureTrap		
Remedial action: Replace the cooling fan. Possible causes are fan physically removed, actual hardware failure.		

Table 27-1513 IK8551030

Alarm	Attributes	Applicable major release
Name: IK8551030 (7185) Type: equipmentAlarm Package: lmg.IK8551030 Raised on class: lmg.FilePrepare	Severity: major Specific problem: Power supply has failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power supply has failed. Details: One of the power supplies in the primary enclosure has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrEMUPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 27-1514 IK8551032

Alarm	Attributes	Applicable major release
Name: IK8551032 (7186) Type: equipmentAlarm Package: lmg.IK8551032 Raised on class: lmg.FilePrepare	Severity: warning Specific problem: Primary enclosure temperature warning Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Primary enclosure temperature warning. Details: The temperature in the primary enclosure has triggered a warning condition detected by the controller.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrEMUTemperature-WarningTrap		
Remedial action: Check the cooling fans in the primary enclosure.		

Table 27-1515 IK8551033

Alarm	Attributes	Applicable major release
Name: IK8551033 (7187) Type: equipmentAlarm Package: lmg.IK8551033 Raised on class: lmg.FilePrepare	Severity: critical Specific problem: Primary enclosure temperature critical! Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Primary enclosure temperature critical!. Details: The temperature in the primary enclosure has triggered a critical condition detected by the controller.\nAlarm is cleared by the system.\nReason: cpqCrEMUTemperatureCriticalTrap		

Table 27-1515 IK8551033 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Check the cooling fans in the primary enclosure.		

Table 27-1516 IK8551035

Alarm	Attributes	Applicable major release
Name: IK8551035 (7188) Type: environmentalAlarm Package: lmg.IK8551035 Raised on class: lmg.FilePrepare	Severity: minor Specific problem: Fan has failed in expansion cabinet Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: Fan has failed in expansion cabinet. Details: One of the cooling fans in the expansion cabinet has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrExpCabFanFailureTrap		
Remedial action: Replace the cooling fan. Possible causes are fan physically removed, actual hardware failure.		

Table 27-1517 IK8551037

Alarm	Attributes	Applicable major release
Name: IK8551037 (7189) Type: equipmentAlarm Package: lmg.IK8551037 Raised on class: lmg.FilePrepare	Severity: major Specific problem: Power supply has failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power supply has failed. Details: One of the power supplies in the expansion cabinet has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrExpCabPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 27-1518 IK8551039

Alarm	Attributes	Applicable major release
Name: IK8551039 (7190) Type: environmentalAlarm Package: lmg.IK8551039 Raised on class: lmg.FilePrepare	Severity: warning Specific problem: Expansion cabinet temperature warning Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: Expansion cabinet temperature warning. Details: The temperature in the expansion cabinet has triggered a warning condition detected by the controller.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrExpCabTemperatureWarningTrap		
Remedial action: Check the cooling fans in the expansion cabinet.		

Table 27-1519 IK8551040

Alarm	Attributes	Applicable major release
Name: IK8551040 (7191) Type: environmentalAlarm Package: lmg.IK8551040 Raised on class: lmg.FilePrepare	Severity: critical Specific problem: cpqCrExpCabTemperatureCriti-calTrap Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Expansion cabinet temperature critical! Details: The temperature in the expansion cabinet has triggered a critical condition detected by the controller.\nAlarm is cleared by the system.\nReason: cpqCrExpCabTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the expansion cabinet.		

Table 27-1520 IK8551059

Alarm	Attributes	Applicable major release
Name: IK8551059 (7192) Type: equipmentAlarm Package: lmg.IK8551059 Raised on class: lmg.FilePrepare	Severity: warning Specific problem: External Array Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: External Array Accelerator Board Bad Data. This alarm signifies that the agent has detected a Array Accelerator Cache Board that has lost battery power. If data was being stored in the accelerator memory when the system lost power, that data has been lost.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqFcaAccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 27-1521 IK8551060

Alarm	Attributes	Applicable major release
Name: IK8551060 (7193) Type: environmentalAlarm Package: lmg.IK8551060 Raised on class: lmg.FilePrepare	Severity: major Specific problem: External Array Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqFcaAccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 27-1522 IK8551067

Alarm	Attributes	Applicable major release
Name: IK8551067 (7194) Type: equipmentAlarm Package: lmg.IK8551067 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Fibre Channel Tape Drive Cleaning Tape Needs Replacing Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: Fibre Channel Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape.\nAlarm to be cleared by the operator at the management system.\nReason: cpqFcTapeDriveCleanTapeReplace		
Remedial action: Replace the failing fibre channel drive cleaning tape		

Table 27-1523 IK8551068

Alarm	Attributes	Applicable major release
Name: IK8551068 (7195) Type: processingErrorAlarm Package: lmg.IK8551068 Raised on class: lmg.FilePrepare	Severity: warning Specific problem: External Array Redundant Controller Active Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG
Description: External Array Redundant Controller Active. This alarm signifies that the Storage Agent has detected that a backup array controller in a duplexed pair has switched over to the active role. The variable cpqFcaCntlrBoxIoSlot indicates the new active controller index.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqFcaCntlrActive		
Remedial action: Check the partner controller for problems. If this was the result of a user initiated switch over, no action is required.		

Table 27-1524 IK8551072

Alarm	Attributes	Applicable major release
Name: IK8551072 (7196) Type: equipmentAlarm Package: lmg.IK8551072 Raised on class: lmg.FilePrepare	Severity: warning Specific problem: External Array Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: External Array Accelerator Board Bad Data. This alarm signifies that the agent has detected a Array Accelerator Cache Board that has lost battery power. If data was being stored in the accelerator memory when the system lost power, that data has been lost.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqFca2AccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 27-1525 IK8551073

Alarm	Attributes	Applicable major release
Name: IK8551073 (7197) Type: environmentalAlarm Package: Img.IK8551073 Raised on class: Img.FilePrepare	Severity: major Specific problem: External Array Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqFca2AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 27-1526 IK8551078

Alarm	Attributes	Applicable major release
Name: IK8551078 (7198) Type: processingErrorAlarm Package: Img.IK8551078 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: External Tape Drive Cleaning Required Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG
Description: External Tape Drive Cleaning Required. The agent has detected a tape drive that needs to have a cleaning tape inserted and run. This will cause the tape drive heads to be cleaned.\nAlarm to be cleared by the operator at the management system.\nReason: cpqExtTapeDriveCleaningRequired		
Remedial action: a External Tape Drive Cleaning should be installed		

Table 27-1527 IK8551079

Alarm	Attributes	Applicable major release
Name: IK8551079 (7199) Type: equipmentAlarm Package: Img.IK8551079 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: External Tape Drive Cleaning Tape Needs Replacing Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: External Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape.\nAlarm to be cleared by the operator at the management system.\nReason: cpqExtTapeDriveCleanTapeReplace		
Remedial action: Replace the External Tape Drive Cleaning Tape		

Table 27-1528 IK8551088

Alarm	Attributes	Applicable major release
Name: IK8551088 (9280) Type: environmentalAlarm Package: Img.IK8551088 Raised on class: Img.FilePrepare	Severity: minor Specific problem: Thermal Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR15.1.MG
Description: The temperature status has been set to failed. The system will be shutdown due to this thermal condition.\nAlarm is cleared by the system.\nReason: cpqHeThermalTempFailed		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1529 IK8551089

Alarm	Attributes	Applicable major release
Name: IK8551089 (7200) Type: environmentalAlarm Package: Img.IK8551089 Raised on class: Img.LMGMngElement	Severity: minor Specific problem: Thermal Status Degraded Implicitly cleared: false Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG
Description: The temperature status has been set to degraded. The server's temperature is outside of the normal operating range. The server will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeThermalTempDegraded		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1530 IK8551091

Alarm	Attributes	Applicable major release
Name: IK8551091 (9281) Type: environmentalAlarm Package: Img.IK8551091 Raised on class: Img.FilePrepare	Severity: major Specific problem: System Fan Failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR15.1.MG • LR16.1.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHeThermalSystemFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-1531 IK8551092

Alarm	Attributes	Applicable major release
Name: IK8551092 (7201) Type: environmentalAlarm Package: Img.IK8551092 Raised on class: Img.LMGMngElement	Severity: minor Specific problem: System Fan Degraded Implicitly cleared: false Default probable cause: coolingFanFailure	Release: • LR14.3.MG
Description: The system fan status has been set to degraded. An optional system fan is not operating normally.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeThermalSystemFanDegraded		
Remedial action: check the system fans		

Table 27-1532 IK8551094

Alarm	Attributes	Applicable major release
Name: IK8551094 (7202) Type: environmentalAlarm Package: Img.IK8551094 Raised on class: Img.FilePrepare	Severity: minor Specific problem: CPU Fan Failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The CPU fan status has been set to failed. A processor fan is not operating normally. The server will be shutdown.\nAlarm is cleared by the system.\nReason: cpqHeThermalCpuFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-1533 IK8551098

Alarm	Attributes	Applicable major release
Name: IK8551098 (7203) Type: equipmentAlarm Package: Img.IK8551098 Raised on class: Img.LMGMngElement	Severity: major Specific problem: POST Errors Occurred Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHePostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 27-1534 IK8551099

Alarm	Attributes	Applicable major release
Name: IK8551099 (7204) Type: equipmentAlarm Package: Img.IK8551099 Raised on class: Img.LMGMngElement	Severity: minor Specific problem: Server Power Supply Degraded Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG

Table 27-1534 IK8551099 (continued)

Alarm	Attributes	Applicable major release
Description: The fault tolerant power supply sub-system condition has been set to degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeFltTolPwrSupplyDegraded		
Remedial action: check the fault tolerant power supply		

Table 27-1535 IK8551102

Alarm	Attributes	Applicable major release
Name: IK8551102 (7205) Type: environmentalAlarm Package: lmg.IK8551102 Raised on class: lmg.FilePrepare	Severity: major Specific problem: Thermal Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The temperature status has been set to failed. The system will be shutdown due to this thermal condition.\nAlarm is cleared by the system.\nReason: cpqHe3ThermalTempFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 27-1536 IK8551103

Alarm	Attributes	Applicable major release
Name: IK8551103 (7206) Type: environmentalAlarm Package: lmg.IK8551103 Raised on class: lmg.FilePrepare	Severity: minor Specific problem: Temperature Degraded Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The temperature status has been set to degraded. The server's temperature is outside of the normal operating range. The server will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHe3ThermalTempDegraded		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 27-1537 IK8551105

Alarm	Attributes	Applicable major release
Name: IK8551105 (7207) Type: environmentalAlarm Package: lmg.IK8551105 Raised on class: lmg.FilePrepare	Severity: major Specific problem: System Fan Failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG

Table 27-1537 IK8551105 (continued)

Alarm	Attributes	Applicable major release
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHe3ThermalSystemFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-1538 IK8551106

Alarm	Attributes	Applicable major release
Name: IK8551106 (7208) Type: environmentalAlarm Package: Img.IK8551106 Raised on class: Img.FilePrepare	Severity: minor Specific problem: System Fan Degraded Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The system fan status has been set to degraded. An optional system fan is not operating normally.\nAlarm is cleared by the system.\nReason: cpqHe3ThermalSystemFanDegraded		
Remedial action: Replace the fan as soon as possible.		

Table 27-1539 IK8551108

Alarm	Attributes	Applicable major release
Name: IK8551108 (7209) Type: environmentalAlarm Package: Img.IK8551108 Raised on class: Img.FilePrepare	Severity: minor Specific problem: CPU Fan Failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The CPU fan status has been set to failed. A processor fan is not operating normally. The server will be shutdown.\nAlarm is cleared by the system.\nReason: cpqHe3ThermalCpuFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-1540 IK8551112

Alarm	Attributes	Applicable major release
Name: IK8551112 (7210) Type: equipmentAlarm Package: Img.IK8551112 Raised on class: Img.FilePrepare	Severity: major Specific problem: POST Errors Occurred Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process. Details of the POST error messages can be found in Integrated Management Log\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3PostError		

Table 27-1540 IK8551112 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 27-1541 IK8551113

Alarm	Attributes	Applicable major release
Name: IK8551113 (7211) Type: equipmentAlarm Package: Img.IK8551113 Raised on class: Img.FilePrepare	Severity: minor Specific problem: Server Power Supply Degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The fault tolerant power supply sub-system condition has been set to degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3FltTolPwrSupplyDegraded		
Remedial action: Check the system for a power supply failure. Replace the power supply.		

Table 27-1542 IK8551114

Alarm	Attributes	Applicable major release
Name: IK8551114 (7212) Type: processingErrorAlarm Package: Img.IK8551114 Raised on class: Img.LMGMngElement	Severity: minor Specific problem: Corr Mem Errors Require a Replacement Memory Module Implicitly cleared: false Default probable cause: memoryMismatch	Release: • LR14.3.MG
Description: A correctable memory log entry indicates a memory module needs to be replaced. The errors have been corrected, but the memory module should be replaced. The error information is reported in the variable cpqHeCorrMemErrDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3CorrMemReplaceMemModule		
Remedial action: Replace the failing memory module		

Table 27-1543 IK8551116

Alarm	Attributes	Applicable major release
Name: IK8551116 (7213) Type: equipmentAlarm Package: Img.IK8551116 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Power Supply Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe3FltTolPowerSupplyFailed		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1544 IK8551117

Alarm	Attributes	Applicable major release
Name: IK8551117 (7214) Type: equipmentAlarm Package: Img.IK8551117 Raised on class: Img.FilePrepare	Severity: minor Specific problem: Power Redundancy Lost Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The Fault Tolerant Power Supplies have lost redundancy for the specified chassis.\nAlarm is cleared by the system.\nReason: cpqHe3FltTolPowerRedundancyLost		
Remedial action: Check the system power supplies for a failure.		

Table 27-1545 IK8551120

Alarm	Attributes	Applicable major release
Name: IK8551120 (7215) Type: environmentalAlarm Package: Img.IK8551120 Raised on class: Img.FilePrepare	Severity: minor Specific problem: Fan Degraded Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The Fault Tolerant Fan condition has been set to degraded for the specified chassis and fan.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3FltTolFanDegraded		
Remedial action: Replace the fan as soon as possible.		

Table 27-1546 IK8551121

Alarm	Attributes	Applicable major release
Name: IK8551121 (7216) Type: environmentalAlarm Package: Img.IK8551121 Raised on class: Img.FilePrepare	Severity: major Specific problem: Fan Failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The Fault Tolerant Fan condition has been set to failed for the specified chassis and fan.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3FltTolFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-1547 IK8551122

Alarm	Attributes	Applicable major release
Name: IK8551122 (7217) Type: environmentalAlarm Package: Img.IK8551122 Raised on class: Img.FilePrepare	Severity: minor Specific problem: Fan Redundancy Lost Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG

Table 27-1547 IK8551122 (continued)

Alarm	Attributes	Applicable major release
Description: The Fault Tolerant Fans have lost redundancy for the specified chassis.\nAlarm is cleared by the system.\nReason: cpqHe3FltTolFanRedundancyLost		
Remedial action: Check the system fans for a failure.		

Table 27-1548 IK8551125

Alarm	Attributes	Applicable major release
Name: IK8551125 (7218) Type: environmentalAlarm Package: Img.IK8551125 Raised on class: Img.FilePrepare	Severity: major Specific problem: Thermal Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The temperature status has been set to failed in the specified chassis and location. The system will be shutdown due to this condition.\nAlarm is cleared by the system.\nReason: cpqHe3TemperatureFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 27-1549 IK8551126

Alarm	Attributes	Applicable major release
Name: IK8551126 (7219) Type: environmentalAlarm Package: Img.IK8551126 Raised on class: Img.FilePrepare	Severity: minor Specific problem: Thermal Status Degraded Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The temperature status has been set to degraded in the specified chassis and location. The server's temperature is outside of the normal operating range. The server will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHe3TemperatureDegraded		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 27-1550 IK8551128

Alarm	Attributes	Applicable major release
Name: IK8551128 (7220) Type: equipmentAlarm Package: Img.IK8551128 Raised on class: Img.FilePrepare	Severity: minor Specific problem: Power Converter Degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The DC-DC Power Converter condition has been set to degraded for the specified chassis, slot and socket.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3PowerConverterDegraded		

Table 27-1550 IK8551128 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Check for a failing power converter or for a failed power converter in a redundant pair. Replace the power converter.		

Table 27-1551 IK8551129

Alarm	Attributes	Applicable major release
Name: IK8551129 (7221) Type: equipmentAlarm Package: Img.IK8551129 Raised on class: Img.FilePrepare	Severity: major Specific problem: Power Converter Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The DC-DC Power Converter condition has been set to failed for the specified chassis, slot and socket.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3PowerConverterFailed		
Remedial action: Replace the failed power converter.		

Table 27-1552 IK8551130

Alarm	Attributes	Applicable major release
Name: IK8551130 (7222) Type: equipmentAlarm Package: Img.IK8551130 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Power Converter Redundancy Lost Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The DC-DC Power Converters have lost redundancy for the specified chassis.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3PowerConverterRedundancyLost		
Remedial action: Check the power converters in the system for a failure in a redundant pair. Replace the power converter.		

Table 27-1553 IK8551131

Alarm	Attributes	Applicable major release
Name: IK8551131 (7223) Type: communicationsAlarm Package: Img.IK8551131 Raised on class: Img.FilePrepare	Severity: minor Specific problem: Cache Accel Parity Errors may require a module Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • LR14.3.MG • LR15.1.MG
Description: A cache accelerator parity error indicates a cache module needs to be replaced. The error information is reported in the variable cpqHeEventLogErrorDesc.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3CacheAccelParityError		
Remedial action: Refer to the Integrated Management Log for details on the error. Replace the cache module.		

Table 27-1554 IK8551132

Alarm	Attributes	Applicable major release
Name: IK8551132 (7224) Type: processingErrorAlarm Package: Img.IK8551132 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Online Spare Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Advanced Memory Protection Online Spare Engaged. The Advanced Memory Protection subsystem has detected a memory fault. The Online Spare Memory has been activated.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeResilientMemOnlineSpareEngaged		
Remedial action: Schedule server down-time to replace the faulty memory.		

Table 27-1555 IK8551134

Alarm	Attributes	Applicable major release
Name: IK8551134 (7225) Type: equipmentAlarm Package: Img.IK8551134 Raised on class: Img.FilePrepare	Severity: minor Specific problem: Power Supply Degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The fault tolerant power supply condition has been set to degraded for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FltTolPowerSupplyDegraded		
Remedial action: Replace the power supply as soon as possible.		

Table 27-1556 IK8551135

Alarm	Attributes	Applicable major release
Name: IK8551135 (7226) Type: equipmentAlarm Package: Img.IK8551135 Raised on class: Img.FilePrepare	Severity: major Specific problem: Power Supply Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FltTolPowerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

Table 27-1557 IK8551136

Alarm	Attributes	Applicable major release
Name: IK8551136 (7227) Type: processingErrorAlarm Package: Img.IK8551136 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Mirrored Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Advanced Memory Protection Mirrored Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. Mirrored Memory has been activated.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeResilientMemMirroredMemoryEngaged		
Remedial action: Replace the faulty memory.		

Table 27-1558 IK8551137

Alarm	Attributes	Applicable major release
Name: IK8551137 (7228) Type: processingErrorAlarm Package: Img.IK8551137 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Advanced ECC Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Advanced Memory Protection Advanced ECC Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. Advanced ECC has been activated.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeResilientAdvancedECCMemoryEngaged		
Remedial action: Replace the faulty memory.		

Table 27-1559 IK8551138

Alarm	Attributes	Applicable major release
Name: IK8551138 (7229) Type: processingErrorAlarm Package: Img.IK8551138 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Advanced XOR Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Advanced Memory Protection XOR Engine Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. The XOR engine has been activated.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeResilientMemXorMemoryEngaged		
Remedial action: Replace the faulty memory.		

Table 27-1560 IK8551141

Alarm	Attributes	Applicable major release
Name: IK8551141 (7230) Type: processingErrorAlarm Package: Img.IK8551141 Raised on class: Img.LMGMngElement	Severity: minor Specific problem: Replace Memory Module Implicitly cleared: false Default probable cause: memoryMismatch	Release: • LR14.3.MG
Description: Corrected Memory Errors Detected. The errors have been corrected, but the memory module should be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe4CorrMemReplaceMemModule		
Remedial action: Replace the memory module.		

Table 27-1561 IK8551142

Alarm	Attributes	Applicable major release
Name: IK8551142 (7231) Type: equipmentAlarm Package: Img.IK8551142 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Memory Board or Cartridge Removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Memory board or cartridge removed. An Advanced Memory Protection sub-system board or cartridge has been removed from the system.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeResMemBoardRemoved		
Remedial action: Insure the board or cartridge has memory correctly installed and re-insert the memory board or cartridge back into the system.		

Table 27-1562 IK8551144

Alarm	Attributes	Applicable major release
Name: IK8551144 (7232) Type: processingErrorAlarm Package: Img.IK8551144 Raised on class: Img.FilePrepare	Severity: major Specific problem: Memory Board or Cartridge Bus Error Detected Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Memory board or cartridge bus error detected. An Advanced Memory Protection sub-system board or cartridge bus error has been detected.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge.		

Table 27-1563 IK8551148

Alarm	Attributes	Applicable major release
Name: IK8551148 (7233) Type: equipmentAlarm Package: Img.IK8551148 Raised on class: Img.FilePrepare	Severity: major Specific problem: Management processor failed reset Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The Management processor failed reset The management processor was not successfully reset and is not operational.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeManagementProcFailedReset		
Remedial action: Reset the management procesessor again or re-flash the management processor firmware.		

Table 27-1564 IK8551149

Alarm	Attributes	Applicable major release
Name: IK8551149 (7234) Type: processingErrorAlarm Package: Img.IK8551149 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: Replace Memory Module Implicitly cleared: false Default probable cause: memoryMismatch	Release: • LR14.3.MG
Description: Corrected \ uncorrected Memory Errors Detected. The errors have been corrected, but the memory module should be replaced. Value 0 for CPU means memory is not Processor based\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe5CorrMemReplaceMemModule		
Remedial action: Replace the failing memory module.		

Table 27-1565 IK8551150

Alarm	Attributes	Applicable major release
Name: IK8551150 (7235) Type: equipmentAlarm Package: Img.IK8551150 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Memory Board or Cartridge or Riser Removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Memory board or cartridge or riser removed. An Advanced Memory Protection sub-system board or cartridge or riser has been removed from the system. Value 0 for CPU means memory is not processor based.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe5ResMemBoardRemoved		
Remedial action: Insure the board or cartridge or riser has memory correctly installed and re-insert the memory board or cartridge or CPU back into the system.		

Table 27-1566 IK8551152

Alarm	Attributes	Applicable major release
Name: IK8551152 (7236) Type: processingErrorAlarm Package: Img.IK8551152 Raised on class: Img.FilePrepare	Severity: major Specific problem: Memory Board or Cartridge or Riser Bus Error Detected Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Memory board or cartridge or Riser bus error detected. An Advanced Memory Protection sub-system board or cartridge or Riser bus error has been detected. Value 0 for CPU means memory is not processor based.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe5ResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge or Riser.		

Table 27-1567 IK8551153

Alarm	Attributes	Applicable major release
Name: IK8551153 (7237) Type: processingErrorAlarm Package: Img.IK8551153 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Advanced LockStep Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Advanced Memory Protection LockStep Engine Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. The LockStep engine has been activated.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeResilientMemLockStepMemoryEngaged		
Remedial action: Replace the faulty memory.		

Table 27-1568 IK8551154

Alarm	Attributes	Applicable major release
Name: IK8551154 (7238) Type: equipmentAlarm Package: Img.IK8551154 Raised on class: Img.FilePrepare	Severity: major Specific problem: Power Supply AC Power Loss Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The fault tolerant power supply AC power loss for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FltTolPowerSupplyACpowerloss		
Remedial action: Check the power source for the specified power supply.		

Table 27-1569 IK8551156

Alarm	Attributes	Applicable major release
Name: IK8551156 (7239) Type: processingErrorAlarm Package: Img.IK8551156 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Application Error Trap Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHoAppErrorTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1570 IK8551158

Alarm	Attributes	Applicable major release
Name: IK8551158 (7240) Type: processingErrorAlarm Package: Img.IK8551158 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Application Error Trap Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2AppErrorTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1571 IK8551160

Alarm	Attributes	Applicable major release
Name: IK8551160 (9282) Type: communicationsAlarm Package: Img.IK8551160 Raised on class: Img.FilePrepare	Severity: major Specific problem: Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG • LR16.1.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition.\nAlarm is cleared by the system.\nReason: cpqHo2NicStatusFailed		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 27-1572 IK8551163

Alarm	Attributes	Applicable major release
Name: IK8551163 (7241) Type: communicationsAlarm Package: lmg.IK8551163 Raised on class: lmg.FilePrepare	Severity: major Specific problem: Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition.\nAlarm is cleared by the system.\nReason: cpqHo2NicStatusFailed2		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 27-1573 IK8551164

Alarm	Attributes	Applicable major release
Name: IK8551164 (7242) Type: communicationsAlarm Package: lmg.IK8551164 Raised on class: lmg.FilePrepare	Severity: warning Specific problem: Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the configured redundant NIC becomes the active NIC.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHo2NicSwitchoverOccurred2		
Remedial action: Examine the network connections and check for a NIC failure.		

Table 27-1574 IK8551168

Alarm	Attributes	Applicable major release
Name: IK8551168 (7243) Type: processingErrorAlarm Package: lmg.IK8551168 Raised on class: lmg.FilePrepare	Severity: warning Specific problem: Critical Software update Notification Trap Implicitly cleared: true Default probable cause: softwareProgramError	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm is a send to the user to notify him of a Critical Software Update.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHoCriticalSoftwareUpdateTrap		
Remedial action: Install the required software updates.		

Table 27-1575 IK8551172

Alarm	Attributes	Applicable major release
Name: IK8551172 (7244) Type: qualityOfServiceAlarm Package: lmg.IK8551172 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Power Threshold Exceeded Implicitly cleared: false Default probable cause: resourceAtOrNearingCapacity	Release: • LR14.3.MG
Description: This alarm notifies user of a power threshold breach. Power threshold exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2PowerThresholdTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1576 IK8552265

Alarm	Attributes	Applicable major release
Name: IK8552265 (7245) Type: environmentalAlarm Package: lmg.IK8552265 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDaAccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 27-1577 IK8552272

Alarm	Attributes	Applicable major release
Name: IK8552272 (7246) Type: environmentalAlarm Package: lmg.IK8552272 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa2AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 27-1578 IK8552279

Alarm	Attributes	Applicable major release
Name: IK8552279 (7247) Type: environmentalAlarm Package: lmg.IK8552279 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa3AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 27-1579 IK8552281

Alarm	Attributes	Applicable major release
Name: IK8552281 (7248) Type: processingErrorAlarm Package: lmg.IK8552281 Raised on class: lmg.FilePrepare	Severity: warning Specific problem: Duplex Controller Active Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG
Description: Controller Active. This alarm signifies that the agent has detected that a backup array controller in a duplexed pair has switched over to the active role. The variable cpqDaCntlrSlot indicates the active controller slot and cpqDaCntlrPartnerSlot indicates the backup.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqDaCntlrActive		
Remedial action: Check the partner controller for problems. If this was the result of a user initiated switch over, no action is required.		

Table 27-1580 IK8552284

Alarm	Attributes	Applicable major release
Name: IK8552284 (7249) Type: equipmentAlarm Package: lmg.IK8552284 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm is cleared by the system when the device is restarted.\ nReason: cpqDa4PhyDrvThreshPassedTrap		
Remedial action: If the physical drive is predicting failure, replace the drive.		

Table 27-1581 IK8552289

Alarm	Attributes	Applicable major release
Name: IK8552289 (7250) Type: equipmentAlarm Package: lmg.IK8552289 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Tape Drive Cleaning Tape Needs Replacing Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDaTapeDriveCleanTapeReplace		
Remedial action: Replace the Tape Drive Cleaning Tape.		

Table 27-1582 IK8552291

Alarm	Attributes	Applicable major release
Name: IK8552291 (7251) Type: equipmentAlarm Package: lmg.IK8552291 Raised on class: lmg.FilePrepare	Severity: major Specific problem: Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Accelerator Board Bad Data. This alarm signifies that the agent has detected an array accelerator cache board that has lost battery power. If data was being stored in the accelerator cache memory when the server lost power, that data has been lost.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqDa5AccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 27-1583 IK8552292

Alarm	Attributes	Applicable major release
Name: IK8552292 (7252) Type: environmentalAlarm Package: lmg.IK8552292 Raised on class: lmg.FilePrepare	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqDa5AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 27-1584 IK8552295

Alarm	Attributes	Applicable major release
Name: IK8552295 (7253) Type: equipmentAlarm Package: Img.IK8552295 Raised on class: Img.FilePrepare	Severity: major Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm is cleared by the system when the device is restarted.\ nReason: cpqDa5PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 27-1585 IK8552302

Alarm	Attributes	Applicable major release
Name: IK8552302 (7254) Type: equipmentAlarm Package: Img.IK8552302 Raised on class: Img.FilePrepare	Severity: major Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm is cleared by the system when the device is restarted.\ nReason: cpqDa6PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 27-1586 IK8552304

Alarm	Attributes	Applicable major release
Name: IK8552304 (7255) Type: equipmentAlarm Package: Img.IK8552304 Raised on class: Img.FilePrepare	Severity: minor Specific problem: Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Cache Module Board Bad Data. This alarm signifies that the agent has detected a cache module board that has lost backup power. If data was being stored in the cache module memory when the server lost power, that data has been lost. The backup power source is indicated by cpqDaAccelBackupPowerSource.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqDa6AccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 27-1587 IK8552305

Alarm	Attributes	Applicable major release
Name: IK8552305 (7256) Type: environmentalAlarm Package: Img.IK8552305 Raised on class: Img.FilePrepare	Severity: minor Specific problem: Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: Cache Module Board Backup Power Source Failed. This alarm signifies that the agent has detected a backup power source failure associated with the cache module board. The backup power source is indicated by cpqDaAccelBackupPowerSource.\ nAlarm is cleared by the system when the device is restarted.\nReason: cpqDa6AccelBatteryFailed		
Remedial action: Replace the Backup Power Source.		

Table 27-1588 IK8552309

Alarm	Attributes	Applicable major release
Name: IK8552309 (7257) Type: processingErrorAlarm Package: Img.IK8552309 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Tape Drive Cleaning Required Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG
Description: Tape Drive Cleaning Required trap. The agent has detected a tape drive that needs to have a cleaning tape inserted and run. This will cause the tape drive heads to be cleaned.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqDa6TapeDriveCleaningRequired		
Remedial action: Insert and run a cleaning tape in the tape drive.		

Table 27-1589 IK8552310

Alarm	Attributes	Applicable major release
Name: IK8552310 (7258) Type: equipmentAlarm Package: Img.IK8552310 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Tape Drive Cleaning Tape Needs Replacing Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqDa6TapeDriveCleanTapeReplace		
Remedial action: Replace the cleaning tape.		

Table 27-1590 IK8552315

Alarm	Attributes	Applicable major release
Name: IK8552315 (7259) Type: equipmentAlarm Package: lmg.IK8552315 Raised on class: lmg.FilePrepare	Severity: minor Specific problem: IDE Drive Degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: An IDE drive status has been set to degraded.\nAlarm is cleared by the system.\nReason: cpqIdeDriveDegraded		
Remedial action: The drive should be scheduled for replacement. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 27-1591 IK8552317

Alarm	Attributes	Applicable major release
Name: IK8552317 (7260) Type: equipmentAlarm Package: lmg.IK8552317 Raised on class: lmg.FilePrepare	Severity: minor Specific problem: IDE Drive Ultra ATA Degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: An IDE drive detects an excessive number of Ultra ATA data transmission errors between the hard drive and the processor.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqIdeDriveUltraAtaDegraded		
Remedial action: For best performance move Ultra ATA devices to the primary controller and non Ultra ATA devices to the secondary controller. If errors still persist, consider replacing the standard 40-conductor IDE cable with an 80-conductor Ultra ATA cable.		

Table 27-1592 IK8552337

Alarm	Attributes	Applicable major release
Name: IK8552337 (7261) Type: communicationsAlarm Package: lmg.IK8552337 Raised on class: lmg.FilePrepare	Severity: major Specific problem: NIC Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNicConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-1593 IK8552339

Alarm	Attributes	Applicable major release
Name: IK8552339 (7262) Type: communicationsAlarm Package: Img.IK8552339 Raised on class: Img.FilePrepare	Severity: minor Specific problem: NIC Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNicRedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-1594 IK8552341

Alarm	Attributes	Applicable major release
Name: IK8552341 (7263) Type: communicationsAlarm Package: Img.IK8552341 Raised on class: Img.FilePrepare	Severity: major Specific problem: NIC Connectivity Lost Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-1595 IK8552343

Alarm	Attributes	Applicable major release
Name: IK8552343 (7264) Type: communicationsAlarm Package: Img.IK8552343 Raised on class: Img.FilePrepare	Severity: major Specific problem: NIC Redundancy Reduced Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2RedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-1596 IK8552344

Alarm	Attributes	Applicable major release
Name: IK8552344 (7265) Type: communicationsAlarm Package: lmg.IK8552344 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: like Activity Detected Trap Implicitly cleared: false Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: This alarm will be sent when the Virus Throttle Filter Driver detects virus like activity.\nAlarm to be cleared by the operator at the management system.\nReason: cpqNicVirusLikeActivityDetected		
Remedial action: The system reporting this trap requires immediate attention.		

Table 27-1597 IK8552347

Alarm	Attributes	Applicable major release
Name: IK8552347 (7266) Type: communicationsAlarm Package: lmg.IK8552347 Raised on class: lmg.FilePrepare	Severity: major Specific problem: NIC Connectivity Lost Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqNic3ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-1598 IK8552349

Alarm	Attributes	Applicable major release
Name: IK8552349 (7267) Type: communicationsAlarm Package: lmg.IK8552349 Raised on class: lmg.FilePrepare	Severity: major Specific problem: NIC Redundancy Reduced Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic3RedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-1599 IK8552360

Alarm	Attributes	Applicable major release
Name: IK8552360 (7268) Type: equipmentAlarm Package: Img.IK8552360 Raised on class: Img.FilePrepare	Severity: major Specific problem: Enclosure temperature failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The enclosure temperature status has been set to failed. This alarm signifies that a enclosure temperature sensor has been tripped indicating an overheat condition.\nAlarm is cleared by the system.\nReason: cpqRackEnclosureTempFailed		
Remedial action: Shutdown the enclosure and possibly the rack as soon as possible. Ensure all fans are working properly and that air flow in the rack has not been blocked.		

Table 27-1600 IK8552361

Alarm	Attributes	Applicable major release
Name: IK8552361 (7269) Type: equipmentAlarm Package: Img.IK8552361 Raised on class: Img.FilePrepare	Severity: minor Specific problem: Enclosure temperature degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The enclosure temperature status has been set to degraded. This alarm signifies that an enclosure temperature sensor has been tripped indicating a possible overheat condition.\nAlarm is cleared by the system.\nReason: cpqRackEnclosureTempDegraded		
Remedial action: Shutdown the enclosure and possibly the rack as soon as possible. Ensure all fans are working properly and that air flow in the rack has not been blocked.		

Table 27-1601 IK8552363

Alarm	Attributes	Applicable major release
Name: IK8552363 (7270) Type: environmentalAlarm Package: Img.IK8552363 Raised on class: Img.FilePrepare	Severity: major Specific problem: Enclosure fan failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The enclosure fan status has been set to failed. This alarm signifies that an enclosure fan has failed and no other fans in the redundant fan group are operating. This may result in overheating of the enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackEnclosureFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-1602 IK8552364

Alarm	Attributes	Applicable major release
Name: IK8552364 (7271) Type: environmentalAlarm Package: lmg.IK8552364 Raised on class: lmg.FilePrepare	Severity: minor Specific problem: Enclosure fan degraded Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The enclosure fan status has been set to degraded. This alarm signifies that an enclosure fan has failed but other fans in the redundant fan group are still operating. This may result in overheating of the enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackEnclosureFanDegraded		
Remedial action: Replace the fan as soon as possible.		

Table 27-1603 IK8552368

Alarm	Attributes	Applicable major release
Name: IK8552368 (7272) Type: equipmentAlarm Package: lmg.IK8552368 Raised on class: lmg.FilePrepare	Severity: critical Specific problem: Rack power supply failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The power supply status has been set to failed. This alarm signifies that a power supply has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

Table 27-1604 IK8552369

Alarm	Attributes	Applicable major release
Name: IK8552369 (7273) Type: equipmentAlarm Package: lmg.IK8552369 Raised on class: lmg.FilePrepare	Severity: major Specific problem: Rack power supply degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The power supply status has been set to degraded. This alarm signifies that a power supply has degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSupplyDegraded		
Remedial action: Replace the power supply as soon as possible.		

Table 27-1605 IK8552373

Alarm	Attributes	Applicable major release
Name: IK8552373 (7274) Type: equipmentAlarm Package: Img.IK8552373 Raised on class: Img.FilePrepare	Severity: minor Specific problem: Rack power subsystem not redundant Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The rack power subsystem is no longer in a redundant state.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSubsystemNotRedundant		
Remedial action: Replace any failed power supplies as soon as possible to return the system to a redundant state.		

Table 27-1606 IK8552374

Alarm	Attributes	Applicable major release
Name: IK8552374 (7275) Type: equipmentAlarm Package: Img.IK8552374 Raised on class: Img.FilePrepare	Severity: major Specific problem: Rack power supply input voltage problem Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The rack power supply detected an input line voltage problem.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSubsystemLineVoltageProblem		
Remedial action: Check the power input for the power supply or replace any failed power supplies as soon as possible.		

Table 27-1607 IK8552375

Alarm	Attributes	Applicable major release
Name: IK8552375 (7276) Type: equipmentAlarm Package: Img.IK8552375 Raised on class: Img.FilePrepare	Severity: major Specific problem: Rack power subsystem overload condition Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The rack power subsystem overload condition.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSubsystemOverloadCondition		
Remedial action: Replace any failed power supplies as soon as possible to return the system to a redundant state.		

Table 27-1608 IK8552376

Alarm	Attributes	Applicable major release
Name: IK8552376 (7277) Type: equipmentAlarm Package: Img.IK8552376 Raised on class: Img.FilePrepare	Severity: critical Specific problem: Server shutdown due to power shedding Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Server shutdown due to power shedding. The server blade was shutdown due to a lack of power.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerShedAutoShutdown		
Remedial action: Check power connections or add power supplies.		

Table 27-1609 IK8552377

Alarm	Attributes	Applicable major release
Name: IK8552377 (7278) Type: equipmentAlarm Package: Img.IK8552377 Raised on class: Img.FilePrepare	Severity: critical Specific problem: Server power on prevented to preserve redundancy Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Server power on prevented to preserve redundancy. There is not enough power to power on the server blade and maintain redundancy for the other blades in the enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailedNotRedundant		
Remedial action: Check power connections or add power supplies.		

Table 27-1610 IK8552378

Alarm	Attributes	Applicable major release
Name: IK8552378 (7279) Type: equipmentAlarm Package: Img.IK8552378 Raised on class: Img.FilePrepare	Severity: critical Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailedNotEnoughPower		
Remedial action: Check power connections or add power supplies.		

Table 27-1611 IK8552379

Alarm	Attributes	Applicable major release
Name: IK8552379 (7280) Type: equipmentAlarm Package: Img.IK8552379 Raised on class: Img.FilePrepare	Severity: critical Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The server enclosure micro-controller was not found.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailedEnclosureNotFound		
Remedial action: Check server enclosure connections or add power supplies.		

Table 27-1612 IK8552380

Alarm	Attributes	Applicable major release
Name: IK8552380 (7281) Type: equipmentAlarm Package: Img.IK8552380 Raised on class: Img.FilePrepare	Severity: critical Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The power enclosure micro-controller was not found.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailedPowerChassisNotFound		
Remedial action: Check power enclosure connections or add power supplies.		

Table 27-1613 IK8552382

Alarm	Attributes	Applicable major release
Name: IK8552382 (7282) Type: environmentalAlarm Package: Img.IK8552382 Raised on class: Img.FilePrepare	Severity: major Specific problem: Fuse open Implicitly cleared: true Default probable cause: enclosureDoorOpen	Release: • LR14.3.MG • LR15.1.MG
Description: Fuse open. The fuse has been tripped.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackFuseOpen		
Remedial action: Check enclosure and / or blade power connections and reset the fuse.		

Table 27-1614 IK8552385

Alarm	Attributes	Applicable major release
Name: IK8552385 (7283) Type: equipmentAlarm Package: lmg.IK8552385 Raised on class: lmg.FilePrepare	Severity: minor Specific problem: Power subsystem not load balanced Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem not load balanced. The power subsystem is out of balance for this power enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisNotLoadBalanced		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies. Add additional power supplies if needed.		

Table 27-1615 IK8552386

Alarm	Attributes	Applicable major release
Name: IK8552386 (7284) Type: equipmentAlarm Package: lmg.IK8552386 Raised on class: lmg.FilePrepare	Severity: major Specific problem: Power subsystem DC power problem Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem DC power problem. There is a power subsystem DC power problem for this power enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisDcPowerProblem		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 27-1616 IK8552387

Alarm	Attributes	Applicable major release
Name: IK8552387 (7285) Type: equipmentAlarm Package: lmg.IK8552387 Raised on class: lmg.FilePrepare	Severity: major Specific problem: Power subsystem AC facility input power exceeded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem AC facility input power exceeded. There is a power subsystem Power subsystem AC facility input power exceeded for this power enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisAc-FacilityPowerExceeded		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 27-1617 IK8552388

Alarm	Attributes	Applicable major release
Name: IK8552388 (7286) Type: equipmentAlarm Package: Img.IK8552388 Raised on class: Img.FilePrepare	Severity: major Specific problem: Unknown power consumption Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Unknown power consumption. There is an unknown power consumer drawing power.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerUnknownPowerConsumption		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 27-1618 IK8552389

Alarm	Attributes	Applicable major release
Name: IK8552389 (7287) Type: equipmentAlarm Package: Img.IK8552389 Raised on class: Img.FilePrepare	Severity: minor Specific problem: Power subsystem load balancing wire missing Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem load balancing wire missing. The power subsystem load balancing wire missing.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisLoadBalancingWireMissing		
Remedial action: Connect the load balancing wire.		

Table 27-1619 IK8552390

Alarm	Attributes	Applicable major release
Name: IK8552390 (7288) Type: equipmentAlarm Package: Img.IK8552390 Raised on class: Img.FilePrepare	Severity: minor Specific problem: Power subsystem has too may power enclosures Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem has too may power enclosures. The maximum number of power enclosures has been exceeded.\ nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisTooManyPowerChassis		
Remedial action: Remove the extra power enclosure.		

Table 27-1620 IK8552391

Alarm	Attributes	Applicable major release
Name: IK8552391 (7289) Type: processingErrorAlarm Package: lmg.IK8552391 Raised on class: lmg.FilePrepare	Severity: major Specific problem: Power subsystem improperly configured Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem improperly configured. The power subsystem has been improperly configured.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisConfigError		
Remedial action: Check the cabling of the power enclosure.		

Table 27-1621 IK8552392

Alarm	Attributes	Applicable major release
Name: IK8552392 (7290) Type: qualityOfServiceAlarm Package: lmg.IK8552392 Raised on class: lmg.FilePrepare	Severity: minor Specific problem: Enclosure manager degraded Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The Onboard Administrator or other management processor status has been set to degraded. This alarm signifies that either an Onboard Administrator has failed but the other Onboard Administrator is still operating, or one or more management processors is in a non-optimal operating state.\nAlarm is cleared by the system.\nReason: cpqRackEnclosureManagerDegraded		
Remedial action: For C-Class enclosures, replace the Onboard Administrator as soon as possible. For all others please refer to product documenation for possible corrective actions		

Table 27-1622 IK8552397

Alarm	Attributes	Applicable major release
Name: IK8552397 (7291) Type: communicationsAlarm Package: lmg.IK8552397 Raised on class: lmg.LMGMngElement	Severity: minor Specific problem: keying failed Implicitly cleared: false Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: The server blade e-keying has failed. This alarm signifies that a server blade e-keying has failed and there is a port mapping problem between a server mezz card and the interconnect.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeEKeyingFailed		
Remedial action: Reconfigure server blade mezz cards.		

Table 27-1623 IK8552401

Alarm	Attributes	Applicable major release
Name: IK8552401 (7292) Type: communicationsAlarm Package: lmg.IK8552401 Raised on class: lmg.FilePrepare	Severity: critical Specific problem: Interconnect failed Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The interconnect status has been set to failed. This alarm signifies that a interconnect has failed.\nAlarm is cleared by the system.\nReason: cpqRackNetConnectorFailed		
Remedial action: Replace the interconnect as soon as possible.		

Table 27-1624 IK8552402

Alarm	Attributes	Applicable major release
Name: IK8552402 (7293) Type: communicationsAlarm Package: lmg.IK8552402 Raised on class: lmg.FilePrepare	Severity: minor Specific problem: Interconnect degraded Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The interconnect status has been set to degraded. This alarm signifies that a interconnect has degraded.\nAlarm is cleared by the system.\nReason: cpqRackNetConnectorDegraded		
Remedial action: Replace the interconnect as soon as possible.		

Table 27-1625 IK8552408

Alarm	Attributes	Applicable major release
Name: IK8552408 (7294) Type: qualityOfServiceAlarm Package: lmg.IK8552408 Raised on class: lmg.FilePrepare	Severity: major Specific problem: Server blade health status degraded Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR14.3.MG • LR15.1.MG
Description: Server blade health status Degraded. The server blade health status has changed to Degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerBladeStatusDegraded		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-1626 IK8552409

Alarm	Attributes	Applicable major release
Name: IK8552409 (7295) Type: processingErrorAlarm Package: lmg.IK8552409 Raised on class: lmg.FilePrepare	Severity: critical Specific problem: Server blade health status critical Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Server blade health status Critical. The server blade health status has changed to Critical.\nAlarm is cleared by the system.\nReason: cpqRackServerBladeStatusCritical		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-1627 IK8552410

Alarm	Attributes	Applicable major release
Name: IK8552410 (7296) Type: equipmentAlarm Package: lmg.IK8552410 Raised on class: lmg.FilePrepare	Severity: minor Specific problem: Server blade not responding to group capping requests Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The server blade is not responding to the group capper. The server blade is not responding to capping requests from the enclosure group capper\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerBladeGrpCapTimeout		
Remedial action: Reset the iLO management processor.		

Table 27-1628 IK8552411

Alarm	Attributes	Applicable major release
Name: IK8552411 (7297) Type: equipmentAlarm Package: lmg.IK8552411 Raised on class: lmg.FilePrepare	Severity: major Specific problem: Server blade unexpected shutdown Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Server blade shutdown unexpectadly. An unexpected shutdown event has occurred for this server blade.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerBladeUnexpectedShutdown		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-1629 IK8552427

Alarm	Attributes	Applicable major release
Name: IK8552427 (7298) Type: equipmentAlarm Package: lmg.IK8552427 Raised on class: lmg.LMGMngElement	Severity: minor Specific problem: Generic EAE Minor trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: EAE Minor trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackMinorEAETrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1630 IK8552428

Alarm	Attributes	Applicable major release
Name: IK8552428 (7299) Type: equipmentAlarm Package: lmg.IK8552428 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Generic EAE Major trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: EAE Major trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackMajorEAETrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1631 IK8552429

Alarm	Attributes	Applicable major release
Name: IK8552429 (7300) Type: equipmentAlarm Package: lmg.IK8552429 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Generic EAE Critical trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: EAE Critical trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackCriticalEAETrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1632 IK8552430

Alarm	Attributes	Applicable major release
Name: IK8552430 (7301) Type: equipmentAlarm Package: lmg.IK8552430 Raised on class: lmg.FilePrepare	Severity: minor Specific problem: Generic Power Subsystem EAE Minor trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: FlexFabric Cmdr Power Subsystem Minor trap.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerMinorEAETrap		

Table 27-1632 IK8552430 (continued)

Alarm	Attributes	Applicable major release
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 27-1633 IK8552431

Alarm	Attributes	Applicable major release
Name: IK8552431 (7302) Type: equipmentAlarm Package: lmg.IK8552431 Raised on class: lmg.FilePrepare	Severity: major Specific problem: Generic Power Subsystem EAE Major trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: FlexFabric Cmdr Power Subsystem Major trap.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerMajorEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 27-1634 IK8552432

Alarm	Attributes	Applicable major release
Name: IK8552432 (7303) Type: equipmentAlarm Package: lmg.IK8552432 Raised on class: lmg.FilePrepare	Severity: critical Specific problem: Generic Power Subsystem EAE Critical trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: FlexFabric Cmdr Power Subsystem Critical trap.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerCriticalEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 27-1635 IK8552435

Alarm	Attributes	Applicable major release
Name: IK8552435 (7304) Type: equipmentAlarm Package: lmg.IK8552435 Raised on class: lmg.LMGMngElement	Severity: minor Specific problem: Generic WSMAN Minor trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: WSMAN Minor trap\nReason: cpqRackMinorWSMANTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1636 IK8552436

Alarm	Attributes	Applicable major release
Name: IK8552436 (7305) Type: equipmentAlarm Package: lmg.IK8552436 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Generic WSMAN Major trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: WSMAN Major trap\nReason: cpqRackMajorWSMANTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1637 IK8552437

Alarm	Attributes	Applicable major release
Name: IK8552437 (7306) Type: equipmentAlarm Package: lmg.IK8552437 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Generic WSMAN Critical trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: WSMAN Critical trap\nReason: cpqRackCriticalWSMANTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1638 IK8552439

Alarm	Attributes	Applicable major release
Name: IK8552439 (7307) Type: communicationsAlarm Package: lmg.IK8552439 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Standby Recovery Server Interconnect Failure Implicitly cleared: false Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: Recovery Server serial interconnect failure. The Standby Recovery Agent reports that the local serial interconnect is not connected or has failed. The primary server is being shutdown in anticipation of the startup of the standby server.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRsStandbyCableFailure		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1639 IK8552443

Alarm	Attributes	Applicable major release
Name: IK8552443 (7308) Type: communicationsAlarm Package: lmg.IK8552443 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Device Connected Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is reporting a Connection Lost due to one of the following. 1. The serial cable connected to the UPS has been unplugged. 2. The Network cable connected to the UPS has been unplugged.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapDeviceConnected		
Remedial action: Perform the following steps to clear the alarm: 1. Insure all cables are seated properly. 2. Check you network to insure it is functioning properly. 3. If the UPS is serially connected insure that the Serial Relay Agent is installed and running.		

Table 27-1640 IK8552444

Alarm	Attributes	Applicable major release
Name: IK8552444 (7309) Type: communicationsAlarm Package: lmg.IK8552444 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Connection Lost Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is reporting a Connection Lost due to one of the following. 1. The serial cable connected to the UPS has been unplugged. 2. The Network cable connected to the UPS has been unplugged.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapConnectionLost		
Remedial action: Perform the following steps to clear the alarm: 1. Insure all cables are seated properly. 2. Check you network to insure it is functioning properly. 3. If the UPS is serially connected insure that the Serial Relay Agent is installed and running.		

Table 27-1641 IK8552449

Alarm	Attributes	Applicable major release
Name: IK8552449 (7310) Type: environmentalAlarm Package: lmg.IK8552449 Raised on class: lmg.LMGMngElement	Severity: indeterminate Specific problem: CMC Temperature 1 Above Warning Implicitly cleared: false Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG
Description: A CMC device is reporting temperature 1 above warning threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapCMCTemp1AboveWarn		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1642 IK8552450

Alarm	Attributes	Applicable major release
Name: IK8552450 (7311) Type: environmentalAlarm Package: lmg.IK8552450 Raised on class: lmg.LMGMngElement	Severity: indeterminate Specific problem: CMC Temperature 1 Above Maximum Implicitly cleared: false Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG
Description: A CMC device is reporting temperature 1 above maximum threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapCMCTemp1AboveMax		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1643 IK8552453

Alarm	Attributes	Applicable major release
Name: IK8552453 (7312) Type: environmentalAlarm Package: lmg.IK8552453 Raised on class: lmg.LMGMngElement	Severity: indeterminate Specific problem: CMC Temperature 2 Above Warning Implicitly cleared: false Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG
Description: A CMC device is reporting temperature 2 above warning threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapCMCTemp2AboveWarn		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1644 IK8552454

Alarm	Attributes	Applicable major release
Name: IK8552454 (7313) Type: environmentalAlarm Package: lmg.IK8552454 Raised on class: lmg.LMGMngElement	Severity: indeterminate Specific problem: CMC Temperature 2 Above Maximum Implicitly cleared: false Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG
Description: A CMC device is reporting temperature 2 above maximum threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapCMCTemp2AboveMax		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1645 IK8552457

Alarm	Attributes	Applicable major release
Name: IK8552457 (7314) Type: equipmentAlarm Package: Img.IK8552457 Raised on class: Img.LMGMngElement	Severity: indeterminate Specific problem: CMC Voltage Above Maximum Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: A CMC device is reporting voltage above maximum threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapCMCVoltOver		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1646 IK8552460

Alarm	Attributes	Applicable major release
Name: IK8552460 (7315) Type: environmentalAlarm Package: Img.IK8552460 Raised on class: Img.LMGMngElement	Severity: indeterminate Specific problem: CMC Humidity Above Maximum Implicitly cleared: false Default probable cause: humidityUnacceptable	Release: • LR14.3.MG
Description: A CMC device is reporting humidity above maximum threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapCMCHmdtOver		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1647 IK8552462

Alarm	Attributes	Applicable major release
Name: IK8552462 (7316) Type: environmentalAlarm Package: Img.IK8552462 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: CMC Smoke Detected Implicitly cleared: true Default probable cause: smoke	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A CMC device is reporting smoke detected.\nAlarm is cleared by the system.\nReason: cpqRPMTrapCMCSmokeDetected		
Remedial action: Investigate CMC Device for an over temperature condition.		

Table 27-1648 IK8552464

Alarm	Attributes	Applicable major release
Name: IK8552464 (7317) Type: equipmentAlarm Package: Img.IK8552464 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: CMC Shock Detected Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG

Table 27-1648 IK8552464 (continued)

Alarm	Attributes	Applicable major release
Description: A CMC device is reporting shock detected.\nAlarm is cleared by the system.\nReason: cpqRPMTrapCMCShockDetected		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1649 IK8552466

Alarm	Attributes	Applicable major release
Name: IK8552466 (7318) Type: equipmentAlarm Package: Img.IK8552466 Raised on class: Img.LMGMngElement	Severity: indeterminate Specific problem: CMC Aux 1 Alarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: A CMC device has entered an alarm condition for auxiliary input 1.\nAlarm is cleared by the system.\nReason: cpqRPMTrapCMCAux1Alarm		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1650 IK8552468

Alarm	Attributes	Applicable major release
Name: IK8552468 (7319) Type: equipmentAlarm Package: Img.IK8552468 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: CMC Aux 2 Alarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A CMC device has entered an alarm condition for auxiliary input 2.\nAlarm is cleared by the system.\nReason: cpqRPMTrapCMCAux2Alarm		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1651 IK8552489

Alarm	Attributes	Applicable major release
Name: IK8552489 (7320) Type: equipmentAlarm Package: Img.IK8552489 Raised on class: Img.LMGMngElement	Severity: indeterminate Specific problem: UPS Input Voltage Above Maximum Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: A UPS device is reporting input voltage above maximum threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapUPSInputVoltageAboveMax		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1652 IK8552490

Alarm	Attributes	Applicable major release
Name: IK8552490 (7321) Type: equipmentAlarm Package: Img.IK8552490 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: UPS Input Voltage Normal Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is reporting input voltage is out of range.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSInputVoltageNormal		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. 2. If the UPS remains on battery for an extended period of time it will not be able to sustain the load.		

Table 27-1653 IK8552492

Alarm	Attributes	Applicable major release
Name: IK8552492 (7322) Type: equipmentAlarm Package: Img.IK8552492 Raised on class: Img.LMGMngElement	Severity: indeterminate Specific problem: UPS Output Voltage Above Maximum Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: A UPS device is reporting output voltage above maximum threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapUPSOutputVoltageAboveMax		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1654 IK8552493

Alarm	Attributes	Applicable major release
Name: IK8552493 (7323) Type: equipmentAlarm Package: Img.IK8552493 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: UPS Output Voltage Normal Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is reporting output voltage is out of Range.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSOutputVoltageNormal		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If this error persists contact technical support.		

Table 27-1655 IK8552494

Alarm	Attributes	Applicable major release
Name: IK8552494 (7324) Type: equipmentAlarm Package: Img.IK8552494 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: UPS Output Overload Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device is reporting an overload condition.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSOutputOverload		
Remedial action: Perform the following steps to clear the alarm: 1. Reduce the load on the UPS by moving some of the load to another UPS. 2. Consider moving to a larger UPS to support the current load.		

Table 27-1656 IK8552496

Alarm	Attributes	Applicable major release
Name: IK8552496 (7325) Type: environmentalAlarm Package: Img.IK8552496 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: UPS Battery Low Implicitly cleared: true Default probable cause: lowBatteryThreshold	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device is reporting low battery.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBatteryLow		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. 2. When utility power is restored, charge the battery to it's full capacity. If the battery level continues to decrease, the UPS will not be able to sustain the output load!		

Table 27-1657 IK8552499

Alarm	Attributes	Applicable major release
Name: IK8552499 (7326) Type: equipmentAlarm Package: Img.IK8552499 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: UPS Battery Level Normal Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is reporting low battery.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSBatteryLevelNormal		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. 2. When utility power is restored, charge the battery to it's full capacity. If the battery level continues to decrease, the UPS will not be able to sustain the output load!		

Table 27-1658 IK8552500

Alarm	Attributes	Applicable major release
Name: IK8552500 (7327) Type: equipmentAlarm Package: Img.IK8552500 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: UPS On Battery Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is reporting on battery condition.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSOnBattery		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. If the UPS remains on battery for an extended time it will not be able to sustain the output load!		

Table 27-1659 IK8552502

Alarm	Attributes	Applicable major release
Name: IK8552502 (7328) Type: equipmentAlarm Package: Img.IK8552502 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: UPS On Buck Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is reporting an On Buck condition due to the following. 1. Utility power has increased above recommended utility input levels.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSOnBuck		
Remedial action: Perform the following steps to clear the alarm: 1. Contact an electrician.		

Table 27-1660 IK8552503

Alarm	Attributes	Applicable major release
Name: IK8552503 (7329) Type: equipmentAlarm Package: Img.IK8552503 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: UPS On Boost Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is reporting an On Boost condition due to the following. 1. Utility power has dropped below recommended utility input levels.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSOnBoost		
Remedial action: Perform the following steps to clear the alarm: 1. Contact an electrician.		

Table 27-1661 IK8552504

Alarm	Attributes	Applicable major release
Name: IK8552504 (7330) Type: equipmentAlarm Package: Img.IK8552504 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: UPS On Utility Power Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG

Table 27-1661 IK8552504 (continued)

Alarm	Attributes	Applicable major release
Description: A UPS device is reporting on battery condition.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSOnUtilityPower		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. If the UPS remains on battery for an extended time it will not be able to sustain the output load!		

Table 27-1662 IK8552506

Alarm	Attributes	Applicable major release
Name: IK8552506 (7331) Type: environmentalAlarm Package: lmg.IK8552506 Raised on class: lmg.LMGMngElement	Severity: indeterminate Specific problem: UPS Temperature High Implicitly cleared: false Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG
Description: A UPS device is reporting temperature above maximum threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapUPSTemperatureHigh		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1663 IK8552507

Alarm	Attributes	Applicable major release
Name: IK8552507 (7332) Type: environmentalAlarm Package: lmg.IK8552507 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: UPS Temperature Normal Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is reporting temperature is out of range.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSTemperatureNormal		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is in a well ventilated area. 2. Lower the ambient temperature in the area where the UPS is located.		

Table 27-1664 IK8552508

Alarm	Attributes	Applicable major release
Name: IK8552508 (7333) Type: equipmentAlarm Package: lmg.IK8552508 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: UPS Internal Failure Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device is reporting a general UPS failure.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSInternal-Failure		

Table 27-1664 IK8552508 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If the problem persists, contact NOKIA customer support.		

Table 27-1665 IK8552510

Alarm	Attributes	Applicable major release
Name: IK8552510 (7334) Type: environmentalAlarm Package: lmg.IK8552510 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: UPS Battery Failure Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device is reporting a battery failure.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBatteryFailure		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If the problem persists, contact NOKIA customer support. 3. Your battery may need to be replaced. The UPS may not be capable of supporting it's load if utility power fails!		

Table 27-1666 IK8552512

Alarm	Attributes	Applicable major release
Name: IK8552512 (7335) Type: equipmentAlarm Package: lmg.IK8552512 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: UPS Diagnostic Test Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is reporting a diagnostic test failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSDiagnosticTestFailed		
Remedial action: Perform the following steps to clear the alarm: 1. Your battery may need to be replaced. 2. If this error persists contact technical support. 3. The UPS may not be capable of supporting it's load if utility power fails!		

Table 27-1667 IK8552513

Alarm	Attributes	Applicable major release
Name: IK8552513 (7336) Type: equipmentAlarm Package: lmg.IK8552513 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: UPS Diagnostic Test Succeeded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is reporting a diagnostic test failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSDiagnosticTestSucceeded		
Remedial action: Perform the following steps to clear the alarm: 1. Your battery may need to be replaced. 2. If this error persists contact technical support. 3. The UPS may not be capable of supporting it's load if utility power fails!		

Table 27-1668 IK8552516

Alarm	Attributes	Applicable major release
Name: IK8552516 (7337) Type: equipmentAlarm Package: Img.IK8552516 Raised on class: Img.LMGMngElement	Severity: indeterminate Specific problem: DC Start Occurred Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG
Description: The UPS has been started on battery when AC input power is not present. This alarm is used to record the date and time of this event.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSDCStartOccurred		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1669 IK8552518

Alarm	Attributes	Applicable major release
Name: IK8552518 (7338) Type: equipmentAlarm Package: Img.IK8552518 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Bypass Not Available Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device is reporting bypass not avaliable.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBypassNotAvailable		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If the problem persists, contact NOKIA customer support.		

Table 27-1670 IK8552522

Alarm	Attributes	Applicable major release
Name: IK8552522 (7339) Type: equipmentAlarm Package: Img.IK8552522 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Utility Not Present Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Indicates that the utility input is not present. This differs from alarm #57 in that the detected voltage is zero in this case.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSUtilityNotPresent		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1671 IK8552526

Alarm	Attributes	Applicable major release
Name: IK8552526 (7340) Type: equipmentAlarm Package: Img.IK8552526 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Site Wiring Fault Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is reporting a fault in the input wiring, other than Phase Rotation: e.g., Ground/Neutral reversed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSSiteWiringFault		
Remedial action: Perform the following steps to clear the alarm: 1. Contact an electrician.		

Table 27-1672 IK8552527

Alarm	Attributes	Applicable major release
Name: IK8552527 (7341) Type: equipmentAlarm Package: Img.IK8552527 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Site Wiring Fault Cleared Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is reporting a fault in the input wiring, other than Phase Rotation: e.g., Ground/Neutral reversed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSSiteWiringNormal		
Remedial action: Perform the following steps to clear the alarm: 1. Contact an electrician.		

Table 27-1673 IK8552528

Alarm	Attributes	Applicable major release
Name: IK8552528 (7342) Type: equipmentAlarm Package: Img.IK8552528 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: The UPS is no longer on manual bypass Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is operating in manual bypass mode.\nAlarm is cleared by the system when the device is restarted.\ nReason: cpqRPMtrapUPSBypassOffManual		
Remedial action: Perform the following steps to clear the alarm: 1. In bypass mode, the UPS cannot support devices if there is a power failure. 2. Once maintenance has been performed return the UPS to normal mode.		

Table 27-1674 IK8552529

Alarm	Attributes	Applicable major release
Name: IK8552529 (7343) Type: equipmentAlarm Package: Img.IK8552529 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: The UPS is on manual bypass Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is operating in manual bypass mode.\nAlarm is cleared by the system when the device is restarted.\ nReason: cpqRPMtrapUPSBypassONManual		
Remedial action: Perform the following steps to clear the alarm: 1. In bypass mode, the UPS cannot support devices if there is a power failure. 2. Once maintenance has been performed return the UPS to normal mode.		

Table 27-1675 IK8552531

Alarm	Attributes	Applicable major release
Name: IK8552531 (7344) Type: equipmentAlarm Package: Img.IK8552531 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: The UPS was started without utility power Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device has been started while on battery power. AC input power is not present.\nAlarm is cleared by the system.\nReason: cppqRPMtrapUPSStartedOnBattery		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. If the UPS remains on battery for an extended time it will not be able to sustain the output load.		

Table 27-1676 IK8552533

Alarm	Attributes	Applicable major release
Name: IK8552533 (7345) Type: equipmentAlarm Package: Img.IK8552533 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Input voltage is out of range Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device is reporting input voltage is out of range.\nAlarm is cleared by the system.\nReason: cpqRPMtrapUPSInput-OutofRange		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. 2. If the UPS remains on battery for an extended period of time it will not be able to sustain the load.		

Table 27-1677 IK8552534

Alarm	Attributes	Applicable major release
Name: IK8552534 (7346) Type: environmentalAlarm Package: lmg.IK8552534 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: UPS temperature out of range Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device is reporting temperature is out of range.\nAlarm is cleared by the system.\nReason: cpqRPMtrapUPSTemperatureOutOfRange		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is in a well ventilated area. 2. Lower the ambient temperature in the area where the UPS is located.		

Table 27-1678 IK8552536

Alarm	Attributes	Applicable major release
Name: IK8552536 (7347) Type: equipmentAlarm Package: lmg.IK8552536 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: The UPS is on automatic bypass Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device is operating in auto bypass mode.\nAlarm is cleared by the system.\nReason: cpqRPMtrapUPSBypassOnAuto		
Remedial action: Perform the following steps to clear the alarm: 1. In bypass mode, the UPS cannot support devices if there is a power failure. 2. Once maintenance has been performed return the UPS to normal mode.		

Table 27-1679 IK8552538

Alarm	Attributes	Applicable major release
Name: IK8552538 (7348) Type: equipmentAlarm Package: lmg.IK8552538 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Output voltage is out of range Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is reporting output voltage is out of Range.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMtrapUPSOutputoutofRange		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If this error persists contact technical support.		

Table 27-1680 IK8552539

Alarm	Attributes	Applicable major release
Name: IK8552539 (7349) Type: equipmentAlarm Package: lmg.IK8552539 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: One or more UPS batteries have been disconnected Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device is reporting batteries are not connected to the UPS.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBatteriesDisconnected		
Remedial action: Perform the following steps to clear the alarm: 1. Connect the UPS Batteries. The UPS will not be capable of supporting it's load if the utility power fails!		

Table 27-1681 IK8552541

Alarm	Attributes	Applicable major release
Name: IK8552541 (7350) Type: environmentalAlarm Package: lmg.IK8552541 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: The UPS batteries are in a discharged condition Implicitly cleared: true Default probable cause: batteryDischarging	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device is reporting batteries are completely discharged.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBatteryDischarged		
Remedial action: Perform the following steps to clear the alarm: 1. Connect the UPS to utility power to charge the batteries. The UPS will not be able to support it's load if the utility power fails!		

Table 27-1682 IK8552543

Alarm	Attributes	Applicable major release
Name: IK8552543 (7351) Type: equipmentAlarm Package: lmg.IK8552543 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: A UPS circuit breaker needs attention Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device is reporting an output Breaker or Relay has failed or may be stuck open or closed with this alarm.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSCheckBreaker		
Remedial action: Perform the following steps to clear the alarm: 1. Check all breakers on the UPS. 2. If the problem persists, contact NOKIA customer support.		

Table 27-1683 IK8552545

Alarm	Attributes	Applicable major release
Name: IK8552545 (7352) Type: equipmentAlarm Package: lmg.IK8552545 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Emergency Power Off activated Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is reporting an Emergency Power Off (EPO) command has been received to shutdown the UPS immediately with out delay. This command may come from a local control panel or from a remote source.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSEPOInitiated		
Remedial action: Perform the following steps to clear the alarm: 1. Turn the UPS on to reapply power to attached equipment.		

Table 27-1684 IK8552546

Alarm	Attributes	Applicable major release
Name: IK8552546 (9283) Type: equipmentAlarm Package: lmg.IK8552546 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: UPS output has been manually turned off Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG • LR16.1.MG
Description: The UPS has been powered off with user interaction.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSManualLoadDumped		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1685 IK8552548

Alarm	Attributes	Applicable major release
Name: IK8552548 (7353) Type: environmentalAlarm Package: lmg.IK8552548 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: A cover panel has been removed Implicitly cleared: true Default probable cause: enclosureDoorOpen	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device is reporting a cover panel has been removed while utility power is present.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSCabinetDoorOpen		
Remedial action: Perform the following steps to clear the alarm: 1. Reinstall all panels. 2. If the problem persists, contact NOKIA customer support.		

Table 27-1686 IK8552550

Alarm	Attributes	Applicable major release
Name: IK8552550 (7354) Type: environmentalAlarm Package: Img.IK8552550 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: The UPS has encountered an fan failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device is reporting a fan failure has occurred.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSFan-Failure		
Remedial action: Perform the following steps to clear the alarm: 1. If the problem persists, contact NOKIA customer support.		

Table 27-1687 IK8552552

Alarm	Attributes	Applicable major release
Name: IK8552552 (7355) Type: processingErrorAlarm Package: Img.IK8552552 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: The UPS N+1 load has been exceeded Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device is reporting a loss of redundancy due to one of the following. 1. One or more of the Electronics Modules has failed 2. One or more of the electronics modules has been manually removed. 3. The amount of load on the UPS has increased to the point that the UPS is no longer able to support an N+1 configuration.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSLos-sOfRedundancy		
Remedial action: Perform the following steps to clear the alarm: 1. Check the UPS to see if one of the modules has failed. 2. Make sure that all modules are securely plugged in. 3. Reduce the load to return the N+1 configuration. 4. If the amount of load is now going to exceed and N+1 configuration permanently, change the configuration on the front panel of the UPS to Capacity instead of Parallel N+1.		

Table 27-1688 IK8552554

Alarm	Attributes	Applicable major release
Name: IK8552554 (7356) Type: equipmentAlarm Package: Img.IK8552554 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: A UPS shutdown is imminent Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device is reporting a shutdown imminent condition.\nAlarm is cleared by the system.\nReason: cpqRPMTrap-UPSShutdownImminent		
Remedial action: Perform the following steps to clear the alarm: 1. Immediately restore power to the UPS. The UPS will not continue to supply power to devices following the shutdown!		

Table 27-1689 IK8552556

Alarm	Attributes	Applicable major release
Name: IK8552556 (7357) Type: equipmentAlarm Package: Img.IK8552556 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: A UPS shutdown is pending Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device is reporting shutdown pending condition.\nAlarm is cleared by the system.\nReason: cpqRPMTrap-UPSShutdownPending		
Remedial action: Perform the following steps to clear the alarm: 1. Immediately restore power to the UPS. The UPS will not continue to supply power to devices following the shutdown!		

Table 27-1690 IK8552559

Alarm	Attributes	Applicable major release
Name: IK8552559 (7358) Type: equipmentAlarm Package: Img.IK8552559 Raised on class: Img.FilePrepare	Severity: critical Specific problem: Critical Alarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A critical alarm has occurred.\nAlarm is cleared by the system.\nReason: cpqPMTrapCritical		
Remedial action: Check the Trap Details for more information.		

Table 27-1691 IK8552560

Alarm	Attributes	Applicable major release
Name: IK8552560 (7359) Type: equipmentAlarm Package: Img.IK8552560 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Warning Alarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: A warning alarm has occurred.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqPMTrapWarning		
Remedial action: Check the Trap Details for more information.		

Table 27-1692 IK8552585

Alarm	Attributes	Applicable major release
Name: IK8552585 (7360) Type: processingErrorAlarm Package: Img.IK8552585 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Tape Drive Cleaning Required Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG
Description: Tape Drive Cleaning Required trap. The agent has detected a tape drive that needs to have a cleaning tape inserted and run. This will cause the tape drive heads to be cleaned.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqTape3PhyDrvCleaningRequired		
Remedial action: Insert and run a cleaning tape in the tape drive.		

Table 27-1693 IK8552586

Alarm	Attributes	Applicable major release
Name: IK8552586 (7361) Type: equipmentAlarm Package: Img.IK8552586 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Tape Drive Cleaning Tape Needs Replacing Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqTape3PhyDrvCleanTapeReplace		
Remedial action: Replace the cleaning tape.		

Table 27-1694 IK8552590

Alarm	Attributes	Applicable major release
Name: IK8552590 (7362) Type: environmentalAlarm Package: Img.IK8552590 Raised on class: Img.FilePrepare	Severity: minor Specific problem: Tape Library Door Opened Implicitly cleared: true Default probable cause: enclosureDoorOpen	Release: • LR14.3.MG • LR15.1.MG
Description: Tape Library Door Open The agent has detected that the door on an autoloader is open so the unit is not operational.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqTape3LibraryDoorOpen		
Remedial action: Close the door on the tape library.		

Table 27-1695 IK8552606

Alarm	Attributes	Applicable major release
Name: IK8552606 (7363) Type: equipmentAlarm Package: lmg.IK8552606 Raised on class: lmg.FilePrepare	Severity: warning Specific problem: System hood is removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: System hood is removed. The hood status has been set to removed. The system's hood is not in a properly installed state. This situation may result in improper cooling of the system due to air flow changes caused by the missing hood.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiHoodRemoved		
Remedial action: Replace the cover (hood), ensure the system's cover is properly installed. Verify the system is in working order.		

Table 27-1696 IK8552608

Alarm	Attributes	Applicable major release
Name: IK8552608 (7364) Type: environmentalAlarm Package: lmg.IK8552608 Raised on class: lmg.FilePrepare	Severity: minor Specific problem: Monitor Condition Degraded Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A fault reporting feature has exceeded normal limits for the monitor indicated by the cpqSiMonitorIndex. The monitor's condition is degraded due to the internal temperature exceeding normal operating limits. The monitor is still useable, but action should be taken to return the condition to OK.\nAlarm is cleared by the system.\nReason: cpqSiMonitorConditionDegraded		
Remedial action: Physically check for obstructions to air flow around the monitor. Check the thermostat in the room that the system occupies. Allow the monitor to cool by turning off the monitor for 5 minutes then turn the monitor back on. After the monitor cools, another alarm indicating an improving condition, such as Monitor OK, will be issued.		

Table 27-1697 IK8552609

Alarm	Attributes	Applicable major release
Name: IK8552609 (7365) Type: processingErrorAlarm Package: lmg.IK8552609 Raised on class: lmg.FilePrepare	Severity: major Specific problem: Monitor Condition Failed Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A fault reporting feature has exceeded normal limits in the monitor indicated by the cpqSiMonitorIndex. The monitor's condition has been set to failed due to an operational feature exceeding normal operating limits. The monitor will not be useable and should be replaced.\nAlarm is cleared by the system.\nReason: cpqSiMonitorConditionFailed		
Remedial action: Make a note of the monitor model number and serial number. Replace the monitor. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 27-1698 IK8552610

Alarm	Attributes	Applicable major release
Name: IK8552610 (7366) Type: processingErrorAlarm Package: Img.IK8552610 Raised on class: Img.FilePrepare	Severity: major Specific problem: Excessive Correctable Memory Errors Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Correctable memory error count has exceeded the threshold for the memory module indicated by the 'cpqSiMemErrorIndex' variable. The appropriate cpqSiMemModuleECCStatus has been set to degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiCorrMemErrStatusDegraded		
Remedial action: For Desktops, the System Administrator should run the F10 Diagnostics on this system and select RAM LONG TEST. If it is determined that a module needs replacing, schedule maintenance for the system and replace the failed memory module. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 27-1699 IK8552612

Alarm	Attributes	Applicable major release
Name: IK8552612 (7367) Type: processingErrorAlarm Package: Img.IK8552612 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Memory modules have changed Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: A memory configuration change has occurred. CpqSiMemConfigChangeData will indicate which memory modules slots have changed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiMemConfigChange		
Remedial action: You may want to verify a valid reason for a memory configuration to have occurred. If system issuing the alert is a Desktop running NT, the memory configuration change information is also logged in the NT System Log.		

Table 27-1700 IK8552615

Alarm	Attributes	Applicable major release
Name: IK8552615 (7368) Type: equipmentAlarm Package: Img.IK8552615 Raised on class: Img.FilePrepare	Severity: major Specific problem: Hot Plug Slot Board Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Hot Plug Slot Board Failed Power-Up. A Hot Plug Slot Board has failed to power-up in the specified chassis and slot.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiHotPlugSlotPowerUpFailed		
Remedial action: Insure the board and all cables are installed correctly and the board type and revision are the same as the replaced board.		

Table 27-1701 IK8552616

Alarm	Attributes	Applicable major release
Name: IK8552616 (7369) Type: environmentalAlarm Package: Img.IK8552616 Raised on class: Img.FilePrepare	Severity: major Specific problem: Battery Failure Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The battery indicated by cpqSiSysBatteryIndex has failed and must be replaced.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiSysBatteryFailure		
Remedial action: Contact your System Administrator or Authorized Reseller to order a replacement battery. Recycle your old battery. For proper disposal information, refer to the documentation that came with your computer.		

Table 27-1702 IK8552617

Alarm	Attributes	Applicable major release
Name: IK8552617 (7370) Type: environmentalAlarm Package: Img.IK8552617 Raised on class: Img.FilePrepare	Severity: major Specific problem: Battery Charging Degradation Implicitly cleared: true Default probable cause: lowBatteryThreshold	Release: • LR14.3.MG • LR15.1.MG
Description: Significant battery degradation has occurred with battery indicated by cpqSiSysBatteryIndex. The battery can no longer be fully recharged.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiSysBatteryChargingDegraded		
Remedial action: If using multiple batteries, run the Power Conservation Utility to identify the battery location. Contact your System Administrator or Authorized Reseller to order a replacement battery.		

Table 27-1703 IK8552618

Alarm	Attributes	Applicable major release
Name: IK8552618 (7371) Type: environmentalAlarm Package: Img.IK8552618 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Battery Calibration Error Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: Calibration is needed with battery indicated by cpqSiSysBatteryIndex. The battery can not correctly indicate capacity.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiSysBatteryCalibrationError		
Remedial action: Run the Power Conservation Utility. Contact your System Administrator or Authorized Reseller to order a replacement battery.		

Table 27-1704 IK8552619

Alarm	Attributes	Applicable major release
Name: IK8552619 (7372) Type: processingErrorAlarm Package: Img.IK8552619 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: Server Reset Detected Implicitly cleared: false Default probable cause: softwareError	Release: • LR14.3.MG
Description: Server Reset Detected. The Remote Insight/ Integrated Lights-Out firmware has detected a server reset.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerReset		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1705 IK8552620

Alarm	Attributes	Applicable major release
Name: IK8552620 (7373) Type: equipmentAlarm Package: Img.IK8552620 Raised on class: Img.FilePrepare	Severity: major Specific problem: Server Power Outage Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Server Power Outage. The Remote Insight/ Integrated Lights-Out firmware has detected server power failure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSm2ServerPowerOutage		
Remedial action: Check the server's power source.		

Table 27-1706 IK8552621

Alarm	Attributes	Applicable major release
Name: IK8552621 (7374) Type: securityServiceOrMechanismViolation Package: Img.IK8552621 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: Out Unauthorized Login Attempts Implicitly cleared: false Default probable cause: unauthorizedAccessAttempt	Release: • LR14.3.MG
Description: Remote Insight/ Integrated Lights-Out Unauthorized Login Attempts. The Remote Insight/ Integrated Lights-Out firmware has detected unauthorized login attempts.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2UnauthorizedLoginAttempts		
Remedial action: Check the iLO log for more information on the login failure.		

Table 27-1707 IK8552622

Alarm	Attributes	Applicable major release
Name: IK8552622 (7375) Type: environmentalAlarm Package: Img.IK8552622 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Remote Insight Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG

Table 27-1707 IK8552622 (continued)

Alarm	Attributes	Applicable major release
Description: Remote Insight Battery Failed. The Remote Insight battery has failed and needs to be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2BatteryFailed		
Remedial action: replace the failing Remote Insight battery.		

Table 27-1708 IK8552628

Alarm	Attributes	Applicable major release
Name: IK8552628 (7376) Type: equipmentAlarm Package: lmg.IK8552628 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Remote Insight external power cable disconnected Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: External Power Cable Disconnected. The Remote Insight external power cable has been disconnected.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ExternalPowerCableDisconnected		
Remedial action: check External Power Cable		

Table 27-1709 IK8552630

Alarm	Attributes	Applicable major release
Name: IK8552630 (7377) Type: processingErrorAlarm Package: lmg.IK8552630 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Security override engaged Implicitly cleared: false Default probable cause: softwareError	Release: • LR14.3.MG
Description: Security Override Engaged. The Remote Insight/ Integrated Lights-Out firmware has detected the security override jumper has been toggled to the engaged position.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2SecurityOverrideEngaged		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1710 IK8552631

Alarm	Attributes	Applicable major release
Name: IK8552631 (7378) Type: processingErrorAlarm Package: lmg.IK8552631 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Security override disengaged Implicitly cleared: false Default probable cause: softwareError	Release: • LR14.3.MG
Description: Security Override Disengaged. The Remote Insight/ Integrated Lights-Out firmware has detected the security override jumper has been toggled to the disengaged position.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2SecurityOverrideDisengaged		

Table 27-1710 IK8552631 (continued)

Alarm	Attributes	Applicable major release
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1711 IK8552632

Alarm	Attributes	Applicable major release
Name: IK8552632 (7379) Type: processingErrorAlarm Package: Img.IK8552632 Raised on class: Img.LMGMngElement	Severity: critical Specific problem: Server Fatal Error Detected Implicitly cleared: false Default probable cause: softwareError	Release: • LR14.3.MG
Description: Server Fatal Error Detected. The Remote Insight/ Integrated Lights-Out firmware has detected a server fatal error.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerFatalError		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1712 IK8552633

Alarm	Attributes	Applicable major release
Name: IK8552633 (7380) Type: communicationsAlarm Package: Img.IK8552633 Raised on class: Img.FilePrepare	Severity: major Specific problem: The iLO NIC Link is Down Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The iLO NIC Link is Down. The Remote Insight/ Integrated Lights-Out firmware has detected the loss of network link.\nAlarm is cleared by the system.\nReason: cpqSm2NicLinkDown		
Remedial action: Check the network connections for the iLO.		

Table 27-1713 IK8552636

Alarm	Attributes	Applicable major release
Name: IK8552636 (9284) Type: equipmentAlarm Package: Img.IK8552636 Raised on class: Img.FilePrepare	Severity: major Specific problem: Server powered off Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG • LR16.1.MG
Description: The server has been powered off. This will be sent once the server has been powered off, either by OS, or the power button.\nAlarm is cleared by the system.\nReason: cpqSm2ServerPowerOff		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1714 IK8552647

Alarm	Attributes	Applicable major release
Name: IK8552647 (7381) Type: qualityOfServiceAlarm Package: lmg.IK8552647 Raised on class: lmg.FilePrepare	Severity: minor Specific problem: PC Card Thermal Degraded Status Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm is sent when the PC Card Slot Thermal Sensor threshold has been exceeded for safe operations thereby causing degraded operations. This alarm will be sent when cpqSePCCardStatus transitions from Normal (1) to Thermal Degraded (2). The manufacturer and product information strings as well as the slot number for the degraded PC Card is provided as parameters for this trap.\nAlarm is cleared by the system.\nReason: cpqSePCCardThermalDegraded		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1715 IK8552648

Alarm	Attributes	Applicable major release
Name: IK8552648 (7382) Type: qualityOfServiceAlarm Package: lmg.IK8552648 Raised on class: lmg.FilePrepare	Severity: major Specific problem: PC Card Thermal Failure Status Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm is sent when the PC Card Slot Thermal Sensor threshold has been exceeded for degraded operations thereby causing failed operations. This alarm will be sent when cpqSePCCardStatus transitions from Thermal Degraded (2) to Thermal Failure (3). The manufacturer and product information strings as well as the slot number for the failed PC Card is provided as parameters for this trap.\nAlarm is cleared by the system.\nReason: cpqSePCCardThermalFailure		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1716 IK8552657

Alarm	Attributes	Applicable major release
Name: IK8552657 (7383) Type: environmentalAlarm Package: lmg.IK8552657 Raised on class: lmg.FilePrepare	Severity: major Specific problem: Storage System Temperature Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.\nAlarm is cleared by the system.\nReason: cpqSsTempFailed		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1717 IK8552658

Alarm	Attributes	Applicable major release
Name: IK8552658 (7384) Type: environmentalAlarm Package: lmg.IK8552658 Raised on class: lmg.FilePrepare	Severity: minor Specific problem: Storage System Temp Degraded Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Storage System temperature degraded. The agent has detected a temperature status that has been set to degraded. The storage system's temperature is outside of the normal operating range.\nAlarm is cleared by the system.\nReason: cpqSsTempDegraded		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1718 IK8552661

Alarm	Attributes	Applicable major release
Name: IK8552661 (7385) Type: equipmentAlarm Package: lmg.IK8552661 Raised on class: lmg.FilePrepare	Severity: minor Specific problem: Storage System side panel is removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Storage System side panel is removed. The side panel status has been set to removed. The storage system's side panel is not in a properly installed state. This situation may result in improper cooling of the drives in the storage system due to air flow changes caused by the missing side panel.\nAlarm is cleared by the system.\nReason: cpqSsSidePanelRemoved		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1719 IK8552662

Alarm	Attributes	Applicable major release
Name: IK8552662 (7386) Type: equipmentAlarm Package: lmg.IK8552662 Raised on class: lmg.LMGMngElement	Severity: minor Specific problem: Power Supply Degraded Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: A storage system power supply status has been set to degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSsPwrSupplyDegraded		
Remedial action: check the storage system power supply		

Table 27-1720 IK8552664

Alarm	Attributes	Applicable major release
Name: IK8552664 (7387) Type: environmentalAlarm Package: lmg.IK8552664 Raised on class: lmg.FilePrepare	Severity: warning Specific problem: Storage System Temperature Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSs3TempFailed		
Remedial action: Shutdown the storage system as soon as possible. Insure that the storage system environment is being cooled properly and that no components are overheated.		

Table 27-1721 IK8552665

Alarm	Attributes	Applicable major release
Name: IK8552665 (7388) Type: environmentalAlarm Package: lmg.IK8552665 Raised on class: lmg.FilePrepare	Severity: warning Specific problem: Storage System Temp Degraded Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: Storage System temperature degraded. The agent has detected a temperature status that has been set to degraded. The storage system's temperature is outside of the normal operating range.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSs3TempDegraded		
Remedial action: Shutdown the storage system as soon as possible. Insure that the storage system environment is being cooled properly and that no components are overheated.		

Table 27-1722 IK8552668

Alarm	Attributes	Applicable major release
Name: IK8552668 (7389) Type: equipmentAlarm Package: lmg.IK8552668 Raised on class: lmg.FilePrepare	Severity: warning Specific problem: Storage System side panel is removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Storage System side panel is removed. The side panel status has been set to removed. The storage system's side panel is not in a properly installed state. This situation may result in improper cooling of the drives in the storage system due to air flow changes caused by the missing side panel.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSs3SidePanelRemoved		
Remedial action: Replace the storage system side panel.		

Table 27-1723 IK8552669

Alarm	Attributes	Applicable major release
Name: IK8552669 (7390) Type: equipmentAlarm Package: Img.IK8552669 Raised on class: Img.LMGMngElement	Severity: minor Specific problem: Power Supply Degraded Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: A storage system power supply status has been set to degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSs3PwrSupplyDegraded		
Remedial action: check the storage system power supply		

Table 27-1724 IK8552670

Alarm	Attributes	Applicable major release
Name: IK8552670 (7391) Type: equipmentAlarm Package: Img.IK8552670 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Power Supply Degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A storage system power supply status has been set to degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSs4PwrSupplyDegraded		
Remedial action: Take action to restore power or replace any failed storage system power supply.		

Table 27-1725 IK8552695

Alarm	Attributes	Applicable major release
Name: IK8552695 (7392) Type: equipmentAlarm Package: Img.IK8552695 Raised on class: Img.FilePrepare	Severity: minor Specific problem: Rising Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Rising Threshold passed. An alarm entry has crossed its rising threshold. The instances of those objects contained within the variable list are those of the alarm entry which generated this trap.\nAlarm is cleared by the system.\nReason: cpqMeRisingAlarm		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1726 IK8552697

Alarm	Attributes	Applicable major release
Name: IK8552697 (7393) Type: equipmentAlarm Package: Img.IK8552697 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Rising Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG

Table 27-1726 IK8552697 (continued)

Alarm	Attributes	Applicable major release
Description: Rising Threshold passed. An alarm entry has crossed its rising threshold. The instances of those objects contained within the variable list are those of the alarm entry which generated this trap.\nAlarm is cleared by the system.\nReason: cpqMe2RisingAlarm		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1727 IK8552699

Alarm	Attributes	Applicable major release
Name: IK8552699 (7394) Type: equipmentAlarm Package: lmg.IK8552699 Raised on class: lmg.LMGMngElement	Severity: indeterminate Specific problem: Rising Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: Rising Threshold passed. An alarm entry has crossed its rising threshold. The instances of those objects contained within the variable list are those of the alarm entry which generated this trap.\nAlarm is cleared by the system.\nReason: cpqMeRisingAlarm-Extended		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1728 IK8552700

Alarm	Attributes	Applicable major release
Name: IK8552700 (7395) Type: equipmentAlarm Package: lmg.IK8552700 Raised on class: lmg.LMGMngElement	Severity: indeterminate Specific problem: Falling Threshold Passed Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: Falling Threshold passed. An alarm entry has crossed its falling threshold. The instances of those objects contained within the variable list are those of the alarm entry which generated this trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqMeFallingAlarmExtended		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1729 IK8552701

Alarm	Attributes	Applicable major release
Name: IK8552701 (7396) Type: equipmentAlarm Package: lmg.IK8552701 Raised on class: lmg.LMGMngElement	Severity: indeterminate Specific problem: Critical Rising Threshold Passed Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: Critical Rising Threshold passed. An alarm entry has crossed its Critical rising threshold. The instances of those objects contained within the variable list are those of the alarm entry which generated this trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqMeCriticalRisingAlarmExtended		

Table 27-1729 IK8552701 (continued)

Alarm	Attributes	Applicable major release
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1730 IK8552702

Alarm	Attributes	Applicable major release
Name: IK8552702 (7397) Type: equipmentAlarm Package: lmg.IK8552702 Raised on class: lmg.LMGMngElement	Severity: indeterminate Specific problem: Critical Falling Threshold Passed Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: Critical Falling Threshold passed. An alarm entry has crossed its Critical falling threshold. The instances of those objects contained within the variable list are those of the alarm entry which generated this trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqMeCriticalFallingAlarmExtended		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1731 IK8552748

Alarm	Attributes	Applicable major release
Name: IK8552748 (7398) Type: equipmentAlarm Package: lmg.IK8552748 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: fluteModuleAlarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Alarm notification\nAlarm is cleared by the system.\nReason: fluteModuleAlarm		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1732 IK8554762

Alarm	Attributes	Applicable major release
Name: IK8554762 (7399) Type: communicationsAlarm Package: lmg.IK8554762 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: linkDown Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: A linkDown alarm signifies that the SNMP entity, acting in an agent role, has detected that the ifOperStatus object for one of its communication links is about to enter the down state from some other state (but not from the notPresent state). This other state is indicated by the included value of ifOperStatus.\nAlarm is cleared by the system.\nReason: linkDown		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1733 IK8557456

Alarm	Attributes	Applicable major release
Name: IK8557456 (9285) Type: environmentalAlarm Package: Img.IK8557456 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Temperature-alarm Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR15.1.MG • LR16.1.MG
Description: The temperature at rack sensor 1 is outside the specified threshold.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmTemp1		
Remedial action: Check the air handling system for the rack and refer to Trap Details for more information.		

Table 27-1734 IK8557457

Alarm	Attributes	Applicable major release
Name: IK8557457 (9286) Type: environmentalAlarm Package: Img.IK8557457 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Temperature-alarm Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR15.1.MG • LR16.1.MG
Description: The temperature at rack sensor 2 is outside the specified threshold.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmTemp2		
Remedial action: Check the air handling system for the rack and refer to Trap Details for more information.		

Table 27-1735 IK8557458

Alarm	Attributes	Applicable major release
Name: IK8557458 (9287) Type: environmentalAlarm Package: Img.IK8557458 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Fan-alarm Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR15.1.MG • LR16.1.MG
Description: The status of Fan 1 has changed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmFan1		
Remedial action: Refer to Trap Details for more information.		

Table 27-1736 IK8557459

Alarm	Attributes	Applicable major release
Name: IK8557459 (9288) Type: environmentalAlarm Package: Img.IK8557459 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Fan-alarm Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR15.1.MG • LR16.1.MG

Table 27-1736 IK8557459 (continued)

Alarm	Attributes	Applicable major release
Description: The status of Fan 2 has changed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmFan2		
Remedial action: Refer to Trap Details for more information.		

Table 27-1737 IK8557460

Alarm	Attributes	Applicable major release
Name: IK8557460 (9289) Type: equipmentAlarm Package: Img.IK8557460 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Voltage-alarm Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG • LR16.1.MG
Description: The AC voltage of the rack is outside the specified threshold.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmVoltage		
Remedial action: Check the incoming power source and ensure all cables are inserted correctly.		

Table 27-1738 IK8557461

Alarm	Attributes	Applicable major release
Name: IK8557461 (9290) Type: environmentalAlarm Package: Img.IK8557461 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Humidity-alarm Implicitly cleared: true Default probable cause: humidityUnacceptable	Release: • LR15.1.MG • LR16.1.MG
Description: The humidity of the rack is outside the specified threshold.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmHumidity		
Remedial action: Check the air handling system for the rack and refer to Trap Details for more information.		

Table 27-1739 IK8557462

Alarm	Attributes	Applicable major release
Name: IK8557462 (9291) Type: environmentalAlarm Package: Img.IK8557462 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Door/sidepanel-alarm Implicitly cleared: true Default probable cause: intrusionDetection	Release: • LR15.1.MG • LR16.1.MG
Description: The door or sidepanel of the rack has been opened (access point #1).\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmInput1		
Remedial action: Check for unauthorized intrusion and refer to Trap Details for more information.		

Table 27-1740 IK8557463

Alarm	Attributes	Applicable major release
Name: IK8557463 (9292) Type: environmentalAlarm Package: lmg.IK8557463 Raised on class: lmg.FilePrepare	Severity: warning Specific problem: Door/sidepanel-alarm Implicitly cleared: true Default probable cause: intrusionDetection	Release: • LR15.1.MG • LR16.1.MG
Description: The door or sidepanel of the rack has been opened (access point #2).\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmInput2		
Remedial action: Check for unauthorized intrusion and refer to Trap Details for more information.		

Table 27-1741 IK8557464

Alarm	Attributes	Applicable major release
Name: IK8557464 (9293) Type: environmentalAlarm Package: lmg.IK8557464 Raised on class: lmg.FilePrepare	Severity: warning Specific problem: Door/sidepanel-alarm Implicitly cleared: true Default probable cause: intrusionDetection	Release: • LR15.1.MG • LR16.1.MG
Description: The door or sidepanel of the rack has been opened (access point #3).\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmInput3		
Remedial action: Check for unauthorized intrusion and refer to Trap Details for more information.		

Table 27-1742 IK8557465

Alarm	Attributes	Applicable major release
Name: IK8557465 (9294) Type: environmentalAlarm Package: lmg.IK8557465 Raised on class: lmg.FilePrepare	Severity: warning Specific problem: Door/sidepanel-alarm Implicitly cleared: true Default probable cause: intrusionDetection	Release: • LR15.1.MG • LR16.1.MG
Description: The door or sidepanel of the rack has been opened (access point #4).\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmInput4		
Remedial action: Check for unauthorized intrusion and refer to Trap Details for more information.		

Table 27-1743 IK8557466

Alarm	Attributes	Applicable major release
Name: IK8557466 (9295) Type: processingErrorAlarm Package: lmg.IK8557466 Raised on class: lmg.FilePrepare	Severity: warning Specific problem: Door-locking-alarm Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR15.1.MG • LR16.1.MG

Table 27-1743 IK8557466 (continued)

Alarm	Attributes	Applicable major release
Description: Rack door lock #1 alarm.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmLock1		
Remedial action: Ensure the door is completely closed and check for unauthorized intrusion and refer to Trap Details for more information.		

Table 27-1744 IK8557467

Alarm	Attributes	Applicable major release
Name: IK8557467 (9296) Type: processingErrorAlarm Package: Img.IK8557467 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Door-locking-alarm Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR15.1.MG • LR16.1.MG
Description: Rack door lock #2 alarm.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmLock2		
Remedial action: Ensure the door is completely closed and check for unauthorized intrusion and refer to Trap Details for more information.		

Table 27-1745 IK8557468

Alarm	Attributes	Applicable major release
Name: IK8557468 (9297) Type: environmentalAlarm Package: Img.IK8557468 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Smoke-alarm Implicitly cleared: true Default probable cause: smoke	Release: • LR15.1.MG • LR16.1.MG
Description: The rack smoke detector has detected smoke.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmSmoke		
Remedial action: Investigate rack for an over temperature condition and refer to Trap Details for more information.		

Table 27-1746 IK8557469

Alarm	Attributes	Applicable major release
Name: IK8557469 (9298) Type: environmentalAlarm Package: Img.IK8557469 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Shock-alarm Implicitly cleared: true Default probable cause: excessiveVibration	Release: • LR15.1.MG • LR16.1.MG
Description: The rack shock detector has detected a vibration to the rack.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmShock		
Remedial action: Investigate rack.		

Table 27-1747 IK8557474

Alarm	Attributes	Applicable major release
Name: IK8557474 (9299) Type: processingErrorAlarm Package: lmg.IK8557474 Raised on class: lmg.FilePrepare	Severity: warning Specific problem: Door-locking-alarm of device Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR15.1.MG • LR16.1.MG
Description: The rack door locking device #1 has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmLock1Dev		
Remedial action: Check the device lock cable or failed battery and refer to Trap Details for more information.		

Table 27-1748 IK8557475

Alarm	Attributes	Applicable major release
Name: IK8557475 (9300) Type: processingErrorAlarm Package: lmg.IK8557475 Raised on class: lmg.FilePrepare	Severity: warning Specific problem: Door-locking-alarm of device Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR15.1.MG • LR16.1.MG
Description: The rack door locking device #2 has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmLock2Dev		
Remedial action: Check the device lock cable or failed battery and refer to Trap Details for more information.		

Table 27-1749 IK8557477

Alarm	Attributes	Applicable major release
Name: IK8557477 (9301) Type: processingErrorAlarm Package: lmg.IK8557477 Raised on class: lmg.FilePrepare	Severity: warning Specific problem: Corrected - uncorrectable Memory Errors - Replace Memory Module Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR15.1.MG • LR16.1.MG
Description: Corrected - uncorrected Memory Errors Detected The errors have been corrected, but the memory module should be replaced. Value 0 for CPU means memory is not Processor based\nAlarm is cleared by the system when the device is restarted.\ nReason: cpqHe5CorrMemReplaceMemModule		
Remedial action: Replace the failing memory module.		

Table 27-1750 IK8557478

Alarm	Attributes	Applicable major release
Name: IK8557478 (9302) Type: communicationsAlarm Package: lmg.IK8557478 Raised on class: lmg.FilePrepare	Severity: warning Specific problem: NIC Virus-like Activity Detected Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG • LR16.1.MG
Description: This alarm will be sent when the Virus Throttle Filter Driver detects virus like activity.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqNicVirusLikeActivityDetected		
Remedial action: The system reporting this trap requires immediate attention.		

Table 27-1751 IK8557479

Alarm	Attributes	Applicable major release
Name: IK8557479 (9303) Type: communicationsAlarm Package: lmg.IK8557479 Raised on class: lmg.FilePrepare	Severity: minor Specific problem: Server Blade e-keying failed Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG • LR16.1.MG
Description: The server blade e-keying has failed. This alarm signifies that a server blade e-keying has failed and there is a port mapping problem between a server mezz card and the interconnect.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerBladeEKeyingFailed		
Remedial action: Reconfigure server blade mezz cards.		

Table 27-1752 IK8557481

Alarm	Attributes	Applicable major release
Name: IK8557481 (10612) Type: processingErrorAlarm Package: lmg.IK8557481 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: The primary controller in the subsytem has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: The primary controller in the subsystem has failed. Details: The primary Controller has failed.		
Remedial action: No action is required.		

Table 27-1753 IK8557482

Alarm	Attributes	Applicable major release
Name: IK8557482 (10613) Type: processingErrorAlarm Package: Img.IK8557482 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: The secondary controller in the subsytem has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: The secondary controller in the subsystem has failed. Details: The secondary controller has failed.		
Remedial action: No action is required.		

Table 27-1754 IK8557483

Alarm	Attributes	Applicable major release
Name: IK8557483 (10614) Type: processingErrorAlarm Package: Img.IK8557483 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: A RAIDset has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A RAIDset has failed. Details: The RAIDset has failed and is off-line.		
Remedial action: No action is required.		

Table 27-1755 IK8557484

Alarm	Attributes	Applicable major release
Name: IK8557484 (10615) Type: processingErrorAlarm Package: Img.IK8557484 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: A RAIDset has become degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A RAIDset has become degraded. Details: A RAIDset has become degraded due to a member disk device failure.		
Remedial action: No action is required.		

Table 27-1756 IK8557485

Alarm	Attributes	Applicable major release
Name: IK8557485 (10616) Type: processingErrorAlarm Package: Img.IK8557485 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: A disk drive has failed Implicitly cleared: true Default probable cause: storageCapacityProblem	Release: • LR16.1.MG
Description: A disk drive has failed. Details: A disk device has failed.		
Remedial action: No action is required.		

Table 27-1757 IK8557486

Alarm	Attributes	Applicable major release
Name: IK8557486 (10617) Type: processingErrorAlarm Package: Img.IK8557486 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Fan has failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: Fan has failed. Details: One of the cooling fans in the primary enclosure has failed.		
Remedial action: No action is required.		

Table 27-1758 IK8557487

Alarm	Attributes	Applicable major release
Name: IK8557487 (10618) Type: processingErrorAlarm Package: Img.IK8557487 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Power supply has failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power supply has failed. Details: One of the power supplies in the primary enclosure has failed.		
Remedial action: No action is required.		

Table 27-1759 IK8557488

Alarm	Attributes	Applicable major release
Name: IK8557488 (10619) Type: processingErrorAlarm Package: Img.IK8557488 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Primary enclosure temperature warning Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Primary enclosure temperature warning. Details: The temperature in the primary enclosure has triggered a warning condition detected by the controller.		
Remedial action: No action is required.		

Table 27-1760 IK8557489

Alarm	Attributes	Applicable major release
Name: IK8557489 (10620) Type: processingErrorAlarm Package: Img.IK8557489 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Fan has failed in expansion cabinet Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: Fan has failed in expansion cabinet. Details: One of the cooling fans in the expansion cabinet has failed.		

Table 27-1760 IK8557489 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-1761 IK8557490

Alarm	Attributes	Applicable major release
Name: IK8557490 (10621) Type: processingErrorAlarm Package: lmg.IK8557490 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Power supply has failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power supply has failed. Details: One of the power supplies in the expansion cabinet has failed.		
Remedial action: No action is required.		

Table 27-1762 IK8557491

Alarm	Attributes	Applicable major release
Name: IK8557491 (10622) Type: processingErrorAlarm Package: lmg.IK8557491 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Expansion cabinet temperature warning Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR16.1.MG
Description: Expansion cabinet temperature warning. Details: The temperature in the expansion cabinet has triggered a warning condition detected by the controller.		
Remedial action: No action is required.		

Table 27-1763 IK8557500

Alarm	Attributes	Applicable major release
Name: IK8557500 (10623) Type: processingErrorAlarm Package: lmg.IK8557500 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Cluster Node Degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: This event will be sent any time the condition of a node in the cluster becomes degraded.		
Remedial action: No action is required.		

Table 27-1764 IK8557501

Alarm	Attributes	Applicable major release
Name: IK8557501 (10624) Type: processingErrorAlarm Package: Img.IK8557501 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Cluster Node Failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: This event will be sent any time the condition of a node in the cluster becomes failed.		
Remedial action: No action is required.		

Table 27-1765 IK8557502

Alarm	Attributes	Applicable major release
Name: IK8557502 (10625) Type: processingErrorAlarm Package: Img.IK8557502 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Cluster Resource Degraded Implicitly cleared: true Default probable cause: underlyingResourceUnavail-able	Release: • LR16.1.MG
Description: This event will be sent any time the condition of a cluster resource becomes degraded.		
Remedial action: No action is required.		

Table 27-1766 IK8557503

Alarm	Attributes	Applicable major release
Name: IK8557503 (10626) Type: processingErrorAlarm Package: Img.IK8557503 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Cluster Resource Failed Implicitly cleared: true Default probable cause: underlyingResourceUnavail-able	Release: • LR16.1.MG
Description: This event will be sent any time the condition of a cluster resource becomes failed.		
Remedial action: No action is required.		

Table 27-1767 IK8557504

Alarm	Attributes	Applicable major release
Name: IK8557504 (10627) Type: processingErrorAlarm Package: Img.IK8557504 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Cluster Network Degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: This event will be sent any time the condition of a cluster network becomes degraded.		

Table 27-1767 IK8557504 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-1768 IK8557505

Alarm	Attributes	Applicable major release
Name: IK8557505 (10628) Type: processingErrorAlarm Package: lmg.IK8557505 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Cluster Network Failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: This event will be sent any time the condition of a cluster network becomes failed.		
Remedial action: No action is required.		

Table 27-1769 IK8557508

Alarm	Attributes	Applicable major release
Name: IK8557508 (10629) Type: processingErrorAlarm Package: lmg.IK8557508 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: External Array Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: External Array Accelerator Board Bad Data. This event signifies that the agent has detected a Array Accelerator Cache Board that has lost battery power. If data was being stored in the accelerator memory when the system lost power, that data has been lost.		
Remedial action: No action is required.		

Table 27-1770 IK8557509

Alarm	Attributes	Applicable major release
Name: IK8557509 (10630) Type: processingErrorAlarm Package: lmg.IK8557509 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: External Array Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG
Description: External Array Accelerator Board Battery Failed. This event signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.		
Remedial action: No action is required.		

Table 27-1771 IK8557510

Alarm	Attributes	Applicable major release
Name: IK8557510 (10631) Type: processingErrorAlarm Package: Img.IK8557510 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: External Array Redundant Controller Active Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: External Array Redundant Controller Active. This event signifies that the Storage Agent has detected that a backup array controller in a duplexed pair has switched over to the active role. The variable cpqFcaCntlrBoxIoSlot indicates the new active controller index.		
Remedial action: No action is required.		

Table 27-1772 IK8557511

Alarm	Attributes	Applicable major release
Name: IK8557511 (10632) Type: processingErrorAlarm Package: Img.IK8557511 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: External Array Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: External Array Accelerator Board Bad Data. This event signifies that the agent has detected a Array Accelerator Cache Board that has lost battery power. If data was being stored in the accelerator memory when the system lost power, that data has been lost.		
Remedial action: No action is required.		

Table 27-1773 IK8557512

Alarm	Attributes	Applicable major release
Name: IK8557512 (10633) Type: processingErrorAlarm Package: Img.IK8557512 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: External Array Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG
Description: External Array Accelerator Board Battery Failed. This event signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.		
Remedial action: No action is required.		

Table 27-1774 IK8557513

Alarm	Attributes	Applicable major release
Name: IK8557513 (10634) Type: processingErrorAlarm Package: Img.IK8557513 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: POST Errors Occurred Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process. Details of the POST error messages can be found in Integrated Management Log		
Remedial action: No action is required.		

Table 27-1775 IK8557514

Alarm	Attributes	Applicable major release
Name: IK8557514 (10635) Type: processingErrorAlarm Package: Img.IK8557514 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Server Power Supply Degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The fault tolerant power supply sub-system condition has been set to degraded.		
Remedial action: No action is required.		

Table 27-1776 IK8557515

Alarm	Attributes	Applicable major release
Name: IK8557515 (10636) Type: processingErrorAlarm Package: Img.IK8557515 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Fan Degraded Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: The Fault Tolerant Fan condition has been set to degraded for the specified chassis and fan.		
Remedial action: No action is required.		

Table 27-1777 IK8557516

Alarm	Attributes	Applicable major release
Name: IK8557516 (10637) Type: processingErrorAlarm Package: Img.IK8557516 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Fan Failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: The Fault Tolerant Fan condition has been set to failed for the specified chassis and fan.		
Remedial action: No action is required.		

Table 27-1778 IK8557517

Alarm	Attributes	Applicable major release
Name: IK8557517 (10638) Type: processingErrorAlarm Package: Img.IK8557517 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Power Converter Degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The DC-DC Power Converter condition has been set to degraded for the specified chassis, slot and socket.		
Remedial action: No action is required.		

Table 27-1779 IK8557518

Alarm	Attributes	Applicable major release
Name: IK8557518 (10639) Type: processingErrorAlarm Package: Img.IK8557518 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Power Converter Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The DC-DC Power Converter condition has been set to failed for the specified chassis, slot and socket.		
Remedial action: No action is required.		

Table 27-1780 IK8557519

Alarm	Attributes	Applicable major release
Name: IK8557519 (10640) Type: processingErrorAlarm Package: Img.IK8557519 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Power Converter Redundancy Lost Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The DC-DC Power Converters have lost redundancy for the specified chassis.		
Remedial action: No action is required.		

Table 27-1781 IK8557520

Alarm	Attributes	Applicable major release
Name: IK8557520 (10641) Type: processingErrorAlarm Package: Img.IK8557520 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Cache Accel Parity Errors may require a module Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • LR16.1.MG
Description: A cache accelerator parity error indicates a cache module needs to be replaced. The error information is reported in the variable cpqHeEventLogErrorDesc.		

Table 27-1781 IK8557520 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-1782 IK8557521

Alarm	Attributes	Applicable major release
Name: IK8557521 (10642) Type: processingErrorAlarm Package: Img.IK8557521 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Online Spare Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Advanced Memory Protection Online Spare Engaged. The Advanced Memory Protection subsystem has detected a memory fault. The Online Spare Memory has been activated.		
Remedial action: No action is required.		

Table 27-1783 IK8557522

Alarm	Attributes	Applicable major release
Name: IK8557522 (10643) Type: processingErrorAlarm Package: Img.IK8557522 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Mirrored Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Advanced Memory Protection Mirrored Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. Mirrored Memory has been activated.		
Remedial action: No action is required.		

Table 27-1784 IK8557523

Alarm	Attributes	Applicable major release
Name: IK8557523 (10644) Type: processingErrorAlarm Package: Img.IK8557523 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Advanced ECC Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Advanced Memory Protection Advanced ECC Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. Advanced ECC has been activated.		
Remedial action: No action is required.		

Table 27-1785 IK8557524

Alarm	Attributes	Applicable major release
Name: IK8557524 (10645) Type: processingErrorAlarm Package: Img.IK8557524 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Advanced XOR Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Advanced Memory Protection XOR Engine Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. The XOR engine has been activated.		
Remedial action: No action is required.		

Table 27-1786 IK8557525

Alarm	Attributes	Applicable major release
Name: IK8557525 (10646) Type: processingErrorAlarm Package: Img.IK8557525 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Memory Board or Cartridge Removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Memory board or cartridge removed. An Advanced Memory Protection sub-system board or cartridge has been removed from the system.		
Remedial action: No action is required.		

Table 27-1787 IK8557526

Alarm	Attributes	Applicable major release
Name: IK8557526 (10647) Type: processingErrorAlarm Package: Img.IK8557526 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Memory Board or Cartridge Bus Error Detected Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Memory board or cartridge bus error detected. An Advanced Memory Protection sub-system board or cartridge bus error has been detected.		
Remedial action: No action is required.		

Table 27-1788 IK8557527

Alarm	Attributes	Applicable major release
Name: IK8557527 (10648) Type: processingErrorAlarm Package: Img.IK8557527 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Management processor failed reset Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: The Management processor failed reset The management processor was not successfully reset and is not operational.		
Remedial action: No action is required.		

Table 27-1789 IK8557528

Alarm	Attributes	Applicable major release
Name: IK8557528 (10649) Type: processingErrorAlarm Package: Img.IK8557528 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Memory Board or Cartridge or Riser Removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Memory board or cartridge or riser removed. An Advanced Memory Protection sub-system board or cartridge or riser has been removed from the system. Value 0 for CPU means memory is not processor based.		
Remedial action: No action is required.		

Table 27-1790 IK8557529

Alarm	Attributes	Applicable major release
Name: IK8557529 (10650) Type: processingErrorAlarm Package: Img.IK8557529 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Memory Board or Cartridge or Riser Bus Error Detected Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Memory board or cartridge or Riser bus error detected. An Advanced Memory Protection sub-system board or cartridge or Riser bus error has been detected. Value 0 for CPU means memory is not processor based.		
Remedial action: No action is required.		

Table 27-1791 IK8557530

Alarm	Attributes	Applicable major release
Name: IK8557530 (10651) Type: processingErrorAlarm Package: Img.IK8557530 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Advanced LockStep Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Advanced Memory Protection LockStep Engine Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. The LockStep engine has been activated.		
Remedial action: No action is required.		

Table 27-1792 IK8557531

Alarm	Attributes	Applicable major release
Name: IK8557531 (10652) Type: processingErrorAlarm Package: Img.IK8557531 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG
Description: This event will be sent any time the configured redundant NIC becomes the active NIC.		
Remedial action: No action is required.		

Table 27-1793 IK8557532

Alarm	Attributes	Applicable major release
Name: IK8557532 (10653) Type: processingErrorAlarm Package: Img.IK8557532 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Critical Software update Notification Trap Implicitly cleared: true Default probable cause: softwareProgramError	Release: • LR16.1.MG
Description: This event is a send to the user to notify him of a Critical Software Update.		
Remedial action: No action is required.		

Table 27-1794 IK8557533

Alarm	Attributes	Applicable major release
Name: IK8557533 (10654) Type: processingErrorAlarm Package: Img.IK8557533 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Duplex Controller Active Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG

Table 27-1794 IK8557533 (continued)

Alarm	Attributes	Applicable major release
Description: Controller Active. This event signifies that the agent has detected that a backup array controller in a duplexed pair has switched over to the active role. The variable cpqDaCntlrSlot indicates the active controller slot and cpqDaCntlrPartnerSlot indicates the backup.		
Remedial action: No action is required.		

Table 27-1795 IK8557534

Alarm	Attributes	Applicable major release
Name: IK8557534 (10655) Type: processingErrorAlarm Package: lmg.IK8557534 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Physical Drive Threshold Passed. This event signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.		
Remedial action: No action is required.		

Table 27-1796 IK8557535

Alarm	Attributes	Applicable major release
Name: IK8557535 (10656) Type: processingErrorAlarm Package: lmg.IK8557535 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Accelerator Board Bad Data. This event signifies that the agent has detected an array accelerator cache board that has lost battery power. If data was being stored in the accelerator cache memory when the server lost power, that data has been lost.		
Remedial action: No action is required.		

Table 27-1797 IK8557536

Alarm	Attributes	Applicable major release
Name: IK8557536 (10657) Type: processingErrorAlarm Package: lmg.IK8557536 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG
Description: Accelerator Board Battery Failed. This event signifies that the agent has detected a battery failure associated with the array accelerator cache board.		
Remedial action: No action is required.		

Table 27-1798 IK8557537

Alarm	Attributes	Applicable major release
Name: IK8557537 (10658) Type: processingErrorAlarm Package: Img.IK8557537 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Physical Drive Threshold Passed. This event signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.		
Remedial action: No action is required.		

Table 27-1799 IK8557538

Alarm	Attributes	Applicable major release
Name: IK8557538 (10659) Type: processingErrorAlarm Package: Img.IK8557538 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Physical Drive Threshold Passed. This event signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.		
Remedial action: No action is required.		

Table 27-1800 IK8557539

Alarm	Attributes	Applicable major release
Name: IK8557539 (10660) Type: processingErrorAlarm Package: Img.IK8557539 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Cache Module Board Bad Data. This event signifies that the agent has detected a cache module board that has lost backup power. If data was being stored in the cache module memory when the server lost power, that data has been lost. The backup power source is indicated by cpqDaAccelBackupPowerSource.		
Remedial action: No action is required.		

Table 27-1801 IK8557540

Alarm	Attributes	Applicable major release
Name: IK8557540 (10661) Type: processingErrorAlarm Package: Img.IK8557540 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG

Table 27-1801 IK8557540 (continued)

Alarm	Attributes	Applicable major release
Description: Cache Module Board Backup Power Source Failed. This event signifies that the agent has detected a backup power source failure associated with the cache module board. The backup power source is indicated by cpqDaAccelBackupPowerSource.		
Remedial action: No action is required.		

Table 27-1802 IK8557541

Alarm	Attributes	Applicable major release
Name: IK8557541 (10662) Type: processingErrorAlarm Package: Img.IK8557541 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Tape Drive Cleaning Required Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG
Description: Tape Drive Cleaning Required trap. The agent has detected a tape drive that needs to have a cleaning tape inserted and run. This will cause the tape drive heads to be cleaned.		
Remedial action: No action is required.		

Table 27-1803 IK8557542

Alarm	Attributes	Applicable major release
Name: IK8557542 (10663) Type: processingErrorAlarm Package: Img.IK8557542 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Tape Drive Cleaning Tape Needs Replacing Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape.		
Remedial action: No action is required.		

Table 27-1804 IK8557543

Alarm	Attributes	Applicable major release
Name: IK8557543 (10664) Type: processingErrorAlarm Package: Img.IK8557543 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: IDE Drive Ultra ATA Degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: An IDE drive detects an excessive number of Ultra ATA data transmission errors between the hard drive and the processor.		
Remedial action: No action is required.		

Table 27-1805 IK8557545

Alarm	Attributes	Applicable major release
Name: IK8557545 (10665) Type: processingErrorAlarm Package: lmg.IK8557545 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: NIC Connectivity Lost Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG
Description: This event will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.		
Remedial action: No action is required.		

Table 27-1806 IK8557546

Alarm	Attributes	Applicable major release
Name: IK8557546 (10666) Type: processingErrorAlarm Package: lmg.IK8557546 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Enclosure fan failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: The enclosure fan status has been set to failed. This event signifies that an enclosure fan has failed and no other fans in the redundant fan group are operating. This may result in overheating of the enclosure.		
Remedial action: No action is required.		

Table 27-1807 IK8557547

Alarm	Attributes	Applicable major release
Name: IK8557547 (10667) Type: processingErrorAlarm Package: lmg.IK8557547 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Enclosure fan degraded Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: The enclosure fan status has been set to degraded. This event signifies that an enclosure fan has failed but other fans in the redundant fan group are still operating. This may result in overheating of the enclosure.		
Remedial action: No action is required.		

Table 27-1808 IK8557548

Alarm	Attributes	Applicable major release
Name: IK8557548 (10668) Type: processingErrorAlarm Package: Img.IK8557548 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Rack power supply failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The power supply status has been set to failed. This event signifies that a power supply has failed.		
Remedial action: No action is required.		

Table 27-1809 IK8557549

Alarm	Attributes	Applicable major release
Name: IK8557549 (10669) Type: processingErrorAlarm Package: Img.IK8557549 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Rack power supply degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The power supply status has been set to degraded. This event signifies that a power supply has degraded.		
Remedial action: No action is required.		

Table 27-1810 IK8557550

Alarm	Attributes	Applicable major release
Name: IK8557550 (10670) Type: processingErrorAlarm Package: Img.IK8557550 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Rack power subsystem not redundant Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The rack power subsystem is no longer in a redundant state.		
Remedial action: No action is required.		

Table 27-1811 IK8557551

Alarm	Attributes	Applicable major release
Name: IK8557551 (10671) Type: processingErrorAlarm Package: Img.IK8557551 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Rack power supply input voltage problem Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The rack power supply detected an input line voltage problem.		

Table 27-1811 IK8557551 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-1812 IK8557552

Alarm	Attributes	Applicable major release
Name: IK8557552 (10672) Type: processingErrorAlarm Package: Img.IK8557552 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Rack power subsystem overload condition Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The rack power subsystem overload condition.		
Remedial action: No action is required.		

Table 27-1813 IK8557553

Alarm	Attributes	Applicable major release
Name: IK8557553 (10673) Type: processingErrorAlarm Package: Img.IK8557553 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Server shutdown due to power shedding Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Server shutdown due to power shedding. The server blade was shutdown due to a lack of power.		
Remedial action: No action is required.		

Table 27-1814 IK8557554

Alarm	Attributes	Applicable major release
Name: IK8557554 (10674) Type: processingErrorAlarm Package: Img.IK8557554 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Server power on prevented to preserve redundancy Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Server power on prevented to preserve redundancy. There is not enough power to power on the server blade and maintain redundancy for the other blades in the enclosure.		
Remedial action: No action is required.		

Table 27-1815 IK8557555

Alarm	Attributes	Applicable major release
Name: IK8557555 (10675) Type: processingErrorAlarm Package: Img.IK8557555 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade.		
Remedial action: No action is required.		

Table 27-1816 IK8557556

Alarm	Attributes	Applicable major release
Name: IK8557556 (10676) Type: processingErrorAlarm Package: Img.IK8557556 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The server enclosure micro-controller was not found.		
Remedial action: No action is required.		

Table 27-1817 IK8557557

Alarm	Attributes	Applicable major release
Name: IK8557557 (10677) Type: processingErrorAlarm Package: Img.IK8557557 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The power enclosure micro-controller was not found.		
Remedial action: No action is required.		

Table 27-1818 IK8557558

Alarm	Attributes	Applicable major release
Name: IK8557558 (10678) Type: processingErrorAlarm Package: Img.IK8557558 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Fuse open Implicitly cleared: true Default probable cause: enclosureDoorOpen	Release: • LR16.1.MG
Description: Fuse open. The fuse has been tripped.		

Table 27-1818 IK8557558 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-1819 IK8557559

Alarm	Attributes	Applicable major release
Name: IK8557559 (10679) Type: processingErrorAlarm Package: Img.IK8557559 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Power subsystem not load balanced Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power subsystem not load balanced. The power subsystem is out of balance for this power enclosure.		
Remedial action: No action is required.		

Table 27-1820 IK8557560

Alarm	Attributes	Applicable major release
Name: IK8557560 (10680) Type: processingErrorAlarm Package: Img.IK8557560 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Power subsystem DC power problem Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power subsystem DC power problem. There is a power subsystem DC power problem for this power enclosure.		
Remedial action: No action is required.		

Table 27-1821 IK8557561

Alarm	Attributes	Applicable major release
Name: IK8557561 (10681) Type: processingErrorAlarm Package: Img.IK8557561 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Power subsystem AC facility input power exceeded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power subsystem AC facility input power exceeded. There is a power subsystem Power subsystem AC facility input power exceeded for this power enclosure.		
Remedial action: No action is required.		

Table 27-1822 IK8557562

Alarm	Attributes	Applicable major release
Name: IK8557562 (10682) Type: processingErrorAlarm Package: lmg.IK8557562 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Unknown power consumption Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Unknown power consumption. There is an unknown power consumer drawing power.		
Remedial action: No action is required.		

Table 27-1823 IK8557563

Alarm	Attributes	Applicable major release
Name: IK8557563 (10683) Type: processingErrorAlarm Package: lmg.IK8557563 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Power subsystem load balancing wire missing Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power subsystem load balancing wire missing. The power subsystem load balancing wire missing.		
Remedial action: No action is required.		

Table 27-1824 IK8557564

Alarm	Attributes	Applicable major release
Name: IK8557564 (10684) Type: processingErrorAlarm Package: lmg.IK8557564 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Power subsystem has too may power enclosures Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power subsystem has too may power enclosures. The maximum number of power enclosures has been exceeded.		
Remedial action: No action is required.		

Table 27-1825 IK8557565

Alarm	Attributes	Applicable major release
Name: IK8557565 (10685) Type: processingErrorAlarm Package: lmg.IK8557565 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Power subsystem improperly configured Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG

Table 27-1825 IK8557565 (continued)

Alarm	Attributes	Applicable major release
Description: Power subsystem improperly configured. The power subsystem has been improperly configured.		
Remedial action: No action is required.		

Table 27-1826 IK8557566

Alarm	Attributes	Applicable major release
Name: IK8557566 (10686) Type: processingErrorAlarm Package: Img.IK8557566 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Server blade health status degraded Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR16.1.MG
Description: Server blade health status Degraded. The server blade health status has changed to Degraded.		
Remedial action: No action is required.		

Table 27-1827 IK8557567

Alarm	Attributes	Applicable major release
Name: IK8557567 (10687) Type: processingErrorAlarm Package: Img.IK8557567 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Server blade not responding to group capping requests Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: The server blade is not responding to the group capper. The server blade is not responding to capping requests from the enclosure group capper		
Remedial action: No action is required.		

Table 27-1828 IK8557568

Alarm	Attributes	Applicable major release
Name: IK8557568 (10688) Type: processingErrorAlarm Package: Img.IK8557568 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Server blade unexpected shutdown Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Server blade shutdown unexpectadly. An unexpected shutdown event has occurred for this server blade.		
Remedial action: No action is required.		

Table 27-1829 IK8557569

Alarm	Attributes	Applicable major release
Name: IK8557569 (10689) Type: processingErrorAlarm Package: Img.IK8557569 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Generic Power Subsystem EAE Minor trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: FlexFabric Cmdr Power Subsystem Minor trap.		
Remedial action: No action is required.		

Table 27-1830 IK8557570

Alarm	Attributes	Applicable major release
Name: IK8557570 (10690) Type: processingErrorAlarm Package: Img.IK8557570 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Generic Power Subsystem EAE Major trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: FlexFabric Cmdr Power Subsystem Major trap.		
Remedial action: No action is required.		

Table 27-1831 IK8557571

Alarm	Attributes	Applicable major release
Name: IK8557571 (10691) Type: processingErrorAlarm Package: Img.IK8557571 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Generic Power Subsystem EAE Critical trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: FlexFabric Cmdr Power Subsystem Critical trap.		
Remedial action: No action is required.		

Table 27-1832 IK8557572

Alarm	Attributes	Applicable major release
Name: IK8557572 (10692) Type: processingErrorAlarm Package: Img.IK8557572 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Generic WSMAN Major trap Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG

Table 27-1832 IK8557572 (continued)

Alarm	Attributes	Applicable major release
Description: WSMAN Major trap		
Remedial action: No action is required.		

Table 27-1833 IK8557573

Alarm	Attributes	Applicable major release
Name: IK8557573 (10693) Type: processingErrorAlarm Package: Img.IK8557573 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Generic WSMAN Critical trap Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: WSMAN Critical trap		
Remedial action: No action is required.		

Table 27-1834 IK8557574

Alarm	Attributes	Applicable major release
Name: IK8557574 (10694) Type: processingErrorAlarm Package: Img.IK8557574 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Device Connected Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG
Description: A UPS device is reporting a Connection Lost due to one of the following. 1. The serial cable connected to the UPS has been unplugged. 2. The Network cable connected to the UPS has been unplugged.		
Remedial action: No action is required.		

Table 27-1835 IK8557575

Alarm	Attributes	Applicable major release
Name: IK8557575 (10695) Type: processingErrorAlarm Package: Img.IK8557575 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Connection Lost Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG
Description: A UPS device is reporting a Connection Lost due to one of the following. 1. The serial cable connected to the UPS has been unplugged. 2. The Network cable connected to the UPS has been unplugged.		
Remedial action: No action is required.		

Table 27-1836 IK8557576

Alarm	Attributes	Applicable major release
Name: IK8557576 (10696) Type: processingErrorAlarm Package: Img.IK8557576 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: UPS Input Voltage Normal Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting input voltage is out of range.		
Remedial action: No action is required.		

Table 27-1837 IK8557577

Alarm	Attributes	Applicable major release
Name: IK8557577 (10697) Type: processingErrorAlarm Package: Img.IK8557577 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: UPS Output Voltage Normal Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting output voltage is out of Range.		
Remedial action: No action is required.		

Table 27-1838 IK8557578

Alarm	Attributes	Applicable major release
Name: IK8557578 (10698) Type: processingErrorAlarm Package: Img.IK8557578 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: UPS Battery Level Normal Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting low battery.		
Remedial action: No action is required.		

Table 27-1839 IK8557579

Alarm	Attributes	Applicable major release
Name: IK8557579 (10699) Type: processingErrorAlarm Package: Img.IK8557579 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: UPS On Battery Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting on battery condition.		
Remedial action: No action is required.		

Table 27-1840 IK8557580

Alarm	Attributes	Applicable major release
Name: IK8557580 (10700) Type: processingErrorAlarm Package: Img.IK8557580 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: UPS On Buck Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting an On Buck condition due to the following. 1. Utility power has increased above recommended utility input levels.		
Remedial action: No action is required.		

Table 27-1841 IK8557581

Alarm	Attributes	Applicable major release
Name: IK8557581 (10701) Type: processingErrorAlarm Package: Img.IK8557581 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: UPS On Boost Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting an On Boost condition due to the following. 1. Utility power has dropped below recommended utility input levels.		
Remedial action: No action is required.		

Table 27-1842 IK8557582

Alarm	Attributes	Applicable major release
Name: IK8557582 (10702) Type: processingErrorAlarm Package: Img.IK8557582 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: UPS On Utility Power Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting on battery condition.		
Remedial action: No action is required.		

Table 27-1843 IK8557583

Alarm	Attributes	Applicable major release
Name: IK8557583 (10703) Type: processingErrorAlarm Package: Img.IK8557583 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: UPS Temperature Normal Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR16.1.MG
Description: A UPS device is reporting temperature is out of range.		

Table 27-1843 IK8557583 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-1844 IK8557584

Alarm	Attributes	Applicable major release
Name: IK8557584 (10704) Type: processingErrorAlarm Package: lmg.IK8557584 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: UPS Diagnostic Test Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting a diagnostic test failed.		
Remedial action: No action is required.		

Table 27-1845 IK8557585

Alarm	Attributes	Applicable major release
Name: IK8557585 (10705) Type: processingErrorAlarm Package: lmg.IK8557585 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: UPS Diagnostic Test Succeeded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting a diagnostic test failed.		
Remedial action: No action is required.		

Table 27-1846 IK8557586

Alarm	Attributes	Applicable major release
Name: IK8557586 (10706) Type: processingErrorAlarm Package: lmg.IK8557586 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Site Wiring Fault Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A UPS device is reporting a fault in the input wiring, other than Phase Rotation: e.g., Ground/Neutral reversed.		
Remedial action: No action is required.		

Table 27-1847 IK8557587

Alarm	Attributes	Applicable major release
Name: IK8557587 (10707) Type: processingErrorAlarm Package: Img.IK8557587 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Site Wiring Fault Cleared Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A UPS device is reporting a fault in the input wiring, other than Phase Rotation: e.g., Ground/Neutral reversed.		
Remedial action: No action is required.		

Table 27-1848 IK8557588

Alarm	Attributes	Applicable major release
Name: IK8557588 (10708) Type: processingErrorAlarm Package: Img.IK8557588 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: The UPS is no longer on manual bypass Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is operating in manual bypass mode.		
Remedial action: No action is required.		

Table 27-1849 IK8557589

Alarm	Attributes	Applicable major release
Name: IK8557589 (10709) Type: processingErrorAlarm Package: Img.IK8557589 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: The UPS is on manual bypass Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is operating in manual bypass mode.		
Remedial action: No action is required.		

Table 27-1850 IK8557590

Alarm	Attributes	Applicable major release
Name: IK8557590 (10710) Type: processingErrorAlarm Package: Img.IK8557590 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Output voltage is out of range Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting output voltage is out of Range.		
Remedial action: No action is required.		

Table 27-1851 IK8557591

Alarm	Attributes	Applicable major release
Name: IK8557591 (10711) Type: processingErrorAlarm Package: Img.IK8557591 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Emergency Power Off activated Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting an Emergency Power Off (EPO) command has been received to shutdown the UPS immediately with out delay. This command may come from a local control panel or from a remote source.		
Remedial action: No action is required.		

Table 27-1852 IK8557592

Alarm	Attributes	Applicable major release
Name: IK8557592 (10712) Type: processingErrorAlarm Package: Img.IK8557592 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Warning Alarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A warning alarm has occurred.		
Remedial action: No action is required.		

Table 27-1853 IK8557593

Alarm	Attributes	Applicable major release
Name: IK8557593 (10713) Type: processingErrorAlarm Package: Img.IK8557593 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Tape Drive Cleaning Required Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG
Description: Tape Drive Cleaning Required trap. The agent has detected a tape drive that needs to have a cleaning tape inserted and run. This will cause the tape drive heads to be cleaned.		
Remedial action: No action is required.		

Table 27-1854 IK8557594

Alarm	Attributes	Applicable major release
Name: IK8557594 (10714) Type: processingErrorAlarm Package: Img.IK8557594 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Tape Drive Cleaning Tape Needs Replacing Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG

Table 27-1854 IK8557594 (continued)

Alarm	Attributes	Applicable major release
Description: Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape.		
Remedial action: No action is required.		

Table 27-1855 IK8557595

Alarm	Attributes	Applicable major release
Name: IK8557595 (10715) Type: processingErrorAlarm Package: lmg.IK8557595 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Tape Library Door Opened Implicitly cleared: true Default probable cause: enclosureDoorOpen	Release: • LR16.1.MG
Description: Tape Library Door Open The agent has detected that the door on an autoloader is open so the unit is not operational.		
Remedial action: No action is required.		

Table 27-1856 IK8557596

Alarm	Attributes	Applicable major release
Name: IK8557596 (10716) Type: processingErrorAlarm Package: lmg.IK8557596 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: System hood is removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: System hood is removed. The hood status has been set to removed. The system's hood is not in a properly installed state. This situation may result in improper cooling of the system due to air flow changes caused by the missing hood.		
Remedial action: No action is required.		

Table 27-1857 IK8557597

Alarm	Attributes	Applicable major release
Name: IK8557597 (10717) Type: processingErrorAlarm Package: lmg.IK8557597 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Excessive Correctable Memory Errors Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Correctable memory error count has exceeded the threshold for the memory module indicated by the 'cpqSiMemErrorIndex' variable. The appropriate cpqSiMemModuleECCStatus has been set to degraded.		
Remedial action: No action is required.		

Table 27-1858 IK8557598

Alarm	Attributes	Applicable major release
Name: IK8557598 (10718) Type: processingErrorAlarm Package: lmg.IK8557598 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Memory modules have changed Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: A memory configuration change has occurred. CpqSiMemConfigChangeData will indicate which memory modules slots have changed.		
Remedial action: No action is required.		

Table 27-1859 IK8557599

Alarm	Attributes	Applicable major release
Name: IK8557599 (10719) Type: processingErrorAlarm Package: lmg.IK8557599 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Hot Plug Slot Board Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Hot Plug Slot Board Failed Power-Up. A Hot Plug Slot Board has failed to power-up in the specified chassis and slot.		
Remedial action: No action is required.		

Table 27-1860 IK8557600

Alarm	Attributes	Applicable major release
Name: IK8557600 (10720) Type: processingErrorAlarm Package: lmg.IK8557600 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Battery Failure Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG
Description: The battery indicated by cpqSiSysBatteryIndex has failed and must be replaced.		
Remedial action: No action is required.		

Table 27-1861 IK8557601

Alarm	Attributes	Applicable major release
Name: IK8557601 (10721) Type: processingErrorAlarm Package: lmg.IK8557601 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Battery Charging Degradation Implicitly cleared: true Default probable cause: lowBatteryThreshold	Release: • LR16.1.MG
Description: Significant battery degradation has occurred with battery indicated by cpqSiSysBatteryIndex. The battery can no longer be fully recharged.		

Table 27-1861 IK8557601 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-1862 IK8557602

Alarm	Attributes	Applicable major release
Name: IK8557602 (10722) Type: processingErrorAlarm Package: Img.IK8557602 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Battery Calibration Error Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG
Description: Calibration is needed with battery indicated by cpqSiSysBatteryIndex. The battery can not correctly indicate capacity.		
Remedial action: No action is required.		

Table 27-1863 IK8557603

Alarm	Attributes	Applicable major release
Name: IK8557603 (10723) Type: processingErrorAlarm Package: Img.IK8557603 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Server Power Outage Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Server Power Outage. The Remote Insight/ Integrated Lights-Out firmware has detected server power failure.		
Remedial action: No action is required.		

Table 27-1864 IK8557604

Alarm	Attributes	Applicable major release
Name: IK8557604 (10724) Type: processingErrorAlarm Package: Img.IK8557604 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Storage System Temperature Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR16.1.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.		
Remedial action: No action is required.		

Table 27-1865 IK8557605

Alarm	Attributes	Applicable major release
Name: IK8557605 (10725) Type: processingErrorAlarm Package: Img.IK8557605 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Storage System Temp Degraded Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR16.1.MG
Description: Storage System temperature degraded. The agent has detected a temperature status that has been set to degraded. The storage system's temperature is outside of the normal operating range.		
Remedial action: No action is required.		

Table 27-1866 IK8557606

Alarm	Attributes	Applicable major release
Name: IK8557606 (10726) Type: processingErrorAlarm Package: Img.IK8557606 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Storage System side panel is removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Storage System side panel is removed. The side panel status has been set to removed. The storage system's side panel is not in a properly installed state. This situation may result in improper cooling of the drives in the storage system due to air flow changes caused by the missing side panel.		
Remedial action: No action is required.		

Table 27-1867 IK8557607

Alarm	Attributes	Applicable major release
Name: IK8557607 (10727) Type: processingErrorAlarm Package: Img.IK8557607 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Power Supply Degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A storage system power supply status has been set to degraded.		
Remedial action: No action is required.		

Table 27-1868 IK8590000

Alarm	Attributes	Applicable major release
Name: IK8590000 (9304) Type: processingErrorAlarm Package: Img.IK8590000 Raised on class: Img.UPlane	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG

Table 27-1868 IK8590000 (continued)

Alarm	Attributes	Applicable major release
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1869 IK8590001

Alarm	Attributes	Applicable major release
Name: IK8590001 (9305) Type: processingErrorAlarm Package: Img.IK8590001 Raised on class: Img.UPlane	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1870 IK8590002

Alarm	Attributes	Applicable major release
Name: IK8590002 (9306) Type: processingErrorAlarm Package: Img.IK8590002 Raised on class: Img.UPlane	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1871 IK8590003

Alarm	Attributes	Applicable major release
Name: IK8590003 (9307) Type: processingErrorAlarm Package: Img.IK8590003 Raised on class: Img.UPlane	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1872 IK8590004

Alarm	Attributes	Applicable major release
Name: IK8590004 (9308) Type: processingErrorAlarm Package: lmg.IK8590004 Raised on class: lmg.UPlane	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1873 IK8590005

Alarm	Attributes	Applicable major release
Name: IK8590005 (9309) Type: processingErrorAlarm Package: lmg.IK8590005 Raised on class: lmg.UPlane	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1874 IK8590006

Alarm	Attributes	Applicable major release
Name: IK8590006 (9310) Type: processingErrorAlarm Package: lmg.IK8590006 Raised on class: lmg.UPlane	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1875 IK8590007

Alarm	Attributes	Applicable major release
Name: IK8590007 (9311) Type: processingErrorAlarm Package: lmg.IK8590007 Raised on class: lmg.UPlane	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1876 IK8590008

Alarm	Attributes	Applicable major release
Name: IK8590008 (9312) Type: processingErrorAlarm Package: Img.IK8590008 Raised on class: Img.UPlane	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1877 IK8590009

Alarm	Attributes	Applicable major release
Name: IK8590009 (9313) Type: processingErrorAlarm Package: Img.IK8590009 Raised on class: Img.UPlane	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1878 IK8590010

Alarm	Attributes	Applicable major release
Name: IK8590010 (9314) Type: processingErrorAlarm Package: Img.IK8590010 Raised on class: Img.UPlane	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1879 IK8590011

Alarm	Attributes	Applicable major release
Name: IK8590011 (9315) Type: processingErrorAlarm Package: Img.IK8590011 Raised on class: Img.UPlane	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1880 IK8590012

Alarm	Attributes	Applicable major release
Name: IK8590012 (9316) Type: processingErrorAlarm Package: lmg.IK8590012 Raised on class: lmg.UPlane	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1881 IK8590013

Alarm	Attributes	Applicable major release
Name: IK8590013 (9317) Type: processingErrorAlarm Package: lmg.IK8590013 Raised on class: lmg.UPlane	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1882 IK8590014

Alarm	Attributes	Applicable major release
Name: IK8590014 (9318) Type: processingErrorAlarm Package: lmg.IK8590014 Raised on class: lmg.UPlane	Severity: warning Specific problem: Provision Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-1883 IK8590015

Alarm	Attributes	Applicable major release
Name: IK8590015 (9960) Type: processingErrorAlarm Package: lmg.IK8590015 Raised on class: lmg.UPlane	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1884 IK8590016

Alarm	Attributes	Applicable major release
Name: IK8590016 (9961) Type: processingErrorAlarm Package: Img.IK8590016 Raised on class: Img.UPlane	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1885 IK8590017

Alarm	Attributes	Applicable major release
Name: IK8590017 (9962) Type: processingErrorAlarm Package: Img.IK8590017 Raised on class: Img.UPlane	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1886 IK8590018

Alarm	Attributes	Applicable major release
Name: IK8590018 (9963) Type: processingErrorAlarm Package: Img.IK8590018 Raised on class: Img.UPlane	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1887 IK8590019

Alarm	Attributes	Applicable major release
Name: IK8590019 (9964) Type: processingErrorAlarm Package: Img.IK8590019 Raised on class: Img.UPlane	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1888 IK8590020

Alarm	Attributes	Applicable major release
Name: IK8590020 (9965) Type: processingErrorAlarm Package: lmg.IK8590020 Raised on class: lmg.UPlane	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1889 IK8590021

Alarm	Attributes	Applicable major release
Name: IK8590021 (9966) Type: processingErrorAlarm Package: lmg.IK8590021 Raised on class: lmg.UPlane	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1890 IK8590022

Alarm	Attributes	Applicable major release
Name: IK8590022 (9967) Type: processingErrorAlarm Package: lmg.IK8590022 Raised on class: lmg.UPlane	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1891 IK8590023

Alarm	Attributes	Applicable major release
Name: IK8590023 (9968) Type: processingErrorAlarm Package: lmg.IK8590023 Raised on class: lmg.UPlane	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1892 IK8600124

Alarm	Attributes	Applicable major release
Name: IK8600124 (7400) Type: processingErrorAlarm Package: lmg.IK8600124 Raised on class: lmg.Flute	Severity: major Specific problem: Error when trying to add content Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG
Description: Fails to watch the webdav folder for Delivery Instance ID (variable parameters such as webdav folder, DeliveryInstanceId and cause are also indicated)\nReason: Error when trying to add content. Webdav folder deleted by a third party OR delivery instance deleted by a concurrent request		
Remedial action: Check if the delivery instance has been deleted. Check if the instance is still existing on the Broadcast Delivery Server, and that a Delete has not been concurrently performed.		

Table 27-1893 IK8600132

Alarm	Attributes	Applicable major release
Name: IK8600132 (7401) Type: processingErrorAlarm Package: lmg.IK8600132 Raised on class: lmg.Flute	Severity: major Specific problem: Error when trying to delete the directory for a live session - case 1 Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG
Description: Fails to remove webdav folder for Delivery Instance ID (variable parameters such as webdav folder, DeliveryInstanceId are also indicated)\nReason: Error when trying to delete the directory for a live session - case 1. Webdav folder could not be deleted		
Remedial action: Check that the Broadcast Delivery Server has rights to delete the folder, and that there is no concurrent writing.		

Table 27-1894 IK8600137

Alarm	Attributes	Applicable major release
Name: IK8600137 (7402) Type: processingErrorAlarm Package: lmg.IK8600137 Raised on class: lmg.Flute	Severity: major Specific problem: Issue occurs when trying to create a BmscEvent Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Error when generating bmsc event string\nReason: Issue occurs when trying to create a BmscEvent. No identified cause		
Remedial action: No immediate action is required. If the problem persists, contact NOKIA customer support.		

Table 27-1895 IK8600141

Alarm	Attributes	Applicable major release
Name: IK8600141 (7403) Type: processingErrorAlarm Package: lmg.IK8600141 Raised on class: lmg.Flute	Severity: major Specific problem: Issue occurs when trying to get DeliverySession from database Implicitly cleared: true Default probable cause: softwareError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to get the delivery session from database (variable parameters such as deliverySessionId, cause are also indicated)\nReason: Issue occurs when trying to get DeliverySession from database . The database can not be reached or persistence errors		
Remedial action: Check that the mysql database is running.		

Table 27-1896 IK8600142

Alarm	Attributes	Applicable major release
Name: IK8600142 (7404) Type: processingErrorAlarm Package: lmg.IK8600142 Raised on class: lmg.Flute	Severity: major Specific problem: Issue occurs when trying to get the DeliveryInstance from database Implicitly cleared: true Default probable cause: softwareError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to get the delivery instance from database (variable parameters such as deliveryInstanceId, cause are also indicated)\nReason: Issue occurs when trying to get the DeliveryInstance from database . The database can not be reached or persistence errors		
Remedial action: Check that the mysql database is running.		

Table 27-1897 IK8600143

Alarm	Attributes	Applicable major release
Name: IK8600143 (7405) Type: processingErrorAlarm Package: lmg.IK8600143 Raised on class: lmg.Flute	Severity: major Specific problem: Issue occurs when trying to get DeliveryInstances from database Implicitly cleared: true Default probable cause: softwareError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to get Delivery Instances for the Delivery Session (variable parameters such as DeliverySessionId, cause are also indicated)\nReason: Issue occurs when trying to get DeliveryInstances from database. The database can not be reached or persistence errors		
Remedial action: Check that the mysql database is running.		

Table 27-1898 IK8600146

Alarm	Attributes	Applicable major release
Name: IK8600146 (7406) Type: processingErrorAlarm Package: Img.IK8600146 Raised on class: Img.Flute	Severity: major Specific problem: Issue occurs when trying to get OnDemandContent from database Implicitly cleared: true Default probable cause: softwareError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to get the OnDemand content from database (variable parameters such as ContentId, cause are also indicated)\nReason: Issue occurs when trying to get OnDemandContent from database. The database can not be reached or persistence errors		
Remedial action: Check that the mysql database is running.		

Table 27-1899 IK8600152

Alarm	Attributes	Applicable major release
Name: IK8600152 (7407) Type: processingErrorAlarm Package: Img.IK8600152 Raised on class: Img.Flute	Severity: critical Specific problem: Problem when initializing the FluteEngine library - case 1 Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to initialize FluteSender library (variable parameters such as DeliveryInstanceId are also indicated)\nReason: Problem when initializing the FluteEngine library - case 1. Broadcast Delivery Server deployment error or Out of memory, memory leaks on Flute engine		
Remedial action: Stop and reinstall the Broadcast Delivery Server.		

Table 27-1900 IK8600159

Alarm	Attributes	Applicable major release
Name: IK8600159 (7408) Type: processingErrorAlarm Package: Img.IK8600159 Raised on class: Img.Flute	Severity: major Specific problem: Error when trying to create the webdav folder for an instance Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to create webdav folder for Delivery Instance ID (variable parameters such as webdavPath, deliveryInstanceId are also indicated)\nReason: Error when trying to create the webdav folder for an instance. Webdav folder could not be created: no rights OR webdav folders path not existing		
Remedial action: Check existence of the base path and that the Broadcast Delivery Server has the creation rights		

Table 27-1901 IK8600163

Alarm	Attributes	Applicable major release
Name: IK8600163 (9319) Type: processingErrorAlarm Package: lmg.IK8600163 Raised on class: lmg.Flute	Severity: major Specific problem: Issue occurs when updating the DeliveryInstance in database. Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: Fails to remove content (content variable parameter is also indicated)\nReason: Issue occurs when updating the DeliveryInstance in database. . The database can not be reached or persistence errors - issue occurs when removing content from database		
Remedial action: Check that the mysql database is running.		

Table 27-1902 IK8600164

Alarm	Attributes	Applicable major release
Name: IK8600164 (7409) Type: processingErrorAlarm Package: lmg.IK8600164 Raised on class: lmg.Flute	Severity: major Specific problem: Issue occurs when trying to get DeliverySession with given TSI from database Implicitly cleared: true Default probable cause: softwareError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to get the DeliverySession with tsi (variable parameters such as tsi, cause are also indicated)\nReason: Issue occurs when trying to get DeliverySession with given TSI from database. The database can not be reached or persistence errors		
Remedial action: Check that the mysql database is running.		

Table 27-1903 IK8600168

Alarm	Attributes	Applicable major release
Name: IK8600168 (7410) Type: processingErrorAlarm Package: lmg.IK8600168 Raised on class: lmg.Flute	Severity: major Specific problem: Database problem - case 1 Implicitly cleared: true Default probable cause: softwareError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to get the delivery instances - database failure (variable parameters such as cause are also indicated)\nReason: Database problem - case 1. The database can not be reached or persistence errors - issue occurs while reloading Delivery Instances		
Remedial action: Check that the mysql database is running.		

Table 27-1904 IK8600169

Alarm	Attributes	Applicable major release
Name: IK8600169 (7411) Type: processingErrorAlarm Package: Img.IK8600169 Raised on class: Img.Flute	Severity: major Specific problem: The jnotify listener could not be created Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to watch webdav folder for Delivery Instance ID (variable parameters such as webdavFolder, DeliveryInstanceId, cause are also indicated)\nReason: The jnotify listener could not be created. No identified cause (issue with Jnotify)		
Remedial action: No immediate action is required. If the problem persists, contact NOKIA customer support.		

Table 27-1905 IK8600170

Alarm	Attributes	Applicable major release
Name: IK8600170 (7412) Type: processingErrorAlarm Package: Img.IK8600170 Raised on class: Img.Flute	Severity: major Specific problem: Database problem - case 2 Implicitly cleared: true Default probable cause: softwareError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to update DeliveryInstance ID (variable parameters such as DeliveryInstanceId, webdavFolder, cause are also indicated)\nReason: Database problem - case 2. The database can not be reached or persistence errors - issue occurs while trying to update Delivery Instance		
Remedial action: Check that the mysql database is running.		

Table 27-1906 IK8600172

Alarm	Attributes	Applicable major release
Name: IK8600172 (7413) Type: processingErrorAlarm Package: Img.IK8600172 Raised on class: Img.Flute	Severity: major Specific problem: Error when trying to delete the directory for a live session - case 2 Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to remove webdav folder (variable parameters such as deliveryInstanceId, webdavFolder are also indicated)\ nReason: Error when trying to delete the directory for a live session - case 2 . Webdav folder could not be deleted		
Remedial action: Check that the Broadcast Delivery Server has rights to delete the folder, and that there is no concurrent writing		

Table 27-1907 IK8600174

Alarm	Attributes	Applicable major release
Name: IK8600174 (7414) Type: communicationsAlarm Package: lmg.IK8600174 Raised on class: lmg.Flute	Severity: minor Specific problem: Problem with the url in charge of receiving the events - case 1 Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to send event (variable parameters such as event, cause are also indicated)\nReason: Problem with the url in charge of receiving the events - case 1. The event could not be sent to the configured URL.		
Remedial action: Check if the URL is correct, and if the orchestrator is correctly started		

Table 27-1908 IK8600175

Alarm	Attributes	Applicable major release
Name: IK8600175 (7415) Type: communicationsAlarm Package: lmg.IK8600175 Raised on class: lmg.LMGMngElement	Severity: minor Specific problem: case 2 Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: Fails to send event File_Continous_Failed (variable parameters such as cause are also indicated). Alarm is cleared by the system.\nReason: The event could not be sent to the configured URL.		
Remedial action: Check if the URL is correct, and if the orchestrator is correctly started		

Table 27-1909 IK8600179

Alarm	Attributes	Applicable major release
Name: IK8600179 (7416) Type: processingErrorAlarm Package: lmg.IK8600179 Raised on class: lmg.Flute	Severity: major Specific problem: Error when trying to delete the directory for a live session Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to remove webdav folder after delete instance (variable parameters such as deliveryInstanceId, webdavFolder are also indicated)\nReason: Error when trying to delete the directory for a live session. Webdav folder could not be deleted		
Remedial action: Check that the Broadcast Delivery Server has rights to delete the folder, and that there is no concurrent writing		

Table 27-1910 IK8600211

Alarm	Attributes	Applicable major release
Name: IK8600211 (7417) Type: communicationsAlarm Package: Img.IK8600211 Raised on class: Img.Flute	Severity: minor Specific problem: Problem with the url in charge of receiving the events - case 3 Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: Fails send event File_Ready_For_Delivery (variable parameters such as cause are also indicated)\nReason: Problem with the url in charge of receiving the events - case 3. The event could not be sent to the configured URL.		
Remedial action: Check if the URL is correct, and if the orchestrator is correctly started		

Table 27-1911 IK8600214

Alarm	Attributes	Applicable major release
Name: IK8600214 (7418) Type: processingErrorAlarm Package: Img.IK8600214 Raised on class: Img.Flute	Severity: major Specific problem: Problem with database - case 4 Implicitly cleared: true Default probable cause: softwareError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to create index (variable parameters such as index, cause are also indicated)\nReason: Problem with database - case 4. The database can not be reached		
Remedial action: Check that the mysql database is running.		

Table 27-1912 IK8600216

Alarm	Attributes	Applicable major release
Name: IK8600216 (7419) Type: processingErrorAlarm Package: Img.IK8600216 Raised on class: Img.Flute	Severity: major Specific problem: Problem with database - case 5 Implicitly cleared: true Default probable cause: softwareError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to get the delivery sessions from database - database failure (variable parameters such as cause are also indicated)\nReason: Problem with database - case 5. The database can not be reached or persistence errors		
Remedial action: Check that the mysql database is running.		

Table 27-1913 IK8600217

Alarm	Attributes	Applicable major release
Name: IK8600217 (7420) Type: processingErrorAlarm Package: lmg.IK8600217 Raised on class: lmg.Flute	Severity: major Specific problem: Problem with database - case 6 Implicitly cleared: true Default probable cause: softwareError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to get the OnDemand files from database (variable parameters such as cause are also indicated)\nReason: Problem with database - case 6. The database can not be reached or persistence errors		
Remedial action: Check that the mysql database is running.		

Table 27-1914 IK8600234

Alarm	Attributes	Applicable major release
Name: IK8600234 (7421) Type: processingErrorAlarm Package: lmg.IK8600234 Raised on class: lmg.Flute	Severity: minor Specific problem: Problem with server. Properties - case 1 Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Invalid value of intparameter Use default value instead (variable parameters such as key authorized values, default value are also indicated)\nReason: Problem with server. Properties - case 1. An int parameter has an invalid value in server. Properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 27-1915 IK8600236

Alarm	Attributes	Applicable major release
Name: IK8600236 (7422) Type: processingErrorAlarm Package: lmg.IK8600236 Raised on class: lmg.Flute	Severity: minor Specific problem: Problem with server. Properties - case 2 Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Invalid value of key parameter Use default value instead (variable parameters such as key, authorized values, default value are also indicated)\nReason: Problem with server. Properties - case 2. An parameter has an invalid value in server. Properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 27-1916 IK8600238

Alarm	Attributes	Applicable major release
Name: IK8600238 (7423) Type: processingErrorAlarm Package: Img.IK8600238 Raised on class: Img.Flute	Severity: major Specific problem: Problem with server. Properties. Server. Multicast. Networkinterface is not found Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Missing broadcast IP in server. Properties Use default IP (variable parameters such as ipbroadcast are also indicated)\nReason: Problem with server. Properties. Server. Multicast. Networkinterface is not found . Server. Multicast. Networkinterface is not found in server. Properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 27-1917 IK8600239

Alarm	Attributes	Applicable major release
Name: IK8600239 (7424) Type: processingErrorAlarm Package: Img.IK8600239 Raised on class: Img.Flute	Severity: major Specific problem: Problem with server. Properties - case 3 Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Network interface not found. Use default loopback interface (variable parameters such as ip, iploopback are also indicated)\nReason: Problem with server. Properties - case 3. Can not occur		
Remedial action: No immediate action is required. If the problem persists, contact NOKIA customer support.		

Table 27-1918 IK8600240

Alarm	Attributes	Applicable major release
Name: IK8600240 (7425) Type: communicationsAlarm Package: Img.IK8600240 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Server. Multicast. Networkinterface does not correspond to an existing network interface Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: The given local IPis not one of available server addressIP (variable parameters such as localIP, addressIP are also indicated). Alarm is cleared only after the server restart.\nReason: server.multicast.networkinterface does not correspond to an existing network interface		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 27-1919 IK8600241

Alarm	Attributes	Applicable major release
Name: IK8600241 (7426) Type: communicationsAlarm Package: lmg.IK8600241 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Problem with the server network interfaces Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: The given local IP is unknown (variable parameters such as IP are also indicated). Alarm is cleared only after the server restart.\nReason: server.multicast.networkinterface is not a valid IP address		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 27-1920 IK8600242

Alarm	Attributes	Applicable major release
Name: IK8600242 (7427) Type: processingErrorAlarm Package: lmg.IK8600242 Raised on class: lmg.Flute	Severity: major Specific problem: Problem with local IPs Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Cannot get Local IPs\nReason: Problem with local IPs . Unknown cause: the java process can not list of network interfaces. (No identified reasons, never occured. Can be OS, Hardware error)		
Remedial action: No immediate action is required. If the problem persists, contact NOKIA customer support.		

Table 27-1921 IK8600248

Alarm	Attributes	Applicable major release
Name: IK8600248 (7428) Type: processingErrorAlarm Package: lmg.IK8600248 Raised on class: lmg.Flute	Severity: minor Specific problem: Problem with server. Properties - case 4 Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Invalid value of parameter Use default value instead (variable parameters such as key, default value are also indicated)\nReason: Problem with server. Properties - case 4. An parameter has an invalid value in server. Properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 27-1922 IK8600250

Alarm	Attributes	Applicable major release
Name: IK8600250 (7429) Type: processingErrorAlarm Package: Img.IK8600250 Raised on class: Img.Flute	Severity: minor Specific problem: Problem with server. Properties - case 5 Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Invalid value of long parameter inferior to the min authorized value Use default value instead (variable parameters such as key, minimum value, default value are also indicated)\nReason: Problem with server. Properties - case 5. An parameter has an invalid value in server. Properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 27-1923 IK8600251

Alarm	Attributes	Applicable major release
Name: IK8600251 (7430) Type: processingErrorAlarm Package: Img.IK8600251 Raised on class: Img.Flute	Severity: minor Specific problem: Problem with server. Properties - case 6 Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Invalid value of parameter superior to the max authorized value. Use default value instead (variable parameters such as key, maximum value, default value are also indicated)\nReason: Problem with server. Properties - case 6. An parameter has an invalid value in server. Properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 27-1924 IK8600252

Alarm	Attributes	Applicable major release
Name: IK8600252 (7431) Type: processingErrorAlarm Package: Img.IK8600252 Raised on class: Img.Flute	Severity: minor Specific problem: Problem with server. Properties - case 7 Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Invalid value of parameter: not an integer Use default value instead (variable parameters such as key, default value are also indicated)\nReason: Problem with server. Properties - case 7. An parameter has an invalid value in server. Properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 27-1925 IK8600254

Alarm	Attributes	Applicable major release
Name: IK8600254 (7432) Type: processingErrorAlarm Package: Img.IK8600254 Raised on class: Img.Flute	Severity: minor Specific problem: Problem with server. Properties - case 8 Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Invalid value of integer parameter inferior to the min authorized value Use default value instead (variable parameters such as key, minimum value, default value are also indicated)\nReason: Problem with server. Properties - case 8. An parameter has an invalid value in server. Properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 27-1926 IK8600256

Alarm	Attributes	Applicable major release
Name: IK8600256 (9320) Type: processingErrorAlarm Package: Img.IK8600256 Raised on class: Img.Flute	Severity: major Specific problem: Database not available at Broadcast Delivery Server start Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: Could not obtain connection to MySQL database (variable parameter such as exception is indicated)\nReason: Database not available at Broadcast Delivery Server start. The database is not available		
Remedial action: Check that the mysql database is running. Check network connection		

Table 27-1927 IK8600258

Alarm	Attributes	Applicable major release
Name: IK8600258 (7433) Type: processingErrorAlarm Package: Img.IK8600258 Raised on class: Img.Flute	Severity: major Specific problem: Input folder for the ondemand instance could not be deleted - case 1 Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to remove on-demand folder for DeliveryInstance ID (variable parameters such as instanceFolder, deliveryInstanceId are also indicated)\nReason: Input folder for the ondemand instance could not be deleted - case 1. A third party has deleted manually the folder Or the folder is locked by another process		
Remedial action: Check the folder state.		

Table 27-1928 IK8600259

Alarm	Attributes	Applicable major release
Name: IK8600259 (7434) Type: processingErrorAlarm Package: Img.IK8600259 Raised on class: Img.Flute	Severity: major Specific problem: Cache folder for the ondemand instance could not be deleted - case 1 Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to remove on-demand cache folder or DeliveryInstance ID (variable parameters such as instanceFolder, deliveryInstanceId are also indicated)\nReason: Cache folder for the ondemand instance could not be deleted - case 1. A third party has deleted manually the folder Or the folder is locked by another process		
Remedial action: Check the folder state.		

Table 27-1929 IK8600262

Alarm	Attributes	Applicable major release
Name: IK8600262 (7435) Type: processingErrorAlarm Package: Img.IK8600262 Raised on class: Img.Flute	Severity: minor Specific problem: Old flutesession not remove from flutesession list Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Obsolete flute session found Delete flute session (variable parameters such as deliveryInstanceId are also indicated)\nReason: Old flutesession not remove from flutesession list. Unknown cause		
Remedial action: No immediate action is required. If the problem persists, contact NOKIA customer support.		

Table 27-1930 IK8600269

Alarm	Attributes	Applicable major release
Name: IK8600269 (7436) Type: processingErrorAlarm Package: Img.IK8600269 Raised on class: Img.Flute	Severity: major Specific problem: Problem with cache folder Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Unable to write FDT file on disk (variable parameters such as xmlFilePath are also indicated)\nReason: Problem with cache folder. The cache folder is unreachable or lock		
Remedial action: Check the folder state.		

Table 27-1931 IK8600271

Alarm	Attributes	Applicable major release
Name: IK8600271 (7437) Type: processingErrorAlarm Package: Img.IK8600271 Raised on class: Img.Flute	Severity: critical Specific problem: Problem when initializing the FluteEngine library - case 2 Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to initialize FluteEngine library (variable parameters such as deliveryInstanceId are also indicated)\nReason: Problem when initializing the FluteEngine library - case 2. Memory leaks or Flute engine internal error		
Remedial action: Trigger a switchover		

Table 27-1932 IK8600273

Alarm	Attributes	Applicable major release
Name: IK8600273 (7438) Type: communicationsAlarm Package: Img.IK8600273 Raised on class: Img.LMGMngElement	Severity: minor Specific problem: case 5 Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: Fails to send event File_Delivery_Started (variable parameters such as cause are also indicated). Alarm is cleared by the system.\nReason: The event could not be sent to the configured URL.		
Remedial action: Check if the URL is correct, and if the orchestrator is correctly started		

Table 27-1933 IK8600274

Alarm	Attributes	Applicable major release
Name: IK8600274 (7439) Type: communicationsAlarm Package: Img.IK8600274 Raised on class: Img.LMGMngElement	Severity: minor Specific problem: case 6 Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: Fails to send event File_Delivered (variable parameters such as cause are also indicated). Alarm is cleared by the system.\nReason: The event could not be sent to the configured URL.		
Remedial action: Check if the URL is correct, and if the orchestrator is correctly started		

Table 27-1934 IK8600275

Alarm	Attributes	Applicable major release
Name: IK8600275 (7440) Type: communicationsAlarm Package: lmg.IK8600275 Raised on class: lmg.LMGMngElement	Severity: minor Specific problem: case 7 Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: Fails to send event File_Transmission_stopped (variable parameters such as cause are also indicated). Alarm is cleared by the system.\nReason: The event could not be sent to the configured URL.		
Remedial action: Check if the URL is correct, and if the orchestrator is correctly started		

Table 27-1935 IK8600276

Alarm	Attributes	Applicable major release
Name: IK8600276 (7441) Type: processingErrorAlarm Package: lmg.IK8600276 Raised on class: lmg.Flute	Severity: major Specific problem: Error when generator the xml in response to the request get Delivery Session Info Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to create delivery session info (variable parameters such as cause are also indicated)\nReason: Error when generator the xml in response to the request get Delivery Session Info. Unknown cause		
Remedial action: No immediate action is required. If the problem persists, contact NOKIA customer support.		

Table 27-1936 IK8600286

Alarm	Attributes	Applicable major release
Name: IK8600286 (7442) Type: processingErrorAlarm Package: lmg.IK8600286 Raised on class: lmg.Flute	Severity: critical Specific problem: Server. Properties is not found at start-up Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Server config file not found in the indicated path\nReason: Server. Properties is not found at start-up. Server. Properties is missing		
Remedial action: Add the server. Properties and restart.		

Table 27-1937 IK8600287

Alarm	Attributes	Applicable major release
Name: IK8600287 (7443) Type: processingErrorAlarm Package: Img.IK8600287 Raised on class: Img.Flute	Severity: critical Specific problem: Server. Properties can not be parsed Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Server config file invalid\nReason: Server. Properties can not be parsed. Server. Properties format is not valid		
Remedial action: Correction the server. Properties file and restart.		

Table 27-1938 IK8600288

Alarm	Attributes	Applicable major release
Name: IK8600288 (7444) Type: processingErrorAlarm Package: Img.IK8600288 Raised on class: Img.Flute	Severity: critical Specific problem: Server. Properties can not be read Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: exception_msg\nReason: Server. Properties can not be read. Server. Properties is written or deleted while the Broadcast Delivery Server is reading it		
Remedial action: Restart the Broadcast Delivery Server.		

Table 27-1939 IK8600289

Alarm	Attributes	Applicable major release
Name: IK8600289 (7445) Type: communicationsAlarm Package: Img.IK8600289 Raised on class: Img.LMGMngElement	Severity: minor Specific problem: case 8 Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: Fails to send event File_Transmission_stopped (variable parameters such as cause are also indicated). Alarm is cleared by the system.\nReason: The event could not be sent to the configured URL.		
Remedial action: Check if the URL is correct, and if the orchestrator is correctly started		

Table 27-1940 IK8600295

Alarm	Attributes	Applicable major release
Name: IK8600295 (7446) Type: processingErrorAlarm Package: Img.IK8600295 Raised on class: Img.Flute	Severity: major Specific problem: Input folder for the ondemand instance could not be deleted - case 2 Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to remove automatically on-demand folder for DeliveryInstance ID (variable parameters such as instanceFolder, deliveryInstanceId are also indicated)\nReason: Input folder for the ondemand instance could not be deleted - case 2. A third party has deleted manually the folder Or the folder is locked by another process		
Remedial action: Check the folder state.		

Table 27-1941 IK8600296

Alarm	Attributes	Applicable major release
Name: IK8600296 (7447) Type: processingErrorAlarm Package: Img.IK8600296 Raised on class: Img.Flute	Severity: major Specific problem: Cache folder for the ondemand instance could not be deleted - case 2 Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to remove automatically on-demand cache folder for DeliveryInstance ID (variable parameters such as instanceFolder, deliveryInstanceId are also indicated)\nReason: Cache folder for the ondemand instance could not be deleted - case 2. A third party has deleted manually the folder Or the folder is locked by another process		
Remedial action: Check the folder state.		

Table 27-1942 IK8600297

Alarm	Attributes	Applicable major release
Name: IK8600297 (7448) Type: processingErrorAlarm Package: Img.IK8600297 Raised on class: Img.Flute	Severity: major Specific problem: The jnotify listener could not be created, when reloading all sessions after a restart Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Delivery Instance ID not loaded Could not create webdav listener (variable parameters such as deliveryInstanceId are also indicated)\nReason: The jnotify listener could not be created, when reloading all sessions after a restart. No identified cause (issue with Jnotify)		
Remedial action: No immediate action is required. If the problem persists, contact NOKIA customer support.		

Table 27-1943 IK8600319

Alarm	Attributes	Applicable major release
Name: IK8600319 (7449) Type: processingErrorAlarm Package: lmg.IK8600319 Raised on class: lmg.Flute	Severity: minor Specific problem: File could not be delivered - case 1 Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to set add file to flute library for Flute session continuous Skip delivering file (variable parameters such as filePath, deliveryInstanceId are also indicated)\nReason: File could not be delivered - case 1. Fec encoding error or Flute engine internal error - Segment can not be added to flute engine		
Remedial action: No immediate action is required. If the problem persists, contact NOKIA customer support.		

Table 27-1944 IK8600320

Alarm	Attributes	Applicable major release
Name: IK8600320 (7450) Type: processingErrorAlarm Package: lmg.IK8600320 Raised on class: lmg.Flute	Severity: minor Specific problem: File could not be delivered - case 2 Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to set FDT Expire for Flute session continuous (variable parameters such deliveryInstanceId are also indicated)\nReason: File could not be delivered - case 2. Unknown cause - Memory leak or Flute engine internal error		
Remedial action: No immediate action is required. If the problem persists, contact NOKIA customer support.		

Table 27-1945 IK8600323

Alarm	Attributes	Applicable major release
Name: IK8600323 (9321) Type: processingErrorAlarm Package: lmg.IK8600323 Raised on class: lmg.Flute	Severity: critical Specific problem: License file not valid Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: License file cannot be parsed\nReason: License file not valid. License file corrupted		
Remedial action: Check license file checksum		

Table 27-1946 IK8600328

Alarm	Attributes	Applicable major release
Name: IK8600328 (7451) Type: communicationsAlarm Package: Img.IK8600328 Raised on class: Img.Flute	Severity: critical Specific problem: The mulltiFEC library is missing or can be loaded Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Required library not found (variable parameters such as path are also indicated)\nReason: The mulltiFEC library is missing or can be loaded . Missing required libraries		
Remedial action: Check the presence of the *. So libraries		

Table 27-1947 IK8600333

Alarm	Attributes	Applicable major release
Name: IK8600333 (7452) Type: processingErrorAlarm Package: Img.IK8600333 Raised on class: Img.Flute	Severity: minor Specific problem: Problem with existence of the mime. Types file in the /config directory Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Error when loading MIME_TYPES_FILE Default mime types will be used instead (variable parameters such as Mimetypes file are also indicated)\nReason: Problem with existence of the mime. Types file in the /config directory. The mime. Types is missing.		
Remedial action: Check the format of this file. Add the mime. Types config file and restart the Broadcast Delivery Server.		

Table 27-1948 IK8600334

Alarm	Attributes	Applicable major release
Name: IK8600334 (7453) Type: processingErrorAlarm Package: Img.IK8600334 Raised on class: Img.Flute	Severity: critical Specific problem: License file not found or not valid Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: License file not found or not valid\nReason: License file not found or not valid (cannot be parsed). License file not found		
Remedial action: Check licence file existence.		

Table 27-1949 IK8600335

Alarm	Attributes	Applicable major release
Name: IK8600335 (7454) Type: processingErrorAlarm Package: Img.IK8600335 Raised on class: Img.Flute	Severity: critical Specific problem: Problem with license Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: exception_msg. New License to be ordered\nReason: Problem with license. The license doesn't authorize to run the Broadcast Delivery Server		
Remedial action: Order a new license .		

Table 27-1950 IK8600336

Alarm	Attributes	Applicable major release
Name: IK8600336 (7455) Type: communicationsAlarm Package: Img.IK8600336 Raised on class: Img.Flute	Severity: major Specific problem: Check delivery instance id Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: control fragment session fails to start. Delivery Instance not found (variable parameters such as deliveryInstanceId, cause are also indicated)\nReason: Check delivery instance id. The instance id referenced in the request doesn't exist		
Remedial action: Check the instance Id existence.		

Table 27-1951 IK8600338

Alarm	Attributes	Applicable major release
Name: IK8600338 (7456) Type: processingErrorAlarm Package: Img.IK8600338 Raised on class: Img.Flute	Severity: major Specific problem: Problem when initializing the FluteEngine library - case 3 Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to initialize FluteSender library for control fragments (variable parameters such as deliveryInstanceId are also indicated)\nReason: Problem when initializing the FluteEngine library - case 3. Memory leak or Flute engine internal error		
Remedial action: Stop and reinstall the Broadcast Delivery Server		

Table 27-1952 IK8600339

Alarm	Attributes	Applicable major release
Name: IK8600339 (7457) Type: processingErrorAlarm Package: lmg.IK8600339 Raised on class: lmg.Flute	Severity: major Specific problem: Problem when adding a fragment to the FluteEngine library - case 1 Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to add fragment to flute library for fragment session. Skip delivering fragment (variable parameters such as file path, delieryInstanceId are also indicated)\nReason: Problem when adding a fragment to the FluteEngine library - case 1. Unknown cause		
Remedial action: No immediate action is required. If the problem persists, contact NOKIA customer support.		

Table 27-1953 IK8600340

Alarm	Attributes	Applicable major release
Name: IK8600340 (7458) Type: processingErrorAlarm Package: lmg.IK8600340 Raised on class: lmg.Flute	Severity: major Specific problem: Problem when adding a fragment to the FluteEngine library - case 2 Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to add fragment to flute library for fragment session. Skip delivering fragment (variable parameters such as file path, delieryInstanceId are also indicated)\nReason: Problem when adding a fragment to the FluteEngine library - case 2. Unknown cause		
Remedial action: No immediate action is required. If the problem persists, contact NOKIA customer support.		

Table 27-1954 IK8600341

Alarm	Attributes	Applicable major release
Name: IK8600341 (7459) Type: processingErrorAlarm Package: lmg.IK8600341 Raised on class: lmg.Flute	Severity: major Specific problem: Problem when starting the delivery of the control fragments - case 1 Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to start transmission cycle for fragment session, Stopping Flute session (variable parameters such as deliveryInstanceId are also indicated)\nReason: Problem when starting the delivery of the control fragments - case 1. Unknown cause		
Remedial action: No immediate action is required. If the problem persists, contact NOKIA customer support.		

Table 27-1955 IK8600343

Alarm	Attributes	Applicable major release
Name: IK8600343 (7460) Type: processingErrorAlarm Package: lmg.IK8600343 Raised on class: lmg.Flute	Severity: major Specific problem: Problem when starting the delivery of the control fragments - case 2 Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fragments session start failed (variable parameters such as deliveryInstanceId are also indicated)\nReason: Problem when starting the delivery of the control fragments - case 2. Unknown cause		
Remedial action: No immediate action is required. If the problem persists, contact NOKIA customer support.		

Table 27-1956 IK8600346

Alarm	Attributes	Applicable major release
Name: IK8600346 (7461) Type: processingErrorAlarm Package: lmg.IK8600346 Raised on class: lmg.Flute	Severity: major Specific problem: OriginatorUserName can not be blank and can not contains spaces Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Invalid value of server. Multicast. SDP. Originator parameter (variable parameters such as invalid parameter value, default value are also indicated)\nReason: OriginatorUserName can not be blank and can not contains spaces. Server. Multicast. SDP. Originator is not found or incorrect in server. Properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 27-1957 IK8600347

Alarm	Attributes	Applicable major release
Name: IK8600347 (7462) Type: processingErrorAlarm Package: lmg.IK8600347 Raised on class: lmg.Flute	Severity: major Specific problem: No namespace for the control fragments has been configured Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: No namespace for the control fragments has been configured (variable parameters are also indicated)\nReason: No namespace for the control fragments has been configured. No namespace configured		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 27-1958 IK8600351

Alarm	Attributes	Applicable major release
Name: IK8600351 (7463) Type: processingErrorAlarm Package: Img.IK8600351 Raised on class: Img.Flute	Severity: major Specific problem: Problem with database - case 8 Implicitly cleared: true Default probable cause: softwareError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Can not queue file for delivery. Cause Fails to get OnDemandFile from database (variable parameters such as file path, cause are also indicated)\nReason: Problem with database - case 8. The database can not be reached or persistence errors		
Remedial action: Check that the mysql database is running.		

Table 27-1959 IK8600352

Alarm	Attributes	Applicable major release
Name: IK8600352 (7464) Type: processingErrorAlarm Package: Img.IK8600352 Raised on class: Img.Flute	Severity: major Specific problem: A file in delivery queue is no more available in database Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Can not queue file for delivery. Cause OnDemandFile not found in database (variable parameters such as file path are also indicated)\nReason: A file in delivery queue is no more available in database. Unknown cause		
Remedial action: No immediate action is required. If the problem persists, contact NOKIA customer support.		

Table 27-1960 IK8600353

Alarm	Attributes	Applicable major release
Name: IK8600353 (7465) Type: processingErrorAlarm Package: Img.IK8600353 Raised on class: Img.Flute	Severity: major Specific problem: Problem with stream file and time offset Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: File not send. Cause FluteEngine fails to read stream (variable parameters such as file path are also indicated). File stream removed from the cache folder, or the delivery of a content, whose delivery should be ended has been restarted\nReason: Problem with stream file and time offset. The computed read offset of the stream is out of stream. Flute engine can not read the stream - Can occur after a BDS restart		
Remedial action: Check the stream file in the cache folder. If the Broadcast Delivery Server has been recently restarted after a long pause, No immediate action is required. If the problem persists, contact NOKIA customer support. to perform.		

Table 27-1961 IK8600354

Alarm	Attributes	Applicable major release
Name: IK8600354 (7466) Type: processingErrorAlarm Package: lmg.IK8600354 Raised on class: lmg.Flute	Severity: major Specific problem: Problem with database - case 9 Implicitly cleared: true Default probable cause: softwareError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: File not updated. Cause Fails to get OnDemandFile from database (variable parameters such as file path are also indicated)\nReason: Problem with database - case 9 . The database can not be reached or persistence errors		
Remedial action: Check that the mysql database is running.		

Table 27-1962 IK8600355

Alarm	Attributes	Applicable major release
Name: IK8600355 (7467) Type: processingErrorAlarm Package: lmg.IK8600355 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: A file in delivery is no more available in database Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: File not updated. Cause OnDemandFile not found in database (variable parameters such as file path are also indicated). Alarm to be cleared by the operator at the management system.\nReason: Unknown cause		
Remedial action: No action is required.		

Table 27-1963 IK8600356

Alarm	Attributes	Applicable major release
Name: IK8600356 (7468) Type: processingErrorAlarm Package: lmg.IK8600356 Raised on class: lmg.Flute	Severity: major Specific problem: Problem with database - case 10 Implicitly cleared: true Default probable cause: softwareError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to update the OnDemandFile to database (variable parameters such as fileURI, cause are also indicated)\nReason: Problem with database - case 10 . The database can not be reached or persistence errors		
Remedial action: Check that the mysql database is running.		

Table 27-1964 IK8600363

Alarm	Attributes	Applicable major release
Name: IK8600363 (7469) Type: processingErrorAlarm Package: Img.IK8600363 Raised on class: Img.Flute	Severity: critical Specific problem: The MIB could not be initialized Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Error when initializing the MIB (variable parameters such as exception are also indicated)\nReason: The MIB could not be initialized. Various possible causes, to be analyzed according the message		
Remedial action: No immediate action is required. If the problem persists, contact NOKIA customer support.		

Table 27-1965 IK8600369

Alarm	Attributes	Applicable major release
Name: IK8600369 (7470) Type: processingErrorAlarm Package: Img.IK8600369 Raised on class: Img.Flute	Severity: major Specific problem: The on demand session failed to start Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to start transmission cycle for Flute session on-demand. Stopping Flute session (variable parameters such as deliveryInstanceId are also indicated)\nReason: The on demand session failed to start. Unknown cause		
Remedial action: No immediate action is required. If the problem persists, contact NOKIA customer support.		

Table 27-1966 IK8600370

Alarm	Attributes	Applicable major release
Name: IK8600370 (7471) Type: processingErrorAlarm Package: Img.IK8600370 Raised on class: Img.Flute	Severity: major Specific problem: The continuous session failed to start Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to start transmission cycle for Flute session continuous . Stopping Flute session (variable parameters such as deliveryInstanceId are also indicated)\nReason: The continuous session failed to start. Unknown cause		
Remedial action: No immediate action is required. If the problem persists, contact NOKIA customer support.		

Table 27-1967 IK8600374

Alarm	Attributes	Applicable major release
Name: IK8600374 (9322) Type: processingErrorAlarm Package: Img.IK8600374 Raised on class: Img.Flute	Severity: critical Specific problem: The base ondemand folder could not be created Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: No such OnDemand basepath (variable parameter such as basePathOnDemand is also indicated)\nReason: The base ondemand folder could not be created. The ondemand folder could not be created		
Remedial action: Check the folder existence AD/OR the folder creation rights for the BDS on the NAS		

Table 27-1968 IK8600375

Alarm	Attributes	Applicable major release
Name: IK8600375 (9323) Type: processingErrorAlarm Package: Img.IK8600375 Raised on class: Img.Flute	Severity: critical Specific problem: The base folder for continuous session could not be created Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: No such Continuous basepath (variable parameter such as basePathContinuous is also indicated)\nReason: The base folder for continuous session could not be created. The base folder for continuous session could not be created		
Remedial action: Check the folder existence AD/OR the folder creation rights for the BDS on the NAS		

Table 27-1969 IK8600376

Alarm	Attributes	Applicable major release
Name: IK8600376 (9324) Type: processingErrorAlarm Package: Img.IK8600376 Raised on class: Img.Flute	Severity: critical Specific problem: The base ondemand folder for cache could not be created Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: No such OnDemand cache basepath (variable parameter such as basePathObDemandCache is also indicated)\nReason: The base ondemand folder for cache could not be created. The ondemand folder for cache could not be created		
Remedial action: Check the folder existence AD/OR the folder creation rights for the BDS on the NAS		

Table 27-1970 IK8600377

Alarm	Attributes	Applicable major release
Name: IK8600377 (9325) Type: processingErrorAlarm Package: Img.IK8600377 Raised on class: Img.Flute	Severity: critical Specific problem: The base ondemand folder for file repair could not be created Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: No such FileRepair basepath (variable parameter such as basePathFileRepair is also indicated)\nReason: The base ondemand folder for file repair could not be created. The ondemand folder for file repair could not be created		
Remedial action: Check the folder existence AD/OR the folder creation rights for the BDS on the NAS		

Table 27-1971 IK8600381

Alarm	Attributes	Applicable major release
Name: IK8600381 (9326) Type: processingErrorAlarm Package: Img.IK8600381 Raised on class: Img.Flute	Severity: major Specific problem: Verify database. Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: Fails to update the OnDemandFile (variable parameters such as fileURI and cause are also indicated)\nReason: Verify database. . The database can not be reached OR persistence errors		
Remedial action: Check that the mysql database is running		

Table 27-1972 IK8600382

Alarm	Attributes	Applicable major release
Name: IK8600382 (9327) Type: processingErrorAlarm Package: Img.IK8600382 Raised on class: Img.Flute	Severity: major Specific problem: Check server. Properties parameter server. Content. Continuous. Queue. Size Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: File delivery queue for Flute session continuous is full, queue is purged. (variable parameter such as Delivery InstanceId is also indicated)\nReason: Check server. Properties parameter server. Content. Continuous. Queue. Size . The bitrate of the instance is not enough		
Remedial action: Check if files are pushed in the webdav folder too fast comparing to the bitrate, create a instance with a bigger bitrate and delete this one.		

Table 27-1973 IK8600385

Alarm	Attributes	Applicable major release
Name: IK8600385 (10728) Type: processingErrorAlarm Package: lmg.IK8600385 Raised on class: lmg.Flute	Severity: warning Specific problem: File in delivery no more available in database Implicitly cleared: true Default probable cause: corruptData	Release: • LR16.1.MG
Description: File not updated. Cause OnDemandFile not found in database (variable parameters such as file path are also indicated)\nReason: File in delivery no more available in database (already removed). Unknown cause		
Remedial action: No immediate action is required. If the problem persists, contact NOKIA customer support.		

Table 27-1974 IK8600390

Alarm	Attributes	Applicable major release
Name: IK8600390 (7472) Type: communicationsAlarm Package: lmg.IK8600390 Raised on class: lmg.Flute	Severity: major Specific problem: Problem with FDTRepetitionPeriod and bitrate parameters Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: FDT repetition period shorter than FDT transmission duration (variable parameters such as FDT period, FDT transmission duration, ContentId, . . . Are also indicated)\nReason: Problem with FDTRepetitionPeriod and bitrate parameters. The FDT can not be sent as many times as required with the instance bitrate		
Remedial action: FDTRepetitionPeriod may be too important comparing to the bitrate and FDT size. Check the bitrate of the instance, and the FDT period. Delete the delivery instance. Create another delivery instance with the correct parameters.		

Table 27-1975 IK8600391

Alarm	Attributes	Applicable major release
Name: IK8600391 (7473) Type: processingErrorAlarm Package: lmg.IK8600391 Raised on class: lmg.Flute	Severity: major Specific problem: Problem with server. Properties parameter server. Content. Continuous. Queue. Size Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: File delivery queue for Flute session continuous is full. Files not queued (variable parameters such as deliveryInstanceId are also indicated)\nReason: Problem with server. Properties parameter server. Content. Continuous. Queue. Size . The bitrate of the instance is not enough		
Remedial action: Check if files are pushed in the webdav folder too fast comparing to the bitrate, create a instance with a bigger bitrate and delete this one.		

Table 27-1976 IK8600398

Alarm	Attributes	Applicable major release
Name: IK8600398 (7474) Type: communicationsAlarm Package: Img.IK8600398 Raised on class: Img.Flute	Severity: critical Specific problem: Licensing: Authorized maximum bitrate reached - case 1 Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Delivery Session reload aborted. Cause Authorized maximum number of sessions reached\nReason: Licensing: Authorized maximum bitrate reached - case 1. The number of sessions in database exceed the authorized number in the licence		
Remedial action: Check the number of registered sessions from database. Use only the right licence.		

Table 27-1977 IK8600399

Alarm	Attributes	Applicable major release
Name: IK8600399 (7475) Type: communicationsAlarm Package: Img.IK8600399 Raised on class: Img.Flute	Severity: critical Specific problem: Licensing: Authorized maximum bitrate reached - case 2 Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Delivery Instance reload aborted. Cause Authorized maximum bitrate reached\nReason: Licensing: Authorized maximum bitrate reached - case 2. The total bitrate size for delivery instances exceed the authorized number in the licence		
Remedial action: Check the number of registered instances from database. Use only the right licence.		

Table 27-1978 IK8600407

Alarm	Attributes	Applicable major release
Name: IK8600407 (7476) Type: processingErrorAlarm Package: Img.IK8600407 Raised on class: Img.Flute	Severity: critical Specific problem: An unexpected error occurred during delivery. The delivery is killed Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Delivery interrupted for unexpected reason (variable parameters such as delivery instanceId, reason are also indicated)\nReason: An unexpected error occurred during delivery. The delivery is killed. Unknown cause		
Remedial action: Check the message in the error. Perform a deleteContent(abort true) to clean the delivery instance and add again the content to the instance		

Table 27-1979 IK8600408

Alarm	Attributes	Applicable major release
Name: IK8600408 (7477) Type: processingErrorAlarm Package: Img.IK8600408 Raised on class: Img.LMGMngElement	Severity: major Specific problem: The file processing request returns BAD REQUEST Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG
Description: File preparation forbidden. Alarm is cleared only after the server restart.\nReason: Misconfiguration		
Remedial action: Check server. Properties server. Flute. Module parameter		

Table 27-1980 IK8600409

Alarm	Attributes	Applicable major release
Name: IK8600409 (7478) Type: processingErrorAlarm Package: Img.IK8600409 Raised on class: Img.LMGMngElement	Severity: major Specific problem: The file processing abort request returns BAD REQUEST Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG
Description: Abort file preparation forbidden. Alarm is cleared only after the server restart.\nReason: Misconfiguration		
Remedial action: Check server. Properties server. Flute. Module parameter		

Table 27-1981 IK8600420

Alarm	Attributes	Applicable major release
Name: IK8600420 (9328) Type: processingErrorAlarm Package: Img.IK8600420 Raised on class: Img.Flute	Severity: critical Specific problem: Happen in the DeliveryInstance delete task when database is not reacheable Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: Unexpected error while getting DeliveryInstance (variable parameters such as delivery instance, cause. . . Are also indicated)\nReason: Happen in the DeliveryInstance delete task when database is not reacheable. The database can not be reached		
Remedial action: Check that the mysql database is running		

Table 27-1982 IK8600440

Alarm	Attributes	Applicable major release
Name: IK8600440 (9329) Type: processingErrorAlarm Package: Img.IK8600440 Raised on class: Img.Flute	Severity: critical Specific problem: Issue occur when trying to add the new event to the events queue Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: Event not queued as Events queue full (variable parameter event is also indicated)\nReason: Issue occur when trying to add the new event to the events queue. The events queue is full		
Remedial action: Trigger a swithcover		

Table 27-1983 IK8600443

Alarm	Attributes	Applicable major release
Name: IK8600443 (9330) Type: processingErrorAlarm Package: Img.IK8600443 Raised on class: Img.Flute	Severity: major Specific problem: Occur while reloading delivery instances from db at server restart Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: Bitrate taking into account the control fragment bitrate and the synchronisation sequence is too low to transmit at least one packet per SYNC period.\nReason: Occur while reloading delivery instances from db at server restart. The bitrate for Live or Ondemand session is lower than one packet per Minimum Sync Period		
Remedial action: Increase the SYNC sequence then restart the server		

Table 27-1984 IK8600500

Alarm	Attributes	Applicable major release
Name: IK8600500 (9331) Type: processingErrorAlarm Package: Img.IK8600500 Raised on class: Img.Flute	Severity: critical Specific problem: The dongle is not present Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: Dongle not found\nReason: The dongle is not present. Dongle removed or not installed		
Remedial action: set up a dongle		

Table 27-1985 IK8600502

Alarm	Attributes	Applicable major release
Name: IK8600502 (9332) Type: processingErrorAlarm Package: Img.IK8600502 Raised on class: Img.Flute	Severity: major Specific problem: Dongle issue Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: USB key protection error\nReason: Dongle issue. Dongle removed or not installed or license limit reached or license expired		
Remedial action: Check the dongle		

Table 27-1986 IK8603228

Alarm	Attributes	Applicable major release
Name: IK8603228 (7479) Type: processingErrorAlarm Package: Img.IK8603228 Raised on class: Img.Flute	Severity: critical Specific problem: License is expired, contact the support to renew the license Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: License is expired.\nReason: License is expired, contact the support to renew the license. License is expired		
Remedial action: Contact NOKIA customer support to renew the license.		

Table 27-1987 IK8603229

Alarm	Attributes	Applicable major release
Name: IK8603229 (7480) Type: processingErrorAlarm Package: Img.IK8603229 Raised on class: Img.Flute	Severity: critical Specific problem: License is invalid. Make sure that all the network interfaces are activated and retry Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Copy protection verification fails.\nReason: License is invalid. Make sure that all the network interfaces are activated and retry. Copy protection verification fails		
Remedial action: Check the server is installed correctly and connected on the network. Contact NOKIA customer support.		

Table 27-1988 IK8603267

Alarm	Attributes	Applicable major release
Name: IK8603267 (7481) Type: processingErrorAlarm Package: Img.IK8603267 Raised on class: Img.Flute	Severity: critical Specific problem: License is invalid, contact the support Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Unknown license for this server\nReason: License is invalid, contact the support. The license doesn't authorize to run the Broadcast Delivery Server		
Remedial action: Order a new license.		

Table 27-1989 IK8609980

Alarm	Attributes	Applicable major release
Name: IK8609980 (10729) Type: processingErrorAlarm Package: Img.IK8609980 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1990 IK8609981

Alarm	Attributes	Applicable major release
Name: IK8609981 (10730) Type: processingErrorAlarm Package: Img.IK8609981 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1991 IK8609982

Alarm	Attributes	Applicable major release
Name: IK8609982 (10731) Type: processingErrorAlarm Package: Img.IK8609982 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG

Table 27-1991 IK8609982 (continued)

Alarm	Attributes	Applicable major release
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1992 IK8609983

Alarm	Attributes	Applicable major release
Name: IK8609983 (10732) Type: processingErrorAlarm Package: lmg.IK8609983 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1993 IK8609984

Alarm	Attributes	Applicable major release
Name: IK8609984 (10733) Type: processingErrorAlarm Package: lmg.IK8609984 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1994 IK8609985

Alarm	Attributes	Applicable major release
Name: IK8609985 (10734) Type: processingErrorAlarm Package: lmg.IK8609985 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1995 IK8609986

Alarm	Attributes	Applicable major release
Name: IK8609986 (10735) Type: processingErrorAlarm Package: Img.IK8609986 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1996 IK8609987

Alarm	Attributes	Applicable major release
Name: IK8609987 (10736) Type: processingErrorAlarm Package: Img.IK8609987 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1997 IK8609988

Alarm	Attributes	Applicable major release
Name: IK8609988 (10737) Type: processingErrorAlarm Package: Img.IK8609988 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1998 IK8609989

Alarm	Attributes	Applicable major release
Name: IK8609989 (10738) Type: processingErrorAlarm Package: Img.IK8609989 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-1999 IK8609990

Alarm	Attributes	Applicable major release
Name: IK8609990 (10739) Type: processingErrorAlarm Package: lmg.IK8609990 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2000 IK8609991

Alarm	Attributes	Applicable major release
Name: IK8609991 (10740) Type: processingErrorAlarm Package: lmg.IK8609991 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2001 IK8609992

Alarm	Attributes	Applicable major release
Name: IK8609992 (10741) Type: processingErrorAlarm Package: lmg.IK8609992 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2002 IK8609993

Alarm	Attributes	Applicable major release
Name: IK8609993 (10742) Type: processingErrorAlarm Package: lmg.IK8609993 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2003 IK8609994

Alarm	Attributes	Applicable major release
Name: IK8609994 (10743) Type: processingErrorAlarm Package: Img.IK8609994 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2004 IK8609995

Alarm	Attributes	Applicable major release
Name: IK8609995 (10744) Type: processingErrorAlarm Package: Img.IK8609995 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2005 IK8609996

Alarm	Attributes	Applicable major release
Name: IK8609996 (10745) Type: processingErrorAlarm Package: Img.IK8609996 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2006 IK8609997

Alarm	Attributes	Applicable major release
Name: IK8609997 (10746) Type: processingErrorAlarm Package: Img.IK8609997 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2007 IK8609998

Alarm	Attributes	Applicable major release
Name: IK8609998 (10747) Type: processingErrorAlarm Package: lmg.IK8609998 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2008 IK8609999

Alarm	Attributes	Applicable major release
Name: IK8609999 (10748) Type: processingErrorAlarm Package: lmg.IK8609999 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2009 IK8610137

Alarm	Attributes	Applicable major release
Name: IK8610137 (7482) Type: processingErrorAlarm Package: lmg.IK8610137 Raised on class: lmg.FilePrepare	Severity: major Specific problem: Issue occurs when trying to create a BmscEvent Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Error when generating bmsc event string\nReason: Issue occurs when trying to create a BmscEvent. No identified cause		
Remedial action: No immediate action is required. If the problem persists, contact NOKIA customer support.		

Table 27-2010 IK8610142

Alarm	Attributes	Applicable major release
Name: IK8610142 (7483) Type: processingErrorAlarm Package: lmg.IK8610142 Raised on class: lmg.FilePrepare	Severity: major Specific problem: Issue occurs when trying to get the DeliveryInstance from database Implicitly cleared: true Default probable cause: softwareError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG

Table 27-2010 IK8610142 (continued)

Alarm	Attributes	Applicable major release
Description: Fails to get the delivery instance from database (variable parameters such as deliveryInstanceId, cause are also indicated)\nReason: Issue occurs when trying to get the DeliveryInstance from database . The database can not be reached or persistence errors		
Remedial action: Check that the mysql database is running.		

Table 27-2011 IK8610168

Alarm	Attributes	Applicable major release
Name: IK8610168 (7484) Type: processingErrorAlarm Package: Img.IK8610168 Raised on class: Img.FilePrepare	Severity: major Specific problem: Database problem - case 1 Implicitly cleared: true Default probable cause: softwareError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to get the delivery instances - database failure (variable parameters such as cause are also indicated)\nReason: Database problem - case 1. The database can not be reached or persistence errors		
Remedial action: Check that the mysql database is running.		

Table 27-2012 IK8610174

Alarm	Attributes	Applicable major release
Name: IK8610174 (7485) Type: communicationsAlarm Package: Img.IK8610174 Raised on class: Img.FilePrepare	Severity: minor Specific problem: Problem with the url in charge of receiving the events - case 1 Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to send event (variable parameters such as event, cause are also indicated)\nReason: Problem with the url in charge of receiving the events - case 1. The event could not be sent to the configured URL.		
Remedial action: Check if the URL is correct, and if the orchestrator is correctly started		

Table 27-2013 IK8610190

Alarm	Attributes	Applicable major release
Name: IK8610190 (7486) Type: processingErrorAlarm Package: Img.IK8610190 Raised on class: Img.FilePrepare	Severity: major Specific problem: Problem with database - case 1 Implicitly cleared: true Default probable cause: softwareError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG

Table 27-2013 IK8610190 (continued)

Alarm	Attributes	Applicable major release
Description: Error while saving file to database (variable parameters such as filePath are also indicated)\nReason: Problem with database - case 1. The database can not be reached or persistence errors - issue occurs in ADD CACHE request		
Remedial action: Check that the mysql database is running.		

Table 27-2014 IK8610196

Alarm	Attributes	Applicable major release
Name: IK8610196 (7487) Type: processingErrorAlarm Package: Img.IK8610196 Raised on class: Img.FilePrepare	Severity: major Specific problem: Problem with database - case 2 Implicitly cleared: true Default probable cause: softwareError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to get OnDemandFile from database (variable parameters such as URI, fileURI are also indicated)\nReason: Problem with database - case 2. The database can not be reached		
Remedial action: Check that the mysql database is running.		

Table 27-2015 IK8610197

Alarm	Attributes	Applicable major release
Name: IK8610197 (7488) Type: processingErrorAlarm Package: Img.IK8610197 Raised on class: Img.FilePrepare	Severity: major Specific problem: Fails to get the file MD5 from database Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to get file uri and MD5 (variable parameters such as URI are also indicated)\nReason: Fails to get the file MD5 from database. Unknown cause		
Remedial action: No immediate action is required. If the problem persists, contact NOKIA customer support.		

Table 27-2016 IK8610200

Alarm	Attributes	Applicable major release
Name: IK8610200 (7489) Type: processingErrorAlarm Package: Img.IK8610200 Raised on class: Img.FilePrepare	Severity: major Specific problem: Problem with database - case 3 Implicitly cleared: true Default probable cause: softwareError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to create index. Files not prepared (variable parameters such as index, cause are also indicated)\nReason: Problem with database - case 3. The database can not be reached		

Table 27-2016 IK8610200 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Check that the mysql database is running.		

Table 27-2017 IK8610211

Alarm	Attributes	Applicable major release
Name: IK8610211 (7490) Type: communicationsAlarm Package: Img.IK8610211 Raised on class: Img.FilePrepare	Severity: minor Specific problem: Problem with the url in charge of receiving the events - case 3 Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to send event (variable parameters such as notification type, cause are also indicated)\nReason: Problem with the url in charge of receiving the events - case 3. The event could not be sent to the configured URL.		
Remedial action: Check if the URL is correct, and if the orchestrator is correctly started		

Table 27-2018 IK8610214

Alarm	Attributes	Applicable major release
Name: IK8610214 (7491) Type: processingErrorAlarm Package: Img.IK8610214 Raised on class: Img.FilePrepare	Severity: major Specific problem: Problem with database - case 4 Implicitly cleared: true Default probable cause: softwareError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to create index (variable parameters such as index, cause are also indicated)\nReason: Problem with database - case 4. The database can not be reached		
Remedial action: Check that the mysql database is running.		

Table 27-2019 IK8610215

Alarm	Attributes	Applicable major release
Name: IK8610215 (7492) Type: processingErrorAlarm Package: Img.IK8610215 Raised on class: Img.FilePrepare	Severity: major Specific problem: The cache folder is not found, when the Broadcast Delivery Server need to check its free space Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Cache folder is not found or doesn't exists any more\nReason: The cache folder is not found, when the Broadcast Delivery Server need to check its free space. The cache folder is not found or doesn't exists any more		
Remedial action: Check the configuration: server. Content. Ondemand. Cache. Basepath, and the existence of this folder		

Table 27-2020 IK8610216

Alarm	Attributes	Applicable major release
Name: IK8610216 (7493) Type: processingErrorAlarm Package: lmg.IK8610216 Raised on class: lmg.FilePrepare	Severity: major Specific problem: Problem with database - case 5 Implicitly cleared: true Default probable cause: softwareError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to get the delivery sessions from database - database failure (variable parameters such as cause are also indicated)\nReason: Problem with database - case 5. The database can not be reached or persistence errors		
Remedial action: Check that the mysql database is running.		

Table 27-2021 IK8610217

Alarm	Attributes	Applicable major release
Name: IK8610217 (7494) Type: processingErrorAlarm Package: lmg.IK8610217 Raised on class: lmg.FilePrepare	Severity: major Specific problem: Problem with database - case 6 Implicitly cleared: true Default probable cause: softwareError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to get the OnDemand files from database (variable parameters such as cause are also indicated)\nReason: Problem with database - case 6. The database can not be reached or persistence errors		
Remedial action: Check that the mysql database is running.		

Table 27-2022 IK8610232

Alarm	Attributes	Applicable major release
Name: IK8610232 (7495) Type: communicationsAlarm Package: lmg.IK8610232 Raised on class: lmg.LMGMngElement	Severity: minor Specific problem: case 4 Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: Fails to send event File deleted (variable parameters such as cause are also indicated). Alarm is cleared by the system.\nReason: The event could not be sent to the configured URL.		
Remedial action: Check if the URL is correct, and if the orchestrator is correctly started		

Table 27-2023 IK8610234

Alarm	Attributes	Applicable major release
Name: IK8610234 (7496) Type: processingErrorAlarm Package: Img.IK8610234 Raised on class: Img.FilePrepare	Severity: minor Specific problem: Problem with server. Properties - case 1 Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Invalid value of intparameter Use default value instead (variable parameters such as key authorized values, default value are also indicated)\nReason: Problem with server. Properties - case 1. An int parameter has an invalid value in server. Properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 27-2024 IK8610236

Alarm	Attributes	Applicable major release
Name: IK8610236 (7497) Type: processingErrorAlarm Package: Img.IK8610236 Raised on class: Img.FilePrepare	Severity: minor Specific problem: Problem with server. Properties - case 2 Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Invalid value of key parameter Use default value instead (variable parameters such as key, authorized values, default value are also indicated)\nReason: Problem with server. Properties - case 2. An parameter has an invalid value in server. Properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 27-2025 IK8610238

Alarm	Attributes	Applicable major release
Name: IK8610238 (7498) Type: communicationsAlarm Package: Img.IK8610238 Raised on class: Img.FilePrepare	Severity: major Specific problem: Problem with server. Properties. Server. Multicast. Networkinterface is not found Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Missing broadcast IP in server. Properties Use default IP (variable parameters such as ipbroadcast are also indicated)\nReason: Problem with server. Properties. Server. Multicast. Networkinterface is not found . Server. Multicast. Networkinterface is not found in server. Properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 27-2026 IK8610239

Alarm	Attributes	Applicable major release
Name: IK8610239 (7499) Type: processingErrorAlarm Package: lmg.IK8610239 Raised on class: lmg.FilePrepare	Severity: major Specific problem: Problem with server. Properties - case 3 Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Network interface not found. Use default loopback interface (variable parameters such as ip, iploopback are also indicated)\nReason: Problem with server. Properties - case 3. Can not occur		
Remedial action: No immediate action is required. If the problem persists, contact NOKIA customer support.		

Table 27-2027 IK8610240

Alarm	Attributes	Applicable major release
Name: IK8610240 (7500) Type: communicationsAlarm Package: lmg.IK8610240 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Server. Multicast. Networkinterface does not correspond to an existing network interface Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: The given local IPis not one of available server addressIP (variable parameters such as localIP, addressIP are also indicated). Alarm is cleared only after the server restart.\nReason: server.multicast.networkinterface does not correspond to an existing network interface		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 27-2028 IK8610241

Alarm	Attributes	Applicable major release
Name: IK8610241 (7501) Type: communicationsAlarm Package: lmg.IK8610241 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Problem with the server network interfaces Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: The given local IP is unknown (variable parameters such as IP are also indicated). Alarm is cleared only after the server restart.\nReason: server.multicast.networkinterface is not a valid IP address		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 27-2029 IK8610242

Alarm	Attributes	Applicable major release
Name: IK8610242 (7502) Type: processingErrorAlarm Package: Img.IK8610242 Raised on class: Img.FilePrepare	Severity: major Specific problem: Problem with local IPs Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Cannot get Local IPs\nReason: Problem with local IPs . Unknown cause: the java process can not list of network interfaces. (No identified reasons, never occured. Can be OS, Hardware error)		
Remedial action: No immediate action is required. If the problem persists, contact NOKIA customer support.		

Table 27-2030 IK8610248

Alarm	Attributes	Applicable major release
Name: IK8610248 (7503) Type: processingErrorAlarm Package: Img.IK8610248 Raised on class: Img.FilePrepare	Severity: minor Specific problem: Problem with server. Properties - case 4 Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Invalid value of parameter Use default value instead (variable parameters such as key, default value are also indicated)\nReason: Problem with server. Properties - case 4. An parameter has an invalid value in server. Properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 27-2031 IK8610250

Alarm	Attributes	Applicable major release
Name: IK8610250 (7504) Type: processingErrorAlarm Package: Img.IK8610250 Raised on class: Img.FilePrepare	Severity: minor Specific problem: Problem with server. Properties - case 5 Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Invalid value of long parameter inferior to the min authorized value Use default value instead (variable parameters such as key, minimum value, default value are also indicated)\nReason: Problem with server. Properties - case 5. An parameter has an invalid value in server. Properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 27-2032 IK8610251

Alarm	Attributes	Applicable major release
Name: IK8610251 (7505) Type: processingErrorAlarm Package: Img.IK8610251 Raised on class: Img.FilePrepare	Severity: minor Specific problem: Problem with server. Properties - case 6 Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Invalid value of parameter superior to the max authorized value. Use default value instead (variable parameters such as key, maximum value, default value are also indicated)\nReason: Problem with server. Properties - case 6. An parameter has an invalid value in server. Properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 27-2033 IK8610252

Alarm	Attributes	Applicable major release
Name: IK8610252 (7506) Type: processingErrorAlarm Package: Img.IK8610252 Raised on class: Img.FilePrepare	Severity: minor Specific problem: Problem with server. Properties - case 7 Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Invalid value of parameter: not an integer Use default value instead (variable parameters such as key, default value are also indicated)\nReason: Problem with server. Properties - case 7. An parameter has an invalid value in server. Properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 27-2034 IK8610254

Alarm	Attributes	Applicable major release
Name: IK8610254 (7507) Type: processingErrorAlarm Package: Img.IK8610254 Raised on class: Img.FilePrepare	Severity: minor Specific problem: Problem with server. Properties - case 8 Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Invalid value of integer parameter inferior to the min authorized value Use default value instead (variable parameters such as key, minimum value, default value are also indicated)\nReason: Problem with server. Properties - case 8. An parameter has an invalid value in server. Properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 27-2035 IK8610256

Alarm	Attributes	Applicable major release
Name: IK8610256 (9333) Type: processingErrorAlarm Package: Img.IK8610256 Raised on class: Img.FilePrepare	Severity: major Specific problem: Database not available at Broadcast Delivery Server start Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: Could not obtain connection to MySQL database (variable parameter such as exception is indicated)\nReason: Database not available at Broadcast Delivery Server start. The database is not available		
Remedial action: Check that the mysql database is running. Check network connection		

Table 27-2036 IK8610271

Alarm	Attributes	Applicable major release
Name: IK8610271 (7508) Type: processingErrorAlarm Package: Img.IK8610271 Raised on class: Img.FilePrepare	Severity: critical Specific problem: Problem when initializing the FluteEngine library - case 2 Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG
Description: Fails to initialize FluteEngine library (variable parameters such as deliveryInstanceId are also indicated)\nReason: Problem when initializing the FluteEngine library - case 2. Memory leaks or Flute engine internal error		
Remedial action: Trigger a switchover		

Table 27-2037 IK8610286

Alarm	Attributes	Applicable major release
Name: IK8610286 (7509) Type: processingErrorAlarm Package: Img.IK8610286 Raised on class: Img.FilePrepare	Severity: critical Specific problem: Server. Properties is not found at start-up Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Server config file not found in the indicated path\nReason: Server. Properties is not found at start-up. Server. Properties is missing		
Remedial action: Add the server. Properties and restart.		

Table 27-2038 IK8610287

Alarm	Attributes	Applicable major release
Name: IK8610287 (7510) Type: processingErrorAlarm Package: Img.IK8610287 Raised on class: Img.FilePrepare	Severity: critical Specific problem: Server. Properties can not be parsed Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Server config file invalid\nReason: Server. Properties can not be parsed. Server. Properties format is not valid		
Remedial action: Correction the server. Properties file and restart.		

Table 27-2039 IK8610288

Alarm	Attributes	Applicable major release
Name: IK8610288 (7511) Type: processingErrorAlarm Package: Img.IK8610288 Raised on class: Img.FilePrepare	Severity: critical Specific problem: Server. Properties can not be read Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: exception_msg\nReason: Server. Properties can not be read. Server. Properties is written or deleted while the Broadcast Delivery Server is reading it		
Remedial action: Restart the Broadcast Delivery Server.		

Table 27-2040 IK8610309

Alarm	Attributes	Applicable major release
Name: IK8610309 (7512) Type: processingErrorAlarm Package: Img.IK8610309 Raised on class: Img.FilePrepare	Severity: minor Specific problem: Problem with database - case 7 Implicitly cleared: true Default probable cause: softwareError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Error while removing file from database (variable parameters such as filePath are also indicated)\nReason: Problem with database - case 7. The database can not be reached or persistence errors		
Remedial action: Check that the mysql database is running.		

Table 27-2041 IK8610321

Alarm	Attributes	Applicable major release
Name: IK8610321 (7513) Type: processingErrorAlarm Package: Img.IK8610321 Raised on class: Img.FilePrepare	Severity: major Specific problem: File could not be prepared - case 1 Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to init Flute Stream Generator for OnDemandFile Skip processing file (variable parameters such as filePath, deliveryInstanceId are also indicated)\nReason: File could not be prepared - case 1. Unknown cause - Memory leak or Flute engine internal error		
Remedial action: No immediate action is required. If the problem persists, contact NOKIA customer support.		

Table 27-2042 IK8610322

Alarm	Attributes	Applicable major release
Name: IK8610322 (7514) Type: processingErrorAlarm Package: Img.IK8610322 Raised on class: Img.FilePrepare	Severity: major Specific problem: File could not be prepared - case 2 Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to start stream generation process for file (variable parameters such as filePath, deliveryInstanceId are also indicated)\nReason: File could not be prepared - case 2. Unknown cause -Flute engine internal error or disk access problem		
Remedial action: No immediate action is required. If the problem persists, contact NOKIA customer support.		

Table 27-2043 IK8610323

Alarm	Attributes	Applicable major release
Name: IK8610323 (9334) Type: processingErrorAlarm Package: Img.IK8610323 Raised on class: Img.FilePrepare	Severity: critical Specific problem: License file not valid Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: License file cannot be parsed\nReason: License file not valid. License file corrupted		
Remedial action: Check license file checksum		

Table 27-2044 IK8610328

Alarm	Attributes	Applicable major release
Name: IK8610328 (7515) Type: communicationsAlarm Package: Img.IK8610328 Raised on class: Img.FilePrepare	Severity: critical Specific problem: The mulltiFEC library is missing or can be loaded Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Required library not found (variable parameters such as path are also indicated)\nReason: The mulltiFEC library is missing or can be loaded . Missing required libraries		
Remedial action: Check the presence of the *. So libraries		

Table 27-2045 IK8610333

Alarm	Attributes	Applicable major release
Name: IK8610333 (7516) Type: processingErrorAlarm Package: Img.IK8610333 Raised on class: Img.FilePrepare	Severity: minor Specific problem: Problem with existence of the mime. Types file in the /config directory Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Error when loading MIME_TYPES_FILE Default mime types will be used instead (variable parameters such as Mimetypes file are also indicated)\nReason: Problem with existence of the mime. Types file in the /config directory. The mime. Types is missing.		
Remedial action: Check the format of this file. Add the mime. Types config file and restart the Broadcast Delivery Server.		

Table 27-2046 IK8610334

Alarm	Attributes	Applicable major release
Name: IK8610334 (7517) Type: processingErrorAlarm Package: Img.IK8610334 Raised on class: Img.FilePrepare	Severity: critical Specific problem: License file not found or not valid Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: License file not found or not valid\nReason: License file not found or not valid (cannot be parsed). License file not found		
Remedial action: Check licence file existence.		

Table 27-2047 IK8610335

Alarm	Attributes	Applicable major release
Name: IK8610335 (7518) Type: processingErrorAlarm Package: Img.IK8610335 Raised on class: Img.FilePrepare	Severity: critical Specific problem: Problem with license Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: exception_msg. New License to be ordered\nReason: Problem with license. The license doesn't authorize to run the Broadcast Delivery Server		
Remedial action: Order a new license .		

Table 27-2048 IK8610338

Alarm	Attributes	Applicable major release
Name: IK8610338 (7519) Type: processingErrorAlarm Package: Img.IK8610338 Raised on class: Img.FilePrepare	Severity: major Specific problem: Problem when initializing the FluteEngine library - case 3 Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG
Description: Fails to initialize FluteSender library for control fragments (variable parameters such as deliveryInstanceId are also indicated)\nReason: Problem when initializing the FluteEngine library - case 3. Memory leak or Flute engine internal error		
Remedial action: Stop and reinstall the Broadcast Delivery Server		

Table 27-2049 IK8610346

Alarm	Attributes	Applicable major release
Name: IK8610346 (7520) Type: processingErrorAlarm Package: Img.IK8610346 Raised on class: Img.FilePrepare	Severity: major Specific problem: OriginatorUserName can not be blank and can not contains spaces Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Invalid value of server. Multicast. SDP. Originator parameter (variable parameters such as invalid parameter value, default value are also indicated)\nReason: OriginatorUserName can not be blank and can not contains spaces. Server. Multicast. SDP. Originator is not found or incorrect in server. Properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 27-2050 IK8610347

Alarm	Attributes	Applicable major release
Name: IK8610347 (7521) Type: processingErrorAlarm Package: Img.IK8610347 Raised on class: Img.FilePrepare	Severity: major Specific problem: No namespace for the control fragments has been configured Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: No namespace for the control fragments has been configured (variable parameters are also indicated)\nReason: No namespace for the control fragments has been configured. No namespace configured		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 27-2051 IK8610348

Alarm	Attributes	Applicable major release
Name: IK8610348 (7522) Type: processingErrorAlarm Package: Img.IK8610348 Raised on class: Img.FilePrepare	Severity: minor Specific problem: Problem with stop task - case 1 Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Stop task for flute stream preparation process could not be stopped. Task not registered (variable parameters such as processId are also indicated)\nReason: Problem with stop task - case 1. Internal error		
Remedial action: No immediate action is required. If the problem persists, contact NOKIA customer support.		

Table 27-2052 IK8610350

Alarm	Attributes	Applicable major release
Name: IK8610350 (10749) Type: processingErrorAlarm Package: Img.IK8610350 Raised on class: Img.FilePrepare	Severity: major Specific problem: Problem with database - case 15 Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: Delivery Instance ID not found from database. Abort Stop stream preparation task (variable parameter deliveryInstanceId is also indicated)\nReason: Problem with database - case 15 (can happen if instance has been deleted). A delete instance has been done just after a prepare file request on the same instance		
Remedial action: Check that there is no issue in the request callflow performed		

Table 27-2053 IK8610357

Alarm	Attributes	Applicable major release
Name: IK8610357 (7523) Type: processingErrorAlarm Package: Img.IK8610357 Raised on class: Img.FilePrepare	Severity: major Specific problem: Problem with database - case 11 Implicitly cleared: true Default probable cause: softwareError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to create new TOI (Transport Object Identifier) (variable parameters such as cause are also indicated)\nReason: Problem with database - case 11 . The database can not be reached or persistence errors		
Remedial action: Check that the mysql database is running.		

Table 27-2054 IK8610359

Alarm	Attributes	Applicable major release
Name: IK8610359 (7524) Type: processingErrorAlarm Package: Img.IK8610359 Raised on class: Img.FilePrepare	Severity: major Specific problem: Problem with database - case 12 Implicitly cleared: true Default probable cause: softwareError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to remove TOI (Transport Object Identifier) (variable parameters such as cause are also indicated)\nReason: Problem with database - case 12 . The database can not be reached or persistence errors		
Remedial action: Check that the mysql database is running.		

Table 27-2055 IK8610360

Alarm	Attributes	Applicable major release
Name: IK8610360 (7525) Type: processingErrorAlarm Package: Img.IK8610360 Raised on class: Img.FilePrepare	Severity: major Specific problem: Problem with database - case 13 Implicitly cleared: true Default probable cause: softwareError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to get OnDemanFile count (variable parameters such as cause are also indicated)\nReason: Problem with database - case 13 . The database can not be reached or persistence errors		
Remedial action: Check that the mysql database is running.		

Table 27-2056 IK8610361

Alarm	Attributes	Applicable major release
Name: IK8610361 (7526) Type: processingErrorAlarm Package: lmg.IK8610361 Raised on class: lmg.FilePrepare	Severity: major Specific problem: TOI range [1, 65535] are full Implicitly cleared: true Default probable cause: storageCapacityProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: TOI (Transport Object Identifier) full\nReason: TOI range [1, 65535] are full. There are near 65535 files in base		
Remedial action: Remove some files before adding new one		

Table 27-2057 IK8610362

Alarm	Attributes	Applicable major release
Name: IK8610362 (7527) Type: processingErrorAlarm Package: lmg.IK8610362 Raised on class: lmg.FilePrepare	Severity: major Specific problem: Problem with database - case 14 Implicitly cleared: true Default probable cause: softwareError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Fails to get OnDemanFile with TOI (Transport Object Identifier) (variable parameters such as toi, cause are also indicated)\nReason: Problem with database - case 14 . The database can not be reached		
Remedial action: Check that the mysql database is running.		

Table 27-2058 IK8610363

Alarm	Attributes	Applicable major release
Name: IK8610363 (7528) Type: processingErrorAlarm Package: lmg.IK8610363 Raised on class: lmg.FilePrepare	Severity: critical Specific problem: The MIB could not be initialized Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Error when initializing the MIB (variable parameters such as exception are also indicated)\nReason: The MIB could not be initialized. Various possible causes, to be analyzed according the message		
Remedial action: No immediate action is required. If the problem persists, contact NOKIA customer support.		

Table 27-2059 IK8610374

Alarm	Attributes	Applicable major release
Name: IK8610374 (9335) Type: processingErrorAlarm Package: Img.IK8610374 Raised on class: Img.FilePrepare	Severity: critical Specific problem: The base ondemand folder could not be created Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: No such OnDemand basepath (variable parameter such as basePathObDemand is also indicated)\nReason: The base ondemand folder could not be created. The ondemand folder could not be created		
Remedial action: Check the folder existence AD/OR the folder creation rights for the BDS on the NAS		

Table 27-2060 IK8610375

Alarm	Attributes	Applicable major release
Name: IK8610375 (9336) Type: processingErrorAlarm Package: Img.IK8610375 Raised on class: Img.FilePrepare	Severity: critical Specific problem: The base folder for continuous session could not be created Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: No such Continuous basepath (variable parameter such as basePathContinuous is also indicated)\nReason: The base folder for continuous session could not be created. The base folder for continuous session could not be created		
Remedial action: Check the folder existence AD/OR the folder creation rights for the BDS on the NAS		

Table 27-2061 IK8610376

Alarm	Attributes	Applicable major release
Name: IK8610376 (9337) Type: processingErrorAlarm Package: Img.IK8610376 Raised on class: Img.FilePrepare	Severity: critical Specific problem: The base ondemand folder for cache could not be created Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: No such OnDemand cache basepath (variable parameter such as basePathObDemandCache is also indicated)\nReason: The base ondemand folder for cache could not be created. The ondemand folder for cache could not be created		
Remedial action: Check the folder existence AD/OR the folder creation rights for the BDS on the NAS		

Table 27-2062 IK8610377

Alarm	Attributes	Applicable major release
Name: IK8610377 (9338) Type: processingErrorAlarm Package: Img.IK8610377 Raised on class: Img.FilePrepare	Severity: critical Specific problem: The base ondemand folder for file repair could not be created Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: No such FileRepair basepath (variable parameter such as basePathFileRepair is also indicated)\nReason: The base ondemand folder for file repair could not be created. The ondemand folder for file repair could not be created		
Remedial action: Check the folder existence AD/OR the folder creation rights for the BDS on the NAS		

Table 27-2063 IK8610410

Alarm	Attributes	Applicable major release
Name: IK8610410 (7529) Type: processingErrorAlarm Package: Img.IK8610410 Raised on class: Img.LMGMngElement	Severity: major Specific problem: The add content request returns BAD REQUEST Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG
Description: Add content forbidden. Alarm is cleared only after the server restart.\nReason: Misconfiguration		
Remedial action: Check server. Properties server. Flute. Module parameter		

Table 27-2064 IK8610411

Alarm	Attributes	Applicable major release
Name: IK8610411 (7530) Type: processingErrorAlarm Package: Img.IK8610411 Raised on class: Img.LMGMngElement	Severity: major Specific problem: The add control fragment request returns BAD REQUEST Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG
Description: Add control fragment forbidden. Alarm is cleared only after the server restart.\nReason: Misconfiguration		
Remedial action: Check server. Properties server. Flute. Module parameter		

Table 27-2065 IK8610412

Alarm	Attributes	Applicable major release
Name: IK8610412 (7531) Type: processingErrorAlarm Package: Img.IK8610412 Raised on class: Img.LMGMngElement	Severity: major Specific problem: The remove content request returns BAD REQUEST Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG
Description: Remove content forbidden. Alarm is cleared only after the server restart.\nReason: Misconfiguration		
Remedial action: Check server. Properties server. Flute. Module parameter		

Table 27-2066 IK8610413

Alarm	Attributes	Applicable major release
Name: IK8610413 (7532) Type: processingErrorAlarm Package: Img.IK8610413 Raised on class: Img.LMGMngElement	Severity: major Specific problem: The create delivery instance request returns BAD REQUEST Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG
Description: Create delivery instance forbidden. Alarm is cleared only after the server restart.\nReason: Misconfiguration		
Remedial action: Check server. Properties server. Flute. Module parameter		

Table 27-2067 IK8610414

Alarm	Attributes	Applicable major release
Name: IK8610414 (7533) Type: processingErrorAlarm Package: Img.IK8610414 Raised on class: Img.LMGMngElement	Severity: major Specific problem: The create delivery session request returns BAD REQUEST Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG
Description: Create delivery session forbidden. Alarm is cleared only after the server restart.\nReason: Misconfiguration		
Remedial action: Check server. Properties server. Flute. Module parameter		

Table 27-2068 IK8610415

Alarm	Attributes	Applicable major release
Name: IK8610415 (7534) Type: processingErrorAlarm Package: Img.IK8610415 Raised on class: Img.LMGMngElement	Severity: major Specific problem: The delete delivery instance request returns BAD REQUEST Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG
Description: Delete delivery instance forbidden. Alarm is cleared only after the server restart.\nReason: Misconfiguration		
Remedial action: Check server. Properties server. Flute. Module parameter		

Table 27-2069 IK8610416

Alarm	Attributes	Applicable major release
Name: IK8610416 (7535) Type: processingErrorAlarm Package: Img.IK8610416 Raised on class: Img.LMGMngElement	Severity: major Specific problem: The delete delivery session request returns BAD REQUEST Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG
Description: Delete delivery session forbidden. Alarm is cleared only after the server restart.\nReason: Misconfiguration		
Remedial action: Check server. Properties server. Flute. Module parameter		

Table 27-2070 IK8610417

Alarm	Attributes	Applicable major release
Name: IK8610417 (7536) Type: processingErrorAlarm Package: Img.IK8610417 Raised on class: Img.LMGMngElement	Severity: major Specific problem: The display delivery session information request returns BAD REQUEST Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG
Description: Display delivery session information forbidden. Alarm is cleared only after the server restart.\nReason: Misconfiguration		
Remedial action: Check server. Properties server. Flute. Module parameter		

Table 27-2071 IK8610440

Alarm	Attributes	Applicable major release
Name: IK8610440 (9339) Type: processingErrorAlarm Package: Img.IK8610440 Raised on class: Img.FilePrepare	Severity: critical Specific problem: Issue occur when trying to add the new event to the events queue Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: Event not queued as Events queue full (variable parameter event is also indicated)\nReason: Issue occur when trying to add the new event to the events queue. The events queue is full		
Remedial action: Trigger a swithcover		

Table 27-2072 IK8610500

Alarm	Attributes	Applicable major release
Name: IK8610500 (9340) Type: processingErrorAlarm Package: Img.IK8610500 Raised on class: Img.FilePrepare	Severity: critical Specific problem: The dongle is not present Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: Dongle not found\nReason: The dongle is not present. Dongle removed or not installed		
Remedial action: set up a dongle		

Table 27-2073 IK8610502

Alarm	Attributes	Applicable major release
Name: IK8610502 (9341) Type: processingErrorAlarm Package: Img.IK8610502 Raised on class: Img.FilePrepare	Severity: major Specific problem: Dongle issue Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: USB key protection error\nReason: Dongle issue. Dongle removed or not installed or license limit reached or license expired		
Remedial action: Check the dongle		

Table 27-2074 IK8613228

Alarm	Attributes	Applicable major release
Name: IK8613228 (7537) Type: processingErrorAlarm Package: Img.IK8613228 Raised on class: Img.FilePrepare	Severity: critical Specific problem: License is expired, contact the support to renew the license Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: License is expired.\nReason: License is expired, contact the support to renew the license. License is expired		
Remedial action: Contact NOKIA customer support to renew the license.		

Table 27-2075 IK8613229

Alarm	Attributes	Applicable major release
Name: IK8613229 (7538) Type: processingErrorAlarm Package: Img.IK8613229 Raised on class: Img.FilePrepare	Severity: critical Specific problem: License is invalid. Make sure that all the network interfaces are activated and retry Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Copy protection verification fails.\nReason: License is invalid. Make sure that all the network interfaces are activated and retry. Copy protection verification fails		
Remedial action: Check the server is installed correctly and connected on the network. Contact NOKIA customer support.		

Table 27-2076 IK8613267

Alarm	Attributes	Applicable major release
Name: IK8613267 (7539) Type: processingErrorAlarm Package: Img.IK8613267 Raised on class: Img.FilePrepare	Severity: critical Specific problem: License is invalid, contact the support Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Unknown license for this server\nReason: License is invalid, contact the support. The license doesn't authorize to run the Broadcast Delivery Server		
Remedial action: Order a new license.		

Table 27-2077 IK8619980

Alarm	Attributes	Applicable major release
Name: IK8619980 (10750) Type: processingErrorAlarm Package: Img.IK8619980 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2078 IK8619981

Alarm	Attributes	Applicable major release
Name: IK8619981 (10751) Type: processingErrorAlarm Package: Img.IK8619981 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2079 IK8619982

Alarm	Attributes	Applicable major release
Name: IK8619982 (10752) Type: processingErrorAlarm Package: Img.IK8619982 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2080 IK8619983

Alarm	Attributes	Applicable major release
Name: IK8619983 (10753) Type: processingErrorAlarm Package: Img.IK8619983 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2081 IK8619984

Alarm	Attributes	Applicable major release
Name: IK8619984 (10754) Type: processingErrorAlarm Package: lmg.IK8619984 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2082 IK8619985

Alarm	Attributes	Applicable major release
Name: IK8619985 (10755) Type: processingErrorAlarm Package: lmg.IK8619985 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2083 IK8619986

Alarm	Attributes	Applicable major release
Name: IK8619986 (10756) Type: processingErrorAlarm Package: lmg.IK8619986 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2084 IK8619987

Alarm	Attributes	Applicable major release
Name: IK8619987 (10757) Type: processingErrorAlarm Package: lmg.IK8619987 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2085 IK8619988

Alarm	Attributes	Applicable major release
Name: IK8619988 (10758) Type: processingErrorAlarm Package: lmg.IK8619988 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2086 IK8619989

Alarm	Attributes	Applicable major release
Name: IK8619989 (10759) Type: processingErrorAlarm Package: lmg.IK8619989 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2087 IK8619990

Alarm	Attributes	Applicable major release
Name: IK8619990 (10760) Type: processingErrorAlarm Package: lmg.IK8619990 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2088 IK8619991

Alarm	Attributes	Applicable major release
Name: IK8619991 (10761) Type: processingErrorAlarm Package: lmg.IK8619991 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2089 IK8619992

Alarm	Attributes	Applicable major release
Name: IK8619992 (10762) Type: processingErrorAlarm Package: lmg.IK8619992 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2090 IK8619993

Alarm	Attributes	Applicable major release
Name: IK8619993 (10763) Type: processingErrorAlarm Package: lmg.IK8619993 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2091 IK8619994

Alarm	Attributes	Applicable major release
Name: IK8619994 (10764) Type: processingErrorAlarm Package: lmg.IK8619994 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2092 IK8619995

Alarm	Attributes	Applicable major release
Name: IK8619995 (10765) Type: processingErrorAlarm Package: lmg.IK8619995 Raised on class: lmg.FilePrepare	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2093 IK8619996

Alarm	Attributes	Applicable major release
Name: IK8619996 (10766) Type: processingErrorAlarm Package: Img.IK8619996 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2094 IK8619997

Alarm	Attributes	Applicable major release
Name: IK8619997 (10767) Type: processingErrorAlarm Package: Img.IK8619997 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2095 IK8619998

Alarm	Attributes	Applicable major release
Name: IK8619998 (10768) Type: processingErrorAlarm Package: Img.IK8619998 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2096 IK8619999

Alarm	Attributes	Applicable major release
Name: IK8619999 (10769) Type: processingErrorAlarm Package: Img.IK8619999 Raised on class: Img.FilePrepare	Severity: indeterminate Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2097 IK8650005

Alarm	Attributes	Applicable major release
Name: IK8650005 (7540) Type: processingErrorAlarm Package: lmg.IK8650005 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: mcdp alarm trap v1 Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: mcdp alarm alarm v1.\nAlarm is cleared by the system.\nReason: alarmTrapV1		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2098 IK8650006

Alarm	Attributes	Applicable major release
Name: IK8650006 (7541) Type: processingErrorAlarm Package: lmg.IK8650006 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Trap associated to an alarm of the managed element Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Trap associated to an alarm of the managed element.\nAlarm is cleared by the system when the device is restarted.\nReason: alarmTrap		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2099 IK8650007

Alarm	Attributes	Applicable major release
Name: IK8650007 (7542) Type: processingErrorAlarm Package: lmg.IK8650007 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: softwareFailure Implicitly cleared: true Default probable cause: softwareError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Trap associated to an alarm while executing software operation (download, activation, validation, reject, backup).\nAlarm is cleared by the system.\nReason: softwareFailure		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2100 IK8650981

Alarm	Attributes	Applicable major release
Name: IK8650981 (7543) Type: equipmentAlarm Package: lmg.IK8650981 Raised on class: lmg.Flute	Severity: minor Specific problem: Cluster Node Degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG

Table 27-2100 IK8650981 (continued)

Alarm	Attributes	Applicable major release
Description: This alarm will be sent any time the condition of a node in the cluster becomes degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterNodeDegraded		
Remedial action: Make a note of the cluster node name then check the node for the cause of the degraded condition.		

Table 27-2101 IK8650982

Alarm	Attributes	Applicable major release
Name: IK8650982 (7544) Type: equipmentAlarm Package: lmg.IK8650982 Raised on class: lmg.Flute	Severity: major Specific problem: Cluster Node Failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a node in the cluster becomes failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterNodeFailed		
Remedial action: Make a note of the cluster node name then check the node for the cause of the failure.		

Table 27-2102 IK8650983

Alarm	Attributes	Applicable major release
Name: IK8650983 (7545) Type: processingErrorAlarm Package: lmg.IK8650983 Raised on class: lmg.Flute	Severity: minor Specific problem: Cluster Resource Degraded Implicitly cleared: true Default probable cause: underlyingResourceUnavail-able	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a cluster resource becomes degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterResourceDegraded		
Remedial action: Make a note of the cluster resource name then check the resource for the cause of the degraded condition.		

Table 27-2103 IK8650984

Alarm	Attributes	Applicable major release
Name: IK8650984 (7546) Type: processingErrorAlarm Package: lmg.IK8650984 Raised on class: lmg.Flute	Severity: major Specific problem: Cluster Resource Failed Implicitly cleared: true Default probable cause: underlyingResourceUnavail-able	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a cluster resource becomes failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterResourceFailed		
Remedial action: Make a note of the cluster resource name then check the resource for the cause of the failure.		

Table 27-2104 IK8650985

Alarm	Attributes	Applicable major release
Name: IK8650985 (7547) Type: equipmentAlarm Package: Img.IK8650985 Raised on class: Img.Flute	Severity: minor Specific problem: Cluster Network Degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a cluster network becomes degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterNetworkDegraded		
Remedial action: Make a note of the cluster network name then check the network for the cause of the degraded condition.		

Table 27-2105 IK8650986

Alarm	Attributes	Applicable major release
Name: IK8650986 (7548) Type: equipmentAlarm Package: Img.IK8650986 Raised on class: Img.Flute	Severity: major Specific problem: Cluster Network Failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a cluster network becomes failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterNetworkFailed		
Remedial action: Make a note of the cluster network name then check the network for the cause of the failure.		

Table 27-2106 IK8650987

Alarm	Attributes	Applicable major release
Name: IK8650987 (7549) Type: environmentalAlarm Package: Img.IK8650987 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG
Description: The temperature at rack sensor 1 is outside the specified threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmTemp1		
Remedial action: Check the air handling system for the rack and refer to Trap Details for more information.		

Table 27-2107 IK8650988

Alarm	Attributes	Applicable major release
Name: IK8650988 (7550) Type: environmentalAlarm Package: Img.IK8650988 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG

Table 27-2107 IK8650988 (continued)

Alarm	Attributes	Applicable major release
Description: The temperature at rack sensor 2 is outside the specified threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmTemp2		
Remedial action: Check the air handling system for the rack and refer to Trap Details for more information.		

Table 27-2108 IK8650989

Alarm	Attributes	Applicable major release
Name: IK8650989 (7551) Type: environmentalAlarm Package: lmg.IK8650989 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: coolingFanFailure	Release: • LR14.3.MG
Description: The status of Fan 1 has changed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmFan1		
Remedial action: Refer to Trap Details for more information.		

Table 27-2109 IK8650990

Alarm	Attributes	Applicable major release
Name: IK8650990 (7552) Type: environmentalAlarm Package: lmg.IK8650990 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: coolingFanFailure	Release: • LR14.3.MG
Description: The status of Fan 2 has changed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmFan2		
Remedial action: Refer to Trap Details for more information.		

Table 27-2110 IK8650991

Alarm	Attributes	Applicable major release
Name: IK8650991 (7553) Type: equipmentAlarm Package: lmg.IK8650991 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: The AC voltage of the rack is outside the specified threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmVoltage		
Remedial action: Check the incoming power source and ensure all cables are inserted correctly.		

Table 27-2111 IK8650992

Alarm	Attributes	Applicable major release
Name: IK8650992 (7554) Type: environmentalAlarm Package: Img.IK8650992 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: humidityUnacceptable	Release: • LR14.3.MG
Description: The humidity of the rack is outside the specified threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmHumidity		
Remedial action: Check the air handling system for the rack and refer to Trap Details for more information.		

Table 27-2112 IK8650993

Alarm	Attributes	Applicable major release
Name: IK8650993 (7555) Type: environmentalAlarm Package: Img.IK8650993 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: intrusionDetection	Release: • LR14.3.MG
Description: The door or sidepanel of the rack has been opened (access point #1).\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmInput1		
Remedial action: Check for unauthorized intrusion and refer to Trap Details for more information.		

Table 27-2113 IK8650994

Alarm	Attributes	Applicable major release
Name: IK8650994 (7556) Type: environmentalAlarm Package: Img.IK8650994 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: intrusionDetection	Release: • LR14.3.MG
Description: The door or sidepanel of the rack has been opened (access point #2).\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmInput2		
Remedial action: Check for unauthorized intrusion and refer to Trap Details for more information.		

Table 27-2114 IK8650995

Alarm	Attributes	Applicable major release
Name: IK8650995 (7557) Type: environmentalAlarm Package: Img.IK8650995 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: intrusionDetection	Release: • LR14.3.MG

Table 27-2114 IK8650995 (continued)

Alarm	Attributes	Applicable major release
Description: The door or sidepanel of the rack has been opened (access point #3).\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmInput3		
Remedial action: Check for unauthorized intrusion and refer to Trap Details for more information.		

Table 27-2115 IK8650996

Alarm	Attributes	Applicable major release
Name: IK8650996 (7558) Type: environmentalAlarm Package: lmg.IK8650996 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: intrusionDetection	Release: • LR14.3.MG
Description: The door or sidepanel of the rack has been opened (access point #4).\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmInput4		
Remedial action: Check for unauthorized intrusion and refer to Trap Details for more information.		

Table 27-2116 IK8650997

Alarm	Attributes	Applicable major release
Name: IK8650997 (7559) Type: processingErrorAlarm Package: lmg.IK8650997 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: locking-alarm Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG
Description: Rack door lock #1 alarm.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmLock1		
Remedial action: Ensure the door is completely closed and check for unauthorized intrusion and refer to Trap Details for more information.		

Table 27-2117 IK8650998

Alarm	Attributes	Applicable major release
Name: IK8650998 (7560) Type: processingErrorAlarm Package: lmg.IK8650998 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: locking-alarm Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG
Description: Rack door lock #2 alarm.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmLock2		
Remedial action: Ensure the door is completely closed and check for unauthorized intrusion and refer to Trap Details for more information.		

Table 27-2118 IK8650999

Alarm	Attributes	Applicable major release
Name: IK8650999 (7561) Type: environmentalAlarm Package: lmg.IK8650999 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: smoke	Release: • LR14.3.MG
Description: The rack smoke detector has detected smoke.\nAlarm to be cleared by the operator at the management system.\ nReason: cpqCmcalarmSmoke		
Remedial action: Investigate rack for an over temperature condition and refer to Trap Details for more information.		

Table 27-2119 IK8651000

Alarm	Attributes	Applicable major release
Name: IK8651000 (7562) Type: environmentalAlarm Package: lmg.IK8651000 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: excessiveVibration	Release: • LR14.3.MG
Description: The rack shock detector has detected a vibration to the rack.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmShock		
Remedial action: Investigate rack.		

Table 27-2120 IK8651001

Alarm	Attributes	Applicable major release
Name: IK8651001 (7563) Type: equipmentAlarm Package: lmg.IK8651001 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: The rack auxiliary alarm input #1 has been triggered.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmAux1		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2121 IK8651002

Alarm	Attributes	Applicable major release
Name: IK8651002 (7564) Type: equipmentAlarm Package: lmg.IK8651002 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG

Table 27-2121 IK8651002 (continued)

Alarm	Attributes	Applicable major release
Description: The rack auxiliary alarm input #2 has been triggered.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmAux2		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2122 IK8651003

Alarm	Attributes	Applicable major release
Name: IK8651003 (7565) Type: communicationsAlarm Package: lmg.IK8651003 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: Alarm 1, set from Network management\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarm1		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2123 IK8651004

Alarm	Attributes	Applicable major release
Name: IK8651004 (7566) Type: communicationsAlarm Package: lmg.IK8651004 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: alarm Implicitly cleared: false Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: Alarm 2, set from Network management\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarm2		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2124 IK8651005

Alarm	Attributes	Applicable major release
Name: IK8651005 (7567) Type: processingErrorAlarm Package: lmg.IK8651005 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: locking-alarm of device Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG
Description: The rack door locking device #1 has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmLock1Dev		

Table 27-2124 IK8651005 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Check the device lock cable or failed battery and refer to Trap Details for more information.		

Table 27-2125 IK8651006

Alarm	Attributes	Applicable major release
Name: IK8651006 (7568) Type: processingErrorAlarm Package: lmg.IK8651006 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: locking-alarm of device Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG
Description: The rack door locking device #2 has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmLock2Dev		
Remedial action: Check the device lock cable or failed battery and refer to Trap Details for more information.		

Table 27-2126 IK8651008

Alarm	Attributes	Applicable major release
Name: IK8651008 (7569) Type: equipmentAlarm Package: lmg.IK8651008 Raised on class: lmg.Flute	Severity: major Specific problem: The primary controller in the subsytem has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The primary controller in the subsystem has failed. Details: The primary Controller has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrController1FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 27-2127 IK8651010

Alarm	Attributes	Applicable major release
Name: IK8651010 (7570) Type: equipmentAlarm Package: lmg.IK8651010 Raised on class: lmg.Flute	Severity: major Specific problem: The secondary controller in the subsytem has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The secondary controller in the subsystem has failed. Details: The secondary controller has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrController2FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 27-2128 IK8651013

Alarm	Attributes	Applicable major release
Name: IK8651013 (7571) Type: equipmentAlarm Package: Img.IK8651013 Raised on class: Img.Flute	Severity: major Specific problem: A RAIDset has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: A RAIDset has failed. Details: The RAIDset has failed and is off-line.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrLogDriveFailureTrap		
Remedial action: Possible cause is too many failed disk drives that make up the RAIDset, the OS can no longer communicate with the RAIDset for other reasons.		

Table 27-2129 IK8651015

Alarm	Attributes	Applicable major release
Name: IK8651015 (7572) Type: equipmentAlarm Package: Img.IK8651015 Raised on class: Img.Flute	Severity: minor Specific problem: A RAIDset has become degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: A RAIDset has become degraded. Details: A RAIDset has become degraded due to a member disk device failure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrLogDriveReducedTrap		
Remedial action: Replace the failed disk device; add a spare to the system to cause a reconstruct.		

Table 27-2130 IK8651018

Alarm	Attributes	Applicable major release
Name: IK8651018 (7573) Type: processingErrorAlarm Package: Img.IK8651018 Raised on class: Img.Flute	Severity: major Specific problem: A disk drive has failed Implicitly cleared: true Default probable cause: storageCapacityProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system.\nReason: cpqCrDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 27-2131 IK8651023

Alarm	Attributes	Applicable major release
Name: IK8651023 (7574) Type: processingErrorAlarm Package: Img.IK8651023 Raised on class: Img.Flute	Severity: major Specific problem: A disk drive has failed Implicitly cleared: true Default probable cause: storageCapacityProblem	Release: • LR14.3.MG • LR15.1.MG

Table 27-2131 IK8651023 (continued)

Alarm	Attributes	Applicable major release
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrPhyDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 27-2132 IK8651028

Alarm	Attributes	Applicable major release
Name: IK8651028 (7575) Type: environmentalAlarm Package: lmg.IK8651028 Raised on class: lmg.Flute	Severity: minor Specific problem: Fan has failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: Fan has failed. Details: One of the cooling fans in the primary enclosure has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrEMUFanFailureTrap		
Remedial action: Replace the cooling fan. Possible causes are fan physically removed, actual hardware failure.		

Table 27-2133 IK8651030

Alarm	Attributes	Applicable major release
Name: IK8651030 (7576) Type: equipmentAlarm Package: lmg.IK8651030 Raised on class: lmg.Flute	Severity: major Specific problem: Power supply has failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power supply has failed. Details: One of the power supplies in the primary enclosure has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrEMUPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 27-2134 IK8651032

Alarm	Attributes	Applicable major release
Name: IK8651032 (7577) Type: equipmentAlarm Package: lmg.IK8651032 Raised on class: lmg.Flute	Severity: warning Specific problem: Primary enclosure temperature warning Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Primary enclosure temperature warning. Details: The temperature in the primary enclosure has triggered a warning condition detected by the controller.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrEMUTemperature-WarningTrap		

Table 27-2134 IK8651032 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Check the cooling fans in the primary enclosure.		

Table 27-2135 IK8651033

Alarm	Attributes	Applicable major release
Name: IK8651033 (7578) Type: equipmentAlarm Package: Img.IK8651033 Raised on class: Img.Flute	Severity: critical Specific problem: Primary enclosure temperature critical! Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Primary enclosure temperature critical!. Details: The temperature in the primary enclosure has triggered a critical condition detected by the controller.\nAlarm is cleared by the system.\nReason: cpqCrEMUTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the primary enclosure.		

Table 27-2136 IK8651035

Alarm	Attributes	Applicable major release
Name: IK8651035 (7579) Type: environmentalAlarm Package: Img.IK8651035 Raised on class: Img.Flute	Severity: minor Specific problem: Fan has failed in expansion cabinet Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: Fan has failed in expansion cabinet. Details: One of the cooling fans in the expansion cabinet has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrExpCabFanFailureTrap		
Remedial action: Replace the cooling fan. Possible causes are fan physically removed, actual hardware failure.		

Table 27-2137 IK8651037

Alarm	Attributes	Applicable major release
Name: IK8651037 (7580) Type: equipmentAlarm Package: Img.IK8651037 Raised on class: Img.Flute	Severity: major Specific problem: Power supply has failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power supply has failed. Details: One of the power supplies in the expansion cabinet has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrExpCabPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 27-2138 IK8651039

Alarm	Attributes	Applicable major release
Name: IK8651039 (7581) Type: environmentalAlarm Package: lmg.IK8651039 Raised on class: lmg.Flute	Severity: warning Specific problem: Expansion cabinet temperature warning Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: Expansion cabinet temperature warning. Details: The temperature in the expansion cabinet has triggered a warning condition detected by the controller.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrExpCabTemperatureWarningTrap		
Remedial action: Check the cooling fans in the expansion cabinet.		

Table 27-2139 IK8651040

Alarm	Attributes	Applicable major release
Name: IK8651040 (7582) Type: environmentalAlarm Package: lmg.IK8651040 Raised on class: lmg.Flute	Severity: critical Specific problem: cpqCrExpCabTemperatureCriticalTrap Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: Expansion cabinet temperature critical! Details: The temperature in the expansion cabinet has triggered a critical condition detected by the controller.\nAlarm is cleared by the system.\nReason: cpqCrExpCabTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the expansion cabinet.		

Table 27-2140 IK8651059

Alarm	Attributes	Applicable major release
Name: IK8651059 (7583) Type: equipmentAlarm Package: lmg.IK8651059 Raised on class: lmg.Flute	Severity: warning Specific problem: External Array Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: External Array Accelerator Board Bad Data. This alarm signifies that the agent has detected a Array Accelerator Cache Board that has lost battery power. If data was being stored in the accelerator memory when the system lost power, that data has been lost.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqFcaAccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 27-2141 IK8651060

Alarm	Attributes	Applicable major release
Name: IK8651060 (7584) Type: environmentalAlarm Package: Img.IK8651060 Raised on class: Img.Flute	Severity: major Specific problem: External Array Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqFcaAccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 27-2142 IK8651067

Alarm	Attributes	Applicable major release
Name: IK8651067 (7585) Type: equipmentAlarm Package: Img.IK8651067 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: Fibre Channel Tape Drive Cleaning Tape Needs Replacing Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: Fibre Channel Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape.\nAlarm to be cleared by the operator at the management system.\nReason: cpqFcTapeDriveCleanTapeReplace		
Remedial action: Replace the failing fibre channel drive cleaning tape		

Table 27-2143 IK8651068

Alarm	Attributes	Applicable major release
Name: IK8651068 (7586) Type: processingErrorAlarm Package: Img.IK8651068 Raised on class: Img.Flute	Severity: warning Specific problem: External Array Redundant Controller Active Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG
Description: External Array Redundant Controller Active. This alarm signifies that the Storage Agent has detected that a backup array controller in a duplexed pair has switched over to the active role. The variable cpqFcaCntlrBoxIoSlot indicates the new active controller index.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqFcaCntlrActive		
Remedial action: Check the partner controller for problems. If this was the result of a user initiated switch over, no action is required.		

Table 27-2144 IK8651072

Alarm	Attributes	Applicable major release
Name: IK8651072 (7587) Type: equipmentAlarm Package: Img.IK8651072 Raised on class: Img.Flute	Severity: warning Specific problem: External Array Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: External Array Accelerator Board Bad Data. This alarm signifies that the agent has detected a Array Accelerator Cache Board that has lost battery power. If data was being stored in the accelerator memory when the system lost power, that data has been lost.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqFca2AccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 27-2145 IK8651073

Alarm	Attributes	Applicable major release
Name: IK8651073 (7588) Type: environmentalAlarm Package: Img.IK8651073 Raised on class: Img.Flute	Severity: major Specific problem: External Array Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqFca2AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 27-2146 IK8651078

Alarm	Attributes	Applicable major release
Name: IK8651078 (7589) Type: processingErrorAlarm Package: Img.IK8651078 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: External Tape Drive Cleaning Required Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG
Description: External Tape Drive Cleaning Required. The agent has detected a tape drive that needs to have a cleaning tape inserted and run. This will cause the tape drive heads to be cleaned.\nAlarm to be cleared by the operator at the management system.\nReason: cpqExtTapeDriveCleaningRequired		
Remedial action: a External Tape Drive Cleaning should be installed		

Table 27-2147 IK8651079

Alarm	Attributes	Applicable major release
Name: IK8651079 (7590) Type: equipmentAlarm Package: Img.IK8651079 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: External Tape Drive Cleaning Tape Needs Replacing Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: External Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape.\nAlarm to be cleared by the operator at the management system.\nReason: cpqExtTapeDriveCleanTapeReplace		
Remedial action: Replace the External Tape Drive Cleaning Tape		

Table 27-2148 IK8651088

Alarm	Attributes	Applicable major release
Name: IK8651088 (9342) Type: environmentalAlarm Package: Img.IK8651088 Raised on class: Img.Flute	Severity: minor Specific problem: Thermal Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR15.1.MG
Description: The temperature status has been set to failed. The system will be shutdown due to this thermal condition.\nAlarm is cleared by the system.\nReason: cpqHeThermalTempFailed		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2149 IK8651089

Alarm	Attributes	Applicable major release
Name: IK8651089 (7591) Type: environmentalAlarm Package: Img.IK8651089 Raised on class: Img.LMGMngElement	Severity: minor Specific problem: Thermal Status Degraded Implicitly cleared: false Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG
Description: The temperature status has been set to degraded. The server's temperature is outside of the normal operating range. The server will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeThermalTempDegraded		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2150 IK8651091

Alarm	Attributes	Applicable major release
Name: IK8651091 (9343) Type: environmentalAlarm Package: lmg.IK8651091 Raised on class: lmg.Flute	Severity: major Specific problem: System Fan Failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR15.1.MG • LR16.1.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHeThermalSystemFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-2151 IK8651092

Alarm	Attributes	Applicable major release
Name: IK8651092 (7592) Type: environmentalAlarm Package: lmg.IK8651092 Raised on class: lmg.LMGMngElement	Severity: minor Specific problem: System Fan Degraded Implicitly cleared: false Default probable cause: coolingFanFailure	Release: • LR14.3.MG
Description: The system fan status has been set to degraded. An optional system fan is not operating normally.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeThermalSystemFanDegraded		
Remedial action: check the system fans		

Table 27-2152 IK8651094

Alarm	Attributes	Applicable major release
Name: IK8651094 (7593) Type: environmentalAlarm Package: lmg.IK8651094 Raised on class: lmg.Flute	Severity: minor Specific problem: CPU Fan Failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The CPU fan status has been set to failed. A processor fan is not operating normally. The server will be shutdown.\nAlarm is cleared by the system.\nReason: cpqHeThermalCpuFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-2153 IK8651098

Alarm	Attributes	Applicable major release
Name: IK8651098 (7594) Type: equipmentAlarm Package: Img.IK8651098 Raised on class: Img.LMGMngElement	Severity: major Specific problem: POST Errors Occurred Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHePostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 27-2154 IK8651099

Alarm	Attributes	Applicable major release
Name: IK8651099 (7595) Type: equipmentAlarm Package: Img.IK8651099 Raised on class: Img.LMGMngElement	Severity: minor Specific problem: Server Power Supply Degraded Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: The fault tolerant power supply sub-system condition has been set to degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeFltTolPwrSupplyDegraded		
Remedial action: check the fault tolerant power supply		

Table 27-2155 IK8651102

Alarm	Attributes	Applicable major release
Name: IK8651102 (7596) Type: environmentalAlarm Package: Img.IK8651102 Raised on class: Img.Flute	Severity: major Specific problem: Thermal Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The temperature status has been set to failed. The system will be shutdown due to this thermal condition.\nAlarm is cleared by the system.\nReason: cpqHe3ThermalTempFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 27-2156 IK8651103

Alarm	Attributes	Applicable major release
Name: IK8651103 (7597) Type: environmentalAlarm Package: Img.IK8651103 Raised on class: Img.Flute	Severity: minor Specific problem: Temperature Degraded Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG

Table 27-2156 IK8651103 (continued)

Alarm	Attributes	Applicable major release
Description: The temperature status has been set to degraded. The server's temperature is outside of the normal operating range. The server will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHe3ThermalTempDegraded		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 27-2157 IK8651105

Alarm	Attributes	Applicable major release
Name: IK8651105 (7598) Type: environmentalAlarm Package: Img.IK8651105 Raised on class: Img.Flute	Severity: major Specific problem: System Fan Failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHe3ThermalSystemFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-2158 IK8651106

Alarm	Attributes	Applicable major release
Name: IK8651106 (7599) Type: environmentalAlarm Package: Img.IK8651106 Raised on class: Img.Flute	Severity: minor Specific problem: System Fan Degraded Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The system fan status has been set to degraded. An optional system fan is not operating normally.\nAlarm is cleared by the system.\nReason: cpqHe3ThermalSystemFanDegraded		
Remedial action: Replace the fan as soon as possible.		

Table 27-2159 IK8651108

Alarm	Attributes	Applicable major release
Name: IK8651108 (7600) Type: environmentalAlarm Package: Img.IK8651108 Raised on class: Img.Flute	Severity: minor Specific problem: CPU Fan Failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG

Table 27-2159 IK8651108 (continued)

Alarm	Attributes	Applicable major release
Description: The CPU fan status has been set to failed. A processor fan is not operating normally. The server will be shutdown.\nAlarm is cleared by the system.\nReason: cpqHe3ThermalCpuFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-2160 IK8651112

Alarm	Attributes	Applicable major release
Name: IK8651112 (7601) Type: equipmentAlarm Package: Img.IK8651112 Raised on class: Img.Flute	Severity: major Specific problem: POST Errors Occurred Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process. Details of the POST error messages can be found in Integrated Management Log\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3PostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 27-2161 IK8651113

Alarm	Attributes	Applicable major release
Name: IK8651113 (7602) Type: equipmentAlarm Package: Img.IK8651113 Raised on class: Img.Flute	Severity: minor Specific problem: Server Power Supply Degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The fault tolerant power supply sub-system condition has been set to degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3FltTolPwrSupplyDegraded		
Remedial action: Check the system for a power supply failure. Replace the power supply.		

Table 27-2162 IK8651114

Alarm	Attributes	Applicable major release
Name: IK8651114 (7603) Type: processingErrorAlarm Package: Img.IK8651114 Raised on class: Img.LMGMngElement	Severity: minor Specific problem: Corr Mem Errors Require a Replacement Memory Module Implicitly cleared: false Default probable cause: memoryMismatch	Release: • LR14.3.MG
Description: A correctable memory log entry indicates a memory module needs to be replaced. The errors have been corrected, but the memory module should be replaced. The error information is reported in the variable cpqHeCorrMemErrDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3CorrMemReplaceMemModule		

Table 27-2162 IK8651114 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Replace the failing memory module		

Table 27-2163 IK8651116

Alarm	Attributes	Applicable major release
Name: IK8651116 (7604) Type: equipmentAlarm Package: lmg.IK8651116 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Power Supply Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe3FltTolPowerSupplyFailed		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2164 IK8651117

Alarm	Attributes	Applicable major release
Name: IK8651117 (7605) Type: equipmentAlarm Package: lmg.IK8651117 Raised on class: lmg.Flute	Severity: minor Specific problem: Power Redundancy Lost Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The Fault Tolerant Power Supplies have lost redundancy for the specified chassis.\nAlarm is cleared by the system.\nReason: cpqHe3FltTolPowerRedundancyLost		
Remedial action: Check the system power supplies for a failure.		

Table 27-2165 IK8651120

Alarm	Attributes	Applicable major release
Name: IK8651120 (7606) Type: environmentalAlarm Package: lmg.IK8651120 Raised on class: lmg.Flute	Severity: minor Specific problem: Fan Degraded Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The Fault Tolerant Fan condition has been set to degraded for the specified chassis and fan.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3FltTolFanDegraded		
Remedial action: Replace the fan as soon as possible.		

Table 27-2166 IK8651121

Alarm	Attributes	Applicable major release
Name: IK8651121 (7607) Type: environmentalAlarm Package: Img.IK8651121 Raised on class: Img.Flute	Severity: major Specific problem: Fan Failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The Fault Tolerant Fan condition has been set to failed for the specified chassis and fan.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3FltTolFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-2167 IK8651122

Alarm	Attributes	Applicable major release
Name: IK8651122 (7608) Type: environmentalAlarm Package: Img.IK8651122 Raised on class: Img.Flute	Severity: minor Specific problem: Fan Redundancy Lost Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The Fault Tolerant Fans have lost redundancy for the specified chassis.\nAlarm is cleared by the system.\nReason: cpqHe3FltTolFanRedundancyLost		
Remedial action: Check the system fans for a failure.		

Table 27-2168 IK8651125

Alarm	Attributes	Applicable major release
Name: IK8651125 (7609) Type: environmentalAlarm Package: Img.IK8651125 Raised on class: Img.Flute	Severity: major Specific problem: Thermal Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The temperature status has been set to failed in the specified chassis and location. The system will be shutdown due to this condition.\nAlarm is cleared by the system.\nReason: cpqHe3TemperatureFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 27-2169 IK8651126

Alarm	Attributes	Applicable major release
Name: IK8651126 (7610) Type: environmentalAlarm Package: Img.IK8651126 Raised on class: Img.Flute	Severity: minor Specific problem: Thermal Status Degraded Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The temperature status has been set to degraded in the specified chassis and location. The server's temperature is outside of the normal operating range. The server will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHe3TemperatureDegraded		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 27-2170 IK8651128

Alarm	Attributes	Applicable major release
Name: IK8651128 (7611) Type: equipmentAlarm Package: Img.IK8651128 Raised on class: Img.Flute	Severity: minor Specific problem: Power Converter Degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The DC-DC Power Converter condition has been set to degraded for the specified chassis, slot and socket.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3PowerConverterDegraded		
Remedial action: Check for a failing power converter or for a failed power converter in a redundant pair. Replace the power converter.		

Table 27-2171 IK8651129

Alarm	Attributes	Applicable major release
Name: IK8651129 (7612) Type: equipmentAlarm Package: Img.IK8651129 Raised on class: Img.Flute	Severity: major Specific problem: Power Converter Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The DC-DC Power Converter condition has been set to failed for the specified chassis, slot and socket.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3PowerConverterFailed		
Remedial action: Replace the failed power converter.		

Table 27-2172 IK8651130

Alarm	Attributes	Applicable major release
Name: IK8651130 (7613) Type: equipmentAlarm Package: Img.IK8651130 Raised on class: Img.Flute	Severity: warning Specific problem: Power Converter Redundancy Lost Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The DC-DC Power Converters have lost redundancy for the specified chassis.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3PowerConverterRedundancyLost		
Remedial action: Check the power converters in the system for a failure in a redundant pair. Replace the power converter.		

Table 27-2173 IK8651131

Alarm	Attributes	Applicable major release
Name: IK8651131 (7614) Type: communicationsAlarm Package: Img.IK8651131 Raised on class: Img.Flute	Severity: minor Specific problem: Cache Accel Parity Errors may require a module Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • LR14.3.MG • LR15.1.MG
Description: A cache accelerator parity error indicates a cache module needs to be replaced. The error information is reported in the variable cpqHeEventLogErrorDesc.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3CacheAccelParityError		
Remedial action: Refer to the Integrated Management Log for details on the error. Replace the cache module.		

Table 27-2174 IK8651132

Alarm	Attributes	Applicable major release
Name: IK8651132 (7615) Type: processingErrorAlarm Package: Img.IK8651132 Raised on class: Img.Flute	Severity: warning Specific problem: Online Spare Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Advanced Memory Protection Online Spare Engaged. The Advanced Memory Protection subsystem has detected a memory fault. The Online Spare Memory has been activated.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeResilientMemOnlineSpareEngaged		
Remedial action: Schedule server down-time to replace the faulty memory.		

Table 27-2175 IK8651134

Alarm	Attributes	Applicable major release
Name: IK8651134 (7616) Type: equipmentAlarm Package: Img.IK8651134 Raised on class: Img.Flute	Severity: minor Specific problem: Power Supply Degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The fault tolerant power supply condition has been set to degraded for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FltTolPowerSupplyDegraded		
Remedial action: Replace the power supply as soon as possible.		

Table 27-2176 IK8651135

Alarm	Attributes	Applicable major release
Name: IK8651135 (7617) Type: equipmentAlarm Package: Img.IK8651135 Raised on class: Img.Flute	Severity: major Specific problem: Power Supply Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FltTolPowerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

Table 27-2177 IK8651136

Alarm	Attributes	Applicable major release
Name: IK8651136 (7618) Type: processingErrorAlarm Package: Img.IK8651136 Raised on class: Img.Flute	Severity: warning Specific problem: Mirrored Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Advanced Memory Protection Mirrored Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. Mirrored Memory has been activated.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeResilientMemMirroredMemoryEngaged		
Remedial action: Replace the faulty memory.		

Table 27-2178 IK8651137

Alarm	Attributes	Applicable major release
Name: IK8651137 (7619) Type: processingErrorAlarm Package: Img.IK8651137 Raised on class: Img.Flute	Severity: warning Specific problem: Advanced ECC Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Advanced Memory Protection Advanced ECC Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. Advanced ECC has been activated.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeResilientAdvancedECCMemoryEngaged		
Remedial action: Replace the faulty memory.		

Table 27-2179 IK8651138

Alarm	Attributes	Applicable major release
Name: IK8651138 (7620) Type: processingErrorAlarm Package: Img.IK8651138 Raised on class: Img.Flute	Severity: warning Specific problem: Advanced XOR Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Advanced Memory Protection XOR Engine Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. The XOR engine has been activated.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeResilientMemXorMemoryEngaged		
Remedial action: Replace the faulty memory.		

Table 27-2180 IK8651141

Alarm	Attributes	Applicable major release
Name: IK8651141 (7621) Type: processingErrorAlarm Package: Img.IK8651141 Raised on class: Img.LMGMngElement	Severity: minor Specific problem: Replace Memory Module Implicitly cleared: false Default probable cause: memoryMismatch	Release: • LR14.3.MG
Description: Corrected Memory Errors Detected. The errors have been corrected, but the memory module should be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe4CorrMemReplaceMemModule		
Remedial action: Replace the memory module.		

Table 27-2181 IK8651142

Alarm	Attributes	Applicable major release
Name: IK8651142 (7622) Type: equipmentAlarm Package: Img.IK8651142 Raised on class: Img.Flute	Severity: warning Specific problem: Memory Board or Cartridge Removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Memory board or cartridge removed. An Advanced Memory Protection sub-system board or cartridge has been removed from the system.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeResMemBoardRemoved		
Remedial action: Insure the board or cartridge has memory correctly installed and re-insert the memory board or cartridge back into the system.		

Table 27-2182 IK8651144

Alarm	Attributes	Applicable major release
Name: IK8651144 (7623) Type: processingErrorAlarm Package: Img.IK8651144 Raised on class: Img.Flute	Severity: major Specific problem: Memory Board or Cartridge Bus Error Detected Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Memory board or cartridge bus error detected. An Advanced Memory Protection sub-system board or cartridge bus error has been detected.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge.		

Table 27-2183 IK8651148

Alarm	Attributes	Applicable major release
Name: IK8651148 (7624) Type: equipmentAlarm Package: Img.IK8651148 Raised on class: Img.Flute	Severity: major Specific problem: Management processor failed reset Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The Management processor failed reset The management processor was not successfully reset and is not operational.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeManagementProcFailedReset		
Remedial action: Reset the management procesessor again or re-flash the management processor firmware.		

Table 27-2184 IK8651149

Alarm	Attributes	Applicable major release
Name: IK8651149 (7625) Type: processingErrorAlarm Package: lmg.IK8651149 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Replace Memory Module Implicitly cleared: false Default probable cause: memoryMismatch	Release: • LR14.3.MG
Description: Corrected \ uncorrected Memory Errors Detected. The errors have been corrected, but the memory module should be replaced. Value 0 for CPU means memory is not Processor based\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe5CorrMemReplaceMemModule		
Remedial action: Replace the failing memory module.		

Table 27-2185 IK8651150

Alarm	Attributes	Applicable major release
Name: IK8651150 (7626) Type: equipmentAlarm Package: lmg.IK8651150 Raised on class: lmg.Flute	Severity: warning Specific problem: Memory Board or Cartridge or Riser Removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Memory board or cartridge or riser removed. An Advanced Memory Protection sub-system board or cartridge or riser has been removed from the system. Value 0 for CPU means memory is not processor based.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe5ResMemBoardRemoved		
Remedial action: Insure the board or cartridge or riser has memory correctly installed and re-insert the memory board or cartridge or CPU back into the system.		

Table 27-2186 IK8651152

Alarm	Attributes	Applicable major release
Name: IK8651152 (7627) Type: processingErrorAlarm Package: lmg.IK8651152 Raised on class: lmg.Flute	Severity: major Specific problem: Memory Board or Cartridge or Riser Bus Error Detected Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Memory board or cartridge or Riser bus error detected. An Advanced Memory Protection sub-system board or cartridge or Riser bus error has been detected. Value 0 for CPU means memory is not processor based.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe5ResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge or Riser.		

Table 27-2187 IK8651153

Alarm	Attributes	Applicable major release
Name: IK8651153 (7628) Type: processingErrorAlarm Package: Img.IK8651153 Raised on class: Img.Flute	Severity: warning Specific problem: Advanced LockStep Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Advanced Memory Protection LockStep Engine Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. The LockStep engine has been activated.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeResilientMemLockStepMemoryEngaged		
Remedial action: Replace the faulty memory.		

Table 27-2188 IK8651154

Alarm	Attributes	Applicable major release
Name: IK8651154 (7629) Type: equipmentAlarm Package: Img.IK8651154 Raised on class: Img.Flute	Severity: major Specific problem: Power Supply AC Power Loss Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The fault tolerant power supply AC power loss for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FltTolPowerSupplyACpowerloss		
Remedial action: Check the power source for the specified power supply.		

Table 27-2189 IK8651156

Alarm	Attributes	Applicable major release
Name: IK8651156 (7630) Type: processingErrorAlarm Package: Img.IK8651156 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Application Error Trap Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHoAppErrorTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2190 IK8651158

Alarm	Attributes	Applicable major release
Name: IK8651158 (7631) Type: processingErrorAlarm Package: lmg.IK8651158 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Application Error Trap Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2AppErrorTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2191 IK8651160

Alarm	Attributes	Applicable major release
Name: IK8651160 (9344) Type: communicationsAlarm Package: lmg.IK8651160 Raised on class: lmg.Flute	Severity: major Specific problem: Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG • LR16.1.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition.\nAlarm is cleared by the system.\nReason: cpqHo2NicStatusFailed		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 27-2192 IK8651163

Alarm	Attributes	Applicable major release
Name: IK8651163 (7632) Type: communicationsAlarm Package: lmg.IK8651163 Raised on class: lmg.Flute	Severity: major Specific problem: Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition.\nAlarm is cleared by the system.\nReason: cpqHo2NicStatusFailed2		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 27-2193 IK8651164

Alarm	Attributes	Applicable major release
Name: IK8651164 (7633) Type: communicationsAlarm Package: lmg.IK8651164 Raised on class: lmg.Flute	Severity: warning Specific problem: Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the configured redundant NIC becomes the active NIC.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHo2NicSwitchoverOccurred2		
Remedial action: Examine the network connections and check for a NIC failure.		

Table 27-2194 IK8651168

Alarm	Attributes	Applicable major release
Name: IK8651168 (7634) Type: processingErrorAlarm Package: lmg.IK8651168 Raised on class: lmg.Flute	Severity: warning Specific problem: Critical Software update Notification Trap Implicitly cleared: true Default probable cause: softwareProgramError	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm is a send to the user to notify him of a Critical Software Update.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHoCriticalSoftwareUpdateTrap		
Remedial action: Install the required software updates.		

Table 27-2195 IK8651172

Alarm	Attributes	Applicable major release
Name: IK8651172 (7635) Type: qualityOfServiceAlarm Package: lmg.IK8651172 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Power Threshold Exceeded Implicitly cleared: false Default probable cause: resourceAtOrNearingCapacity	Release: • LR14.3.MG
Description: This alarm notifies user of a power threshold breach. Power threshold exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2PowerThresholdTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2196 IK8652265

Alarm	Attributes	Applicable major release
Name: IK8652265 (7636) Type: environmentalAlarm Package: lmg.IK8652265 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDaAccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 27-2197 IK8652272

Alarm	Attributes	Applicable major release
Name: IK8652272 (7637) Type: environmentalAlarm Package: lmg.IK8652272 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa2AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 27-2198 IK8652279

Alarm	Attributes	Applicable major release
Name: IK8652279 (7638) Type: environmentalAlarm Package: lmg.IK8652279 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa3AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 27-2199 IK8652281

Alarm	Attributes	Applicable major release
Name: IK8652281 (7639) Type: processingErrorAlarm Package: Img.IK8652281 Raised on class: Img.Flute	Severity: warning Specific problem: Duplex Controller Active Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG
Description: Controller Active. This alarm signifies that the agent has detected that a backup array controller in a duplexed pair has switched over to the active role. The variable cpqDaCntlrSlot indicates the active controller slot and cpqDaCntlrPartnerSlot indicates the backup.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqDaCntlrActive		
Remedial action: Check the partner controller for problems. If this was the result of a user initiated switch over, no action is required.		

Table 27-2200 IK8652284

Alarm	Attributes	Applicable major release
Name: IK8652284 (7640) Type: equipmentAlarm Package: Img.IK8652284 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm is cleared by the system when the device is restarted.\ nReason: cpqDa4PhyDrvThreshPassedTrap		
Remedial action: If the physical drive is predicting failure, replace the drive.		

Table 27-2201 IK8652289

Alarm	Attributes	Applicable major release
Name: IK8652289 (7641) Type: equipmentAlarm Package: Img.IK8652289 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: Tape Drive Cleaning Tape Needs Replacing Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDaTapeDriveCleanTapeReplace		
Remedial action: Replace the Tape Drive Cleaning Tape.		

Table 27-2202 IK8652291

Alarm	Attributes	Applicable major release
Name: IK8652291 (7642) Type: equipmentAlarm Package: Img.IK8652291 Raised on class: Img.Flute	Severity: major Specific problem: Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Accelerator Board Bad Data. This alarm signifies that the agent has detected an array accelerator cache board that has lost battery power. If data was being stored in the accelerator cache memory when the server lost power, that data has been lost.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqDa5AccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 27-2203 IK8652292

Alarm	Attributes	Applicable major release
Name: IK8652292 (7643) Type: environmentalAlarm Package: Img.IK8652292 Raised on class: Img.Flute	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqDa5AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 27-2204 IK8652295

Alarm	Attributes	Applicable major release
Name: IK8652295 (7644) Type: equipmentAlarm Package: Img.IK8652295 Raised on class: Img.Flute	Severity: major Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm is cleared by the system when the device is restarted.\ nReason: cpqDa5PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 27-2205 IK8652302

Alarm	Attributes	Applicable major release
Name: IK8652302 (7645) Type: equipmentAlarm Package: Img.IK8652302 Raised on class: Img.Flute	Severity: major Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm is cleared by the system when the device is restarted.\ nReason: cpqDa6PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 27-2206 IK8652304

Alarm	Attributes	Applicable major release
Name: IK8652304 (7646) Type: equipmentAlarm Package: Img.IK8652304 Raised on class: Img.Flute	Severity: minor Specific problem: Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Cache Module Board Bad Data. This alarm signifies that the agent has detected a cache module board that has lost backup power. If data was being stored in the cache module memory when the server lost power, that data has been lost. The backup power source is indicated by cpqDaAccelBackupPowerSource.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqDa6AccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 27-2207 IK8652305

Alarm	Attributes	Applicable major release
Name: IK8652305 (7647) Type: environmentalAlarm Package: Img.IK8652305 Raised on class: Img.Flute	Severity: minor Specific problem: Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: Cache Module Board Backup Power Source Failed. This alarm signifies that the agent has detected a backup power source failure associated with the cache module board. The backup power source is indicated by cpqDaAccelBackupPowerSource.\ nAlarm is cleared by the system when the device is restarted.\nReason: cpqDa6AccelBatteryFailed		
Remedial action: Replace the Backup Power Source.		

Table 27-2208 IK8652309

Alarm	Attributes	Applicable major release
Name: IK8652309 (7648) Type: processingErrorAlarm Package: Img.IK8652309 Raised on class: Img.Flute	Severity: warning Specific problem: Tape Drive Cleaning Required Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG
Description: Tape Drive Cleaning Required trap. The agent has detected a tape drive that needs to have a cleaning tape inserted and run. This will cause the tape drive heads to be cleaned.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqDa6TapeDriveCleaningRequired		
Remedial action: Insert and run a cleaning tape in the tape drive.		

Table 27-2209 IK8652310

Alarm	Attributes	Applicable major release
Name: IK8652310 (7649) Type: equipmentAlarm Package: Img.IK8652310 Raised on class: Img.Flute	Severity: warning Specific problem: Tape Drive Cleaning Tape Needs Replacing Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqDa6TapeDriveCleanTapeReplace		
Remedial action: Replace the cleaning tape.		

Table 27-2210 IK8652315

Alarm	Attributes	Applicable major release
Name: IK8652315 (7650) Type: equipmentAlarm Package: Img.IK8652315 Raised on class: Img.Flute	Severity: minor Specific problem: IDE Drive Degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: An IDE drive status has been set to degraded.\nAlarm is cleared by the system.\nReason: cpqIdeDriveDegraded		
Remedial action: The drive should be scheduled for replacement. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 27-2211 IK8652317

Alarm	Attributes	Applicable major release
Name: IK8652317 (7651) Type: equipmentAlarm Package: lmg.IK8652317 Raised on class: lmg.Flute	Severity: minor Specific problem: IDE Drive Ultra ATA Degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: An IDE drive detects an excessive number of Ultra ATA data transmission errors between the hard drive and the processor.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqIdeDriveUltraAtaDegraded		
Remedial action: For best performance move Ultra ATA devices to the primary controller and non Ultra ATA devices to the secondary controller. If errors still persist, consider replacing the standard 40-conductor IDE cable with an 80-conductor Ultra ATA cable.		

Table 27-2212 IK8652337

Alarm	Attributes	Applicable major release
Name: IK8652337 (7652) Type: communicationsAlarm Package: lmg.IK8652337 Raised on class: lmg.Flute	Severity: major Specific problem: NIC Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNicConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-2213 IK8652339

Alarm	Attributes	Applicable major release
Name: IK8652339 (7653) Type: communicationsAlarm Package: lmg.IK8652339 Raised on class: lmg.Flute	Severity: minor Specific problem: NIC Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNicRedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-2214 IK8652341

Alarm	Attributes	Applicable major release
Name: IK8652341 (7654) Type: communicationsAlarm Package: Img.IK8652341 Raised on class: Img.Flute	Severity: major Specific problem: NIC Connectivity Lost Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-2215 IK8652343

Alarm	Attributes	Applicable major release
Name: IK8652343 (7655) Type: communicationsAlarm Package: Img.IK8652343 Raised on class: Img.Flute	Severity: major Specific problem: NIC Redundancy Reduced Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2RedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-2216 IK8652344

Alarm	Attributes	Applicable major release
Name: IK8652344 (7656) Type: communicationsAlarm Package: Img.IK8652344 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: like Activity Detected Trap Implicitly cleared: false Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: This alarm will be sent when the Virus Throttle Filter Driver detects virus like activity.\nAlarm to be cleared by the operator at the management system.\nReason: cpqNicVirusLikeActivityDetected		
Remedial action: The system reporting this trap requires immediate attention.		

Table 27-2217 IK8652347

Alarm	Attributes	Applicable major release
Name: IK8652347 (7657) Type: communicationsAlarm Package: lmg.IK8652347 Raised on class: lmg.Flute	Severity: major Specific problem: NIC Connectivity Lost Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqNic3ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-2218 IK8652349

Alarm	Attributes	Applicable major release
Name: IK8652349 (7658) Type: communicationsAlarm Package: lmg.IK8652349 Raised on class: lmg.Flute	Severity: major Specific problem: NIC Redundancy Reduced Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic3RedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-2219 IK8652360

Alarm	Attributes	Applicable major release
Name: IK8652360 (7659) Type: equipmentAlarm Package: lmg.IK8652360 Raised on class: lmg.Flute	Severity: major Specific problem: Enclosure temperature failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The enclosure temperature status has been set to failed. This alarm signifies that a enclosure temperature sensor has been tripped indicating an overheat condition.\nAlarm is cleared by the system.\nReason: cpqRackEnclosureTempFailed		
Remedial action: Shutdown the enclosure and possibly the rack as soon as possible. Ensure all fans are working properly and that air flow in the rack has not been blocked.		

Table 27-2220 IK8652361

Alarm	Attributes	Applicable major release
Name: IK8652361 (7660) Type: equipmentAlarm Package: Img.IK8652361 Raised on class: Img.Flute	Severity: minor Specific problem: Enclosure temperature degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The enclosure temperature status has been set to degraded. This alarm signifies that an enclosure temperature sensor has been tripped indicating a possible overheat condition.\nAlarm is cleared by the system.\nReason: cpqRackEnclosureTempDegraded		
Remedial action: Shutdown the enclosure and possibly the rack as soon as possible. Ensure all fans are working properly and that air flow in the rack has not been blocked.		

Table 27-2221 IK8652363

Alarm	Attributes	Applicable major release
Name: IK8652363 (7661) Type: environmentalAlarm Package: Img.IK8652363 Raised on class: Img.Flute	Severity: major Specific problem: Enclosure fan failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The enclosure fan status has been set to failed. This alarm signifies that an enclosure fan has failed and no other fans in the redundant fan group are operating. This may result in overheating of the enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackEnclosureFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-2222 IK8652364

Alarm	Attributes	Applicable major release
Name: IK8652364 (7662) Type: environmentalAlarm Package: Img.IK8652364 Raised on class: Img.Flute	Severity: minor Specific problem: Enclosure fan degraded Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The enclosure fan status has been set to degraded. This alarm signifies that an enclosure fan has failed but other fans in the redundant fan group are still operating. This may result in overheating of the enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackEnclosureFanDegraded		
Remedial action: Replace the fan as soon as possible.		

Table 27-2223 IK8652368

Alarm	Attributes	Applicable major release
Name: IK8652368 (7663) Type: equipmentAlarm Package: Img.IK8652368 Raised on class: Img.Flute	Severity: critical Specific problem: Rack power supply failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The power supply status has been set to failed. This alarm signifies that a power supply has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

Table 27-2224 IK8652369

Alarm	Attributes	Applicable major release
Name: IK8652369 (7664) Type: equipmentAlarm Package: Img.IK8652369 Raised on class: Img.Flute	Severity: major Specific problem: Rack power supply degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The power supply status has been set to degraded. This alarm signifies that a power supply has degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSupplyDegraded		
Remedial action: Replace the power supply as soon as possible.		

Table 27-2225 IK8652373

Alarm	Attributes	Applicable major release
Name: IK8652373 (7665) Type: equipmentAlarm Package: Img.IK8652373 Raised on class: Img.Flute	Severity: minor Specific problem: Rack power subsystem not redundant Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The rack power subsystem is no longer in a redundant state.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSubsystemNotRedundant		
Remedial action: Replace any failed power supplies as soon as possible to return the system to a redundant state.		

Table 27-2226 IK8652374

Alarm	Attributes	Applicable major release
Name: IK8652374 (7666) Type: equipmentAlarm Package: Img.IK8652374 Raised on class: Img.Flute	Severity: major Specific problem: Rack power supply input voltage problem Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The rack power supply detected an input line voltage problem.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSubsystemLineVoltageProblem		
Remedial action: Check the power input for the power supply or replace any failed power supplies as soon as possible.		

Table 27-2227 IK8652375

Alarm	Attributes	Applicable major release
Name: IK8652375 (7667) Type: equipmentAlarm Package: Img.IK8652375 Raised on class: Img.Flute	Severity: major Specific problem: Rack power subsystem overload condition Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The rack power subsystem overload condition.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSubsystemOverloadCondition		
Remedial action: Replace any failed power supplies as soon as possible to return the system to a redundant state.		

Table 27-2228 IK8652376

Alarm	Attributes	Applicable major release
Name: IK8652376 (7668) Type: equipmentAlarm Package: Img.IK8652376 Raised on class: Img.Flute	Severity: critical Specific problem: Server shutdown due to power shedding Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Server shutdown due to power shedding. The server blade was shutdown due to a lack of power.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerShedAutoShutdown		
Remedial action: Check power connections or add power supplies.		

Table 27-2229 IK8652377

Alarm	Attributes	Applicable major release
Name: IK8652377 (7669) Type: equipmentAlarm Package: lmg.IK8652377 Raised on class: lmg.Flute	Severity: critical Specific problem: Server power on prevented to preserve redundancy Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Server power on prevented to preserve redundancy. There is not enough power to power on the server blade and maintain redundancy for the other blades in the enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailedNotRedundant		
Remedial action: Check power connections or add power supplies.		

Table 27-2230 IK8652378

Alarm	Attributes	Applicable major release
Name: IK8652378 (7670) Type: equipmentAlarm Package: lmg.IK8652378 Raised on class: lmg.Flute	Severity: critical Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailedNotEnoughPower		
Remedial action: Check power connections or add power supplies.		

Table 27-2231 IK8652379

Alarm	Attributes	Applicable major release
Name: IK8652379 (7671) Type: equipmentAlarm Package: lmg.IK8652379 Raised on class: lmg.Flute	Severity: critical Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The server enclosure micro-controller was not found.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFaile-dEnclosureNotFound		
Remedial action: Check server enclosure connections or add power supplies.		

Table 27-2232 IK8652380

Alarm	Attributes	Applicable major release
Name: IK8652380 (7672) Type: equipmentAlarm Package: Img.IK8652380 Raised on class: Img.Flute	Severity: critical Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The power enclosure micro-controller was not found.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailed-PowerChassisNotFound		
Remedial action: Check power enclosure connections or add power supplies.		

Table 27-2233 IK8652382

Alarm	Attributes	Applicable major release
Name: IK8652382 (7673) Type: environmentalAlarm Package: Img.IK8652382 Raised on class: Img.Flute	Severity: major Specific problem: Fuse open Implicitly cleared: true Default probable cause: enclosureDoorOpen	Release: • LR14.3.MG • LR15.1.MG
Description: Fuse open. The fuse has been tripped.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackFuseOpen		
Remedial action: Check enclosure and / or blade power connections and reset the fuse.		

Table 27-2234 IK8652385

Alarm	Attributes	Applicable major release
Name: IK8652385 (7674) Type: equipmentAlarm Package: Img.IK8652385 Raised on class: Img.Flute	Severity: minor Specific problem: Power subsystem not load balanced Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem not load balanced. The power subsystem is out of balance for this power enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisNotLoadBalanced		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies. Add additional power supplies if needed.		

Table 27-2235 IK8652386

Alarm	Attributes	Applicable major release
Name: IK8652386 (7675) Type: equipmentAlarm Package: Img.IK8652386 Raised on class: Img.Flute	Severity: major Specific problem: Power subsystem DC power problem Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem DC power problem. There is a power subsystem DC power problem for this power enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisDcPowerProblem		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 27-2236 IK8652387

Alarm	Attributes	Applicable major release
Name: IK8652387 (7676) Type: equipmentAlarm Package: Img.IK8652387 Raised on class: Img.Flute	Severity: major Specific problem: Power subsystem AC facility input power exceeded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem AC facility input power exceeded. There is a power subsystem Power subsystem AC facility input power exceeded for this power enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisAc-FacilityPowerExceeded		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 27-2237 IK8652388

Alarm	Attributes	Applicable major release
Name: IK8652388 (7677) Type: equipmentAlarm Package: Img.IK8652388 Raised on class: Img.Flute	Severity: major Specific problem: Unknown power consumption Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Unknown power consumption. There is an unknown power consumer drawing power.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerUnknownPowerConsumption		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 27-2238 IK8652389

Alarm	Attributes	Applicable major release
Name: IK8652389 (7678) Type: equipmentAlarm Package: Img.IK8652389 Raised on class: Img.Flute	Severity: minor Specific problem: Power subsystem load balancing wire missing Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem load balancing wire missing. The power subsystem load balancing wire missing.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisLoadBalancingWireMissing		
Remedial action: Connect the load balancing wire.		

Table 27-2239 IK8652390

Alarm	Attributes	Applicable major release
Name: IK8652390 (7679) Type: equipmentAlarm Package: Img.IK8652390 Raised on class: Img.Flute	Severity: minor Specific problem: Power subsystem has too may power enclosures Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem has too may power enclosures. The maximum number of power enclosures has been exceeded.\ nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisTooManyPowerChassis		
Remedial action: Remove the extra power enclosure.		

Table 27-2240 IK8652391

Alarm	Attributes	Applicable major release
Name: IK8652391 (7680) Type: processingErrorAlarm Package: Img.IK8652391 Raised on class: Img.Flute	Severity: major Specific problem: Power subsystem improperly configured Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem improperly configured. The power subsystem has been improperly configured.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisConfigError		
Remedial action: Check the cabling of the power enclosure.		

Table 27-2241 IK8652392

Alarm	Attributes	Applicable major release
Name: IK8652392 (7681) Type: qualityOfServiceAlarm Package: lmg.IK8652392 Raised on class: lmg.Flute	Severity: minor Specific problem: Enclosure manager degraded Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The Onboard Administrator or other management processor status has been set to degraded. This alarm signifies that either an Onboard Administrator has failed but the other Onboard Administrator is still operating, or one or more management processors is in a non-optimal operating state.\nAlarm is cleared by the system.\nReason: cpqRackEnclosureManagerDegraded		
Remedial action: For C-Class enclosures, replace the Onboard Administrator as soon as possible. For all others please refer to product documenation for possible corrective actions		

Table 27-2242 IK8652397

Alarm	Attributes	Applicable major release
Name: IK8652397 (7682) Type: communicationsAlarm Package: lmg.IK8652397 Raised on class: lmg.LMGMngElement	Severity: minor Specific problem: keying failed Implicitly cleared: false Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: The server blade e-keying has failed. This alarm signifies that a server blade e-keying has failed and there is a port mapping problem between a server mezz card and the interconnect.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeEKeyingFailed		
Remedial action: Reconfigure server blade mezz cards.		

Table 27-2243 IK8652401

Alarm	Attributes	Applicable major release
Name: IK8652401 (7683) Type: communicationsAlarm Package: lmg.IK8652401 Raised on class: lmg.Flute	Severity: critical Specific problem: Interconnect failed Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: The interconnect status has been set to failed. This alarm signifies that a interconnect has failed.\nAlarm is cleared by the system.\nReason: cpqRackNetConnectorFailed		
Remedial action: Replace the interconnect as soon as possible.		

Table 27-2244 IK8652402

Alarm	Attributes	Applicable major release
Name: IK8652402 (7684) Type: communicationsAlarm Package: Img.IK8652402 Raised on class: Img.Flute	Severity: minor Specific problem: Interconnect degraded Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The interconnect status has been set to degraded. This alarm signifies that a interconnect has degraded.\nAlarm is cleared by the system.\nReason: cpqRackNetConnectorDegraded		
Remedial action: Replace the interconnect as soon as possible.		

Table 27-2245 IK8652408

Alarm	Attributes	Applicable major release
Name: IK8652408 (7685) Type: qualityOfServiceAlarm Package: Img.IK8652408 Raised on class: Img.Flute	Severity: major Specific problem: Server blade health status degraded Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR14.3.MG • LR15.1.MG
Description: Server blade health status Degraded. The server blade health status has changed to Degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerBladeStatusDegraded		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-2246 IK8652409

Alarm	Attributes	Applicable major release
Name: IK8652409 (7686) Type: processingErrorAlarm Package: Img.IK8652409 Raised on class: Img.Flute	Severity: critical Specific problem: Server blade health status critical Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG
Description: Server blade health status Critical. The server blade health status has changed to Critical.\nAlarm is cleared by the system.\nReason: cpqRackServerBladeStatusCritical		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-2247 IK8652410

Alarm	Attributes	Applicable major release
Name: IK8652410 (7687) Type: equipmentAlarm Package: Img.IK8652410 Raised on class: Img.Flute	Severity: minor Specific problem: Server blade not responding to group capping requests Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The server blade is not responding to the group capper. The server blade is not responding to capping requests from the enclosure group capper\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerBladeGrpCapTimeout		
Remedial action: Reset the iLO management processor.		

Table 27-2248 IK8652411

Alarm	Attributes	Applicable major release
Name: IK8652411 (7688) Type: equipmentAlarm Package: Img.IK8652411 Raised on class: Img.Flute	Severity: major Specific problem: Server blade unexpected shutdown Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Server blade shutdown unexpectadly. An unexpected shutdown event has occurred for this server blade.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerBladeUnexpectedShutdown		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-2249 IK8652427

Alarm	Attributes	Applicable major release
Name: IK8652427 (7689) Type: equipmentAlarm Package: Img.IK8652427 Raised on class: Img.LMGMngElement	Severity: minor Specific problem: Generic EAE Minor trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: EAE Minor trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackMinorEAETrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2250 IK8652428

Alarm	Attributes	Applicable major release
Name: IK8652428 (7690) Type: equipmentAlarm Package: Img.IK8652428 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Generic EAE Major trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG

Table 27-2250 IK8652428 (continued)

Alarm	Attributes	Applicable major release
Description: EAE Major trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackMajorEAETrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2251 IK8652429

Alarm	Attributes	Applicable major release
Name: IK8652429 (7691) Type: equipmentAlarm Package: Img.IK8652429 Raised on class: Img.LMGMngElement	Severity: critical Specific problem: Generic EAE Critical trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: EAE Critical trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackCriticalEAETrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2252 IK8652430

Alarm	Attributes	Applicable major release
Name: IK8652430 (7692) Type: equipmentAlarm Package: Img.IK8652430 Raised on class: Img.Flute	Severity: minor Specific problem: Generic Power Subsystem EAE Minor trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: FlexFabric Cmdr Power Subsystem Minor trap.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerMinorEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 27-2253 IK8652431

Alarm	Attributes	Applicable major release
Name: IK8652431 (7693) Type: equipmentAlarm Package: Img.IK8652431 Raised on class: Img.Flute	Severity: major Specific problem: Generic Power Subsystem EAE Major trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: FlexFabric Cmdr Power Subsystem Major trap.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerMajorEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 27-2254 IK8652432

Alarm	Attributes	Applicable major release
Name: IK8652432 (7694) Type: equipmentAlarm Package: Img.IK8652432 Raised on class: Img.Flute	Severity: critical Specific problem: Generic Power Subsystem EAE Critical trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: FlexFabric Cmdr Power Subsystem Critical trap.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerCriticalEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 27-2255 IK8652435

Alarm	Attributes	Applicable major release
Name: IK8652435 (7695) Type: equipmentAlarm Package: Img.IK8652435 Raised on class: Img.LMGMngElement	Severity: minor Specific problem: Generic WSMAN Minor trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: WSMAN Minor trap\nReason: cpqRackMinorWSMANTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2256 IK8652436

Alarm	Attributes	Applicable major release
Name: IK8652436 (7696) Type: equipmentAlarm Package: Img.IK8652436 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Generic WSMAN Major trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: WSMAN Major trap\nReason: cpqRackMajorWSMANTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2257 IK8652437

Alarm	Attributes	Applicable major release
Name: IK8652437 (7697) Type: equipmentAlarm Package: Img.IK8652437 Raised on class: Img.LMGMngElement	Severity: critical Specific problem: Generic WSMAN Critical trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: WSMAN Critical trap\nReason: cpqRackCriticalWSMANTrap		

Table 27-2257 IK8652437 (continued)

Alarm	Attributes	Applicable major release
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2258 IK8652439

Alarm	Attributes	Applicable major release
Name: IK8652439 (7698) Type: communicationsAlarm Package: Img.IK8652439 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Standby Recovery Server Interconnect Failure Implicitly cleared: false Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: Recovery Server serial interconnect failure. The Standby Recovery Agent reports that the local serial interconnect is not connected or has failed. The primary server is being shutdown in anticipation of the startup of the standby server.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRsStandbyCableFailure		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2259 IK8652443

Alarm	Attributes	Applicable major release
Name: IK8652443 (7699) Type: communicationsAlarm Package: Img.IK8652443 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Device Connected Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is reporting a Connection Lost due to one of the following. 1. The serial cable connected to the UPS has been unplugged. 2. The Network cable connected to the UPS has been unplugged.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapDeviceConnected		
Remedial action: Perform the following steps to clear the alarm: 1. Insure all cables are seated properly. 2. Check you network to insure it is functioning properly. 3. If the UPS is serially connected insure that the Serial Relay Agent is installed and running.		

Table 27-2260 IK8652444

Alarm	Attributes	Applicable major release
Name: IK8652444 (7700) Type: communicationsAlarm Package: Img.IK8652444 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Connection Lost Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG

Table 27-2260 IK8652444 (continued)

Alarm	Attributes	Applicable major release
Description: A UPS device is reporting a Connection Lost due to one of the following. 1. The serial cable connected to the UPS has been unplugged. 2. The Network cable connected to the UPS has been unplugged.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapConnectionLost		
Remedial action: Perform the following steps to clear the alarm: 1. Insure all cables are seated properly. 2. Check you network to insure it is functioning properly. 3. If the UPS is serially connected insure that the Serial Relay Agent is installed and running.		

Table 27-2261 IK8652449

Alarm	Attributes	Applicable major release
Name: IK8652449 (7701) Type: environmentalAlarm Package: lmg.IK8652449 Raised on class: lmg.LMGMngElement	Severity: indeterminate Specific problem: CMC Temperature 1 Above Warning Implicitly cleared: false Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG
Description: A CMC device is reporting temperature 1 above warning threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapCMCTemp1AboveWarn		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2262 IK8652450

Alarm	Attributes	Applicable major release
Name: IK8652450 (7702) Type: environmentalAlarm Package: lmg.IK8652450 Raised on class: lmg.LMGMngElement	Severity: indeterminate Specific problem: CMC Temperature 1 Above Maximum Implicitly cleared: false Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG
Description: A CMC device is reporting temperature 1 above maximum threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapCMCTemp1AboveMax		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2263 IK8652453

Alarm	Attributes	Applicable major release
Name: IK8652453 (7703) Type: environmentalAlarm Package: lmg.IK8652453 Raised on class: lmg.LMGMngElement	Severity: indeterminate Specific problem: CMC Temperature 2 Above Warning Implicitly cleared: false Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG
Description: A CMC device is reporting temperature 2 above warning threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapCMCTemp2AboveWarn		

Table 27-2263 IK8652453 (continued)

Alarm	Attributes	Applicable major release
Remedial action: If the problem persists, contact Nokia customer support.

Name: IK8652468 (7710) Type: equipmentAlarm Package: lmg.IK8652468 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: CMC Aux 2 Alarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG

Table 27-2270 IK8652468 (continued)

Alarm	Attributes	Applicable major release
Description: A CMC device has entered an alarm condition for auxiliary input 2.\nAlarm is cleared by the system.\nReason: cpqRPMTrapCMCAux2Alarm		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2271 IK8652489

Alarm	Attributes	Applicable major release
Name: IK8652489 (7711) Type: equipmentAlarm Package: Img.IK8652489 Raised on class: Img.LMGMngElement	Severity: indeterminate Specific problem: UPS Input Voltage Above Maximum Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: A UPS device is reporting input voltage above maximum threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapUPSInputVoltageAboveMax		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2272 IK8652490

Alarm	Attributes	Applicable major release
Name: IK8652490 (7712) Type: equipmentAlarm Package: Img.IK8652490 Raised on class: Img.Flute	Severity: indeterminate Specific problem: UPS Input Voltage Normal Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is reporting input voltage is out of range.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSInputVoltageNormal		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. 2. If the UPS remains on battery for an extended period of time it will not be able to sustain the load.		

Table 27-2273 IK8652492

Alarm	Attributes	Applicable major release
Name: IK8652492 (7713) Type: equipmentAlarm Package: Img.IK8652492 Raised on class: Img.LMGMngElement	Severity: indeterminate Specific problem: UPS Output Voltage Above Maximum Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: A UPS device is reporting output voltage above maximum threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapUPSOutputVoltageAboveMax		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2274 IK8652493

Alarm	Attributes	Applicable major release
Name: IK8652493 (7714) Type: equipmentAlarm Package: Img.IK8652493 Raised on class: Img.Flute	Severity: indeterminate Specific problem: UPS Output Voltage Normal Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is reporting output voltage is out of Range.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSOutputVoltageNormal		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If this error persists contact technical support.		

Table 27-2275 IK8652494

Alarm	Attributes	Applicable major release
Name: IK8652494 (7715) Type: equipmentAlarm Package: Img.IK8652494 Raised on class: Img.Flute	Severity: indeterminate Specific problem: UPS Output Overload Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device is reporting an overload condition.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSOutpu-tOverload		
Remedial action: Perform the following steps to clear the alarm: 1. Reduce the load on the UPS by moving some of the load to another UPS. 2. Consider moving to a larger UPS to support the current load.		

Table 27-2276 IK8652496

Alarm	Attributes	Applicable major release
Name: IK8652496 (7716) Type: environmentalAlarm Package: Img.IK8652496 Raised on class: Img.Flute	Severity: indeterminate Specific problem: UPS Battery Low Implicitly cleared: true Default probable cause: lowBatteryThreshold	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device is reporting low battery.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBatteryLow		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. 2. When utility power is restored, charge the battery to it's full capacity. If the battery level continues to decrease, the UPS will not be able to sustain the output load!		

Table 27-2277 IK8652499

Alarm	Attributes	Applicable major release
Name: IK8652499 (7717) Type: equipmentAlarm Package: Img.IK8652499 Raised on class: Img.Flute	Severity: indeterminate Specific problem: UPS Battery Level Normal Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is reporting low battery.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSBatteryLevelNormal		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. 2. When utility power is restored, charge the battery to it's full capacity. If the battery level continues to decrease, the UPS will not be able to sustain the output load!		

Table 27-2278 IK8652500

Alarm	Attributes	Applicable major release
Name: IK8652500 (7718) Type: equipmentAlarm Package: Img.IK8652500 Raised on class: Img.Flute	Severity: indeterminate Specific problem: UPS On Battery Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is reporting on battery condition.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSOnBattery		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. If the UPS remains on battery for an extended time it will not be able to sustain the output load!		

Table 27-2279 IK8652502

Alarm	Attributes	Applicable major release
Name: IK8652502 (7719) Type: equipmentAlarm Package: Img.IK8652502 Raised on class: Img.Flute	Severity: indeterminate Specific problem: UPS On Buck Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is reporting an On Buck condition due to the following. 1. Utility power has increased above recommended utility input levels.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSOnBuck		
Remedial action: Perform the following steps to clear the alarm: 1. Contact an electrician.		

Table 27-2280 IK8652503

Alarm	Attributes	Applicable major release
Name: IK8652503 (7720) Type: equipmentAlarm Package: Img.IK8652503 Raised on class: Img.Flute	Severity: indeterminate Specific problem: UPS On Boost Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is reporting an On Boost condition due to the following. 1. Utility power has dropped below recommended utility input levels.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSOnBoost		
Remedial action: Perform the following steps to clear the alarm: 1. Contact an electrician.		

Table 27-2281 IK8652504

Alarm	Attributes	Applicable major release
Name: IK8652504 (7721) Type: equipmentAlarm Package: Img.IK8652504 Raised on class: Img.Flute	Severity: indeterminate Specific problem: UPS On Utility Power Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is reporting on battery condition.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSOnUtilityPower		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. If the UPS remains on battery for an extended time it will not be able to sustain the output load!		

Table 27-2282 IK8652506

Alarm	Attributes	Applicable major release
Name: IK8652506 (7722) Type: environmentalAlarm Package: Img.IK8652506 Raised on class: Img.LMGMngElement	Severity: indeterminate Specific problem: UPS Temperature High Implicitly cleared: false Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG
Description: A UPS device is reporting temperature above maximum threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapUPSTemperatureHigh		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2283 IK8652507

Alarm	Attributes	Applicable major release
Name: IK8652507 (7723) Type: environmentalAlarm Package: Img.IK8652507 Raised on class: Img.Flute	Severity: indeterminate Specific problem: UPS Temperature Normal Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG

Table 27-2283 IK8652507 (continued)

Alarm	Attributes	Applicable major release
Description: A UPS device is reporting temperature is out of range.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSTemperatureNormal		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is in a well ventilated area. 2. Lower the ambient temperature in the area where the UPS is located.		

Table 27-2284 IK8652508

Alarm	Attributes	Applicable major release
Name: IK8652508 (7724) Type: equipmentAlarm Package: lmg.IK8652508 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: UPS Internal Failure Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device is reporting a general UPS failure.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSInternal-Failure		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If the problem persists, contact NOKIA customer support.		

Table 27-2285 IK8652510

Alarm	Attributes	Applicable major release
Name: IK8652510 (7725) Type: environmentalAlarm Package: lmg.IK8652510 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: UPS Battery Failure Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device is reporting a battery failure.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBatteryFailure		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If the problem persists, contact NOKIA customer support. 3. Your battery may need to be replaced. The UPS may not be capable of supporting it's load if utility power fails!		

Table 27-2286 IK8652512

Alarm	Attributes	Applicable major release
Name: IK8652512 (7726) Type: equipmentAlarm Package: lmg.IK8652512 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: UPS Diagnostic Test Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is reporting a diagnostic test failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSDiagnosticTestFailed		

Table 27-2286 IK8652512 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Perform the following steps to clear the alarm: 1. Your battery may need to be replaced. 2. If this error persists contact technical support. 3. The UPS may not be capable of supporting it's load if utility power fails!		

Table 27-2287 IK8652513

Alarm	Attributes	Applicable major release
Name: IK8652513 (7727) Type: equipmentAlarm Package: lmg.IK8652513 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: UPS Diagnostic Test Succeeded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is reporting a diagnostic test failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSDiagnosticTestSucceeded		
Remedial action: Perform the following steps to clear the alarm: 1. Your battery may need to be replaced. 2. If this error persists contact technical support. 3. The UPS may not be capable of supporting it's load if utility power fails!		

Table 27-2288 IK8652516

Alarm	Attributes	Applicable major release
Name: IK8652516 (7728) Type: equipmentAlarm Package: lmg.IK8652516 Raised on class: lmg.LMGMngElement	Severity: indeterminate Specific problem: DC Start Occurred Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG
Description: The UPS has been started on battery when AC input power is not present. This alarm is used to record the date and time of this event.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSDCStartOccurred		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2289 IK8652518

Alarm	Attributes	Applicable major release
Name: IK8652518 (7729) Type: equipmentAlarm Package: lmg.IK8652518 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Bypass Not Available Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device is reporting bypass not avaliable.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBypassNotAvailable		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If the problem persists, contact NOKIA customer support.		

Table 27-2290 IK8652522

Alarm	Attributes	Applicable major release
Name: IK8652522 (7730) Type: equipmentAlarm Package: Img.IK8652522 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Utility Not Present Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Indicates that the utility input is not present. This differs from alarm #57 in that the detected voltage is zero in this case.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSUtilityNotPresent		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2291 IK8652526

Alarm	Attributes	Applicable major release
Name: IK8652526 (7731) Type: equipmentAlarm Package: Img.IK8652526 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Site Wiring Fault Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is reporting a fault in the input wiring, other than Phase Rotation: e.g., Ground/Neutral reversed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSSiteWiringFault		
Remedial action: Perform the following steps to clear the alarm: 1. Contact an electrician.		

Table 27-2292 IK8652527

Alarm	Attributes	Applicable major release
Name: IK8652527 (7732) Type: equipmentAlarm Package: Img.IK8652527 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Site Wiring Fault Cleared Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is reporting a fault in the input wiring, other than Phase Rotation: e.g., Ground/Neutral reversed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSSiteWiringNormal		
Remedial action: Perform the following steps to clear the alarm: 1. Contact an electrician.		

Table 27-2293 IK8652528

Alarm	Attributes	Applicable major release
Name: IK8652528 (7733) Type: equipmentAlarm Package: Img.IK8652528 Raised on class: Img.Flute	Severity: indeterminate Specific problem: The UPS is no longer on manual bypass Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG

Table 27-2293 IK8652528 (continued)

Alarm	Attributes	Applicable major release
Description: A UPS device is operating in manual bypass mode.\nAlarm is cleared by the system when the device is restarted.\ nReason: cpqRPMtrapUPSBypassOffManual		
Remedial action: Perform the following steps to clear the alarm: 1. In bypass mode, the UPS cannot support devices if there is a power failure. 2. Once maintenance has been performed return the UPS to normal mode.		

Table 27-2294 IK8652529

Alarm	Attributes	Applicable major release
Name: IK8652529 (7734) Type: equipmentAlarm Package: lmg.IK8652529 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: The UPS is on manual bypass Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is operating in manual bypass mode.\nAlarm is cleared by the system when the device is restarted.\ nReason: cpqRPMtrapUPSBypassONManual		
Remedial action: Perform the following steps to clear the alarm: 1. In bypass mode, the UPS cannot support devices if there is a power failure. 2. Once maintenance has been performed return the UPS to normal mode.		

Table 27-2295 IK8652531

Alarm	Attributes	Applicable major release
Name: IK8652531 (7735) Type: equipmentAlarm Package: lmg.IK8652531 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: The UPS was started without utility power Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device has been started while on battery power. AC input power is not present.\nAlarm is cleared by the system.\nReason: cppqRPMtrapUPSStartedOnBattery		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. If the UPS remains on battery for an extended time it will not be able to sustain the output load.		

Table 27-2296 IK8652533

Alarm	Attributes	Applicable major release
Name: IK8652533 (7736) Type: equipmentAlarm Package: lmg.IK8652533 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Input voltage is out of range Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG

Table 27-2296 IK8652533 (continued)

Alarm	Attributes	Applicable major release
Description: A UPS device is reporting input voltage is out of range.\nAlarm is cleared by the system.\nReason: cpqRPMtrapUPSInput-OutofRange		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. 2. If the UPS remains on battery for an extended period of time it will not be able to sustain the load.		

Table 27-2297 IK8652534

Alarm	Attributes	Applicable major release
Name: IK8652534 (7737) Type: environmentalAlarm Package: lmg.IK8652534 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: UPS temperature out of range Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device is reporting temperature is out of range.\nAlarm is cleared by the system.\nReason: cpqRPMtrapUPSTem-peratureOutOfRange		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is in a well ventilated area. 2. Lower the ambient temperature in the area where the UPS is located.		

Table 27-2298 IK8652536

Alarm	Attributes	Applicable major release
Name: IK8652536 (7738) Type: equipmentAlarm Package: lmg.IK8652536 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: The UPS is on automatic bypass Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device is operating in auto bypass mode.\nAlarm is cleared by the system.\nReason: cpqRPMtrapUPSBypassO-nAuto		
Remedial action: Perform the following steps to clear the alarm: 1. In bypass mode, the UPS cannot support devices if there is a power failure. 2. Once maintenance has been performed return the UPS to normal mode.		

Table 27-2299 IK8652538

Alarm	Attributes	Applicable major release
Name: IK8652538 (7739) Type: equipmentAlarm Package: lmg.IK8652538 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Output voltage is out of range Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG

Table 27-2299 IK8652538 (continued)

Alarm	Attributes	Applicable major release
Description: A UPS device is reporting output voltage is out of Range.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMtrapUPSOutputoutofRange		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If this error persists contact technical support.		

Table 27-2300 IK8652539

Alarm	Attributes	Applicable major release
Name: IK8652539 (7740) Type: equipmentAlarm Package: lmg.IK8652539 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: One or more UPS batteries have been disconnected Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device is reporting batteries are not connected to the UPS.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBatteriesDisconnected		
Remedial action: Perform the following steps to clear the alarm: 1. Connect the UPS Batteries. The UPS will not be capable of supporting it's load if the utility power fails!		

Table 27-2301 IK8652541

Alarm	Attributes	Applicable major release
Name: IK8652541 (7741) Type: environmentalAlarm Package: lmg.IK8652541 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: The UPS batteries are in a discharged condition Implicitly cleared: true Default probable cause: batteryDischarging	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device is reporting batteries are completely discharged.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBatteryDischarged		
Remedial action: Perform the following steps to clear the alarm: 1. Connect the UPS to utility power to charge the batteries. The UPS will not be able to support it's load if the utility power fails!		

Table 27-2302 IK8652543

Alarm	Attributes	Applicable major release
Name: IK8652543 (7742) Type: equipmentAlarm Package: lmg.IK8652543 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: A UPS circuit breaker needs attention Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG

Table 27-2302 IK8652543 (continued)

Alarm	Attributes	Applicable major release
Description: A UPS device is reporting an output Breaker or Relay has failed or may be stuck open or closed with this alarm.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSCheckBreaker		
Remedial action: Perform the following steps to clear the alarm: 1. Check all breakers on the UPS. 2. If the problem persists, contact NOKIA customer support.		

Table 27-2303 IK8652545

Alarm	Attributes	Applicable major release
Name: IK8652545 (7743) Type: equipmentAlarm Package: Img.IK8652545 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Emergency Power Off activated Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A UPS device is reporting an Emergency Power Off (EPO) command has been received to shutdown the UPS immediately with out delay. This command may come from a local control panel or from a remote source.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSEPOInitiated		
Remedial action: Perform the following steps to clear the alarm: 1. Turn the UPS on to reapply power to attached equipment.		

Table 27-2304 IK8652546

Alarm	Attributes	Applicable major release
Name: IK8652546 (9345) Type: equipmentAlarm Package: Img.IK8652546 Raised on class: Img.Flute	Severity: indeterminate Specific problem: UPS output has been manually turned off Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG • LR16.1.MG
Description: The UPS has been powered off with user interaction.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSManualLoadDumped		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2305 IK8652548

Alarm	Attributes	Applicable major release
Name: IK8652548 (7744) Type: environmentalAlarm Package: Img.IK8652548 Raised on class: Img.Flute	Severity: indeterminate Specific problem: A cover panel has been removed Implicitly cleared: true Default probable cause: enclosureDoorOpen	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device is reporting a cover panel has been removed while utility power is present.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSCabinetDoorOpen		

Table 27-2305 IK8652548 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Perform the following steps to clear the alarm: 1. Reinstall all panels. 2. If the problem persists, contact NOKIA customer support.		

Table 27-2306 IK8652550

Alarm	Attributes	Applicable major release
Name: IK8652550 (7745) Type: environmentalAlarm Package: Img.IK8652550 Raised on class: Img.Flute	Severity: indeterminate Specific problem: The UPS has encountered an fan failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device is reporting a fan failure has occurred.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSFan-Failure		
Remedial action: Perform the following steps to clear the alarm: 1. If the problem persists, contact NOKIA customer support.		

Table 27-2307 IK8652552

Alarm	Attributes	Applicable major release
Name: IK8652552 (7746) Type: processingErrorAlarm Package: Img.IK8652552 Raised on class: Img.Flute	Severity: indeterminate Specific problem: The UPS N+1 load has been exceeded Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device is reporting a loss of redundancy due to one of the following. 1. One or more of the Electronics Modules has failed 2. One or more of the electronics modules has been manually removed. 3. The amount of load on the UPS has increased to the point that the UPS is no longer able to support an N+1 configuration.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSLos-sOfRedundancy		
Remedial action: Perform the following steps to clear the alarm: 1. Check the UPS to see if one of the modules has failed. 2. Make sure that all modules are securely plugged in. 3. Reduce the load to return the N+1 configuration. 4. If the amount of load is now going to exceed and N+1 configuration permanently, change the configuration on the front panel of the UPS to Capacity instead of Parallel N+1.		

Table 27-2308 IK8652554

Alarm	Attributes	Applicable major release
Name: IK8652554 (7747) Type: equipmentAlarm Package: Img.IK8652554 Raised on class: Img.Flute	Severity: indeterminate Specific problem: A UPS shutdown is imminent Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device is reporting a shutdown imminent condition.\nAlarm is cleared by the system.\nReason: cpqRPMTrap-UPSShutdownImminent		
Remedial action: Perform the following steps to clear the alarm: 1. Immediately restore power to the UPS. The UPS will not continue to supply power to devices following the shutdown!		

Table 27-2309 IK8652556

Alarm	Attributes	Applicable major release
Name: IK8652556 (7748) Type: equipmentAlarm Package: Img.IK8652556 Raised on class: Img.Flute	Severity: indeterminate Specific problem: A UPS shutdown is pending Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A UPS device is reporting shutdown pending condition.\nAlarm is cleared by the system.\nReason: cpqRPMTrap-UPSShutdownPending		
Remedial action: Perform the following steps to clear the alarm: 1. Immediately restore power to the UPS. The UPS will not continue to supply power to devices following the shutdown!		

Table 27-2310 IK8652559

Alarm	Attributes	Applicable major release
Name: IK8652559 (7749) Type: equipmentAlarm Package: Img.IK8652559 Raised on class: Img.Flute	Severity: critical Specific problem: Critical Alarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: A critical alarm has occurred.\nAlarm is cleared by the system.\nReason: cpqPMTrapCritical		
Remedial action: Check the Trap Details for more information.		

Table 27-2311 IK8652560

Alarm	Attributes	Applicable major release
Name: IK8652560 (7750) Type: equipmentAlarm Package: Img.IK8652560 Raised on class: Img.Flute	Severity: warning Specific problem: Warning Alarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: A warning alarm has occurred.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqPMTrapWarning		
Remedial action: Check the Trap Details for more information.		

Table 27-2312 IK8652585

Alarm	Attributes	Applicable major release
Name: IK8652585 (7751) Type: processingErrorAlarm Package: Img.IK8652585 Raised on class: Img.Flute	Severity: warning Specific problem: Tape Drive Cleaning Required Implicitly cleared: true Default probable cause: configurationOrCustomizationError	Release: • LR14.3.MG • LR15.1.MG
Description: Tape Drive Cleaning Required trap. The agent has detected a tape drive that needs to have a cleaning tape inserted and run. This will cause the tape drive heads to be cleaned.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqTape3PhyDrvCleaningRequired		
Remedial action: Insert and run a cleaning tape in the tape drive.		

Table 27-2313 IK8652586

Alarm	Attributes	Applicable major release
Name: IK8652586 (7752) Type: equipmentAlarm Package: Img.IK8652586 Raised on class: Img.Flute	Severity: warning Specific problem: Tape Drive Cleaning Tape Needs Replacing Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqTape3PhyDrvCleanTapeReplace		
Remedial action: Replace the cleaning tape.		

Table 27-2314 IK8652590

Alarm	Attributes	Applicable major release
Name: IK8652590 (7753) Type: environmentalAlarm Package: Img.IK8652590 Raised on class: Img.Flute	Severity: minor Specific problem: Tape Library Door Opened Implicitly cleared: true Default probable cause: enclosureDoorOpen	Release: • LR14.3.MG • LR15.1.MG
Description: Tape Library Door Open The agent has detected that the door on an autoloader is open so the unit is not operational.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqTape3LibraryDoorOpen		
Remedial action: Close the door on the tape library.		

Table 27-2315 IK8652606

Alarm	Attributes	Applicable major release
Name: IK8652606 (7754) Type: equipmentAlarm Package: Img.IK8652606 Raised on class: Img.Flute	Severity: warning Specific problem: System hood is removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: System hood is removed. The hood status has been set to removed. The system's hood is not in a properly installed state. This situation may result in improper cooling of the system due to air flow changes caused by the missing hood.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiHoodRemoved		
Remedial action: Replace the cover (hood), ensure the system's cover is properly installed. Verify the system is in working order.		

Table 27-2316 IK8652608

Alarm	Attributes	Applicable major release
Name: IK8652608 (7755) Type: environmentalAlarm Package: Img.IK8652608 Raised on class: Img.Flute	Severity: minor Specific problem: Monitor Condition Degraded Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A fault reporting feature has exceeded normal limits for the monitor indicated by the cpqSiMonitorIndex. The monitor's condition is degraded due to the internal temperature exceeding normal operating limits. The monitor is still useable, but action should be taken to return the condition to OK.\nAlarm is cleared by the system.\nReason: cpqSiMonitorConditionDegraded		
Remedial action: Physically check for obstructions to air flow around the monitor. Check the thermostat in the room that the system occupies. Allow the monitor to cool by turning off the monitor for 5 minutes then turn the monitor back on. After the monitor cools, another alarm indicating an improving condition, such as Monitor OK, will be issued.		

Table 27-2317 IK8652609

Alarm	Attributes	Applicable major release
Name: IK8652609 (7756) Type: processingErrorAlarm Package: Img.IK8652609 Raised on class: Img.Flute	Severity: major Specific problem: Monitor Condition Failed Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A fault reporting feature has exceeded normal limits in the monitor indicated by the cpqSiMonitorIndex. The monitor's condition has been set to failed due to an operational feature exceeding normal operating limits. The monitor will not be useable and should be replaced.\nAlarm is cleared by the system.\nReason: cpqSiMonitorConditionFailed		
Remedial action: Make a note of the monitor model number and serial number. Replace the monitor. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 27-2318 IK8652610

Alarm	Attributes	Applicable major release
Name: IK8652610 (7757) Type: processingErrorAlarm Package: Img.IK8652610 Raised on class: Img.Flute	Severity: major Specific problem: Excessive Correctable Memory Errors Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Correctable memory error count has exceeded the threshold for the memory module indicated by the 'cpqSiMemErrorIndex' variable. The appropriate cpqSiMemModuleECCStatus has been set to degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiCorrMemErrStatusDegraded		
Remedial action: For Desktops, the System Administrator should run the F10 Diagnostics on this system and select RAM LONG TEST. If it is determined that a module needs replacing, schedule maintenance for the system and replace the failed memory module. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 27-2319 IK8652612

Alarm	Attributes	Applicable major release
Name: IK8652612 (7758) Type: processingErrorAlarm Package: Img.IK8652612 Raised on class: Img.Flute	Severity: warning Specific problem: Memory modules have changed Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: A memory configuration change has occurred. CpqSiMemConfigChangeData will indicate which memory modules slots have changed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiMemConfigChange		
Remedial action: You may want to verify a valid reason for a memory configuration to have occurred. If system issuing the alert is a Desktop running NT, the memory configuration change information is also logged in the NT System Log.		

Table 27-2320 IK8652615

Alarm	Attributes	Applicable major release
Name: IK8652615 (7759) Type: equipmentAlarm Package: Img.IK8652615 Raised on class: Img.Flute	Severity: major Specific problem: Hot Plug Slot Board Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Hot Plug Slot Board Failed Power-Up. A Hot Plug Slot Board has failed to power-up in the specified chassis and slot.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiHotPlugSlotPowerUpFailed		
Remedial action: Insure the board and all cables are installed correctly and the board type and revision are the same as the replaced board.		

Table 27-2321 IK8652616

Alarm	Attributes	Applicable major release
Name: IK8652616 (7760) Type: environmentalAlarm Package: Img.IK8652616 Raised on class: Img.Flute	Severity: major Specific problem: Battery Failure Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The battery indicated by cpqSiSysBatteryIndex has failed and must be replaced.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiSysBatteryFailure		
Remedial action: Contact your System Administrator or Authorized Reseller to order a replacement battery. Recycle your old battery. For proper disposal information, refer to the documentation that came with your computer.		

Table 27-2322 IK8652617

Alarm	Attributes	Applicable major release
Name: IK8652617 (7761) Type: environmentalAlarm Package: Img.IK8652617 Raised on class: Img.Flute	Severity: major Specific problem: Battery Charging Degradation Implicitly cleared: true Default probable cause: lowBatteryThreshold	Release: • LR14.3.MG • LR15.1.MG
Description: Significant battery degradation has occurred with battery indicated by cpqSiSysBatteryIndex. The battery can no longer be fully recharged.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiSysBatteryChargingDegraded		
Remedial action: If using multiple batteries, run the Power Conservation Utility to identify the battery location. Contact your System Administrator or Authorized Reseller to order a replacement battery.		

Table 27-2323 IK8652618

Alarm	Attributes	Applicable major release
Name: IK8652618 (7762) Type: environmentalAlarm Package: Img.IK8652618 Raised on class: Img.Flute	Severity: warning Specific problem: Battery Calibration Error Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: Calibration is needed with battery indicated by cpqSiSysBatteryIndex. The battery can not correctly indicate capacity.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiSysBatteryCalibrationError		
Remedial action: Run the Power Conservation Utility. Contact your System Administrator or Authorized Reseller to order a replacement battery.		

Table 27-2324 IK8652619

Alarm	Attributes	Applicable major release
Name: IK8652619 (7763) Type: processingErrorAlarm Package: Img.IK8652619 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: Server Reset Detected Implicitly cleared: false Default probable cause: softwareError	Release: • LR14.3.MG
Description: Server Reset Detected. The Remote Insight/ Integrated Lights-Out firmware has detected a server reset.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerReset		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2325 IK8652620

Alarm	Attributes	Applicable major release
Name: IK8652620 (7764) Type: equipmentAlarm Package: Img.IK8652620 Raised on class: Img.Flute	Severity: major Specific problem: Server Power Outage Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Server Power Outage. The Remote Insight/ Integrated Lights-Out firmware has detected server power failure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSm2ServerPowerOutage		
Remedial action: Check the server's power source.		

Table 27-2326 IK8652621

Alarm	Attributes	Applicable major release
Name: IK8652621 (7765) Type: securityServiceOrMechanismViolation Package: Img.IK8652621 Raised on class: Img.LMGMngElement	Severity: warning Specific problem: Out Unauthorized Login Attempts Implicitly cleared: false Default probable cause: unauthorizedAccessAttempt	Release: • LR14.3.MG

Table 27-2326 IK8652621 (continued)

Alarm	Attributes	Applicable major release
Description: Remote Insight/ Integrated Lights-Out Unauthorized Login Attempts. The Remote Insight/ Integrated Lights-Out firmware has detected unauthorized login attempts.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2UnauthorizedLoginAttempts		
Remedial action: Check the iLO log for more information on the login failure.		

Table 27-2327 IK8652622

Alarm	Attributes	Applicable major release
Name: IK8652622 (7766) Type: environmentalAlarm Package: lmg.IK8652622 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Remote Insight Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Remote Insight Battery Failed. The Remote Insight battery has failed and needs to be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2BatteryFailed		
Remedial action: replace the failing Remote Insight battery.		

Table 27-2328 IK8652628

Alarm	Attributes	Applicable major release
Name: IK8652628 (7767) Type: equipmentAlarm Package: lmg.IK8652628 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Remote Insight external power cable disconnected Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: External Power Cable Disconnected. The Remote Insight external power cable has been disconnected.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ExternalPowerCableDisconnected		
Remedial action: check External Power Cable		

Table 27-2329 IK8652630

Alarm	Attributes	Applicable major release
Name: IK8652630 (7768) Type: processingErrorAlarm Package: lmg.IK8652630 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Security override engaged Implicitly cleared: false Default probable cause: softwareError	Release: • LR14.3.MG
Description: Security Override Engaged. The Remote Insight/ Integrated Lights-Out firmware has detected the security override jumper has been toggled to the engaged position.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2SecurityOverrideEngaged		

Table 27-2329 IK8652630 (continued)

Alarm	Attributes	Applicable major release
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2330 IK8652631

Alarm	Attributes	Applicable major release
Name: IK8652631 (7769) Type: processingErrorAlarm Package: lmg.IK8652631 Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Security override disengaged Implicitly cleared: false Default probable cause: softwareError	Release: • LR14.3.MG
Description: Security Override Disengaged. The Remote Insight/ Integrated Lights-Out firmware has detected the security override jumper has been toggled to the disengaged position.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2SecurityOverrideDisengaged		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2331 IK8652632

Alarm	Attributes	Applicable major release
Name: IK8652632 (7770) Type: processingErrorAlarm Package: lmg.IK8652632 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Server Fatal Error Detected Implicitly cleared: false Default probable cause: softwareError	Release: • LR14.3.MG
Description: Server Fatal Error Detected. The Remote Insight/ Integrated Lights-Out firmware has detected a server fatal error.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerFatalError		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2332 IK8652633

Alarm	Attributes	Applicable major release
Name: IK8652633 (7771) Type: communicationsAlarm Package: lmg.IK8652633 Raised on class: lmg.Flute	Severity: major Specific problem: The iLO NIC Link is Down Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The iLO NIC Link is Down. The Remote Insight/ Integrated Lights-Out firmware has detected the loss of network link.\nAlarm is cleared by the system.\nReason: cpqSm2NicLinkDown		
Remedial action: Check the network connections for the iLO.		

Table 27-2333 IK8652636

Alarm	Attributes	Applicable major release
Name: IK8652636 (9346) Type: equipmentAlarm Package: Img.IK8652636 Raised on class: Img.Flute	Severity: major Specific problem: Server powered off Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG • LR16.1.MG
Description: The server has been powered off. This will be sent once the server has been powered off, either by OS, or the power button.\nAlarm is cleared by the system.\nReason: cpqSm2ServerPowerOff		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2334 IK8652647

Alarm	Attributes	Applicable major release
Name: IK8652647 (7772) Type: qualityOfServiceAlarm Package: Img.IK8652647 Raised on class: Img.Flute	Severity: minor Specific problem: PC Card Thermal Degraded Status Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm is sent when the PC Card Slot Thermal Sensor threshold has been exceeded for safe operations thereby causing degraded operations. This alarm will be sent when cpqSePCCardStatus transitions from Normal (1) to Thermal Degraded (2). The manufacturer and product information strings as well as the slot number for the degraded PC Card is provided as parameters for this trap.\nAlarm is cleared by the system.\nReason: cpqSePCCardThermalDegraded		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2335 IK8652648

Alarm	Attributes	Applicable major release
Name: IK8652648 (7773) Type: qualityOfServiceAlarm Package: Img.IK8652648 Raised on class: Img.Flute	Severity: major Specific problem: PC Card Thermal Failure Status Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm is sent when the PC Card Slot Thermal Sensor threshold has been exceeded for degraded operations thereby causing failed operations. This alarm will be sent when cpqSePCCardStatus transitions from Thermal Degraded (2) to Thermal Failure (3). The manufacturer and product information strings as well as the slot number for the failed PC Card is provided as parameters for this trap.\nAlarm is cleared by the system.\nReason: cpqSePCCardThermalFailure		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2336 IK8652657

Alarm	Attributes	Applicable major release
Name: IK8652657 (7774) Type: environmentalAlarm Package: lmg.IK8652657 Raised on class: lmg.Flute	Severity: major Specific problem: Storage System Temperature Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.\nAlarm is cleared by the system.\nReason: cpqSsTempFailed		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2337 IK8652658

Alarm	Attributes	Applicable major release
Name: IK8652658 (7775) Type: environmentalAlarm Package: lmg.IK8652658 Raised on class: lmg.Flute	Severity: minor Specific problem: Storage System Temp Degraded Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Storage System temperature degraded. The agent has detected a temperature status that has been set to degraded. The storage system's temperature is outside of the normal operating range.\nAlarm is cleared by the system.\nReason: cpqSsTempDegraded		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2338 IK8652661

Alarm	Attributes	Applicable major release
Name: IK8652661 (7776) Type: equipmentAlarm Package: lmg.IK8652661 Raised on class: lmg.Flute	Severity: minor Specific problem: Storage System side panel is removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Storage System side panel is removed. The side panel status has been set to removed. The storage system's side panel is not in a properly installed state. This situation may result in improper cooling of the drives in the storage system due to air flow changes caused by the missing side panel.\nAlarm is cleared by the system.\nReason: cpqSsSidePanelRemoved		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2339 IK8652662

Alarm	Attributes	Applicable major release
Name: IK8652662 (7777) Type: equipmentAlarm Package: Img.IK8652662 Raised on class: Img.LMGMngElement	Severity: minor Specific problem: Power Supply Degraded Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: A storage system power supply status has been set to degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSsPwrSupplyDegraded		
Remedial action: check the storage system power supply		

Table 27-2340 IK8652664

Alarm	Attributes	Applicable major release
Name: IK8652664 (7778) Type: environmentalAlarm Package: Img.IK8652664 Raised on class: Img.Flute	Severity: warning Specific problem: Storage System Temperature Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSs3TempFailed		
Remedial action: Shutdown the storage system as soon as possible. Insure that the storage system environment is being cooled properly and that no components are overheated.		

Table 27-2341 IK8652665

Alarm	Attributes	Applicable major release
Name: IK8652665 (7779) Type: environmentalAlarm Package: Img.IK8652665 Raised on class: Img.Flute	Severity: warning Specific problem: Storage System Temp Degraded Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: Storage System temperature degraded. The agent has detected a temperature status that has been set to degraded. The storage system's temperature is outside of the normal operating range.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSs3TempDegraded		
Remedial action: Shutdown the storage system as soon as possible. Insure that the storage system environment is being cooled properly and that no components are overheated.		

Table 27-2342 IK8652668

Alarm	Attributes	Applicable major release
Name: IK8652668 (7780) Type: equipmentAlarm Package: Img.IK8652668 Raised on class: Img.Flute	Severity: warning Specific problem: Storage System side panel is removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Storage System side panel is removed. The side panel status has been set to removed. The storage system's side panel is not in a properly installed state. This situation may result in improper cooling of the drives in the storage system due to air flow changes caused by the missing side panel.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSs3SidePanelRemoved		
Remedial action: Replace the storage system side panel.		

Table 27-2343 IK8652669

Alarm	Attributes	Applicable major release
Name: IK8652669 (7781) Type: equipmentAlarm Package: Img.IK8652669 Raised on class: Img.LMGMngElement	Severity: minor Specific problem: Power Supply Degraded Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: A storage system power supply status has been set to degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSs3PwrSupplyDegraded		
Remedial action: check the storage system power supply		

Table 27-2344 IK8652670

Alarm	Attributes	Applicable major release
Name: IK8652670 (7782) Type: equipmentAlarm Package: Img.IK8652670 Raised on class: Img.Flute	Severity: warning Specific problem: Power Supply Degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A storage system power supply status has been set to degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSs4PwrSupplyDegraded		
Remedial action: Take action to restore power or replace any failed storage system power supply.		

Table 27-2345 IK8652695

Alarm	Attributes	Applicable major release
Name: IK8652695 (7783) Type: equipmentAlarm Package: Img.IK8652695 Raised on class: Img.Flute	Severity: minor Specific problem: Rising Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Rising Threshold passed. An alarm entry has crossed its rising threshold. The instances of those objects contained within the variable list are those of the alarm entry which generated this trap.\nAlarm is cleared by the system.\nReason: cpqMeRisingAlarm		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2346 IK8652697

Alarm	Attributes	Applicable major release
Name: IK8652697 (7784) Type: equipmentAlarm Package: Img.IK8652697 Raised on class: Img.Flute	Severity: warning Specific problem: Rising Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Rising Threshold passed. An alarm entry has crossed its rising threshold. The instances of those objects contained within the variable list are those of the alarm entry which generated this trap.\nAlarm is cleared by the system.\nReason: cpqMe2RisingAlarm		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2347 IK8652699

Alarm	Attributes	Applicable major release
Name: IK8652699 (7785) Type: equipmentAlarm Package: Img.IK8652699 Raised on class: Img.LMGMngElement	Severity: indeterminate Specific problem: Rising Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: Rising Threshold passed. An alarm entry has crossed its rising threshold. The instances of those objects contained within the variable list are those of the alarm entry which generated this trap.\nAlarm is cleared by the system.\nReason: cpqMeRisingAlarm-Extended		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2348 IK8652700

Alarm	Attributes	Applicable major release
Name: IK8652700 (7786) Type: equipmentAlarm Package: Img.IK8652700 Raised on class: Img.LMGMngElement	Severity: indeterminate Specific problem: Falling Threshold Passed Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: Falling Threshold passed. An alarm entry has crossed its falling threshold. The instances of those objects contained within the variable list are those of the alarm entry which generated this trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqMeFallingAlarmExtended		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2349 IK8652701

Alarm	Attributes	Applicable major release
Name: IK8652701 (7787) Type: equipmentAlarm Package: Img.IK8652701 Raised on class: Img.LMGMngElement	Severity: indeterminate Specific problem: Critical Rising Threshold Passed Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: Critical Rising Threshold passed. An alarm entry has crossed its Critical rising threshold. The instances of those objects contained within the variable list are those of the alarm entry which generated this trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqMeCriticalRisingAlarmExtended		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2350 IK8652702

Alarm	Attributes	Applicable major release
Name: IK8652702 (7788) Type: equipmentAlarm Package: Img.IK8652702 Raised on class: Img.LMGMngElement	Severity: indeterminate Specific problem: Critical Falling Threshold Passed Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: Critical Falling Threshold passed. An alarm entry has crossed its Critical falling threshold. The instances of those objects contained within the variable list are those of the alarm entry which generated this trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqMeCriticalFallingAlarmExtended		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2351 IK8652748

Alarm	Attributes	Applicable major release
Name: IK8652748 (7789) Type: equipmentAlarm Package: lmg.IK8652748 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: fluteModuleAlarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Alarm notification\nAlarm is cleared by the system.\nReason: fluteModuleAlarm		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2352 IK8654762

Alarm	Attributes	Applicable major release
Name: IK8654762 (7790) Type: communicationsAlarm Package: lmg.IK8654762 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: linkDown Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: A linkDown alarm signifies that the SNMP entity, acting in an agent role, has detected that the ifOperStatus object for one of its communication links is about to enter the down state from some other state (but not from the notPresent state). This other state is indicated by the included value of ifOperStatus.\nAlarm is cleared by the system.\nReason: linkDown		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2353 IK8657456

Alarm	Attributes	Applicable major release
Name: IK8657456 (9347) Type: environmentalAlarm Package: lmg.IK8657456 Raised on class: lmg.Flute	Severity: warning Specific problem: Temperature-alarm Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR15.1.MG • LR16.1.MG
Description: The temperature at rack sensor 1 is outside the specified threshold.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmTemp1		
Remedial action: Check the air handling system for the rack and refer to Trap Details for more information.		

Table 27-2354 IK8657457

Alarm	Attributes	Applicable major release
Name: IK8657457 (9348) Type: environmentalAlarm Package: lmg.IK8657457 Raised on class: lmg.Flute	Severity: warning Specific problem: Temperature-alarm Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR15.1.MG • LR16.1.MG
Description: The temperature at rack sensor 2 is outside the specified threshold.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmTemp2		
Remedial action: Check the air handling system for the rack and refer to Trap Details for more information.		

Table 27-2355 IK8657458

Alarm	Attributes	Applicable major release
Name: IK8657458 (9349) Type: environmentalAlarm Package: lmg.IK8657458 Raised on class: lmg.Flute	Severity: warning Specific problem: Fan-alarm Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR15.1.MG • LR16.1.MG
Description: The status of Fan 1 has changed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmFan1		
Remedial action: Refer to Trap Details for more information.		

Table 27-2356 IK8657459

Alarm	Attributes	Applicable major release
Name: IK8657459 (9350) Type: environmentalAlarm Package: lmg.IK8657459 Raised on class: lmg.Flute	Severity: warning Specific problem: Fan-alarm Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR15.1.MG • LR16.1.MG
Description: The status of Fan 2 has changed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmFan2		
Remedial action: Refer to Trap Details for more information.		

Table 27-2357 IK8657460

Alarm	Attributes	Applicable major release
Name: IK8657460 (9351) Type: equipmentAlarm Package: lmg.IK8657460 Raised on class: lmg.Flute	Severity: warning Specific problem: Voltage-alarm Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG • LR16.1.MG

Table 27-2357 IK8657460 (continued)

Alarm	Attributes	Applicable major release
Description: The AC voltage of the rack is outside the specified threshold.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmVoltage		
Remedial action: Check the incoming power source and ensure all cables are inserted correctly.		

Table 27-2358 IK8657461

Alarm	Attributes	Applicable major release
Name: IK8657461 (9352) Type: environmentalAlarm Package: Img.IK8657461 Raised on class: Img.Flute	Severity: warning Specific problem: Humidity-alarm Implicitly cleared: true Default probable cause: humidityUnacceptable	Release: • LR15.1.MG • LR16.1.MG
Description: The humidity of the rack is outside the specified threshold.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmHumidity		
Remedial action: Check the air handling system for the rack and refer to Trap Details for more information.		

Table 27-2359 IK8657462

Alarm	Attributes	Applicable major release
Name: IK8657462 (9353) Type: environmentalAlarm Package: Img.IK8657462 Raised on class: Img.Flute	Severity: warning Specific problem: Door/sidepanel-alarm Implicitly cleared: true Default probable cause: intrusionDetection	Release: • LR15.1.MG • LR16.1.MG
Description: The door or sidepanel of the rack has been opened (access point #1).\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmInput1		
Remedial action: Check for unauthorized intrusion and refer to Trap Details for more information.		

Table 27-2360 IK8657463

Alarm	Attributes	Applicable major release
Name: IK8657463 (9354) Type: environmentalAlarm Package: Img.IK8657463 Raised on class: Img.Flute	Severity: warning Specific problem: Door/sidepanel-alarm Implicitly cleared: true Default probable cause: intrusionDetection	Release: • LR15.1.MG • LR16.1.MG
Description: The door or sidepanel of the rack has been opened (access point #2).\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmInput2		
Remedial action: Check for unauthorized intrusion and refer to Trap Details for more information.		

Table 27-2361 IK8657464

Alarm	Attributes	Applicable major release
Name: IK8657464 (9355) Type: environmentalAlarm Package: Img.IK8657464 Raised on class: Img.Flute	Severity: warning Specific problem: Door/sidepanel-alarm Implicitly cleared: true Default probable cause: intrusionDetection	Release: • LR15.1.MG • LR16.1.MG
Description: The door or sidepanel of the rack has been opened (access point #3).\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmInput3		
Remedial action: Check for unauthorized intrusion and refer to Trap Details for more information.		

Table 27-2362 IK8657465

Alarm	Attributes	Applicable major release
Name: IK8657465 (9356) Type: environmentalAlarm Package: Img.IK8657465 Raised on class: Img.Flute	Severity: warning Specific problem: Door/sidepanel-alarm Implicitly cleared: true Default probable cause: intrusionDetection	Release: • LR15.1.MG • LR16.1.MG
Description: The door or sidepanel of the rack has been opened (access point #4).\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmInput4		
Remedial action: Check for unauthorized intrusion and refer to Trap Details for more information.		

Table 27-2363 IK8657466

Alarm	Attributes	Applicable major release
Name: IK8657466 (9357) Type: processingErrorAlarm Package: Img.IK8657466 Raised on class: Img.Flute	Severity: warning Specific problem: Door-locking-alarm Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR15.1.MG • LR16.1.MG
Description: Rack door lock #1 alarm.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmLock1		
Remedial action: Ensure the door is completely closed and check for unauthorized intrusion and refer to Trap Details for more information.		

Table 27-2364 IK8657467

Alarm	Attributes	Applicable major release
Name: IK8657467 (9358) Type: processingErrorAlarm Package: Img.IK8657467 Raised on class: Img.Flute	Severity: warning Specific problem: Door-locking-alarm Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR15.1.MG • LR16.1.MG
Description: Rack door lock #2 alarm.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmLock2		
Remedial action: Ensure the door is completely closed and check for unauthorized intrusion and refer to Trap Details for more information.		

Table 27-2365 IK8657468

Alarm	Attributes	Applicable major release
Name: IK8657468 (9359) Type: environmentalAlarm Package: Img.IK8657468 Raised on class: Img.Flute	Severity: warning Specific problem: Smoke-alarm Implicitly cleared: true Default probable cause: smoke	Release: • LR15.1.MG • LR16.1.MG
Description: The rack smoke detector has detected smoke.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmSmoke		
Remedial action: Investigate rack for an over temperature condition and refer to Trap Details for more information.		

Table 27-2366 IK8657469

Alarm	Attributes	Applicable major release
Name: IK8657469 (9360) Type: environmentalAlarm Package: Img.IK8657469 Raised on class: Img.Flute	Severity: warning Specific problem: Shock-alarm Implicitly cleared: true Default probable cause: excessiveVibration	Release: • LR15.1.MG • LR16.1.MG
Description: The rack shock detector has detected a vibration to the rack.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmShock		
Remedial action: Investigate rack.		

Table 27-2367 IK8657474

Alarm	Attributes	Applicable major release
Name: IK8657474 (9361) Type: processingErrorAlarm Package: Img.IK8657474 Raised on class: Img.Flute	Severity: warning Specific problem: Door-locking-alarm of device Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR15.1.MG • LR16.1.MG
Description: The rack door locking device #1 has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmLock1Dev		
Remedial action: Check the device lock cable or failed battery and refer to Trap Details for more information.		

Table 27-2368 IK8657475

Alarm	Attributes	Applicable major release
Name: IK8657475 (9362) Type: processingErrorAlarm Package: Img.IK8657475 Raised on class: Img.Flute	Severity: warning Specific problem: Door-locking-alarm of device Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR15.1.MG • LR16.1.MG
Description: The rack door locking device #2 has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmLock2Dev		
Remedial action: Check the device lock cable or failed battery and refer to Trap Details for more information.		

Table 27-2369 IK8657477

Alarm	Attributes	Applicable major release
Name: IK8657477 (9363) Type: processingErrorAlarm Package: Img.IK8657477 Raised on class: Img.Flute	Severity: warning Specific problem: Corrected - uncorrectable Memory Errors - Replace Memory Module Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR15.1.MG • LR16.1.MG
Description: Corrected - uncorrected Memory Errors Detected The errors have been corrected, but the memory module should be replaced. Value 0 for CPU means memory is not Processor based\nAlarm is cleared by the system when the device is restarted.\ nReason: cpqHe5CorrMemReplaceMemModule		
Remedial action: Replace the failing memory module.		

Table 27-2370 IK8657478

Alarm	Attributes	Applicable major release
Name: IK8657478 (9364) Type: communicationsAlarm Package: lmg.IK8657478 Raised on class: lmg.Flute	Severity: warning Specific problem: NIC Virus-like Activity Detected Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG • LR16.1.MG
Description: This alarm will be sent when the Virus Throttle Filter Driver detects virus like activity.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqNicVirusLikeActivityDetected		
Remedial action: The system reporting this trap requires immediate attention.		

Table 27-2371 IK8657479

Alarm	Attributes	Applicable major release
Name: IK8657479 (9365) Type: communicationsAlarm Package: lmg.IK8657479 Raised on class: lmg.Flute	Severity: minor Specific problem: Server Blade e-keying failed Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG • LR16.1.MG
Description: The server blade e-keying has failed. This alarm signifies that a server blade e-keying has failed and there is a port mapping problem between a server mezz card and the interconnect.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerBladeEKeyingFailed		
Remedial action: Reconfigure server blade mezz cards.		

Table 27-2372 IK8657481

Alarm	Attributes	Applicable major release
Name: IK8657481 (10770) Type: equipmentAlarm Package: lmg.IK8657481 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: The primary controller in the subsytem has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: The primary controller in the subsystem has failed. Details: The primary Controller has failed.		
Remedial action: No action is required.		

Table 27-2373 IK8657482

Alarm	Attributes	Applicable major release
Name: IK8657482 (10771) Type: equipmentAlarm Package: Img.IK8657482 Raised on class: Img.Flute	Severity: indeterminate Specific problem: The secondary controller in the subsytem has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: The secondary controller in the subsystem has failed. Details: The secondary controller has failed.		
Remedial action: No action is required.		

Table 27-2374 IK8657483

Alarm	Attributes	Applicable major release
Name: IK8657483 (10772) Type: equipmentAlarm Package: Img.IK8657483 Raised on class: Img.Flute	Severity: indeterminate Specific problem: A RAIDset has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A RAIDset has failed. Details: The RAIDset has failed and is off-line.		
Remedial action: No action is required.		

Table 27-2375 IK8657484

Alarm	Attributes	Applicable major release
Name: IK8657484 (10773) Type: equipmentAlarm Package: Img.IK8657484 Raised on class: Img.Flute	Severity: indeterminate Specific problem: A RAIDset has become degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A RAIDset has become degraded. Details: A RAIDset has become degraded due to a member disk device failure.		
Remedial action: No action is required.		

Table 27-2376 IK8657485

Alarm	Attributes	Applicable major release
Name: IK8657485 (10774) Type: equipmentAlarm Package: Img.IK8657485 Raised on class: Img.Flute	Severity: indeterminate Specific problem: A disk drive has failed Implicitly cleared: true Default probable cause: storageCapacityProblem	Release: • LR16.1.MG
Description: A disk drive has failed. Details: A disk device has failed.		
Remedial action: No action is required.		

Table 27-2377 IK8657486

Alarm	Attributes	Applicable major release
Name: IK8657486 (10775) Type: equipmentAlarm Package: Img.IK8657486 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Fan has failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: Fan has failed. Details: One of the cooling fans in the primary enclosure has failed.		
Remedial action: No action is required.		

Table 27-2378 IK8657487

Alarm	Attributes	Applicable major release
Name: IK8657487 (10776) Type: equipmentAlarm Package: Img.IK8657487 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Power supply has failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power supply has failed. Details: One of the power supplies in the primary enclosure has failed.		
Remedial action: No action is required.		

Table 27-2379 IK8657488

Alarm	Attributes	Applicable major release
Name: IK8657488 (10777) Type: equipmentAlarm Package: Img.IK8657488 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Primary enclosure temperature warning Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Primary enclosure temperature warning. Details: The temperature in the primary enclosure has triggered a warning condition detected by the controller.		
Remedial action: No action is required.		

Table 27-2380 IK8657489

Alarm	Attributes	Applicable major release
Name: IK8657489 (10778) Type: equipmentAlarm Package: Img.IK8657489 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Fan has failed in expansion cabinet Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: Fan has failed in expansion cabinet. Details: One of the cooling fans in the expansion cabinet has failed.		

Table 27-2380 IK8657489 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-2381 IK8657490

Alarm	Attributes	Applicable major release
Name: IK8657490 (10779) Type: equipmentAlarm Package: lmg.IK8657490 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Power supply has failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power supply has failed. Details: One of the power supplies in the expansion cabinet has failed.		
Remedial action: No action is required.		

Table 27-2382 IK8657491

Alarm	Attributes	Applicable major release
Name: IK8657491 (10780) Type: equipmentAlarm Package: lmg.IK8657491 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Expansion cabinet temperature warning Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR16.1.MG
Description: Expansion cabinet temperature warning. Details: The temperature in the expansion cabinet has triggered a warning condition detected by the controller.		
Remedial action: No action is required.		

Table 27-2383 IK8657500

Alarm	Attributes	Applicable major release
Name: IK8657500 (10781) Type: equipmentAlarm Package: lmg.IK8657500 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Cluster Node Degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: This event will be sent any time the condition of a node in the cluster becomes degraded.		
Remedial action: No action is required.		

Table 27-2384 IK8657501

Alarm	Attributes	Applicable major release
Name: IK8657501 (10782) Type: equipmentAlarm Package: Img.IK8657501 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Cluster Node Failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: This event will be sent any time the condition of a node in the cluster becomes failed.		
Remedial action: No action is required.		

Table 27-2385 IK8657502

Alarm	Attributes	Applicable major release
Name: IK8657502 (10783) Type: equipmentAlarm Package: Img.IK8657502 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Cluster Resource Degraded Implicitly cleared: true Default probable cause: underlyingResourceUnavail-able	Release: • LR16.1.MG
Description: This event will be sent any time the condition of a cluster resource becomes degraded.		
Remedial action: No action is required.		

Table 27-2386 IK8657503

Alarm	Attributes	Applicable major release
Name: IK8657503 (10784) Type: equipmentAlarm Package: Img.IK8657503 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Cluster Resource Failed Implicitly cleared: true Default probable cause: underlyingResourceUnavail-able	Release: • LR16.1.MG
Description: This event will be sent any time the condition of a cluster resource becomes failed.		
Remedial action: No action is required.		

Table 27-2387 IK8657504

Alarm	Attributes	Applicable major release
Name: IK8657504 (10785) Type: equipmentAlarm Package: Img.IK8657504 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Cluster Network Degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: This event will be sent any time the condition of a cluster network becomes degraded.		

Table 27-2387 IK8657504 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-2388 IK8657505

Alarm	Attributes	Applicable major release
Name: IK8657505 (10786) Type: equipmentAlarm Package: lmg.IK8657505 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Cluster Network Failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: This event will be sent any time the condition of a cluster network becomes failed.		
Remedial action: No action is required.		

Table 27-2389 IK8657508

Alarm	Attributes	Applicable major release
Name: IK8657508 (10787) Type: equipmentAlarm Package: lmg.IK8657508 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: External Array Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: External Array Accelerator Board Bad Data. This event signifies that the agent has detected a Array Accelerator Cache Board that has lost battery power. If data was being stored in the accelerator memory when the system lost power, that data has been lost.		
Remedial action: No action is required.		

Table 27-2390 IK8657509

Alarm	Attributes	Applicable major release
Name: IK8657509 (10788) Type: equipmentAlarm Package: lmg.IK8657509 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: External Array Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG
Description: External Array Accelerator Board Battery Failed. This event signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.		
Remedial action: No action is required.		

Table 27-2391 IK8657510

Alarm	Attributes	Applicable major release
Name: IK8657510 (10789) Type: equipmentAlarm Package: Img.IK8657510 Raised on class: Img.Flute	Severity: indeterminate Specific problem: External Array Redundant Controller Active Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: External Array Redundant Controller Active. This event signifies that the Storage Agent has detected that a backup array controller in a duplexed pair has switched over to the active role. The variable cpqFcaCntlrBoxIoSlot indicates the new active controller index.		
Remedial action: No action is required.		

Table 27-2392 IK8657511

Alarm	Attributes	Applicable major release
Name: IK8657511 (10790) Type: equipmentAlarm Package: Img.IK8657511 Raised on class: Img.Flute	Severity: indeterminate Specific problem: External Array Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: External Array Accelerator Board Bad Data. This event signifies that the agent has detected a Array Accelerator Cache Board that has lost battery power. If data was being stored in the accelerator memory when the system lost power, that data has been lost.		
Remedial action: No action is required.		

Table 27-2393 IK8657512

Alarm	Attributes	Applicable major release
Name: IK8657512 (10791) Type: equipmentAlarm Package: Img.IK8657512 Raised on class: Img.Flute	Severity: indeterminate Specific problem: External Array Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG
Description: External Array Accelerator Board Battery Failed. This event signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.		
Remedial action: No action is required.		

Table 27-2394 IK8657513

Alarm	Attributes	Applicable major release
Name: IK8657513 (10792) Type: equipmentAlarm Package: lmg.IK8657513 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: POST Errors Occurred Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process. Details of the POST error messages can be found in Integrated Management Log		
Remedial action: No action is required.		

Table 27-2395 IK8657514

Alarm	Attributes	Applicable major release
Name: IK8657514 (10793) Type: equipmentAlarm Package: lmg.IK8657514 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Server Power Supply Degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The fault tolerant power supply sub-system condition has been set to degraded.		
Remedial action: No action is required.		

Table 27-2396 IK8657515

Alarm	Attributes	Applicable major release
Name: IK8657515 (10794) Type: equipmentAlarm Package: lmg.IK8657515 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Fan Degraded Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: The Fault Tolerant Fan condition has been set to degraded for the specified chassis and fan.		
Remedial action: No action is required.		

Table 27-2397 IK8657516

Alarm	Attributes	Applicable major release
Name: IK8657516 (10795) Type: equipmentAlarm Package: lmg.IK8657516 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Fan Failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: The Fault Tolerant Fan condition has been set to failed for the specified chassis and fan.		
Remedial action: No action is required.		

Table 27-2398 IK8657517

Alarm	Attributes	Applicable major release
Name: IK8657517 (10796) Type: equipmentAlarm Package: Img.IK8657517 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Power Converter Degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The DC-DC Power Converter condition has been set to degraded for the specified chassis, slot and socket.		
Remedial action: No action is required.		

Table 27-2399 IK8657518

Alarm	Attributes	Applicable major release
Name: IK8657518 (10797) Type: equipmentAlarm Package: Img.IK8657518 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Power Converter Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The DC-DC Power Converter condition has been set to failed for the specified chassis, slot and socket.		
Remedial action: No action is required.		

Table 27-2400 IK8657519

Alarm	Attributes	Applicable major release
Name: IK8657519 (10798) Type: equipmentAlarm Package: Img.IK8657519 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Power Converter Redundancy Lost Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The DC-DC Power Converters have lost redundancy for the specified chassis.		
Remedial action: No action is required.		

Table 27-2401 IK8657520

Alarm	Attributes	Applicable major release
Name: IK8657520 (10799) Type: equipmentAlarm Package: Img.IK8657520 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Cache Accel Parity Errors may require a module Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • LR16.1.MG
Description: A cache accelerator parity error indicates a cache module needs to be replaced. The error information is reported in the variable cpqHeEventLogErrorDesc.		

Table 27-2401 IK8657520 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-2402 IK8657521

Alarm	Attributes	Applicable major release
Name: IK8657521 (10800) Type: equipmentAlarm Package: lmg.IK8657521 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Online Spare Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Advanced Memory Protection Online Spare Engaged. The Advanced Memory Protection subsystem has detected a memory fault. The Online Spare Memory has been activated.		
Remedial action: No action is required.		

Table 27-2403 IK8657522

Alarm	Attributes	Applicable major release
Name: IK8657522 (10801) Type: equipmentAlarm Package: lmg.IK8657522 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Mirrored Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Advanced Memory Protection Mirrored Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. Mirrored Memory has been activated.		
Remedial action: No action is required.		

Table 27-2404 IK8657523

Alarm	Attributes	Applicable major release
Name: IK8657523 (10802) Type: equipmentAlarm Package: lmg.IK8657523 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Advanced ECC Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Advanced Memory Protection Advanced ECC Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. Advanced ECC has been activated.		
Remedial action: No action is required.		

Table 27-2405 IK8657524

Alarm	Attributes	Applicable major release
Name: IK8657524 (10803) Type: equipmentAlarm Package: Img.IK8657524 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Advanced XOR Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Advanced Memory Protection XOR Engine Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. The XOR engine has been activated.		
Remedial action: No action is required.		

Table 27-2406 IK8657525

Alarm	Attributes	Applicable major release
Name: IK8657525 (10804) Type: equipmentAlarm Package: Img.IK8657525 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Memory Board or Cartridge Removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Memory board or cartridge removed. An Advanced Memory Protection sub-system board or cartridge has been removed from the system.		
Remedial action: No action is required.		

Table 27-2407 IK8657526

Alarm	Attributes	Applicable major release
Name: IK8657526 (10805) Type: equipmentAlarm Package: Img.IK8657526 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Memory Board or Cartridge Bus Error Detected Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Memory board or cartridge bus error detected. An Advanced Memory Protection sub-system board or cartridge bus error has been detected.		
Remedial action: No action is required.		

Table 27-2408 IK8657527

Alarm	Attributes	Applicable major release
Name: IK8657527 (10806) Type: equipmentAlarm Package: lmg.IK8657527 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Management processor failed reset Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: The Management processor failed reset The management processor was not successfully reset and is not operational.		
Remedial action: No action is required.		

Table 27-2409 IK8657528

Alarm	Attributes	Applicable major release
Name: IK8657528 (10807) Type: equipmentAlarm Package: lmg.IK8657528 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Memory Board or Cartridge or Riser Removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Memory board or cartridge or riser removed. An Advanced Memory Protection sub-system board or cartridge or riser has been removed from the system. Value 0 for CPU means memory is not processor based.		
Remedial action: No action is required.		

Table 27-2410 IK8657529

Alarm	Attributes	Applicable major release
Name: IK8657529 (10808) Type: equipmentAlarm Package: lmg.IK8657529 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Memory Board or Cartridge or Riser Bus Error Detected Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Memory board or cartridge or Riser bus error detected. An Advanced Memory Protection sub-system board or cartridge or Riser bus error has been detected. Value 0 for CPU means memory is not processor based.		
Remedial action: No action is required.		

Table 27-2411 IK8657530

Alarm	Attributes	Applicable major release
Name: IK8657530 (10809) Type: equipmentAlarm Package: Img.IK8657530 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Advanced LockStep Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Advanced Memory Protection LockStep Engine Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. The LockStep engine has been activated.		
Remedial action: No action is required.		

Table 27-2412 IK8657531

Alarm	Attributes	Applicable major release
Name: IK8657531 (10810) Type: equipmentAlarm Package: Img.IK8657531 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG
Description: This event will be sent any time the configured redundant NIC becomes the active NIC.		
Remedial action: No action is required.		

Table 27-2413 IK8657532

Alarm	Attributes	Applicable major release
Name: IK8657532 (10811) Type: equipmentAlarm Package: Img.IK8657532 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Critical Software update Notification Trap Implicitly cleared: true Default probable cause: softwareProgramError	Release: • LR16.1.MG
Description: This event is a send to the user to notify him of a Critical Software Update.		
Remedial action: No action is required.		

Table 27-2414 IK8657533

Alarm	Attributes	Applicable major release
Name: IK8657533 (10812) Type: equipmentAlarm Package: Img.IK8657533 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Duplex Controller Active Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG

Table 27-2414 IK8657533 (continued)

Alarm	Attributes	Applicable major release
Description: Controller Active. This event signifies that the agent has detected that a backup array controller in a duplexed pair has switched over to the active role. The variable cpqDaCntlrSlot indicates the active controller slot and cpqDaCntlrPartnerSlot indicates the backup.		
Remedial action: No action is required.		

Table 27-2415 IK8657534

Alarm	Attributes	Applicable major release
Name: IK8657534 (10813) Type: equipmentAlarm Package: lmg.IK8657534 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Physical Drive Threshold Passed. This event signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.		
Remedial action: No action is required.		

Table 27-2416 IK8657535

Alarm	Attributes	Applicable major release
Name: IK8657535 (10814) Type: equipmentAlarm Package: lmg.IK8657535 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Accelerator Board Bad Data. This event signifies that the agent has detected an array accelerator cache board that has lost battery power. If data was being stored in the accelerator cache memory when the server lost power, that data has been lost.		
Remedial action: No action is required.		

Table 27-2417 IK8657536

Alarm	Attributes	Applicable major release
Name: IK8657536 (10815) Type: equipmentAlarm Package: lmg.IK8657536 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG
Description: Accelerator Board Battery Failed. This event signifies that the agent has detected a battery failure associated with the array accelerator cache board.		
Remedial action: No action is required.		

Table 27-2418 IK8657537

Alarm	Attributes	Applicable major release
Name: IK8657537 (10816) Type: equipmentAlarm Package: Img.IK8657537 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Physical Drive Threshold Passed. This event signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.		
Remedial action: No action is required.		

Table 27-2419 IK8657538

Alarm	Attributes	Applicable major release
Name: IK8657538 (10817) Type: equipmentAlarm Package: Img.IK8657538 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Physical Drive Threshold Passed. This event signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.		
Remedial action: No action is required.		

Table 27-2420 IK8657539

Alarm	Attributes	Applicable major release
Name: IK8657539 (10818) Type: equipmentAlarm Package: Img.IK8657539 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Cache Module Board Bad Data. This event signifies that the agent has detected a cache module board that has lost backup power. If data was being stored in the cache module memory when the server lost power, that data has been lost. The backup power source is indicated by cpqDaAccelBackupPowerSource.		
Remedial action: No action is required.		

Table 27-2421 IK8657540

Alarm	Attributes	Applicable major release
Name: IK8657540 (10819) Type: equipmentAlarm Package: Img.IK8657540 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG

Table 27-2421 IK8657540 (continued)

Alarm	Attributes	Applicable major release
Description: Cache Module Board Backup Power Source Failed. This event signifies that the agent has detected a backup power source failure associated with the cache module board. The backup power source is indicated by cpqDaAccelBackupPowerSource.		
Remedial action: No action is required.		

Table 27-2422 IK8657541

Alarm	Attributes	Applicable major release
Name: IK8657541 (10820) Type: equipmentAlarm Package: Img.IK8657541 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Tape Drive Cleaning Required Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG
Description: Tape Drive Cleaning Required trap. The agent has detected a tape drive that needs to have a cleaning tape inserted and run. This will cause the tape drive heads to be cleaned.		
Remedial action: No action is required.		

Table 27-2423 IK8657542

Alarm	Attributes	Applicable major release
Name: IK8657542 (10821) Type: equipmentAlarm Package: Img.IK8657542 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Tape Drive Cleaning Tape Needs Replacing Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape.		
Remedial action: No action is required.		

Table 27-2424 IK8657543

Alarm	Attributes	Applicable major release
Name: IK8657543 (10822) Type: equipmentAlarm Package: Img.IK8657543 Raised on class: Img.Flute	Severity: indeterminate Specific problem: IDE Drive Ultra ATA Degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: An IDE drive detects an excessive number of Ultra ATA data transmission errors between the hard drive and the processor.		
Remedial action: No action is required.		

Table 27-2425 IK8657545

Alarm	Attributes	Applicable major release
Name: IK8657545 (10823) Type: equipmentAlarm Package: lmg.IK8657545 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: NIC Connectivity Lost Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG
Description: This event will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.		
Remedial action: No action is required.		

Table 27-2426 IK8657546

Alarm	Attributes	Applicable major release
Name: IK8657546 (10824) Type: equipmentAlarm Package: lmg.IK8657546 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Enclosure fan failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: The enclosure fan status has been set to failed. This event signifies that an enclosure fan has failed and no other fans in the redundant fan group are operating. This may result in overheating of the enclosure.		
Remedial action: No action is required.		

Table 27-2427 IK8657547

Alarm	Attributes	Applicable major release
Name: IK8657547 (10825) Type: equipmentAlarm Package: lmg.IK8657547 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Enclosure fan degraded Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: The enclosure fan status has been set to degraded. This event signifies that an enclosure fan has failed but other fans in the redundant fan group are still operating. This may result in overheating of the enclosure.		
Remedial action: No action is required.		

Table 27-2428 IK8657548

Alarm	Attributes	Applicable major release
Name: IK8657548 (10826) Type: equipmentAlarm Package: Img.IK8657548 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Rack power supply failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The power supply status has been set to failed. This event signifies that a power supply has failed.		
Remedial action: No action is required.		

Table 27-2429 IK8657549

Alarm	Attributes	Applicable major release
Name: IK8657549 (10827) Type: equipmentAlarm Package: Img.IK8657549 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Rack power supply degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The power supply status has been set to degraded. This event signifies that a power supply has degraded.		
Remedial action: No action is required.		

Table 27-2430 IK8657550

Alarm	Attributes	Applicable major release
Name: IK8657550 (10828) Type: equipmentAlarm Package: Img.IK8657550 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Rack power subsystem not redundant Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The rack power subsystem is no longer in a redundant state.		
Remedial action: No action is required.		

Table 27-2431 IK8657551

Alarm	Attributes	Applicable major release
Name: IK8657551 (10829) Type: equipmentAlarm Package: Img.IK8657551 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Rack power supply input voltage problem Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The rack power supply detected an input line voltage problem.		

Table 27-2431 IK8657551 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-2432 IK8657552

Alarm	Attributes	Applicable major release
Name: IK8657552 (10830) Type: equipmentAlarm Package: Img.IK8657552 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Rack power subsystem overload condition Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The rack power subsystem overload condition.		
Remedial action: No action is required.		

Table 27-2433 IK8657553

Alarm	Attributes	Applicable major release
Name: IK8657553 (10831) Type: equipmentAlarm Package: Img.IK8657553 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Server shutdown due to power shedding Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Server shutdown due to power shedding. The server blade was shutdown due to a lack of power.		
Remedial action: No action is required.		

Table 27-2434 IK8657554

Alarm	Attributes	Applicable major release
Name: IK8657554 (10832) Type: equipmentAlarm Package: Img.IK8657554 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Server power on prevented to preserve redundancy Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Server power on prevented to preserve redundancy. There is not enough power to power on the server blade and maintain redundancy for the other blades in the enclosure.		
Remedial action: No action is required.		

Table 27-2435 IK8657555

Alarm	Attributes	Applicable major release
Name: IK8657555 (10833) Type: equipmentAlarm Package: Img.IK8657555 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade.		
Remedial action: No action is required.		

Table 27-2436 IK8657556

Alarm	Attributes	Applicable major release
Name: IK8657556 (10834) Type: equipmentAlarm Package: Img.IK8657556 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The server enclosure micro-controller was not found.		
Remedial action: No action is required.		

Table 27-2437 IK8657557

Alarm	Attributes	Applicable major release
Name: IK8657557 (10835) Type: equipmentAlarm Package: Img.IK8657557 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The power enclosure micro-controller was not found.		
Remedial action: No action is required.		

Table 27-2438 IK8657558

Alarm	Attributes	Applicable major release
Name: IK8657558 (10836) Type: equipmentAlarm Package: Img.IK8657558 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Fuse open Implicitly cleared: true Default probable cause: enclosureDoorOpen	Release: • LR16.1.MG
Description: Fuse open. The fuse has been tripped.		

Table 27-2438 IK8657558 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-2439 IK8657559

Alarm	Attributes	Applicable major release
Name: IK8657559 (10837) Type: equipmentAlarm Package: Img.IK8657559 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Power subsystem not load balanced Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power subsystem not load balanced. The power subsystem is out of balance for this power enclosure.		
Remedial action: No action is required.		

Table 27-2440 IK8657560

Alarm	Attributes	Applicable major release
Name: IK8657560 (10838) Type: equipmentAlarm Package: Img.IK8657560 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Power subsystem DC power problem Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power subsystem DC power problem. There is a power subsystem DC power problem for this power enclosure.		
Remedial action: No action is required.		

Table 27-2441 IK8657561

Alarm	Attributes	Applicable major release
Name: IK8657561 (10839) Type: equipmentAlarm Package: Img.IK8657561 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Power subsystem AC facility input power exceeded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power subsystem AC facility input power exceeded. There is a power subsystem Power subsystem AC facility input power exceeded for this power enclosure.		
Remedial action: No action is required.		

Table 27-2442 IK8657562

Alarm	Attributes	Applicable major release
Name: IK8657562 (10840) Type: equipmentAlarm Package: Img.IK8657562 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Unknown power consumption Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Unknown power consumption. There is an unknown power consumer drawing power.		
Remedial action: No action is required.		

Table 27-2443 IK8657563

Alarm	Attributes	Applicable major release
Name: IK8657563 (10841) Type: equipmentAlarm Package: Img.IK8657563 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Power subsystem load balancing wire missing Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power subsystem load balancing wire missing. The power subsystem load balancing wire missing.		
Remedial action: No action is required.		

Table 27-2444 IK8657564

Alarm	Attributes	Applicable major release
Name: IK8657564 (10842) Type: equipmentAlarm Package: Img.IK8657564 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Power subsystem has too may power enclosures Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power subsystem has too may power enclosures. The maximum number of power enclosures has been exceeded.		
Remedial action: No action is required.		

Table 27-2445 IK8657565

Alarm	Attributes	Applicable major release
Name: IK8657565 (10843) Type: equipmentAlarm Package: Img.IK8657565 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Power subsystem improperly configured Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG

Table 27-2445 IK8657565 (continued)

Alarm	Attributes	Applicable major release
Description: Power subsystem improperly configured. The power subsystem has been improperly configured.		
Remedial action: No action is required.		

Table 27-2446 IK8657566

Alarm	Attributes	Applicable major release
Name: IK8657566 (10844) Type: equipmentAlarm Package: Img.IK8657566 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Server blade health status degraded Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR16.1.MG
Description: Server blade health status Degraded. The server blade health status has changed to Degraded.		
Remedial action: No action is required.		

Table 27-2447 IK8657567

Alarm	Attributes	Applicable major release
Name: IK8657567 (10845) Type: equipmentAlarm Package: Img.IK8657567 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Server blade not responding to group capping requests Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: The server blade is not responding to the group capper. The server blade is not responding to capping requests from the enclosure group capper		
Remedial action: No action is required.		

Table 27-2448 IK8657568

Alarm	Attributes	Applicable major release
Name: IK8657568 (10846) Type: equipmentAlarm Package: Img.IK8657568 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Server blade unexpected shutdown Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Server blade shutdown unexpectadly. An unexpected shutdown event has occurred for this server blade.		
Remedial action: No action is required.		

Table 27-2449 IK8657569

Alarm	Attributes	Applicable major release
Name: IK8657569 (10847) Type: equipmentAlarm Package: Img.IK8657569 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Generic Power Subsystem EAE Minor trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: FlexFabric Cmdr Power Subsystem Minor trap.		
Remedial action: No action is required.		

Table 27-2450 IK8657570

Alarm	Attributes	Applicable major release
Name: IK8657570 (10848) Type: equipmentAlarm Package: Img.IK8657570 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Generic Power Subsystem EAE Major trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: FlexFabric Cmdr Power Subsystem Major trap.		
Remedial action: No action is required.		

Table 27-2451 IK8657571

Alarm	Attributes	Applicable major release
Name: IK8657571 (10849) Type: equipmentAlarm Package: Img.IK8657571 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Generic Power Subsystem EAE Critical trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: FlexFabric Cmdr Power Subsystem Critical trap.		
Remedial action: No action is required.		

Table 27-2452 IK8657572

Alarm	Attributes	Applicable major release
Name: IK8657572 (10850) Type: equipmentAlarm Package: Img.IK8657572 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Generic WSMAN Major trap Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG

Table 27-2452 IK8657572 (continued)

Alarm	Attributes	Applicable major release
Description: WSMAN Major trap		
Remedial action: No action is required.		

Table 27-2453 IK8657573

Alarm	Attributes	Applicable major release
Name: IK8657573 (10851) Type: equipmentAlarm Package: Img.IK8657573 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Generic WSMAN Critical trap Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: WSMAN Critical trap		
Remedial action: No action is required.		

Table 27-2454 IK8657574

Alarm	Attributes	Applicable major release
Name: IK8657574 (10852) Type: equipmentAlarm Package: Img.IK8657574 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Device Connected Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG
Description: A UPS device is reporting a Connection Lost due to one of the following. 1. The serial cable connected to the UPS has been unplugged. 2. The Network cable connected to the UPS has been unplugged.		
Remedial action: No action is required.		

Table 27-2455 IK8657575

Alarm	Attributes	Applicable major release
Name: IK8657575 (10853) Type: equipmentAlarm Package: Img.IK8657575 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Connection Lost Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG
Description: A UPS device is reporting a Connection Lost due to one of the following. 1. The serial cable connected to the UPS has been unplugged. 2. The Network cable connected to the UPS has been unplugged.		
Remedial action: No action is required.		

Table 27-2456 IK8657576

Alarm	Attributes	Applicable major release
Name: IK8657576 (10854) Type: equipmentAlarm Package: Img.IK8657576 Raised on class: Img.Flute	Severity: indeterminate Specific problem: UPS Input Voltage Normal Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting input voltage is out of range.		
Remedial action: No action is required.		

Table 27-2457 IK8657577

Alarm	Attributes	Applicable major release
Name: IK8657577 (10855) Type: equipmentAlarm Package: Img.IK8657577 Raised on class: Img.Flute	Severity: indeterminate Specific problem: UPS Output Voltage Normal Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting output voltage is out of Range.		
Remedial action: No action is required.		

Table 27-2458 IK8657578

Alarm	Attributes	Applicable major release
Name: IK8657578 (10856) Type: equipmentAlarm Package: Img.IK8657578 Raised on class: Img.Flute	Severity: indeterminate Specific problem: UPS Battery Level Normal Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting low battery.		
Remedial action: No action is required.		

Table 27-2459 IK8657579

Alarm	Attributes	Applicable major release
Name: IK8657579 (10857) Type: equipmentAlarm Package: Img.IK8657579 Raised on class: Img.Flute	Severity: indeterminate Specific problem: UPS On Battery Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting on battery condition.		
Remedial action: No action is required.		

Table 27-2460 IK8657580

Alarm	Attributes	Applicable major release
Name: IK8657580 (10858) Type: equipmentAlarm Package: Img.IK8657580 Raised on class: Img.Flute	Severity: indeterminate Specific problem: UPS On Buck Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting an On Buck condition due to the following. 1. Utility power has increased above recommended utility input levels.		
Remedial action: No action is required.		

Table 27-2461 IK8657581

Alarm	Attributes	Applicable major release
Name: IK8657581 (10859) Type: equipmentAlarm Package: Img.IK8657581 Raised on class: Img.Flute	Severity: indeterminate Specific problem: UPS On Boost Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting an On Boost condition due to the following. 1. Utility power has dropped below recommended utility input levels.		
Remedial action: No action is required.		

Table 27-2462 IK8657582

Alarm	Attributes	Applicable major release
Name: IK8657582 (10860) Type: equipmentAlarm Package: Img.IK8657582 Raised on class: Img.Flute	Severity: indeterminate Specific problem: UPS On Utility Power Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting on battery condition.		
Remedial action: No action is required.		

Table 27-2463 IK8657583

Alarm	Attributes	Applicable major release
Name: IK8657583 (10861) Type: equipmentAlarm Package: Img.IK8657583 Raised on class: Img.Flute	Severity: indeterminate Specific problem: UPS Temperature Normal Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR16.1.MG
Description: A UPS device is reporting temperature is out of range.		

Table 27-2463 IK8657583 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-2464 IK8657584

Alarm	Attributes	Applicable major release
Name: IK8657584 (10862) Type: equipmentAlarm Package: lmg.IK8657584 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: UPS Diagnostic Test Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting a diagnostic test failed.		
Remedial action: No action is required.		

Table 27-2465 IK8657585

Alarm	Attributes	Applicable major release
Name: IK8657585 (10863) Type: equipmentAlarm Package: lmg.IK8657585 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: UPS Diagnostic Test Succeeded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting a diagnostic test failed.		
Remedial action: No action is required.		

Table 27-2466 IK8657586

Alarm	Attributes	Applicable major release
Name: IK8657586 (10864) Type: equipmentAlarm Package: lmg.IK8657586 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Site Wiring Fault Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A UPS device is reporting a fault in the input wiring, other than Phase Rotation: e.g., Ground/Neutral reversed.		
Remedial action: No action is required.		

Table 27-2467 IK8657587

Alarm	Attributes	Applicable major release
Name: IK8657587 (10865) Type: equipmentAlarm Package: Img.IK8657587 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Site Wiring Fault Cleared Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A UPS device is reporting a fault in the input wiring, other than Phase Rotation: e.g., Ground/Neutral reversed.		
Remedial action: No action is required.		

Table 27-2468 IK8657588

Alarm	Attributes	Applicable major release
Name: IK8657588 (10866) Type: equipmentAlarm Package: Img.IK8657588 Raised on class: Img.Flute	Severity: indeterminate Specific problem: The UPS is no longer on manual bypass Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is operating in manual bypass mode.		
Remedial action: No action is required.		

Table 27-2469 IK8657589

Alarm	Attributes	Applicable major release
Name: IK8657589 (10867) Type: equipmentAlarm Package: Img.IK8657589 Raised on class: Img.Flute	Severity: indeterminate Specific problem: The UPS is on manual bypass Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is operating in manual bypass mode.		
Remedial action: No action is required.		

Table 27-2470 IK8657590

Alarm	Attributes	Applicable major release
Name: IK8657590 (10868) Type: equipmentAlarm Package: Img.IK8657590 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Output voltage is out of range Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting output voltage is out of Range.		
Remedial action: No action is required.		

Table 27-2471 IK8657591

Alarm	Attributes	Applicable major release
Name: IK8657591 (10869) Type: equipmentAlarm Package: Img.IK8657591 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Emergency Power Off activated Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting an Emergency Power Off (EPO) command has been received to shutdown the UPS immediately with out delay. This command may come from a local control panel or from a remote source.		
Remedial action: No action is required.		

Table 27-2472 IK8657592

Alarm	Attributes	Applicable major release
Name: IK8657592 (10870) Type: equipmentAlarm Package: Img.IK8657592 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Warning Alarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A warning alarm has occurred.		
Remedial action: No action is required.		

Table 27-2473 IK8657593

Alarm	Attributes	Applicable major release
Name: IK8657593 (10871) Type: equipmentAlarm Package: Img.IK8657593 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Tape Drive Cleaning Required Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG
Description: Tape Drive Cleaning Required trap. The agent has detected a tape drive that needs to have a cleaning tape inserted and run. This will cause the tape drive heads to be cleaned.		
Remedial action: No action is required.		

Table 27-2474 IK8657594

Alarm	Attributes	Applicable major release
Name: IK8657594 (10872) Type: equipmentAlarm Package: Img.IK8657594 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Tape Drive Cleaning Tape Needs Replacing Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG

Table 27-2474 IK8657594 (continued)

Alarm	Attributes	Applicable major release
Description: Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape.		
Remedial action: No action is required.		

Table 27-2475 IK8657595

Alarm	Attributes	Applicable major release
Name: IK8657595 (10873) Type: equipmentAlarm Package: lmg.IK8657595 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Tape Library Door Opened Implicitly cleared: true Default probable cause: enclosureDoorOpen	Release: • LR16.1.MG
Description: Tape Library Door Open The agent has detected that the door on an autoloader is open so the unit is not operational.		
Remedial action: No action is required.		

Table 27-2476 IK8657596

Alarm	Attributes	Applicable major release
Name: IK8657596 (10874) Type: equipmentAlarm Package: lmg.IK8657596 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: System hood is removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: System hood is removed. The hood status has been set to removed. The system's hood is not in a properly installed state. This situation may result in improper cooling of the system due to air flow changes caused by the missing hood.		
Remedial action: No action is required.		

Table 27-2477 IK8657597

Alarm	Attributes	Applicable major release
Name: IK8657597 (10875) Type: equipmentAlarm Package: lmg.IK8657597 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Excessive Correctable Memory Errors Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Correctable memory error count has exceeded the threshold for the memory module indicated by the 'cpqSiMemErrorIndex' variable. The appropriate cpqSiMemModuleECCStatus has been set to degraded.		
Remedial action: No action is required.		

Table 27-2478 IK8657598

Alarm	Attributes	Applicable major release
Name: IK8657598 (10876) Type: equipmentAlarm Package: Img.IK8657598 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Memory modules have changed Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: A memory configuration change has occurred. CpqSiMemConfigChangeData will indicate which memory modules slots have changed.		
Remedial action: No action is required.		

Table 27-2479 IK8657599

Alarm	Attributes	Applicable major release
Name: IK8657599 (10877) Type: equipmentAlarm Package: Img.IK8657599 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Hot Plug Slot Board Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Hot Plug Slot Board Failed Power-Up. A Hot Plug Slot Board has failed to power-up in the specified chassis and slot.		
Remedial action: No action is required.		

Table 27-2480 IK8657600

Alarm	Attributes	Applicable major release
Name: IK8657600 (10878) Type: equipmentAlarm Package: Img.IK8657600 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Battery Failure Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG
Description: The battery indicated by cpqSiSysBatteryIndex has failed and must be replaced.		
Remedial action: No action is required.		

Table 27-2481 IK8657601

Alarm	Attributes	Applicable major release
Name: IK8657601 (10879) Type: equipmentAlarm Package: Img.IK8657601 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Battery Charging Degradation Implicitly cleared: true Default probable cause: lowBatteryThreshold	Release: • LR16.1.MG
Description: Significant battery degradation has occurred with battery indicated by cpqSiSysBatteryIndex. The battery can no longer be fully recharged.		

Table 27-2481 IK8657601 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-2482 IK8657602

Alarm	Attributes	Applicable major release
Name: IK8657602 (10880) Type: equipmentAlarm Package: Img.IK8657602 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Battery Calibration Error Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG
Description: Calibration is needed with battery indicated by cpqSiSysBatteryIndex. The battery can not correctly indicate capacity.		
Remedial action: No action is required.		

Table 27-2483 IK8657603

Alarm	Attributes	Applicable major release
Name: IK8657603 (10881) Type: equipmentAlarm Package: Img.IK8657603 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Server Power Outage Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Server Power Outage. The Remote Insight/ Integrated Lights-Out firmware has detected server power failure.		
Remedial action: No action is required.		

Table 27-2484 IK8657604

Alarm	Attributes	Applicable major release
Name: IK8657604 (10882) Type: equipmentAlarm Package: Img.IK8657604 Raised on class: Img.Flute	Severity: indeterminate Specific problem: Storage System Temperature Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR16.1.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.		
Remedial action: No action is required.		

Table 27-2485 IK8657605

Alarm	Attributes	Applicable major release
Name: IK8657605 (10883) Type: equipmentAlarm Package: lmg.IK8657605 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Storage System Temp Degraded Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR16.1.MG
Description: Storage System temperature degraded. The agent has detected a temperature status that has been set to degraded. The storage system's temperature is outside of the normal operating range.		
Remedial action: No action is required.		

Table 27-2486 IK8657606

Alarm	Attributes	Applicable major release
Name: IK8657606 (10884) Type: equipmentAlarm Package: lmg.IK8657606 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Storage System side panel is removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Storage System side panel is removed. The side panel status has been set to removed. The storage system's side panel is not in a properly installed state. This situation may result in improper cooling of the drives in the storage system due to air flow changes caused by the missing side panel.		
Remedial action: No action is required.		

Table 27-2487 IK8657607

Alarm	Attributes	Applicable major release
Name: IK8657607 (10885) Type: equipmentAlarm Package: lmg.IK8657607 Raised on class: lmg.Flute	Severity: indeterminate Specific problem: Power Supply Degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A storage system power supply status has been set to degraded.		
Remedial action: No action is required.		

Table 27-2488 IK8690000

Alarm	Attributes	Applicable major release
Name: IK8690000 (9366) Type: processingErrorAlarm Package: lmg.IK8690000 Raised on class: lmg.Flute	Severity: warning Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG

Table 27-2488 IK8690000 (continued)

Alarm	Attributes	Applicable major release
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2489 IK8690001

Alarm	Attributes	Applicable major release
Name: IK8690001 (9367) Type: processingErrorAlarm Package: Img.IK8690001 Raised on class: Img.Flute	Severity: warning Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2490 IK8690002

Alarm	Attributes	Applicable major release
Name: IK8690002 (9368) Type: processingErrorAlarm Package: Img.IK8690002 Raised on class: Img.Flute	Severity: warning Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2491 IK8690003

Alarm	Attributes	Applicable major release
Name: IK8690003 (9369) Type: processingErrorAlarm Package: Img.IK8690003 Raised on class: Img.Flute	Severity: warning Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2492 IK8690004

Alarm	Attributes	Applicable major release
Name: IK8690004 (9370) Type: processingErrorAlarm Package: lmg.IK8690004 Raised on class: lmg.Flute	Severity: warning Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2493 IK8690005

Alarm	Attributes	Applicable major release
Name: IK8690005 (9371) Type: processingErrorAlarm Package: lmg.IK8690005 Raised on class: lmg.Flute	Severity: warning Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2494 IK8690006

Alarm	Attributes	Applicable major release
Name: IK8690006 (9372) Type: processingErrorAlarm Package: lmg.IK8690006 Raised on class: lmg.Flute	Severity: warning Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2495 IK8690007

Alarm	Attributes	Applicable major release
Name: IK8690007 (9373) Type: processingErrorAlarm Package: lmg.IK8690007 Raised on class: lmg.Flute	Severity: warning Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2496 IK8690008

Alarm	Attributes	Applicable major release
Name: IK8690008 (9374) Type: processingErrorAlarm Package: Img.IK8690008 Raised on class: Img.Flute	Severity: warning Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2497 IK8690009

Alarm	Attributes	Applicable major release
Name: IK8690009 (9375) Type: processingErrorAlarm Package: Img.IK8690009 Raised on class: Img.Flute	Severity: warning Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2498 IK8690010

Alarm	Attributes	Applicable major release
Name: IK8690010 (9376) Type: processingErrorAlarm Package: Img.IK8690010 Raised on class: Img.Flute	Severity: warning Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2499 IK8690011

Alarm	Attributes	Applicable major release
Name: IK8690011 (9377) Type: processingErrorAlarm Package: Img.IK8690011 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2500 IK8690012

Alarm	Attributes	Applicable major release
Name: IK8690012 (9378) Type: processingErrorAlarm Package: lmg.IK8690012 Raised on class: lmg.FilePrepare	Severity: warning Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2501 IK8690013

Alarm	Attributes	Applicable major release
Name: IK8690013 (9379) Type: processingErrorAlarm Package: lmg.IK8690013 Raised on class: lmg.FilePrepare	Severity: warning Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2502 IK8690014

Alarm	Attributes	Applicable major release
Name: IK8690014 (9380) Type: processingErrorAlarm Package: lmg.IK8690014 Raised on class: lmg.FilePrepare	Severity: warning Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2503 IK8690015

Alarm	Attributes	Applicable major release
Name: IK8690015 (9381) Type: processingErrorAlarm Package: lmg.IK8690015 Raised on class: lmg.FilePrepare	Severity: warning Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2504 IK8690016

Alarm	Attributes	Applicable major release
Name: IK8690016 (9382) Type: processingErrorAlarm Package: Img.IK8690016 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2505 IK8690017

Alarm	Attributes	Applicable major release
Name: IK8690017 (9383) Type: processingErrorAlarm Package: Img.IK8690017 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2506 IK8690018

Alarm	Attributes	Applicable major release
Name: IK8690018 (9384) Type: processingErrorAlarm Package: Img.IK8690018 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2507 IK8690019

Alarm	Attributes	Applicable major release
Name: IK8690019 (9385) Type: processingErrorAlarm Package: Img.IK8690019 Raised on class: Img.FilePrepare	Severity: warning Specific problem: Provision Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: This is a spare for future use		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2508 IK8705835

Alarm	Attributes	Applicable major release
Name: IK8705835 (7791) Type: equipmentAlarm Package: lmg.IK8705835 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: emergencyTrap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: A user-defined alarm indicating an extremely urgent situation, usually indicating that the system has failed and is shutting down.\nAlarm to be cleared by the operator at the management system.\nReason: emergencyTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2509 IK8705836

Alarm	Attributes	Applicable major release
Name: IK8705836 (7792) Type: processingErrorAlarm Package: lmg.IK8705836 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: alertTrap Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: A user-defined alarm indicating a condition that should be corrected immediately, such as a failed disk.\nAlarm to be cleared by the operator at the management system.\nReason: alertTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2510 IK8705837

Alarm	Attributes	Applicable major release
Name: IK8705837 (7793) Type: equipmentAlarm Package: lmg.IK8705837 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: criticalTrap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: A user-defined alarm indicating a critical condition, such as a hard device error.\nAlarm to be cleared by the operator at the management system.\nReason: criticalTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2511 IK8705843

Alarm	Attributes	Applicable major release
Name: IK8705843 (7794) Type: processingErrorAlarm Package: lmg.IK8705843 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: diskFailedShutdown Implicitly cleared: true Default probable cause: storageCapacityProblem	Release: • LR14.3.MG

Table 27-2511 IK8705843 (continued)

Alarm	Attributes	Applicable major release
Description: System is shutting down because the system has been running in degraded mode for 24 hours. The alarm includes a string describing the failed disk.\nAlarm is cleared by the system.\nReason: diskFailedShutdown		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2512 IK8705844

Alarm	Attributes	Applicable major release
Name: IK8705844 (7795) Type: processingErrorAlarm Package: lmg.IK8705844 Raised on class: lmg.FRU	Severity: critical Specific problem: One or more disks failed Implicitly cleared: true Default probable cause: storageCapacityProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: One or more disks failed. The alarm includes a string describing the failed disk(s).\nAlarm is cleared by the system.\nReason: diskFailed		
Remedial action: Replace the disk device.		

Table 27-2513 IK8705846

Alarm	Attributes	Applicable major release
Name: IK8705846 (7796) Type: environmentalAlarm Package: lmg.IK8705846 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: fanFailureShutdown Implicitly cleared: false Default probable cause: coolingFanFailure	Release: • LR14.3.MG
Description: Critical chassis or cpu fans have failed and the system is shutting down.\nAlarm to be cleared by the operator at the management system.\nReason: fanFailureShutdown		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2514 IK8705849

Alarm	Attributes	Applicable major release
Name: IK8705849 (7797) Type: equipmentAlarm Package: lmg.IK8705849 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: powerSupplyFailureShutdown Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: Critical power supplies or power rails failed and the system is shutting down.\nAlarm to be cleared by the operator at the management system.\nReason: powerSupplyFailureShutdown		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2515 IK8705850

Alarm	Attributes	Applicable major release
Name: IK8705850 (7798) Type: equipmentAlarm Package: lmg.IK8705850 Raised on class: lmg.FRU	Severity: critical Specific problem: One or more redundant power supplies failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: One or more redundant power supplies failed. Include in the alarm a string describing the failed power supply(ies).\nAlarm is cleared by the system.\nReason: powerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

Table 27-2516 IK8705853

Alarm	Attributes	Applicable major release
Name: IK8705853 (7799) Type: equipmentAlarm Package: lmg.IK8705853 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: CPU utilization exceeds 90% Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: CPU utilization exceeds 90%. This alarm is not enabled by default. To enable this alarm set the registry entry options.monitor.cpu.enable to on. Note that as the threshold for this alarm is checked once a minute it is possible to receive multiple instances of this alarm in a short time.\nAlarm is cleared by the system.\nReason: cpuTooBusy		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2517 IK8705855

Alarm	Attributes	Applicable major release
Name: IK8705855 (7800) Type: environmentalAlarm Package: lmg.IK8705855 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: The NVRAM battery is fully discharged Implicitly cleared: false Default probable cause: batteryDischarging	Release: • LR14.3.MG
Description: The NVRAM battery is fully discharged.\nAlarm to be cleared by the operator at the management system.\nReason: nvramBatteryDischarged		
Remedial action: Check the NVRAM battery		

Table 27-2518 IK8705856

Alarm	Attributes	Applicable major release
Name: IK8705856 (7801) Type: environmentalAlarm Package: lmg.IK8705856 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: The charge in the NVRAM battery is low Implicitly cleared: false Default probable cause: lowBatteryThreshold	Release: • LR14.3.MG
Description: The charge in the NVRAM battery is low.\nAlarm to be cleared by the operator at the management system.\nReason: nvramBatteryLow		
Remedial action: check the NVRAM battery		

Table 27-2519 IK8705862

Alarm	Attributes	Applicable major release
Name: IK8705862 (9386) Type: processingErrorAlarm Package: lmg.IK8705862 Raised on class: lmg.FRU	Severity: critical Specific problem: At least one volume is more than 95% full Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: At least one volume is more than 95% full. The string sent with the alarm gives the name of the volume or volumes which exceed the volumeFull or volumeNearlyFull thresholds\nAlarm is cleared by the system.\nReason: volumeNearlyFull		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2520 IK8705865

Alarm	Attributes	Applicable major release
Name: IK8705865 (7802) Type: environmentalAlarm Package: lmg.IK8705865 Raised on class: lmg.FRU	Severity: critical Specific problem: System temperature is too high to continue operating Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: System temperature is too high to continue operating. The system is shutting down.\nAlarm is cleared by the system.\nReason: overTempShutdown		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2521 IK8705868

Alarm	Attributes	Applicable major release
Name: IK8705868 (9387) Type: processingErrorAlarm Package: lmg.IK8705868 Raised on class: lmg.FRU	Severity: major Specific problem: shelfFault Implicitly cleared: true Default probable cause: storageCapacityProblem	Release: • LR15.1.MG • LR16.1.MG
Description: A disk storage shelf reported a fault, probably due to a problem with drive placement, fans, power, or temperature.\nAlarm is cleared by the system.\nReason: shelfFault		
Remedial action: Check drive placement, fans, power, and temperature		

Table 27-2522 IK8705870

Alarm	Attributes	Applicable major release
Name: IK8705870 (7803) Type: processingErrorAlarm Package: lmg.IK8705870 Raised on class: lmg.FRU	Severity: critical Specific problem: globalStatusNonRecoverable Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The appliance's overall status changed to 'nonRecoverable', indicating a problem so severe that the appliance is shutting down.\nAlarm is cleared by the system.\nReason: globalStatusNonRecoverable		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2523 IK8705871

Alarm	Attributes	Applicable major release
Name: IK8705871 (7804) Type: processingErrorAlarm Package: lmg.IK8705871 Raised on class: lmg.FRU	Severity: critical Specific problem: globalStatusCritical Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The appliance's overall status changed to 'critical', indicating a problem that needs immediate attention.\nAlarm is cleared by the system.\nReason: globalStatusCritical		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2524 IK8705872

Alarm	Attributes	Applicable major release
Name: IK8705872 (7805) Type: processingErrorAlarm Package: lmg.IK8705872 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: globalStatusNonCritical Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG

Table 27-2524 IK8705872 (continued)

Alarm	Attributes	Applicable major release
Description: The appliance's overall status changed to 'nonCritical', indicating a problem that needs attention.\nAlarm to be cleared by the operator at the management system.\nReason: globalStatusNonCritical		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2525 IK8705881

Alarm	Attributes	Applicable major release
Name: IK8705881 (7806) Type: environmentalAlarm Package: lmg.IK8705881 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: UPS: Shutting down now: Time left on battery is exhausted Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: UPS: Shutting down now: Time left on battery is exhausted.\nAlarm to be cleared by the operator at the management system.\nReason: upsShuttingDown		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2526 IK8705882

Alarm	Attributes	Applicable major release
Name: IK8705882 (7807) Type: environmentalAlarm Package: lmg.IK8705882 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: UPS: Warning: Time left on battery is getting critical Implicitly cleared: false Default probable cause: lowBatteryThreshold	Release: • LR14.3.MG
Description: UPS: Warning: Time left on battery is getting critical.\nAlarm to be cleared by the operator at the management system.\nReason: upsBatteryWarning		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2527 IK8705884

Alarm	Attributes	Applicable major release
Name: IK8705884 (7808) Type: processingErrorAlarm Package: lmg.IK8705884 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: appEmergency Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: The application encountered an extremely urgent situation and requires an immediate response.\nAlarm to be cleared by the operator at the management system.\nReason: appEmergency		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2528 IK8705885

Alarm	Attributes	Applicable major release
Name: IK8705885 (7809) Type: processingErrorAlarm Package: lmg.IK8705885 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: appAlert Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: The application is in a condition that should be corrected immediately.\nAlarm to be cleared by the operator at the management system.\nReason: appAlert		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2529 IK8705900

Alarm	Attributes	Applicable major release
Name: IK8705900 (7810) Type: processingErrorAlarm Package: lmg.IK8705900 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: eccMasked Implicitly cleared: false Default probable cause: memoryMismatch	Release: • LR14.3.MG
Description: Memory ECC: High frequency of ECC errors\nAlarm to be cleared by the operator at the management system.\nReason: eccMasked		
Remedial action: check Memory ECC		

Table 27-2530 IK8705902

Alarm	Attributes	Applicable major release
Name: IK8705902 (7811) Type: communicationsAlarm Package: lmg.IK8705902 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: ftpdMaxConnNotice Implicitly cleared: false Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: Ftp daemon: number of connections hits maximum number\nAlarm to be cleared by the operator at the management system.\nReason: ftpdMaxConnNotice		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2531 IK8705907

Alarm	Attributes	Applicable major release
Name: IK8705907 (7812) Type: equipmentAlarm Package: lmg.IK8705907 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: vifPrimaryLinkFailed Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG

Table 27-2531 IK8705907 (continued)

Alarm	Attributes	Applicable major release
Description: Vif: The primary Interface on a Single mode vif has failed\nAlarm to be cleared by the operator at the management system.\nReason: vifPrimaryLinkFailed		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2532 IK8705908

Alarm	Attributes	Applicable major release
Name: IK8705908 (7813) Type: communicationsAlarm Package: lmg.IK8705908 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: vifAllLinksFailed Implicitly cleared: false Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: Vif: All the links of the vif have failed\nAlarm to be cleared by the operator at the management system.\nReason: vifAllLinksFailed		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2533 IK8705916

Alarm	Attributes	Applicable major release
Name: IK8705916 (7814) Type: processingErrorAlarm Package: lmg.IK8705916 Raised on class: lmg.FRU	Severity: critical Specific problem: volumeRestrictedByMirrorBigIo Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A volume that experienced a medium error during reconstruction is restricted and marked wafl-inconsistent, but starting wafliron has failed. This alarm is issued to alert operator that a volume is not accessible and wafliron must be started to allow access to it.\nAlarm is cleared by the system.\nReason: volumeRestrictedByMirrorBigIo		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2534 IK8705921

Alarm	Attributes	Applicable major release
Name: IK8705921 (7815) Type: equipmentAlarm Package: lmg.IK8705921 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: rmcCardMissingCables Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: Remote Management Controller card is missing its internal cable, or LAN cable or power supply cable. The alarm includes a string specifying the missing component.\nAlarm to be cleared by the operator at the management system.\nReason: rmcCardMissingCables		

Table 27-2534 IK8705921 (continued)

Alarm	Attributes	Applicable major release
Remedial action: check Remote Management Controller card and its internal cable		

Table 27-2535 IK8705933

Alarm	Attributes	Applicable major release
Name: IK8705933 (9388) Type: equipmentAlarm Package: lmg.IK8705933 Raised on class: lmg.FRU	Severity: major Specific problem: snapmirrorSyncFailed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: Synchronous SnapMirror failed and went into asynchronous mode.\nAlarm is cleared by the system.\nReason: snapmirrorSyncFailed		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2536 IK8705935

Alarm	Attributes	Applicable major release
Name: IK8705935 (7816) Type: processingErrorAlarm Package: lmg.IK8705935 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: The chassis temperature is extreme Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: The chassis temperature is extreme. The appliance has initiated a shutdown to protect itself. The operating environment should be monitored and corrected before restarting the appliance.\nAlarm to be cleared by the operator at the management system.\nReason: chassisTemperatureShutdown		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2537 IK8705939

Alarm	Attributes	Applicable major release
Name: IK8705939 (7817) Type: environmentalAlarm Package: lmg.IK8705939 Raised on class: lmg.FRU	Severity: critical Specific problem: One or more CPU fans have stopped Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: One or more CPU fans have stopped. The appliance has initiated a shutdown to protect itself. A new motherboard may be required to correct the fan. Contact customer support for direction.\nAlarm is cleared by the system.\nReason: chassisCPUFanStopped		
Remedial action: Check the motherboard		

Table 27-2538 IK8705940

Alarm	Attributes	Applicable major release
Name: IK8705940 (9998) Type: environmentalAlarm Package: lmg.IK8705940 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: A CPU fan is spinning too slowly Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: A CPU fan is spinning too slowly. A new motherboard may be required to correct the fan. Contact customer support for direction.\nAlarm is cleared by the system.\nReason: chassisCPUFanSlow		
Remedial action: Check the motherboard		

Table 27-2539 IK8705942

Alarm	Attributes	Applicable major release
Name: IK8705942 (7818) Type: equipmentAlarm Package: lmg.IK8705942 Raised on class: lmg.FRU	Severity: critical Specific problem: Multiple chassis power supplies failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Multiple chassis power supplies failed.\nAlarm is cleared by the system.\nReason: chassisPowerSuppliesFailed		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2540 IK8705943

Alarm	Attributes	Applicable major release
Name: IK8705943 (7819) Type: equipmentAlarm Package: lmg.IK8705943 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: One or more chassis power supplies are degraded Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: One or more chassis power supplies are degraded. A description of the degraded state has been logged to the console and message log file.\nAlarm to be cleared by the operator at the management system.\nReason: chassisPowerSupplyDegraded		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2541 IK8705944

Alarm	Attributes	Applicable major release
Name: IK8705944 (7820) Type: equipmentAlarm Package: lmg.IK8705944 Raised on class: lmg.FRU	Severity: critical Specific problem: One chassis power supply failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: One chassis power supply failed.\nAlarm is cleared by the system.\nReason: chassisPowerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

Table 27-2542 IK8705946

Alarm	Attributes	Applicable major release
Name: IK8705946 (9389) Type: equipmentAlarm Package: lmg.IK8705946 Raised on class: lmg.FRU	Severity: major Specific problem: One or more chassis power supplies are off Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG • LR16.1.MG
Description: One or more chassis power supplies are off.\nAlarm is cleared by the system.\nReason: chassisPowerSupplyOff		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2543 IK8705957

Alarm	Attributes	Applicable major release
Name: IK8705957 (7821) Type: communicationsAlarm Package: lmg.IK8705957 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: prefDCDisconnect Implicitly cleared: false Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: All connections to domain controllers in the preferred domain controllers list have been lost.\nAlarm to be cleared by the operator at the management system.\nReason: prefDCDisconnect		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2544 IK8705963

Alarm	Attributes	Applicable major release
Name: IK8705963 (7822) Type: equipmentAlarm Package: lmg.IK8705963 Raised on class: lmg.FRU	Severity: critical Specific problem: shelfSESElectronicsFailed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG

Table 27-2544 IK8705963 (continued)

Alarm	Attributes	Applicable major release
Description: One or more of the enclosure services devices in a disk shelf has failed. Some shelf designs combine the enclosure monitoring hardware function into the module that provides the storage interface to the shelf. A failure in the enclosure monitoring section of these combined modules does not necessarily indicate a failure in disk or loop or bus operation, which may be able to continue.\nAlarm is cleared by the system.\nReason: shelfSESElectronicsFailed		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2545 IK8705965

Alarm	Attributes	Applicable major release
Name: IK8705965 (7823) Type: equipmentAlarm Package: lmg.IK8705965 Raised on class: lmg.FRU	Severity: major Specific problem: shelfIFModuleFailed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: One or more of the storage interface modules in a disk shelf has failed. Some shelf designs combine the enclosure monitoring hardware function into the module that operates the fibre channel loop or SCSI in the shelf. This failure is of the storage interface itself, not a failure of the enclosure monitoring, which may be able to continue. This failure may make one or more disks in the shelf or in the loop or bus unavailable.\nAlarm is cleared by the system.\nReason: shelfIFModuleFailed		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2546 IK8705971

Alarm	Attributes	Applicable major release
Name: IK8705971 (7824) Type: equipmentAlarm Package: lmg.IK8705971 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Power Supply Unit is removed from the system Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: Power Supply Unit is removed from the system. System will be shutdown in x minutes if it is not put back.\nAlarm to be cleared by the operator at the management system.\nReason: chassisPSRemovedxMinShutdown		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2547 IK8705973

Alarm	Attributes	Applicable major release
Name: IK8705973 (7825) Type: environmentalAlarm Package: lmg.IK8705973 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Multiple chassis fan failure Implicitly cleared: false Default probable cause: coolingFanFailure	Release: • LR14.3.MG

Table 27-2547 IK8705973 (continued)

Alarm	Attributes	Applicable major release
Description: Multiple chassis fan failure. System will shut down in a few minutes if not corrected.\nAlarm to be cleared by the operator at the management system.\nReason: chassisFanFailxMinShutdown		
Remedial action: Check the chassis fan		

Table 27-2548 IK8705974

Alarm	Attributes	Applicable major release
Name: IK8705974 (7826) Type: equipmentAlarm Package: lmg.IK8705974 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: chassisPSUwrongInput Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: Power Supply Unit (PSU) in the system is connected to an incompatible external power source.\nAlarm to be cleared by the operator at the management system.\nReason: chassisPSUwrongInput		
Remedial action: Change the power source being used or replace the PSU with one that matches the current power source.		

Table 27-2549 IK8705975

Alarm	Attributes	Applicable major release
Name: IK8705975 (7827) Type: environmentalAlarm Package: lmg.IK8705975 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Multiple power supply fans failure Implicitly cleared: false Default probable cause: coolingFanFailure	Release: • LR14.3.MG
Description: Multiple power supply fans failure. System will shut down in a few minutes if not corrected.\nAlarm to be cleared by the operator at the management system.\nReason: powerSupplyFanFailxMinShutdown		
Remedial action: Check power supply fans		

Table 27-2550 IK8705976

Alarm	Attributes	Applicable major release
Name: IK8705976 (7828) Type: equipmentAlarm Package: lmg.IK8705976 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: system remote management detected a system down event Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG

Table 27-2550 IK8705976 (continued)

Alarm	Attributes	Applicable major release
Description: system remote management detected a system down event. The alarm includes a string describing the specific event which triggered the trap. The string is structured in the following form: Remote Management Event: type="{system_down|system_up|test|keep_alive}, severity={alert|warning|notice|normal|debug|info}, event={post_error|watchdog_reset|power_loss|abnormal_reboot}, key=value An example of a complete message would be: Remote Management Event: type=system_down, severity=alert, event=watchdog_reset, ss=16bytes Additional key=value items may, in the future, be appended to this message. The events that would generate this alarm would be: post_error: Fatal POST error on boot power_loss: Loss of power to system abnormal_reboot: I2_watchdog_reset\nAlarm to be cleared by the operator at the management system.\nReason: remoteSystemMgtAlert"		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2551 IK8705977

Alarm	Attributes	Applicable major release
Name: IK8705977 (7829) Type: equipmentAlarm Package: lmg.IK8705977 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: system remote management detected a system down event Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: system remote management detected a system down event. The alarm includes a string describing the specific event which triggered the trap. The string is structured in the following form: Remote Management Event: type="{system_down|system_up|test|keep_alive}, severity={alert|warning|notice|normal|debug|info}, event={loss-of-heartbeat}, key=value An example of a complete message would be: Remote Management Event: type=system_down, severity=warning, event=loss_of_heartbeat, ss=16bytes Additional key=value items may, in the future, be appended to this message. The events that would generate this alarm would be: loss_of_heartbeat: Loss of heartbeat to the RLM.\nAlarm to be cleared by the operator at the management system.\nReason: remoteSystemMgmtWarning"		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2552 IK8705978

Alarm	Attributes	Applicable major release
Name: IK8705978 (7830) Type: equipmentAlarm Package: lmg.IK8705978 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: system remote management detected a system down event Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: system remote management detected a system down event. The alarm includes a string describing the specific event which triggered the trap. The string is structured in the following form: Remote Management Event: type="{system_down|system_up|test|keep_alive}, severity={alert|warning|notice|normal|debug|info}, event={power_off_via_rlm,power_cycle_via_rlm,reset_via_rlm}, key=value An example of a complete message would be: Remote Management Event: type=system_down, severity=notice, event=power_off_via_rlm, ss=16bytes Additional key=value items may, in the future, be appended to this message. The events that would generate this alarm would be: power_off_via_rlm: This indicates system power off power_cycle_via_rlm: This indicates system power cycle reset_via_rlm: This indicates system reset.\nAlarm to be cleared by the operator at the management system.\nReason: remoteSystemMgmtNotification"		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2553 IK8705984

Alarm	Attributes	Applicable major release
Name: IK8705984 (7831) Type: equipmentAlarm Package: Img.IK8705984 Raised on class: Img.LMGMngElement	Severity: critical Specific problem: driveDisableErr Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: A drive has been disabled by the shelf module due to hardware errors. If it is the only drive in the shelf that is disabled, replace the drive.\nAlarm to be cleared by the operator at the management system.\nReason: driveDisableErr		
Remedial action: Replace the failing drive		

Table 27-2554 IK8706001

Alarm	Attributes	Applicable major release
Name: IK8706001 (7832) Type: equipmentAlarm Package: Img.IK8706001 Raised on class: Img.LMGMngElement	Severity: major Specific problem: rebootAbnormal Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: System rebooted abnormally after any of the following events: event =" watchdog reset, agent watchdog reset, panic, power-glitch.\nAlarm to be cleared by the operator at the management system.\nReason: rebootAbnormal"		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2555 IK8706007

Alarm	Attributes	Applicable major release
Name: IK8706007 (7833) Type: communicationsAlarm Package: Img.IK8706007 Raised on class: Img.LMGMngElement	Severity: major Specific problem: scsibladeOutOfQuorum Implicitly cleared: false Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: The node has lost connectivity with the other nodes in the cluster. Both fcp and iscsi traffic have been disabled on this node. The corrective action is to reboot the node, and if the node is waiting for giveback then perform a giveback.\nAlarm to be cleared by the operator at the management system.\nReason: scsibladeOutOfQuorum		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2556 IK8707446

Alarm	Attributes	Applicable major release
Name: IK8707446 (9390) Type: processingErrorAlarm Package: lmg.IK8707446 Raised on class: lmg.FRU	Severity: major Specific problem: QoS dynamic memory has reached its limit Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR15.1.MG • LR16.1.MG
Description: QoS dynamic memory has reached its limit. Some QoS features may operate in a limited capacity.\nAlarm is cleared by the system.\nReason: qosMonitorMemoryMaxed		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2557 IK8707451

Alarm	Attributes	Applicable major release
Name: IK8707451 (9391) Type: securityServiceOrMechanismViolation Package: lmg.IK8707451 Raised on class: lmg.FRU	Severity: major Specific problem: cifsAuthQueueBuildUp Implicitly cleared: true Default probable cause: authenticationFailure	Release: • LR15.1.MG • LR16.1.MG
Description: The authentication queue is building up due to a dead or slow CIFS domain controller connection. This OID is not available from the Cluster management interfaces.\nAlarm is cleared by the system.\nReason: cifsAuthQueueBuildUp		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2558 IK8750982

Alarm	Attributes	Applicable major release
Name: IK8750982 (7834) Type: equipmentAlarm Package: lmg.IK8750982 Raised on class: lmg.FRU	Severity: major Specific problem: Cluster Node Failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a node in the cluster becomes failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterNodeFailed		
Remedial action: Make a note of the cluster node name then check the node for the cause of the failure.		

Table 27-2559 IK8750984

Alarm	Attributes	Applicable major release
Name: IK8750984 (7835) Type: processingErrorAlarm Package: lmg.IK8750984 Raised on class: lmg.FRU	Severity: major Specific problem: Cluster Resource Failed Implicitly cleared: true Default probable cause: underlyingResourceUnavail-able	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a cluster resource becomes failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterResourceFailed		
Remedial action: Make a note of the cluster resource name then check the resource for the cause of the failure.		

Table 27-2560 IK8750986

Alarm	Attributes	Applicable major release
Name: IK8750986 (7836) Type: equipmentAlarm Package: lmg.IK8750986 Raised on class: lmg.FRU	Severity: major Specific problem: Cluster Network Failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a cluster network becomes failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterNetworkFailed		
Remedial action: Make a note of the cluster network name then check the network for the cause of the failure.		

Table 27-2561 IK8751008

Alarm	Attributes	Applicable major release
Name: IK8751008 (7837) Type: equipmentAlarm Package: lmg.IK8751008 Raised on class: lmg.FRU	Severity: major Specific problem: The primary controller in the subsytem has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The primary controller in the subsystem has failed. Details: The primary Controller has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrController1FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 27-2562 IK8751010

Alarm	Attributes	Applicable major release
Name: IK8751010 (7838) Type: equipmentAlarm Package: Img.IK8751010 Raised on class: Img.FRU	Severity: major Specific problem: The secondary controller in the subsytem has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The secondary controller in the subsystem has failed. Details: The secondary controller has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrController2FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 27-2563 IK8751013

Alarm	Attributes	Applicable major release
Name: IK8751013 (7839) Type: equipmentAlarm Package: Img.IK8751013 Raised on class: Img.FRU	Severity: major Specific problem: A RAIDset has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: A RAIDset has failed. Details: The RAIDset has failed and is off-line.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrLogDriveFailureTrap		
Remedial action: Possible cause is too many failed disk drives that make up the RAIDset, the OS can no longer communicate with the RAIDset for other reasons.		

Table 27-2564 IK8751018

Alarm	Attributes	Applicable major release
Name: IK8751018 (7840) Type: processingErrorAlarm Package: Img.IK8751018 Raised on class: Img.FRU	Severity: major Specific problem: A disk drive has failed Implicitly cleared: true Default probable cause: storageCapacityProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system.\nReason: cpqCrDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 27-2565 IK8751023

Alarm	Attributes	Applicable major release
Name: IK8751023 (7841) Type: processingErrorAlarm Package: Img.IK8751023 Raised on class: Img.FRU	Severity: major Specific problem: A disk drive has failed Implicitly cleared: true Default probable cause: storageCapacityProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrPhyDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 27-2566 IK8751030

Alarm	Attributes	Applicable major release
Name: IK8751030 (7842) Type: equipmentAlarm Package: Img.IK8751030 Raised on class: Img.FRU	Severity: major Specific problem: Power supply has failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power supply has failed. Details: One of the power supplies in the primary enclosure has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrEMUPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 27-2567 IK8751033

Alarm	Attributes	Applicable major release
Name: IK8751033 (7843) Type: equipmentAlarm Package: Img.IK8751033 Raised on class: Img.FRU	Severity: critical Specific problem: Primary enclosure temperature critical! Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Primary enclosure temperature critical!. Details: The temperature in the primary enclosure has triggered a critical condition detected by the controller.\nAlarm is cleared by the system.\nReason: cpqCrEMUTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the primary enclosure.		

Table 27-2568 IK8751037

Alarm	Attributes	Applicable major release
Name: IK8751037 (7844) Type: equipmentAlarm Package: lmg.IK8751037 Raised on class: lmg.FRU	Severity: major Specific problem: Power supply has failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power supply has failed. Details: One of the power supplies in the expansion cabinet has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrExpCabPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 27-2569 IK8751040

Alarm	Attributes	Applicable major release
Name: IK8751040 (7845) Type: environmentalAlarm Package: lmg.IK8751040 Raised on class: lmg.FRU	Severity: critical Specific problem: cpqCrExpCabTemperatureCriti-calTrap Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Expansion cabinet temperature critical! Details: The temperature in the expansion cabinet has triggered a critical condition detected by the controller.\nAlarm is cleared by the system.\nReason: cpqCrExpCabTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the expansion cabinet.		

Table 27-2570 IK8751060

Alarm	Attributes	Applicable major release
Name: IK8751060 (7846) Type: environmentalAlarm Package: lmg.IK8751060 Raised on class: lmg.FRU	Severity: major Specific problem: External Array Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqFcaAccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 27-2571 IK8751073

Alarm	Attributes	Applicable major release
Name: IK8751073 (7847) Type: environmentalAlarm Package: lmg.IK8751073 Raised on class: lmg.FRU	Severity: major Specific problem: External Array Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqFca2AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 27-2572 IK8751091

Alarm	Attributes	Applicable major release
Name: IK8751091 (9392) Type: environmentalAlarm Package: lmg.IK8751091 Raised on class: lmg.FRU	Severity: major Specific problem: System Fan Failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR15.1.MG • LR16.1.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHeThermalSystemFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-2573 IK8751098

Alarm	Attributes	Applicable major release
Name: IK8751098 (7848) Type: equipmentAlarm Package: lmg.IK8751098 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: POST Errors Occurred Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHePostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 27-2574 IK8751102

Alarm	Attributes	Applicable major release
Name: IK8751102 (7849) Type: environmentalAlarm Package: Img.IK8751102 Raised on class: Img.FRU	Severity: major Specific problem: Thermal Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The temperature status has been set to failed. The system will be shutdown due to this thermal condition.\nAlarm is cleared by the system.\nReason: cpqHe3ThermalTempFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 27-2575 IK8751105

Alarm	Attributes	Applicable major release
Name: IK8751105 (7850) Type: environmentalAlarm Package: Img.IK8751105 Raised on class: Img.FRU	Severity: major Specific problem: System Fan Failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHe3ThermalSystemFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-2576 IK8751112

Alarm	Attributes	Applicable major release
Name: IK8751112 (7851) Type: equipmentAlarm Package: Img.IK8751112 Raised on class: Img.FRU	Severity: major Specific problem: POST Errors Occurred Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process. Details of the POST error messages can be found in Integrated Management Log\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3PostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 27-2577 IK8751116

Alarm	Attributes	Applicable major release
Name: IK8751116 (7852) Type: equipmentAlarm Package: lmg.IK8751116 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Power Supply Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe3FltTolPowerSupplyFailed		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2578 IK8751121

Alarm	Attributes	Applicable major release
Name: IK8751121 (7853) Type: environmentalAlarm Package: lmg.IK8751121 Raised on class: lmg.FRU	Severity: major Specific problem: Fan Failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The Fault Tolerant Fan condition has been set to failed for the specified chassis and fan.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3FltTolFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-2579 IK8751125

Alarm	Attributes	Applicable major release
Name: IK8751125 (7854) Type: environmentalAlarm Package: lmg.IK8751125 Raised on class: lmg.FRU	Severity: major Specific problem: Thermal Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The temperature status has been set to failed in the specified chassis and location. The system will be shutdown due to this condition.\nAlarm is cleared by the system.\nReason: cpqHe3TemperatureFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 27-2580 IK8751129

Alarm	Attributes	Applicable major release
Name: IK8751129 (7855) Type: equipmentAlarm Package: lmg.IK8751129 Raised on class: lmg.FRU	Severity: major Specific problem: Power Converter Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG

Table 27-2580 IK8751129 (continued)

Alarm	Attributes	Applicable major release
Description: The DC-DC Power Converter condition has been set to failed for the specified chassis, slot and socket.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3PowerConverterFailed		
Remedial action: Replace the failed power converter.		

Table 27-2581 IK8751135

Alarm	Attributes	Applicable major release
Name: IK8751135 (7856) Type: equipmentAlarm Package: lmg.IK8751135 Raised on class: lmg.FRU	Severity: major Specific problem: Power Supply Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FltTolPowerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

Table 27-2582 IK8751144

Alarm	Attributes	Applicable major release
Name: IK8751144 (7857) Type: processingErrorAlarm Package: lmg.IK8751144 Raised on class: lmg.FRU	Severity: major Specific problem: Memory Board or Cartridge Bus Error Detected Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Memory board or cartridge bus error detected. An Advanced Memory Protection sub-system board or cartridge bus error has been detected.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge.		

Table 27-2583 IK8751148

Alarm	Attributes	Applicable major release
Name: IK8751148 (7858) Type: equipmentAlarm Package: lmg.IK8751148 Raised on class: lmg.FRU	Severity: major Specific problem: Management processor failed reset Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The Management processor failed reset The management processor was not successfully reset and is not operational.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeManagementProcFailedReset		
Remedial action: Reset the management procesessor again or re-flash the management processor firmware.		

Table 27-2584 IK8751152

Alarm	Attributes	Applicable major release
Name: IK8751152 (7859) Type: processingErrorAlarm Package: lmg.IK8751152 Raised on class: lmg.FRU	Severity: major Specific problem: Memory Board or Cartridge or Riser Bus Error Detected Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Memory board or cartridge or Riser bus error detected. An Advanced Memory Protection sub-system board or cartridge or Riser bus error has been detected. Value 0 for CPU means memory is not processor based.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe5ResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge or Riser.		

Table 27-2585 IK8751154

Alarm	Attributes	Applicable major release
Name: IK8751154 (7860) Type: equipmentAlarm Package: lmg.IK8751154 Raised on class: lmg.FRU	Severity: major Specific problem: Power Supply AC Power Loss Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The fault tolerant power supply AC power loss for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FltTolPowerSupplyACpowerloss		
Remedial action: Check the power source for the specified power supply.		

Table 27-2586 IK8751156

Alarm	Attributes	Applicable major release
Name: IK8751156 (7861) Type: processingErrorAlarm Package: lmg.IK8751156 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Application Error Trap Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHoAppErrorTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2587 IK8751158

Alarm	Attributes	Applicable major release
Name: IK8751158 (7862) Type: processingErrorAlarm Package: lmg.IK8751158 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Application Error Trap Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2AppErrorTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2588 IK8751160

Alarm	Attributes	Applicable major release
Name: IK8751160 (9393) Type: communicationsAlarm Package: lmg.IK8751160 Raised on class: lmg.FRU	Severity: major Specific problem: Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG • LR16.1.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition.\nAlarm is cleared by the system.\nReason: cpqHo2NicStatusFailed		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 27-2589 IK8751163

Alarm	Attributes	Applicable major release
Name: IK8751163 (7863) Type: communicationsAlarm Package: lmg.IK8751163 Raised on class: lmg.FRU	Severity: major Specific problem: Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition.\nAlarm is cleared by the system.\nReason: cpqHo2NicStatusFailed2		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 27-2590 IK8751172

Alarm	Attributes	Applicable major release
Name: IK8751172 (7864) Type: qualityOfServiceAlarm Package: lmg.IK8751172 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Power Threshold Exceeded Implicitly cleared: false Default probable cause: resourceAtOrNearingCapacity	Release: • LR14.3.MG
Description: This alarm notifies user of a power threshold breach. Power threshold exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2PowerThresholdTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2591 IK8752265

Alarm	Attributes	Applicable major release
Name: IK8752265 (7865) Type: environmentalAlarm Package: lmg.IK8752265 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDaAccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 27-2592 IK8752272

Alarm	Attributes	Applicable major release
Name: IK8752272 (7866) Type: environmentalAlarm Package: lmg.IK8752272 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa2AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 27-2593 IK8752279

Alarm	Attributes	Applicable major release
Name: IK8752279 (7867) Type: environmentalAlarm Package: lmg.IK8752279 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa3AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 27-2594 IK8752291

Alarm	Attributes	Applicable major release
Name: IK8752291 (7868) Type: equipmentAlarm Package: lmg.IK8752291 Raised on class: lmg.FRU	Severity: major Specific problem: Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Accelerator Board Bad Data. This alarm signifies that the agent has detected an array accelerator cache board that has lost battery power. If data was being stored in the accelerator cache memory when the server lost power, that data has been lost.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqDa5AccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 27-2595 IK8752292

Alarm	Attributes	Applicable major release
Name: IK8752292 (7869) Type: environmentalAlarm Package: lmg.IK8752292 Raised on class: lmg.FRU	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqDa5AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 27-2596 IK8752295

Alarm	Attributes	Applicable major release
Name: IK8752295 (7870) Type: equipmentAlarm Package: lmg.IK8752295 Raised on class: lmg.FRU	Severity: major Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm is cleared by the system when the device is restarted.\ nReason: cpqDa5PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 27-2597 IK8752302

Alarm	Attributes	Applicable major release
Name: IK8752302 (7871) Type: equipmentAlarm Package: lmg.IK8752302 Raised on class: lmg.FRU	Severity: major Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm is cleared by the system when the device is restarted.\ nReason: cpqDa6PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 27-2598 IK8752337

Alarm	Attributes	Applicable major release
Name: IK8752337 (7872) Type: communicationsAlarm Package: lmg.IK8752337 Raised on class: lmg.FRU	Severity: major Specific problem: NIC Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNicConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-2599 IK8752341

Alarm	Attributes	Applicable major release
Name: IK8752341 (7873) Type: communicationsAlarm Package: Img.IK8752341 Raised on class: Img.FRU	Severity: major Specific problem: NIC Connectivity Lost Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-2600 IK8752343

Alarm	Attributes	Applicable major release
Name: IK8752343 (7874) Type: communicationsAlarm Package: Img.IK8752343 Raised on class: Img.FRU	Severity: major Specific problem: NIC Redundancy Reduced Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2RedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-2601 IK8752347

Alarm	Attributes	Applicable major release
Name: IK8752347 (7875) Type: communicationsAlarm Package: Img.IK8752347 Raised on class: Img.FRU	Severity: major Specific problem: NIC Connectivity Lost Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqNic3ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-2602 IK8752349

Alarm	Attributes	Applicable major release
Name: IK8752349 (7876) Type: communicationsAlarm Package: lmg.IK8752349 Raised on class: lmg.FRU	Severity: major Specific problem: NIC Redundancy Reduced Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic3RedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-2603 IK8752360

Alarm	Attributes	Applicable major release
Name: IK8752360 (7877) Type: equipmentAlarm Package: lmg.IK8752360 Raised on class: lmg.FRU	Severity: major Specific problem: Enclosure temperature failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The enclosure temperature status has been set to failed. This alarm signifies that a enclosure temperature sensor has been tripped indicating an overheat condition.\nAlarm is cleared by the system.\nReason: cpqRackEnclosureTempFailed		
Remedial action: Shutdown the enclosure and possibly the rack as soon as possible. Ensure all fans are working properly and that air flow in the rack has not been blocked.		

Table 27-2604 IK8752363

Alarm	Attributes	Applicable major release
Name: IK8752363 (7878) Type: environmentalAlarm Package: lmg.IK8752363 Raised on class: lmg.FRU	Severity: major Specific problem: Enclosure fan failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The enclosure fan status has been set to failed. This alarm signifies that an enclosure fan has failed and no other fans in the redundant fan group are operating. This may result in overheating of the enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackEnclosureFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-2605 IK8752368

Alarm	Attributes	Applicable major release
Name: IK8752368 (7879) Type: equipmentAlarm Package: Img.IK8752368 Raised on class: Img.FRU	Severity: critical Specific problem: Rack power supply failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The power supply status has been set to failed. This alarm signifies that a power supply has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

Table 27-2606 IK8752369

Alarm	Attributes	Applicable major release
Name: IK8752369 (7880) Type: equipmentAlarm Package: Img.IK8752369 Raised on class: Img.FRU	Severity: major Specific problem: Rack power supply degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The power supply status has been set to degraded. This alarm signifies that a power supply has degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSupplyDegraded		
Remedial action: Replace the power supply as soon as possible.		

Table 27-2607 IK8752374

Alarm	Attributes	Applicable major release
Name: IK8752374 (7881) Type: equipmentAlarm Package: Img.IK8752374 Raised on class: Img.FRU	Severity: major Specific problem: Rack power supply input voltage problem Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The rack power supply detected an input line voltage problem.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSubsystemLineVoltageProblem		
Remedial action: Check the power input for the power supply or replace any failed power supplies as soon as possible.		

Table 27-2608 IK8752375

Alarm	Attributes	Applicable major release
Name: IK8752375 (7882) Type: equipmentAlarm Package: lmg.IK8752375 Raised on class: lmg.FRU	Severity: major Specific problem: Rack power subsystem overload condition Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The rack power subsystem overload condition.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSubsystemOverloadCondition		
Remedial action: Replace any failed power supplies as soon as possible to return the system to a redundant state.		

Table 27-2609 IK8752376

Alarm	Attributes	Applicable major release
Name: IK8752376 (7883) Type: equipmentAlarm Package: lmg.IK8752376 Raised on class: lmg.FRU	Severity: critical Specific problem: Server shutdown due to power shedding Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Server shutdown due to power shedding. The server blade was shutdown due to a lack of power.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerShedAutoShutdown		
Remedial action: Check power connections or add power supplies.		

Table 27-2610 IK8752377

Alarm	Attributes	Applicable major release
Name: IK8752377 (7884) Type: equipmentAlarm Package: lmg.IK8752377 Raised on class: lmg.FRU	Severity: critical Specific problem: Server power on prevented to preserve redundancy Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Server power on prevented to preserve redundancy. There is not enough power to power on the server blade and maintain redundancy for the other blades in the enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailedNotRedundant		
Remedial action: Check power connections or add power supplies.		

Table 27-2611 IK8752378

Alarm	Attributes	Applicable major release
Name: IK8752378 (7885) Type: equipmentAlarm Package: Img.IK8752378 Raised on class: Img.FRU	Severity: critical Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailedNotEnoughPower		
Remedial action: Check power connections or add power supplies.		

Table 27-2612 IK8752379

Alarm	Attributes	Applicable major release
Name: IK8752379 (7886) Type: equipmentAlarm Package: Img.IK8752379 Raised on class: Img.FRU	Severity: critical Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The server enclosure micro-controller was not found.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFaile-dEnclosureNotFound		
Remedial action: Check server enclosure connections or add power supplies.		

Table 27-2613 IK8752380

Alarm	Attributes	Applicable major release
Name: IK8752380 (7887) Type: equipmentAlarm Package: Img.IK8752380 Raised on class: Img.FRU	Severity: critical Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The power enclosure micro-controller was not found.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailed-PowerChassisNotFound		
Remedial action: Check power enclosure connections or add power supplies.		

Table 27-2614 IK8752382

Alarm	Attributes	Applicable major release
Name: IK8752382 (7888) Type: environmentalAlarm Package: lmg.IK8752382 Raised on class: lmg.FRU	Severity: major Specific problem: Fuse open Implicitly cleared: true Default probable cause: enclosureDoorOpen	Release: • LR14.3.MG • LR15.1.MG
Description: Fuse open. The fuse has been tripped.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackFuseOpen		
Remedial action: Check enclosure and / or blade power connections and reset the fuse.		

Table 27-2615 IK8752386

Alarm	Attributes	Applicable major release
Name: IK8752386 (7889) Type: equipmentAlarm Package: lmg.IK8752386 Raised on class: lmg.FRU	Severity: major Specific problem: Power subsystem DC power problem Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem DC power problem. There is a power subsystem DC power problem for this power enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisDcPowerProblem		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 27-2616 IK8752387

Alarm	Attributes	Applicable major release
Name: IK8752387 (7890) Type: equipmentAlarm Package: lmg.IK8752387 Raised on class: lmg.FRU	Severity: major Specific problem: Power subsystem AC facility input power exceeded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem AC facility input power exceeded. There is a power subsystem Power subsystem AC facility input power exceeded for this power enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisAc-FacilityPowerExceeded		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 27-2617 IK8752388

Alarm	Attributes	Applicable major release
Name: IK8752388 (7891) Type: equipmentAlarm Package: Img.IK8752388 Raised on class: Img.FRU	Severity: major Specific problem: Unknown power consumption Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Unknown power consumption. There is an unknown power consumer drawing power.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerUnknownPowerConsumption		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 27-2618 IK8752391

Alarm	Attributes	Applicable major release
Name: IK8752391 (7892) Type: processingErrorAlarm Package: Img.IK8752391 Raised on class: Img.FRU	Severity: major Specific problem: Power subsystem improperly configured Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem improperly configured. The power subsystem has been improperly configured.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisConfigError		
Remedial action: Check the cabling of the power enclosure.		

Table 27-2619 IK8752401

Alarm	Attributes	Applicable major release
Name: IK8752401 (7893) Type: communicationsAlarm Package: Img.IK8752401 Raised on class: Img.FRU	Severity: critical Specific problem: Interconnect failed Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The interconnect status has been set to failed. This alarm signifies that a interconnect has failed.\nAlarm is cleared by the system.\nReason: cpqRackNetConnectorFailed		
Remedial action: Replace the interconnect as soon as possible.		

Table 27-2620 IK8752408

Alarm	Attributes	Applicable major release
Name: IK8752408 (7894) Type: qualityOfServiceAlarm Package: lmg.IK8752408 Raised on class: lmg.FRU	Severity: major Specific problem: Server blade health status degraded Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR14.3.MG • LR15.1.MG
Description: Server blade health status Degraded. The server blade health status has changed to Degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerBladeStatusDegraded		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-2621 IK8752409

Alarm	Attributes	Applicable major release
Name: IK8752409 (7895) Type: processingErrorAlarm Package: lmg.IK8752409 Raised on class: lmg.FRU	Severity: critical Specific problem: Server blade health status critical Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Server blade health status Critical. The server blade health status has changed to Critical.\nAlarm is cleared by the system.\nReason: cpqRackServerBladeStatusCritical		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-2622 IK8752411

Alarm	Attributes	Applicable major release
Name: IK8752411 (7896) Type: equipmentAlarm Package: lmg.IK8752411 Raised on class: lmg.FRU	Severity: major Specific problem: Server blade unexpected shutdown Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Server blade shutdown unexpectadly. An unexpected shutdown event has occurred for this server blade.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerBladeUnexpectedShutdown		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-2623 IK8752428

Alarm	Attributes	Applicable major release
Name: IK8752428 (7897) Type: equipmentAlarm Package: lmg.IK8752428 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Generic EAE Major trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG

Table 27-2623 IK8752428 (continued)

Alarm	Attributes	Applicable major release
Description: EAE Major trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackMajorEAETrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2624 IK8752429

Alarm	Attributes	Applicable major release
Name: IK8752429 (7898) Type: equipmentAlarm Package: Img.IK8752429 Raised on class: Img.LMGMngElement	Severity: critical Specific problem: Generic EAE Critical trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: EAE Critical trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackCriticalEAETrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2625 IK8752431

Alarm	Attributes	Applicable major release
Name: IK8752431 (7899) Type: equipmentAlarm Package: Img.IK8752431 Raised on class: Img.FRU	Severity: major Specific problem: Generic Power Subsystem EAE Major trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: FlexFabric Cmdr Power Subsystem Major trap.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerMajorEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 27-2626 IK8752432

Alarm	Attributes	Applicable major release
Name: IK8752432 (7900) Type: equipmentAlarm Package: Img.IK8752432 Raised on class: Img.FRU	Severity: critical Specific problem: Generic Power Subsystem EAE Critical trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: FlexFabric Cmdr Power Subsystem Critical trap.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerCriticalEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 27-2627 IK8752436

Alarm	Attributes	Applicable major release
Name: IK8752436 (7901) Type: equipmentAlarm Package: lmg.IK8752436 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Generic WSMAN Major trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: WSMAN Major trap\nReason: cpqRackMajorWSMANTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2628 IK8752437

Alarm	Attributes	Applicable major release
Name: IK8752437 (7902) Type: equipmentAlarm Package: lmg.IK8752437 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Generic WSMAN Critical trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: WSMAN Critical trap\nReason: cpqRackCriticalWSMANTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2629 IK8752439

Alarm	Attributes	Applicable major release
Name: IK8752439 (7903) Type: communicationsAlarm Package: lmg.IK8752439 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Standby Recovery Server Interconnect Failure Implicitly cleared: false Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: Recovery Server serial interconnect failure. The Standby Recovery Agent reports that the local serial interconnect is not connected or has failed. The primary server is being shutdown in anticipation of the startup of the standby server.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRsStandbyCableFailure		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2630 IK8752462

Alarm	Attributes	Applicable major release
Name: IK8752462 (10002) Type: environmentalAlarm Package: lmg.IK8752462 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: CMC Smoke Detected Implicitly cleared: true Default probable cause: smoke	Release: • LR16.1.MG

Table 27-2630 IK8752462 (continued)

Alarm	Attributes	Applicable major release
Description: A CMC device is reporting smoke detected.\nAlarm is cleared by the system.\nReason: cpqRPMTrapCMCSmokeDetected		
Remedial action: Investigate CMC Device for an over temperature condition.		

Table 27-2631 IK8752464

Alarm	Attributes	Applicable major release
Name: IK8752464 (10003) Type: equipmentAlarm Package: Img.IK8752464 Raised on class: Img.FRU	Severity: indeterminate Specific problem: CMC Shock Detected Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A CMC device is reporting shock detected.\nAlarm is cleared by the system.\nReason: cpqRPMTrapCMCShockDetected		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2632 IK8752468

Alarm	Attributes	Applicable major release
Name: IK8752468 (10004) Type: equipmentAlarm Package: Img.IK8752468 Raised on class: Img.FRU	Severity: indeterminate Specific problem: CMC Aux 2 Alarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A CMC device has entered an alarm condition for auxiliary input 2.\nAlarm is cleared by the system.\nReason: cpqRPMTrapCMCAux2Alarm		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2633 IK8752494

Alarm	Attributes	Applicable major release
Name: IK8752494 (10007) Type: equipmentAlarm Package: Img.IK8752494 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS Output Overload Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A UPS device is reporting an overload condition.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSOutpu-tOverload		
Remedial action: Perform the following steps to clear the alarm: 1. Reduce the load on the UPS by moving some of the load to another UPS. 2. Consider moving to a larger UPS to support the current load.		

Table 27-2634 IK8752496

Alarm	Attributes	Applicable major release
Name: IK8752496 (10008) Type: environmentalAlarm Package: lmg.IK8752496 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: UPS Battery Low Implicitly cleared: true Default probable cause: lowBatteryThreshold	Release: • LR16.1.MG
Description: A UPS device is reporting low battery.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBatteryLow		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. 2. When utility power is restored, charge the battery to it's full capacity. If the battery level continues to decrease, the UPS will not be able to sustain the output load!		

Table 27-2635 IK8752508

Alarm	Attributes	Applicable major release
Name: IK8752508 (10015) Type: equipmentAlarm Package: lmg.IK8752508 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: UPS Internal Failure Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A UPS device is reporting a general UPS failure.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSInternal-Failure		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If the problem persists, contact NOKIA customer support.		

Table 27-2636 IK8752510

Alarm	Attributes	Applicable major release
Name: IK8752510 (10016) Type: environmentalAlarm Package: lmg.IK8752510 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: UPS Battery Failure Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG
Description: A UPS device is reporting a battery failure.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBatteryFailure		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If the problem persists, contact NOKIA customer support. 3. Your battery may need to be replaced. The UPS may not be capable of supporting it's load if utility power fails!		

Table 27-2637 IK8752518

Alarm	Attributes	Applicable major release
Name: IK8752518 (10019) Type: equipmentAlarm Package: lmg.IK8752518 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Bypass Not Available Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A UPS device is reporting bypass not avaliable.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBypassNotAvailable		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If the problem persists, contact NOKIA customer support.		

Table 27-2638 IK8752531

Alarm	Attributes	Applicable major release
Name: IK8752531 (10024) Type: equipmentAlarm Package: lmg.IK8752531 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: The UPS was started without utility power Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device has been started while on battery power. AC input power is not present.\nAlarm is cleared by the system.\nReason: cppqRPMtrapUPSStartedOnBattery		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. If the UPS remains on battery for an extended time it will not be able to sustain the output load.		

Table 27-2639 IK8752533

Alarm	Attributes	Applicable major release
Name: IK8752533 (10025) Type: equipmentAlarm Package: lmg.IK8752533 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Input voltage is out of range Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting input voltage is out of range.\nAlarm is cleared by the system.\nReason: cpqRPMtrapUPSInputOutofRange		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. 2. If the UPS remains on battery for an extended period of time it will not be able to sustain the load.		

Table 27-2640 IK8752534

Alarm	Attributes	Applicable major release
Name: IK8752534 (10026) Type: environmentalAlarm Package: lmg.IK8752534 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: UPS temperature out of range Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR16.1.MG
Description: A UPS device is reporting temperature is out of range.\nAlarm is cleared by the system.\nReason: cpqRPMtrapUPSTemperatureOutOfRange		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is in a well ventilated area. 2. Lower the ambient temperature in the area where the UPS is located.		

Table 27-2641 IK8752536

Alarm	Attributes	Applicable major release
Name: IK8752536 (10027) Type: equipmentAlarm Package: lmg.IK8752536 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: The UPS is on automatic bypass Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is operating in auto bypass mode.\nAlarm is cleared by the system.\nReason: cpqRPMtrapUPSBypassOnAuto		
Remedial action: Perform the following steps to clear the alarm: 1. In bypass mode, the UPS cannot support devices if there is a power failure. 2. Once maintenance has been performed return the UPS to normal mode.		

Table 27-2642 IK8752539

Alarm	Attributes	Applicable major release
Name: IK8752539 (10029) Type: equipmentAlarm Package: lmg.IK8752539 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: One or more UPS batteries have been disconnected Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A UPS device is reporting batteries are not connected to the UPS.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBatteriesDisconnected		
Remedial action: Perform the following steps to clear the alarm: 1. Connect the UPS Batteries. The UPS will not be capable of supporting it's load if the utility power fails!		

Table 27-2643 IK8752541

Alarm	Attributes	Applicable major release
Name: IK8752541 (10030) Type: environmentalAlarm Package: lmg.IK8752541 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: The UPS batteries are in a discharged condition Implicitly cleared: true Default probable cause: batteryDischarging	Release: • LR16.1.MG
Description: A UPS device is reporting batteries are completely discharged.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBatteryDischarged		
Remedial action: Perform the following steps to clear the alarm: 1. Connect the UPS to utility power to charge the batteries. The UPS will not be able to support it's load if the utility power fails!		

Table 27-2644 IK8752543

Alarm	Attributes	Applicable major release
Name: IK8752543 (10031) Type: equipmentAlarm Package: lmg.IK8752543 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: A UPS circuit breaker needs attention Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A UPS device is reporting an output Breaker or Relay has failed or may be stuck open or closed with this alarm.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSCheckBreaker		
Remedial action: Perform the following steps to clear the alarm: 1. Check all breakers on the UPS. 2. If the problem persists, contact NOKIA customer support.		

Table 27-2645 IK8752546

Alarm	Attributes	Applicable major release
Name: IK8752546 (10033) Type: equipmentAlarm Package: lmg.IK8752546 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: UPS output has been manually turned off Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The UPS has been powered off with user interaction.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSManualLoadDumped		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2646 IK8752548

Alarm	Attributes	Applicable major release
Name: IK8752548 (10034) Type: environmentalAlarm Package: lmg.IK8752548 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: A cover panel has been removed Implicitly cleared: true Default probable cause: enclosureDoorOpen	Release: • LR16.1.MG
Description: A UPS device is reporting a cover panel has been removed while utility power is present.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSCabinetDoorOpen		
Remedial action: Perform the following steps to clear the alarm: 1. Reinstall all panels. 2. If the problem persists, contact NOKIA customer support.		

Table 27-2647 IK8752550

Alarm	Attributes	Applicable major release
Name: IK8752550 (10035) Type: environmentalAlarm Package: lmg.IK8752550 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: The UPS has encountered an fan failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: A UPS device is reporting a fan failure has occurred.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSFan-Failure		
Remedial action: Perform the following steps to clear the alarm: 1. If the problem persists, contact NOKIA customer support.		

Table 27-2648 IK8752552

Alarm	Attributes	Applicable major release
Name: IK8752552 (10036) Type: processingErrorAlarm Package: lmg.IK8752552 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: The UPS N+1 load has been exceeded Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG
Description: A UPS device is reporting a loss of redundancy due to one of the following. 1. One or more of the Electronics Modules has failed 2. One or more of the electronics modules has been manually removed. 3. The amount of load on the UPS has increased to the point that the UPS is no longer able to support an N+1 configuration.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSLos-sOfRedundancy		
Remedial action: Perform the following steps to clear the alarm: 1. Check the UPS to see if one of the modules has failed. 2. Make sure that all modules are securely plugged in. 3. Reduce the load to return the N+1 configuration. 4. If the amount of load is now going to exceed and N+1 configuration permanently, change the configuration on the front panel of the UPS to Capacity instead of Parallel N+1.		

Table 27-2649 IK8752554

Alarm	Attributes	Applicable major release
Name: IK8752554 (10037) Type: equipmentAlarm Package: lmg.IK8752554 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: A UPS shutdown is imminent Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting a shutdown imminent condition.\nAlarm is cleared by the system.\nReason: cpqRPMTrap-UPSShutdownImminent		
Remedial action: Perform the following steps to clear the alarm: 1. Immediately restore power to the UPS. The UPS will not continue to supply power to devices following the shutdown!		

Table 27-2650 IK8752556

Alarm	Attributes	Applicable major release
Name: IK8752556 (10038) Type: equipmentAlarm Package: lmg.IK8752556 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: A UPS shutdown is pending Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting shutdown pending condition.\nAlarm is cleared by the system.\nReason: cpqRPMTrap-UPSShutdownPending		
Remedial action: Perform the following steps to clear the alarm: 1. Immediately restore power to the UPS. The UPS will not continue to supply power to devices following the shutdown!		

Table 27-2651 IK8752559

Alarm	Attributes	Applicable major release
Name: IK8752559 (7904) Type: equipmentAlarm Package: lmg.IK8752559 Raised on class: lmg.FRU	Severity: critical Specific problem: Critical Alarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A critical alarm has occurred.\nAlarm is cleared by the system.\nReason: cpqPMTrapCritical		
Remedial action: Check the Trap Details for more information.		

Table 27-2652 IK8752609

Alarm	Attributes	Applicable major release
Name: IK8752609 (7905) Type: processingErrorAlarm Package: lmg.IK8752609 Raised on class: lmg.FRU	Severity: major Specific problem: Monitor Condition Failed Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A fault reporting feature has exceeded normal limits in the monitor indicated by the cpqSiMonitorIndex. The monitor's condition has been set to failed due to an operational feature exceeding normal operating limits. The monitor will not be useable and should be replaced.\nAlarm is cleared by the system.\nReason: cpqSiMonitorConditionFailed		
Remedial action: Make a note of the monitor model number and serial number. Replace the monitor. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 27-2653 IK8752610

Alarm	Attributes	Applicable major release
Name: IK8752610 (7906) Type: processingErrorAlarm Package: lmg.IK8752610 Raised on class: lmg.FRU	Severity: major Specific problem: Excessive Correctable Memory Errors Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Correctable memory error count has exceeded the threshold for the memory module indicated by the 'cpqSiMemErrorIndex' variable. The appropriate cpqSiMemModuleECCStatus has been set to degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiCorrMemErrStatusDegraded		
Remedial action: For Desktops, the System Administrator should run the F10 Diagnostics on this system and select RAM LONG TEST. If it is determined that a module needs replacing, schedule maintenance for the system and replace the failed memory module. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 27-2654 IK8752615

Alarm	Attributes	Applicable major release
Name: IK8752615 (7907) Type: equipmentAlarm Package: lmg.IK8752615 Raised on class: lmg.FRU	Severity: major Specific problem: Hot Plug Slot Board Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Hot Plug Slot Board Failed Power-Up. A Hot Plug Slot Board has failed to power-up in the specified chassis and slot.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiHotPlugSlotPowerUpFailed		
Remedial action: Insure the board and all cables are installed correctly and the board type and revision are the same as the replaced board.		

Table 27-2655 IK8752616

Alarm	Attributes	Applicable major release
Name: IK8752616 (7908) Type: environmentalAlarm Package: lmg.IK8752616 Raised on class: lmg.FRU	Severity: major Specific problem: Battery Failure Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The battery indicated by cpqSiSysBatteryIndex has failed and must be replaced.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiSysBatteryFailure		
Remedial action: Contact your System Administrator or Authorized Reseller to order a replacement battery. Recycle your old battery. For proper disposal information, refer to the documentation that came with your computer.		

Table 27-2656 IK8752617

Alarm	Attributes	Applicable major release
Name: IK8752617 (7909) Type: environmentalAlarm Package: lmg.IK8752617 Raised on class: lmg.FRU	Severity: major Specific problem: Battery Charging Degradation Implicitly cleared: true Default probable cause: lowBatteryThreshold	Release: • LR14.3.MG • LR15.1.MG
Description: Significant battery degradation has occurred with battery indicated by cpqSiSysBatteryIndex. The battery can no longer be fully recharged.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiSysBatteryChargingDegraded		
Remedial action: If using multiple batteries, run the Power Conservation Utility to identify the battery location. Contact your System Administrator or Authorized Reseller to order a replacement battery.		

Table 27-2657 IK8752620

Alarm	Attributes	Applicable major release
Name: IK8752620 (7910) Type: equipmentAlarm Package: lmg.IK8752620 Raised on class: lmg.FRU	Severity: major Specific problem: Server Power Outage Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Server Power Outage. The Remote Insight/ Integrated Lights-Out firmware has detected server power failure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSm2ServerPowerOutage		
Remedial action: Check the server's power source.		

Table 27-2658 IK8752622

Alarm	Attributes	Applicable major release
Name: IK8752622 (7911) Type: environmentalAlarm Package: Img.IK8752622 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Remote Insight Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Remote Insight Battery Failed. The Remote Insight battery has failed and needs to be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2BatteryFailed		
Remedial action: replace the failing Remote Insight battery.		

Table 27-2659 IK8752628

Alarm	Attributes	Applicable major release
Name: IK8752628 (7912) Type: equipmentAlarm Package: Img.IK8752628 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Remote Insight external power cable disconnected Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: External Power Cable Disconnected. The Remote Insight external power cable has been disconnected.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ExternalPowerCableDisconnected		
Remedial action: check External Power Cable		

Table 27-2660 IK8752632

Alarm	Attributes	Applicable major release
Name: IK8752632 (7913) Type: processingErrorAlarm Package: Img.IK8752632 Raised on class: Img.LMGMngElement	Severity: critical Specific problem: Server Fatal Error Detected Implicitly cleared: false Default probable cause: softwareError	Release: • LR14.3.MG
Description: Server Fatal Error Detected. The Remote Insight/ Integrated Lights-Out firmware has detected a server fatal error.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerFatalError		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2661 IK8752633

Alarm	Attributes	Applicable major release
Name: IK8752633 (7914) Type: communicationsAlarm Package: lmg.IK8752633 Raised on class: lmg.FRU	Severity: major Specific problem: The iLO NIC Link is Down Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The iLO NIC Link is Down. The Remote Insight/ Integrated Lights-Out firmware has detected the loss of network link.\nAlarm is cleared by the system.\nReason: cpqSm2NicLinkDown		
Remedial action: Check the network connections for the iLO.		

Table 27-2662 IK8752636

Alarm	Attributes	Applicable major release
Name: IK8752636 (9394) Type: equipmentAlarm Package: lmg.IK8752636 Raised on class: lmg.FRU	Severity: major Specific problem: Server powered off Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG • LR16.1.MG
Description: The server has been powered off. This will be sent once the server has been powered off, either by OS, or the power button.\nAlarm is cleared by the system.\nReason: cpqSm2ServerPowerOff		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2663 IK8752648

Alarm	Attributes	Applicable major release
Name: IK8752648 (7915) Type: qualityOfServiceAlarm Package: lmg.IK8752648 Raised on class: lmg.FRU	Severity: major Specific problem: PC Card Thermal Failure Status Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm is sent when the PC Card Slot Thermal Sensor threshold has been exceeded for degraded operations thereby causing failed operations. This alarm will be sent when cpqSePCCardStatus transitions from Thermal Degraded (2) to Thermal Failure (3). The manufacturer and product information strings as well as the slot number for the failed PC Card is provided as parameters for this trap.\nAlarm is cleared by the system.\nReason: cpqSePCCardThermalFailure		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2664 IK8752657

Alarm	Attributes	Applicable major release
Name: IK8752657 (7916) Type: environmentalAlarm Package: lmg.IK8752657 Raised on class: lmg.FRU	Severity: major Specific problem: Storage System Temperature Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.\nAlarm is cleared by the system.\nReason: cpqSsTempFailed		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2665 IK8754762

Alarm	Attributes	Applicable major release
Name: IK8754762 (7917) Type: communicationsAlarm Package: lmg.IK8754762 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: linkDown Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: A linkDown alarm signifies that the SNMP entity, acting in an agent role, has detected that the ifOperStatus object for one of its communication links is about to enter the down state from some other state (but not from the notPresent state). This other state is indicated by the included value of ifOperStatus.\nAlarm is cleared by the system.\nReason: linkDown		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2666 IK8757481

Alarm	Attributes	Applicable major release
Name: IK8757481 (10886) Type: equipmentAlarm Package: lmg.IK8757481 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: The primary controller in the subsytem has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: The primary controller in the subsystem has failed. Details: The primary Controller has failed.		
Remedial action: No action is required.		

Table 27-2667 IK8757482

Alarm	Attributes	Applicable major release
Name: IK8757482 (10887) Type: equipmentAlarm Package: Img.IK8757482 Raised on class: Img.FRU	Severity: indeterminate Specific problem: The secondary controller in the subsytem has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: The secondary controller in the subsystem has failed. Details: The secondary controller has failed.		
Remedial action: No action is required.		

Table 27-2668 IK8757483

Alarm	Attributes	Applicable major release
Name: IK8757483 (10888) Type: equipmentAlarm Package: Img.IK8757483 Raised on class: Img.FRU	Severity: indeterminate Specific problem: A RAIDset has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A RAIDset has failed. Details: The RAIDset has failed and is off-line.		
Remedial action: No action is required.		

Table 27-2669 IK8757484

Alarm	Attributes	Applicable major release
Name: IK8757484 (10889) Type: equipmentAlarm Package: Img.IK8757484 Raised on class: Img.FRU	Severity: indeterminate Specific problem: A RAIDset has become degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A RAIDset has become degraded. Details: A RAIDset has become degraded due to a member disk device failure.		
Remedial action: No action is required.		

Table 27-2670 IK8757485

Alarm	Attributes	Applicable major release
Name: IK8757485 (10890) Type: equipmentAlarm Package: Img.IK8757485 Raised on class: Img.FRU	Severity: indeterminate Specific problem: A disk drive has failed Implicitly cleared: true Default probable cause: storageCapacityProblem	Release: • LR16.1.MG
Description: A disk drive has failed. Details: A disk device has failed.		
Remedial action: No action is required.		

Table 27-2671 IK8757486

Alarm	Attributes	Applicable major release
Name: IK8757486 (10891) Type: equipmentAlarm Package: lmg.IK8757486 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Fan has failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: Fan has failed. Details: One of the cooling fans in the primary enclosure has failed.		
Remedial action: No action is required.		

Table 27-2672 IK8757487

Alarm	Attributes	Applicable major release
Name: IK8757487 (10892) Type: equipmentAlarm Package: lmg.IK8757487 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Power supply has failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power supply has failed. Details: One of the power supplies in the primary enclosure has failed.		
Remedial action: No action is required.		

Table 27-2673 IK8757488

Alarm	Attributes	Applicable major release
Name: IK8757488 (10893) Type: equipmentAlarm Package: lmg.IK8757488 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Primary enclosure temperature warning Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Primary enclosure temperature warning. Details: The temperature in the primary enclosure has triggered a warning condition detected by the controller.		
Remedial action: No action is required.		

Table 27-2674 IK8757489

Alarm	Attributes	Applicable major release
Name: IK8757489 (10894) Type: equipmentAlarm Package: lmg.IK8757489 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Fan has failed in expansion cabinet Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: Fan has failed in expansion cabinet. Details: One of the cooling fans in the expansion cabinet has failed.		

Table 27-2674 IK8757489 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-2675 IK8757490

Alarm	Attributes	Applicable major release
Name: IK8757490 (10895) Type: equipmentAlarm Package: Img.IK8757490 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Power supply has failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power supply has failed. Details: One of the power supplies in the expansion cabinet has failed.		
Remedial action: No action is required.		

Table 27-2676 IK8757491

Alarm	Attributes	Applicable major release
Name: IK8757491 (10896) Type: equipmentAlarm Package: Img.IK8757491 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Expansion cabinet temperature warning Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR16.1.MG
Description: Expansion cabinet temperature warning. Details: The temperature in the expansion cabinet has triggered a warning condition detected by the controller.		
Remedial action: No action is required.		

Table 27-2677 IK8757500

Alarm	Attributes	Applicable major release
Name: IK8757500 (10897) Type: equipmentAlarm Package: Img.IK8757500 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Cluster Node Degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: This event will be sent any time the condition of a node in the cluster becomes degraded.		
Remedial action: No action is required.		

Table 27-2678 IK8757501

Alarm	Attributes	Applicable major release
Name: IK8757501 (10898) Type: equipmentAlarm Package: lmg.IK8757501 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Cluster Node Failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: This event will be sent any time the condition of a node in the cluster becomes failed.		
Remedial action: No action is required.		

Table 27-2679 IK8757502

Alarm	Attributes	Applicable major release
Name: IK8757502 (10899) Type: equipmentAlarm Package: lmg.IK8757502 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Cluster Resource Degraded Implicitly cleared: true Default probable cause: underlyingResourceUnavail-able	Release: • LR16.1.MG
Description: This event will be sent any time the condition of a cluster resource becomes degraded.		
Remedial action: No action is required.		

Table 27-2680 IK8757503

Alarm	Attributes	Applicable major release
Name: IK8757503 (10900) Type: equipmentAlarm Package: lmg.IK8757503 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Cluster Resource Failed Implicitly cleared: true Default probable cause: underlyingResourceUnavail-able	Release: • LR16.1.MG
Description: This event will be sent any time the condition of a cluster resource becomes failed.		
Remedial action: No action is required.		

Table 27-2681 IK8757504

Alarm	Attributes	Applicable major release
Name: IK8757504 (10901) Type: equipmentAlarm Package: lmg.IK8757504 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Cluster Network Degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: This event will be sent any time the condition of a cluster network becomes degraded.		

Table 27-2681 IK8757504 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-2682 IK8757505

Alarm	Attributes	Applicable major release
Name: IK8757505 (10902) Type: equipmentAlarm Package: lmg.IK8757505 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Cluster Network Failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: This event will be sent any time the condition of a cluster network becomes failed.		
Remedial action: No action is required.		

Table 27-2683 IK8757508

Alarm	Attributes	Applicable major release
Name: IK8757508 (10903) Type: equipmentAlarm Package: lmg.IK8757508 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: External Array Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: External Array Accelerator Board Bad Data. This event signifies that the agent has detected a Array Accelerator Cache Board that has lost battery power. If data was being stored in the accelerator memory when the system lost power, that data has been lost.		
Remedial action: No action is required.		

Table 27-2684 IK8757509

Alarm	Attributes	Applicable major release
Name: IK8757509 (10904) Type: equipmentAlarm Package: lmg.IK8757509 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: External Array Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG
Description: External Array Accelerator Board Battery Failed. This event signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.		
Remedial action: No action is required.		

Table 27-2685 IK8757510

Alarm	Attributes	Applicable major release
Name: IK8757510 (10905) Type: equipmentAlarm Package: lmg.IK8757510 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: External Array Redundant Controller Active Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: External Array Redundant Controller Active. This event signifies that the Storage Agent has detected that a backup array controller in a duplexed pair has switched over to the active role. The variable cpqFcaCntlrBoxIoSlot indicates the new active controller index.		
Remedial action: No action is required.		

Table 27-2686 IK8757511

Alarm	Attributes	Applicable major release
Name: IK8757511 (10906) Type: equipmentAlarm Package: lmg.IK8757511 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: External Array Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: External Array Accelerator Board Bad Data. This event signifies that the agent has detected a Array Accelerator Cache Board that has lost battery power. If data was being stored in the accelerator memory when the system lost power, that data has been lost.		
Remedial action: No action is required.		

Table 27-2687 IK8757512

Alarm	Attributes	Applicable major release
Name: IK8757512 (10907) Type: equipmentAlarm Package: lmg.IK8757512 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: External Array Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG
Description: External Array Accelerator Board Battery Failed. This event signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.		
Remedial action: No action is required.		

Table 27-2688 IK8757513

Alarm	Attributes	Applicable major release
Name: IK8757513 (10908) Type: equipmentAlarm Package: Img.IK8757513 Raised on class: Img.FRU	Severity: indeterminate Specific problem: POST Errors Occurred Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process. Details of the POST error messages can be found in Integrated Management Log		
Remedial action: No action is required.		

Table 27-2689 IK8757514

Alarm	Attributes	Applicable major release
Name: IK8757514 (10909) Type: equipmentAlarm Package: Img.IK8757514 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Server Power Supply Degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The fault tolerant power supply sub-system condition has been set to degraded.		
Remedial action: No action is required.		

Table 27-2690 IK8757515

Alarm	Attributes	Applicable major release
Name: IK8757515 (10910) Type: equipmentAlarm Package: Img.IK8757515 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Fan Degraded Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: The Fault Tolerant Fan condition has been set to degraded for the specified chassis and fan.		
Remedial action: No action is required.		

Table 27-2691 IK8757516

Alarm	Attributes	Applicable major release
Name: IK8757516 (10911) Type: equipmentAlarm Package: Img.IK8757516 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Fan Failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: The Fault Tolerant Fan condition has been set to failed for the specified chassis and fan.		
Remedial action: No action is required.		

Table 27-2692 IK8757517

Alarm	Attributes	Applicable major release
Name: IK8757517 (10912) Type: equipmentAlarm Package: lmg.IK8757517 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Power Converter Degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The DC-DC Power Converter condition has been set to degraded for the specified chassis, slot and socket.		
Remedial action: No action is required.		

Table 27-2693 IK8757518

Alarm	Attributes	Applicable major release
Name: IK8757518 (10913) Type: equipmentAlarm Package: lmg.IK8757518 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Power Converter Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The DC-DC Power Converter condition has been set to failed for the specified chassis, slot and socket.		
Remedial action: No action is required.		

Table 27-2694 IK8757519

Alarm	Attributes	Applicable major release
Name: IK8757519 (10914) Type: equipmentAlarm Package: lmg.IK8757519 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Power Converter Redundancy Lost Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The DC-DC Power Converters have lost redundancy for the specified chassis.		
Remedial action: No action is required.		

Table 27-2695 IK8757520

Alarm	Attributes	Applicable major release
Name: IK8757520 (10915) Type: equipmentAlarm Package: lmg.IK8757520 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Cache Accel Parity Errors may require a module Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • LR16.1.MG
Description: A cache accelerator parity error indicates a cache module needs to be replaced. The error information is reported in the variable cpqHeEventLogErrorDesc.		

Table 27-2695 IK8757520 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-2696 IK8757521

Alarm	Attributes	Applicable major release
Name: IK8757521 (10916) Type: equipmentAlarm Package: lmg.IK8757521 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Online Spare Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Advanced Memory Protection Online Spare Engaged. The Advanced Memory Protection subsystem has detected a memory fault. The Online Spare Memory has been activated.		
Remedial action: No action is required.		

Table 27-2697 IK8757522

Alarm	Attributes	Applicable major release
Name: IK8757522 (10917) Type: equipmentAlarm Package: lmg.IK8757522 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Mirrored Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Advanced Memory Protection Mirrored Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. Mirrored Memory has been activated.		
Remedial action: No action is required.		

Table 27-2698 IK8757523

Alarm	Attributes	Applicable major release
Name: IK8757523 (10918) Type: equipmentAlarm Package: lmg.IK8757523 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Advanced ECC Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Advanced Memory Protection Advanced ECC Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. Advanced ECC has been activated.		
Remedial action: No action is required.		

Table 27-2699 IK8757524

Alarm	Attributes	Applicable major release
Name: IK8757524 (10919) Type: equipmentAlarm Package: lmg.IK8757524 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Advanced XOR Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Advanced Memory Protection XOR Engine Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. The XOR engine has been activated.		
Remedial action: No action is required.		

Table 27-2700 IK8757525

Alarm	Attributes	Applicable major release
Name: IK8757525 (10920) Type: equipmentAlarm Package: lmg.IK8757525 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Memory Board or Cartridge Removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Memory board or cartridge removed. An Advanced Memory Protection sub-system board or cartridge has been removed from the system.		
Remedial action: No action is required.		

Table 27-2701 IK8757526

Alarm	Attributes	Applicable major release
Name: IK8757526 (10921) Type: equipmentAlarm Package: lmg.IK8757526 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Memory Board or Cartridge Bus Error Detected Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Memory board or cartridge bus error detected. An Advanced Memory Protection sub-system board or cartridge bus error has been detected.		
Remedial action: No action is required.		

Table 27-2702 IK8757527

Alarm	Attributes	Applicable major release
Name: IK8757527 (10922) Type: equipmentAlarm Package: Img.IK8757527 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Management processor failed reset Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: The Management processor failed reset The management processor was not successfully reset and is not operational.		
Remedial action: No action is required.		

Table 27-2703 IK8757528

Alarm	Attributes	Applicable major release
Name: IK8757528 (10923) Type: equipmentAlarm Package: Img.IK8757528 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Memory Board or Cartridge or Riser Removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Memory board or cartridge or riser removed. An Advanced Memory Protection sub-system board or cartridge or riser has been removed from the system. Value 0 for CPU means memory is not processor based.		
Remedial action: No action is required.		

Table 27-2704 IK8757529

Alarm	Attributes	Applicable major release
Name: IK8757529 (10924) Type: equipmentAlarm Package: Img.IK8757529 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Memory Board or Cartridge or Riser Bus Error Detected Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Memory board or cartridge or Riser bus error detected. An Advanced Memory Protection sub-system board or cartridge or Riser bus error has been detected. Value 0 for CPU means memory is not processor based.		
Remedial action: No action is required.		

Table 27-2705 IK8757530

Alarm	Attributes	Applicable major release
Name: IK8757530 (10925) Type: equipmentAlarm Package: lmg.IK8757530 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Advanced LockStep Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Advanced Memory Protection LockStep Engine Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. The LockStep engine has been activated.		
Remedial action: No action is required.		

Table 27-2706 IK8757531

Alarm	Attributes	Applicable major release
Name: IK8757531 (10926) Type: equipmentAlarm Package: lmg.IK8757531 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG
Description: This event will be sent any time the configured redundant NIC becomes the active NIC.		
Remedial action: No action is required.		

Table 27-2707 IK8757532

Alarm	Attributes	Applicable major release
Name: IK8757532 (10927) Type: equipmentAlarm Package: lmg.IK8757532 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Critical Software update Notification Trap Implicitly cleared: true Default probable cause: softwareProgramError	Release: • LR16.1.MG
Description: This event is a send to the user to notify him of a Critical Software Update.		
Remedial action: No action is required.		

Table 27-2708 IK8757533

Alarm	Attributes	Applicable major release
Name: IK8757533 (10928) Type: equipmentAlarm Package: lmg.IK8757533 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Duplex Controller Active Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG

Table 27-2708 IK8757533 (continued)

Alarm	Attributes	Applicable major release
Description: Controller Active. This event signifies that the agent has detected that a backup array controller in a duplexed pair has switched over to the active role. The variable cpqDaCntlrSlot indicates the active controller slot and cpqDaCntlrPartnerSlot indicates the backup.		
Remedial action: No action is required.		

Table 27-2709 IK8757534

Alarm	Attributes	Applicable major release
Name: IK8757534 (10929) Type: equipmentAlarm Package: lmg.IK8757534 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Physical Drive Threshold Passed. This event signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.		
Remedial action: No action is required.		

Table 27-2710 IK8757535

Alarm	Attributes	Applicable major release
Name: IK8757535 (10930) Type: equipmentAlarm Package: lmg.IK8757535 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Accelerator Board Bad Data. This event signifies that the agent has detected an array accelerator cache board that has lost battery power. If data was being stored in the accelerator cache memory when the server lost power, that data has been lost.		
Remedial action: No action is required.		

Table 27-2711 IK8757536

Alarm	Attributes	Applicable major release
Name: IK8757536 (10931) Type: equipmentAlarm Package: lmg.IK8757536 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG
Description: Accelerator Board Battery Failed. This event signifies that the agent has detected a battery failure associated with the array accelerator cache board.		
Remedial action: No action is required.		

Table 27-2712 IK8757537

Alarm	Attributes	Applicable major release
Name: IK8757537 (10932) Type: equipmentAlarm Package: lmg.IK8757537 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Physical Drive Threshold Passed. This event signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.		
Remedial action: No action is required.		

Table 27-2713 IK8757538

Alarm	Attributes	Applicable major release
Name: IK8757538 (10933) Type: equipmentAlarm Package: lmg.IK8757538 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Physical Drive Threshold Passed. This event signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.		
Remedial action: No action is required.		

Table 27-2714 IK8757539

Alarm	Attributes	Applicable major release
Name: IK8757539 (10934) Type: equipmentAlarm Package: lmg.IK8757539 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Cache Module Board Bad Data. This event signifies that the agent has detected a cache module board that has lost backup power. If data was being stored in the cache module memory when the server lost power, that data has been lost. The backup power source is indicated by cpqDaAccelBackupPowerSource.		
Remedial action: No action is required.		

Table 27-2715 IK8757540

Alarm	Attributes	Applicable major release
Name: IK8757540 (10935) Type: equipmentAlarm Package: lmg.IK8757540 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG

Table 27-2715 IK8757540 (continued)

Alarm	Attributes	Applicable major release
Description: Cache Module Board Backup Power Source Failed. This event signifies that the agent has detected a backup power source failure associated with the cache module board. The backup power source is indicated by cpqDaAccelBackupPowerSource.		
Remedial action: No action is required.		

Table 27-2716 IK8757541

Alarm	Attributes	Applicable major release
Name: IK8757541 (10936) Type: equipmentAlarm Package: lmg.IK8757541 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Tape Drive Cleaning Required Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG
Description: Tape Drive Cleaning Required trap. The agent has detected a tape drive that needs to have a cleaning tape inserted and run. This will cause the tape drive heads to be cleaned.		
Remedial action: No action is required.		

Table 27-2717 IK8757542

Alarm	Attributes	Applicable major release
Name: IK8757542 (10937) Type: equipmentAlarm Package: lmg.IK8757542 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Tape Drive Cleaning Tape Needs Replacing Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape.		
Remedial action: No action is required.		

Table 27-2718 IK8757543

Alarm	Attributes	Applicable major release
Name: IK8757543 (10938) Type: equipmentAlarm Package: lmg.IK8757543 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: IDE Drive Ultra ATA Degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: An IDE drive detects an excessive number of Ultra ATA data transmission errors between the hard drive and the processor.		
Remedial action: No action is required.		

Table 27-2719 IK8757545

Alarm	Attributes	Applicable major release
Name: IK8757545 (10939) Type: equipmentAlarm Package: lmg.IK8757545 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: NIC Connectivity Lost Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG
Description: This event will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.		
Remedial action: No action is required.		

Table 27-2720 IK8757546

Alarm	Attributes	Applicable major release
Name: IK8757546 (10940) Type: equipmentAlarm Package: lmg.IK8757546 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Enclosure fan failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: The enclosure fan status has been set to failed. This event signifies that an enclosure fan has failed and no other fans in the redundant fan group are operating. This may result in overheating of the enclosure.		
Remedial action: No action is required.		

Table 27-2721 IK8757547

Alarm	Attributes	Applicable major release
Name: IK8757547 (10941) Type: equipmentAlarm Package: lmg.IK8757547 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Enclosure fan degraded Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR16.1.MG
Description: The enclosure fan status has been set to degraded. This event signifies that an enclosure fan has failed but other fans in the redundant fan group are still operating. This may result in overheating of the enclosure.		
Remedial action: No action is required.		

Table 27-2722 IK8757548

Alarm	Attributes	Applicable major release
Name: IK8757548 (10942) Type: equipmentAlarm Package: Img.IK8757548 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Rack power supply failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The power supply status has been set to failed. This event signifies that a power supply has failed.		
Remedial action: No action is required.		

Table 27-2723 IK8757549

Alarm	Attributes	Applicable major release
Name: IK8757549 (10943) Type: equipmentAlarm Package: Img.IK8757549 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Rack power supply degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The power supply status has been set to degraded. This event signifies that a power supply has degraded.		
Remedial action: No action is required.		

Table 27-2724 IK8757550

Alarm	Attributes	Applicable major release
Name: IK8757550 (10944) Type: equipmentAlarm Package: Img.IK8757550 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Rack power subsystem not redundant Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The rack power subsystem is no longer in a redundant state.		
Remedial action: No action is required.		

Table 27-2725 IK8757551

Alarm	Attributes	Applicable major release
Name: IK8757551 (10945) Type: equipmentAlarm Package: Img.IK8757551 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Rack power supply input voltage problem Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The rack power supply detected an input line voltage problem.		

Table 27-2725 IK8757551 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-2726 IK8757552

Alarm	Attributes	Applicable major release
Name: IK8757552 (10946) Type: equipmentAlarm Package: lmg.IK8757552 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Rack power subsystem overload condition Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: The rack power subsystem overload condition.		
Remedial action: No action is required.		

Table 27-2727 IK8757553

Alarm	Attributes	Applicable major release
Name: IK8757553 (10947) Type: equipmentAlarm Package: lmg.IK8757553 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Server shutdown due to power shedding Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Server shutdown due to power shedding. The server blade was shutdown due to a lack of power.		
Remedial action: No action is required.		

Table 27-2728 IK8757554

Alarm	Attributes	Applicable major release
Name: IK8757554 (10948) Type: equipmentAlarm Package: lmg.IK8757554 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Server power on prevented to preserve redundancy Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Server power on prevented to preserve redundancy. There is not enough power to power on the server blade and maintain redundancy for the other blades in the enclosure.		
Remedial action: No action is required.		

Table 27-2729 IK8757555

Alarm	Attributes	Applicable major release
Name: IK8757555 (10949) Type: equipmentAlarm Package: Img.IK8757555 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade.		
Remedial action: No action is required.		

Table 27-2730 IK8757556

Alarm	Attributes	Applicable major release
Name: IK8757556 (10950) Type: equipmentAlarm Package: Img.IK8757556 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The server enclosure micro-controller was not found.		
Remedial action: No action is required.		

Table 27-2731 IK8757557

Alarm	Attributes	Applicable major release
Name: IK8757557 (10951) Type: equipmentAlarm Package: Img.IK8757557 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The power enclosure micro-controller was not found.		
Remedial action: No action is required.		

Table 27-2732 IK8757558

Alarm	Attributes	Applicable major release
Name: IK8757558 (10952) Type: equipmentAlarm Package: Img.IK8757558 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Fuse open Implicitly cleared: true Default probable cause: enclosureDoorOpen	Release: • LR16.1.MG
Description: Fuse open. The fuse has been tripped.		

Table 27-2732 IK8757558 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-2733 IK8757559

Alarm	Attributes	Applicable major release
Name: IK8757559 (10953) Type: equipmentAlarm Package: lmg.IK8757559 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Power subsystem not load balanced Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power subsystem not load balanced. The power subsystem is out of balance for this power enclosure.		
Remedial action: No action is required.		

Table 27-2734 IK8757560

Alarm	Attributes	Applicable major release
Name: IK8757560 (10954) Type: equipmentAlarm Package: lmg.IK8757560 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Power subsystem DC power problem Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power subsystem DC power problem. There is a power subsystem DC power problem for this power enclosure.		
Remedial action: No action is required.		

Table 27-2735 IK8757561

Alarm	Attributes	Applicable major release
Name: IK8757561 (10955) Type: equipmentAlarm Package: lmg.IK8757561 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Power subsystem AC facility input power exceeded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power subsystem AC facility input power exceeded. There is a power subsystem Power subsystem AC facility input power exceeded for this power enclosure.		
Remedial action: No action is required.		

Table 27-2736 IK8757562

Alarm	Attributes	Applicable major release
Name: IK8757562 (10956) Type: equipmentAlarm Package: Img.IK8757562 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Unknown power consumption Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Unknown power consumption. There is an unknown power consumer drawing power.		
Remedial action: No action is required.		

Table 27-2737 IK8757563

Alarm	Attributes	Applicable major release
Name: IK8757563 (10957) Type: equipmentAlarm Package: Img.IK8757563 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Power subsystem load balancing wire missing Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power subsystem load balancing wire missing. The power subsystem load balancing wire missing.		
Remedial action: No action is required.		

Table 27-2738 IK8757564

Alarm	Attributes	Applicable major release
Name: IK8757564 (10958) Type: equipmentAlarm Package: Img.IK8757564 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Power subsystem has too may power enclosures Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Power subsystem has too may power enclosures. The maximum number of power enclosures has been exceeded.		
Remedial action: No action is required.		

Table 27-2739 IK8757565

Alarm	Attributes	Applicable major release
Name: IK8757565 (10959) Type: equipmentAlarm Package: Img.IK8757565 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Power subsystem improperly configured Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG

Table 27-2739 IK8757565 (continued)

Alarm	Attributes	Applicable major release
Description: Power subsystem improperly configured. The power subsystem has been improperly configured.		
Remedial action: No action is required.		

Table 27-2740 IK8757566

Alarm	Attributes	Applicable major release
Name: IK8757566 (10960) Type: equipmentAlarm Package: Img.IK8757566 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Server blade health status degraded Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR16.1.MG
Description: Server blade health status Degraded. The server blade health status has changed to Degraded.		
Remedial action: No action is required.		

Table 27-2741 IK8757567

Alarm	Attributes	Applicable major release
Name: IK8757567 (10961) Type: equipmentAlarm Package: Img.IK8757567 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Server blade not responding to group capping requests Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: The server blade is not responding to the group capper. The server blade is not responding to capping requests from the enclosure group capper		
Remedial action: No action is required.		

Table 27-2742 IK8757568

Alarm	Attributes	Applicable major release
Name: IK8757568 (10962) Type: equipmentAlarm Package: Img.IK8757568 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Server blade unexpected shutdown Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Server blade shutdown unexpectadly. An unexpected shutdown event has occurred for this server blade.		
Remedial action: No action is required.		

Table 27-2743 IK8757569

Alarm	Attributes	Applicable major release
Name: IK8757569 (10963) Type: equipmentAlarm Package: Img.IK8757569 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Generic Power Subsystem EAE Minor trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: FlexFabric Cmdr Power Subsystem Minor trap.		
Remedial action: No action is required.		

Table 27-2744 IK8757570

Alarm	Attributes	Applicable major release
Name: IK8757570 (10964) Type: equipmentAlarm Package: Img.IK8757570 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Generic Power Subsystem EAE Major trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: FlexFabric Cmdr Power Subsystem Major trap.		
Remedial action: No action is required.		

Table 27-2745 IK8757571

Alarm	Attributes	Applicable major release
Name: IK8757571 (10965) Type: equipmentAlarm Package: Img.IK8757571 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Generic Power Subsystem EAE Critical trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: FlexFabric Cmdr Power Subsystem Critical trap.		
Remedial action: No action is required.		

Table 27-2746 IK8757572

Alarm	Attributes	Applicable major release
Name: IK8757572 (10966) Type: equipmentAlarm Package: Img.IK8757572 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Generic WSMAN Major trap Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG

Table 27-2746 IK8757572 (continued)

Alarm	Attributes	Applicable major release
Description: WSMAN Major trap		
Remedial action: No action is required.		

Table 27-2747 IK8757573

Alarm	Attributes	Applicable major release
Name: IK8757573 (10967) Type: equipmentAlarm Package: lmg.IK8757573 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Generic WSMAN Critical trap Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: WSMAN Critical trap		
Remedial action: No action is required.		

Table 27-2748 IK8757574

Alarm	Attributes	Applicable major release
Name: IK8757574 (10968) Type: equipmentAlarm Package: lmg.IK8757574 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Device Connected Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG
Description: A UPS device is reporting a Connection Lost due to one of the following. 1. The serial cable connected to the UPS has been unplugged. 2. The Network cable connected to the UPS has been unplugged.		
Remedial action: No action is required.		

Table 27-2749 IK8757575

Alarm	Attributes	Applicable major release
Name: IK8757575 (10969) Type: equipmentAlarm Package: lmg.IK8757575 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Connection Lost Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR16.1.MG
Description: A UPS device is reporting a Connection Lost due to one of the following. 1. The serial cable connected to the UPS has been unplugged. 2. The Network cable connected to the UPS has been unplugged.		
Remedial action: No action is required.		

Table 27-2750 IK8757576

Alarm	Attributes	Applicable major release
Name: IK8757576 (10970) Type: equipmentAlarm Package: Img.IK8757576 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS Input Voltage Normal Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting input voltage is out of range.		
Remedial action: No action is required.		

Table 27-2751 IK8757577

Alarm	Attributes	Applicable major release
Name: IK8757577 (10971) Type: equipmentAlarm Package: Img.IK8757577 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS Output Voltage Normal Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting output voltage is out of Range.		
Remedial action: No action is required.		

Table 27-2752 IK8757578

Alarm	Attributes	Applicable major release
Name: IK8757578 (10972) Type: equipmentAlarm Package: Img.IK8757578 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS Battery Level Normal Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting low battery.		
Remedial action: No action is required.		

Table 27-2753 IK8757579

Alarm	Attributes	Applicable major release
Name: IK8757579 (10973) Type: equipmentAlarm Package: Img.IK8757579 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS On Battery Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting on battery condition.		
Remedial action: No action is required.		

Table 27-2754 IK8757580

Alarm	Attributes	Applicable major release
Name: IK8757580 (10974) Type: equipmentAlarm Package: Img.IK8757580 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS On Buck Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting an On Buck condition due to the following. 1. Utility power has increased above recommended utility input levels.		
Remedial action: No action is required.		

Table 27-2755 IK8757581

Alarm	Attributes	Applicable major release
Name: IK8757581 (10975) Type: equipmentAlarm Package: Img.IK8757581 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS On Boost Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting an On Boost condition due to the following. 1. Utility power has dropped below recommended utility input levels.		
Remedial action: No action is required.		

Table 27-2756 IK8757582

Alarm	Attributes	Applicable major release
Name: IK8757582 (10976) Type: equipmentAlarm Package: Img.IK8757582 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS On Utility Power Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting on battery condition.		
Remedial action: No action is required.		

Table 27-2757 IK8757583

Alarm	Attributes	Applicable major release
Name: IK8757583 (10977) Type: equipmentAlarm Package: Img.IK8757583 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS Temperature Normal Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR16.1.MG
Description: A UPS device is reporting temperature is out of range.		

Table 27-2757 IK8757583 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-2758 IK8757584

Alarm	Attributes	Applicable major release
Name: IK8757584 (10978) Type: equipmentAlarm Package: Img.IK8757584 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS Diagnostic Test Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting a diagnostic test failed.		
Remedial action: No action is required.		

Table 27-2759 IK8757585

Alarm	Attributes	Applicable major release
Name: IK8757585 (10979) Type: equipmentAlarm Package: Img.IK8757585 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS Diagnostic Test Succeeded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting a diagnostic test failed.		
Remedial action: No action is required.		

Table 27-2760 IK8757586

Alarm	Attributes	Applicable major release
Name: IK8757586 (10980) Type: equipmentAlarm Package: Img.IK8757586 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Site Wiring Fault Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A UPS device is reporting a fault in the input wiring, other than Phase Rotation: e.g., Ground/Neutral reversed.		
Remedial action: No action is required.		

Table 27-2761 IK8757587

Alarm	Attributes	Applicable major release
Name: IK8757587 (10981) Type: equipmentAlarm Package: lmg.IK8757587 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Site Wiring Fault Cleared Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A UPS device is reporting a fault in the input wiring, other than Phase Rotation: e.g., Ground/Neutral reversed.		
Remedial action: No action is required.		

Table 27-2762 IK8757588

Alarm	Attributes	Applicable major release
Name: IK8757588 (10982) Type: equipmentAlarm Package: lmg.IK8757588 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: The UPS is no longer on manual bypass Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is operating in manual bypass mode.		
Remedial action: No action is required.		

Table 27-2763 IK8757589

Alarm	Attributes	Applicable major release
Name: IK8757589 (10983) Type: equipmentAlarm Package: lmg.IK8757589 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: The UPS is on manual bypass Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is operating in manual bypass mode.		
Remedial action: No action is required.		

Table 27-2764 IK8757590

Alarm	Attributes	Applicable major release
Name: IK8757590 (10984) Type: equipmentAlarm Package: lmg.IK8757590 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Output voltage is out of range Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting output voltage is out of Range.		
Remedial action: No action is required.		

Table 27-2765 IK8757591

Alarm	Attributes	Applicable major release
Name: IK8757591 (10985) Type: equipmentAlarm Package: Img.IK8757591 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Emergency Power Off activated Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A UPS device is reporting an Emergency Power Off (EPO) command has been received to shutdown the UPS immediately with out delay. This command may come from a local control panel or from a remote source.		
Remedial action: No action is required.		

Table 27-2766 IK8757592

Alarm	Attributes	Applicable major release
Name: IK8757592 (10986) Type: equipmentAlarm Package: Img.IK8757592 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Warning Alarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: A warning alarm has occurred.		
Remedial action: No action is required.		

Table 27-2767 IK8757593

Alarm	Attributes	Applicable major release
Name: IK8757593 (10987) Type: equipmentAlarm Package: Img.IK8757593 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Tape Drive Cleaning Required Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR16.1.MG
Description: Tape Drive Cleaning Required trap. The agent has detected a tape drive that needs to have a cleaning tape inserted and run. This will cause the tape drive heads to be cleaned.		
Remedial action: No action is required.		

Table 27-2768 IK8757594

Alarm	Attributes	Applicable major release
Name: IK8757594 (10988) Type: equipmentAlarm Package: Img.IK8757594 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Tape Drive Cleaning Tape Needs Replacing Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG

Table 27-2768 IK8757594 (continued)

Alarm	Attributes	Applicable major release
Description: Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape.		
Remedial action: No action is required.		

Table 27-2769 IK8757595

Alarm	Attributes	Applicable major release
Name: IK8757595 (10989) Type: equipmentAlarm Package: lmg.IK8757595 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Tape Library Door Opened Implicitly cleared: true Default probable cause: enclosureDoorOpen	Release: • LR16.1.MG
Description: Tape Library Door Open The agent has detected that the door on an autoloader is open so the unit is not operational.		
Remedial action: No action is required.		

Table 27-2770 IK8757596

Alarm	Attributes	Applicable major release
Name: IK8757596 (10990) Type: equipmentAlarm Package: lmg.IK8757596 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: System hood is removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: System hood is removed. The hood status has been set to removed. The system's hood is not in a properly installed state. This situation may result in improper cooling of the system due to air flow changes caused by the missing hood.		
Remedial action: No action is required.		

Table 27-2771 IK8757597

Alarm	Attributes	Applicable major release
Name: IK8757597 (10991) Type: equipmentAlarm Package: lmg.IK8757597 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Excessive Correctable Memory Errors Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: Correctable memory error count has exceeded the threshold for the memory module indicated by the 'cpqSiMemErrorIndex' variable. The appropriate cpqSiMemModuleECCStatus has been set to degraded.		
Remedial action: No action is required.		

Table 27-2772 IK8757598

Alarm	Attributes	Applicable major release
Name: IK8757598 (10992) Type: equipmentAlarm Package: Img.IK8757598 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Memory modules have changed Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR16.1.MG
Description: A memory configuration change has occurred. CpqSiMemConfigChangeData will indicate which memory modules slots have changed.		
Remedial action: No action is required.		

Table 27-2773 IK8757599

Alarm	Attributes	Applicable major release
Name: IK8757599 (10993) Type: equipmentAlarm Package: Img.IK8757599 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Hot Plug Slot Board Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Hot Plug Slot Board Failed Power-Up. A Hot Plug Slot Board has failed to power-up in the specified chassis and slot.		
Remedial action: No action is required.		

Table 27-2774 IK8757600

Alarm	Attributes	Applicable major release
Name: IK8757600 (10994) Type: equipmentAlarm Package: Img.IK8757600 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Battery Failure Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG
Description: The battery indicated by cpqSiSysBatteryIndex has failed and must be replaced.		
Remedial action: No action is required.		

Table 27-2775 IK8757601

Alarm	Attributes	Applicable major release
Name: IK8757601 (10995) Type: equipmentAlarm Package: Img.IK8757601 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Battery Charging Degradation Implicitly cleared: true Default probable cause: lowBatteryThreshold	Release: • LR16.1.MG
Description: Significant battery degradation has occurred with battery indicated by cpqSiSysBatteryIndex. The battery can no longer be fully recharged.		

Table 27-2775 IK8757601 (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action is required.		

Table 27-2776 IK8757602

Alarm	Attributes	Applicable major release
Name: IK8757602 (10996) Type: equipmentAlarm Package: Img.IK8757602 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Battery Calibration Error Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR16.1.MG
Description: Calibration is needed with battery indicated by cpqSiSysBatteryIndex. The battery can not correctly indicate capacity.		
Remedial action: No action is required.		

Table 27-2777 IK8757603

Alarm	Attributes	Applicable major release
Name: IK8757603 (10997) Type: equipmentAlarm Package: Img.IK8757603 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Server Power Outage Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: Server Power Outage. The Remote Insight/ Integrated Lights-Out firmware has detected server power failure.		
Remedial action: No action is required.		

Table 27-2778 IK8757604

Alarm	Attributes	Applicable major release
Name: IK8757604 (10998) Type: equipmentAlarm Package: Img.IK8757604 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Storage System Temperature Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR16.1.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.		
Remedial action: No action is required.		

Table 27-2779 IK8757605

Alarm	Attributes	Applicable major release
Name: IK8757605 (10999) Type: equipmentAlarm Package: lmg.IK8757605 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Storage System Temp Degraded Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR16.1.MG
Description: Storage System temperature degraded. The agent has detected a temperature status that has been set to degraded. The storage system's temperature is outside of the normal operating range.		
Remedial action: No action is required.		

Table 27-2780 IK8757606

Alarm	Attributes	Applicable major release
Name: IK8757606 (11000) Type: equipmentAlarm Package: lmg.IK8757606 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Storage System side panel is removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR16.1.MG
Description: Storage System side panel is removed. The side panel status has been set to removed. The storage system's side panel is not in a properly installed state. This situation may result in improper cooling of the drives in the storage system due to air flow changes caused by the missing side panel.		
Remedial action: No action is required.		

Table 27-2781 IK8757607

Alarm	Attributes	Applicable major release
Name: IK8757607 (11001) Type: equipmentAlarm Package: lmg.IK8757607 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Power Supply Degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR16.1.MG
Description: A storage system power supply status has been set to degraded.		
Remedial action: No action is required.		

Table 27-2782 IK8802753

Alarm	Attributes	Applicable major release
Name: IK8802753 (7918) Type: environmentalAlarm Package: lmg.IK8802753 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: CPU temperature is too high Implicitly cleared: false Default probable cause: highTemperature	Release: • LR14.3.MG

Table 27-2782 IK8802753 (continued)

Alarm	Attributes	Applicable major release
Description: CPU temperature is too high.\nAlarm to be cleared by the operator at the management system.\nReason: bigipCpuTempHigh		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2783 IK8802755

Alarm	Attributes	Applicable major release
Name: IK8802755 (7919) Type: environmentalAlarm Package: lmg.IK8802755 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: CPU fan speed signal not received Implicitly cleared: false Default probable cause: coolingFanFailure	Release: • LR14.3.MG
Description: CPU fan speed signal not received.\nAlarm to be cleared by the operator at the management system.\nReason: bigipCpuFanSpeedBad		
Remedial action: check the CPU fan		

Table 27-2784 IK8802756

Alarm	Attributes	Applicable major release
Name: IK8802756 (7920) Type: environmentalAlarm Package: lmg.IK8802756 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Chassis temperature is too high Implicitly cleared: false Default probable cause: highTemperature	Release: • LR14.3.MG
Description: Chassis temperature is too high.\nAlarm to be cleared by the operator at the management system.\nReason: bigipChassisTempHigh		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2785 IK8802758

Alarm	Attributes	Applicable major release
Name: IK8802758 (7921) Type: equipmentAlarm Package: lmg.IK8802758 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Chassis power supply status is bad Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: Chassis power supply status is bad.\nAlarm to be cleared by the operator at the management system.\nReason: bigipChassisPowerSupplyBad		
Remedial action: check the Chassis power supply		

Table 27-2786 IK8802759

Alarm	Attributes	Applicable major release
Name: IK8802759 (7922) Type: equipmentAlarm Package: Img.IK8802759 Raised on class: Img.FRU	Severity: major Specific problem: A service is detected DOWN Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A service is detected DOWN.\nAlarm is cleared by the system.\nReason: bigipServiceDown		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2787 IK8802761

Alarm	Attributes	Applicable major release
Name: IK8802761 (7923) Type: equipmentAlarm Package: Img.IK8802761 Raised on class: Img.FRU	Severity: major Specific problem: A node is detected DOWN Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A node is detected DOWN.\nAlarm is cleared by the system.\nReason: bigipNodeDown		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2788 IK8802766

Alarm	Attributes	Applicable major release
Name: IK8802766 (9395) Type: equipmentAlarm Package: Img.IK8802766 Raised on class: Img.FRU	Severity: major Specific problem: A high availability feature triggered action failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: A high availability feature triggered action failed.\nAlarm is cleared by the system.\nReason: bigipFeatureFailed		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2789 IK8802778

Alarm	Attributes	Applicable major release
Name: IK8802778 (7924) Type: equipmentAlarm Package: Img.IK8802778 Raised on class: Img.LMGMngElement	Severity: critical Specific problem: The system is in an unusable situation Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG

Table 27-2789 IK8802778 (continued)

Alarm	Attributes	Applicable major release
Description: The system is in an unusable situation.\nAlarm to be cleared by the operator at the management system.\nReason: bigipLogEmerg		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2790 IK8802779

Alarm	Attributes	Applicable major release
Name: IK8802779 (7925) Type: equipmentAlarm Package: lmg.IK8802779 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: bigipLogAlert Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: Action must be taken immediately for the system to work properly.\nAlarm to be cleared by the operator at the management system.\nReason: bigipLogAlert		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2791 IK8802780

Alarm	Attributes	Applicable major release
Name: IK8802780 (7926) Type: equipmentAlarm Package: lmg.IK8802780 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: The system is in a critical condition Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: The system is in a critical condition.\nAlarm to be cleared by the operator at the management system.\nReason: bigipLogCrit		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2792 IK8802787

Alarm	Attributes	Applicable major release
Name: IK8802787 (7927) Type: processingErrorAlarm Package: lmg.IK8802787 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: bigipAsmRequestBlocked Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: The HTTP request was blocked because it issued (at least one) violation(s) which is marked as blocking at the current active policy in Application Security Module.\nAlarm to be cleared by the operator at the management system.\nReason: bigipAsmRequestBlocked		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2793 IK8802788

Alarm	Attributes	Applicable major release
Name: IK8802788 (7928) Type: processingErrorAlarm Package: lmg.IK8802788 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: bigipAsmRequestViolation Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: The HTTP request issued a violation to the current active policy. This violation is marked as an alerting violation in that policy in Application Security Module.\nAlarm to be cleared by the operator at the management system.\nReason: bigipAsmRequestViolation		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2794 IK8802790

Alarm	Attributes	Applicable major release
Name: IK8802790 (9396) Type: equipmentAlarm Package: lmg.IK8802790 Raised on class: lmg.FRU	Severity: major Specific problem: bigipGtmPoolNotAvail Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: A pool is becoming unavailable in global traffic management module.\nAlarm is cleared by the system.\nReason: bigipGtmPoolNotAvail		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2795 IK8802791

Alarm	Attributes	Applicable major release
Name: IK8802791 (9397) Type: equipmentAlarm Package: lmg.IK8802791 Raised on class: lmg.FRU	Severity: major Specific problem: A pool is disabled in global traffic management module Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: A pool is disabled in global traffic management module.\nAlarm is cleared by the system.\nReason: bigipGtmPoolDisabled		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2796 IK8802794

Alarm	Attributes	Applicable major release
Name: IK8802794 (9398) Type: communicationsAlarm Package: lmg.IK8802794 Raised on class: lmg.FRU	Severity: major Specific problem: bigipGtmLinkNotAvail Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG • LR16.1.MG
Description: A link is becoming unavailable in global traffic management module.\nAlarm is cleared by the system.\nReason: bigipGtmLinkNotAvail		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2797 IK8802795

Alarm	Attributes	Applicable major release
Name: IK8802795 (9399) Type: communicationsAlarm Package: lmg.IK8802795 Raised on class: lmg.FRU	Severity: major Specific problem: A link is disabled in global traffic management module Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG • LR16.1.MG
Description: A link is disabled in global traffic management module.\nAlarm is cleared by the system.\nReason: bigipGtmLinkDisabled		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2798 IK8802798

Alarm	Attributes	Applicable major release
Name: IK8802798 (9400) Type: equipmentAlarm Package: lmg.IK8802798 Raised on class: lmg.FRU	Severity: major Specific problem: bigipGtmWideIpNotAvail Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: A wide IP is becoming unavailable in global traffic management module.\nAlarm is cleared by the system.\nReason: bigipGtmWideIpNotAvail		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2799 IK8802799

Alarm	Attributes	Applicable major release
Name: IK8802799 (9401) Type: equipmentAlarm Package: lmg.IK8802799 Raised on class: lmg.FRU	Severity: major Specific problem: A wide IP is disabled in global traffic management module Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: A wide IP is disabled in global traffic management module.\nAlarm is cleared by the system.\nReason: bigipGtmWideIp-Disabled		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2800 IK8802802

Alarm	Attributes	Applicable major release
Name: IK8802802 (9402) Type: equipmentAlarm Package: lmg.IK8802802 Raised on class: lmg.FRU	Severity: major Specific problem: bigipGtmPoolMbrNotAvail Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: A pool member is becoming unavailable in global traffic management module.\nAlarm is cleared by the system.\nReason: bigipGtmPoolMbrNotAvail		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2801 IK8802803

Alarm	Attributes	Applicable major release
Name: IK8802803 (9403) Type: equipmentAlarm Package: lmg.IK8802803 Raised on class: lmg.FRU	Severity: major Specific problem: bigipGtmPoolMbrDisabled Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: A pool member is disabled in global traffic management module.\nAlarm is cleared by the system.\nReason: bigipGtmPoolMbrDisabled		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2802 IK8802806

Alarm	Attributes	Applicable major release
Name: IK8802806 (7929) Type: equipmentAlarm Package: lmg.IK8802806 Raised on class: lmg.FRU	Severity: major Specific problem: bigipGtmServerNotAvail Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A server is becoming unavailable in global traffic management module.\nAlarm is cleared by the system.\nReason: bigipGtmServerNotAvail		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2803 IK8802807

Alarm	Attributes	Applicable major release
Name: IK8802807 (9404) Type: equipmentAlarm Package: lmg.IK8802807 Raised on class: lmg.FRU	Severity: major Specific problem: A server is disabled in global traffic management module Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: A server is disabled in global traffic management module.\nAlarm is cleared by the system.\nReason: bigipGtmServerDisabled		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2804 IK8802810

Alarm	Attributes	Applicable major release
Name: IK8802810 (9405) Type: equipmentAlarm Package: lmg.IK8802810 Raised on class: lmg.FRU	Severity: major Specific problem: bigipGtmVsNotAvail Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: A virtual server is becoming unavailable in global traffic management module.\nAlarm is cleared by the system.\nReason: bigipGtmVsNotAvail		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2805 IK8802811

Alarm	Attributes	Applicable major release
Name: IK8802811 (9406) Type: equipmentAlarm Package: Img.IK8802811 Raised on class: Img.FRU	Severity: major Specific problem: bigipGtmVsDisabled Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: A virtual server is disabled in global traffic management module.\nAlarm is cleared by the system.\nReason: bigipGtmVsDisabled		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2806 IK8802814

Alarm	Attributes	Applicable major release
Name: IK8802814 (9407) Type: processingErrorAlarm Package: Img.IK8802814 Raised on class: Img.FRU	Severity: major Specific problem: bigipGtmDcNotAvail Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: A data center is becoming unavailable in global traffic management module.\nAlarm is cleared by the system.\nReason: bigipGtmDcNotAvail		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2807 IK8802815

Alarm	Attributes	Applicable major release
Name: IK8802815 (9408) Type: processingErrorAlarm Package: Img.IK8802815 Raised on class: Img.FRU	Severity: major Specific problem: bigipGtmDcDisabled Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: A data center is disabled in global traffic management module.\nAlarm is cleared by the system.\nReason: bigipGtmDcDisabled		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2808 IK8802819

Alarm	Attributes	Applicable major release
Name: IK8802819 (9409) Type: processingErrorAlarm Package: Img.IK8802819 Raised on class: Img.FRU	Severity: major Specific problem: bigipGtmAppObjNotAvail Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG

Table 27-2808 IK8802819 (continued)

Alarm	Attributes	Applicable major release
Description: An application object is becoming unavailable in global management module.\nAlarm is cleared by the system.\nReason: bigipGtmAppObjNotAvail		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2809 IK8802821

Alarm	Attributes	Applicable major release
Name: IK8802821 (9410) Type: processingErrorAlarm Package: lmg.IK8802821 Raised on class: lmg.FRU	Severity: major Specific problem: bigipGtmAppNotAvail Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: An application is becoming unavailable in global management module.\nAlarm is cleared by the system.\nReason: bigipGtmAppNotAvail		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2810 IK8802827

Alarm	Attributes	Applicable major release
Name: IK8802827 (7930) Type: communicationsAlarm Package: lmg.IK8802827 Raised on class: lmg.FRU	Severity: major Specific problem: bigipGtmBoxNotAvail Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A gtm machine (which equates to an iquery connect to a gtm machine) has gone DOWN\nAlarm is cleared by the system.\nReason: bigipGtmBoxNotAvail		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2811 IK8802828

Alarm	Attributes	Applicable major release
Name: IK8802828 (7931) Type: processingErrorAlarm Package: lmg.IK8802828 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: bigipAsmFtpRequestBlocked Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: The FTP request was blocked because it issued (at least one) violation(s) which is marked as blocking at the current active policy in Application Security Module.\nAlarm to be cleared by the operator at the management system.\nReason: bigipAsmFtpRequestBlocked		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2812 IK8802829

Alarm	Attributes	Applicable major release
Name: IK8802829 (7932) Type: processingErrorAlarm Package: Img.IK8802829 Raised on class: Img.LMGMngElement	Severity: major Specific problem: bigipAsmFtpRequestViolation Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: The FTP request issued a violation to the current active policy. This violation is marked as an alerting violation in that policy in Application Security Module.\nAlarm to be cleared by the operator at the management system.\nReason: bigipAsmFtpRequest-Violation		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2813 IK8802834

Alarm	Attributes	Applicable major release
Name: IK8802834 (7933) Type: processingErrorAlarm Package: Img.IK8802834 Raised on class: Img.LMGMngElement	Severity: major Specific problem: bigipAsmSmtpRequestBlocked Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: The SMTP request was blocked because it issued (at least one) violation(s) which is marked as blocking at the current active policy in Application Security Module.\nAlarm to be cleared by the operator at the management system.\nReason: bigipAsmSmtpRequestBlocked		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2814 IK8802835

Alarm	Attributes	Applicable major release
Name: IK8802835 (7934) Type: processingErrorAlarm Package: Img.IK8802835 Raised on class: Img.LMGMngElement	Severity: major Specific problem: bigipAsmSmtpRequestViolation Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: The SMTP request issued a violation to the current active policy. This violation is marked as an alerting violation in that policy in Application Security Module.\nAlarm to be cleared by the operator at the management system.\nReason: bigipAsmSmtpRe-questViolation		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2815 IK8802836

Alarm	Attributes	Applicable major release
Name: IK8802836 (7935) Type: environmentalAlarm Package: Img.IK8802836 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Blade temperature is too high Implicitly cleared: false Default probable cause: highTemperature	Release: • LR14.3.MG
Description: Blade temperature is too high.\nAlarm to be cleared by the operator at the management system.\nReason: bigipBladeTempHigh		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2816 IK8802837

Alarm	Attributes	Applicable major release
Name: IK8802837 (7936) Type: equipmentAlarm Package: Img.IK8802837 Raised on class: Img.LMGMngElement	Severity: major Specific problem: A blade lost power Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: A blade lost power. The blade may be pulled out\nAlarm to be cleared by the operator at the management system.\nReason: bigipBladeNoPower		
Remedial action: Check the Power of the blade		

Table 27-2817 IK8802839

Alarm	Attributes	Applicable major release
Name: IK8802839 (7937) Type: equipmentAlarm Package: Img.IK8802839 Raised on class: Img.LMGMngElement	Severity: major Specific problem: offline Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: A blade has failed - offline.\nAlarm to be cleared by the operator at the management system.\nReason: bigipBladeOffline		
Remedial action: Replace the blade		

Table 27-2818 IK8802841

Alarm	Attributes	Applicable major release
Name: IK8802841 (7938) Type: processingErrorAlarm Package: Img.IK8802841 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Brute force attack detected by Application Security Module Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG

Table 27-2818 IK8802841 (continued)

Alarm	Attributes	Applicable major release
Description: Brute force attack detected by Application Security Module.\nAlarm to be cleared by the operator at the management system.\nReason: bigipAsmBruteForceAttackDetected		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2819 IK8802842

Alarm	Attributes	Applicable major release
Name: IK8802842 (7939) Type: environmentalAlarm Package: lmg.IK8802842 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: AOM reports the air temperature near the host CPU too high Implicitly cleared: false Default probable cause: highTemperature	Release: • LR14.3.MG
Description: AOM reports the air temperature near the host CPU too high.\nAlarm to be cleared by the operator at the management system.\nReason: bigipAomCpuTempTooHigh		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2820 IK8802845

Alarm	Attributes	Applicable major release
Name: IK8802845 (7940) Type: processingErrorAlarm Package: lmg.IK8802845 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Disk failure in a RAID disk array Implicitly cleared: false Default probable cause: storageCapacityProblem	Release: • LR14.3.MG
Description: Disk failure in a RAID disk array.\nAlarm to be cleared by the operator at the management system.\nReason: bigipRaidDiskFailure		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2821 IK8802848

Alarm	Attributes	Applicable major release
Name: IK8802848 (9411) Type: processingErrorAlarm Package: lmg.IK8802848 Raised on class: lmg.FRU	Severity: major Specific problem: Prober Pool Disabled Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: Prober Pool Disabled.\nAlarm is cleared by the system.\nReason: bigipGtmProberPoolDisabled		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2822 IK8802852

Alarm	Attributes	Applicable major release
Name: IK8802852 (9412) Type: processingErrorAlarm Package: lmg.IK8802852 Raised on class: lmg.FRU	Severity: major Specific problem: Prober Pool Member Disabled Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG • LR16.1.MG
Description: Prober Pool Member Disabled.\nAlarm is cleared by the system.\nReason: bigipGtmProberPoolMbrDisabled		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2823 IK8802857

Alarm	Attributes	Applicable major release
Name: IK8802857 (7941) Type: equipmentAlarm Package: lmg.IK8802857 Raised on class: lmg.FRU	Severity: major Specific problem: A VCMP guest is powered off Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A VCMP guest is powered off.\nAlarm is cleared by the system.\nReason: bigipVcmpAlertsVcmpPowerOff		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2824 IK8802858

Alarm	Attributes	Applicable major release
Name: IK8802858 (7942) Type: communicationsAlarm Package: lmg.IK8802858 Raised on class: lmg.FRU	Severity: major Specific problem: A VCMP guest heartbeat is lost Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: A VCMP guest heartbeat is lost.\nAlarm is cleared by the system.\nReason: bigipVcmpAlertsVcmpHBLost		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2825 IK8802862

Alarm	Attributes	Applicable major release
Name: IK8802862 (7943) Type: environmentalAlarm Package: lmg.IK8802862 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Temperature is too high Implicitly cleared: false Default probable cause: highTemperature	Release: • LR14.3.MG
Description: Temperature is too high.\nAlarm to be cleared by the operator at the management system.\nReason: bigipSystemCheckA-lertTempHigh		

Table 27-2825 IK8802862 (continued)

Alarm	Attributes	Applicable major release
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2826 IK8802863

Alarm	Attributes	Applicable major release
Name: IK8802863 (7944) Type: equipmentAlarm Package: lmg.IK8802863 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Voltage is too high Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: Voltage is too high.\nAlarm to be cleared by the operator at the management system.\nReason: bigipSystemCheckAlert-VoltageHigh		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2827 IK8802869

Alarm	Attributes	Applicable major release
Name: IK8802869 (7945) Type: equipmentAlarm Package: lmg.IK8802869 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Blade hardware sensor indicated critical alarm Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: Blade hardware sensor indicated critical alarm.\nAlarm to be cleared by the operator at the management system.\nReason: bigipLibhalSensorAlarmCritical		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2828 IK8802872

Alarm	Attributes	Applicable major release
Name: IK8802872 (7946) Type: equipmentAlarm Package: lmg.IK8802872 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Voltage is too low Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: Voltage is too low.\nAlarm to be cleared by the operator at the management system.\nReason: bigipSystemCheckAlert-VoltageLow		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2829 IK8802873

Alarm	Attributes	Applicable major release
Name: IK8802873 (7947) Type: equipmentAlarm Package: Img.IK8802873 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Voltage is too high Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: Milli-Voltage is too high.\nAlarm to be cleared by the operator at the management system.\nReason: bigipSystemCheckAlertMilliVoltageHigh		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2830 IK8802875

Alarm	Attributes	Applicable major release
Name: IK8802875 (7948) Type: equipmentAlarm Package: Img.IK8802875 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Power is too high Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: Power is too high.\nAlarm to be cleared by the operator at the management system.\nReason: bigipSystemCheckAlertPowerHigh		
Remedial action: check the power		

Table 27-2831 IK8802876

Alarm	Attributes	Applicable major release
Name: IK8802876 (7949) Type: equipmentAlarm Package: Img.IK8802876 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Voltage is too low Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: Milli-Voltage is too low.\nAlarm to be cleared by the operator at the management system.\nReason: bigipSystemCheckAlertMilliVoltageLow		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2832 IK8802878

Alarm	Attributes	Applicable major release
Name: IK8802878 (7950) Type: equipmentAlarm Package: Img.IK8802878 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Power is too low Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG

Table 27-2832 IK8802878 (continued)

Alarm	Attributes	Applicable major release
Description: Power is too low.\nAlarm to be cleared by the operator at the management system.\nReason: bigipSystemCheckAlert-PowerLow		
Remedial action: check the power		

Table 27-2833 IK8802882

Alarm	Attributes	Applicable major release
Name: IK8802882 (9413) Type: equipmentAlarm Package: lmg.IK8802882 Raised on class: lmg.FRU	Severity: major Specific problem: A DOS attack start was detected Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: A DOS attack start was detected.\nAlarm is cleared by the system.\nReason: bigipDosAttackStart		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2834 IK8802886

Alarm	Attributes	Applicable major release
Name: IK8802886 (7951) Type: processingErrorAlarm Package: lmg.IK8802886 Raised on class: lmg.FRU	Severity: major Specific problem: Software installation has failed Implicitly cleared: true Default probable cause: softwareProgramError	Release: • LR14.3.MG • LR15.1.MG
Description: Software installation has failed.\nAlarm is cleared by the system.\nReason: emSoftwareInstallFailed		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2835 IK8802887

Alarm	Attributes	Applicable major release
Name: IK8802887 (7952) Type: equipmentAlarm Package: lmg.IK8802887 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: A device clock is out of sync with EM Implicitly cleared: false Default probable cause: timingProblem	Release: • LR14.3.MG
Description: A device clock is out of sync with EM.\nAlarm to be cleared by the operator at the management system.\nReason: emDeviceClockSkew		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2836 IK8802889

Alarm	Attributes	Applicable major release
Name: IK8802889 (7953) Type: processingErrorAlarm Package: lmg.IK8802889 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: The system memory is exceeding configured usage limits Implicitly cleared: false Default probable cause: memoryMismatch	Release: • LR14.3.MG
Description: The system memory is exceeding configured usage limits.\nAlarm to be cleared by the operator at the management system.\nReason: emMemoryUsage		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2837 IK8802891

Alarm	Attributes	Applicable major release
Name: IK8802891 (9414) Type: equipmentAlarm Package: lmg.IK8802891 Raised on class: lmg.FRU	Severity: major Specific problem: A hotfix installation has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG
Description: A hotfix installation has failed.\nAlarm is cleared by the system.\nReason: emHotfixInstallFailed		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2838 IK8802892

Alarm	Attributes	Applicable major release
Name: IK8802892 (7954) Type: equipmentAlarm Package: lmg.IK8802892 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: The cpu is exceeding configured usage limits Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: The cpu is exceeding configured usage limits.\nAlarm to be cleared by the operator at the management system.\nReason: emCpuUsage		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2839 IK8802898

Alarm	Attributes	Applicable major release
Name: IK8802898 (7955) Type: equipmentAlarm Package: Img.IK8802898 Raised on class: Img.FRU	Severity: critical Specific problem: The system RAID drive failure has been detected Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The system RAID drive failure has been detected.\nAlarm is cleared by the system.\nReason: emRaidDriveFailureDetected		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2840 IK8802900

Alarm	Attributes	Applicable major release
Name: IK8802900 (7956) Type: processingErrorAlarm Package: Img.IK8802900 Raised on class: Img.LMGMngElement	Severity: major Specific problem: EM HA Sync has failed Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: EM HA Sync has failed.\nAlarm to be cleared by the operator at the management system.\nReason: emHaSyncFailed		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2841 IK8802902

Alarm	Attributes	Applicable major release
Name: IK8802902 (9415) Type: equipmentAlarm Package: Img.IK8802902 Raised on class: Img.FRU	Severity: major Specific problem: ASM signature installation has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: ASM signature installation has failed.\nAlarm is cleared by the system.\nReason: emASMSigInstallFailed		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2842 IK8802904

Alarm	Attributes	Applicable major release
Name: IK8802904 (9416) Type: equipmentAlarm Package: Img.IK8802904 Raised on class: Img.FRU	Severity: major Specific problem: ASM signature update failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: ASM signature update failed.\nAlarm is cleared by the system.\nReason: emASMSigUpdateFailed		

Table 27-2842 IK8802904 (continued)

Alarm	Attributes	Applicable major release
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2843 IK8802905

Alarm	Attributes	Applicable major release
Name: IK8802905 (7957) Type: processingErrorAlarm Package: lmg.IK8802905 Raised on class: lmg.FRU	Severity: major Specific problem: emPerformanceStorageDays Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: Performance storage capacity is about to fall below configured number of days.\nAlarm is cleared by the system.\ nReason: emPerformanceStorageDays		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2844 IK8802908

Alarm	Attributes	Applicable major release
Name: IK8802908 (7958) Type: processingErrorAlarm Package: lmg.IK8802908 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Scheduled performance data backup has failed Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: Scheduled performance data backup has failed.\nAlarm to be cleared by the operator at the management system.\nReason: emSchedBackupFailed		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2845 IK8802913

Alarm	Attributes	Applicable major release
Name: IK8802913 (9417) Type: communicationsAlarm Package: lmg.IK8802913 Raised on class: lmg.FRU	Severity: major Specific problem: Statistics database connectivity is lost Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG
Description: Statistics database connectivity is lost.\nAlarm is cleared by the system.\nReason: emStatsDBConnectivityLost		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2846 IK8807417

Alarm	Attributes	Applicable major release
Name: IK8807417 (9418) Type: equipmentAlarm Package: Img.IK8807417 Raised on class: Img.FRU	Severity: major Specific problem: A virtual has become unavailable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: A virtual has become unavailable.\nAlarm is cleared by the system.\nReason: bigipLtmVsUnavail		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2847 IK8807419

Alarm	Attributes	Applicable major release
Name: IK8807419 (9419) Type: equipmentAlarm Package: Img.IK8807419 Raised on class: Img.FRU	Severity: major Specific problem: A virtual has become disabled Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG • LR16.1.MG
Description: A virtual has become disabled.\nAlarm is cleared by the system.\nReason: bigipLtmVsDisabled		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2848 IK8807429

Alarm	Attributes	Applicable major release
Name: IK8807429 (9420) Type: equipmentAlarm Package: Img.IK8807429 Raised on class: Img.FRU	Severity: critical Specific problem: Power supply unit has powered off Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG • LR16.1.MG
Description: Power supply unit has powered off.\nAlarm is cleared by the system.\nReason: bigipPsPowerOff		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2849 IK8850006

Alarm	Attributes	Applicable major release
Name: IK8850006 (10039) Type: processingErrorAlarm Package: Img.IK8850006 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Trap send in an alarm rising and falling edges Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR16.1.MG
Description: Trap send in an alarm rising and falling edges.\nAlarm is cleared by the system.\nReason: alarmTrap		
Remedial action: If the problem persists, contact NOKIA customer support.		

Table 27-2850 IK8900005

Alarm	Attributes	Applicable major release
Name: IK8900005 (9421) Type: processingErrorAlarm Package: lmg.IK8900005 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: mcdp alarm trap v1 Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: mcdp alarm alarm v1.\nAlarm is cleared by the system.\nReason: alarmTrapV1		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2851 IK8900006

Alarm	Attributes	Applicable major release
Name: IK8900006 (9422) Type: processingErrorAlarm Package: lmg.IK8900006 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Trap associated to an alarm of the managed element Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: Trap associated to an alarm of the managed element.\nAlarm is cleared by the system.\nReason: alarmTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2852 IK8900007

Alarm	Attributes	Applicable major release
Name: IK8900007 (9423) Type: processingErrorAlarm Package: lmg.IK8900007 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: softwareFailure Implicitly cleared: true Default probable cause: softwareError	Release: • LR15.1.MG
Description: Trap associated to an alarm while executing software operation (download, activation, validation, reject, backup).\nAlarm is cleared by the system.\nReason: softwareFailure		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2853 IK8900981

Alarm	Attributes	Applicable major release
Name: IK8900981 (9424) Type: equipmentAlarm Package: lmg.IK8900981 Raised on class: lmg.FRU	Severity: minor Specific problem: Cluster Node Degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG

Table 27-2853 IK8900981 (continued)

Alarm	Attributes	Applicable major release
Description: This alarm will be sent any time the condition of a node in the cluster becomes degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterNodeDegraded		
Remedial action: Make a note of the cluster node name then check the node for the cause of the degraded condition.		

Table 27-2854 IK8900982

Alarm	Attributes	Applicable major release
Name: IK8900982 (8288) Type: equipmentAlarm Package: lmg.IK8900982 Raised on class: lmg.FRU	Severity: major Specific problem: Cluster Node Failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a node in the cluster becomes failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterNodeFailed		
Remedial action: Make a note of the cluster node name then check the node for the cause of the failure.		

Table 27-2855 IK8900983

Alarm	Attributes	Applicable major release
Name: IK8900983 (9425) Type: processingErrorAlarm Package: lmg.IK8900983 Raised on class: lmg.FRU	Severity: minor Specific problem: Cluster Resource Degraded Implicitly cleared: true Default probable cause: underlyingResourceUnavail-able	Release: • LR15.1.MG
Description: This alarm will be sent any time the condition of a cluster resource becomes degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterResourceDegraded		
Remedial action: Make a note of the cluster resource name then check the resource for the cause of the degraded condition.		

Table 27-2856 IK8900984

Alarm	Attributes	Applicable major release
Name: IK8900984 (8289) Type: processingErrorAlarm Package: lmg.IK8900984 Raised on class: lmg.FRU	Severity: major Specific problem: Cluster Resource Failed Implicitly cleared: true Default probable cause: underlyingResourceUnavail-able	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a cluster resource becomes failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterResourceFailed		
Remedial action: Make a note of the cluster resource name then check the resource for the cause of the failure.		

Table 27-2857 IK8900985

Alarm	Attributes	Applicable major release
Name: IK8900985 (9426) Type: equipmentAlarm Package: lmg.IK8900985 Raised on class: lmg.FRU	Severity: minor Specific problem: Cluster Network Degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG
Description: This alarm will be sent any time the condition of a cluster network becomes degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterNetworkDegraded		
Remedial action: Make a note of the cluster network name then check the network for the cause of the degraded condition.		

Table 27-2858 IK8900986

Alarm	Attributes	Applicable major release
Name: IK8900986 (8290) Type: equipmentAlarm Package: lmg.IK8900986 Raised on class: lmg.FRU	Severity: major Specific problem: Cluster Network Failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the condition of a cluster network becomes failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqClusterNetworkFailed		
Remedial action: Make a note of the cluster network name then check the network for the cause of the failure.		

Table 27-2859 IK8901008

Alarm	Attributes	Applicable major release
Name: IK8901008 (8291) Type: equipmentAlarm Package: lmg.IK8901008 Raised on class: lmg.FRU	Severity: major Specific problem: The primary controller in the subsytem has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The primary controller in the subsystem has failed. Details: The primary Controller has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrController1FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 27-2860 IK8901010

Alarm	Attributes	Applicable major release
Name: IK8901010 (8292) Type: equipmentAlarm Package: Img.IK8901010 Raised on class: Img.FRU	Severity: major Specific problem: The secondary controller in the subsytem has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The secondary controller in the subsystem has failed. Details: The secondary controller has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrController2FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 27-2861 IK8901013

Alarm	Attributes	Applicable major release
Name: IK8901013 (8293) Type: equipmentAlarm Package: Img.IK8901013 Raised on class: Img.FRU	Severity: major Specific problem: A RAIDset has failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: A RAIDset has failed. Details: The RAIDset has failed and is off-line.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrLogDriveFailureTrap		
Remedial action: Possible cause is too many failed disk drives that make up the RAIDset, the OS can no longer communicate with the RAIDset for other reasons.		

Table 27-2862 IK8901015

Alarm	Attributes	Applicable major release
Name: IK8901015 (9427) Type: equipmentAlarm Package: Img.IK8901015 Raised on class: Img.FRU	Severity: minor Specific problem: A RAIDset has become degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG
Description: A RAIDset has become degraded. Details: A RAIDset has become degraded due to a member disk device failure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrLogDriveReducedTrap		
Remedial action: Replace the failed disk device; add a spare to the system to cause a reconstruct.		

Table 27-2863 IK8901018

Alarm	Attributes	Applicable major release
Name: IK8901018 (8294) Type: processingErrorAlarm Package: lmg.IK8901018 Raised on class: lmg.FRU	Severity: major Specific problem: A disk drive has failed Implicitly cleared: true Default probable cause: storageCapacityProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system.\nReason: cpqCrDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 27-2864 IK8901023

Alarm	Attributes	Applicable major release
Name: IK8901023 (8295) Type: processingErrorAlarm Package: lmg.IK8901023 Raised on class: lmg.FRU	Severity: major Specific problem: A disk drive has failed Implicitly cleared: true Default probable cause: storageCapacityProblem	Release: • LR14.3.MG • LR15.1.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrPhyDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 27-2865 IK8901028

Alarm	Attributes	Applicable major release
Name: IK8901028 (9428) Type: environmentalAlarm Package: lmg.IK8901028 Raised on class: lmg.FRU	Severity: minor Specific problem: Fan has failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR15.1.MG
Description: Fan has failed. Details: One of the cooling fans in the primary enclosure has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrEMUFanFailureTrap		
Remedial action: Replace the cooling fan. Possible causes are fan physically removed, actual hardware failure.		

Table 27-2866 IK8901030

Alarm	Attributes	Applicable major release
Name: IK8901030 (8296) Type: equipmentAlarm Package: lmg.IK8901030 Raised on class: lmg.FRU	Severity: major Specific problem: Power supply has failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG

Table 27-2866 IK8901030 (continued)

Alarm	Attributes	Applicable major release
Description: Power supply has failed. Details: One of the power supplies in the primary enclosure has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrEMUPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 27-2867 IK8901032

Alarm	Attributes	Applicable major release
Name: IK8901032 (9429) Type: equipmentAlarm Package: lmg.IK8901032 Raised on class: lmg.FRU	Severity: warning Specific problem: Primary enclosure temperature warning Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG
Description: Primary enclosure temperature warning. Details: The temperature in the primary enclosure has triggered a warning condition detected by the controller.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrEMUTemperature-WarningTrap		
Remedial action: Check the cooling fans in the primary enclosure.		

Table 27-2868 IK8901033

Alarm	Attributes	Applicable major release
Name: IK8901033 (8297) Type: equipmentAlarm Package: lmg.IK8901033 Raised on class: lmg.FRU	Severity: critical Specific problem: Primary enclosure temperature critical! Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Primary enclosure temperature critical!. Details: The temperature in the primary enclosure has triggered a critical condition detected by the controller.\nAlarm is cleared by the system.\nReason: cpqCrEMUTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the primary enclosure.		

Table 27-2869 IK8901035

Alarm	Attributes	Applicable major release
Name: IK8901035 (9430) Type: environmentalAlarm Package: lmg.IK8901035 Raised on class: lmg.FRU	Severity: minor Specific problem: Fan has failed in expansion cabinet Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR15.1.MG
Description: Fan has failed in expansion cabinet. Details: One of the cooling fans in the expansion cabinet has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrExpCabFanFailureTrap		

Table 27-2869 IK8901035 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Replace the cooling fan. Possible causes are fan physically removed, actual hardware failure.		

Table 27-2870 IK8901037

Alarm	Attributes	Applicable major release
Name: IK8901037 (8298) Type: equipmentAlarm Package: lmg.IK8901037 Raised on class: lmg.FRU	Severity: major Specific problem: Power supply has failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power supply has failed. Details: One of the power supplies in the expansion cabinet has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrExpCabPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 27-2871 IK8901039

Alarm	Attributes	Applicable major release
Name: IK8901039 (9431) Type: environmentalAlarm Package: lmg.IK8901039 Raised on class: lmg.FRU	Severity: warning Specific problem: Expansion cabinet temperature warning Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR15.1.MG
Description: Expansion cabinet temperature warning. Details: The temperature in the expansion cabinet has triggered a warning condition detected by the controller.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCrExpCabTemperatureWarningTrap		
Remedial action: Check the cooling fans in the expansion cabinet.		

Table 27-2872 IK8901040

Alarm	Attributes	Applicable major release
Name: IK8901040 (8299) Type: environmentalAlarm Package: lmg.IK8901040 Raised on class: lmg.FRU	Severity: critical Specific problem: cpqCrExpCabTemperatureCriticalTrap Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: Expansion cabinet temperature critical! Details: The temperature in the expansion cabinet has triggered a critical condition detected by the controller.\nAlarm is cleared by the system.\nReason: cpqCrExpCabTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the expansion cabinet.		

Table 27-2873 IK8901059

Alarm	Attributes	Applicable major release
Name: IK8901059 (9432) Type: equipmentAlarm Package: lmg.IK8901059 Raised on class: lmg.FRU	Severity: warning Specific problem: External Array Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: External Array Accelerator Board Bad Data. This alarm signifies that the agent has detected a Array Accelerator Cache Board that has lost battery power. If data was being stored in the accelerator memory when the system lost power, that data has been lost.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqFcaAccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 27-2874 IK8901060

Alarm	Attributes	Applicable major release
Name: IK8901060 (8300) Type: environmentalAlarm Package: lmg.IK8901060 Raised on class: lmg.FRU	Severity: major Specific problem: External Array Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqFcaAccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 27-2875 IK8901068

Alarm	Attributes	Applicable major release
Name: IK8901068 (9433) Type: processingErrorAlarm Package: lmg.IK8901068 Raised on class: lmg.FRU	Severity: warning Specific problem: External Array Redundant Controller Active Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: External Array Redundant Controller Active. This alarm signifies that the Storage Agent has detected that a backup array controller in a duplexed pair has switched over to the active role. The variable cpqFcaCntlrBoxIoSlot indicates the new active controller index.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqFcaCntlrActive		
Remedial action: Check the partner controller for problems. If this was the result of a user initiated switch over, no action is required.		

Table 27-2876 IK8901072

Alarm	Attributes	Applicable major release
Name: IK8901072 (9434) Type: equipmentAlarm Package: lmg.IK8901072 Raised on class: lmg.FRU	Severity: warning Specific problem: External Array Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: External Array Accelerator Board Bad Data. This alarm signifies that the agent has detected a Array Accelerator Cache Board that has lost battery power. If data was being stored in the accelerator memory when the system lost power, that data has been lost.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqFca2AccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 27-2877 IK8901073

Alarm	Attributes	Applicable major release
Name: IK8901073 (8301) Type: environmentalAlarm Package: lmg.IK8901073 Raised on class: lmg.FRU	Severity: major Specific problem: External Array Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqFca2AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 27-2878 IK8901088

Alarm	Attributes	Applicable major release
Name: IK8901088 (9435) Type: environmentalAlarm Package: lmg.IK8901088 Raised on class: lmg.FRU	Severity: minor Specific problem: Thermal Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR15.1.MG
Description: The temperature status has been set to failed. The system will be shutdown due to this thermal condition.\nAlarm is cleared by the system.\nReason: cpqHeThermalTempFailed		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2879 IK8901091

Alarm	Attributes	Applicable major release
Name: IK8901091 (9436) Type: environmentalAlarm Package: lmg.IK8901091 Raised on class: lmg.FRU	Severity: major Specific problem: System Fan Failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR15.1.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHeThermalSystemFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-2880 IK8901094

Alarm	Attributes	Applicable major release
Name: IK8901094 (9437) Type: environmentalAlarm Package: lmg.IK8901094 Raised on class: lmg.FRU	Severity: minor Specific problem: CPU Fan Failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR15.1.MG
Description: The CPU fan status has been set to failed. A processor fan is not operating normally. The server will be shutdown.\nAlarm is cleared by the system.\nReason: cpqHeThermalCpuFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-2881 IK8901098

Alarm	Attributes	Applicable major release
Name: IK8901098 (8302) Type: equipmentAlarm Package: lmg.IK8901098 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: POST Errors Occurred Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHePostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 27-2882 IK8901102

Alarm	Attributes	Applicable major release
Name: IK8901102 (8303) Type: environmentalAlarm Package: lmg.IK8901102 Raised on class: lmg.FRU	Severity: major Specific problem: Thermal Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG

Table 27-2882 IK8901102 (continued)

Alarm	Attributes	Applicable major release
Description: The temperature status has been set to failed. The system will be shutdown due to this thermal condition.\nAlarm is cleared by the system.\nReason: cpqHe3ThermalTempFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 27-2883 IK8901103

Alarm	Attributes	Applicable major release
Name: IK8901103 (9438) Type: environmentalAlarm Package: lmg.IK8901103 Raised on class: lmg.FRU	Severity: minor Specific problem: Temperature Degraded Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR15.1.MG
Description: The temperature status has been set to degraded. The server's temperature is outside of the normal operating range. The server will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHe3ThermalTempDegraded		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 27-2884 IK8901105

Alarm	Attributes	Applicable major release
Name: IK8901105 (8304) Type: environmentalAlarm Package: lmg.IK8901105 Raised on class: lmg.FRU	Severity: major Specific problem: System Fan Failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHe3ThermalSystemFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-2885 IK8901106

Alarm	Attributes	Applicable major release
Name: IK8901106 (9439) Type: environmentalAlarm Package: lmg.IK8901106 Raised on class: lmg.FRU	Severity: minor Specific problem: System Fan Degraded Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR15.1.MG
Description: The system fan status has been set to degraded. An optional system fan is not operating normally.\nAlarm is cleared by the system.\nReason: cpqHe3ThermalSystemFanDegraded		
Remedial action: Replace the fan as soon as possible.		

Table 27-2886 IK8901108

Alarm	Attributes	Applicable major release
Name: IK8901108 (9440) Type: environmentalAlarm Package: Img.IK8901108 Raised on class: Img.FRU	Severity: minor Specific problem: CPU Fan Failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR15.1.MG
Description: The CPU fan status has been set to failed. A processor fan is not operating normally. The server will be shutdown.\nAlarm is cleared by the system.\nReason: cpqHe3ThermalCpuFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-2887 IK8901112

Alarm	Attributes	Applicable major release
Name: IK8901112 (8305) Type: equipmentAlarm Package: Img.IK8901112 Raised on class: Img.FRU	Severity: major Specific problem: POST Errors Occurred Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process. Details of the POST error messages can be found in Integrated Management Log\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3PostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 27-2888 IK8901113

Alarm	Attributes	Applicable major release
Name: IK8901113 (9441) Type: equipmentAlarm Package: Img.IK8901113 Raised on class: Img.FRU	Severity: minor Specific problem: Server Power Supply Degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: The fault tolerant power supply sub-system condition has been set to degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3FltTolPwrSupplyDegraded		
Remedial action: Check the system for a power supply failure. Replace the power supply.		

Table 27-2889 IK8901116

Alarm	Attributes	Applicable major release
Name: IK8901116 (8306) Type: equipmentAlarm Package: Img.IK8901116 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Power Supply Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG

Table 27-2889 IK8901116 (continued)

Alarm	Attributes	Applicable major release
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe3FltTolPowerSupplyFailed		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2890 IK8901117

Alarm	Attributes	Applicable major release
Name: IK8901117 (9442) Type: equipmentAlarm Package: lmg.IK8901117 Raised on class: lmg.FRU	Severity: minor Specific problem: Power Redundancy Lost Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: The Fault Tolerant Power Supplies have lost redundancy for the specified chassis.\nAlarm is cleared by the system.\nReason: cpqHe3FltTolPowerRedundancyLost		
Remedial action: Check the system power supplies for a failure.		

Table 27-2891 IK8901120

Alarm	Attributes	Applicable major release
Name: IK8901120 (9443) Type: environmentalAlarm Package: lmg.IK8901120 Raised on class: lmg.FRU	Severity: minor Specific problem: Fan Degraded Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR15.1.MG
Description: The Fault Tolerant Fan condition has been set to degraded for the specified chassis and fan.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3FltTolFanDegraded		
Remedial action: Replace the fan as soon as possible.		

Table 27-2892 IK8901121

Alarm	Attributes	Applicable major release
Name: IK8901121 (8307) Type: environmentalAlarm Package: lmg.IK8901121 Raised on class: lmg.FRU	Severity: major Specific problem: Fan Failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The Fault Tolerant Fan condition has been set to failed for the specified chassis and fan.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3FltTolFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-2893 IK8901122

Alarm	Attributes	Applicable major release
Name: IK8901122 (9444) Type: environmentalAlarm Package: Img.IK8901122 Raised on class: Img.FRU	Severity: minor Specific problem: Fan Redundancy Lost Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR15.1.MG
Description: The Fault Tolerant Fans have lost redundancy for the specified chassis.\nAlarm is cleared by the system.\nReason: cpqHe3FltTolFanRedundancyLost		
Remedial action: Check the system fans for a failure.		

Table 27-2894 IK8901125

Alarm	Attributes	Applicable major release
Name: IK8901125 (8308) Type: environmentalAlarm Package: Img.IK8901125 Raised on class: Img.FRU	Severity: major Specific problem: Thermal Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: The temperature status has been set to failed in the specified chassis and location. The system will be shutdown due to this condition.\nAlarm is cleared by the system.\nReason: cpqHe3TemperatureFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 27-2895 IK8901126

Alarm	Attributes	Applicable major release
Name: IK8901126 (9445) Type: environmentalAlarm Package: Img.IK8901126 Raised on class: Img.FRU	Severity: minor Specific problem: Thermal Status Degraded Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR15.1.MG
Description: The temperature status has been set to degraded in the specified chassis and location. The server's temperature is outside of the normal operating range. The server will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHe3TemperatureDegraded		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 27-2896 IK8901128

Alarm	Attributes	Applicable major release
Name: IK8901128 (9446) Type: equipmentAlarm Package: Img.IK8901128 Raised on class: Img.FRU	Severity: minor Specific problem: Power Converter Degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG

Table 27-2896 IK8901128 (continued)

Alarm	Attributes	Applicable major release
Description: The DC-DC Power Converter condition has been set to degraded for the specified chassis, slot and socket.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3PowerConverterDegraded		
Remedial action: Check for a failing power converter or for a failed power converter in a redundant pair. Replace the power converter.		

Table 27-2897 IK8901129

Alarm	Attributes	Applicable major release
Name: IK8901129 (8309) Type: equipmentAlarm Package: lmg.IK8901129 Raised on class: lmg.FRU	Severity: major Specific problem: Power Converter Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The DC-DC Power Converter condition has been set to failed for the specified chassis, slot and socket.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3PowerConverterFailed		
Remedial action: Replace the failed power converter.		

Table 27-2898 IK8901130

Alarm	Attributes	Applicable major release
Name: IK8901130 (9447) Type: equipmentAlarm Package: lmg.IK8901130 Raised on class: lmg.FRU	Severity: warning Specific problem: Power Converter Redundancy Lost Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: The DC-DC Power Converters have lost redundancy for the specified chassis.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3PowerConverterRedundancyLost		
Remedial action: Check the power converters in the system for a failure in a redundant pair. Replace the power converter.		

Table 27-2899 IK8901131

Alarm	Attributes	Applicable major release
Name: IK8901131 (9448) Type: communicationsAlarm Package: lmg.IK8901131 Raised on class: lmg.FRU	Severity: minor Specific problem: Cache Accel Parity Errors may require a module Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • LR15.1.MG
Description: A cache accelerator parity error indicates a cache module needs to be replaced. The error information is reported in the variable cpqHeEventLogErrorDesc.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe3CacheAccelParityError		
Remedial action: Refer to the Integrated Management Log for details on the error. Replace the cache module.		

Table 27-2900 IK8901132

Alarm	Attributes	Applicable major release
Name: IK8901132 (9449) Type: processingErrorAlarm Package: Img.IK8901132 Raised on class: Img.FRU	Severity: warning Specific problem: Online Spare Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR15.1.MG
Description: Advanced Memory Protection Online Spare Engaged. The Advanced Memory Protection subsystem has detected a memory fault. The Online Spare Memory has been activated.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeResilientMemOnlineSpareEngaged		
Remedial action: Schedule server down-time to replace the faulty memory.		

Table 27-2901 IK8901134

Alarm	Attributes	Applicable major release
Name: IK8901134 (9450) Type: equipmentAlarm Package: Img.IK8901134 Raised on class: Img.FRU	Severity: minor Specific problem: Power Supply Degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: The fault tolerant power supply condition has been set to degraded for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FltTolPowerSupplyDegraded		
Remedial action: Replace the power supply as soon as possible.		

Table 27-2902 IK8901135

Alarm	Attributes	Applicable major release
Name: IK8901135 (8310) Type: equipmentAlarm Package: Img.IK8901135 Raised on class: Img.FRU	Severity: major Specific problem: Power Supply Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FltTolPowerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

Table 27-2903 IK8901136

Alarm	Attributes	Applicable major release
Name: IK8901136 (9451) Type: processingErrorAlarm Package: Img.IK8901136 Raised on class: Img.FRU	Severity: warning Specific problem: Mirrored Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR15.1.MG

Table 27-2903 IK8901136 (continued)

Alarm	Attributes	Applicable major release
Description: Advanced Memory Protection Mirrored Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. Mirrored Memory has been activated.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeResilientMemMirroredMemoryEngaged		
Remedial action: Replace the faulty memory.		

Table 27-2904 IK8901137

Alarm	Attributes	Applicable major release
Name: IK8901137 (9452) Type: processingErrorAlarm Package: lmg.IK8901137 Raised on class: lmg.FRU	Severity: warning Specific problem: Advanced ECC Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR15.1.MG
Description: Advanced Memory Protection Advanced ECC Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. Advanced ECC has been activated.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeResilientAdvancedECCMemoryEngaged		
Remedial action: Replace the faulty memory.		

Table 27-2905 IK8901138

Alarm	Attributes	Applicable major release
Name: IK8901138 (9453) Type: processingErrorAlarm Package: lmg.IK8901138 Raised on class: lmg.FRU	Severity: warning Specific problem: Advanced XOR Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR15.1.MG
Description: Advanced Memory Protection XOR Engine Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. The XOR engine has been activated.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeResilientMemXorMemoryEngaged		
Remedial action: Replace the faulty memory.		

Table 27-2906 IK8901142

Alarm	Attributes	Applicable major release
Name: IK8901142 (9454) Type: equipmentAlarm Package: lmg.IK8901142 Raised on class: lmg.FRU	Severity: warning Specific problem: Memory Board or Cartridge Removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG
Description: Memory board or cartridge removed. An Advanced Memory Protection sub-system board or cartridge has been removed from the system.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeResMemBoardRemoved		

Table 27-2906 IK8901142 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Insure the board or cartridge has memory correctly installed and re-insert the memory board or cartridge back into the system.		

Table 27-2907 IK8901144

Alarm	Attributes	Applicable major release
Name: IK8901144 (8311) Type: processingErrorAlarm Package: Img.IK8901144 Raised on class: Img.FRU	Severity: major Specific problem: Memory Board or Cartridge Bus Error Detected Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Memory board or cartridge bus error detected. An Advanced Memory Protection sub-system board or cartridge bus error has been detected.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge.		

Table 27-2908 IK8901148

Alarm	Attributes	Applicable major release
Name: IK8901148 (8312) Type: equipmentAlarm Package: Img.IK8901148 Raised on class: Img.FRU	Severity: major Specific problem: Management processor failed reset Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The Management processor failed reset The management processor was not successfully reset and is not operational.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeManagementProcFailedReset		
Remedial action: Reset the management procesessor again or re-flash the management processor firmware.		

Table 27-2909 IK8901150

Alarm	Attributes	Applicable major release
Name: IK8901150 (9455) Type: equipmentAlarm Package: Img.IK8901150 Raised on class: Img.FRU	Severity: warning Specific problem: Memory Board or Cartridge or Riser Removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG
Description: Memory board or cartridge or riser removed. An Advanced Memory Protection sub-system board or cartridge or riser has been removed from the system. Value 0 for CPU means memory is not processor based.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe5ResMemBoardRemoved		
Remedial action: Insure the board or cartridge or riser has memory correctly installed and re-insert the memory board or cartridge or CPU back into the system.		

Table 27-2910 IK8901152

Alarm	Attributes	Applicable major release
Name: IK8901152 (8313) Type: processingErrorAlarm Package: Img.IK8901152 Raised on class: Img.FRU	Severity: major Specific problem: Memory Board or Cartridge or Riser Bus Error Detected Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG
Description: Memory board or cartridge or Riser bus error detected. An Advanced Memory Protection sub-system board or cartridge or Riser bus error has been detected. Value 0 for CPU means memory is not processor based.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHe5ResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge or Riser.		

Table 27-2911 IK8901153

Alarm	Attributes	Applicable major release
Name: IK8901153 (9456) Type: processingErrorAlarm Package: Img.IK8901153 Raised on class: Img.FRU	Severity: warning Specific problem: Advanced LockStep Memory Engaged Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR15.1.MG
Description: Advanced Memory Protection LockStep Engine Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. The LockStep engine has been activated.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHeResilientMemLockStepMemoryEngaged		
Remedial action: Replace the faulty memory.		

Table 27-2912 IK8901154

Alarm	Attributes	Applicable major release
Name: IK8901154 (8314) Type: equipmentAlarm Package: Img.IK8901154 Raised on class: Img.FRU	Severity: major Specific problem: Power Supply AC Power Loss Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The fault tolerant power supply AC power loss for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FltTolPowerSupplyACpowerloss		
Remedial action: Check the power source for the specified power supply.		

Table 27-2913 IK8901156

Alarm	Attributes	Applicable major release
Name: IK8901156 (8315) Type: processingErrorAlarm Package: Img.IK8901156 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Application Error Trap Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHoAppErrorTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2914 IK8901158

Alarm	Attributes	Applicable major release
Name: IK8901158 (8316) Type: processingErrorAlarm Package: Img.IK8901158 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Application Error Trap Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2AppErrorTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2915 IK8901160

Alarm	Attributes	Applicable major release
Name: IK8901160 (9457) Type: communicationsAlarm Package: Img.IK8901160 Raised on class: Img.FRU	Severity: major Specific problem: Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition.\nAlarm is cleared by the system.\nReason: cpqHo2NicStatusFailed		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 27-2916 IK8901163

Alarm	Attributes	Applicable major release
Name: IK8901163 (8317) Type: communicationsAlarm Package: lmg.IK8901163 Raised on class: lmg.FRU	Severity: major Specific problem: Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition.\nAlarm is cleared by the system.\nReason: cpqHo2NicStatusFailed2		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 27-2917 IK8901164

Alarm	Attributes	Applicable major release
Name: IK8901164 (9458) Type: communicationsAlarm Package: lmg.IK8901164 Raised on class: lmg.FRU	Severity: warning Specific problem: Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG
Description: This alarm will be sent any time the configured redundant NIC becomes the active NIC.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHo2NicSwitchoverOccurred2		
Remedial action: Examine the network connections and check for a NIC failure.		

Table 27-2918 IK8901168

Alarm	Attributes	Applicable major release
Name: IK8901168 (9459) Type: processingErrorAlarm Package: lmg.IK8901168 Raised on class: lmg.FRU	Severity: warning Specific problem: Critical Software update Notification Trap Implicitly cleared: true Default probable cause: softwareProgramError	Release: • LR15.1.MG
Description: This alarm is a send to the user to notify him of a Critical Software Update.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqHoCriticalSoftwareUpdateTrap		
Remedial action: Install the required software updates.		

Table 27-2919 IK8901172

Alarm	Attributes	Applicable major release
Name: IK8901172 (8318) Type: qualityOfServiceAlarm Package: lmg.IK8901172 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Power Threshold Exceeded Implicitly cleared: false Default probable cause: resourceAtOrNearingCapacity	Release: • LR14.3.MG
Description: This alarm notifies user of a power threshold breach. Power threshold exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2PowerThresholdTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2920 IK8902265

Alarm	Attributes	Applicable major release
Name: IK8902265 (8319) Type: environmentalAlarm Package: lmg.IK8902265 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDaAccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 27-2921 IK8902272

Alarm	Attributes	Applicable major release
Name: IK8902272 (8320) Type: environmentalAlarm Package: lmg.IK8902272 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa2AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 27-2922 IK8902279

Alarm	Attributes	Applicable major release
Name: IK8902279 (8321) Type: environmentalAlarm Package: lmg.IK8902279 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa3AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 27-2923 IK8902281

Alarm	Attributes	Applicable major release
Name: IK8902281 (9460) Type: processingErrorAlarm Package: lmg.IK8902281 Raised on class: lmg.FRU	Severity: warning Specific problem: Duplex Controller Active Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR15.1.MG
Description: Controller Active. This alarm signifies that the agent has detected that a backup array controller in a duplexed pair has switched over to the active role. The variable cpqDaCntlrSlot indicates the active controller slot and cpqDaCntlrPartnerSlot indicates the backup.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqDaCntlrActive		
Remedial action: Check the partner controller for problems. If this was the result of a user initiated switch over, no action is required.		

Table 27-2924 IK8902284

Alarm	Attributes	Applicable major release
Name: IK8902284 (9461) Type: equipmentAlarm Package: lmg.IK8902284 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm is cleared by the system when the device is restarted.\ nReason: cpqDa4PhyDrvThreshPassedTrap		
Remedial action: If the physical drive is predicting failure, replace the drive.		

Table 27-2925 IK8902291

Alarm	Attributes	Applicable major release
Name: IK8902291 (8322) Type: equipmentAlarm Package: lmg.IK8902291 Raised on class: lmg.FRU	Severity: major Specific problem: Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Accelerator Board Bad Data. This alarm signifies that the agent has detected an array accelerator cache board that has lost battery power. If data was being stored in the accelerator cache memory when the server lost power, that data has been lost.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqDa5AccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 27-2926 IK8902292

Alarm	Attributes	Applicable major release
Name: IK8902292 (8323) Type: environmentalAlarm Package: lmg.IK8902292 Raised on class: lmg.FRU	Severity: major Specific problem: Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqDa5AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 27-2927 IK8902295

Alarm	Attributes	Applicable major release
Name: IK8902295 (8324) Type: equipmentAlarm Package: lmg.IK8902295 Raised on class: lmg.FRU	Severity: major Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm is cleared by the system when the device is restarted.\ nReason: cpqDa5PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 27-2928 IK8902302

Alarm	Attributes	Applicable major release
Name: IK8902302 (8325) Type: equipmentAlarm Package: lmg.IK8902302 Raised on class: lmg.FRU	Severity: major Specific problem: Physical Drive Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm is cleared by the system when the device is restarted.\ nReason: cpqDa6PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 27-2929 IK8902304

Alarm	Attributes	Applicable major release
Name: IK8902304 (9462) Type: equipmentAlarm Package: lmg.IK8902304 Raised on class: lmg.FRU	Severity: minor Specific problem: Accelerator Board Bad Data Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: Cache Module Board Bad Data. This alarm signifies that the agent has detected a cache module board that has lost backup power. If data was being stored in the cache module memory when the server lost power, that data has been lost. The backup power source is indicated by cpqDaAccelBackupPowerSource.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqDa6AccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 27-2930 IK8902305

Alarm	Attributes	Applicable major release
Name: IK8902305 (9463) Type: environmentalAlarm Package: lmg.IK8902305 Raised on class: lmg.FRU	Severity: minor Specific problem: Accelerator Board Battery Failed Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR15.1.MG
Description: Cache Module Board Backup Power Source Failed. This alarm signifies that the agent has detected a backup power source failure associated with the cache module board. The backup power source is indicated by cpqDaAccelBackupPowerSource.\ nAlarm is cleared by the system when the device is restarted.\nReason: cpqDa6AccelBatteryFailed		
Remedial action: Replace the Backup Power Source.		

Table 27-2931 IK8902309

Alarm	Attributes	Applicable major release
Name: IK8902309 (9464) Type: processingErrorAlarm Package: lmg.IK8902309 Raised on class: lmg.FRU	Severity: warning Specific problem: Tape Drive Cleaning Required Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR15.1.MG
Description: Tape Drive Cleaning Required trap. The agent has detected a tape drive that needs to have a cleaning tape inserted and run. This will cause the tape drive heads to be cleaned.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqDa6TapeDriveCleaningRequired		
Remedial action: Insert and run a cleaning tape in the tape drive.		

Table 27-2932 IK8902310

Alarm	Attributes	Applicable major release
Name: IK8902310 (9465) Type: equipmentAlarm Package: lmg.IK8902310 Raised on class: lmg.FRU	Severity: warning Specific problem: Tape Drive Cleaning Tape Needs Replacing Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG
Description: Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqDa6TapeDriveCleanTapeReplace		
Remedial action: Replace the cleaning tape.		

Table 27-2933 IK8902315

Alarm	Attributes	Applicable major release
Name: IK8902315 (9466) Type: equipmentAlarm Package: lmg.IK8902315 Raised on class: lmg.FRU	Severity: minor Specific problem: IDE Drive Degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG
Description: An IDE drive status has been set to degraded.\nAlarm is cleared by the system.\nReason: cpqIdeDriveDegraded		
Remedial action: The drive should be scheduled for replacement. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 27-2934 IK8902317

Alarm	Attributes	Applicable major release
Name: IK8902317 (9467) Type: equipmentAlarm Package: lmg.IK8902317 Raised on class: lmg.FRU	Severity: minor Specific problem: IDE Drive Ultra ATA Degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG
Description: An IDE drive detects an excessive number of Ultra ATA data transmission errors between the hard drive and the processor.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqIdeDriveUltraAtaDegraded		
Remedial action: For best performance move Ultra ATA devices to the primary controller and non Ultra ATA devices to the secondary controller. If errors still persist, consider replacing the standard 40-conductor IDE cable with an 80-conductor Ultra ATA cable.		

Table 27-2935 IK8902337

Alarm	Attributes	Applicable major release
Name: IK8902337 (8326) Type: communicationsAlarm Package: lmg.IK8902337 Raised on class: lmg.FRU	Severity: major Specific problem: NIC Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNicConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-2936 IK8902339

Alarm	Attributes	Applicable major release
Name: IK8902339 (9468) Type: communicationsAlarm Package: lmg.IK8902339 Raised on class: lmg.FRU	Severity: minor Specific problem: NIC Status Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNicRedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-2937 IK8902341

Alarm	Attributes	Applicable major release
Name: IK8902341 (8327) Type: communicationsAlarm Package: Img.IK8902341 Raised on class: Img.FRU	Severity: major Specific problem: NIC Connectivity Lost Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-2938 IK8902343

Alarm	Attributes	Applicable major release
Name: IK8902343 (8328) Type: communicationsAlarm Package: Img.IK8902343 Raised on class: Img.FRU	Severity: major Specific problem: NIC Redundancy Reduced Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2RedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-2939 IK8902347

Alarm	Attributes	Applicable major release
Name: IK8902347 (8329) Type: communicationsAlarm Package: Img.IK8902347 Raised on class: Img.FRU	Severity: major Specific problem: NIC Connectivity Lost Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqNic3ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-2940 IK8902349

Alarm	Attributes	Applicable major release
Name: IK8902349 (8330) Type: communicationsAlarm Package: lmg.IK8902349 Raised on class: lmg.FRU	Severity: major Specific problem: NIC Redundancy Reduced Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic3RedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 27-2941 IK8902360

Alarm	Attributes	Applicable major release
Name: IK8902360 (8331) Type: equipmentAlarm Package: lmg.IK8902360 Raised on class: lmg.FRU	Severity: major Specific problem: Enclosure temperature failed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: The enclosure temperature status has been set to failed. This alarm signifies that a enclosure temperature sensor has been tripped indicating an overheat condition.\nAlarm is cleared by the system.\nReason: cpqRackEnclosureTempFailed		
Remedial action: Shutdown the enclosure and possibly the rack as soon as possible. Ensure all fans are working properly and that air flow in the rack has not been blocked.		

Table 27-2942 IK8902361

Alarm	Attributes	Applicable major release
Name: IK8902361 (9469) Type: equipmentAlarm Package: lmg.IK8902361 Raised on class: lmg.FRU	Severity: minor Specific problem: Enclosure temperature degraded Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG
Description: The enclosure temperature status has been set to degraded. This alarm signifies that an enclosure temperature sensor has been tripped indicating a possible overheat condition.\nAlarm is cleared by the system.\nReason: cpqRackEnclosureTempDegraded		
Remedial action: Shutdown the enclosure and possibly the rack as soon as possible. Ensure all fans are working properly and that air flow in the rack has not been blocked.		

Table 27-2943 IK8902363

Alarm	Attributes	Applicable major release
Name: IK8902363 (8332) Type: environmentalAlarm Package: lmg.IK8902363 Raised on class: lmg.FRU	Severity: major Specific problem: Enclosure fan failed Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR14.3.MG • LR15.1.MG
Description: The enclosure fan status has been set to failed. This alarm signifies that an enclosure fan has failed and no other fans in the redundant fan group are operating. This may result in overheating of the enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackEnclosureFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 27-2944 IK8902364

Alarm	Attributes	Applicable major release
Name: IK8902364 (9470) Type: environmentalAlarm Package: lmg.IK8902364 Raised on class: lmg.FRU	Severity: minor Specific problem: Enclosure fan degraded Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR15.1.MG
Description: The enclosure fan status has been set to degraded. This alarm signifies that an enclosure fan has failed but other fans in the redundant fan group are still operating. This may result in overheating of the enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackEnclosureFanDegraded		
Remedial action: Replace the fan as soon as possible.		

Table 27-2945 IK8902368

Alarm	Attributes	Applicable major release
Name: IK8902368 (8333) Type: equipmentAlarm Package: lmg.IK8902368 Raised on class: lmg.FRU	Severity: critical Specific problem: Rack power supply failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The power supply status has been set to failed. This alarm signifies that a power supply has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

Table 27-2946 IK8902369

Alarm	Attributes	Applicable major release
Name: IK8902369 (8334) Type: equipmentAlarm Package: lmg.IK8902369 Raised on class: lmg.FRU	Severity: major Specific problem: Rack power supply degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The power supply status has been set to degraded. This alarm signifies that a power supply has degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSupplyDegraded		
Remedial action: Replace the power supply as soon as possible.		

Table 27-2947 IK8902373

Alarm	Attributes	Applicable major release
Name: IK8902373 (9471) Type: equipmentAlarm Package: lmg.IK8902373 Raised on class: lmg.FRU	Severity: minor Specific problem: Rack power subsystem not redundant Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: The rack power subsystem is no longer in a redundant state.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSubsystemNotRedundant		
Remedial action: Replace any failed power supplies as soon as possible to return the system to a redundant state.		

Table 27-2948 IK8902374

Alarm	Attributes	Applicable major release
Name: IK8902374 (8335) Type: equipmentAlarm Package: lmg.IK8902374 Raised on class: lmg.FRU	Severity: major Specific problem: Rack power supply input voltage problem Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The rack power supply detected an input line voltage problem.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSubsystemLineVoltageProblem		
Remedial action: Check the power input for the power supply or replace any failed power supplies as soon as possible.		

Table 27-2949 IK8902375

Alarm	Attributes	Applicable major release
Name: IK8902375 (8336) Type: equipmentAlarm Package: Img.IK8902375 Raised on class: Img.FRU	Severity: major Specific problem: Rack power subsystem overload condition Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: The rack power subsystem overload condition.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerSubsystemOverloadCondition		
Remedial action: Replace any failed power supplies as soon as possible to return the system to a redundant state.		

Table 27-2950 IK8902376

Alarm	Attributes	Applicable major release
Name: IK8902376 (8337) Type: equipmentAlarm Package: Img.IK8902376 Raised on class: Img.FRU	Severity: critical Specific problem: Server shutdown due to power shedding Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Server shutdown due to power shedding. The server blade was shutdown due to a lack of power.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerShedAutoShutdown		
Remedial action: Check power connections or add power supplies.		

Table 27-2951 IK8902377

Alarm	Attributes	Applicable major release
Name: IK8902377 (8338) Type: equipmentAlarm Package: Img.IK8902377 Raised on class: Img.FRU	Severity: critical Specific problem: Server power on prevented to preserve redundancy Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Server power on prevented to preserve redundancy. There is not enough power to power on the server blade and maintain redundancy for the other blades in the enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailedNotRedundant		
Remedial action: Check power connections or add power supplies.		

Table 27-2952 IK8902378

Alarm	Attributes	Applicable major release
Name: IK8902378 (8339) Type: equipmentAlarm Package: Img.IK8902378 Raised on class: Img.FRU	Severity: critical Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailedNotEnoughPower		
Remedial action: Check power connections or add power supplies.		

Table 27-2953 IK8902379

Alarm	Attributes	Applicable major release
Name: IK8902379 (8340) Type: equipmentAlarm Package: Img.IK8902379 Raised on class: Img.FRU	Severity: critical Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The server enclosure micro-controller was not found.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFaile-dEnclosureNotFound		
Remedial action: Check server enclosure connections or add power supplies.		

Table 27-2954 IK8902380

Alarm	Attributes	Applicable major release
Name: IK8902380 (8341) Type: equipmentAlarm Package: Img.IK8902380 Raised on class: Img.FRU	Severity: critical Specific problem: Inadequate power to power on Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The power enclosure micro-controller was not found.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerPowerOnFailed-PowerChassisNotFound		
Remedial action: Check power enclosure connections or add power supplies.		

Table 27-2955 IK8902382

Alarm	Attributes	Applicable major release
Name: IK8902382 (8342) Type: environmentalAlarm Package: Img.IK8902382 Raised on class: Img.FRU	Severity: major Specific problem: Fuse open Implicitly cleared: true Default probable cause: enclosureDoorOpen	Release: • LR14.3.MG • LR15.1.MG
Description: Fuse open. The fuse has been tripped.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackFuseOpen		
Remedial action: Check enclosure and / or blade power connections and reset the fuse.		

Table 27-2956 IK8902385

Alarm	Attributes	Applicable major release
Name: IK8902385 (9472) Type: equipmentAlarm Package: Img.IK8902385 Raised on class: Img.FRU	Severity: minor Specific problem: Power subsystem not load balanced Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: Power subsystem not load balanced. The power subsystem is out of balance for this power enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisNotLoadBalanced		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies. Add additional power supplies if needed.		

Table 27-2957 IK8902386

Alarm	Attributes	Applicable major release
Name: IK8902386 (8343) Type: equipmentAlarm Package: Img.IK8902386 Raised on class: Img.FRU	Severity: major Specific problem: Power subsystem DC power problem Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem DC power problem. There is a power subsystem DC power problem for this power enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisDcPowerProblem		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 27-2958 IK8902387

Alarm	Attributes	Applicable major release
Name: IK8902387 (8344) Type: equipmentAlarm Package: lmg.IK8902387 Raised on class: lmg.FRU	Severity: major Specific problem: Power subsystem AC facility input power exceeded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem AC facility input power exceeded. There is a power subsystem Power subsystem AC facility input power exceeded for this power enclosure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisAc-FacilityPowerExceeded		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 27-2959 IK8902388

Alarm	Attributes	Applicable major release
Name: IK8902388 (8345) Type: equipmentAlarm Package: lmg.IK8902388 Raised on class: lmg.FRU	Severity: major Specific problem: Unknown power consumption Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Unknown power consumption. There is an unknown power consumer drawing power.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerUnknownPowerConsumption		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 27-2960 IK8902389

Alarm	Attributes	Applicable major release
Name: IK8902389 (9473) Type: equipmentAlarm Package: lmg.IK8902389 Raised on class: lmg.FRU	Severity: minor Specific problem: Power subsystem load balancing wire missing Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: Power subsystem load balancing wire missing. The power subsystem load balancing wire missing.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisLoadBalancingWireMissing		
Remedial action: Connect the load balancing wire.		

Table 27-2961 IK8902390

Alarm	Attributes	Applicable major release
Name: IK8902390 (9474) Type: equipmentAlarm Package: lmg.IK8902390 Raised on class: lmg.FRU	Severity: minor Specific problem: Power subsystem has too may power enclosures Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: Power subsystem has too may power enclosures. The maximum number of power enclosures has been exceeded.\ nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisTooManyPowerChassis		
Remedial action: Remove the extra power enclosure.		

Table 27-2962 IK8902391

Alarm	Attributes	Applicable major release
Name: IK8902391 (8346) Type: processingErrorAlarm Package: lmg.IK8902391 Raised on class: lmg.FRU	Severity: major Specific problem: Power subsystem improperly configured Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR14.3.MG • LR15.1.MG
Description: Power subsystem improperly configured. The power subsystem has been improperly configured.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerChassisConfigError		
Remedial action: Check the cabling of the power enclosure.		

Table 27-2963 IK8902392

Alarm	Attributes	Applicable major release
Name: IK8902392 (9475) Type: qualityOfServiceAlarm Package: lmg.IK8902392 Raised on class: lmg.FRU	Severity: minor Specific problem: Enclosure manager degraded Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR15.1.MG
Description: The Onboard Administrator or other management processor status has been set to degraded. This alarm signifies that either an Onboard Administrator has failed but the other Onboard Administrator is still operating, or one or more management processors is in a non-optimal operating state.\nAlarm is cleared by the system.\nReason: cpqRackEnclosureManagerDegraded		
Remedial action: For C-Class enclosures, replace the Onboard Administrator as soon as possible. For all others please refer to product documenation for possible corrective actions		

Table 27-2964 IK8902401

Alarm	Attributes	Applicable major release
Name: IK8902401 (8347) Type: communicationsAlarm Package: lmg.IK8902401 Raised on class: lmg.FRU	Severity: critical Specific problem: Interconnect failed Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: The interconnect status has been set to failed. This alarm signifies that a interconnect has failed.\nAlarm is cleared by the system.\nReason: cpqRackNetConnectorFailed		
Remedial action: Replace the interconnect as soon as possible.		

Table 27-2965 IK8902402

Alarm	Attributes	Applicable major release
Name: IK8902402 (9476) Type: communicationsAlarm Package: lmg.IK8902402 Raised on class: lmg.FRU	Severity: minor Specific problem: Interconnect degraded Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG
Description: The interconnect status has been set to degraded. This alarm signifies that a interconnect has degraded.\nAlarm is cleared by the system.\nReason: cpqRackNetConnectorDegraded		
Remedial action: Replace the interconnect as soon as possible.		

Table 27-2966 IK8902408

Alarm	Attributes	Applicable major release
Name: IK8902408 (8348) Type: qualityOfServiceAlarm Package: lmg.IK8902408 Raised on class: lmg.FRU	Severity: major Specific problem: Server blade health status degraded Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR14.3.MG • LR15.1.MG
Description: Server blade health status Degraded. The server blade health status has changed to Degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerBladeStatusDegraded		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-2967 IK8902409

Alarm	Attributes	Applicable major release
Name: IK8902409 (8349) Type: processingErrorAlarm Package: Img.IK8902409 Raised on class: Img.FRU	Severity: critical Specific problem: Server blade health status critical Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG
Description: Server blade health status Critical. The server blade health status has changed to Critical.\nAlarm is cleared by the system.\nReason: cpqRackServerBladeStatusCritical		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-2968 IK8902410

Alarm	Attributes	Applicable major release
Name: IK8902410 (9477) Type: equipmentAlarm Package: Img.IK8902410 Raised on class: Img.FRU	Severity: minor Specific problem: Server blade not responding to group capping requests Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG
Description: The server blade is not responding to the group capper. The server blade is not responding to capping requests from the enclosure group capper\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerBladeGrpCapTimeout		
Remedial action: Reset the iLO management processor.		

Table 27-2969 IK8902411

Alarm	Attributes	Applicable major release
Name: IK8902411 (8350) Type: equipmentAlarm Package: Img.IK8902411 Raised on class: Img.FRU	Severity: major Specific problem: Server blade unexpected shutdown Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: Server blade shutdown unexpectadly. An unexpected shutdown event has occurred for this server blade.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerBladeUnexpectedShutdown		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 27-2970 IK8902428

Alarm	Attributes	Applicable major release
Name: IK8902428 (8351) Type: equipmentAlarm Package: Img.IK8902428 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Generic EAE Major trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG

Table 27-2970 IK8902428 (continued)

Alarm	Attributes	Applicable major release
Description: EAE Major trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackMajorEAETrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2971 IK8902429

Alarm	Attributes	Applicable major release
Name: IK8902429 (8352) Type: equipmentAlarm Package: lmg.IK8902429 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Generic EAE Critical trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: EAE Critical trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackCriticalEAETrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2972 IK8902430

Alarm	Attributes	Applicable major release
Name: IK8902430 (9478) Type: equipmentAlarm Package: lmg.IK8902430 Raised on class: lmg.FRU	Severity: minor Specific problem: Generic Power Subsystem EAE Minor trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: FlexFabric Cmdr Power Subsystem Minor trap.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerMinorEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 27-2973 IK8902431

Alarm	Attributes	Applicable major release
Name: IK8902431 (8353) Type: equipmentAlarm Package: lmg.IK8902431 Raised on class: lmg.FRU	Severity: major Specific problem: Generic Power Subsystem EAE Major trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: FlexFabric Cmdr Power Subsystem Major trap.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerMajorEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 27-2974 IK8902432

Alarm	Attributes	Applicable major release
Name: IK8902432 (8354) Type: equipmentAlarm Package: Img.IK8902432 Raised on class: Img.FRU	Severity: critical Specific problem: Generic Power Subsystem EAE Critical trap Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: FlexFabric Cmdr Power Subsystem Critical trap.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackPowerCriticalEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 27-2975 IK8902436

Alarm	Attributes	Applicable major release
Name: IK8902436 (8355) Type: equipmentAlarm Package: Img.IK8902436 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Generic WSMAN Major trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: WSMAN Major trap\nReason: cpqRackMajorWSMANTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2976 IK8902437

Alarm	Attributes	Applicable major release
Name: IK8902437 (8356) Type: equipmentAlarm Package: Img.IK8902437 Raised on class: Img.LMGMngElement	Severity: critical Specific problem: Generic WSMAN Critical trap Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • LR14.3.MG
Description: WSMAN Critical trap\nReason: cpqRackCriticalWSMANTrap		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2977 IK8902439

Alarm	Attributes	Applicable major release
Name: IK8902439 (8357) Type: communicationsAlarm Package: Img.IK8902439 Raised on class: Img.LMGMngElement	Severity: major Specific problem: Standby Recovery Server Interconnect Failure Implicitly cleared: false Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG

Table 27-2977 IK8902439 (continued)

Alarm	Attributes	Applicable major release
Description: Recovery Server serial interconnect failure. The Standby Recovery Agent reports that the local serial interconnect is not connected or has failed. The primary server is being shutdown in anticipation of the startup of the standby server.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRsStandbyCableFailure		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2978 IK8902443

Alarm	Attributes	Applicable major release
Name: IK8902443 (9479) Type: communicationsAlarm Package: lmg.IK8902443 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Device Connected Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG
Description: A UPS device is reporting a Connection Lost due to one of the following. 1. The serial cable connected to the UPS has been unplugged. 2. The Network cable connected to the UPS has been unplugged.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapDeviceConnected		
Remedial action: Perform the following steps to clear the alarm: 1. Insure all cables are seated properly. 2. Check you network to insure it is functioning properly. 3. If the UPS is serially connected insure that the Serial Relay Agent is installed and running.		

Table 27-2979 IK8902444

Alarm	Attributes	Applicable major release
Name: IK8902444 (9480) Type: communicationsAlarm Package: lmg.IK8902444 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Connection Lost Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG
Description: A UPS device is reporting a Connection Lost due to one of the following. 1. The serial cable connected to the UPS has been unplugged. 2. The Network cable connected to the UPS has been unplugged.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapConnectionLost		
Remedial action: Perform the following steps to clear the alarm: 1. Insure all cables are seated properly. 2. Check you network to insure it is functioning properly. 3. If the UPS is serially connected insure that the Serial Relay Agent is installed and running.		

Table 27-2980 IK8902462

Alarm	Attributes	Applicable major release
Name: IK8902462 (9481) Type: environmentalAlarm Package: Img.IK8902462 Raised on class: Img.FRU	Severity: indeterminate Specific problem: CMC Smoke Detected Implicitly cleared: true Default probable cause: smoke	Release: • LR15.1.MG
Description: A CMC device is reporting smoke detected.\nAlarm is cleared by the system.\nReason: cpqRPMTrapCMCSmokeDetected		
Remedial action: Investigate CMC Device for an over temperature condition.		

Table 27-2981 IK8902464

Alarm	Attributes	Applicable major release
Name: IK8902464 (9482) Type: equipmentAlarm Package: Img.IK8902464 Raised on class: Img.FRU	Severity: indeterminate Specific problem: CMC Shock Detected Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG
Description: A CMC device is reporting shock detected.\nAlarm is cleared by the system.\nReason: cpqRPMTrapCMCShockDetected		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2982 IK8902468

Alarm	Attributes	Applicable major release
Name: IK8902468 (9483) Type: equipmentAlarm Package: Img.IK8902468 Raised on class: Img.FRU	Severity: indeterminate Specific problem: CMC Aux 2 Alarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG
Description: A CMC device has entered an alarm condition for auxiliary input 2.\nAlarm is cleared by the system.\nReason: cpqRPMTrapCMCAux2Alarm		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2983 IK8902490

Alarm	Attributes	Applicable major release
Name: IK8902490 (9484) Type: equipmentAlarm Package: Img.IK8902490 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS Input Voltage Normal Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: A UPS device is reporting input voltage is out of range.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSInputVoltageNormal		

Table 27-2983 IK8902490 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. 2. If the UPS remains on battery for an extended period of time it will not be able to sustain the load.		

Table 27-2984 IK8902493

Alarm	Attributes	Applicable major release
Name: IK8902493 (9485) Type: equipmentAlarm Package: lmg.IK8902493 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: UPS Output Voltage Normal Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: A UPS device is reporting output voltage is out of Range.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSOutputVoltageNormal		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If this error persists contact technical support.		

Table 27-2985 IK8902494

Alarm	Attributes	Applicable major release
Name: IK8902494 (9486) Type: equipmentAlarm Package: lmg.IK8902494 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: UPS Output Overload Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG
Description: A UPS device is reporting an overload condition.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSOutpu-tOverload		
Remedial action: Perform the following steps to clear the alarm: 1. Reduce the load on the UPS by moving some of the load to another UPS. 2. Consider moving to a larger UPS to support the current load.		

Table 27-2986 IK8902496

Alarm	Attributes	Applicable major release
Name: IK8902496 (9487) Type: environmentalAlarm Package: lmg.IK8902496 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: UPS Battery Low Implicitly cleared: true Default probable cause: lowBatteryThreshold	Release: • LR15.1.MG
Description: A UPS device is reporting low battery.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBatteryLow		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. 2. When utility power is restored, charge the battery to it's full capacity. If the battery level continues to decrease, the UPS will not be able to sustain the output load!		

Table 27-2987 IK8902499

Alarm	Attributes	Applicable major release
Name: IK8902499 (9488) Type: equipmentAlarm Package: lmg.IK8902499 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: UPS Battery Level Normal Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: A UPS device is reporting low battery.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSBatteryLevelNormal		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. 2. When utility power is restored, charge the battery to it's full capacity. If the battery level continues to decrease, the UPS will not be able to sustain the output load!		

Table 27-2988 IK8902500

Alarm	Attributes	Applicable major release
Name: IK8902500 (9489) Type: equipmentAlarm Package: lmg.IK8902500 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: UPS On Battery Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: A UPS device is reporting on battery condition.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSOnBattery		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. If the UPS remains on battery for an extended time it will not be able to sustain the output load!		

Table 27-2989 IK8902502

Alarm	Attributes	Applicable major release
Name: IK8902502 (9490) Type: equipmentAlarm Package: lmg.IK8902502 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: UPS On Buck Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: A UPS device is reporting an On Buck condition due to the following. 1. Utility power has increased above recommended utility input levels.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSOnBuck		
Remedial action: Perform the following steps to clear the alarm: 1. Contact an electrician.		

Table 27-2990 IK8902503

Alarm	Attributes	Applicable major release
Name: IK8902503 (9491) Type: equipmentAlarm Package: lmg.IK8902503 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: UPS On Boost Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: A UPS device is reporting an On Boost condition due to the following. 1. Utility power has dropped below recommended utility input levels.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSOnBoost		
Remedial action: Perform the following steps to clear the alarm: 1. Contact an electrician.		

Table 27-2991 IK8902504

Alarm	Attributes	Applicable major release
Name: IK8902504 (9492) Type: equipmentAlarm Package: lmg.IK8902504 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: UPS On Utility Power Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: A UPS device is reporting on battery condition.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSOnUtilityPower		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. If the UPS remains on battery for an extended time it will not be able to sustain the output load!		

Table 27-2992 IK8902507

Alarm	Attributes	Applicable major release
Name: IK8902507 (9493) Type: environmentalAlarm Package: lmg.IK8902507 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: UPS Temperature Normal Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR15.1.MG
Description: A UPS device is reporting temperature is out of range.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSTemperatureNormal		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is in a well ventilated area. 2. Lower the ambient temperature in the area where the UPS is located.		

Table 27-2993 IK8902508

Alarm	Attributes	Applicable major release
Name: IK8902508 (9494) Type: equipmentAlarm Package: lmg.IK8902508 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: UPS Internal Failure Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG
Description: A UPS device is reporting a general UPS failure.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSInternal-Failure		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If this error persists contact technical support.		

Table 27-2994 IK8902510

Alarm	Attributes	Applicable major release
Name: IK8902510 (9495) Type: environmentalAlarm Package: lmg.IK8902510 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: UPS Battery Failure Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR15.1.MG
Description: A UPS device is reporting a battery failure.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBatteryFailure		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If this error persists contact technical support. 3. Your battery may need to be replaced. The UPS may not be capable of supporting it's load if utility power fails!		

Table 27-2995 IK8902512

Alarm	Attributes	Applicable major release
Name: IK8902512 (9496) Type: equipmentAlarm Package: lmg.IK8902512 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: UPS Diagnostic Test Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: A UPS device is reporting a diagnostic test failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSDiagnosticTestFailed		
Remedial action: Perform the following steps to clear the alarm: 1. Your battery may need to be replaced. 2. If this error persists contact technical support. 3. The UPS may not be capable of supporting it's load if utility power fails!		

Table 27-2996 IK8902513

Alarm	Attributes	Applicable major release
Name: IK8902513 (9497) Type: equipmentAlarm Package: lmg.IK8902513 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: UPS Diagnostic Test Succeeded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: A UPS device is reporting a diagnostic test failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSDiagnosticTestSucceeded		
Remedial action: Perform the following steps to clear the alarm: 1. Your battery may need to be replaced. 2. If this error persists contact technical support. 3. The UPS may not be capable of supporting it's load if utility power fails!		

Table 27-2997 IK8902518

Alarm	Attributes	Applicable major release
Name: IK8902518 (9498) Type: equipmentAlarm Package: lmg.IK8902518 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Bypass Not Available Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG
Description: A UPS device is reporting bypass not avaliable.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBypassNotAvailable		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If this error persists contact technical support.		

Table 27-2998 IK8902522

Alarm	Attributes	Applicable major release
Name: IK8902522 (9499) Type: equipmentAlarm Package: lmg.IK8902522 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Utility Not Present Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: Indicates that the utility input is not present. This differs from alarm #57 in that the detected voltage is zero in this case.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSUtilityNotPresent		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-2999 IK8902526

Alarm	Attributes	Applicable major release
Name: IK8902526 (9500) Type: equipmentAlarm Package: Img.IK8902526 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Site Wiring Fault Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG
Description: A UPS device is reporting a fault in the input wiring, other than Phase Rotation: e.g., Ground/Neutral reversed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSSiteWiringFault		
Remedial action: Perform the following steps to clear the alarm: 1. Contact an electrician.		

Table 27-3000 IK8902527

Alarm	Attributes	Applicable major release
Name: IK8902527 (9501) Type: equipmentAlarm Package: Img.IK8902527 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Site Wiring Fault Cleared Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG
Description: A UPS device is reporting a fault in the input wiring, other than Phase Rotation: e.g., Ground/Neutral reversed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSSiteWiringNormal		
Remedial action: Perform the following steps to clear the alarm: 1. Contact an electrician.		

Table 27-3001 IK8902528

Alarm	Attributes	Applicable major release
Name: IK8902528 (9502) Type: equipmentAlarm Package: Img.IK8902528 Raised on class: Img.FRU	Severity: indeterminate Specific problem: The UPS is no longer on manual bypass Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: A UPS device is operating in manual bypass mode.\nAlarm is cleared by the system when the device is restarted.\ nReason: cpqRPMtrapUPSBypassOffManual		
Remedial action: Perform the following steps to clear the alarm: 1. In bypass mode, the UPS cannot support devices if there is a power failure. 2. Once maintenance has been performed return the UPS to normal mode.		

Table 27-3002 IK8902529

Alarm	Attributes	Applicable major release
Name: IK8902529 (9503) Type: equipmentAlarm Package: lmg.IK8902529 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: The UPS is on manual bypass Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: A UPS device is operating in manual bypass mode.\nAlarm is cleared by the system when the device is restarted.\ nReason: cpqRPMtrapUPSBypassONManual		
Remedial action: Perform the following steps to clear the alarm: 1. In bypass mode, the UPS cannot support devices if there is a power failure. 2. Once maintenance has been performed return the UPS to normal mode.		

Table 27-3003 IK8902531

Alarm	Attributes	Applicable major release
Name: IK8902531 (9504) Type: equipmentAlarm Package: lmg.IK8902531 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: The UPS was started without utility power Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: A UPS device has been started while on battery power. AC input power is not present.\nAlarm is cleared by the system.\nReason: cppqRPMtrapUPSStartedOnBattery		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. If the UPS remains on battery for an extended time it will not be able to sustain the output load.		

Table 27-3004 IK8902533

Alarm	Attributes	Applicable major release
Name: IK8902533 (9505) Type: equipmentAlarm Package: lmg.IK8902533 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Input voltage is out of range Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: A UPS device is reporting input voltage is out of range.\nAlarm is cleared by the system.\nReason: cpqRPMtrapUPSInput-OutofRange		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. 2. If the UPS remains on battery for an extended period of time it will not be able to sustain the load.		

Table 27-3005 IK8902534

Alarm	Attributes	Applicable major release
Name: IK8902534 (9506) Type: environmentalAlarm Package: Img.IK8902534 Raised on class: Img.FRU	Severity: indeterminate Specific problem: UPS temperature out of range Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR15.1.MG
Description: A UPS device is reporting temperature is out of range.\nAlarm is cleared by the system.\nReason: cpqRPMtrapUPSTemperatureOutOfRange		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is in a well ventilated area. 2. Lower the ambient temperature in the area where the UPS is located.		

Table 27-3006 IK8902536

Alarm	Attributes	Applicable major release
Name: IK8902536 (9507) Type: equipmentAlarm Package: Img.IK8902536 Raised on class: Img.FRU	Severity: indeterminate Specific problem: The UPS is on automatic bypass Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: A UPS device is operating in auto bypass mode.\nAlarm is cleared by the system.\nReason: cpqRPMtrapUPSBypassOnAuto		
Remedial action: Perform the following steps to clear the alarm: 1. In bypass mode, the UPS cannot support devices if there is a power failure. 2. Once maintenance has been performed return the UPS to normal mode.		

Table 27-3007 IK8902538

Alarm	Attributes	Applicable major release
Name: IK8902538 (9508) Type: equipmentAlarm Package: Img.IK8902538 Raised on class: Img.FRU	Severity: indeterminate Specific problem: Output voltage is out of range Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: A UPS device is reporting output voltage is out of Range.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMtrapUPSOutputoutofRange		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If this error persists contact technical support.		

Table 27-3008 IK8902539

Alarm	Attributes	Applicable major release
Name: IK8902539 (9509) Type: equipmentAlarm Package: lmg.IK8902539 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: One or more UPS batteries have been disconnected Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG
Description: A UPS device is reporting batteries are not connected to the UPS.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBatteriesDisconnected		
Remedial action: Perform the following steps to clear the alarm: 1. Connect the UPS Batteries. The UPS will not be capable of supporting it's load if the utility power fails!		

Table 27-3009 IK8902541

Alarm	Attributes	Applicable major release
Name: IK8902541 (9510) Type: environmentalAlarm Package: lmg.IK8902541 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: The UPS batteries are in a discharged condition Implicitly cleared: true Default probable cause: batteryDischarging	Release: • LR15.1.MG
Description: A UPS device is reporting batteries are completely discharged.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBatteryDischarged		
Remedial action: Perform the following steps to clear the alarm: 1. Connect the UPS to utility power to charge the batteries. The UPS will not be able to support it's load if the utility power fails!		

Table 27-3010 IK8902543

Alarm	Attributes	Applicable major release
Name: IK8902543 (9511) Type: equipmentAlarm Package: lmg.IK8902543 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: A UPS circuit breaker needs attention Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG
Description: A UPS device is reporting an output Breaker or Relay has failed or may be stuck open or closed with this alarm.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSCheckBreaker		
Remedial action: Perform the following steps to clear the alarm: 1. Check all breakers on the UPS. 2. If this error persists contact technical support.		

Table 27-3011 IK8902545

Alarm	Attributes	Applicable major release
Name: IK8902545 (9512) Type: equipmentAlarm Package: lmg.IK8902545 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: Emergency Power Off activated Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: A UPS device is reporting an Emergency Power Off (EPO) command has been received to shutdown the UPS immediately with out delay. This command may come from a local control panel or from a remote source.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRPMTrapUPSEPOInitiated		
Remedial action: Perform the following steps to clear the alarm: 1. Turn the UPS on to reapply power to attached equipment.		

Table 27-3012 IK8902546

Alarm	Attributes	Applicable major release
Name: IK8902546 (9513) Type: equipmentAlarm Package: lmg.IK8902546 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: UPS output has been manually turned off Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: The UPS has been powered off with user interaction.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSManualLoadDumped		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-3013 IK8902548

Alarm	Attributes	Applicable major release
Name: IK8902548 (9514) Type: environmentalAlarm Package: lmg.IK8902548 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: A cover panel has been removed Implicitly cleared: true Default probable cause: enclosureDoorOpen	Release: • LR15.1.MG
Description: A UPS device is reporting a cover panel has been removed while utility power is present.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSCabinetDoorOpen		
Remedial action: Perform the following steps to clear the alarm: 1. Reinstall all panels. 2. If this error persists contact technical support.		

Table 27-3014 IK8902550

Alarm	Attributes	Applicable major release
Name: IK8902550 (9515) Type: environmentalAlarm Package: lmg.IK8902550 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: The UPS has encountered an fan failure Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR15.1.MG
Description: A UPS device is reporting a fan failure has occurred.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSFan-Failure		
Remedial action: Perform the following steps to clear the alarm: 1. If this error persists contact technical support.		

Table 27-3015 IK8902552

Alarm	Attributes	Applicable major release
Name: IK8902552 (9516) Type: processingErrorAlarm Package: lmg.IK8902552 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: The UPS N+1 load has been exceeded Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR15.1.MG
Description: A UPS device is reporting a loss of redundancy due to one of the following. 1. One or more of the Electronics Modules has failed 2. One or more of the electronics modules has been manually removed. 3. The amount of load on the UPS has increased to the point that the UPS is no longer able to support an N+1 configuration.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSLos-sOfRedundancy		
Remedial action: Perform the following steps to clear the alarm: 1. Check the UPS to see if one of the modules has failed. 2. Make sure that all modules are securely plugged in. 3. Reduce the load to return the N+1 configuration. 4. If the amount of load is now going to exceed and N+1 configuration permanently, change the configuration on the front panel of the UPS to Capacity instead of Parallel N+1.		

Table 27-3016 IK8902554

Alarm	Attributes	Applicable major release
Name: IK8902554 (9517) Type: equipmentAlarm Package: lmg.IK8902554 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: A UPS shutdown is imminent Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: A UPS device is reporting a shutdown imminent condition.\nAlarm is cleared by the system.\nReason: cpqRPMTrap-UPSShutdownImminent		
Remedial action: Perform the following steps to clear the alarm: 1. Immediately restore power to the UPS. The UPS will not continue to supply power to devices following the shutdown!		

Table 27-3017 IK8902556

Alarm	Attributes	Applicable major release
Name: IK8902556 (9518) Type: equipmentAlarm Package: Img.IK8902556 Raised on class: Img.FRU	Severity: indeterminate Specific problem: A UPS shutdown is pending Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: A UPS device is reporting shutdown pending condition.\nAlarm is cleared by the system.\nReason: cpqRPMTrap-UPSShutdownPending		
Remedial action: Perform the following steps to clear the alarm: 1. Immediately restore power to the UPS. The UPS will not continue to supply power to devices following the shutdown!		

Table 27-3018 IK8902559

Alarm	Attributes	Applicable major release
Name: IK8902559 (8358) Type: equipmentAlarm Package: Img.IK8902559 Raised on class: Img.FRU	Severity: critical Specific problem: Critical Alarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR14.3.MG • LR15.1.MG
Description: A critical alarm has occurred.\nAlarm is cleared by the system.\nReason: cpqPMTrapCritical		
Remedial action: Check the Trap Details for more information.		

Table 27-3019 IK8902560

Alarm	Attributes	Applicable major release
Name: IK8902560 (9519) Type: equipmentAlarm Package: Img.IK8902560 Raised on class: Img.FRU	Severity: warning Specific problem: Warning Alarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG
Description: A warning alarm has occurred.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqPMTrapWarning		
Remedial action: Check the Trap Details for more information.		

Table 27-3020 IK8902585

Alarm	Attributes	Applicable major release
Name: IK8902585 (9520) Type: processingErrorAlarm Package: Img.IK8902585 Raised on class: Img.FRU	Severity: warning Specific problem: Tape Drive Cleaning Required Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR15.1.MG

Table 27-3020 IK8902585 (continued)

Alarm	Attributes	Applicable major release
Description: Tape Drive Cleaning Required trap. The agent has detected a tape drive that needs to have a cleaning tape inserted and run. This will cause the tape drive heads to be cleaned.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqTape3PhyDrvCleaningRequired		
Remedial action: Insert and run a cleaning tape in the tape drive.		

Table 27-3021 IK8902586

Alarm	Attributes	Applicable major release
Name: IK8902586 (9521) Type: equipmentAlarm Package: lmg.IK8902586 Raised on class: lmg.FRU	Severity: warning Specific problem: Tape Drive Cleaning Tape Needs Replacing Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG
Description: Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqTape3PhyDrvCleanTapeReplace		
Remedial action: Replace the cleaning tape.		

Table 27-3022 IK8902590

Alarm	Attributes	Applicable major release
Name: IK8902590 (9522) Type: environmentalAlarm Package: lmg.IK8902590 Raised on class: lmg.FRU	Severity: minor Specific problem: Tape Library Door Opened Implicitly cleared: true Default probable cause: enclosureDoorOpen	Release: • LR15.1.MG
Description: Tape Library Door Open The agent has detected that the door on an autoloader is open so the unit is not operational.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqTape3LibraryDoorOpen		
Remedial action: Close the door on the tape library.		

Table 27-3023 IK8902606

Alarm	Attributes	Applicable major release
Name: IK8902606 (9523) Type: equipmentAlarm Package: lmg.IK8902606 Raised on class: lmg.FRU	Severity: warning Specific problem: System hood is removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG
Description: System hood is removed. The hood status has been set to removed. The system's hood is not in a properly installed state. This situation may result in improper cooling of the system due to air flow changes caused by the missing hood.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiHoodRemoved		

Table 27-3023 IK8902606 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Replace the cover (hood), ensure the system's cover is properly installed. Verify the system is in working order.		

Table 27-3024 IK8902608

Alarm	Attributes	Applicable major release
Name: IK8902608 (9524) Type: environmentalAlarm Package: Img.IK8902608 Raised on class: Img.FRU	Severity: minor Specific problem: Monitor Condition Degraded Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR15.1.MG
Description: A fault reporting feature has exceeded normal limits for the monitor indicated by the cpqSiMonitorIndex. The monitor's condition is degraded due to the internal temperature exceeding normal operating limits. The monitor is still useable, but action should be taken to return the condition to OK.\nAlarm is cleared by the system.\nReason: cpqSiMonitorConditionDegraded		
Remedial action: Physically check for obstructions to air flow around the monitor. Check the thermostat in the room that the system occupies. Allow the monitor to cool by turning off the monitor for 5 minutes then turn the monitor back on. After the monitor cools, another alarm indicating an improving condition, such as Monitor OK, will be issued.		

Table 27-3025 IK8902609

Alarm	Attributes	Applicable major release
Name: IK8902609 (8359) Type: processingErrorAlarm Package: Img.IK8902609 Raised on class: Img.FRU	Severity: major Specific problem: Monitor Condition Failed Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • LR14.3.MG • LR15.1.MG
Description: A fault reporting feature has exceeded normal limits in the monitor indicated by the cpqSiMonitorIndex. The monitor's condition has been set to failed due to an operational feature exceeding normal operating limits. The monitor will not be useable and should be replaced.\nAlarm is cleared by the system.\nReason: cpqSiMonitorConditionFailed		
Remedial action: Make a note of the monitor model number and serial number. Replace the monitor. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 27-3026 IK8902610

Alarm	Attributes	Applicable major release
Name: IK8902610 (8360) Type: processingErrorAlarm Package: Img.IK8902610 Raised on class: Img.FRU	Severity: major Specific problem: Excessive Correctable Memory Errors Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR14.3.MG • LR15.1.MG

Table 27-3026 IK8902610 (continued)

Alarm	Attributes	Applicable major release
Description: Correctable memory error count has exceeded the threshold for the memory module indicated by the 'cpqSiMemErrorIndex' variable. The appropriate cpqSiMemModuleECCStatus has been set to degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiCorrMemErrStatusDegraded		
Remedial action: For Desktops, the System Administrator should run the F10 Diagnostics on this system and select RAM LONG TEST. If it is determined that a module needs replacing, schedule maintenance for the system and replace the failed memory module. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 27-3027 IK8902612

Alarm	Attributes	Applicable major release
Name: IK8902612 (9525) Type: processingErrorAlarm Package: lmg.IK8902612 Raised on class: lmg.FRU	Severity: warning Specific problem: Memory modules have changed Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR15.1.MG
Description: A memory configuration change has occurred. CpqSiMemConfigChangeData will indicate which memory modules slots have changed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiMemConfigChange		
Remedial action: You may want to verify a valid reason for a memory configuration to have occurred. If system issuing the alert is a Desktop running NT, the memory configuration change information is also logged in the NT System Log.		

Table 27-3028 IK8902615

Alarm	Attributes	Applicable major release
Name: IK8902615 (8361) Type: equipmentAlarm Package: lmg.IK8902615 Raised on class: lmg.FRU	Severity: major Specific problem: Hot Plug Slot Board Failed Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Hot Plug Slot Board Failed Power-Up. A Hot Plug Slot Board has failed to power-up in the specified chassis and slot.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiHotPlugSlotPowerUpFailed		
Remedial action: Insure the board and all cables are installed correctly and the board type and revision are the same as the replaced board.		

Table 27-3029 IK8902616

Alarm	Attributes	Applicable major release
Name: IK8902616 (8362) Type: environmentalAlarm Package: lmg.IK8902616 Raised on class: lmg.FRU	Severity: major Specific problem: Battery Failure Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR14.3.MG • LR15.1.MG

Table 27-3029 IK8902616 (continued)

Alarm	Attributes	Applicable major release
Description: The battery indicated by cpqSiSysBatteryIndex has failed and must be replaced.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiSysBatteryFailure		
Remedial action: Contact your System Administrator or Authorized Reseller to order a replacement battery. Recycle your old battery. For proper disposal information, refer to the documentation that came with your computer.		

Table 27-3030 IK8902617

Alarm	Attributes	Applicable major release
Name: IK8902617 (8363) Type: environmentalAlarm Package: lmg.IK8902617 Raised on class: lmg.FRU	Severity: major Specific problem: Battery Charging Degradation Implicitly cleared: true Default probable cause: lowBatteryThreshold	Release: • LR14.3.MG • LR15.1.MG
Description: Significant battery degradation has occurred with battery indicated by cpqSiSysBatteryIndex. The battery can no longer be fully recharged.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiSysBatteryChargingDegraded		
Remedial action: If using multiple batteries, run the Power Conservation Utility to identify the battery location. Contact your System Administrator or Authorized Reseller to order a replacement battery.		

Table 27-3031 IK8902618

Alarm	Attributes	Applicable major release
Name: IK8902618 (9526) Type: environmentalAlarm Package: lmg.IK8902618 Raised on class: lmg.FRU	Severity: warning Specific problem: Battery Calibration Error Implicitly cleared: true Default probable cause: batteryFailure	Release: • LR15.1.MG
Description: Calibration is needed with battery indicated by cpqSiSysBatteryIndex. The battery can not correctly indicate capacity.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSiSysBatteryCalibrationError		
Remedial action: Run the Power Conservation Utility. Contact your System Administrator or Authorized Reseller to order a replacement battery.		

Table 27-3032 IK8902620

Alarm	Attributes	Applicable major release
Name: IK8902620 (8364) Type: equipmentAlarm Package: lmg.IK8902620 Raised on class: lmg.FRU	Severity: major Specific problem: Server Power Outage Implicitly cleared: true Default probable cause: powerProblem	Release: • LR14.3.MG • LR15.1.MG
Description: Server Power Outage. The Remote Insight/ Integrated Lights-Out firmware has detected server power failure.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSm2ServerPowerOutage		

Table 27-3032 IK8902620 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Check the server's power source.		

Table 27-3033 IK8902622

Alarm	Attributes	Applicable major release
Name: IK8902622 (8365) Type: environmentalAlarm Package: lmg.IK8902622 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Remote Insight Battery Failed Implicitly cleared: false Default probable cause: batteryFailure	Release: • LR14.3.MG
Description: Remote Insight Battery Failed. The Remote Insight battery has failed and needs to be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2BatteryFailed		
Remedial action: replace the failing Remote Insight battery.		

Table 27-3034 IK8902628

Alarm	Attributes	Applicable major release
Name: IK8902628 (8366) Type: equipmentAlarm Package: lmg.IK8902628 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Remote Insight external power cable disconnected Implicitly cleared: false Default probable cause: powerProblem	Release: • LR14.3.MG
Description: External Power Cable Disconnected. The Remote Insight external power cable has been disconnected.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ExternalPowerCableDisconnected		
Remedial action: check External Power Cable		

Table 27-3035 IK8902632

Alarm	Attributes	Applicable major release
Name: IK8902632 (8367) Type: processingErrorAlarm Package: lmg.IK8902632 Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Server Fatal Error Detected Implicitly cleared: false Default probable cause: softwareError	Release: • LR14.3.MG
Description: Server Fatal Error Detected. The Remote Insight/ Integrated Lights-Out firmware has detected a server fatal error.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerFatalError		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-3036 IK8902633

Alarm	Attributes	Applicable major release
Name: IK8902633 (8368) Type: communicationsAlarm Package: lmg.IK8902633 Raised on class: lmg.FRU	Severity: major Specific problem: The iLO NIC Link is Down Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG • LR15.1.MG
Description: The iLO NIC Link is Down. The Remote Insight/ Integrated Lights-Out firmware has detected the loss of network link.\nAlarm is cleared by the system.\nReason: cpqSm2NicLinkDown		
Remedial action: Check the network connections for the iLO.		

Table 27-3037 IK8902636

Alarm	Attributes	Applicable major release
Name: IK8902636 (9527) Type: equipmentAlarm Package: lmg.IK8902636 Raised on class: lmg.FRU	Severity: major Specific problem: Server powered off Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: The server has been powered off. This will be sent once the server has been powered off, either by OS, or the power button.\nAlarm is cleared by the system.\nReason: cpqSm2ServerPowerOff		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-3038 IK8902647

Alarm	Attributes	Applicable major release
Name: IK8902647 (9528) Type: qualityOfServiceAlarm Package: lmg.IK8902647 Raised on class: lmg.FRU	Severity: minor Specific problem: PC Card Thermal Degraded Status Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR15.1.MG
Description: This alarm is sent when the PC Card Slot Thermal Sensor threshold has been exceeded for safe operations thereby causing degraded operations. This alarm will be sent when cpqSePCCardStatus transitions from Normal (1) to Thermal Degraded (2). The manufacturer and product information strings as well as the slot number for the degraded PC Card is provided as parameters for this trap.\nAlarm is cleared by the system.\nReason: cpqSePCCardThermalDegraded		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-3039 IK8902648

Alarm	Attributes	Applicable major release
Name: IK8902648 (8369) Type: qualityOfServiceAlarm Package: lmg.IK8902648 Raised on class: lmg.FRU	Severity: major Specific problem: PC Card Thermal Failure Status Implicitly cleared: true Default probable cause: performanceDegraded	Release: • LR14.3.MG • LR15.1.MG
Description: This alarm is sent when the PC Card Slot Thermal Sensor threshold has been exceeded for degraded operations thereby causing failed operations. This alarm will be sent when cpqSePCCardStatus transitions from Thermal Degraded (2) to Thermal Failure (3). The manufacturer and product information strings as well as the slot number for the failed PC Card is provided as parameters for this trap.\nAlarm is cleared by the system.\nReason: cpqSePCCardThermalFailure		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-3040 IK8902657

Alarm	Attributes	Applicable major release
Name: IK8902657 (8370) Type: environmentalAlarm Package: lmg.IK8902657 Raised on class: lmg.FRU	Severity: major Specific problem: Storage System Temperature Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR14.3.MG • LR15.1.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.\nAlarm is cleared by the system.\nReason: cpqSsTempFailed		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-3041 IK8902658

Alarm	Attributes	Applicable major release
Name: IK8902658 (9529) Type: environmentalAlarm Package: lmg.IK8902658 Raised on class: lmg.FRU	Severity: minor Specific problem: Storage System Temp Degraded Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR15.1.MG
Description: Storage System temperature degraded. The agent has detected a temperature status that has been set to degraded. The storage system's temperature is outside of the normal operating range.\nAlarm is cleared by the system.\nReason: cpqSsTempDegraded		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-3042 IK8902661

Alarm	Attributes	Applicable major release
Name: IK8902661 (9530) Type: equipmentAlarm Package: Img.IK8902661 Raised on class: Img.FRU	Severity: minor Specific problem: Storage System side panel is removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG
Description: Storage System side panel is removed. The side panel status has been set to removed. The storage system's side panel is not in a properly installed state. This situation may result in improper cooling of the drives in the storage system due to air flow changes caused by the missing side panel.\nAlarm is cleared by the system.\nReason: cpqSsSidePanelRemoved		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-3043 IK8902664

Alarm	Attributes	Applicable major release
Name: IK8902664 (9531) Type: environmentalAlarm Package: Img.IK8902664 Raised on class: Img.FRU	Severity: warning Specific problem: Storage System Temperature Failure Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR15.1.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSs3TempFailed		
Remedial action: Shutdown the storage system as soon as possible. Insure that the storage system environment is being cooled properly and that no components are overheated.		

Table 27-3044 IK8902665

Alarm	Attributes	Applicable major release
Name: IK8902665 (9532) Type: environmentalAlarm Package: Img.IK8902665 Raised on class: Img.FRU	Severity: warning Specific problem: Storage System Temp Degraded Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR15.1.MG
Description: Storage System temperature degraded. The agent has detected a temperature status that has been set to degraded. The storage system's temperature is outside of the normal operating range.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSs3TempDegraded		
Remedial action: Shutdown the storage system as soon as possible. Insure that the storage system environment is being cooled properly and that no components are overheated.		

Table 27-3045 IK8902668

Alarm	Attributes	Applicable major release
Name: IK8902668 (9533) Type: equipmentAlarm Package: lmg.IK8902668 Raised on class: lmg.FRU	Severity: warning Specific problem: Storage System side panel is removed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG
Description: Storage System side panel is removed. The side panel status has been set to removed. The storage system's side panel is not in a properly installed state. This situation may result in improper cooling of the drives in the storage system due to air flow changes caused by the missing side panel.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSs3SidePanelRemoved		
Remedial action: Replace the storage system side panel.		

Table 27-3046 IK8902670

Alarm	Attributes	Applicable major release
Name: IK8902670 (9534) Type: equipmentAlarm Package: lmg.IK8902670 Raised on class: lmg.FRU	Severity: warning Specific problem: Power Supply Degraded Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: A storage system power supply status has been set to degraded.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqSs4PwrSupplyDegraded		
Remedial action: Take action to restore power or replace any failed storage system power supply.		

Table 27-3047 IK8902695

Alarm	Attributes	Applicable major release
Name: IK8902695 (9535) Type: equipmentAlarm Package: lmg.IK8902695 Raised on class: lmg.FRU	Severity: minor Specific problem: Rising Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG
Description: Rising Threshold passed. An alarm entry has crossed its rising threshold. The instances of those objects contained within the variable list are those of the alarm entry which generated this trap.\nAlarm is cleared by the system.\nReason: cpqMeRisingAlarm		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-3048 IK8902697

Alarm	Attributes	Applicable major release
Name: IK8902697 (9536) Type: equipmentAlarm Package: lmg.IK8902697 Raised on class: lmg.FRU	Severity: warning Specific problem: Rising Threshold Passed Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG
Description: Rising Threshold passed. An alarm entry has crossed its rising threshold. The instances of those objects contained within the variable list are those of the alarm entry which generated this trap.\nAlarm is cleared by the system.\nReason: cpqMe2RisingAlarm		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-3049 IK8902748

Alarm	Attributes	Applicable major release
Name: IK8902748 (9537) Type: equipmentAlarm Package: lmg.IK8902748 Raised on class: lmg.FRU	Severity: indeterminate Specific problem: fluteModuleAlarm Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • LR15.1.MG
Description: Alarm notification\nAlarm is cleared by the system.\nReason: fluteModuleAlarm		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-3050 IK8904762

Alarm	Attributes	Applicable major release
Name: IK8904762 (8371) Type: communicationsAlarm Package: lmg.IK8904762 Raised on class: lmg.LMGMngElement	Severity: major Specific problem: linkDown Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR14.3.MG
Description: A linkDown alarm signifies that the SNMP entity, acting in an agent role, has detected that the ifOperStatus object for one of its communication links is about to enter the down state from some other state (but not from the notPresent state). This other state is indicated by the included value of ifOperStatus.\nAlarm is cleared by the system.\nReason: linkDown		
Remedial action: If the problem persists, contact Nokia customer support.		

Table 27-3051 IK8907456

Alarm	Attributes	Applicable major release
Name: IK8907456 (9538) Type: environmentalAlarm Package: lmg.IK8907456 Raised on class: lmg.FRU	Severity: warning Specific problem: Temperature-alarm Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR15.1.MG

Table 27-3051 IK8907456 (continued)

Alarm	Attributes	Applicable major release
Description: The temperature at rack sensor 1 is outside the specified threshold.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmTemp1		
Remedial action: Check the air handling system for the rack and refer to Trap Details for more information.		

Table 27-3052 IK8907457

Alarm	Attributes	Applicable major release
Name: IK8907457 (9539) Type: environmentalAlarm Package: lmg.IK8907457 Raised on class: lmg.FRU	Severity: warning Specific problem: Temperature-alarm Implicitly cleared: true Default probable cause: temperatureUnacceptable	Release: • LR15.1.MG
Description: The temperature at rack sensor 2 is outside the specified threshold.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmTemp2		
Remedial action: Check the air handling system for the rack and refer to Trap Details for more information.		

Table 27-3053 IK8907458

Alarm	Attributes	Applicable major release
Name: IK8907458 (9540) Type: environmentalAlarm Package: lmg.IK8907458 Raised on class: lmg.FRU	Severity: warning Specific problem: Fan-alarm Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR15.1.MG
Description: The status of Fan 1 has changed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmFan1		
Remedial action: Refer to Trap Details for more information.		

Table 27-3054 IK8907459

Alarm	Attributes	Applicable major release
Name: IK8907459 (9541) Type: environmentalAlarm Package: lmg.IK8907459 Raised on class: lmg.FRU	Severity: warning Specific problem: Fan-alarm Implicitly cleared: true Default probable cause: coolingFanFailure	Release: • LR15.1.MG
Description: The status of Fan 2 has changed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmFan2		
Remedial action: Refer to Trap Details for more information.		

Table 27-3055 IK8907460

Alarm	Attributes	Applicable major release
Name: IK8907460 (9542) Type: equipmentAlarm Package: Img.IK8907460 Raised on class: Img.FRU	Severity: warning Specific problem: Voltage-alarm Implicitly cleared: true Default probable cause: powerProblem	Release: • LR15.1.MG
Description: The AC voltage of the rack is outside the specified threshold.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmVoltage		
Remedial action: Check the incoming power source and ensure all cables are inserted correctly.		

Table 27-3056 IK8907461

Alarm	Attributes	Applicable major release
Name: IK8907461 (9543) Type: environmentalAlarm Package: Img.IK8907461 Raised on class: Img.FRU	Severity: warning Specific problem: Humidity-alarm Implicitly cleared: true Default probable cause: humidityUnacceptable	Release: • LR15.1.MG
Description: The humidity of the rack is outside the specified threshold.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmHumidity		
Remedial action: Check the air handling system for the rack and refer to Trap Details for more information.		

Table 27-3057 IK8907462

Alarm	Attributes	Applicable major release
Name: IK8907462 (9544) Type: environmentalAlarm Package: Img.IK8907462 Raised on class: Img.FRU	Severity: warning Specific problem: Door/sidepanel-alarm Implicitly cleared: true Default probable cause: intrusionDetection	Release: • LR15.1.MG
Description: The door or sidepanel of the rack has been opened (access point #1).\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmInput1		
Remedial action: Check for unauthorized intrusion and refer to Trap Details for more information.		

Table 27-3058 IK8907463

Alarm	Attributes	Applicable major release
Name: IK8907463 (9545) Type: environmentalAlarm Package: Img.IK8907463 Raised on class: Img.FRU	Severity: warning Specific problem: Door/sidepanel-alarm Implicitly cleared: true Default probable cause: intrusionDetection	Release: • LR15.1.MG

Table 27-3058 IK8907463 (continued)

Alarm	Attributes	Applicable major release
Description: The door or sidepanel of the rack has been opened (access point #2).\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmInput2		
Remedial action: Check for unauthorized intrusion and refer to Trap Details for more information.		

Table 27-3059 IK8907464

Alarm	Attributes	Applicable major release
Name: IK8907464 (9546) Type: environmentalAlarm Package: lmg.IK8907464 Raised on class: lmg.FRU	Severity: warning Specific problem: Door/sidepanel-alarm Implicitly cleared: true Default probable cause: intrusionDetection	Release: • LR15.1.MG
Description: The door or sidepanel of the rack has been opened (access point #3).\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmInput3		
Remedial action: Check for unauthorized intrusion and refer to Trap Details for more information.		

Table 27-3060 IK8907465

Alarm	Attributes	Applicable major release
Name: IK8907465 (9547) Type: environmentalAlarm Package: lmg.IK8907465 Raised on class: lmg.FRU	Severity: warning Specific problem: Door/sidepanel-alarm Implicitly cleared: true Default probable cause: intrusionDetection	Release: • LR15.1.MG
Description: The door or sidepanel of the rack has been opened (access point #4).\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmInput4		
Remedial action: Check for unauthorized intrusion and refer to Trap Details for more information.		

Table 27-3061 IK8907466

Alarm	Attributes	Applicable major release
Name: IK8907466 (9548) Type: processingErrorAlarm Package: lmg.IK8907466 Raised on class: lmg.FRU	Severity: warning Specific problem: Door-locking-alarm Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR15.1.MG
Description: Rack door lock #1 alarm.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmLock1		
Remedial action: Ensure the door is completely closed and check for unauthorized intrusion and refer to Trap Details for more information.		

Table 27-3062 IK8907467

Alarm	Attributes	Applicable major release
Name: IK8907467 (9549) Type: processingErrorAlarm Package: lmg.IK8907467 Raised on class: lmg.FRU	Severity: warning Specific problem: Door-locking-alarm Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR15.1.MG
Description: Rack door lock #2 alarm.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmLock2		
Remedial action: Ensure the door is completely closed and check for unauthorized intrusion and refer to Trap Details for more information.		

Table 27-3063 IK8907468

Alarm	Attributes	Applicable major release
Name: IK8907468 (9550) Type: environmentalAlarm Package: lmg.IK8907468 Raised on class: lmg.FRU	Severity: warning Specific problem: Smoke-alarm Implicitly cleared: true Default probable cause: smoke	Release: • LR15.1.MG
Description: The rack smoke detector has detected smoke.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmSmoke		
Remedial action: Investigate rack for an over temperature condition and refer to Trap Details for more information.		

Table 27-3064 IK8907469

Alarm	Attributes	Applicable major release
Name: IK8907469 (9551) Type: environmentalAlarm Package: lmg.IK8907469 Raised on class: lmg.FRU	Severity: warning Specific problem: Shock-alarm Implicitly cleared: true Default probable cause: excessiveVibration	Release: • LR15.1.MG
Description: The rack shock detector has detected a vibration to the rack.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmShock		
Remedial action: Investigate rack.		

Table 27-3065 IK8907474

Alarm	Attributes	Applicable major release
Name: IK8907474 (9552) Type: processingErrorAlarm Package: lmg.IK8907474 Raised on class: lmg.FRU	Severity: warning Specific problem: Door-locking-alarm of device Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR15.1.MG
Description: The rack door locking device #1 has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmLock1Dev		
Remedial action: Check the device lock cable or failed battery and refer to Trap Details for more information.		

Table 27-3066 IK8907475

Alarm	Attributes	Applicable major release
Name: IK8907475 (9553) Type: processingErrorAlarm Package: lmg.IK8907475 Raised on class: lmg.FRU	Severity: warning Specific problem: Door-locking-alarm of device Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • LR15.1.MG
Description: The rack door locking device #2 has failed.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqCmcalarmLock2Dev		
Remedial action: Check the device lock cable or failed battery and refer to Trap Details for more information.		

Table 27-3067 IK8907477

Alarm	Attributes	Applicable major release
Name: IK8907477 (9554) Type: processingErrorAlarm Package: lmg.IK8907477 Raised on class: lmg.FRU	Severity: warning Specific problem: Corrected - uncorrectable Memory Errors - Replace Memory Module Implicitly cleared: true Default probable cause: memoryMismatch	Release: • LR15.1.MG
Description: Corrected - uncorrected Memory Errors Detected The errors have been corrected, but the memory module should be replaced. Value 0 for CPU means memory is not Processor based\nAlarm is cleared by the system when the device is restarted.\ nReason: cpqHe5CorrMemReplaceMemModule		
Remedial action: Replace the failing memory module.		

Table 27-3068 IK8907478

Alarm	Attributes	Applicable major release
Name: IK8907478 (9555) Type: communicationsAlarm Package: Img.IK8907478 Raised on class: Img.FRU	Severity: warning Specific problem: NIC Virus-like Activity Detected Trap Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG
Description: This alarm will be sent when the Virus Throttle Filter Driver detects virus like activity.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqNicVirusLikeActivityDetected		
Remedial action: The system reporting this trap requires immediate attention.		

Table 27-3069 IK8907479

Alarm	Attributes	Applicable major release
Name: IK8907479 (9556) Type: communicationsAlarm Package: Img.IK8907479 Raised on class: Img.FRU	Severity: minor Specific problem: Server Blade e-keying failed Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • LR15.1.MG
Description: The server blade e-keying has failed. This alarm signifies that a server blade e-keying has failed and there is a port mapping problem between a server mezz card and the interconnect.\nAlarm is cleared by the system when the device is restarted.\nReason: cpqRackServerBladeEKeyingFailed		
Remedial action: Reconfigure server blade mezz cards.		

Table 27-3070 IncompleteConfiguration

Alarm	Attributes	Applicable major release
Name: IncompleteConfiguration (1942) Type: operationalViolation Package: netw.IncompleteConfiguration Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompleteConfig	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when a pre-provisioned NE has no objects configured beneath it.		
Raising condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' EQUAL '\"\"'))		
Clearing condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' NOT EQUAL '\"\"'))		
Remedial action: A configuration error has been made which must be corrected. The configuration of the pre-provisioned NE is incomplete. A work order was not associated with the pre-provisioned NE and as a consequence the attempt to auto-configure the NE failed.		

Table 27-3071 LicensedLimitExceeded

Alarm	Attributes	Applicable major release
Name: LicensedLimitExceeded (127) Type: licensingAlarm Package: security.LicensedLimitExceeded Raised on class: security.SamLicensePoints	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: licensedLimitExceeded	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 27-3072 LinkDown (equipment)

Alarm	Attributes	Applicable major release
Name: LinkDown (12) Type: communicationsAlarm Package: equipment.LinkDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: portLinkProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 27-3073 MobileConnectorDown

Alarm	Attributes	Applicable major release
Name: MobileConnectorDown (1064) Type: EpcAlarm Package: lteservice.MobileConnectorDown Raised on class: lteservice.MobileServiceConnector	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EpcDown	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL '\"\"')		
Clearing condition: ('EPS Path' NOT EQUAL '\"\"')		

Table 27-3073 MobileConnectorDown (continued)

Alarm	Attributes	Applicable major release
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

Table 27-3074 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major release
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm Package: netw. NeManagementAndTrapManagementMismatch Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: neManagementChange	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		
Raising condition: ((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band')))		
Clearing condition: ((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band')))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

Table 27-3075 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major release
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm Package: security.NewSsh2ServerKeyDetected Raised on class: security.KnownHostKey	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 27-3076 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major release
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm Package: netw.NodeDatabaseFallbackDetected Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeDatabaseFallback	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 27-3077 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major release
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm Package: netw.NodeDatabaseMisalignmentDetected Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

Table 27-3078 NodeRebooted

Alarm	Attributes	Applicable major release
Name: NodeRebooted (32) Type: equipmentAlarm Package: netw.NodeRebooted Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: nodeReboot	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when the 5620 SAM detects an NE reboot based on the latest NE sysUpTime value.		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 27-3079 NodeSuspended

Alarm	Attributes	Applicable major release
Name: NodeSuspended (5123) Type: communicationsAlarm Package: netw.NodeSuspended Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NodeSuspend	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element.The alarm will be cleared when the network element is managed back.		

Table 27-3080 PartialResyncProblem

Alarm	Attributes	Applicable major release
Name: PartialResyncProblem (4401) Type: communicationsAlarm Package: netw.PartialResyncProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: partialResyncProblem	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when a partial resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 27-3081 PartialVPRNEncryption

Alarm	Attributes	Applicable major release
Name: PartialVPRNEncryption (8992) Type: configurationAlarm Package: nge.PartialVPRNEncryption Raised on class: nge.VprnEncryptService	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConfigMismatch	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when one or more sites are not encryption enabled in a VPRN service.		
Raising condition: (('VPRN Service Encryption Status' EQUAL 'Partial'))		

Table 27-3081 PartialVPRNEncryption (continued)

Alarm	Attributes	Applicable major release
Clearing condition: (('VPRN Service Encryption Status' NOT EQUAL 'Partial'))		
Remedial action: This site is newly added to the VPRN service, Perform the encrypt operation on the KeyGroup to clear the alarm.		

Table 27-3082 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major release
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm Package: netw. PersistentIndexParametersMisconfigured Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistentIndexConfiguration-Mismatch	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when persistence is set to Off in the NE BOF.		
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

Table 27-3083 PollerProblem

Alarm	Attributes	Applicable major release
Name: PollerProblem (31) Type: communicationsAlarm Package: netw.PollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resyncFailed	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 27-3084 PrimaryImageBootFailure

Alarm	Attributes	Applicable major release
Name: PrimaryImageBootFailure (191) Type: configurationAlarm Package: sw.PrimaryImageBootFailure Raised on class: sw.CardSoftware	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 27-3085 RadiusOperStatusDown

Alarm	Attributes	Applicable major release
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm Package: netw.RadiusOperStatusDown Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: radiusOperationStatusDown	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up.Check the connectivity between SAM server and radius server configured on the Network element.		

Table 27-3086 ReachabilityProblem

Alarm	Attributes	Applicable major release
Name: ReachabilityProblem (243) Type: communicationsAlarm Package: netw.ReachabilityProblem Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReachabilityTestFailed	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when a mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. The polling interval depends on the NE type and is configurable in nms-server.xml. By default, the 5620 SAM polls a managed NE every four minutes. If a poll fails, the alarm is raised. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		

Table 27-3086 ReachabilityProblem (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 27-3087 ReconfigFailure

Alarm	Attributes	Applicable major release
Name: ReconfigFailure (1949) Type: communicationsAlarm Package: netw.ReconfigFailure Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: failedReconfig	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This alarm is raised when the reconfig action failed.		
Raising condition: ('State' EQUAL 'Failed')		
Clearing condition: ('State' NOT EQUAL 'Failed')		
Remedial action: Verify that the object is configured as expected.		

Table 27-3088 SaveConfigFailed

Alarm	Attributes	Applicable major release
Name: SaveConfigFailed (105) Type: configurationAlarm Package: sw.SaveConfigFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileAccessError	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact your Nokia support representative for assistance.		

Table 27-3089 ScheduledPollerProblem

Alarm	Attributes	Applicable major release
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm Package: netw.ScheduledPollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: scheduledResyncFailed	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 27-3090 StatsRetrieveFailed

Alarm	Attributes	Applicable major release
Name: StatsRetrieveFailed (244) Type: configurationAlarm Package: sw.StatsRetrieveFailed Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: fileTransferFailure	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 27-3091 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major release
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed Package: netw.SubscriberSystemNextHopUsageHigh Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		

Table 27-3091 SubscriberSystemNextHopUsageHigh (continued)

Alarm	Attributes	Applicable major release
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

Table 27-3092 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major release
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm Package: netw.TrapDestinationMisconfigured Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trapDestinationMisconfigured Applicable probable causes: • trapDestinationMisconfigured • duplicateTrapLogId	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 27-3093 TrapReceivingFailure

Alarm	Attributes	Applicable major release
Name: TrapReceivingFailure (1083) Type: communications Package: netw.TrapReceivingFailure Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: trapsWillNotBeSent	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		
Raising condition: ((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')))		

Table 27-3093 TrapReceivingFailure (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')))) **Remedial action:** A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

Table 27-3094 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major release
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications Package: netw. TrapRoutePreferenceRedundancyMissing Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trapsRedundancyMissing	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: ((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')))		
Clearing condition: ((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None')))		
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

Table 27-3095 UnidentifiedNode

Alarm	Attributes	Applicable major release
Name: UnidentifiedNode (1922) Type: communicationsAlarm Package: netw.UnidentifiedNode Raised on class: netw.DiscoveredNode	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unidentifiedNode	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG

Table 27-3095 UnidentifiedNode (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 27-3096 UnmanageFailed

Alarm	Attributes	Applicable major release
Name: UnmanageFailed (300) Type: discoveryControlAlarm Package: netw.UnmanageFailed Raised on class: netw.NodeDiscoveryControl	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unableToDeleteNode	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'Unmanage Failed')		
Clearing condition: ('Site State' NOT EQUAL 'Unmanage Failed')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 27-3097 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major release
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm Package: netw.UpgradedBuildVersionMismatch Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: upgradedImageNotBooted	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 27-3098 upgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: upgradedCardAlarm (255) Type: softwareAlarm Package: equipment.upgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: upgradedCard	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 27-3099 UplinkDown

Alarm	Attributes	Applicable major release
Name: UplinkDown (11062) Type: virtualSwitchAlarm Package: dctr.UplinkDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsAllDown	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when all connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '2'))		
Clearing condition: (('uplinkState' NOT EQUAL '2'))		
Remedial action: This alarm is raised when all connections associated to the uplink lost connectivity.		

Table 27-3100 UplinkPartiallyDown

Alarm	Attributes	Applicable major release
Name: UplinkPartiallyDown (11063) Type: virtualSwitchAlarm Package: dctr.UplinkPartiallyDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsDown	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when some connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '3'))		
Clearing condition: (('uplinkState' NOT EQUAL '3'))		
Remedial action: This alarm is raised when a connection of the uplink lost connectivity but at least one connection remains connected.		

Table 27-3101 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm Package: sw.VersionConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: versionMismatch	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 27-3102 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major release
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm Package: netw.WrongCpaaSoftwareVersion Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion	Release: • LR14.3.MG • LR15.1.MG • LR16.1.MG
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL '\"TiMOS-B-3.0.Generic \"') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Clearing condition: (('Software Version' NOT EQUAL '\"TiMOS-B-3.0.Generic \"') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

28 9966 SC GW

28.1 Alarms

Alarms

Note: Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see Chapter 39, “Unspecified NE”.

Table 28-1 AAA_addressPoolExhausted

Alarm	Attributes	Applicable major release
Name: AAA_addressPoolExhausted (5673) Type: qualityOfServiceAlarm Package: femto.AAA_addressPoolExhausted Raised on class: femto.AAA	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when the address pool for the available SeGW servers has become exhausted		
Remedial action: The AAA_addressPoolExhausted alarm is raised when all IPs in the VPN-IP pool are allocated. When the RADIUS Access request message is received, the Nas IP, Nas Id, Nas Port and the called Station Id is searched in the SecurityGateway MO Class. cd /opt/bin./BSGCLI.execd FGW:<DN Number>;cd AAA:<DN Number>;cd securityGateway:<DN Number>;get securityGateway-FemtoVPNSubnets;The returned range is exhausted.When the lease time expires, AAA server sends an Accounting-Stop message to SeGW and the VPN-IP state is set as Reserved. cd /opt/bin./BSGCLI.execd FGW:<DN Number>;cd AAA:<DN Number>;cd securityGateway:<DN Number>;get securityGatewayAddressLeaseTime;The returned range is exhausted.On receiving an Accounting-Response message from Security Gateway, or when an Accounting-Stop message is retried until AAA::maxAcctReqXmts limit is reached, the VPN IP state changes to Available. cd /opt/bin./BSGCLI.execd FGW:<DN Number>;cd AAA:<DN Number>;get maxAcctReqXmts;		

Table 28-2 AAA_centralAAAFailure

Alarm	Attributes	Applicable major release
Name: AAA_centralAAAFailure (5674) Type: communicationsAlarm Package: femto.AAA_centralAAAFailure Raised on class: femto.AAA	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when communication to all central AAA has failed.		

Table 28-2 AAA_centralAAAFailure (continued)

Alarm	Attributes	Applicable major release
Remedial action: This fault is generated when the BSR Gateway is unable to establish connection with any of the configured remote AAA servers. cd /opt/bin./BSGCLI.execd FGW:<DN Number>;cd AAA:<DN Number>;cd AAAremoteAAAServer:<DN Number>;get remoteAAAServerIpAddress;A maximum of 10 remote AAA servers can be configured. Run Wireshark in BSR Gateway. Check whether RADIUS Access-Request message is forwarded to any one of the configured Remote AAA servers. Ping each configured remote AAA server's IP address (remoteAAAServerIpAddress) and check for any connectivity issues.		

Table 28-3 ActiveAbnormalCondition

Alarm	Attributes	Applicable major release
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm Package: netw.ActiveAbnormalCondition Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

Table 28-4 AggregatedVFLPortDown

Alarm	Attributes	Applicable major release
Name: AggregatedVFLPortDown (5436) Type: equipmentAlarm Package: equipment.AggregatedVFLPortDown Raised on class: equipment.Shelf	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: connectivityIssue	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is generated when the aggregated virtual fabric link on the virtual chassis slot is down.		
Raising condition: (('Shelf Type' EQUAL '7850') AND ('Total Slots' EQUAL '4') AND ('Virtual Fabric Link State' NOT EQUAL 'Up'))		
Clearing condition: (('Shelf Type' EQUAL '7850') AND ('Total Slots' EQUAL '4') AND ('Virtual Fabric Link State' EQUAL 'Up'))		
Remedial action: The alarm is raised when the aggregated virtual fabric link on the virtual chassis is down. Please check the virtual fabric links for the virtual chassis setup.		

Table 28-5 AGPSProxy_agpsServiceFailure

Alarm	Attributes	Applicable major release
Name: AGPSProxy_agpsServiceFailure (5675) Type: communicationsAlarm Package: femto.AGPSProxy_agpsServiceFailure Raised on class: femto.AGPSProxy	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is raised if a failure is detected on the Assisted GPS Service		
Remedial action: This alarm is cleared automatically from the OAM system.		

Table 28-6 AGWDiameterPeerDown

Alarm	Attributes	Applicable major release
Name: AGWDiameterPeerDown (844) Type: EpcAlarm Package: lte.AGWDiameterPeerDown Raised on class: lte.AGWDiameterPeer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerDown	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 28-7 AMCSlot_deviceInstalledAssert

Alarm	Attributes	Applicable major release
Name: AMCSlot_deviceInstalledAssert (5679) Type: equipmentAlarm Package: femto.AMCSlot_deviceInstalledAssert Raised on class: femto.AMCSlot	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Device installed assert		
Remedial action: The operator must do a manual clearance.		

Table 28-8 AMCSlot_deviceInstalledDeassert

Alarm	Attributes	Applicable major release
Name: AMCSlot_deviceInstalledDeassert (5680) Type: equipmentAlarm Package: femto.AMCSlot_deviceInstalledDeassert Raised on class: femto.AMCSlot	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Device installed deassert		
Remedial action: The operator must do a manual clearance.		

Table 28-9 AMCSlot_ds75DeviceinstalledCriticalAssert

Alarm	Attributes	Applicable major release
Name: AMCSlot_ds75DeviceinstalledCriticalAssert (5681) Type: equipmentAlarm Package: femto.AMCSlot_ds75DeviceinstalledCriticalAssert Raised on class: femto.AMCSlot	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: DS 75 device installed critical assert		
Remedial action: No action needed. Indicates device is being installed.		

Table 28-10 AMCSlot_ds75DeviceinstalledCriticalDeassert

Alarm	Attributes	Applicable major release
Name: AMCSlot_ds75DeviceinstalledCriticalDeassert (5682) Type: equipmentAlarm Package: femto.AMCSlot_ds75DeviceinstalledCriticalDeassert Raised on class: femto.AMCSlot	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: DS 75 device installed critical deassert		
Remedial action: The operator must do a manual clearance.		

Table 28-11 AMCSlot_ds75DeviceinstalledMajorAssert

Alarm	Attributes	Applicable major release
Name: AMCSlot_ds75DeviceinstalledMajorAssert (5683) Type: equipmentAlarm Package: femto.AMCSlot_ds75DeviceinstalledMajorAssert Raised on class: femto.AMCSlot	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: DS 75 device installed major assert		
Remedial action: No action needed. Indicates device is being installed.		

Table 28-12 AMCSlot_ds75DeviceinstalledMajorDeassert

Alarm	Attributes	Applicable major release
Name: AMCSlot_ds75DeviceinstalledMajorDeassert (5684) Type: equipmentAlarm Package: femto.AMCSlot_ds75DeviceinstalledMajorDeassert Raised on class: femto.AMCSlot	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: DS 75 device installed major deassert		
Remedial action: The operator must do a manual clearance.		

Table 28-13 AMCSlot_ds75DeviceinstalledMinorAssert

Alarm	Attributes	Applicable major release
Name: AMCSlot_ds75DeviceinstalledMinorAssert (5685) Type: equipmentAlarm Package: femto.AMCSlot_ds75DeviceinstalledMinorAssert Raised on class: femto.AMCSlot	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: DS 75 device installed minor assert		
Remedial action: The operator must do a manual clearance.		

Table 28-14 AMCSlot_ds75DeviceinstalledMinorDeassert

Alarm	Attributes	Applicable major release
Name: AMCSlot_ds75DeviceinstalledMinorDeassert (5686) Type: equipmentAlarm Package: femto.AMCSlot_ds75DeviceinstalledMinorDeassert Raised on class: femto.AMCSlot	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: DS 75 device installed minor deassert		
Remedial action: The operator must do a manual clearance.		

Table 28-15 AMCSlot_info12vDeviceInstalledAssert

Alarm	Attributes	Applicable major release
Name: AMCSlot_info12vDeviceInstalledAssert (5687) Type: equipmentAlarm Package: femto.AMCSlot_info12vDeviceInstalledAssert Raised on class: femto.AMCSlot	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: 12V device installed assert		
Remedial action: The operator must do a manual clearance.		

Table 28-16 AMCSlot_info12vDeviceInstalledDeassert

Alarm	Attributes	Applicable major release
Name: AMCSlot_info12vDeviceInstalledDeassert (5688) Type: equipmentAlarm Package: femto.AMCSlot_info12vDeviceInstalledDeassert Raised on class: femto.AMCSlot	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: 12v device installed deassert		
Remedial action: The operator must do a manual clearance.		

Table 28-17 AMCSlot_info3vDeviceInstalledAssert

Alarm	Attributes	Applicable major release
Name: AMCSlot_info3vDeviceInstalledAssert (5689) Type: equipmentAlarm Package: femto.AMCSlot_info3vDeviceInstalledAssert Raised on class: femto.AMCSlot	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: 3V device installed assert		
Remedial action: The operator must do a manual clearance.		

Table 28-18 AMCSlot_info3vDeviceInstalledDeassert

Alarm	Attributes	Applicable major release
Name: AMCSlot_info3vDeviceInstalledDeassert (5690) Type: equipmentAlarm Package: femto.AMCSlot_ info3vDeviceInstalledDeassert Raised on class: femto.AMCSlot	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: 3v device installed deassert		
Remedial action: The operator must do a manual clearance.		

Table 28-19 AMCSlot_info5vDeviceInstalledAssert

Alarm	Attributes	Applicable major release
Name: AMCSlot_info5vDeviceInstalledAssert (5691) Type: equipmentAlarm Package: femto.AMCSlot_info5vDeviceInstalledAssert Raised on class: femto.AMCSlot	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: 5V device installed assert		
Remedial action: The operator must do a manual clearance.		

Table 28-20 AMCSlot_info5vDeviceInstalledDeassert

Alarm	Attributes	Applicable major release
Name: AMCSlot_info5vDeviceInstalledDeassert (5692) Type: equipmentAlarm Package: femto.AMCSlot_ info5vDeviceInstalledDeassert Raised on class: femto.AMCSlot	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: 5V device installed deassert		
Remedial action: The operator must do a manual clearance.		

Table 28-21 Application4G_droppingS1Traffic

Alarm	Attributes	Applicable major release
Name: Application4G_droppingS1Traffic (5693) Type: qualityOfServiceAlarm Package: femto.Application4G_droppingS1Traffic Raised on class: femto.Application4G	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity	Release: • SC17.2 • SC19.1 • SC20.1
Description: This fault is generated when SCGW drops S1 traffic since SCGW CPU/Memory utilization has crossed maximum threshold		
Remedial action: The alarm is cleared when the BSR Gateway recovers from the overload condition.The %CPU column of top command can be used to check the CPU utilization.Enter the command free to check the memory utilization.Free memory specified should be high. compared to the used memory available, for recovering to normal overload.The used buffer cache memory should be low.To drop the cache memory use the command echo 3 >/proc/sys/vm/drop_caches.Terminate some calls to check whether memory utilization comes down, clearing the alarm.If the memory utilization does not reduce and the alarm persists, de-register the Small Cells and check for reduction in memory utilization.If there is no reduction in memory utilization, even after call termination and enforced Small Cell de-registration. Enforce a BSR Gateway switch-over by terminating the BSR Gateway application.		

Table 28-22 Application4G_dSMessageQueueOverloadMaximumThreshold

Alarm	Attributes	Applicable major release
Name: Application4G_ dSMessageQueueOverloadMaximumThreshold (12955) Type: equipmentAlarm Package: femto.Application4G_ dSMessageQueueOverloadMaximumThreshold Raised on class: femto.Application4G	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: outOfMessageQueue	Release: • SC19.1 • SC20.1
Description: This alarm is raised whenever the FGW has detected that the maximum message queue overload threshold has been exceeded for the DS process.		

Table 28-22 Application4G_dSMessageQueueOverloadMaximumThreshold (continued)

Alarm	Attributes	Applicable major release
Remedial action: The FGW may initiate a failover to the available standby FGW if CPU or Memory maximum thresolds also get exceeded along with DS message queue threshold. If significant detoriation in KPIs is seen perform forceful FGW switch-over manually.For further assistance please contact NOKIA customer support.		

Table 28-23 Application4G_dSMessageQueueOverloadMinimumThreshold

Alarm	Attributes	Applicable major release
Name: Application4G_ dSMessageQueueOverloadMinimumThreshold (12956) Type: equipmentAlarm Package: femto.Application4G_ dSMessageQueueOverloadMinimumThreshold Raised on class: femto.Application4G	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • SC19.1 • SC20.1
Description: This alarm is raised whenever the FGW has detected that the minimum message queue overload threshold has been exceeded for the DS process.		
Remedial action: This alarm is cleared when either the measured DS process main message queues usage falls below the minimum threshold or rises above the maximum threshold.If the alarm persists for a long duration and not cleared on its own, terminate some calls and check whether message queue utilization comes down and the alarm is cleared.If message queue utilization does not come down and alarm is still present, de-register the Small Cells in a phased manner and check whether queue utilization comes down.For further assistance please contact NOKIA customer support.		

Table 28-24 Application4G_failedToDecodeMMESentMsg

Alarm	Attributes	Applicable major release
Name: Application4G_failedToDecodeMMESentMsg (5694) Type: communicationsAlarm Package: femto.Application4G_ failedToDecodeMMESentMsg Raised on class: femto.Application4G	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1
Description: This fault is triggered when SCGW fails to decode messages sent by MME		
Remedial action: Check whether the messages from the MME are properly framed.This is MME message encoding problem or 3GPP release version support mismatchbetween FGW and MME.This fault is cleared manually from the OAM system.		

Table 28-25 Application4G_failedToSendDataToHeNB

Alarm	Attributes	Applicable major release
Name: Application4G_failedToSendDataToHeNB (5695) Type: communicationsAlarm Package: femto.Application4G_ failedToSendDataToHeNB Raised on class: femto.Application4G	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1
Description: This fault is generated when SCGW fails to send data to BSR		
Remedial action: Check the connectivity between the Small Cell and BSR Gateway.Check whether the BSR Gateway sctp port (6005) towards Small Cell is open.Check for any errors with respect to sending the data towards Small Cell. This can be done by looking for LOG ERROR statements in LOG_FMG.log file under /opt/log/.Use the above mentioned information to isolate the issue at Small Cell or BSR Gateway.This alarm is cleared when data from the BSR Gateway reaches the Small Cell successfully.		

Table 28-26 Application4G_failedToSendDataToMME

Alarm	Attributes	Applicable major release
Name: Application4G_failedToSendDataToMME (5696) Type: communicationsAlarm Package: femto.Application4G_ failedToSendDataToMME Raised on class: femto.Application4G	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1
Description: This fault is generated when SCGW fails to send data to MME		
Remedial action: Reduce memory utilization in SCGW, using the command free. Check if there is a reduction.Check whether memory overload alarm has been triggered.Terminate some calls to check if the memory utilization reduces, clearing the alarm.If there is no reduction in memory utilization, and the overload alarm still persists, then de-register the Small Cells. Now check for any reduction in memory utilization.If there is no reduction in memory utilization, even after call termination and enforced Small Cell de-registration. Enforce a BSR Gateway switchover by terminating the BSR Gateway application		

Table 28-27 Application4G_henBGrpMessageQueueOverloadMaximumThreshold

Alarm	Attributes	Applicable major release
Name: Application4G_ henBGrpMessageQueueOverloadMaximumThreshold (12957) Type: equipmentAlarm Package: femto.Application4G_ henBGrpMessageQueueOverloadMaximumThreshold Raised on class: femto.Application4G	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: outOfMessageQueue	Release: • SC19.1 • SC20.1
Description: This alarm is raised whenever the FGW has detected that the maximum message queue overload threshold has been exceeded for the HeNBGroup processes.		

Table 28-27 Application4G_henBGrpMessageQueueOverloadMaximumThreshold (continued)

Alarm	Attributes	Applicable major release
Remedial action: The FGW may initiate a failover to the available standby FGW if CPU or Memory maximum thresolds also get exceeded along with HeNBGrps message queue threshold.If significant detoriation in KPIs is seen perform forceful FGW switch-over manually.For further assistance please contact NOKIA customer support.		

Table 28-28 Application4G_henBGrpMessageQueueOverloadMinimumThreshold

Alarm	Attributes	Applicable major release
Name: Application4G_ henBGrpMessageQueueOverloadMinimumThreshold (12958) Type: equipmentAlarm Package: femto.Application4G_ henBGrpMessageQueueOverloadMinimumThreshold Raised on class: femto.Application4G	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • SC19.1 • SC20.1
Description: This alarm is raised whenever the FGW has detected that the minimum message queue overload threshold has been exceeded for the HeNBGroup processes.		
Remedial action: This alarm is cleared when either the measured HenBGrp process main message queue usage falls below the minimum threshold or rises above the maximum threshold.. If the alarm persists for a long duration and not cleared on its own, terminate some calls and check whether message queue utilization comes down and the alarm is cleared.If message queue utilization does not come down and alarm is still present, de-register the Small Cells in a phased manner and check whether queue utilization comes down.For further assistance please contact NOKIA customer support.		

Table 28-29 Application4G_henbIdClash

Alarm	Attributes	Applicable major release
Name: Application4G_henbIdClash (5698) Type: operationalViolation Package: femto.Application4G_henbIdClash Raised on class: femto.Application4G	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: callEstablishmentError	Release: • SC17.2 • SC19.1 • SC20.1
Description: This fault is generated when SCGW has detected that another HENB tries to register with a henbId already used by another HeNB.		
Remedial action: Re-configure the Small Cell with a different ID.Re-register the Small Cell.		

Table 28-30 Application4G_henbIntegrityViolation

Alarm	Attributes	Applicable major release
Name: Application4G_henbIntegrityViolation (5699) Type: securityServiceOrMechanismViolation Package: femto.Application4G_henbIntegrityViolation Raised on class: femto.Application4G	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: authenticationFailure	Release: • SC17.2 • SC19.1 • SC20.1
Description: This fault is generated when SCGW has detected a mismatch between the parameters received from the HeNB SETUP Request and the provisioned HeNB parameters. At least one of the following parameters might have been manipulated:- HeNB-Id,- TAC- Access mode		
Remedial action: Verify, that the HeNB-Id, TAC and access mode of the registered Small Cell is same as present in BSR DATA XML file.Re-register this Small Cell.		

Table 28-31 Application4G_heNbOutOfService

Alarm	Attributes	Applicable major release
Name: Application4G_heNbOutOfService (5697) Type: equipmentAlarm Package: femto.Application4G_heNbOutOfService Raised on class: femto.Application4G	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1
Description: This alarm is triggered for HeNBs which have not registered with the SCGW during either the HenbRegisterAfterFailure-Timer period or the HenbRegisterAfterInitTimer period and which have the Application4G::enableServiceMonitoringattribute set to True.		
Remedial action: The alarm is cleared by the Gateway whenApplication4G::enableServiceMonitoring attribute is disabled orthe failed Small Cell tries to reregister.		

Table 28-32 Application4G_invalidHeNBS1SetupMessage

Alarm	Attributes	Applicable major release
Name: Application4G_invalidHeNBS1SetupMessage (5700) Type: communicationsAlarm Package: femto.Application4G_ invalidHeNBS1SetupMessage Raised on class: femto.Application4G	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1
Description: This fault is generated when SCGW receives S1 SETUP message with an invalid HeNBId.		
Remedial action: Check whether any invalid IE is sent as part of Small Cell registration request.Check Fatal/Error logs in Log_FMG.log file with respect to decoding of Small Cell registration request.Use the above information to isolate the issue at Small Cell or BSR Gateway end.		

Table 28-33 Application4G_invalidS1flexConfiguration

Alarm	Attributes	Applicable major release
Name: Application4G_invalidS1flexConfiguration (5701) Type: processingErrorAlarm Package: femto.Application4G_ invalidS1flexConfiguration Raised on class: femto.Application4G	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • SC17.2 • SC19.1 • SC20.1
Description: This alarm is generated if the TAI in the INITIAL UE MESSAGE does not match the PLMN ID and TAC for an MME Region.		
Remedial action: Check the provisioned S1 Flex configuration function.		

Table 28-34 Application4G_massHeNbOutOfService

Alarm	Attributes	Applicable major release
Name: Application4G_massHeNbOutOfService (5702) Type: equipmentAlarm Package: femto.Application4G_ massHeNbOutOfService Raised on class: femto.Application4G	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1
Description: This alarm is triggered when the number of active bsrOutOfService alarms reaches the threshold defined by the Application4G:: maxNumHenbServiceAlarms attribute		
Remedial action: The alarm is automatically detected and cleared by the Gateway, when the total number of failed Small Cells drops below the Application4G:: maxNumHenbServiceAlarms value.		

Table 28-35 Application4G_massNBHeNbOutOfService

Alarm	Attributes	Applicable major release
Name: Application4G_massNBHeNbOutOfService (12737) Type: equipmentAlarm Package: femto.Application4G_ massNBHeNbOutOfService Raised on class: femto.Application4G	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1
Description: This alarm is triggered when the number of active nbHeNbOutOfService alarms reaches the threshold defined by the Application4G:: maxNumHenbServiceAlarms attribute		
Remedial action: The alarm is automatically detected and cleared by the Gateway, when the total number of failed NB-IOT Small Cells drops below the Application4G:: maxNumHenbServiceAlarms value.		

Table 28-36 Application4G_nbHeNbOutOfService

Alarm	Attributes	Applicable major release
Name: Application4G_nbHeNbOutOfService (12738) Type: equipmentAlarm Package: femto.Application4G_nbHeNbOutOfService Raised on class: femto.Application4G	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1
Description: This alarm is triggered for NB-IOT HeNBs which have not registered with the SCGW during either the HenbRegisterAfter-FailureTimer period or the HenbRegisterAfterInitTimer period and which have the Application4G::enableServiceMonitoring attribute set to True.		
Remedial action: The alarm is cleared by the Gateway whenApplication4G::enableServiceMonitoring attribute is disabled orthe failed NB-IOT Small Cell tries to reregister.		

Table 28-37 Application4G_newHeNBS1SetupRejectedDueToOverload

Alarm	Attributes	Applicable major release
Name: Application4G_ newHeNBS1SetupRejectedDueToOverload (5703) Type: qualityOfServiceAlarm Package: femto.Application4G_ newHeNBS1SetupRejectedDueToOverload Raised on class: femto.Application4G	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity	Release: • SC17.2 • SC19.1 • SC20.1
Description: This fault is generated when SCGW rejects new HeNB SETUP request due to overload		
Remedial action: Check the loading on the FGW.FGW automatically drops new S1SetupRequest and InitialUE messages from HeNBs, Paging messages from MME sheds signaling messages load and after 30-60 seconds the alarm is cleared automatically by FGW.This fault is automatically cleared by the clear alarmAPPLICATION4G_ NEWHENBS1SETUPREJECTEDDUETOOVERLOADCLEARANCE.If the alarm is not cleared automatically by FGW after 60 seconds, then contact Nokia customer support.		

Table 28-38 Application4G_provisionedWBHeNBsThresholdExceeded

Alarm	Attributes	Applicable major release
Name: Application4G_ provisionedWBHeNBsThresholdExceeded (12959) Type: equipmentAlarm Package: femto.Application4G_ provisionedWBHeNBsThresholdExceeded Raised on class: femto.Application4G	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: thresholdCrossed	Release: • SC19.1 • SC20.1
Description: This alarm is triggered when the number of provisioned WB HeNBs exceeds HeNBGW provisioned threshold limit(via Application4G::maxSupportedHeNBs attribute).		
Remedial action: Check if more than maxSupportedHeNBs (FGW threshold limit) WB entries are being sent in the HeNB data file to FGW from the OAM system. If yes take steps to limit the provisioning to threshold (currently 65535) for WB HeNBs. The operator must do a manual clearance for the alarm.		

Table 28-39 Application4G_s1pagingCapacityThresholdExceeded

Alarm	Attributes	Applicable major release
Name: Application4G_ s1pagingCapacityThresholdExceeded (12960) Type: equipmentAlarm Package: femto.Application4G_ s1pagingCapacityThresholdExceeded Raised on class: femto.Application4G	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: thresholdCrossed	Release: • SC19.1 • SC20.1
Description: This alarm is triggered when the number of S1AP Paging received by the HeNBGW from MME exceeded the threshold HeNBGW limit.		
Remedial action: Check if more no of S1 Paging requests are received from MME than provisioned limit in parameter Applocation4G:: maxSupportedS1Paging.Check if Paging retries are happening from the MME and investigate the cause if there is a sudden or gradual incease during last few intervals. The operator must do a manual clearance for the alarm.For further assistance please contact Nokia Support.		

Table 28-40 Application4G_spareAlarmApplication4G1

Alarm	Attributes	Applicable major release
Name: Application4G_spareAlarmApplication4G1 (12394) Type: equipmentAlarm Package: femto.Application4G_ spareAlarmApplication4G1 Raised on class: femto.Application4G	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1
Description: Spare Alarm 1		
Remedial action: Spare Alarm 1		

Table 28-41 Application4G_spareAlarmApplication4G2

Alarm	Attributes	Applicable major release
Name: Application4G_spareAlarmApplication4G2 (12395) Type: equipmentAlarm Package: femto.Application4G_ spareAlarmApplication4G2 Raised on class: femto.Application4G	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1
Description: Spare Alarm 2		
Remedial action: Spare Alarm 2		

Table 28-42 Application4G_spareAlarmApplication4G3

Alarm	Attributes	Applicable major release
Name: Application4G_spareAlarmApplication4G3 (12396) Type: equipmentAlarm Package: femto.Application4G_ spareAlarmApplication4G3 Raised on class: femto.Application4G	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1
Description: Spare Alarm 3		
Remedial action: Spare Alarm 3		

Table 28-43 Application4G_spareAlarmApplication4G4

Alarm	Attributes	Applicable major release
Name: Application4G_spareAlarmApplication4G4 (12961) Type: equipmentAlarm Package: femto.Application4G_ spareAlarmApplication4G4 Raised on class: femto.Application4G	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC19.1 • SC20.1
Description: Spare Alarm 4		
Remedial action: Spare Alarm 4		

Table 28-44 Application4G_spareAlarmApplication4G5

Alarm	Attributes	Applicable major release
Name: Application4G_spareAlarmApplication4G5 (12962) Type: equipmentAlarm Package: femto.Application4G_ spareAlarmApplication4G5 Raised on class: femto.Application4G	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC19.1 • SC20.1
Description: Spare Alarm 5		
Remedial action: Spare Alarm 5		

Table 28-45 Application4G_spareAlarmApplication4G6

Alarm	Attributes	Applicable major release
Name: Application4G_spareAlarmApplication4G6 (12963) Type: equipmentAlarm Package: femto.Application4G_ spareAlarmApplication4G6 Raised on class: femto.Application4G	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC19.1 • SC20.1
Description: Spare Alarm 6		
Remedial action: Spare Alarm 6		

Table 28-46 ApplicationX2Aggregator_spareAlarmApplicationX2Aggregator1

Alarm	Attributes	Applicable major release
Name: ApplicationX2Aggregator_ spareAlarmApplicationX2Aggregator1 (12973) Type: equipmentAlarm Package: femto.ApplicationX2Aggregator_ spareAlarmApplicationX2Aggregator1 Raised on class: femto.ApplicationX2Aggregator	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC20.1
Description: Spare Alarm 1		
Remedial action: Spare Alarm 1		

Table 28-47 ApplicationX2Aggregator_spareAlarmApplicationX2Aggregator2

Alarm	Attributes	Applicable major release
Name: ApplicationX2Aggregator_ spareAlarmApplicationX2Aggregator2 (12974) Type: equipmentAlarm Package: femto.ApplicationX2Aggregator_ spareAlarmApplicationX2Aggregator2 Raised on class: femto.ApplicationX2Aggregator	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC20.1
Description: Spare Alarm 2		
Remedial action: Spare Alarm 2		

Table 28-48 ApplicationX2Aggregator_spareAlarmApplicationX2Aggregator3

Alarm	Attributes	Applicable major release
Name: ApplicationX2Aggregator_ spareAlarmApplicationX2Aggregator3 (12975) Type: equipmentAlarm Package: femto.ApplicationX2Aggregator_ spareAlarmApplicationX2Aggregator3 Raised on class: femto.ApplicationX2Aggregator	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC20.1
Description: Spare Alarm 3		
Remedial action: Spare Alarm 3		

Table 28-49 ApplicationX2Aggregator_spareAlarmApplicationX2Aggregator4

Alarm	Attributes	Applicable major release
Name: ApplicationX2Aggregator_ spareAlarmApplicationX2Aggregator4 (12976) Type: equipmentAlarm Package: femto.ApplicationX2Aggregator_ spareAlarmApplicationX2Aggregator4 Raised on class: femto.ApplicationX2Aggregator	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC20.1
Description: Spare Alarm 4		
Remedial action: Spare Alarm 4		

Table 28-50 ApplicationX2Aggregator_spareAlarmApplicationX2Aggregator5

Alarm	Attributes	Applicable major release
Name: ApplicationX2Aggregator_ spareAlarmApplicationX2Aggregator5 (12977) Type: equipmentAlarm Package: femto.ApplicationX2Aggregator_ spareAlarmApplicationX2Aggregator5 Raised on class: femto.ApplicationX2Aggregator	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC20.1
Description: Spare Alarm 5		
Remedial action: Spare Alarm 5		

Table 28-51 ApplicationX2Aggregator_spareAlarmApplicationX2Aggregator6

Alarm	Attributes	Applicable major release
Name: ApplicationX2Aggregator_ spareAlarmApplicationX2Aggregator6 (12978) Type: equipmentAlarm Package: femto.ApplicationX2Aggregator_ spareAlarmApplicationX2Aggregator6 Raised on class: femto.ApplicationX2Aggregator	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC20.1
Description: Spare Alarm 6		
Remedial action: Spare Alarm 6		

Table 28-52 AtcaAlarmCard_e1InfraAlarm

Alarm	Attributes	Applicable major release
Name: AtcaAlarmCard_e1InfraAlarm (5704) Type: communicationsAlarm Package: femto.AtcaAlarmCard_e1InfraAlarm Raised on class: femto.SCATCAAlarmCard	Severity: info Specific problem: Not Applicable Implicitly cleared: true Default probable cause: remoteAlarmInterface	Release: • 4.0.0
Description: This Alarm is raised when there is a failure and the infrastructure alarms :E1_A, E1_B, E1_C, E1_D get raised.		
Remedial action: See the nodal documentation for more information.		

Table 28-53 AtcaAlarmCard_e2InfraAlarm

Alarm	Attributes	Applicable major release
Name: AtcaAlarmCard_e2InfraAlarm (5705) Type: communicationsAlarm Package: femto.AtcaAlarmCard_e2InfraAlarm Raised on class: femto.SCATCAAlarmCard	Severity: info Specific problem: Not Applicable Implicitly cleared: true Default probable cause: remoteAlarmInterface	Release: • 4.0.0
Description: This Alarm is raised when there is a failure and the infrastructure alarms : E2_A, E2_B, E2_C, E2_D get raised.		
Remedial action: See the nodal documentation for more information.		

Table 28-54 AtcaAlarmCard_e3InfraAlarm

Alarm	Attributes	Applicable major release
Name: AtcaAlarmCard_e3InfraAlarm (5706) Type: communicationsAlarm Package: femto.AtcaAlarmCard_e3InfraAlarm Raised on class: femto.SCATCAAlarmCard	Severity: info Specific problem: Not Applicable Implicitly cleared: true Default probable cause: remoteAlarmInterface	Release: • 4.0.0
Description: This Alarm is raised when there is a failure and the infrastructure alarms : E3_A, E3_B, E3_C, E3_D get raised.		

Table 28-54 AtcaAlarmCard_e3InfraAlarm (continued)

Alarm	Attributes	Applicable major release
Remedial action: See the nodal documentation for more information.		

Table 28-55 AtcaAlarmCard_e4InfraAlram

Alarm	Attributes	Applicable major release
Name: AtcaAlarmCard_e4InfraAlram (5707) Type: communicationsAlarm Package: femto.AtcaAlarmCard_e4InfraAlram Raised on class: femto.SCATCAAlarmCard	Severity: info Specific problem: Not Applicable Implicitly cleared: true Default probable cause: remoteAlarmInterface	Release: • 4.0.0
Description: This Alarm is raised when there is a failure and the infrastructure alarms : E4_A, E4_B, E4_C, E4_D get raised.		
Remedial action: See the nodal documentation for more information.		

Table 28-56 AtcaAlarmCard_pdu

Alarm	Attributes	Applicable major release
Name: AtcaAlarmCard_pdu (5708) Type: equipmentAlarm Package: femto.AtcaAlarmCard_pdu Raised on class: femto.SCATCAAlarmCard	Severity: info Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 4.0.0
Description: This Alarm is raised when there is failure in the PDU presence.		
Remedial action: See the nodal documentation for more information.		

Table 28-57 AtcaAlarmCard_pduBreakerPwr

Alarm	Attributes	Applicable major release
Name: AtcaAlarmCard_pduBreakerPwr (5709) Type: environmentalAlarm Package: femto.AtcaAlarmCard_pduBreakerPwr Raised on class: femto.SCATCAAlarmCard	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerProblem	Release: • 4.0.0
Description: This Alarm is raised when there is failure in AT1 PDU Breaker A, AT1 PDU Breaker B.		
Remedial action: See the nodal documentation for more information.		

Table 28-58 AtcaAlarmCard_pduFeedPwr

Alarm	Attributes	Applicable major release
Name: AtcaAlarmCard_pduFeedPwr (5710) Type: environmentalAlarm Package: femto.AtcaAlarmCard_pduFeedPwr Raised on class: femto.SCATCAAlarmCard	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerProblem	Release: • 4.0.0
Description: This Alarm is raised when there is failure in the AT1 PDU Feed A, AT1 PDU Feed B.		
Remedial action: See the nodal documentation for more information.		

Table 28-59 AtcaAlarmCard_powerFailure

Alarm	Attributes	Applicable major release
Name: AtcaAlarmCard_powerFailure (5711) Type: environmentalAlarm Package: femto.AtcaAlarmCard_powerFailure Raised on class: femto.SCATCAAlarmCard	Severity: info Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerProblem	Release: • 4.0.0
Description: This Alarm is raised when the Loop Voltage failure, VoltageFailure48V_A and VoltageFailure48V_B. happens		
Remedial action: See the nodal documentation for more information.		

Table 28-60 AtcaAlarmCard_telcoAlarmInput

Alarm	Attributes	Applicable major release
Name: AtcaAlarmCard_telcoAlarmInput (5712) Type: equipmentAlarm Package: femto.AtcaAlarmCard_telcoAlarmInput Raised on class: femto.SCATCAAlarmCard	Severity: info Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 4.0.0
Description: This Alarm is raised when the System manager does the minor Reset, major Reset and Alarm cutoff.		
Remedial action: See the nodal documentation for more information.		

Table 28-61 AtcaCardTemperatureLowerThresholdAlarm

Alarm	Attributes	Applicable major release
Name: AtcaCardTemperatureLowerThresholdAlarm (3710) Type: equipmentAlarm Package: equipment. AtcaCardTemperatureLowerThresholdAlarm Raised on class: equipment.AtcaCard	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: AtcaCardTemperatureLow	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when the ATCA card temperature has decreased below any of the lower thresholds.		

Table 28-61 AtcaCardTemperatureLowerThresholdAlarm (continued)

Alarm	Attributes	Applicable major release
Raising condition: ('Temperature Threshold State' EQUAL 'Lower Critical')		
Clearing condition: ('Temperature Threshold State' EQUAL 'Unspecified')		
Remedial action: Informational - no corrective action required.		

Table 28-62 AtcaCardTemperatureUpperThresholdAlarm

Alarm	Attributes	Applicable major release
Name: AtcaCardTemperatureUpperThresholdAlarm (3711) Type: equipmentAlarm Package: equipment. AtcaCardTemperatureUpperThresholdAlarm Raised on class: equipment.AtcaCard	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: AtcaCardTemperatureHigh	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when the ATCA card temperature has increased beyond any of the upper thresholds.		
Raising condition: ('Temperature Threshold State' EQUAL 'Upper Critical')		
Clearing condition: ('Temperature Threshold State' EQUAL 'Unspecified')		
Remedial action: Monitor the blade. If the condition persists, replace the blade. If the condition applies to more than one blade, verify the performance of the site cooling system.		

Table 28-63 AtcaCardVoltageLowerThresholdAlarm

Alarm	Attributes	Applicable major release
Name: AtcaCardVoltageLowerThresholdAlarm (3712) Type: equipmentAlarm Package: equipment. AtcaCardVoltageLowerThresholdAlarm Raised on class: equipment.AtcaCard	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: AtcaCardVoltageLow	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when the ATCA card voltage level has decreased below any of the lower thresholds.		
Raising condition: ('Voltage Threshold State' EQUAL 'Lower Critical')		
Clearing condition: ('Voltage Threshold State' EQUAL 'Unspecified')		
Remedial action: Monitor. If the alarm persists and the blade is in the active state, it should be replaced.		

Table 28-64 AtcaCardVoltageUpperThresholdAlarm

Alarm	Attributes	Applicable major release
Name: AtcaCardVoltageUpperThresholdAlarm (3713) Type: equipmentAlarm Package: equipment. AtcaCardVoltageUpperThresholdAlarm Raised on class: equipment.AtcaCard	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: AtcaCardVoltageHigh	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when the ATCA card voltage level has increased beyond any of the upper thresholds.		
Raising condition: ('Voltage Threshold State' EQUAL 'Upper Critical')		
Clearing condition: ('Voltage Threshold State' EQUAL 'Unspecified')		
Remedial action: Monitor. If the alarm persists and the blade is in the active state, it should be replaced.		

Table 28-65 AtcaFanTray_fanAgingDown1

Alarm	Attributes	Applicable major release
Name: AtcaFanTray_fanAgingDown1 (5713) Type: equipmentAlarm Package: femto.AtcaFanTray_fanAgingDown1 Raised on class: femto.SCATCAFanTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableUnitProblem	Release: • 4.0.0
Description: This Alarm is raised when the Down fan tray reaches the Aging1		
Remedial action: See the nodal documentation for more information.		

Table 28-66 AtcaFanTray_fanAgingDown2

Alarm	Attributes	Applicable major release
Name: AtcaFanTray_fanAgingDown2 (5714) Type: equipmentAlarm Package: femto.AtcaFanTray_fanAgingDown2 Raised on class: femto.SCATCAFanTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableUnitProblem	Release: • 4.0.0
Description: This Alarm is raised when the Down fan tray reaches the Aging2		
Remedial action: See the nodal documentation for more information.		

Table 28-67 AtcaFanTray_fanAgingDown3

Alarm	Attributes	Applicable major release
Name: AtcaFanTray_fanAgingDown3 (5715) Type: equipmentAlarm Package: femto.AtcaFanTray_fanAgingDown3 Raised on class: femto.SCATCAFanTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableUnitProblem	Release: • 4.0.0
Description: This Alarm is raised when the Down fan tray reaches the Aging3		
Remedial action: See the nodal documentation for more information.		

Table 28-68 AtcaFanTray_fanAgingDown4

Alarm	Attributes	Applicable major release
Name: AtcaFanTray_fanAgingDown4 (5716) Type: equipmentAlarm Package: femto.AtcaFanTray_fanAgingDown4 Raised on class: femto.SCATCAFanTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableUnitProblem	Release: • 4.0.0
Description: This Alarm is raised when the Down fan tray reaches the Aging4		
Remedial action: See the nodal documentation for more information.		

Table 28-69 AtcaFanTray_fanAgingDown5

Alarm	Attributes	Applicable major release
Name: AtcaFanTray_fanAgingDown5 (5717) Type: equipmentAlarm Package: femto.AtcaFanTray_fanAgingDown5 Raised on class: femto.SCATCAFanTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableUnitProblem	Release: • 4.0.0
Description: This Alarm is raised when the Down fan tray reaches the Aging5		
Remedial action: See the nodal documentation for more information.		

Table 28-70 AtcaFanTray_fanAgingDown6

Alarm	Attributes	Applicable major release
Name: AtcaFanTray_fanAgingDown6 (5718) Type: equipmentAlarm Package: femto.AtcaFanTray_fanAgingDown6 Raised on class: femto.SCATCAFanTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableUnitProblem	Release: • 4.0.0
Description: This Alarm is raised when the Down fan tray reaches the Aging6		
Remedial action: See the nodal documentation for more information.		

Table 28-71 AtcaFanTray_fanAgingRear1

Alarm	Attributes	Applicable major release
Name: AtcaFanTray_fanAgingRear1 (5719) Type: equipmentAlarm Package: femto.AtcaFanTray_fanAgingRear1 Raised on class: femto.SCATCAFanTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableUnitProblem	Release: • 4.0.0
Description: This Alarm is raised when the Rear fan tray reaches the Aging1		
Remedial action: See the nodal documentation for more information.		

Table 28-72 AtcaFanTray_fanAgingRear2

Alarm	Attributes	Applicable major release
Name: AtcaFanTray_fanAgingRear2 (5720) Type: equipmentAlarm Package: femto.AtcaFanTray_fanAgingRear2 Raised on class: femto.SCATCAFanTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableUnitProblem	Release: • 4.0.0
Description: This Alarm is raised when the Rear fan tray reaches the Aging2		
Remedial action: See the nodal documentation for more information.		

Table 28-73 AtcaFanTray_fanAgingRear3

Alarm	Attributes	Applicable major release
Name: AtcaFanTray_fanAgingRear3 (5721) Type: equipmentAlarm Package: femto.AtcaFanTray_fanAgingRear3 Raised on class: femto.SCATCAFanTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableUnitProblem	Release: • 4.0.0
Description: This Alarm is raised when the Rear fan tray reaches the Aging3		
Remedial action: See the nodal documentation for more information.		

Table 28-74 AtcaFanTray_fanAgingRear4

Alarm	Attributes	Applicable major release
Name: AtcaFanTray_fanAgingRear4 (5722) Type: equipmentAlarm Package: femto.AtcaFanTray_fanAgingRear4 Raised on class: femto.SCATCAFanTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableUnitProblem	Release: • 4.0.0
Description: This Alarm is raised when the Rear fan tray reaches the Aging4		
Remedial action: See the nodal documentation for more information.		

Table 28-75 AtcaFanTray_fanAgingRear5

Alarm	Attributes	Applicable major release
Name: AtcaFanTray_fanAgingRear5 (5723) Type: equipmentAlarm Package: femto.AtcaFanTray_fanAgingRear5 Raised on class: femto.SCATCAFanTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableUnitProblem	Release: • 4.0.0
Description: This Alarm is raised when the Rear fan tray reaches the Aging5		
Remedial action: See the nodal documentation for more information.		

Table 28-76 AtcaFanTray_fanAgingRear6

Alarm	Attributes	Applicable major release
Name: AtcaFanTray_fanAgingRear6 (5724) Type: equipmentAlarm Package: femto.AtcaFanTray_fanAgingRear6 Raised on class: femto.SCATCAFanTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableUnitProblem	Release: • 4.0.0
Description: This Alarm is raised when the Rear fan tray reaches the Aging6		
Remedial action: See the nodal documentation for more information.		

Table 28-77 AtcaFanTray_fanAgingUp1

Alarm	Attributes	Applicable major release
Name: AtcaFanTray_fanAgingUp1 (5725) Type: equipmentAlarm Package: femto.AtcaFanTray_fanAgingUp1 Raised on class: femto.SCATCAFanTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableUnitProblem	Release: • 4.0.0
Description: This Alarm is raised when the Upper fan tray reaches the Aging1		
Remedial action: See the nodal documentation for more information.		

Table 28-78 AtcaFanTray_fanAgingUp2

Alarm	Attributes	Applicable major release
Name: AtcaFanTray_fanAgingUp2 (5726) Type: equipmentAlarm Package: femto.AtcaFanTray_fanAgingUp2 Raised on class: femto.SCATCAFanTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableUnitProblem	Release: • 4.0.0
Description: This Alarm is raised when the Upper fan tray reaches the Aging2		
Remedial action: See the nodal documentation for more information.		

Table 28-79 AtcaFanTray_fanAgingUp3

Alarm	Attributes	Applicable major release
Name: AtcaFanTray_fanAgingUp3 (5727) Type: equipmentAlarm Package: femto.AtcaFanTray_fanAgingUp3 Raised on class: femto.SCATCAFanTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableUnitProblem	Release: • 4.0.0
Description: This Alarm is raised when the Upper fan tray reaches the Aging3		
Remedial action: See the nodal documentation for more information.		

Table 28-80 AtcaFanTray_fanAgingUp4

Alarm	Attributes	Applicable major release
Name: AtcaFanTray_fanAgingUp4 (5728) Type: equipmentAlarm Package: femto.AtcaFanTray_fanAgingUp4 Raised on class: femto.SCATCAFanTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableUnitProblem	Release: • 4.0.0
Description: This Alarm is raised when the Upper fan tray reaches the Aging4		
Remedial action: See the nodal documentation for more information.		

Table 28-81 AtcaFanTray_fanAgingUp5

Alarm	Attributes	Applicable major release
Name: AtcaFanTray_fanAgingUp5 (5729) Type: equipmentAlarm Package: femto.AtcaFanTray_fanAgingUp5 Raised on class: femto.SCATCAFanTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableUnitProblem	Release: • 4.0.0
Description: This Alarm is raised when the Upper fan tray reaches the Aging5		
Remedial action: See the nodal documentation for more information.		

Table 28-82 AtcaFanTray_fanAgingUp6

Alarm	Attributes	Applicable major release
Name: AtcaFanTray_fanAgingUp6 (5730) Type: equipmentAlarm Package: femto.AtcaFanTray_fanAgingUp6 Raised on class: femto.SCATCAFanTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableUnitProblem	Release: • 4.0.0
Description: This Alarm is raised when the Upper fan tray reaches the Aging6		
Remedial action: See the nodal documentation for more information.		

Table 28-83 AtcaShelfManager_boardFilterAbsence

Alarm	Attributes	Applicable major release
Name: AtcaShelfManager_boardFilterAbsence (5731) Type: equipmentAlarm Package: femto.AtcaShelfManager_ boardFilterAbsence Raised on class: femto.SCATCAShelfManager	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: probCauseUnknown	Release: • 4.0.0
Description: This Alarm is raised when the Board filter or the Front side filter or grid is not present.		
Remedial action: See the nodal documentation for more information.		

Table 28-84 AtcaShelfManager_cpldSensor

Alarm	Attributes	Applicable major release
Name: AtcaShelfManager_cpldSensor (5732) Type: equipmentAlarm Package: femto.AtcaShelfManager_cpldSensor Raised on class: femto.SCATCAShelfManager	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 4.0.0
Description: This Alarm is raised when there is change in the shelf manager redundancy status.		
Remedial action: See the nodal documentation for more information.		

Table 28-85 AtcaShelfManager_fanTrayLowAbsence

Alarm	Attributes	Applicable major release
Name: AtcaShelfManager_fanTrayLowAbsence (5733) Type: equipmentAlarm Package: femto.AtcaShelfManager_ fanTrayLowAbsence Raised on class: femto.SCATCAShelfManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: probCauseUnknown	Release: • 4.0.0
Description: This Alarm is raised when the Lower fan tray is not present.		
Remedial action: See the nodal documentation for more information.		

Table 28-86 AtcaShelfManager_fanTrayRearAbsence

Alarm	Attributes	Applicable major release
Name: AtcaShelfManager_fanTrayRearAbsence (5734) Type: equipmentAlarm Package: femto.AtcaShelfManager_ fanTrayRearAbsence Raised on class: femto.SCATCAShelfManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: probCauseUnknown	Release: • 4.0.0

Table 28-86 AtcaShelfManager_fanTrayRearAbsence (continued)

Alarm	Attributes	Applicable major release
Description: This Alarm is raised when the Rear fan tray is not present.		
Remedial action: See the nodal documentation for more information.		

Table 28-87 AtcaShelfManager_fanTraysFRUcriticalFailure

Alarm	Attributes	Applicable major release
Name: AtcaShelfManager_fanTraysFRUcriticalFailure (5736) Type: equipmentAlarm Package: femto.AtcaShelfManager_ fanTraysFRUcriticalFailure Raised on class: femto.SCATCAShelfManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 4.0.0
Description: This Alarm is raised when failure occurs in the Fan Trays FRUs.		
Remedial action: See the nodal documentation for more information.		

Table 28-88 AtcaShelfManager_fanTrayUpAbsence

Alarm	Attributes	Applicable major release
Name: AtcaShelfManager_fanTrayUpAbsence (5735) Type: equipmentAlarm Package: femto.AtcaShelfManager_ fanTrayUpAbsence Raised on class: femto.SCATCAShelfManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: probCauseUnknown	Release: • 4.0.0
Description: This Alarm is raised when the Up fan tray is not present.		
Remedial action: See the nodal documentation for more information.		

Table 28-89 AtcaShelfManager_i2cLocalBus

Alarm	Attributes	Applicable major release
Name: AtcaShelfManager_i2cLocalBus (5737) Type: equipmentAlarm Package: femto.AtcaShelfManager_i2cLocalBus Raised on class: femto.SCATCAShelfManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 4.0.0
Description: This Alarm is raised when failure happens to the I2C Local Bus.		
Remedial action: See the nodal documentation for more information.		

Table 28-90 AtcaShelfManager_i2cMasterResourceHighLimit

Alarm	Attributes	Applicable major release
Name: AtcaShelfManager_ i2cMasterResourceHighLimit (5738) Type: equipmentAlarm Package: femto.AtcaShelfManager_ i2cMasterResourceHighLimit Raised on class: femto.SCATCAShelfManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 4.0.0
Description: This Alarm is raised when the I2C Master Resource reaches the critical limit.		
Remedial action: See the nodal documentation for more information.		

Table 28-91 AtcaShelfManager_i2cMasterResourceMidLimit

Alarm	Attributes	Applicable major release
Name: AtcaShelfManager_i2cMasterResourceMidLimit (5739) Type: equipmentAlarm Package: femto.AtcaShelfManager_ i2cMasterResourceMidLimit Raised on class: femto.SCATCAShelfManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 4.0.0
Description: This Alarm is raised when the I2C of the Master Resource reaches the major limit		
Remedial action: See the nodal documentation for more information.		

Table 28-92 AtcaShelfManager_ipmbLinkDown

Alarm	Attributes	Applicable major release
Name: AtcaShelfManager_ipmbLinkDown (5740) Type: equipmentAlarm Package: femto.AtcaShelfManager_ipmbLinkDown Raised on class: femto.SCATCAShelfManager	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 4.0.0
Description: This Alarm is raised when failure happens to the IPMB-0 link		
Remedial action: See the nodal documentation for more information.		

Table 28-93 AtcaShelfManager_lm75TempDownHighLimit

Alarm	Attributes	Applicable major release
Name: AtcaShelfManager_lm75TempDownHighLimit (5741) Type: environmentalAlarm Package: femto.AtcaShelfManager_ lm75TempDownHighLimit Raised on class: femto.SCATCAShelfManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lowTemperature	Release: • 4.0.0
Description: This Alarm is raised when the temperature of the bottom of the NBSHMC board reaches the lower critical limit.		
Remedial action: See the nodal documentation for more information.		

Table 28-94 AtcaShelfManager_lm75TempDownMidLimit

Alarm	Attributes	Applicable major release
Name: AtcaShelfManager_lm75TempDownMidLimit (5742) Type: environmentalAlarm Package: femto.AtcaShelfManager_ lm75TempDownMidLimit Raised on class: femto.SCATCAShelfManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lowTemperatureMidLimit	Release: • 4.0.0
Description: This Alarm is raised when the temperature of the bottom of the NBSHMC board reaches the lower major limit.		
Remedial action: See the nodal documentation for more information.		

Table 28-95 AtcaShelfManager_lm75TempUpHighLimit

Alarm	Attributes	Applicable major release
Name: AtcaShelfManager_lm75TempUpHighLimit (5743) Type: environmentalAlarm Package: femto.AtcaShelfManager_ lm75TempUpHighLimit Raised on class: femto.SCATCAShelfManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: highTemperature	Release: • 4.0.0
Description: This Alarm is raised when the temperature of the top of the NBSHMC board reaches the upper critical limit.		
Remedial action: See the nodal documentation for more information.		

Table 28-96 AtcaShelfManager_lm75TempUpMidLimit

Alarm	Attributes	Applicable major release
Name: AtcaShelfManager_lm75TempUpMidLimit (5744) Type: environmentalAlarm Package: femto.AtcaShelfManager_ lm75TempUpMidLimit Raised on class: femto.SCATCAShelfManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: highTemperature	Release: • 4.0.0
Description: This Alarm is raised when the temperature of the top of the NBSHMC board reaches the upper major limit.		
Remedial action: See the nodal documentation for more information.		

Table 28-97 AtcaShelfManager_pwrRedDegraded

Alarm	Attributes	Applicable major release
Name: AtcaShelfManager_pwrRedDegraded (5745) Type: equipmentAlarm Package: femto.AtcaShelfManager_pwrRedDegraded Raised on class: femto.SCATCAShelfManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 4.0.0
Description: Power supple redundancy degraded assert. Redundancy still exists, but at a less than full level. For example, a system has four fans, and can tolerate the failure of two of them, and presently one has failed		
Remedial action: See the nodal documentation for more information.		

Table 28-98 AtcaShelfManager_pwrRedLost

Alarm	Attributes	Applicable major release
Name: AtcaShelfManager_pwrRedLost (5746) Type: equipmentAlarm Package: femto.AtcaShelfManager_pwrRedLost Raised on class: femto.SCATCAShelfManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 4.0.0
Description: This Alarm is raised when the Power supply redundancy lost or Entered any non-redundant state, including Non-redundant: Insufficient Resources		
Remedial action: See the nodal documentation for more information.		

Table 28-99 AtcaShelfManager_pwrRedRegained

Alarm	Attributes	Applicable major release
Name: AtcaShelfManager_pwrRedRegained (5747) Type: equipmentAlarm Package: femto.AtcaShelfManager_pwrRedRegained Raised on class: femto.SCATCAShelfManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 4.0.0

Table 28-99 AtcaShelfManager_pwrRedRegained (continued)

Alarm	Attributes	Applicable major release
Description: This Alarm is raised when the full power supply redundancy has been regained		
Remedial action: See the nodal documentation for more information.		

Table 28-100 AtcaShelfManager_rebootReason

Alarm	Attributes	Applicable major release
Name: AtcaShelfManager_rebootReason (5748) Type: equipmentAlarm Package: femto.AtcaShelfManager_rebootReason Raised on class: femto.SCATCAShelfManager	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • 4.0.0
Description: This Alarm is raised when the Shelf Manager has been Rebooted		
Remedial action: See the nodal documentation for more information.		

Table 28-101 AtcaShelfManager_rtmFilterAbsence

Alarm	Attributes	Applicable major release
Name: AtcaShelfManager_rtmFilterAbsence (5749) Type: equipmentAlarm Package: femto.AtcaShelfManager_rtmFilterAbsence Raised on class: femto.SCATCAShelfManager	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: probCauseUnknown	Release: • 4.0.0
Description: This Alarm is raised when the RTM filter or the Back side filter or grid is not present.		
Remedial action: See the nodal documentation for more information.		

Table 28-102 AtcaShelfManager_shelfFRUcriticalFailure

Alarm	Attributes	Applicable major release
Name: AtcaShelfManager_shelfFRUcriticalFailure (5750) Type: equipmentAlarm Package: femto.AtcaShelfManager_ shelfFRUcriticalFailure Raised on class: femto.SCATCAShelfManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 4.0.0
Description: This Alarm is raised when critical failure happens to the Shelf FRUs in EEPROMs.		
Remedial action: See the nodal documentation for more information.		

Table 28-103 AtcaShelfManager_shelfFRUminorFailure

Alarm	Attributes	Applicable major release
Name: AtcaShelfManager_shelfFRUminorFailure (5751) Type: equipmentAlarm Package: femto.AtcaShelfManager_ shelfFRUminorFailure Raised on class: femto.SCATCAShelfManager	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 4.0.0
Description: This Alarm is raised when minor failure happens to the Shelf FRUs in EEPROMs.		
Remedial action: See the nodal documentation for more information.		

Table 28-104 AtcaShelfManager_shelfManagerConnectionFailure

Alarm	Attributes	Applicable major release
Name: AtcaShelfManager_ shelfManagerConnectionFailure (5752) Type: communicationsAlarm Package: femto.AtcaShelfManager_ shelfManagerConnectionFailure Raised on class: femto.SCATCAShelfManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 4.0.0
Description: This Alarm is raised when the Shelf Oam is unable to communicate with shelf manager		
Remedial action: See the nodal documentation for more information.		

Table 28-105 AtcaShelfManager_shelfManagerInNonRedundantState

Alarm	Attributes	Applicable major release
Name: AtcaShelfManager_ shelfManagerInNonRedundantState (5753) Type: communicationsAlarm Package: femto.AtcaShelfManager_ shelfManagerInNonRedundantState Raised on class: femto.SCATCAShelfManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 4.0.0
Description: This Alarm is raised when the Peer Shelf Manager is not available		
Remedial action: See the nodal documentation for more information.		

Table 28-106 AtcaShelfManager_shelfManagerUnAvailable

Alarm	Attributes	Applicable major release
Name: AtcaShelfManager_shelfManagerUnAvailable (5754) Type: equipmentAlarm Package: femto.AtcaShelfManager_ shelfManagerUnAvailable Raised on class: femto.SCATCAShelfManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 4.0.0
Description: This Alarm is raised when the Shelf Manager Card is not available		
Remedial action: See the nodal documentation for more information.		

Table 28-107 AtcaShelf_alarmCardAbsence

Alarm	Attributes	Applicable major release
Name: AtcaShelf_alarmCardAbsence (5755) Type: equipmentAlarm Package: femto.AtcaShelf_alarmCardAbsence Raised on class: femto.SCATCAShelf	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: probCauseUnknown	Release: • 4.0.0
Description: This Alarm is raised when there is failure in the Alarm card presence.		
Remedial action: See the nodal documentation for more information.		

Table 28-108 AtcaSwitchBaseEthernetIntf_malbanBaseEthernetPortFailure

Alarm	Attributes	Applicable major release
Name: AtcaSwitchBaseEthernetIntf_ malbanBaseEthernetPortFailure (5756) Type: equipmentAlarm Package: femto.AtcaSwitchBaseEthernetIntf_ malbanBaseEthernetPortFailure Raised on class: femto. SCATCASwitchBaseEthernetIntf	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • 4.0.0
Description: This Alarm is raised when the Malban Card Base Ethernet port has failed		
Remedial action: See the nodal documentation for more information.		

Table 28-109 AtcaSwitchCPU_malban10CPUFailure

Alarm	Attributes	Applicable major release
Name: AtcaSwitchCPU_malban10CPUFailure (5757) Type: equipmentAlarm Package: femto.AtcaSwitchCPU_ malban10CPUFailure Raised on class: femto.SCATCASwitchCPU	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: processorProblem	Release: • 4.0.0
Description: This Alarm is raised when software critical error occurs on the payload. Usually followed by a board reboot or reset. It is asserted upon fault detection by the payload software and de-asserted on startup.		
Remedial action: See the nodal documentation for more information.		

Table 28-110 AtcaSwitchFabricEthernetIntf_malbanFabricEthernetPortFailure

Alarm	Attributes	Applicable major release
Name: AtcaSwitchFabricEthernetIntf_ malbanFabricEthernetPortFailure (5758) Type: equipmentAlarm Package: femto.AtcaSwitchFabricEthernetIntf_ malbanFabricEthernetPortFailure Raised on class: femto. SCATCASwitchFabricEthernetIntf	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • 4.0.0
Description: This Alarm is raised when the Malban Card Fabric Ethernet port has failed		
Remedial action: See the nodal documentation for more information.		

Table 28-111 AtcaSwitchSlot_malbanConnectionFailure

Alarm	Attributes	Applicable major release
Name: AtcaSwitchSlot_malbanConnectionFailure (5759) Type: communicationsAlarm Package: femto.AtcaSwitchSlot_ malbanConnectionFailure Raised on class: femto.SCATCASwitchSlot	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 4.0.0
Description: This Alarm is raised when the Shelf Oam is unable to communicate with Malban		
Remedial action: See the nodal documentation for more information.		

Table 28-112 AtcaSwitchSlot_malbanInNonRedundantState

Alarm	Attributes	Applicable major release
Name: AtcaSwitchSlot_malbanInNonRedundantState (5760) Type: communicationsAlarm Package: femto.AtcaSwitchSlot_malbanInNonRedundantState Raised on class: femto.SCATCASwitchSlot	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 4.0.0
Description: This Alarm is raised when the Peer Malban is not available		
Remedial action: See the nodal documentation for more information.		

Table 28-113 AtcaSwitchSlot_malbanIpmbLinkDown

Alarm	Attributes	Applicable major release
Name: AtcaSwitchSlot_malbanIpmbLinkDown (5761) Type: equipmentAlarm Package: femto.AtcaSwitchSlot_malbanIpmbLinkDown Raised on class: femto.SCATCASwitchSlot	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 4.0.0
Description: This Alarm is raised when failure happens to the IPMB-0 link		
Remedial action: See the nodal documentation for more information.		

Table 28-114 AtcaSwitchSlot_malbanUnAvailable

Alarm	Attributes	Applicable major release
Name: AtcaSwitchSlot_malbanUnAvailable (5762) Type: equipmentAlarm Package: femto.AtcaSwitchSlot_malbanUnAvailable Raised on class: femto.SCATCASwitchSlot	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • 4.0.0
Description: This Alarm is raised when the Malban Card is not available		
Remedial action: See the nodal documentation for more information.		

Table 28-115 AtcaSwitchSlot_malbanVlanCreationFailure

Alarm	Attributes	Applicable major release
Name: AtcaSwitchSlot_malbanVlanCreationFailure (5763) Type: communicationsAlarm Package: femto.AtcaSwitchSlot_malbanVlanCreationFailure Raised on class: femto.SCATCASwitchSlot	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • 4.0.0

Table 28-115 AtcaSwitchSlot_malbanVlanCreationFailure (continued)

Alarm	Attributes	Applicable major release
Description: This Alarm is raised when the vlan creation failed in Malban		
Remedial action: See the nodal documentation for more information.		

Table 28-116 AtcaSwitchSlot_ncpuFatalError

Alarm	Attributes	Applicable major release
Name: AtcaSwitchSlot_ncpuFatalError (5764) Type: equipmentAlarm Package: femto.AtcaSwitchSlot_ncpuFatalError Raised on class: femto.SCATCASwitchSlot	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • 4.0.0
Description: This Alarm is raised when a software critical error occurs on the payload.		
Remedial action: See the nodal documentation for more information.		

Table 28-117 AuxiliaryServerStatus

Alarm	Attributes	Applicable major release
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm Package: server.AuxiliaryServerStatus Raised on class: server.AuxiliaryServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 28-118 BareMetalReachabilityDown

Alarm	Attributes	Applicable major release
Name: BareMetalReachabilityDown (10273) Type: virtualPortAlarm Package: dctr.BareMetalReachabilityDown Raised on class: dctr.BMDevice	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BareMetalReachability-DownOrDeleted	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0

Table 28-118 BareMetalReachabilityDown (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when Bare Metal server is reachability down.		
Raising condition: (('bgpReachabilityState' NOT EQUAL '0'))		
Clearing condition: (('bgpReachabilityState' EQUAL '0'))		
Remedial action: This alarm can be cleared when bare metal device BGP prefix is up. Check for virtual switch controller down or virtual switch down or interface/port down in underlay network (hence the BGP prefix not advertised).		

Table 28-119 BladeHardware_alarm48VaAssert

Alarm	Attributes	Applicable major release
Name: BladeHardware_alarm48VaAssert (5861) Type: equipmentAlarm Package: femto.BladeHardware_alarm48VaAssert Raised on class: femto.BladeHardware	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Alarm 48Va assert		
Remedial action: Check the power supply of the ATCA chassis.		

Table 28-120 BladeHardware_alarm48VaDeassert

Alarm	Attributes	Applicable major release
Name: BladeHardware_alarm48VaDeassert (5862) Type: equipmentAlarm Package: femto.BladeHardware_alarm48VaDeassert Raised on class: femto.BladeHardware	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Alarm 48Va deassert		
Remedial action: The operator must do a manual clearance.		

Table 28-121 BladeHardware_alarm48VbAssert

Alarm	Attributes	Applicable major release
Name: BladeHardware_alarm48VbAssert (5863) Type: equipmentAlarm Package: femto.BladeHardware_alarm48VbAssert Raised on class: femto.BladeHardware	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Alarm 48Vb assert		
Remedial action: Clear the alarms manually from the OAM system after replacing the blade hardware.		

Table 28-122 BladeHardware_alarm48VbDeassert

Alarm	Attributes	Applicable major release
Name: BladeHardware_alarm48VbDeassert (5864) Type: equipmentAlarm Package: femto.BladeHardware_alarm48VbDeassert Raised on class: femto.BladeHardware	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Alarm 48Vb deassert		
Remedial action: The operator must do a manual clearance.		

Table 28-123 BladeHardware_bonoCardDeletionEvent

Alarm	Attributes	Applicable major release
Name: BladeHardware_bonoCardDeletionEvent (12969) Type: equipmentAlarm Package: femto.BladeHardware_ bonoCardDeletionEvent Raised on class: femto.BladeHardware	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC19.1 • SC20.1
Description: This alarm is generated when a bono card is pulled out or removed from either active or standby card slot of FGW in an ATCA shelf.		
Remedial action: The operator must do a manual clearance for the alarm.For further assistance, contact Nokia customer support.		

Table 28-124 BladeHardware_bonoCardInsertionEvent

Alarm	Attributes	Applicable major release
Name: BladeHardware_bonoCardInsertionEvent (12970) Type: equipmentAlarm Package: femto.BladeHardware_ bonoCardInsertionEvent Raised on class: femto.BladeHardware	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC19.1 • SC20.1
Description: This alarm is generated when a bono card is inserted in either active or standby card slot of FGW in an ATCA shelf.		
Remedial action: The operator must do a manual clearance.		

Table 28-125 BladeHardware_bootOkAssert

Alarm	Attributes	Applicable major release
Name: BladeHardware_bootOkAssert (5865) Type: equipmentAlarm Package: femto.BladeHardware_bootOkAssert Raised on class: femto.BladeHardware	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Boot OK assert		
Remedial action: The operator must do a manual clearance.		

Table 28-126 BladeHardware_bootOkDeassert

Alarm	Attributes	Applicable major release
Name: BladeHardware_bootOkDeassert (5866) Type: equipmentAlarm Package: femto.BladeHardware_bootOkDeassert Raised on class: femto.BladeHardware	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Boot OK deassert		
Remedial action: The operator must do a manual clearance.		

Table 28-127 BladeHardware_ipmbPhysicalAssert

Alarm	Attributes	Applicable major release
Name: BladeHardware_ipmbPhysicalAssert (5867) Type: equipmentAlarm Package: femto.BladeHardware_ipmbPhysicalAssert Raised on class: femto.BladeHardware	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: IPMB physical assert		
Remedial action: Check the IPMB link sensor associated with the blade hardware.Perform switch over if the error appears at shelf manager level.Replace the blade hardware if the issue still continues.		

Table 28-128 BladeHardware_ipmbPhysicalDeassert

Alarm	Attributes	Applicable major release
Name: BladeHardware_ipmbPhysicalDeassert (5868) Type: equipmentAlarm Package: femto.BladeHardware_ipmbPhysicalDeassert Raised on class: femto.BladeHardware	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: IPMB physical deassert		
Remedial action: The operator must do a manual clearance.		

Table 28-129 BladeHardware_lm75localTempCriticalAssert

Alarm	Attributes	Applicable major release
Name: BladeHardware_lm75localTempCriticalAssert (5871) Type: equipmentAlarm Package: femto.BladeHardware_lm75localTempCriticalAssert Raised on class: femto.BladeHardware	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: LM 75 local temperature critical assert		
Remedial action: Check BONO card temperature and cooling.For further assistance, contact Nokia customer support.		

Table 28-130 BladeHardware_lm75localTempCriticalAssLMert

Alarm	Attributes	Applicable major release
Name: BladeHardware_ lm75localTempCriticalAssLMert (5870) Type: equipmentAlarm Package: femto.BladeHardware_ lm75localTempCriticalAssLMert Raised on class: femto.BladeHardware	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • 4.0.0
Description: LM 75 local temperature critical assert		
Remedial action: The operator must do a manual clearance.		

Table 28-131 BladeHardware_lm75localTempCriticalDeassert

Alarm	Attributes	Applicable major release
Name: BladeHardware_ lm75localTempCriticalDeassert (5873) Type: equipmentAlarm Package: femto.BladeHardware_ lm75localTempCriticalDeassert Raised on class: femto.BladeHardware	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: LM 75 local temperature critical deassert		
Remedial action: No action needed.Informational alarm indicating Bono card temperature has recovered within the range.		

Table 28-132 BladeHardware_lm75localTempCriticalDeassLMert

Alarm	Attributes	Applicable major release
Name: BladeHardware_ lm75localTempCriticalDeassLMert (5872) Type: equipmentAlarm Package: femto.BladeHardware_ lm75localTempCriticalDeassLMert Raised on class: femto.BladeHardware	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • 4.0.0
Description: LM 75 local temperature critical deassert		
Remedial action: The operator must do a manual clearance.		

Table 28-133 BladeHardware_lm75LocalTempMajorAssert

Alarm	Attributes	Applicable major release
Name: BladeHardware_lm75LocalTempMajorAssert (5869) Type: equipmentAlarm Package: femto.BladeHardware_ lm75LocalTempMajorAssert Raised on class: femto.BladeHardware	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: LM 75 local temperature major assert		
Remedial action: Clear the alarms manually from the OAM system after replacing the blade hardware.		

Table 28-134 BladeHardware_lm75localTempMajorDeassert

Alarm	Attributes	Applicable major release
Name: BladeHardware_lm75localTempMajorDeassert (5874) Type: equipmentAlarm Package: femto.BladeHardware_ lm75localTempMajorDeassert Raised on class: femto.BladeHardware	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: LM 75 local temperature major deassert		
Remedial action: The operator must do a manual clearance.		

Table 28-135 BladeHardware_lm75localTempMinorAssert

Alarm	Attributes	Applicable major release
Name: BladeHardware_lm75localTempMinorAssert (5875) Type: equipmentAlarm Package: femto.BladeHardware_ lm75localTempMinorAssert Raised on class: femto.BladeHardware	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: LM 75 local temperature minor assert		
Remedial action: The operator must do a manual clearance.		

Table 28-136 BladeHardware_lm75localTempMinorDeassert

Alarm	Attributes	Applicable major release
Name: BladeHardware_lm75localTempMinorDeassert (5876) Type: equipmentAlarm Package: femto.BladeHardware_ lm75localTempMinorDeassert Raised on class: femto.BladeHardware	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: LM 75 local temperature minor deassert		
Remedial action: The operator must do a manual clearance.		

Table 28-137 BladeHardware_ncpuFatalErrAssert

Alarm	Attributes	Applicable major release
Name: BladeHardware_ncpuFatalErrAssert (5877) Type: equipmentAlarm Package: femto.BladeHardware_ncpuFatalErrAssert Raised on class: femto.BladeHardware	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: NCPU fatal assert		
Remedial action: The operator must do a manual clearance.		

Table 28-138 BladeHardware_ncpuFatalErrDeassert

Alarm	Attributes	Applicable major release
Name: BladeHardware_ncpuFatalErrDeassert (5878) Type: equipmentAlarm Package: femto.BladeHardware_ ncpuFatalErrDeassert Raised on class: femto.BladeHardware	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: NCPU fatal deassert		
Remedial action: The operator must do a manual clearance.		

Table 28-139 BladeHardware_powerConsumptionMinor

Alarm	Attributes	Applicable major release
Name: BladeHardware_powerConsumptionMinor (5879) Type: equipmentAlarm Package: femto.BladeHardware_ powerConsumptionMinor Raised on class: femto.BladeHardware	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Power consumption minor		
Remedial action: Check power connectivity to blade.		

Table 28-140 BladeHardware_spareAlarmBHADAC1

Alarm	Attributes	Applicable major release
Name: BladeHardware_spareAlarmBHADAC1 (8472) Type: equipmentAlarm Package: femto.BladeHardware_ spareAlarmBHADAC1 Raised on class: femto.BladeHardware	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1
Description: Spare Alarm 1		
Remedial action: Spare Alarm 1		

Table 28-141 BladeHardware_spareAlarmBHADAC2

Alarm	Attributes	Applicable major release
Name: BladeHardware_spareAlarmBHADAC2 (8473) Type: equipmentAlarm Package: femto.BladeHardware_ spareAlarmBHADAC2 Raised on class: femto.BladeHardware	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1
Description: Spare Alarm 2		
Remedial action: Spare Alarm 2		

Table 28-142 BladeHardware_spareAlarmBHADAC3

Alarm	Attributes	Applicable major release
Name: BladeHardware_spareAlarmBHADAC3 (8474) Type: equipmentAlarm Package: femto.BladeHardware_ spareAlarmBHADAC3 Raised on class: femto.BladeHardware	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1
Description: Spare Alarm 3		
Remedial action: Spare Alarm 3		

Table 28-143 BladeHardware_spareAlarmBHADAC4

Alarm	Attributes	Applicable major release
Name: BladeHardware_spareAlarmBHADAC4 (8475) Type: equipmentAlarm Package: femto.BladeHardware_ spareAlarmBHADAC4 Raised on class: femto.BladeHardware	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1
Description: Spare Alarm 4		
Remedial action: Spare Alarm 4		

Table 28-144 BladeHardware_spareAlarmBHADAC5

Alarm	Attributes	Applicable major release
Name: BladeHardware_spareAlarmBHADAC5 (8476) Type: equipmentAlarm Package: femto.BladeHardware_ spareAlarmBHADAC5 Raised on class: femto.BladeHardware	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1
Description: Spare Alarm 5		
Remedial action: Spare Alarm 5		

Table 28-145 BladeHardware_switchConnectionLost

Alarm	Attributes	Applicable major release
Name: BladeHardware_switchConnectionLost (5880) Type: equipmentAlarm Package: femto.BladeHardware_ switchConnectionLost Raised on class: femto.BladeHardware	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Switch connection lost		
Remedial action: The operator must do a manual clearance for this alarm.For further assistance, contact Nokia customer support.		

Table 28-146 BootableConfigBackupFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigBackupFailed (103) Type: configurationAlarm Package: sw.BootableConfigBackupFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 28-147 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm Package: sw.BootableConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		

Table 28-147 BootableConfigRestoreFailed (continued)

Alarm	Attributes	Applicable major release
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 28-148 BootParametersMisconfigured

Alarm	Attributes	Applicable major release
Name: BootParametersMisconfigured (35) Type: configurationAlarm Package: netw.BootParametersMisconfigured Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistentIndexFailure Applicable probable causes: • persistentIndexFailure • configFileBootFailure	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND ((('Config File Status' NOT EQUAL 'Executed Successfully') AND ('Config File Status' NOT EQUAL 'configFileStatus_unspecified')) OR (('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded') AND ('Persistent Index Status' NOT EQUAL 'persistentIndexStatus_unspecified'))))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

Table 28-149 BPG_noBpgMapping

Alarm	Attributes	Applicable major release
Name: BPG_noBpgMapping (5765) Type: processingErrorAlarm Package: femto.BPG_noBpgMapping Raised on class: femto.BPG	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when the BPG function receives a user plane packet which gets discarded due to there being no associated binding in the BPG mapping table.		
Remedial action: This alarm is generated when the BPG application receives a (user plane) voice packet, which gets discarded, due to there is no GTP-U packet between the Small Cell and BTG.Identify the Small Cell for which the alarm was raised in WMS with the patternBPG_NOBPGMAPPINGalarm raised for Small Cell.Initiate a voice call between the Small Cell and the core network. Verify that the connection is established between the Small Cell and BTG, through BTGConsole. Run the BTGConsole application and enter btg_get_bpg_table. A rule must be present for the corresponding Small Cell and core network.		

Table 28-150 BSG_aBSGUeRegTableFull

Alarm	Attributes	Applicable major release
Name: BSG_aBSGUeRegTableFull (5766) Type: equipmentAlarm Package: femto.BSG_aBSGUeRegTableFull Raised on class: femto.BSG	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when the UE Registration Table has become full and existing entries have been discarded to make space for new entries		
Remedial action: Perform a UE de-registration to check whether the alarm is auto cleared.If Step 1 does not resolve the issue, de-register Small Cells and check whether alarm is auto cleared.The UE registration table is an internal BSR Gateway data structure, and the BSR Gateway auto clears the alarm when the count in the directory is below the maximum limit.		

Table 28-151 BSG_allocationOfStreamFail

Alarm	Attributes	Applicable major release
Name: BSG_allocationOfStreamFail (5767) Type: qualityOfServiceAlarm Package: femto.BSG_allocationOfStreamFail Raised on class: femto.BSG	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: congestion	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SCGW fails to allocate requested stream ID by BSR		
Remedial action: This alarm is cleared only if the streams are available for establishment of a call.The streams are freed by terminating the mobile originated calls.		

Table 28-152 BSG_bsgMessageQueueOverloadMaximumThreshold

Alarm	Attributes	Applicable major release
Name: BSG_ bsgMessageQueueOverloadMaximumThreshold (12964) Type: equipmentAlarm Package: femto.BSG_ bsgMessageQueueOverloadMaximumThreshold Raised on class: femto.BSG	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: outOfMessageQueue	Release: • SC19.1 • SC20.1
Description: This alarm is raised whenever the FGW has detected that the maximum message queue overload threshold has been exceeded for the BSG process.		
Remedial action: The FGW may initiate a failover to the available standby FGW if CPU or Memory maximum thresolds also get exceeded along with BSG message queue threshold. If significant detoriation in KPIs is seen perform forceful FGW switch-over manually.For further assistance please contact NOKIA customer support.		

Table 28-153 BSG_bsgMessageQueueOverloadMinimumThreshold

Alarm	Attributes	Applicable major release
Name: BSG_ bsgMessageQueueOverloadMinimumThreshold (12965) Type: equipmentAlarm Package: femto.BSG_ bsgMessageQueueOverloadMinimumThreshold Raised on class: femto.BSG	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • SC19.1 • SC20.1
Description: This alarm is raised whenever the FGW has detected that the minimum message queue overload threshold has been exceeded for the BSG process.		
Remedial action: This alarm is cleared when either the measured BSG process SCTP message queue usage falls below the minimum threshold or rises above the maximum threshold. If the alarm persists for a long duration and not cleared on its own, terminate some calls and check whether message queue utilization comes down and the alarm is cleared.If message queue utilization does not come down and alarm is still present, de-register the Small Cells in a phased manner and check whether queue utilization comes down.For further assistance please contact NOKIA customer support.		

Table 28-154 BSG_bsgppPagingHighRateExceeded

Alarm	Attributes	Applicable major release
Name: BSG_bsgppPagingHighRateExceeded (5768) Type: processingErrorAlarm Package: femto.BSG_bsgppPagingHighRateExceeded Raised on class: femto.BSG	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is raised when the number of bsgpp Batch Paging messages processed per second has exceeded its High limit. Batch Paging is either greater than the configurable high CPU utilization or greater than the configurable High Batch Paging message rate. The number of Batch Paging messages sent shall be degraded to a rate within bounds.		
Remedial action: This alarm is cleared automatically from the OAM system when the number of batch paging messages processedper second is lower than the batch paging overload high value defined in the BSG, after sustain period configured in the BSG.		

Table 28-155 BSG_bsgppPagingLowRateExceeded

Alarm	Attributes	Applicable major release
Name: BSG_bsgppPagingLowRateExceeded (5769) Type: processingErrorAlarm Package: femto.BSG_bsgppPagingLowRateExceeded Raised on class: femto.BSG	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is raised when the number of bsgpp Batch Paging messages processed per second has exceeded its Low limit. Batch Paging is either greater than the configurable low CPU utilization or greater than the configurable Low Batch Paging message rate.		

Table 28-155 BSG_bsgppPagingLowRateExceeded (continued)

Alarm	Attributes	Applicable major release
Remedial action: This alarm is cleared automatically from the OAM system when the number of batch paging messages processedper second is lower than the batch paging overload low value defined in the BSG, after sustain period configured in the BSG.		

Table 28-156 BSG_bsrOutOfService

Alarm	Attributes	Applicable major release
Name: BSG_bsrOutOfService (5770) Type: equipmentAlarm Package: femto.BSG_bsrOutOfService Raised on class: femto.BSG	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is triggered for BSRs which have not registered with the SCGW during either the bsrRegisterAfterFailureTimer period or the bsrRegisterAfterInitTimer period and which have the BSR::enableServiceMonitoringattribute set to True.		
Remedial action: The alarm is automatically detected and cleared by the BSR Gateway when:BSR::enableServiceMonitoring attribute is disabled.The failed Small Cell tries to reregister.		

Table 28-157 BSG_cellBroadcastConflictingServiceArea

Alarm	Attributes	Applicable major release
Name: BSG_cellBroadcastConflictingServiceArea (5771) Type: processingErrorAlarm Package: femto.BSG_ cellBroadcastConflictingServiceArea Raised on class: femto.BSG	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm shall be raised when a Small Cell registers a Broadcast Service Area Identifier already in use by another Small Cell.		
Remedial action: Check the small cell's configuration to determine the cause of the incorrect Broadcast Service Area Identifier.		

Table 28-158 BSG_cellBroadcastInvalidServiceArea

Alarm	Attributes	Applicable major release
Name: BSG_cellBroadcastInvalidServiceArea (5772) Type: processingErrorAlarm Package: femto.BSG_cellBroadcastInvalidServiceArea Raised on class: femto.BSG	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0

Table 28-158 BSG_cellBroadcastInvalidServiceArea (continued)

Alarm	Attributes	Applicable major release
Description: This alarm shall be raised when a Small Cell attempts to register a Broadcast Service Area Identifier which does not correspond to the one provisioned for that Small Cell.		
Remedial action: Check the small cell's configuration to determine the cause of the incorrect Broadcast Service Area Identifier.		

Table 28-159 BSG_collapsingLAI

Alarm	Attributes	Applicable major release
Name: BSG_collapsingLAI (5773) Type: processingErrorAlarm Package: femto.BSG_collapsingLAI Raised on class: femto.BSG	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • SC17.2 • SC19.1 • SC20.1
Description: This alarm is raised when a SC requests the identity of a PSC/UARFCN that can only be matched to an entry from a different SC group, but with the same LAI		
Remedial action: Check LAI planning and consider changing LAI of one of the impacted SC groups.This alarm needs to be manually cleared from the OAM system.For further assistance contact Nokia customer support.		

Table 28-160 BSG_conflictingNeighboursDiscovered

Alarm	Attributes	Applicable major release
Name: BSG_conflictingNeighboursDiscovered (8464) Type: processingErrorAlarm Package: femto.BSG_ conflictingNeighboursDiscovered Raised on class: femto.BSG	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: proceduralError	Release: • SC17.2 • SC19.1 • SC20.1
Description: An Access Point has reported neighbours with conflicting PSC setting		
Remedial action: Perform a self optimisaton of the BSRs identified in the additional information for this alarm at the next opportunity		

Table 28-161 BSG_differentLacRacSameGroup

Alarm	Attributes	Applicable major release
Name: BSG_differentLacRacSameGroup (5774) Type: processingErrorAlarm Package: femto.BSG_differentLacRacSameGroup Raised on class: femto.BSG	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is raised when a Femto belonging to a Group has tried to register with a different Macro LAC RAC than other Femtos belonging to the same Group.		

Table 28-161 BSG_differentLacRacSameGroup (continued)

Alarm	Attributes	Applicable major release
Remedial action: This alarm is cleared automatically from the OAM system when the BSG accepts new registration requests from Small Cells having different group ids with the different macro LAC RAC values.		

Table 28-162 BSG_differentMacroLacRacDetected

Alarm	Attributes	Applicable major release
Name: BSG_differentMacroLacRacDetected (5775) Type: processingErrorAlarm Package: femto.BSG_differentMacroLacRacDetected Raised on class: femto.BSG	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is raised when Femto registration contains a Macro LAC RAC that is not provisioned on the BSG..		
Remedial action: This alarm is cleared automatically from the OAM system when theBSG is configured with macro LAC RAC andaccepts new registration requests from the Small Cell.		

Table 28-163 BSG_droppingRANAPTraffic

Alarm	Attributes	Applicable major release
Name: BSG_droppingRANAPTraffic (5776) Type: qualityOfServiceAlarm Package: femto.BSG_droppingRANAPTraffic Raised on class: femto.BSG	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SCGW drops RANAP traffic since SCGW CPU/Memory utilization has crossed maximum threshold		
Remedial action: The alarm is cleared when the BSR Gateway recovers from the overload condition by the clear alarm BSG_DROPPINGRANAPTRAFFICCLEARANCEThe %CPU column of top command can be used to check the CPU utilization.Enter the command free -m to check the memory utilization. Free memory specified should be high compared to the used memory available,for recovering to normal overload. The used buffer cache memory should be low. To drop the cache memory use the command echo 3 >/proc/sys/vm/drop_caches.Terminate some calls to check whether memory utilization comes down, clearing thealarm.If the memory utilization does not reduce and the alarm persists, de-register the Femtocells and check for reduction in memory utilization.If there is no reduction in memory utilization, even after call termination and enforcedFemtocell de-registration, enforce a BSR Gateway switch-over by terminating the BSR Gateway application.If the problem persists, contact Nokia customer support.		

Table 28-164 BSG_failedIMSIRetrieval

Alarm	Attributes	Applicable major release
Name: BSG_failedIMSIRetrieval (5777) Type: equipmentAlarm Package: femto.BSG_failedIMSIRetrieval Raised on class: femto.BSG	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when the SCGW is not able to retrieve the IMSI directory entries		
Remedial action: Check the directory bsg_get_imsi_directory to view the IMSI list.Clear the alarms manually from the OAM system if IMSIs are successfully retrieved.		

Table 28-165 BSG_failedToDecodeMSCSentMsg

Alarm	Attributes	Applicable major release
Name: BSG_failedToDecodeMSCSentMsg (5778) Type: communicationsAlarm Package: femto.BSG_failedToDecodeMSCSentMsg Raised on class: femto.BSG	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is triggered when SCGW fails to decode messages sent by 3G-MSC		
Remedial action: Check whether the following IEs are properly framed and sent by the MSC/SGSN: RAB Assignment Request CommonId Paging Reset Reset Acknowledge Reset Resource Reset Resource Acknowledge Relocation RequestCheck if any CS specific IEs (For example, relocation request) are sent for PS calls by the SGSN.This fault is cleared manually from the SCMS.If the problem persists, contact Nokia customer support.		

Table 28-166 BSG_failedToSendDataToBSR

Alarm	Attributes	Applicable major release
Name: BSG_failedToSendDataToBSR (5779) Type: communicationsAlarm Package: femto.BSG_failedToSendDataToBSR Raised on class: femto.BSG	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SCGW fails to send data to BSR		
Remedial action: Check the connectivity between the Small Cell and BSR Gateway.Check whether the BSR Gateway sctp port (6005) towards Small Cell is open.Check for any errors with respect to sending the data towards Small Cell. This can be done by looking for LOG ERROR statements in LOG_FMG.log file under /opt/log/.Use the above mentioned information to isolate the issue at Small Cell or BSR Gateway.This alarm is cleared when data from the BSR Gateway reaches the Small Cell successfully.It is verified by executing successful IuCS/IuPS calls.For further assistance contact Nokia customer support.		

Table 28-167 BSG_failedToSendDataToMSC

Alarm	Attributes	Applicable major release
Name: BSG_failedToSendDataToMSC (5780) Type: communicationsAlarm Package: femto.BSG_failedToSendDataToMSC Raised on class: femto.BSG	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SCGW fails to send data to 3G-MSC		
Remedial action: Reduce memory utilization in BSR Gateway, using the command free -m. Check if there is a reduction.Check whether memory overload alarm has been triggered.Terminate some calls to check if the memory utilization reduces, clearing the alarm.If there is no reduction in memory utilization, and the overload alarm still persists,then de-register the Femtocells. Now check for any reduction in memory utilization.If there is no reduction in memory utilization, even after call termination and enforcedFemtocell de-registration. Enforce a BSR Gateway switchover by terminating the BSR Gateway applicationIf the problem persists, contact Nokia customer support.		

Table 28-168 BSG_groupNeighbourUsingAssignedPSC

Alarm	Attributes	Applicable major release
Name: BSG_groupNeighbourUsingAssignedPSC (8465) Type: processingErrorAlarm Package: femto.BSG_ groupNeighbourUsingAssignedPSC Raised on class: femto.BSG	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: proceduralError	Release: • SC17.2 • SC19.1 • SC20.1
Description: An Access Point is reporting a detected Macro Cell which is using a PSC from the group's femtoPSCList but is not a member of this Femto Group		
Remedial action: Check the PSC configuration of the Macro Cells and the configuration of the PSC lists for this Femto Group		

Table 28-169 BSG_hnbIntegrityViolation

Alarm	Attributes	Applicable major release
Name: BSG_hnbIntegrityViolation (5781) Type: securityServiceOrMechanismViolation Package: femto.BSG_hnbIntegrityViolation Raised on class: femto.BSG	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: authenticationFailure	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when BSG has detected a mismatch between the registration parameters received from the BSR and the provisioned BSR parameters. At least one of the following parameters might have been manipulated:- Cell-Id,- HNB Identity		

Table 28-169 BSG_hnbIntegrityViolation (continued)

Alarm	Attributes	Applicable major release
Remedial action: This fault is raised when incoming Hnb Id or Cell Id parameter in the HNB Registration request is not available in theentries, present in the BSR DATA XML file /opt/bsrdata/OAM_BsrDataPersistentDB.txt. Check if the Hnb Id returned in the additional text is present in the /opt/bsrdata/OAM_BsrDataPersistentDB.txt file.If the received Hnb Id is present, then obtain the corresponding BSR ID from the/opt/bsrdata/OAM_BsrDataPersistentDB.txt and frame the Cell Id which is a combination of (MSB: BSG:bsr Id(16 bit) LSB: FGW:globalRNCIdRncId (12 bits) padded with 0000(4 bits)), and compare with the Cell Id returned in the Additional Textcd /opt/bin./BSGCLI.execd FGW:<DNNumber>;get {globalRNCIdRncId};Change the information in the registration request or the BSR DATA XML file to be in sync and perform the registration again.		

Table 28-170 BSG_imsiDirectoryFull

Alarm	Attributes	Applicable major release
Name: BSG_imsiDirectoryFull (5782) Type: qualityOfServiceAlarm Package: femto.BSG_imsiDirectoryFull Raised on class: femto.BSG	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when the IMSI directory has become full and existing entries have been discarded to make space for new entries		
Remedial action: Perform a UE de-registration to check whether the alarm is auto cleared.If Step 1 does not resolve the issue, de-register Small Cells and check whether alarm is auto cleared.The mentioned IMSI directory is an internal BSR Gateway data structure, and the BSR Gateway auto clears the alarm when the count in the directory is below the maximum limit.The IMSI directory limit is a MIM parameter imsidirectorymaximumentries.		

Table 28-171 BSG_incomingHoProvisionError

Alarm	Attributes	Applicable major release
Name: BSG_incomingHoProvisionError (5783) Type: processingErrorAlarm Package: femto.BSG_incomingHoProvisionError Raised on class: femto.BSG	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is raised if the Target BSR Selection Algorithm has incorrect data provisioned for incoming HO on a particular RAT, when incoming HO isenabled for that RAT,		
Remedial action: This fault is manually cleared from the OAM system.Configure the Small Cell with correct data (for example, basic, virtual or enhanced configuration) for incoming HO, on the particular RAT. Refer SRS-BSG-CP-1222, SRS-BSG-CP-1223, SRS-BSG-CP-1224, and SRS-BSG-CP-1225 for configurations.		

Table 28-172 BSG_invalidBSRIdInBSRRegistrationMessage

Alarm	Attributes	Applicable major release
Name: BSG_invalidBSRIdInBSRRegistrationMessage (5784) Type: communicationsAlarm Package: femto.BSG_ invalidBSRIdInBSRRegistrationMessage Raised on class: femto.BSG	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SCGW receives BSR registration message with already registered BSR ID and different IP Sec address		
Remedial action: This alarm is cleared by registering the Small Cell with a BSR ID, which does not exist in the BSR Gateway.The successful registration is verified in the BSR Gateway console, using the command bsg_get_bsr_registrations.		

Table 28-173 BSG_invalidMocnConfiguration

Alarm	Attributes	Applicable major release
Name: BSG_invalidMocnConfiguration (5785) Type: processingErrorAlarm Package: femto.BSG_invalidMocnConfiguration Raised on class: femto.BSG	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm shall be raised when CS or PS region is not assigned or CN Node for selected operator is not configured in the region for split NRIs based MOCN operator selection		
Remedial action: Check the MOCN configuration planning		

Table 28-174 BSG_macroLacRacNotAllowed

Alarm	Attributes	Applicable major release
Name: BSG_macroLacRacNotAllowed (5786) Type: processingErrorAlarm Package: femto.BSG_macroLacRacNotAllowed Raised on class: femto.BSG	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Femto registration contains a Macro LAC RAC that is not allowed by this Femto.		
Remedial action: This alarm is cleared manually from the OAM system when BSG is configured with macro LAC RAC and accepts new registration requests from Small Cell.		

Table 28-175 BSG_manuallyAssignedPSCConflicts

Alarm	Attributes	Applicable major release
Name: BSG_manuallyAssignedPSCConflicts (8466) Type: processingErrorAlarm Package: femto.BSG_manuallyAssignedPSCConflicts Raised on class: femto.BSG	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: proceduralError	Release: • SC17.2 • SC19.1 • SC20.1
Description: A Grid Access Point in the Femto Group has been manually assigned a PSC which conflicts with the assignment of the other Access Points.		
Remedial action: Change the Manual PSC of the AP or perform self optimisation of the conflicting APs.		

Table 28-176 BSG_massBsrCsCnConnLost

Alarm	Attributes	Applicable major release
Name: BSG_massBsrCsCnConnLost (5787) Type: communicationsAlarm Package: femto.BSG_massBsrCsCnConnLost Raised on class: femto.BSG	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: remoteNodeTransmissionError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: A significant number of Femto BSRs have detected a loss of connectivity to the CS Core Network, even though their transport layer is still connected.		
Remedial action: The alarm is automatically cleared by the clear alarmBSG_MASSBSRCSCNCONNLOSTCLEARANCE.2. The PM counter difference between CS SCCP Req attempts and success willindicate CS core network connectivity issue.3. Investigate the fault at the MSC side.4. The alarm is cleared by de-registering the registered Femtocells, so that the sizereduces and is lesser than the threshold level.5. If the problem persists, contact Nokia customer support.		

Table 28-177 BSG_massBsrOutOfService

Alarm	Attributes	Applicable major release
Name: BSG_massBsrOutOfService (5788) Type: equipmentAlarm Package: femto.BSG_massBsrOutOfService Raised on class: femto.BSG	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is triggered when the number of active bsrOutOfService alarms reaches the threshold defined by the BSG:: maxNumBSRServiceAlarms attribute		
Remedial action: The alarm is automatically detected and cleared by the BSR Gateway, when the total number of failed Small Cells drops below the BSG:: maxNumBSRServiceAlarms value.The value of the attribute, maxNumBSRServiceAlarms can be set with the BSGCLI in the class BSR Gateway. Execute the following commands in the BSGCLI:./BSGCLI.exe, to run the BSGCLI exe.cd FGW:<FGW Instance Number>cd BSG:<BSG Instance Number>set {maxNumBSRServiceAlarms="<Threshold value>}"		

Table 28-178 BSG_maximumImsiListThresholdExceeded

Alarm	Attributes	Applicable major release
Name: BSG_maximumImsiListThresholdExceeded (5789) Type: qualityOfServiceAlarm Package: femto.BSG_ maximumImsiListThresholdExceeded Raised on class: femto.BSG	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity	Release: • SC17.2 • SC19.1 • SC20.1
Description: This alarm is raised whenever the number of IMSIs in the ACL lists defined on the SCGW has exceeded the maximum threshold defined by attribute maximumIMSIList. The alarm is automatically cleared whenever the number falls below this threshold.		
Remedial action: The operator must do a manual clearance.This alarm gets cleared when total number of IMSIs in the ACL lists defined on the SCGW falls below the maximumIMSIList value.		

Table 28-179 BSG_maximumPSCAssignmentAlarmsRaised

Alarm	Attributes	Applicable major release
Name: BSG_maximumPSCAssignmentAlarmsRaised (8467) Type: processingErrorAlarm Package: femto.BSG_ maximumPSCAssignmentAlarmsRaised Raised on class: femto.BSG	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: proceduralError	Release: • SC17.2 • SC19.1 • SC20.1
Description: The maximum number of PSC Assignment alarms have been raised		
Remedial action: Check and resolve the existing PSC assignment related alarms		

Table 28-180 BSG_minimumImsiListThresholdExceeded

Alarm	Attributes	Applicable major release
Name: BSG_minimumImsiListThresholdExceeded (5790) Type: qualityOfServiceAlarm Package: femto.BSG_ minimumImsiListThresholdExceeded Raised on class: femto.BSG	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity	Release: • SC17.2 • SC19.1 • SC20.1
Description: This alarm is raised whenever the number of IMSIs in the ACL lists defined on the SCGW has exceeded the minimum threshold defined by attribute minimumIMSIList. The alarm is automatically cleared whenever the number falls below this threshold.		
Remedial action: The operator must do a manual clearance.This alarm gets cleared when total number of IMSIs in the ACL lists defined on the BSR Gateway falls below the minimumIMSIList value.		

Table 28-181 BSG_newBSRRegistrationRejectedDueToOverload

Alarm	Attributes	Applicable major release
Name: BSG_ newBSRRegistrationRejectedDueToOverload (5791) Type: qualityOfServiceAlarm Package: femto.BSG_ newBSRRegistrationRejectedDueToOverload Raised on class: femto.BSG	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SCGW rejects new BSR registration due to overload		
Remedial action: This fault is automatically cleared by the Clear Alarm BSG_ NEWBSRREGISTRATIONACCEPTEDAFTERRECOVERFROMOVERLOAD.The alarm is cleared when the BSR Gateway recovers from the overload condition.The %CPU column of top command can be used to check the CPU utilization.The memory utilization can be checked, by using the command freeFree memory specified should be high. compared to the used memory available, for recovering to normal overload.The used buffer cache memory should be low.To drop the cache memory use the command echo 3> /proc/sys/vm/ drop_caches.Terminate some calls to check whether memory utilization comes down, clearing the alarm.If the memory utilization does not reduce and the alarm persists, de-register the Small Cells and check for reduction in memory utilization.If there is no reduction in memory utilization, even after call termination and enforced Small Cell de-registration. Enforce a BSR Gateway switch-over by terminating the BSR Gateway application.If the problem persists, contact Nokia customer support.		

Table 28-182 BSG_newRANAPCallRejectedDueToOverload

Alarm	Attributes	Applicable major release
Name: BSG_newRANAPCallRejectedDueToOverload (5792) Type: qualityOfServiceAlarm Package: femto.BSG_ newRANAPCallRejectedDueToOverload Raised on class: femto.BSG	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SCGW rejects RANAP calls due to overload		
Remedial action: This fault is automatically cleared by the Clear Alarm BSG_OVERLOADCONDITIONBACKTONORMAL.The alarm is cleared when the BSR Gateway recovers from the overload condition.The %CPU column of top command can be used to check the CPU utilization.Enter the command free to check the memory utilization:Free memory specified should be high. compared to the used memory available, for recovering to normal overload.The used buffer cache memory should be low.To drop the cache memory use the command echo 3 >/proc/sys/vm/drop_caches.Terminate some calls to check whether memory utilization comes down, clearing the alarm.If the memory utilization does not reduce and the alarm persists, de-register the Small Cells and check for reduction in memory utilization.If there is no reduction in memory utilization, even after call termination and enforced Small Cell de-registration. Enforce a BSR Gateway switch-over by terminating the BSR Gateway application.If the problem persists, contact Nokia customer support.		

Table 28-183 BSG_pagingRecordLimitExceeded

Alarm	Attributes	Applicable major release
Name: BSG_pagingRecordLimitExceeded (5793) Type: processingErrorAlarm Package: femto.BSG_pagingRecordLimitExceeded Raised on class: femto.BSG	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is raised when the number of Paging messages for the same Macro LAC RAC per Batch has exceded its limit.		
Remedial action: This alarm is cleared automatically from the OAM system when the number of paging records for a macro LAC RACin a BSGPP messages is lower than 256 after the sustain period configured from the BSG.		

Table 28-184 BSG_provisionedBSRsThresholdExceeded

Alarm	Attributes	Applicable major release
Name: BSG_provisionedBSRsThresholdExceeded (12966) Type: equipmentAlarm Package: femto.BSG_ provisionedBSRsThresholdExceeded Raised on class: femto.BSG	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: thresholdCrossed	Release: • SC19.1 • SC20.1
Description: This alarm is triggered when the number of provisioned BSRs exceeds FGW threshold limit of 65535.		
Remedial action: Check if more than 65535 (FGW threshold limit) entries are being sent in the BSR data file to FGW from the OAM system. If yes take steps to limit the provisioning to 65535 for the cluster.The operator must do a manual clearance for the alarm.		

Table 28-185 BSG_pSCAssignmentCapacityExhausted

Alarm	Attributes	Applicable major release
Name: BSG_pSCAssignmentCapacityExhausted (8468) Type: processingErrorAlarm Package: femto.BSG_ pSCAssignmentCapacityExhausted Raised on class: femto.BSG	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: proceduralError	Release: • SC17.2 • SC19.1 • SC20.1
Description: An Access Point in the Femto Group has requested a PSC, but the SCGW has not been able to assign a unique one based on the group configuration		
Remedial action: Check the Access Point and Femto Group configuration to allocate additional PSCs if possible.		

Table 28-186 BSG_pSCAssignmentDuplicatedInGroup

Alarm	Attributes	Applicable major release
Name: BSG_pSCAssignmentDuplicatedInGroup (8469) Type: processingErrorAlarm Package: femto.BSG_ pSCAssignmentDuplicatedInGroup Raised on class: femto.BSG	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: proceduralError	Release: • SC17.2 • SC19.1 • SC20.1
Description: An Access Point which is marked as needing a unqiue PSC in the group has been assigned aPSC which is duplicated in the group.		
Remedial action: Perform a self-optmisation for the BSR identified in the additional information for this alarm at the next oppotunity.		

Table 28-187 BSG_pscInconsistent

Alarm	Attributes	Applicable major release
Name: BSG_pscInconsistent (5794) Type: processingErrorAlarm Package: femto.BSG_pscInconsistent Raised on class: femto.BSG	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is raised if PSC consistency is not maintained at BSR registration for open access BSR with incoming HO enabled.		
Remedial action: Check for psctype in the attribute bsrPSCforVirtEnhCellid.If closed access and the incoming HO is open, check the Small Cell and identify the root cause of the issue.If open access and the incoming HO is closed, check the Small Cell and identify the root cause of the issue.If the incoming HO mode matches with the MIM attribute mode, then this alarm has to be manually cleared at the OAM system..If BSR Gateway raises this alarm even in matching case, contact Nokia customer support.This alarm is cleared manually.		

Table 28-188 BSG_ranapPagingHighRateExceded

Alarm	Attributes	Applicable major release
Name: BSG_ranapPagingHighRateExceded (5795) Type: processingErrorAlarm Package: femto.BSG_ranapPagingHighRateExceded Raised on class: femto.BSG	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is raised when the number of RANAP Paging messages per second received has exceded its High limit. RANAP Paging messages above this limit shall be dropped.		
Remedial action: This alarm is cleared automatically from the OAM system when the number of RANAP paging messages processedper second is lower than the paging overload high value defined in BSGclass, after sustain period configured in the BSG.		

Table 28-189 BSG_ranapPagingLowRateExceded

Alarm	Attributes	Applicable major release
Name: BSG_ranapPagingLowRateExceded (5796) Type: processingErrorAlarm Package: femto.BSG_ranapPagingLowRateExceded Raised on class: femto.BSG	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is raised when the number of RANAP Paging messages per second received has exceded its Low limit.		
Remedial action: This alarm is cleared automatically from the OAM system when the number of RANAP paging messages processedper second is lower than the paging overload low value defined in the BSG class after sustain period configured in the BSG.		

Table 28-190 BSG_rangeOfStreamIdFromMSCNotSupported

Alarm	Attributes	Applicable major release
Name: BSG_rangeOfStreamIdFromMSCNotSupported (5797) Type: communicationsAlarm Package: femto.BSG_ rangeOfStreamIdFromMSCNotSupported Raised on class: femto.BSG	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SCGW receives RANAP message with invalid stream ID on the SCTP association from the 3G-MSC		
Remedial action: This alarm is cleared only if the streams are available for establishment of a call.The streams are freed by terminating the mobile originated calls.		

Table 28-191 BSG_rangeOfStreamIdNotSupported

Alarm	Attributes	Applicable major release
Name: BSG_rangeOfStreamIdNotSupported (5798) Type: communicationsAlarm Package: femto.BSG_rangeOfStreamIdNotSupported Raised on class: femto.BSG	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SCGW receives STRMGR PDU with invalid stream ID from the BSR		
Remedial action: This fault is cleared manually from the OAM system.This alarm is cleared by providing Stream ID between 0 and 255 in the Small Cell, while executing the calls.		

Table 28-192 BSG_receivedInvalidBSRRegistrationMessage

Alarm	Attributes	Applicable major release
Name: BSG_receivedInvalidBSRRegistrationMessage (5799) Type: communicationsAlarm Package: femto.BSG_ receivedInvalidBSRRegistrationMessage Raised on class: femto.BSG	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SCGW receives invalid BSR registration message from BSR		
Remedial action: Check using wireshark or ethereal traces whether any invalid IE is sent as part of Small Cell registration request.Check Fatal/Error logs in Log_FMG.log file with respect to decoding of Small Cell registration request.Use the above information to isolate the issue at Small Cell or BSR Gateway end.This alarm is cleared manually from the OAM system when a valid Small Cell registration request is received by the BSR Gateway.		

Table 28-193 BSG_registrationOfBSRFailed

Alarm	Attributes	Applicable major release
Name: BSG_registrationOfBSRFailed (5800) Type: processingErrorAlarm Package: femto.BSG_registrationOfBSRFailed Raised on class: femto.BSG	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SCGW fails to register a valid BSR registration request due to some configuration errors in SCGW		
Remedial action: This fault is cleared manually from the OAM system.The alarm is cleared by registering Small Cell with the following valid registration elements:BSG_GWY_PRM_BSR_IDBSG_GWY_PRM_LACBSG_GWY_PRM_UC_IDBSG_GWY_PRM_RACBSR_ GWY_PRM_FEMTO_INTERNET_PUBLIC_IP_ADDRBSR_GWY_PRM_BSR_GROUP_IDBSR_GWY_PRM_BSR_ CAPABILITIES1BSR_GWY_PRM_BSR_FACTORY_SERIAL_NUMBERBSR_GWY_PRM_BSR_REG_REASONBSG_GWY_PRM_ GEO_LOCATIONBSR_GWY_BSRPSCBSR_GWY_UMTS_VIRTCIDBSR_GWY_GSM_VIRTCIDBSR_GWY_UMTS_ MACROCELINFOBSR_GWY_UMTS_MACROCELINFOThe successful registration of a Small Cell can be verified in the BSGConsole, using the command bsg_get_bsr_registrations.		

Table 28-194 BSG_spareAlarmBSGADAC1

Alarm	Attributes	Applicable major release
Name: BSG_spareAlarmBSGADAC1 (12979) Type: processingErrorAlarm Package: femto.BSG_spareAlarmBSGADAC1 Raised on class: femto.BSG	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: operationalCondition	Release: • SC20.1
Description: Spare Alarm 1		
Remedial action: Spare Alarm		

Table 28-195 BSG_spareAlarmBSGADAC2

Alarm	Attributes	Applicable major release
Name: BSG_spareAlarmBSGADAC2 (12980) Type: processingErrorAlarm Package: femto.BSG_spareAlarmBSGADAC2 Raised on class: femto.BSG	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: operationalCondition	Release: • SC20.1
Description: Spare Alarm 2		
Remedial action: Spare Alarm		

Table 28-196 BSG_spareAlarmBSGADAC3

Alarm	Attributes	Applicable major release
Name: BSG_spareAlarmBSGADAC3 (12981) Type: processingErrorAlarm Package: femto.BSG_spareAlarmBSGADAC3 Raised on class: femto.BSG	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: operationalCondition	Release: • SC20.1
Description: Spare Alarm 3		
Remedial action: Spare Alarm		

Table 28-197 BSG_spareAlarmBSGADAC4

Alarm	Attributes	Applicable major release
Name: BSG_spareAlarmBSGADAC4 (12982) Type: processingErrorAlarm Package: femto.BSG_spareAlarmBSGADAC4 Raised on class: femto.BSG	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: operationalCondition	Release: • SC20.1
Description: Spare Alarm 4		
Remedial action: Spare Alarm		

Table 28-198 BSG_spareAlarmBSGADAC5

Alarm	Attributes	Applicable major release
Name: BSG_spareAlarmBSGADAC5 (12983) Type: processingErrorAlarm Package: femto.BSG_spareAlarmBSGADAC5 Raised on class: femto.BSG	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: operationalCondition	Release: • SC20.1
Description: Spare Alarm 5		
Remedial action: Spare Alarm		

Table 28-199 BSG_spareAlarmBSGADAC6

Alarm	Attributes	Applicable major release
Name: BSG_spareAlarmBSGADAC6 (12984) Type: processingErrorAlarm Package: femto.BSG_spareAlarmBSGADAC6 Raised on class: femto.BSG	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: operationalCondition	Release: • SC20.1
Description: Spare Alarm 6		
Remedial action: Spare Alarm		

Table 28-200 BSG_spareAlarmBSGADMC1

Alarm	Attributes	Applicable major release
Name: BSG_spareAlarmBSGADMC1 (12985) Type: processingErrorAlarm Package: femto.BSG_spareAlarmBSGADMC1 Raised on class: femto.BSG	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: operationalCondition	Release: • SC20.1
Description: Spare Alarm 1		
Remedial action: Spare Alarm		

Table 28-201 BSG_spareAlarmBSGADMC2

Alarm	Attributes	Applicable major release
Name: BSG_spareAlarmBSGADMC2 (12986) Type: processingErrorAlarm Package: femto.BSG_spareAlarmBSGADMC2 Raised on class: femto.BSG	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: operationalCondition	Release: • SC20.1
Description: Spare Alarm 2		
Remedial action: Spare Alarm		

Table 28-202 BSG_spareAlarmBSGADMC3

Alarm	Attributes	Applicable major release
Name: BSG_spareAlarmBSGADMC3 (12987) Type: processingErrorAlarm Package: femto.BSG_spareAlarmBSGADMC3 Raised on class: femto.BSG	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: operationalCondition	Release: • SC20.1
Description: Spare Alarm 3		
Remedial action: Spare Alarm		

Table 28-203 BSG_spareAlarmBSGADMC4

Alarm	Attributes	Applicable major release
Name: BSG_spareAlarmBSGADMC4 (12988) Type: processingErrorAlarm Package: femto.BSG_spareAlarmBSGADMC4 Raised on class: femto.BSG	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: operationalCondition	Release: • SC20.1
Description: Spare Alarm 4		
Remedial action: Spare Alarm		

Table 28-204 BSG_spareAlarmBSGADMC5

Alarm	Attributes	Applicable major release
Name: BSG_spareAlarmBSGADMC5 (12989) Type: processingErrorAlarm Package: femto.BSG_spareAlarmBSGADMC5 Raised on class: femto.BSG	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: operationalCondition	Release: • SC20.1
Description: Spare Alarm 5		
Remedial action: Spare Alarm		

Table 28-205 BSG_spareAlarmBSGADMC6

Alarm	Attributes	Applicable major release
Name: BSG_spareAlarmBSGADMC6 (12990) Type: processingErrorAlarm Package: femto.BSG_spareAlarmBSGADMC6 Raised on class: femto.BSG	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: operationalCondition	Release: • SC20.1
Description: Spare Alarm 6		
Remedial action: Spare Alarm		

Table 28-206 BVG_noBvgMapping

Alarm	Attributes	Applicable major release
Name: BVG_noBvgMapping (5860) Type: processingErrorAlarm Package: femto.BVG_noBvgMapping Raised on class: femto.BVG	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0

Table 28-206 BVG_noBvgMapping (continued)

Alarm	Attributes	Applicable major release
Description: This fault is generated when the BVG function receives a user plane packet which gets discarded due to there being no associated binding in the BVG mapping table.		
Remedial action: This alarm is generated when the BVG application receives a (user plane) voice packet, which gets discarded, due to there being no voice connection between the Small Cell and BTG.To determine the Small Cell, for which the alarm is raised, use the Log_ BTG.log file, located at /opt/log/BTG/. Use the pattern BVG_NOBVGMAPPING Alarm raised for BSR.Initiate a voice call between the Small Cell and core network. Verify the the connection is established between the Small Cell and BTG through BTGConsole. Run BTGConsole application and enter btg_get_bvg_table. A rule should be present for the corresponding Small Cell and core network.		

Table 28-207 ClientDelegateServerStatus

Alarm	Attributes	Applicable major release
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm Package: server.ClientDelegateServerStatus Raised on class: server.ClientDelegateServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 28-208 CmuManagementFailed

Alarm	Attributes	Applicable major release
Name: CmuManagementFailed (10040) Type: communicationsAlarm Package: lte.CmuManagementFailed Raised on class: lte.CompactMobilityUnit	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ftpFailed	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when SAM fails to manage a 9430 Compact Mobility Unit due to an FTP failure.		
Raising condition: ('Management State' EQUAL 'FTP Failed')		
Clearing condition: ('Management State' EQUAL 'Managed')		
Remedial action: Verify FTP connectivity between the 5620 SAM and the 9430 Compact Mobility Unit, then re-attempt to manage.		

Table 28-209 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm Package: equipment.ContainingEquipmentAdministrativelyDown Raised on class: equipment.Port	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentAdministrativelyDown	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 28-210 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm Package: equipment.ContainingEquipmentMismatch Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentMismatch	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 28-211 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm Package: equipment.ContainingEquipmentOperationallyDown Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentDown	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationllyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		

Table 28-211 ContainingEquipmentOperationallyDown (continued)

Alarm	Attributes	Applicable major release
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

Table 28-212 CorruptImageFile

Alarm	Attributes	Applicable major release
Name: CorruptImageFile (171) Type: configurationAlarm Package: mediation.CorruptImageFile Raised on class: mediation. AbstractSoftwareFolderDescriptor	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 28-213 CPUInfo_configErrorAssert

Alarm	Attributes	Applicable major release
Name: CPUInfo_configErrorAssert (5884) Type: equipmentAlarm Package: femto.CPUInfo_configErrorAssert Raised on class: femto.FGWCPUInfo	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: processorProblem	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Configuration error assert		
Remedial action: Check the BIOS processor configuration.Rectify the processor configuration if there are issues.Reboot the system after making the BIOS configuration changes.After receiving the CPUInfo_configErrorDeassert alarm, the operator can do a manual clearance.		

Table 28-214 CPUInfo_configErrorDeassert

Alarm	Attributes	Applicable major release
Name: CPUInfo_configErrorDeassert (5885) Type: equipmentAlarm Package: femto.CPUInfo_configErrorDeassert Raised on class: femto.FGWCPUInfo	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: processorProblem	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Configuration error de-assert		
Remedial action: The operator must do a manual clearance.		

Table 28-215 CPUInfo_disabledAssert

Alarm	Attributes	Applicable major release
Name: CPUInfo_disabledAssert (5886) Type: equipmentAlarm Package: femto.CPUInfo_disabledAssert Raised on class: femto.FGWCPUInfo	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: processorProblem	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Disabled assert		
Remedial action: Check the BIOS configuration for CPU configuration issue.Check the system CPU cooling for overheat related issues.Check if the processor has been inserted in the slot appropriately.Reboot the system after performing the corrective action.After receiving the CPUInfo_disabledDeassert alarm, the operator can do a manual clearance.		

Table 28-216 CPUInfo_disabledDeassert

Alarm	Attributes	Applicable major release
Name: CPUInfo_disabledDeassert (5887) Type: equipmentAlarm Package: femto.CPUInfo_disabledDeassert Raised on class: femto.FGWCPUInfo	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: processorProblem	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Disabled de-assert		
Remedial action: The operator must do a manual clearance.		

Table 28-217 CPUInfo_iERRAssert

Alarm	Attributes	Applicable major release
Name: CPUInfo_iERRAssert (5888) Type: equipmentAlarm Package: femto.CPUInfo_iERRAssert Raised on class: femto.FGWCPUInfo	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: processorProblem	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: IERR assert		
Remedial action: Check the cooling system to ensure that, proper cooling for the processor is in place.Check whether the processor is properly secured in its slot.Reboot the system after verifying and correcting issues identified in steps 1 and 2.After receiving the CPUInfo_iERRDeassert alarm, the operator must do a manual clearance.		

Table 28-218 CPUInfo_iERRDeassert

Alarm	Attributes	Applicable major release
Name: CPUInfo_iERRDeassert (5889) Type: equipmentAlarm Package: femto.CPUInfo_iERRDeassert Raised on class: femto.FGWCPUInfo	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: processorProblem	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: IERR de-assert		
Remedial action: No action needed. CPU problem is recovered.		

Table 28-219 CPUInfo_presenceAssert

Alarm	Attributes	Applicable major release
Name: CPUInfo_presenceAssert (5890) Type: physicalViolation Package: femto.CPUInfo_presenceAssert Raised on class: femto.FGWCPUInfo	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: intrusionDetection	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Presence assert		
Remedial action: The operator must do a manual clearance.		

Table 28-220 CPUInfo_presenceDeassert

Alarm	Attributes	Applicable major release
Name: CPUInfo_presenceDeassert (5891) Type: physicalViolation Package: femto.CPUInfo_presenceDeassert Raised on class: femto.FGWCPUInfo	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: intrusionDetection	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Presence de-assert		
Remedial action: Check the BIOS configuration for CPU configuration issue.Check the system CPU cooling for overheat related issues.Check if the processor is properly secured in its slot.After receiving the CPUInfo_presenceAssert alarm, the operator can do a manual clearance.		

Table 28-221 CPUInfo_thermakTripAssert

Alarm	Attributes	Applicable major release
Name: CPUInfo_thermakTripAssert (5892) Type: equipmentAlarm Package: femto.CPUInfo_thermakTripAssert Raised on class: femto.FGWCPUInfo	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: processorProblem	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Thermal trip assert		
Remedial action: NA		

Table 28-222 CPUInfo_thermalTripAssert

Alarm	Attributes	Applicable major release
Name: CPUInfo_thermalTripAssert (5893) Type: equipmentAlarm Package: femto.CPUInfo_thermalTripAssert Raised on class: femto.FGWCPUInfo	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: processorProblem	Release: • SC17.2 • SC19.1 • SC20.1
Description: Thermal trip assert		
Remedial action: Check the cooling system to ensure, that proper cooling for the processor is in place.Check whether the processor is properly secured in its slot.Reboot the system after verifying and correcting issues identified in steps 1 and 2.		

Table 28-223 CPUInfo_thermalTripDeassert

Alarm	Attributes	Applicable major release
Name: CPUInfo_thermalTripDeassert (5894) Type: equipmentAlarm Package: femto.CPUInfo_thermalTripDeassert Raised on class: femto.FGWCPUInfo	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: processorProblem	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Thermal trip de-assert		
Remedial action: No action needed. CPU problem is recovered.		

Table 28-224 CPU_memTempMajor

Alarm	Attributes	Applicable major release
Name: CPU_memTempMajor (5895) Type: equipmentAlarm Package: femto.CPU_memTempMajor Raised on class: femto.CPU	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Memory temperature Major		
Remedial action: Check system temperature and cooling		

Table 28-225 CPU_presenceAssert

Alarm	Attributes	Applicable major release
Name: CPU_presenceAssert (5896) Type: physicalViolation Package: femto.CPU_presenceAssert Raised on class: femto.CPU	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: intrusionDetection	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Presence assert		
Remedial action: Clear the alarms manually from the OAM system after replacing the hardware.		

Table 28-226 CPU_presenceDeassert

Alarm	Attributes	Applicable major release
Name: CPU_presenceDeassert (5897) Type: physicalViolation Package: femto.CPU_presenceDeassert Raised on class: femto.CPU	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: intrusionDetection	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Presence de-assert		
Remedial action: Clear the alarms manually from the OAM system after replacing the hardware.		

Table 28-227 CPU_tempCritical

Alarm	Attributes	Applicable major release
Name: CPU_tempCritical (5898) Type: equipmentAlarm Package: femto.CPU_tempCritical Raised on class: femto.CPU	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Temperature Critical		
Remedial action: Clear the alarms manually from the OAM system after replacing the hardware.For further assistance, contact Nokia customer support		

Table 28-228 CPU_tempMajor

Alarm	Attributes	Applicable major release
Name: CPU_tempMajor (5899) Type: equipmentAlarm Package: femto.CPU_tempMajor Raised on class: femto.CPU	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Temperature Major		
Remedial action: Check system temperature and cooling		

Table 28-229 CsRegion_invalidSuperLacOverlap

Alarm	Attributes	Applicable major release
Name: CsRegion_invalidSuperLacOverlap (5900) Type: integrityViolation Package: femto.CsRegion_invalidSuperLacOverlap Raised on class: femto.CsRegion	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Incorrect configuration for superLAC values which have different superLACs for overlapping regions.		
Remedial action: Check the BSG configuration OAM_Preconfig.xml file and make sure the CSRegion and superLAC configurations are correct.		

Table 28-230 DimmSlot_deviceInstalledAssert

Alarm	Attributes	Applicable major release
Name: DimmSlot_deviceInstalledAssert (5903) Type: equipmentAlarm Package: femto.DimmSlot_deviceInstalledAssert Raised on class: femto.DimmSlot	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Device installed assert		
Remedial action: The operator must do a manual clearance.		

Table 28-231 DimmSlot_disabledAssert

Alarm	Attributes	Applicable major release
Name: DimmSlot_disabledAssert (5904) Type: equipmentAlarm Package: femto.DimmSlot_disabledAssert Raised on class: femto.DimmSlot	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Disabled assert		
Remedial action: Check the BIOS configuration for CPU configuration issue.Check the system CPU cooling for overheat related issues.Check if the processor has been inserted in the slot appropriately.Reboot the system after performing the corrective action.After receiving the CPUInfo_disabledDeassert alarm, the operator can do a manual clearance.		

Table 28-232 DimmSlot_faultStatusAssert

Alarm	Attributes	Applicable major release
Name: DimmSlot_faultStatusAssert (5905) Type: equipmentAlarm Package: femto.DimmSlot_faultStatusAssert Raised on class: femto.DimmSlot	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Fault status assert		
Remedial action: Check whether there are misalignments in the Dimmslot.Check whether the memory card is properly inserted in the Dimmslot.Reboot the system after rectifying the above mentioned issuesPerform a manual clearance.		

Table 28-233 DimmSlot_sparingAssert

Alarm	Attributes	Applicable major release
Name: DimmSlot_sparingAssert (5906) Type: equipmentAlarm Package: femto.DimmSlot_sparingAssert Raised on class: femto.DimmSlot	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Sparing assert		
Remedial action: Check whether there are misalignments in the DimmSlot.Check whether the memory card is properly inserted in the DimmSlot.Reboot the system after rectifying the above mentioned issues.Perform manual clearance.		

Table 28-234 DiskPartition_partitionNearingCapacity

Alarm	Attributes	Applicable major release
Name: DiskPartition_partitionNearingCapacity (8477) Type: equipmentAlarm Package: femto.DiskPartition_partitionNearingCapacity Raised on class: femto.DiskPartition	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity	Release: • SC17.2 • SC19.1 • SC20.1
Description: This alarm is raised whenever the disk usage has exceeded upper threshold . The alarm is automatically cleared whenever disk usage is reduced below lower threshold.		
Remedial action: Check or correct the disk usage in the identified partition.		

Table 28-235 DNS_dnsServerDownNode1

Alarm	Attributes	Applicable major release
Name: DNS_dnsServerDownNode1 (5901) Type: processingErrorAlarm Package: femto.DNS_dnsServerDownNode1 Raised on class: femto.DNS	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: outOfService	Release: • SC17.2 • SC19.1 • SC20.1
Description: This fault is generated when the DNS server within SCGW hardware Node1 is out of service.		
Remedial action: Enter the command ps -ef | grep named to verify whether the DNS service is running on the BSR Gateway server.		

Table 28-236 DNS_dnsServerDownNode2

Alarm	Attributes	Applicable major release
Name: DNS_dnsServerDownNode2 (5902) Type: processingErrorAlarm Package: femto.DNS_dnsServerDownNode2 Raised on class: femto.DNS	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: outOfService	Release: • SC17.2 • SC19.1 • SC20.1
Description: This fault is generated when the DNS server within SCGW hardware Node2 is out of service.		
Remedial action: Enter the command ps -ef | grep named to verify whether the DNS service is running on the BSR Gateway server.		

Table 28-237 downgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: downgradedCardAlarm (256) Type: softwareAlarm Package: equipment.downgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: downgradedCard	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 28-238 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm Package: equipment.EquipmentAdministrativelyDown Raised on class: equipment.Equipment	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentAdministratively-Down	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 28-239 EquipmentDown

Alarm	Attributes	Applicable major release
Name: EquipmentDown (10) Type: equipmentAlarm Package: equipment.EquipmentDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: inoperableEquipment	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 28-240 EquipmentFailure

Alarm	Attributes	Applicable major release
Name: EquipmentFailure (145) Type: equipmentAlarm Package: equipment.EquipmentFailure Raised on class: equipment.ReplaceableUnit	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cardFailure	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when a I/O card or control processor or power-supply tray reports a failure. When the object type is ControlProcessor, a CPM may be unable to boot. When the object type is Power Supply Tray and the alarm is raised during device discovery, a power-supply tray may be out of service. When the object type is a Power Supply Tray and the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		

Table 28-240 EquipmentFailure (continued)

Alarm	Attributes	Applicable major release
Raising condition: ('operationalState' EQUAL 'Failed')		
Clearing condition: ('operationalState' NOT EQUAL 'Failed')		
Remedial action: If the alarm indicates that the CPM card or I/O card has a fault, remove the card and reset it. If this does not clear the alarm then please contact your Nokia support representative for assistance. If the alarm indicates that the Power Supply tray is out of service ensure that the NE is properly connected to power. If the problem persists please contact your Nokia support representative for assistance.		

Table 28-241 EquipmentInTest

Alarm	Attributes	Applicable major release
Name: EquipmentInTest (11) Type: equipmentAlarm Package: equipment.EquipmentInTest Raised on class: equipment.Equipment	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentInTest	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 28-242 EquipmentMismatch

Alarm	Attributes	Applicable major release
Name: EquipmentMismatch (9) Type: equipmentAlarm Package: equipment.EquipmentMismatch Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentTypeMismatch	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 28-243 EquipmentRemoved

Alarm	Attributes	Applicable major release
Name: EquipmentRemoved (8) Type: equipmentAlarm Package: equipment.EquipmentRemoved Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: ((('isEquipped' EQUAL 'false') OR ('compositeEquipmentState' EQUAL 'Removed')) AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Removed') AND ('isEquipped' EQUAL 'true'))		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 28-244 EthernetIntf_interfaceActive

Alarm	Attributes	Applicable major release
Name: EthernetIntf_interfaceActive (5907) Type: communicationsAlarm Package: femto.EthernetIntf_interfaceActive Raised on class: femto.EthernetIntf	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: unspecifiedReason	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when the EthernetIntf interface is up		
Remedial action: The operator must do a manual clearance.		

Table 28-245 EthernetIntf_interfaceFailure

Alarm	Attributes	Applicable major release
Name: EthernetIntf_interfaceFailure (5908) Type: equipmentAlarm Package: femto.EthernetIntf_interfaceFailure Raised on class: femto.EthernetIntf	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when a EthernetIntf interface failure occurs		
Remedial action: The alarm gets cleared automatically by the clear alarmETHERNETINTF_INTERFACEFAILURECLEARANCE, once the connectivity is restored.Check if the ethernet interface on BONO is up and running.If the problem persists, contact Nokia customer support.		

Table 28-246 EthernetPort_cardFailure

Alarm	Attributes	Applicable major release
Name: EthernetPort_cardFailure (5909) Type: equipmentAlarm Package: femto.EthernetPort_cardFailure Raised on class: femto.EthernetPort	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when EthernetPort card failure occurs		
Remedial action: Check whether the Ethernet card to be installed in the X4250 system, is recommended by SUN.Check whether the PCIe Ethernet card is inserted in the appropriate slot.Check whether there are any alignment issues while installing the Ethernet card.Rectify the problems and reboot the system.Connect the cable to the card and check whether the LED is blinking, indicating flow of traffic.After receiving EthernetPort_cardFailure clearance alarm, the operator must do a manual clearance.		

Table 28-247 EthernetPort_interfaceActive

Alarm	Attributes	Applicable major release
Name: EthernetPort_interfaceActive (5910) Type: communicationsAlarm Package: femto.EthernetPort_interfaceActive Raised on class: femto.EthernetPort	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: unspecifiedReason	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when EthernetPort interface is up		
Remedial action: The operator must do a manual clearance.		

Table 28-248 ExternalEthernetIntfPort_interfaceActive

Alarm	Attributes	Applicable major release
Name: ExternalEthernetIntfPort_interfaceActive (5911) Type: communicationsAlarm Package: femto.ExternalEthernetIntfPort_ interfaceActive Raised on class: femto.ExternalEthernetIntfPort	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: unspecifiedReason	Release: • SC17.2 • SC19.1 • SC20.1
Description: This fault is generated when the EthernetIntf interface is up		
Remedial action: The operator must do a manual clearance.		

Table 28-249 ExternalEthernetIntfPort_interfaceFailure

Alarm	Attributes	Applicable major release
Name: ExternalEthernetIntfPort_interfaceFailure (5912) Type: equipmentAlarm Package: femto.ExternalEthernetIntfPort_ interfaceFailure Raised on class: femto.ExternalEthernetIntfPort	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1
Description: This fault is generated when an external EthernetIntf interface failure occurs		
Remedial action: Check the RTM port status on the chassis and on the Malban.Ensure the RTM ports are up.This fault is cleared automatically by the clear alarmEXTERNALETHERNETINTFPORT_INTERFACEFAILURECLEARANCE.If the problem persists, contact Nokia customer support		

Table 28-250 FGW_aclViolation

Alarm	Attributes	Applicable major release
Name: FGW_aclViolation (5913) Type: securityServiceOrMechanismViolation Package: femto.FGW_aclViolation Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: unauthorizedAccessAttempt	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SCGW has detected a UE trying to get access to the network through a restricted closed access BSR even if the IMSI of the user is not listed in the ACL of the BSR.		
Remedial action: Check whether the IMSI is present in the ACL list of any Small Cell.If the IMSI is not present, then configure the Small Cell ACL list to include the IMSI.Perform actbsrdata upgrade from the OAM system and sync the new BSR DATA XML file with the BSR GatewayRetest the scenario.		

Table 28-251 FGW_activeFGWOAMPortFailure

Alarm	Attributes	Applicable major release
Name: FGW_activeFGWOAMPortFailure (5914) Type: communicationsAlarm Package: femto.FGW_activeFGWOAMPortFailure Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1
Description: This alarm is reported to indicate that 1G port that is being used by SCGW OAM function has failed and SCGW shall start using other port for OAM function		
Remedial action: Investigate the cause of the 1G port failure in active FGW.This fault is automatically cleared by the alarmFGW_ ACTIVEFGWOAMPORTFAILURECLEARANCE.If the problem persists, contact Nokia customer support..		

Table 28-252 FGW_agpsServiceUnavailable

Alarm	Attributes	Applicable major release
Name: FGW_agpsServiceUnavailable (5915) Type: communicationsAlarm Package: femto.FGW_agpsServiceUnavailable Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is raised if the Assisted GPS Service is unavailable		
Remedial action: Check the AGPS system configuration and connectivity to the AGPS server.		

Table 28-253 FGW_automaticFailoverInitiatedByActiveNode

Alarm	Attributes	Applicable major release
Name: FGW_automaticFailoverInitiatedByActiveNode (5916) Type: processingErrorAlarm Package: femto.FGW_ automaticFailoverInitiatedByActiveNode Raised on class: femto.FGW	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated whenever a failover is initiated by the active node due to the detection of a failure within the node,		
Remedial action: This alarm is initiated as part of switch-over and there is no explicit corrective procedure for this alarm.Execute the script /opt/scripts/Status.sh to verify whether the current system is active.The alarm is cleared manually from the OAM system once the system status is active.		

Table 28-254 FGW_automaticFailoverInitiatedByStandbyNode

Alarm	Attributes	Applicable major release
Name: FGW_ automaticFailoverInitiatedByStandbyNode (5917) Type: processingErrorAlarm Package: femto.FGW_ automaticFailoverInitiatedByStandbyNode Raised on class: femto.FGW	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated whenever a failover is initiated by the standby node due to the detection of a failure within the node,		
Remedial action: NA		

Table 28-255 FGW_availabilityTargetAchieved

Alarm	Attributes	Applicable major release
Name: FGW_availabilityTargetAchieved (5918) Type: processingErrorAlarm Package: femto.FGW_availabilityTargetAchieved Raised on class: femto.FGW	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated following a failover when the the newly-active node has bound the floating IP address(es) for FAP connection, and it has sent out the 'Notify Connection Status (Active)' message to all femtos which have SCTP associations to the fixed IP address.		
Remedial action: This alarm is initiated as part of switch-over and there is no explicit corrective procedure for this alarm.Execute the script /opt/scripts/Status.sh to verify whether the current system is active or standby.The alarm is cleared manually from the OAM system once the system status is active.		

Table 28-256 FGW_baseboardControllerFailure

Alarm	Attributes	Applicable major release
Name: FGW_baseboardControllerFailure (5919) Type: equipmentAlarm Package: femto.FGW_baseboardControllerFailure Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is raised if the IPMI driver fails to start because it cannot communicate with the controller.		
Remedial action: Contact Nokia technical support for assistance.		

Table 28-257 FGW_bsrDataFileDownloadFailed

Alarm	Attributes	Applicable major release
Name: FGW_bsrDataFileDownloadFailed (5920) Type: processingErrorAlarm Package: femto.FGW_bsrDataFileDownloadFailed Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: fileError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when the SCGW has failed to download a BSR Data file from the OAM system		
Remedial action: Verify the connectivity between the OAM system and the Gateway.Verify that the appropriate keys have been exchanged to enable automatic download between the BSR Gateway and the OAM system.Verify that the necessary file download permission is granted.Verify that the /opt/bsrdata directory is present in the system.		

Table 28-258 FGW_bsrDataFileEntryInvalid

Alarm	Attributes	Applicable major release
Name: FGW_bsrDataFileEntryInvalid (12742) Type: processingErrorAlarm Package: femto.FGW_bsrDataFileEntryInvalid Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: fileError	Release: • SC17.2 • SC19.1 • SC20.1
Description: This fault is generated when the FGW has detected that one or more BSR/HeNB entry in the Data File has an invalid format during partial or complete ACL sync operation.		
Remedial action: The Operator should investigate and correct such invalid BSR/HeNB entries and initiate a manual ACL sync to effect the data update at the FGW.		

Table 28-259 FGW_bsrDataFileInvalid

Alarm	Attributes	Applicable major release
Name: FGW_bsrDataFileInvalid (5921) Type: processingErrorAlarm Package: femto.FGW_bsrDataFileInvalid Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: fileError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when the SCGW has detected that the format of the BSR Data File has an invalid XML format		
Remedial action: Verify that the XML file downloaded from the OAM system is syntactically correct. Check if there is any tag mismatch in the XML file.Download the corrected XML file again usingactbsrdata command.		

Table 28-260 FGW_bsrDataLost

Alarm	Attributes	Applicable major release
Name: FGW_bsrDataLost (5922) Type: processingErrorAlarm Package: femto.FGW_bsrDataLost Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: fileError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when the SCGW has determined a failure has occurred with the complete BSR data held on the SCGW		
Remedial action: Download the complete BSR DATA XML file again, using theactbsrdata command.Perform Small Cell registration and verify if the registrations aresuccessful.		

Table 28-261 FGW_bsrDataNonExistingBSR

Alarm	Attributes	Applicable major release
Name: FGW_bsrDataNonExistingBSR (5923) Type: processingErrorAlarm Package: femto.FGW_bsrDataNonExistingBSR Raised on class: femto.FGW	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: fileError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when the SCGW has detected that there changes requested in the BSR Data file relating to a non esisting BSR record.		
Remedial action: Verify that the BSR record exists in the BSR DATA XML file for which the change had been requested.If the BSR record is not present, then perform actbsrdata upgrade and create the BSR record in the BSR DATA XML file.Perform the changes on the BSR record which has been obtained from the actbsrdata upgrade.		

Table 28-262 FGW_bsrDataQueueFailure

Alarm	Attributes	Applicable major release
Name: FGW_bsrDataQueueFailure (5924) Type: processingErrorAlarm Package: femto.FGW_bsrDataQueueFailure Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: fileError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when the SCGW has received a actBSRData request from the OAM system and it still has a maximum number of previous requests being queued		
Remedial action: Reduce the frequency of BSR DATA sync-up between the OAM system and BSR Gateway from once in 3 minutes to once in 6 minutes.This provides time for the BSR Gateway to process previous commands and to free up the command queueRetry the sync-up and see if the problem persists.		

Table 28-263 FGW_bsrIdClash

Alarm	Attributes	Applicable major release
Name: FGW_bsrIdClash (5925) Type: operationalViolation Package: femto.FGW_bsrIdClash Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: callEstablishmentError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SCGW has detected that another BSR tries to register with a BSR-Id already used by another BSR.		
Remedial action: Re-configure the Small Cell with a different BSR ID.Perform actbsrdata upgrade from the OAM system, and synchronize the new BSR DATA XML file with the BSR Gateway.Re-register the Small Cell.		

Table 28-264 FGW_bsrIntegrityCheckFailure

Alarm	Attributes	Applicable major release
Name: FGW_bsrIntegrityCheckFailure (5926) Type: securityServiceOrMechanismViolation Package: femto.FGW_bsrIntegrityCheckFailure Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: authenticationFailure	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated on receipt of a BSR Registration message from the BSR and the 'Registration Reason' IE is present and has the value 'Integrity Protection Failed		
Remedial action: Contact Nokia technical support for assistance.		

Table 28-265 FGW_bsrIntegrityViolation

Alarm	Attributes	Applicable major release
Name: FGW_bsrIntegrityViolation (5927) Type: securityServiceOrMechanismViolation Package: femto.FGW_bsrIntegrityViolation Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: authenticationFailure	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SCGW has detected a mismatch between the registration parameters received from the BSR and the provisioned BSR parameters. At least one of the following parameters might have been manipulated:- BSR-Id,- Group-Id,- Access mode		
Remedial action: Verify, that the BSR ID, Group ID, access mode of the registered Small Cell and associated FSN, is same as present in BSR DATA XML fileIf there is any mismatch, configure the BSR DATA XML file with the correct values.Perform actbsrdata upgrade from the OAM system andsync the new BSR DATA file with the BSR Gateway.Re-register this Small Cell.		

Table 28-266 FGW_cellIdClash

Alarm	Attributes	Applicable major release
Name: FGW_cellIdClash (5928) Type: operationalViolation Package: femto.FGW_cellIdClash Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: callEstablishmentError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SCGW has detected that another BSR tries to register with a Cell Id already used by another BSR.		
Remedial action: Ensure that the bsrId present in the/opt/bsrdata/OAM_BsrDataPersistentDB.txt for the incoming normal overloadHnbId is not associated with any other Hnb		

Table 28-267 FGW_cpuOverloadMaximumThreshold

Alarm	Attributes	Applicable major release
Name: FGW_cpuOverloadMaximumThreshold (5929) Type: equipmentAlarm Package: femto.FGW_ cpuOverloadMaximumThreshold Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: cpuCyclesLimitExceeded	Release: • SC17.2 • SC19.1 • SC20.1
Description: This alarm is raised whenever the SCGW has detected that the maximum CPU overload threshold has been exceeded		
Remedial action: The FGW shall initiate the swictover to the standby card in order to continue provide service after a brief outage.For further assistance please contact NOKIA customer support.		

Table 28-268 FGW_cpuOverloadMinimumThreshold

Alarm	Attributes	Applicable major release
Name: FGW_cpuOverloadMinimumThreshold (5930) Type: equipmentAlarm Package: femto.FGW_cpuOverloadMinimumThreshold Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • SC17.2 • SC19.1 • SC20.1
Description: This alarm is raised whenever the SCGW has detected that the mimimum CPU overload threshold has been exceeded		
Remedial action: This alarm is cleared when either the measured load falls below the minimum threshold as a result of FGW corrective actions or rises above the maximum thresold. The %CPU column of the top command can be used to check the CPU utilization.For further assistance please contact NOKIA customer support.		

Table 28-269 FGW_failedCreatingDynamicTransport

Alarm	Attributes	Applicable major release
Name: FGW_failedCreatingDynamicTransport (5931) Type: processingErrorAlarm Package: femto.FGW_ failedCreatingDynamicTransport Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when dynamic creation of TCP transport fails.		
Remedial action: There is no explicit corrective procedure for this alarm.Once the dynamic creation of TPC transport is successful, this fault is cleared manually from the OAM system.		

Table 28-270 FGW_femtoMsgRateExceeded

Alarm	Attributes	Applicable major release
Name: FGW_femtoMsgRateExceeded (5932) Type: equipmentAlarm Package: femto.FGW_femtoMsgRateExceeded Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: retransmissionRateExcessive	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The message rate from a femto has been exceeded, resulting in dropped messages. This indicates a serious software flaw or a hacked femto.		
Remedial action: This alarm is raised when the message rate from a Small Cell exceeds and there is no explicit corrective procedure for this alarm.Once the BSR Gateway accepts the messages from the Small Cell,this fault is cleared manually from the OAM system.		

Table 28-271 FGW_fgw10GPortFailureAtNonResilientState

Alarm	Attributes	Applicable major release
Name: FGW_fgw10GPortFailureAtNonResilientState (5933) Type: communicationsAlarm Package: femto.FGW_ fgw10GPortFailureAtNonResilientState Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1
Description: This alarm is generated to report failure of 10G port on BONO when the redundancy state of the system is Active_NonResilient, which means that there is a 10G port failure at a state where the other 10G port is already unavailable		
Remedial action: Investigate the cause of the 10G port failure in active FGW.This fault is automatically cleared by the clear alarmFGW_FGW10GPORTFAILUREATNONRESILIENTSTATECLEARANCE.If the problem persists, contact Nokia customer support.		

Table 28-272 FGW_fgwActiveNonResilient

Alarm	Attributes	Applicable major release
Name: FGW_fgwActiveNonResilient (5934) Type: communicationsAlarm Package: femto.FGW_fgwActiveNonResilient Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1
Description: This alarm is generated to report failure of 10G port on BONO OR failure of MALBAN when the redundancy state of the system is Active, which means that Active system has lost the redundant path and has become non-resilient		
Remedial action: Investigate the cause of the 10G port failure in active FGW.This fault is cleared automatically byFGW_ FGWACTIVENONRESILIENTCLEARANCE..If the problem persists, contact Nokia customer support		

Table 28-273 FGW_fgwActiveNotResponding

Alarm	Attributes	Applicable major release
Name: FGW_fgwActiveNotResponding (5935) Type: communicationsAlarm Package: femto.FGW_fgwActiveNotResponding Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • SC17.2 • SC19.1 • SC20.1
Description: This alarm is reported to indicate that standby detected a fault with Active and a failover is being triggered		
Remedial action: Verify that the switch to standby is successful.Investigate the cause of the problem with the active system.This fault is cleared automatically byFGW_FGWACTIVENOTRESPONDINGCLEARANCE.If the problem persists, contact Nokia customer support.		

Table 28-274 FGW_fgwNodeIsolated

Alarm	Attributes	Applicable major release
Name: FGW_fgwNodeIsolated (5936) Type: communicationsAlarm Package: femto.FGW_fgwNodeIsolated Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SCGW Node gets isolated from mate SCGW-Node		
Remedial action: Check the cabling between the BSR Gateway and the mate node.Check the cabling between the BSR Gateway and the Central Router.Ensure that the port, which holds the connections to the router and mate BSRGateway, is blinking, indicating flow of traffic.Stop/Start BSR Gateway to check whether the connection is restored.If problem still persists, initiate switch-over.For further assistance please contact NOKIA customer support.		

Table 28-275 FGW_fgwNodeStateChangeActiveToStandby

Alarm	Attributes	Applicable major release
Name: FGW_fgwNodeStateChangeActiveToStandby (5937) Type: communicationsAlarm Package: femto.FGW_ fgwNodeStateChangeActiveToStandby Raised on class: femto.FGW	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: unspecifiedReason	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is generated when SCGW Node status changes from Active to Standby		
Remedial action: This alarm is initiated as part of switch-over and there is no explicit corrective procedure for this alarm.To verify whether the current system is active, execute the script /opt/scripts/Status.sh.Once the system status is active, the operator can clear the alarm.		

Table 28-276 FGW_fgwNodeStateChangeStandbyToActive

Alarm	Attributes	Applicable major release
Name: FGW_fgwNodeStateChangeStandbyToActive (5938) Type: communicationsAlarm Package: femto.FGW_ fgwNodeStateChangeStandbyToActive Raised on class: femto.FGW	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: unspecifiedReason	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is generated when SCGW Node status changes from Standby to Active		
Remedial action: This is initiated as a part of switch-over and there is no explicit corrective procedure for this alarm.To verify if the current system is in an active state, execute the script /opt/scripts/Status.sh. Check the reports.Once the system status is active, the operator can clear the alarm.		

Table 28-277 FGW_fgwStandbyNonResilient

Alarm	Attributes	Applicable major release
Name: FGW_fgwStandbyNonResilient (5939) Type: communicationsAlarm Package: femto.FGW_fgwStandbyNonResilient Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1
Description: This alarm is generated to report failure of 10G port on BONO OR failure of MALBAN when the redundancy state of the system is Standby, which means thatStandby system has lost the redundant path and has become non-resilient		
Remedial action: Investigate the cause of the 10G port alarm.		

Table 28-278 FGW_fgwStandbyNotResponding

Alarm	Attributes	Applicable major release
Name: FGW_fgwStandbyNotResponding (5940) Type: communicationsAlarm Package: femto.FGW_fgwStandbyNotResponding Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unspecifiedReason	Release: • SC17.2 • SC19.1 • SC20.1
Description: This alarm is reported to indicate that Active detected a fault with Standby . This fault indicates that FGW is running in simplex mode		
Remedial action: Check that the standby node is running and that there is connectivity between the active and standby nodes via internodeLink1 and internodeLink2 IP addresses.This fault is cleared automatically by FGW_ FGWSTANDBYNOTRESPONDINGCLEARANCE.If the problem persists, contact Nokia customer support.		

Table 28-279 FGW_fgwStandbyUnavailable

Alarm	Attributes	Applicable major release
Name: FGW_fgwStandbyUnavailable (5941) Type: communicationsAlarm Package: femto.FGW_fgwStandbyUnavailable Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1
Description: This alaram indicates that SCGW standby node is not available		
Remedial action: Investigate the cause of the peer node communication.This fault is cleared automatically by clear alarmFGW_ FGWSTANDBYUNAVAILABLECLEARANCE.If the problem persists, contact Nokia customer support.		

Table 28-280 FGW_fgwToCentralRouterConnectionFailed

Alarm	Attributes	Applicable major release
Name: FGW_fgwToCentralRouterConnectionFailed (5942) Type: communicationsAlarm Package: femto.FGW_ fgwToCentralRouterConnectionFailed Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when connection between SCGW and Central Router fails		
Remedial action: Check if the eth2 cable is secure in the port.Check if the port light on the connected eth2 is blinking, indicating traffic.Check the cabling at the Central Router.Stop/Start BSR Gateway to check if the connection is restored.If the problem persists, initiate a switch-over.The BSR Gateway sends a clearance alarm when the connection is restored.For further assistance contact Nokia customer support.		

Table 28-281 FGW_fmsHardResetInitiated

Alarm	Attributes	Applicable major release
Name: FGW_fmsHardResetInitiated (5943) Type: equipmentAlarm Package: femto.FGW_fmsHardResetInitiated Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is triggered when hard reset is initiated in SCGW when it receives a hard reset request from the OAM system		
Remedial action: The fault is automatically cleared when the system is restarted.Execute the command /opt/scripts/showproc to verify the system status.For further assistance contact Nokia customer support.		

Table 28-282 FGW_fmsSoftResetInitiated

Alarm	Attributes	Applicable major release
Name: FGW_fmsSoftResetInitiated (5944) Type: equipmentAlarm Package: femto.FGW_fmsSoftResetInitiated Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is triggered when soft reset is initiated in SCGW when it receives a soft reset request from the OAM system		
Remedial action: The fault is automatically cleared when the system is restarted.Execute the command /opt/scripts/showproc to verify the system status.For further assistance contact Nokia customer support.		

Table 28-283 FGW_hnbSecurityViolation

Alarm	Attributes	Applicable major release
Name: FGW_hnbSecurityViolation (5945) Type: operationalViolation Package: femto.FGW_hnbSecurityViolation Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: callEstablishmentError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SCGW has detected that a BSR is trying to send HNBAP or RUA messages with 'UE Context Id' that is registered by another BSR.		
Remedial action: The fault is automatically cleared when the system is restarted.		

Table 28-284 FGW_incorrectIPAddress

Alarm	Attributes	Applicable major release
Name: FGW_incorrectIPAddress (5946) Type: processingErrorAlarm Package: femto.FGW_incorrectIPAddress Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when BSR tries to connect to SCGW on a specific IP address and fails.		
Remedial action: The fault is automatically cleared when the system is restarted.		

Table 28-285 FGW_initialisationInProgress

Alarm	Attributes	Applicable major release
Name: FGW_initialisationInProgress (5947) Type: equipmentAlarm Package: femto.FGW_initialisationInProgress Raised on class: femto.FGW	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This event is triggered when the system starts initiazing itself after reset		
Remedial action: If the system is completely up, that is, initialization is completed after all the threads are spawned and the SIGTRAN stack is initialized, this alarm is cleared automatically.		

Table 28-286 FGW_initializeAcceptorFail

Alarm	Attributes	Applicable major release
Name: FGW_initializeAcceptorFail (5948) Type: processingErrorAlarm Package: femto.FGW_initializeAcceptorFail Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when IP Address entry in SCGW configuration is wrongly configured.		
Remedial action: Configure the IP address and execute the command /opt/script/status.sh to verify the system status.Clear the alarm manually from the OAM system if the IP configuration is successful.		

Table 28-287 FGW_invalidDownloadedConfiguration

Alarm	Attributes	Applicable major release
Name: FGW_invalidDownloadedConfiguration (5949) Type: equipmentAlarm Package: femto.FGW_ invalidDownloadedConfiguration Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • SC17.2 • SC19.1 • SC20.1
Description: This alarm is raised when the downloaded configuration is not valid.Scenaio-1: During downloadDB operation, if the xml file is corrupt (parsing fail).In this case, new configuration will not be used and GW continues to use the old configuration.Scenario-2: During downloadDB operation, if constraint checks fail.In this case, new configuration file will be used but alarm will be raised with additional text Constraints check failed on downloaded configuration from WMSScenario-3:During GW start/restart (which includes switchover), if the constraint check fails.In this case, new configuration file will be used but alarm wil be raised with additional text Constraints check failed on running configuration		
Remedial action: The operator must do a manual clearance of the alarm.For scenario 1, operator need to fix the problem and downloadDB againFor scenario 2,3 operator need to try to fix the reason of constraint check failure.		

Table 28-288 FGW_invalidIuflexConfiguration

Alarm	Attributes	Applicable major release
Name: FGW_invalidIuflexConfiguration (5950) Type: processingErrorAlarm Package: femto.FGW_invalidIuflexConfiguration Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is generated when inconsistent/missing configuration data is detected for Iuflex NNSF function		
Remedial action: This alarm is cleared manually by doing CSRegion/PSRegion and BSGraiToPsRegion/BSGlaiToCsRegion configurations in the BSR Gateway with the same LAC/RAC, PLMNID, NRI values configured in the initial UE message fromthe Small Cell.If the alarm is raised due to region mismatch, then configure the corresponding LAC/RAC/PLMNID values in the BSR Gateway.If the alarm is raised due to NRI mismatch, configure an Iu interface with the NRI value to be matched in the BSR Gateway.The mismatch is identified in the Log_FMG.log file after initiating call from the Small Cell.		

Table 28-289 FGW_lag1ExceededSeventyPercent

Alarm	Attributes	Applicable major release
Name: FGW_lag1ExceededSeventyPercent (5951) Type: communicationsAlarm Package: femto.FGW_lag1ExceededSeventyPercent Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is raised whenever the traffic carried on LAG1 of the RTM unit exceeds 70 percent of maximum capacity.		
Remedial action: Check the system configuration and provision additional members of the LAG to provide capacity.		

Table 28-290 FGW_lag1TrafficImbalance

Alarm	Attributes	Applicable major release
Name: FGW_lag1TrafficImbalance (5952) Type: communicationsAlarm Package: femto.FGW_lag1TrafficImbalance Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is raised whenever there is a traffic imbalance on the LAG1 ports of the RTM unit		
Remedial action: Check the cabling for the ports associated with LAG 1 is correct and the links are working		

Table 28-291 FGW_lag2ExceededSeventyPercent

Alarm	Attributes	Applicable major release
Name: FGW_lag2ExceededSeventyPercent (5953) Type: communicationsAlarm Package: femto.FGW_lag2ExceededSeventyPercent Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is raised whenever the traffic carried on LAG2 of the RTM unit exceeds 70 percent of maximum capacity.		
Remedial action: Check the system configuration and provision additional members of the LAG to provide capacity.		

Table 28-292 FGW_lag2TrafficImbalance

Alarm	Attributes	Applicable major release
Name: FGW_lag2TrafficImbalance (5954) Type: communicationsAlarm Package: femto.FGW_lag2TrafficImbalance Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is raised whenever there is a traffic imbalance on the LAG2 ports of the RTM unit		
Remedial action: Check the cabling for the ports associated with LAG 2 is correct and the links are working		

Table 28-293 FGW_lag3ExceededSeventyPercent

Alarm	Attributes	Applicable major release
Name: FGW_lag3ExceededSeventyPercent (5955) Type: communicationsAlarm Package: femto.FGW_lag3ExceededSeventyPercent Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is raised whenever the traffic carried on LAG3 of the RTM unit exceeds 70 percent of maximum capacity.		
Remedial action: Check the system configuration and provision additional members of the LAG to provide capacity.		

Table 28-294 FGW_lag3TrafficImbalance

Alarm	Attributes	Applicable major release
Name: FGW_lag3TrafficImbalance (5956) Type: communicationsAlarm Package: femto.FGW_lag3TrafficImbalance Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is raised whenever there is a traffic imbalance on the LAG3 ports of the RTM unit		
Remedial action: Check the cabling for the ports associated with LAG 3 is correct and the links are working		

Table 28-295 FGW_lag4ExceededSeventyPercent

Alarm	Attributes	Applicable major release
Name: FGW_lag4ExceededSeventyPercent (5957) Type: communicationsAlarm Package: femto.FGW_lag4ExceededSeventyPercent Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is raised whenever the traffic carried on LAG4 of the RTM unit exceeds 70 percent of maximum capacity.		
Remedial action: Check the system configuration and provision additional members of the LAG to provide capacity.		

Table 28-296 FGW_lag4TrafficImbalance

Alarm	Attributes	Applicable major release
Name: FGW_lag4TrafficImbalance (5958) Type: communicationsAlarm Package: femto.FGW_lag4TrafficImbalance Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is raised whenever there is a traffic imbalance on the LAG4 ports of the RTM unit		
Remedial action: Check the cabling for the ports associated with LAG 4 is correct and the links are working		

Table 28-297 FGW_lag5ExceededSeventyPercent

Alarm	Attributes	Applicable major release
Name: FGW_lag5ExceededSeventyPercent (5959) Type: communicationsAlarm Package: femto.FGW_lag5ExceededSeventyPercent Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is raised whenever the traffic carried on LAG5 of the RTM unit exceeds 70 percent of maximum capacity.		
Remedial action: Check the system configuration and provision additional members of the LAG to provide capacity.		

Table 28-298 FGW_lag5TrafficImbalance

Alarm	Attributes	Applicable major release
Name: FGW_lag5TrafficImbalance (5960) Type: communicationsAlarm Package: femto.FGW_lag5TrafficImbalance Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is raised whenever there is a traffic imbalance on the LAG5 ports of the RTM unit		
Remedial action: Check the cabling for the ports associated with LAG 5 is correct and the links are working		

Table 28-299 FGW_lag6ExceededSeventyPercent

Alarm	Attributes	Applicable major release
Name: FGW_lag6ExceededSeventyPercent (5961) Type: communicationsAlarm Package: femto.FGW_lag6ExceededSeventyPercent Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is raised whenever the traffic carried on LAG6 of the RTM unit exceeds 70 percent of maximum capacity.		
Remedial action: Check the system configuration and provision additional members of the LAG to provide capacity.		

Table 28-300 FGW_lag6TrafficImbalance

Alarm	Attributes	Applicable major release
Name: FGW_lag6TrafficImbalance (5962) Type: communicationsAlarm Package: femto.FGW_lag6TrafficImbalance Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is raised whenever there is a traffic imbalance on the LAG6 ports of the RTM unit		
Remedial action: Check the cabling for the ports associated with LAG 6 is correct and the links are working		

Table 28-301 FGW_logFileTransferFailure

Alarm	Attributes	Applicable major release
Name: FGW_logFileTransferFailure (11146) Type: securityServiceOrMechanismViolation Package: femto.FGW_logFileTransferFailure Raised on class: femto.FGW	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: underlyingResourceUnavail-able	Release: • SC17.2 • SC19.1 • SC20.1
Description: This fault indicates that the centralized log file management capability for a SC GW host is attempting to transfer a copy of log files to the repository bearing host and the transfer procedure failed. Upon the next successful transfer, the alarm is automatically cleared.		
Remedial action: Root cause analyze the source of the problem that is interfering with the file transfer process and resolve this issue.		

Table 28-302 FGW_malbanConnectionFailure

Alarm	Attributes	Applicable major release
Name: FGW_malbanConnectionFailure (5963) Type: equipmentAlarm Package: femto.FGW_malbanConnectionFailure Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Malban connection failure		
Remedial action: The alarm is cleared automatically by the BSR Gateway by the clear alarmFGW_ MALBANCONNECTIONFAILURECLEARANCE when Malban is able to communicate with FGW/SHMC.Check if the MALBAN in the given slot (MALBAN-A in slot 7 or MALBAN-B in slot 8) is operational.If the problem persists, contact Nokia customer support.		

Table 28-303 FGW_malbanVlanCreationFailure

Alarm	Attributes	Applicable major release
Name: FGW_malbanVlanCreationFailure (5964) Type: equipmentAlarm Package: femto.FGW_malbanVlanCreationFailure Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Malban VLAN creation failure		
Remedial action: When MALBAN comes up, FGW re-configures all VLANs towards the MALBAN and few VLAN re-configurations may fail during the flap, those failures get reported asFGW_malbanVlanCreationFailure alarm. Although the re-configuration will succeeded later when the BONO-to-MALBAN interface stabilizes.If after MALBAN reboot the re-configuration does not succeed then there will be other outage ADAC alarms such as: StandbyNotResponding (if internodelink vlan config failed) ActiveNotResponding (if internodelink vlan config failed) IuCS or IuPS ASP down (if Core Network vlan config failed) S1 link down (if MME S1 link vlan config failed) OAM link down (if OAM vlan config failed) bsrOutOfService or heNBOutOfService (if FemtoCP or HeNBCP vlan config failed)After MALBAN boots up and becomes operational the above outage ADAC alarms are not raised, FGW_malbanVlanCreationFailure ADMC alarm can be clearedmanually. There is no remedial action needed.Recommend ping malban IPs If MALBAN IP is not reachable then check MALBAN presence and its operationalstate. If MALBAN IP is reachable then try stopbsg + startbsg. If outage ADAC alarms still persist then probably issue exists with BONO->MALBAN configuration script or MALBAN HW/SW issue.If the problem persists, contact Nokia customer support.		

Table 28-304 FGW_manualFailoverInitiatedByActiveNode

Alarm	Attributes	Applicable major release
Name: FGW_manualFailoverInitiatedByActiveNode (5965) Type: processingErrorAlarm Package: femto.FGW_ manualFailoverInitiatedByActiveNode Raised on class: femto.FGW	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated whenever a failover is manually initiated on the active node,		
Remedial action: This alarm is initiated as part of switch-over and there is no explicit corrective procedure for this alarm.Execute the script /opt/scripts/Status.sh to verify whether the current system is active or standby.The alarm is cleared manually from the OAM system once the system status is active.		

Table 28-305 FGW_manualFailoverInitiatedByStandbyNode

Alarm	Attributes	Applicable major release
Name: FGW_manualFailoverInitiatedByStandbyNode (5966) Type: processingErrorAlarm Package: femto.FGW_ manualFailoverInitiatedByStandbyNode Raised on class: femto.FGW	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0

Table 28-305 FGW_manualFailoverInitiatedByStandbyNode (continued)

Alarm	Attributes	Applicable major release
Description: This fault is generated whenever a failover is manually initiated on the standby node,		
Remedial action: NA		

Table 28-306 FGW_maximumImsiListThresholdExceeded

Alarm	Attributes	Applicable major release
Name: FGW_maximumImsiListThresholdExceeded (5967) Type: qualityOfServiceAlarm Package: femto.FGW_ maximumImsiListThresholdExceeded Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The number of IMSIs in the ACL lists defined on the SCGW has exceeded the maximum threshold defined by attribute FGW::maximumIMSIList		
Remedial action: The operator must do a manual clearance.This alarm gets cleared when total number of IMSIs in the ACL lists defined on the SCGW falls below the maximumIMSIList value.		

Table 28-307 FGW_memoryOverloadMaximumThreshold

Alarm	Attributes	Applicable major release
Name: FGW_memoryOverloadMaximumThreshold (5968) Type: equipmentAlarm Package: femto.FGW_ memoryOverloadMaximumThreshold Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: outOfMemory	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is raised whenever the SCGW has detected that the maximum memory overload threshold has been exceeded		
Remedial action: The FGW shall initiate the swictover to the standby card in order to continue provide service after a brief outage.For further assistance please contact NOKIA customer support		

Table 28-308 FGW_memoryOverloadMinimumThreshold

Alarm	Attributes	Applicable major release
Name: FGW_memoryOverloadMinimumThreshold (5969) Type: equipmentAlarm Package: femto.FGW_ memoryOverloadMinimumThreshold Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0

Table 28-308 FGW_memoryOverloadMinimumThreshold (continued)

Alarm	Attributes	Applicable major release
Description: This alarm is raised whenever the SCGW has detected that the mimimum memory overload threshold has been exceeded		
Remedial action: This alarm is cleared when either the measured memory usage falls below the minimum threshold as aresult of FGW corrective actions or rises above the maximum threshold.. The %CPU column of the top command can be used to check the CPU utilization.Enter the command free to check the memory usage.Free memory specified in the third column must be high compared to the used memory available in second column, for recovering to normal overload.Also, the used buffer cache memory must be low.If the memory usage does not decrease as a result of FGW corrective actions and the alarm is not cleared on its own, terminate some calls and check whether memory utilization comes down and the alarm is clearedIf memory utilization does not come down and overload alarm is still generated, de-register the Small Cells and check whether memory utilization comes down.For further assistance please contact NOKIA customer support.		

Table 28-309 FGW_minimumImsiListThresholdExceeded

Alarm	Attributes	Applicable major release
Name: FGW_minimumImsiListThresholdExceeded (5970) Type: qualityOfServiceAlarm Package: femto.FGW_ minimumImsiListThresholdExceeded Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The number of IMSIs in the ACL lists defined on the SCGW has exceeded the mimimum threshold defined by attribute FGW::minimumIMSIList		
Remedial action: The operator must do a manual clearance.This alarm gets cleared when total number of IMSIs in the ACL lists defined on the BSR Gateway falls below the minimumIMSIList value.		

Table 28-310 FGW_monProcessRestart

Alarm	Attributes	Applicable major release
Name: FGW_monProcessRestart (5971) Type: processingErrorAlarm Package: femto.FGW_monProcessRestart Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when the SCGW MON forces a process restart.		
Remedial action: NA		

Table 28-311 FGW_nLLInvalidFileFormat

Alarm	Attributes	Applicable major release
Name: FGW_nLLInvalidFileFormat (5972) Type: processingErrorAlarm Package: femto.FGW_nLLInvalidFileFormat Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: fileError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is generated if the SCGW detects invalid data in the NLL file		
Remedial action: Log in to the BSR Gateway.Check if the iprange file format is correct in the/opt/natloc/download directory.If the file format is invalid, place the correct IP range file in the /opt/natloc/download directory.This fault is cleared manually from the OAM system.		

Table 28-312 FGW_nLLmultipleFileInDownloadDir

Alarm	Attributes	Applicable major release
Name: FGW_nLLmultipleFileInDownloadDir (5973) Type: processingErrorAlarm Package: femto.FGW_nLLmultipleFileInDownloadDir Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: fileError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is generated whenever multiple files have been detected in the NLL download directory on the SCGW		
Remedial action: Log in to the BSR Gateway.Check if multiple ip range files are present in/opt/natloc/download directory.If there are multiple IP range files, the FMG reports to the OAM system, to place a single IP range file in the /opt/natloc/download directory.This fault is cleared manually from the OAM system.		

Table 28-313 FGW_noHeartbeatResponseFromActiveNode

Alarm	Attributes	Applicable major release
Name: FGW_noHeartbeatResponseFromActiveNode (5974) Type: processingErrorAlarm Package: femto.FGW_ noHeartbeatResponseFromActiveNode Raised on class: femto.FGW	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated each time the standby node fails to receive a heartbeat response from the active node within the configured time period,		
Remedial action: This alarm is initiated as part of switch-over and there is no explicit corrective procedure for this alarm.Execute the script /opt/scripts/Status.sh to verify whether the current system is active.		

Table 28-314 FGW_percentageNodesRecovered100

Alarm	Attributes	Applicable major release
Name: FGW_percentageNodesRecovered100 (5975) Type: processingErrorAlarm Package: femto.FGW_ percentageNodesRecovered100 Raised on class: femto.FGW	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated following a failover in a Redundant Active/Warm Standby configuration, when 100% of small cells have successfully reregistered, compared to the number of standby SCTP associations at the point of failover.		
Remedial action: This alarm is initiated as part of switch-over and there is no explicit corrective procedure for this alarm.Execute the script /opt/scripts/Status.sh to verify whether the current system is active or standby.The alarm is cleared manually from the OAM system once the system status is active.		

Table 28-315 FGW_percentageNodesRecovered70

Alarm	Attributes	Applicable major release
Name: FGW_percentageNodesRecovered70 (5976) Type: processingErrorAlarm Package: femto.FGW_percentageNodesRecovered70 Raised on class: femto.FGW	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated following a failover in a Redundant Active/Warm Standby configuration, when 70% of small cells have successfully reregistered, compared to the number of standby SCTP associations at the point of failover.		
Remedial action: This alarm is initiated as part of switch-over and there is no explicit corrective procedure for this alarm.Execute the script /opt/scripts/Status.sh to verify whether the current system is active or standby.The alarm is cleared manually from the OAM system once the system status is active.		

Table 28-316 FGW_percentageNodesRecovered80

Alarm	Attributes	Applicable major release
Name: FGW_percentageNodesRecovered80 (5977) Type: processingErrorAlarm Package: femto.FGW_percentageNodesRecovered80 Raised on class: femto.FGW	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated following a failover in a Redundant Active/Warm Standby configuration, when 80% of small cells have successfully reregistered, compared to the number of standby SCTP associations at the point of failover.		
Remedial action: This alarm is initiated as part of switch-over and there is no explicit corrective procedure for this alarm.Execute the script /opt/scripts/Status.sh to verify whether the current system is active or standby.The alarm is cleared manually from the OAM system once the system status is active.		

Table 28-317 FGW_percentageNodesRecovered90

Alarm	Attributes	Applicable major release
Name: FGW_percentageNodesRecovered90 (5978) Type: processingErrorAlarm Package: femto.FGW_percentageNodesRecovered90 Raised on class: femto.FGW	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated following a failover in a Redundant Active/Warm Standby configuration, when 90% of small cells have successfully reregistered, compared to the number of standby SCTP associations at the point of failover.		
Remedial action: This alarm is initiated as part of switch-over and there is no explicit corrective procedure for this alarm.Execute the script /opt/scripts/Status.sh to verify whether the current system is active or standby.The alarm is cleared manually from the OAM system once the system status is active.		

Table 28-318 FGW_presenceEventInconsistent

Alarm	Attributes	Applicable major release
Name: FGW_presenceEventInconsistent (5979) Type: integrityViolation Package: femto.FGW_presenceEventInconsistent Raised on class: femto.FGW	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: corruptData	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The Presence Event Indication from the BSR has either the IMSI applicability bit set to 0 and no IMSI included, or the IMSI applicability bit set to 1 and an IMSI included		
Remedial action: Verify the wireshark capture and analyze whether the UE Present Event Indication message sent from the Small Cell has IMSI applicability bit set to 0 and with IMSI included or IMSI applicability bit set to 1 and with no IMSI included. Contact Small Cell support and send a UE Present Event Indication message with any of the following combinations:IMSI applicability bit set to 0 and no IMSI must be includedIMSI applicability bit set to 1 andIMSI must be included		

Table 28-319 FGW_presenceNotActive

Alarm	Attributes	Applicable major release
Name: FGW_presenceNotActive (5980) Type: communicationsAlarm Package: femto.FGW_presenceNotActive Raised on class: femto.FGW	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when the SCGW receives a BSGAP 'UE Presence Event Indication' from the FemtoBSR when the'activatePresenceAPI' is set to false.		

Table 28-319 FGW_presenceNotActive (continued)

Alarm	Attributes	Applicable major release
Remedial action: Verify whether presence is active by using the below commands from BSGCLI command prompt:/opt/bin/BSGCLI. execd FGW<DNNumber>get {activatePresenceAPI};If activatePresenceAPI="False, enablethe PresenceAPI feature using the below commands:/opt/bin/BSGCLI.execd FGW<DNNumber>set {activatePresenceAPI=True};"		

Table 28-320 FGW_resetSuccessful

Alarm	Attributes	Applicable major release
Name: FGW_resetSuccessful (5982) Type: equipmentAlarm Package: femto.FGW_resetSuccessful Raised on class: femto.FGW	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This event is triggered when the system is fully operational after reset		
Remedial action: The system has restarted. No specific operation needed.		

Table 28-321 FGW_rtmConnectionFailure

Alarm	Attributes	Applicable major release
Name: FGW_rtmConnectionFailure (5983) Type: equipmentAlarm Package: femto.FGW_rtmConnectionFailure Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1
Description: RTM connection failure		
Remedial action: NA		

Table 28-322 FGW_rTMLinkExceededSeventyPercent

Alarm	Attributes	Applicable major release
Name: FGW_rTMLinkExceededSeventyPercent (5981) Type: communicationsAlarm Package: femto.FGW_ rTMLinkExceededSeventyPercent Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is raised whenever the traffic carried on the link between the Malban unit and the RTM unit exceeds 70 percent of maximum capacity.		
Remedial action: Verify the system configuration.If the problem persists contact Nokia customer support for assistance.		

Table 28-323 FGW_secHardeningProcedureFailure

Alarm	Attributes	Applicable major release
Name: FGW_secHardeningProcedureFailure (11147) Type: securityServiceOrMechanismViolation Package: femto.FGW_secHardeningProcedureFailure Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • SC17.2 • SC19.1 • SC20.1
Description: This fault indicates that a security hardening procedure has failed. Two possible outcomes are implied, (a) the target host may be operationally impaired and/or, (b) the security of the target host may be impaired.		
Remedial action: Root cause analyze the source of the problem and extent of impact. If the host is operationally impacted and is associated with a software upgrade, then the upgrade should be aborted and prior software version restored. Otherwise to address a potentially important security gap, a work around should be explored to cover the security gap and decision on whether or not to accept the software upgrade made on a case basis by a security engineer.If the problem persists, contact Nokia customer support.		

Table 28-324 FGW_shelfManagerConnectionFailure

Alarm	Attributes	Applicable major release
Name: FGW_shelfManagerConnectionFailure (5984) Type: equipmentAlarm Package: femto.FGW_shelfManagerConnectionFailure Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Shelf manager connection failure		
Remedial action: This alarm is cleared automatically by BSR Gateway.This alarm is cleared when the shelfoam is able to communicate with the shelfmanager.This alarm is raised when the active shelfmanagerreboots and gets cleared when the shelfmanager is up.Check if the shelfmanager boards in slot 13 and 14 are operational.If the problem persists, contact Nokia customer support.		

Table 28-325 FGW_shelfManagerConnectionUp

Alarm	Attributes	Applicable major release
Name: FGW_shelfManagerConnectionUp (5985) Type: equipmentAlarm Package: femto.FGW_shelfManagerConnectionUp Raised on class: femto.FGW	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Shelf manager connection up		
Remedial action: No action required		

Table 28-326 FGW_spareAlarmFGWADAC1

Alarm	Attributes	Applicable major release
Name: FGW_spareAlarmFGWADAC1 (8478) Type: processingErrorAlarm Package: femto.FGW_spareAlarmFGWADAC1 Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1
Description: Spare Alarm 1		
Remedial action: Spare Alarm		

Table 28-327 FGW_spareAlarmFGWADAC2

Alarm	Attributes	Applicable major release
Name: FGW_spareAlarmFGWADAC2 (8479) Type: processingErrorAlarm Package: femto.FGW_spareAlarmFGWADAC2 Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1
Description: Spare Alarm 2		
Remedial action: Spare Alarm		

Table 28-328 FGW_spareAlarmFGWADAC3

Alarm	Attributes	Applicable major release
Name: FGW_spareAlarmFGWADAC3 (8480) Type: processingErrorAlarm Package: femto.FGW_spareAlarmFGWADAC3 Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1
Description: Spare Alarm 3		
Remedial action: Spare Alarm		

Table 28-329 FGW_spareAlarmFGWADAC4

Alarm	Attributes	Applicable major release
Name: FGW_spareAlarmFGWADAC4 (8481) Type: processingErrorAlarm Package: femto.FGW_spareAlarmFGWADAC4 Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1

Table 28-329 FGW_spareAlarmFGWADAC4 (continued)

Alarm	Attributes	Applicable major release
Remedial action: Spare Alarm		

Table 28-337 FGW_spareAlarmFGWADMC3

Alarm	Attributes	Applicable major release
Name: FGW_spareAlarmFGWADMC3 (8486) Type: processingErrorAlarm Package: femto.FGW_spareAlarmFGWADMC3 Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1
Description: Spare Alarm 3		
Remedial action: Spare Alarm		

Table 28-338 FGW_spareAlarmFGWADMC4

Alarm	Attributes	Applicable major release
Name: FGW_spareAlarmFGWADMC4 (8487) Type: processingErrorAlarm Package: femto.FGW_spareAlarmFGWADMC4 Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1
Description: Spare Alarm 4		
Remedial action: Spare Alarm		

Table 28-339 FGW_spareAlarmFGWADMC5

Alarm	Attributes	Applicable major release
Name: FGW_spareAlarmFGWADMC5 (8488) Type: processingErrorAlarm Package: femto.FGW_spareAlarmFGWADMC5 Raised on class: femto.FGW	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1
Description: Spare Alarm 5		
Remedial action: Spare Alarm		

Table 28-340 FGW_spareAlarmFGWADMC6

Alarm	Attributes	Applicable major release
Name: FGW_spareAlarmFGWADMC6 (8489) Type: processingErrorAlarm Package: femto.FGW_spareAlarmFGWADMC6 Raised on class: femto.FGW	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: operationalCondition	Release: • SC17.2 • SC19.1 • SC20.1
Description: Spare Alarm 6		
Remedial action: Spare Alarm		

Table 28-341 FGW_sshKeySharingNotCorrect

Alarm	Attributes	Applicable major release
Name: FGW_sshKeySharingNotCorrect (9018) Type: equipmentAlarm Package: femto.FGW_sshKeySharingNotCorrect Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: proceduralError	Release: • SC17.2 • SC19.1 • SC20.1
Description: SSH Key is not shared properly between the nodes		
Remedial action: Synchronize SSH keys between nodes		

Table 28-342 FGW_strmgrRedirectPDUDecodeFailed

Alarm	Attributes	Applicable major release
Name: FGW_strmgrRedirectPDUDecodeFailed (5986) Type: processingErrorAlarm Package: femto.FGW_ strmgrRedirectPDUDecodeFailed Raised on class: femto.FGW	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated whenever the SCGW has detected a failure to decode a Redirect PDU for Femto to Femto Handover		
Remedial action: When the incoming message PDU size is greater than the control PDU size, then the alarm raised.If the message for Redirect does not have a Begin Indication flag, then this alarm is raised.Check at the Small Cell side for the root cause and send another Small Cell to Small Cell redirect request.This fault is cleared manually from the OAM system when hand over happens successfully.		

Table 28-343 FGW_switchOver

Alarm	Attributes	Applicable major release
Name: FGW_switchOver (5987) Type: processingErrorAlarm Package: femto.FGW_switchOver Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is generated when switchover of SCGW Node happens at Central router		
Remedial action: This alarm is cleared when switchover successfully happens.This is verified by checking the system state after switchover.This alarm is manually cleared from the OAM system.If the problem persists, contact Nokia customer support.		

Table 28-344 FGW_sysHardResetInitiated

Alarm	Attributes	Applicable major release
Name: FGW_sysHardResetInitiated (5988) Type: equipmentAlarm Package: femto.FGW_sysHardResetInitiated Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is triggered when hard reset is initiated in SCGW when it automatically resets due to system failure		
Remedial action: NA		

Table 28-345 FGW_sysSoftResetInitiated

Alarm	Attributes	Applicable major release
Name: FGW_sysSoftResetInitiated (5989) Type: equipmentAlarm Package: femto.FGW_sysSoftResetInitiated Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is triggered when soft reset is initiated in SCGW when it resets due to system failure		
Remedial action: NA		

Table 28-346 FGW_unstableSCTPAssociation

Alarm	Attributes	Applicable major release
Name: FGW_unstableSCTPAssociation (8490) Type: communicationsAlarm Package: femto.FGW_unstableSCTPAssociation Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: communicationsSubsystem-Failure	Release: • SC17.2 • SC19.1 • SC20.1
Description: This fault is raised if the SCTP association to the Access Point has been unstable with many short term interruptions		
Remedial action: Investigate the stability of the back haul links between the Access Point and SCGW		

Table 28-347 FGW_violationBufferOverflow

Alarm	Attributes	Applicable major release
Name: FGW_violationBufferOverflow (5990) Type: qualityOfServiceAlarm Package: femto.FGW_violationBufferOverflow Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: resourceAtOrNearingCapacity	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is generated when the SCGW buffer used to store aclViolation, bsrIntegrity and bsrIdClash alarms is exceeded.		
Remedial action: This alarm is raised when the violation buffer exceeds the limit.The violation buffer size is set from the BSGCLI.The fault is cleared manually from the OAM system.		

Table 28-348 FGW_vlanCreationFailure

Alarm	Attributes	Applicable major release
Name: FGW_vlanCreationFailure (5991) Type: equipmentAlarm Package: femto.FGW_vlanCreationFailure Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: VLAN creation failure		
Remedial action: Execute the command ifconfig to verify the VLAN creation.Clear the alarm manually from the OAM system if the VLAN creation is successful.		

Table 28-349 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major release
Name: FrameSizeProblem (37) Type: configurationAlarm Package: netw.FrameSizeProblem Raised on class: netw.StatefullConnectableInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: frameSizeProblem	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL '0L'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL '0L'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 28-350 GaPeerDown

Alarm	Attributes	Applicable major release
Name: GaPeerDown (3303) Type: EpcAlarm Package: lteggsn.GaPeerDown Raised on class: lteggsn.GaPeer	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerDown	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 28-351 GenericNatProxy_genericNATproxyServiceFailure

Alarm	Attributes	Applicable major release
Name: GenericNatProxy_ genericNATproxyServiceFailure (5999) Type: communicationsAlarm Package: femto.GenericNatProxy_ genericNATproxyServiceFailure Raised on class: femto.GenericNatProxy	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unavailable	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0

Table 28-351 GenericNatProxy_genericNATproxyServiceFailure (continued)

Alarm	Attributes	Applicable major release
Description: This alarm is raised if the DNS resolution of an FQDN configured in GenericNatProxy::serverAddress fails. The alarm is cleared when the DNS resolution of the FQDN succeeds		
Remedial action: Check the configured FQDN in GenericNatProxy::serverAddress is validCheck that the FQDN is registered in DNS.		

Table 28-352 HardDiskSlot_diskUsageNearingCapacity

Alarm	Attributes	Applicable major release
Name: HardDiskSlot_diskUsageNearingCapacity (6001) Type: equipmentAlarm Package: femto.HardDiskSlot_ diskUsageNearingCapacity Raised on class: femto.HardDiskSlot	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is raised whenever the disk usage has exceeded seventy percent of available capacity. The alarm is automatically cleared whenever disk usage is reduced below thirty percent of available capacity.		
Remedial action: Cleanup unnecessary backups,files to bring down disk usage.		

Table 28-353 HardDisk_diskUsageNearingCapacity

Alarm	Attributes	Applicable major release
Name: HardDisk_diskUsageNearingCapacity (6002) Type: equipmentAlarm Package: femto.HardDisk_diskUsageNearingCapacity Raised on class: femto.HardDisk	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is raised whenever the disk usage has exceeded seventy percent of available capacity. The alarm is automatically cleared whenever disk usage is reduced below thirty percent of available capacity.		
Remedial action: Cleanup unnecessary backups,files to bring down disk usage.		

Table 28-354 HeNBMasterCP_rangeOfStreamsFromHeNBNotSupported

Alarm	Attributes	Applicable major release
Name: HeNBMasterCP_ rangeOfStreamsFromHeNBNotSupported (6003) Type: communicationsAlarm Package: femto.HeNBMasterCP_ rangeOfStreamsFromHeNBNotSupported Raised on class: femto.HeNBMasterCP	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1

Table 28-354 HeNBMasterCP_rangeOfStreamsFromHeNBNotSupported (continued)

Alarm	Attributes	Applicable major release
Description: This fault indicates a mismatch between the number of input & output streams configured on the gateway and the number of input & output streams received from HeNB during SCTP INIT negotiation HeNB ID shall be mentioned in the alarm description so that operator can identify the HeNBThis alarm can be used for Small Cells Monitoring (Service Monitoring) feature		
Remedial action: Check the configuration for the number of input and output steams supported by the HeNB.The number of input and output streams are expected to be equal and to have indetifiers in the range [0..511]. So HeNB configuration needs to be corrected for input and output SCTP streams.This alarm should be manually cleared by the OAM system's user.If the problem persists, contact Nokia customer support.		

Table 28-355 HeNBMasterCP_spareAlarmHeNBMasterCP1

Alarm	Attributes	Applicable major release
Name: HeNBMasterCP_spareAlarmHeNBMasterCP1 (12398) Type: equipmentAlarm Package: femto.HeNBMasterCP_ spareAlarmHeNBMasterCP1 Raised on class: femto.HeNBMasterCP	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1
Description: Spare Alarm 1		
Remedial action: Spare Alarm 1		

Table 28-356 HeNBMasterCP_spareAlarmHeNBMasterCP2

Alarm	Attributes	Applicable major release
Name: HeNBMasterCP_spareAlarmHeNBMasterCP2 (12399) Type: equipmentAlarm Package: femto.HeNBMasterCP_ spareAlarmHeNBMasterCP2 Raised on class: femto.HeNBMasterCP	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1
Description: Spare Alarm 2		
Remedial action: Spare Alarm 2		

Table 28-357 HeNBMasterCP_spareAlarmHeNBMasterCP3

Alarm	Attributes	Applicable major release
Name: HeNBMasterCP_spareAlarmHeNBMasterCP3 (12400) Type: equipmentAlarm Package: femto.HeNBMasterCP_ spareAlarmHeNBMasterCP3 Raised on class: femto.HeNBMasterCP	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1
Description: Spare Alarm 3		
Remedial action: Spare Alarm 1		

Table 28-358 HeNBMasterUP_noUserPlaneMapping

Alarm	Attributes	Applicable major release
Name: HeNBMasterUP_noUserPlaneMapping (12401) Type: processingErrorAlarm Package: femto.HeNBMasterUP_ noUserPlaneMapping Raised on class: femto.HeNBMasterUP	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • SC17.2 • SC19.1 • SC20.1
Description: This fault is generated when the SCGW receives a user plane packet which gets discarded due to there being no associated binding in the UserPlane mapping table		
Remedial action: NA		

Table 28-359 IncompleteConfiguration

Alarm	Attributes	Applicable major release
Name: IncompleteConfiguration (1942) Type: operationalViolation Package: netw.IncompleteConfiguration Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompleteConfig	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when a pre-provisioned NE has no objects configured beneath it.		
Raising condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' EQUAL '\"\"'))		
Clearing condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' NOT EQUAL '\"\"'))		
Remedial action: A configuration error has been made which must be corrected. The configuration of the pre-provisioned NE is incomplete. A work order was not associated with the pre-provisioned NE and as a consequence the attempt to auto-configure the NE failed.		

Table 28-360 IPSP_aspDown

Alarm	Attributes	Applicable major release
Name: IPSP_aspDown (6004) Type: communicationsAlarm Package: femto.IPSP_aspDown Raised on class: femto.IPSP	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Notification to inform the application that SCGW's IPSP instance for CS and PS connections is now down		
Remedial action: Perform SCTPAssociation administrative state lock/unlock from FGW CLI/SAM to restore the link.On completion of successful handshake, ASPUP messages are exchanged between the BSR Gateway and Core Network.This fault is automatically cleared by the clear alarm IPSP_ASPDOWNCLEARANCE.Run BSGConsole.exe. Use the below command in active FGW to check the destination point code status.bsg_get_destination_status<dpc>Check the link connectivity.Investigate the fault at the core network.If the problem persists, contact Nokia customer support		

Table 28-361 IPSP_aspInactive

Alarm	Attributes	Applicable major release
Name: IPSP_aspInactive (6005) Type: communicationsAlarm Package: femto.IPSP_aspInactive Raised on class: femto.IPSP	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Notification to inform the application that the SCGW's IPSP instance has become inactive		
Remedial action: Perform SCTPAssociation administrative state lock/unlock from FGW CLI/SAM to restore the link.This fault is automatically cleared by the clear alarmIPSP_ASPINACTIVECLEARANCE.Run BSGConsole.exe. Use the command in active FGW to check the destination point code status:bsg_get_destination_status<dpc>Check the link connectivity.Investigate the fault at the core network.If the problem persists, contact Nokia customer support		

Table 28-362 IPSP_ICM_EVENT_BND_FAIL

Alarm	Attributes	Applicable major release
Name: IPSP_ICM_EVENT_BND_FAIL (6006) Type: communicationsAlarm Package: femto.IPSP_ICM_EVENT_BND_FAIL Raised on class: femto.IPSP	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Generated if the bind procedure with the lower layer fails. The bind procedure can fail either due to the absence of bind confirm, or if there is a negative bind confirm from the lower layer.		

Table 28-362 IPSP_ICM_EVENT_BND_FAIL (continued)

Alarm	Attributes	Applicable major release
Remedial action: This alarm is cleared automatically by the clear alarm IPSP_ICM_EVENT_BND_OK.Perform SCTPAssociation administrative state lock/unlock from FGW CLI/SAM to make the M3UA lower SAP bind with SCTP successful.Perform stopbsg and switchover if the alarm is not cleared for a long time.If the problem persists, contact Nokia customer support.		

Table 28-363 IPSP_IIT_EVENT_ESTABLISH_FAIL

Alarm	Attributes	Applicable major release
Name: IPSP_IIT_EVENT_ESTABLISH_FAIL (6007) Type: communicationsAlarm Package: femto.IPSP_IIT_EVENT_ESTABLISH_FAIL Raised on class: femto.IPSP	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Generated if association establishment fails. If it is an association to a remote SG, the SG ID is given by s.sgId. If it is an association to a remote ASP, the ASP ID is given by s.aspId.		
Remedial action: The alarm is cleared automatically by the Clear Alarm IPSP_IIT_EVENT_ESTABLISH_OK.		

Table 28-364 IPSP_IIT_EVENT_SCT_COMM_DOWN

Alarm	Attributes	Applicable major release
Name: IPSP_IIT_EVENT_SCT_COMM_DOWN (6008) Type: communicationsAlarm Package: femto.IPSP_IIT_EVENT_SCT_COMM_DOWN Raised on class: femto.IPSP	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Generated when an the SCTP service provider indicates that an association has lost communications		
Remedial action: NA		

Table 28-365 IPSP_IIT_EVENT_TERM_IND

Alarm	Attributes	Applicable major release
Name: IPSP_IIT_EVENT_TERM_IND (6009) Type: communicationsAlarm Package: femto.IPSP_IIT_EVENT_TERM_IND Raised on class: femto.IPSP	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Generated when a termination indication is received from the SCTP service provider		

Table 28-365 IPSP_IIT_EVENT_TERM_IND (continued)

Alarm	Attributes	Applicable major release
Remedial action: When the association establishment procedure is successful for the Iu Interface, and ESTABLISH_OK event is received, the alarm is cleared automatically by the Clear Alarm IPSP_IIT_EVENT_ESTABLISH_OK.Perform stopbsg and switchover if the association establishment procedure is not successful for a long time.		

Table 28-366 IuBC_cellBroadcastCenterFailure

Alarm	Attributes	Applicable major release
Name: IuBC_cellBroadcastCenterFailure (6019) Type: communicationsAlarm Package: femto.IuBC_cellBroadcastCenterFailure Raised on class: femto.IuBC	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Communication with the Cell Broadcast Center has been lost.		
Remedial action: Check that the IP addresses entered for the cell broadcast center in ipAddressCellBroadcastPrimary and ipAddressCellBroadcastSecondary are correct.Check the connectivity to the Cell Broadcast Center.		

Table 28-367 IuBC_cellBroadcastOverload

Alarm	Attributes	Applicable major release
Name: IuBC_cellBroadcastOverload (6020) Type: qualityOfServiceAlarm Package: femto.IuBC_cellBroadcastOverload Raised on class: femto.IuBC	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm shall be raised when the threshold has been reached for the number of concurrent inprogress SABP procedures handled by the gateway		
Remedial action: Wait until the existing SABP procedures have completed before sending additional requests.		

Table 28-368 IuCSMGW_remoteMTP3Unreachable

Alarm	Attributes	Applicable major release
Name: IuCSMGW_remoteMTP3Unreachable (6021) Type: communicationsAlarm Package: femto.IuCSMGW_remoteMTP3Unreachable Raised on class: femto.IuCSMGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0

Table 28-368 IuCSMGW_remoteMTP3Unreachable (continued)

Alarm	Attributes	Applicable major release
Description: All routes to reach the MTP3 at this destination (i.e. Media Gateway) have failed.		
Remedial action: Check the status of the remote MTP3 on the remote device		

Table 28-369 IuCSMGW_remoteMTP3UserUnavailable

Alarm	Attributes	Applicable major release
Name: IuCSMGW_remoteMTP3UserUnavailable (6022) Type: communicationsAlarm Package: femto.IuCSMGW_ remoteMTP3UserUnavailable Raised on class: femto.IuCSMGW	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: transmitFailure	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The user of the MTP3 (i.e. ALCAP/STC.1) on the peer node is not available for service		
Remedial action: Check the status of the remote MTP3 on the remote device		

Table 28-370 IuCSUserplaneVCL_aConfigFailure

Alarm	Attributes	Applicable major release
Name: IuCSUserplaneVCL_aConfigFailure (6024) Type: processingErrorAlarm Package: femto.IuCSUserplaneVCL_aConfigFailure Raised on class: femto.IuCSUserplaneVCL	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: applicationSubsystemFailure	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The userplane configuration is failed in ALCAP. To recover from this failure, degrow this IuCSUserplaneVCL and regrow again.		
Remedial action: NA		

Table 28-371 IuCSUserplaneVCL_aEndToEndConnectionFailure

Alarm	Attributes	Applicable major release
Name: IuCSUserplaneVCL_ aEndToEndConnectionFailure (6025) Type: communicationsAlarm Package: femto.IuCSUserplaneVCL_ aEndToEndConnectionFailure Raised on class: femto.IuCSUserplaneVCL	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0

Table 28-371 IuCSUserplaneVCL_aEndToEndConnectionFailure (continued)

Alarm	Attributes	Applicable major release
Description: Multiple CS calls that were having bearers on this userplane has faced end to end bearer failures. This will be cleared upon a successful call establishment and teardown.		
Remedial action: NA		

Table 28-372 IuCSUserplaneVCL_aLocallyBlockedForAdminLock

Alarm	Attributes	Applicable major release
Name: IuCSUserplaneVCL_ aLocallyBlockedForAdminLock (6026) Type: processingErrorAlarm Package: femto.IuCSUserplaneVCL_ aLocallyBlockedForAdminLock Raised on class: femto.IuCSUserplaneVCL	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The userplane is locally blocked due to local admin Lock action. This will be cleared after the admin state changes to unlocked.		
Remedial action: NA		

Table 28-373 IuCSUserplaneVCL_aLocallyBlockedForBearerFailures

Alarm	Attributes	Applicable major release
Name: IuCSUserplaneVCL_ aLocallyBlockedForBearerFailures (6027) Type: processingErrorAlarm Package: femto.IuCSUserplaneVCL_ aLocallyBlockedForBearerFailures Raised on class: femto.IuCSUserplaneVCL	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The userplane is locally blocked due to multiple call failures resulted due to end-to-end bearer issues. This will be cleared either after one successful call is released or upon the ALCAP trying to unblock upon a expiry		
Remedial action: NA		

Table 28-374 IuCSUserplaneVCL_aLocallyBlockedForUnblockCfm

Alarm	Attributes	Applicable major release
Name: IuCSUserplaneVCL_ aLocallyBlockedForUnblockCfm (6028) Type: communicationsAlarm Package: femto.IuCSUserplaneVCL_ aLocallyBlockedForUnblockCfm Raised on class: femto.IuCSUserplaneVCL	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0

Table 28-374 IuCSUserplaneVCL_aLocallyBlockedForUnblockCfm (continued)

Alarm	Attributes	Applicable major release
Description: The userplane is locally blocked and the unblock procedure is under progress with the peer node and wating for Unblock Confirm. This will be cleared after successful reception of Unblock Confirm from peer.		
Remedial action: NA		

Table 28-375 IuCSUserplaneVCL_aRemotelyBlocked

Alarm	Attributes	Applicable major release
Name: IuCSUserplaneVCL_aRemotelyBlocked (6029) Type: communicationsAlarm Package: femto.IuCSUserplaneVCL_ aRemotelyBlocked Raised on class: femto.IuCSUserplaneVCL	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: remoteNodeTransmissionError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The userplane is remotely blocked by the peer node. This will be cleared after the remote successfully unblocks the userplane.		
Remedial action: NA		

Table 28-376 IuCS_aspInactive

Alarm	Attributes	Applicable major release
Name: IuCS_aspInactive (6030) Type: communicationsAlarm Package: femto.IuCS_aspInactive Raised on class: femto.IuCS	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Notification to inform the application that the FGW's IPSP instance has become inactive		
Remedial action: NA		

Table 28-377 IuCS_destinationMSCNotReachable

Alarm	Attributes	Applicable major release
Name: IuCS_destinationMSCNotReachable (6031) Type: communicationsAlarm Package: femto.IuCS_destinationMSCNotReachable Raised on class: femto.IuCS	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0

Table 28-377 IuCS_destinationMSCNotReachable (continued)

Alarm	Attributes	Applicable major release
Description: This fault is generated when 3G-MSC is not reachable from the SCGW		
Remedial action: Check the vlan by pinging the ipaddress and also the association existence using the command Cat /proc/net/sctp/assoc.Use wireshark to capture trace and BSR Gateway logs and check if SSP is in prohibited state or whether AS is in inactive state.Check whether the PC is unavailable or route is unavailableCheck the configuration settings on the BSR Gateway and the Core Network and correct the configuration if necessary.Retry the communication between the Core Network and the BSR Gateway.This alarm is cleared after successful handshake with the Core Network.It can be verified in Wireshark capture and also by executing calls through that interface.		

Table 28-378 IuCS_emergencyCallfailed

Alarm	Attributes	Applicable major release
Name: IuCS_emergencyCallfailed (6032) Type: communicationsAlarm Package: femto.IuCS_emergencyCallfailed Raised on class: femto.IuCS	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SCGW could not handle Emergency Call		
Remedial action: Check the connectivity between BSR Gateway and MSC.Check whether BSR Gateway socket towards MSC is opened.Check for the ERROR/FATAL log statements related to this issue.This alarm is manually cleared from the OAM system.		

Table 28-379 IuCS_failedToSendPAGINGToBSR

Alarm	Attributes	Applicable major release
Name: IuCS_failedToSendPAGINGToBSR (6033) Type: communicationsAlarm Package: femto.IuCS_failedToSendPAGINGToBSR Raised on class: femto.IuCS	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SCGW fails to send PAGING message to BSR		
Remedial action: Check for the log statement Failed to send PAGING, BSR Instin Log_FMG.log file. This prints the association ID of the Small Cell for which the paging message failed.Check for the Small Cells registeredin the BSR Gateway console using the command bsg_get_bsr_registrations.If there is no Small Cell registered with the BSR Gateway, retry the scenario after registering the Small Cells with the BSR Gateway.Perform paging from the Core Network and check whether any new alarm is generated.This fault is manually cleared at the OAM system.		

Table 28-380 IuCS_failedToSendRelocationRequestMsgToDestBSR

Alarm	Attributes	Applicable major release
Name: IuCS_ failedToSendRelocationRequestMsgToDestBSR (6034) Type: communicationsAlarm Package: femto.IuCS_ failedToSendRelocationRequestMsgToDestBSR Raised on class: femto.IuCS	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SCGW could not send Relocation Request message to the BSR		
Remedial action: Check whether the Small Cell is registered with the BSR Gateway.Check whether there are FATAL/ERROR logs in Log_FMG.log with respect to this issue.Use the above mentioned information to isolate the issue at Small Cell or BSR Gateway end.This fault is manually cleared from the OAM system. Clear the alarm if the next relocation request message sent from BSR Gateway reaches the destination Small Cell.		

Table 28-381 IuCS_iuCsInterfaceInactive

Alarm	Attributes	Applicable major release
Name: IuCS_iuCsInterfaceInactive (6035) Type: communicationsAlarm Package: femto.IuCS_iuCsInterfaceInactive Raised on class: femto.IuCS	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unavailable	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The IuCS interface has become inactive as the number of dropped inbound massages has been exceeded. This indicates a potential locking of the IuCS interface or fault at the Core Network.		
Remedial action: Check if the administrative state of IuCS interface is set to locked. If locked then unlock the IuCS interface.Run BSGConsole.exe. Use the command in active FGW to check the destination point code status:bsg_get_destination_status<dpc> Check the link connectivity.Investigate the fault at the SGSN end.Perform SCTPAssociation administrative state lock/unlock from FGW CLI/SAM torestore the link.The alarm is cleared automatically by the clear alarmIUCS_IUCSINTERFACEINACTIVECLEARANCE, if CN responds for furtherconnection requests from the FGW.If the problem persists, contact Nokia customer support		

Table 28-382 IuCS_noBSRConnectedToBSG

Alarm	Attributes	Applicable major release
Name: IuCS_noBSRConnectedToBSG (6036) Type: communicationsAlarm Package: femto.IuCS_noBSRConnectedToBSG Raised on class: femto.IuCS	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SCGW fails to forward CL messages to BSR since no BSRs are connected		

Table 28-382 IuCS_noBSRConnectedToBSG (continued)

Alarm	Attributes	Applicable major release
Remedial action: Check for the Small Cells registered in the BSR Gateway Console using the command bsg_get_bsr_registrations. Register the Small Cell and retry the CS call.If there is no Small Cell registered, then register the Small Cells with the BSR Gateway and retry the scenario again.This fault is manually cleared from the OAM system.		

Table 28-383 IuCS_noBSRInReceivedLAC

Alarm	Attributes	Applicable major release
Name: IuCS_noBSRInReceivedLAC (6037) Type: communicationsAlarm Package: femto.IuCS_noBSRInReceivedLAC Raised on class: femto.IuCS	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SCGW receives paging message from a MSC for which no BSR is registered		
Remedial action: Check for the FATAL/ERROR log messages in Log_FMG.log for the relevant error messages.If the Small Cell is not registered, register the Small Cell.Issue the same paging message again.Clear the alarm manually.		

Table 28-384 IuCS_receivedMTP3PauseSPInaccessible

Alarm	Attributes	Applicable major release
Name: IuCS_receivedMTP3PauseSPInaccessible (6038) Type: communicationsAlarm Package: femto.IuCS_ receivedMTP3PauseSPInaccessible Raised on class: femto.IuCS	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SCCP stack receives MTP3-Pause due to deactivation of link indicating remote point inaccessible.		
Remedial action: This alarm is automatically cleared by theBSGwhen the remote point code of MSCis accessible and in allowed state.		

Table 28-385 IuCS_receivedPauseForMSC

Alarm	Attributes	Applicable major release
Name: IuCS_receivedPauseForMSC (6039) Type: communicationsAlarm Package: femto.IuCS_receivedPauseForMSC Raised on class: femto.IuCS	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0

Table 28-385 IuCS_receivedPauseForMSC (continued)

Alarm	Attributes	Applicable major release
Description: This fault is generated when SCGW is not able to access MSC due to failure of connection towards MSC		
Remedial action: Check the point codes configured for the particular Iu interface at the the BSR Gateway as well as in the core network.Make necessary changes if the configuration is incorrect.Run BSGConsole.exe. Use the command in active FGW to check the destination point code status:bsg_get_destination_status<dpc> Check the link connectivity.Investigate the fault at the MSC end.Perform SCTPAssociation administrative state lock/unlock from FGW CLI/SAM to restore the link.This fault is cleared automatically when the destination point code for a CS domaininterface is in available state, that is, when destination point code/route available message is received.The clearance alarm is IUCS_RECEIVEDPAUSEFORMSCCLEARANCE.This can be verified by Wireshark capture and also by executing calls.If the problem persists, contact Nokia customer support.		

Table 28-386 IuCS_remoteMTP3Unreachable

Alarm	Attributes	Applicable major release
Name: IuCS_remoteMTP3Unreachable (6040) Type: communicationsAlarm Package: femto.IuCS_remoteMTP3Unreachable Raised on class: femto.IuCS	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: All routes to reach the MTP3 at this destination (i.e. MSC server) have failed.		
Remedial action: Check the availability status of the remote systemIf the problem persists, contact Nokia customer support		

Table 28-387 IuCS_remoteMTP3UserUnavailable

Alarm	Attributes	Applicable major release
Name: IuCS_remoteMTP3UserUnavailable (6041) Type: communicationsAlarm Package: femto.IuCS_remoteMTP3UserUnavailable Raised on class: femto.IuCS	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: transmitFailure	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The user of the MTP3 (i.e. SCCP) on the peer node is not available for service		
Remedial action: Check the availability status of the remote system		

Table 28-388 IuCS_remoteSubsystemOutOfService

Alarm	Attributes	Applicable major release
Name: IuCS_remoteSubsystemOutOfService (6042) Type: processingErrorAlarm Package: femto.IuCS_remoteSubsystemOutOfService Raised on class: femto.IuCS	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The remote subsystem has gone out of service		
Remedial action: Check the status of the remote system		

Table 28-389 IuPC_destinationSASNotReachable

Alarm	Attributes	Applicable major release
Name: IuPC_destinationSASNotReachable (8492) Type: communicationsAlarm Package: femto.IuPC_destinationSASNotReachable Raised on class: femto.IuPC	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1
Description: This fault is generated when operator SAS is not reachable from the SCGW		
Remedial action: Check the vlan by pinging the ipaddress and also the association existence using the command Cat /proc/net/sctp/assoc. Use wireshark to capture trace and SCGW logs and check if SSP is in prohibited state or whether AS is in inactive state.Check whether the PC is unavailable or route is unavailable Check the configuration settings on the SCGW and the Core Network and correct the configuration if necessary. Retry the communication between the Core Network and the SCGW. This alarm is cleared after successful handshake with the Core Network. It can be verified in Wireshark capture and also by executing calls through that interface.		

Table 28-390 IuPC_positionInitiationGlobalTransactionIdExhausted

Alarm	Attributes	Applicable major release
Name: IuPC_ positionInitiationGlobalTransactionIdExhausted (8493) Type: qualityOfServiceAlarm Package: femto.IuPC_ positionInitiationGlobalTransactionIdExhausted Raised on class: femto.IuPC	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity	Release: • SC17.2 • SC19.1 • SC20.1
Description: The pool of Global Transaction Ids for use with PCAP Position Initiation Request procedures is 95% exhausted		
Remedial action: Alarm occurs due to high rate of RANAP Location Report Control procedures for UEs in Small Cell coverage. Consider reducing frequency of these procedures. Consider use of RNC centric location procedures rather than SAS centric . Automatically cleared when transaction id usage recovers to less than 90%.		

Table 28-391 IuPS_aspInactive

Alarm	Attributes	Applicable major release
Name: IuPS_aspInactive (6044) Type: communicationsAlarm Package: femto.IuPS_aspInactive Raised on class: femto.IuPS	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Notification to inform the application that the FGW's IPSP instance has become inactive		
Remedial action: NA		

Table 28-392 IuPS_destinationSGSNNotReachable

Alarm	Attributes	Applicable major release
Name: IuPS_destinationSGSNNotReachable (6045) Type: communicationsAlarm Package: femto.IuPS_destinationSGSNNotReachable Raised on class: femto.IuPS	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SGSN is not reachable from the SCGW		
Remedial action: Check the vlan by pinging the ipaddressand also the association existence using the commandCat /proc/net/sctp/assoc.Use wireshark capture trace and FGW logs and check if SSP is in prohibited state or whether AS is in inactive state.Check whether PC is unavailable or route is unavailable.Check the configuration settings at BSR Gateway and the CN and correct the configuration if necessary.Retry communication between the CN and the BSR Gateway.When CN establishes communication with the BSR Gateway successfully, this alarm is cleared after successful handshake with core network.		

Table 28-393 IuPS_failedToSendPAGINGToBSR

Alarm	Attributes	Applicable major release
Name: IuPS_failedToSendPAGINGToBSR (6046) Type: communicationsAlarm Package: femto.IuPS_failedToSendPAGINGToBSR Raised on class: femto.IuPS	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SCGW fails to send PAGING message to BSR		
Remedial action: Check for the log statement Failed to send PAGING, BSR Instin Log_FMG.log file. This prints the association ID of the Small Cell for which the paging message failed.Check for the Small Cells registeredin the BSR Gateway console using the command bsg_get_bsr_registrations.If there is no Small Cell registered with the BSR Gateway, retry the scenario after registering the Small Cells with the BSR Gateway.Perform paging from the Core Network and check whether any new alarm is generated.This fault is manually cleared at the OAM system.		

Table 28-394 IuPS_failedToSendRANAPResetToBSR

Alarm	Attributes	Applicable major release
Name: IuPS_failedToSendRANAPResetToBSR (6047) Type: communicationsAlarm Package: femto.IuPS_ failedToSendRANAPResetToBSR Raised on class: femto.IuPS	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SCGW fails to send RANAP RESET message to BSR		
Remedial action: Check the status of the interface to the BSR.		

Table 28-395 IuPS_failedToSendRelocationRequestMsgToDestBSR

Alarm	Attributes	Applicable major release
Name: IuPS_ failedToSendRelocationRequestMsgToDestBSR (6048) Type: communicationsAlarm Package: femto.IuPS_ failedToSendRelocationRequestMsgToDestBSR Raised on class: femto.IuPS	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SCGW could not send Relocation Request message to the BSR		
Remedial action: Check whether the Small Cell is registered with the BSR Gateway.Check whether there are FATAL/ERROR logs in Log_FMG.log with respect to this issue.Use the above mentioned information to isolate the issue at Small Cell or BSR Gateway end.This fault is manually cleared from the OAM system. Clear the alarm if the next relocation request message sent from BSR Gateway reaches the destination Small Cell.		

Table 28-396 IuPS_failedToSendResetResourceToBSR

Alarm	Attributes	Applicable major release
Name: IuPS_failedToSendResetResourceToBSR (6049) Type: communicationsAlarm Package: femto.IuPS_ failedToSendResetResourceToBSR Raised on class: femto.IuPS	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SCGW fails to send Reset Resource message to BSR		
Remedial action: Check the status of the interface to the BSR.		

Table 28-397 IuPS_gtpEchoFailure

Alarm	Attributes	Applicable major release
Name: IuPS_gtpEchoFailure (6050) Type: communicationsAlarm Package: femto.IuPS_gtpEchoFailure Raised on class: femto.IuPS	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: responseTimeExcessive	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: No response to repetitive GTP-U Echo Requests from BPG to SGSN for a particular active connection.		
Remedial action: The SGSN machine must be up and running.Check for proper cable connections between the SGSN and the BTG. Verify whether the response is properly sent and received.Initiate PS call between Small Cell and SGSN. The GTP echo request is raised automatically from the BTG machine to the SGSN machine.Verify the connection is established with Small Cell and BTG through BTGConsole. Run BTGConsole application and enter btg_get_bpg_table. The rule is present for the corresponding Small Cell and SGSN.When a GTP Echo response is received from SGSN then the alarm is auto cleared by BTG.Verify the alarm is raised or not from the BTG log file /opt/log/BTG/Log_BTG.log using the pattern IUPS_GTPECHOFAILURE ALARM clearance raised.		

Table 28-398 IuPS_iuPsInterfaceInactive

Alarm	Attributes	Applicable major release
Name: IuPS_iuPsInterfaceInactive (6051) Type: communicationsAlarm Package: femto.IuPS_iuPsInterfaceInactive Raised on class: femto.IuPS	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unavailable	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The IuPS interface has become inactive as the number of dropped inbound massages has been exceeded. This indicates a potential locking of the IuPS interface or fault at the Core Network.		
Remedial action: Check if the administrative state of IuPS interface is set to locked. If locked thenunlock the IuPS interface.Run BSGConsole.exe. Use the command bsg_get_destination_status<dpc> in active FGW to check the destination point code status.Check the link connectivity.Investigate the fault at the SGSN end.Perform SCTPAssociation administrative state lock/unlock from FGW CLI/SAM torestore the link.The alarm is cleared automatically by the clear alarmIUPS_IUPSINTERFACEINACTIVECLEARANCE, if CN responds for furtherconnection requests from the FGW.If the problem persists, contact Nokia customer support.		

Table 28-399 IuPS_noBSRConnectedToBSG

Alarm	Attributes	Applicable major release
Name: IuPS_noBSRConnectedToBSG (6052) Type: communicationsAlarm Package: femto.IuPS_noBSRConnectedToBSG Raised on class: femto.IuPS	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SCGW fails to forward CL messages to BSR since no BSRs are connected		

Table 28-399 IuPS_noBSRConnectedToBSG (continued)

Alarm	Attributes	Applicable major release
Remedial action: Check for the Small Cells registered in the BSR Gateway Console using the command bsg_get_bsr_registrations. Register the Small Cell and retry the CS call.If there is no Small Cell registered, then register the Small Cells with the BSR Gateway and retry the scenario again.This fault is manually cleared from the OAM system.		

Table 28-400 IuPS_noBSRInReceivedRAC

Alarm	Attributes	Applicable major release
Name: IuPS_noBSRInReceivedRAC (6053) Type: communicationsAlarm Package: femto.IuPS_noBSRInReceivedRAC Raised on class: femto.IuPS	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SCGW receives a paging message for an RAC and no BSR is registered for that RAC		
Remedial action: Check the fatal/error log messages in Log_FMG.logfor the relevant error messages.If the Small Cell is not registered, then register the same.Issue the same paging message again.Clear the alarm manually.		

Table 28-401 IuPS_receivedMTP3PauseSPInaccessible

Alarm	Attributes	Applicable major release
Name: IuPS_receivedMTP3PauseSPInaccessible (6054) Type: communicationsAlarm Package: femto.IuPS_ receivedMTP3PauseSPInaccessible Raised on class: femto.IuPS	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when SCCP stack receives MTP3-Pause due to deactivation of link indicating remote point inaccessible.		
Remedial action: This alarm is automatically cleared by theBSGwhen the remote point code of MSCis accessible and in allowed state.		

Table 28-402 IuPS_receivedPauseForSGSN

Alarm	Attributes	Applicable major release
Name: IuPS_receivedPauseForSGSN (6055) Type: communicationsAlarm Package: femto.IuPS_receivedPauseForSGSN Raised on class: femto.IuPS	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0

Table 28-402 IuPS_receivedPauseForSGSN (continued)

Alarm	Attributes	Applicable major release
Description: This fault is generated when SCGW is not able to access SGSN due to connection failure towards SGSN		
Remedial action: Check the point codes status at BSR Gateway and SGSN and the configuration settings at BSR Gateway and SGSN.Run BSGConsole.exe. Use the command bsg_get_destination_status<dpc> in active FGW to check the destination point code status.Check the link connectivity.Investigate the fault at the SGSN end.Perform SCTPAssociation administrative state lock/unlock from FGW CLI/SAM to restore the link.This fault is cleared automatically when the destination point code for a PS domain interface is in available state (when destination point code/Route available message is received).The clearance alarm is IUPS_ RECEIVEDPAUSEFORSGSNCLEARANCE.This can be verified by Wireshark capture and also by executing calls.If the problem persists, contact Nokia customer support.		

Table 28-403 IuPS_remoteMTP3Unreachable

Alarm	Attributes	Applicable major release
Name: IuPS_remoteMTP3Unreachable (6056) Type: communicationsAlarm Package: femto.IuPS_remoteMTP3Unreachable Raised on class: femto.IuPS	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: All routes to reach the MTP3 at this destination (i.e. SGSN) have failed.		
Remedial action: Check the availability status of the remote systemIf the problem persists, contact Nokia customer support		

Table 28-404 IuPS_remoteMTP3UserUnavailable

Alarm	Attributes	Applicable major release
Name: IuPS_remoteMTP3UserUnavailable (6057) Type: communicationsAlarm Package: femto.IuPS_remoteMTP3UserUnavailable Raised on class: femto.IuPS	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: transmitFailure	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The user of the MTP3 (i.e. SCCP) on the peer node is not available for service		
Remedial action: Check the status of the remote system		

Table 28-405 IuPS_remoteSubsystemOutOfService

Alarm	Attributes	Applicable major release
Name: IuPS_remoteSubsystemOutOfService (6058) Type: processingErrorAlarm Package: femto.IuPS_remoteSubsystemOutOfService Raised on class: femto.IuPS	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: applicationSubsystemFailure	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The remote subsystem has gone out of service		
Remedial action: Check the availability status of the remote systemIf the problem persists, contact Nokia customer support		

Table 28-406 LagPortAddFailed

Alarm	Attributes	Applicable major release
Name: LagPortAddFailed (422) Type: equipmentAlarm Package: equipment.LagPortAddFailed Raised on class: equipment.PhysicalPort	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: linkDown	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when the Lag Port Add function Fails.		
Raising condition: (('state' EQUAL 'Link Down') AND ('LAG ID' > '0'))		
Clearing condition: (('state' NOT EQUAL 'Link Down') OR ('LAG ID' EQUAL '0'))		
Remedial action: A configuration error has occurred which must be corrected. The link that was to be added to the LAG group may be of the wrong type (i.e. non ethernet) or the limit of the number of links supported in a LAG may have been reached.		

Table 28-407 LegalReq_legalReqFileDeliveryFailure

Alarm	Attributes	Applicable major release
Name: LegalReq_legalReqFileDeliveryFailure (6090) Type: communicationsAlarm Package: femto.LegalReq_legalReqFileDeliveryFailure Raised on class: femto.LegalReq	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: transmissionError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when the SCGW fails to deliver a legal requisition data file to the collection server.		
Remedial action: Verify whether LR server is reachable by pinging to the ip address of the LRServer.Verify whether public key authentication has been enabled between BSR Gateway and LR Server (when manual SFTP from BSR Gateway to LR Server is tried, user should not be prompted for password).Verify the directory permissions on the LRServer is root:root and the permission is 755. This fault will be cleared automatically when BSR Gateway succeeds in sending a previously failed legal req file.		

Table 28-408 LegalReq_legalReqFileDeliveryFailureclearance

Alarm	Attributes	Applicable major release
Name: LegalReq_ legalReqFileDeliveryFailureclearance (6091) Type: processingErrorAlarm Package: femto.LegalReq_ legalReqFileDeliveryFailureclearance Raised on class: femto.LegalReq	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: fileError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This alarm is generated when the FGW succeeds in sending a previously failed legal req file.		
Remedial action: NA		

Table 28-409 LicensedLimitExceeded

Alarm	Attributes	Applicable major release
Name: LicensedLimitExceeded (127) Type: licensingAlarm Package: security.LicensedLimitExceeded Raised on class: security.SamLicensePoints	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: licensedLimitExceeded	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 28-410 LinkDown (equipment)

Alarm	Attributes	Applicable major release
Name: LinkDown (12) Type: communicationsAlarm Package: equipment.LinkDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: portLinkProblem	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		

Table 28-410 LinkDown (equipment) (continued)

Alarm	Attributes	Applicable major release
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 28-411 LowTemperatureDetected

Alarm	Attributes	Applicable major release
Name: LowTemperatureDetected (1127) Type: environmentalAlarm Package: equipment.LowTemperatureDetected Raised on class: equipment.Shelf	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentOvercooled	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when the chassis temperature falls below the minimum threshold.		
Raising condition: ('Low Temperature State' EQUAL 'Low')		
Clearing condition: ('Low Temperature State' NOT EQUAL 'Low')		
Remedial action: The NE has detected internal temperatures which are abnormally low. This may happen when the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 28-412 MeNBMasterCP_spareAlarmMeNBMasterCP1

Alarm	Attributes	Applicable major release
Name: MeNBMasterCP_spareAlarmMeNBMasterCP1 (12998) Type: equipmentAlarm Package: femto.MeNBMasterCP_ spareAlarmMeNBMasterCP1 Raised on class: femto.MeNBMasterCP	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC20.1
Description: Spare Alarm 1		
Remedial action: Spare Alarm 1		

Table 28-413 MeNBMasterCP_spareAlarmMeNBMasterCP2

Alarm	Attributes	Applicable major release
Name: MeNBMasterCP_spareAlarmMeNBMasterCP2 (12999) Type: equipmentAlarm Package: femto.MeNBMasterCP_ spareAlarmMeNBMasterCP2 Raised on class: femto.MeNBMasterCP	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC20.1

Table 28-413 MeNBMasterCP_spareAlarmMeNBMasterCP2 (continued)

Alarm	Attributes	Applicable major release
Description: Spare Alarm 2		
Remedial action: Spare Alarm 2		

Table 28-414 MeNBMasterCP_spareAlarmMeNBMasterCP3

Alarm	Attributes	Applicable major release
Name: MeNBMasterCP_spareAlarmMeNBMasterCP3 (13000) Type: equipmentAlarm Package: femto.MeNBMasterCP_ spareAlarmMeNBMasterCP3 Raised on class: femto.MeNBMasterCP	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC20.1
Description: Spare Alarm 3		
Remedial action: Spare Alarm 3		

Table 28-415 MMERegion_invalidTacRegion

Alarm	Attributes	Applicable major release
Name: MMERegion_invalidTacRegion (6095) Type: communicationsAlarm Package: femto.MMERegion_invalidTacRegion Raised on class: femto.MMERegion	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1
Description: This fault is raised when operators configures a region with a TAC that is already used by an existing region		
Remedial action: Correct the region's configuration in the appropriate MMERegion object		

Table 28-416 MMERegion_s1InterfaceFailure

Alarm	Attributes	Applicable major release
Name: MMERegion_s1InterfaceFailure (6096) Type: communicationsAlarm Package: femto.MMERegion_s1InterfaceFailure Raised on class: femto.MMERegion	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1
Description: S1 Interface towards all the MME's in this MMERegion are down.		
Remedial action: Check the status of the MMEs.Check the communication path to the MME.This fault is automatically cleared by the clear alarmMMEREGION_S1INTERFACEFAILURECLEARANCE.If the problem persists, contact Nokia customer support.		

Table 28-417 MME_rangeOfStreamsFromMMENotSupported

Alarm	Attributes	Applicable major release
Name: MME_rangeOfStreamsFromMMENotSupported (6097) Type: communicationsAlarm Package: femto.MME_ rangeOfStreamsFromMMENotSupported Raised on class: femto.MME	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1
Description: This fault indicates that an uneqal number of input and output streams have been received from the MME or a S1AP message with an invalid stream id has been received		
Remedial action: MME configuration needs to be corrected for input and output SCTP streams.This alarm should be manually cleared by the OAM system's user..If the problem persists, contact Nokia customer support.		

Table 28-418 MME_s1InterfaceDown

Alarm	Attributes	Applicable major release
Name: MME_s1InterfaceDown (6098) Type: communicationsAlarm Package: femto.MME_s1InterfaceDown Raised on class: femto.MME	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1
Description: This fault is generated when the S1 Setup procedure fails towards towards the MME (i.e. No S1 Setup Response after several retries or reception of S1 Setup Failure response). This indicates the s1Interface down and no other procedure can be performed towards the MME.		
Remedial action: Check the status of the MME.Check the communication path to the MME.This fault is automatically cleared by the clear alarmMME_S1INTERFACEDOWNCLEARANCE.If the problem persists, contact Nokia customer support.		

Table 28-419 MME_s1InterfaceInactive

Alarm	Attributes	Applicable major release
Name: MME_s1InterfaceInactive (6099) Type: communicationsAlarm Package: femto.MME_s1InterfaceInactive Raised on class: femto.MME	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1
Description: This fault indicates that S1 link between SCGW and MME has been locked through an OAM action. This alarm gets cleared when S1 link is unlocked		
Remedial action: Perform unlock operation for MME on the OAM system GUI.This fault is automatically cleared by the clear alarmMME_S1INTERFACEINACTIVECLEARANCE.If the problem persists, contact Nokia customer support.		

Table 28-420 MME_s1SCTPAssociationDown

Alarm	Attributes	Applicable major release
Name: MME_s1SCTPAssociationDown (6100) Type: communicationsAlarm Package: femto.MME_s1SCTPAssociationDown Raised on class: femto.MME	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1
Description: This fault indicates SCTP assoication failure between SCGW and MME.		
Remedial action: Check the status of the MME.Check the communication path to the MME.This fault is automatically cleared by the clear alarmMME_S1SCTPASSOCIATIONDOWNCLEARANCE.If the problem persists, contact Nokia customer support.		

Table 28-421 MobileConnectorDown

Alarm	Attributes	Applicable major release
Name: MobileConnectorDown (1064) Type: EpcAlarm Package: lteservice.MobileConnectorDown Raised on class: lteservice.MobileServiceConnector	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EpcDown	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL '\"\"')		
Clearing condition: ('EPS Path' NOT EQUAL '\"\"')		
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

Table 28-422 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major release
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm Package: netw. NeManagementAndTrapManagementMismatch Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: neManagementChange	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		

Table 28-422 NeManagementAndTrapManagementMismatch (continued)

Alarm	Attributes	Applicable major release
Raising condition: ((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band')))		
Clearing condition: ((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band')))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

Table 28-423 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major release
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm Package: security.NewSsh2ServerKeyDetected Raised on class: security.KnownHostKey	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 28-424 NextHopHeartBeat_fgwActiveSRLinkDown

Alarm	Attributes	Applicable major release
Name: NextHopHeartBeat_fgwActiveSRLinkDown (6151) Type: communicationsAlarm Package: femto.NextHopHeartBeat_ fgwActiveSRLinkDown Raised on class: femto.NextHopHeartBeat	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1
Description: This alarm is reported to indicate that SCGW Active node cannot reach one of the SRs connected to it. This alarm shall be raised for each SR failure		
Remedial action: Check the connection between the gateway and the service router for the active SR link.If the problem persists, contact Nokia customer support.		

Table 28-425 NextHopHeartBeat_fgwStandbySRLinkDown

Alarm	Attributes	Applicable major release
Name: NextHopHeartBeat_fgwStandbySRLinkDown (6152) Type: communicationsAlarm Package: femto.NextHopHeartBeat_ fgwStandbySRLinkDown Raised on class: femto.NextHopHeartBeat	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1
Description: This alarm is reported to indicate that SCGW Standby node cannot reach one of the SRs connected to it. This alarm shall be raised for each SR failure		
Remedial action: Check the connection between the gateway and the service router for the standby SR linkIf the problem persists, contact Nokia customer support.		

Table 28-426 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major release
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm Package: netw.NodeDatabaseFallbackDetected Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeDatabaseFallback	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 28-427 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major release
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm Package: netw.NodeDatabaseMisalignmentDetected Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		

Table 28-427 NodeDatabaseMisalignmentDetected (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

Table 28-428 NodeSuspended

Alarm	Attributes	Applicable major release
Name: NodeSuspended (5123) Type: communicationsAlarm Package: netw.NodeSuspended Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NodeSuspend	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element.The alarm will be cleared when the network element is managed back.		

Table 28-429 OAM_223

Alarm	Attributes	Applicable major release
Name: OAM_223 (6164) Type: communicationsAlarm Package: femto.OAM_223 Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • 4.0.0
Description: Some of the SCGW PM files are missing. Please check the SCGW logs for reasons on why the PM files are missing.		
Remedial action: Check the communication link between PM Server and FileServer. This notification may be required by Global Product Support for debugging purposes		

Table 28-430 OverloadedCard

Alarm	Attributes	Applicable major release
Name: OverloadedCard (2941) Type: cardAlarm Package: equipment.OverloadedCard Raised on class: equipment.AtcaCard	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: overloadedCard	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when an ATCA card becomes overloaded.		
Raising condition: (('Overload State' EQUAL 'Critical') OR ('Overload State' EQUAL 'Resource Critical'))		
Clearing condition: ('Overload State' EQUAL 'Normal')		
Remedial action: Investigate /opt/tpa/logs/RACServer.log on the CSB to determine cause of system overload.		

Table 28-431 OverTemperatureDetected

Alarm	Attributes	Applicable major release
Name: OverTemperatureDetected (388) Type: environmentalAlarm Package: equipment.OverTemperatureDetected Raised on class: equipment.Shelf	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentOverheated	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when the chassis temperature exceeds the maximum threshold value.		
Raising condition: ('Over Temperature State' EQUAL 'Over')		
Clearing condition: ('Over Temperature State' NOT EQUAL 'Over')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 28-432 PartialResyncProblem

Alarm	Attributes	Applicable major release
Name: PartialResyncProblem (4401) Type: communicationsAlarm Package: netw.PartialResyncProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: partialResyncProblem	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when a partial resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		

Table 28-432 PartialResyncProblem (continued)

Alarm	Attributes	Applicable major release
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 28-433 PartialVPRNEncryption

Alarm	Attributes	Applicable major release
Name: PartialVPRNEncryption (8992) Type: configurationAlarm Package: nge.PartialVPRNEncryption Raised on class: nge.VprnEncryptService	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConfigMismatch	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when one or more sites are not encryption enabled in a VPRN service.		
Raising condition: (('VPRN Service Encryption Status' EQUAL 'Partial'))		
Clearing condition: (('VPRN Service Encryption Status' NOT EQUAL 'Partial'))		
Remedial action: This site is newly added to the VPRN service, Perform the encrypt operation on the KeyGroup to clear the alarm.		

Table 28-434 PCIEthernetCard_cardFailure

Alarm	Attributes	Applicable major release
Name: PCIEthernetCard_cardFailure (6165) Type: equipmentAlarm Package: femto.PCIEthernetCard_cardFailure Raised on class: femto.PCIEthernetCard	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when PCI Ethernet card failure occurs		
Remedial action: Check whether the Ethernet card to be installed in the X4250 system, is recommended by SUN.Check whether the PCIe Ethernet card is inserted in the appropriate slot.Check whether there are any alignment issues while installing the Ethernet card.Rectify the problems and reboot the system.Connect the cable to the card and check whether the LED is blinking, indicating flow of traffic.After receiving EthernetPort_cardFailure clearance alarm, the operator must do a manual clearance.		

Table 28-435 PCIEthernetPort_cardFailure

Alarm	Attributes	Applicable major release
Name: PCIEthernetPort_cardFailure (6166) Type: equipmentAlarm Package: femto.PCIEthernetPort_cardFailure Raised on class: femto.PCIEthernetPort	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when a PCI Ethernet Port failure occurs		
Remedial action: Check whether the Ethernet card to be installed in the X4250 system, is recommended by SUN.Check whether the PCIe Ethernet card is inserted in the appropriate slot.Check whether there are any alignment issues while installing the Ethernet card.Rectify the problems and reboot the system.Connect the cable to the card and check whether the LED is blinking, indicating flow of traffic.After receiving EthernetPort_cardFailure clearance alarm, the operator must do a manual clearance.		

Table 28-436 PCIEthernetPort_interfaceActive

Alarm	Attributes	Applicable major release
Name: PCIEthernetPort_interfaceActive (6167) Type: communicationsAlarm Package: femto.PCIEthernetPort_interfaceActive Raised on class: femto.PCIEthernetPort	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: unspecifiedReason	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when the PCI Ethernet Port interface is up		
Remedial action: The operator must do a manual clearance.		

Table 28-437 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major release
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm Package: netw. PersistentIndexParametersMisconfigured Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistentIndexConfiguration-Mismatch	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when persistence is set to Off in the NE BOF.		
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		

Table 28-437 PersistentIndexParametersMisconfigured (continued)

Alarm	Attributes	Applicable major release
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

Table 28-438 PhysicalInterfaceB_vLANInterfaceDown

Alarm	Attributes	Applicable major release
Name: PhysicalInterfaceB_vLANInterfaceDown (6170) Type: communicationsAlarm Package: femto.PhysicalInterfaceB_ vLANInterfaceDown Raised on class: femto.PhysicalInterfaceB	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentMalfunction	Release: • SC17.2 • SC19.1 • SC20.1
Description: This fault indicates that VLAN is not reachable and it is not active.		
Remedial action: Ensure that the VLAN is properly configured on all the nexthops switches and routers.The fault is automatically cleared byPHYSICALINTERFACEB_VLANINTERFACEDOWNCLEARANCE.If the problem persists, contact Nokia customer support.		

Table 28-439 PollerProblem

Alarm	Attributes	Applicable major release
Name: PollerProblem (31) Type: communicationsAlarm Package: netw.PollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resyncFailed	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 28-440 PowerModule_voltageALocalFailure

Alarm	Attributes	Applicable major release
Name: PowerModule_voltageALocalFailure (6171) Type: environmentalAlarm Package: femto.PowerModule_voltageALocalFailure Raised on class: femto.SCATCAPowerModule	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerProblem	Release: • 4.0.0
Description: This Alarm is raised when the 48V Voltage Failure happens in the power supply A of the local Shelf.		
Remedial action: See the nodal documentation for more information.		

Table 28-441 PowerModule_voltageARemoteFailure

Alarm	Attributes	Applicable major release
Name: PowerModule_voltageARemoteFailure (6172) Type: environmentalAlarm Package: femto.PowerModule_voltageARemoteFailure Raised on class: femto.SCATCAPowerModule	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerProblem	Release: • 4.0.0
Description: This Alarm is raised when the 48V Voltage Failure happens in the power supply A of the remote Shelf.		
Remedial action: See the nodal documentation for more information.		

Table 28-442 PowerModule_voltageBLocalFailure

Alarm	Attributes	Applicable major release
Name: PowerModule_voltageBLocalFailure (6173) Type: environmentalAlarm Package: femto.PowerModule_voltageBLocalFailure Raised on class: femto.SCATCAPowerModule	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerProblem	Release: • 4.0.0
Description: This Alarm is raised when the 48V Voltage Failure happens in the power supply B of the local Shelf.		
Remedial action: See the nodal documentation for more information.		

Table 28-443 PowerModule_voltageBRemoteFailure

Alarm	Attributes	Applicable major release
Name: PowerModule_voltageBRemoteFailure (6174) Type: environmentalAlarm Package: femto.PowerModule_voltageBRemoteFailure Raised on class: femto.SCATCAPowerModule	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerProblem	Release: • 4.0.0
Description: This Alarm is raised when the 48V Voltage Failure happens in the power supply B of the remote Shelf.		
Remedial action: See the nodal documentation for more information.		

Table 28-444 PowerSupplySlot_presenceDetectedAssert

Alarm	Attributes	Applicable major release
Name: PowerSupplySlot_presenceDetectedAssert (6175) Type: physicalViolation Package: femto.PowerSupplySlot_ presenceDetectedAssert Raised on class: femto.PowerSupplySlot	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: intrusionDetection	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Presence detected assert		
Remedial action: Check if the power supply slot in the system is faulty.Reboot the system after rectifying the issue.After receiving PowerSupplySlot_presenceDetectedAssert alarm operator must do manual clearance.		

Table 28-445 PowerSupplySlot_presenceDetectedDeassert

Alarm	Attributes	Applicable major release
Name: PowerSupplySlot_presenceDetectedDeassert (6176) Type: physicalViolation Package: femto.PowerSupplySlot_ presenceDetectedDeassert Raised on class: femto.PowerSupplySlot	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: intrusionDetection	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Presence detected de-assert		
Remedial action: The alarm is cleared manually from the OAM system.		

Table 28-446 PowerSupplySlot_pwrSupFailuerDeassert

Alarm	Attributes	Applicable major release
Name: PowerSupplySlot_pwrSupFailuerDeassert (6177) Type: equipmentAlarm Package: femto.PowerSupplySlot_ pwrSupFailuerDeassert Raised on class: femto.PowerSupplySlot	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: powerProblem	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Predictive failure assert		
Remedial action: Manual switch to redundant system recommended to address the power supply problem.		

Table 28-447 PowerSupplySlot_pwrSupFailureAssert

Alarm	Attributes	Applicable major release
Name: PowerSupplySlot_pwrSupFailureAssert (6178) Type: equipmentAlarm Package: femto.PowerSupplySlot_ pwrSupFailureAssert Raised on class: femto.PowerSupplySlot	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerProblem	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Power supply failure detected assert		
Remedial action: Check for voltage fluctuations in the system as a result of power supply failure.Check if there are issues within the power regulator in the system and in the service processor card.Reboot the system after rectifying the above issues.After receiving PowerSupplySlot_pwrSupFailuerDeassert alarm operator must do a manual clearance.		

Table 28-448 PowerSupplySlot_pwrSupInputLost

Alarm	Attributes	Applicable major release
Name: PowerSupplySlot_pwrSupInputLost (6179) Type: equipmentAlarm Package: femto.PowerSupplySlot_pwrSupInputLost Raised on class: femto.PowerSupplySlot	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: powerProblem	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Power supply input lost assert		
Remedial action: Check for the power supply input, to see if there are any fluctuations.Verify whether the power supply unit within the system is in functional order.Reboot the system after rectifying the problems.After restoring operator must do manual clearance.		

Table 28-449 Presence_presenceServerFailure

Alarm	Attributes	Applicable major release
Name: Presence_presenceServerFailure (6180) Type: communicationsAlarm Package: femto.Presence_presenceServerFailure Raised on class: femto.PresenceServer	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: Communication with a Presence server has been lost.		
Remedial action: Obtain the presence server ID, from the last index of the OID, printed in the alarm raised at the OAM system.In SSH session, execute the following commands, to check for IPAddress of presence server, from BSGCLI:/opt/bin/BSGCLI.execd FGW:<DNNumber>/BSG:<DNNumber>/Presence:<PresenceServerID >;get {presenceserver};presenceserver="<IPAddress_of_ Presence_Server>To ping the presence server, execute:Ping <IPAddress_of_Presence_Server>If the destination is reachable then presence server is active.If the destination is not reachable then check for the availability of presence server.The alarm is automatically detected and cleared by the BSR Gateway, once the presence server establishes communication with the Gateway."		

Table 28-450 Presence_publishRespBadEvent

Alarm	Attributes	Applicable major release
Name: Presence_publishRespBadEvent (6181) Type: communicationsAlarm Package: femto.Presence_publishRespBadEvent Raised on class: femto.PresenceServer	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: communicationsProtocolError	Release: • SC17.2 • SC19.1 • SC20.1 • 4.0.0
Description: This fault is generated when the SCGW receives a 489 (Bad Event) response in return to a SIP PUBLISH
