Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm Package: equipment.ContainingEquipmentMismatch Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentMismatch	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 34-15 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm Package: equipment. ContainingEquipmentOperationallyDown Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentDown	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationllyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

Table 34-16 CorruptImageFile

Alarm	Attributes	Applicable major release
Name: CorruptImageFile (171) Type: configurationAlarm Package: mediation.CorruptImageFile Raised on class: mediation. AbstractSoftwareFolderDescriptor	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 34-17 DiameterMonitoredDestinationOverloaded

Alarm	Attributes	Applicable major release
Name: DiameterMonitoredDestinationOverloaded (7959) Type: EpcAlarm Package: lte. DiameterMonitoredDestinationOverloaded Raised on class: lte.DscDiameterMonDestination	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: DscOverloadStateChange	Release: • 6.0 • 7.0 • 8.0 • 9.0

Table 34-17 DiameterMonitoredDestinationOverloaded (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the overload state of a monitored destination changes from normal.		
Raising condition: (('Overload State' EQUAL 'Critical') OR ('Overload State' EQUAL 'Resource Critical'))		
Clearing condition: ('Overload State' EQUAL 'Normal')		
Remedial action: The overload state of a monitored destination has changed from normal. Verify the threshold limit of the destination.		

Table 34-18 DiskTemperatureLowerThresholdAlarm

Alarm	Attributes	Applicable major release
Name: DiskTemperatureLowerThresholdAlarm (3716) Type: equipmentAlarm Package: equipment. DiskTemperatureLowerThresholdAlarm Raised on class: equipment.Disk	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: DiskTemperatureLow	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when the disk temperature decreases below a lower threshold.		
Raising condition: ('Temperature Threshold State' EQUAL 'Lower Critical')		
Clearing condition: ('Temperature Threshold State' EQUAL 'Unspecified')		
Remedial action: Informational - no corrective action required.		

Table 34-19 DiskTemperatureUpperThresholdAlarm

Alarm	Attributes	Applicable major release
Name: DiskTemperatureUpperThresholdAlarm (3717) Type: equipmentAlarm Package: equipment. DiskTemperatureUpperThresholdAlarm Raised on class: equipment.Disk	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: DiskTemperatureHigh	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when the disk temperature increases above an upper threshold.		
Raising condition: ('Temperature Threshold State' EQUAL 'Upper Critical')		
Clearing condition: ('Temperature Threshold State' EQUAL 'Unspecified')		
Remedial action: Check the site cooling mechanism. If the alarm persists, replace the disk.		

Table 34-20 DiskVoltageLowerThresholdAlarm

Alarm	Attributes	Applicable major release
Name: DiskVoltageLowerThresholdAlarm (3718) Type: equipmentAlarm Package: equipment. DiskVoltageLowerThresholdAlarm Raised on class: equipment.Disk	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: DiskVoltageLow	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when the disk voltage level decreases below a lower threshold.		
Raising condition: ('Voltage Threshold State' EQUAL 'Lower Critical')		
Clearing condition: ('Voltage Threshold State' EQUAL 'Unspecified')		
Remedial action: Monitor. If the alarm persists and the disk is in the active state, it should be replaced.		

Table 34-21 DiskVoltageUpperThresholdAlarm

Alarm	Attributes	Applicable major release
Name: DiskVoltageUpperThresholdAlarm (3719) Type: equipmentAlarm Package: equipment. DiskVoltageUpperThresholdAlarm Raised on class: equipment.Disk	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: DiskVoltageHigh	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when the disk voltage level increases above an upper threshold.		
Raising condition: ('Voltage Threshold State' EQUAL 'Upper Critical')		
Clearing condition: ('Voltage Threshold State' EQUAL 'Unspecified')		
Remedial action: Monitor. If the alarm persists and the disk is in the active state, it should be replaced.		

Table 34-22 DscExtSystemOperStateDown

Alarm	Attributes	Applicable major release
Name: DscExtSystemOperStateDown (7960) Type: EpcAlarm Package: lte.DscExtSystemOperStateDown Raised on class: lte.DscExtSystem	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: DscExtSystemOperStateDown	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when the operational state of an external system is down.		
Raising condition: (('Operational State' EQUAL 'Down'))		
Clearing condition: (('Operational State' EQUAL 'Up'))		

Table 34-22 DscExtSystemOperStateDown (continued)

Alarm	Attributes	Applicable major release
Remedial action: The operational state of an external system is down (not connected). Verify its connection.		

Table 34-23 DscGeoRedundancyFailure

Alarm	Attributes	Applicable major release
Name: DscGeoRedundancyFailure (8153) Type: EpcAlarm Package: lte.DscGeoRedundancyFailure Raised on class: lte.ServiceContainer	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lossOfRedundancy	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when a DSC loses Geo Redundancy.		
Raising condition: (('Geo-Redundancy' EQUAL 'Standalone'))		
Clearing condition: (('Geo-Redundancy' EQUAL 'Redundant'))		
Remedial action: Check the operational state of both geo-mates. If failed, the operator must recover both geo-mates. If geo-mates are operational, the root cause must be a failure in the WAN link used for geo-redundancy, which must be corrected.		

Table 34-24 DscPlatformLicenseKeyExpiredAlarm

Alarm	Attributes	Applicable major release
Name: DscPlatformLicenseKeyExpiredAlarm (1133) Type: EpcAlarm Package: lte.DscPlatformLicenseKeyExpiredAlarm Raised on class: lte. DynamicServicesControllerInstance	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DscPlatformLicenseKeyExpired	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when the DSC platform license key is expired.		
Remedial action: Contact your Nokia support representative to obtain new DSC license key		

Table 34-25 DscPlatformLicenseKeyExpiringAlarm

Alarm	Attributes	Applicable major release
Name: DscPlatformLicenseKeyExpiringAlarm (1134) Type: EpcAlarm Package: lte.DscPlatformLicenseKeyExpiringAlarm Raised on class: lte. DynamicServicesControllerInstance	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DscPlatformLicenseKeyExpiring	Release: • 6.0 • 7.0 • 8.0 • 9.0

Table 34-25 DscPlatformLicenseKeyExpiringAlarm (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the DSC platform license key is expiring.		
Remedial action: Contact your Nokia support representative to obtain new DSC license key		

Table 34-26 DscPlatformLicenseKeyHighWaterAlarm

Alarm	Attributes	Applicable major release
Name: DscPlatformLicenseKeyHighWaterAlarm (1135) Type: EpcAlarm Package: lte.DscPlatformLicenseKeyHighWaterAlarm Raised on class: lte.DynamicServicesControllerInstance	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DscPlatformLicenseKeyHighWaterMarkCrossed	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when the DSC license key crosses the high watermark for a specified threshold.		
Remedial action: Contact your Nokia support representative to obtain new DSC license key		

Table 34-27 DscPlatformLicenseKeyLowWaterAlarm

Alarm	Attributes	Applicable major release
Name: DscPlatformLicenseKeyLowWaterAlarm (1136) Type: EpcAlarm Package: lte.DscPlatformLicenseKeyLowWaterAlarm Raised on class: lte.DynamicServicesControllerInstance	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DscPlatformLicenseKeyLowWaterMarkCrossed	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when the DSC license key crosses the low watermark for a specified threshold.		
Remedial action: Contact your Nokia support representative to obtain new DSC license key		

Table 34-28 DscPlatformLicenseKeyThresholdReachedAlarm

Alarm	Attributes	Applicable major release
Name: DscPlatformLicenseKeyThresholdReachedAlarm (1137) Type: EpcAlarm Package: lte.DscPlatformLicenseKeyThresholdReachedAlarm Raised on class: lte.DynamicServicesControllerInstance	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: DscPlatformLicenseKeyThresholdReached	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when the DSC license key reaches a specified threshold.		

Table 34-28 DscPlatformLicenseKeyThresholdReachedAlarm (continued)

Alarm	Attributes	Applicable major release
Remedial action: NContact your Nokia support representative to obtain new DSC license key		

Table 34-29 DscServiceContainerDown

Alarm	Attributes	Applicable major release
Name: DscServiceContainerDown (845) Type: EpcAlarm Package: lte.DscServiceContainerDown Raised on class: lte.ServiceContainer	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: DscServiceDown	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when a DSC service container is down.		
Raising condition: (('Operational State' EQUAL 'Disabled'))		
Clearing condition: (('Operational State' EQUAL 'Enabled'))		
Remedial action: Investigate /opt/tpa/logs/RACServer.log on the CSB to determine cause of service container failure.		

Table 34-30 DscServiceDown

Alarm	Attributes	Applicable major release
Name: DscServiceDown (846) Type: EpcAlarm Package: lte.DscServiceDown Raised on class: lte. AbstractDynamicServicesControllerMember	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: DscServiceDown	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when a DSC service member is down.		
Raising condition: (('Operational State' EQUAL 'Disabled'))		
Clearing condition: (('Operational State' EQUAL 'Enabled'))		
Remedial action: Investigate /opt/tpa/logs/RACServer.log on the CSB to determine cause of service failure.		

Table 34-31 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm Package: equipment.EquipmentAdministrativelyDown Raised on class: equipment.Equipment	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentAdministratively-Down	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 34-32 EquipmentDegraded

Alarm	Attributes	Applicable major release
Name: EquipmentDegraded (604) Type: equipmentAlarm Package: equipment.EquipmentDegraded Raised on class: equipment.FanTray	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: singleFanFailure	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when a single fan fails. The chassis attempts to continue operating within the normal temperature range using only the remaining fans.		
Raising condition: ('Device State' EQUAL 'MinorFailure')		
Clearing condition: ('Device State' NOT EQUAL 'MinorFailure')		
Remedial action: The failed fan unit should be replaced.		

Table 34-33 EquipmentDown

Alarm	Attributes	Applicable major release
Name: EquipmentDown (10) Type: equipmentAlarm Package: equipment.EquipmentDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: inoperableEquipment	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		

Table 34-33 EquipmentDown (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 34-34 EquipmentFailure

Alarm	Attributes	Applicable major release
Name: EquipmentFailure (145) Type: equipmentAlarm Package: equipment.EquipmentFailure Raised on class: equipment.ReplaceableUnit	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cardFailure	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when a I/O card or control processor or power-supply tray reports a failure. When the object type is ControlProcessor, a CPM may be unable to boot. When the object type is Power Supply Tray and the alarm is raised during device discovery, a power-supply tray may be out of service. When the object type is a Power Supply Tray and the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: ('operationalState' EQUAL 'Failed')		
Clearing condition: ('operationalState' NOT EQUAL 'Failed')		
Remedial action: If the alarm indicates that the CPM card or I/O card has a fault, remove the card and reset it. If this does not clear the alarm then please contact your Nokia support representative for assistance. If the alarm indicates that the Power Supply tray is out of service ensure that the NE is properly connected to power. If the problem persists please contact your Nokia support representative for assistance.		

Table 34-35 EquipmentInTest

Alarm	Attributes	Applicable major release
Name: EquipmentInTest (11) Type: equipmentAlarm Package: equipment.EquipmentInTest Raised on class: equipment.Equipment	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentInTest	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 34-36 EquipmentMismatch

Alarm	Attributes	Applicable major release
Name: EquipmentMismatch (9) Type: equipmentAlarm Package: equipment.EquipmentMismatch Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentTypeMismatch	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 34-37 EquipmentRemoved

Alarm	Attributes	Applicable major release
Name: EquipmentRemoved (8) Type: equipmentAlarm Package: equipment.EquipmentRemoved Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: ((('isEquipped' EQUAL 'false') OR ('compositeEquipmentState' EQUAL 'Removed')) AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Removed') AND ('isEquipped' EQUAL 'true'))		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 34-38 FanFailure (equipment)

Alarm	Attributes	Applicable major release
Name: FanFailure (624) Type: equipmentAlarm Package: equipment.FanFailure Raised on class: equipment.FanTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fanFailure	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when the associated fan is not operationally Up.		
Raising condition: (('Device State' EQUAL 'Failed') OR ('Device State' EQUAL 'Unknown') OR ('Device State' EQUAL 'OutOfservice'))		

Table 34-38 FanFailure (equipment) (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ('Device State' EQUAL 'OK')		
Remedial action: Remove and reset the fan unit. If this does not resolve the problem replace the fan.		

Table 34-39 FanTrayRemoved

Alarm	Attributes	Applicable major release
Name: FanTrayRemoved (569) Type: equipmentAlarm Package: equipment.FanTrayRemoved Raised on class: equipment.FanTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: FanTrayRemoved	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when the deviceState attribute has a value of deviceNotEquipped.		
Raising condition: ('Device State' EQUAL 'Not Equipped')		
Clearing condition: ('Device State' NOT EQUAL 'Not Equipped')		
Remedial action: Informational - a fan tray has been removed from the NE.		

Table 34-40 LicensedLimitExceeded

Alarm	Attributes	Applicable major release
Name: LicensedLimitExceeded (127) Type: licensingAlarm Package: security.LicensedLimitExceeded Raised on class: security.SamLicensePoints	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: licensedLimitExceeded	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 34-41 LinkDown (equipment)

Alarm	Attributes	Applicable major release
Name: LinkDown (12) Type: communicationsAlarm Package: equipment.LinkDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: portLinkProblem	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 34-42 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major release
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm Package: security.NewSsh2ServerKeyDetected Raised on class: security.KnownHostKey	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 34-43 NodeRebooted

Alarm	Attributes	Applicable major release
Name: NodeRebooted (32) Type: equipmentAlarm Package: netw.NodeRebooted Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: nodeReboot	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when the 5620 SAM detects an NE reboot based on the latest NE sysUpTime value.		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 34-44 NodeSuspended

Alarm	Attributes	Applicable major release
Name: NodeSuspended (5123) Type: communicationsAlarm Package: netw.NodeSuspended Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NodeSuspend	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element.The alarm will be cleared when the network element is managed back.		

Table 34-45 OverloadedCard

Alarm	Attributes	Applicable major release
Name: OverloadedCard (2941) Type: cardAlarm Package: equipment.OverloadedCard Raised on class: equipment.AtcaCard	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: overloadedCard	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when an ATCA card becomes overloaded.		
Raising condition: (('Overload State' EQUAL 'Critical') OR ('Overload State' EQUAL 'Resource Critical'))		
Clearing condition: ('Overload State' EQUAL 'Normal')		
Remedial action: Investigate /opt/tpa/logs/RACServer.log on the CSB to determine cause of system overload.		

Table 34-46 PartialResyncProblem

Alarm	Attributes	Applicable major release
Name: PartialResyncProblem (4401) Type: communicationsAlarm Package: netw.PartialResyncProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: partialResyncProblem	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when a partial resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		

Table 34-46 PartialResyncProblem (continued)

Alarm	Attributes	Applicable major release
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 34-47 PartialVPRNEncryption

Alarm	Attributes	Applicable major release
Name: PartialVPRNEncryption (8992) Type: configurationAlarm Package: nge.PartialVPRNEncryption Raised on class: nge.VprnEncryptService	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConfigMismatch	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when one or more sites are not encryption enabled in a VPRN service.		
Raising condition: (('VPRN Service Encryption Status' EQUAL 'Partial'))		
Clearing condition: (('VPRN Service Encryption Status' NOT EQUAL 'Partial'))		
Remedial action: This site is newly added to the VPRN service, Perform the encrypt operation on the KeyGroup to clear the alarm.		

Table 34-48 PollerProblem

Alarm	Attributes	Applicable major release
Name: PollerProblem (31) Type: communicationsAlarm Package: netw.PollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resyncFailed	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 34-49 PowerSupplyInputFeedDownAlarm

Alarm	Attributes	Applicable major release
Name: PowerSupplyInputFeedDownAlarm (5154) Type: equipmentAlarm Package: equipment. PowerSupplyInputFeedDownAlarm Raised on class: equipment.PowerSupply	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyInputFeedDown	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: This alarm is generated if any one of the input feeds for a given power supply is not supplying power.		
Raising condition: (('Input Feed Status' EQUAL 'Input A Down') OR ('Input Feed Status' EQUAL 'Input B Down') OR (('Input Feed Status'allBits'Input A Down') AND ('Input Feed Status'allBits'Input B Down')))		
Clearing condition: ('Input Feed Status' EQUAL 'None')		
Remedial action: Restore all of the input feeds that are not supplying power		

Table 34-50 ReachabilityProblem

Alarm	Attributes	Applicable major release
Name: ReachabilityProblem (243) Type: communicationsAlarm Package: netw.ReachabilityProblem Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReachabilityTestFailed	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when a mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. The polling interval depends on the NE type and is configurable in nms-server.xml. By default, the 5620 SAM polls a managed NE every four minutes. If a poll fails, the alarm is raised. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 34-51 ScheduledPollerProblem

Alarm	Attributes	Applicable major release
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm Package: netw.ScheduledPollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: scheduledResyncFailed	Release: • 6.0 • 7.0 • 8.0 • 9.0

Table 34-51 ScheduledPollerProblem (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 34-52 StatsRetrieveFailed

Alarm	Attributes	Applicable major release
Name: StatsRetrieveFailed (244) Type: configurationAlarm Package: sw.StatsRetrieveFailed Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: fileTransferFailure	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 34-53 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major release
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed Package: netw.SubscriberSystemNextHopUsageHigh Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

Table 34-54 SubSysChassMemoryUsageHi

Alarm	Attributes	Applicable major release
Name: SubSysChassMemoryUsageHi (5656) Type: thresholdCrossed Package: equipment.SubSysChassMemoryUsageHi Raised on class: equipment.Shelf	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: This alarm is raised when the memory usage by subscriber management on this system or chassis reaches its high watermark ('true').		
Raising condition: ('Memory Usage High' EQUAL 'True')		
Clearing condition: (('Memory Usage High' EQUAL 'False') OR ('Memory Usage High' EQUAL 'unspecified'))		
Remedial action: The memory usage by subscriber management on this system has reached its high watermark. Please check your memory usage.		

Table 34-55 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major release
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm Package: netw.TrapDestinationMisconfigured Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trapDestinationMisconfigured Applicable probable causes: • trapDestinationMisconfigured • duplicateTrapLogId	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 34-56 UnidentifiedNode

Alarm	Attributes	Applicable major release
Name: UnidentifiedNode (1922) Type: communicationsAlarm Package: netw.UnidentifiedNode Raised on class: netw.DiscoveredNode	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unidentifiedNode	Release: • 6.0 • 7.0 • 8.0 • 9.0

Table 34-56 UnidentifiedNode (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 34-57 UnmanageFailed

Alarm	Attributes	Applicable major release
Name: UnmanageFailed (300) Type: discoveryControlAlarm Package: netw.UnmanageFailed Raised on class: netw.NodeDiscoveryControl	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unableToDeleteNode	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'Unmanage Failed')		
Clearing condition: ('Site State' NOT EQUAL 'Unmanage Failed')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 34-58 UplinkDown

Alarm	Attributes	Applicable major release
Name: UplinkDown (11062) Type: virtualSwitchAlarm Package: dctr.UplinkDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsAllDown	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when all connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '2'))		
Clearing condition: (('uplinkState' NOT EQUAL '2'))		
Remedial action: This alarm is raised when all connections associated to the uplink lost connectivity.		

Table 34-59 UplinkPartiallyDown

Alarm	Attributes	Applicable major release
Name: UplinkPartiallyDown (11063) Type: virtualSwitchAlarm Package: dctr.UplinkPartiallyDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsDown	Release: • 6.0 • 7.0 • 8.0 • 9.0
Description: The alarm is raised when some connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '3'))		
Clearing condition: (('uplinkState' NOT EQUAL '3'))		
Remedial action: This alarm is raised when a connection of the uplink lost connectivity but at least one connection remains connected.		

35 FlexiPacket MultiRadio

35.1 Alarms

Alarms

Note: Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see Chapter 39, “Unspecified NE”.

Table 35-1 ACCMConfigError

Alarm	Attributes	Applicable major release
Name: ACCMConfigError (11243) Type: processingErrorAlarm Package: dw.ACCMConfigError Raised on class: dw.DwAlarmedObject	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ProtectionError	Release: • N/A
Description: The content of a received A-CCM message is not coherent with the configuration.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-2 ACCMLoss

Alarm	Attributes	Applicable major release
Name: ACCMLoss (11244) Type: processingErrorAlarm Package: dw.ACCMLoss Raised on class: dw.DwAlarmedObject	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ProtectionError	Release: • N/A
Description: ODU does not receive a valid CCM in the relevant MA.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-3 AccountLogFilledFirstThreshold

Alarm	Attributes	Applicable major release
Name: AccountLogFilledFirstThreshold (11470) Type: processingErrorAlarm Package: netw.AccountLogFilledFirstThreshold Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ProcessingError	Release: • N/A
Description: This alarm is raised when the first threshold on account log is crossed.		

Table 35-3 AccountLogFilledFirstThreshold (continued)

Alarm	Attributes	Applicable major release
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 35-4 AccountLogFilledSecondThreshold

Alarm	Attributes	Applicable major release
Name: AccountLogFilledSecondThreshold (11471) Type: processingErrorAlarm Package: netw.AccountLogFilledSecondThreshold Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ProcessingError	Release: • N/A
Description: This alarm is raised when the second threshold on account log is crossed.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 35-5 AirLoss

Alarm	Attributes	Applicable major release
Name: AirLoss (11280) Type: processingErrorAlarm Package: equipment.AirLoss Raised on class: equipment.PhysicalPort	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SignallingError	Release: • N/A
Description: Triggered when the RX constellation is not locked. The trigger depends on the RX Modulation in use (the airLoss threshold depends on modulation format). Action: Check the RF quality including the received power and received S/MSE value.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-6 ATPCAutoDisabled

Alarm	Attributes	Applicable major release
Name: ATPCAutoDisabled (11469) Type: processingErrorAlarm Package: netw.ATPCAutoDisabled Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EquipmentError	Release: • N/A
Description: Transmit power stays at Pmax for at least the continuative period of time defined by ATPC Cfg Intervention Timer.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-7 AutonegotiationConfigurationError

Alarm	Attributes	Applicable major release
Name: AutonegotiationConfigurationError (11281) Type: processingErrorAlarm Package: equipment. AutonegotiationConfigurationError Raised on class: equipment.PhysicalPort	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SyncError	Release: • N/A
Description: Auto-negotiation capabilities do not match the Synch settings. Possible causes: misconfiguration of the equipment.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-8 CollocatedMEPStateDown

Alarm	Attributes	Applicable major release
Name: CollocatedMEPStateDown (11246) Type: processingErrorAlarm Package: dw.CollocatedMEPStateDown Raised on class: dw.DwAlarmedObject	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ProtectionError	Release: • N/A
Description: The operational state of the collocated MEP State machine is down.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-9 ConfigurationError

Alarm	Attributes	Applicable major release
Name: ConfigurationError (11473) Type: processingErrorAlarm Package: netw.ConfigurationError Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SyncError	Release: • N/A
Description: The MultiRadio ODU has received SSM carrying a DNU code from at least one synchronization interface. Possible causes: misconfiguration of the peer equipment.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-10 ConfigurationNotSupported

Alarm	Attributes	Applicable major release
Name: ConfigurationNotSupported (11474) Type: processingErrorAlarm Package: netw.ConfigurationNotSupported Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EquipmentError	Release: • N/A
Description: The current configuration such as system type vs profile is not supported		

Table 35-10 ConfigurationNotSupported (continued)

Alarm	Attributes	Applicable major release
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-11 ECCMConfigError

Alarm	Attributes	Applicable major release
Name: ECCMConfigError (11247) Type: processingErrorAlarm Package: dw.ECCMConfigError Raised on class: dw.DwAlarmedObject	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ProtectionError	Release: • N/A
Description: The content of a received E-CCM message is not coherent with the configuration;Action: change the configuration of one MultiRadio to have the same configuration of the second MultiRadio.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-12 ECCMLoss

Alarm	Attributes	Applicable major release
Name: ECCMLoss (11248) Type: processingErrorAlarm Package: dw.ECCMLoss Raised on class: dw.DwAlarmedObject	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ProtectionError	Release: • N/A
Description: E-CCMs messages are exchanged between the IDU and the ODU; ODU does not receive a valid CCM in the relevant MA. Only if System type is protected.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-13 FpmrSelfTestFailure

Alarm	Attributes	Applicable major release
Name: FpmrSelfTestFailure (11476) Type: processingErrorAlarm Package: netw.FpmrSelfTestFailure Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EquipmentError	Release: • N/A
Description: Self-test output procedure failed.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-14 FpmrSystemFailure

Alarm	Attributes	Applicable major release
Name: FpmrSystemFailure (11477) Type: equipmentAlarm Package: netw.FpmrSystemFailure Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EquipmentError	Release: • N/A
Description: The MultiRadio is out of service the RF Transmitter is squelched. MultiRadio must be replaced. Action: Reset the Controller. If the alarm is still active replace MultiRadio.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-15 FragmentationError

Alarm	Attributes	Applicable major release
Name: FragmentationError (11478) Type: processingErrorAlarm Package: netw.FragmentationError Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SignallingError	Release: • N/A
Description: This alarms is raised when the field fpmrQosfgFragmentationEn is successfully set to enabled but the fragmentation is not done at the side because of:1. The SVR on the remote side ODU is less than 2.52. Locally the number of configured strict priority queues is 0.The alarm is cleared when the fragmentation is disabled or when the conditions above have been removed.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-16 HighBER (netw)

Alarm	Attributes	Applicable major release
Name: HighBER (682) Type: processingErrorAlarm Package: netw.HighBER Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SignallingError	Release: • N/A
Description: Local ODU detects an High BER (near the threshold of the Data Loss).		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-17 HSBYConfigurationError

Alarm	Attributes	Applicable major release
Name: HSBYConfigurationError (11479) Type: processingErrorAlarm Package: netw.HSBYConfigurationError Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ProtectionError	Release: • N/A

Table 35-17 HSBYConfigurationError (continued)

Alarm	Attributes	Applicable major release
Description: ODU received 9 consecutive P-CCM (OK ON) (P-CCM(OK OFF)) when in ON (OFF) state.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-18 HybridPacketMismatch

Alarm	Attributes	Applicable major release
Name: HybridPacketMismatch (11480) Type: processingErrorAlarm Package: netw.HybridPacketMismatch Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ProcessingError	Release: • N/A
Description: There is a hybrid/packet mismatch between STBY and active software.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-19 LOF

Alarm	Attributes	Applicable major release
Name: LOF (11292) Type: processingErrorAlarm Package: equipment.LOF Raised on class: equipment.PhysicalPort	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: CableInerfaceError	Release: • N/A
Description: There is a LOF at IDU-ODU cable frame level.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-20 ManualOperationOn

Alarm	Attributes	Applicable major release
Name: ManualOperationOn (11481) Type: processingErrorAlarm Package: netw.ManualOperationOn Raised on class: netw.NetworkElement	Severity: info Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ProcessingError	Release: • N/A
Description: This alarm is related to Test/Manual Operation. It is raised when at least one test configuration is active.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 35-21 MauStatusDown

Alarm	Attributes	Applicable major release
Name: MauStatusDown (11293) Type: processingErrorAlarm Package: equipment.MauStatusDown Raised on class: equipment.PhysicalPort	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EquipmentError	Release: • N/A
Description: This object identifies Media Available state of the MAU interface.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-22 ModemSignalUnderThreshold

Alarm	Attributes	Applicable major release
Name: ModemSignalUnderThreshold (11482) Type: equipmentAlarm Package: netw.ModemSignalUnderThreshold Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EquipmentError	Release: • N/A
Description: Triggered when the signal level after the ADC in the Modem section is below a fixed threshold.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-23 MultipleMatchInPacketIdentification

Alarm	Attributes	Applicable major release
Name: MultipleMatchInPacketIdentification (11484) Type: processingErrorAlarm Package: netw.MultipleMatchInPacketIdentification Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ProcessingError	Release: • N/A
Description: When raised, at least one packet has not been compressed because of muiltiple rule matching.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-24 NotHybridInterface

Alarm	Attributes	Applicable major release
Name: NotHybridInterface (11486) Type: processingErrorAlarm Package: netw.NotHybridInterface Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: CableInerfaceError	Release: • N/A
Description: The IDU is not properly working for this application.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-25 OAM_RDI

Alarm	Attributes	Applicable major release
Name: OAM_RDI (11253) Type: processingErrorAlarm Package: dw.OAM_RDI Raised on class: dw.DwAlarmedObject	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OAMError	Release: • N/A
Description: State of the RDI bit in the last received CCM (true for RDI="1) or false if none has been received. CRITICAL if System type is(1+0). Most probable cause: Connection problem with Microwave Hub (MultiRadio receives messages from Microwave Hub but Hub does not receives messages from the MultiRadio). Action: Reset the Controller. If the alarm is still active check the connectivity between MultiRadio and Hub."		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-26 ODUContinuityCheckLoss

Alarm	Attributes	Applicable major release
Name: ODUContinuityCheckLoss (11254) Type: processingErrorAlarm Package: dw.ODUContinuityCheckLoss Raised on class: dw.DwAlarmedObject	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OAMError	Release: • N/A
Description: ODU does not receive a valid CCM in the relevant MA. IDU is not properly set and it doesn't send CCM messages to ODU or IDU-ODU connectivity is compromised. Action: Check IDU settings or check IDU-ODU connectivity.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-27 ODUODUPortFailure

Alarm	Attributes	Applicable major release
Name: ODUODUPortFailure (11809) Type: processingErrorAlarm Package: equipment.ODUODUPortFailure Raised on class: equipment.PhysicalPort	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EquipmentError	Release: • N/A
Description: The ODU to ODU connection is lost. Action: Check the cable. If the cable is OK check in the Alarm list the active alarm.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-28 ODUSynchMissingSSM

Alarm	Attributes	Applicable major release
Name: ODUSynchMissingSSM (11488) Type: processingErrorAlarm Package: netw.ODUSynchMissingSSM Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SyncError	Release: • N/A

Table 35-28 ODUSynchMissingSSM (continued)

Alarm	Attributes	Applicable major release
Description: The MultiRadio ODU doesn't receive SSM messages from the selected synchronization interface. Possible causes: misconfiguration of the peer equipment. Action: Check the synchronization network configuration.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-29 PacketDischarging

Alarm	Attributes	Applicable major release
Name: PacketDischarging (11298) Type: processingErrorAlarm Package: equipment.PacketDischarging Raised on class: equipment.PhysicalPort	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: CableInerfaceError	Release: • N/A
Description: FPGA is discharging packets from IDU.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-30 PCCMConfigError

Alarm	Attributes	Applicable major release
Name: PCCMConfigError (11255) Type: processingErrorAlarm Package: dw.PCCMConfigError Raised on class: dw.DwAlarmedObject	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ProtectionError	Release: • N/A
Description: The content of a received P-CCM message is not coherent with the configuration; Action: change the configuration of one MultiRadio to have the same configuration of the second MultiRadio.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-31 PCCMLoss

Alarm	Attributes	Applicable major release
Name: PCCMLoss (11256) Type: processingErrorAlarm Package: dw.PCCMLoss Raised on class: dw.DwAlarmedObject	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ProtectionError	Release: • N/A
Description: P-CCM messages are exchanged between the two ODUs belonging to the same MA; ODU does not receive a valid CCM in the relevant MA.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-32 PortDown

Alarm	Attributes	Applicable major release
Name: PortDown (11299) Type: communicationsAlarm Package: equipment.PortDown Raised on class: equipment.PhysicalPort	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: inoperableEquipment	Release: • N/A
Description: This alarm is raised when the Operational State of Port goes down when the Admin State is up.		
Remedial action: Please refer to Troubleshooting Guide for remedial action.		

Table 35-33 PowerSupplyFailure (netw)

Alarm	Attributes	Applicable major release
Name: PowerSupplyFailure (633) Type: equipmentAlarm Package: netw.PowerSupplyFailure Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EquipmentError	Release: • N/A
Description: Failure in the internal DC/DC converter.MultiRadio must be replaced. Action: Check the voltage of the station battery. If OK replace MultiRadio.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-34 ProtectionModeMismatch

Alarm	Attributes	Applicable major release
Name: ProtectionModeMismatch (11490) Type: processingErrorAlarm Package: netw.ProtectionModeMismatch Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ProtectionError	Release: • N/A
Description: Wrong configuration of Protection Mode.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-35 RadioFrameLoss

Alarm	Attributes	Applicable major release
Name: RadioFrameLoss (11305) Type: processingErrorAlarm Package: equipment.RadioFrameLoss Raised on class: equipment.PhysicalPort	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SignallingError	Release: • N/A

Table 35-35 RadioFrameLoss (continued)

Alarm	Attributes	Applicable major release
Description: The MultiRadio ODU detects an RxFail in the RX function. It is triggered by the Loss of the synchronization with the frame preamble; it is independent from the data modulation. Most probable causes and actions: (a) The radio path is down cannot receive signal from remote ODU. Clean the radio path or check the remote ODU TX power. (b) Configuration problem the frequency is different from remote ODU. Align ODU frequency configuration for both sides. (c) Remote ODU radio port squelch. Set remote ODU radio port up.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-36 RDIReceivedInLastACCM

Alarm	Attributes	Applicable major release
Name: RDIReceivedInLastACCM (11259) Type: processingErrorAlarm Package: dw.RDIReceivedInLastACCM Raised on class: dw.DwAlarmedObject	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OAMError	Release: • N/A
Description: State of the RDI bit in the last received A-CCM (true for RDI="1) or false if none has been received."		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-37 RDIReceivedInLastECCM

Alarm	Attributes	Applicable major release
Name: RDIReceivedInLastECCM (11260) Type: processingErrorAlarm Package: dw.RDIReceivedInLastECCM Raised on class: dw.DwAlarmedObject	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OAMError	Release: • N/A
Description: State of the RDI bit in the last received E-CCM (true for RDI="1) or false if none has been received."		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-38 RDIReceivedInLastPCCM

Alarm	Attributes	Applicable major release
Name: RDIReceivedInLastPCCM (11261) Type: processingErrorAlarm Package: dw.RDIReceivedInLastPCCM Raised on class: dw.DwAlarmedObject	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OAMError	Release: • N/A
Description: State of the RDI bit in the last received P-CCM (true for RDI="1) or false if none has been received."		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-39 RolePriorityMismatch

Alarm	Attributes	Applicable major release
Name: RolePriorityMismatch (11492) Type: processingErrorAlarm Package: netw.RolePriorityMismatch Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ProtectionError	Release: • N/A
Description: Wrong configuration of Role/Priority.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-40 RxTimerReferenceMissing

Alarm	Attributes	Applicable major release
Name: RxTimerReferenceMissing (11493) Type: processingErrorAlarm Package: netw.RxTimerReferenceMissing Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: CableInerfaceError	Release: • N/A
Description: Rx Timer Reference is missing.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-41 ScheduledActionFailure

Alarm	Attributes	Applicable major release
Name: ScheduledActionFailure (11272) Type: processingErrorAlarm Package: dw.ScheduledActionFailure Raised on class: dw.DwAlarmedObject	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ProcessingError	Release: • N/A
Description: This alarm is generated whenever a scheduled operation has failed.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 35-42 SoftwareSwitchNotAllowed

Alarm	Attributes	Applicable major release
Name: SoftwareSwitchNotAllowed (11495) Type: processingErrorAlarm Package: netw.SoftwareSwitchNotAllowed Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ProcessingError	Release: • N/A
Description: This alarm is raised when Switching action is initiated when not allowed. When any component Standby FW version is not compatible with the HW version, the switch command can not be executed. A new software must be downloaded.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 35-43 SwHwMismatch

Alarm	Attributes	Applicable major release
Name: SwHwMismatch (11497) Type: equipmentAlarm Package: netw.SwHwMismatch Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EquipmentError	Release: • N/A
Description: This alarm is raised to indicate Software/Firmware and Hardware mismatch. This occurs when the loaded SW and FW is not compatible with HW.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 35-44 SynchAllSourcesDown

Alarm	Attributes	Applicable major release
Name: SynchAllSourcesDown (11498) Type: communicationsAlarm Package: netw.SynchAllSourcesDown Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SyncError	Release: • N/A
Description: This alarm is raised when a physical layer problem in all the configured synchronization interfaces is detected. Possible causes for IDU: (a) LinkState="DOWN has been detected in the Ethernet interface selected as synchronization interface. (b) LOS has been detected in the E1 interface selected as synchronization interface. As a consequent action the equipment will go to holdover state. The alarm is masked when the system is in Internal Synchronization Mode. Possible causes for ODU: The MultiRadio ODU has detected a physical layer problem in all the configured synchronization interfaces. As a consequent action the equipment will go to holdover state. Action: Check the synchronization sources."		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 35-45 SynchOneSourceDown (netw)

Alarm	Attributes	Applicable major release
Name: SynchOneSourceDown (11277) Type: processingErrorAlarm Package: netw.SynchOneSourceDown Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SyncError	Release: • N/A
Description: Multiple synchronization interfaces are configured and when detecting a physical layer problem in at least one of the synchronization interfaces. Action: Check the synchronization sources.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-46 SystemTypeMismatch

Alarm	Attributes	Applicable major release
Name: SystemTypeMismatch (11501) Type: processingErrorAlarm Package: netw.SystemTypeMismatch Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EquipmentError	Release: • N/A
Description: The Collocated ODU has a different system type configuration. An ODU configured as DD in either Trunk or Chain role reveals that the other ODU connected on the ODUODU interface is configured: (a) In a different system type (by means of the A-CCM protocol) (b) With the same system role (by means of the A-CCM protocol).		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-47 SystemTypeMismatchInPairedODUGroup

Alarm	Attributes	Applicable major release
Name: SystemTypeMismatchInPairedODUGroup (11502) Type: processingErrorAlarm Package: netw. SystemTypeMismatchInPairedODUGroup Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ProtectionError	Release: • N/A
Description: This alarm can be raised only if system type is 2+2 XPIC. It represents wrong configuration in system type in paired ODU group.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-48 TimeServerMissing

Alarm	Attributes	Applicable major release
Name: TimeServerMissing (11503) Type: communicationsAlarm Package: netw.TimeServerMissing Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SyncError	Release: • N/A
Description: This alarm is raised when the Time Server is missing. Cleared when time server answers. Action: Check the cable.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 35-49 TrapOutOfSequence

Alarm	Attributes	Applicable major release
Name: TrapOutOfSequence (11504) Type: equipmentAlarm Package: netw.TrapOutOfSequence Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MissingTrap	Release: • N/A
Description: This alarm is raised when SAM receives a trap that is out of sequence. This indicates some trap(s) sent from node did not reach SAM. When SAM receives an alarm that is out of sequence, SAM automaticlally synchronizes the Active Alarms on the Node and state information (Admin and Oper states) on all Ports. However, if any traps related to equipment configuration and service do not reach SAM, Full Node Sync needs to be manually triggered in order to synchronize Node with SAM.		
Remedial action: Please trigger Full Node Synchronization on the Node.		

Table 35-50 TxPowerAlarm

Alarm	Attributes	Applicable major release
Name: TxPowerAlarm (11505) Type: equipmentAlarm Package: netw.TxPowerAlarm Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EquipmentError	Release: • N/A
Description: TX power 3 dB (or more) lower than requested TX power at the output of the RF Transmitter. FPR must be replaced. Action: FPR must be replaced.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

Table 35-51 WrongRoleOrPriorityInPairedODUGroup

Alarm	Attributes	Applicable major release
Name: WrongRoleOrPriorityInPairedODUGroup (11510) Type: processingErrorAlarm Package: netw. WrongRoleOrPriorityInPairedODUGroup Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ProtectionError	Release: • N/A
Description: This alarm can be raised only if system type is 2+2 XPIC. It represents wrong configuration in Role/Priority in paired ODU group.		
Remedial action: Please refer to FPMR Troubleshooting Guide for remedial action.		

36 Generic NE

36.1 Alarms

Alarms

Note: Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see Chapter 39, “Unspecified NE”.

Table 36-1 AccessInterfaceDown

Alarm	Attributes	Applicable major release
Name: AccessInterfaceDown (249) Type: AccessInterfaceAlarm Package: service.AccessInterfaceDown Raised on class: service.AccessInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceDown	Release: • 1.0.0
Description: The alarm is raised when an L2 or L3 interface operational state is Down. The alarm is not raised against an L2 access interface that is associated with an MC ring or MC LAG in the standby state.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'Standby For MC-Ring') AND ('State Cause' NOT EQUAL 'Standby For MC Protocol') AND ('State Cause' NOT EQUAL 'Standby For BGP Multi-homing'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'Standby For MC-Ring') OR ('State Cause' EQUAL 'Standby For MC Protocol') OR ('State Cause' EQUAL 'Standby For BGP Multi-homing'))		
Remedial action: The condition exists because the physical interface is down either because it is administratively disabled, faulty or a cabling fault has occurred. Ensure that the interface is administratively up. Check for a poor cable connection to the port or for a faulty cable/fiber. If neither appears to be the problem run diagnostics on the port to determine if it is faulty.		

Table 36-2 ActiveAbnormalCondition

Alarm	Attributes	Applicable major release
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm Package: netw.ActiveAbnormalCondition Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState	Release: • 1.0.0
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

Table 36-3 adjacencyDown

Alarm	Attributes	Applicable major release
Name: adjacencyDown (11462) Type: communicationsAlarm Package: mpr.adjacencyDown Raised on class: mpr.BackhaulAdjacency	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: adjacencyDown	Release: • 1.0.0
Description: The alarm is raised when the Operational State of a adjacency is Down, for example, because of one of the following conditions: The Operational State of local port pointer is Down.		
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' EQUAL 'Up')		
Remedial action: NE Alarms causing operState down must not exist on the selected adjancency.		

Table 36-4 AggregatedVFLPortDown

Alarm	Attributes	Applicable major release
Name: AggregatedVFLPortDown (5436) Type: equipmentAlarm Package: equipment.AggregatedVFLPortDown Raised on class: equipment.Shelf	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: connectivityIssue	Release: • 1.0.0
Description: The alarm is generated when the aggregated virtual fabric link on the virtual chassis slot is down.		
Raising condition: (('Shelf Type' EQUAL '7850') AND ('Total Slots' EQUAL '4') AND ('Virtual Fabric Link State' NOT EQUAL 'Up'))		
Clearing condition: (('Shelf Type' EQUAL '7850') AND ('Total Slots' EQUAL '4') AND ('Virtual Fabric Link State' EQUAL 'Up'))		
Remedial action: The alarm is raised when the aggregated virtual fabric link on the virtual chassis is down. Please check the virtual fabric links for the virtual chassis setup.		

Table 36-5 AGWDiameterPeerDown

Alarm	Attributes	Applicable major release
Name: AGWDiameterPeerDown (844) Type: EpcAlarm Package: lte.AGWDiameterPeerDown Raised on class: lte.AGWDiameterPeer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerDown	Release: • 1.0.0
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 36-6 AncillaryPathLimitReached

Alarm	Attributes	Applicable major release
Name: AncillaryPathLimitReached (459) Type: resourceAlarm Package: equipment.AncillaryPathLimitReached Raised on class: equipment.DaughterCard	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceLimitReached	Release: • 1.0.0
Description: The alarm is raised when the Ingress Multicast Path Management ancillary path bandwidth limit is reached.		
Raising condition: (('Ancillary Path Limit Override' > '0') AND ('Ancillary Path In use' >=" (1000 * 'Ancillary Path Limit Override')))"		
Clearing condition: (('Ancillary Path Limit Override' > '0') AND ('Ancillary Path In use' < (1000 * 'Ancillary Path Limit Override')))		
Remedial action: Informational - The alarm is raised when the Ingress Multicast Path Management ancillary path bandwidth limit is reached. This can be remedied by modifying the ancillary path limit located at T1 Paths tab of the multicast bandwidth policy which assigned to the card, or increase the ancillary path limit override located at the Daughter Card tab under Daughter Card Slot form.		

Table 36-7 AreaTypeMismatch

Alarm	Attributes	Applicable major release
Name: AreaTypeMismatch (38) Type: configurationAlarm Package: ospf.AreaTypeMismatch Raised on class: ospf.Area	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: areaTypeMisconfigured	Release: • 1.0.0
Description: The alarm is raised when an OSPF area on one NE is configured as an NSSA and the same OSPF area on another NE is configured as a stub area.		
Raising condition: ('Type Mismatch' EQUAL 'true')		
Clearing condition: ('Type Mismatch' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The OSPF area type configured for the NE does not match with the same OSPF area configured on another NE. Compare the configuration on the endpoint and correct the mismatch.		

Table 36-8 AuxiliaryServerStatus

Alarm	Attributes	Applicable major release
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm Package: server.AuxiliaryServerStatus Raised on class: server.AuxiliaryServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • 1.0.0
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		

Table 36-8 AuxiliaryServerStatus (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 36-9 BareMetalReachabilityDown

Alarm	Attributes	Applicable major release
Name: BareMetalReachabilityDown (10273) Type: virtualPortAlarm Package: dctr.BareMetalReachabilityDown Raised on class: dctr.BMDevice	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BareMetalReachability-DownOrDeleted	Release: • 1.0.0
Description: The alarm is raised when Bare Metal server is reachability down.		
Raising condition: (('bgpReachabilityState' NOT EQUAL '0'))		
Clearing condition: (('bgpReachabilityState' EQUAL '0'))		
Remedial action: This alarm can be cleared when bare metal device BGP prefix is up. Check for virtual switch controller down or virtual switch down or interface/port down in underlay network (hence the BGP prefix not advertised).		

Table 36-10 BgpDown

Alarm	Attributes	Applicable major release
Name: BgpDown (6) Type: ProtocolAlarm Package: bgp.BgpDown Raised on class: bgp.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 1.0.0
Description: The alarm is raised when a BGP instance has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The BGP protocol entity is down - administratively disable BGP and re-enable. If the problem persists please contact your Nokia support representative for assistance.		

Table 36-11 BootableConfigBackupFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigBackupFailed (103) Type: configurationAlarm Package: sw.BootableConfigBackupFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • 1.0.0

Table 36-11 BootableConfigBackupFailed (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 36-12 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm Package: sw.BootableConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • 1.0.0
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 36-13 BootParametersMisconfigured

Alarm	Attributes	Applicable major release
Name: BootParametersMisconfigured (35) Type: configurationAlarm Package: netw.BootParametersMisconfigured Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistentIndexFailure Applicable probable causes: • persistentIndexFailure • configFileBootFailure	Release: • 1.0.0
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND ((('Config File Status' NOT EQUAL 'Executed Successfully') AND ('Config File Status' NOT EQUAL 'configFileStatus_unspecified')) OR (('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded') AND ('Persistent Index Status' NOT EQUAL 'persistentIndexStatus_unspecified'))))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		

Table 36-13 BootParametersMisconfigured (continued)

Alarm	Attributes	Applicable major release
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

Table 36-14 ClientDelegateServerStatus

Alarm	Attributes	Applicable major release
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm Package: server.ClientDelegateServerStatus Raised on class: server.ClientDelegateServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • 1.0.0
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 36-15 CmuManagementFailed

Alarm	Attributes	Applicable major release
Name: CmuManagementFailed (10040) Type: communicationsAlarm Package: lte.CmuManagementFailed Raised on class: lte.CompactMobilityUnit	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ftpFailed	Release: • 1.0.0
Description: The alarm is raised when SAM fails to manage a 9430 Compact Mobility Unit due to an FTP failure.		
Raising condition: ('Management State' EQUAL 'FTP Failed')		
Clearing condition: ('Management State' EQUAL 'Managed')		
Remedial action: Verify FTP connectivity between the 5620 SAM and the 9430 Compact Mobility Unit, then re-attempt to manage.		

Table 36-16 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm Package: equipment.ContainingEquipmentAdministrativelyDown Raised on class: equipment.Port	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentAdministrativelyDown	Release: • 1.0.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 36-17 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm Package: equipment.ContainingEquipmentMismatch Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentMismatch	Release: • 1.0.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 36-18 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm Package: equipment.ContainingEquipmentOperationallyDown Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentDown	Release: • 1.0.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationllyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		

Table 36-18 ContainingEquipmentOperationallyDown (continued)

Alarm	Attributes	Applicable major release
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

Table 36-19 CorruptImageFile

Alarm	Attributes	Applicable major release
Name: CorruptImageFile (171) Type: configurationAlarm Package: mediation.CorruptImageFile Raised on class: mediation.AbstractSoftwareFolderDescriptor	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile	Release: • 1.0.0
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 36-20 downgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: downgradedCardAlarm (256) Type: softwareAlarm Package: equipment.downgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: downgradedCard	Release: • 1.0.0
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 36-21 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm Package: equipment.EquipmentAdministrativelyDown Raised on class: equipment.Equipment	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentAdministratively-Down	Release: • 1.0.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 36-22 EquipmentDown

Alarm	Attributes	Applicable major release
Name: EquipmentDown (10) Type: equipmentAlarm Package: equipment.EquipmentDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: inoperableEquipment	Release: • 1.0.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 36-23 EquipmentInTest

Alarm	Attributes	Applicable major release
Name: EquipmentInTest (11) Type: equipmentAlarm Package: equipment.EquipmentInTest Raised on class: equipment.Equipment	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentInTest	Release: • 1.0.0
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 36-24 EquipmentMismatch

Alarm	Attributes	Applicable major release
Name: EquipmentMismatch (9) Type: equipmentAlarm Package: equipment.EquipmentMismatch Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentTypeMismatch	Release: • 1.0.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 36-25 EquipmentRemoved

Alarm	Attributes	Applicable major release
Name: EquipmentRemoved (8) Type: equipmentAlarm Package: equipment.EquipmentRemoved Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved	Release: • 1.0.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: ((('isEquipped' EQUAL 'false') OR ('compositeEquipmentState' EQUAL 'Removed')) AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Removed') AND ('isEquipped' EQUAL 'true'))		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 36-26 ForwardingTableSizeLimitReached

Alarm	Attributes	Applicable major release
Name: ForwardingTableSizeLimitReached (164) Type: resourceAlarm Package: l2fwd.ForwardingTableSizeLimitReached Raised on class: l2fwd.SiteFib	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceLimitReached	Release: • 1.0.0
Description: The alarm is raised when the number of MAC address entries in the FIB reaches or exceeds the VPLS site high watermark specified by l2fwd.SiteFib.highWatermark. The alarm clears when the number of MAC address entries in the FIB drops below the VPLS site low watermark specified by l2fwd.SiteFib.lowWatermark. The alarm can be raised against a VPLS site, L2 access interface, or spoke SDP binding.		
Raising condition: (('Entries' >=" 'Size') OR ('Entries' >= (('High Watermark' * 'Size') / 100.0)))"		
Clearing condition: (('Entries' < 'Size') AND (('High Watermark' EQUAL '0L') OR ('Entries' < (('Low Watermark' * 'Size') / 100.0))) AND (('Low Watermark' EQUAL '0L') OR ('Entries' < (('Low Watermark' * 'Size') / 100.0))))		

Table 36-26 ForwardingTableSizeLimitReached (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational		

Table 36-27 FrameSizeProblem (svt)

Alarm	Attributes	Applicable major release
Name: FrameSizeProblem (37) Type: configurationAlarm Package: svt.FrameSizeProblem Raised on class: svt.SdpBinding	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: frameSizeProblem	Release: • 1.0.0
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('Operational State' EQUAL 'MTU Mismatch') OR ('Operational State' EQUAL 'Tunnel MTU Too Small') OR ('State Cause'anyBit'Tunnel MTU Too Small') OR ('State Cause'anyBit'Service MTU Mismatch'))		
Clearing condition: (('Operational State' NOT EQUAL 'MTU Mismatch') AND ('Operational State' NOT EQUAL 'Tunnel MTU Too Small') AND NOT ((('State Cause'anyBit'Tunnel MTU Too Small') OR ('State Cause'anyBit'Service MTU Mismatch'))))		
Remedial action: The MTU value must be changed such that is is less than or equal to the supported MTU size value.		

Table 36-28 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major release
Name: FrameSizeProblem (37) Type: configurationAlarm Package: netw.FrameSizeProblem Raised on class: netw.StatefullConnectableInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: frameSizeProblem	Release: • 1.0.0
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL '0L'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL '0L'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 36-29 GaPeerDown

Alarm	Attributes	Applicable major release
Name: GaPeerDown (3303) Type: EpcAlarm Package: lteggsn.GaPeerDown Raised on class: lteggsn.GaPeer	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerDown	Release: • 1.0.0
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		

Table 36-29 GaPeerDown (continued)

Alarm	Attributes	Applicable major release
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 36-30 GenericInterfaceLinkDown

Alarm	Attributes	Applicable major release
Name: GenericInterfaceLinkDown (403) Type: equipmentAlarm Package: genericne.GenericInterfaceLinkDown Raised on class: genericne.GenericNeInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: inoperableEquipment	Release: • 1.0.0
Description: The alarm is raised when the 5620 SAM detects a communication link failure on a GNE interface. The alarm clears when the link returns to service.		
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' EQUAL 'Up')		
Remedial action: The Operational State of the generic NE interface is down. The physical port (near end or far end) may have failed - this can be remedied by replacing the interface card in question. The physical links may have been turned down administratively - re-enable the links. A cable failure or disconnect may have occurred - please ensure that the cables are properly connected to the physical port and and that the cable has not been damaged.		

Table 36-31 IgmpDown

Alarm	Attributes	Applicable major release
Name: IgmpDown (158) Type: ProtocolAlarm Package: igmp.IgmpDown Raised on class: igmp.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 1.0.0
Description: The alarm is raised when an IGMP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: While configured under VPRN, check if VPRN site is admin down, or if route distinguisher is not configured.		

Table 36-32 IncompleteConfiguration

Alarm	Attributes	Applicable major release
Name: IncompleteConfiguration (1942) Type: operationalViolation Package: netw.IncompleteConfiguration Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompleteConfig	Release: • 1.0.0
Description: The alarm is raised when a pre-provisioned NE has no objects configured beneath it.		
Raising condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' EQUAL '\"\"'))		
Clearing condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' NOT EQUAL '\"\"'))		
Remedial action: A configuration error has been made which must be corrected. The configuration of the pre-provisioned NE is incomplete. A work order was not associated with the pre-provisioned NE and as a consequence the attempt to auto-configure the NE failed.		

Table 36-33 inSufficientBandwidth

Alarm	Attributes	Applicable major release
Name: inSufficientBandwidth (11464) Type: serviceAlarm Package: mpr.inSufficientBandwidth Raised on class: mpr.BackhaulAdjacency	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: inSufficientBandwidth	Release: • 1.0.0
Description: The alarm is raised when a deployed adjacency doesnt have sufficent bandwidth.		
Raising condition: (('Deployed to Site' EQUAL 'false') AND ('isBandwidthExceeded' EQUAL 'true'))		
Clearing condition: (('Deployed to Site' EQUAL 'true') OR ('isBandwidthExceeded' EQUAL 'false'))		
Remedial action: Increase the bandwidth.		

Table 36-34 InterfaceDown (netw)

Alarm	Attributes	Applicable major release
Name: InterfaceDown (36) Type: InterfaceAlarm Package: netw.InterfaceDown Raised on class: netw.StatefullConnectableInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceDown	Release: • 1.0.0
Description: The alarm is raised when an interface or underlying resource fails, as indicated by an interface compositeState attribute value of failed or underlyingResourceFailed.		
Raising condition: (('compositeState' EQUAL 'Inoperable') OR ('compositeState' EQUAL 'Underlying Resource Inoperable'))		
Clearing condition: (('compositeState' NOT EQUAL 'Inoperable') AND ('compositeState' NOT EQUAL 'Underlying Resource Inoperable'))		
Remedial action: A physical port (physical interface, LAG, channel) associated with the network interface in not operational. Ensure that the interface is cabled and there are no configuration errors (i.e. MTU size set incorrectly etc) on the interface.		

Table 36-35 IsisAdjacencyDown

Alarm	Attributes	Applicable major release
Name: IsisAdjacencyDown (153) Type: adjacencyAlarm Package: isis.IsisAdjacencyDown Raised on class: isis.Interface	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IsisInterfaceDown	Release: • 1.0.0
Description: The alarm is raised when an IS-IS interface has no adjacencies, for example, because the IS-IS protocol on the remote site is down.		
Raising condition: (('Adjacency Count' EQUAL '0L') AND ('interfaceClass' NOT EQUAL 'System') AND ('Passive' NOT EQUAL 'True'))		
Clearing condition: (('Adjacency Count' > '0L') OR ('Passive' EQUAL 'True'))		
Remedial action: Check remote site to see if corresponding IS-IS interface is configured and admin up.		

Table 36-36 IsisDown

Alarm	Attributes	Applicable major release
Name: IsisDown (19) Type: ProtocolAlarm Package: isis.IsisDown Raised on class: isis.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 1.0.0
Description: The alarm is raised when an IS-IS site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The protocol is not working anymore, could be a problem with IP addresses, resources on the device, ...		

Table 36-37 IsisInterfaceDown

Alarm	Attributes	Applicable major release
Name: IsisInterfaceDown (301) Type: ProtocolAlarm Package: isis.IsisInterfaceDown Raised on class: isis.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 1.0.0
Description: The alarm is raised when an IS-IS interface has an Operational State other than Up.		
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' NOT EQUAL 'Down')		
Remedial action: Check if underlying port is down, or associated network interface is down.		

Table 36-38 KeepAliveProblem

Alarm	Attributes	Applicable major release
Name: KeepAliveProblem (100) Type: oamAlarm Package: svt.KeepAliveProblem Raised on class: svt.Tunnel	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: keepAliveFailed	Release: • 1.0.0
Description: The alarm is raised when the 5620 SAM detects a keep-alive protocol status of senderIdInvalid or responderIdError.		
Raising condition: (('Keep-Alive State' NOT EQUAL 'Disabled') AND ('Keep-Alive State' NOT EQUAL 'Alive') AND ('Keep-Alive State' NOT EQUAL 'Unknown'))		
Clearing condition: (('Keep-Alive State' EQUAL 'Disabled') OR ('Keep-Alive State' EQUAL 'Alive') OR ('Keep-Alive State' EQUAL 'Unknown'))		
Remedial action: Check the configuration of this tunnel and underlying physical transport.		

Table 36-39 LabelProblem

Alarm	Attributes	Applicable major release
Name: LabelProblem (98) Type: CircuitAlarm Package: svt.LabelProblem Raised on class: svt.SdpBinding	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: labelProblem	Release: • 1.0.0
Description: The alarm is raised when an ingress or an egress label is missing.		
Raising condition: (('Operational State' EQUAL 'No Egress Label') OR ('Operational State' EQUAL 'No Ingress Label') OR ('Operational State' EQUAL 'No Labels') OR ('State Cause'anyBit'No Egress VC Label') OR ('State Cause'anyBit'No Ingress VC Label') OR ('State Cause'anyBit'Label Manager Has Ran Out Of Labels'))		
Clearing condition: (('Operational State' NOT EQUAL 'No Egress Label') AND ('Operational State' NOT EQUAL 'No Ingress Label') AND ('Operational State' NOT EQUAL 'No Labels') AND NOT ((('State Cause'anyBit'No Egress VC Label') OR ('State Cause'anyBit'No Ingress VC Label') OR ('State Cause'anyBit'Label Manager Has Ran Out Of Labels'))))		
Remedial action: An ingress or egress label is missing for the SDP binding.		

Table 36-40 LagPortAddFailed

Alarm	Attributes	Applicable major release
Name: LagPortAddFailed (422) Type: equipmentAlarm Package: equipment.LagPortAddFailed Raised on class: equipment.PhysicalPort	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: linkDown	Release: • 1.0.0
Description: The alarm is raised when the Lag Port Add function Fails.		
Raising condition: (('state' EQUAL 'Link Down') AND ('LAG ID' > '0'))		
Clearing condition: (('state' NOT EQUAL 'Link Down') OR ('LAG ID' EQUAL '0'))		

Table 36-40 LagPortAddFailed (continued)

Alarm	Attributes	Applicable major release
Remedial action: A configuration error has occurred which must be corrected. The link that was to be added to the LAG group may be of the wrong type (i.e. non ethernet) or the limit of the number of links supported in a LAG may have been reached.		

Table 36-41 LdpDown

Alarm	Attributes	Applicable major release
Name: LdpDown (22) Type: ProtocolAlarm Package: ldp.LdpDown Raised on class: ldp.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 1.0.0
Description: The alarm is raised when an LDP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: Check operational state down reason and update accordingly.		

Table 36-42 LdpTargetedPeerDown

Alarm	Attributes	Applicable major release
Name: LdpTargetedPeerDown (23) Type: ProtocolAlarm Package: ldp.LdpTargetedPeerDown Raised on class: ldp.TargetedPeer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 1.0.0
Description: The alarm is raised when an LDP targeted peer is operationally down.		
Raising condition: (('administrativeState' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('administrativeState' NOT EQUAL 'Up'))		
Remedial action: Please check the route to LDP targeted peer to make sure all associated protocols/interfaces/connections are OK.		

Table 36-43 LicensedLimitExceeded

Alarm	Attributes	Applicable major release
Name: LicensedLimitExceeded (127) Type: licensingAlarm Package: security.LicensedLimitExceeded Raised on class: security.SamLicensePoints	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: licensedLimitExceeded	Release: • 1.0.0
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		

Table 36-43 LicensedLimitExceeded (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 36-44 LinkDown (equipment)

Alarm	Attributes	Applicable major release
Name: LinkDown (12) Type: communicationsAlarm Package: equipment.LinkDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: portLinkProblem	Release: • 1.0.0
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 36-45 LowTemperatureDetected

Alarm	Attributes	Applicable major release
Name: LowTemperatureDetected (1127) Type: environmentalAlarm Package: equipment.LowTemperatureDetected Raised on class: equipment.Shelf	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentOvercooled	Release: • 1.0.0
Description: The alarm is raised when the chassis temperature falls below the minimum threshold.		
Raising condition: ('Low Temperature State' EQUAL 'Low')		
Clearing condition: ('Low Temperature State' NOT EQUAL 'Low')		
Remedial action: The NE has detected internal temperatures which are abnormally low. This may happen when the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 36-46 LspDown

Alarm	Attributes	Applicable major release
Name: LspDown (25) Type: pathAlarm Package: mpls.LspDown Raised on class: mpls.Lsp	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lspDown	Release: • 1.0.0
Description: The alarm is raised when the Operational State of an LSP is Down, but the Administrative State is Up.		
Raising condition: (('administrativeState' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('administrativeState' NOT EQUAL 'Up'))		
Remedial action: So many things can cause LSP down, check if source and destination interfaces are down, LSP path is down and the failure code, or MPLS path is down...		

Table 36-47 LspPathBypassTunnelActive

Alarm	Attributes	Applicable major release
Name: LspPathBypassTunnelActive (264) Type: pathAlarm Package: mpls.LspPathBypassTunnelActive Raised on class: mpls.LspPath	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LspPathReroutedToBypass-Tunnel	Release: • 1.0.0
Description: The alarm is raised when an LSP primary path is rerouted to the bypass tunnel. The alarm clears when the primary path returns to the original tunnel and the actual hop returns to the primary path.		
Raising condition: ('Bypass Tunnel Active' EQUAL 'true')		
Clearing condition: ('Bypass Tunnel Active' EQUAL 'false')		
Remedial action: There is a problem with the original path, check what is the problem and fix it if possible.		

Table 36-48 LspPathDown

Alarm	Attributes	Applicable major release
Name: LspPathDown (26) Type: pathAlarm Package: mpls.LspPathDown Raised on class: mpls.LspPath	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lspPathDown	Release: • 1.0.0
Description: The alarm is raised when an LSP path is operationally down.		
Raising condition: (('Administrative' EQUAL 'Up') AND ('Operational' NOT EQUAL 'Up') AND ('Type' EQUAL 'Standby'))		
Clearing condition: (('Operational' EQUAL 'Up') OR ('Administrative' NOT EQUAL 'Up') OR ('Type' EQUAL 'Secondary'))		
Remedial action: Check the failure code and update accordingly, e.g. whether MPLS/RSVP interfaces, OSPF interfaces are down.		

Table 36-49 macMoveRateExceeded (service)

Alarm	Attributes	Applicable major release
Name: macMoveRateExceeded (3690) Type: accessInterfaceAlarm Package: service.macMoveRateExceeded Raised on class: service.AccessInterface	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MacMoveRateExceeded	Release: • 1.0.0
Description: The alarm is raised when the SAP exceeds the MAC Move Frequency of the service site.		
Raising condition: ('State Cause'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('State Cause'anyBit'Relearn Limit Exceeded'))		
Remedial action: Informational.		

Table 36-50 macMoveRateExceeded (svt)

Alarm	Attributes	Applicable major release
Name: macMoveRateExceeded (3690) Type: SpokeSdpBindingAlarm Package: svt.macMoveRateExceeded Raised on class: svt.SpokeSdpBinding	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MacMoveRateExceeded	Release: • 1.0.0
Description: The alarm is raised when the SDP exceeds the Service Site's MAC Move Frequency.		
Raising condition: ('operationalFlags'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('operationalFlags'anyBit'Relearn Limit Exceeded'))		
Remedial action: Check Service Site MAC move frequency or underlying physical link to understand issue.		

Table 36-51 MobileConnectorDown

Alarm	Attributes	Applicable major release
Name: MobileConnectorDown (1064) Type: EpcAlarm Package: lteservice.MobileConnectorDown Raised on class: lteservice.MobileServiceConnector	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EpcDown	Release: • 1.0.0
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL '\"\"')		
Clearing condition: ('EPS Path' NOT EQUAL '\"\"')		
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

Table 36-52 MplsDown

Alarm	Attributes	Applicable major release
Name: MplsDown (27) Type: ProtocolAlarm Package: mpls.MplsDown Raised on class: mpls.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 1.0.0
Description: The alarm is raised when an MPLS site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: Check operational down reason and update accordingly.		

Table 36-53 MplsPathUpdateFailed

Alarm	Attributes	Applicable major release
Name: MplsPathUpdateFailed (1066) Type: pathAlarm Package: mpls.MplsPathUpdateFailed Raised on class: mpls.LspPath	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mbbRetryExceeded Applicable probable causes: • mbbRetryExceeded • lspPathGoingDown • startingHighPriMbb • restartingMbb • highPriMbbInProg	Release: • 1.0.0
Description: The alarm is raised when an MPLS path update fails because of an MBB problem. The alarm clears when the MBB status changes to Successful.		
Raising condition: (('mbbStatus' NOT EQUAL 'None') AND ('mbbStatus' NOT EQUAL 'Successful'))		
Clearing condition: (('Last Performed State' EQUAL 'Success') OR ('Administrative' EQUAL 'Down') OR (('Operational' EQUAL 'Up') AND ('Last Performed State' EQUAL 'None')))		
Remedial action: Based on the probable cause, change the parameters and update the path again.		

Table 36-54 MvrSiteDown

Alarm	Attributes	Applicable major release
Name: MvrSiteDown (162) Type: ProtocolAlarm Package: layer2.MvrSiteDown Raised on class: layer2.MvrSite	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 1.0.0
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		

Table 36-54 MvrSiteDown (continued)

Alarm	Attributes	Applicable major release
Raising condition: ('MVR Admin Status' EQUAL 'Disabled')		
Clearing condition: ('MVR Admin Status' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable MVR Admin Status under the Bridge Instance.		

Table 36-55 NeighborDown

Alarm	Attributes	Applicable major release
Name: NeighborDown (121) Type: NeighborDown Package: ospf.NeighborDown Raised on class: ospf.AbstractNeighbor	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NeighborDown	Release: • 1.0.0
Description: The alarm is raised when an OSPF interface neighbor is operationally Down.		
Raising condition: ('Operational State' NOT EQUAL 'full')		
Clearing condition: ('Operational State' EQUAL 'full')		
Remedial action: This alarm is raised when the OSPF interface neighbor is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 36-56 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major release
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm Package: netw. NeManagementAndTrapManagementMismatch Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: neManagementChange	Release: • 1.0.0
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		
Raising condition: ((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band')))		
Clearing condition: ((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band')))		

Table 36-56 NeManagementAndTrapManagementMismatch (continued)

Alarm	Attributes	Applicable major release
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

Table 36-57 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major release
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm Package: security.NewSsh2ServerKeyDetected Raised on class: security.KnownHostKey	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch	Release: • 1.0.0
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 36-58 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major release
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm Package: netw.NodeDatabaseFallbackDetected Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeDatabaseFallback	Release: • 1.0.0
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 36-59 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major release
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm Package: netw.NodeDatabaseMisalignmentDetected Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment	Release: • 1.0.0

Table 36-59 NodeDatabaseMisalignmentDetected (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

Table 36-60 NodeSuspended

Alarm	Attributes	Applicable major release
Name: NodeSuspended (5123) Type: communicationsAlarm Package: netw.NodeSuspended Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NodeSuspend	Release: • 1.0.0
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element.The alarm will be cleared when the network element is managed back.		

Table 36-61 nonDeployedAdjacencyExists

Alarm	Attributes	Applicable major release
Name: nonDeployedAdjacencyExists (11465) Type: communicationsAlarm Package: mpr.nonDeployedAdjacencyExists Raised on class: mpr.BackhaulAdjacency	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nonDeployedAdjacencyExists	Release: • 1.0.0
Description: The alarm is raised when a deployed adjacency is deleted on the site.		
Raising condition: (('Deployed to Site' EQUAL 'false') AND ('existedOnSite' EQUAL 'true'))		
Clearing condition: (('Deployed to Site' EQUAL 'true') AND ('existedOnSite' EQUAL 'true'))		
Remedial action: Deploy the changes made to the service.		

Table 36-62 NTPOperDown

Alarm	Attributes	Applicable major release
Name: NTPOperDown (4879) Type: communicationsAlarm Package: ntp.NTPOperDown Raised on class: ntp.NTP	Severity: info Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NTPOperDown	Release: • 1.0.0
Description: The alarm is generated when the NTP Operational State is down for NTP.		
Raising condition: (('Operational State' EQUAL 'Down') AND ('NTP State' EQUAL 'Enabled'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('NTP State' EQUAL 'Disabled'))		
Remedial action: Please check if NTP is administratively enabled (Admin State in NTP General Tab). If admin state down, enable it to make NTP operationally up.		

Table 36-63 OspfInterfaceDown

Alarm	Attributes	Applicable major release
Name: OspfInterfaceDown (141) Type: OspfInterfaceDown Package: ospf.OspfInterfaceDown Raised on class: ospf.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OspfInterfaceDown	Release: • 1.0.0
Description: The alarm is raised when an OSPF interface is operationally down.		
Raising condition: ('operationalState' EQUAL 'Down')		
Clearing condition: ('operationalState' NOT EQUAL 'Down')		
Remedial action: This alarm is raised when the OSPF interface is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 36-64 OverTemperatureDetected

Alarm	Attributes	Applicable major release
Name: OverTemperatureDetected (388) Type: environmentalAlarm Package: equipment.OverTemperatureDetected Raised on class: equipment.Shelf	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentOverheated	Release: • 1.0.0
Description: The alarm is raised when the chassis temperature exceeds the maximum threshold value.		
Raising condition: ('Over Temperature State' EQUAL 'Over')		
Clearing condition: ('Over Temperature State' NOT EQUAL 'Over')		

Table 36-64 OverTemperatureDetected (continued)

Alarm	Attributes	Applicable major release
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 36-65 PartialResyncProblem

Alarm	Attributes	Applicable major release
Name: PartialResyncProblem (4401) Type: communicationsAlarm Package: netw.PartialResyncProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: partialResyncProblem	Release: • 1.0.0
Description: The alarm is raised when a partial resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 36-66 PartialVPRNEncryption

Alarm	Attributes	Applicable major release
Name: PartialVPRNEncryption (8992) Type: configurationAlarm Package: nge.PartialVPRNEncryption Raised on class: nge.VprnEncryptService	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConfigMismatch	Release: • 1.0.0
Description: The alarm is raised when one or more sites are not encryption enabled in a VPRN service.		
Raising condition: (('VPRN Service Encryption Status' EQUAL 'Partial'))		
Clearing condition: (('VPRN Service Encryption Status' NOT EQUAL 'Partial'))		
Remedial action: This site is newly added to the VPRN service, Perform the encrypt operation on the KeyGroup to clear the alarm.		

Table 36-67 PeerConnectionDown (bgp)

Alarm	Attributes	Applicable major release
Name: PeerConnectionDown (2) Type: ProtocolAlarm Package: bgp.PeerConnectionDown Raised on class: bgp.Peer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: connectionDown	Release: • 1.0.0
Description: The alarm is raised when a BGP peer has a Connection State other than Established, and the Administrative State of the BGP peer is Up.		
Raising condition: (('Connection State' NOT EQUAL 'Established') AND ('Administrative State' EQUAL 'Up'))		
Clearing condition: (('Connection State' EQUAL 'Established') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: A mismatch in configuration may have occurred. Check the configuration of both peers to rule out a mismatched configuration.		

Table 36-68 PeerDown (bgp)

Alarm	Attributes	Applicable major release
Name: PeerDown (1) Type: ProtocolAlarm Package: bgp.PeerDown Raised on class: bgp.Peer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 1.0.0
Description: The alarm is raised when a BGP peer has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The BGP peer entity is down - administratively disable the BGP peer and re-enable it. If toggling the administrative state does not solve the problem check that the physical interface and network connection to the far end peer are up and operational. If the problem persists please contact your Nokia support representative for assistance.		

Table 36-69 PeerGroupDown (bgp)

Alarm	Attributes	Applicable major release
Name: PeerGroupDown (5) Type: ProtocolAlarm Package: bgp.PeerGroupDown Raised on class: bgp.PeerGroup	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 1.0.0
Description: The alarm is raised when a BGP peer group has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The BGP peer group is down - administratively disable the BGP peer group and re-enable it. If the problem persists please contact your Nokia support representative for assistance.		

Table 36-70 PeerLacIngressEgressFault

Alarm	Attributes	Applicable major release
Name: PeerLacIngressEgressFault (2929) Type: PeerLacAlarm Package: svt.PeerLacIngressEgressFault Raised on class: svt.SpokeSdpBinding	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: peerPWStatusBitsChanged	Release: • 1.0.0
Description: The alarm is raised when the Peer Status is Peer LAC Rx Fault and Peer LAC Tx Fault		
Raising condition: (('Peer State Cause'anyBit'Peer LAC Tx Fault') AND ('Peer State Cause'anyBit'Peer LAC Rx Fault'))		
Clearing condition: NOT ((('Peer State Cause'anyBit'Peer LAC Tx Fault') AND ('Peer State Cause'anyBit'Peer LAC Rx Fault')))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 36-71 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major release
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm Package: netw. PersistentIndexParametersMisconfigured Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistentIndexConfiguration-Mismatch	Release: • 1.0.0
Description: The alarm is raised when persistence is set to Off in the NE BOF.		
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

Table 36-72 PimDown

Alarm	Attributes	Applicable major release
Name: PimDown (184) Type: ProtocolAlarm Package: pim.PimDown Raised on class: pim.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 1.0.0
Description: The alarm is raised when a PIM site is administratively Up but operationally Down. The alarm is cleared when the PIM site becomes operationally Up but administratively Down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		

Table 36-72 PimDown (continued)

Alarm	Attributes	Applicable major release
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This should never happen. Contact your Nokia support representative for assistance.		

Table 36-73 PollerProblem

Alarm	Attributes	Applicable major release
Name: PollerProblem (31) Type: communicationsAlarm Package: netw.PollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resyncFailed	Release: • 1.0.0
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 36-74 PrimaryImageBootFailure

Alarm	Attributes	Applicable major release
Name: PrimaryImageBootFailure (191) Type: configurationAlarm Package: sw.PrimaryImageBootFailure Raised on class: sw.CardSoftware	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured	Release: • 1.0.0
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 36-75 PrimaryPathLimitReached

Alarm	Attributes	Applicable major release
Name: PrimaryPathLimitReached (457) Type: resourceAlarm Package: equipment.PrimaryPathLimitReached Raised on class: equipment.DaughterCard	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceLimitReached	Release: • 1.0.0
Description: The alarm is raised when the Ingress Multicast Path Management primary path bandwidth limit is reached.		
Raising condition: (('Primary Path Limit Override' > '0') AND ('Primary Path In use' >=" (1000 * 'Primary Path Limit Override')))"		
Clearing condition: (('Primary Path Limit Override' > '0') AND ('Primary Path In use' < (1000 * 'Primary Path Limit Override')))		
Remedial action: Informational - The alarm is raised when the Ingress Multicast Path Management primary path bandwidth limit is reached. This can be remedied by modifying the primary path limit located at T1 Paths tab of the multicast bandwidth policy which assigned to the card, or increase the primary path limit override located at the Daughter Card tab under Daughter Card Slot form.		

Table 36-76 RadiusOperStatusDown

Alarm	Attributes	Applicable major release
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm Package: netw.RadiusOperStatusDown Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: radiusOperationStatusDown	Release: • 1.0.0
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up.Check the connectivity between SAM server and radius server configured on the Network element.		

Table 36-77 ReachabilityProblem

Alarm	Attributes	Applicable major release
Name: ReachabilityProblem (243) Type: communicationsAlarm Package: netw.ReachabilityProblem Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReachabilityTestFailed	Release: • 1.0.0
Description: The alarm is raised when a mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. The polling interval depends on the NE type and is configurable in nms-server.xml. By default, the 5620 SAM polls a managed NE every four minutes. If a poll fails, the alarm is raised. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		

Table 36-77 ReachabilityProblem (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 36-78 ReconfigFailure

Alarm	Attributes	Applicable major release
Name: ReconfigFailure (1949) Type: communicationsAlarm Package: netw.ReconfigFailure Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: failedReconfig	Release: • 1.0.0
Description: This alarm is raised when the reconfig action failed.		
Raising condition: ('State' EQUAL 'Failed')		
Clearing condition: ('State' NOT EQUAL 'Failed')		
Remedial action: Verify that the object is configured as expected.		

Table 36-79 RouteDistinguisherNotConfigured

Alarm	Attributes	Applicable major release
Name: RouteDistinguisherNotConfigured (142) Type: configurationAlarm Package: l3fwd.RouteDistinguisherNotConfigured Raised on class: l3fwd.ServiceSite	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: routeDistinguisherNotConfig-ured	Release: • 1.0.0
Description: The alarm is raised when no RD is configured for an L3 service site.		
Raising condition: ('routeDistinguisher' EQUAL '\"00 00 00 00 00 00 00 00\"')		
Clearing condition: ('routeDistinguisher' NOT EQUAL '\"00 00 00 00 00 00 00 00\"')		
Remedial action: A configuration error has occurred which must be corrected. The RD must be configured on the L3 Service Site in question.		

Table 36-80 RsvpDown

Alarm	Attributes	Applicable major release
Name: RsvpDown (74) Type: ProtocolAlarm Package: rsvp.RsvpDown Raised on class: rsvp.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 1.0.0

Table 36-80 RsvpDown (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when an RSVP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The RSVP Site is down while it is administratively up. Please check MPLS is enabled and administratively up.		

Table 36-81 SaveConfigFailed

Alarm	Attributes	Applicable major release
Name: SaveConfigFailed (105) Type: configurationAlarm Package: sw.SaveConfigFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileAccessError	Release: • 1.0.0
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact your Nokia support representative for assistance.		

Table 36-82 ScheduledPollerProblem

Alarm	Attributes	Applicable major release
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm Package: netw.ScheduledPollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: scheduledResyncFailed	Release: • 1.0.0
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 36-83 SdpBindingDown

Alarm	Attributes	Applicable major release
Name: SdpBindingDown (221) Type: SdpBindingAlarm Package: svt.SdpBindingDown Raised on class: svt.SdpBinding	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SdpBindingNotReady	Release: • 1.0.0
Description: The alarm is raised when an SDP binding has an Operational State other than Up.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'Standby For BGP Multi-Homing'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'Standby For BGP Multi-Homing'))		
Remedial action: To resolve this alarm check the SDP binding to determine if a configuration mismatch exists. If configuration is determined to be correct then the associated network interface may be down. Further investigation is required to determine why the underlying network interface is down.		

Table 36-84 SdpBindingTunnelDown

Alarm	Attributes	Applicable major release
Name: SdpBindingTunnelDown (222) Type: CircuitAlarm Package: svt.SdpBindingTunnelDown Raised on class: svt.SdpBinding	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SdpTunnelNotReady	Release: • 1.0.0
Description: The alarm is raised when an SDP binding tunnel has an Operational State other than Up.		
Raising condition: (('Operational State' EQUAL 'Tunnel Not Ready') OR ('Operational State' EQUAL 'Tunnel Down') OR ('State Cause'anyBit'Tunnel Oper Down'))		
Clearing condition: (('Operational State' NOT EQUAL 'Tunnel Not Ready') AND ('Operational State' NOT EQUAL 'Tunnel Down') AND NOT (('State Cause'anyBit'Tunnel Oper Down')))		
Remedial action: To resolve this alarm check the endpoints of the SDP binding to determine if a configuration mismatch exists. If configuration matches then the underlying network resource between the endpoints of the SDP may be down. Further investigation is required to determine why the underlying transport network is down.		

Table 36-85 SdpEgressIfsNetDomainInConsistent

Alarm	Attributes	Applicable major release
Name: SdpEgressIfsNetDomainInConsistent (3616) Type: resourceAlarm Package: svt.SdpEgressIfsNetDomainInConsistent Raised on class: svt.Tunnel	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: sdpEgressIfsNetDomainIn-Consistent	Release: • 1.0.0
Description: The alarm is raised when the SDP egress interface's consistency state changes to inconsistent.		
Raising condition: ('Egress Interfaces Consistency State' EQUAL '3')		
Clearing condition: ('Egress Interfaces Consistency State' EQUAL '2')		

Table 36-85 SdpEgressIfsNetDomainInConsistent (continued)

Alarm	Attributes	Applicable major release
Remedial action: To resolve this alarm check egress interfaces of the SDP configuration. If configuration is determined to be correct check underlying physical transport. Further investigation is required.		

Table 36-86 SecondaryPathLimitReached

Alarm	Attributes	Applicable major release
Name: SecondaryPathLimitReached (458) Type: resourceAlarm Package: equipment.SecondaryPathLimitReached Raised on class: equipment.DaughterCard	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceLimitReached	Release: • 1.0.0
Description: The alarm is raised when the Ingress Multicast Path Management secondary path bandwidth limit is reached.		
Raising condition: (('Secondary Path Limit Override' > '0') AND ('Secondary Path In use' >=" (1000 * 'Secondary Path Limit Override')))"		
Clearing condition: (('Secondary Path Limit Override' > '0') AND ('Secondary Path In use' < (1000 * 'Secondary Path Limit Override')))		
Remedial action: Informational - The alarm is raised when the Ingress Multicast Path Management secondary path bandwidth limit is reached. This can be remedied by modifying the secondary path limit located at T1 Paths tab of the multicast bandwidth policy which assigned to the card, or increase the secondary path limit override located at the Daughter Card tab under Daughter Card Slot form.		

Table 36-87 ServiceSiteDown

Alarm	Attributes	Applicable major release
Name: ServiceSiteDown (97) Type: serviceAlarm Package: service.ServiceSiteDown Raised on class: service.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: siteDown	Release: • 1.0.0
Description: The alarm is raised when all SAPs on a site are operationally down, or when the service tunnels for the site are operationally down. For Backhaul Sites, this alarm is raised when one or more Backhaul Adjacencies is operationally down.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'All Spoke SDP Bindings are Standby'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'All Spoke SDP Bindings are Standby'))		
Remedial action: The network resources (i.e. physical ports for SAPs or Backhaul Sites, or physical ports/LSP) associated with the service site should be examined to determine if/why they are operationally down. The underlying transport network supporting the site may also be unreliable.		

Table 36-88 SessionDown

Alarm	Attributes	Applicable major release
Name: SessionDown (73) Type: ProtocolAlarm Package: rsvp.SessionDown Raised on class: rsvp.Session	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceDown	Release: • 1.0.0
Description: The alarm is raised when an RSVP session is operationally down.		
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' EQUAL 'Up')		
Remedial action: Please check the RSVP session path to make sure all associated protocols/interfaces/connections are OK.		

Table 36-89 SingleSFMOverloadDetected

Alarm	Attributes	Applicable major release
Name: SingleSFMOverloadDetected (843) Type: ProtocolAlarm Package: l3fwd.SingleSFMOverloadDetected Raised on class: l3fwd.Site	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: signleSfmOverloadDetected	Release: • 1.0.0
Description: The alarm is raised when a device reports a single-SFM overload. The alarm clears when the VR exits the Overload state.		
Raising condition: ('Overload State' EQUAL 'Overload')		
Clearing condition: ('Overload State' EQUAL 'Normal')		
Remedial action: Information - if the the problem persists please contact your Nokia support representative for assistance.		

Table 36-90 StatsRetrieveFailed

Alarm	Attributes	Applicable major release
Name: StatsRetrieveFailed (244) Type: configurationAlarm Package: sw.StatsRetrieveFailed Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: fileTransferFailure	Release: • 1.0.0
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 36-91 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major release
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed Package: netw.SubscriberSystemNextHopUsageHigh Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 1.0.0
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

Table 36-92 SubSysChassMemoryUsageHi

Alarm	Attributes	Applicable major release
Name: SubSysChassMemoryUsageHi (5656) Type: thresholdCrossed Package: equipment.SubSysChassMemoryUsageHi Raised on class: equipment.Shelf	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 1.0.0
Description: This alarm is raised when the memory usage by subscriber management on this system or chassis reaches its high watermark ('true').		
Raising condition: ('Memory Usage High' EQUAL 'True')		
Clearing condition: (('Memory Usage High' EQUAL 'False') OR ('Memory Usage High' EQUAL 'unspecified'))		
Remedial action: The memory usage by subscriber management on this system has reached its high watermark. Please check your memory usage.		

Table 36-93 TemperatureThresholdCrossed

Alarm	Attributes	Applicable major release
Name: TemperatureThresholdCrossed (7) Type: environmentalAlarm Package: equipment.TemperatureThresholdCrossed Raised on class: equipment.Environment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentOverheated	Release: • 1.0.0
Description: The alarm is raised when a temperature crosses a threshold.		
Raising condition: ('temperatureThresholdCrossed' EQUAL 'true')		
Clearing condition: ('temperatureThresholdCrossed' EQUAL 'false')		

Table 36-93 TemperatureThresholdCrossed (continued)

Alarm	Attributes	Applicable major release
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 36-94 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major release
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm Package: netw.TrapDestinationMisconfigured Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trapDestinationMisconfigured Applicable probable causes: • trapDestinationMisconfigured • duplicateTrapLogId	Release: • 1.0.0
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 36-95 TrapReceivingFailure

Alarm	Attributes	Applicable major release
Name: TrapReceivingFailure (1083) Type: communications Package: netw.TrapReceivingFailure Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: trapsWillNotBeSent	Release: • 1.0.0
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		
Raising condition: ((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')))		

Table 36-95 TrapReceivingFailure (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

Table 36-96 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major release
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications Package: netw. TrapRoutePreferenceRedundancyMissing Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trapsRedundancyMissing	Release: • 1.0.0
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: ((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')))		
Clearing condition: ((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None')))		
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

Table 36-97 TunnelAdministrativelyDown (mpls)

Alarm	Attributes	Applicable major release
Name: TunnelAdministrativelyDown (523) Type: pathAlarm Package: mpls.TunnelAdministrativelyDown Raised on class: mpls.Tunnel	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tunnelAdministrativelyDown	Release: • 1.0.0

Table 36-97 TunnelAdministrativelyDown (mpls) (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the 5620 SAM detects that an MPLS path is administratively down.		
Raising condition: ('Administrative' NOT EQUAL 'Up')		
Clearing condition: ('Administrative' EQUAL 'Up')		
Remedial action: Turn up the corresponding MPLS path.		

Table 36-98 TunnelAdministrativelyDown (svt)

Alarm	Attributes	Applicable major release
Name: TunnelAdministrativelyDown (523) Type: pathAlarm Package: svt.TunnelAdministrativelyDown Raised on class: svt.Tunnel	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tunnelAdministrativelyDown	Release: • 1.0.0
Description: The alarm is raised when the 5620 SAM detects that a service tunnel is administratively down.		
Raising condition: ('administrativeState' NOT EQUAL 'Up')		
Clearing condition: ('administrativeState' EQUAL 'Up')		
Remedial action: Informational - an operator has manually turned down a service tunnel.		

Table 36-99 TunnelDown (mpls)

Alarm	Attributes	Applicable major release
Name: TunnelDown (30) Type: pathAlarm Package: mpls.TunnelDown Raised on class: mpls.Tunnel	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tunnelDown	Release: • 1.0.0
Description: The alarm is raised when an MPLS path has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative' EQUAL 'Up') AND ('Operational' NOT EQUAL 'Up'))		
Clearing condition: (('Operational' EQUAL 'Up') OR ('Administrative' NOT EQUAL 'Up'))		
Remedial action: Check the network resources along the path.		

Table 36-100 TunnelDown (svt)

Alarm	Attributes	Applicable major release
Name: TunnelDown (30) Type: pathAlarm Package: svt.TunnelDown Raised on class: svt.AbstractTunnel	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tunnelDown	Release: • 1.0.0
Description: The alarm is raised when the 5620 SAM detects that a service tunnel is operationally down.		
Raising condition: (('Administrative' EQUAL 'Up') AND ('Operational' NOT EQUAL 'Up'))		
Clearing condition: (('Operational' EQUAL 'Up') OR ('Administrative' NOT EQUAL 'Up'))		
Remedial action: This alarm indicates that a problem has been made in the underlying transport network. If the alarm persists or re-occurs frequently then investigation of the underlying transport issues is warranted.		

Table 36-101 UnidentifiedNode

Alarm	Attributes	Applicable major release
Name: UnidentifiedNode (1922) Type: communicationsAlarm Package: netw.UnidentifiedNode Raised on class: netw.DiscoveredNode	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unidentifiedNode	Release: • 1.0.0
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 36-102 UnmanageFailed

Alarm	Attributes	Applicable major release
Name: UnmanageFailed (300) Type: discoveryControlAlarm Package: netw.UnmanageFailed Raised on class: netw.NodeDiscoveryControl	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unableToDeleteNode	Release: • 1.0.0
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'Unmanage Failed')		
Clearing condition: ('Site State' NOT EQUAL 'Unmanage Failed')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 36-103 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major release
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm Package: netw.UpgradedBuildVersionMismatch Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: upgradedImageNotBooted	Release: • 1.0.0
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 36-104 upgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: upgradedCardAlarm (255) Type: softwareAlarm Package: equipment.upgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: upgradedCard	Release: • 1.0.0
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 36-105 UplinkDown

Alarm	Attributes	Applicable major release
Name: UplinkDown (11062) Type: virtualSwitchAlarm Package: dctr.UplinkDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsAllDown	Release: • 1.0.0
Description: The alarm is raised when all connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '2'))		
Clearing condition: (('uplinkState' NOT EQUAL '2'))		
Remedial action: This alarm is raised when all connections associated to the uplink lost connectivity.		

Table 36-106 UplinkPartiallyDown

Alarm	Attributes	Applicable major release
Name: UplinkPartiallyDown (11063) Type: virtualSwitchAlarm Package: dctr.UplinkPartiallyDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsDown	Release: • 1.0.0
Description: The alarm is raised when some connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '3'))		
Clearing condition: (('uplinkState' NOT EQUAL '3'))		
Remedial action: This alarm is raised when a connection of the uplink lost connectivity but at least one connection remains connected.		

Table 36-107 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm Package: sw.VersionConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: versionMismatch	Release: • 1.0.0
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 36-108 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major release
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm Package: netw.WrongCpaaSoftwareVersion Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion	Release: • 1.0.0
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL '\"TiMOS-B-3.0.Generic \"') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Clearing condition: (('Software Version' NOT EQUAL '\"TiMOS-B-3.0.Generic \"') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

Table 36-109 XplError

Alarm	Attributes	Applicable major release
Name: XplError (573) Type: hardwareAnomaly Package: equipment.XplError Raised on class: equipment.DaughterCard	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: xplError	Release: • 1.0.0
Description: The alarm is raised when an MDA reports persistent XPL Errors.		
Raising condition: ('Number Of Notifications' NOT EQUAL '0')		
Clearing condition: ('Number Of Notifications' EQUAL '0')		
Remedial action: Informational - if the condition persists then the MDA indicated in the alarm should be replaced.		

37 HIP

37.1 Alarms

Alarms

Note: Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see Chapter 39, “Unspecified NE”.

Table 37-1 ActiveAbnormalCondition

Alarm	Attributes	Applicable major release
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm Package: netw.ActiveAbnormalCondition Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState	Release: • N/A
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

Table 37-2 AggregatedVFLPortDown

Alarm	Attributes	Applicable major release
Name: AggregatedVFLPortDown (5436) Type: equipmentAlarm Package: equipment.AggregatedVFLPortDown Raised on class: equipment.Shelf	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: connectivityIssue	Release: • N/A
Description: The alarm is generated when the aggregated virtual fabric link on the virtual chassis slot is down.		
Raising condition: (('Shelf Type' EQUAL '7850') AND ('Total Slots' EQUAL '4') AND ('Virtual Fabric Link State' NOT EQUAL 'Up'))		
Clearing condition: (('Shelf Type' EQUAL '7850') AND ('Total Slots' EQUAL '4') AND ('Virtual Fabric Link State' EQUAL 'Up'))		
Remedial action: The alarm is raised when the aggregated virtual fabric link on the virtual chassis is down. Please check the virtual fabric links for the virtual chassis setup.		

Table 37-3 AGWDiameterPeerDown

Alarm	Attributes	Applicable major release
Name: AGWDiameterPeerDown (844) Type: EpcAlarm Package: lte.AGWDiameterPeerDown Raised on class: lte.AGWDiameterPeer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerDown	Release: • N/A
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 37-4 AuxiliaryServerStatus

Alarm	Attributes	Applicable major release
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm Package: server.AuxiliaryServerStatus Raised on class: server.AuxiliaryServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • N/A
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 37-5 BareMetalReachabilityDown

Alarm	Attributes	Applicable major release
Name: BareMetalReachabilityDown (10273) Type: virtualPortAlarm Package: dctr.BareMetalReachabilityDown Raised on class: dctr.BMDevice	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BareMetalReachability-DownOrDeleted	Release: • N/A
Description: The alarm is raised when Bare Metal server is reachability down.		
Raising condition: (('bgpReachabilityState' NOT EQUAL '0'))		
Clearing condition: (('bgpReachabilityState' EQUAL '0'))		

Table 37-5 BareMetalReachabilityDown (continued)

Alarm	Attributes	Applicable major release
Remedial action: This alarm can be cleared when bare metal device BGP prefix is up. Check for virtual switch controller down or virtual switch down or interface/port down in underlay network (hence the BGP prefix not advertised).		

Table 37-6 BootableConfigBackupFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigBackupFailed (103) Type: configurationAlarm Package: sw.BootableConfigBackupFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • N/A
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 37-7 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm Package: sw.BootableConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • N/A
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 37-8 BootParametersMisconfigured

Alarm	Attributes	Applicable major release
Name: BootParametersMisconfigured (35) Type: configurationAlarm Package: netw.BootParametersMisconfigured Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistentIndexFailure Applicable probable causes: • persistentIndexFailure • configFileBootFailure	Release: • N/A
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND ((('Config File Status' NOT EQUAL 'Executed Successfully') AND ('Config File Status' NOT EQUAL 'configFileStatus_unspecified')) OR (('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded') AND ('Persistent Index Status' NOT EQUAL 'persistentIndexStatus_unspecified'))))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

Table 37-9 ClientDelegateServerStatus

Alarm	Attributes	Applicable major release
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm Package: server.ClientDelegateServerStatus Raised on class: server.ClientDelegateServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • N/A
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 37-10 CmuManagementFailed

Alarm	Attributes	Applicable major release
Name: CmuManagementFailed (10040) Type: communicationsAlarm Package: lte.CmuManagementFailed Raised on class: lte.CompactMobilityUnit	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ftpFailed	Release: • N/A

Table 37-10 CmuManagementFailed (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when SAM fails to manage a 9430 Compact Mobility Unit due to an FTP failure.		
Raising condition: ('Management State' EQUAL 'FTP Failed')		
Clearing condition: ('Management State' EQUAL 'Managed')		
Remedial action: Verify FTP connectivity between the 5620 SAM and the 9430 Compact Mobility Unit, then re-attempt to manage.		

Table 37-11 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm Package: equipment. ContainingEquipmentAdministrativelyDown Raised on class: equipment.Port	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentAdminist-rativelyDown	Release: • N/A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 37-12 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm Package: equipment.ContainingEquipmentMismatch Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentMismatch	Release: • N/A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 37-13 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm Package: equipment.ContainingEquipmentOperationallyDown Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentDown	Release: • N/A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationllyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

Table 37-14 CorruptImageFile

Alarm	Attributes	Applicable major release
Name: CorruptImageFile (171) Type: configurationAlarm Package: mediation.CorruptImageFile Raised on class: mediation.AbstractSoftwareFolderDescriptor	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile	Release: • N/A
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 37-15 downgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: downgradedCardAlarm (256) Type: softwareAlarm Package: equipment.downgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: downgradedCard	Release: • N/A
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		

Table 37-15 downgradedCardAlarm (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 37-16 EMSNetworkElementSystemAlarmOverLoad

Alarm	Attributes	Applicable major release
Name: EMSNetworkElementSystemAlarmOverLoad (4620) Type: processingErrorAlarm Package: hip.EMSNetworkElementSystemAlarmOverLoad Raised on class: hip.EMSNetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemResourcesOverload	Release: • N/A
Description: The alarm is raised when the 5620 SAM detects an overload of EMS alarms in the alarm list.		
Raising condition: ('alarmOverLoaded' EQUAL 'true')		
Clearing condition: ('alarmOverLoaded' EQUAL 'false')		
Remedial action: Informational - no corrective action required.		

Table 37-17 EMSNetworkElementSystemUnreachable

Alarm	Attributes	Applicable major release
Name: EMSNetworkElementSystemUnreachable (4621) Type: communicationsAlarm Package: hip.EMSNetworkElementSystemUnreachable Raised on class: hip.EMSNetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: connectionEstablishmentError Applicable probable causes: • connectionEstablishmentError • transmissionError • fireDetected • lossOfRedundancy • protectionMechanismFailure • protectingResourceFailure • excessiveResponseTime • excessiveRetransmissionRate	Release: • N/A
Description: The alarm is raised when the 5620 SAM detects a HIP communication link failure to the EM System while the EM System is administratively up. The alarm clears when the HIP link returns to service or the EM System is no longer administratively up.		
Raising condition: ('alarmNetworkConnection' EQUAL 'true')		
Clearing condition: ('alarmNetworkConnection' EQUAL 'false')		

Table 37-17 EMSNetworkElementSystemUnreachable (continued)

Alarm	Attributes	Applicable major release
Remedial action: Check network connectivity between the SAM main server and EM System server. Check that the EM System is running and connectivity to SAM is operational.		

Table 37-18 EMSystemAlarmOverLoad

Alarm	Attributes	Applicable major release
Name: EMSystemAlarmOverLoad (3741) Type: processingErrorAlarm Package: hip.EMSystemAlarmOverLoad Raised on class: hip.EMSystem	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemResourcesOverload	Release: • N/A
Description: The alarm is raised when the 5620 SAM detects an overload of EMS alarms in the alarm list.		
Raising condition: ('alarmOverLoaded' EQUAL 'true')		
Clearing condition: ('alarmOverLoaded' EQUAL 'false')		
Remedial action: Informational - no corrective action required.		

Table 37-19 EMSystemTimeOut

Alarm	Attributes	Applicable major release
Name: EMSystemTimeOut (8151) Type: communicationsAlarm Package: hip.EMSystemTimeOut Raised on class: hip.EMSystem	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: excessiveResponseTime	Release: • N/A
Description: The alarm is raised when the time out is raised (the SAM to EMS request take too long time)		
Remedial action: NA		

Table 37-20 EMSystemUnreachable

Alarm	Attributes	Applicable major release
Name: EMSystemUnreachable (2947) Type: communicationsAlarm Package: hip.EMSystemUnreachable Raised on class: hip.EMSystem	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: connectionEstablishmentError Applicable probable causes: • connectionEstablishmentError • transmissionError • fireDetected • lossOfRedundancy • protectionMechanismFailure • protectingResourceFailure • excessiveResponseTime • excessiveRetransmissionRate	Release: • N/A
Description: The alarm is raised when the 5620 SAM detects a HIP communication link failure to the EM System while the EM System is administratively up. The alarm clears when the HIP link returns to service or the EM System is no longer administratively up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Network Connection Status' NOT EQUAL 'Up'))		
Clearing condition: (('Administrative State' NOT EQUAL 'Up') OR ('Network Connection Status' EQUAL 'Up'))		
Remedial action: Check network connectivity between the SAM main server and EM System server. Check that the EM System is running and connectivity to SAM is operational.		

Table 37-21 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm Package: equipment.EquipmentAdministrativelyDown Raised on class: equipment.Equipment	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentAdministratively-Down	Release: • N/A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 37-22 EquipmentDown

Alarm	Attributes	Applicable major release
Name: EquipmentDown (10) Type: equipmentAlarm Package: equipment.EquipmentDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: inoperableEquipment	Release: • N/A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 37-23 EquipmentFailure

Alarm	Attributes	Applicable major release
Name: EquipmentFailure (145) Type: equipmentAlarm Package: equipment.EquipmentFailure Raised on class: equipment.ReplaceableUnit	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cardFailure	Release: • N/A
Description: The alarm is raised when a I/O card or control processor or power-supply tray reports a failure. When the object type is ControlProcessor, a CPM may be unable to boot. When the object type is Power Supply Tray and the alarm is raised during device discovery, a power-supply tray may be out of service. When the object type is a Power Supply Tray and the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: ('operationalState' EQUAL 'Failed')		
Clearing condition: ('operationalState' NOT EQUAL 'Failed')		
Remedial action: If the alarm indicates that the CPM card or I/O card has a fault, remove the card and reset it. If this does not clear the alarm then please contact your Nokia support representative for assistance. If the alarm indicates that the Power Supply tray is out of service ensure that the NE is properly connected to power. If the problem persists please contact your Nokia support representative for assistance.		

Table 37-24 EquipmentInTest

Alarm	Attributes	Applicable major release
Name: EquipmentInTest (11) Type: equipmentAlarm Package: equipment.EquipmentInTest Raised on class: equipment.Equipment	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentInTest	Release: • N/A
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		

Table 37-24 EquipmentInTest (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational - no corrective action required.		

Table 37-25 EquipmentMismatch

Alarm	Attributes	Applicable major release
Name: EquipmentMismatch (9) Type: equipmentAlarm Package: equipment.EquipmentMismatch Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentTypeMismatch	Release: • N/A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 37-26 EquipmentRemoved

Alarm	Attributes	Applicable major release
Name: EquipmentRemoved (8) Type: equipmentAlarm Package: equipment.EquipmentRemoved Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved	Release: • N/A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: ((('isEquipped' EQUAL 'false') OR ('compositeEquipmentState' EQUAL 'Removed')) AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Removed') AND ('isEquipped' EQUAL 'true'))		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 37-27 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major release
Name: FrameSizeProblem (37) Type: configurationAlarm Package: netw.FrameSizeProblem Raised on class: netw.StatefullConnectableInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: frameSizeProblem	Release: • N/A
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		

Table 37-27 FrameSizeProblem (netw) (continued)

Alarm	Attributes	Applicable major release
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL '0L'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL '0L'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 37-28 GaPeerDown

Alarm	Attributes	Applicable major release
Name: GaPeerDown (3303) Type: EpcAlarm Package: lteggsn.GaPeerDown Raised on class: lteggsn.GaPeer	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerDown	Release: • N/A
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 37-29 IncompleteConfiguration

Alarm	Attributes	Applicable major release
Name: IncompleteConfiguration (1942) Type: operationalViolation Package: netw.IncompleteConfiguration Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompleteConfig	Release: • N/A
Description: The alarm is raised when a pre-provisioned NE has no objects configured beneath it.		
Raising condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' EQUAL '\"\"'))		
Clearing condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' NOT EQUAL '\"\"'))		
Remedial action: A configuration error has been made which must be corrected. The configuration of the pre-provisioned NE is incomplete. A work order was not associated with the pre-provisioned NE and as a consequence the attempt to auto-configure the NE failed.		

Table 37-30 LagPortAddFailed

Alarm	Attributes	Applicable major release
Name: LagPortAddFailed (422) Type: equipmentAlarm Package: equipment.LagPortAddFailed Raised on class: equipment.PhysicalPort	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: linkDown	Release: • N/A
Description: The alarm is raised when the Lag Port Add function Fails.		
Raising condition: (('state' EQUAL 'Link Down') AND ('LAG ID' > '0'))		
Clearing condition: (('state' NOT EQUAL 'Link Down') OR ('LAG ID' EQUAL '0'))		
Remedial action: A configuration error has occurred which must be corrected. The link that was to be added to the LAG group may be of the wrong type (i.e. non ethernet) or the limit of the number of links supported in a LAG may have been reached.		

Table 37-31 LicensedLimitExceeded

Alarm	Attributes	Applicable major release
Name: LicensedLimitExceeded (127) Type: licensingAlarm Package: security.LicensedLimitExceeded Raised on class: security.SamLicensePoints	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: licensedLimitExceeded	Release: • N/A
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 37-32 LinkDown (equipment)

Alarm	Attributes	Applicable major release
Name: LinkDown (12) Type: communicationsAlarm Package: equipment.LinkDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: portLinkProblem	Release: • N/A
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 37-33 LowTemperatureDetected

Alarm	Attributes	Applicable major release
Name: LowTemperatureDetected (1127) Type: environmentalAlarm Package: equipment.LowTemperatureDetected Raised on class: equipment.Shelf	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentOvercooled	Release: • N/A
Description: The alarm is raised when the chassis temperature falls below the minimum threshold.		
Raising condition: ('Low Temperature State' EQUAL 'Low')		
Clearing condition: ('Low Temperature State' NOT EQUAL 'Low')		
Remedial action: The NE has detected internal temperatures which are abnormally low. This may happen when the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 37-34 MobileConnectorDown

Alarm	Attributes	Applicable major release
Name: MobileConnectorDown (1064) Type: EpcAlarm Package: lteservice.MobileConnectorDown Raised on class: lteservice.MobileServiceConnector	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EpcDown	Release: • N/A
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL '\"\"')		
Clearing condition: ('EPS Path' NOT EQUAL '\"\"')		
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

Table 37-35 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major release
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm Package: netw. NeManagementAndTrapManagementMismatch Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: neManagementChange	Release: • N/A
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		

Table 37-35 NeManagementAndTrapManagementMismatch (continued)

Alarm	Attributes	Applicable major release
Raising condition: ((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band')))		
Clearing condition: ((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band')))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

Table 37-36 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major release
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm Package: security.NewSsh2ServerKeyDetected Raised on class: security.KnownHostKey	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch	Release: • N/A
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 37-37 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major release
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm Package: netw.NodeDatabaseFallbackDetected Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeDatabaseFallback	Release: • N/A
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 37-38 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major release
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm Package: netw.NodeDatabaseMisalignmentDetected Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment	Release: • N/A
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

Table 37-39 NodeSuspended

Alarm	Attributes	Applicable major release
Name: NodeSuspended (5123) Type: communicationsAlarm Package: netw.NodeSuspended Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NodeSuspend	Release: • N/A
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element.The alarm will be cleared when the network element is managed back.		

Table 37-40 OverTemperatureDetected

Alarm	Attributes	Applicable major release
Name: OverTemperatureDetected (388) Type: environmentalAlarm Package: equipment.OverTemperatureDetected Raised on class: equipment.Shelf	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentOverheated	Release: • N/A
Description: The alarm is raised when the chassis temperature exceeds the maximum threshold value.		
Raising condition: ('Over Temperature State' EQUAL 'Over')		
Clearing condition: ('Over Temperature State' NOT EQUAL 'Over')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 37-41 PartialResyncProblem

Alarm	Attributes	Applicable major release
Name: PartialResyncProblem (4401) Type: communicationsAlarm Package: netw.PartialResyncProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: partialResyncProblem	Release: • N/A
Description: The alarm is raised when a partial resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 37-42 PartialVPRNEncryption

Alarm	Attributes	Applicable major release
Name: PartialVPRNEncryption (8992) Type: configurationAlarm Package: nge.PartialVPRNEncryption Raised on class: nge.VprnEncryptService	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConfigMismatch	Release: • N/A
Description: The alarm is raised when one or more sites are not encryption enabled in a VPRN service.		
Raising condition: (('VPRN Service Encryption Status' EQUAL 'Partial'))		
Clearing condition: (('VPRN Service Encryption Status' NOT EQUAL 'Partial'))		
Remedial action: This site is newly added to the VPRN service, Perform the encrypt operation on the KeyGroup to clear the alarm.		

Table 37-43 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major release
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm Package: netw. PersistentIndexParametersMisconfigured Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistentIndexConfiguration-Mismatch	Release: • N/A
Description: The alarm is raised when persistence is set to Off in the NE BOF.		
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		

Table 37-43 PersistentIndexParametersMisconfigured (continued)

Alarm	Attributes	Applicable major release
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

Table 37-44 PollerProblem

Alarm	Attributes	Applicable major release
Name: PollerProblem (31) Type: communicationsAlarm Package: netw.PollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resyncFailed	Release: • N/A
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 37-45 PrimaryImageBootFailure

Alarm	Attributes	Applicable major release
Name: PrimaryImageBootFailure (191) Type: configurationAlarm Package: sw.PrimaryImageBootFailure Raised on class: sw.CardSoftware	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured	Release: • N/A
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 37-46 RadiusOperStatusDown

Alarm	Attributes	Applicable major release
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm Package: netw.RadiusOperStatusDown Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: radiusOperationStatusDown	Release: • N/A
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up.Check the connectivity between SAM server and radius server configured on the Network element.		

Table 37-47 ReachabilityProblem

Alarm	Attributes	Applicable major release
Name: ReachabilityProblem (243) Type: communicationsAlarm Package: netw.ReachabilityProblem Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReachabilityTestFailed	Release: • N/A
Description: The alarm is raised when a mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. The polling interval depends on the NE type and is configurable in nms-server.xml. By default, the 5620 SAM polls a managed NE every four minutes. If a poll fails, the alarm is raised. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 37-48 ReconfigFailure

Alarm	Attributes	Applicable major release
Name: ReconfigFailure (1949) Type: communicationsAlarm Package: netw.ReconfigFailure Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: failedReconfig	Release: • N/A
Description: This alarm is raised when the reconfig action failed.		
Raising condition: ('State' EQUAL 'Failed')		
Clearing condition: ('State' NOT EQUAL 'Failed')		
Remedial action: Verify that the object is configured as expected.		

Table 37-49 SaveConfigFailed

Alarm	Attributes	Applicable major release
Name: SaveConfigFailed (105) Type: configurationAlarm Package: sw.SaveConfigFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileAccessError	Release: • N/A
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact your Nokia support representative for assistance.		

Table 37-50 ScheduledPollerProblem

Alarm	Attributes	Applicable major release
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm Package: netw.ScheduledPollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: scheduledResyncFailed	Release: • N/A
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 37-51 StatsRetrieveFailed

Alarm	Attributes	Applicable major release
Name: StatsRetrieveFailed (244) Type: configurationAlarm Package: sw.StatsRetrieveFailed Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: fileTransferFailure	Release: • N/A
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 37-52 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major release
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed Package: netw.SubscriberSystemNextHopUsageHigh Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • N/A
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

Table 37-53 SubSysChassMemoryUsageHi

Alarm	Attributes	Applicable major release
Name: SubSysChassMemoryUsageHi (5656) Type: thresholdCrossed Package: equipment.SubSysChassMemoryUsageHi Raised on class: equipment.Shelf	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • N/A
Description: This alarm is raised when the memory usage by subscriber management on this system or chassis reaches its high watermark ('true').		
Raising condition: ('Memory Usage High' EQUAL 'True')		
Clearing condition: (('Memory Usage High' EQUAL 'False') OR ('Memory Usage High' EQUAL 'unspecified'))		
Remedial action: The memory usage by subscriber management on this system has reached its high watermark. Please check your memory usage.		

Table 37-54 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major release
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm Package: netw.TrapDestinationMisconfigured Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trapDestinationMisconfigured Applicable probable causes: • trapDestinationMisconfigured • duplicateTrapLogId	Release: • N/A
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		

Table 37-54 TrapDestinationMisconfigured (continued)

Alarm	Attributes	Applicable major release
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 37-55 TrapReceivingFailure

Alarm	Attributes	Applicable major release
Name: TrapReceivingFailure (1083) Type: communications Package: netw.TrapReceivingFailure Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: trapsWillNotBeSent	Release: • N/A
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		
Raising condition: ((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')))		
Clearing condition: ((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

Table 37-56 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major release
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications Package: netw.TrapRoutePreferenceRedundancyMissing Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trapsRedundancyMissing	Release: • N/A
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: ((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')))		
Clearing condition: ((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None')))		
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

Table 37-57 UnidentifiedNode

Alarm	Attributes	Applicable major release
Name: UnidentifiedNode (1922) Type: communicationsAlarm Package: netw.UnidentifiedNode Raised on class: netw.DiscoveredNode	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unidentifiedNode	Release: • N/A
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 37-58 UnmanageFailed

Alarm	Attributes	Applicable major release
Name: UnmanageFailed (300) Type: discoveryControlAlarm Package: netw.UnmanageFailed Raised on class: netw.NodeDiscoveryControl	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unableToDeleteNode	Release: • N/A

Table 37-58 UnmanageFailed (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'Unmanage Failed')		
Clearing condition: ('Site State' NOT EQUAL 'Unmanage Failed')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 37-59 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major release
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm Package: netw.UpgradedBuildVersionMismatch Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: upgradedImageNotBooted	Release: • N/A
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 37-60 upgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: upgradedCardAlarm (255) Type: softwareAlarm Package: equipment.upgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: upgradedCard	Release: • N/A
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 37-61 UplinkDown

Alarm	Attributes	Applicable major release
Name: UplinkDown (11062) Type: virtualSwitchAlarm Package: dctr.UplinkDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsAllDown	Release: • N/A
Description: The alarm is raised when all connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '2'))		
Clearing condition: (('uplinkState' NOT EQUAL '2'))		
Remedial action: This alarm is raised when all connections associated to the uplink lost connectivity.		

Table 37-62 UplinkPartiallyDown

Alarm	Attributes	Applicable major release
Name: UplinkPartiallyDown (11063) Type: virtualSwitchAlarm Package: dctr.UplinkPartiallyDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsDown	Release: • N/A
Description: The alarm is raised when some connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '3'))		
Clearing condition: (('uplinkState' NOT EQUAL '3'))		
Remedial action: This alarm is raised when a connection of the uplink lost connectivity but at least one connection remains connected.		

Table 37-63 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm Package: sw.VersionConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: versionMismatch	Release: • N/A
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 37-64 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major release
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm Package: netw.WrongCpaaSoftwareVersion Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion	Release: • N/A
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL '\"TiMOS-B-3.0.Generic \"') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Clearing condition: (('Software Version' NOT EQUAL '\"TiMOS-B-3.0.Generic \"') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

38 FlexiPacket Hub 800

38.1 Alarms

Alarms

Note: Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see Chapter 39, “Unspecified NE”.

Table 38-1 AccountLogFilledFirstThreshold

Alarm	Attributes	Applicable major release
Name: AccountLogFilledFirstThreshold (11470) Type: processingErrorAlarm Package: netw.AccountLogFilledFirstThreshold Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ProcessingError	Release: • N/A
Description: This alarm is raised when the first threshold on account log is crossed.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-2 AccountLogFilledSecondThreshold

Alarm	Attributes	Applicable major release
Name: AccountLogFilledSecondThreshold (11471) Type: processingErrorAlarm Package: netw.AccountLogFilledSecondThreshold Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ProcessingError	Release: • N/A
Description: This alarm is raised when the second threshold on account log is crossed.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-3 AutonegotiationMismatch

Alarm	Attributes	Applicable major release
Name: AutonegotiationMismatch (11282) Type: communicationsAlarm Package: equipment.AutonegotiationMismatch Raised on class: equipment.PhysicalPort	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SignallingError	Release: • N/A
Description: This alarm is raised when there is Autonegotiation mismatch on the GbE interface.		

Table 38-3 AutonegotiationMismatch (continued)

Alarm	Attributes	Applicable major release
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-4 CardDisconnected

Alarm	Attributes	Applicable major release
Name: CardDisconnected (11283) Type: equipmentAlarm Package: equipment.CardDisconnected Raised on class: equipment.CardSlot	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EquipmentError	Release: • N/A
Description: This alarm is raised when the Card status changes.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-5 CardMismatchIndication

Alarm	Attributes	Applicable major release
Name: CardMismatchIndication (11284) Type: equipmentAlarm Package: equipment.CardMismatchIndication Raised on class: equipment.CardSlot	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EquipmentError	Release: • N/A
Description: This alarm is raised when the Card status changes.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-6 CCMContinuityCheckLoss

Alarm	Attributes	Applicable major release
Name: CCMContinuityCheckLoss (11245) Type: equipmentAlarm Package: dw.CCMContinuityCheckLoss Raised on class: dw.DwAlarmedObject	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EquipmentError	Release: • N/A
Description: This alarm is raised when the IDU does not receive nsncetCfmMepCClossThreshold consecutive CCMs in the relevant MEP. 'nsncetCfmMepCClossThreshold' is the Number of missed CCMs that cause some CCM defect.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-7 DebugModeOn

Alarm	Attributes	Applicable major release
Name: DebugModeOn (11475) Type: processingErrorAlarm Package: netw.DebugModeOn Raised on class: netw.NetworkElement	Severity: info Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ProcessingError	Release: • N/A
Description: This alarm is raised when the Node is set to Debug Mode.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-8 E1AISIn

Alarm	Attributes	Applicable major release
Name: E1AISIn (11285) Type: communicationsAlarm Package: equipment.E1AISIn Raised on class: equipment.PhysicalPort	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: AIS	Release: • N/A
Description: This alarm is sent when the value of Line Status changes.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-9 E1AISOut

Alarm	Attributes	Applicable major release
Name: E1AISOut (11286) Type: communicationsAlarm Package: equipment.E1AISOut Raised on class: equipment.PhysicalPort	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: AIS	Release: • N/A
Description: This alarm is sent when the value of Line Status changes.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-10 E1FarEndFailure

Alarm	Attributes	Applicable major release
Name: E1FarEndFailure (11287) Type: communicationsAlarm Package: equipment.E1FarEndFailure Raised on class: equipment.PhysicalPort	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: FarEndFailure	Release: • N/A
Description: This alarm is sent when the value of Line Status changes.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-11 E1LoF

Alarm	Attributes	Applicable major release
Name: E1LoF (11288) Type: communicationsAlarm Package: equipment.E1LoF Raised on class: equipment.PhysicalPort	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LoF	Release: • N/A
Description: This alarm is sent when the value of Line Status changes.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-12 E1LoS

Alarm	Attributes	Applicable major release
Name: E1LoS (11289) Type: communicationsAlarm Package: equipment.E1LoS Raised on class: equipment.PhysicalPort	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LoS	Release: • N/A
Description: This alarm is sent when the value of Line Status changes.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-13 E1MaintenanceLoopback

Alarm	Attributes	Applicable major release
Name: E1MaintenanceLoopback (11290) Type: equipmentAlarm Package: equipment.E1MaintenanceLoopback Raised on class: equipment.PhysicalPort	Severity: info Specific problem: Not Applicable Implicitly cleared: true Default probable cause: Maintenance	Release: • N/A
Description: This alarm is sent when the value of Line Status changes.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-14 LocalSignalFailure

Alarm	Attributes	Applicable major release
Name: LocalSignalFailure (11249) Type: communicationsAlarm Package: dw.LocalSignalFailure Raised on class: dw.DwAlarmedObject	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SignallingError	Release: • N/A
Description: This alarm is generated on the following events: - Local SF is received for the ring. - Local Clear SF is received for the ring.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-15 ManualOperationOn

Alarm	Attributes	Applicable major release
Name: ManualOperationOn (11481) Type: processingErrorAlarm Package: netw.ManualOperationOn Raised on class: netw.NetworkElement	Severity: info Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ProcessingError	Release: • N/A
Description: This alarm is related to Test/Manual Operation. It is raised when at least one test configuration is active.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-16 MEP1731AIS

Alarm	Attributes	Applicable major release
Name: MEP1731AIS (11250) Type: equipmentAlarm Package: dw.MEP1731AIS Raised on class: dw.DwAlarmedObject	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EquipmentError	Release: • N/A
Description: This alarm indicates MEP is in AIS Condition. AIS condition occurs when the interface receives an AIS frame.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-17 MPTermination

Alarm	Attributes	Applicable major release
Name: MPTermination (11251) Type: communicationsAlarm Package: dw.MPTermination Raised on class: dw.DwAlarmedObject	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SignallingError	Release: • N/A
Description: This alarm is raised during the notification of LCP link termination.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-18 NEOverheating

Alarm	Attributes	Applicable major release
Name: NEOverheating (11485) Type: equipmentAlarm Package: netw.NEOverheating Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EquipmentError	Release: • N/A

Table 38-18 NEOverheating (continued)

Alarm	Attributes	Applicable major release
Description: This alarm is raised when the board temperature is higher than the threshold. This is the internally measured temperature, which has a delta with respect to environmental temperature of about 20C more. If the internal temperature rises up to 75C, system will report the Equipment OverHeating alarm; if the internal temperature falls below 72C, system will clear the Equipment OverHeating alarm. Resolution 1 degree; check every 15s.'		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-19 NoPowerSupplyToODU

Alarm	Attributes	Applicable major release
Name: NoPowerSupplyToODU (11294) Type: equipmentAlarm Package: equipment.NoPowerSupplyToODU Raised on class: equipment.PhysicalPort	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PowerSupplyError	Release: • N/A
Description: This alarm is raised when PW Supply to ODU has failed.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-20 OAMDiscoveryFail

Alarm	Attributes	Applicable major release
Name: OAMDiscoveryFail (11808) Type: communicationsAlarm Package: equipment.OAMDiscoveryFail Raised on class: equipment.PhysicalPort	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SignallingError	Release: • N/A
Description: This alarm is raised when the Local NE cannot detect the presence of an OAM sublayer at the remote NE. In passive mode, NE doesn't receive OAMPDU after three intervals after admin enabling. In active mode, NE doesn't receive OAMPDU after three intervals after admin enabling OR Negotiation failed after receiving Information OAMPDU. This alarm is cleared when negotiation process is successful.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-21 OAMMAConfigurationError

Alarm	Attributes	Applicable major release
Name: OAMMAConfigurationError (11252) Type: qualityOfServiceAlarm Package: dw.OAMMAConfigurationError Raised on class: dw.DwAlarmedObject	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: QoSError	Release: • N/A
Description: This alarm is raised when the content of a received CCM message is not coherent with the configuration.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-22 OpticalSFPLoS

Alarm	Attributes	Applicable major release
Name: OpticalSFPLoS (11295) Type: communicationsAlarm Package: equipment.OpticalSFPLoS Raised on class: equipment.PhysicalPort	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LoS	Release: • N/A
Description: This alarm is raised when SFP LOS is active. This is applicable only for Optical SFP ports.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-23 OpticalSFPTXFault

Alarm	Attributes	Applicable major release
Name: OpticalSFPTXFault (11296) Type: equipmentAlarm Package: equipment.OpticalSFPTXFault Raised on class: equipment.PhysicalPort	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EquipmentError	Release: • N/A
Description: This alarm is raised when SFP Tx Fault is active. This is applicable only for Optical SFP ports.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-24 OvercurrentOrUndercurrentFPRPowerSupply

Alarm	Attributes	Applicable major release
Name: OvercurrentOrUndercurrentFPRPowerSupply (11297) Type: equipmentAlarm Package: equipment. OvercurrentOrUndercurrentFPRPowerSupply Raised on class: equipment.PhysicalPort	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EquipmentError	Release: • N/A
Description: This alarm is raised when Overcurrent/Undercurrent condition is detected at the ODU Ethernet Interface. Possible causes: (a) Short/open circuit in ODU cable (b) Wrong cable manifacturing; (c) ODU failure.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-25 PortDown

Alarm	Attributes	Applicable major release
Name: PortDown (11299) Type: communicationsAlarm Package: equipment.PortDown Raised on class: equipment.PhysicalPort	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: inoperableEquipment	Release: • N/A

Table 38-25 PortDown (continued)

Alarm	Attributes	Applicable major release
Description: This alarm is raised when the Operational State of Port goes down when the Admin State is up.		
Remedial action: Please refer to Troubleshooting Guide for remedial action.		

Table 38-26 PortFail

Alarm	Attributes	Applicable major release
Name: PortFail (11300) Type: equipmentAlarm Package: equipment.PortFail Raised on class: equipment.PhysicalPort	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EquipmentError	Release: • N/A
Description: This alarm is raised to indicate the Media Availability State on the GbE interface. The states are as per definitions in IANA-MAU MIB.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-27 PortSpeedLower

Alarm	Attributes	Applicable major release
Name: PortSpeedLower (11301) Type: qualityOfServiceAlarm Package: equipment.PortSpeedLower Raised on class: equipment.PhysicalPort	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: QoSError	Release: • N/A
Description: This alarm is raised when the Interface Speed is less than the absolute shaped bandwidth of the Interface.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-28 PortSpeedLowerThanCIR

Alarm	Attributes	Applicable major release
Name: PortSpeedLowerThanCIR (11302) Type: qualityOfServiceAlarm Package: equipment.PortSpeedLowerThanCIR Raised on class: equipment.PhysicalPort	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: QoSError	Release: • N/A
Description: This alarm is raised when the Interface Speed is less than sum of CIR of allocated services on the Interface.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-29 PowerSupplyToODUFailure

Alarm	Attributes	Applicable major release
Name: PowerSupplyToODUFailure (11303) Type: equipmentAlarm Package: equipment.PowerSupplyToODUFailure Raised on class: equipment.PhysicalPort	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PowerSupplyError	Release: • N/A
Description: This alarm is raised when PW Supply to ODU has failed.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-30 PowerSupplyToODUShortCircuit

Alarm	Attributes	Applicable major release
Name: PowerSupplyToODUShortCircuit (11304) Type: equipmentAlarm Package: equipment.PowerSupplyToODUShortCircuit Raised on class: equipment.PhysicalPort	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PowerSupplyError	Release: • N/A
Description: This alarm is raised when PW Supply to ODU has failed.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-31 PWFail

Alarm	Attributes	Applicable major release
Name: PWFail (11257) Type: equipmentAlarm Package: dw.PWFail Raised on class: dw.DwAlarmedObject	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PowerSupplyError	Release: • N/A
Description: This alarm is raised when the OperStatus object for one or more PW objects are about to enter the down or lowerLayerDown state from any other state, except for transition from the notPresent state.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-32 PWFunctionAlarm

Alarm	Attributes	Applicable major release
Name: PWFunctionAlarm (11489) Type: equipmentAlarm Package: netw.PWFunctionAlarm Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EquipmentError	Release: • N/A
Description: This alarm is raised as soon as OperStatus on any one PW is not up while its relevant AdminStatus is enabled. It is cleared when OperStatus on all PW objectes are up for which the corresponding AdmimState is enabled.		

Table 38-32 PWFunctionAlarm (continued)

Alarm	Attributes	Applicable major release
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-33 PWRemotePacketLoss

Alarm	Attributes	Applicable major release
Name: PWRemotePacketLoss (11258) Type: communicationsAlarm Package: dw.PWRemotePacketLoss Raised on class: dw.DwAlarmedObject	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: FarEndFailure	Release: • N/A
Description: This alarm is raised when there is Remote Packet Loss Indication on the PW object.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-34 RadioLinkStatusDown

Alarm	Attributes	Applicable major release
Name: RadioLinkStatusDown (11262) Type: communicationsAlarm Package: dw.RadioLinkStatusDown Raised on class: dw.DwAlarmedObject	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: CommunicationError	Release: • N/A
Description: This alarm is raised when the Radio Link status changes.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-35 RemoteFaultIndication

Alarm	Attributes	Applicable major release
Name: RemoteFaultIndication (11306) Type: communicationsAlarm Package: equipment.RemoteFaultIndication Raised on class: equipment.PhysicalPort	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: FarEndFailure	Release: • N/A
Description: This alarm is raised when there is remote fault. It means that the partner connected to the port is signalling a fault.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-36 RemoteSignalFailure

Alarm	Attributes	Applicable major release
Name: RemoteSignalFailure (11263) Type: communicationsAlarm Package: dw.RemoteSignalFailure Raised on class: dw.DwAlarmedObject	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SignallingError	Release: • N/A
Description: This alarm is generated on the following events: - Remote failure is detected on this ring. - Remote failure is cleared on this ring.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-37 RingFailure

Alarm	Attributes	Applicable major release
Name: RingFailure (11491) Type: communicationsAlarm Package: netw.RingFailure Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SignallingError	Release: • N/A
Description: This alarm is generated when there is any failure on a ring.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-38 ScheduledActionFailure

Alarm	Attributes	Applicable major release
Name: ScheduledActionFailure (11272) Type: processingErrorAlarm Package: dw.ScheduledActionFailure Raised on class: dw.DwAlarmedObject	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ProcessingError	Release: • N/A
Description: This alarm is generated whenever a scheduled operation has failed.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-39 SelfTestFailure

Alarm	Attributes	Applicable major release
Name: SelfTestFailure (11494) Type: processingErrorAlarm Package: netw.SelfTestFailure Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EquipmentError	Release: • N/A
Description: This alarm is raised when the self test procedure fails.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-40 ServiceDown

Alarm	Attributes	Applicable major release
Name: ServiceDown (11273) Type: qualityOfServiceAlarm Package: dw.ServiceDown Raised on class: dw.DwAlarmedObject	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ServiceError	Release: • N/A
Description: This alarm is raised when the Operation State of Service is Down. For E-LINE service, alarm is raised under following conditions - (a) If the service SubType is 'p2p' - no connectivity with the other end-point. (b) If the service SubType is 'tls' - no connectivity with a VPLS VSI. For E-LAN service, the alarm is raised when service has no end-to-end connectivity.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-41 ServicePartial

Alarm	Attributes	Applicable major release
Name: ServicePartial (11274) Type: qualityOfServiceAlarm Package: dw.ServicePartial Raised on class: dw.DwAlarmedObject	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: QoSError	Release: • N/A
Description: This alarm is raised when the Service State changes.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-42 SFPAbsent

Alarm	Attributes	Applicable major release
Name: SFPAbsent (11307) Type: equipmentAlarm Package: equipment.SFPAbsent Raised on class: equipment.PhysicalPort	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EquipmentError	Release: • N/A
Description: This alarm is raised when SFP module is missing.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-43 SFPMismatch

Alarm	Attributes	Applicable major release
Name: SFPMismatch (11308) Type: equipmentAlarm Package: equipment.SFPMismatch Raised on class: equipment.PhysicalPort	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EquipmentError	Release: • N/A
Description: This alarm is raised when there is SFP mismatch.		

Table 38-43 SFPMismatch (continued)

Alarm	Attributes	Applicable major release
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-44 SFPRxPowerAbnormal

Alarm	Attributes	Applicable major release
Name: SFPRxPowerAbnormal (11309) Type: equipmentAlarm Package: equipment.SFPRxPowerAbnormal Raised on class: equipment.PhysicalPort	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PowerSupplyError	Release: • N/A
Description: This alarm is raised when Calibrated Rx Power value is bigger than the higher threshold or lower than lower threshold. This alarm is evaluated if and only if the SFPMissing and SFPMismatch alarms are not raised.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-45 SFPTxPowerAbnormal

Alarm	Attributes	Applicable major release
Name: SFPTxPowerAbnormal (11310) Type: equipmentAlarm Package: equipment.SFPTxPowerAbnormal Raised on class: equipment.PhysicalPort	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PowerSupplyError	Release: • N/A
Description: This alarm is raised when Calibrated Tx Power value is bigger than the higher threshold or lower than lower threshold configured. This alarm is evaluated if and only if the SFPMissing and SFPMismatch alarms are not raised.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-46 SoftwareSwitchNotAllowed

Alarm	Attributes	Applicable major release
Name: SoftwareSwitchNotAllowed (11495) Type: processingErrorAlarm Package: netw.SoftwareSwitchNotAllowed Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ProcessingError	Release: • N/A
Description: This alarm is raised when Switching action is initiated when not allowed. When any component Standby FW version is not compatible with the HW version, the switch command can not be executed. A new software must be downloaded.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-47 StationAlarmOn

Alarm	Attributes	Applicable major release
Name: StationAlarmOn (11496) Type: processingErrorAlarm Package: netw.StationAlarmOn Raised on class: netw.NetworkElement	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ProcessingError	Release: • N/A
Description: Station Alarm.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-48 STM1AuAIS

Alarm	Attributes	Applicable major release
Name: STM1AuAIS (11312) Type: communicationsAlarm Package: equipment.STM1AuAIS Raised on class: equipment.PhysicalPort	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: AIS	Release: • N/A
Description: This alarm is raised when VC4 Status changes.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-49 STM1AULossOfPointer

Alarm	Attributes	Applicable major release
Name: STM1AULossOfPointer (11311) Type: communicationsAlarm Package: equipment.STM1AULossOfPointer Raised on class: equipment.PhysicalPort	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SignallingError	Release: • N/A
Description: This alarm is raised when VC4 Status changes.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-50 STM1HighPathSignalLabelMismatch

Alarm	Attributes	Applicable major release
Name: STM1HighPathSignalLabelMismatch (11317) Type: communicationsAlarm Package: equipment. STM1HighPathSignalLabelMismatch Raised on class: equipment.PhysicalPort	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SignallingError	Release: • N/A
Description: This alarm is raised when VC4 Status changes.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-51 STM1HPDegrade

Alarm	Attributes	Applicable major release
Name: STM1HPDegrade (11313) Type: communicationsAlarm Package: equipment.STM1HPDegrade Raised on class: equipment.PhysicalPort	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SignallingError	Release: • N/A
Description: This alarm is raised when the Path is Degraded.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-52 STM1HPExcessiveError

Alarm	Attributes	Applicable major release
Name: STM1HPExcessiveError (11314) Type: communicationsAlarm Package: equipment.STM1HPExcessiveError Raised on class: equipment.PhysicalPort	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SignallingError	Release: • N/A
Description: This alarm is raised during Path Excessive Error.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-53 STM1HPRemoteDefectIndication

Alarm	Attributes	Applicable major release
Name: STM1HPRemoteDefectIndication (11315) Type: communicationsAlarm Package: equipment.STM1HPRemoteDefectIndication Raised on class: equipment.PhysicalPort	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: FarEndFailure	Release: • N/A
Description: This alarm is raised when VC4 Status changes.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-54 STM1HPUnequipped

Alarm	Attributes	Applicable major release
Name: STM1HPUnequipped (11316) Type: equipmentAlarm Package: equipment.STM1HPUnequipped Raised on class: equipment.PhysicalPort	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EquipmentError	Release: • N/A
Description: This alarm is raised when VC4 Status changes.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-55 STM1J0TraceIdentifierMismatch

Alarm	Attributes	Applicable major release
Name: STM1J0TraceIdentifierMismatch (11318) Type: communicationsAlarm Package: equipment.STM1J0TraceIdentifierMismatch Raised on class: equipment.PhysicalPort	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SignallingError	Release: • N/A
Description: This alarm is raised during J0 TIM event.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-56 STM1J1TraceIdentifierMismatch

Alarm	Attributes	Applicable major release
Name: STM1J1TraceIdentifierMismatch (11319) Type: communicationsAlarm Package: equipment.STM1J1TraceIdentifierMismatch Raised on class: equipment.PhysicalPort	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SignallingError	Release: • N/A
Description: This alarm is raised during J1 TIM event.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-57 STM1LoF

Alarm	Attributes	Applicable major release
Name: STM1LoF (11320) Type: communicationsAlarm Package: equipment.STM1LoF Raised on class: equipment.PhysicalPort	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LoF	Release: • N/A
Description: This alarm is raised when the RS Status changes.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-58 STM1LoS

Alarm	Attributes	Applicable major release
Name: STM1LoS (11321) Type: communicationsAlarm Package: equipment.STM1LoS Raised on class: equipment.PhysicalPort	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LoS	Release: • N/A
Description: This alarm is raised when the RS Status changes.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-59 STM1LpDegrade

Alarm	Attributes	Applicable major release
Name: STM1LpDegrade (11265) Type: communicationsAlarm Package: dw.STM1LpDegrade Raised on class: dw.DwIduVC12Specifics	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SignallingError	Release: • N/A
Description: This alarm is raised when VC12 is degraded.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-60 STM1LPJ2TraceIdentifierMismatch

Alarm	Attributes	Applicable major release
Name: STM1LPJ2TraceIdentifierMismatch (11264) Type: communicationsAlarm Package: dw.STM1LPJ2TraceIdentifierMismatch Raised on class: dw.DwIduVC12Specifics	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SignallingError	Release: • N/A
Description: This alarm is raised during J2 TIM event.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-61 STM1LpRemoteDefectIndication

Alarm	Attributes	Applicable major release
Name: STM1LpRemoteDefectIndication (11266) Type: communicationsAlarm Package: dw.STM1LpRemoteDefectIndication Raised on class: dw.DwIduVC12Specifics	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: FarEndFailure	Release: • N/A
Description: This alarm is raised when VC4 Status changes.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-62 STM1LpRemoteFailureIndication

Alarm	Attributes	Applicable major release
Name: STM1LpRemoteFailureIndication (11267) Type: communicationsAlarm Package: dw.STM1LpRemoteFailureIndication Raised on class: dw.DwIduVC12Specifics	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: FarEndFailure	Release: • N/A
Description: This alarm is raised when VC4 Status changes.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-63 STM1LpSignalLabelMismatch

Alarm	Attributes	Applicable major release
Name: STM1LpSignalLabelMismatch (11268) Type: communicationsAlarm Package: dw.STM1LpSignalLabelMismatch Raised on class: dw.DwIduVC12Specifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SignallingError	Release: • N/A
Description: This alarm is raised when VC4 Status changes.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-64 STM1LpTuAIS

Alarm	Attributes	Applicable major release
Name: STM1LpTuAIS (11269) Type: communicationsAlarm Package: dw.STM1LpTuAIS Raised on class: dw.DwIduVC12Specifics	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: AIS	Release: • N/A
Description: This alarm is raised when VC4 Status changes.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-65 STM1LpTuLossOfMultiframe

Alarm	Attributes	Applicable major release
Name: STM1LpTuLossOfMultiframe (11322) Type: communicationsAlarm Package: equipment.STM1LpTuLossOfMultiframe Raised on class: equipment.PhysicalPort	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SignallingError	Release: • N/A
Description: This alarm is raised during STM1#n LP#m TU loss of multiframe.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-66 STM1LpTuLossOfPointer

Alarm	Attributes	Applicable major release
Name: STM1LpTuLossOfPointer (11270) Type: communicationsAlarm Package: dw.STM1LpTuLossOfPointer Raised on class: dw.DwIduVC12Specifics	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SignallingError	Release: • N/A
Description: This alarm is raised when VC4 Status changes.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-67 STM1LpUnequipped

Alarm	Attributes	Applicable major release
Name: STM1LpUnequipped (11271) Type: communicationsAlarm Package: dw.STM1LpUnequipped Raised on class: dw.DwIduVC12Specifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EquipmentError	Release: • N/A
Description: This alarm is raised when VC4 Status changes.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-68 STM1MSAIS

Alarm	Attributes	Applicable major release
Name: STM1MSAIS (11323) Type: communicationsAlarm Package: equipment.STM1MSAIS Raised on class: equipment.PhysicalPort	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: AIS	Release: • N/A
Description: This alarm is raised when MS Status changes.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-69 STM1MSDegrade

Alarm	Attributes	Applicable major release
Name: STM1MSDegrade (11324) Type: communicationsAlarm Package: equipment.STM1MSDegrade Raised on class: equipment.PhysicalPort	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SignallingError	Release: • N/A
Description: This alarm is raised during MS Degrade.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-70 STM1MSExcessiveError

Alarm	Attributes	Applicable major release
Name: STM1MSExcessiveError (11325) Type: communicationsAlarm Package: equipment.STM1MSExcessiveError Raised on class: equipment.PhysicalPort	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SignallingError	Release: • N/A
Description: This alarm is raised during Multiplex Section Excessive Error event.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-71 STM1MSFarEndFailure

Alarm	Attributes	Applicable major release
Name: STM1MSFarEndFailure (11326) Type: communicationsAlarm Package: equipment.STM1MSFarEndFailure Raised on class: equipment.PhysicalPort	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: FarEndFailure	Release: • N/A
Description: This alarm is raised when MS Status changes.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-72 STM1RSDegrade

Alarm	Attributes	Applicable major release
Name: STM1RSDegrade (11327) Type: communicationsAlarm Package: equipment.STM1RSDegrade Raised on class: equipment.PhysicalPort	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SignallingError	Release: • N/A
Description: This alarm is raised during RS Degrade.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-73 SwHwMismatch

Alarm	Attributes	Applicable major release
Name: SwHwMismatch (11497) Type: equipmentAlarm Package: netw.SwHwMismatch Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EquipmentError	Release: • N/A
Description: This alarm is raised to indicate Software/Firmware and Hardware mismatch. This occurs when the loaded SW and FW is not compatible with HW.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-74 SynchAllSourcesDown

Alarm	Attributes	Applicable major release
Name: SynchAllSourcesDown (11498) Type: communicationsAlarm Package: netw.SynchAllSourcesDown Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SyncError	Release: • N/A

Table 38-74 SynchAllSourcesDown (continued)

Alarm	Attributes	Applicable major release
Description: This alarm is raised when a physical layer problem in all the configured synchronization interfaces is detected. Possible causes for IDU: (a) LinkState="DOWN has been detected in the Ethernet interface selected as synchronization interface. (b) LOS has been detected in the E1 interface selected as synchronization interface. As a consequent action the equipment will go to holdover state. The alarm is masked when the system is in Internal Synchronization Mode. Possible causes for ODU: The MultiRadio ODU has detected a physical layer problem in all the configured synchronization interfaces. As a consequent action the equipment will go to holdover state. Action: Check the synchronization sources."		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-75 SynchConfigurationError

Alarm	Attributes	Applicable major release
Name: SynchConfigurationError (11275) Type: communicationsAlarm Package: dw.SynchConfigurationError Raised on class: dw.ClockSource	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SyncError	Release: • N/A
Description: This alarm is raised when the Node is receiving SSM carrying a DNU code from at least one synchronization interface. Possible cause: misconfiguration of the peer equipment. The alarm is masked when the SSM are disabled for that interface.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-76 SynchMissingSSM

Alarm	Attributes	Applicable major release
Name: SynchMissingSSM (11276) Type: communicationsAlarm Package: dw.SynchMissingSSM Raised on class: dw.ClockSource	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SyncError	Release: • N/A
Description: The equipment activates this alarm when it does not receive SSM messages from the selected synchronization interface. When multiple interfaces are configured as synchronization sources this alarm is activated if it does not receive SSM messages from at least one of the configured synchronization interfaces. Possible causes: misconfiguration of the peer equipment. The alarm is masked when the SSM are disabled for that interface.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-77 SynchOneSourceDown (dw)

Alarm	Attributes	Applicable major release
Name: SynchOneSourceDown (11277) Type: communicationsAlarm Package: dw.SynchOneSourceDown Raised on class: dw.ClockSource	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SyncError	Release: • N/A

Table 38-77 SynchOneSourceDown (dw) (continued)

Alarm	Attributes	Applicable major release
Description: This alarm is raised when when multiple synchronization interfaces are configured AND a physical layer problem in at least one of the synchronization interfaces is detected. Possible causes: (a) LinkState="DOWN has been detected in an Ethernet interface selected as synchronization interface (b) LOS has been detected in the E1 interface selected as synchronization interface. As a consequent action the equipment will select the alternative synchronization source. The alarm is masked when the system is in Internal Synchronization Mode. The alarm is masked when the flexiPacketIDUSeInterfAllDown is active."		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-78 SynchQualityLevelDegraded

Alarm	Attributes	Applicable major release
Name: SynchQualityLevelDegraded (11278) Type: qualityOfServiceAlarm Package: dw.SynchQualityLevelDegraded Raised on class: dw.ClockSource	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SyncError	Release: • N/A
Description: The equipment activates this alarm when it receives SSM messages from the selected synchronization interface carrying a quality code lower than the expected one. Possible causes: (a) failure of the upstream synchronization network (b) equipment misconfiguration. The alarm is masked when the SSM are disabled for that interface.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-79 SynchUnlockedPLL

Alarm	Attributes	Applicable major release
Name: SynchUnlockedPLL (11499) Type: communicationsAlarm Package: netw.SynchUnlockedPLL Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SyncError	Release: • N/A
Description: The equipment activates this alarm when it has been configured in External Reference mode, but the PLL is unlocked. Possible causes: (a) the local oscillator is out-of-range (b) the uplink device is out-of-range. The alarm is masked when the system is in Internal Synchronization Mode.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-80 SystemFailure

Alarm	Attributes	Applicable major release
Name: SystemFailure (11500) Type: equipmentAlarm Package: netw.SystemFailure Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EquipmentError	Release: • N/A
Description: This alarm is raised to indicate Equipment Failure. The FPH 800 IDU is Out of Service and needs to be replaced.		

Table 38-80 SystemFailure (continued)

Alarm	Attributes	Applicable major release
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-81 TimeServerMissing

Alarm	Attributes	Applicable major release
Name: TimeServerMissing (11503) Type: communicationsAlarm Package: netw.TimeServerMissing Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SyncError	Release: • N/A
Description: This alarm is raised when the Time Server is missing. Cleared when time server answers. Action: Check the cable.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-82 TrapOutOfSequence

Alarm	Attributes	Applicable major release
Name: TrapOutOfSequence (11504) Type: equipmentAlarm Package: netw.TrapOutOfSequence Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MissingTrap	Release: • N/A
Description: This alarm is raised when SAM receives a trap that is out of sequence. This indicates some trap(s) sent from node did not reach SAM. When SAM receives an alarm that is out of sequence, SAM automaticlally synchronizes the Active Alarms on the Node and state information (Admin and Oper states) on all Ports. However, if any traps related to equipment configuration and service do not reach SAM, Full Node Sync needs to be manually triggered in order to synchronize Node with SAM.		
Remedial action: Please trigger Full Node Synchronization on the Node.		

Table 38-83 USBKeyForWrongNEType

Alarm	Attributes	Applicable major release
Name: USBKeyForWrongNEType (11506) Type: equipmentAlarm Package: netw.USBKeyForWrongNEType Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: USBKeyError	Release: • N/A
Description: This alarm is raised when the Memory key is invalid. Memory key is considered not valid due to a different Equipment Type stored information. The equipment enters the Idle state if invalid valid key is detected at start-up, whereas it stays in the previous state (Idle or run/no set) if the not valid key is detected during run time (a wrong key has been plugged into the appliance).		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-84 USBKeyNotPresent

Alarm	Attributes	Applicable major release
Name: USBKeyNotPresent (11507) Type: equipmentAlarm Package: netw.USBKeyNotPresent Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: USBKeyError	Release: • N/A
Description: This alarm is raised when the availability of USB Key physical device is no more detected during run-time polling or at startup. The equipment enters the Idle state if the absence is detected at start-up, whereas it enters the Run/no set state if the absence is detected during run time.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-85 USBKeyOverload

Alarm	Attributes	Applicable major release
Name: USBKeyOverload (11508) Type: equipmentAlarm Package: netw.USBKeyOverload Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: USBKeyError	Release: • N/A
Description: This alarm is raised when the unused space in USB key less than 30M. Cleared when the unused space in USB key is more than 50M. When this alarm occurs, it is suggested to remove the unused files.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

Table 38-86 USBKeyWithMismatchContent

Alarm	Attributes	Applicable major release
Name: USBKeyWithMismatchContent (11509) Type: equipmentAlarm Package: netw.USBKeyWithMismatchContent Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: USBKeyError	Release: • N/A
Description: This alarm is raised when the System type stored in the Memory Key is not supported by the NE embedded SW. This can be detected at start-up only, thus controller enters the Idle state.		
Remedial action: Please refer to Harmony Hub800 Troubleshooting Guide for remedial action.		

39 Unspecified NE

39.1 Alarms

Alarms

Note: This chapter lists alarms that have no NE type specified. The alarms listed in this chapter may apply to one or more NE types, however, this information is not specified in the 5620 SAM alarm schema. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort.

Table 39-1 AARadiusAcctPlcyFailure

Alarm	Attributes	Applicable major release
Name: AARadiusAcctPlcyFailure (3948) Type: AARadiusAcctPlcyFailureAlarm Package: aapolicy.AARadiusAcctPlcyFailure Raised on class: aapolicy.AARadiusAccountingPolicy	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: aARadiusAcctPlcyFailure	Release: • N/A
Description: The alarm is raised when a RADIUS accounting request was not successfully sent to any of the RADIUS servers specified in the AA RADIUS accounting policy. The effect is accounting data for current subscribers will not be exported externally. Based on the noted reason, if necessary take action to ensure that the next RADIUS accounting will be successfully sent.		
Remedial action: The AA RADIUS Accounting Server(s) which are configured in the AA RADIUS Accounting Policy are unreachable. This may occur in a number of different scenarios. The server(s) may have become unresponsive - please refer to the AA RADIUS Accounting Server documentation for assistance. The network connectivity to the server(s) may have been lost - please investigate why the underlying transport network is unreliable.		

Table 39-2 AARadiusAcctServerStateChanged

Alarm	Attributes	Applicable major release
Name: AARadiusAcctServerStateChanged (3949) Type: AARadiusAcctServerStateChangedAlarm Package: aapolicy.AARadiusAcctServerStateChanged Raised on class: aapolicy.AARadiusAccountingServer	Severity: info Specific problem: Not Applicable Implicitly cleared: true Default probable cause: aARadiusAcctServerStat-eChanged	Release: • N/A
Description: The notification alarm is raised when the operational status of an AA RADIUS Accounting Policy Server has transitioned from 'In Service' to 'Out of Service' or 'Unknown' and cleared when operational status transitioned to 'In Service'.		
Raising condition: (('Operational State' EQUAL 'Out Of Service') AND ('isLocal' EQUAL 'true'))		
Clearing condition: ('Operational State' EQUAL 'In Service')		
Remedial action: Informational - This is a notification alarm to indicate that AA RADIUS Accounting Server which is configured in the AA RADIUS Accounting Policy is changing operational state.		

Table 39-3 AarpStateChanged

Alarm	Attributes	Applicable major release
Name: AarpStateChanged (3705) Type: AarpStateChanged Package: aapolicy.AarpStateChanged Raised on class: aapolicy.Aarp	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: AarpStateChanged	Release: • N/A
Description: The alarm is raised when the 5620 SAM detects that an AARP state is changed.		
Remedial action: The application assurance redundancy protocol state is changed between standalone, remote, master or backup.		

Table 39-4 AaStatTcaCfgThrshCross

Alarm	Attributes	Applicable major release
Name: AaStatTcaCfgThrshCross (9634) Type: processingErrorAlarm Package: aapolicy.AaStatTcaCfgThrshCross Raised on class: aapolicy.AaStatTcaCfg	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: aaStatTcaCfgThrshCross	Release: • N/A
Description: The alarm is generated when the utilization matching a AaStatTcaCfg in the past minute is greater than or equal to the value of tcaHighWatermark and the notification is not currently raised for the same entry.		
Remedial action: The utilization of the AA Statistics TCA Config(s) which are configured in the AA Statistics TCA Config Policy are equal or higher than the configured high watermark. Make an adjustment to the watermark.		

Table 39-5 AaStatTcaFilterThrshCross

Alarm	Attributes	Applicable major release
Name: AaStatTcaFilterThrshCross (9635) Type: processingErrorAlarm Package: aapolicy.AaStatTcaFilterThrshCross Raised on class: aapolicy.AaStatTcaFilterCfg	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: aaStatTcaFilterThrshCross	Release: • N/A
Description: The alarm is generated when the utilization matching a AaStatTcaFilterCfg in the past minute is greater than or equal to the value of tcaHighWatermark and the notification is not currently raised for the same entry.		
Remedial action: The utilization of the AA Statistics TCA Filter(s) which are configured in the AA Statistics TCA Filter Policy are equal or higher than the configured high watermark. Make an adjustment to the watermark.		

Table 39-6 AaStatTcaFltrEntryThrshCross

Alarm	Attributes	Applicable major release
Name: AaStatTcaFltrEntryThrshCross (9636) Type: processingErrorAlarm Package: aapolicy.AaStatTcaFltrEntryThrshCross Raised on class: aapolicy.AaStatTcaFltrEntryCfg	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: aaStatTcaFltrEntryThrshCross	Release: • N/A

Table 39-6 AaStatTcaFltrEntryThrshCross (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is generated when the utilization matching a AaStatTcaFltrEntryCfg in the past minute is greater than or equal to the value of tcaHighWatermark and the notification is not currently raised for the same entry.		
Remedial action: The utilization of the AA Statistics TCA Filter Entry(Entries) which are configured in the AA Statistics TCA Entry Policy are equal or higher than the configured high watermark. Make an adjustment to the watermark.		

Table 39-7 AaStatTcaPolicerThrshCross

Alarm	Attributes	Applicable major release
Name: AaStatTcaPolicerThrshCross (9637) Type: processingErrorAlarm Package: aapolicy.AaStatTcaPolicerThrshCross Raised on class: aapolicy.AaStatTcaPolicerCfg	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: aaStatTcaPolicerThrshCross	Release: • N/A
Description: The alarm is generated when the utilization matching a AaStatTcaPolicerCfg in the past minute is greater than or equal to the value of tcaHighWatermark and the notification is not currently raised for the same entry.		
Remedial action: The utilization of the AA Statistics TCA Policer(s) which are configured in the AA Statistics TCA Policer Policy are equal or higher than the configured high watermark. Make an adjustment to the watermark.		

Table 39-8 AaTcpValTcaCrossed

Alarm	Attributes	Applicable major release
Name: AaTcpValTcaCrossed (11057) Type: processingErrorAlarm Package: aapolicy.AaTcpValTcaCrossed Raised on class: aapolicy.AaTcpValidationTca	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: aaTcpValTcaCrossed	Release: • N/A
Description: The alarm is generated when the utilization matching a tmnxBsxTcpValTcaEntry in the past minute is greater than or equal to the value of tmnxBsxTcpValTcaHighWatermark and the notification is not currently raised for the same entry.		
Remedial action: The utilization of the AA TCP Validation template(s) which are configured in the AA Statistics TCA Validation entry in the past minute is greater than or equal to the value of the high watermark. Make an adjustment to the watermark.		

Table 39-9 AAUrlFilterStateChanged

Alarm	Attributes	Applicable major release
Name: AAUrlFilterStateChanged (4972) Type: processingErrorAlarm Package: aapolicy.AAUrlFilterStateChanged Raised on class: aapolicy.AAUrlFilter	Severity: info Specific problem: Not Applicable Implicitly cleared: true Default probable cause: aAUrlFilterStateChanged	Release: • N/A
Description: The notification alarm is raised when the operational status has transitioned from 'In Service' to 'Out of Service' and cleared when operational status transitioned from 'Out of Service' to 'In Service'.		

Table 39-9 AAUrlFilterStateChanged (continued)

Alarm	Attributes	Applicable major release
Raising condition: (('Operational State' EQUAL 'Down') AND ('isLocal' EQUAL 'true'))		
Clearing condition: ('Operational State' EQUAL 'Up')		
Remedial action: Informational - This is a notification alarm to indicate that AA URL Filter which is configured in the AA URL Filter Policy is changing operational state.		

Table 39-10 ABSAlarm

Alarm	Attributes	Applicable major release
Name: ABSAlarm (5187) Type: equipmentAlarm Package: isa.ABSAlarm Raised on class: isa.MgGroupMember	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceLimitReached	Release: • N/A
Description: The ABSAlarm is raised when a set of the internal parameters for ICC call latency and memory utilization reach the high threshold (activated) and cleared when it drop back and keep staying below the low threshold for at least some time period (de-activated)		
Remedial action: Diagnose why high memory utilization and/or control signaling overload happen.		

Table 39-11 AccountingPolicyDown

Alarm	Attributes	Applicable major release
Name: AccountingPolicyDown (538) Type: AccountingPolicy Package: accounting.AccountingPolicyDown Raised on class: accounting.Policy	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: accountingPolicyDown	Release: • N/A
Description: The alarm is raised when an accounting policy goes operationally Down after a file creation failure at the specified admin and backup locations.		
Raising condition: ('operationalState' EQUAL 'Down')		
Clearing condition: ('operationalState' NOT EQUAL 'Down')		
Remedial action: The file creation error is most likely a result of a flash disk full condition. Please analyse the content of the flash disk and remove redundant files. After this operation is complete please administratively toggle the accounting policy down/up. If the problem persists please contact your Nokia support representative for assistance.		

Table 39-12 ActivationSessionActiveTooLong

Alarm	Attributes	Applicable major release
Name: ActivationSessionActiveTooLong (1153) Type: configurationAlarm Package: activation.ActivationSessionActiveTooLong Raised on class: activation.Session	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: activationSessionOpen	Release: • N/A
Description: The alarm is raised when an activation session has been active for a long time.		
Remedial action: Close the Activation Session.		

Table 39-13 ActivationSessionAutoClosed

Alarm	Attributes	Applicable major release
Name: ActivationSessionAutoClosed (12372) Type: configurationAlarm Package: activation.ActivationSessionAutoClosed Raised on class: activation.Session	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: activationSessionIdleTooLong	Release: • N/A
Description: The alarm is raised when an idle activation session is closed automatically.		
Remedial action: Informational - no corrective action required.		

Table 39-14 ActiveCPMMgmtEthernetPortDown

Alarm	Attributes	Applicable major release
Name: ActiveCPMMgmtEthernetPortDown (9572) Type: communicationsAlarm Package: netw.ActiveCPMMgmtEthernetPortDown Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ActiveCPMMgmtEthernetPort-Down	Release: • N/A
Description: The alarm is raised when the active CPM's management Ethernet port goes operationally down and the standby CPM's management Ethernet port is operationally up and now serving as the system's management Ethernet port.		
Remedial action: Active CPM's management Ethernet port goes operationally down and the standby CPM's management Ethernet port is operationally up and now serving as the system's management Ethernet port.		

Table 39-15 ActivitySwitch

Alarm	Attributes	Applicable major release
Name: ActivitySwitch (182) Type: communicationsAlarm Package: netw.ActivitySwitch Raised on class: netw.NmsSystem	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: systemFailed	Release: • N/A

Table 39-15 ActivitySwitch (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when a 5620 SAM main server activity switch occurs.		
Remedial action: Informational - if the alarm persists or is occurring frequently perform root cause analysis to determine why connectivity between the primary and standby SAM servers is unreliable.		

Table 39-16 AddressAttachFailed (service)

Alarm	Attributes	Applicable major release
Name: AddressAttachFailed (8134) Type: processingErrorAlarm Package: service.AddressAttachFailed Raised on class: service.L3AccessInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: addressAttachFailed	Release: • N/A
Description: The alarm is raised when an IP address could not be attached to an interface.		
Remedial action: An IP address could not be attached to an interface. A possible cause is that a duplicate address is detected.		

Table 39-17 AddressAttachFailed (rtr)

Alarm	Attributes	Applicable major release
Name: AddressAttachFailed (8134) Type: processingErrorAlarm Package: rtr.AddressAttachFailed Raised on class: rtr.NetworkInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: addressAttachFailed	Release: • N/A
Description: The alarm is raised when an IP address could not be attached to an interface.		
Remedial action: An IP address could not be attached to an interface. A possible cause is that a duplicate address is detected.		

Table 39-18 AddressMisconfiguration

Alarm	Attributes	Applicable major release
Name: AddressMisconfiguration (591) Type: configurationAlarm Package: service.AddressMisconfiguration Raised on class: service.Service	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EpipeBackboneMacAddressMismatch Applicable probable causes: • EpipeBackboneMacAddressMismatch • BVplsSourceMacAddressDuplicate	Release: • N/A

Table 39-18 AddressMisconfiguration (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when B-VPLS site addresses are misconfigured. The EpipeBackboneMacAddressMismatch probable cause indicates that the backbone destination MAC address does not match the backbone source MAC address of the site on the destination NE. The BVplsSourceMacAddressDuplicate probable cause indicates that there are duplicate backbone source MAC addresses.		
Remedial action: Reconfigure the backbone MAC address so that the destination MAC address match the destination site for an EPIPE, or the source MAC address is not duplicate to the other source MAC address for a B-VPLS.		

Table 39-19 AdvNotActivated

Alarm	Attributes	Applicable major release
Name: AdvNotActivated (741) Type: configurationAlarm Package: vrrp.AdvNotActivated Raised on class: vrrp.InstanceV6	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: advertisementNotActivated	Release: • N/A
Description: The alarm is raised when the parent interface of an IPv6 VR instance is not configured to send router advertisements, or when router advertisement is not configured to use the virtual MAC address.		
Remedial action: Activate the Advertisement for the interface for the VRRP so that it sends Advertisement and Use Virtual MAC Address.		

Table 39-20 Ais

Alarm	Attributes	Applicable major release
Name: Ais (736) Type: communicationsAlarm Package: equipment.Ais Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ais	Release: • N/A
Description: The alarm is raised when an NE reports an AIS condition on the Tx or Rx circuit of a PDH tributary.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 39-21 AlarmDebouncingThresholdReached

Alarm	Attributes	Applicable major release
Name: AlarmDebouncingThresholdReached (11177) Type: communicationsAlarm Package: netw.AlarmDebouncingThresholdReached Raised on class: netw.NmsSystem	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: debouncingCacheFull	Release: • N/A
Description: The alarm is raised when the cache that handles alarm debouncing is at capacity with excess bouncing alarms. When this happens, Alarm Debouncing is disabled and all alarm clear events that are being debounced are processed immediately. Alarm Debouncing is re-enabled after the processing of cached events completes.		

Table 39-21 AlarmDebouncingThresholdReached (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational - Debounced alarms are being processed immediately to accommodate further bouncing alarms. If the problem persists, consider refining your alarm debouncing policy configurations or investigating why the network is generating so many bouncing alarms.		

Table 39-22 AlarmIndicationSignalOnHOPath

Alarm	Attributes	Applicable major release
Name: AlarmIndicationSignalOnHOPath (9005) Type: communicationsAlarm Package: tdm.AlarmIndicationSignalOnHOPath Raised on class: tdm.AUn	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: AISP	Release: • N/A
Description: The alarm is raised on Alarm Indication Signal on HO Path (NEND).		
Remedial action: Alarm Indication Signal detected on HO Path (NEND).		

Table 39-23 AlarmQueueOverflowed

Alarm	Attributes	Applicable major release
Name: AlarmQueueOverflowed (3683) Type: qualityOfServiceAlarm Package: netw.AlarmQueueOverflowed Raised on class: netw.NmsSystem	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: queueSizeExceeded	Release: • N/A
Description: The alarm is raised when the alarm queue size exceeds the allowed maximum. When this happens, the 5620 SAM discards alarms.		
Remedial action: An excessive number of traps are being received by 5620 SAM from the NEs in the network. 5620 SAM discards excess traps and recovers them from the network once the trap rate subsides. If the problem persists please contact your Nokia support representative for assistance.		

Table 39-24 AlarmReplayFailure

Alarm	Attributes	Applicable major release
Name: AlarmReplayFailure (5121) Type: communicationsAlarm Package: netw.AlarmReplayFailure Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: communicationsProtocolError	Release: • N/A
Description: The alarm is raised when the Alarm Replay fails. It is stored in Alarm Historical table.		
Remedial action: An Alarm Replay has failed (usually due to communication problems) - Some alarms may be missing in the Historical Alarm List.		

Table 39-25 AllArchiveLogsDeleted

Alarm	Attributes	Applicable major release
Name: AllArchiveLogsDeleted (199) Type: databaseAlarm Package: db.AllArchiveLogsDeleted Raised on class: db.DatabaseManager	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: archivedLogsIssue	Release: • N/A
Description: The alarm is raised when the 5620 SAM deletes all database archive logs because it requires more disk space. When database disk space is low, the 5620 SAM first deletes the archive logs that have been applied to the standby database and raises the OldArchiveLogsDeleted alarm. If deleting the applied archive logs does not free up sufficient disk space, the 5620 SAM deletes the remaining archive logs, which creates an archive log gap that requires a standby database reinstantiation to correct. The alarm is raised only in a redundant 5620 SAM system.		
Remedial action: The standby database should be manually re-instantiated using the commands available in the SAM GUI. Please contact your Nokia support representative for further investigation.		

Table 39-26 AllBgpPeerConnectionsDown

Alarm	Attributes	Applicable major release
Name: AllBgpPeerConnectionsDown (5417) Type: topologyAlarm Package: topology.AllBgpPeerConnectionsDown Raised on class: topology.Cpaa	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: CPAAPeerConnectionDown	Release: • N/A
Description: The alarm is raised when all CPAA's BGP peers went down.		
Remedial action: 1) All BGP peer connections are down for the active CPAA. Please check the connections.\n2) If the standby CPAA is functional as per your requirements, switch-over might resolve the issue.		

Table 39-27 AllowInBandMismatchAlarm

Alarm	Attributes	Applicable major release
Name: AllowInBandMismatchAlarm (8419) Type: integrityViolation Package: gmpls.AllowInBandMismatchAlarm Raised on class: gmpls.DbLink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: allowInBandMismatch	Release: • N/A
Description: The alarm is raised when the Allow In Band configured on the endpoints of the DB Link do not match.		
Remedial action: This alarm indicates that the allow in band property configured on the endpoints of the discovered DB Link do not match. Please make sure the allow in band is the same on the databearers at each end.		

Table 39-28 AllTimingReferencesNotQualified

Alarm	Attributes	Applicable major release
Name: AllTimingReferencesNotQualified (549) Type: communicationsAlarm Package: sonet.AllTimingReferencesNotQualified Raised on class: sonet.SiteSync	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: allTimingReferencesNotQualified	Release: • N/A
Description: The alarm is raised when no timing references on an NE are in the Qualified state.		
Raising condition: (('Qualified For Use' NOT EQUAL 'Qualified') AND ('Qualified For Use' NOT EQUAL 'Qualified') AND ('Qualified For Use' NOT EQUAL 'Qualified') AND ('Qualified For Use' NOT EQUAL 'Qualified'))		
Clearing condition: (('Qualified For Use' EQUAL 'Qualified') OR ('Qualified For Use' EQUAL 'Qualified') OR ('Qualified For Use' EQUAL 'Qualified') OR ('Qualified For Use' EQUAL 'Qualified'))		
Remedial action: Make sure that all the Timing References are qualified.		

Table 39-29 apsCfgRaiseAlarm

Alarm	Attributes	Applicable major release
Name: apsCfgRaiseAlarm (772) Type: configurationAlarm Package: ethernettunnel.apsCfgRaiseAlarm Raised on class: ethernettunnel.EthernetTunnelEndpoint	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationMismatch	Release: • N/A
Description: The alarm is raised when the 5620 SAM detects a mismatch between the working and protection Ethernet tunnel group configurations.		
Remedial action: Fix the mismatch between the working and protection Ethernet tunnel configurations.		

Table 39-30 apsNoRspRaiseAlarm

Alarm	Attributes	Applicable major release
Name: apsNoRspRaiseAlarm (773) Type: configurationAlarm Package: ethernettunnel.apsNoRspRaiseAlarm Raised on class: ethernettunnel.EthernetTunnelEndpoint	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompleteProtectionSwitching	Release: • N/A
Description: The alarm is raised when an Ethernet tunnel group protection switch is incomplete, as indicated by a comparison of the transmitted 'Requested Signal' values and the received 'Bridged Signal' in the APS protocol.		
Remedial action: Fix the mismatch between the working and protection Ethernet tunnel configurations.		

Table 39-31 apsPrvsnAlarm

Alarm	Attributes	Applicable major release
Name: apsPrvsnAlarm (1196) Type: configurationAlarm Package: ethring.apsPrvsnAlarm Raised on class: ethring.Element	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: provisioningMismatch	Release: • N/A
Description: The alarm is raised when a mismatch is detected on Ethernet Ring provisioning. The mismatch occurs when the RPL Owner Node receives one or more No Request R-APS message(s) with an RPL blocked status flag set (NR, RB) and a different Node ID.		
Remedial action: Probably more than one Ring Protection Link owners configured in the Ring, make sure which one should be RPL owner and delete others.		

Table 39-32 apsPrvsnRaiseAlarm

Alarm	Attributes	Applicable major release
Name: apsPrvsnRaiseAlarm (774) Type: configurationAlarm Package: ethernettunnel.apsPrvsnRaiseAlarm Raised on class: ethernettunnel. EthernetTunnelEndpoint	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: provisioningMismatch	Release: • N/A
Description: The alarm is raised when an Ethernet tunnel group provisioning mismatch is detected at the ETH layer. The mismatch is detected through a comparison of the transmitted and received APS protocol A, B and D bits.		
Remedial action: Check the configuration of the two ends of the tunnel are compatible/same for the protocol.		

Table 39-33 APSSwitchover

Alarm	Attributes	Applicable major release
Name: APSSwitchover (8376) Type: equipmentAlarm Package: aps.APSSwitchover Raised on class: aps.ApsGroup	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: apsEventSwitchover	Release: • N/A
Description: The alarm is raised when APS Switchover happens either from the working channel to the protection or from the protection channel to the working.		
Remedial action: Informational - Make sure that the working/protection channel of the APS Group is up and operational.		

Table 39-34 ArchiveLogDiskSpaceBelowThreshold

Alarm	Attributes	Applicable major release
Name: ArchiveLogDiskSpaceBelowThreshold (197) Type: databaseAlarm Package: db.ArchiveLogDiskSpaceBelowThreshold Raised on class: db.DatabaseManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: diskSpaceIssue	Release: • N/A
Description: The alarm is raised when the primary or standalone database archived log disk space threshold specified in the nms-server.xml file is reached.		
Remedial action: The archive log directory has become too full. Performing a manual database backup is required to reduce the size of this directory. If the alarm persists then the frequency of database backups must be increased.		

Table 39-35 ArchiveLogDiskSpaceSizeMisMatch

Alarm	Attributes	Applicable major release
Name: ArchiveLogDiskSpaceSizeMisMatch (2935) Type: diskSpaceIssue Package: db.ArchiveLogDiskSpaceSizeMisMatch Raised on class: db.DatabaseManager	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: diskSpaceIssue	Release: • N/A
Description: The alarm is raised when the primary and standby database archived log directory sizes do not match.		
Remedial action: Disk space should be adjusted on the database servers to ensure adequate and equal space is reserved.		

Table 39-36 ArpEntriesExceededLimit (rtr)

Alarm	Attributes	Applicable major release
Name: ArpEntriesExceededLimit (9588) Type: communicationsAlarm Package: rtr.ArpEntriesExceededLimit Raised on class: rtr.NetworkInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ArpEntriesExceededLimit	Release: • N/A
Description: The alarm is raised when the number of IPv4 ARP entries learned on an IP interface has exceeded the configured maximum.		
Remedial action: Need to increase the ARP Limit since number of ARP entries have exceeded the configured limit so no new entries are learned until an entry expires.		

Table 39-37 ArpEntriesExceededLimit (service)

Alarm	Attributes	Applicable major release
Name: ArpEntriesExceededLimit (9588) Type: communicationsAlarm Package: service.ArpEntriesExceededLimit Raised on class: service.L3AccessInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ArpEntriesExceededLimit	Release: • N/A

Table 39-37 ArpEntriesExceededLimit (service) (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the number of IPv4 ARP entries learned on an IP interface has exceeded the configured maximum.		
Remedial action: Need to increase the ARP Limit since number of ARP entries have exceeded the configured limit so no new entries are learned until an entry expires.		

Table 39-38 ArpEntriesExceededThresholdLimit (rtr)

Alarm	Attributes	Applicable major release
Name: ArpEntriesExceededThresholdLimit (9589) Type: communicationsAlarm Package: rtr.ArpEntriesExceededThresholdLimit Raised on class: rtr.NetworkInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ArpEntriesExceededThresh-oldLimit	Release: • N/A
Description: The alarm is raised when the number of IPv4 ARP entries learned on an IP interface has exceeded vRtrIfArpThreshold percent of the configured maximum as specified by vRtrIfArpLimit.		
Remedial action: Need to increase the ARP Limit.		

Table 39-39 ArpEntriesExceededThresholdLimit (service)

Alarm	Attributes	Applicable major release
Name: ArpEntriesExceededThresholdLimit (9589) Type: communicationsAlarm Package: service.ArpEntriesExceededThresholdLimit Raised on class: service.L3AccessInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ArpEntriesExceededThresh-oldLimit	Release: • N/A
Description: The alarm is raised when the number of IPv4 ARP entries learned on an IP interface has exceeded vRtrIfArpThreshold percent of the configured maximum as specified by vRtrIfArpLimit.		
Remedial action: Need to increase the ARP Limit.		

Table 39-40 ArpHostOverride

Alarm	Attributes	Applicable major release
Name: ArpHostOverride (9573) Type: processingErrorAlarm Package: netw.ArpHostOverride Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: arpHostOverride	Release: • N/A

Table 39-40 ArpHostOverride (continued)

Alarm	Attributes	Applicable major release
Description: The system generates an svcArpHostOverride notification when it overrides the MAC address of an ARP host. The new MAC address is in svcArpHostMacAddr, while the old MAC address is in svcNotifyMacAddress. [CAUSE] The system overrides the MAC address of an ARP host, because an ARP host with the same IP address as a known ARP host has appeared with a different MAC address. [EFFECT] The MAC address of the known ARP host has changed. [RECOVERY] No recovery required.		
Remedial action: Informational - no recovery needed.		

Table 39-41 AssuranceEventLoggingTurnedOff

Alarm	Attributes	Applicable major release
Name: AssuranceEventLoggingTurnedOff (9029) Type: processingErrorAlarm Package: assurance.AssuranceEventLoggingTurnedOff Raised on class: assurance.AssuranceEventManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: diskSpaceIssue	Release: • N/A
Description: This alarm is raised when database disk space used to log Assurance Events grows above pre-defined threshold and the internal defense mechanism turns off Assurance Event logging to protect the database disk space.		
Remedial action: Purge Assurance Event records and wait until all of the alarms DatafileSizeAboveThreshold on EVENT_HISTORY files are cleared, then enable Assurance Event logging.		

Table 39-42 AsymmetricalConfig (bundle)

Alarm	Attributes	Applicable major release
Name: AsymmetricalConfig (295) Type: configurationAlarm Package: bundle.AsymmetricalConfig Raised on class: bundle.MultiChassisApsInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: asymmetricalConfig	Release: • N/A
Description: The alarm is raised when the bundles in an APS group do not have matching configurations.		
Raising condition: ('Asymmetrical Config Detected' EQUAL 'true')		
Clearing condition: ('Asymmetrical Config Detected' EQUAL 'false')		
Remedial action: Check configurations on both members to see anything not matched.		

Table 39-43 ATPCHighPowerTimeout

Alarm	Attributes	Applicable major release
Name: ATPCHighPowerTimeout (4818) Type: communicationsAlarm Package: mwa.ATPCHighPowerTimeout Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ATPCLoopProblem	Release: • N/A

Table 39-43 ATPCHighPowerTimeout (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when a MPT detects a ATPC High Power Timeout		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-44 AuthenticationFailure

Alarm	Attributes	Applicable major release
Name: AuthenticationFailure (128) Type: communicationsAlarm Package: security.AuthenticationFailure Raised on class: security.TSecurityManager	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: multipleSecurityViolations	Release: • N/A
Description: The alarm is raised when a configurable number of attempts to log in to a 5620 SAM client fail. The alarm information includes the user name. The 5620 SAM will clear the alarm upon a successful user login or account deletion.		
Remedial action: Informational - the additional text field of the alarm will provide more details.		

Table 39-45 AuthFailure

Alarm	Attributes	Applicable major release
Name: AuthFailure (281) Type: authenticationAlarm Package: vrrp.AuthFailure Raised on class: vrrp.AbstractInstance	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: authFailure	Release: • N/A
Description: The alarm is raised when authentication fails. The alarm information includes the source IP address.		
Remedial action: Reconfigure the authentication key so that the keys are the same for the peer VRRP instances.		

Table 39-46 AuthKeyConflict (ldp)

Alarm	Attributes	Applicable major release
Name: AuthKeyConflict (5188) Type: processingErrorAlarm Package: ldp.AuthKeyConflict Raised on class: ldp.Peer	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: AuthKeyConflict	Release: • N/A
Description: The alarm is raised when both Authentication Key and LDP Peer Keychain are configured. LDP Peer Keychain will be used.		
Remedial action: Authentication Key and LDP Peer Keychain are both configured. LDP Peer Keychain will be used. The alarm is cleared when only one is configured.		

Table 39-47 AuthKeyFailure

Alarm	Attributes	Applicable major release
Name: AuthKeyFailure (8389) Type: processingErrorAlarm Package: ldp.AuthKeyFailure Raised on class: ldp.PeerTransport	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: AuthKeyConflict	Release: • N/A
Description: The alarm is raised when both Authentication Key and LDP Peer Keychain are configured. LDP PeerTransport Keychain will be used.		
Remedial action: Authentication Key and LDP Peer Transport Keychain are both configured. LDP Peer Transport Keychain will be used. The alarm is cleared when only one is configured.		

Table 39-48 AuthorizationFailure

Alarm	Attributes	Applicable major release
Name: AuthorizationFailure (529) Type: communicationsAlarm Package: security.AuthorizationFailure Raised on class: security.TSecurityManager	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: multipleSecurityViolations	Release: • N/A
Description: The alarm is raised when a configurable number of attempts to delete or modify an object that is not in the current user span of control fail.		
Remedial action: Informational - the additional text field of the alarm will provide more details.		

Table 39-49 AuxDatabaseBackupFailed

Alarm	Attributes	Applicable major release
Name: AuxDatabaseBackupFailed (9613) Type: configurationAlarm Package: db.AuxDatabaseBackupFailed Raised on class: db.AuxiliaryDbBackup	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: databaseBackupFailure	Release: • N/A
Description: The alarm is raised when the auxiliary database backup files cannot be created because of, for example, a lack of disk space or insufficient file permissions.		
Raising condition: ('Latest Backup State' EQUAL 'Failed')		
Remedial action: Check the additional text of the alarm for guidance as to the specifics of the problem. Possible causes are lack of disk space or insufficient file permissions or the backup cannot finish on time. If the backup cannot finish on time, re-attempt the database backup.		

Table 39-50 AuxDbCannotRollbackToLastGoodEpoch

Alarm	Attributes	Applicable major release
Name: AuxDbCannotRollbackToLastGoodEpoch (9638) Type: databaseAlarm Package: db.AuxDbCannotRollbackToLastGoodEpoch Raised on class: db.AuxiliaryDatabaseCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DatabaseErrors	Release: • N/A
Description: This informative alarm is raised when the auxiliary database is corrupted and cannot be started nor rolled back to the last good epoch.		
Remedial action: The auxiliary database is corrupted and cannot be started nor rolled back to the last good epoch. Statistics collection is stopped. Please contact your Nokia support representative.		

Table 39-51 AuxDbCannotStart

Alarm	Attributes	Applicable major release
Name: AuxDbCannotStart (10271) Type: databaseAlarm Package: db.AuxDbCannotStart Raised on class: db.AuxiliaryDatabaseCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DatabaseErrors	Release: • N/A
Description: This informative alarm is raised when the auxiliary database cannot be automatically started.		
Remedial action: The auxiliary database cannot be started automatically. Statistics collection is stopped. Please contact your Nokia support representative.		

Table 39-52 AuxiliaryAlarm

Alarm	Attributes	Applicable major release
Name: AuxiliaryAlarm (1159) Type: dryContactAlarm Package: equipment.AuxiliaryAlarm Raised on class: equipment.AuxAlarmDefinition	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: auxliaryAlarmTriggered	Release: • N/A
Description: The alarm is raised when an NE reports that a configured auxiliary alarm condition has been triggered.		
Remedial action: Informational - no corrective action required.		

Table 39-53 AuxiliaryDatabaseClusterUnavailable

Alarm	Attributes	Applicable major release
Name: AuxiliaryDatabaseClusterUnavailable (8154) Type: databaseAlarm Package: db.AuxiliaryDatabaseClusterUnavailable Raised on class: db.AuxiliaryDatabaseCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DatabaseErrors	Release: • N/A

Table 39-53 AuxiliaryDatabaseClusterUnavailable (continued)

Alarm	Attributes	Applicable major release
Description: This informative alarm is raised when the auxiliary database cluster is not available.		
Remedial action: The auxiliary database cluster is not responding. This means all the nodes in the cluster are down. Stats collection is stopped. Please restart the auxiliary database cluster.		

Table 39-54 AuxiliaryDatabaseConnectivityStatus

Alarm	Attributes	Applicable major release
Name: AuxiliaryDatabaseConnectivityStatus (9614) Type: communicationsAlarm Package: db.AuxiliaryDatabaseConnectivityStatus Raised on class: db.AuxiliaryDatabase	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • N/A
Description: This informative alarm is raised when a 5620 SAM server cannot communicate with an auxiliary database server. The alarm clears when communication is restored.		
Raising condition: ('Connectivity State' EQUAL 'Offline')		
Clearing condition: ('Connectivity State' EQUAL 'Online')		
Remedial action: The 5620 SAM server is unable to communicate with an auxiliary database. Check the status of the auxiliary database and the communication link between SAM server and auxiliary database node.		

Table 39-55 AuxiliaryDatabaseNodeFailed

Alarm	Attributes	Applicable major release
Name: AuxiliaryDatabaseNodeFailed (9615) Type: databaseAlarm Package: db.AuxiliaryDatabaseNodeFailed Raised on class: db.AuxiliaryDatabaseCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DatabaseErrors	Release: • N/A
Description: This informative alarm is raised when the auxiliary database node failed and was stopped.		
Remedial action: The auxiliary database node failed and was stopped. Please fix the issue with the auxiliary database node and re-start the auxiliary database process.		

Table 39-56 AuxiliaryDatabaseStatus

Alarm	Attributes	Applicable major release
Name: AuxiliaryDatabaseStatus (5173) Type: communicationsAlarm Package: db.AuxiliaryDatabaseStatus Raised on class: db.AuxiliaryDatabase	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • N/A

Table 39-56 AuxiliaryDatabaseStatus (continued)

Alarm	Attributes	Applicable major release
Description: This informative alarm is raised when a 5620 SAM server detects that an auxiliary database server is down. The alarm clears when the node is restored.		
Raising condition: ('State' EQUAL 'Down')		
Clearing condition: ('State' EQUAL 'Up')		
Remedial action: The 5620 SAM server detected an auxiliary database is down. Check the status of the auxiliary database.		

Table 39-57 AuxiliaryServerAssignmentProblem

Alarm	Attributes	Applicable major release
Name: AuxiliaryServerAssignmentProblem (5135) Type: processingErrorAlarm Package: server.AuxiliaryServerAssignmentProblem Raised on class: server.AuxiliaryServer	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • N/A
Description: This alarm is raised when a NE cannot be assigned to an AuxiliaryServer during load balancing or manual assignment operation.		
Remedial action: Ensure the NE is managed, reachable and that no configuration operation is in progress on that NE and relaunch the operation.		

Table 39-58 BackgroundDiagnosticFault

Alarm	Attributes	Applicable major release
Name: BackgroundDiagnosticFault (467) Type: equipmentAlarm Package: equipment.BackgroundDiagnosticFault Raised on class: equipment.ReplaceableUnit	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: backgroundDiagnosticFault	Release: • N/A
Description: The alarm is raised when an NE detects a failure in a background diagnostic test suite.		
Remedial action: Informational - if the condition persists then the element indicated in the alarm should be replaced.		

Table 39-59 backhaulServiceDown

Alarm	Attributes	Applicable major release
Name: backhaulServiceDown (11463) Type: communicationsAlarm Package: mpr.backhaulServiceDown Raised on class: mpr.BackhaulService	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: backhaulServiceDown	Release: • N/A
Description: The alarm is raised when the service is down.		

Table 39-59 backhaulServiceDown (continued)

Alarm	Attributes	Applicable major release
Raising condition: ('Operational State' EQUAL '3')		
Clearing condition: ('Operational State' EQUAL '1')		
Remedial action: Check any affected adjancency/Site.		

Table 39-60 BackupDiskSpaceBelowThreshold

Alarm	Attributes	Applicable major release
Name: BackupDiskSpaceBelowThreshold (195) Type: databaseAlarm Package: db.BackupDiskSpaceBelowThreshold Raised on class: db.DatabaseManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: diskSpaceIssue	Release: • N/A
Description: The alarm is raised when the primary or standalone database backup disk space threshold specified in the nms-server.xml file is reached.		
Remedial action: The additional text field of the alarm will provide more details. Additional disk space must be made available for the backup location or a different, larger backup location must be configured.		

Table 39-61 BatteryFail (equipment)

Alarm	Attributes	Applicable major release
Name: BatteryFail (616) Type: equipmentAlarm Package: equipment.BatteryFail Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: batteryFail	Release: • N/A
Description: The alarm is raised when the battery fails or is missing.		
Remedial action: The battery on the CPM should be replaced or re-installed.		

Table 39-62 BfdSessionDown (service)

Alarm	Attributes	Applicable major release
Name: BfdSessionDown (439) Type: bfdSessionAlarm Package: service.BfdSessionDown Raised on class: service.L3AccessInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bfdSessionDown	Release: • N/A
Description: The alarm is raised when a BFD session is operationally down.		

Table 39-62 BfdSessionDown (service) (continued)

Alarm	Attributes	Applicable major release
Remedial action: This alarm is raised when a BFD session on a L3 access interface goes down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 39-63 BfdSessionDown (vprn)

Alarm	Attributes	Applicable major release
Name: BfdSessionDown (439) Type: bfdSessionAlarm Package: vprn.BfdSessionDown Raised on class: vprn.NetworkInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bfdSessionDown	Release: • N/A
Description: The alarm is raised when a BFD session is operationally Down.		
Remedial action: This alarm is raised when a BFD session on a VPRN network interface goes down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 39-64 BfdSessionDown (rtr)

Alarm	Attributes	Applicable major release
Name: BfdSessionDown (439) Type: bfdSessionAlarm Package: rtr.BfdSessionDown Raised on class: rtr.NetworkInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bfdSessionDown	Release: • N/A
Description: The alarm is raised when a BFD session is operationally down.		
Remedial action: This alarm is raised when a BFD session on a network interface goes down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 39-65 BfdSessionFlapped (rtr)

Alarm	Attributes	Applicable major release
Name: BfdSessionFlapped (3900) Type: bfdSessionAlarm Package: rtr.BfdSessionFlapped Raised on class: rtr.NetworkInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: bfdSessionFlapped	Release: • N/A

Table 39-65 BfdSessionFlapped (rtr) (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when a BFD session transitions from Up to Down and back to Up within the BFD operational state transition interval.		
Remedial action: The BFD session on a network interface has transitioned from Up to Down and back to Up within the configured BFD Flapping Interval.		

Table 39-66 BfdSessionFlapped (service)

Alarm	Attributes	Applicable major release
Name: BfdSessionFlapped (3900) Type: bfdSessionAlarm Package: service.BfdSessionFlapped Raised on class: service.L3AccessInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bfdSessionFlapped	Release: • N/A
Description: The alarm is raised when a BFD session transitions from Up to Down and back to Up within the BFD operational state transition interval.		
Remedial action: The BFD session on a L3 access interface has transitioned from Up to Down and back to Up within the configured BFD Flapping Interval.		

Table 39-67 BfdSessionFlapped (vprn)

Alarm	Attributes	Applicable major release
Name: BfdSessionFlapped (3900) Type: bfdSessionAlarm Package: vprn.BfdSessionFlapped Raised on class: vprn.NetworkInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bfdSessionFlapped	Release: • N/A
Description: The alarm is raised when a BFD session transitions from Up to Down and back to Up within the BFD operational state transition interval.		
Remedial action: The BFD session on a VPRN network interface has transitioned from Up to Down and back to Up within the configured BFD Flapping Interval.		

Table 39-68 BfdSessionMissing (service)

Alarm	Attributes	Applicable major release
Name: BfdSessionMissing (438) Type: bfdSessionAlarm Package: service.BfdSessionMissing Raised on class: service.L3AccessInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bfdSessionMissing	Release: • N/A
Description: The alarm is raised when a previously present BFD session is absent.		

Table 39-68 BfdSessionMissing (service) (continued)

Alarm	Attributes	Applicable major release
Remedial action: This alarm is raised when a previously present BFD session on a L3 access interface is absent. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the near end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 39-69 BfdSessionMissing (rtr)

Alarm	Attributes	Applicable major release
Name: BfdSessionMissing (438) Type: bfdSessionAlarm Package: rtr.BfdSessionMissing Raised on class: rtr.NetworkInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bfdSessionMissing	Release: • N/A
Description: The alarm is raised when a previously present BFD session is absent.		
Remedial action: This alarm is raised when a previously present BFD session on a network interface is absent. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the near end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 39-70 BfdSessionMissing (vprn)

Alarm	Attributes	Applicable major release
Name: BfdSessionMissing (438) Type: bfdSessionAlarm Package: vprn.BfdSessionMissing Raised on class: vprn.NetworkInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bfdSessionMissing	Release: • N/A
Description: The alarm is raised when a previously present BFD session is absent.		
Remedial action: This alarm is raised when a previously present BFD session on a VPRN network interface is absent. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the near end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 39-71 BgpAdVplsIdDiscoveryError

Alarm	Attributes	Applicable major release
Name: BgpAdVplsIdDiscoveryError (572) Type: serviceAlarm Package: vpls.BgpAdVplsIdDiscoveryError Raised on class: vpls.AbstractSite	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bgpAdVplsIdInconsistent	Release: • N/A
Description: The alarm is raised when the VPLS ID of a discovered VPLS instance is ambiguous.		

Table 39-71 BgpAdVplsIdDiscoveryError (continued)

Alarm	Attributes	Applicable major release
Remedial action: Check that all VPLS IDs are properly configured for all VPLS instances.		

Table 39-72 BgpAdVplsIdMisconfiguration

Alarm	Attributes	Applicable major release
Name: BgpAdVplsIdMisconfiguration (570) Type: configurationAlarm Package: vpls.BgpAdVplsIdMisconfiguration Raised on class: vpls.AbstractVpls	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bgpAdVplsIdInconsistent	Release: • N/A
Description: The alarm is raised when the VPLS ID of a site does not match the VPLS ID of the other sites in the service.		
Remedial action: All VPLS IDs of sites in a service must be the same.		

Table 39-73 BgpAsPathLenPerMonPrefThresholdReached

Alarm	Attributes	Applicable major release
Name: BgpAsPathLenPerMonPrefThresholdReached (795) Type: topologyAlarm Package: topology. BgpAsPathLenPerMonPrefThresholdReached Raised on class: topology.Cpaa	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: asPathTooLong	Release: • N/A
Description: The alarm is raised when the AS path length for a monitored BGP route reaches or exceeds the maximum threshold value.		
Remedial action: User configured alarm for monitoring purpose. Alarm text provides information about the affected prefix. User can look at the records for BGP prefix monitoring or BGP events history for debugging purpose.		

Table 39-74 BgpEventDbSizeThresholdExceeded

Alarm	Attributes	Applicable major release
Name: BgpEventDbSizeThresholdExceeded (3703) Type: configurationAlarm Package: topology. BgpEventDbSizeThresholdExceeded Raised on class: topology.BgpEventPartitionManager	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BGPEventDBSizeIsNotSuffi-cient	Release: • N/A
Description: The alarm is raised when the actual DB size consumed by BGP Events exceeds the threshold.		
Remedial action: BGP Events DB storage reached threshold or exceeded, increase "Max BGP Events DB Size" in BGP Event Manager GUI.		

Table 39-75 BgpEventUnreachable

Alarm	Attributes	Applicable major release
Name: BgpEventUnreachable (4896) Type: topologyAlarm Package: topology.BgpEventUnreachable Raised on class: topology.Cpaa	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: prefixUnreachable	Release: • N/A
Description: The alarm is raised when Unreachable BGP Event is detected.		
Remedial action: Alarm text provides information about the affected prefix. User can look at the BGP events history for debugging purpose.		

Table 39-76 BgpFlowspecNlriProblem

Alarm	Attributes	Applicable major release
Name: BgpFlowspecNlriProblem (3317) Type: ProtocolAlarm Package: rtr.BgpFlowspecNlriProblem Raised on class: rtr.RoutingInstanceSite	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: NlriProblem	Release: • N/A
Description: The alarm is raised when the filter module receives a BGP FlowSpec NLRI that cannot be treated.		
Remedial action: Information - if the the problem persists please contact your Nokia support representative for assistance.		

Table 39-77 BgpMonitorPrefixFlapRateThresholdReached

Alarm	Attributes	Applicable major release
Name: BgpMonitorPrefixFlapRateThresholdReached (432) Type: topologyAlarm Package: topology. BgpMonitorPrefixFlapRateThresholdReached Raised on class: topology.Cpaa	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unstablePrefix	Release: • N/A
Description: The alarm is raised when a BGP monitor prefix flap rate exceeds the maximum flap rate threshold value.		
Remedial action: User configured alarm for monitoring purpose. Alarm text provides information about the affected prefix. User can look at the records for BGP prefix monitoring or BGP events history for debugging purpose.		

Table 39-78 BgpMonPrefixUnreachable

Alarm	Attributes	Applicable major release
Name: BgpMonPrefixUnreachable (1114) Type: topologyAlarm Package: topology.BgpMonPrefixUnreachable Raised on class: topology.Cpaa	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: prefixUnreachable	Release: • N/A

Table 39-78 BgpMonPrefixUnreachable (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when no route for the monitored prefix is detected.		
Remedial action: User configured alarm for monitoring purpose. Alarm text provides information about the affected prefix. User can look at the records for BGP prefix monitoring or BGP events history for debugging purpose.		

Table 39-79 BgpMonPrefRedundancyLossThresholdReached

Alarm	Attributes	Applicable major release
Name: BgpMonPrefRedundancy-LossThresholdReached (796) Type: topologyAlarm Package: topology.BgpMonPrefRedundancyLossThresholdReached Raised on class: topology.Cpaa	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lowNumberofNHops	Release: • N/A
Description: The alarm is raised when the number of next hops for a monitored BGP route reaches or falls below the minimum threshold value.		
Remedial action: User configured alarm for monitoring purpose. Alarm text provides information about the affected prefix. User can look at the records for BGP prefix monitoring or BGP events history for debugging purpose.		

Table 39-80 BgpPktRateThresholdReached

Alarm	Attributes	Applicable major release
Name: BgpPktRateThresholdReached (431) Type: topologyAlarm Package: topology.BgpPktRateThresholdReached Raised on class: topology.Cpaa	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unstableBgpSpeaker	Release: • N/A
Description: The alarm is raised when a BGP packet rate exceeds the maximum threshold value.		
Remedial action: User configured alarm for monitoring purpose. BGP events history can be used for debugging purpose.		

Table 39-81 BgpProfilePrefixUnreachable

Alarm	Attributes	Applicable major release
Name: BgpProfilePrefixUnreachable (8148) Type: topologyAlarm Package: topology.BgpProfilePrefixUnreachable Raised on class: topology.AbstractBgpRouteProfile	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: BGPProfilePrefixUnreachable	Release: • N/A
Description: The alarm is raised when the prefix on BGP profile is unreachable.		
Remedial action: BGP Profile matched with BGP prefix unreachable event.		

Table 39-82 BgpRouteChangeThresholdPerNHopReached

Alarm	Attributes	Applicable major release
Name: BgpRouteChangeThresholdPerNHopReached (601) Type: topologyAlarm Package: topology.BgpRouteChangeThresholdPerNHopReached Raised on class: topology.Cpaa	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unstableBgpSpeaker	Release: • N/A
Description: The alarm is raised when the number of BGP route changes for a next hop reaches the maximum threshold value for a next hop.		
Remedial action: User configured alarm for monitoring purpose. BGP events history can be used for debugging purpose.		

Table 39-83 BgpRouteChangeThresholdPerRTargetReached

Alarm	Attributes	Applicable major release
Name: BgpRouteChangeThresholdPer-RTargetReached (600) Type: topologyAlarm Package: topology.BgpRouteChangeThresholdPerRTargetReached Raised on class: topology.Cpaa	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unstableVpnSite	Release: • N/A
Description: The alarm is raised when the number of BGP route changes for a route target reaches the maximum threshold value for route targets.		
Remedial action: User configured alarm for monitoring purpose. BGP events history can be used for debugging purpose.		

Table 39-84 BgpRouteCountThresholdReached

Alarm	Attributes	Applicable major release
Name: BgpRouteCountThresholdReached (428) Type: topologyAlarm Package: topology.BgpRouteCountThresholdReached Raised on class: topology.Cpaa	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tooManyBgpRoute-ForNextHop	Release: • N/A
Description: The alarm is raised when the BGP route count for a next hop exceeds the maximum threshold value for next hops.		
Remedial action: User configured alarm for monitoring purpose. BGP events history can be used for debugging purpose.		

Table 39-85 BgpRouteFlapRateThresholdReached

Alarm	Attributes	Applicable major release
Name: BgpRouteFlapRateThresholdReached (430) Type: topologyAlarm Package: topology. BgpRouteFlapRateThresholdReached Raised on class: topology.Cpaa	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unstableBgpSpeaker	Release: • N/A
Description: The alarm is raised when the BGP route flap rate exceeds the maximum threshold value.		
Remedial action: User configured alarm for monitoring purpose. BGP events history can be used for debugging purpose.		

Table 39-86 BgpRouteHighWatermarkPerRTargetReached

Alarm	Attributes	Applicable major release
Name: BgpRouteHighWatermarkPerRTargetReached (433) Type: topologyAlarm Package: topology. BgpRouteHighWatermarkPerRTargetReached Raised on class: topology.Cpaa	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tooManyBgpRouteForGiven-RouteTarget	Release: • N/A
Description: The alarm is raised when there are too many BGP routes for a route target.		
Remedial action: User configured alarm for monitoring purpose. BGP events history can be used for debugging purpose.		

Table 39-87 BgpRouteLowWatermarkPerRTargetReached

Alarm	Attributes	Applicable major release
Name: BgpRouteLowWatermarkPerRTargetReached (434) Type: topologyAlarm Package: topology. BgpRouteLowWatermarkPerRTargetReached Raised on class: topology.Cpaa	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tooLittleBgpRouteForGiven-RouteTarget	Release: • N/A
Description: The alarm is raised when there are too few BGP routes for a route target.		
Remedial action: User configured alarm for monitoring purpose. BGP events history can be used for debugging purpose.		

Table 39-88 BgpRouteRateThresholdPerRTargetReached

Alarm	Attributes	Applicable major release
Name: BgpRouteRateThresholdPerRTargetReached (435) Type: topologyAlarm Package: topology.BgpRouteRateThresholdPerRTargetReached Raised on class: topology.Cpaa	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unstableVpnSite	Release: • N/A
Description: The alarm is raised when the BGP route rate for a target reaches the maximum threshold value for route targets.		
Remedial action: User configured alarm for monitoring purpose. BGP events history can be used for debugging purpose.		

Table 39-89 BgpRouteRateThresholdReached

Alarm	Attributes	Applicable major release
Name: BgpRouteRateThresholdReached (429) Type: topologyAlarm Package: topology.BgpRouteRateThresholdReached Raised on class: topology.Cpaa	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tooManyBgpRoute-ForNextHop	Release: • N/A
Description: The alarm is raised when the BGP route rate for a next hop exceeds the maximum threshold value for next hops.		
Remedial action: User configured alarm for monitoring purpose. BGP events history can be used for debugging purpose.		

Table 39-90 BidirectionalTPLspDestinationMisconfiguration

Alarm	Attributes	Applicable major release
Name: BidirectionalTPLspDestinationMisconfiguration (5117) Type: configurationAlarm Package: mplstp.BidirectionalTPLspDestinationMisconfiguration Raised on class: mplstp.GlobalTPLsp	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: DestinationParametersMis-match	Release: • N/A
Description: The alarm is raised when the Destination Global ID, Destination Node ID, or Destination Tunnel Number is not consistent with the configuration of the opposite TP-LSP in a Bidirectional TP-LSP.		
Remedial action: This alarm is generated when a TP-LSP that belongs to a Bidirectional TP-LSP has any of its Destination Global ID, Destination Node ID, or Destination Tunnel Number misconfigured. Review the configuration both TP-LSPs in the Bidirectional TP-LSP and ensure that the Destination Global ID, Destination Node ID, and Destination Tunnel Number are configured properly.		

Table 39-91 BidirectionalTPLspPathLspNumberMisconfiguration

Alarm	Attributes	Applicable major release
Name: BidirectionalTPLspPathLspNum-berMisconfiguration (5118) Type: configurationAlarm Package: mplstp.BidirectionalTPLspPathLspNumberMisconfiguration Raised on class: mplstp.GlobalTPLspPath	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LSPNumberMismatch	Release: • N/A
Description: The alarm is raised when the LSP Path Number is not consistent with the LSP Path Number for LER A and LER B.		
Remedial action: This alarm is generated when the LSP Path Number for the Bidirectional TP-LSP Path does not match LER A and/or LER B. Review the configuration of LSP Path Number LER A and LER B and ensure both are set to the same value as the Bidirectional TP-LSP Path's LSP Path Number.		

Table 39-92 BidirIpPathMonitorPathsDiverge

Alarm	Attributes	Applicable major release
Name: BidirIpPathMonitorPathsDiverge (603) Type: topologyAlarm Package: monpath.BidirIpPathMonitorPathsDiverge Raised on class: monpath.BidirMonitoredIpPath	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ipPathsDiverge	Release: • N/A
Description: The alarm is raised when the 5650 CPAM detects that the IP paths of a bidirectional IP path monitor diverge. The alarm clears when the paths converge. This may occur when an IP path monitor cannot be set up after the number of attempts specified by the cpamManagedRoute problematicThresholdAlarmAfter value in the nms-server.xml file. The alarm is raised if the cpamMan-agedRoute problematicRetryStrategy value in nms-server.xml is set to countdown. The default problematicRetryStrategy value of reactive prevents the alarm from being raised.		
Remedial action: Informational - Paths in both direction can be highlighted on the CPAM map to identify the divergence point.		

Table 39-93 BidirLspMonitorPathsDiverge

Alarm	Attributes	Applicable major release
Name: BidirLspMonitorPathsDiverge (1915) Type: topologyAlarm Package: monpath.BidirLspMonitorPathsDiverge Raised on class: monpath.BidirMonitoredLspPath	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LspPathsDiverge	Release: • N/A
Description: The alarm is raised when the LSP's active path's hops do not match in the forward and reverse direction.		
Remedial action: Informational - Paths in both direction can be highlighted on the CPAM map to identify the divergence point.		

Table 39-94 BITSReferenceLossOfSignal (equipment)

Alarm	Attributes	Applicable major release
Name: BITSReferenceLossOfSignal (1950) Type: communicationsAlarm Package: equipment.BITSReferenceLossOfSignal Raised on class: equipment.ProcessorCard	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BITSReferenceLossOfSignal	Release: • N/A
Description: The alarm is raised when the BITS Port reference on the Standby CPM is not qualified due to Loss of Signal.		
Remedial action: Make sure that peer connected to BITS Port on the Standby CPM is properly configured.		

Table 39-95 BITSReferenceOutOfFrequency (equipment)

Alarm	Attributes	Applicable major release
Name: BITSReferenceOutOfFrequency (1951) Type: communicationsAlarm Package: equipment.BITSReferenceOutOfFrequency Raised on class: equipment.ProcessorCard	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BITSReferenceOutOfFrequency	Release: • N/A
Description: The alarm is raised when the BITS Port reference on the Standby CPM is not qualified due to Out of frequency.		
Remedial action: Make sure that frequency configured for the BITS Port on the Standby CPM is correct.		

Table 39-96 BITSReferenceOutOfPollInRange (equipment)

Alarm	Attributes	Applicable major release
Name: BITSReferenceOutOfPollInRange (1952) Type: communicationsAlarm Package: equipment.BITSReferenceOutOfPollInRange Raised on class: equipment.ProcessorCard	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BITSReferenceOutOfPollInRange	Release: • N/A
Description: The alarm is raised when the BITS Port reference on the Standby CPM is not qualified due to Out of poll in range.		
Remedial action: Check the BITS Port on the Standby CPM is configured correctly and the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary		

Table 39-97 BofSaveFailed

Alarm	Attributes	Applicable major release
Name: BofSaveFailed (11056) Type: equipmentAlarm Package: sw.BofSaveFailed Raised on class: sw.SoftwareUpgradeManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bofSaveFailed	Release: • N/A

Table 39-97 BofSaveFailed (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the bof save failed		
Remedial action: Please log into the NE in question via CLI and execute a manual bof save. If the problem persists please contact Nokia support for assistance.		

Table 39-98 BootConfigFailScriptNotAccesible

Alarm	Attributes	Applicable major release
Name: BootConfigFailScriptNotAccesible (543) Type: configurationAlarm Package: netw.BootConfigFailScriptNotAccesible Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: bootConfigFailScriptNotAccesible	Release: • N/A
Description: The alarm is raised when a CLI script that runs after NE configuration file execution failure is inaccessible.		
Remedial action: Ensure that the CLI script (boot-bad-exec) that runs after an NE configuration file execution failure is accessible. The script location is configurable through CLI on the NE (configure system boot-bad-exec)		

Table 39-99 BootConfigOKScriptNotAccesible

Alarm	Attributes	Applicable major release
Name: BootConfigOKScriptNotAccesible (544) Type: configurationAlarm Package: netw.BootConfigOKScriptNotAccesible Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: bootConfigOKScriptNotAccesible	Release: • N/A
Description: The alarm is raised when a CLI script that runs after NE configuration file execution success is inaccessible.		
Remedial action: Ensure that the CLI script (boot-good-exec) file that runs after an NE configuration file execution success is accessible. The script location is configurable through CLI on the NE (configure system boot-good-exec)		

Table 39-100 BootEnvironmentSyncFailed

Alarm	Attributes	Applicable major release
Name: BootEnvironmentSyncFailed (101) Type: equipmentAlarm Package: sw.BootEnvironmentSyncFailed Raised on class: sw.SoftwareUpgradeManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bootEnvironmentSyncFailed	Release: • N/A
Description: The alarm is raised when the synchronization of one or more system initialization files between the active and standby CPM cards fails, or when one or both of the CSM compact flash devices do not have enough space when the 'admin redundancy synchronize boot-env' command is executed, or when the node is rebooted.		

Table 39-100 BootEnvironmentSyncFailed (continued)

Alarm	Attributes	Applicable major release
Remedial action: The operator should make sure that the Boot Environment files on the CSM cards are in Sync with each other or there is enough space available on the compact flash.		

Table 39-101 BootLoaderFirmwareMismatchAlarm

Alarm	Attributes	Applicable major release
Name: BootLoaderFirmwareMismatchAlarm (617) Type: firmwareAlarm Package: equipment. BootLoaderFirmwareMismatchAlarm Raised on class: equipment.ControlProcessor	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: bootLoaderVersionMismatch	Release: • N/A
Description: The alarm is raised when there is a mismatch between the firmware version and the software image on an NE. The alarm information includes the discovered and expected version identifiers.		
Remedial action: Either the firmware or the device SW must be upgraded to compatible versions. The image (firmware or device SW) which is the oldest should be upgraded. Firmware must be upgraded using the NE's CLI. 5620 SAM can be used to upgrade the SW image on the device.		

Table 39-102 BootLoaderUpdateFailed

Alarm	Attributes	Applicable major release
Name: BootLoaderUpdateFailed (9017) Type: equipmentAlarm Package: sw.BootLoaderUpdateFailed Raised on class: sw.SoftwareUpgradeManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bootLoaderUpdateFailed	Release: • N/A
Description: The alarm is raised when boot-loader update fails.		
Remedial action: The alarm is raised when boot-loader update fails. Investigate the cause of the failure and reattempt the update. If the problem persists contact your Nokia support representative for assistance.		

Table 39-103 BrokenLoop

Alarm	Attributes	Applicable major release
Name: BrokenLoop (469) Type: configurationAlarm Package: equipment.BrokenLoop Raised on class: equipment.StackConfiguration	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: stackNotInLoop	Release: • N/A
Description: The alarm is raised when the loop-detection stack detects a loop condition, or when the stack contains an unexpected element.		
Remedial action: Login to switch console, check and correct configuration and reload stack.		

Table 39-104 BTSSoftwareResynchronization

Alarm	Attributes	Applicable major release
Name: BTSSoftwareResynchronization (11806) Type: configurationAlarm Package: sw.BTSSoftwareResynchronization Raised on class: sw.SoftwareUpgradeManager	Severity: major Specific problem: BTS Software Upgrade Failure. Implicitly cleared: true Default probable cause: FILE_ERROR	Release: • N/A
Description: The alarm is raised when an automatic NE software resynchronization initiated by the BTS failed. The detail of the error is set in the additional information of the alarm and in the resynchronization detail error of the BTS software upgrade status.		
Remedial action: Investigation is required to resolve the following possible scenarios: the BTS or OMS is unreachable (including underlying transport network issue); loss of connectivity to the BTS or OMS during transfer; CORBA and HTTP security credential issues.		

Table 39-105 BTSSoftwareUpgrade

Alarm	Attributes	Applicable major release
Name: BTSSoftwareUpgrade (11807) Type: configurationAlarm Package: sw.BTSSoftwareUpgrade Raised on class: sw.SoftwareUpgradeManager	Severity: major Specific problem: BTS Software Upgrade Failure. Implicitly cleared: true Default probable cause: FILE_ERROR	Release: • N/A
Description: The alarm is raised when an automatic NE software upgrade initiated by the BTS failed. The detail of the error is set in the additional information of the alarm and in the upgrade detail error of the BTS software upgrade status.		
Remedial action: Investigation is required to resolve the following possible scenarios: the BTS or LTE OMS is unreachable (including underlying transport network issue); loss of connectivity to the BTS or LTE OMS during transfer; CORBA and HTTP security credential issues; BTS software load is missing in SAM.		

Table 39-106 BWUtilizationExceeded

Alarm	Attributes	Applicable major release
Name: BWUtilizationExceeded (811) Type: thresholdCrossed Package: netw.BWUtilizationExceeded Raised on class: netw.AbstractPhysicalLink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • N/A
Description: The alarm is raised when the per-CoS or overall bandwidth utilization exceeds the configured threshold.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand how this Physical Link became overbooked		

Table 39-107 CacheSyncCommunicationFailure

Alarm	Attributes	Applicable major release
Name: CacheSyncCommunicationFailure (4390) Type: communicationsAlarm Package: server.CacheSyncCommunicationFailure Raised on class: server.SamServer	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: connectionEstablishmentError	Release: • N/A
Description: The alarm is raised when the 5620 SAM standby server cannot establish a warm redundancy connection with the 5620 SAM primary server.		
Remedial action: Please ensure the primary and standby servers are up and verify the cache-sync connection settings in nms-server.xml.		

Table 39-108 CAProfileStateChange

Alarm	Attributes	Applicable major release
Name: CAProfileStateChange (3910) Type: configurationAlarm Package: sitesec.CAProfileStateChange Raised on class: sitesec.CertificateAuthProfile	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: caProfileStateDown	Release: • N/A
Description: The alarm is raised when Certificate Authority profile changes state to 'down' due to tmnxSecNotifFailureReason.		
Remedial action: The Certificate Authority profile changes state to 'down'. Depending on the reason specified, corrective action should be taken		

Table 39-109 CAProfileUpDueToRevokeChkCrlOpt

Alarm	Attributes	Applicable major release
Name: CAProfileUpDueToRevokeChkCrlOpt (8417) Type: configurationAlarm Package: sitesec.CAProfileUpDueToRevokeChkCrlOpt Raised on class: sitesec.CertificateAuthProfile	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: CAProfileUpDueToRevokeChkCrlOpt	Release: • N/A
Description: This alarm is raised when Certificate Authority profile state changes to 'up' even when there are other alarms, due to revocationCheck is set to 'crlOptional'.		
Remedial action: Certificate Authority profile will remain up but the other alarms on the Certificate Authority profile should still be corrected.		

Table 39-110 CardCPUAboveThreshold

Alarm	Attributes	Applicable major release
Name: CardCPUAboveThreshold (618) Type: configurationAlarm Package: equipment.CardCPUAboveThreshold Raised on class: equipment.CardSlot	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: CardCPUUtilizationCrossed-AboveThreshold	Release: • N/A
Description: The alarm is raised when the card CPU usage exceeds the threshold value.		
Remedial action: Informational - The CPU of the card indicated in the alarm is overloaded. If the condition persists then processing load should be transferred from this card to other cards which are more lightly loaded. If the problem persists then please contact your Nokia support representative for assistance.		

Table 39-111 CardMemoryAboveThreshold

Alarm	Attributes	Applicable major release
Name: CardMemoryAboveThreshold (619) Type: configurationAlarm Package: equipment.CardMemoryAboveThreshold Raised on class: equipment.CardSlot	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: CardMemoryUtilization-CrossedAboveThreshold	Release: • N/A
Description: The alarm is raised when the card memory usage exceeds the threshold value.		
Remedial action: Informational - The memory of the card indicated in the alarm is over utilized. If the condition persists then processing load should be transferred from this card to other cards which are more lightly loaded in order to reduce memory consumption. If the problem persists then please contact your Nokia support representative for assistance.		

Table 39-112 CardRxAboveThreshold

Alarm	Attributes	Applicable major release
Name: CardRxAboveThreshold (620) Type: configurationAlarm Package: equipment.CardRxAboveThreshold Raised on class: equipment.CardSlot	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: CardRxUtilizationCrossed-AboveThreshold	Release: • N/A
Description: The alarm is raised when the card Rx exceeds the threshold value.		
Remedial action: The utilization of the card is higher than normal. If the problem persists please contact your Nokia support representative for assistance.		

Table 39-113 CardRxTxAboveThreshold

Alarm	Attributes	Applicable major release
Name: CardRxTxAboveThreshold (621) Type: configurationAlarm Package: equipment.CardRxTxAboveThreshold Raised on class: equipment.CardSlot	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: CardRxTxUtilizationCrossed-AboveThreshold	Release: • N/A
Description: The alarm is raised when the card Tx exceeds the threshold value.		
Remedial action: The utilization of the card is higher than normal. If the problem persists please contact your Nokia support representative for assistance.		

Table 39-114 CardUnseated

Alarm	Attributes	Applicable major release
Name: CardUnseated (1161) Type: equipmentAlarm Package: equipment.CardUnseated Raised on class: equipment.CardSlot	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: CardUnseated	Release: • N/A
Description: The alarm is raised when a card is removed.		
Remedial action: Informational - no corrective action required.		

Table 39-115 CeAddressIncompatible

Alarm	Attributes	Applicable major release
Name: CeAddressIncompatible (251) Type: configurationAlarm Package: ipipe.CeAddressIncompatible Raised on class: ipipe.Ipipe	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ceAddressIncompatible	Release: • N/A
Description: The alarm is raised when two SAPs in an Ipipe have the same CE IP address, or when the CE IP address is not the same as the CE IP address of the peer SDP binding.		
Raising condition: ('ceAddressIncompatible' EQUAL 'true')		
Clearing condition: ('ceAddressIncompatible' EQUAL 'false')		
Remedial action: Modify the CE Address so that it's not same address as other SAPs and it matches the address of the peer SDP binding.		

Table 39-116 CertAfterExpWarning

Alarm	Attributes	Applicable major release
Name: CertAfterExpWarning (9601) Type: communicationsAlarm Package: sitesec.CertAfterExpWarning Raised on class: sitesec.CertificateAuthProfile	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: certAfterExpWarning	Release: • N/A
Description: The alarm is raised when the certificate file indicated in Certificate Authority profile is expired.		
Remedial action: Replace the indicated file with an updated certificate.		

Table 39-117 CertBeforeExpWarning

Alarm	Attributes	Applicable major release
Name: CertBeforeExpWarning (9602) Type: communicationsAlarm Package: sitesec.CertBeforeExpWarning Raised on class: sitesec.CertificateAuthProfile	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: certBeforeExpWarning	Release: • N/A
Description: The alarm is raised when the certificate file indicated in Certificate Authority profile will expire in the time period as indicated.		
Remedial action: Replace the indicated file with an updated certificate.		

Table 39-118 certifyFailureAlarm

Alarm	Attributes	Applicable major release
Name: certifyFailureAlarm (533) Type: softwareAlarm Package: sw.certifyFailureAlarm Raised on class: sw.SoftwareControlModule	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: certifyFailureAlarm	Release: • N/A
Description: The alarm is raised when the software certification process on an NE fails.		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 39-119 CheckpointLimitAt75Percent

Alarm	Attributes	Applicable major release
Name: CheckpointLimitAt75Percent (425) Type: configurationAlarm Package: topology.CheckpointLimitAt75Percent Raised on class: topology.TopologyManager	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tooManyCheckpoints	Release: • N/A
Description: The alarm is raised when the number of check points reaches 75 percent of the maximum allowed value.		

Table 39-119 CheckpointLimitAt75Percent (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational - deprecated 9.0		

Table 39-120 CheckpointLimitReachedOrExceeded

Alarm	Attributes	Applicable major release
Name: CheckpointLimitReachedOrExceeded (426) Type: configurationAlarm Package: topology. CheckpointLimitReachedOrExceeded Raised on class: topology.TopologyManager	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tooManyCheckpointObjects	Release: • N/A
Description: The alarm is raised when the number of check points objects reaches or exceeds the maximum allowed value.		
Remedial action: Maximum number of Checkpoint objects reached, the IGP history cleanup task begins and removes older objects. To keep history increase maximumNumberOfCheckpointObjects in nms-server,xml.		

Table 39-121 ChildTemplateInvalid

Alarm	Attributes	Applicable major release
Name: ChildTemplateInvalid (193) Type: configurationAlarm Package: template.ChildTemplateInvalid Raised on class: template.TemplateBinding	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: referencedObjectInvalid	Release: • N/A
Description: The alarm is raised when a child template in a template binding is invalid. The alarm is deprecated in the 5620 SAM, Release 6.0 and later.		
Raising condition: ('childTemplateInvalidReference' EQUAL 'true')		
Clearing condition: ('childTemplateInvalidReference' EQUAL 'false')		
Remedial action: Informational - deprecated 6.0		

Table 39-122 ChipIfCellEvent

Alarm	Attributes	Applicable major release
Name: ChipIfCellEvent (4991) Type: hardwareAnomaly Package: equipment.ChipIfCellEvent Raised on class: equipment.Card	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ifCellError	Release: • N/A
Description: The alarm is raised when an inter-chip interface (XPL2 bundle) experiences internal datapath cell errors on IOM or CPM.		
Remedial action: A fault has been detected in the hardware if the problem persists please contact your Nokia support representative for assistance.		

Table 39-123 ChipIfDownEvent

Alarm	Attributes	Applicable major release
Name: ChipIfDownEvent (4992) Type: hardwareAnomaly Package: equipment.ChipIfDownEvent Raised on class: equipment.Card	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ifDownError	Release: • N/A
Description: The alarm is raised when an inter-chip interface (XPL2 bundle) experiences an internal datapath problem on IOM or CPM.		
Remedial action: A fault has been detected in the hardware if the problem persists please contact your Nokia support representative for assistance.		

Table 39-124 ChipResetProtImpact

Alarm	Attributes	Applicable major release
Name: ChipResetProtImpact (5642) Type: hardwareAnomaly Package: equipment.ChipResetProtImpact Raised on class: equipment.Card	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ChipResetProtocolTimeout	Release: • N/A
Description: The alarm is raised when a slot experienced a data path failure which impacted a protocol.		
Remedial action: Informational.The alarm is raised when a slot experienced a data path failure due to Qchip reset on IOM/CPM which caused a timeout on short BFD or ETH-OAM protocol timers. Services-related data associated with the impacted protocol may be lost.		

Table 39-125 CliCommandFailure

Alarm	Attributes	Applicable major release
Name: CliCommandFailure (402) Type: communicationsAlarm Package: netw.CliCommandFailure Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: cliCommandFailure	Release: • N/A
Description: The alarm is raised when a CLI command on an NE fails.		
Remedial action: Verify that the mediation profile matches the device CLI login credentials. If the problem persists please contact your Nokia support representative for assistance.		

Table 39-126 CliConnectionProblem

Alarm	Attributes	Applicable major release
Name: CliConnectionProblem (299) Type: communicationsAlarm Package: netw.CliConnectionProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: cliConnectionProblem	Release: • N/A

Table 39-126 CliConnectionProblem (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the 5620 SAM fails to open a CLI session on an NE because the number of open CLI sessions on the NE is at the maximum.		
Remedial action: Verify that connectivity can be established to the network element. For GNE devices, verify that the GNE profile matches the device operation.		

Table 39-127 ClientDelegateServerMaxUIExceeded

Alarm	Attributes	Applicable major release
Name: ClientDelegateServerMaxUIExceeded (730) Type: resourceAlarm Package: server.ClientDelegateServerMaxUIExceeded Raised on class: server.ClientDelegateServer	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: clientDelegateServerMax-UIExceeded	Release: • N/A
Description: The alarm is raised when the total number of client GUI sessions on a client delegate server reaches or exceeds the configured maximum value.		
Remedial action: Informational - The number of available GUI client sessions has been exceeded. Please reduce the number of GUI client sessions.		

Table 39-128 CliLoginFailed

Alarm	Attributes	Applicable major release
Name: CliLoginFailed (298) Type: communicationsAlarm Package: netw.CliLoginFailed Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: cliLoginFailed	Release: • N/A
Description: The alarm is raised when a CLI login attempt fails because of an incorrect user name or password.		
Remedial action: Verify that the mediation profile matches the device login credentials.		

Table 39-129 CliLoginMaxAttempts

Alarm	Attributes	Applicable major release
Name: CliLoginMaxAttempts (3701) Type: communicationsAlarm Package: netw.CliLoginMaxAttempts Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: cliLoginMaxAttempts	Release: • N/A
Description: The alarm is raised when the number of CLI login failures due to an incorrect user name or password using TELNET session exceeds the configured value.		
Remedial action: The wrong password was entered by the user during telnet. Please try to log in again later.		

Table 39-130 CModeRxQueryMismatch

Alarm	Attributes	Applicable major release
Name: CModeRxQueryMismatch (160) Type: configurationAlarm Package: igmp.CModeRxQueryMismatch Raised on class: igmp.Interface	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: InvalidCompatibilityMode-ofQueryReceieved	Release: • N/A
Description: The alarm is raised when an IGMP interface receives an IGMP query of a higher version than the version configured on the interface, for example, when the interface is configured for IGMPv1 and it receives an IGMPv2 or IGMPv3 query. The interface does not process the received IGMP message.		
Remedial action: Informational - no corrective action required.		

Table 39-131 ColorMismatchAlarm

Alarm	Attributes	Applicable major release
Name: ColorMismatchAlarm (8420) Type: integrityViolation Package: gmpls.ColorMismatchAlarm Raised on class: gmpls.TeLink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: colorMismatch	Release: • N/A
Description: The alarm is raised when the colors configured on the endpoints of the TE Link do not match.		
Remedial action: This alarm indicates that the colors configured on the endpoints of the discovered TE Link do not match. Please make sure the colors match.		

Table 39-132 CombinerLossOfAlignment (mwa)

Alarm	Attributes	Applicable major release
Name: CombinerLossOfAlignment (5604) Type: equipmentAlarm Package: mwa.CombinerLossOfAlignment Raised on class: mwa.PortTermination	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: CombinerLossOfAlignment	Release: • N/A
Description: The alarm is raised when a MPT detects a combiner loss of alignment.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-133 CommunityMisconfiguration

Alarm	Attributes	Applicable major release
Name: CommunityMisconfiguration (442) Type: serviceAlarm Package: vprn.CommunityMisconfiguration Raised on class: vprn.AbstractSite	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: CommunityMisconfiguration	Release: • N/A

Table 39-133 CommunityMisconfiguration (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the 5620 SAM detects a community misconfiguration on a service site.		
Remedial action: Configure the SNMP community String on the VPRN service site		

Table 39-134 ConfigFileSyncFailed

Alarm	Attributes	Applicable major release
Name: ConfigFileSyncFailed (102) Type: equipmentAlarm Package: sw.ConfigFileSyncFailed Raised on class: sw.SoftwareUpgradeManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configFileSyncFailed	Release: • N/A
Description: The alarm is raised when the configuration file synchronization between the active and standby CPM cards fails.		
Remedial action: Please log into the NE in question via CLI and execute a manual synchronization. If the problem persists please contact your Nokia support representative for assistance.		

Table 39-135 ConfigNotCompatible

Alarm	Attributes	Applicable major release
Name: ConfigNotCompatible (405) Type: equipmentAlarm Package: equipment.ConfigNotCompatible Raised on class: equipment.PhysicalPort	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DaughterCardConfigNotCompatible	Release: • N/A
Description: The alarm is raised when an MDA configuration is incompatible with the MDA.		
Remedial action: A configuration error has occurred which must be corrected. The MDA type configured for the slot identified in the alarm must match the installed MDA type.		

Table 39-136 ContainingEquipmentMissing

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentMissing (463) Type: equipmentAlarm Package: equipment.ContainingEquipmentMissing Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentMissing	Release: • N/A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMissing.		
Clearing condition: (('Status' NOT EQUAL 'Parent Removed') OR ('isTerminatable' NOT EQUAL 'true') OR ('Equipped' EQUAL 'false'))		
Remedial action: Informational - an card has been removed from the system.		

Table 39-137 CorporateAndSecuredCompositeServicesAreNotConnected

Alarm	Attributes	Applicable major release
Name: CorporateAndSecuredComposite-ServicesAreNotConnected (828) Type: serviceAlarm Package: ipsec.CorporateAndSecuredComposite-ServicesAreNotConnected Raised on class: ipsec.IPSecSecuredVpn	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: CompositeServiceMisconfiguration	Release: • N/A
Description: The alarm is raised when the corporate and secured services used by an IPsec VPN do not have a connector between them.		
Raising condition: ('corporateToSecureServiceConnector' EQUAL 'Not Connected')		
Clearing condition: (('corporateToSecureServiceConnector' EQUAL 'Connected') OR ('corporateToSecureServiceConnector' EQUAL 'None'))		
Remedial action: Create a connector to connect the Corporate service and Secured service.		

Table 39-138 CorporateAndSecuredCompositeServicesMistmatch

Alarm	Attributes	Applicable major release
Name: CorporateAndSecuredComposite-ServicesMistmatch (829) Type: serviceAlarm Package: ipsec.CorporateAndSecuredCompositeServicesMistmatch Raised on class: ipsec.IPSecSecuredVpn	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: CompositeServiceMisconfiguration	Release: • N/A
Description: The alarm is raised when the corporate and secured services used by an IPsec VPN are in different composite services.		
Remedial action: Informational - no corrective action required.		

Table 39-139 CorruptedBgpUpdate

Alarm	Attributes	Applicable major release
Name: CorruptedBgpUpdate (3328) Type: topologyAlarm Package: topology.CorruptedBgpUpdate Raised on class: topology.BgpAutonomousSystem	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: CorruptedBgpUpdateDetected	Release: • N/A
Description: The alarm is raised when a BGP-bad-update-packet-received message is sent from the CPAA against a BGP AS. The alarm is not auto-cleared by CPAM.		
Remedial action: A peer is sending a corrupted BGP update. The information regarding the update can be viewed in the BGP corrupted update record. Action should be taken to fix the offending BGP speaker.		

Table 39-140 CorruptedUdpPacket

Alarm	Attributes	Applicable major release
Name: CorruptedUdpPacket (1921) Type: communicationsAlarm Package: netw.CorruptedUdpPacket Raised on class: netw.NetworkElement	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: corruptedPacket	Release: • N/A
Description: The alarm is raised when an UDP packet for an application is corrupted.		
Remedial action: A call trace packet contains unexpected content. If the problem persists, the source device might be generating unexpected content.		

Table 39-141 CostMetricMismatchAlarm

Alarm	Attributes	Applicable major release
Name: CostMetricMismatchAlarm (8421) Type: integrityViolation Package: gmpls.CostMetricMismatchAlarm Raised on class: gmpls.TeLink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: costMetricMismatch	Release: • N/A
Description: The alarm is raised when the cost metric configured on the endpoints of the TE Link do not match.		
Remedial action: This alarm indicates that the cost metric configured on the endpoints of the discovered TE Link do not match. Please make sure the cost metrics match.		

Table 39-142 CouplingEthernetLinkDown

Alarm	Attributes	Applicable major release
Name: CouplingEthernetLinkDown (4819) Type: communicationsAlarm Package: mwa.CouplingEthernetLinkDown Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LossOfSignal	Release: • N/A
Description: The alarm is raised when a MPT detects a coupling Ethernet Link Down		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-143 CouplingLossOfRadioFrame

Alarm	Attributes	Applicable major release
Name: CouplingLossOfRadioFrame (4820) Type: communicationsAlarm Package: mwa.CouplingLossOfRadioFrame Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LossOfFrame	Release: • N/A
Description: The alarm is raised when a MPT detects a Loss of Radio Frame from Coupling Path		

Table 39-143 CouplingLossOfRadioFrame (continued)

Alarm	Attributes	Applicable major release
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-144 CouplingPortSFPCardFailure

Alarm	Attributes	Applicable major release
Name: CouplingPortSFPCardFailure (4821) Type: equipmentAlarm Package: mwa.CouplingPortSFPCardFailure Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReplaceableUnitProblem	Release: • N/A
Description: This alarm is raised when coupling port SFP Card failure is detected.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-145 CouplingPortSFPMissing

Alarm	Attributes	Applicable major release
Name: CouplingPortSFPMissing (4822) Type: equipmentAlarm Package: mwa.CouplingPortSFPMissing Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReplaceableUnitMissing	Release: • N/A
Description: This alarm is raised when coupling port SFP is missing.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-146 CpaaAreaUnreachableThroughISIS

Alarm	Attributes	Applicable major release
Name: CpaaAreaUnreachableThroughISIS (5418) Type: topologyAlarm Package: topology.CpaaAreaUnreachableThroughISIS Raised on class: topology.Cpaa	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: CPAALinksToAreaDown	Release: • N/A
Description: The alarm is raised when all links from CPAA to an area are down.		
Remedial action: 1) The active CPAA cannot reach certain CPAA instance through the ISIS protocol. Please check the links to the unreachable CPAA instance.\n2) If the standby CPAA is functional as per your requirements, switch-over might resolve the issue.		

Table 39-147 CpaaAreaUnreachableThroughOSPF

Alarm	Attributes	Applicable major release
Name: CpaaAreaUnreachableThroughOSPF (5419) Type: topologyAlarm Package: topology. CpaaAreaUnreachableThroughOSPF Raised on class: topology.Cpaa	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: CPAALinksToAreaDown	Release: • N/A
Description: The alarm is raised when all links from CPAA to OSPF area are down.		
Remedial action: 1) The active CPAA cannot reach certain area through the OSPF protocol. Please check the links to the unreachable area.\n2) If the standby CPAA is functional as per your requirements, switch-over might resolve the issue.		

Table 39-148 CpaaAreaUnreachableThroughOSPFv3

Alarm	Attributes	Applicable major release
Name: CpaaAreaUnreachableThroughOSPFv3 (5420) Type: topologyAlarm Package: topology. CpaaAreaUnreachableThroughOSPFv3 Raised on class: topology.Cpaa	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: CPAALinksToAreaDown	Release: • N/A
Description: The alarm is raised when all links from CPAA to OSPFv3 area are down.		
Remedial action: 1) The active CPAA cannot reach certain area through the OSPFv3 protocol. Please check the links to the unreachable area.\n2) If the standby CPAA is functional as per your requirements, switch-over might resolve the issue.		

Table 39-149 CpamTimedLicenseExpiryNotice

Alarm	Attributes	Applicable major release
Name: CpamTimedLicenseExpiryNotice (692) Type: cpamLicensingAlarm Package: security.CpamTimedLicenseExpiryNotice Raised on class: security.CpamLicense	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: timedcpamLicenseExpiryNotice	Release: • N/A
Description: The alarm is raised when the 5650 CPAM license timer expires. The alarm information includes the license expiry date.		
Remedial action: Informational - the CPAM license key is about to expire. Please contact your Nokia sales representative to request either an extension for the license or a permanent license key.		

Table 39-150 CpeUnreachable

Alarm	Attributes	Applicable major release
Name: CpeUnreachable (525) Type: communicationsAlarm Package: rtr.CpeUnreachable Raised on class: rtr.StaticRoute	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: CpeUnreachable	Release: • N/A
Description: The alarm is raised when the CPE associated with a static route is unreachable.		
Remedial action: Please check that the static route is correct or exists for the CPE.		

Table 39-151 CPMPChipMemoryEvent

Alarm	Attributes	Applicable major release
Name: CPMPChipMemoryEvent (4989) Type: hardwareAnomaly Package: equipment.CPMPChipMemoryEvent Raised on class: equipment.ProcessorCard	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: memoryParityError	Release: • N/A
Description: The alarm is raised when a PChip detects a memory error. The alarm is raised against a 7450 ESS, 7710 SR, 7950 SR, or 7750 SR. The alarm is raised against a Release 11.0 NE at R4 or later.		
Remedial action: A fault has been detected in the hardware if the problem persists please contact your Nokia support representative for assistance.		

Table 39-152 CreditControlInsertedFltrEntryDropped

Alarm	Attributes	Applicable major release
Name: CreditControlInsertedFltrEntryDropped (1150) Type: configurationAlarm Package: aclfilter. CreditControlInsertedFltrEntryDropped Raised on class: aclfilter.FilterDefinition	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: FilterEntryDropped	Release: • N/A
Description: The alarm is raised when a request to insert a filter entry is not successful for a credit control application.		
Remedial action: A Configuration error has occurred. The request to insert a filter entry was not successful for Credit Control application. Check the configuration filter entry.		

Table 39-153 CreditControlInsertSpaceThresholdAlarm

Alarm	Attributes	Applicable major release
Name: CreditControlInsertSpaceThresholdAlarm (1149) Type: configurationAlarm Package: aclfilter. CreditControlInsertSpaceThresholdAlarm Raised on class: aclfilter.FilterDefinition	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: UtilizationExceedConfigured-Limit	Release: • N/A
Description: The alarm is raised when the utilization of a filter entry range that is reserved for filter entry insertion increases to the configured maximum value for a credit control application insert range.		
Remedial action: The filter entry range reserved for filter entry insertion has increased to the configured high watermark for Credit Control application. Make an adjusted to the high watermark or to the filter.		

Table 39-154 CRLAfterExpWarning

Alarm	Attributes	Applicable major release
Name: CRLAfterExpWarning (9597) Type: communicationsAlarm Package: sitesec.CRLAfterExpWarning Raised on class: sitesec.CertificateAuthProfile	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: CRLAfterExpWarning	Release: • N/A
Description: The alarm is raised when the CRL file indicated in Certificate Authority profile is expired.		
Remedial action: Replace the indicated file with an updated CRL.		

Table 39-155 CRLBeforeExpWarning

Alarm	Attributes	Applicable major release
Name: CRLBeforeExpWarning (9598) Type: communicationsAlarm Package: sitesec.CRLBeforeExpWarning Raised on class: sitesec.CertificateAuthProfile	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: CRLBeforeExpWarning	Release: • N/A
Description: The alarm is raised when the CRL file indicated in Certificate Authority profile will expire in the time period as indicated.		
Remedial action: Replace the indicated file with an updated CRL.		

Table 39-156 CRLUpdateFailureonAllURL

Alarm	Attributes	Applicable major release
Name: CRLUpdateFailureonAllURL (9599) Type: communicationsAlarm Package: sitesec.CRLUpdateFailureonAllURL Raised on class: sitesec.CrlUrlEntry	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: crlUpdateFailureonAllURL	Release: • N/A

Table 39-156 CRLUpdateFailureonAllURL (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the CRL update operation failed after attempting all URLs for an existing CA Profile.		
Remedial action: Make sure the URLs specified in CrlUrlEntry is correct.		

Table 39-157 CRLUpdateFailureonURL

Alarm	Attributes	Applicable major release
Name: CRLUpdateFailureonURL (9600) Type: communicationsAlarm Package: sitesec.CRLUpdateFailureonURL Raised on class: sitesec.CrlUrlEntry	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: crlUpdateFailureonURL	Release: • N/A
Description: The alarm is raised when the CRL update operation has failed after attempting the indicated URL for an existing CA Profile.		
Remedial action: Make sure the URLs specified in CrlUrlEntry is correct.		

Table 39-158 CurrentDataMergeTableCountThresholdExceeded

Alarm	Attributes	Applicable major release
Name: CurrentDataMergeTableCount-ThresholdExceeded (9616) Type: databaseAlarm Package: db.CurrentDataMergeTableCountThresholdExceeded Raised on class: db.AuxiliaryDatabaseCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DatabaseErrors	Release: • N/A
Description: This alarm indicated that the auxiliary database is unable to keep up with the update rate for current data during stats collection. The number of pending merges is above the threshold. It is a sign that stats collection is falling behind. Your auxiliary database cluster capacity might not be capable of handling the stats collection load.		
Remedial action: Try increasing the threshold for merge tables. If this does not work. Please revisit the capacity of the auxiliary database cluster.		

Table 39-159 CurrentDataMergeTableCountTooHigh

Alarm	Attributes	Applicable major release
Name: CurrentDataMergeTableCountTooHigh (9617) Type: databaseAlarm Package: db.CurrentDataMergeTableCountTooHigh Raised on class: db.AuxiliaryDatabaseCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DatabaseErrors	Release: • N/A

Table 39-159 CurrentDataMergeTableCountTooHigh (continued)

Alarm	Attributes	Applicable major release
Description: This alarm indicated that the auxiliary database is unable to keep up with the update rate for current data during stats collection. The number of pending merges is above expected with respect to the number of routers/stats types being collected. It is a sign that stats collection is falling behind. Your auxiliary database cluster capacity might not be capable of handling the stats collection load.		
Remedial action: Decrease the number of performance stats being collected or decrease the number of routers subject to mib statistics collection or increase the capacity of the auxiliary database cluster.		

Table 39-160 CurrentDataMergeTableTooOld

Alarm	Attributes	Applicable major release
Name: CurrentDataMergeTableTooOld (9618) Type: databaseAlarm Package: db.CurrentDataMergeTableTooOld Raised on class: db.AuxiliaryDatabaseCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DatabaseErrors	Release: • N/A
Description: This alarm indicated that the auxiliary database is unable to keep up with the update rate for current data during stats collection. Some merge tables stayed in the system longer than the allowed time threshold. It is a sign that stats collection is falling behind. Your auxiliary database cluster capacity might not be capable of handling the stats collection load.		
Remedial action: Revisit the capacity of the auxiliary database cluster with respect to the amount of performance stats collected.		

Table 39-161 DatabaseArchivedLogNotApplied

Alarm	Attributes	Applicable major release
Name: DatabaseArchivedLogNotApplied (205) Type: configurationAlarm Package: db.DatabaseArchivedLogNotApplied Raised on class: db.DatabaseManager	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: databaseArchivedLogNotApplied	Release: • N/A
Description: The alarm is raised when, during a database backup, the 5620 SAM determines that the archive logs are not being applied to the standby database, as indicated by the archive log gap. The archive log gap threshold is defined in the nms-server.xml file. The alarm is raised only in a redundant 5620 SAM system.		
Remedial action: Possible causes include loss of network connectivity between the primary and standby database platforms or network latency. If problem does not appear to be network connectivity/latency related then please contact your Nokia support representative for assistance.		

Table 39-162 DatabaseBackupFailed

Alarm	Attributes	Applicable major release
Name: DatabaseBackupFailed (136) Type: configurationAlarm Package: db.DatabaseBackupFailed Raised on class: db.DatabaseManager	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: databaseBackupFailure	Release: • N/A
Description: The alarm is raised when the database backup files cannot be created because of, for example, a lack of disk space or insufficient file permissions.		
Remedial action: Check the additional text of the alarm for guidance as to the specifics of the problem. Possible causes are lack of disk space or insufficient file permissions or the backup cannot finish on time. If the backup cannot finish on time, re-attempt the database backup.		

Table 39-163 DatabaseBackupInvalidConfig

Alarm	Attributes	Applicable major release
Name: DatabaseBackupInvalidConfig (1117) Type: configurationAlarm Package: db.DatabaseBackupInvalidConfig Raised on class: db.DatabaseManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: InvalidbBackupConfigration	Release: • N/A
Description: The alarm is raised when the directory location specified for database scheduled backups is empty.		
Remedial action: A configuration error has been made which must be corrected. The backup destination must be configured in the database backup policy.		

Table 39-164 DatabaseBackupRsyncFailed

Alarm	Attributes	Applicable major release
Name: DatabaseBackupRsyncFailed (749) Type: databaseAlarm Package: db.DatabaseBackupRsyncFailed Raised on class: db.DatabaseManager	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: databaseBackupFileRsync-Failed	Release: • N/A
Description: The alarm is raised when one or more database backup files cannot be copied to the standby database station.		
Remedial action: The additional text field of the alarm will provide more details as will the EmsServer.log. Possible causes include a HW failure on the platform hosting the standby database function, loss of network connectivity between the primary and standby database servers.		

Table 39-165 DatabaseRedundancyArchiveGap

Alarm	Attributes	Applicable major release
Name: DatabaseRedundancyArchiveGap (611) Type: configurationAlarm Package: db.DatabaseRedundancyArchiveGap Raised on class: db.DatabaseManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: DatabaseRedundancyArchive-Gap	Release: • N/A
Description: The alarm is raised when the primary 5620 SAM main server detects an archive log gap. An archive log gap occurs when a number of archive logs cannot be applied to the standby database. The alarm may indicate that the primary database is out of archive log disk space, the standby database has been down for too long, or the standby database is not able to process the archive logs at the rate that the primary database sends them. The alarm clears after a standby database reinstantiation, which corrects the archive log gap. The alarm is raised only in a redundant 5620 SAM system.		
Remedial action: The standby database should be manually re-instantiated using the commands available in the SAM GUI. Please contact your Nokia support representative for further investigation.		

Table 39-166 DatabaseRedundancyFailure

Alarm	Attributes	Applicable major release
Name: DatabaseRedundancyFailure (246) Type: configurationAlarm Package: db.DatabaseRedundancyFailure Raised on class: db.DatabaseManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: DatabaseRedundancyFailure	Release: • N/A
Description: The alarm is raised when the 5620 SAM detects a standby database problem, for example, the database is down or not in managed recovery mode. The alarm clears when the standby database is functional. The alarm is raised only in a redundant 5620 SAM system.		
Remedial action: The additional text field of the alarm will provide more details as will the EmsServer.log. Possible causes include a HW failure on the platform hosting the standby database function, loss of network connectivity between the primary and standby database		

Table 39-167 DatabaseRedundancyOutOfSync

Alarm	Attributes	Applicable major release
Name: DatabaseRedundancyOutOfSync (302) Type: configurationAlarm Package: db.DatabaseRedundancyOutOfSync Raised on class: db.DatabaseManager	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: DatabaseRedundancyOutOf-Sync	Release: • N/A
Description: The alarm is raised when the primary 5620 SAM server polls the primary and standby databases and detects a difference in the primary and standby database archive log sequence numbers that is greater than one. The alarm may indicate that the primary database is not sending archive logs to the standby quickly enough, or that the standby database is not able to process the archive logs at the rate that the primary sends them. The alarm is raised only in a redundant 5620 SAM system.		

Table 39-167 DatabaseRedundancyOutOfSync (continued)

Alarm	Attributes	Applicable major release
Remedial action: Possible causes include loss of network connectivity between the primary and standby database platforms or network latency. Ensure that network connectivity is available and that network latency is within limits published by Nokia. If the network is functioning contact your Nokia support representative for assistance.		

Table 39-168 DatabaseRedundancyRealTimeApplyFailure

Alarm	Attributes	Applicable major release
Name: DatabaseRedundancyRealTimeApplyFailure (296) Type: configurationAlarm Package: db.DatabaseRedundancyRealTimeApplyFailure Raised on class: db.DatabaseManager	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: DatabaseRedundancyReal-TimeApplyFailure	Release: • N/A
Description: The alarm is raised when database redundancy falls out of real-time apply transfer mode, which means that the primary database transactions are not immediately replicated to the standby database. The alarm clears when the database is operating in real-time apply mode.		
Remedial action: Possible causes include loss of network connectivity between the primary and standby database platforms or network latency. This can be intermittent where the software will recover from this state. Ensure that network connectivity is available and that network latency is within limits published by Nokia. If the network is functioning contact your Nokia support representative for assistance.		

Table 39-169 DatabaseServerErrors

Alarm	Attributes	Applicable major release
Name: DatabaseServerErrors (5174) Type: databaseAlarm Package: db.DatabaseServerErrors Raised on class: db.DatabaseManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DatabaseErrors	Release: • N/A
Description: The alarm is raised when when a critical Oracle error occurs.		
Remedial action: The probable cause of this alarm is the database server detected a critical error. The EmsDbServerHealth.log and oracle trace files will provide more information.		

Table 39-170 DatabaseSqlFormatInvalid

Alarm	Attributes	Applicable major release
Name: DatabaseSqlFormatInvalid (4419) Type: databaseAlarm Package: db.DatabaseSqlFormatInvalid Raised on class: db.DatabaseManager	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: InvalidSqlFormat	Release: • N/A

Table 39-170 DatabaseSqlFormatInvalid (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when an invalid SQL is detected by the database server.		
Remedial action: The probable cause of this alarm is the database server detected invalid SQL. The EmsDbServerHealth.log will provide more information. Possible causes include SQL injection and invalid SQL statement errors.		

Table 39-171 DataBearerPropertyMismatch

Alarm	Attributes	Applicable major release
Name: DataBearerPropertyMismatch (8391) Type: operationalViolation Package: lmp.DataBearerPropertyMismatch Raised on class: lmp.DataBearer	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: remoteIdMismatch	Release: • N/A
Description: The alarm is raised when a Data Bearer property mismatch is detected on the node. This notification is only generated the first time a mismatch is detected.		
Remedial action: A network configuration issue has been detected. Ensure the Data Bearer configuration between the local node and the peer node is consistent.		

Table 39-172 DataChannelLoopback

Alarm	Attributes	Applicable major release
Name: DataChannelLoopback (3945) Type: configurationAlarm Package: tdmequipment.DataChannelLoopback Raised on class: tdmequipment.DataChannelSpecifics	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: dataChannelLoopback	Release: • N/A
Description: The alarm is raised when an NE reports that a data channel has a loopback alarm condition.		
Remedial action: Informational only.		

Table 39-173 DataFileDiskSpaceBelowThreshold

Alarm	Attributes	Applicable major release
Name: DataFileDiskSpaceBelowThreshold (196) Type: databaseAlarm Package: db.DataFileDiskSpaceBelowThreshold Raised on class: db.DatabaseManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: diskSpaceIssue	Release: • N/A
Description: The alarm is raised when the primary or standalone database data file disk space threshold specified in the nms-server.xml file is reached.		
Remedial action: Informational - it may be necessary to add additional disk capacity to the platform. Please contact your Nokia support representative for assistance.		

Table 39-174 DatafileSizeAboveThreshold

Alarm	Attributes	Applicable major release
Name: DatafileSizeAboveThreshold (750) Type: databaseAlarm Package: db.DatafileSizeAboveThreshold Raised on class: db.DatabaseManager	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: HighNumberOfRecords	Release: • N/A
Description: The alarm is raised when a tablespace data file size exceeds the used space threshold.		
Remedial action: The probable cause of this alarm is the storage of too many records in the database. If the alarm persists please contact your Nokia support representative for assistance.		

Table 39-175 DataLossAlarm (equipment)

Alarm	Attributes	Applicable major release
Name: DataLossAlarm (148) Type: storageAlarm Package: equipment.DataLossAlarm Raised on class: equipment.FlashMemory	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: dataLoss	Release: • N/A
Description: The alarm is raised when a device detects an error while writing to a compact flash unit.		
Remedial action: The frequency at which accounting statistics are being collected must be reduced. Optionally an statistics AUX server may be added to the SAM platform complex in order to offload the statistics collection task from the main SAM server.		

Table 39-176 DataLossAlarm (sw)

Alarm	Attributes	Applicable major release
Name: DataLossAlarm (148) Type: storageAlarm Package: sw.DataLossAlarm Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: dataLoss	Release: • N/A
Description: The alarm is raised when the 5620 SAM receives the tmnxLogAccountingDataLoss trap, which is sent when a statistics collection interval ends while an NE is writing data to an accounting file. The statistics collection for the interval stops immediately, and collection for the next interval begins. The accounting statistics file for the interrupted collection contains an incomplete data set as a result.		
Remedial action: The collection interval configured on the NE is too short. Please lengthen the collection interval such that the NE has sufficient time to complete data collection within one interval. If the problem persists please contact your Nokia support representative for assistance.		

Table 39-177 DataMtReused

Alarm	Attributes	Applicable major release
Name: DataMtReused (361) Type: dataMtReusedAlarm Package: pim.DataMtReused Raised on class: pim.DataMtInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DataMtReused	Release: • N/A
Description: The alarm is raised when a data MDT is reused.		
Remedial action: A configuration error has occurred that must be corrected. Please check MVPN Selective Tunnel Data MT Interface configuration so that no duplicate C (S,G) is mapped to a data MDT.		

Table 39-178 DaughterCardConfigNotCompatible

Alarm	Attributes	Applicable major release
Name: DaughterCardConfigNotCompatible (404) Type: equipmentAlarm Package: equipment. DaughterCardConfigNotCompatible Raised on class: equipment.DaughterCardSlot	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DaughterCardConfigNotCompatible	Release: • N/A
Description: The alarm is raised when a supported MDA is inserted into a compatible IOM slot, but the configuration on the MDA ports is not compatible with the MDA.		
Remedial action: A configuration error has occurred which must be corrected. The configuration of one or more ports must be changed to match the ports on the MDA.		

Table 39-179 DBFailOver

Alarm	Attributes	Applicable major release
Name: DBFailOver (201) Type: configurationAlarm Package: db.DBFailOver Raised on class: db.DatabaseManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: databasePrimaryDown	Release: • N/A
Description: The alarm is raised when a database failover occurs. A standby database reinstantiation is required. The alarm clears when the standby database is online.		
Remedial action: The standby database should be manually re-instantiated using the commands available in the SAM GUI.		

Table 39-180 DDosCardFpEventOverflow

Alarm	Attributes	Applicable major release
Name: DDosCardFpEventOverflow (4460) Type: securityServiceOrMechanismViolation Package: equipment.DDosCardFpEventOverflow Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: eventOverflow	Release: • N/A
Description: The alarm is raised when a flood of distributed CPU FP protection events occur on a particular card and some of the events are lost due to event throttling mechanism.		
Remedial action: Please reduce the number of distributed DoS FP protection policers configured.		

Table 39-181 DDosCardSapEventOverflow

Alarm	Attributes	Applicable major release
Name: DDosCardSapEventOverflow (4461) Type: securityServiceOrMechanismViolation Package: equipment.DDosCardSapEventOverflow Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: eventOverflow	Release: • N/A
Description: The alarm is raised when a flood of distributed CPU protection SAP events occur on a particular card and some of the events are lost due to event throttling mechanism.		
Remedial action: Please reduce the number of distributed DoS SAP protection policers configured.		

Table 39-182 DDosCardVrtrIfEventOverflow

Alarm	Attributes	Applicable major release
Name: DDosCardVrtrIfEventOverflow (4462) Type: securityServiceOrMechanismViolation Package: equipment.DDosCardVrtrIfEventOverflow Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: eventOverflow	Release: • N/A
Description: The alarm is raised when a flood of distributed CPU protection network-interface events occur on a particular card and some of the events are lost due to event throttling mechanism.		
Remedial action: Please reduce the number of distributed DoS Network Interface protection policers configured.		

Table 39-183 DDosFpDynamicPoolUsageHigh

Alarm	Attributes	Applicable major release
Name: DDosFpDynamicPoolUsageHigh (4463) Type: securityServiceOrMechanismViolation Package: equipment.DDosFpDynamicPoolUsageHigh Raised on class: equipment.ForwardingPlane	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceLimitReached	Release: • N/A

Table 39-183 DDosFpDynamicPoolUsageHigh (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the dynamic enforcement policer pool usage on the forwarding plane is nearly exhausted.		
Remedial action: Please adjust the dynamic enforcement policer pool usage.		

Table 39-184 DefaultInstanceInconsistency

Alarm	Attributes	Applicable major release
Name: DefaultInstanceInconsistency (211) Type: ConfigurationAlarm Package: policy.DefaultInstanceInconsistency Raised on class: policy.Manager	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: multipleDefaultInstancesEncountered	Release: • N/A
Description: The alarm is raised when an accounting policy is the default for more then one service type or more then one network type.		
Raising condition: ('defaultInstanceInconsistency' EQUAL 'true')		
Clearing condition: ('defaultInstanceInconsistency' EQUAL 'false')		
Remedial action: Informational		

Table 39-185 Degrade

Alarm	Attributes	Applicable major release
Name: Degrade (622) Type: communicationsAlarm Package: equipment.Degrade Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: degrade	Release: • N/A
Description: The alarm is raised when a degraded signal is detected.		
Remedial action: The signal being received on the indicated port is of poor quality. Check to ensure that the physical link is not damaged and that the link is properly connected/seated to the port.		

Table 39-186 DemodulatorUnlocked

Alarm	Attributes	Applicable major release
Name: DemodulatorUnlocked (4823) Type: communicationsAlarm Package: mwa.DemodulatorUnlocked Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: DemodulationFailure	Release: • N/A
Description: The alarm is raised when a MPT detects demodulation failure.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-187 DependentObjectDeleted

Alarm	Attributes	Applicable major release
Name: DependentObjectDeleted (192) Type: configurationAlarm Package: template.DependentObjectDeleted Raised on class: template.Template	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: referencedObjectGone	Release: • N/A
Description: The alarm is raised when an object referenced by a template cannot be found. The alarm is deprecated in the 5620 SAM, Release 6.0 and later.		
Raising condition: ('Invalid References (Reset on Save)' EQUAL 'true')		
Clearing condition: ('Invalid References (Reset on Save)' EQUAL 'false')		
Remedial action: Informational - deprecated 6.0		

Table 39-188 DeployerObjectsLimitExceeded

Alarm	Attributes	Applicable major release
Name: DeployerObjectsLimitExceeded (3314) Type: communicationsAlarm Package: netw.DeployerObjectsLimitExceeded Raised on class: netw.NmsSystem	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tooManyDeployerObjects	Release: • N/A
Description: The alarm is raised when the number of deployed objects or attributes exceeds the 5620 SAM system limit.		
Remedial action: Clear failed deployers to make deployers available for network operations.		

Table 39-189 DeploymentFailure

Alarm	Attributes	Applicable major release
Name: DeploymentFailure (13) Type: deploymentFailure Package: generic.DeploymentFailure Raised on class: generic.GenericObject	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: failedToModifyNetworkResource	Release: • N/A
Description: The alarm is raised when the 5620 SAM is unable to create, modify, or delete a network object because of NE unreachability or a failed SNMP set operation. The alarm information includes the deployment ID, the requesting user ID, and the deployment type.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM		

Table 39-190 DeployProfileFailed

Alarm	Attributes	Applicable major release
Name: DeployProfileFailed (610) Type: configurationAlarm Package: autoconfig.DeployProfileFailed Raised on class: autoconfig.AutoProvisioning	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DeployProfileFailed	Release: • N/A
Description: The alarm is raised when the deployment of a script to a 7705 SAR fails.		
Remedial action: Informational - Please revisit target node configuration.		

Table 39-191 DetectedPreProvisionedCantidateNodeHasConfig

Alarm	Attributes	Applicable major release
Name: DetectedPreProvisionedCanti-dateNodeHasConfig (1960) Type: communicationsAlarm Package: netw. DetectedPreProvisionedCantidateNodeHasConfig Raised on class: netw.DiscoveredNode	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: detectedPreProvisionedCanti-dateNodeHasConfig	Release: • N/A
Description: The alarm is raised when the candidate node detected for pre-provisioning already has a configuration in it. The configuration in the detected node is replaced with the configuration in the matching pre-provisioned node in SAM during the deployment stage of self-configuration.		
Remedial action: Verify that the candidate network element is intended to be pre-provisioned with the specified configuration. configuration deployment stage of self-config		

Table 39-192 DfPeerDown

Alarm	Attributes	Applicable major release
Name: DfPeerDown (3304) Type: EpcLIAlarm Package: lteli.DfPeerDown Raised on class: lteli.DFPeer	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: DfPeerDown	Release: • N/A
Description: The alarm is raised on a Delivery Function that is operationally down.		
Raising condition: (('isLocal' EQUAL 'true') AND ('Operational State' NOT EQUAL 'In Service'))		
Clearing condition: NOT ((('isLocal' EQUAL 'true') AND ('Operational State' NOT EQUAL 'In Service')))		
Remedial action: A TCP connection failure associated with a Delivery Function has occurred. The underlying transport network is unreliable. Please correct the issue within the transport network.		

Table 39-193 DHCPPFoLeaseUpdateFailedAddressConflict

Alarm	Attributes	Applicable major release
Name: DHCPPFoLeaseUpdateFailedAddressConflict (5159) Type: configurationAlarm Package: dhcp. DHCPPFoLeaseUpdateFailedAddressConflict Raised on class: dhcp.LocalDhcpPoolFailover	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DHCPPFoLeaseUpdate-FailedAddressConflict	Release: • N/A
Description: This alarm is raised when a address conflict lease update received from the failover peer cannot be processed successfully. This DHCP pool instance has already leased another address to this host.		
Remedial action: This alarm indicates that the Local DHCP Pool Failover lease update has failed. Packets received from the failover peer cannot be processed. This DHCP pool instance has already leased another address to this host. Please ensure all configurations are correct.		

Table 39-194 DHCPPFoLeaseUpdateFailedfoShutdown

Alarm	Attributes	Applicable major release
Name: DHCPPFoLeaseUpdateFailedfoShutdown (5167) Type: configurationAlarm Package: dhcp. DHCPPFoLeaseUpdateFailedfoShutdown Raised on class: dhcp.LocalDhcpPoolFailover	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DHCPPFoLeaseUpdate-FailedfoShutdown	Release: • N/A
Description: This alarm is raised when a shutdown lease update received from the failover peer cannot be processed successfully. The failover state of this DHCP Pool instance is 'shutdown'.		
Remedial action: This alarm indicates that the Local DHCP Pool Failover lease update has failed. Packets received from the failover peer cannot be processed. The failover state of this DHCP Pool instance is 'shutdown'. Please ensure all configurations are correct.		

Table 39-195 DHCPPFoLeaseUpdateFailedHostConflict

Alarm	Attributes	Applicable major release
Name: DHCPPFoLeaseUpdateFailedHostConflict (5160) Type: configurationAlarm Package: dhcp. DHCPPFoLeaseUpdateFailedHostConflict Raised on class: dhcp.LocalDhcpPoolFailover	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DHCPPFoLeaseUpdate-FailedHostConflict	Release: • N/A
Description: This alarm is raised when a host conflict lease update received from the failover peer cannot be processed successfully. This DHCP pool instance has already leased this address to another host.		
Remedial action: This alarm indicates that the Local DHCP Pool Failover lease update has failed. Packets received from the failover peer cannot be processed. This DHCP pool instance has already leased this address to another host. Please ensure all configurations are correct.		

Table 39-196 DHCPPFoLeaseUpdateFailedLeaseExpired

Alarm	Attributes	Applicable major release
Name: DHCPPFoLeaseUpdateFailedLeaseExpired (5161) Type: configurationAlarm Package: dhcp. DHCPPFoLeaseUpdateFailedLeaseExpired Raised on class: dhcp.LocalDhcpPoolFailover	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DHCPPFoLeaseUpdate-FailedLeaseExpired	Release: • N/A
Description: This alarm is raised when a lease expired lease update received from the failover peer cannot be processed successfully. The lease received from the peer has expired.		
Remedial action: This alarm indicates that the Local DHCP Pool Failover lease update has failed. Packets received from the failover peer cannot be processed. The lease received from the peer has expired. Please ensure all configurations are correct.		

Table 39-197 DHCPPFoLeaseUpdateFailedMaxLeaseReached

Alarm	Attributes	Applicable major release
Name: DHCPPFoLeaseUpdateFailedMax-LeaseReached (5162) Type: configurationAlarm Package: dhcp. DHCPPFoLeaseUpdateFailedMaxLeaseReached Raised on class: dhcp.LocalDhcpPoolFailover	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DHCPPFoLeaseUpdate-FailedMaxLeaseReached	Release: • N/A
Description: This alarm is raised when a maximum reached lease update received from the failover peer cannot be processed successfully. The maximum number of leases is already reached.		
Remedial action: This alarm indicates that the Local DHCP Pool Failover lease update has failed. Packets received from the failover peer cannot be processed. The maximum number of leases is already reached. Please ensure all configurations are correct.		

Table 39-198 DHCPPFoLeaseUpdateFailedPeerConflict

Alarm	Attributes	Applicable major release
Name: DHCPPFoLeaseUpdateFailedPeerConflict (5163) Type: configurationAlarm Package: dhcp. DHCPPFoLeaseUpdateFailedPeerConflict Raised on class: dhcp.LocalDhcpPoolFailover	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DHCPPFoLeaseUpdate-FailedPeerConflict	Release: • N/A
Description: This alarm is raised when a peer conflict lease update received from the failover peer cannot be processed successfully. The failover peer has leased an address within a subnet range of which the failover control is set to 'local' on this local DHCP pool instance.		
Remedial action: This alarm indicates that the Local DHCP Pool Failover lease update has failed. Packets received from the failover peer cannot be processed. The failover peer has leased an address within a subnet range of which the failover control is set to 'local' on this local DHCP pool instance. Please ensure all configuration is correct.		

Table 39-199 DHCPPFoLeaseUpdateFailedPersistenceCongested

Alarm	Attributes	Applicable major release
Name: DHCPPFoLeaseUpdateFailedPersistenceCongested (5164) Type: configurationAlarm Package: dhcp.DHCPPFoLeaseUpdateFailedPersistenceCongested Raised on class: dhcp.LocalDhcpPoolFailover	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DHCPPFoLeaseUpdateFailedPersistenceCongested	Release: • N/A
Description: This alarm is raised when a persistence congested lease update received from the failover peer cannot be processed successfully. The lease received from the peer can not be persistently stored because the persistence subsystem is in overload.		
Remedial action: This alarm indicates that the Local DHCP Pool Failover lease update has failed. Packets received from the failover peer cannot be processed. The lease received from the peer can not be persistently stored because the persistence subsystem is in overload. Please ensure all configuration is correct.		

Table 39-200 DHCPPFoLeaseUpdateFailedRangeNotFound

Alarm	Attributes	Applicable major release
Name: DHCPPFoLeaseUpdateFailedRangeNotFound (5165) Type: configurationAlarm Package: dhcp.DHCPPFoLeaseUpdateFailedRangeNotFound Raised on class: dhcp.LocalDhcpPoolFailover	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DHCPPFoLeaseUpdateFailedRangeNotFound	Release: • N/A
Description: This alarm is raised when a range not found lease update received from the failover peer cannot be processed successfully. No valid include range for this lease could be found.		
Remedial action: This alarm indicates that the Local DHCP Pool Failover lease update has failed. Packets received from the failover peer cannot be processed. No valid include range for this lease could be found. Please ensure all configurations are correct.		

Table 39-201 DHCPPFoLeaseUpdateFailedSubnetNotFound

Alarm	Attributes	Applicable major release
Name: DHCPPFoLeaseUpdateFailedSubnetNotFound (5166) Type: configurationAlarm Package: dhcp.DHCPPFoLeaseUpdateFailedSubnetNotFound Raised on class: dhcp.LocalDhcpPoolFailover	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DHCPPFoLeaseUpdateFailedSubnetNotFound	Release: • N/A
Description: This alarm is raised when a subnet not found lease update received from the failover peer cannot be processed successfully. No valid subnet for this lease could be found.		
Remedial action: This alarm indicates that the Local DHCP Pool Failover lease update has failed. Packets received from the failover peer cannot be processed. No valid subnet for this lease could be found. Please ensure all configurations are correct.		

Table 39-202 DhcpServerAddrAllocationFailure

Alarm	Attributes	Applicable major release
Name: DhcpServerAddrAllocationFailure (11064) Type: configurationAlarm Package: dhcp.DhcpServerAddrAllocationFailure Raised on class: dhcp.LocalDhcpServer	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DhcpsAddrAllocationFailure	Release: • N/A
Description: This alarm is raised when a DHCP server instance could not allocate an address for a client. [CAUSE] A failure occurs when a DHCP server instance could not allocate an address for a client. The reason could be that the DHCP server instance could not find a free address, or it could be a configuration issue. [EFFECT] The client does not get an IP address lease this time. The client will have to try again if it needs a lease from this system. [RECOVERY] The recovery action, if any, will depend on the reason.		
Remedial action: The recovery action, if any, will depend on the reason.		

Table 39-203 DhcpServerHostConflict

Alarm	Attributes	Applicable major release
Name: DhcpServerHostConflict (11065) Type: configurationAlarm Package: dhcp.DhcpServerHostConflict Raised on class: dhcp.LocalDhcpServer	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DhcpSvrHostConflict	Release: • N/A
Description: This alarm is raised when when a host requests an fixed IP address in the local user database and the system detects that this IP address has alread been handed out to another (dynamic) host. [RECOVERY] The recovery action, if any, will depend on the reason.		
Remedial action: The recovery action, if any, will depend on the reason.		

Table 39-204 DhcpServerIntLseConflict

Alarm	Attributes	Applicable major release
Name: DhcpServerIntLseConflict (11066) Type: configurationAlarm Package: dhcp.DhcpServerIntLseConflict Raised on class: dhcp.AbstractDhcpServer	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DhcpSvrIntLseConflict	Release: • N/A
Description: This alarm is raised when DHCP hosts trying to acquire an IP address that was handed through the local address assignment infrastructure, or the local address assignment infrastructure tries to use an IP address that was handed out to a DHCP client. [RECOVERY] The recovery action, if any, will depend on the reason.		
Remedial action: The recovery action, if any, will depend on the reason.		

Table 39-205 DhcpServerLeaseNotOwner

Alarm	Attributes	Applicable major release
Name: DhcpServerLeaseNotOwner (11067) Type: configurationAlarm Package: dhcp.DhcpServerLeaseNotOwner Raised on class: dhcp.AbstractDhcpServer	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DhcpSvrLeaseNotOwner	Release: • N/A
Description: This alarm is raised when a DHCP message is received from a DHCP client that does not own the lease indicated by the IP address from the message. [RECOVERY] The recovery action, if any, will depend on the reason.		
Remedial action: The recovery action, if any, will depend on the reason.		

Table 39-206 DhcpServerLeaseOfferedExpired

Alarm	Attributes	Applicable major release
Name: DhcpServerLeaseOfferedExpired (11068) Type: configurationAlarm Package: dhcp.DhcpServerLeaseOfferedExpired Raised on class: dhcp.AbstractDhcpServer	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DhcpsLeaseOfferedExpired	Release: • N/A
Description: This alarm is raised when an offered DHCP lease expires in the 'offered' state. [CAUSE] A failure occurs when a DHCP lease that this system had offered to a client, expires while it is still in the 'offered' state, because this system did not receive a DHCP request message from the client. [EFFECT] The client does not get a lease this time. The client will have to try again if it needs a lease from this system. [RECOVERY] The recovery action, if any, will depend on the reason of the expiry.		
Remedial action: The recovery action, if any, will depend on the reason of the expiry.		

Table 39-207 DhcpServerPoolUnknown

Alarm	Attributes	Applicable major release
Name: DhcpServerPoolUnknown (11069) Type: configurationAlarm Package: dhcp.DhcpServerPoolUnknown Raised on class: dhcp.AbstractDhcpServer	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DhcpSvrPoolUnknown	Release: • N/A
Description: This alarm is raised when when the lookup in the local user database for a host returns a poolname which is not defined within the local DHCP server. [RECOVERY] The recovery action, if any, will depend on the reason.		
Remedial action: The recovery action, if any, will depend on the reason.		

Table 39-208 DiamMessageDropped

Alarm	Attributes	Applicable major release
Name: DiamMessageDropped (9639) Type: processingErrorAlarm Package: diameter.DiamMessageDropped Raised on class: diameter.DiameterPeer	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: diamMessageDropped	Release: • N/A
Description: The alarm is raised when the Diameter protocol has dropped a message.		
Remedial action: The recovery action depends on the exact cause of the failure. See the Additional Text field in the Alarm Info form for a specific cause for the failure.		

Table 39-209 DiamSessionEventFailure

Alarm	Attributes	Applicable major release
Name: DiamSessionEventFailure (8379) Type: processingErrorAlarm Package: diameter.DiamSessionEventFailure Raised on class: diameter.DiameterAppPolicy	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: UnknownApplicationPolicy Applicable probable causes: • UnknownApplicationPolicy • UnknownPeerPolicy • NoOperationalPeers • TxError • RxError • TxTimeout • TxTimeoutPendingQ • TxRetriesExceeded • CcrtReplayLifetimeExceeded • CcrtReplayTooManySessions	Release: • N/A
Description: This alarm is raised when something unusual happens while handling a Diameter session.		
Remedial action: The recovery action depends on the exact cause of the failure. See the Additional Text field in the Alarm Information form for a specific cause for the failure.		

Table 39-210 DiskCapacityProblem

Alarm	Attributes	Applicable major release
Name: DiskCapacityProblem (144) Type: storageAlarm Package: equipment.DiskCapacityProblem Raised on class: equipment.FlashMemory	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: diskCapacityProblem	Release: • N/A

Table 39-210 DiskCapacityProblem (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when a compact flash capacity threshold value on an NE is reached or exceeded. The alarm condition is detected during resynchronization or when a tnmxEqFlashDiskFull trap is received. The threshold value is not configurable. The severity of the alarm depends on the percentage of disk capacity used, as listed below: - 75 percent, Minor - 90 percent, Major - 100 percent, Critical		
Remedial action: The usage of the compact flash device must be analysed and old or redundant files must be removed. This operation must be executed using the CLI interface on the NE.		

Table 39-211 DiskSpaceBelowThreshold

Alarm	Attributes	Applicable major release
Name: DiskSpaceBelowThreshold (1934) Type: serverAlarm Package: server.DiskSpaceBelowThreshold Raised on class: server.SamServer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: diskSpaceIssue	Release: • N/A
Description: The alarm is raised when the disk space threshold is reached.		
Remedial action: This is a generic error if SAM Server free disk space is below acceptable levels. The additional text field of the alarm will provide more details of the specific problem. Reduce the disk space by changing file retention times or disk usage limits. It may be necessary to add additional disk space to the system to resolve the problem.		

Table 39-212 DnsIpCacheFull

Alarm	Attributes	Applicable major release
Name: DnsIpCacheFull (8388) Type: equipmentAlarm Package: isa.DnsIpCacheFull Raised on class: isa.AaGroupMember	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: DnsIpCacheFull	Release: • N/A
Description: The alarm is raised when the number of entries in a DNS IP Cache is greater than or equal to the percentage value tmnxBsxDnsIpCacheHighWatermark of its tmnxBsxDnsIpCacheSize and the previous percentage value was less than this threshold. And it is clear when the number of entries in a DNS IP Cache is less than or equal to the percentage value tmnxBsxDnsIpCacheLow-Watermark of its tmnxBsxDnsIpCacheSize and the previous percentage value was greater than this threshold.		
Remedial action: The ISA-AA DNS IP Cache buffer has entered an overload state as determined by the configured DNS IP Cache Watermarks and Size. The Watermark thresholds and or Size configured should be revisited to ensure the high threshold is not set too low, and the low threshold is not set too high with respect to the size. To disable the notification, set the High Watermark and or size to the maximum, or set the Low Watermark to the minimum.		

Table 39-213 DroppedUdpPackets

Alarm	Attributes	Applicable major release
Name: DroppedUdpPackets (1935) Type: communicationsAlarm Package: server.DroppedUdpPackets Raised on class: server.SamServer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tooManyUdpPacketsBuffered	Release: • N/A
Description: The alarm is raised when the number of UDP Packets that await processing by the 5620 SAM surpasses the server's capacity to process them.		
Remedial action: The NEs in the network are sending more data to this server than it can process. Reduce the number of nodes sending data to this server.		

Table 39-214 DryContactAlarm

Alarm	Attributes	Applicable major release
Name: DryContactAlarm (460) Type: dryContactAlarm Package: equipment.DryContactAlarm Raised on class: equipment.DryContact	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: dryContactExternalAlarm-Raised	Release: • N/A
Description: The alarm is raised when a device detects a dry contact alarm condition.		
Remedial action: The remedial action for this alarm depends on the condition that the dry contact alarm is configured.		

Table 39-215 DS1E1Loopback

Alarm	Attributes	Applicable major release
Name: DS1E1Loopback (409) Type: configurationAlarm Package: tdmequipment.DS1E1Loopback Raised on class: tdmequipment. DS1E1ChannelSpecifics	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ds1e1Loopback	Release: • N/A
Description: The alarm is raised when an NE reports that a specific DS1 or E1 channel has a loopback alarm condition.		
Remedial action: Informational only.		

Table 39-216 DS3E3Loopback

Alarm	Attributes	Applicable major release
Name: DS3E3Loopback (408) Type: configurationAlarm Package: tdmequipment.DS3E3Loopback Raised on class: tdmequipment.DS3E3ChannelSpecifics	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ds3e3Loopback	Release: • N/A
Description: The alarm is raised when an NE reports that a specific DS3 or E3 channel has a loopback alarm condition.		
Remedial action: Informational only.		

Table 39-217 DualEndedLossNotSupported

Alarm	Attributes	Applicable major release
Name: DualEndedLossNotSupported (1194) Type: oamAlarm Package: ethernetoam.DualEndedLossNotSupported Raised on class: ethernetoam.MaintAssociation	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: dualEndedLossNotSupported	Release: • N/A
Description: The alarm is raised when a MEP that does not support Y1731 Dual Ended Loss test is participating in a CFM Continuity Check test that has Y1731 Dual Ended Loss test enabled.		
Remedial action: Informational - The alarm is raised when at least one MEP that does not support Y1731 Dual Ended Loss test is participating in a CFM Continuity Check test that has Y1731 Dual Ended Loss test enabled.		

Table 39-218 DualEndedLossThresholdAlarm

Alarm	Attributes	Applicable major release
Name: DualEndedLossThresholdAlarm (1195) Type: oamAlarm Package: ethernetoam.DualEndedLossThresholdAlarm Raised on class: ethernetoam.Mep	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: dualEndedLossThresholdExceeded	Release: • N/A
Description: The alarm is raised when a MEP reports that either the Local or Remote loss ratio has exceeded the configured threshold for the specified remote MEP.		
Remedial action: Informational - The alarm is raised when a MEP reports that either the Local or Remote loss ratio has exceeded the configured threshold for the specified remote MEP.		

Table 39-219 DualMaster

Alarm	Attributes	Applicable major release
Name: DualMaster (420) Type: configurationAlarm Package: srrp.DualMaster Raised on class: srrp.Instance	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: dualMaster	Release: • N/A
Description: The alarm is raised when the local and remote SRRP instances are in the master state.		
Remedial action: Shut down one of the peer SRRP instances, modify the priority to a larger value (lower priority) and then turn it up.		

Table 39-220 duplicateAdminGroupName

Alarm	Attributes	Applicable major release
Name: duplicateAdminGroupName (4895) Type: configurationAlarm Package: svt.duplicateAdminGroupName Raised on class: svt.TunnelAdminGroup	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: duplicateNameExists	Release: • N/A
Description: The alarm is raised when two or more global Admin Groups share the same group name.		
Remedial action: Either change the admin group name to a different value, or delete this one and recreate it with a new name.		

Table 39-221 DuplicateIpAddress

Alarm	Attributes	Applicable major release
Name: DuplicateIpAddress (5129) Type: configurationAlarm Package: rtr.DuplicateIpAddress Raised on class: rtr.VirtualRouterIpAddress	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: duplicateIpAddress	Release: • N/A
Description: The alarm is raised when a duplicate routing instance IP Address is found on two or more different NEs.		
Remedial action: Verify to ensure the duplicate routing instance IP Address is not for dual homing or network redundancy configuration. Navigate to the Virtual Router Duplicate IP Addresses listing: (Tools -> Network Resources -> Virtual Router Duplicate IP Addresses), for more information on the duplicate IP address.		

Table 39-222 DuplicateNodeIPv6SegmentId

Alarm	Attributes	Applicable major release
Name: DuplicateNodeIPv6SegmentId (11175) Type: configurationAlarm Package: isis.DuplicateNodeIPv6SegmentId Raised on class: isis.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: duplicateNodeIPv6SegmentId	Release: • N/A
Description: The alarm is raised when a duplicate node segment id value is found on two or more different NEs.		

Table 39-222 DuplicateNodeIPv6SegmentId (continued)

Alarm	Attributes	Applicable major release
Remedial action: Verify to ensure the duplicate ISIS Interface instance Node IPv6 Segment ID. Navigate to the Duplicate Node Segment Routing SID listing: (Tools -> Network Resources -> Duplicate Segment Routing SID), for more information on the duplicate Node SIDs.		

Table 39-223 DuplicateNodeSegmentId (ospf)

Alarm	Attributes	Applicable major release
Name: DuplicateNodeSegmentId (9053) Type: configurationAlarm Package: ospf.DuplicateNodeSegmentId Raised on class: ospf.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: duplicateNodeSegmentId	Release: • N/A
Description: The alarm is raised when a duplicate node segment id value is found on two or more different NEs.		
Remedial action: Verify to ensure the duplicate OSPF Interface instance Node Segment ID. Navigate to the Duplicate Node Segment Routing SID listing: (Tools -> Network Resources -> Duplicate Segment Routing SID), for more information on the duplicate Node SIDs.		

Table 39-224 DuplicateNodeSegmentId (isis)

Alarm	Attributes	Applicable major release
Name: DuplicateNodeSegmentId (9053) Type: configurationAlarm Package: isis.DuplicateNodeSegmentId Raised on class: isis.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: duplicateNodeSegmentId	Release: • N/A
Description: The alarm is raised when a duplicate node segment id value is found on two or more different NEs.		
Remedial action: Verify to ensure the duplicate ISIS Interface instance Node Segment ID. Navigate to the Duplicate Node Segment Routing SID listing: (Tools -> Network Resources -> Duplicate Segment Routing SID), for more information on the duplicate Node SIDs.		

Table 39-225 DuplicateRole

Alarm	Attributes	Applicable major release
Name: DuplicateRole (470) Type: configurationAlarm Package: equipment.DuplicateRole Raised on class: equipment.StackConfiguration	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: twoElementsWithSameRole	Release: • N/A
Description: The alarm is raised when a slot has the same primary or secondary role as another slot in the stack. The slot subsequently enters pass-through mode.		
Remedial action: Login to switch console, check and correct configuration and reload stack.		

Table 39-226 DuplicateRouteDistinguisher

Alarm	Attributes	Applicable major release
Name: DuplicateRouteDistinguisher (4996) Type: configurationAlarm Package: l3fwd.DuplicateRouteDistinguisher Raised on class: l3fwd.ServiceSite	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: duplicateRouteDistinguisher	Release: • N/A
Description: The alarm is raised if a duplicate Route Distinguisher is configured on two different NE's on different VPRN Service.		
Remedial action: The Route Distinguisher has been configured on another L3 VPRN Site. Please check the value of Route Distinguisher under Routing tab of VPRN Routing Instance.		

Table 39-227 DuplicateRouterIdProblem

Alarm	Attributes	Applicable major release
Name: DuplicateRouterIdProblem (411) Type: configurationAlarm Package: netw.DuplicateRouterIdProblem Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: duplicateRouterId	Release: • N/A
Description: The alarm is raised when the 5620 SAM detects that the same address is being used by multiple NEs. To prevent 5620 SAM database corruption, the 5620 SAM does not discover the NE with the duplicate address.		
Remedial action: A configuration error has been made which must be corrected. Re-configure the IP address in error to a correct value.		

Table 39-228 DuplicateSlot

Alarm	Attributes	Applicable major release
Name: DuplicateSlot (468) Type: configurationAlarm Package: equipment.DuplicateSlot Raised on class: equipment.StackConfiguration	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: duplicateSlotNINumber	Release: • N/A
Description: The alarm is raised when a slot has the same slot number as another stack element. The slot must relinquish its operational status because it has a higher election key, based on the up time, slot number, and MAC address. Both slots subsequently enter pass-through mode.		
Remedial action: Login to switch console, correct the slot number and reload stack.		

Table 39-229 DuplicateVrfPolicy

Alarm	Attributes	Applicable major release
Name: DuplicateVrfPolicy (229) Type: configurationAlarm Package: l3fwd.DuplicateVrfPolicy Raised on classes: • l3fwd.ServiceSiteExportPolicy • l3fwd.ServiceSiteImportPolicy	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: duplicateVrfPolicyExists	Release: • N/A
Description: The alarm is raised when the 5620 SAM detects a duplicate VRF policy in a VPRN. The alarm information includes the VRF policy ID and type, and information about the service site. Note: starting from SAM 12.0 R1, SAM no longer raise this alarm since it is not much useful but has performance issue.		
Remedial action: A configuration error has been made which must be corrected. The duplicate VRF policy must be deleted. Note: starting from SAM 12.0 R1, SAM no longer raises this alarm.		

Table 39-230 DuplicateVrfTarget

Alarm	Attributes	Applicable major release
Name: DuplicateVrfTarget (230) Type: configurationAlarm Package: l3fwd.DuplicateVrfTarget Raised on class: l3fwd.ServiceSite	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: duplicateVrfTargetExists	Release: • N/A
Description: The alarm is raised when the 5620 SAM detects a duplicate VRF target in a VPRN. The alarm information includes the VRF policy ID and type, and information about the service site.		
Remedial action: A configuration error has been made which must be corrected. The duplicate VRF target must be deleted.		

Table 39-231 DyingGasp (equipment)

Alarm	Attributes	Applicable major release
Name: DyingGasp (1164) Type: communicationsAlarm Package: equipment.DyingGasp Raised on class: equipment.CardSlot	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: dyingGaspSignal	Release: • N/A
Description: The alarm is raised when a Dying Gasp trap is received to indicate a power failure.		
Remedial action: This alarm is raised by the node just before going down, this might be due to the fact that the power supply connected to the node is down or failed. Please make sure the power supply to the specific node is proper.		

Table 39-232 DyingGasp (netw)

Alarm	Attributes	Applicable major release
Name: DyingGasp (1164) Type: communicationsAlarm Package: netw.DyingGasp Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: dyingGasp	Release: • N/A
Description: The alarm is raised when a 7210 SAS node has loss of power.		
Remedial action: This alarm is raised by the node just before going down, this might be due to the fact that the power supply connected to the node is down or failed. Please make sure the power supply to the specific node is proper.		

Table 39-233 DyingGaspSignal

Alarm	Attributes	Applicable major release
Name: DyingGaspSignal (623) Type: communicationsAlarm Package: equipment.DyingGaspSignal Raised on class: equipment.PhysicalPort	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: dyingGaspSignal	Release: • N/A
Description: The alarm is raised when a Dying Gasp signal is received from a remote 7210 SAS to indicate a power loss/from a remote node to indicate EFM-OAM is disabled on the connected remote port.		
Clearing condition: ('state' EQUAL 'Up')		
Remedial action: This alarm is raised by the node to indicate that one of the neighbouring node which is directly connected to the specific port of this node has signaled that it's going down. This might be due to the fact that the power supply connected to the remote node is down/failed or EFM-OAM is disabled. Please make sure the power supply to that specific remote node is proper or EFM-OAM on the specific remote port is enabled.		

Table 39-234 DynamicPeerLimitReached

Alarm	Attributes	Applicable major release
Name: DynamicPeerLimitReached (9030) Type: ProtocolAlarm Package: bgp.DynamicPeerLimitReached Raised on class: bgp.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: dynamicPeerLimitReached	Release: • N/A
Description: The alarm is raised when the dynamic peer limit for this BGP instance is reached.		
Remedial action: Increase the dynamic peer limit for this BGP instance.		

Table 39-235 DynSvcIdRangeConflict

Alarm	Attributes	Applicable major release
Name: DynSvcIdRangeConflict (4420) Type: DynSvcIdRangeConflict Package: dynsvc.DynSvcIdRangeConflict Raised on class: dynsvc.DynSvcNeConfig	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: DynSvcIdRangeConflict	Release: • N/A
Description: The alarm is raised when the configured Dynamic Service ID Range has conflicts with one or more Range Policies.		
Remedial action: A possible conflict currently exists between the Dynamic Service ID Range specified for this NE and one or more Range Policy entries. To clear the alarm, one of the two must change. This alarm may be benign if the the conflicting Range Policy and Dynamic Service ID Range were intended.		

Table 39-236 DynSvcSapFailure

Alarm	Attributes	Applicable major release
Name: DynSvcSapFailure (4421) Type: DynSvcSapFailure Package: dynsvc.DynSvcSapFailure Raised on class: dynsvc.DynSvcNeConfig	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DynSvcSapFailure	Release: • N/A
Description: The DynSvcSapFailure alarm is raised when a Dynamic Services service SAP creation, modification or removal failed. If the SAP does not exist at the time of this notification, the value 'invalid portid' is put in the alarms sapPortId.'		
Remedial action: Ensure that the RADIUS server and python script specified by the Dynamic Service Policy is functioning correctly.		

Table 39-237 EarlyWarning (mwa)

Alarm	Attributes	Applicable major release
Name: EarlyWarning (681) Type: communicationsAlarm Package: mwa.EarlyWarning Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EarlyWarning	Release: • N/A
Description: The alarm is raised when a MPT detects an early warning event.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-238 EncapsulationTypeIncompatible

Alarm	Attributes	Applicable major release
Name: EncapsulationTypeIncompatible (250) Type: configurationAlarm Package: vll.EncapsulationTypeIncompatible Raised on class: vll.Vll	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: sapEncapsulationTypeIncompatible	Release: • N/A

Table 39-238 EncapsulationTypeIncompatible (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the encapsulation types of two SAPs in the same Ipipe are mismatched.		
Raising condition: ('encapsulationTypeIncompatible' EQUAL 'true')		
Clearing condition: ('encapsulationTypeIncompatible' EQUAL 'false')		
Remedial action: Ensure that the encapsulation type of any two SAPs in I-Pipe service are not mismatched.		

Table 39-239 EndpointActiveObjectChanged

Alarm	Attributes	Applicable major release
Name: EndpointActiveObjectChanged (437) Type: redundancyAlarm Package: service.EndpointActiveObjectChanged Raised on class: service.Endpoint	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ServiceEndpointSwitchover Applicable probable causes: • ServiceEndpointSwitchover • ForceSwitchover	Release: • N/A
Description: The alarm is raised when an automatic or manual endpoint switchover occurs.		
Remedial action: Informational - no corrective action required.		

Table 39-240 EndpointMacLimitReached

Alarm	Attributes	Applicable major release
Name: EndpointMacLimitReached (444) Type: resourceAlarm Package: vpls.EndpointMacLimitReached Raised on class: vpls.Endpoint	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceLimitReached	Release: • N/A
Description: The alarm is raised when the 5620 SAM receives the svcEndpointMacLimitAlarmRaised trap from an NE, which indicates that the number of MAC addresses stored in the FDB for the endpoint exceeds the high watermark for the site FIB. The number of MAC addresses includes the static MAC addresses on the endpoint and the learned MAC addresses in the spoke SDPs that are associated with the endpoint. The alarm clears when the 5620 SAM receives the svcEndpointMacLimitAlarmCleared trap from the NE.		
Remedial action: Increase the high water mark for the site FIB to allow more entries to be added.		

Table 39-241 EPSPathDrillDownFailed

Alarm	Attributes	Applicable major release
Name: EPSPathDrillDownFailed (847) Type: EpcAlarm Package: lte.EPSPathDrillDownFailed Raised on class: lte.EPSPath	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPathDrillDownFailed	Release: • N/A
Description: The alarm is raised when the drilldown of an EPS path fails.		
Raising condition: ('State' EQUAL 'Failed')		
Clearing condition: ('State' NOT EQUAL 'Failed')		
Remedial action: A configuration error has been made which must be corrected. The configured drill down hint does not match the underlying transport connectivity.		

Table 39-242 EPSPathReferencedObjectDeleted

Alarm	Attributes	Applicable major release
Name: EPSPathReferencedObjectDeleted (848) Type: EpcAlarm Package: lte.EPSPathReferencedObjectDeleted Raised on class: lte.EPSPathComponent	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPathReferencedObject-Deleted	Release: • N/A
Description: The alarm is raised when a referenced object is deleted.		
Raising condition: ('componentPointer' EQUAL '\"\"')		
Clearing condition: ('componentPointer' NOT EQUAL '\"\"')		
Remedial action: Informational - no corrective action required.		

Table 39-243 EthernetPortInternalAlarm

Alarm	Attributes	Applicable major release
Name: EthernetPortInternalAlarm (3630) Type: communicationsAlarm Package: ethernetequipment.EthernetPortInternalAlarm Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ethernetPortInternalAlarm	Release: • N/A
Description: The alarm is raised when an Ethernet port experiences excessive internal MAC tx errors. It is generated only when downOnInternalError is enabled on the port.		
Remedial action: This alarm indicates that the port (card) in question is likely faulty. Please replace the card with a card known to be functional.		

Table 39-244 EthernetPortRateMismatchAlarm

Alarm	Attributes	Applicable major release
Name: EthernetPortRateMismatchAlarm (8463) Type: equipmentAlarm Package: ethernetequipment.EthernetPortRateMismatchAlarm Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EthernetPortRateMisMatch	Release: • N/A
Description: The alarm is raised when an Ethernet port rate selected is not supported by SFP plugged.		
Remedial action: SFP module plugged is not compliant with the Rate configured on the interface.		

Table 39-245 EthernetTunnelDown

Alarm	Attributes	Applicable major release
Name: EthernetTunnelDown (771) Type: configurationAlarm Package: ethernettunnel.EthernetTunnelDown Raised on class: ethernettunnel.EthernetTunnel	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ethernetTunnelDown	Release: • N/A
Description: The alarm is raised when the aggregated Ethernet tunnel Operational State is Down.		
Raising condition: (('aggrEndPtOperationalState' EQUAL 'Down'))		
Clearing condition: (('aggrEndPtOperationalState' NOT EQUAL 'Down'))		
Remedial action: Fix the error indicated in the alarm, e.g. port down, MEP down...		

Table 39-246 EventsThrottled

Alarm	Attributes	Applicable major release
Name: EventsThrottled (356) Type: communicationsAlarm Package: netw.EventsThrottled Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: snmpDaemonOverloaded	Release: • N/A
Description: The alarm is raised when an NE throttles events because the event rate exceeds the configured maximum.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation on the NE is required to understand what is causing the consistently high rate of event traffic.		

Table 39-247 ExcessiveEnvironmentTemparature (mwa)

Alarm	Attributes	Applicable major release
Name: ExcessiveEnvironmentTemparature (1118) Type: environmentalAlarm Package: mwa.ExcessiveEnvironmentTemparature Raised on class: mwa.PortTermination	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ExcessiveEnvironmentTem-parature	Release: • N/A
Description: This alarm is raised when a MPT detects excessive environmental temperature.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-248 ExportPolicyNotFound

Alarm	Attributes	Applicable major release
Name: ExportPolicyNotFound (231) Type: configurationAlarm Package: l3fwd.ExportPolicyNotFound Raised on class: l3fwd.ServiceSiteExportPolicy	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: exportPolicyDoesNotExist	Release: • N/A
Description: The alarm is raised when a VRF export policy for a VPRN cannot be found. The alarm information includes the policy ID. Note: starting from SAM 12.0 R1, SAM no longer raise this alarm since it is not much useful but has performance issue.		
Remedial action: A configuration error has occurred which must be corrected. The VRP export policy must be created and distributed to the NE reporting the problem. Note: starting from SAM 12.0 R1, SAM no longer raises this alarm.		

Table 39-249 ExternalLinkDown

Alarm	Attributes	Applicable major release
Name: ExternalLinkDown (9014) Type: communicationsAlarm Package: optical.ExternalLinkDown Raised on class: optical.OpticalLink	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OperationalStateDown	Release: • N/A
Description: The alarm is raised when any end point of the external Optical Link is operationally down.		
Remedial action: Informational - If the alarm persists or is occurring frequently then investigation is required by looking at the active alarms on the Link End points to understand why the underlying transport network is unreliable.		

Table 39-250 FailureToSwitchManagementProtocol

Alarm	Attributes	Applicable major release
Name: FailureToSwitchManagementProtocol (1076) Type: communicationsAlarm Package: netw.FailureToSwitchManagementProtocol Raised on class: netw.NodeDiscoveryControl	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: managementAddressInvalid	Release: • N/A

Table 39-250 FailureToSwitchManagementProtocol (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the 5620 SAM cannot switch the management address of an NE from one IP version to another.		
Remedial action: The additional text field of the alarm will provide guidance as to the reason for the failure - the most probable cause is a configuration error. The configuration error must be corrected. Once the issue has been resolved SAM will automatically re-attempt.		

Table 39-251 FanFailure (mwa)

Alarm	Attributes	Applicable major release
Name: FanFailure (624) Type: equipmentAlarm Package: mwa.FanFailure Raised on class: mwa.PortTermination	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: FanFailure	Release: • N/A
Description: This alarm is raised when a MPT detects a fan failure.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-252 FanRPMAlarm

Alarm	Attributes	Applicable major release
Name: FanRPMAlarm (1126) Type: equipmentAlarm Package: equipment.FanRPMAlarm Raised on class: equipment.Fan	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: fanFailure	Release: • N/A
Description: The alarm is raised when a fan alarm usage state is other than Normal.		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 39-253 fgwConfigurationUpdateFailed

Alarm	Attributes	Applicable major release
Name: fgwConfigurationUpdateFailed (9020) Type: communicationsAlarm Package: femto.fgwConfigurationUpdateFailed Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • N/A
Description: This alarm indicates that the New Configuration Update on FGW Node is Failed.		
Remedial action: Not available		

Table 39-254 FGWFileTransferFailure

Alarm	Attributes	Applicable major release
Name: FGWFileTransferFailure (11824) Type: communicationsAlarm Package: femto.FGWFileTransferFailure Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • N/A
Description: This alarm indicates that there was a failure in File transfer Operation with FGW.		
Remedial action: Check The Communication Link and/or SSH Key-sharing between SAM and FGW.This Notification may be required by Global Product support for Debugging purpose		

Table 39-255 FIBHighOccupancy

Alarm	Attributes	Applicable major release
Name: FIBHighOccupancy (752) Type: resourceAlarm Package: equipment.FIBHighOccupancy Raised on class: equipment.BaseCard	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: FIBHighOccupancy	Release: • N/A
Description: The alarm is raised when the FIB occupancy on an IOM card changes from normal to high.		
Remedial action: Informational - no corrective action required.		

Table 39-256 FibOutOfSynch

Alarm	Attributes	Applicable major release
Name: FibOutOfSynch (625) Type: resourceAlarm Package: equipment.FibOutOfSynch Raised on class: equipment.DaughterCard	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fibUpdateFailed	Release: • N/A
Description: The alarm is raised when the FIB on an MDA is out of synchronization.		
Remedial action: Informational - no corrective action required.		

Table 39-257 FileTransferFailure

Alarm	Attributes	Applicable major release
Name: FileTransferFailure (8152) Type: communicationsAlarm Package: netw.FileTransferFailure Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: fileTransferFailure	Release: • N/A

Table 39-257 FileTransferFailure (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when SAM cannot transfer a file from a Network Element due to one or more of the following causes: unreachable NE, remote file not found, authentication failure, file transfer interrupted, or lack of available local storage space.		
Remedial action: Investigation is required to resolve the following possible scenarios: SAM server has connectivity issue with NE; insufficient disk space on the SAM server to accommodate the file transfer being attempted; loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues. If SAM implements recovery mechanism for the target node, check the file's target directory to confirm whether the file has already been recovered.		

Table 39-258 FilterApplyPathProblem

Alarm	Attributes	Applicable major release
Name: FilterApplyPathProblem (4904) Type: configurationAlarm Package: filterprefixlist.FilterApplyPathProblem Raised on class: filterprefixlist.PrefixListApplyPathMember	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tFilterApplyPathProblem	Release: • N/A
Description: The alarm is raised when a problem is encountered for a configured IP PrefixList apply-path rule.		
Remedial action: Clear the alarm and verify the prefix-list configurations which might have reached the maximum limit. Try reducing the prefix-list/ apply-path members.		

Table 39-259 FilterEmbeddingOperStateChange

Alarm	Attributes	Applicable major release
Name: FilterEmbeddingOperStateChange (4973) Type: configurationAlarm Package: aclfilter.FilterEmbeddingOperStateChange Raised on class: aclfilter.FilterEmbeddedRefTable	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tFilterEmbeddingOperStat-eChange	Release: • N/A
Description: The alarm is raised when the embedding oper state change is other than in-service.		
Remedial action: The alarm is raised when the embedded filter operstate is other than inService. Remove and reapply the embedding to make operstate as inService.		

Table 39-260 FirmwareDownloadOnGoing (equipment)

Alarm	Attributes	Applicable major release
Name: FirmwareDownloadOnGoing (626) Type: equipmentAlarm Package: equipment.FirmwareDownloadOnGoing Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: firmwareDownloadOnGoing	Release: • N/A
Description: The alarm is raised when a firmware download is in progress.		

Table 39-260 FirmwareDownloadOnGoing (equipment) (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational - Firmware for the equipment is downloading.		

Table 39-261 FirmwareMismatchAlarm

Alarm	Attributes	Applicable major release
Name: FirmwareMismatchAlarm (146) Type: firmwareAlarm Package: equipment.FirmwareMismatchAlarm Raised on class: equipment.Card	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bootRomVersionMismatch Applicable probable causes: • bootRomVersionMismatch • fpgaVersionMismatch	Release: • N/A
Description: The alarm is raised when a device detects a mismatch between the firmware version and the device software image. The alarm information includes the expected firmware version.		
Remedial action: Either the firmware or the device SW must be upgraded to compatible versions. The image (firmware or device SW) which is the oldest should be upgraded. Firmware must be upgraded using the NE's CLI. 5620 SAM can be used to upgrade the SW image on the device.		

Table 39-262 FirmwareUpgradeAlarm

Alarm	Attributes	Applicable major release
Name: FirmwareUpgradeAlarm (212) Type: firmwareAlarm Package: equipment.FirmwareUpgradeAlarm Raised on class: equipment.Card	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: firmwareUpgraded	Release: • N/A
Description: The alarm is raised when a device automatically upgrades the firmware of a hot-inserted IOM or CPM.		
Remedial action: Informational - no corrective action required.		

Table 39-263 firstExpirationThresholdCrossed

Alarm	Attributes	Applicable major release
Name: firstExpirationThresholdCrossed (2907) Type: configurationAlarm Package: ranlicense.firstExpirationThresholdCrossed Raised on class: ranlicense.RANLicense	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ageingLicense	Release: • N/A
Description: The alarm is raised when the specified First Expiration Threshold for RAN licensing is crossed.		
Remedial action: Ask for a new LKDI license file with a further expiration date.		

Table 39-264 firstUsageThresholdCrossed

Alarm	Attributes	Applicable major release
Name: firstUsageThresholdCrossed (2908) Type: configurationAlarm Package: ranlicense.firstUsageThresholdCrossed Raised on class: ranlicense.RANLicense	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: insufficientPurchasedLicenses	Release: • N/A
Description: The alarm is raised when the specified First Usage Threshold for RAN licensing is crossed.		
Remedial action: Ask for a new LKDI license file with more tokens.		

Table 39-265 FlowRouteInvalid

Alarm	Attributes	Applicable major release
Name: FlowRouteInvalid (2932) Type: ProtocolAlarm Package: bgp.FlowRouteInvalid Raised on class: bgp.Peer	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: flowRouteInvalid	Release: • N/A
Description: The alarm is raised when the received BGP flow route is invalid. The BGP peer dose not create ip filter entry for the received flow route.		
Remedial action: The NE has received an invalid flow route from a 3rd party appliance which is monitoring the network for suspect traffic. This could be the result of corruption or a SW error on the 3rd party appliance. Please refer to the documentation supplied with appliance for assistance.		

Table 39-266 FlowspecUnsupportdComAction

Alarm	Attributes	Applicable major release
Name: FlowspecUnsupportdComAction (2933) Type: ProtocolAlarm Package: bgp.FlowspecUnsupportdComAction Raised on class: bgp.Site	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: unsupportdComAction	Release: • N/A
Description: The alarm is raised when the best route for a FlowSpec NLRI is received from a remote BGP peer with an extended community action that is unsupported.		
Remedial action: Informational - no corrective action required.		

Table 39-267 ForceQTagForwardingMisconfiguration (epipe)

Alarm	Attributes	Applicable major release
Name: ForceQTagForwardingMisconfiguration (813) Type: configurationAlarm Package: epipe. ForceQTagForwardingMisconfiguration Raised on class: epipe.Epipe	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: forceQTagForwardingInconsis-tent	Release: • N/A
Description: The alarm is raised when two I-sites in a service use different Force Q Tag Forwarding values.		
Raising condition: ('operationalFlags'anyBit'Force Q Tag Forwarding Inconsistent')		
Clearing condition: NOT (('operationalFlags'anyBit'Force Q Tag Forwarding Inconsistent'))		
Remedial action: Check configuration so that I-sites in the service use same Force Q-Tag Forwarding values.		

Table 39-268 ForceQTagForwardingMisconfiguration (vpls)

Alarm	Attributes	Applicable major release
Name: ForceQTagForwardingMisconfiguration (813) Type: configurationAlarm Package: vpls.ForceQTagForwardingMisconfiguration Raised on class: vpls.AbstractVpls	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: forceQTagForwardingInconsis-tent	Release: • N/A
Description: The alarm is raised when two I-sites in a service use different Force Q Tag Forwarding values.		
Raising condition: ('operationalFlags'anyBit'Force Q Tag Forwarding Inconsistent')		
Clearing condition: NOT (('operationalFlags'anyBit'Force Q Tag Forwarding Inconsistent'))		
Remedial action: Check configuration so that I-sites in the service use same Force Q-Tag Forwarding values.		

Table 39-269 FrameSizeProblem (service)

Alarm	Attributes	Applicable major release
Name: FrameSizeProblem (37) Type: configurationAlarm Package: service.FrameSizeProblem Raised on class: service.Service	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: frameSizeProblem	Release: • N/A
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: ('mtuInconsistent' EQUAL 'true')		
Clearing condition: ('mtuInconsistent' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is is less than or equal to the supported MTU size value.		

Table 39-270 FtpClientFailure

Alarm	Attributes	Applicable major release
Name: FtpClientFailure (357) Type: communicationsAlarm Package: netw.FtpClientFailure Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ftpClientFailure	Release: • N/A
Description: The alarm is raised when an NE sends notification that an FTP operation initiated by the FTP client fails because of file unavailability, interruption during the file transfer, or a lack of available storage space.		
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space on the NE to accommodate the file transfer being attempted; the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 39-271 FTPLoginMaxAttempts

Alarm	Attributes	Applicable major release
Name: FTPLoginMaxAttempts (10267) Type: communicationsAlarm Package: netw.FTPLoginMaxAttempts Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: FtpLoginMaxAttempts	Release: • N/A
Description: The alarm is raised when the number of ftp login failures due to incorrect user name or password using SSH session exceeds the configured value.		
Remedial action: The wrong password was entered by the user during FTP. Please try to log in again later.		

Table 39-272 GlobalAppProfileCreated

Alarm	Attributes	Applicable major release
Name: GlobalAppProfileCreated (2931) Type: ConfigurationAlarm Package: aapolicy.GlobalAppProfileCreated Raised on class: aapolicy.ApplicationProfile	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: globalAppProfileMissing	Release: • N/A
Description: The alarm is raised when a global application profile to which a global transit IP policy is referenced does not exist. The alarm notifies the user that a global application profile has been created.		
Remedial action: Informational. A global Application Profile has been created; this object is referenced by a Transit IP Policy or Transit Prefix Policy.		

Table 39-273 globalLicenseViolation

Alarm	Attributes	Applicable major release
Name: globalLicenseViolation (2909) Type: configurationAlarm Package: ranlicense.globalLicenseViolation Raised on class: ranlicense.RANLicenseManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: atLeastOneLicenseInViolation	Release: • N/A
Description: The alarm is raised when at least one RAN license is in violation.		
Remedial action: Provide a new LKDI license file with a further expiration date and/or more tokens.		

Table 39-274 GneCommunicationAlarm

Alarm	Attributes	Applicable major release
Name: GneCommunicationAlarm (783) Type: CommunicationAlarm Package: netw.GneCommunicationAlarm Raised on class: netw.NetworkElement	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: User_Defined	Release: • N/A
Description: This user-definable alarm is raised against a generic NE when the 5620 SAM receives a trap from the generic NE that is mapped to the alarm in a generic NE alarm catalogue. The alarm mapping defines the Probable cause, Severity, and Implicitly cleared values, and optionally contains an extension that is appended to the Name value.		
Remedial action: This alarm is mapped from a GNE trap. Remedial action depends on the specific equipment and trap definition.		

Table 39-275 GneEnvironmentalAlarm

Alarm	Attributes	Applicable major release
Name: GneEnvironmentalAlarm (784) Type: EnvironmentalAlarm Package: netw.GneEnvironmentalAlarm Raised on class: netw.NetworkElement	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: User_Defined	Release: • N/A
Description: This user-definable alarm is raised against a generic NE when the 5620 SAM receives a trap from the generic NE that is mapped to the alarm in a generic NE alarm catalogue. The alarm mapping defines the Probable cause, Severity, and Implicitly cleared values, and optionally contains an extension that is appended to the Name value.		
Remedial action: This alarm is mapped from a GNE trap. Remedial action depends on the specific equipment and trap definition.		

Table 39-276 GneEquipmentAlarm

Alarm	Attributes	Applicable major release
Name: GneEquipmentAlarm (785) Type: EquipmentAlarm Package: netw.GneEquipmentAlarm Raised on class: netw.NetworkElement	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: User_Defined	Release: • N/A

Table 39-276 GneEquipmentAlarm (continued)

Alarm	Attributes	Applicable major release
Description: This user-definable alarm is raised against a generic NE when the 5620 SAM receives a trap from the generic NE that is mapped to the alarm in a generic NE alarm catalogue. The alarm mapping defines the Probable cause, Severity, and Implicitly cleared values, and optionally contains an extension that is appended to the Name value.		
Remedial action: This alarm is mapped from a GNE trap. Remedial action depends on the specific equipment and trap definition.		

Table 39-277 GneInterfaceAlarm

Alarm	Attributes	Applicable major release
Name: GneInterfaceAlarm (9610) Type: EquipmentAlarm Package: genericne.GneInterfaceAlarm Raised on class: genericne.GenericNeInterface	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: User_Defined	Release: • N/A
Description: This user-definable alarm is raised against a generic NE when the 5620 SAM receives a trap from the generic NE that is mapped to the alarm in a generic NE alarm catalogue. The alarm mapping defines the Probable cause, Severity, and Implicitly cleared values, and optionally contains an extension that is appended to the Name value.		
Remedial action: This alarm is mapped from a GNE trap. Remedial action depends on the specific equipment and trap definition.		

Table 39-278 GneMTIEAlarm (netw)

Alarm	Attributes	Applicable major release
Name: GneMTIEAlarm (3633) Type: EquipmentAlarm Package: netw.GneMTIEAlarm Raised on class: netw.NetworkElement	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: User_Defined	Release: • N/A
Description: This user-definable alarm is raised against a generic NE when the 5620 SAM receives a trap from the generic NE that is mapped to the alarm in a generic NE alarm catalogue. The alarm mapping defines the Probable cause, Severity, and Implicitly cleared values, and optionally contains an extension that is appended to the Name value.		
Remedial action: This alarm is mapped from a GNE trap. Remedial action depends on the specific equipment and trap definition.		

Table 39-279 GneMTIEAlarm (genericne)

Alarm	Attributes	Applicable major release
Name: GneMTIEAlarm (3633) Type: EquipmentAlarm Package: genericne.GneMTIEAlarm Raised on class: genericne.GenericNeInterface	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: User_Defined	Release: • N/A
Description: This user-definable alarm is raised against a generic NE when the 5620 SAM receives a trap from the generic NE that is mapped to the alarm in a generic NE alarm catalogue. The alarm mapping defines the Probable cause, Severity, and Implicitly cleared values, and optionally contains an extension that is appended to the Name value.		

Table 39-279 GneMTIEAlarm (genericne) (continued)

Alarm	Attributes	Applicable major release
Remedial action: This alarm is mapped from a GNE trap. Remedial action depends on the specific equipment and trap definition.		

Table 39-280 GneProcessingErrorAlarm

Alarm	Attributes	Applicable major release
Name: GneProcessingErrorAlarm (786) Type: ProcessingErrorAlarm Package: netw.GneProcessingErrorAlarm Raised on class: netw.NetworkElement	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: User_Defined	Release: • N/A
Description: This user-definable alarm is raised against a generic NE when the 5620 SAM receives a trap from the generic NE that is mapped to the alarm in a generic NE alarm catalogue. The alarm mapping defines the Probable cause, Severity, and Implicitly cleared values, and optionally contains an extension that is appended to the Name value.		
Remedial action: This alarm is mapped from a GNE trap. Remedial action depends on the specific equipment and trap definition.		

Table 39-281 GneQualityOfServiceAlarm

Alarm	Attributes	Applicable major release
Name: GneQualityOfServiceAlarm (787) Type: QualityOfServiceAlarm Package: netw.GneQualityOfServiceAlarm Raised on class: netw.NetworkElement	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: User_Defined	Release: • N/A
Description: This user-definable alarm is raised against a generic NE when the 5620 SAM receives a trap from the generic NE that is mapped to the alarm in a generic NE alarm catalogue. The alarm mapping defines the Probable cause, Severity, and Implicitly cleared values, and optionally contains an extension that is appended to the Name value.		
Remedial action: This alarm is mapped from a GNE trap. Remedial action depends on the specific equipment and trap definition.		

Table 39-282 GneServiceAlarm

Alarm	Attributes	Applicable major release
Name: GneServiceAlarm (788) Type: ServiceAlarm Package: netw.GneServiceAlarm Raised on class: netw.NetworkElement	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: User_Defined	Release: • N/A
Description: This user-definable alarm is raised against a generic NE when the 5620 SAM receives a trap from the generic NE that is mapped to the alarm in a generic NE alarm catalogue. The alarm mapping defines the Probable cause, Severity, and Implicitly cleared values, and optionally contains an extension that is appended to the Name value.		
Remedial action: This alarm is mapped from a GNE trap. Remedial action depends on the specific equipment and trap definition.		

Table 39-283 GneSystemAlarm

Alarm	Attributes	Applicable major release
Name: GneSystemAlarm (789) Type: SystemAlarm Package: netw.GneSystemAlarm Raised on class: netw.NetworkElement	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: User_Defined	Release: • N/A
Description: This user-definable alarm is raised against a generic NE when the 5620 SAM receives a trap from the generic NE that is mapped to the alarm in a generic NE alarm catalogue. The alarm mapping defines the Probable cause, Severity, and Implicitly cleared values, and optionally contains an extension that is appended to the Name value.		
Remedial action: This alarm is mapped from a GNE trap. Remedial action depends on the specific equipment and trap definition.		

Table 39-284 GneTransportAlarm

Alarm	Attributes	Applicable major release
Name: GneTransportAlarm (790) Type: TransportAlarm Package: netw.GneTransportAlarm Raised on class: netw.NetworkElement	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: User_Defined	Release: • N/A
Description: This user-definable alarm is raised against a generic NE when the 5620 SAM receives a trap from the generic NE that is mapped to the alarm in a generic NE alarm catalogue. The alarm mapping defines the Probable cause, Severity, and Implicitly cleared values, and optionally contains an extension that is appended to the Name value.		
Remedial action: This alarm is mapped from a GNE trap. Remedial action depends on the specific equipment and trap definition.		

Table 39-285 GponPortInBandAlarm

Alarm	Attributes	Applicable major release
Name: GponPortInBandAlarm (3697) Type: gponInBandSignallingAlarm Package: equipment.GponPortInBandAlarm Raised on class: equipment.GponPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: InBandSignallingNotEstablishedBetweenSARAndONT	Release: • N/A
Description: The alarm is raised when in-band signaling between the ONT and SAR for GPON statistics collection is not established after 30 seconds of GPON port uptime.		
Remedial action: Informational - Reachability between SAR and ONT devices has to be checked.		

Table 39-286 GponPortInBandAlarmClear

Alarm	Attributes	Applicable major release
Name: GponPortInBandAlarmClear (3698) Type: gponInBandSignallingAlarm Package: equipment.GponPortInBandAlarmClear Raised on class: equipment.GponPortSpecifics	Severity: cleared Specific problem: Not Applicable Implicitly cleared: true Default probable cause: InBandSignallingEstablished-BetweenSARAndONT	Release: • N/A
Description: The alarm is raised when in-band signaling between the ONT and SAR for GPON statistics collection is established.		
Remedial action: Informational - no corrective action required.		

Table 39-287 GroupInSSMRange

Alarm	Attributes	Applicable major release
Name: GroupInSSMRange (187) Type: configurationAlarm Package: pim.GroupInSSMRange Raised on class: pim.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: STARGGroupInSSMRange	Release: • N/A
Description: The alarm is raised when an NE receives a PIM register, PIM (*,G) assert, PIM (*,G) join/prune, or an IGMP local membership message for a group defined in the SSM address range.		
Remedial action: Informational - no corrective action required		

Table 39-288 GwAcrFailuresAlarmMajor

Alarm	Attributes	Applicable major release
Name: GwAcrFailuresAlarmMajor (2955) Type: communicationsAlarm Package: lte.GwAcrFailuresAlarmMajor Raised on class: lte.AgwRfPeer	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: connectionDown	Release: • N/A
Description: A tmnxMobGwAcrFailuresAlarmMajor is generated when 2 ACR transmission failures occur in a 10 second interval or 5 ACR transmission failures occur in a 60 second interval to the peer.		
Remedial action: Informational - a threshold for Anonymous Communication Rejection transmission failures has been exceeded. If the condition persists please contact your Nokia support representative for assistance.		

Table 39-289 GwDdnThrottlingStart

Alarm	Attributes	Applicable major release
Name: GwDdnThrottlingStart (4630) Type: communicationsAlarm Package: lte.GwDdnThrottlingStart Raised on class: lte.SigAGWGTPPMIPPeer	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: downLinkThrottling	Release: • N/A

Table 39-289 GwDdnThrottlingStart (continued)

Alarm	Attributes	Applicable major release
Description: A GwDdnThrottlingStart notification is generated when the serving gateway (SGW) starts throttling the Downlink Data Notification (DDN) for the low priority traffic towards a peer node (SGSN/MME).		
Remedial action: The serving gateway (SGW) starts throttling the Downlink Data Notification (DDN) for the low priority traffic towards a peer node (SGSN/MME). When the throttling duration is passed, the SGW will stop throttling the DDN.		

Table 39-290 GwDdnThrottlingStop

Alarm	Attributes	Applicable major release
Name: GwDdnThrottlingStop (4631) Type: communicationsAlarm Package: lte.GwDdnThrottlingStop Raised on class: lte.SigAGWGTPPMIPPeer	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: downLinkThrottling	Release: • N/A
Description: A GwDdnThrottlingStop notification is generated when the serving gateway (SGW) stops throttling the Downlink Data Notification (DDN) for the low priority traffic towards a peer node (SGSN/MME).		
Remedial action: The serving gateway (SGW) stops throttling the Downlink Data Notification (DDN) for the low priority traffic towards a peer node (SGSN/MME). When another throttling instruction is received from a peer node, the SGW will start throttling the DDN.		

Table 39-291 GwPoolCapacityAlarmMajor

Alarm	Attributes	Applicable major release
Name: GwPoolCapacityAlarmMajor (5190) Type: EpcAlarm Package: lte.GwPoolCapacityAlarmMajor Raised on class: lte.IpPool	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: Threshold	Release: • N/A
Description: A tmnxMobGwPoolCapacityAlarmMajor notification is generated when either the IPv4 or IPv6 address pool usage reaches 95% of the pool size.		
Remedial action: The IPv4 or IPv6 address pool usage reached 95% of the pool size. Need to look at increasing the address pool size.		

Table 39-292 GwPoolCapacityAlarmMinor

Alarm	Attributes	Applicable major release
Name: GwPoolCapacityAlarmMinor (5191) Type: EpcAlarm Package: lte.GwPoolCapacityAlarmMinor Raised on class: lte.IpPool	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: Threshold	Release: • N/A
Description: A tmnxMobGwPoolCapacityAlarmMinor notification is generated when either the IPv4 or IPv6 address pool usage reaches 85% of the pool size.		

Table 39-292 GwPoolCapacityAlarmMinor (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational: The IPv4 or IPv6 address pool usage reached 85% of the pool size. Need to closely monitor the usage.		

Table 39-293 HardwareBootFailure

Alarm	Attributes	Applicable major release
Name: HardwareBootFailure (108) Type: softwareAlarm Package: sw.HardwareBootFailure Raised on class: sw.CardSoftware	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: softwareBootProblemDueTo-HardwareIssues	Release: • N/A
Description: The alarm is raised when an NE fails to boot because of a hardware problem.		
Remedial action: Please contact your Nokia support representative for assistance.		

Table 39-294 HardwareRedundancyAlarm

Alarm	Attributes	Applicable major release
Name: HardwareRedundancyAlarm (147) Type: equipmentAlarm Package: equipment.HardwareRedundancyAlarm Raised on class: equipment.ControlProcessor	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: primaryCpmFailure	Release: • N/A
Description: The alarm is raised when the primary CPM fails.		
Remedial action: The CPM card in the chassis may have suffered a failure. Remove and reset the card in question. If this does not resolve the problem replace the card.		

Table 39-295 HashLabelMismatch (svt)

Alarm	Attributes	Applicable major release
Name: HashLabelMismatch (1113) Type: configurationAlarm Package: svt.HashLabelMismatch Raised on class: svt.SdpBinding	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: hashLabelMismatch	Release: • N/A
Description: The alarm is raised when an SDP binding hash label is enabled and the return SDP binding hash label is disabled. If this misconfiguration causes the mismatch of the operational hash label on both sides, the receiving site will drop the data packets as a result. This alarm is cleared when the hash label is either enabled or disabled on both sides.		
Remedial action: The hash label must be enabled or disabled on both ends of the SDP		

Table 39-296 HashLabelMismatch (vprn)

Alarm	Attributes	Applicable major release
Name: HashLabelMismatch (1113) Type: configurationAlarm Package: vprn.HashLabelMismatch Raised on class: vprn.Vprn	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: hashLabelMismatch	Release: • N/A
Description: The alarm is raised when the hash label is enabled on a VPRN site and disabled on another site in the service.		
Remedial action: A configuration error has occurred which must be corrected. The hash label must be enabled or disabled on both ends of the SDP		

Table 39-297 HashLabelSignalCapabilityMismatch

Alarm	Attributes	Applicable major release
Name: HashLabelSignalCapabilityMismatch (3327) Type: configurationAlarm Package: svt.HashLabelSignalCapabilityMismatch Raised on class: svt.SdpBinding	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: hashLabelSignalCapabili-tyMismatch	Release: • N/A
Description: The alarm is raised when an SDP binding hash label signal capability is enabled and the return SDP binding hash label signal capability is disabled or not supported. If this misconfiguration causes the mismatch of the operational hash label on both sides, the receiving site will drop the data packets as a result. This alarm is cleared when the hash label signal capability is either enabled or disabled on both sides.		
Remedial action: The hash label signal capability must be enabled or disabled on both ends of the SDP		

Table 39-298 HDMConfiguration_FileserverHostNameForFemtoConfigurationAlarm

Alarm	Attributes	Applicable major release
Name: HDMConfiguration_ FileserverHostNameForFemtoConfigurationAlarm (11148) Type: configurationAlarm Package: femto.HDMConfiguration_ FileserverHostNameForFemtoConfigurationAlarm Raised on class: femto.HDMConfiguration	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • N/A
Description: The fileserverHostNameForFemto is not configured.		
Remedial action: Configure the FileserverHostNameForFemto in Smallcell Configuration window.		

Table 39-299 HDMConfiguration_OamNeIPConfigurationAlarm

Alarm	Attributes	Applicable major release
Name: HDMConfiguration_ OamNeIPConfigurationAlarm (11149) Type: configurationAlarm Package: femto.HDMConfiguration_ OamNeIPConfigurationAlarm Raised on class: femto.HDMConfiguration	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • N/A
Description: The oamNeIP is not configured.		
Remedial action: Configure the OamNeIPAddress in Smallcell Configuration window.		

Table 39-300 HighBER (mwa)

Alarm	Attributes	Applicable major release
Name: HighBER (682) Type: communicationsAlarm Package: mwa.HighBER Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: HighBER	Release: • N/A
Description: The alarm is raised when a MPT detects a high BER.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-301 HighBER (equipment)

Alarm	Attributes	Applicable major release
Name: HighBER (682) Type: communicationsAlarm Package: equipment.HighBER Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: highBER	Release: • N/A
Description: The alarm is raised when an MSS detects a high BER.		
Remedial action: 1. Retrieve power level reading on the local OT port.2. Clean the fiber.3. If cleaning the fiber does not clear the problem, replace the fiber.4. If the power level is within the operating range, check for pluggable module alarms.5. Replace the pluggable module.		

Table 39-302 HighLevelRoutesReached

Alarm	Attributes	Applicable major release
Name: HighLevelRoutesReached (1197) Type: ProtocolAlarm Package: l3fwd.HighLevelRoutesReached Raised on class: l3fwd.ServiceSite	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: HighLevelRoutesReached	Release: • N/A

Table 39-302 HighLevelRoutesReached (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the number of routes in a VPRN exceeds the high threshold value. The high threshold value is a percentage of the maximum number of routes specified in the VPRN configuration. The percentage is derived by adding 100 to the threshold value in the VPRN configuration and dividing the result by 2. The alarm information includes the number of routes and this calculated high threshold value.		
Remedial action: Informational. The threshold configured should be revisited to ensure that it is not set to low given the number of routes that are being received. If the threshold is set close to the maximum number of routes supported by the NE then it is probable that there is an issue with another NE or VRF instance in the network. If the problem persists please contact your Nokia support representative for assistance.		

Table 39-303 HistCorrDbSizeThresholdExceeded

Alarm	Attributes	Applicable major release
Name: HistCorrDbSizeThresholdExceeded (5169) Type: configurationAlarm Package: histcorr.HistCorrDbSizeThresholdExceeded Raised on class: histcorr.HistCorrPartitionManager	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: HistCorrEventDBSizeIsNot-Sufficient	Release: • N/A
Description: The alarm is raised when the actual DB size consumed by Correlation Events exceeds the threshold.		
Remedial action: Correlation Events DB storage reached threshold or exceeded, increase "Max DB Size" in Correlation Partition Manager GUI.		

Table 39-304 HoldTimeInconsistent

Alarm	Attributes	Applicable major release
Name: HoldTimeInconsistent (810) Type: ProtocolAlarm Package: bgp.HoldTimeInconsistent Raised on class: bgp.Peer	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: holdTimeInconsistent	Release: • N/A
Description: The alarm is raised when a BGP site tries to establish a peering using a hold time that is less than the configured strict hold time. The peering is rejected as a result.		
Remedial action: A configuration error has occurred which must be corrected. The hold time must be set to a value greater than the strict hold time.		

Table 39-305 HOPathUnequipped

Alarm	Attributes	Applicable major release
Name: HOPathUnequipped (9006) Type: communicationsAlarm Package: tdm.HOPathUnequipped Raised on class: tdm.AUn	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: UNEQP	Release: • N/A
Description: The alarm is raised on HOPath Unequipped (NEND).		
Remedial action: HO Path is unequipped at NEND.		

Table 39-306 HostBGPPeeringSetupFailed

Alarm	Attributes	Applicable major release
Name: HostBGPPeeringSetupFailed (9592) Type: processingErrorAlarm Package: service.HostBGPPeeringSetupFailed Raised on class: service.ServiceAccessPoint	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: HostBGPPeeringSetupFailed	Release: • N/A
Description: The alarm indicates that the system was unable to create a BGP neighbor and set up BGP peering for the given host. This alarm is related to the NE trap sapHostBGPPeeringSetupFailed.		
Remedial action: Please verify BGP peering attributes and ensure configuration is correct. The recovery action depends on the specific cause of failure. Please review the alarm's additional text for further details.		

Table 39-307 HostnameMismatch

Alarm	Attributes	Applicable major release
Name: HostnameMismatch (732) Type: configurationAlarm Package: server.HostnameMismatch Raised on class: server.SamServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: hostnameMismatch	Release: • N/A
Description: The alarm is raised when an auxiliary or standby server host name in a 5620 SAM main server configuration does not match the host name of the auxiliary or standby server /etc/hosts file.		
Remedial action: A configuration error has been made which must be corrected. The standby SAM server or AUX server host names on the 5620 SAM server are not resolving correctly and must be corrected (i.e. in the /etc/hosts file).		

Table 39-308 HostPortReachabilityDown

Alarm	Attributes	Applicable major release
Name: HostPortReachabilityDown (10274) Type: virtualPortAlarm Package: dctr.HostPortReachabilityDown Raised on class: dctr.GatewayVirtualPort	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: HostPortPrefixMissing	Release: • N/A

Table 39-308 HostPortReachabilityDown (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when Host type VP is reachability down.		
Raising condition: (('bgpReachabilityState' EQUAL '2') AND ('vpType' EQUAL '1') AND ('isRedundant' EQUAL 'false'))		
Clearing condition: (('vpType' EQUAL '1'))		
Remedial action: This alarm can be cleared when host type virtual port BGP prefix is up.		

Table 39-309 HostSharedFilterHighWatermarkAlarm

Alarm	Attributes	Applicable major release
Name: HostSharedFilterHighWatermarkAlarm (4974) Type: configurationAlarm Package: aclfilter. HostSharedFilterHighWatermarkAlarm Raised on class: aclfilter.FilterDefinition	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: HostSharedFilterHighWatermarkAlarm	Release: • N/A
Description: The alarm is raised when the number of dynamically allocated Host Shared Filters based on the indicated filter reaches or exceeds the configured high watermark. This alarm is cleared when the number of dynamically allocated Host Shared Filters drops to or below the configured low watermark of the indicated filter.		
Remedial action: Please check the watermark configurations on the indicated filter and make an adjustment accordingly.		

Table 39-310 IgmpGrpIfSapMaxGroupsLimitExceeded

Alarm	Attributes	Applicable major release
Name: IgmpGrpIfSapMaxGroupsLimitExceeded (3979) Type: configurationAlarm Package: igmp. IgmpGrpIfSapMaxGroupsLimitExceeded Raised on class: igmp.GroupInterfaceSap	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: IgmpGrpIfSapMaxGroupsLimitExceeded	Release: • N/A
Description: This alarm is raised when an IGMP host subscribes to a new multicast group that cannot be installed because the maximum number of active groups on the IGMP group interface SAP has already been reached.		
Remedial action: Increase the value of the 'maxGroups' attribute in the parent IGMP group interface so that the number of active IGMP groups stays under the configured threshold.		

Table 39-311 IgmpGrpIfSapMaxGrpSrcLimExcd

Alarm	Attributes	Applicable major release
Name: IgmpGrpIfSapMaxGrpSrcLimExcd (4622) Type: configurationAlarm Package: igmp.IgmpGrpIfSapMaxGrpSrcLimExcd Raised on class: igmp.GroupInterfaceSap	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: IgmpGrpIfSapMaxGrpSr-cLimExcd	Release: • N/A
Description: This alarm is raised when an attempt is made to configure a group source for a group when the number of group sources is equal to vRtrIgmpGrpIfSapMaxGrpSources, the maximum number of group sources per group supported on the SAP.		
Remedial action: Increase the value of the 'maxGrpSources' attribute in the parent IGMP group interface so that the number of active IGMP Group sources stays under the configured threshold.		

Table 39-312 IgmpGrpIfSapMaxSourcesLimitExceeded

Alarm	Attributes	Applicable major release
Name: IgmpGrpIfSapMaxSourcesLimitExceeded (3980) Type: configurationAlarm Package: igmp. IgmpGrpIfSapMaxSourcesLimitExceeded Raised on class: igmp.GroupInterfaceSap	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: IgmpGrpIfSapMax-SourcesLimitExceeded	Release: • N/A
Description: This alarm is raised when an IGMP host subscribes to a multicast group with a source that cannot be installed because the maximum number of active sources on the IGMP group interface SAP has already been reached.		
Remedial action: Increase the value of the 'maxSources' attribute in the parent IGMP group interface so that the number of active IGMP sources stays under the configured threshold.		

Table 39-313 IgmpHostMaxGrpSrcsLimitExcd

Alarm	Attributes	Applicable major release
Name: IgmpHostMaxGrpSrcsLimitExcd (4623) Type: configurationAlarm Package: igmp.IgmpHostMaxGrpSrcsLimitExcd Raised on class: igmp.GrpInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: IgmpHostMaxGrpSrcsLimit-Excd	Release: • N/A
Description: This alarm is raised when an attempt is made to configure a source for a group when the number of group sources is equal to vRtrIgmpHostMaxGrpSources, the maximum number of group sources per group supported on the host.		
Remedial action: Increase the value of the 'maxGrpSources' attribute in the parent IGMP group interface so that the number of active IGMP Group sources stays under the configured threshold.		

Table 39-314 IgmpSnpgGrpDroppedLimitExceeded (svt)

Alarm	Attributes	Applicable major release
Name: IgmpSnpgGrpDroppedLimitExceeded (392) Type: SdpBindingAlarm Package: svt.IgmpSnpgGrpDroppedLimitExceeded Raised on class: svt.SdpBindingIgmpSnpgCfg	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: igmpSnpgGrpMaxN-brGrpsReached	Release: • N/A
Description: The alarm is raised when an IGMP group is removed from an SDP binding because the number of allowed IGMP groups specified by sdpBndIgmpSnpgCfgMaxNbrGrps is reached.		
Remedial action: This can be remedied by increasing the maximum number of allowed IGMP groups on the SDP.		

Table 39-315 IgmpSnpgGrpDroppedLimitExceeded (vpls)

Alarm	Attributes	Applicable major release
Name: IgmpSnpgGrpDroppedLimitExceeded (392) Type: AccessInterfaceAlarm Package: vpls.IgmpSnpgGrpDroppedLimitExceeded Raised on class: vpls.L2AccessInterfaceIgmpSnpgCfg	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: igmpSnpgGrpMaxN-brGrpsReached	Release: • N/A
Description: The alarm is raised when an IGMP group is removed from a SAP because the number of allowed IGMP groups specified by sapIgmpSnpgCfgMaxNbrGrps is reached.		
Remedial action: This can be remedied by increasing the maximum number of allowed IGMP groups on the SAP.		

Table 39-316 IgmpSnpgGrpSrcLimitExceed

Alarm	Attributes	Applicable major release
Name: IgmpSnpgGrpSrcLimitExceed (4894) Type: SdpBindingAlarm Package: svt.IgmpSnpgGrpSrcLimitExceed Raised on class: svt.SdpBindingIgmpSnpgCfg	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: IgmpSnpgGrpSrcLimitExceed	Release: • N/A
Description: The alarm is raised when an IGMP group or source is dropped on a given SDP Bind because a user configurable upper limit given by sdpBndIgmpSnpgCfgMaxNbrGrpSrcs is reached		
Remedial action: This can be remedied by increasing the maximum number of allowed IGMP group sources on the SDP.		

Table 39-317 IgmpSnpgGrpSrcLimitExceeded

Alarm	Attributes	Applicable major release
Name: IgmpSnpgGrpSrcLimitExceeded (4897) Type: AccessInterfaceAlarm Package: vpls.IgmpSnpgGrpSrcLimitExceeded Raised on class: vpls.L2AccessInterfaceIgmpSnpgCfg	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: igmpSnpgGrpMaxNbrGrpSrcsReached	Release: • N/A
Description: The alarm is raised when an IGMP group or source is dropped on a given SAP because a user configurable upper limit given by sapIgmpSnpgCfgMaxNbrGrpSrcs is reached		
Remedial action: This can be remedied by increasing the maximum number of allowed IGMP Group sources on the SAP.		

Table 39-318 IgmpSnpgSrcDroppedLimitExceeded (svt)

Alarm	Attributes	Applicable major release
Name: IgmpSnpgSrcDroppedLimitExceeded (735) Type: SdpBindingAlarm Package: svt.IgmpSnpgSrcDroppedLimitExceeded Raised on class: svt.SdpBindingIgmpSnpgCfg	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: igmpSnpgGrpMaxNbrSrcsReached	Release: • N/A
Description: The alarm is raised when an IGMP source is removed from an SDP binding because the number of allowed IGMP sources specified by sdpBndIgmpSnpgCfgMaxNbrSrcs is reached.		
Remedial action: This can be remedied by increasing the maximum number of allowed IGMP sources on the SDP.		

Table 39-319 IgmpSnpgSrcDroppedLimitExceeded (vpls)

Alarm	Attributes	Applicable major release
Name: IgmpSnpgSrcDroppedLimitExceeded (735) Type: AccessInterfaceAlarm Package: vpls.IgmpSnpgSrcDroppedLimitExceeded Raised on class: vpls.L2AccessInterfaceIgmpSnpgCfg	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: igmpSnpgGrpMaxNbrSrcsReached	Release: • N/A
Description: The alarm is raised when an IGMP source is removed from a SAP because the number of allowed IGMP sources specified by sapIgmpSnpgCfgMaxNbrGrps is reached.		
Remedial action: This can be remedied by increasing the maximum number of allowed IGMP sources on the SAP.		

Table 39-320 ignoreUnknownImportedLicenses

Alarm	Attributes	Applicable major release
Name: ignoreUnknownImportedLicenses (2910) Type: configurationAlarm Package: ranlicense.ignoreUnknownImportedLicenses Raised on class: ranlicense.RANLicenseManager	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: licenseMappingFileNo-tAlignedWithImportedFile	Release: • N/A
Description: The alarm is raised when at least one of the imported licenses in the LKDI license file is not recognized by the 5620 SAM.		
Remedial action: Informational - Provide a LKDI license file compliant with supported licenses.		

Table 39-321 ImportPolicyNotFound

Alarm	Attributes	Applicable major release
Name: ImportPolicyNotFound (232) Type: configurationAlarm Package: l3fwd.ImportPolicyNotFound Raised on class: l3fwd.ServiceSiteImportPolicy	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: importPolicyDoesNotExist	Release: • N/A
Description: The alarm is raised when a VRF import policy for a VPRN cannot be found. The alarm information includes the policy ID. Note: starting from SAM 12.0 R1, SAM no longer raise this alarm since it is not much useful but has performance issue.		
Remedial action: A configuration error has occurred which must be corrected. The VRP import policy must be created and distributed to the NE reporting the problem. Note: starting from SAM 12.0 R1, SAM no longer raises this alarm.		

Table 39-322 InBandManagementConnectionDown

Alarm	Attributes	Applicable major release
Name: InBandManagementConnectionDown (139) Type: communicationsAlarm Package: netw.InBandManagementConnectionDown Raised on class: netw.NodeDiscoveryControl	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: managementConnectionDown	Release: • N/A
Description: The alarm is raised when the 5620 SAM cannot reach a managed NE using the ping function over an in-band connection.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM		

Table 39-323 IncompatibleCapacity

Alarm	Attributes	Applicable major release
Name: IncompatibleCapacity (1166) Type: communicationsAlarm Package: equipment.IncompatibleCapacity Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompatibleCapacity	Release: • N/A

Table 39-323 IncompatibleCapacity (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when there is a radio capacity incompatibility.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 39-324 IncompatibleFrequency (mwa)

Alarm	Attributes	Applicable major release
Name: IncompatibleFrequency (683) Type: communicationsAlarm Package: mwa.IncompatibleFrequency Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IncompatibleFrequency	Release: • N/A
Description: The alarm is raised when a provisioned MPT frequency is incompatible with the MPT hardware.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-325 IncompatibleModulationParam (mwa)

Alarm	Attributes	Applicable major release
Name: IncompatibleModulationParam (1144) Type: communicationsAlarm Package: mwa.IncompatibleModulationParam Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IncompatibleModulationParam	Release: • N/A
Description: The alarm is raised when the provisioned modulation parameters are incompatible with the MPT hardware.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-326 IncompatibleProtection (mwa)

Alarm	Attributes	Applicable major release
Name: IncompatibleProtection (4824) Type: communicationsAlarm Package: mwa.IncompatibleProtection Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IncompatibleProtection	Release: • N/A
Description: The alarm is raised when a incompatible protection scheme is selected.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-327 IncompatibleShifter (mwa)

Alarm	Attributes	Applicable major release
Name: IncompatibleShifter (685) Type: communicationsAlarm Package: mwa.IncompatibleShifter Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: Incompatibleshifter	Release: • N/A
Description: The alarm is raised when the provisioned MPT shifter parameters are incompatible with the MPT hardware.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-328 IncompatibleTxPower

Alarm	Attributes	Applicable major release
Name: IncompatibleTxPower (4825) Type: communicationsAlarm Package: mwa.IncompatibleTxPower Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IncompatibleTxPower	Release: • N/A
Description: The alarm is raised when the provisioned MPT transmit power is incompatible with the MPT hardware.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-329 IncompleteConfig (lag)

Alarm	Attributes	Applicable major release
Name: IncompleteConfig (294) Type: configurationAlarm Package: lag.IncompleteConfig Raised on class: lag.MultiChassisLag	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompleteConfig	Release: • N/A
Description: The alarm is raised when an MC LAG has fewer than two members.		
Raising condition: ('numberOfMembers' NOT EQUAL '2')		
Clearing condition: ('numberOfMembers' EQUAL '2')		
Remedial action: Configure the missing peered object.		

Table 39-330 IncompleteConfig (rmon)

Alarm	Attributes	Applicable major release
Name: IncompleteConfig (294) Type: configurationAlarm Package: rmon.IncompleteConfig Raised on classes: • rmon.Alarm • rmon.Event	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompleteConfig	Release: • N/A
Description: The alarm is raised when an object is created with default values but not yet made active.		
Raising condition: ('Status' EQUAL 'Under Creation')		
Clearing condition: ('Status' NOT EQUAL 'Under Creation')		
Remedial action: The object is created with default values but not yet made active. Please activate.		

Table 39-331 IncompleteConfig (bundle)

Alarm	Attributes	Applicable major release
Name: IncompleteConfig (294) Type: configurationAlarm Package: bundle.IncompleteConfig Raised on class: bundle.MultiChassisApsInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompleteConfig	Release: • N/A
Description: The alarm is raised when there are not exactly two APS bundles in an APS group.		
Raising condition: (('Number of members' NOT EQUAL '2'))		
Clearing condition: (('Number of members' EQUAL '2'))		
Remedial action: Configure the missing peered object.		

Table 39-332 InconsistenciesOnNode

Alarm	Attributes	Applicable major release
Name: InconsistenciesOnNode (1077) Type: integrityViolation Package: netw.InconsistenciesOnNode Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: inconsistenciesOnNode	Release: • N/A
Description: The alarm is raised when a device detects one or more configuration inconsistencies. On a 9500 MPR, this can be caused by cross-connect creation failure during service creation.		
Remedial action: Please click on the clear inconsistencies button from the NE properties GUI form to clear the inconsistencies.		

Table 39-333 InstallDirectoryDiskSpaceBelowThreshold

Alarm	Attributes	Applicable major release
Name: InstallDirectoryDiskSpaceBelowThreshold (612) Type: databaseAlarm Package: db.InstallDirectoryDiskSpaceBelowThreshold Raised on class: db.DatabaseManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: diskSpaceIssue	Release: • N/A
Description: The alarm is raised when the primary or standalone database installation disk space threshold specified in the nms-server.xml file is reached.		
Remedial action: The Oracle Proxy purges the log based on database file policy configuration. Reducing the number of archives to keep and/or size of the log files or increasing the available disk space will resolve the problem. If alarm persists please contact your Nokia support representative for assistance.		

Table 39-334 InstanceIdMismatch

Alarm	Attributes	Applicable major release
Name: InstanceIdMismatch (416) Type: configurationAlarm Package: srrp.InstanceIdMismatch Raised on class: srrp.Instance	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: instanceIdMismatch	Release: • N/A
Description: The alarm is raised when a local SRRP SAP is backed up by a different SRRP instance on a remote peer.		
Remedial action: Reconfigure the instance so that the peer SRRP instances have the same ID.		

Table 39-335 InterCompoundLinkDown

Alarm	Attributes	Applicable major release
Name: InterCompoundLinkDown (9015) Type: communicationsAlarm Package: optical.InterCompoundLinkDown Raised on class: optical.OpticalLink	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OperationalStateDown	Release: • N/A
Description: The alarm is raised when any end point of the inter-compound Optical Link is operationally down.		
Remedial action: Informational - If the alarm persists or is occurring frequently then investigation is required by looking at the active alarms on the Link End points to understand why the underlying transport network is unreliable.		

Table 39-336 InterfaceDbDescriptAuthFailure

Alarm	Attributes	Applicable major release
Name: InterfaceDbDescriptAuthFailure (46) Type: authenticationAlarm Package: ospf.InterfaceDbDescriptAuthFailure Raised on class: ospf.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: authTypeMismatch Applicable probable causes: • authTypeMismatch • authFailure	Release: • N/A
Description: The alarm is raised when an NE receives a dbDescript packet on a non-virtual interface from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a dbDescript packet has been received on a non-virtual interface from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 39-337 InterfaceDbDescriptConfig

Alarm	Attributes	Applicable major release
Name: InterfaceDbDescriptConfig (40) Type: configurationAlarm Package: ospf.InterfaceDbDescriptConfig Raised on class: ospf.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: badVersion Applicable probable causes: • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifTypeMismatch • nullRouterId • ifAdminDown • ifPassive • subnetMismatch	Release: • N/A
Description: The alarm is raised when an NE receives a dbDescript packet on a non-virtual interface from an NE whose configuration parameters conflict with the local NE configuration parameters.		

Table 39-337 InterfaceDbDescriptConfig (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational - The alarm signifies that a dbDescript packet has been received on a non-virtual interface from the network whose configuration parameters conflict with the local NE's configurations.		

Table 39-338 InterfaceHelloAuthFailure

Alarm	Attributes	Applicable major release
Name: InterfaceHelloAuthFailure (45) Type: authenticationAlarm Package: ospf.InterfaceHelloAuthFailure Raised on class: ospf.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: authTypeMismatch Applicable probable causes: • authTypeMismatch • authFailure	Release: • N/A
Description: The alarm is raised when an NE receives a hello packet on a non-virtual interface from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a hello packet has been received on a non-virtual interface from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 39-339 InterfaceHelloConfig

Alarm	Attributes	Applicable major release
Name: InterfaceHelloConfig (39) Type: configurationAlarm Package: ospf.InterfaceHelloConfig Raised on class: ospf.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: badVersion Applicable probable causes: • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifTypeMismatch • nullRouterId • ifAdminDown • ifPassive • subnetMismatch	Release: • N/A
Description: The alarm is raised when an NE receives a hello packet on a non-virtual interface from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a hello packet has been received on a non-virtual interface from the network whose configuration parameters conflict with the local NE's configurations.		

Table 39-340 InterfaceLsAckAuthFailure

Alarm	Attributes	Applicable major release
Name: InterfaceLsAckAuthFailure (49) Type: authenticationAlarm Package: ospf.InterfaceLsAckAuthFailure Raised on class: ospf.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: authTypeMismatch Applicable probable causes: • authTypeMismatch • authFailure	Release: • N/A
Description: The alarm is raised when an NE receives an lsAck packet on a non-virtual interface from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		

Table 39-340 InterfaceLsAckAuthFailure (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational - The alarm signifies that a lsAck packet has been received on a non-virtual interface from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 39-341 InterfaceLsAckConfig

Alarm	Attributes	Applicable major release
Name: InterfaceLsAckConfig (43) Type: configurationAlarm Package: ospf.InterfaceLsAckConfig Raised on class: ospf.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: badVersion Applicable probable causes: • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifTypeMismatch • nullRouterId • ifAdminDown • ifPassive • subnetMismatch	Release: • N/A
Description: The alarm is raised when an NE receives an lsAck packet on a non-virtual interface from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a lsAck packet has been received on a non-virtual interface from the network whose configuration parameters conflict with the local NE's configurations.		

Table 39-342 InterfaceLsReqAuthFailure

Alarm	Attributes	Applicable major release
Name: InterfaceLsReqAuthFailure (47) Type: authenticationAlarm Package: ospf.InterfaceLsReqAuthFailure Raised on class: ospf.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: authTypeMismatch Applicable probable causes: • authTypeMismatch • authFailure	Release: • N/A
Description: The alarm is raised when an NE receives an lsReq packet on a non-virtual interface from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a lsReq packet has been received on a non-virtual interface from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 39-343 InterfaceLsReqConfig

Alarm	Attributes	Applicable major release
Name: InterfaceLsReqConfig (41) Type: configurationAlarm Package: ospf.InterfaceLsReqConfig Raised on class: ospf.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: badVersion Applicable probable causes: • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifTypeMismatch • nullRouterId • ifAdminDown • ifPassive • subnetMismatch	Release: • N/A
Description: The alarm is raised when an NE receives an lsReq packet on a non-virtual interface from an NE whose configuration parameters conflict with the local NE configuration parameters.		

Table 39-343 InterfaceLsReqConfig (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational - The alarm signifies that a lsReq packet has been received on a non-virtual interface from the network whose configuration parameters conflict with the local NE's configurations.		

Table 39-344 InterfaceLsUpdateAuthFailure

Alarm	Attributes	Applicable major release
Name: InterfaceLsUpdateAuthFailure (48) Type: authenticationAlarm Package: ospf.InterfaceLsUpdateAuthFailure Raised on class: ospf.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: authTypeMismatch Applicable probable causes: • authTypeMismatch • authFailure	Release: • N/A
Description: The alarm is raised when an NE receives an lsUpdate packet on a non-virtual interface from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a lsUpdate packet has been received on a non-virtual interface from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 39-345 InterfaceLsUpdateConfig

Alarm	Attributes	Applicable major release
Name: InterfaceLsUpdateConfig (42) Type: configurationAlarm Package: ospf.InterfaceLsUpdateConfig Raised on class: ospf.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: badVersion Applicable probable causes: • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifTypeMismatch • nullRouterId • ifAdminDown • ifPassive • subnetMismatch	Release: • N/A
Description: The alarm is raised when an NE receives an lsUpdate packet on a non-virtual interface from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a lsUpdate packet has been received on a non-virtual interface from the network whose configuration parameters conflict with the local NE's configurations.		

Table 39-346 InterfaceNullPacketAuthFailure

Alarm	Attributes	Applicable major release
Name: InterfaceNullPacketAuthFailure (50) Type: authenticationAlarm Package: ospf.InterfaceNullPacketAuthFailure Raised on class: ospf.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: authTypeMismatch Applicable probable causes: • authTypeMismatch • authFailure	Release: • N/A
Description: The alarm is raised when an NE receives a null packet on a non-virtual interface from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		

Table 39-346 InterfaceNullPacketAuthFailure (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational - The alarm signifies that a null packet has been received on a non-virtual interface from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 39-347 InterfaceNullPacketConfig

Alarm	Attributes	Applicable major release
Name: InterfaceNullPacketConfig (44) Type: configurationAlarm Package: ospf.InterfaceNullPacketConfig Raised on class: ospf.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: badVersion Applicable probable causes: • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifTypeMismatch • nullRouterId • ifAdminDown • ifPassive • subnetMismatch	Release: • N/A
Description: The alarm is raised when an NE receives a null packet on a non-virtual interface from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a null packet has been received on a non-virtual interface from the network whose configuration parameters conflict with the local NE's configurations.		

Table 39-348 InterfaceRxBadPacket

Alarm	Attributes	Applicable major release
Name: InterfaceRxBadPacket (51) Type: communicationsAlarm Package: ospf.InterfaceRxBadPacket Raised on class: ospf.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: hello Applicable probable causes: • hello • dbDescript • lsReq • lsUpdate • lsAck • nullPacket	Release: • N/A
Description: The alarm is raised when an NE cannot parse an OSPF packet that it receives on a non-virtual interface.		
Remedial action: Informational - an NE cannot parse an OSPF packet that it receives on a non-virtual interface.		

Table 39-349 InternalLinkDown

Alarm	Attributes	Applicable major release
Name: InternalLinkDown (9016) Type: communicationsAlarm Package: optical.InternalLinkDown Raised on class: optical.OpticalLink	Severity: cleared Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OperationalStateDown	Release: • N/A
Description: The alarm is raised when any end point of the internal Optical Link is operationally down.		
Remedial action: Informational - If the alarm persists or is occurring frequently then investigation is required by looking at the active alarms on the Link End points to understand why the underlying transport network is unreliable.		

Table 39-350 InterRedundantMPTCommunicationFailure

Alarm	Attributes	Applicable major release
Name: InterRedundantMPTCommunicationFailure (4826) Type: communicationsAlarm Package: mwa.InterRedundantMPTCommunicationFailure Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: InternalCommunicationProblem	Release: • N/A
Description: The alarm is raised when a MPT detects a Inter Redundant MPTs Communication Failure		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-351 InterXPolarizedMPTCommunicationFailure

Alarm	Attributes	Applicable major release
Name: InterXPolarizedMPTCommunicationFailure (4827) Type: communicationsAlarm Package: mwa.InterXPolarizedMPTCommunicationFailure Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: InternalCommunicationProblem	Release: • N/A
Description: The alarm is raised when a MPT detects a Inter X-Polarized MPTs Communication Failure		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-352 InvalidBOFAddress

Alarm	Attributes	Applicable major release
Name: InvalidBOFAddress (1141) Type: communicationsAlarm Package: netw.InvalidBOFAddress Raised on class: netw.NodeDiscoveryControl	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: invalidBOF	Release: • N/A
Description: The alarm is raised during a network topology rescan in which the 5620 SAM does not find a previously configured NE BOF address, and the Management IP Selection of the NE is set to one of the following: - Out Of Band Preferred - In Band Preferred		
Remedial action: A configuration error has been made which must be corrected. The BOF address must be configured on the NE.		

Table 39-353 invalidHDMVersion

Alarm	Attributes	Applicable major release
Name: invalidHDMVersion (12418) Type: equipmentAlarm Package: femto.invalidHDMVersion Raised on class: femto.HDMCluster	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: invalidHDMVersion	Release: • N/A
Description: Invalid HDM Version 4.1.x		
Remedial action: HDM Version 4.1.x is not supported. Configure HDM 5.0.3 or later version.		

Table 39-354 InvalidJoinPrune

Alarm	Attributes	Applicable major release
Name: InvalidJoinPrune (185) Type: communicationsAlarm Package: pim.InvalidJoinPrune Raised on class: pim.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: InvalidJoinPruneReceived	Release: • N/A

Table 39-354 InvalidJoinPrune (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the RP address in a Join Prune message is not the RP for the group specified in the message.		
Remedial action: Informational - please make sure the RP address in a Join Prune message is the RP for the group specified		

Table 39-355 InvalidRegister

Alarm	Attributes	Applicable major release
Name: InvalidRegister (186) Type: communicationsAlarm Package: pim.InvalidRegister Raised on class: pim.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: InvalidJoinRegisterReceived	Release: • N/A
Description: The alarm is raised when the RP address in a Register message is not the RP for the group specified in the message.		
Remedial action: Informational - please make sure the RP address in a Register message is the RP for the group specified		

Table 39-356 invalidRPLoopbackInterfaceConfig

Alarm	Attributes	Applicable major release
Name: invalidRPLoopbackInterfaceConfig (269) Type: configurationAlarm Package: pim.invalidRPLoopbackInterfaceConfig Raised on class: pim.VirtualAnyCastRP	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: invalidRPLoopbackIfConfig	Release: • N/A
Description: The alarm is raised when an RP loopback interface configuration is invalid.		
Remedial action: A configuration error has occurred that must be corrected. Please check the global Virtual Anycast RP configuration and its operational status flag so that the loopback is properly configured, PIM is enabled on the loopback interface.		

Table 39-357 IOReadFileFromDisk

Alarm	Attributes	Applicable major release
Name: IOReadFileFromDisk (5136) Type: serverAlarm Package: server.IOReadFileFromDisk Raised on class: server.SamServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: diskProblem	Release: • N/A
Description: The alarm is raised when SAM cannot read a file from disk.		
Remedial action: Check the additional text of the alarm for more details. Possible causes are insufficient file permissions, disk corruption or general disk hardware failure. The additional text will provide guidance as to the specifics of the problem.		

Table 39-358 IOWriteFileToDisk

Alarm	Attributes	Applicable major release
Name: IOWriteFileToDisk (5137) Type: serverAlarm Package: server.IOWriteFileToDisk Raised on class: server.SamServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: diskProblem	Release: • N/A
Description: The alarm is raised when SAM cannot write a file to disk.		
Remedial action: Check the additional text of the alarm for more details. Possible causes are lack of disk space, insufficient file permissions, disk corruption or or general disk hardware failure. The additional text will provide guidance as to the specifics of the problem.		

Table 39-359 IpAddressManaged

Alarm	Attributes	Applicable major release
Name: IpAddressManaged (4388) Type: IpAddressManaged Package: ptp.IpAddressManaged Raised on class: ptp.SourceEntryPoint	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: IpAddressManaged	Release: • N/A
Description: The alarm is raised when unmanaged IP address becomes managed virtual router IP address.		
Remedial action: The source entry point unmanaged IP address becomes managed virtual router IP address. Please re-configure source entry point.		

Table 39-360 IpAddressOverlap

Alarm	Attributes	Applicable major release
Name: IpAddressOverlap (3318) Type: configurationAlarm Package: rtr.IpAddressOverlap Raised on class: rtr.VirtualRouterIpAddress	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IpAddressOverlap	Release: • N/A
Description: The alarm is raised when the IP addresses configured on different VPRN sites within service overlap.		
Remedial action: Please check the IP Addresses configured on different VPRN sites have no overlap.		

Table 39-361 IPListMismatch

Alarm	Attributes	Applicable major release
Name: IPListMismatch (282) Type: configurationAlarm Package: vrrp.IPListMismatch Raised on class: vrrp.AbstractInstance	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nonMatchingBackupAddress-List	Release: • N/A

Table 39-361 IPListMismatch (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the IP address list in an advertisement message from the current master does not match the configured IP address list.		
Remedial action: Check the configured IP addresses, make sure they match the advertised IP addresses from the master VRRP instance.		

Table 39-362 IpPathDown

Alarm	Attributes	Applicable major release
Name: IpPathDown (1916) Type: topologyAlarm Package: monpath.IpPathDown Raised on class: monpath.MonitoredIpPath	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ipPathDown	Release: • N/A
Description: This alarm is raised when the re-calculation by the CPAA shows that no IP Path is available.		
Remedial action: Informational - The IP path record provides an Error code which provides a clue on why the path is down.		

Table 39-363 IpPathMonitorFailedRetryThresholdCrossed

Alarm	Attributes	Applicable major release
Name: IpPathMonitorFailedRetryThresholdCrossed (400) Type: topologyAlarm Package: monpath.IpPathMonitorFailedRetryThresholdCrossed Raised on class: monpath.MonitoredIpPath	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ipPathCouldNotBeDetermined	Release: • N/A
Description: The alarm is raised when the 5650 CPAM cannot set up an IP path monitor after the number of attempts specified by the cpamManagedRoute problematicThresholdAlarmAfter value in the nms-server.xml file. The alarm is raised if the cpamManagedRoute problematicRetryStrategy value in nms-server.xml is set to countdown. The default problematicRetryStrategy value of reactive prevents the alarm from being raised.		
Remedial action: Informational - The Retry strategy can be modified in nms-server.xml. This alarm is not raised for the default retry strategy, reactive.		

Table 39-364 IpPathMonitorRetryAttemptsExhausted

Alarm	Attributes	Applicable major release
Name: IpPathMonitorRetryAttemptsExhausted (401) Type: topologyAlarm Package: monpath.IpPathMonitorRetryAttemptsExhausted Raised on class: monpath.MonitoredIpPath	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ipPathCouldNotBeDetermined	Release: • N/A

Table 39-364 IpPathMonitorRetryAttemptsExhausted (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the 5650 CPAM stops trying to set up an IP path monitor after the number of attempts specified by the cpamManagedRoute problematicDeadAfter value in the nms-server.xml file. The alarm is raised if the cpamManagedRoute problematicRetryStrategy value in nms-server.xml is set to countdown. The default problematicRetryStrategy value of reactive prevents the alarm from being raised.		
Remedial action: Informational - The Retry strategy can be modified in nms-server.xml. This alarm is not raised for the default retry strategy, reactive.		

Table 39-365 IpPathMulticastWarning

Alarm	Attributes	Applicable major release
Name: IpPathMulticastWarning (1917) Type: topologyAlarm Package: monpath.IpPathMulticastWarning Raised on class: monpath.MonitoredIpPath	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IpPathSegmentNotMulticas-tEnabled	Release: • N/A
Description: If IP Path is enabled for monitoring Multicast, the alarm is raised when at least one IP Path segment is not Multicast enabled. The alarm is cleared when all the segments are Multicast enabled.		
Remedial action: Informational - The segments without PIM interface enabled can be obtained from path record. PIM should be enabled on these interfaces in order for alarm to be cleared.		

Table 39-366 IPsecInterfaceBfdSessionDown

Alarm	Attributes	Applicable major release
Name: IPsecInterfaceBfdSessionDown (3324) Type: bfdSessionAlarm Package: service.IPsecInterfaceBfdSessionDown Raised on class: service.IPsecInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bfdSessionDown	Release: • N/A
Description: The alarm is raised when a BFD session is operationally down.		
Remedial action: This alarm is raised when a BFD session on an IPsec interface goes down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 39-367 IPsecInterfaceBfdSessionFlapped

Alarm	Attributes	Applicable major release
Name: IPsecInterfaceBfdSessionFlapped (3905) Type: bfdSessionAlarm Package: service.IPsecInterfaceBfdSessionFlapped Raised on class: service.IPsecInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bfdSessionFlapped	Release: • N/A
Description: The alarm is raised when a BFD session transitions from Up to Down and back to Up within the BFD operational state transition interval.		
Remedial action: The BFD session on an IPsec interface has transitioned from Up to Down and back to Up within the configured BFD Flapping Interval.		

Table 39-368 IPsecInterfaceBfdSessionMissing

Alarm	Attributes	Applicable major release
Name: IPsecInterfaceBfdSessionMissing (3325) Type: bfdSessionAlarm Package: service.IPsecInterfaceBfdSessionMissing Raised on class: service.IPsecInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bfdSessionMissing	Release: • N/A
Description: The alarm is raised when a previously present BFD session is absent.		
Remedial action: This alarm is raised when a previously present BFD session on an IPsec interface is absent. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the near end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 39-369 IPSecRUSAFailToAddRoute

Alarm	Attributes	Applicable major release
Name: IPSecRUSAFailToAddRoute (5185) Type: processingErrorAlarm Package: ipsec.IPSecRUSAFailToAddRoute Raised on class: ipsec.IPSecSecuredVpnManager	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: IPSecRUSAFailToAddRoute	Release: • N/A
Description: The trap tIPsecRUSAFailToAddRoute is sent when adding route to tIPsecRUSARemAddr for the remote-user tunnel fails with reason indicated by tIPsecNotifReason.		
Remedial action: Informational - Please see reason for failure.		

Table 39-370 IPsecRUTnlFailToCreate

Alarm	Attributes	Applicable major release
Name: IPsecRUTnlFailToCreate (5186) Type: processingErrorAlarm Package: ipsec.IPsecRUTnlFailToCreate Raised on class: ipsec.IPSecGateway	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: IPsecRUTnlFailToCreate	Release: • N/A
Description: This alarm is sent when creation of a remote-user tunnel fails with reason indicated by notifReason.		
Remedial action: Informational - Please see reason for failure.		

Table 39-371 IPsecRUTnlRemoved

Alarm	Attributes	Applicable major release
Name: IPsecRUTnlRemoved (9611) Type: processingErrorAlarm Package: ipsec.IPsecRUTnlRemoved Raised on class: ipsec.IPSecGateway	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: IPsecRUTnlRemoved	Release: • N/A
Description: This alarm is sent when creation of a remote-user tunnel is removed under certain reasons, which are indicated by notifReason (e.g., failed to renew private address lease with DHCP server)		
Remedial action: Informational - Please see reason for failure.		

Table 39-372 IsaAaGrpBitRate

Alarm	Attributes	Applicable major release
Name: IsaAaGrpBitRate (2948) Type: equipmentAlarm Package: isa.IsaAaGrpBitRate Raised on class: isa.AaGroup	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: isaAaGrpBitRate	Release: • N/A
Description: The alarm is raised when the current bit rate on the MDA in the ISA-AA group is greater than or equal to tmnxBsxBitRate-HighWatermark, and the prior bit rate is less than the threshold.		
Remedial action: The current bit rate on the MDA in the ISA-AA group is greater than or equal to the configured Bit Rate High Watermark. The threshold configured should be revisited to ensure that it is not set too low. To disable the notification, set the Packet Rate High Watermark to maximum.		

Table 39-373 IsaAaGrpCapCostThres

Alarm	Attributes	Applicable major release
Name: IsaAaGrpCapCostThres (835) Type: equipmentAlarm Package: isa.IsaAaGrpCapCostThres Raised on class: isa.AaGroupMember	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: IsaAaGrpCapCostThres	Release: • N/A

Table 39-373 IsaAaGrpCapCostThres (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the capacity cost for an MDA in an ISA-AA group reaches the configured threshold.		
Remedial action: The capacity cost high threshold for the MDA in the ISA-AA group has been reached.		

Table 39-374 IsaAaGrpFailure

Alarm	Attributes	Applicable major release
Name: IsaAaGrpFailure (564) Type: equipmentAlarm Package: isa.IsaAaGrpFailure Raised on class: isa.AaGroup	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: isaAaGrpFailure	Release: • N/A
Description: The alarm is raised when an ISA-AA Group has no configured primary MDA or the number of active MDAs is not equal to the number of configured primary MDAs.		
Remedial action: There is a failure on the ISA-AA group. Ensure that ISA-AA group has a primary MDA group member configured, and that the number of active MDAs is equal to the number of configured primary MDAs.		

Table 39-375 IsaAaGrpFlowFull

Alarm	Attributes	Applicable major release
Name: IsaAaGrpFlowFull (566) Type: equipmentAlarm Package: isa.IsaAaGrpFlowFull Raised on class: isa.AaGroup	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: isaAaGrpFlowFull	Release: • N/A
Description: The alarm is raised when an ISA-AA group uses a greater number of flow records than the value specified by tmnxBsxFlowFullHighWatermark.		
Remedial action: The number of flow records that the ISA-AA group is using is greater than or equal to the configured Flow Full High Watermark. The threshold configured should be revisited to ensure that it is not set too low.		

Table 39-376 IsaAaGrpFlowSetup

Alarm	Attributes	Applicable major release
Name: IsaAaGrpFlowSetup (2949) Type: equipmentAlarm Package: isa.IsaAaGrpFlowSetup Raised on class: isa.AaGroup	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: isaAaGrpFlowSetup	Release: • N/A
Description: The alarm is raised when the current flow setup rate on the MDA in the ISA-AA group is greater than or equal to tmnxBsxFlowSetupHighWatermark, and the prior bit rate is less than the threshold.		

Table 39-376 IsaAaGrpFlowSetup (continued)

Alarm	Attributes	Applicable major release
Remedial action: The current flow setup rate on the MDA in the ISA-AA group is greater than or equal to the configured Flow Setup High Watermark. The threshold configured should be revisited to ensure that it is not set too low. To disable the notification, set the Flow Setup High Watermark to maximum.		

Table 39-377 IsaAaGrpFmSbWaSBufOvld

Alarm	Attributes	Applicable major release
Name: IsaAaGrpFmSbWaSBufOvld (2950) Type: equipmentAlarm Package: isa.IsaAaGrpFmSbWaSBufOvld Raised on class: isa.AaGroupMember	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IsaAaGrpFmSbWaSBufOvld	Release: • N/A
Description: The alarm is raised when the current weighted average shared buffer for an ISA in the from subscriber direction is greater than or equal to a high water mark in a normal, non-overloaded, state.		
Remedial action: The ISA-AA Egress From-Subscriber buffer pool has entered an overload state as determined by the configured Buffer Utilization High Watermark. The threshold configured should be revisited to ensure it is not set too low. To disable the notification, set the Buffer Utilization High Watermark to the maximum.		

Table 39-378 IsaAaGrpNonRedundant

Alarm	Attributes	Applicable major release
Name: IsaAaGrpNonRedundant (565) Type: equipmentAlarm Package: isa.IsaAaGrpNonRedundant Raised on class: isa.AaGroup	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: isaAaGrpNonRedundant	Release: • N/A
Description: The alarm is raised when an ISA-AA Group has a configured backup MDA but there is no standby MDA available.		
Remedial action: The ISA-AA Group has a configured backup MDA but there is no standby MDA available. Check that the configured standby MDA is active and operationally up. There may be a fault with the ISA Application Assurance MDA.		

Table 39-379 IsaAaGrpOvrldCutthru

Alarm	Attributes	Applicable major release
Name: IsaAaGrpOvrldCutthru (2951) Type: equipmentAlarm Package: isa.IsaAaGrpOvrldCutthru Raised on class: isa.AaGroupMember	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IsaAaGrpOvrldCutthru	Release: • N/A
Description: The alarm is raised when cut through processing starts on an ISA MDA.		
Remedial action: Overload Cut-Through is enabled on the ISA-AA Group. All traffic is cut-through and the ISA-AA MDA is overloaded. Disable Overload Cut-Through if this is not required.		

Table 39-380 IsaAaGrpPacketRate

Alarm	Attributes	Applicable major release
Name: IsaAaGrpPacketRate (2952) Type: equipmentAlarm Package: isa.IsaAaGrpPacketRate Raised on class: isa.AaGroup	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: isaAaGrpPacketRate	Release: • N/A
Description: The alarm is raised when the current packet rate on the MDA in the ISA-AA group is greater than or equal to tmnxBsxPacketRateHighWatermark, and the prior rate is less than this threshold.		
Remedial action: The current packet rate on the MDA in the ISA-AA group is greater than or equal to the configured Packet Rate High Watermark. The threshold configured should be revisited to ensure that it is not set too low. To disable the notification, set the Packet Rate High Watermark to maximum.		

Table 39-381 IsaAaGrpSwitchover

Alarm	Attributes	Applicable major release
Name: IsaAaGrpSwitchover (567) Type: equipmentAlarm Package: isa.IsaAaGrpSwitchover Raised on class: isa.AaGroup	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: isaAaGrpSwitchover	Release: • N/A
Description: The alarm is raised when an ISA-AA group experiences an activity switch from one ISA-AA to another.		
Remedial action: The ISA-AA Group has performed an activity switch from one ISA-AA MDA to another.		

Table 39-382 IsaAaGrpToSbWaSBufOvld

Alarm	Attributes	Applicable major release
Name: IsaAaGrpToSbWaSBufOvld (2953) Type: equipmentAlarm Package: isa.IsaAaGrpToSbWaSBufOvld Raised on class: isa.AaGroupMember	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IsaAaGrpToSbWaSBufOvld	Release: • N/A
Description: The alarm is raised when the current weighted average shared buffer use for an ISA in the To subscriber direction, is greater than or equal to a high water mark, after being in a normal or non-overloaded state.		
Remedial action: The ISA-AA Egress To-Subscriber buffer pool has entered an overload state as determined by the configured Buffer Utilization High Watermark. The threshold configured should be revisited to ensure it is not set too low. To disable the notification, set the Buffer Utilization High Watermark to the maximum.		

Table 39-383 IsaDatapathCpuUsage

Alarm	Attributes	Applicable major release
Name: IsaDatapathCpuUsage (11174) Type: equipmentAlarm Package: isa.IsaDatapathCpuUsage Raised on class: isa.AaGroup	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: isaDatapathCpuUsage	Release: • N/A
Description: The alarm is raised when the current datapath CPU usage on the MDA in the ISA-AA group is greater than or equal to the tmnxBsxDatapathCpuHighWatermark and the prior usage was less than this threshold.		
Remedial action: The current datapath CPU usage on the MDA in the ISA-AA group is greater than or equal to the configured Datapath CPU Usage High Watermark. The threshold configured should be revisited to ensure that it is not set too low. To disable the notification, set the Datapath CPU Usage High Watermark to maximum.		

Table 39-384 IsidMisconfiguration (vpls)

Alarm	Attributes	Applicable major release
Name: IsidMisconfiguration (592) Type: configurationAlarm Package: vpls.IsidMisconfiguration Raised on class: vpls.AbstractVpls	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: isidInconsistent	Release: • N/A
Description: The alarm is raised when service sites use inconsistent I-SID values for a PBB backbone. The alarm is raised against a VPLS or M-VPLS service.		
Raising condition: ('operationalFlags'anyBit'ISID Inconsistent')		
Clearing condition: NOT (('operationalFlags'anyBit'ISID Inconsistent'))		
Remedial action: All service sites must use consistent I-SID values for a PBB backbone.		

Table 39-385 IsidMisconfiguration (epipe)

Alarm	Attributes	Applicable major release
Name: IsidMisconfiguration (592) Type: configurationAlarm Package: epipe.IsidMisconfiguration Raised on class: epipe.Epipe	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: isidInconsistent	Release: • N/A
Description: The alarm is raised when Epipe service sites that are bound to a PBB backbone use different ISID values.		
Raising condition: ('operationalFlags'anyBit'ISID Inconsistent')		
Clearing condition: NOT (('operationalFlags'anyBit'ISID Inconsistent'))		
Remedial action: All service sites must use consistent I-SID values for a PBB backbone.		

Table 39-386 IsisAreaMismatch

Alarm	Attributes	Applicable major release
Name: IsisAreaMismatch (156) Type: configurationAlarm Package: isis.IsisAreaMismatch Raised on class: isis.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: areaTypeMisconfigured	Release: • N/A
Description: The alarm is raised when IS-IS receives a Hello PDU from an IS with which it does not share an area address.		
Remedial action: Check whether NET address is configured and the AREA ID between two adjacencies are not the same.		

Table 39-387 IsisAuthFailure

Alarm	Attributes	Applicable major release
Name: IsisAuthFailure (155) Type: authenticationAlarm Package: isis.IsisAuthFailure Raised on class: isis.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: authFailure	Release: • N/A
Description: The alarm is raised when IS-IS receives a PDU that contains incorrect authentication information.		
Remedial action: The authentication information on the ISIS Site needs to be changed to match its neighbours.		

Table 39-388 IsisAuthTypeFailure

Alarm	Attributes	Applicable major release
Name: IsisAuthTypeFailure (154) Type: authenticationAlarm Package: isis.IsisAuthTypeFailure Raised on class: isis.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: authFailure	Release: • N/A
Description: The alarm is raised when IS-IS receives a PDU that contains the wrong authentication type.		
Remedial action: The authentication information on the ISIS Site needs to be changed to match its neighbours.		

Table 39-389 IsisExportLimitDropped

Alarm	Attributes	Applicable major release
Name: IsisExportLimitDropped (838) Type: configurationAlarm Package: isis.IsisExportLimitDropped Raised on class: isis.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: exportLimitDropped	Release: • N/A
Description: The alarm is raised when the number of routes exported from the route table to an IS-IS level drops below the Export Limit value for the level.		
Remedial action: Informational.		

Table 39-390 IsisExportLimitReached

Alarm	Attributes	Applicable major release
Name: IsisExportLimitReached (839) Type: configurationAlarm Package: isis.IsisExportLimitReached Raised on class: isis.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: exportLimitReached	Release: • N/A
Description: The alarm is raised when the number of routes exported from the route table to an IS-IS level is equal to the Export Limit value for the level.		
Remedial action: Informational - the number of routes exported from the route table to an IS-IS level is equal to the Export Limit value for the level		

Table 39-391 IsisExportLimitWarning

Alarm	Attributes	Applicable major release
Name: IsisExportLimitWarning (840) Type: configurationAlarm Package: isis.IsisExportLimitWarning Raised on class: isis.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: exportLimitWarning	Release: • N/A
Description: The alarm is raised when the number of routes exported from the route table to an IS-IS level is equal to the Export Limit percentage specified by the Export Limit Log Percent value.		
Remedial action: Informational - the number of routes exported from the route table to an IS-IS level is equal to the Export Limit percentage specified by the Export Limit Log Percent value.		

Table 39-392 IsisLspRateThresholdExceeded

Alarm	Attributes	Applicable major release
Name: IsisLspRateThresholdExceeded (376) Type: topologyAlarm Package: topology.IsisLspRateThresholdExceeded Raised on class: topology.Cpaa	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unstableIGPNetwork	Release: • N/A
Description: The alarm is raised when the IS-IS LSP rate exceeds the maximum allowed value because of an unstable IGP network.		
Remedial action: User configured alarm for monitoring purpose. IGP historical map can be used for debugging purpose.		

Table 39-393 IsisLspThresholdExceeded

Alarm	Attributes	Applicable major release
Name: IsisLspThresholdExceeded (375) Type: topologyAlarm Package: topology.IsisLspThresholdExceeded Raised on class: topology.Cpaa	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: largeIGPNetwork	Release: • N/A

Table 39-393 IsisLspThresholdExceeded (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the number of IS-IS LSPs exceeds the maximum allowed value because of a large IGP network.		
Remedial action: User configured alarm for monitoring purpose. IGP historical map can be used for debugging purpose.		

Table 39-394 IsisManualAddressDrops

Alarm	Attributes	Applicable major release
Name: IsisManualAddressDrops (157) Type: configurationAlarm Package: isis.IsisManualAddressDrops Raised on class: isis.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: noError	Release: • N/A
Description: The alarm is raised when a manual area address assigned to an IS is ignored during a route computation.		
Remedial action: Informational - no corrective action required.		

Table 39-395 IsisPrefixLimitWarning

Alarm	Attributes	Applicable major release
Name: IsisPrefixLimitWarning (9647) Type: configurationAlarm Package: isis.IsisPrefixLimitWarning Raised on class: isis.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: prefixLimitWarning	Release: • N/A
Description: The alarm is raised when number of prefixes in the system reaches the PrefixLimitThreshold or the PrefixLimit		
Remedial action: Increase the IS-IS prefix limit for this instance.		

Table 39-396 IsisReachabilityThresholdExceeded

Alarm	Attributes	Applicable major release
Name: IsisReachabilityThresholdExceeded (377) Type: topologyAlarm Package: topology.IsisReachabilityThresholdExceeded Raised on class: topology.Cpaa	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: manyExternalLSAsFloodingIn-toIGP	Release: • N/A
Description: The alarm is raised when the IS-IS reachability value exceeds the maximum allowed value because too many external LSAs are flooding the IGP.		
Remedial action: User configured alarm for monitoring purpose. The advertised routes can be viewed using CPAM IGP prefix list.		

Table 39-397 IsisRejectedAdjacency

Alarm	Attributes	Applicable major release
Name: IsisRejectedAdjacency (214) Type: adjacencyAlarm Package: isis.IsisRejectedAdjacency Raised on class: isis.Interface	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceMismatch	Release: • N/A
Description: The alarm is raised when the 5620 SAM receives a vRtrIsisRejectedAdjacency trap, which indicates that an adjacency cannot be established in response to a Hello PDU from an IS because of a lack of resources.		
Remedial action: Informational, might have exceeded the maximum number of adjacencies allowed.		

Table 39-398 IsisRejectedAdjacencySID

Alarm	Attributes	Applicable major release
Name: IsisRejectedAdjacencySID (9054) Type: configurationAlarm Package: isis.IsisRejectedAdjacencySID Raised on class: isis.Site	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: isisRejectedAdjacencySID	Release: • N/A
Description: The notification is sent when node do not establish an adjacency SID due to a lack of resources.		
Remedial action: Informational, When an operationally up interface is deleted, the ADJ-SID can be reused by any interface which is waiting to receive an ADJ-SID.		

Table 39-399 IsisSIDError

Alarm	Attributes	Applicable major release
Name: IsisSIDError (9055) Type: configurationAlarm Package: isis.IsisSIDError Raised on class: isis.Site	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: isisSIDError	Release: • N/A
Description: This notification is generated when ISIS receives an IOM or CPM failure (system exhausted ILM, NHLFE, duplicate SID) while resolving and programming a received prefix SID.		
Remedial action: In case of system exhaustion, the IGP instance goes into overload. The operator must manually clear the IGP overload condition after freeing resources. IGP will attempt to program at the next SPF all tunnels which previously failed the programming operation		

Table 39-400 IsisSIDNotInLabelRange

Alarm	Attributes	Applicable major release
Name: IsisSIDNotInLabelRange (9056) Type: configurationAlarm Package: isis.IsisSIDNotInLabelRange Raised on class: isis.Site	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: isisSIDNotInLabelRange	Release: • N/A
Description: This notification is generated when ISIS receives a SID which is not within the label range of the next hop router		
Remedial action: The SID range needs to be change to include adjacent SID received.		

Table 39-401 JMSClientMessagesRemoved

Alarm	Attributes	Applicable major release
Name: JMSClientMessagesRemoved (532) Type: communicationsAlarm Package: security.JMSClientMessagesRemoved Raised on class: security.User	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: maximumExceededMessages	Release: • N/A
Description: The alarm is raised when the number of JMS messages that are queued for a 5620 SAM client exceeds the allowed number. The 5620 SAM subsequently deletes messages to keep the number within the allowed range.		
Remedial action: Information - if the alarm persists or is occurring frequently then investigation is required to determine a) why the underlying transport network is unreliable or b) why the OSS client which initiated the JMS connection is unable to process the JMS messages.		

Table 39-402 JMSDurableClientReset

Alarm	Attributes	Applicable major release
Name: JMSDurableClientReset (530) Type: communicationsAlarm Package: security.JMSDurableClientReset Raised on class: security.User	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: jmsServerRestart	Release: • N/A
Description: The alarm is raised when a durable JMS client is removed from the 5620 SAM because of a JMS server restart or switchover.		
Remedial action: Informational - the JMS server has restarted. If the alarm persists contact your Nokia support representative for assistance.		

Table 39-403 JMSDurableClientUnsubscribed

Alarm	Attributes	Applicable major release
Name: JMSDurableClientUnsubscribed (531) Type: communicationsAlarm Package: security.JMSDurableClientUnsubscribed Raised on class: security.User	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: maximumExceededMessages	Release: • N/A
Description: The alarm is raised when a durable JMS client is unsubscribed and removed from the 5620 SAM.		
Remedial action: Informational - the durable message limit for the topic has been reached and disconnected clients are automatically unsubscribed. An investigation is required to understand a) why the underlying transport network is unreliable or b) why the OSS client which initiated the JMS connection is unable to process the JMS messages.		

Table 39-404 JMSServerDown

Alarm	Attributes	Applicable major release
Name: JMSServerDown (360) Type: communicationsAlarm Package: netw.JMSServerDown Raised on class: netw.NmsSystem	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: systemFailed	Release: • N/A
Description: The alarm is raised when JMS communication fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the SAM server and the OSS system is unreliable.		

Table 39-405 JMSServerMemoryLow

Alarm	Attributes	Applicable major release
Name: JMSServerMemoryLow (3693) Type: communicationsAlarm Package: security.JMSServerMemoryLow Raised on class: security.User	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: jmsMessageQueueBacklog	Release: • N/A
Description: The alarm is raised when available memory on the JMS server is low.		
Remedial action: This is probably caused by SAM GUI clients or OSS clients having a large backlog of events on the JMS server. If available memory continues to decrease, the client with the largest backlog will be removed by the server. Please see the Additional Text field to identify the client with the largest backlog. If the problem persists please contact your Nokia support representative for assistance.		

Table 39-406 KeyChainAuthFailure

Alarm	Attributes	Applicable major release
Name: KeyChainAuthFailure (421) Type: communicationsAlarm Package: security.KeyChainAuthFailure Raised on class: security.KeyChain	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: keyChainAuthFailure	Release: • N/A
Description: The alarm is raised when an incoming packet is dropped because of a TCP key chain authentication failure.		
Remedial action: A configuration error has been made which must be corrected. The TCP configuration related to authentication differs between the systems upon which the connection endpoints reside. Compare the configuration on the endpoint and correct the mismatch.		

Table 39-407 KPIThresholdCrossingAlarm

Alarm	Attributes	Applicable major release
Name: KPIThresholdCrossingAlarm (11190) Type: qualityOfServiceAlarm Package: sup.KPIThresholdCrossingAlarm Raised on class: sup.SupervisionManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • N/A
Description: This alarm is raised on a monitored object when the monitored object has a KPI TCA policy associated with it and the KPI values for KPIs specified in the TCA policy cross the threshold values defined in the TCA policy. KPI TCA Policy is available as a BETA feature for network supervision web application.		
Remedial action: Please see the recomended action specified in the KPI TCA Policy		

Table 39-408 L2tpLnsSePppSessionFailure

Alarm	Attributes	Applicable major release
Name: L2tpLnsSePppSessionFailure (3901) Type: processingErrorAlarm Package: rtr.L2tpLnsSePppSessionFailure Raised on class: rtr.RoutingInstanceSite	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: l2tpLnsSePppSessionFailed	Release: • N/A
Description: The alarm is raised when an NE notifies the 5620 SAM that it cannot create a new L2TP session.		
Remedial action: The alarm is raised when an NE notifies the 5620 SAM that it cannot create a new L2TP session. Verify the configuration to have LNS group assigned to the group tunnel profile or tunnel profile. Additionally, verify the length of the auto-generated subscriber identification.		

Table 39-409 L2tpTunnelBlacklisted

Alarm	Attributes	Applicable major release
Name: L2tpTunnelBlacklisted (4625) Type: processingErrorAlarm Package: l2tp.L2tpTunnelBlacklisted Raised on class: l2tp.TunnelStatus	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tmnxL2tpTunnelBlacklisted	Release: • N/A
Description: This alarm is raised when a L2TP tunnel is added to the tunnel-selection-blacklist. It is automatically cleared when the tunnel is removed from the list.		
Remedial action: In most cases the problem is a configuration mismatch between LAC and LNS, or a problem on LNS. Please refer to the additional text and enable the debug log on event lac-session-setup to figure out the root cause.		

Table 39-410 LacpExpired

Alarm	Attributes	Applicable major release
Name: LacpExpired (3981) Type: equipmentAlarm Package: lag.LacpExpired Raised on class: lag.PortTermination	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LagSubgroupMemberStat-eChange	Release: • N/A
Description: The alarm is raised when Lacp expired on subgroup lag member due to state change.		
Remedial action: The reasons for LACP Expired alarm may vary. The following possible causes of this alarm should be investigated. The partner lag member oper state may have changed or LACP Transmit Standby may have been disabled - this can be remedied by enabling the LACP Transmit Standby on Lag. The partner lag member 802.3ah oper state may have changed - ensure that 802.3ah state is same on both ends. The partner lag member dot1ag state may have changed - ensure that dot1ag state is same on both ends.		

Table 39-411 LagDot1agStateChanged

Alarm	Attributes	Applicable major release
Name: LagDot1agStateChanged (3982) Type: equipmentAlarm Package: lag.LagDot1agStateChanged Raised on class: lag.PortTermination	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: Dot1agStateChange	Release: • N/A
Description: The alarm is raised when the subgroup lag member dot1ag state has changed.		
Remedial action: The lag member dot1ag state may have changed - please ensure that dot1ag state is same on both ends.		

Table 39-412 LagEfmOamStateChanged

Alarm	Attributes	Applicable major release
Name: LagEfmOamStateChanged (3983) Type: equipmentAlarm Package: lag.LagEfmOamStateChanged Raised on class: lag.PortTermination	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EfmOamStateChange	Release: • N/A
Description: The alarm is raised when the subgroup lag member efmOam state has changed.		
Remedial action: The lag member 802.3ah oper state may have changed - please ensure that 802.3ah state is same on both ends.		

Table 39-413 LagPartnerOperStateChanged

Alarm	Attributes	Applicable major release
Name: LagPartnerOperStateChanged (3984) Type: equipmentAlarm Package: lag.LagPartnerOperStateChanged Raised on class: lag.PortTermination	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PartnerOperStateChange	Release: • N/A
Description: The alarm is raised when the subgroup lag member partner oper state has changed.		
Remedial action: The lag member oper state may have changed or LACP Transmit Standby may have been disabled - this can be remedied by enabling the LACP Transmit Standby on Lag.		

Table 39-414 LanFailure

Alarm	Attributes	Applicable major release
Name: LanFailure (628) Type: equipmentAlarm Package: equipment.LanFailure Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lanFailure	Release: • N/A
Description: The alarm is raised when a LAN failure is detected.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 39-415 LastHopIncorrectLabelAction

Alarm	Attributes	Applicable major release
Name: LastHopIncorrectLabelAction (352) Type: configurationAlarm Package: mpls.LastHopIncorrectLabelAction Raised on class: mpls.StaticLsp	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LabelActionIsNotPopOnLastHop	Release: • N/A
Description: The alarm is raised when the label action specified for the last hop in a static LSP is not a pop action.		
Remedial action: Ensure the last hop configured with a pop label action, if the last hop node is managed by SAM.		

Table 39-416 LastHopNotMatchingDestination

Alarm	Attributes	Applicable major release
Name: LastHopNotMatchingDestination (351) Type: configurationAlarm Package: mpls.LastHopNotMatchingDestination Raised on class: mpls.StaticLsp	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LastHopNotMatchingDestination	Release: • N/A
Description: The alarm is raised when the last hop in a static LSP is not the destination.		
Remedial action: Ensure the last hop configured in the static LSP match the destination of the LSP, if the last hop node is managed by SAM.		

Table 39-417 LatencyMismatchAlarm

Alarm	Attributes	Applicable major release
Name: LatencyMismatchAlarm (8422) Type: integrityViolation Package: gmpls.LatencyMismatchAlarm Raised on class: gmpls.TeLink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: latencyMismatch	Release: • N/A
Description: The alarm is raised when the latency configured on the endpoints of the TE Link do not match.		
Remedial action: This alarm indicates that the latency configured on the endpoints of the discovered TE Link do not match. Please make sure the latency values match.		

Table 39-418 LCD

Alarm	Attributes	Applicable major release
Name: LCD (803) Type: communicationsAlarm Package: mpr.LCD Raised on class: mpr.IMALink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lossOfCellDelineation	Release: • N/A

Table 39-418 LCD (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when a Loss of Cell Delineation signal is detected on an ASAP MDA.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 39-419 LdpInterfaceDown

Alarm	Attributes	Applicable major release
Name: LdpInterfaceDown (21) Type: ProtocolAlarm Package: ldp.LdpInterfaceDown Raised on class: ldp.Interface	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: protocolDown	Release: • N/A
Description: The alarm is raised when an LDP interface is operationally down.		
Remedial action: Check operational state down reason and state qualifier, then update accordingly.		

Table 39-420 Licensed3RouterLimitExceeded

Alarm	Attributes	Applicable major release
Name: Licensed3RouterLimitExceeded (694) Type: cpamLicensingAlarm Package: security.Licensed3RouterLimitExceeded Raised on class: security.CpamLicense	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cpamLicensedLimitExceeded	Release: • N/A
Description: The alarm is raised when the number of third-party routers in the 5650 CPAM network reaches 100 percent of the license capacity.		
Raising condition: ('isLicensed3RouterLimitExceeded' EQUAL 'true')		
Clearing condition: ('isLicensed3RouterLimitExceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of Third Party Router licenses purchased and available on the CPAM server is insufficient as compared to the number of third party routers under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 39-421 Licensed3RouterLimitNearing

Alarm	Attributes	Applicable major release
Name: Licensed3RouterLimitNearing (695) Type: cpamLicensingAlarm Package: security.Licensed3RouterLimitNearing Raised on class: security.CpamLicense	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cpamLicensedLimitNearing	Release: • N/A
Description: The alarm is raised when the number of third-party routers in the 5650 CPAM network reaches 75 to 90 percent of the license capacity.		

Table 39-421 Licensed3RouterLimitNearing (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational - The number of Third Party Router licenses purchased and available on the CPAM server is insufficient as compared to the number of third party routers under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 39-422 Licensed3RouterLimitNearlyExceeded

Alarm	Attributes	Applicable major release
Name: Licensed3RouterLimitNearlyExceeded (696) Type: cpamLicensingAlarm Package: security. Licensed3RouterLimitNearlyExceeded Raised on class: security.CpamLicense	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cpamLicensedLimitNearlyExceeded	Release: • N/A
Description: The alarm is raised when the number of third-party routers in the 5650 CPAM network reaches 90 to 100 percent of the license capacity.		
Remedial action: Informational - The number of Third Party Router licenses purchased and available on the CPAM server is insufficient as compared to the number of third party routers under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 39-423 LicensedBgpRouteProfileLimitExceeded

Alarm	Attributes	Applicable major release
Name: LicensedBgpRouteProfileLimitExceeded (5132) Type: cpamLicensingAlarm Package: security. LicensedBgpRouteProfileLimitExceeded Raised on class: security.CpamLicense	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cpamLicensedLimitExceeded	Release: • N/A
Description: The alarm is raised when the number of BGP Route Profiles in the 5650 CPAM reaches 100 percent of the license capacity.		
Raising condition: ('isLicensedBgpProfileLimitExceeded' EQUAL 'true')		
Clearing condition: ('isLicensedBgpProfileLimitExceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of Bgp Route Profile Module licenses purchased and available on the CPAM server is insufficient as compared to the number of Bgp Route Profiles in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 39-424 LicensedBgpRouteProfileLimitNearing

Alarm	Attributes	Applicable major release
Name: LicensedBgpRouteProfileLimitNearing (5133) Type: cpamLicensingAlarm Package: security.LicensedBgpRouteProfileLimitNearing Raised on class: security.CpamLicense	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cpamLicensedLimitNearing	Release: • N/A
Description: The alarm is raised when the number of BGP Route Profiles in the 5650 CPAM reaches 75 to 90 percent of the license capacity.		
Remedial action: Informational - The number of Bgp Route Profile Module licenses purchased and available on the CPAM server is insufficient as compared to the number of Bgp Route Profiles in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 39-425 LicensedBgpRouteProfileLimitNearlyExceeded

Alarm	Attributes	Applicable major release
Name: LicensedBgpRouteProfileLimitNearlyExceeded (5134) Type: cpamLicensingAlarm Package: security.LicensedBgpRouteProfileLimitNearlyExceeded Raised on class: security.CpamLicense	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cpamLicensedLimitNearlyExceeded	Release: • N/A
Description: The alarm is raised when the number of BGP Route Profiles in the 5650 CPAM reaches 90 to 100 percent of the license capacity.		
Remedial action: Informational - The number of Bgp Route Profiles Module licenses purchased and available on the CPAM server is insufficient as compared to the number of BGP Route Profiles in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 39-426 LicensedBigRouterLimitExceeded

Alarm	Attributes	Applicable major release
Name: LicensedBigRouterLimitExceeded (709) Type: cpamLicensingAlarm Package: security.LicensedBigRouterLimitExceeded Raised on class: security.CpamLicense	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cpamLicensedLimitExceeded	Release: • N/A
Description: The alarm is raised when the number of Nokia large routers in the network reaches 100 percent of the 5650 CPAM license capacity.		
Raising condition: ('isLicensedBigRouterLimitExceeded' EQUAL 'true')		
Clearing condition: ('isLicensedBigRouterLimitExceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of Big Router licenses purchased and available on the CPAM server is insufficient as compared to the number of big routers under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 39-427 LicensedBigRouterLimitNearing

Alarm	Attributes	Applicable major release
Name: LicensedBigRouterLimitNearing (710) Type: cpamLicensingAlarm Package: security.LicensedBigRouterLimitNearing Raised on class: security.CpamLicense	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cpamLicensedLimitNearing	Release: • N/A
Description: The alarm is raised when the number of Nokia large routers in the network reaches 75 to 90 percent of the 5650 CPAM license capacity.		
Remedial action: Informational - The number of Big Router licenses purchased and available on the CPAM server is insufficient as compared to the number of big routers under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 39-428 LicensedBigRouterLimitNearlyExceeded

Alarm	Attributes	Applicable major release
Name: LicensedBigRouterLimitNearlyExceeded (711) Type: cpamLicensingAlarm Package: security. LicensedBigRouterLimitNearlyExceeded Raised on class: security.CpamLicense	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cpamLicensedLimitNearlyExceeded	Release: • N/A
Description: The alarm is raised when the number of Nokia large routers in the network reaches 90 to 100 percent of the 5650 CPAM license capacity.		
Remedial action: Informational - The number of Big Router licenses purchased and available on the CPAM server is insufficient as compared to the number of big routers under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 39-429 LicensedCpaaLimitExceeded

Alarm	Attributes	Applicable major release
Name: LicensedCpaaLimitExceeded (389) Type: cpamLicensingAlarm Package: security.LicensedCpaaLimitExceeded Raised on class: security.CpamLicense	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cpamLicensedLimitExceeded	Release: • N/A
Description: The alarm is raised when the number of 7701 CPAAs in the network reaches 100 percent of the license capacity.		
Raising condition: ('isLicensedCpaaLimitExceeded' EQUAL 'true')		
Clearing condition: ('isLicensedCpaaLimitExceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of CPAA licenses purchased and available on the CPAM server is insufficient as compared to the number of CPAAs under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 39-430 LicensedCpaaLimitNearing

Alarm	Attributes	Applicable major release
Name: LicensedCpaaLimitNearing (390) Type: cpamLicensingAlarm Package: security.LicensedCpaaLimitNearing Raised on class: security.CpamLicense	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cpamLicensedLimitNearing	Release: • N/A
Description: The alarm is raised when the number of 7701 CPAAs in the network reaches 75 to 90 percent of the license capacity.		
Remedial action: Informational - The number of CPAA licenses purchased and available on the CPAM server is insufficient as compared to the number of CPAAs under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 39-431 LicensedCpaaLimitNearlyExceeded

Alarm	Attributes	Applicable major release
Name: LicensedCpaaLimitNearlyExceeded (391) Type: cpamLicensingAlarm Package: security.LicensedCpaaLimitNearlyExceeded Raised on class: security.CpamLicense	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cpamLicensedLimitNearlyExceeded	Release: • N/A
Description: The alarm is raised when the number of 7701 CPAAs in the network reaches 90 to 100 percent of the license capacity.		
Remedial action: Informational - The number of CPAA licenses purchased and available on the CPAM server is insufficient as compared to the number of CPAAs under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 39-432 LicensedImpactAnalysisRouterLimitExceeded

Alarm	Attributes	Applicable major release
Name: LicensedImpactAnalysisRouterLimitExceeded (712) Type: cpamLicensingAlarm Package: security. LicensedImpactAnalysisRouterLimitExceeded Raised on class: security.CpamLicenseScenario	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cpamLicensedLimitExceeded	Release: • N/A
Description: The alarm is raised when the number of routers in a simulation scenario reaches 100 percent of the license capacity.		
Raising condition: ('isLicensedRouterLimitExceeded' EQUAL 'true')		
Clearing condition: ('isLicensedRouterLimitExceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of licenses purchased and available on the CPAM server for routers in a simulation scenario is insufficient as compared to the number of routers in a simulation scenario. Please contact your Nokia sales representative to purchase additional licenses.		

Table 39-433 LicensedImpactAnalysisRouterLimitNearing

Alarm	Attributes	Applicable major release
Name: LicensedImpactAnalysisRouterLimitNearing (713) Type: cpamLicensingAlarm Package: security.LicensedImpactAnalysisRouterLimitNearing Raised on class: security.CpamLicenseScenario	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cpamLicensedLimitNearing	Release: • N/A
Description: The alarm is raised when the number of routers in a simulation scenario reaches 75 to 90 percent of the license capacity.		
Remedial action: Informational - The number of licenses purchased and available on the CPAM server for routers in a simulation scenario is insufficient as compared to the number of routers in a simulation scenario. Please contact your Nokia sales representative to purchase additional licenses.		

Table 39-434 LicensedImpactAnalysisRouterLimitNearlyExceeded

Alarm	Attributes	Applicable major release
Name: LicensedImpactAnalysisRouter-LimitNearlyExceeded (714) Type: cpamLicensingAlarm Package: security.LicensedImpactAnalysisRouterLimitNearlyExceeded Raised on class: security.CpamLicenseScenario	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cpamLicensedLimitNearlyExceeded	Release: • N/A
Description: The alarm is raised when the number of routers in a simulation scenario reaches 90 to 100 percent of the license capacity.		
Remedial action: Informational - The number of licenses purchased and available on the CPAM server for routers in a simulation scenario is insufficient as compared to the number of routers in a simulation scenario. Please contact your Nokia sales representative to purchase additional licenses.		

Table 39-435 LicensedIpPathLimitExceeded

Alarm	Attributes	Applicable major release
Name: LicensedIpPathLimitExceeded (715) Type: cpamLicensingAlarm Package: security.LicensedIpPathLimitExceeded Raised on class: security.CpamLicense	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cpamLicensedLimitExceeded	Release: • N/A
Description: The alarm is raised when the number of IP path monitors in the 5650 CPAM reaches 100 percent of the license capacity.		
Raising condition: ('isLicensedIpPathLimitExceeded' EQUAL 'true')		
Clearing condition: ('isLicensedIpPathLimitExceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of Path Computation Module licenses purchased and available on the CPAM server is insufficient as compared to the number of PCA paths in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 39-436 LicensedIpPathLimitNearing

Alarm	Attributes	Applicable major release
Name: LicensedIpPathLimitNearing (716) Type: cpamLicensingAlarm Package: security.LicensedIpPathLimitNearing Raised on class: security.CpamLicense	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cpamLicensedLimitNearing	Release: • N/A
Description: The alarm is raised when the number of IP path monitors in the 5650 CPAM reaches 75 to 90 percent of the license capacity.		
Remedial action: Informational - The number of Path Computation Module licenses purchased and available on the CPAM server is insufficient as compared to the number of PCA paths in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 39-437 LicensedIpPathLimitNearlyExceeded

Alarm	Attributes	Applicable major release
Name: LicensedIpPathLimitNearlyExceeded (717) Type: cpamLicensingAlarm Package: security. LicensedIpPathLimitNearlyExceeded Raised on class: security.CpamLicense	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cpamLicensedLimitNearlyExceeded	Release: • N/A
Description: The alarm is raised when the number of IP path monitors in the 5650 CPAM reaches 90 to 100 percent of the license capacity.		
Remedial action: Informational - The number of Path Computation Module licenses purchased and available on the CPAM server is insufficient as compared to the number of PCA paths in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 39-438 LicensedLimitNearing

Alarm	Attributes	Applicable major release
Name: LicensedLimitNearing (1931) Type: licensingAlarm Package: security.LicensedLimitNearing Raised on class: security.SamLicensePoints	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: licensedLimitNearing	Release: • N/A
Description: The alarm is raised when the license items in the network reaches 75 to 90 percent of the license capacity.		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 39-439 LicensedLimitNearlyExceeded

Alarm	Attributes	Applicable major release
Name: LicensedLimitNearlyExceeded (1932) Type: licensingAlarm Package: security.LicensedLimitNearlyExceeded Raised on class: security.SamLicensePoints	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: licensedLimitNearlyExceeded	Release: • N/A
Description: The alarm is raised when the license items in the network reaches 90 to 100 percent of the license capacity.		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 39-440 LicensedLimitReached

Alarm	Attributes	Applicable major release
Name: LicensedLimitReached (1933) Type: licensingAlarm Package: security.LicensedLimitReached Raised on class: security.SamLicensePoints	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: licensedLimitReached	Release: • N/A
Description: The alarm is raised when the license items in the network reaches 100 percent of the license capacity.		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 39-441 LicensedMcRouterLimitExceeded

Alarm	Attributes	Applicable major release
Name: LicensedMcRouterLimitExceeded (718) Type: cpamLicensingAlarm Package: security.LicensedMcRouterLimitExceeded Raised on class: security.CpamLicense	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cpamLicensedLimitExceeded	Release: • N/A
Description: The alarm is raised when the number of multicast routers in the 5650 CPAM reaches 100 percent of the license capacity.		
Raising condition: ('isLicensedMcRouterLimitExceeded' EQUAL 'true')		
Clearing condition: ('isLicensedMcRouterLimitExceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of Multicast Router licenses purchased and available on the CPAM server is insufficient as compared to the number of multicast routers under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 39-442 LicensedMcRouterLimitNearing

Alarm	Attributes	Applicable major release
Name: LicensedMcRouterLimitNearing (719) Type: cpamLicensingAlarm Package: security.LicensedMcRouterLimitNearing Raised on class: security.CpamLicense	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cpamLicensedLimitNearing	Release: • N/A
Description: The alarm is raised when the number of multicast routers in the 5650 CPAM reaches 75 to 90 percent of the license capacity.		
Remedial action: Informational - The number of Multicast Router licenses purchased and available on the CPAM server is insufficient as compared to the number of multicast routers under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 39-443 LicensedMcRouterLimitNearlyExceeded

Alarm	Attributes	Applicable major release
Name: LicensedMcRouterLimitNearlyExceeded (720) Type: cpamLicensingAlarm Package: security. LicensedMcRouterLimitNearlyExceeded Raised on class: security.CpamLicense	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cpamLicensedLimitNearlyExceeded	Release: • N/A
Description: The alarm is raised when the number of multicast routers in the 5650 CPAM reaches 90 to 100 percent of the license capacity.		
Remedial action: Informational - The number of Multicast Router licenses purchased and available on the CPAM server is insufficient as compared to the number of multicast routers under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 39-444 LicensedSmallRouterLimitExceeded

Alarm	Attributes	Applicable major release
Name: LicensedSmallRouterLimitExceeded (727) Type: cpamLicensingAlarm Package: security.LicensedSmallRouterLimitExceeded Raised on class: security.CpamLicense	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cpamLicensedLimitExceeded	Release: • N/A
Description: The alarm is raised when the number of Nokia small routers in the network reaches 100 percent of the 5650 CPAM license capacity.		
Raising condition: ('isLicensedSmallRouterLimitExceeded' EQUAL 'true')		
Clearing condition: ('isLicensedSmallRouterLimitExceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of Small Router licenses purchased and available on the CPAM server is insufficient as compared to the number of small routers under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 39-445 LicensedSmallRouterLimitNearing

Alarm	Attributes	Applicable major release
Name: LicensedSmallRouterLimitNearing (728) Type: cpamLicensingAlarm Package: security.LicensedSmallRouterLimitNearing Raised on class: security.CpamLicense	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cpamLicensedLimitNearing	Release: • N/A
Description: The alarm is raised when the number of Nokia small routers in the network reaches 75 to 90 percent of the 5650 CPAM license capacity.		
Remedial action: Informational - The number of Small Router licenses purchased and available on the CPAM server is insufficient as compared to the number of small routers under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 39-446 LicensedSmallRouterLimitNearlyExceeded

Alarm	Attributes	Applicable major release
Name: LicensedSmallRouterLimitNearlyExceeded (729) Type: cpamLicensingAlarm Package: security. LicensedSmallRouterLimitNearlyExceeded Raised on class: security.CpamLicense	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cpamLicensedLimitNearlyExceeded	Release: • N/A
Description: The alarm is raised when the number of Nokia small routers in the network reaches 90 to 100 percent of the 5650 CPAM license capacity.		
Remedial action: Informational - The number of Small Router licenses purchased and available on the CPAM server is insufficient as compared to the number of small routers under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 39-447 licenseExpiration

Alarm	Attributes	Applicable major release
Name: licenseExpiration (2911) Type: configurationAlarm Package: ranlicense.licenseExpiration Raised on class: ranlicense.RANLicense	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: licenseExpired	Release: • N/A
Description: The alarm is raised when a RAN license expires.		
Remedial action: Provide a new LKDI license file with a further expiration date.		

Table 39-448 LicenseKeyIsInvalid

Alarm	Attributes	Applicable major release
Name: LicenseKeyIsInvalid (1122) Type: licensingAlarm Package: security.LicenseKeyIsInvalid Raised on class: security.AbstractLicense	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LicenseKeyIsInvalid	Release: • N/A
Description: The alarm is raised when the 5620 SAM server configuration is updated with a new license key and the license key is not valid.		
Remedial action: Informational - The license key information entered is invalid. Please re-enter the license key information. If the alarm persists contact your Nokia support representative for assistance.		

Table 39-449 LicenseMismatch

Alarm	Attributes	Applicable major release
Name: LicenseMismatch (342) Type: licensingAlarm Package: security.LicenseMismatch Raised on class: security.AbstractLicense	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: licenseMismatch	Release: • N/A
Description: The alarm is raised when the primary 5620 SAM main server license does not match the standby 5620 SAM main server license.		
Remedial action: Informational - Please ensure that the same license key is installed on both the active and standby SAM/CPAM servers		

Table 39-450 LicenseMisMatch

Alarm	Attributes	Applicable major release
Name: LicenseMisMatch (693) Type: cpamLicensingAlarm Package: security.LicenseMisMatch Raised on class: security.CpamLicense	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: cpamLicenseMisMatch	Release: • N/A
Description: The alarm is raised when the primary 5650 CPAM server license does not match the standby 5650 CPAM server license.		
Remedial action: Informational - Please ensure that the same license key is installed on both the active and standby SAM/CPAM servers		

Table 39-451 LicenseUpgradeFailed

Alarm	Attributes	Applicable major release
Name: LicenseUpgradeFailed (4389) Type: configurationAlarm Package: nelicense.LicenseUpgradeFailed Raised on class: nelicense.LicenseUpgradeStatus	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: fileAccessError	Release: • N/A
Description: The alarm is raised when an NE license upgrade using the 5620 SAM fails.		
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues. Invalid License File.		

Table 39-452 LicenseViolation

Alarm	Attributes	Applicable major release
Name: LicenseViolation (1930) Type: licensingAlarm Package: security.LicenseViolation Raised on class: security.SamLicensePoints	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: licenseViolation Applicable probable causes: • licenseViolation • HostIdUsedInsteadOfUUIDForX86	Release: • N/A
Description: The alarm is raised when a license violation has occurred. Alarms raised against licensed products, due to the licensed product limit being zero at the time of node discovery, will be implicitly cleared if a new license that sets the licensed product limit to not zero is imported.		
Remedial action: Informational - the additional text field of the alarm will provide more details. If the alarm persists contact your Nokia sales representative to purchase additional licenses.		

Table 39-453 licenseViolation

Alarm	Attributes	Applicable major release
Name: licenseViolation (2912) Type: configurationAlarm Package: ranlicense.licenseViolation Raised on class: ranlicense.RANLicense	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: noMoreTokens	Release: • N/A
Description: The alarm is raised when a RAN license is in violation due to insufficient tokens.		
Remedial action: Provide a new LKDI license file with more tokens.		

Table 39-454 liDestinationChangeReject

Alarm	Attributes	Applicable major release
Name: liDestinationChangeReject (551) Type: ConfigurationAlarm Package: mirrorli.liDestinationChangeReject Raised on class: mirrorli.LIMirrorSiteCfg	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tMirrorDestinationChangeReject	Release: • N/A
Description: The alarm is raised when an operator tries to modify a mirror destination that is in use by an LI mirror.		
Remedial action: Informational - no corrective action required.		

Table 39-455 liDestinationEnabled

Alarm	Attributes	Applicable major release
Name: liDestinationEnabled (550) Type: ConfigurationAlarm Package: mirrorli.liDestinationEnabled Raised on class: mirrorli.LIMirrorSiteCfg	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tMirrorDestinationEnabled	Release: • N/A
Description: The alarm is raised when a mirror destination Operational State changes from Down to Up.		
Remedial action: Informational - no corrective action required.		

Table 39-456 LIF

Alarm	Attributes	Applicable major release
Name: LIF (804) Type: communicationsAlarm Package: mpr.LIF Raised on class: mpr.IMALink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lossOfIMAFrame	Release: • N/A
Description: The alarm is raised when a Loss of IMA Frame signal is detected on an ASAP MDA.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 39-457 liFilterAssignToItfWarn

Alarm	Attributes	Applicable major release
Name: liFilterAssignToItfWarn (556) Type: ConfigurationAlarm Package: mirrorli.liFilterAssignToItfWarn Raised on class: mirrorli.LIMirrorSiteCfg	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tMirrorFilterAssignToItfWarn	Release: • N/A
Description: The alarm is raised when an operator tries to assign a filter that is in use by LI to an interface.		
Remedial action: Informational - no corrective action required.		

Table 39-458 liFilterAssignToSapWarn

Alarm	Attributes	Applicable major release
Name: liFilterAssignToSapWarn (554) Type: ConfigurationAlarm Package: mirrorli.liFilterAssignToSapWarn Raised on class: mirrorli.LIMirrorSiteCfg	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tMirrorFilterAssignToSapWarn	Release: • N/A
Description: The alarm is raised when an operator tries to assign a filter that is in use by LI to a SAP.		
Remedial action: Informational - no corrective action required.		

Table 39-459 liFilterAssignToSdpWarn

Alarm	Attributes	Applicable major release
Name: liFilterAssignToSdpWarn (555) Type: ConfigurationAlarm Package: mirrorli.liFilterAssignToSdpWarn Raised on class: mirrorli.LIMirrorSiteCfg	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tMirrorFilterAssignToSdpWarn	Release: • N/A
Description: The alarm is raised when an operator tries to assign a filter that is in use by LI to an SDP.		
Remedial action: Informational - no corrective action required.		

Table 39-460 LinkAggMemberMisconfigured

Alarm	Attributes	Applicable major release
Name: LinkAggMemberMisconfigured (652) Type: lnkaggAlarm Package: lag.LinkAggMemberMisconfigured Raised on class: lag.Interface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lagMemberMisconfigured	Release: • N/A
Description: The alarm is raised when one or more misconfigured LAG members are detected, for example, when some LAG members are in access mode and some are in network mode.		
Remedial action: A configuration error has occurred which must be corrected. The configuration of the LAG port member should be checked and the configuration error corrected,		

Table 39-461 LinkAggModeMisconfigured

Alarm	Attributes	Applicable major release
Name: LinkAggModeMisconfigured (653) Type: lnkaggAlarm Package: lag.LinkAggModeMisconfigured Raised on class: lag.Interface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lagModeMisconfigured	Release: • N/A

Table 39-461 LinkAggModeMisconfigured (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the LAG mode differs from the mode of one or more LAG members, for example, when the LAG mode is access and the LAG members are in network mode.		
Remedial action: A configuration error has occurred which must be corrected. The configuration of the LAG port member should be checked and the configuration error corrected,		

Table 39-462 LinkAggPortJoin

Alarm	Attributes	Applicable major release
Name: LinkAggPortJoin (654) Type: lnkaggAlarm Package: lag.LinkAggPortJoin Raised on class: lag.Interface	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: lagPortJoin	Release: • N/A
Description: The alarm is raised when a LAG port joins a LAG by entering the attached state.		
Remedial action: Informational.		

Table 39-463 LinkAggPortLeave

Alarm	Attributes	Applicable major release
Name: LinkAggPortLeave (655) Type: lnkaggAlarm Package: lag.LinkAggPortLeave Raised on class: lag.Interface	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: lagPortLeave	Release: • N/A
Description: The alarm is raised when a LAG port leaves a LAG by exiting the attached state.		
Remedial action: Informational.		

Table 39-464 LinkAggPortRemove

Alarm	Attributes	Applicable major release
Name: LinkAggPortRemove (656) Type: lnkaggAlarm Package: lag.LinkAggPortRemove Raised on class: lag.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: lagPortRemove	Release: • N/A
Description: The alarm is raised when a LAG port is removed from a LAG because of an invalid configuration.		
Remedial action: A configuration error has occurred which must be corrected. Please check the configuration of the port in question.		

Table 39-465 LinkDown (optical)

Alarm	Attributes	Applicable major release
Name: LinkDown (12) Type: communicationsAlarm Package: optical.LinkDown Raised on class: optical.OpticalLink	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OperationalStateDown	Release: • N/A
Description: The alarm is raised when any of the Optical Link end point is operationally down.		
Remedial action: Informational - If the alarm persists or is occurring frequently then investigation is required by looking at the active alarms on the Link End points to understand why the underlying transport network is unreliable.		

Table 39-466 LinkIdentifierMismatch (mwa)

Alarm	Attributes	Applicable major release
Name: LinkIdentifierMismatch (686) Type: communicationsAlarm Package: mwa.LinkIdentifierMismatch Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LinkIdentifierMismatch	Release: • N/A
Description: The alarm is raised when a MPT detects a link identifier mismatch.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-467 linkLoss

Alarm	Attributes	Applicable major release
Name: linkLoss (6389) Type: communicationsAlarm Package: femto.linkLoss Raised on class: femto.FemtoNetwork	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • N/A
Description: This alarm is deprecated from femto 16.1.		
Remedial action: See the nodal documentation for more information.		

Table 39-468 liSourceDisabled

Alarm	Attributes	Applicable major release
Name: liSourceDisabled (563) Type: ConfigurationAlarm Package: mirrorli.liSourceDisabled Raised on class: mirrorli.LISourceCfg	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tMirrorSourceDisabled	Release: • N/A
Description: The alarm is raised when an LI mirror source Operational State changes from Up to Down.		

Table 39-468 liSourceDisabled (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational - no corrective action required.		

Table 39-469 liSourceEnabled

Alarm	Attributes	Applicable major release
Name: liSourceEnabled (562) Type: ConfigurationAlarm Package: mirrorli.liSourceEnabled Raised on class: mirrorli.LISourceCfg	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tMirrorSourceEnabled	Release: • N/A
Description: The alarm is raised when an LI mirror source Operational State changes from Down to Up.		
Remedial action: Informational - no corrective action required.		

Table 39-470 liSourceFilterAssignReject

Alarm	Attributes	Applicable major release
Name: liSourceFilterAssignReject (557) Type: ConfigurationAlarm Package: mirrorli.liSourceFilterAssignReject Raised on class: mirrorli.LIMgmtSite	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tMirrorSourceFilterAssignReject	Release: • N/A
Description: The alarm is raised when an operator tries to modify a filter that is in use by LI.		
Remedial action: Informational - no corrective action required.		

Table 39-471 liSourceFilterAssignWarn

Alarm	Attributes	Applicable major release
Name: liSourceFilterAssignWarn (559) Type: ConfigurationAlarm Package: mirrorli.liSourceFilterAssignWarn Raised on class: mirrorli.LIMgmtSite	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tMirrorSourceFilterAssignWarn	Release: • N/A
Description: The alarm is raised when an operator assigns a mirror filter that is in use by LI and the assignment may be overruled.		
Remedial action: Informational - no corrective action required.		

Table 39-472 liSourceFilterChanged

Alarm	Attributes	Applicable major release
Name: liSourceFilterChanged (3313) Type: ConfigurationAlarm Package: mirrorli.liSourceFilterChanged Raised on class: mirrorli.LIMgmtSite	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tMirrorSourceLiFilterChanged	Release: • N/A
Description: The alarm is raised when a parameter of a filter which is referenced by Lawful Intercept (LI), or a parameter of one of its entry is changed. This notification may be triggered only if the LI filter lock is overruled, and one of the following actions occurs: -a filter referenced by LI has been deleted. -one of the parameters (default-action, scope) of a filter which is referenced by LI has been changed. -a filter which is referenced by LI is overwritten. -a new entry is created for a filter which is referenced by LI. -an entry of a filter which is referenced by LI is activated. -an entry is removed from a filter which is referenced by LI. -an entry of a filter which is referenced by LI is renumbered. -one of the parameters of an entry in a filter which is referenced by LI is changed.		
Remedial action: Informational - no corrective action required.		

Table 39-473 liSourceFilterOverruled

Alarm	Attributes	Applicable major release
Name: liSourceFilterOverruled (558) Type: ConfigurationAlarm Package: mirrorli.liSourceFilterOverruled Raised on class: mirrorli.LIMgmtSite	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tMirrorSourceFilterOverruled	Release: • N/A
Description: The alarm is raised when the assignment of a mirror filter is overruled by another filter assignment.		
Remedial action: Informational - no corrective action required.		

Table 39-474 liSourceIP6FltrChangeReject

Alarm	Attributes	Applicable major release
Name: liSourceIP6FltrChangeReject (4377) Type: ConfigurationAlarm Package: mirrorli.liSourceIP6FltrChangeReject Raised on class: mirrorli.LIMirrorSiteCfg	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tMirrorSourceIP6FltrChangeReject	Release: • N/A
Description: The alarm is raised when an operator tries to modify an IPv6 filter or an IPv6 filter entry that is in use by LI.		
Remedial action: Informational - no corrective action required.		

Table 39-475 liSourceIPFltrChangeReject

Alarm	Attributes	Applicable major release
Name: liSourceIPFltrChangeReject (552) Type: ConfigurationAlarm Package: mirrorli.liSourceIPFltrChangeReject Raised on class: mirrorli.LIMirrorSiteCfg	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tMirrorSourceIPFltrChangeReject	Release: • N/A
Description: The alarm is raised when an operator tries to modify an IP filter or an IP filter entry that is in use by LI.		
Remedial action: Informational - no corrective action required.		

Table 39-476 liSourceMacFltrChangeReject

Alarm	Attributes	Applicable major release
Name: liSourceMacFltrChangeReject (553) Type: ConfigurationAlarm Package: mirrorli.liSourceMacFltrChangeReject Raised on class: mirrorli.LIMirrorSiteCfg	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tMirrorSourceMacFltrChangeReject	Release: • N/A
Description: The alarm is raised when an operator tries to modify a MAC filter or a MAC filter entry that is in use by LI.		
Remedial action: Informational - no corrective action required.		

Table 39-477 liSourceSapChange

Alarm	Attributes	Applicable major release
Name: liSourceSapChange (560) Type: ConfigurationAlarm Package: mirrorli.liSourceSapChange Raised on class: mirrorli.LISourceInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tMirrorSourceSapChange	Release: • N/A
Description: The alarm is raised when a SAP that is associated with LI is modified or deleted.		
Remedial action: Informational - no corrective action required.		

Table 39-478 liSourceSubscriberChange

Alarm	Attributes	Applicable major release
Name: liSourceSubscriberChange (561) Type: ConfigurationAlarm Package: mirrorli.liSourceSubscriberChange Raised on class: mirrorli.LISourceSubscriberHost	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tMirrorSourceSubChange	Release: • N/A
Description: The alarm is raised when a subscriber that is associated with LI is modified or deleted.		

Table 39-478 liSourceSubscriberChange (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational - no corrective action required.		

Table 39-479 LODS

Alarm	Attributes	Applicable major release
Name: LODS (805) Type: communicationsAlarm Package: mpr.LODS Raised on class: mpr.IMALink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lossOfDelaySynchronization	Release: • N/A
Description: The alarm is raised when a Loss of Delay Synchronization signal is detected on an ASAP MDA.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 39-480 LogLocFailure

Alarm	Attributes	Applicable major release
Name: LogLocFailure (340) Type: storageAlarm Package: file.LogLocFailure Raised on class: file.Policy	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: AdminLocFailure Applicable probable causes: • AdminLocFailure • BackupLocFailure	Release: • N/A
Description: The alarm is raised when an attempt to create a log or billing file fails. The probable cause is AdminLocFailure when using the admin location fails, in which case the backup location, if specified, is used. The probable cause is BackupLocFailure when using the backup location fails.		
Remedial action: The flash device targeted to store the log or billing file is either full or the directory does not exist. An analysis of the files on the flash device needs to be analyzed and redundant files removed or the directory must be configured. Log into the NE via the CLI to perform the cleanup/creation operations.		

Table 39-481 LossOfAlignment

Alarm	Attributes	Applicable major release
Name: LossOfAlignment (629) Type: communicationsAlarm Package: equipment.LossOfAlignment Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lossOfAlignment	Release: • N/A
Description: The alarm is raised when a Loss of Alignment signal is detected.		

Table 39-481 LossOfAlignment (continued)

Alarm	Attributes	Applicable major release
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 39-482 LossOfESMC

Alarm	Attributes	Applicable major release
Name: LossOfESMC (2939) Type: communicationsAlarm Package: equipment.LossOfESMC Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lossOfESMC	Release: • N/A
Description: The alarm is raised when a loss of ESMC signal failure is detected.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 39-483 LossOfPointer

Alarm	Attributes	Applicable major release
Name: LossOfPointer (3623) Type: communicationsAlarm Package: equipment.LossOfPointer Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lossOfPointer	Release: • N/A
Description: The alarm is raised when a loss of pointer occurs		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 39-484 LossOfPointerHOPath

Alarm	Attributes	Applicable major release
Name: LossOfPointerHOPath (9007) Type: communicationsAlarm Package: tdm.LossOfPointerHOPath Raised on class: tdm.AUn	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LOPP	Release: • N/A
Description: The alarm is raised on Loss of Pointer HO Path (NEND).		

Table 39-484 LossOfPointerHOPath (continued)

Alarm	Attributes	Applicable major release
Remedial action: Loss of Pointer found on HO Path at NEND.		

Table 39-485 LossOfRadioFrame

Alarm	Attributes	Applicable major release
Name: LossOfRadioFrame (4828) Type: communicationsAlarm Package: mwa.LossOfRadioFrame Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LossOfFrame	Release: • N/A
Description: The alarm is raised when a MPT detects a Loss of Radio Frame from Radio Path		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-486 LossOfRadioFramesAlignment

Alarm	Attributes	Applicable major release
Name: LossOfRadioFramesAlignment (4829) Type: communicationsAlarm Package: mwa.LossOfRadioFramesAlignment Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LossOfAlignment	Release: • N/A
Description: The alarm is raised when a MPT detects a Loss of Radio Frames Alignment		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-487 LowSwitchFabricCap

Alarm	Attributes	Applicable major release
Name: LowSwitchFabricCap (5178) Type: hardwareAnomaly Package: equipment.LowSwitchFabricCap Raised on class: equipment.Card	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LowSwitchFabricCapacity	Release: • N/A
Description: The alarm is raised when the total switch fabric capacity becomes less than the line card capacity due to link failures. At least one of the taps on the Card is below 100% capacity.		
Remedial action: 1. Make sure that the hardware switching fabric capacity is more than the line card capacity. 2. Please reboot the card and check if it resolves the problem. If problem persists after reboot, please contact your Nokia support representative for assistance.		

Table 39-488 LpsLearnMac

Alarm	Attributes	Applicable major release
Name: LpsLearnMac (519) Type: learnedPortSecurityAlarm Package: lps.LpsLearnMac Raised on class: lps.LearnedPortSecurity	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: portLearnedBridgedMAC	Release: • N/A
Description: The alarm is raised when an LPS port learns a bridged MAC address.		
Remedial action: Informational - no corrective action required.		

Table 39-489 LpsPortUpAfterLearningWindowExpired

Alarm	Attributes	Applicable major release
Name: LpsPortUpAfterLearningWindowExpired (517) Type: learnedPortSecurityAlarm Package: lps.LpsPortUpAfterLearningWindowExpired Raised on class: lps.LPSConfiguration	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: portUpAfterLearningWin-dowExpired	Release: • N/A
Description: The alarm is raised either when an LPS port is enabled after the learning window expires and MAC address learning on the port is disabled, or when the learning window expires with slice and port values of 0.		
Remedial action: Informational - no corrective action required.		

Table 39-490 LsdbOverflow

Alarm	Attributes	Applicable major release
Name: LsdbOverflow (53) Type: equipmentAlarm Package: ospf.LsdbOverflow Raised on class: ospf.Site	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: resourceFull	Release: • N/A
Description: The alarm is raised when the number of received external LSAs exceeds the configured number allowed. By default, there is no limit. The alarm information includes the configured LSDB limit and one of the following LSDB overflow states: - 0, which means no overflow - 1, which means nearing limit - 2, which means limit exceeded		
Remedial action: Informational - the number of received external LSAs exceeds the configured number allowed. The alarm will also be raised when external LSAs is nearing limit.		

Table 39-491 LudbDhcpHostGroupIfTooLong

Alarm	Attributes	Applicable major release
Name: LudbDhcpHostGroupIfTooLong (4627) Type: LudbDhcpHostGroupIfTooLongAlarm Package: localuserdb.LudbDhcpHostGroupIfTooLong Raised on class: localuserdb.DhcpHost	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ludbDhcpHostGroupIfTooLong	Release: • N/A
Description: The alarm is raised when the default MSAP group interface name of a DHCP Host, concatenated with the port ID is longer than 32 characters.		
Remedial action: The string configured in DHCP Host as default MSAP Group Interface Name concatenated with the port-id is longer than 32 characters. It is an invalid configuration since it exceeds the length allowed for a Group Interface Name. (Please) Reconfigure the MSAP Group Interface Name or refer to the Local User Database documentation for assistance.		

Table 39-492 LudbPppHostGroupIfTooLong

Alarm	Attributes	Applicable major release
Name: LudbPppHostGroupIfTooLong (4628) Type: LudbPppHostGroupIfTooLongAlarm Package: localuserdb.LudbPppHostGroupIfTooLong Raised on class: localuserdb.PppHost	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ludbPppHostGroupIfTooLong	Release: • N/A
Description: The alarm is raised when the default MSAP group interface name of a PPP host, concatenated with the port ID is longer than 32 characters.		
Remedial action: The string configured in PPP Host as default MSAP Group Interface Name concatenated with the port-id is longer than 32 characters. It is an invalid configuration since it exceeds the length allowed for a Group Interface Name. (Please) Reconfigure the MSAP Group Interface Name or refer to the Local User Database documentation for assistance.		

Table 39-493 MacAccountingLimitReached (rtr)

Alarm	Attributes	Applicable major release
Name: MacAccountingLimitReached (4907) Type: macAccountingAlarm Package: rtr.MacAccountingLimitReached Raised on class: rtr.NetworkInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: macAccountingLimitReached	Release: • N/A
Description: The alarm is raised when the system detects that the MAC accounting table is full.		
Remedial action: This alarm can be cleared when the used MAC entries are deleted by disabling MAC accounting on a particular interface or through manual intervention with a user command such as clear router interface mac.		

Table 39-494 MacAccountingLimitReached (service)

Alarm	Attributes	Applicable major release
Name: MacAccountingLimitReached (4907) Type: macAccountingAlarm Package: service.MacAccountingLimitReached Raised on class: service.L3AccessInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: macAccountingLimitReached	Release: • N/A
Description: The alarm is raised when the system detects that the MAC accounting table is full.		
Remedial action: This alarm can be cleared when the used MAC entries are deleted by disabling MAC accounting on a particular interface or through manual intervention with a user command such as clear router interface mac.		

Table 39-495 macMoveRateExceededNonBlock (service)

Alarm	Attributes	Applicable major release
Name: macMoveRateExceededNonBlock (4893) Type: accessInterfaceAlarm Package: service.macMoveRateExceededNonBlock Raised on class: service.AccessInterface	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: MacMoveRateExceededNon-Block	Release: • N/A
Description: The alarm is raised when the SAP exceeds the MAC Move Frequency of the service site when limitMacMove(sapTlsLimit-MacMove) is set to 'nonBlocking'.		
Remedial action: Informational - User can adjust the value of 'MAC Move Maximum Rate' to reduce the frequency of this alarm.		

Table 39-496 MacPinningViolation

Alarm	Attributes	Applicable major release
Name: MacPinningViolation (443) Type: serviceAlarm Package: vpls.MacPinningViolation Raised on class: vpls.AbstractSite	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: macAddressPinned	Release: • N/A
Description: The alarm is raised when an attempt is made to assign a pinned MAC address to another L2 access interface or spoke SDP binding in an M-VPLS or VPLS.		
Remedial action: Use a MAC address that is not already pinned.		

Table 39-497 ManagedRouteAddFailed

Alarm	Attributes	Applicable major release
Name: ManagedRouteAddFailed (5130) Type: processingErrorAlarm Package: rtr.ManagedRouteAddFailed Raised on class: rtr.RoutingInstanceSite	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tmnxVRtrManagedRouteAdd-Failed	Release: • N/A
Description: The alarm is raised when a managed route could not be installed.		
Remedial action: Check the additional text of the alarm for more details.		

Table 39-498 ManagedRouteFailedRetryThresholdCrossed

Alarm	Attributes	Applicable major release
Name: ManagedRouteFailedRetryThresholdCrossed (397) Type: topologyAlarm Package: topology. ManagedRouteFailedRetryThresholdCrossed Raised on class: topology.RouteManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: managedRouteCouldNot-BeSetup	Release: • N/A
Description: The alarm is raised when the 5650 CPAM cannot set up a managed route after the number of attempts specified by the cpamManagedRoute problematicThresholdAlarmAfter value in the nms-server.xml file. The alarm is raised if the cpamManagedRoute problematicRetryStrategy value in nms-server.xml is set to countdown. The alarm is not raised if the problematicRetryStrategy value is set to the default of reactive.		
Remedial action: Informational - The Retry strategy can be modified in nms-server.xml. This alarm is not raised for the default retry strategy, reactive.		

Table 39-499 ManagedRouteRetryAttemptsExhausted

Alarm	Attributes	Applicable major release
Name: ManagedRouteRetryAttemptsExhausted (398) Type: topologyAlarm Package: topology. ManagedRouteRetryAttemptsExhausted Raised on class: topology.RouteManager	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: managedRouteCouldNot-BeSetup	Release: • N/A
Description: The alarm is raised when the 5650 CPAM stops trying to set up a managed route after the number of attempts specified by the cpamManagedRoute problematicDeadAfter value in the nms-server.xml file. The alarm is raised if the cpamManagedRoute problematicRetryStrategy value in nms-server.xml is set to countdown. The alarm is not raised if the problematicRetryStrategy value is set to the default value of reactive.		
Remedial action: Informational - The Retry strategy can be modified in nms-server.xml. This alarm is not raised for the default retry strategy, reactive.		

Table 39-500 ManagementAccessFilterMisconfigured

Alarm	Attributes	Applicable major release
Name: ManagementAccessFilterMisconfigured (76) Type: configurationAlarm Package: sitesec.ManagementAccessFilterMisconfigured Raised on classes: • sitesec.MafEntry • sitesec.MacMafEntry	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: invalidSourcePortIdentifier	Release: • N/A
Description: The alarm is raised when a MAF is misconfigured.		
Raising condition: ('isValidSourcePortName' EQUAL 'false')		
Clearing condition: ('isValidSourcePortName' EQUAL 'true')		
Remedial action: A configuration error has occurred which must be corrected. Please check the management access filter configuration for errors.		

Table 39-501 ManagementAccessFilterMisconfiguredIpv6

Alarm	Attributes	Applicable major release
Name: ManagementAccessFilterMisconfiguredIpv6 (1112) Type: configurationAlarm Package: sitesec. ManagementAccessFilterMisconfiguredIpv6 Raised on class: sitesec.MafIPv6Entry	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: invalidSourcePortIdentifier	Release: • N/A
Description: The alarm is raised when an IPv6 MAF is misconfigured.		
Raising condition: ('isValidSourcePortName' EQUAL 'false')		
Clearing condition: ('isValidSourcePortName' EQUAL 'true')		
Remedial action: A configuration error has occurred which must be corrected. Please check the management access filter configuration for errors.		

Table 39-502 ManagementInterfaceProtectionSwitch

Alarm	Attributes	Applicable major release
Name: ManagementInterfaceProtectionSwitch (34) Type: communicationsAlarm Package: netw.ManagementInterfaceProtectionSwitch Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: switchToInband Applicable probable causes: • switchToInband • switchToOutband	Release: • N/A

Table 39-502 ManagementInterfaceProtectionSwitch (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when an NE has in-band and out-of-band management interfaces and switches from one type of management to the other.		
Remedial action: Informational		

Table 39-503 ManagementIpAddressMismatch

Alarm	Attributes	Applicable major release
Name: ManagementIpAddressMismatch (1943) Type: communicationsAlarm Package: netw.ManagementIpAddressMismatch Raised on class: netw.DiscoveredNode	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mismatchOfManagementIpAddress	Release: • N/A
Description: The alarm is raised when the IP address of the shadow network element does not match with the IP address of the discovered NE.		
Remedial action: A configuration error has been made which must be corrected. One of 2 scenario is possible a) the IP address assigned to the shadow NE is incorrect or the IP address configured on the NE itself is incorrect.		

Table 39-504 ManagementIPSwitchUnsupported

Alarm	Attributes	Applicable major release
Name: ManagementIPSwitchUnsupported (1078) Type: communicationsAlarm Package: netw.ManagementIPSwitchUnsupported Raised on class: netw.NodeDiscoveryControl	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: managementAddressInvalid	Release: • N/A
Description: The alarm is raised when an attempt is made to switch the management address of an NE from one IP version to another.		
Remedial action: The additional text field of the alarm will provide guidance as to the reason for the failure - the most probable cause is a configuration error. The configuration error must be corrected. Once the issue has been resolved SAM will automatically re-attempt.		

Table 39-505 ManagementVlanConflict

Alarm	Attributes	Applicable major release
Name: ManagementVlanConflict (215) Type: configurationAlarm Package: vlan.ManagementVlanConflict Raised on class: vlan.Vlan	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: topologyMisconfigured	Release: • N/A
Description: The alarm is raised when a management VLAN ID is in use by another service type.		
Raising condition: ('managementVlanConflict' EQUAL 'true')		

Table 39-505 ManagementVlanConflict (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ('managementVlanConflict' EQUAL 'false')		
Remedial action: Ensure that the VLAN ID of this Management Service is not used on any other type of VLAN Service.		

Table 39-506 ManualCpaaSwitchover

Alarm	Attributes	Applicable major release
Name: ManualCpaaSwitchover (5143) Type: configurationAlarm Package: topology.ManualCpaaSwitchover Raised on class: topology.Cpaa	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: CPAASwitchover	Release: • N/A
Description: The alarm is raised when an operator has manually initiated a switchover. This alarm is not self clearing. Another switchover will not be permitted for 10 mins.		
Remedial action: Manual Switchover has been executed.		

Table 39-507 ManualManagementRemoval

Alarm	Attributes	Applicable major release
Name: ManualManagementRemoval (9008) Type: equipmentAlarm Package: tdm.ManualManagementRemoval Raised on class: tdm.AUn	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MAN	Release: • N/A
Description: The alarm is raised on Manual (Management) Removal (NEND).		
Remedial action: AUn facility is manually (Management) Removed at NEND.		

Table 39-508 MaxExecutingScripts

Alarm	Attributes	Applicable major release
Name: MaxExecutingScripts (3686) Type: serverAlarm Package: script.MaxExecutingScripts Raised on class: script.AbstractScript	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: maxExecutingScripts	Release: • N/A
Description: The alarm is raised when the maximum number of scripts allowed to execute concurrently is exceeded.		
Remedial action: The number of being scripts executed simultaneously has exceeded to maximum allowed. Reduce the number of scripts being executed. If the problem persists please contact your Nokia support representative for assistance.		

Table 39-509 MaxFecLimitReached

Alarm	Attributes	Applicable major release
Name: MaxFecLimitReached (6448) Type: processingErrorAlarm Package: ldp.MaxFecLimitReached Raised on class: ldp.Peer	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MaxFecLimitReached	Release: • N/A
Description: The alarm is raised when the number of FECs accepted from the peer has reached the value specified by fecLimit. The alarm is cleared when a new MaxFecThresholdChange notification is received.		
Remedial action: Number of FECs accepted from the peer has reached the value specified by FEC Limit. Appropriate configuration changes in local or peer LSR will be required.		

Table 39-510 MaxFecThresholdChange

Alarm	Attributes	Applicable major release
Name: MaxFecThresholdChange (6449) Type: processingErrorAlarm Package: ldp.MaxFecThresholdChange Raised on class: ldp.Peer	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MaxFecThresholdChange	Release: • N/A
Description: The alarm is raised when the number of FECs accepted from the peer has exceeded the threshold percent of the value specified by fecLimit. The alarm is cleared when the number of FECs received drops below the threshold percent of the value specified by fecLimit.		
Remedial action: Number of FECs accepted from the peer has exceeded or dropped below the threshold percent of the value specified by FEC Limit. Appropriate configuration changes in local or peer LSR will be required.		

Table 39-511 MaxNumExportRoutesReached

Alarm	Attributes	Applicable major release
Name: MaxNumExportRoutesReached (1116) Type: ProtocolAlarm Package: vprn.MaxNumExportRoutesReached Raised on class: vprn.AbstractSite	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MaxNumExportRoutes-Reached	Release: • N/A
Description: The alarm is raised when the number of routes exported from a route table to a VRF reaches the configured maximum.		
Remedial action: Informational. The threshold configured should be revisited to ensure that it is not set to low given the number of routes that are being received. If the threshold is set close to the maximum number of routes supported by the NE then it is probable that there is an issue with another NE or VRF instance in the network. If the problem persists please contact your Nokia support representative for assistance.		

Table 39-512 MaxNumIpv6RoutesReached

Alarm	Attributes	Applicable major release
Name: MaxNumIpv6RoutesReached (505) Type: ProtocolAlarm Package: l3fwd.MaxNumIpv6RoutesReached Raised on class: l3fwd.ServiceSite	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MaxNumIpv6RouteReached	Release: • N/A
Description: The alarm is raised when the number of IPv6 routes in a VPRN exceeds the configured maximum.		
Remedial action: The number of IPv6 routes has exceeded the configured maximum for the VPRN - the route table must be examined to ensure that all of the routes in the table are valid and not the result of a misconfiguration in the VPRN service. If all of the routes appear to be valid then the value used as the maximum value should be revisited.		

Table 39-513 MaxNumMcastRoutes

Alarm	Attributes	Applicable major release
Name: MaxNumMcastRoutes (206) Type: ProtocolAlarm Package: l3fwd.MaxNumMcastRoutes Raised on class: l3fwd.Site	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MaxNumMcastRoutes-Reached	Release: • N/A
Description: The alarm is raised when the number of multicast routes in a VPRN exceeds the configured maximum.		
Remedial action: Informational. The number of multicast routes in a VPRN exceeds the configured maximum. The value used as the threshold value should be revisited.		

Table 39-514 MaxNumRoutesReached

Alarm	Attributes	Applicable major release
Name: MaxNumRoutesReached (1198) Type: ProtocolAlarm Package: l3fwd.MaxNumRoutesReached Raised on class: l3fwd.ServiceSite	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: MaxNumRoutesReached	Release: • N/A
Description: The alarm is raised when the number of routes in a VPRN reaches the maximum number of routes specified in the VPRN configuration. The alarm information includes the number of routes, the specified maximum, and the route type, which is either IPv4 or IPv6.		
Remedial action: Informational. The threshold configured should be revisited to ensure that it is not set to low given the number of routes that are being received. If the threshold is set close to the maximum number of routes supported by the NE then it is probable that there is an issue with another NE or VRF instance in the network. If the problem persists please contact your Nokia support representative for assistance.		

Table 39-515 MaxNumV6ExportRoutesReached

Alarm	Attributes	Applicable major release
Name: MaxNumV6ExportRoutesReached (4398) Type: ProtocolAlarm Package: vprn.MaxNumV6ExportRoutesReached Raised on class: vprn.AbstractSite	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MaxNumV6ExportRoutesReached	Release: • N/A
Description: The alarm is raised when the number of IPv6 routes exported from a route table to a VRF reaches the configured maximum.		
Remedial action: Informational. The threshold configured should be revisited to ensure that it is not set to low given the number of routes that are being received. If the threshold is set close to the maximum number of routes supported by the NE then it is probable that there is an issue with another NE or VRF instance in the network. If the problem persists please contact your Nokia support representative for assistance.		

Table 39-516 McacPolicyDropped (igmp)

Alarm	Attributes	Applicable major release
Name: McacPolicyDropped (341) Type: communicationsAlarm Package: igmp.McacPolicyDropped Raised on class: igmp.Interface	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: igmpGroupOnSapDropped	Release: • N/A
Description: The alarm is raised when an IGMP group is dropped because a multicast CAC policy is applied.		
Remedial action: Informational - no corrective action required.		

Table 39-517 McacPolicyDropped (vpls)

Alarm	Attributes	Applicable major release
Name: McacPolicyDropped (341) Type: communicationsAlarm Package: vpls.McacPolicyDropped Raised on class: vpls.L2AccessInterfaceIgmpSnpgCfg	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: igmpGroupOnSapDropped	Release: • N/A
Description: The alarm is raised when an IGMP group is removed from a SAP because a multicast CAC policy is applied.		
Remedial action: Informational only.		

Table 39-518 McacPolicyDropped (pim)

Alarm	Attributes	Applicable major release
Name: McacPolicyDropped (341) Type: communicationsAlarm Package: pim.McacPolicyDropped Raised on class: pim.Interface	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: pimGroupOnSapDropped	Release: • N/A
Description: The alarm is raised when a PIM group is dropped because a multicast CAC policy is applied.		
Remedial action: Informational only.		

Table 39-519 McacPolicyDropped (svt)

Alarm	Attributes	Applicable major release
Name: McacPolicyDropped (341) Type: communicationsAlarm Package: svt.McacPolicyDropped Raised on class: svt.SdpBindingIgmpSnpgCfg	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: igmpGroupOnSdpBind-Dropped	Release: • N/A
Description: The alarm is raised when an IGMP group is dropped because a multicast CAC policy is applied to an SDP binding.		
Remedial action: Informational only.		

Table 39-520 McastRoutesMidLevelThresholdReached

Alarm	Attributes	Applicable major release
Name: McastRoutesMidLevelThresholdReached (207) Type: ProtocolAlarm Package: l3fwd. McastRoutesMidLevelThresholdReached Raised on class: l3fwd.Site	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: MidLevelThresholdReached	Release: • N/A
Description: The alarm is raised when the number of multicast routes in a VPRN exceeds the configured threshold value. The alarm information includes the number of multicast routes and the threshold value.		
Remedial action: the number of multicast routes in a VPRN exceeds the configured threshold value. The value used as the threshold value should be revisited.		

Table 39-521 McIPsecTunnelGroupSyncTagMisconfigured

Alarm	Attributes	Applicable major release
Name: McIPsecTunnelGroupSyncTagMisconfigured (4817) Type: redundancyAlarm Package: multichassis.McIPsecTunnelGroupSyncTagMisconfigured Raised on class: multichassis.MultiChassisIPSecGroup	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ipsecGroupSyncTagMisconfigure	Release: • N/A
Description: The alarm is raised when a peer of MC IPsec tunnel groups has unconfigured or mismatched synchronization tag.		
Raising condition: (('Synchronization Tag' NOT EQUAL 'Synchronization Tag') OR (('Synchronization Tag' EQUAL '\"\"') OR ('Synchronization Tag' EQUAL '\"\"')))		
Clearing condition: (('Synchronization Tag' EQUAL 'Synchronization Tag') AND (('Synchronization Tag' NOT EQUAL '\"\"') AND ('Synchronization Tag' NOT EQUAL '\"\"')))		
Remedial action: Check if the synchronization tag has been configured for the MC IPsec tunnel group peer and they matches.		

Table 39-522 McLagGatewayPortDown

Alarm	Attributes	Applicable major release
Name: McLagGatewayPortDown (11241) Type: virtualPortAlarm Package: dctr.McLagGatewayPortDown Raised on class: dctr.McLagGatewayPort	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: McLagGatewayPortDownOrDeleted	Release: • N/A
Description: The alarm is raised when McLagGatewayPort is down.		
Raising condition: (('operationalState' NOT EQUAL '2'))		
Clearing condition: (('operationalState' EQUAL '2'))		
Remedial action: This alarm can be cleared when the MC Lag gateway virtual port is up.		

Table 39-523 McLagGatewayPortRedundancyLost

Alarm	Attributes	Applicable major release
Name: McLagGatewayPortRedundancyLost (11242) Type: virtualPortAlarm Package: dctr.McLagGatewayPortRedundancyLost Raised on class: dctr.McLagGatewayPort	Severity: info Specific problem: Not Applicable Implicitly cleared: true Default probable cause: RedundancyVirtualPortDownOrDeleted	Release: • N/A
Description: The alarm is raised when VP is shutdown.		
Remedial action: This alarm is raised when the MC-Lag redundancy is lost for a gateway virtual port.		

Table 39-524 McLagSourceBMacLsbMisconfigured (lag)

Alarm	Attributes	Applicable major release
Name: McLagSourceBMacLsbMisconfigured (776) Type: configurationAlarm Package: lag.McLagSourceBMacLsbMisconfigured Raised on class: lag.MultiChassisLag	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: McLagSourceBMacLsbMis-configured	Release: • N/A
Description: The alarm is raised when the 5620 SAM detects a mismatch in the last 16 bits of the source backbone MAC address on the peer device. This mismatch prevents PBB access dual homing from operating.		
Raising condition: ('srcBMacLSBMisconfigured' EQUAL 'true')		
Clearing condition: ('srcBMacLSBMisconfigured' EQUAL 'false')		
Remedial action: Check the MAC Address LSB is correct for source backbone address.		

Table 39-525 McLagSourceBMacLsbMisconfigured (multichassis)

Alarm	Attributes	Applicable major release
Name: McLagSourceBMacLsbMisconfigured (776) Type: configurationAlarm Package: multichassis. McLagSourceBMacLsbMisconfigured Raised on class: multichassis.MultiChassisLag	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: McLagSourceBMacLsbMis-configured	Release: • N/A
Description: The alarm is raised when the 5620 SAM detects a mismatch in the last 16 bits of the source backbone MAC address on the peer device. This mismatch prevents PBB access dual homing from operating.		
Raising condition: ('srcBMacLSBMisconfigured' EQUAL 'true')		
Clearing condition: ('srcBMacLSBMisconfigured' EQUAL 'false')		
Remedial action: Check the MAC Address LSB is correct for source backbone address.		

Table 39-526 McMobileGeoRedChgInfo

Alarm	Attributes	Applicable major release
Name: McMobileGeoRedChgInfo (4380) Type: equipmentAlarm Package: multichassis.McMobileGeoRedChgInfo Raised on class: multichassis. MultiChassisPeerMobileGateway	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: equipmentAlarm	Release: • N/A
Description: The alarm is raised when the mobile-gateway or the CPM has changed its geo-redundancy state or the peer's connection status has changed.		
Remedial action: Check what caused this state change. Bring the peer and/or peer-link up and ensure that the chassis and CPM geo-redundancy states are 'hot'.		

Table 39-527 McMobileIssuStateChange

Alarm	Attributes	Applicable major release
Name: McMobileIssuStateChange (5119) Type: integrityViolation Package: multichassis.McMobileIssuStateChange Raised on class: multichassis.MultiChassisPeerMobileSpecifics	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mismatchPeerSets	Release: • N/A
Description: The alarm is raised when ISSU state between the mobile-gateways participating in the geo-redundancy changes		
Remedial action: Check what caused this change in ISSU state and correct the issue for geo-redundancy to work.		

Table 39-528 McOmcrClientNumEntriesHigh

Alarm	Attributes	Applicable major release
Name: McOmcrClientNumEntriesHigh (8057) Type: communicationsAlarm Package: multichassis.McOmcrClientNumEntriesHigh Raised on class: multichassis.PeerSynchronizationProtocol	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: McOmcrClientNumEntriesHigh	Release: • N/A
Description: The alarm is raised when the system is configured as an OMCR warm standby system, and the total number of entries in the MCS database for a particular application becomes high. When the 80% and 90% threshold is crossed, there is no effect. When the 100% threshold is exceeded, the peer indicated by the values of tmnxMcPeerIpType and tmnxMcPeerIpAddr is shut down automatically by this system.		
Remedial action: Reconfigure the oversubscribed multi chassis redundancy set up to reduce the number of entries protected by this system.		

Table 39-529 McPathBlackHole

Alarm	Attributes	Applicable major release
Name: McPathBlackHole (2940) Type: resourceAlarm Package: equipment.McPathBlackHole Raised on class: equipment.DaughterCard	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceLimitReached	Release: • N/A
Description: The alarm is raised when a multicast (S,G) specification enters a black-hole state. As of 11.0 R1, this alarm will no longer be raised. Instead, the McPathsBlackHole alarm will be raised. All existing McPathBlackHole alarms will be converted to the McPathsBlackHole on upgrade.		
Remedial action: The alarm is raised when a source, group (S,G) goes into a black-hole state. The situation may occur when a certain source, group(S,G) has a bandwidth higher than it's configured maximum and no path/plane that can accommodate for the bandwidth of the new stream. This can be remedied by increasing the path limit(iom2 and older) or plane limit (iom3 and newer) at the Daughter Card tab or by modifying Ingress Multicast Path Management policy which assigned to the card.		

Table 39-530 McPathsBlackHole

Alarm	Attributes	Applicable major release
Name: McPathsBlackHole (4903) Type: resourceAlarm Package: equipment.McPathsBlackHole Raised on class: equipment.DaughterCard	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: resourceLimitReached	Release: • N/A
Description: The alarm is raised when one or more multicast (S,G) specifications enters a black-hole state.		
Remedial action: The alarm is raised when one or more source, group (S,G) goes into a black-hole state. The situation may occur when a certain source, group (S,G) has a bandwidth higher than it's configured maximum and no path/plane that can accommodate for the bandwidth of the new stream. This can be remedied by increasing the path limit(iom2 and older) or plane limit (iom3 and newer) at the Daughter Card tab or by modifying Ingress Multicast Path Management policy which assigned to the card.		

Table 39-531 McPeerOutOfSync

Alarm	Attributes	Applicable major release
Name: McPeerOutOfSync (9569) Type: communicationsAlarm Package: multichassis.McPeerOutOfSync Raised on class: multichassis. PeerSynchronizationProtocol	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PeerSyncStatusChanged	Release: • N/A
Description: The alarm is raised when the sync status of peer is OutOfSync		
Remedial action: Check the peer sync status if it is OutOfSync i.e., one of the peer is shutdown. Synchronize with the peers and the status should be inSync or SyncInProgress.		

Table 39-532 MD5AuthFailure

Alarm	Attributes	Applicable major release
Name: MD5AuthFailure (2934) Type: communicationsAlarm Package: bgp.MD5AuthFailure Raised on class: bgp.Md5Key	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: md5AuthFailure	Release: • N/A
Description: The alarm is raised when an incoming packet is dropped because of BGP MD5 key authentication failure.		
Remedial action: A configuration error has been made which must be corrected. The MD5 authentication key configured is incorrect.		

Table 39-533 MdaRuntimeEvent

Alarm	Attributes	Applicable major release
Name: MdaRuntimeEvent (9620) Type: resourceAlarm Package: equipment.MdaRuntimeEvent Raised on class: equipment.DaughterCard	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mdaRuntimeStatusUpdate	Release: • N/A
Description: The alarm is generated when the MDA has experienced a runtime status event worthy of reporting.		
Remedial action: Informational - no corrective action required.		

Table 39-534 MediationAuthenticationFailure (snmp)

Alarm	Attributes	Applicable major release
Name: MediationAuthenticationFailure (75) Type: communicationsAlarm Package: snmp.MediationAuthenticationFailure Raised on class: snmp.PollerManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: noMediationPolicyFound	Release: • N/A
Description: The alarm is raised when an NE has no associated 5620 SAM mediation policy.		
Remedial action: A configuration error has been made which must be corrected. Create the necessary mediation policy and associate the policy with the NE type.		

Table 39-535 MediationAuthenticationFailure (security)

Alarm	Attributes	Applicable major release
Name: MediationAuthenticationFailure (75) Type: communicationsAlarm Package: security.MediationAuthenticationFailure Raised on class: security.BaseMediationPolicy	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: unsupportedSecLevel Applicable probable causes: • unsupportedSecLevel • notInTimeWindow • unknownUserName • unknownEngineID • wrongDigest • decryptionError	Release: • N/A
Description: The alarm is raised when a mediation authentication failure occurs. This alarm is in some cases automatically cleared when mediation is restored for nodes that use the same mediation policy for read, write and trap access.		
Remedial action: A configuration error has been made which must be corrected. Create the necessary mediation policy and associate the policy with the NE type.		

Table 39-536 MemoryConsumption

Alarm	Attributes	Applicable major release
Name: MemoryConsumption (216) Type: communicationsAlarm Package: netw.MemoryConsumption Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tooManyTrapsBuffered	Release: • N/A
Description: The alarm is raised when one of the following occurs. - The number of traps from a particular NE that await processing by the 5620 SAM surpasses the NE red threshold for trap memory management in the 5620 SAM server configuration. - The global number of traps that await processing by the 5620 SAM surpasses the yellow threshold for trap memory management in the 5620 SAM server configuration. Caution: Nokia strongly recommends against modifying NE trap management threshold values; modifying these values can seriously degrade 5620 SAM performance. The alarm clears when one of the following occurs. - The number of traps from the NE that await processing falls below the NE red threshold. - The global number of traps that await processing falls below the system yellow threshold. The NE is resynchronized only if required.		
Remedial action: Informational - if the alarm persists or is occurring frequently perform root cause analysis to determine why the NEs in the network are consistently generating high rates of alarms.		

Table 39-537 MemoryThresholdCrossingAlarm

Alarm	Attributes	Applicable major release
Name: MemoryThresholdCrossingAlarm (1936) Type: configurationAlarm Package: server.MemoryThresholdCrossingAlarm Raised on class: server.SamServer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: lowMemoryConfigured	Release: • N/A
Description: The alarm is raised when the available memory on the 5620 SAM server drops below the warning threshold.		
Remedial action: Informational - Memory threshold settings are not configurable. Please contact your Nokia support representative for assistance.		

Table 39-538 MFibTableSizeLimitReached

Alarm	Attributes	Applicable major release
Name: MFibTableSizeLimitReached (190) Type: resourceAlarm Package: vpls.MFibTableSizeLimitReached Raised on classes: • vpls.AbstractBSite • vpls.AbstractTlsSite	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceLimitReached	Release: • N/A
Description: The alarm is raised when the 5620 SAM receives a svcTlsMfibTableFullAlarmRaised trap for a VPLS site. The alarm clears when the 5620 SAM receives a svcTlsMfibTableFullAlarmCleared trap for the site.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why		

Table 39-539 MGMCSwitchOverStatusNotify

Alarm	Attributes	Applicable major release
Name: MGMCSwitchOverStatusNotify (4814) Type: processingErrorAlarm Package: multichassis.MGMCSwitchOverStatusNotify Raised on class: multichassis.MultiChassisPeerMobileGateway	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configurationOrCustomization-Error	Release: • N/A
Description: The alarm is raised when the status of switchover enforced on the mobile-gateway in geo-redundancy changes		
Remedial action: Check switchover failure reason and correct the issue in order to perform switchover.		

Table 39-540 MgwPeerGtpMismatchAlarm

Alarm	Attributes	Applicable major release
Name: MgwPeerGtpMismatchAlarm (5144) Type: configurationAlarm Package: wlangw.MgwPeerGtpMismatchAlarm Raised on class: wlangw.MgwPeer	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: MgwPeerGtpMismatchAlarm	Release: • N/A
Description: This alarm is raised when the Negotiated QoS profile RADIUS attribute contains a release indicator either for GGSN or PGW that does not correspond to the interface type actually used in GTP. e.g. the release indicator is for GGSN and the interface type used in GTP is S2a/S2b while it should be Gn.		
Remedial action: The RADIUS Server configuration should be corrected to match the MgwPeer interface type actually used in GTP.		

Table 39-541 MicroBFDSessionDown

Alarm	Attributes	Applicable major release
Name: MicroBFDSessionDown (4997) Type: lnkaggAlarm Package: lag.MicroBFDSessionDown Raised on class: lag.Interface	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LagMemberMicroBfdSession-StateChanged	Release: • N/A
Description: The alarm is raised when there is a change in the state of the micro-BFD session of a link (port) of the LAG. When the state is 'idle', 'failed', 'waitingFwd', 'up', then the port is forwarding traffic. When the state is 'waiting', 'down', then the port is not forwarding traffic.		
Remedial action: Micro BFD Session state of one of the LAG links is changed. Please check the LAG's BFD configuration or the configuration of the LAG and the Ports in it.		

Table 39-542 MidLevelIPv6RoutesReached

Alarm	Attributes	Applicable major release
Name: MidLevelIPv6RoutesReached (506) Type: ProtocolAlarm Package: l3fwd.MidLevelIPv6RoutesReached Raised on class: l3fwd.ServiceSite	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: MidLevelIPv6RoutesReached	Release: • N/A
Description: The alarm is raised when the number of IPv6 routes in a VPRN exceeds the configured threshold value. The alarm information includes the number of IPv6 routes and the threshold value.		
Remedial action: The number of IPv6 routes has exceeded the configured maximum for the VPRN - the route table must be examined to ensure that all of the routes in the table are valid and not the result of a misconfiguration in the VPRN service. If all of the routes appear to be valid then the value used as the threshold value should be revisited.		

Table 39-543 MidLevelRoutesReached

Alarm	Attributes	Applicable major release
Name: MidLevelRoutesReached (1199) Type: ProtocolAlarm Package: l3fwd.MidLevelRoutesReached Raised on class: l3fwd.ServiceSite	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: MidLevelRoutesReached	Release: • N/A
Description: The alarm is raised when the number of routes in a VPRN exceeds the threshold specified in the VPRN configuration. The threshold value is a percentage of the maximum number of routes specified in the VPRN configuration. The alarm information includes the number of routes and the threshold value.		
Remedial action: Informational. The threshold configured should be revisited to ensure that it is not set to low given the number of routes that are being received. If the threshold is set close to the maximum number of routes supported by the NE then it is probable that there is an issue with another NE or VRF instance in the network. If the problem persists please contact your Nokia support representative for assistance.		

Table 39-544 MirrorDestinationMisconfigured

Alarm	Attributes	Applicable major release
Name: MirrorDestinationMisconfigured (209) Type: configurationAlarm Package: mirror.MirrorDestinationMisconfigured Raised on class: mirror.Mirror	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mirrorDestinationMisconfig-ured	Release: • N/A
Description: The alarm is raised when more than two destination Sites are configured for a service mirror.		
Raising condition: ('destinationMisconfigured' EQUAL 'true')		
Clearing condition: ('destinationMisconfigured' EQUAL 'false')		
Remedial action: Delete destination site so that there are two or less destination sites in one Mirror service.		

Table 39-545 MirrorEncapsulationTypeInconsistent

Alarm	Attributes	Applicable major release
Name: MirrorEncapsulationTypeInconsistent (217) Type: configurationAlarm Package: mirror.MirrorEncapsulationTypeInconsistent Raised on class: mirror.Mirror	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mirrorEncapsulationTypeIn-consistent	Release: • N/A
Description: The alarm is raised when the encapsulation types of the mirror sites differ.		
Raising condition: ('encapsulationTypeInconsistent' EQUAL 'true')		
Clearing condition: ('encapsulationTypeInconsistent' EQUAL 'false')		
Remedial action: Reconfigure the 'Encapsulation Type' for the sites (delete and re-add the sites if not configurable) so that the 'Encapsulation Type' are the same in one Mirror service.		

Table 39-546 MisconfiguredNode

Alarm	Attributes	Applicable major release
Name: MisconfiguredNode (382) Type: configurationAlarm Package: netw.MisconfiguredNode Raised on class: netw.Topology	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: persistOff Applicable probable causes: • persistOff • noSystemAddress • noIpv4Address • duplicateSystemAddress • sameManagementSystemAddress • noAdminDomainFound • sysIdentifierFail • duplicatedNodeName	Release: • N/A
Description: The alarm is raised when the 5620 SAM tries to discover an NE that is not properly configured for management. For example, when persistence is set to Off in the NE BOF, when the NE has no system address or NE share same management and system address.		
Remedial action: A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

Table 39-547 mismatchAnyCastRPTypes

Alarm	Attributes	Applicable major release
Name: mismatchAnyCastRPTypes (270) Type: configurationAlarm Package: pim.mismatchAnyCastRPTypes Raised on class: pim.AnyCastRP	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mismatchAnyCastRPTypes	Release: • N/A
Description: The alarm is raised when there is an anycast RP type mismatch.		
Remedial action: A configuration error has occurred that must be corrected. Please check to make sure the global Virtual Anycast RP service type and this PIM Anycast RP service type are consistent.		

Table 39-548 mismatchBackupAddress

Alarm	Attributes	Applicable major release
Name: mismatchBackupAddress (279) Type: configurationAlarm Package: vrrp.mismatchBackupAddress Raised on class: vrrp.VRInstance	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mismatchBackupAddress	Release: • N/A
Description: The alarm is raised when two VR instances in a VR have different backup addresses.		
Remedial action: Reconfigure the backup addresses for the peer VRRP instances so that they are the same.		

Table 39-549 mismatchSubnets

Alarm	Attributes	Applicable major release
Name: mismatchSubnets (280) Type: configurationAlarm Package: vrrp.mismatchSubnets Raised on class: vrrp.VRInstance	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mismatchSubnets	Release: • N/A
Description: The alarm is raised when two VR Instances in a VR have backup addresses that are in different subnets.		
Remedial action: Reconfigure the ip addresses for the peer VRRP instances so that they are in the same subnets.		

Table 39-550 mismatchVrrpTypes

Alarm	Attributes	Applicable major release
Name: mismatchVrrpTypes (278) Type: configurationAlarm Package: vrrp.mismatchVrrpTypes Raised on class: vrrp.VRInstance	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mismatchVrrpTypes	Release: • N/A
Description: The alarm is raised when two VR instances in a VR are of different types, for example, when one VR instance type is Network and the other is IES.		

Table 39-550 mismatchVrrpTypes (continued)

Alarm	Attributes	Applicable major release
Raising condition: (('VRRP Type' NOT EQUAL 'VRRP Type'))		
Clearing condition: (('VRRP Type' EQUAL 'VRRP Type'))		
Remedial action: Reconfigure the VRRP instance peers so that they are from the same type of interfaces (Network, IES or VPRN).		

Table 39-551 MissedStatsCatchUpCollection

Alarm	Attributes	Applicable major release
Name: MissedStatsCatchUpCollection (2895) Type: communicationsAlarm Package: netw.MissedStatsCatchUpCollection Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: snmpDown	Release: • N/A
Description: The alarm is raised when a 5620 SAM main server cannot communicate with the node to retrieve missed collections intervals. It is cleared after 5620 SAM main server can retrieve missed collections intervals.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM.		

Table 39-552 MissedStatsCollection

Alarm	Attributes	Applicable major release
Name: MissedStatsCollection (355) Type: communicationsAlarm Package: netw.MissedStatsCollection Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • N/A
Description: The alarm is raised when a 5620 SAM main server cannot collect statistics from the node during a statistics poll. It is cleared after 5620 SAM main server can collect statistics from the node during a statistics poll.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the node and the SAM server cannot be established.		

Table 39-553 MissingFallingEvent

Alarm	Attributes	Applicable major release
Name: MissingFallingEvent (414) Type: configurationAlarm Package: rmon.MissingFallingEvent Raised on class: rmon.Alarm	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: incompleteConfig	Release: • N/A
Description: The alarm is raised when the 5620 SAM cannot find the falling event object that is named in an RMON policy alarm definition.		

Table 39-553 MissingFallingEvent (continued)

Alarm	Attributes	Applicable major release
Raising condition: ('Missing Falling Event' EQUAL 'true')		
Clearing condition: ('Missing Falling Event' EQUAL 'false')		
Remedial action: Cannot find the falling event object that is named in an RMON policy alarm definition. Please create the required event.		

Table 39-554 MissingHopConfiguration

Alarm	Attributes	Applicable major release
Name: MissingHopConfiguration (350) Type: configurationAlarm Package: mpls.MissingHopConfiguration Raised on class: mpls.StaticLsp	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MissingHopConfiguration	Release: • N/A
Description: The alarm is raised when a static LSP is created without hops.		
Remedial action: Need to configure static hops to the destination.		

Table 39-555 MissingNESelfConfigPolicy

Alarm	Attributes	Applicable major release
Name: MissingNESelfConfigPolicy (1944) Type: communicationsAlarm Package: netw.MissingNESelfConfigPolicy Raised on class: netw.TopologyDiscoveryRule	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: noNESelfConfigPolicyFound	Release: • N/A
Description: The alarm is raised when an identifier of a shadow NE matches the identifier of a node being discovered by a scan of this discovery rule, but there is no NE self-config policy for the node type set in this discovery rule.		
Remedial action: A configuration error has been made which must be corrected. Create a NE self-config policy and assign it to the discovery rule associated with the node being discovered.		

Table 39-556 MissingPreProvisionedNode

Alarm	Attributes	Applicable major release
Name: MissingPreProvisionedNode (1945) Type: communicationsAlarm Package: netw.MissingPreProvisionedNode Raised on class: netw.DiscoveredNode	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: noPreProvisionedNodeFound	Release: • N/A
Description: The alarm is raised when there is no pre-provisioned NE with which to associate the discovered candidate target NE.		
Remedial action: A configuration error has been made which must be corrected. Create a pre-provisioned NE for the node being discovered.		

Table 39-557 MissingRisingEvent

Alarm	Attributes	Applicable major release
Name: MissingRisingEvent (413) Type: configurationAlarm Package: rmon.MissingRisingEvent Raised on class: rmon.Alarm	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: incompleteConfig	Release: • N/A
Description: The alarm is raised when the 5620 SAM cannot find the rising event object that is named in an RMON policy alarm definition.		
Raising condition: ('Missing Rising Event' EQUAL 'true')		
Clearing condition: ('Missing Rising Event' EQUAL 'false')		
Remedial action: Cannot find the rising event object that is named in an RMON policy alarm definition. Please create the required event.		

Table 39-558 missingStaticRPConfigurations

Alarm	Attributes	Applicable major release
Name: missingStaticRPConfigurations (268) Type: configurationAlarm Package: pim.missingStaticRPConfigurations Raised on class: pim.VirtualAnyCastRP	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: missingStaticRPConfigura-tions	Release: • N/A
Description: The alarm is raised when a static RP configuration is missing.		
Remedial action: A configuration error has occurred that must be corrected. Please check the global Virtual Anycast RP configuration and its operational status flag so that the Static RP and Group Range(s) are all configured.		

Table 39-559 MissSpokeConfiguration

Alarm	Attributes	Applicable major release
Name: MissSpokeConfiguration (218) Type: configurationAlarm Package: vpls.MissSpokeConfiguration Raised on class: vpls.AbstractVpls	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: missSpokeConfiguration	Release: • N/A
Description: The alarm is raised when the 5620 SAM detects a spoke SDP binding between two sites in one M-VPLS or VPLS. The alarm is not raised by the 5620 SAM, Release 4.0 or later.		
Raising condition: ('missSpokeConfiguration' EQUAL 'true')		
Clearing condition: ('missSpokeConfiguration' EQUAL 'false')		
Remedial action: Deprecated since Rel.4.0		

Table 39-560 MldGrpIfSapCModeRxQueryMism

Alarm	Attributes	Applicable major release
Name: MldGrpIfSapCModeRxQueryMism (5390) Type: configurationAlarm Package: mld.MldGrpIfSapCModeRxQueryMism Raised on class: mld.GrpInterfaceSap	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: InvalidCompatibilityMode-ofQueryReceived	Release: • N/A
Description: The alarm is raised when there is a mismatch between the compatible mode of the MLD SAP and the version of the received query. It is generated when the SAP is in MLDv1 compatible mode but it receives an MLDv2. It will include information on the configured version of the compatibility mode of the SAP, and the version of the received query.		
Remedial action: Change the MLD Version attribute on the MLD Group Interface to match the MLD host version.		

Table 39-561 MldGrpIfSapMaxGroupsLimitExceeded

Alarm	Attributes	Applicable major release
Name: MldGrpIfSapMaxGroupsLimitExceeded (5391) Type: configurationAlarm Package: mld.MldGrpIfSapMaxGroupsLimitExceeded Raised on class: mld.GrpInterfaceSap	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: MldGrpIfSapMaxGroupsLimit-Exceeded	Release: • N/A
Description: 'This alarm is raised when an attempt is made to configure a group when the number of groups configured on the SAP, is equal to the 'Maximum Number of Groups' supported on the SAP.'		
Remedial action: Increase the value of the 'Maximum Number of Groups' attribute in the parent MLD group interface so that the number of active MLD groups stays under the configured threshold.		

Table 39-562 MldGrpIfSapMaxGrpSrcLimExcd

Alarm	Attributes	Applicable major release
Name: MldGrpIfSapMaxGrpSrcLimExcd (5392) Type: configurationAlarm Package: mld.MldGrpIfSapMaxGrpSrcLimExcd Raised on class: mld.GrpInterfaceSap	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: MldGrpIfSapMaxGrpSr-cLimExcd	Release: • N/A
Description: This alarm is raised when an attempt is made to configure a group source for a group when the number of group sources is equal to the 'Maximum Number of Group Sources' per group supported on the SAP.		
Remedial action: Increase the value of the 'Maximum Number Of Group Sources' attribute in the parent MLD group interface so that the number of active MLD Group sources stays under the configured threshold.		

Table 39-563 MldGrpIfSapMaxSourcesLimitExceeded

Alarm	Attributes	Applicable major release
Name: MldGrpIfSapMaxSourcesLimitExceeded (5393) Type: configurationAlarm Package: mld.MldGrpIfSapMaxSourcesLimitExceeded Raised on class: mld.GrpInterfaceSap	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: MldGrpIfSapMaxSourcesLimit-Exceeded	Release: • N/A
Description: 'This alarm is raised when an attempt is made to configure a source for a group when the number of sources for this group is equal to the 'Maximum Number of Sources' per group supported on the SAP.'		
Remedial action: Increase the value of the 'Maximum Number Of Sources' attribute in the parent MLD group interface so that the number of active MLD sources stays under the configured threshold.		

Table 39-564 MldGrpIfSapRxQueryVerMism

Alarm	Attributes	Applicable major release
Name: MldGrpIfSapRxQueryVerMism (5394) Type: configurationAlarm Package: mld.MldGrpIfSapRxQueryVerMism Raised on class: mld.GrpInterfaceSap	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: InvalidVersionofQueryMes-sageReceived	Release: • N/A
Description: The alarm is raised when the MLD host SAP is configured as MLDv2 but receives an MLDv1 Query. It will include information on the configured version of the SAP, and the version of the received query.		
Remedial action: Change the MLD Version attribute on the MLD Group Interface to match the MLD host version.		

Table 39-565 MldHostCModeRxQueryMismatch

Alarm	Attributes	Applicable major release
Name: MldHostCModeRxQueryMismatch (8051) Type: configurationAlarm Package: mld.MldHostCModeRxQueryMismatch Raised on class: mld.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: InvalidCompatibilityMode-OfQueryReceived	Release: • N/A
Description: The alarm is raised when there is a mismatch between the compatible mode of the MLD Host and the version of the received query, i.e. the Host is in MLDv1 compatible mode but it receives a MLDv2 Query.		
Remedial action: Change the MLD Version attribute on the MLD Group Interface to match the MLD host version.		

Table 39-566 MldHostInstantiationFail

Alarm	Attributes	Applicable major release
Name: MldHostInstantiationFail (8052) Type: configurationAlarm Package: mld.MldHostInstantiationFail Raised on class: mld.GrpInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: MldHostInstantiationFailed	Release: • N/A
Description: This alarm is generated when a host is eligible for running MLD, but MLD cannot be started on the host.		
Remedial action: A host is eligible for running MLD, but MLD cannot be started on the given host.		

Table 39-567 MldHostMaxGroupsLimitExceeded

Alarm	Attributes	Applicable major release
Name: MldHostMaxGroupsLimitExceeded (8053) Type: configurationAlarm Package: mld.MldHostMaxGroupsLimitExceeded Raised on class: mld.GrpInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: MldHostMaxGroupsLimitExceeded	Release: • N/A
Description: This alarm is generated when an attempt is made to configure a group when the number of groups configured on the PIM interface is equal to the maximum number of groups supported on the host.		
Remedial action: Increase the value of the 'Maximum Number of Groups' attribute in the MLD group interface so that the number of active MLD groups stays under the configured threshold.		

Table 39-568 MldHostMaxGrpSrcsLimitExceeded

Alarm	Attributes	Applicable major release
Name: MldHostMaxGrpSrcsLimitExceeded (8054) Type: configurationAlarm Package: mld.MldHostMaxGrpSrcsLimitExceeded Raised on class: mld.GrpInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: MldHostMaxGrpSrcsLimitExceeded	Release: • N/A
Description: The alarm is generated when an attempt is made to configure a source for a group when the number of group sources is equal to the maximum number of group sources per group supported on the host.		
Remedial action: Increase the value of the 'Maximum Number Of Group Sources' attribute in the MLD group interface so that the number of active MLD Group sources stays under the configured threshold.		

Table 39-569 MldHostMaxSrcsLimitExceeded

Alarm	Attributes	Applicable major release
Name: MldHostMaxSrcsLimitExceeded (8055) Type: configurationAlarm Package: mld.MldHostMaxSrcsLimitExceeded Raised on class: mld.GrpInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: MldHostMaxSrcsLimitExceeded	Release: • N/A
Description: The alarm is generated when an attempt is made to configure a source for a group when the number of sources for this group is equal to the maximum number of sources per group supported on the host.		
Remedial action: Increase the value of the 'Maximum Number Of Sources' attribute in the MLD group interface so that the number of active MLD sources stays under the configured threshold.		

Table 39-570 MldHostRxQueryVerMismatch

Alarm	Attributes	Applicable major release
Name: MldHostRxQueryVerMismatch (8056) Type: configurationAlarm Package: mld.MldHostRxQueryVerMismatch Raised on class: mld.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: InvalidVersionOfQueryMessageReceived	Release: • N/A
Description: The alarm is raised when the MLD host is configured as MLDv2 but receives an MLDv1 Query. It will include information on the configured version of MLD Host, and the version of the received query.		
Remedial action: Change the MLD Version attribute on the MLD Group Interface to match the MLD host version.		

Table 39-571 MldSnpgGrpDroppedLimitExceeded

Alarm	Attributes	Applicable major release
Name: MldSnpgGrpDroppedLimitExceeded (537) Type: AccessInterfaceAlarm Package: vpls.MldSnpgGrpDroppedLimitExceeded Raised on class: vpls.L2AccessInterfaceMldSnpgCfg	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: mldSnpgGrpMaxNbrGrpsReached	Release: • N/A
Description: The alarm is raised when a SAP drops an MLD group because the configurable maximum number of MLD groups on the SAP is reached.		
Remedial action: Increasing the maximum number of MLD Groups to prevent groups from being dropped.		

Table 39-572 MlpppBundleInterleavingDisabled

Alarm	Attributes	Applicable major release
Name: MlpppBundleInterleavingDisabled (4383) Type: other Package: netw.MlpppBundleInterleavingDisabled Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mlpppBundleInterleavingDisabled	Release: • N/A
Description: The alarm is raised when the 'Link Fragmentation and LFI' bit is set but LFI isn't active for MLPPP Bundle. It is cleared for other cases. If LFI is not desired, disable it in the L2TP MLPPP configuration of the related routing instance. Or, ensure that the MLPPP bundle only contains a single link.		
Remedial action: If LFI is not desired, disable it in the L2TP MLPPP configuration of the related routing instance. Or, ensure that the MLPPP bundle only contains a single link.		

Table 39-573 MobGwSysGrpWriteCdrToCfAlarm

Alarm	Attributes	Applicable major release
Name: MobGwSysGrpWriteCdrToCfAlarm (3634) Type: MgGroupAlarm Package: isa.MobGwSysGrpWriteCdrToCfAlarm Raised on class: isa.MgIsaGroup	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MobGwSysGrpWriteCdrToCfStop	Release: • N/A
Description: The alarm is raised when the SGW or PGW writes Charging Data Record (CDR) packets to the local compact flash for the mobile system group.		
Remedial action: Retrieve Charging Data Record (CDR) files from compact flash.		

Table 39-574 ModFail

Alarm	Attributes	Applicable major release
Name: ModFail (1171) Type: communicationsAlarm Package: equipment.ModFail Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: modFail	Release: • N/A
Description: The alarm is raised when a modulation failure is detected.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 39-575 ModLOS

Alarm	Attributes	Applicable major release
Name: ModLOS (1172) Type: communicationsAlarm Package: equipment.ModLOS Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: modLOS	Release: • N/A
Description: The alarm is raised when a modulation loss of signal is detected.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 39-576 ModuleOutOfMemory

Alarm	Attributes	Applicable major release
Name: ModuleOutOfMemory (180) Type: equipmentAlarm Package: netw.ModuleOutOfMemory Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: outOfMemory	Release: • N/A
Description: The alarm is raised when the available NE memory is insufficient for allocation to a task.		
Remedial action: Informational - If the alarm persists please contact your Nokia support representative for assistance		

Table 39-577 MonitoredObjectsCrossThreshold

Alarm	Attributes	Applicable major release
Name: MonitoredObjectsCrossThreshold (8146) Type: processingErrorAlarm Package: sup.MonitoredObjectsCrossThreshold Raised on class: sup.SupervisionManager	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MonitoredObjectsCrossThreshold	Release: • N/A
Description: This alarm is raised when total monitored objects count cross certain threshold. It is in warning when the total count exceeds 90% of the limit, and in critical when the total count reaches the limit. It is automatically cleared when the total count is back under the limit and threshold.		
Remedial action: Please remove unnecessary supervision groups or change the inclusion filters of supervision groups to reduce monitored objects.		

Table 39-578 MplsResignalTimerExpired

Alarm	Attributes	Applicable major release
Name: MplsResignalTimerExpired (1121) Type: ProtocolAlarm Package: mpls.MplsResignalTimerExpired Raised on class: mpls.Site	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: resignalTimerExpired	Release: • N/A

Table 39-578 MplsResignalTimerExpired (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when an MPLS instance resignal timer expires.		
Remedial action: Informational only.		

Table 39-579 MPTCardFailure

Alarm	Attributes	Applicable major release
Name: MPTCardFailure (4830) Type: equipmentAlarm Package: mwa.MPTCardFailure Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReplaceableUnitProblem	Release: • N/A
Description: This alarm is raised when MPT card failure is detected.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-580 MPTPlugInCardFailure

Alarm	Attributes	Applicable major release
Name: MPTPlugInCardFailure (4831) Type: equipmentAlarm Package: mwa.MPTPlugInCardFailure Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReplaceableUnitProblem	Release: • N/A
Description: This alarm is raised when RPS/XPIC Plug-in card failure is detected.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-581 MPTPowerSupplyFailure

Alarm	Attributes	Applicable major release
Name: MPTPowerSupplyFailure (1170) Type: equipmentAlarm Package: equipment.MPTPowerSupplyFailure Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyFailure	Release: • N/A
Description: The alarm is raised when an MPT radio power source has a power supply failure.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 39-582 msapCreationFailure

Alarm	Attributes	Applicable major release
Name: msapCreationFailure (740) Type: ConfigurationAlarm Package: vpls.msapCreationFailure Raised on class: vpls.L2AccessInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: creationFailure Applicable probable causes: • creationFailure • radiusAuthFailed	Release: • N/A
Description: The alarm is raised when an NE notifies the 5620 SAM that it cannot create an MSAP.		
Remedial action: This warning is raised when the NE fails to create an MSAP.\nPlease review the alarm's additional text to obtain information about the error condition. Possible problems can be mis-configuration of the capture SAP, authentication failures, a missing target service or interface, illegal trigger packets and more.		

Table 39-583 MsdpActSrcLimExcd

Alarm	Attributes	Applicable major release
Name: MsdpActSrcLimExcd (380) Type: communicationsAlarm Package: msdp.MsdpActSrcLimExcd Raised on class: msdp.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: MsdpActiveSourcesLimitExceeded	Release: • N/A
Description: The alarm is raised when an MSDP site receives a number of source active messages that exceeds the configured maximum.		
Remedial action: Increase the configurable maximum number of source active messages if possible.		

Table 39-584 MsdpGroupSrcActMsgsExcd

Alarm	Attributes	Applicable major release
Name: MsdpGroupSrcActMsgsExcd (378) Type: communicationsAlarm Package: msdp.MsdpGroupSrcActMsgsExcd Raised on class: msdp.PeerGroup	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: MsdpGroupActiveSourcesLimitExceeded	Release: • N/A
Description: The alarm is raised when an MSDP group receives a number of source active messages that exceeds the configured maximum.		
Remedial action: Increase the configurable maximum number of source active messages if possible.		

Table 39-585 MsdpPeerActSrcLimExcd

Alarm	Attributes	Applicable major release
Name: MsdpPeerActSrcLimExcd (379) Type: communicationsAlarm Package: msdp.MsdpPeerActSrcLimExcd Raised on classes: • msdp.Peer • msdp.GroupPeer	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: MsdpPeerActiveSourcesLimit-Exceeded	Release: • N/A
Description: The alarm is raised when an MSDP peer receives a number of source active messages that exceeds the configured maximum.		
Remedial action: Increase the configurable maximum number of source active messages if possible.		

Table 39-586 MsdpRPFFailure

Alarm	Attributes	Applicable major release
Name: MsdpRPFFailure (354) Type: communicationsAlarm Package: msdp.MsdpRPFFailure Raised on class: msdp.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: MsdpRPFFailure	Release: • N/A
Description: The alarm is raised when an MSDP site experiences an RPF failure.		
Remedial action: Informational.		

Table 39-587 MsdpSourceSrcActMsgsExcd

Alarm	Attributes	Applicable major release
Name: MsdpSourceSrcActMsgsExcd (381) Type: communicationsAlarm Package: msdp.MsdpSourceSrcActMsgsExcd Raised on class: msdp.Source	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: MsdpSourceActive-SourcesLimitExceeded	Release: • N/A
Description: The alarm is raised when an MSDP source receives a number of source active messages that exceeds the configured maximum.		
Remedial action: Increase the configurable maximum number of source active messages if possible.		

Table 39-588 MsPwFecMisConfig

Alarm	Attributes	Applicable major release
Name: MsPwFecMisConfig (3691) Type: serviceAlarm Package: svt.MsPwFecMisConfig Raised on class: svt.SpokeSdpFec	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: msPwFecMisConfig	Release: • N/A
Description: The alarm is raised when a misconfiguration is discovered between two signaling multi-segment pseudowires. For example, configuring both multi-segment pseudowires as master would cause this notification.		
Clearing condition: ('Administrative State' EQUAL 'Up')		
Remedial action: Configure multi-segment pseudo-wires such that both are not configured to be master.		

Table 39-589 MultiChassisStpBlockingStatus

Alarm	Attributes	Applicable major release
Name: MultiChassisStpBlockingStatus (4902) Type: communicationsAlarm Package: aosredundancy. MultiChassisStpBlockingStatus Raised on class: aosredundancy.AOSMultiChassis	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: PrimarybridgeSTPPriority-ishigherthansecondrybridge	Release: • N/A
Description: Primary bridge STP Priority is higher than secondary bridge		
Remedial action: This Alarm can be cleared by setting primary bridge STP Priority lower then secondary bridge stp priority		

Table 39-590 MultipleOwners

Alarm	Attributes	Applicable major release
Name: MultipleOwners (283) Type: configurationAlarm Package: vrrp.MultipleOwners Raised on class: vrrp.AbstractInstance	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: multipleOwnersConfigured	Release: • N/A
Description: The alarm is raised when an owner VR instance detects another instance that advertises itself as an owner.		
Remedial action: Shut down one of the peer VRRP instances and change the owner to false and then turn it up.		

Table 39-591 multipleRPLOwner

Alarm	Attributes	Applicable major release
Name: multipleRPLOwner (2946) Type: configurationAlarm Package: ethring.multipleRPLOwner Raised on class: ethring.Element	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: multiplerpl	Release: • N/A

Table 39-591 multipleRPLOwner (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised on RPL elements configured as RPL owners, when there are multiple RPL owners detected in the ring topology.		
Remedial action: A configuration error has been made which must be corrected. The duplicate RPL owners must be deleted.		

Table 39-592 MVPNDuplicateVrfPolicy

Alarm	Attributes	Applicable major release
Name: MVPNDuplicateVrfPolicy (649) Type: configurationAlarm Package: l3fwd.MVPNDuplicateVrfPolicy Raised on classes: • l3fwd.ServiceSiteMVPNImportPolicy • l3fwd.ServiceSiteMVPNExportPolicy	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: duplicateVrfPolicyExists	Release: • N/A
Description: The alarm is raised when the 5620 SAM detects a duplicate VRF policy in a multicast VPRN. The alarm information includes the VRF policy ID and type, and information about the service site. Note: starting from SAM 12.0 R1, SAM no longer raise this alarm since it is not much useful but has performance issue.		
Remedial action: A configuration error has occurred which must be corrected. The duplicate VRF policy must be removed. Note: starting from SAM 12.0 R1, SAM no longer raises this alarm.		

Table 39-593 MVPNExportPolicyNotFound

Alarm	Attributes	Applicable major release
Name: MVPNExportPolicyNotFound (650) Type: configurationAlarm Package: l3fwd.MVPNExportPolicyNotFound Raised on class: l3fwd.ServiceSiteMVPNExportPolicy	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: exportPolicyDoesNotExist	Release: • N/A
Description: The alarm is raised when a VRF export policy for a multicast VPRN cannot be found. The alarm information includes the policy ID. Note: starting from SAM 12.0 R1, SAM no longer raise this alarm since it is not much useful but has performance issue.		
Remedial action: A configuration error has occurred which must be corrected. A VRF export policy with the appropriate ID must be configured. Note: starting from SAM 12.0 R1, SAM no longer raises this alarm.		

Table 39-594 MVPNImportPolicyNotFound

Alarm	Attributes	Applicable major release
Name: MVPNImportPolicyNotFound (651) Type: configurationAlarm Package: l3fwd.MVPNImportPolicyNotFound Raised on class: l3fwd.ServiceSiteMVPNImportPolicy	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: importPolicyDoesNotExist	Release: • N/A

Table 39-594 MVPNImportPolicyNotFound (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when a VRF import policy for a multicast VPRN cannot be found. The alarm information includes the policy ID. Note: starting from SAM 12.0 R1, SAM no longer raise this alarm since it is not much useful but has performance issue.		
Remedial action: A configuration error has occurred which must be corrected. A VRF import policy with the appropriate ID must be configured. Note: starting from SAM 12.0 R1, SAM no longer raises this alarm.		

Table 39-595 MwLinkEPSActivityChange

Alarm	Attributes	Applicable major release
Name: MwLinkEPSActivityChange (4945) Type: communicationsAlarm Package: mwa.MwLinkEPSActivityChange Raised on class: mwa.MwLink	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: EPSActivityChange	Release: • N/A
Description: This alarm is raised when a microwave link changes activity for EPS.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-596 MwLinkMaintenanceChange

Alarm	Attributes	Applicable major release
Name: MwLinkMaintenanceChange (4946) Type: communicationsAlarm Package: mwa.MwLinkMaintenanceChange Raised on class: mwa.MwLink	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: MaintenanceCommand-Change	Release: • N/A
Description: This alarm is raised when a microwave link maintenance command changes.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-597 MwLinkPeerChange

Alarm	Attributes	Applicable major release
Name: MwLinkPeerChange (4832) Type: communicationsAlarm Package: mwa.MwLinkPeerChange Raised on class: mwa.MwLink	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: PeerChange	Release: • N/A
Description: This alarm is raised when a microwave link discovered peer changes.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-598 MwLinkRPSActivityChange

Alarm	Attributes	Applicable major release
Name: MwLinkRPSActivityChange (4947) Type: communicationsAlarm Package: mwa.MwLinkRPSActivityChange Raised on class: mwa.MwLink	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: RPSActivityChange	Release: • N/A
Description: This alarm is raised when a microwave link changes activity for RPS.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-599 MwLinkTPSActivityChange

Alarm	Attributes	Applicable major release
Name: MwLinkTPSActivityChange (4948) Type: communicationsAlarm Package: mwa.MwLinkTPSActivityChange Raised on class: mwa.MwLink	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: TPSActivityChange	Release: • N/A
Description: This alarm is raised when a microwave link changes activity for TPS.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-600 NEBackupRecoveryFailed

Alarm	Attributes	Applicable major release
Name: NEBackupRecoveryFailed (8418) Type: processingErrorAlarm Package: sw.NEBackupRecoveryFailed Raised on class: sw.BackupRestoreManager	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileError	Release: • N/A
Description: The alarm is raised when an unexpected directory was found during NE backup recovery. The alarm is cleared when all NE backups located on the file system are already in the 5620 SAM database or they are recovered successfully in the 5620 SAM database.		
Remedial action: An NE backup located on the file system could not be imported in the 5620 SAM database. Ensure the directory structure containing the backups has the correct permissions and the directory names are properly formatted.		

Table 39-601 NeDatafileSizeAboveThreshold

Alarm	Attributes	Applicable major release
Name: NeDatafileSizeAboveThreshold (4975) Type: databaseAlarm Package: db.NeDatafileSizeAboveThreshold Raised on class: db.DatabaseManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: HighNumberOfRecords	Release: • N/A

Table 39-601 NeDatafileSizeAboveThreshold (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when a tablespace data file size exceeds the used space threshold. This may indicate that the number of stored NE backups or software images is too high.		
Remedial action: The probable cause of this alarm is the storage of too many NE backup or software image files. Purge old backup or extra software image files from the SAM database to resolve the problem. If the alarm persists please contact your Nokia support representative for assistance.		

Table 39-602 NeighborEntriesExceededLimit (rtr)

Alarm	Attributes	Applicable major release
Name: NeighborEntriesExceededLimit (9590) Type: communicationsAlarm Package: rtr.NeighborEntriesExceededLimit Raised on class: rtr.NetworkInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: NeighborEntriesExceeded-Limit	Release: • N/A
Description: The alarm is raised when the maximum amount of IPv6 neighbor entries learned on an IP interface has exceeded the configured maximum.		
Remedial action: Need to increase the Neighbor limit since number of IPv6 Neighbor entries have exceeded the configured limit so no new entries are learned until an entry expires.		

Table 39-603 NeighborEntriesExceededLimit (service)

Alarm	Attributes	Applicable major release
Name: NeighborEntriesExceededLimit (9590) Type: communicationsAlarm Package: service.NeighborEntriesExceededLimit Raised on class: service.L3AccessInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: NeighborEntriesExceeded-Limit	Release: • N/A
Description: The alarm is raised when the maximum amount of IPv6 neighbor entries learned on an IP interface has exceeded the configured maximum.		
Remedial action: Need to increase the Neighbor limit since number of IPv6 Neighbor entries have exceeded the configured limit so no new entries are learned until an entry expires.		

Table 39-604 NeighborEntriesExceededThresholdLimit (service)

Alarm	Attributes	Applicable major release
Name: NeighborEntriesExceededThresholdLimit (9591) Type: communicationsAlarm Package: service. NeighborEntriesExceededThresholdLimit Raised on class: service.L3AccessInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: NeighborEntriesExceed-edThresholdLimit	Release: • N/A
Description: The alarm is raised when the number of IPv6 neighbor entries learned on an IP interface has exceeded vRtrIfIpv6NbrThreshold percent of the configured maximum as specified by vRtrIfIpv6NbrLimit.		
Remedial action: Need to increase the Neighbor limit.		

Table 39-605 NeighborEntriesExceededThresholdLimit (rtr)

Alarm	Attributes	Applicable major release
Name: NeighborEntriesExceededThresholdLimit (9591) Type: communicationsAlarm Package: rtr.NeighborEntriesExceededThresholdLimit Raised on class: rtr.NetworkInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: NeighborEntriesExceed-edThresholdLimit	Release: • N/A
Description: The alarm is raised when the number of IPv6 neighbor entries learned on an IP interface has exceeded vRtrIfIpv6NbrThreshold percent of the configured maximum as specified by vRtrIfIpv6NbrLimit.		
Remedial action: Need to increase the Neighbor limit.		

Table 39-606 NeighborLoss (pim)

Alarm	Attributes	Applicable major release
Name: NeighborLoss (188) Type: communicationsAlarm Package: pim.NeighborLoss Raised on class: pim.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NeighborConnectionLost	Release: • N/A
Description: The alarm is raised when the connection to a neighbor is lost.		
Remedial action: Informational - please check the connection to the neighbor is fine, e.g the peer is not in shutdown state. The alarm will be cleared when the neighbor is discovered up.		

Table 39-607 NeighborLoss (vpls)

Alarm	Attributes	Applicable major release
Name: NeighborLoss (188) Type: communicationsAlarm Package: vpls.NeighborLoss Raised on class: vpls.InterfacePimSnooping	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NeighborConnectionLost	Release: • N/A
Description: The alarm is raised when the 5620 SAM detects a loss of connection to a PIM neighbor.		
Remedial action: There is a lost connection to the PIM Neighbor. Check the PIM Neighbor to ensure it is still operational and that underlying transport of the SAP or SDP is operationally up.		

Table 39-608 NetConfEventSubscriptionProblem

Alarm	Attributes	Applicable major release
Name: NetConfEventSubscriptionProblem (4864) Type: communicationsAlarm Package: netw.NetConfEventSubscriptionProblem Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NetConfEventSubscription-Failed	Release: • N/A
Description: The alarm is raised when the 5620 SAM is unable to subscribe for Netconf event notification from a network element. For a WMM or CMM: if this problem persists it may result in a loss of PM file collection.		
Remedial action: Informational -if the alarm persists or is occurring frequently then investigation is required to understand why the Netconf event subscription configuration is failing.		

Table 39-609 NetworkElementChassisTypeMismatch

Alarm	Attributes	Applicable major release
Name: NetworkElementChassisTypeMismatch (1946) Type: communicationsAlarm Package: netw.NetworkElementChassisTypeMismatch Raised on class: netw.DiscoveredNode	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mismatchOfNetworkElement-ChassisType	Release: • N/A
Description: The alarm is raised when the chassis type of the shadow network element does not match with the chassis type of the discovered NE.		
Remedial action: A configuration error has been made which must be corrected. The pre-provisioned NE chassis type defined must match the chassis type of the node being discovered.		

Table 39-610 NetworkElementTypeMismatch

Alarm	Attributes	Applicable major release
Name: NetworkElementTypeMismatch (1947) Type: communicationsAlarm Package: netw.NetworkElementTypeMismatch Raised on class: netw.DiscoveredNode	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mismatchOfNetworkElement-Type	Release: • N/A
Description: The alarm is raised when the type of the shadow network element does not match with the type of the discovered NE.		
Remedial action: A configuration error has been made which must be corrected. The pre-provisioned NE type defined must match the type of the node being discovered.		

Table 39-611 NetworkElementVersionMismatch

Alarm	Attributes	Applicable major release
Name: NetworkElementVersionMismatch (1948) Type: communicationsAlarm Package: netw.NetworkElementVersionMismatch Raised on class: netw.DiscoveredNode	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mismatchOfNetworkElement-Version	Release: • N/A
Description: The alarm is raised when the version of the shadow network element does not match with the version of the discovered NE.		
Remedial action: A configuration error has been made which must be corrected. The pre-provisioned NE version defined must match the version of the node being discovered.		

Table 39-612 NodeAlreadyManagedOverAnotherProtocol

Alarm	Attributes	Applicable major release
Name: NodeAlreadyManagedOverAnotherProtocol (1080) Type: discoveryControlAlarm Package: netw. NodeAlreadyManagedOverAnotherProtocol Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: nodeAlreadyDiscovered	Release: • N/A
Description: The alarm is raised when the 5620 SAM tries to rediscover a previously discovered NE using a different IP version.		
Remedial action: Informational		

Table 39-613 NodeColdStart

Alarm	Attributes	Applicable major release
Name: NodeColdStart (172) Type: equipmentAlarm Package: netw.NodeColdStart Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: nodeColdStart	Release: • N/A
Description: The alarm is raised when the 5620 SAM receives a SNMPv2-MIB.coldStart trap from an NE.		
Remedial action: Informational - 5620 SAM has received an indication from an NE that it has restarted. If the problem persists please contact your Nokia support representative for assistance.		

Table 39-614 NodeDatabaseCorruptionDetected

Alarm	Attributes	Applicable major release
Name: NodeDatabaseCorruptionDetected (1961) Type: communicationsAlarm Package: netw.NodeDatabaseCorruptionDetected Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeDatabaseCorrupted	Release: • N/A
Description: This alarm is raised when an error in the node causes the node to lose its configuration and come up in an inconsistent/incomplete state. To overcome this it might be necessary to reconfigure the node.		
Remedial action: The node configuration is inconsistent. You may have to do a Reconfigure. However if it's a first discovery, you have to delete the node, then create a pre-provisioned NE instance, create a new discovery rule with a self-configuration policy and discover the node.		

Table 39-615 NodeDataMismatch

Alarm	Attributes	Applicable major release
Name: NodeDataMismatch (3315) Type: configurationAlarm Package: netw.NodeDataMismatch Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: nodeDataMismatch	Release: • N/A
Description: The alarm is raised when the 5620 SAM Data model and node is mismatched.		
Remedial action: Resync the object or update it with the appropriate values.		

Table 39-616 NodeSoftwareMisalignmentDetected

Alarm	Attributes	Applicable major release
Name: NodeSoftwareMisalignmentDetected (4906) Type: communicationsAlarm Package: netw.NodeSoftwareMisalignmentDetected Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeSoftwareMisalignment	Release: • N/A

Table 39-616 NodeSoftwareMisalignmentDetected (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when a software misalignment has been detected on the node and comes back up with an unexpected software version (software change triggered by external tool) To correct this situation it is necessary to download and activate on the node the software referenced by SAM and then reconfigure the node with the 5620 SAM's current configuration.		
Remedial action: the NE software is misaligned. Perform a Download and Activate Software operation with the software version known by SAM which is the reference.		

Table 39-617 NodeUpgraded

Alarm	Attributes	Applicable major release
Name: NodeUpgraded (178) Type: configurationAlarm Package: netw.NodeUpgraded Raised on class: netw.NetworkElement	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: upgradedNodeVersion	Release: • N/A
Description: The alarm is raised when the 5620 SAM detects an NE software version upgrade.		
Remedial action: Informational		

Table 39-618 NodeVersionMismatch

Alarm	Attributes	Applicable major release
Name: NodeVersionMismatch (177) Type: configurationAlarm Package: netw.NodeVersionMismatch Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DowngradedNodeVersion	Release: • N/A
Description: The alarm is raised when the software version on an NE differs from the version recorded for the NE in the 5620 SAM database.		
Remedial action: The NE has been manually downloaded with a new version of SW. Unmanage and re-manage this node to clear the alarm. If software version on the NE is incompatible with the version of 5620 SAM, then the SW should be reverted to a compatible version for SAM (then unmanage and re-manage the node).		

Table 39-619 NominalLinkViolation

Alarm	Attributes	Applicable major release
Name: NominalLinkViolation (9012) Type: communicationsAlarm Package: gmpls.NominalLinkViolation Raised on class: gmpls.OpticalGLSP	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NominalLinkViolation	Release: • N/A
Description: The alarm is raised for a tunnel LSP on nominal path when at least one tunnel is not on nominal path.		
Remedial action: Not Available.		

Table 39-620 NoRPLOwner

Alarm	Attributes	Applicable major release
Name: NoRPLOwner (3700) Type: configurationAlarm Package: ethring.NoRPLOwner Raised on class: ethring.RadioRing	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: norpltype	Release: • N/A
Description: The alarm is raised when there is No RPL Owner selected on a Radio Ring.		
Remedial action: Operator has to configure at least one of the Elements belonging to a Radio Ring as RPL Owner.		

Table 39-621 NotEnoughContiguousBlocks

Alarm	Attributes	Applicable major release
Name: NotEnoughContiguousBlocks (4987) Type: configurationAlarm Package: dhcp.NotEnoughContiguousBlocks Raised on class: dhcp.LocalDhcp6Server	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: notEnoughContiguousBlocks	Release: • N/A
Description: The alarm is raised when a lease cannot be created because not enough contiguous blocks are found for the requested delegated prefix size.		
Remedial action: This alarm is raised when a lease cannot be created because not enough contiguous blocks are found for the requested delegated prefix size.\n Please adjust the associated pools.		

Table 39-622 NsgVirtualSwitchDown

Alarm	Attributes	Applicable major release
Name: NsgVirtualSwitchDown (11060) Type: virtualSwitchAlarm Package: dctr.NsgVirtualSwitchDown Raised on class: dctr.NsgVirtualSwitch	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NsgUplinksAllDown	Release: • N/A
Description: The alarm is raised when all Uplinks of the NSG are down.		
Remedial action: This alarm is raised when all uplinks associated to the NSG are lost.		

Table 39-623 NsgVirtualSwitchPartiallyDown

Alarm	Attributes	Applicable major release
Name: NsgVirtualSwitchPartiallyDown (11061) Type: virtualSwitchAlarm Package: dctr.NsgVirtualSwitchPartiallyDown Raised on class: dctr.NsgVirtualSwitch	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NsgUplinkDown	Release: • N/A
Description: The alarm is raised when some Uplinks of the NSG are down.		

Table 39-623 NsgVirtualSwitchPartiallyDown (continued)

Alarm	Attributes	Applicable major release
Remedial action: This alarm is raised when an uplink of the NSG is lost but at least one uplink remains.		

Table 39-624 NTPMaxAssocTrap

Alarm	Attributes	Applicable major release
Name: NTPMaxAssocTrap (9633) Type: communicationsAlarm Package: ntp.NTPMaxAssocTrap Raised on class: ntp.NTP	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: NTPMaxAssocTrap	Release: • N/A
Description: Notify the management entity on reaching the maximum allowable NTP client and peer associations.		
Remedial action: This is informational alarm to indicate management entity on reaching the maximum allowable NTP client and peer associations.		

Table 39-625 NTPNoServersAvail

Alarm	Attributes	Applicable major release
Name: NTPNoServersAvail (4878) Type: communicationsAlarm Package: ntp.NTPNoServersAvail Raised on class: ntp.NTP	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NTPNoServersAvail	Release: • N/A
Description: The alarm is generated when no NTP Servers are available.		
Remedial action: Please check if the configured servers are physically reachable (IP ping) from the node (Or) check if the configured servers are enabled as NTP Server (NTP Server attribute on General Tab) and their Operational state is Up (Or) check if the authentication keys are correctly defined on the client and the NTP server node.		

Table 39-626 NTPServerChange

Alarm	Attributes	Applicable major release
Name: NTPServerChange (4880) Type: communicationsAlarm Package: ntp.NTPServerChange Raised on class: ntp.NTP	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: NTPServerChange	Release: • N/A
Description: The alarm generated when more than one NTP servers are configured in a system and a different NTP server is selected because the operational status of the earlier NTP server has changed.		
Remedial action: This is informational alarm to indicate that the current clock source has changed for the node. Alarm needs to be manually cleared.		

Table 39-627 OAM_120

Alarm	Attributes	Applicable major release
Name: OAM_120 (6153) Type: communicationsAlarm Package: femto.OAM_120 Raised on class: femto.FGW	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • N/A
Description: Loss of OAM link between SAM and FGW.		
Remedial action: No particular action is required. This notification may be required by Global Product Support for debugging purposes		

Table 39-628 OAM_121

Alarm	Attributes	Applicable major release
Name: OAM_121 (6154) Type: communicationsAlarm Package: femto.OAM_121 Raised on class: femto.FGW	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: communicationsSubsystem-Failure	Release: • N/A
Description: The OAMLinkAdministrativeState parameter (FGW object) is equal to locked.		
Remedial action: Find out why the OAMLinkAdministrativeState was locked in the first place. Set the OAMLinkAdministrativeState parameter (FGW object) to unlocked.		

Table 39-629 OAM_122

Alarm	Attributes	Applicable major release
Name: OAM_122 (6155) Type: processingErrorAlarm Package: femto.OAM_122 Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • N/A
Description: The MIB number received from NE is different from the MIB number stored in the active view.		
Remedial action: See the nodal documentation for more information.		

Table 39-630 OAM_123

Alarm	Attributes	Applicable major release
Name: OAM_123 (6156) Type: processingErrorAlarm Package: femto.OAM_123 Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • N/A
Description: The FGW ID received from NE is different from the data configured at SAM.		
Remedial action: Undeclare and then declare the FGW with the correct FGW ID		

Table 39-631 OAM_124

Alarm	Attributes	Applicable major release
Name: OAM_124 (6157) Type: processingErrorAlarm Package: femto.OAM_124 Raised on class: femto.FGW	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • N/A
Description: The FGW Cluster ID received from NE is different from the data configured at SAM.		
Remedial action: Undeclare and then declare the FGW with the correct FGW Cluster ID		

Table 39-632 OCHTrailDown

Alarm	Attributes	Applicable major release
Name: OCHTrailDown (3891) Type: communicationsAlarm Package: optical.OCHTrailDown Raised on class: optical.OCHTrail	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OperationalStateDown	Release: • N/A
Description: The alarm is raised when the termination point(s) of the OCH trail are operationally down.		
Remedial action: Informational - If the alarm persists or is occurring frequently then investigation is required by looking at the active alarms on the hops to understand why the underlying transport network is unreliable.		

Table 39-633 OCHTrailMisConfigured

Alarm	Attributes	Applicable major release
Name: OCHTrailMisConfigured (5125) Type: communicationsAlarm Package: optical.OCHTrailMisConfigured Raised on class: optical.OCHTrail	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: OchCrossConnectionTrail-NameMisMatch	Release: • N/A

Table 39-633 OCHTrailMisConfigured (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when all the OCh cross connections (XCs) of an OCh trail do not have the same trail name. In order for the auto wavekey processing to work properly, the XC name should be the same on all NEs of the OCh trail.		
Remedial action: Recreate the OCH Cross Connects with same OCH Trail name else Wave Tracker does not work properly.		

Table 39-634 ODUTrailDown

Alarm	Attributes	Applicable major release
Name: ODUTrailDown (3892) Type: communicationsAlarm Package: optical.ODUTrailDown Raised on class: optical.ODUTrail	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OperationalStateDown	Release: • N/A
Description: The alarm is raised when the termination point(s) of the ODU trail are operationally down.		
Remedial action: Informational - If the alarm persists or is occurring frequently then investigation is required by looking at the active alarms on the hops to understand why the underlying transport network is unreliable.		

Table 39-635 ODUTrailMisConfigured

Alarm	Attributes	Applicable major release
Name: ODUTrailMisConfigured (3893) Type: communicationsAlarm Package: optical.ODUTrailMisConfigured Raised on class: optical.ODUTrail	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: OchCrossConnectionTrail-NameMisMatch	Release: • N/A
Description: The alarm is raised when all the OCh cross connections (XCs) of an OCh trail do not have the same trail name. In order for the auto wavekey processing to work properly, the XC name should be the same on all NEs of the OCh trail.		
Remedial action: Recreate the OCH Cross Connects with same OCH Trail name else Wave Tracker does not work properly.		

Table 39-636 oesCfgBlocked

Alarm	Attributes	Applicable major release
Name: oesCfgBlocked (11180) Type: equipmentAlarm Package: netw.oesCfgBlocked Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: OesConfigurationisNotinSyn-cWithRouter	Release: • N/A
Description: CAUSE This alarm is generated when a configuration being made in the OES was blocked. EFFECT The configuration is not active in the OES.		

Table 39-636 oesCfgBlocked (continued)

Alarm	Attributes	Applicable major release
Remedial action: 1.If there is a card present in the OES and is a supported card type but the router is not yet aware of its presence.This will be cleared as soon as the router becomes aware of the card.\n 2. If the mounted card is supported card and is misaligned with the configuration, move the card to the correct slot.\n 3. If there is an unsupported card type in the OES that the router cannot manage.The OES has to be re-commissioned to clear the condition.		

Table 39-637 oesCfgFailNoMemory

Alarm	Attributes	Applicable major release
Name: oesCfgFailNoMemory (11181) Type: equipmentAlarm Package: netw.oesCfgFailNoMemory Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: requestForDynamicMemoryToDownloadConfigFailed	Release: • N/A
Description: [CAUSE] The oesCfgFailNoMemory notification is generated when a request to obtain dynamic memory to download a configuration to the OES has failed. [EFFECT] The configuration is not active in the OES.		
Remedial action: This may be a temporary issue and the condition may clear on its own. If the event is raised periodically, then there is a permanent memory issue and the support organization should be informed.		

Table 39-638 OesControlCommunicationDown

Alarm	Attributes	Applicable major release
Name: OesControlCommunicationDown (9576) Type: equipmentAlarm Package: netw.OesControlCommunicationDown Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OesControlPathCommunicationDown	Release: • N/A
Description: This alarm generated when the active CPM of SR Chassis can not reach the OES master chassis.		
Remedial action: The Control Path Communication from the router to the OES Master Chassis has gone down. The OES can not be managed by the router. Ensure that all control communications ports between the router and the OES master chassis are correctly connected and test the cables.		

Table 39-639 OesCtlCardPortDown

Alarm	Attributes	Applicable major release
Name: OesCtlCardPortDown (9043) Type: equipmentAlarm Package: equipment.OesCtlCardPortDown Raised on class: equipment.PhysicalPort	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OesCtlCardPortDown	Release: • N/A
Description: This alarm is generated when a port (e.g. ES 1 or AUX) on an OES Control Card is not operational.		

Table 39-639 OesCtlCardPortDown (continued)

Alarm	Attributes	Applicable major release
Remedial action: The port on OES control card may be misconnected, disconnected, faulty or having faulty cable or faulty Control card. Check that the cable is correctly connected and test the cable.		

Table 39-640 OesDbInvalid

Alarm	Attributes	Applicable major release
Name: OesDbInvalid (9577) Type: equipmentAlarm Package: equipment.OesDbInvalid Raised on class: equipment.Shelf	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: DbInvalid	Release: • N/A
Description: During installation,if the OES is not properly commissioned. A downgrade of OES software has occurred. A serial number in the database does not match that of the OES either because the controller was replaced or the alarm card was replaced. Equipment Controller is removed/reseated during a system process, causing file corruption. The database audit failed indicating some type of corruption of the database.		
Remedial action: OES database corruption has occured.Recommision the OES to SR shelf. The correct database is held in the host system so it will be restored to the shelf once the existing database is cleared and the host re-establishes communication with the OES.		

Table 39-641 OesDbSyncFailure

Alarm	Attributes	Applicable major release
Name: OesDbSyncFailure (9578) Type: equipmentAlarm Package: equipment.OesDbSyncFailure Raised on class: equipment.Shelf	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OesEquipmentControllerFail-ure	Release: • N/A
Description: This alarm is generated when an active Equipment Controller of OES is unable to synchronize its database with the inactive Equipment Controller. This could be because of incorrectly seated Equipment Controller or the software versions on the active and inactive Equipment Controllers are not compatible or A hardware problem with one or both controllers.		
Remedial action: The OES does not have redundancy protection between the two Equipment Controller cards. \n 1.Remove the Equipment Controller with the condition and examine the connector on the back of the card for damage, including bent or broken pins; \n 2.Examine the connector on the backplane for damage. If there is damage to the backplane of the shelf, contact your service representative; \n 3.Re-insert the Equipment Controller into its original slot and allow the card to initialize; \n 4.Repeat the steps 2 to 3 for the second Equipment Controller. \n 5.Replace the Equipment Controller with the alarm condition with a new unit. If the condition is not cleared, replace the second Equipment Controller with a new unit. Follow the return and repair process to return the faulty card to an authorized repair center for replacement.		

Table 39-642 OesDbUnsync

Alarm	Attributes	Applicable major release
Name: OesDbUnsync (9579) Type: equipmentAlarm Package: equipment.OesDbUnsync Raised on class: equipment.Shelf	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OesEquipmentControllerRedundancySyncFailure	Release: • N/A
Description: This alarm is generated when the active and standby Equipment Controllers are not in sync. This could be because of the OES does not have redundancy protection between the two Equipment Controller cards.		
Remedial action: The OES does not have redundancy protection between the two Equipment Controller cards. If a switchover were to occur, then the database of the newly active controller might not reflect the latest configuration. Perform a warm reset of the standby controller. If the problem persists please contact your Nokia support representative for assistance.		

Table 39-643 OESECSwitchOver

Alarm	Attributes	Applicable major release
Name: OESECSwitchOver (9042) Type: equipmentAlarm Package: equipment.OESECSwitchOver Raised on class: equipment.BaseCard	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ECEventSwitchover	Release: • N/A
Description: The alarm is raised when a OES EC Switch over happens.		
Remedial action: Informational - OES Equipment Controller Switch over		

Table 39-644 OesFan32HReqd

Alarm	Attributes	Applicable major release
Name: OesFan32HReqd (9044) Type: equipmentAlarm Package: equipment.OesFan32HReqd Raised on class: equipment.FanTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: oesFan32HReqd	Release: • N/A
Description: The alarm is raised when the OES chassis in a PSS32 shelf requires high speed fan (FAN32H), but the fan inserted is not the right type.		
Remedial action: Replace the OES fan unit with the correct one for 1830 PSS32 shelf.		

Table 39-645 OesFanFailure

Alarm	Attributes	Applicable major release
Name: OesFanFailure (9045) Type: equipmentAlarm Package: equipment.OesFanFailure Raised on class: equipment.FanTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fanFailure	Release: • N/A
Description: The alarm is raised when the associated fan in the OES chassis is not operationally Up.		
Remedial action: Remove and reset the fan unit. If this does not resolve the problem replace the fan.		

Table 39-646 OesFanSpeedHigh

Alarm	Attributes	Applicable major release
Name: OesFanSpeedHigh (11106) Type: equipmentAlarm Package: equipment.OesFanSpeedHigh Raised on class: equipment.FanTray	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: oesFanSpeedHigh	Release: • N/A
Description: The alarm is raised when the fan speed of the OES chassis is too high.		
Remedial action: Remove and re-insert the fan tray into the chassis. If the alarm does not clear, replace the fan tray.		

Table 39-647 OesFanSpeedLow

Alarm	Attributes	Applicable major release
Name: OesFanSpeedLow (11107) Type: equipmentAlarm Package: equipment.OesFanSpeedLow Raised on class: equipment.FanTray	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: oesFanSpeedLow	Release: • N/A
Description: The alarm is raised when the fan speed of the OES chassis is too low.		
Remedial action: Check for airflow blockage or a dirty filter, and clear. If the alarm does not clear, replace the fan tray.		

Table 39-648 OesFirmwareCondition

Alarm	Attributes	Applicable major release
Name: OesFirmwareCondition (11108) Type: firmwareAlarm Package: equipment.OesFirmwareCondition Raised on class: equipment.Card	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: FirmwareCondition	Release: • N/A
Description: The OesFirmwareCondition alarm is generated when the firmware on the card has a condition that needs to be notified.		
Remedial action: The OesFirmwareCondition alarm is generated when the firmware on the card has a condition that needs to be notified to network administrator.		

Table 39-649 OesNtpOutOfSync

Alarm	Attributes	Applicable major release
Name: OesNtpOutOfSync (11109) Type: equipmentAlarm Package: equipment.OesNtpOutOfSync Raised on class: equipment.Shelf	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OesNtpOutOfSync	Release: • N/A
Description: This alarm is generated when NTP time on the OES is not synchronized to the host router.		
Remedial action: Ensure the host router has NTP configured and a reachable time source. Allow 40 minutes for the condition to clear.		

Table 39-650 OesPortError

Alarm	Attributes	Applicable major release
Name: OesPortError (9046) Type: equipmentAlarm Package: equipment.OesPortError Raised on class: equipment.PhysicalPort	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OesPortDeviceorPortFailure-Detected	Release: • N/A
Description: This alarm is generated when there is a failure on the device or the transmission of the OES port.		
Remedial action: There is a device or transmission failure on the OES port, this could be service affecting. Please try taking the port out of service then bringing back in service, eg. shutdown/no shutdown , or try a soft reset, hard reset, then replacement of the card if the error condition persists.		

Table 39-651 OesPowerSupplyFailure

Alarm	Attributes	Applicable major release
Name: OesPowerSupplyFailure (9047) Type: equipmentAlarm Package: equipment.OesPowerSupplyFailure Raised on class: equipment.PowerSupplyTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyFailure	Release: • N/A
Description: The alarm is raised when a power filter card reports a failure.		
Remedial action: Ensure that the NE is properly connected to power. If the problem persists please contact your Nokia support representative for assistance.		

Table 39-652 oesSwBelowMinRev

Alarm	Attributes	Applicable major release
Name: oesSwBelowMinRev (11182) Type: equipmentAlarm Package: netw.oesSwBelowMinRev Raised on class: netw.NetworkElement	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: OesSwBelowMinRev	Release: • N/A

Table 39-652 oesSwBelowMinRev (continued)

Alarm	Attributes	Applicable major release
Description: This alarm is generated when the version of the running OES software image is below the minimum expected version.		
Remedial action: Upgrade the OES to a software image that is equal to or greater than the minimum expected version.		

Table 39-653 oesSwUpgdCleanupFailed

Alarm	Attributes	Applicable major release
Name: oesSwUpgdCleanupFailed (11183) Type: equipmentAlarm Package: netw.oesSwUpgdCleanupFailed Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: OesSwUpgdCleanupFailed	Release: • N/A
Description: This alarm is generated when the operation to clean-up a failed software upgrade fails.		
Remedial action: 1. Determine the reason for the upgrade failure from tmnxOesEventReason in the notification. First clear the condition indicated by the reason. 2. Re-try the upgrade procedure. 3. Contact the Nokia technical support team if the re-try does not fix the problem.		

Table 39-654 oesSwUpgdFailed

Alarm	Attributes	Applicable major release
Name: oesSwUpgdFailed (11184) Type: equipmentAlarm Package: netw.oesSwUpgdFailed Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: OesSwUpgdFailed	Release: • N/A
Description: This alarm is generated when a failure occurs in upgrading a component in the OES.		
Remedial action: 1.Determine the reason the upgrade failed by checking the tmnxOesEventReason. First clear the condition indicated by the reason in the object tmnxOesEventReason. 2. Perform a soft reset on the card that failed to upgrade and try the upgrade procedure again. 3. Perform a hard reset on the card that failed to upgrade and try the upgrade procedure again. 4. Remove and re-insert the card that failed to upgrade and try the upgrade procedure again. 5. Replace the card that failed to upgrade and try the upgrade procedure again. 6. Inform the Nokia technical support team.		

Table 39-655 OesUsrpnlPortDown

Alarm	Attributes	Applicable major release
Name: OesUsrpnlPortDown (9048) Type: equipmentAlarm Package: equipment.OesUsrpnlPortDown Raised on class: equipment.PhysicalPort	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OesUsrpnlPortDown	Release: • N/A
Description: This alarm is generated when a port (E1 or E2) on an OES USRPNL card is not operational.		

Table 39-655 OesUsrpnlPortDown (continued)

Alarm	Attributes	Applicable major release
Remedial action: The port on OES User panel may be misconnected, disconnected, faulty or having faulty cable faulty User Panel card. Check that the cable is correctly connected and test the cable.		

Table 39-656 OlcStateChangeAlarm

Alarm	Attributes	Applicable major release
Name: OlcStateChangeAlarm (3740) Type: communicationsAlarm Package: generic.OlcStateChangeAlarm Raised on class: generic.GenericObject	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: unknown	Release: • N/A
Description: The alarm is raised to notify the user, when an OLC State change takes place at the specified revert time.		
Remedial action: Informational - This is a notification alarm to indicate that the object will revert it's OLC state.		

Table 39-657 OldArchiveLogsDeleted

Alarm	Attributes	Applicable major release
Name: OldArchiveLogsDeleted (198) Type: databaseAlarm Package: db.OldArchiveLogsDeleted Raised on class: db.DatabaseManager	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: archivedLogsIssue	Release: • N/A
Description: The alarm is raised when the 5620 SAM deletes the applied archive logs because database disk space is low. In a standalone deployment, the 5620 SAM deletes all archive logs. In a redundant deployment, the 5620 SAM deletes the applied archive logs, and can raise the alarm against the primary or standby database.		
Remedial action: Informational - verify there is adequate disk space for the archive log files on the database servers. If the alarm persists then the frequency of database backups should be increased.		

Table 39-658 OMSTrailDown

Alarm	Attributes	Applicable major release
Name: OMSTrailDown (8082) Type: communicationsAlarm Package: optical.OMSTrailDown Raised on class: optical.OMSTrail	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OperationalStateDown	Release: • N/A
Description: The alarm is raised when termination point(s) of the OMS trail are operationally down.		
Remedial action: Informational - If the alarm persists or is occurring frequently then investigation is required by looking at the active alarms on the hops to understand why the underlying transport network is unreliable.		

Table 39-659 OneWayCommunication

Alarm	Attributes	Applicable major release
Name: OneWayCommunication (733) Type: communicationsAlarm Package: server.OneWayCommunication Raised on class: server.AuxiliaryServer	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: routingConfiguration	Release: • N/A
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server, but the auxiliary server can communicate with the main server.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 39-660 OperDownInvalidMac

Alarm	Attributes	Applicable major release
Name: OperDownInvalidMac (8144) Type: configurationAlarm Package: srrp.OperDownInvalidMac Raised on class: srrp.Instance	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: invalidMacAddress	Release: • N/A
Description: This Alarm is generated when the operational virtual MAC of an SRRP instance conflicts with the MAC of the parent interface.		
Remedial action: The alarm is generated when the operational virtual MAC of an SRRP instance conflicts with the MAC of the parent interface. The SRRP virtual router instance is not allowed to become operationally 'up'.		

Table 39-661 OperDownInvalidMacClear

Alarm	Attributes	Applicable major release
Name: OperDownInvalidMacClear (8145) Type: configurationAlarm Package: srrp.OperDownInvalidMacClear Raised on class: srrp.Instance	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: invalidMacAddressCleared	Release: • N/A
Description: The Alarm is generated when a previously occurring OperDownInvalidMac notification has been cleared. Operational virtual MAC of an IPv4 SRRP instance does not have any conflict with the MAC of the parent interface.		
Remedial action: The alarm is generated when a previously occurring OperDownInvalidMac notification has been cleared. Operational virtual MAC of an IPv4 SRRP instance does not have any conflict with the MAC of the parent interface.		

Table 39-662 OpticalAmplifierLossOfInputOpticalPower

Alarm	Attributes	Applicable major release
Name: OpticalAmplifierLossOfInputOpticalPower (1185) Type: communicationsAlarm Package: ethernetequipment. OpticalAmplifierLossOfInputOpticalPower Raised on class: ethernetequipment. WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: AmplifierLossOfInputOpticalPower	Release: • N/A
Description: The alarm is raised when a device reports an Amplifier Loss of input optical power on an optical amplifier interface.		
Remedial action: Ensure that the input optical power at the face plate is greater than the minimum required		

Table 39-663 OpticalAmplifierLossOfOutputPower

Alarm	Attributes	Applicable major release
Name: OpticalAmplifierLossOfOutputPower (1186) Type: communicationsAlarm Package: ethernetequipment. OpticalAmplifierLossOfOutputPower Raised on class: ethernetequipment. WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: AmplifierLossOfOutputPower	Release: • N/A
Description: The alarm is raised when a device reports an Amplifier Loss of output power on an optical amplifier interface.		
Remedial action: If the alarm is persistent: 1. clear the mda, 2. clear card 3. replace the card		

Table 39-664 OPticalAmplifierModuleCaseTemperatureHigh

Alarm	Attributes	Applicable major release
Name: OPticalAmplifierModuleCaseTemperatureHigh (1180) Type: communicationsAlarm Package: ethernetequipment. OPticalAmplifierModuleCaseTemperatureHigh Raised on class: ethernetequipment. WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: AmplifierModuleCaseTemperatureHigh	Release: • N/A
Description: The alarm is raised when a device reports an Amplifier Module Case Temperature High on an optical amplifier interface.		
Remedial action: Decrease the ambient temperature		

Table 39-665 OPticalAmplifierModuleCaseTemperatureLow

Alarm	Attributes	Applicable major release
Name: OPticalAmplifierModuleCaseTemperatureLow (1181) Type: communicationsAlarm Package: ethernetequipment. OPticalAmplifierModuleCaseTemperatureLow Raised on class: ethernetequipment. WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: AmplifierModuleCaseTemperatureLow	Release: • N/A
Description: The alarm is raised when a device reports an Amplifier Module Case Temperature Low on an optical amplifier interface.		
Remedial action: Increase the ambient temperature		

Table 39-666 OpticalAmplifierModuleCommunicationFailure

Alarm	Attributes	Applicable major release
Name: OpticalAmplifierModuleCommunicationFailure (1187) Type: communicationsAlarm Package: ethernetequipment. OpticalAmplifierModuleCommunicationFailure Raised on class: ethernetequipment. WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: AmplifierModuleCommunicationFailure	Release: • N/A
Description: The alarm is raised when a device reports an Amplifier Module Communication Failure on a tunable dispersion compensation module's interface.		
Remedial action: If the alarm is persistent: 1. clear the mda, 2. clear card 3. replace the card		

Table 39-667 OpticalAmplifierPumpCurrent

Alarm	Attributes	Applicable major release
Name: OpticalAmplifierPumpCurrent (1188) Type: communicationsAlarm Package: ethernetequipment. OpticalAmplifierPumpCurrent Raised on class: ethernetequipment. WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: AmplifierPumpcurrent	Release: • N/A
Description: The alarm is raised when a device reports an Amplifier Pump over current on an optical amplifier interface.		
Remedial action: If the alarm is persistent: 1. clear the mda, 2. clear card 3. replace the card		

Table 39-668 OPticalAmplifierPumpTemperature

Alarm	Attributes	Applicable major release
Name: OPticalAmplifierPumpTemperature (1182) Type: communicationsAlarm Package: ethernetequipment. OPticalAmplifierPumpTemperature Raised on class: ethernetequipment. WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: AmplifierPumpTemperature	Release: • N/A
Description: The alarm is raised when a device reports an Amplifier Pump Temperature on an optical amplifier interface.		
Remedial action: Decrease the ambient temperature		

Table 39-669 OpticalTdcmEEPROMinvalid

Alarm	Attributes	Applicable major release
Name: OpticalTdcmEEPROMinvalid (1189) Type: communicationsAlarm Package: ethernetequipment. OpticalTdcmEEPROMinvalid Raised on class: ethernetequipment. WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: TdcmEEPROMinvalid	Release: • N/A
Description: The alarm is raised when a device reports a Tdcm EEPROM invalid on a tunable dispersion compensation module's interface.		
Remedial action: Replace the card		

Table 39-670 OpticalTdcmModuleCommunicationFailure

Alarm	Attributes	Applicable major release
Name: OpticalTdcmModuleCommunicationFailure (1190) Type: communicationsAlarm Package: ethernetequipment. OpticalTdcmModuleCommunicationFailure Raised on class: ethernetequipment. WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: TdcmModuleCommunication-Failure	Release: • N/A
Description: The alarm is raised when a device reports a Tdcm Module Communication Failure on a tunable dispersion compensation module's interface.		
Remedial action: If the alarm is persistent: 1. clear the mda, 2. clear card 3. replace the card		

Table 39-671 OPticalTdcmModuleTemperatureHigh

Alarm	Attributes	Applicable major release
Name: OPticalTdcmModuleTemperatureHigh (1183) Type: communicationsAlarm Package: ethernetequipment.OPticalTdcmModuleTemperatureHigh Raised on class: ethernetequipment.WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: TdcmModuleTemperatureHigh	Release: • N/A
Description: The alarm is raised when a device reports a Tdcm Module Temperature High on a tunable dispersion compensation module's interface.		
Remedial action: Decrease the ambient temperature		

Table 39-672 OPticalTdcmModuleTemperatureLow

Alarm	Attributes	Applicable major release
Name: OPticalTdcmModuleTemperatureLow (1184) Type: communicationsAlarm Package: ethernetequipment.OPticalTdcmModuleTemperatureLow Raised on class: ethernetequipment.WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: TdcmModuleTemperatureLow	Release: • N/A
Description: The alarm is raised when a device reports a Tdcm Module Temperature Low on a tunable dispersion compensation module's interface.		
Remedial action: Increase the ambient temperature		

Table 39-673 OpticalTdcmNotReady

Alarm	Attributes	Applicable major release
Name: OpticalTdcmNotReady (1191) Type: communicationsAlarm Package: ethernetequipment.OpticalTdcmNotReady Raised on class: ethernetequipment.WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: TdcmNotReady	Release: • N/A
Description: The alarm is raised when a device reports a Tdcm Not Ready on a tunable dispersion compensation module's interface.		
Remedial action: This is a transient condition that should clear under normal operation but if it causes the link to fail and persists: 1. clear the mda, 2. clear card 3. replace the card		

Table 39-674 OpticalTdcmThermalControlTemperatureLimit

Alarm	Attributes	Applicable major release
Name: OpticalTdcmThermalControlTemperatureLimit (1192) Type: communicationsAlarm Package: ethernetequipment. OpticalTdcmThermalControlTemperatureLimit Raised on class: ethernetequipment. WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: TdcmThermalControlTemperatureLimit	Release: • N/A
Description: The alarm is raised when a device reports a Tdcm Thermal Control Temperature Limit on a tunable dispersion compensation module's interface.		
Remedial action: If this alarm persists: 1. clear the mda, 2. clear card 3. replace the card		

Table 39-675 OpticalTdcmThermalControlUnlocked

Alarm	Attributes	Applicable major release
Name: OpticalTdcmThermalControlUnlocked (1193) Type: communicationsAlarm Package: ethernetequipment. OpticalTdcmThermalControlUnlocked Raised on class: ethernetequipment. WaveLengthTracker	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: TdcmThermalControlUnlocked	Release: • N/A
Description: The alarm is raised when a device reports a Tdcm Thermal Control Unlocked on a tunable dispersion compensation module's interface.		
Remedial action: This is a transient condition that should clear under normal operation but if it causes the link to fail and persists: 1. clear the mda, 2. clear card 3. replace the card		

Table 39-676 OracleHomeDiskSpaceBelowThreshold

Alarm	Attributes	Applicable major release
Name: OracleHomeDiskSpaceBelowThreshold (399) Type: databaseAlarm Package: db.OracleHomeDiskSpaceBelowThreshold Raised on class: db.DatabaseManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: diskSpaceIssue	Release: • N/A
Description: The alarm is raised when the primary or standalone database Oracle disk space threshold specified in the nms-server.xml file is reached.		
Remedial action: The Oracle Proxy purges the log based on database file policy configuration. Reducing the number of archives to keep and/or size of the log files or increasing the available disk space will resolve the problem. If alarm persists please contact your Nokia support representative for assistance.		

Table 39-677 OspfAdvRtrLsaLimitWarning

Alarm	Attributes	Applicable major release
Name: OspfAdvRtrLsaLimitWarning (9585) Type: configurationAlarm Package: ospf.OspfAdvRtrLsaLimitWarning Raised on class: ospf.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: AdvRtrLsaLimitWarning	Release: • N/A
Description: The alarm is raised when when OSPF reaches Advertise Router LSA limit value or warning limit.		
Remedial action: Increase the LSA Limit or LSA Threshold for this OSPF instance.		

Table 39-678 OspfExportLimitDropped

Alarm	Attributes	Applicable major release
Name: OspfExportLimitDropped (1924) Type: configurationAlarm Package: ospf.OspfExportLimitDropped Raised on class: ospf.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: exportLimitDropped	Release: • N/A
Description: The alarm is raised when the total number of exported routes to the OSPF level, drops below the configured limit.		
Remedial action: Informational - the total number of exported routes from the route table to this OSPF level drops below the configured export limit.		

Table 39-679 OspfExportLimitReached

Alarm	Attributes	Applicable major release
Name: OspfExportLimitReached (1925) Type: configurationAlarm Package: ospf.OspfExportLimitReached Raised on class: ospf.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: exportLimitReached	Release: • N/A
Description: The alarm is raised when the total number of routes to the OSPF level is equal to the configured limit for exported routes.		
Remedial action: Informational - the total number of routes for the level is equal to the configured limit for exported routes		

Table 39-680 OspfExportLimitWarning

Alarm	Attributes	Applicable major release
Name: OspfExportLimitWarning (1926) Type: configurationAlarm Package: ospf.OspfExportLimitWarning Raised on class: ospf.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: exportLimitWarning	Release: • N/A
Description: The alarm is raised when the total number of exported routes to the OSPF level is equal to the configured percentage, vRtrIsisExportLimitLogPercent of the export limit.		

Table 39-680 OspfExportLimitWarning (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational - the total number of exported routes or the level is equal to the configured Export Limit Log Percent		

Table 39-681 OspfExternalLsaThresholdExceeded

Alarm	Attributes	Applicable major release
Name: OspfExternalLsaThresholdExceeded (372) Type: topologyAlarm Package: topology. OspfExternalLsaThresholdExceeded Raised on class: topology.Cpaa	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: manyExternalLSAsFloodingIn-toIGP	Release: • N/A
Description: The alarm is raised when the number of OSPF external LSAs exceeds the maximum threshold because a large number of external LSAs flooding into the IGP.		
Remedial action: User configured alarm for monitoring purpose. The advertised external routes can be viewed using CPAM IGP prefix list.		

Table 39-682 OspfIfTxRetransmit

Alarm	Attributes	Applicable major release
Name: OspfIfTxRetransmit (662) Type: communicationsAlarm Package: ospf.OspfIfTxRetransmit Raised on class: ospf.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: hello Applicable probable causes: • hello • dbDescript • lsReq • lsUpdate • lsAck • nullPacket	Release: • N/A
Description: The alarm is raised when an NE retransmits an OSPF packet. The alarm information includes the NE ID of the OSPF neighbor. The alarm is not raised against a Release 4.0 or later NE.		
Remedial action: Informational - an NE retransmits an OSPF packet. The alarm information includes the NE ID of the OSPF neighbor. The alarm is not raised against a Release 4.0 or later NE.		

Table 39-683 OspfInternalLsaRateThresholdExceededPerArea

Alarm	Attributes	Applicable major release
Name: OspfInternalLsaRateThreshold-ExceededPerArea (310) Type: topologyAlarm Package: topology.OspfInternalLsaRateThresholdExceededPerArea Raised on class: topology.Area	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unstableIGPNetwork	Release: • N/A
Description: The alarm is raised when the OSPF internal LSA rate for an area exceeds the maximum allowed value because of an unstable IGP network.		
Remedial action: User configured alarm for monitoring purpose. IGP historical map can be used for debugging purpose.		

Table 39-684 OspfInternalLsaThresholdExceededPerArea

Alarm	Attributes	Applicable major release
Name: OspfInternalLsaThresholdExceededPerArea (309) Type: topologyAlarm Package: topology.OspfInternalLsaThresholdExceededPerArea Raised on class: topology.Area	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: largeIgpNetwork	Release: • N/A
Description: The alarm is raised when the number of OSPF internal LSAs for an area exceeds the maximum allowed value because of a large IGP network.		
Remedial action: User configured alarm for monitoring purpose. IGP historical map can be used for debugging purpose.		

Table 39-685 OspfLsaRateThresholdExceededPerRouter

Alarm	Attributes	Applicable major release
Name: OspfLsaRateThresholdExceededPerRouter (308) Type: topologyAlarm Package: topology.OspfLsaRateThresholdExceededPerRouter Raised on class: topology.Router	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unstableLinksOnRouter	Release: • N/A
Description: The alarm is raised when the OSPF LSA rate for an NE exceeds the maximum allowed value because of an unstable NE link.		
Remedial action: User configured alarm for monitoring purpose. IGP historical map can be used for debugging purpose.		

Table 39-686 OspfLsaThresholdExceededPerRouter

Alarm	Attributes	Applicable major release
Name: OspfLsaThresholdExceededPerRouter (374) Type: topologyAlarm Package: topology. OspfLsaThresholdExceededPerRouter Raised on class: topology.Router	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: routerAdvertisingManyLSAs	Release: • N/A
Description: The alarm is raised when the number of OSPF LSAs for an NE exceeds the maximum allowed value because the NE advertises too many LSAs.		
Remedial action: User configured alarm for monitoring purpose. IGP historical map can be used for debugging purpose.		

Table 39-687 OspfSIDError

Alarm	Attributes	Applicable major release
Name: OspfSIDError (9586) Type: configurationAlarm Package: ospf.OspfSIDError Raised on class: ospf.Site	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ospfSIDError	Release: • N/A
Description: This notification is generated when OSPF receives a SID label which is already in use for another prefix.		
Remedial action: In case of system exhaustion, the IGP instance goes into overload. The operator must manually clear the IGP overload condition after freeing resources. IGP will attempt to program at the next SPF all tunnels which previously failed the programming operation		

Table 39-688 OspfSIDNotInLabelRange

Alarm	Attributes	Applicable major release
Name: OspfSIDNotInLabelRange (9587) Type: configurationAlarm Package: ospf.OspfSIDNotInLabelRange Raised on class: ospf.Site	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ospfSIDNotInLabelRange	Release: • N/A
Description: This notification is generated when OSPF receives a SID which is not within the label range of the next hop router.		
Remedial action: The SID range needs to be change to include remote SID received.		

Table 39-689 OTSTrailDown

Alarm	Attributes	Applicable major release
Name: OTSTrailDown (8084) Type: communicationsAlarm Package: optical.OTSTrailDown Raised on class: optical.OTSTrail	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OperationalStateDown	Release: • N/A

Table 39-689 OTSTrailDown (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the termination point(s) of the OTS trail are operationally down.		
Remedial action: Informational - If the alarm persists or is occurring frequently then investigation is required by looking at the active alarms on the hops to understand why the underlying transport network is unreliable.		

Table 39-690 OTUAlarmIndicationSignal

Alarm	Attributes	Applicable major release
Name: OTUAlarmIndicationSignal (755) Type: communicationsAlarm Package: ethernetequipment. OTUAlarmIndicationSignal Raised on class: ethernetequipment.OtuInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: AlarmIndicationSignal	Release: • N/A
Description: The alarm is raised when a device reports an AIS on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 39-691 OTUBackwardDefectIndication

Alarm	Attributes	Applicable major release
Name: OTUBackwardDefectIndication (756) Type: communicationsAlarm Package: ethernetequipment. OTUBackwardDefectIndication Raised on class: ethernetequipment.OtuInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BackwardDefectIndication	Release: • N/A
Description: The alarm is raised when a device reports a BDI on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 39-692 OTUBackwardIncomingAlignmentError

Alarm	Attributes	Applicable major release
Name: OTUBackwardIncomingAlignmentError (815) Type: communicationsAlarm Package: ethernetequipment. OTUBackwardIncomingAlignmentError Raised on class: ethernetequipment.OtuInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BackwardIncomingAlignment-Error	Release: • N/A
Description: The alarm is raised when a device reports an ODU alarm indication signal on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 39-693 OTUBitErrorRateSignalDegradation

Alarm	Attributes	Applicable major release
Name: OTUBitErrorRateSignalDegradation (757) Type: communicationsAlarm Package: ethernetequipment. OTUBitErrorRateSignalDegradation Raised on class: ethernetequipment.OtuInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BitErrorRateSignalDegrada-tion	Release: • N/A
Description: The alarm is raised when a device reports a BER-SD on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 39-694 OTUBitErrorRateSignalFail

Alarm	Attributes	Applicable major release
Name: OTUBitErrorRateSignalFail (758) Type: communicationsAlarm Package: ethernetequipment. OTUBitErrorRateSignalFail Raised on class: ethernetequipment.OtuInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BitErrorRateSignalFail	Release: • N/A
Description: The alarm is raised when a device reports a BER-SF on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 39-695 OTUFECRxTxModeMismatch

Alarm	Attributes	Applicable major release
Name: OTUFECRxTxModeMismatch (759) Type: communicationsAlarm Package: ethernetequipment. OTUFECRxTxModeMismatch Raised on class: ethernetequipment.OtuInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: FECRxTxModeMismatch	Release: • N/A
Description: The alarm is raised when a device reports a FEC Rx/Tx mode mismatch on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 39-696 OTUFECSignalDegradation

Alarm	Attributes	Applicable major release
Name: OTUFECSignalDegradation (760) Type: communicationsAlarm Package: ethernetequipment. OTUFECSignalDegradation Raised on class: ethernetequipment.OtuInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: FECSignalDegradation	Release: • N/A
Description: The alarm is raised when a device reports a FEC-SD on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 39-697 OTUFECSignalFailure

Alarm	Attributes	Applicable major release
Name: OTUFECSignalFailure (761) Type: communicationsAlarm Package: ethernetequipment.OTUFECSignalFailure Raised on class: ethernetequipment.OtuInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: FECSignalFailure	Release: • N/A
Description: The alarm is raised when a device reports a FEC-SF on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 39-698 OTUIncomingAlignmentError

Alarm	Attributes	Applicable major release
Name: OTUIncomingAlignmentError (816) Type: communicationsAlarm Package: ethernetequipment. OTUIncomingAlignmentError Raised on class: ethernetequipment.OtuInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: IncomingAlignmentError	Release: • N/A
Description: The alarm is raised when a device reports an ODU open connection indication on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 39-699 OTULossOfClock

Alarm	Attributes	Applicable major release
Name: OTULossOfClock (762) Type: communicationsAlarm Package: ethernetequipment.OTULossOfClock Raised on class: ethernetequipment.OtuInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LossOfClock	Release: • N/A
Description: The alarm is raised when a device reports an LOC on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 39-700 OTULossOfFraming

Alarm	Attributes	Applicable major release
Name: OTULossOfFraming (763) Type: communicationsAlarm Package: ethernetequipment.OTULossOfFraming Raised on class: ethernetequipment.OtuInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LossOfFraming	Release: • N/A
Description: The alarm is raised when a device reports an LOF on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 39-701 OTULossOfMultiFrame

Alarm	Attributes	Applicable major release
Name: OTULossOfMultiFrame (764) Type: communicationsAlarm Package: ethernetequipment.OTULossOfMultiFrame Raised on class: ethernetequipment.OtuInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LossOfMultiFrame	Release: • N/A
Description: The alarm is raised when a device reports an LOM on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 39-702 OTULossOfSignal

Alarm	Attributes	Applicable major release
Name: OTULossOfSignal (765) Type: communicationsAlarm Package: ethernetequipment.OTULossOfSignal Raised on class: ethernetequipment.OtuInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LossOfSignal	Release: • N/A
Description: The alarm is raised when a device reports an LOS on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 39-703 OTUODUAlarmIndicationSignal

Alarm	Attributes	Applicable major release
Name: OTUODUAlarmIndicationSignal (766) Type: communicationsAlarm Package: ethernetequipment. OTUODUAlarmIndicationSignal Raised on class: ethernetequipment.OtuInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ODUAlarmIndicationSignal	Release: • N/A
Description: The alarm is raised when a device reports an ODU AIS on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 39-704 OTUODULocked

Alarm	Attributes	Applicable major release
Name: OTUODULocked (767) Type: communicationsAlarm Package: ethernetequipment.OTUODULocked Raised on class: ethernetequipment.OtuInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ODULocked	Release: • N/A
Description: The alarm is raised when a device reports an ODU locked on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 39-705 OTUODUOpenConnectionIndication

Alarm	Attributes	Applicable major release
Name: OTUODUOpenConnectionIndication (768) Type: communicationsAlarm Package: ethernetequipment. OTUODUOpenConnectionIndication Raised on class: ethernetequipment.OtuInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ODUOpenConnectionIndication	Release: • N/A
Description: The alarm is raised when a device reports an ODU-OCI on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 39-706 OTUOPUPSIPayloadTypeMismatch

Alarm	Attributes	Applicable major release
Name: OTUOPUPSIPayloadTypeMismatch (817) Type: communicationsAlarm Package: ethernetequipment. OTUOPUPSIPayloadTypeMismatch Raised on class: ethernetequipment.OtuInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OPUPSIPayloadTypeMismatch	Release: • N/A
Description: The alarm is raised when a device reports a PM backward defect indication on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 39-707 OTUOPUPSITraceMismatch

Alarm	Attributes	Applicable major release
Name: OTUOPUPSITraceMismatch (818) Type: communicationsAlarm Package: ethernetequipment. OTUOPUPSITraceMismatch Raised on class: ethernetequipment.OtuInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OPUPSITraceMismatch	Release: • N/A
Description: The alarm is raised when a device reports an ODU locked indication on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 39-708 OTUPMBackwardDefectIndication

Alarm	Attributes	Applicable major release
Name: OTUPMBackwardDefectIndication (769) Type: communicationsAlarm Package: ethernetequipment. OTUPMBackwardDefectIndication Raised on class: ethernetequipment.OtuInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PMBackwardDefectIndication	Release: • N/A
Description: The alarm is raised when a device reports a PM BDI on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 39-709 OTUPMTraceIDMismatch

Alarm	Attributes	Applicable major release
Name: OTUPMTraceIDMismatch (819) Type: communicationsAlarm Package: ethernetequipment. OTUPMTraceIDMismatch Raised on class: ethernetequipment.OtuInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PMTraceIDMismatch	Release: • N/A
Description: The alarm is raised when a device reports an ODU open connection indication on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 39-710 OTUTraceIdMismatch

Alarm	Attributes	Applicable major release
Name: OTUTraceIdMismatch (820) Type: communicationsAlarm Package: ethernetequipment.OTUTraceIdMismatch Raised on class: ethernetequipment.OtuInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: TraceIdMismatch	Release: • N/A
Description: The alarm is raised when a device reports a trace ID mismatch on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 39-711 OTUTrailDown

Alarm	Attributes	Applicable major release
Name: OTUTrailDown (5126) Type: communicationsAlarm Package: optical.OTUTrailDown Raised on class: optical.OTUTrail	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OperationalStateDown	Release: • N/A
Description: The alarm is raised when the termination point(s) of the OTU trail are operationally down.		
Remedial action: Informational - If the alarm persists or is occurring frequently then investigation is required by looking at the active alarms on the hops to understand why the underlying transport network is unreliable.		

Table 39-712 OTUTrailMisConfigured

Alarm	Attributes	Applicable major release
Name: OTUTrailMisConfigured (5127) Type: communicationsAlarm Package: optical.OTUTrailMisConfigured Raised on class: optical.OTUTrail	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: OchCrossConnectionTrail-NameMisMatch	Release: • N/A
Description: The alarm is raised when all the OCh cross connections (XCs) of an OTU trail do not have the same trail name. In order for the auto wavekey processing to work properly, the XC name should be the same on all NEs of the OTU trail.		
Remedial action: Recreate the OCH Cross Connects with same Trail name else Wave Tracker does not work properly.		

Table 39-713 OTUUncorrectableFECErrors

Alarm	Attributes	Applicable major release
Name: OTUUncorrectableFECErrors (770) Type: communicationsAlarm Package: ethernetequipment. OTUUncorrectableFECErrors Raised on class: ethernetequipment.OtuInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: UncorrectableFECErrors	Release: • N/A
Description: The alarm is raised when a device reports one or more uncorrectable FEC errors on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 39-714 OutOfBandManagementConnectionDown

Alarm	Attributes	Applicable major release
Name: OutOfBandManagementConnectionDown (138) Type: communicationsAlarm Package: netw. OutOfBandManagementConnectionDown Raised on class: netw.NodeDiscoveryControl	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: managementConnectionDown	Release: • N/A
Description: The alarm is raised when the 5620 SAM cannot reach a managed NE using the ping function over an out-of-band connection.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM.		

Table 39-715 OutOfSlots

Alarm	Attributes	Applicable major release
Name: OutOfSlots (462) Type: configurationAlarm Package: equipment.OutOfSlots Raised on class: equipment.Shelf	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: noAvailableSlotNumbers	Release: • N/A
Description: The alarm is raised when a stack element enters pass-through mode because there is no slot number for the element.		
Remedial action: Login to switch console, correct the slot number and reload stack.		

Table 39-716 PacingInProgressWarning

Alarm	Attributes	Applicable major release
Name: PacingInProgressWarning (737) Type: configurationAlarm Package: tunnelmgmt.PacingInProgressWarning Raised on class: tunnelmgmt.TopologyRule	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: noUpdatesDueToPacingIn-Progress	Release: • N/A
Description: The alarm is raised when tunnel creation or deletion is not performed after a member is added or removed from a rule group because topology rule pacing is in progress. When this occurs, the Reapply and Delete Unused operations must be performed manually when the pacing is complete. The alarm clears after a Reapply operation is performed.		
Remedial action: When this occurs, the Reapply and Delete Unused operations must be performed manually when the pacing is complete. The alarm clears after a Reapply operation is performed.		

Table 39-717 PacketDropped

Alarm	Attributes	Applicable major release
Name: PacketDropped (11070) Type: configurationAlarm Package: dhcp.PacketDropped Raised on class: dhcp.AbstractDhcpServer	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: DhcpsPacketDropped	Release: • N/A
Description: The alarm is generated when a DHCP or DHCPv6 server instance dropped a DHCP packet it received.		
Remedial action: The recovery action, if any, will depend on the reason.		

Table 39-718 ParentTemplateInvalid

Alarm	Attributes	Applicable major release
Name: ParentTemplateInvalid (194) Type: configurationAlarm Package: template.ParentTemplateInvalid Raised on class: template.TemplateBinding	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: referencedObjectInvalid	Release: • N/A
Description: The alarm is raised when a parent template in a template binding is invalid. The alarm is deprecated in the 5620 SAM, Release 6.0 and later.		
Raising condition: ('parentTemplateInvalidReference' EQUAL 'true')		
Clearing condition: ('parentTemplateInvalidReference' EQUAL 'false')		
Remedial action: Informational - deprecated 6.0		

Table 39-719 PatchLevelMismatch

Alarm	Attributes	Applicable major release
Name: PatchLevelMismatch (659) Type: softwareAlarm Package: netw.PatchLevelMismatch Raised on class: netw.NmsSystem	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: patchLevelMismatch	Release: • N/A
Description: The alarm is raised when the 5620 SAM primary main server software patch level does not match the standby main server software patch level.		
Remedial action: Informational - it is advisable to have both active and standby servers at the same patch level. During a maintenance window apply the appropriate patch to the standby server to bring it inline with the main server.		

Table 39-720 PathReoptimized

Alarm	Attributes	Applicable major release
Name: PathReoptimized (28) Type: pathAlarm Package: mpls.PathReoptimized Raised on class: mpls.Tunnel	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: pathReoptimized	Release: • N/A
Description: The alarm is raised when an MPLS path generates an mplsTunnelReoptimized trap.		
Remedial action: Informational only.		

Table 39-721 PathRerouted

Alarm	Attributes	Applicable major release
Name: PathRerouted (29) Type: pathAlarm Package: mpls.PathRerouted Raised on class: mpls.Tunnel	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: pathRerouted	Release: • N/A
Description: The alarm is raised when an MPLS path generates an mplsTunnelRerouted trap.		
Remedial action: Informational only.		

Table 39-722 PbbSiteMisconfiguration

Alarm	Attributes	Applicable major release
Name: PbbSiteMisconfiguration (571) Type: configurationAlarm Package: vpls.PbbSiteMisconfiguration Raised on class: vpls.AbstractVpls	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: includeBothBAndISite	Release: • N/A
Description: The alarm is raised when a VPLS contains a B-Site and an I-Site.		

Table 39-722 PbbSiteMisconfiguration (continued)

Alarm	Attributes	Applicable major release
Raising condition: (('Include B-Site(s)' EQUAL 'true') AND ('Include I-Site(s)' EQUAL 'true'))		
Clearing condition: (('Include B-Site(s)' NOT EQUAL 'true') OR ('Include I-Site(s)' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which needs to be corrected. The service can have only an I-site or a B-site but not both.		

Table 39-723 PChipCAMEvent

Alarm	Attributes	Applicable major release
Name: PChipCAMEvent (814) Type: hardwareAnomaly Package: equipment.PChipCAMEvent Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: camError	Release: • N/A
Description: The alarm is raised when an IOM or CPM experiences a P-chip CAM error.		
Remedial action: Informational - if the condition persists then the card indicated in the alarm should be replaced.		

Table 39-724 PChipError

Alarm	Attributes	Applicable major release
Name: PChipError (593) Type: hardwareAnomaly Package: equipment.PChipError Raised on class: equipment.BaseCard	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: pChipError	Release: • N/A
Description: The alarm is raised when persistent FCS errors are detected on the specified complex in the specified direction.		
Remedial action: A fault has been detected in the hardware. If the problem persists please contact your Nokia support representative for assistance.		

Table 39-725 PChipMemoryEvent

Alarm	Attributes	Applicable major release
Name: PChipMemoryEvent (608) Type: hardwareAnomaly Package: equipment.PChipMemoryEvent Raised on class: equipment.BaseCard	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: memoryParityError	Release: • N/A
Description: The alarm is raised when a P chip detects a memory parity error. The alarm is raised against a 7450 ESS, 7710 SR, or 7750 SR. The alarm is raised against a Release 6.0 NE at R10 or later and a Release 6.1 NE at R5 or later.		
Remedial action: A fault has been detected in the hardware if the problem persists please contact your Nokia support representative for assistance.		

Table 39-726 PeerGroupDynamicPeerLimitReached

Alarm	Attributes	Applicable major release
Name: PeerGroupDynamicPeerLimitReached (9031) Type: ProtocolAlarm Package: bgp.PeerGroupDynamicPeerLimitReached Raised on class: bgp.PeerGroup	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: peerGroupDynamicPeerLimitReached	Release: • N/A
Description: The alarm is raised when the dynamic peer limit for this BGP Group is reached.		
Remedial action: Increase the dynamic peer limit for this BGP group.		

Table 39-727 peerSetConfigurationIssue

Alarm	Attributes	Applicable major release
Name: peerSetConfigurationIssue (267) Type: configurationAlarm Package: pim.peerSetConfigurationIssue Raised on class: pim.VirtualAnyCastRP	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mismatchPeerSets	Release: • N/A
Description: The alarm is raised when a peer set is misconfigured.		
Remedial action: A configuration error has occurred that must be corrected. Please check the global Virtual Anycast RP configuration and its operational status flag so that the Inconsistent Peer Sets and Only one peer bits are reset.		

Table 39-728 PeerToAuxAddressMismatch

Alarm	Attributes	Applicable major release
Name: PeerToAuxAddressMismatch (8408) Type: configurationAlarm Package: server.PeerToAuxAddressMismatch Raised on class: server.SamServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: peerToAuxAddressMismatch	Release: • N/A
Description: The alarm is raised when standbyAddress in cluster in a 5620 SAM main server configuration does not match the same property on standby configuration.		
Remedial action: A configuration error has been made which must be corrected. The standbyAddress in cluster on primary server does not match the standby address accessible to Auxiliary servers, and must be corrected.		

Table 39-729 PersistenceRestoreProblem

Alarm	Attributes	Applicable major release
Name: PersistenceRestoreProblem (5141) Type: processingErrorAlarm Package: sw.PersistenceRestoreProblem Raised on class: sw.NodePersistence	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: persistenceRestoreProblem	Release: • N/A

Table 39-729 PersistenceRestoreProblem (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when an error is detected while processing a persistence record.		
Remedial action: Check the node persistence configuration.		

Table 39-730 PersistencyFileSysThresRaised

Alarm	Attributes	Applicable major release
Name: PersistencyFileSysThresRaised (5142) Type: equipmentAlarm Package: sw.PersistencyFileSysThresRaised Raised on class: sw.NodePersistence	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistencyFileSysThres-Raised	Release: • N/A
Description: The alarm is raised when the filesystem reaches 90 percent usage.		
Remedial action: Delete unnecessary files on the compact flash disk. This operation must be executed using CLI interface on the NE.		

Table 39-731 PkiCertVerificationFailed

Alarm	Attributes	Applicable major release
Name: PkiCertVerificationFailed (3743) Type: configurationAlarm Package: ipsec.PkiCertVerificationFailed Raised on class: ipsec.IPSecBaseEntity	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: pkiCertInvalid	Release: • N/A
Description: The alarm is raised when an attempt to verify the certificate fails.		
Remedial action: An attempt to verify the certificate fails. Please make sure the certificate specified exists under the node cf3:system-pki and is a valid certificate		

Table 39-732 PkiFileReadFailed (sitesec)

Alarm	Attributes	Applicable major release
Name: PkiFileReadFailed (3744) Type: configurationAlarm Package: sitesec.PkiFileReadFailed Raised on class: sitesec.CertificateAuthProfile	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: pkiFileReadCorrupted	Release: • N/A
Description: The alarm is raised when an attempt to read the file fails.		
Remedial action: An attempt to read the PKI file fails. Please make sure the path specified is correct and the file exists under the node cf3:system-pki		

Table 39-733 PkiFileReadFailed (ipsec)

Alarm	Attributes	Applicable major release
Name: PkiFileReadFailed (3744) Type: configurationAlarm Package: ipsec.PkiFileReadFailed Raised on class: ipsec.IPSecBaseEntity	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: pkiFileReadCorrupted	Release: • N/A
Description: The alarm is raised when an attempt to read the file fails.		
Remedial action: An attempt to read the PKI file fails. Please make sure the path specified is correct and the file exists under the node cf3:system-pki		

Table 39-734 PlcyAcctStatsEventOvrflw

Alarm	Attributes	Applicable major release
Name: PlcyAcctStatsEventOvrflw (5640) Type: equipmentAlarm Package: equipment.PlcyAcctStatsEventOvrflw Raised on class: equipment.Card	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PlcyAcctStatsPoolInUseExcAndLow	Release: • N/A
Description: The alarm is raised because of resource usage fluctuation that happens when the number of in-use stats resource usage exceeds 95 percent and deprecates below 85 percent of the specified stats pool limit more than 200 times.		
Remedial action: Notifications will resume once the resource usage fluctuation is in control i.e when the occurrence of tmnxPlcyAcctStatsPoolExcResource and tmnxPlcyAcctStatsPoolLowResource is less than 200.		

Table 39-735 PMFileRecovery

Alarm	Attributes	Applicable major release
Name: PMFileRecovery (4867) Type: communicationsAlarm Package: netw.PMFileRecovery Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: netconfDown	Release: • N/A
Description: The alarm is raised when a 5620 SAM main server loses connectivity to an NE and as a result retrieves PM files that were not previously collected.		
Remedial action: Informational		

Table 39-736 PollDeadlineMissed

Alarm	Attributes	Applicable major release
Name: PollDeadlineMissed (240) Type: configurationAlarm Package: netw.PollDeadlineMissed Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tooManyItemsToPoll	Release: • N/A
Description: The alarm is raised when a 5620 SAM server cannot finish browsing a statistics MIB before a polling interval expires.		
Remedial action: The rate at which performance statistics are being collected must be reduced or an AUX sever may be added to the 5620 SAM platform complex if the polling frequency cannot be reduced.		

Table 39-737 PoolManagerAddNewPoolFailed

Alarm	Attributes	Applicable major release
Name: PoolManagerAddNewPoolFailed (9593) Type: processingErrorAlarm Package: service.PoolManagerAddNewPoolFailed Raised on class: service.SubscriberInterface	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: PoolManagerAddNewPool-Failed	Release: • N/A
Description: This notification is sent when adding a new pool, given by the DHCPv6 server, is failing. (Examples : conflict with existing pool, subnet too small, maximum number of pools reached, out of memory, etc.) [CAUSE] Failed to add a new pool given by the server. [EFFECT] The ISA-BB may run out of free DHCPv6 addresses or SLAAC prefixes. [RECOVERY] No recovery is needed. Retry periodically.		
Remedial action: No recovery is needed. Retry periodically.		

Table 39-738 PoolManagerCreateInternalObjectFailed

Alarm	Attributes	Applicable major release
Name: PoolManagerCreateInternalObjectFailed (9036) Type: processingErrorAlarm Package: dhcp. PoolManagerCreateInternalObjectFailed Raised on class: dhcp.Address6Pool	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: PoolManagerCreateInter-nalObjectFailed	Release: • N/A
Description: This notification is sent when the creation of an internal node object for a pool is failing. [CAUSE] Failed to create an internal object for a pool. [EFFECT] Forwarding will not work for UEs having an address/prefix from this pool. [RECOVERY] No recovery is needed. Retry periodically.'		
Remedial action: No recovery is needed. Retry periodically.		

Table 39-739 PoolManagerDHCPv6ClientStartFailed

Alarm	Attributes	Applicable major release
Name: PoolManagerDHCPv6ClientStartFailed (9594) Type: processingErrorAlarm Package: service. PoolManagerDHCPv6ClientStartFailed Raised on class: service.SubscriberInterface	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: PoolManagerDHCPv6ClientStartFailed	Release: • N/A
Description: This notification is sent when a DHCPv6 client of the Pool Manager failed to start. [CAUSE] Failed to start a DHCPv6 client. [EFFECT] No pools can be requested for this ISA-BB. [RECOVERY] Perform a shutdown/no shutdown of the DHCPv6 client.		
Remedial action: Perform a shutdown/no shutdown of the DHCPv6 client.		

Table 39-740 PoolManagerNewPoolRequestFailed

Alarm	Attributes	Applicable major release
Name: PoolManagerNewPoolRequestFailed (9595) Type: processingErrorAlarm Package: service.PoolManagerNewPoolRequestFailed Raised on class: service.SubscriberInterface	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: PoolManagerNewPoolRe-questFailed	Release: • N/A
Description: This notification is sent when sending a request for a new pool is failing. (For example, when a DHCPv6 server is unreachable.) [CAUSE] Failed to send a request for a new pool. [EFFECT] The ISA-BB may run out of free DHCPv6 addresses or SLAAC prefixes. [RECOVERY] No recovery is needed. Retry periodically.		
Remedial action: No recovery is needed. Retry periodically.		

Table 39-741 PoolManagerPoolTimeout

Alarm	Attributes	Applicable major release
Name: PoolManagerPoolTimeout (9037) Type: processingErrorAlarm Package: dhcp.PoolManagerPoolTimeout Raised on class: dhcp.Address6Pool	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: PoolManagerPoolTimeout	Release: • N/A
Description: This notification is sent when a pool is timing out unexpectedly. [CAUSE] Pool timed out unexpectedly. [EFFECT] The pool is removed from the ISA-BB together with all associated UEs. [RECOVERY] No recovery possible.		
Remedial action: No recovery possible.		

Table 39-742 PoolManagerPoolUsageLow

Alarm	Attributes	Applicable major release
Name: PoolManagerPoolUsageLow (9038) Type: processingErrorAlarm Package: dhcp.PoolManagerPoolUsageLow Raised on class: dhcp.Address6Pool	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: PoolManagerPoolUsageLow	Release: • N/A
Description: This notification is sent when the usage of a pool drops below 1%. [CAUSE] Pool usage dropped below 1%. [EFFECT] The pool has become stale. [RECOVERY] Manually clear the pool.		
Remedial action: Manually clear the pool.		

Table 39-743 PostDiscoveryScriptExecutionFailed

Alarm	Attributes	Applicable major release
Name: PostDiscoveryScriptExecutionFailed (4868) Type: discoveryControlAlarm Package: netw.PostDiscoveryScriptExecutionFailed Raised on class: netw.NodeDiscoveryControl	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: scriptExecutionError	Release: • N/A
Description: The alarm is raised when the execution of the post discovery script failed. At this point, the NE is successfully discovered, only the auto configuration of the NE defined in the script failed. Manual intervention is required.		
Remedial action: The post discovery NE auto configuration script execution failed. run the script manually, or configure the NE manually. \nTo clear the Failed post discovery script execution status, click the "Clear" button on the Node Discovery Control configuration form: Administration->Discovery Manager->Managed State tab. Clearing the script execution status will also clear the associated alarm.		

Table 39-744 PostDiscoveryScriptNotExecuted

Alarm	Attributes	Applicable major release
Name: PostDiscoveryScriptNotExecuted (4869) Type: discoveryControlAlarm Package: netw.PostDiscoveryScriptNotExecuted Raised on class: netw.NodeDiscoveryControl	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: resyncFailed	Release: • N/A
Description: The alarm is raised when the post discovery script is not executed. This is normally due to NE discovery failure. Manual intervention is required.		
Remedial action: The post discovery NE auto configuration script was not executed. Run the script manually, or configure the NE manually. \nThis is normally due to NE discovery failure. Fix the node resync issue associated with the PollerProblem alarm, unmanage and delete the node from the network, then rescan the discovery rule.		

Table 39-745 PowerSupplyACRectifierFailure

Alarm	Attributes	Applicable major release
Name: PowerSupplyACRectifierFailure (5181) Type: equipmentAlarm Package: equipment.PowerSupplyACRectifierFailure Raised on class: equipment.PowerSupplyTray	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PowerSupplACRectifierFaile-dorMissing	Release: • N/A
Description: This alarm is generated if any one of the AC rectifiers for a given power supply is in a failed state or is missing. When the alarm is raised during device discovery, one or both AC Rectifiers of the Power Supply Tray may be not equipped. When the alarm is raised while the device is in the managed state, one or both AC Rectifiers of the Power Supply Tray might be removed or they have a fault condition. The alarm clears when the status changes to OK.		
Remedial action: Ensure that the NE is properly connected to power. There is an increased risk of the power supply failing, causing insufficient power to the system. Please bring the AC rectifiers back online by equipping them properly. If the problem persists please contact your Nokia support representative for assistance.		

Table 39-746 PowerSupplyVoltageAlarm

Alarm	Attributes	Applicable major release
Name: PowerSupplyVoltageAlarm (1129) Type: equipmentAlarm Package: equipment.PowerSupplyVoltageAlarm Raised on class: equipment.PowerSupply	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: powerSupplyFailure	Release: • N/A
Description: The alarm is raised when the power supply voltage alarm state changes to a value other than Normal.		
Remedial action: Check the status of the site power supply.		

Table 39-747 PowerSupplyWrongFanDir

Alarm	Attributes	Applicable major release
Name: PowerSupplyWrongFanDir (8166) Type: equipmentAlarm Package: equipment.PowerSupplyWrongFanDir Raised on class: equipment.PowerSupplyTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PowerSupplyWrongFanDir	Release: • N/A
Description: This alarm is generated when the airflow direction of the power supply's fan is incorrect.		
Remedial action: To recover from this event, the customer is requested to replace the power supply with one that has the proper fan direction.		

Table 39-748 PppNcpFailure

Alarm	Attributes	Applicable major release
Name: PppNcpFailure (3689) Type: processingErrorAlarm Package: service.PppNcpFailure Raised on class: service.ServiceAccessPoint	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: sapAtmPppNcpFailure	Release: • N/A
Description: The alarm is raised when there is an NCP phase setup problem.		
Remedial action: This alarm indicates the NCP phase setup failed, thus IP protocol can not be configured for the user that attempted to set up the PPP session. Please verify NCP setup configuration.		

Table 39-749 PPPoASessionFailure

Alarm	Attributes	Applicable major release
Name: PPPoASessionFailure (3688) Type: processingErrorAlarm Package: service.PPPoASessionFailure Raised on class: service.AccessInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: sapAtmPppSessionFailure	Release: • N/A
Description: The alarm is raised when an NE notifies the 5620 SAM that it cannot create a PPPoA Session.		
Remedial action: This alarm indicates the problem encountered by NE while trying to create a new PPPoA session. Please review the alarm's additional text to obtain information about the error condition. Possible problems include authentication failures, LCP or IPCP layer problems during the session establishment, or possible mis-configuration on the service interface or PPP policy.		

Table 39-750 PPPoESessionFailure

Alarm	Attributes	Applicable major release
Name: PPPoESessionFailure (2915) Type: processingErrorAlarm Package: service.PPPoESessionFailure Raised on class: service.ServiceAccessPoint	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: pppoeSessionFailed	Release: • N/A
Description: The alarm is raised when an NE notifies the 5620 SAM that it cannot create a PPPoE Session.		
Remedial action: This alarm indicates the problem encountered by NE while trying to create a new PPPoE session. Please review the alarm's additional text to obtain information about the error condition. Possible problems include authentication failures, LCP or IPCP layer problems during the session establishment, or possible mis-configuration on the service interface or PPP policy.		

Table 39-751 PrefixLimitExceeded

Alarm	Attributes	Applicable major release
Name: PrefixLimitExceeded (4) Type: ProtocolAlarm Package: bgp.PrefixLimitExceeded Raised on class: bgp.Peer	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: prefixLimitExceeded	Release: • N/A
Description: The alarm is raised when a BGP instance learns the maximum number of peer routes.		
Remedial action: Informational. The threshold configured should be revisited to ensure that it is not set to low given the number of peer routes that are being received. If the threshold is set close to the maximum number of routes supported by the NE then it is probable that there is an issue with another NE in the network. If the problem persists please contact your Nokia support representative for assistance.		

Table 39-752 PrefixLimitNearing

Alarm	Attributes	Applicable major release
Name: PrefixLimitNearing (3) Type: ProtocolAlarm Package: bgp.PrefixLimitNearing Raised on class: bgp.Peer	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: prefixLimitNearing	Release: • N/A
Description: The alarm is raised when a BGP instance exceeds the threshold percentage of the configured maximum.		
Remedial action: Informational. The threshold configured should be revisited to ensure that it is not set to low given the number of peer routes that are being received. If the threshold is set close to the maximum number of routes supported by the NE then it is probable that there is an issue with another NE in the network. If the problem persists please contact your Nokia support representative for assistance.		

Table 39-753 PrefixUnreachable

Alarm	Attributes	Applicable major release
Name: PrefixUnreachable (8428) Type: virtualSwitchAlarm Package: dctr.PrefixUnreachable Raised on class: dctr.AbstractVirtualSwitchGlobal	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PrefixDown	Release: • N/A
Description: The alarm is raised when the Prefix is unreachable i.e. all the advertising routers are down.		
Remedial action: This alarm can be cleared when the IGP or BGP Prefix for the Virtual Switch is reachable.		

Table 39-754 PrimaryDatabaseDown

Alarm	Attributes	Applicable major release
Name: PrimaryDatabaseDown (751) Type: databaseAlarm Package: db.PrimaryDatabaseDown Raised on class: db.DatabaseManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: primaryDatabaseDown	Release: • N/A
Description: The alarm is raised when the primary 5620 SAM database is down for at least one poll. The alarm is not persisted in the database or stored in the alarm history; when the database returns to service, the PrimaryDatabaseWasDown alarm is raised.		
Remedial action: Informational - verify connectivity to the primary database server		

Table 39-755 PrimaryDatabaseWasDown

Alarm	Attributes	Applicable major release
Name: PrimaryDatabaseWasDown (254) Type: databaseAlarm Package: db.PrimaryDatabaseWasDown Raised on class: db.DatabaseManager	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: primaryDatabaseWasDown	Release: • N/A
Description: The alarm is raised when the primary database returns to service after being unavailable for at least one poll.		
Remedial action: Informational - no corrective action required.		

Table 39-756 PrimaryVirtualServicesControllerFailed

Alarm	Attributes	Applicable major release
Name: PrimaryVirtualServicesControllerFailed (8429) Type: virtualSwitchAlarm Package: dctr.PrimaryVirtualServicesControllerFailed Raised on class: dctr.AbstractVirtualSwitchGlobal	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PrimaryControllerFailOver	Release: • N/A
Description: The alarm is raised when communication between the virtual switch to the primary controller has failed.		
Remedial action: This alarm can be cleared when primary virtual switch is operationally up.		

Table 39-757 ProbeFailedAlarm (mpls)

Alarm	Attributes	Applicable major release
Name: ProbeFailedAlarm (3707) Type: oamAlarm Package: mpls.ProbeFailedAlarm Raised on class: mpls.Lsp	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object reports a probe failure.		

Table 39-757 ProbeFailedAlarm (mpls) (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-758 ProbeFailedAlarm (mirror)

Alarm	Attributes	Applicable major release
Name: ProbeFailedAlarm (3707) Type: oamAlarm Package: mirror.ProbeFailedAlarm Raised on class: mirror.Mirror	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-759 ProbeFailedAlarm (ethernetoam)

Alarm	Attributes	Applicable major release
Name: ProbeFailedAlarm (3707) Type: oamAlarm Package: ethernetoam.ProbeFailedAlarm Raised on class: ethernetoam.MaintAssociation	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 39-760 ProbeFailedAlarm (vprn)

Alarm	Attributes	Applicable major release
Name: ProbeFailedAlarm (3707) Type: oamAlarm Package: vprn.ProbeFailedAlarm Raised on class: vprn.Vprn	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-761 ProbeFailedAlarm (svt)

Alarm	Attributes	Applicable major release
Name: ProbeFailedAlarm (3707) Type: oamAlarm Package: svt.ProbeFailedAlarm Raised on class: svt.Tunnel	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-762 ProbeFailedAlarm (rtr)

Alarm	Attributes	Applicable major release
Name: ProbeFailedAlarm (3707) Type: oamAlarm Package: rtr.ProbeFailedAlarm Raised on class: rtr.VirtualRouter	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-763 ProbeFailedAlarm (mplstp)

Alarm	Attributes	Applicable major release
Name: ProbeFailedAlarm (3707) Type: oamAlarm Package: mplstp.ProbeFailedAlarm Raised on class: mplstp.TPLsp	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-764 ProbeFailedAlarm (monpath)

Alarm	Attributes	Applicable major release
Name: ProbeFailedAlarm (3707) Type: oamAlarm Package: monpath.ProbeFailedAlarm Raised on class: monpath.MonitoredIpPath	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A

Table 39-764 ProbeFailedAlarm (monpath) (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-765 ProbeFailedAlarm (lte)

Alarm	Attributes	Applicable major release
Name: ProbeFailedAlarm (3707) Type: oamAlarm Package: lte.ProbeFailedAlarm Raised on class: lte.EPSPath	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when ProbeFailedAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 39-766 ProbeFailedAlarm (service)

Alarm	Attributes	Applicable major release
Name: ProbeFailedAlarm (3707) Type: oamAlarm Package: service.ProbeFailedAlarm Raised on class: service.SpokeConnector	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when ProbeFailedAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-767 ProbeFailedAlarm (netw)

Alarm	Attributes	Applicable major release
Name: ProbeFailedAlarm (3707) Type: oamAlarm Package: netw.ProbeFailedAlarm Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-768 ProbeFailedAlarm (pim)

Alarm	Attributes	Applicable major release
Name: ProbeFailedAlarm (3707) Type: oamAlarm Package: pim.ProbeFailedAlarm Raised on class: pim.Site	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 39-769 ProbeFailedAlarm (bgp)

Alarm	Attributes	Applicable major release
Name: ProbeFailedAlarm (3707) Type: oamAlarm Package: bgp.ProbeFailedAlarm Raised on class: bgp.Site	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 39-770 ProbeFailedAlarm (ldp)

Alarm	Attributes	Applicable major release
Name: ProbeFailedAlarm (3707) Type: oamAlarm Package: ldp.ProbeFailedAlarm Raised on class: ldp.Site	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 39-771 ProbeFailedAlarm (lteservice)

Alarm	Attributes	Applicable major release
Name: ProbeFailedAlarm (3707) Type: oamAlarm Package: lteservice.ProbeFailedAlarm Raised on class: lteservice.MobileService	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A

Table 39-771 ProbeFailedAlarm (lteservice) (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-772 ProbeFailedAlarm (vll)

Alarm	Attributes	Applicable major release
Name: ProbeFailedAlarm (3707) Type: oamAlarm Package: vll.ProbeFailedAlarm Raised on class: vll.Vll	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-773 ProbeFailedAlarm (vpls)

Alarm	Attributes	Applicable major release
Name: ProbeFailedAlarm (3707) Type: oamAlarm Package: vpls.ProbeFailedAlarm Raised on class: vpls.AbstractVpls	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-774 ProbeFailedAlarm (atm)

Alarm	Attributes	Applicable major release
Name: ProbeFailedAlarm (3707) Type: oamAlarm Package: atm.ProbeFailedAlarm Raised on class: atm.PvcConnection	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 39-775 ProbeFailedAlarm2 (svt)

Alarm	Attributes	Applicable major release
Name: ProbeFailedAlarm2 (3738) Type: oamAlarm Package: svt.ProbeFailedAlarm2 Raised on class: svt.SdpBinding	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-776 ProbeFailedAlarm2 (ethernetoam)

Alarm	Attributes	Applicable major release
Name: ProbeFailedAlarm2 (3738) Type: oamAlarm Package: ethernetoam.ProbeFailedAlarm2 Raised on class: ethernetoam.Mep	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 39-777 ProbeFailedAlarm2 (service)

Alarm	Attributes	Applicable major release
Name: ProbeFailedAlarm2 (3738) Type: oamAlarm Package: service.ProbeFailedAlarm2 Raised on class: service.Site	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when ProbeFailedAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-778 ProbeFailedAlarm2 (mpls)

Alarm	Attributes	Applicable major release
Name: ProbeFailedAlarm2 (3738) Type: oamAlarm Package: mpls.ProbeFailedAlarm2 Raised on class: mpls.P2MPDynamicLsp	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A

Table 39-778 ProbeFailedAlarm2 (mpls) (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-779 ProbeFailedAlarm2 (atm)

Alarm	Attributes	Applicable major release
Name: ProbeFailedAlarm2 (3738) Type: oamAlarm Package: atm.ProbeFailedAlarm2 Raised on class: atm.VPConnection	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 39-780 ProbeFailedAlarm2 (lte)

Alarm	Attributes	Applicable major release
Name: ProbeFailedAlarm2 (3738) Type: oamAlarm Package: lte.ProbeFailedAlarm2 Raised on class: lte.EPSPeer	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when ProbeFailedAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 39-781 ProbeFailedAlarm2 (rtr)

Alarm	Attributes	Applicable major release
Name: ProbeFailedAlarm2 (3738) Type: oamAlarm Package: rtr.ProbeFailedAlarm2 Raised on class: rtr.LDPTunnelInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-782 ProbeFailedAlarm3 (service)

Alarm	Attributes	Applicable major release
Name: ProbeFailedAlarm3 (3885) Type: oamAlarm Package: service.ProbeFailedAlarm3 Raised on class: service.CompositeService	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-783 ProbeFailedAlarm3 (mpls)

Alarm	Attributes	Applicable major release
Name: ProbeFailedAlarm3 (3885) Type: oamAlarm Package: mpls.ProbeFailedAlarm3 Raised on class: mpls.LspPath	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-784 ProbeFailedAlarm3 (svt)

Alarm	Attributes	Applicable major release
Name: ProbeFailedAlarm3 (3885) Type: oamAlarm Package: svt.ProbeFailedAlarm3 Raised on class: svt.SpokeSdpFec	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-785 ProbeFailureAlarm

Alarm	Attributes	Applicable major release
Name: ProbeFailureAlarm (3902) Type: oamAlarm Package: sas.ProbeFailureAlarm Raised on class: sas.Test	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A

Table 39-785 ProbeFailureAlarm (continued)

Alarm	Attributes	Applicable major release
Description: This alarm is raised when a probe failure trap is received from the node.		
Remedial action: Fix network connections issues.		

Table 39-786 ProxyArpDupDetect

Alarm	Attributes	Applicable major release
Name: ProxyArpDupDetect (9604) Type: configurationAlarm Package: vpls.ProxyArpDupDetect Raised on class: vpls.ProxyArpEntry	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: macAddrMisconfigured	Release: • N/A
Description: This alarm is generated when duplicate detection criteria is met when a new mac address overwrites the existing mac address for the proxy arp entry. A traffic disruption may occur if both systems are active. Identify and correct configuration of one of the systems.		
Remedial action: Identify and correct configuration of mac address of one of the systems.		

Table 39-787 ProxyArpSvcHiUsgSet

Alarm	Attributes	Applicable major release
Name: ProxyArpSvcHiUsgSet (9605) Type: processingErrorAlarm Package: vpls.ProxyArpSvcHiUsgSet Raised on class: vpls.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: proxyArpSvcHiUsgSet	Release: • N/A
Description: This alarm is generated when the number of proxy ARP entries in a VPLS service exceeds 95% of the per-service limit.		
Remedial action: Informational - the number of proxy ARP entries in a VPLS service exceeds 95% of the per-service limit		

Table 39-788 ProxyArpSysHiUsgSet

Alarm	Attributes	Applicable major release
Name: ProxyArpSysHiUsgSet (9580) Type: processingErrorAlarm Package: netw.ProxyArpSysHiUsgSet Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: proxyArpSysHiUsgSet	Release: • N/A
Description: This alarm is generated when the number of proxy ARP entries in the system exceeds 95% of the system limit.		
Remedial action: Informational - the number of proxy ARP entries in the system exceeds 95% of the system limit		

Table 39-789 ProxyDown

Alarm	Attributes	Applicable major release
Name: ProxyDown (1959) Type: communicationsAlarm Package: db.ProxyDown Raised on class: db.DatabaseManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • N/A
Description: The alarm is raised when proxy server communication fails.		
Remedial action: The Oracle Proxy runs on the 5620 SAM database workstations. To determine if the Oracle Proxy is running login to the database workstation, open a terminal and run the command ps -eaf | grep oracleproxy. If there is no oracleproxy process running, start the process using /etc/rc3.d/S965620SAMOracleProxyWrapper start.		

Table 39-790 ProxyNdDupDetect

Alarm	Attributes	Applicable major release
Name: ProxyNdDupDetect (9606) Type: configurationAlarm Package: vpls.ProxyNdDupDetect Raised on class: vpls.ProxyNdEntry	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: macAddrMisconfigured	Release: • N/A
Description: This alarm is generated when duplicate detection criteria is met when a new mac address overwrites the existing mac address for the proxy ND entry. A traffic disruption may occur if both sytems are active. Identify and correct configuration of one of the systems.		
Remedial action: Identify and correct configuration of mac address of one of the systems.		

Table 39-791 ProxyNdSvcHiUsgSet

Alarm	Attributes	Applicable major release
Name: ProxyNdSvcHiUsgSet (9607) Type: processingErrorAlarm Package: vpls.ProxyNdSvcHiUsgSet Raised on class: vpls.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: proxyNdSvcHiUsgSet	Release: • N/A
Description: This alarm is generated when the number of proxy ND entries in a VPLS service exceeds 95% of the per-service limit.		
Remedial action: Informational - the number of proxy ND entries in a VPLS service exceeds 95% of the per-service limit		

Table 39-792 ProxyNdSysHiUsgSet

Alarm	Attributes	Applicable major release
Name: ProxyNdSysHiUsgSet (9581) Type: processingErrorAlarm Package: netw.ProxyNdSysHiUsgSet Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: proxyNdSysHiUsgSet	Release: • N/A

Table 39-792 ProxyNdSysHiUsgSet (continued)

Alarm	Attributes	Applicable major release
Description: This alarm is generated when the number of proxy ND entries in the system exceeds 95% of the system limit.		
Remedial action: Informational - the number of proxy ND entries in the system exceeds 95% of the system limit		

Table 39-793 PTPCardNotSupportedAlarm

Alarm	Attributes	Applicable major release
Name: PTPCardNotSupportedAlarm (3603) Type: equipmentAlarm Package: ptp.PTPCardNotSupportedAlarm Raised on class: ptp.IEEEPTPClock	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PTPCardNotSupported	Release: • N/A
Description: The alarm is raised when the Precision Timing Protocol (PTP) is enabled on a card that does not support clock recovery.		
Remedial action: Please enable PTP on CPM which supports OCX0 oscillator type		

Table 39-794 PTPClockRecoveryStateAlarm

Alarm	Attributes	Applicable major release
Name: PTPClockRecoveryStateAlarm (3605) Type: communicationsAlarm Package: ptp.PTPClockRecoveryStateAlarm Raised on class: ptp.IEEEPTPClock	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: PTPClockRecoveryStat-eChange	Release: • N/A
Description: The alarm is raised when the aluPtpClockRecoveryState changes for an IEEE 1588 Precision Timing Protocol (PTP) clock.		
Remedial action: Informational		

Table 39-795 PTPMasterChangeAlarm

Alarm	Attributes	Applicable major release
Name: PTPMasterChangeAlarm (3606) Type: communicationsAlarm Package: ptp.PTPMasterChangeAlarm Raised on class: ptp.IEEEPTPClock	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: PTPMasterChange	Release: • N/A
Description: The alarm is raised when there is a change in the synchronization source for a Precision Timing Protocol (PTP) clock.		
Remedial action: Informational		

Table 39-796 PTPOutOfResourcesAlarm

Alarm	Attributes	Applicable major release
Name: PTPOutOfResourcesAlarm (3607) Type: equipmentAlarm Package: ptp.PTPOutOfResourcesAlarm Raised on class: ptp.IEEEPTPClock	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PTPOutOfResources	Release: • N/A
Description: The alarm is raised when the Precision Timing Protocol (PTP) process on the card is out of resources. This may occur in either of two situations: 1. The number of PTP peers exceeds the system limit. 2. The total unicast packet rate negotiated with all PTP peers reaches the maximum packet rate supported by the system.		
Remedial action: Informational		

Table 39-797 PTPPortDSPortStateAlarm

Alarm	Attributes	Applicable major release
Name: PTPPortDSPortStateAlarm (3610) Type: communicationsAlarm Package: ptp.PTPPortDSPortStateAlarm Raised on class: ptp.IEEEPTPPort	Severity: info Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PTPPortDSPortState	Release: • N/A
Description: The alarm is raised when the aluPtpPortDSPortState changes for an IEEE 1588 Precision Timing Protocol (PTP) port.		
Remedial action: Informational.		

Table 39-798 PTPQualityLevelChangedAlarm

Alarm	Attributes	Applicable major release
Name: PTPQualityLevelChangedAlarm (3612) Type: communicationsAlarm Package: sonet.PTPQualityLevelChangedAlarm Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: PTPQualityLevelChanged	Release: • N/A
Description: The alarm is raised when there is a change of the received quality level on the Precision Timing Protocol (PTP).		
Remedial action: Informational only.		

Table 39-799 PTPReferenceLossOfSignal (equipment)

Alarm	Attributes	Applicable major release
Name: PTPReferenceLossOfSignal (3613) Type: communicationsAlarm Package: equipment.PTPReferenceLossOfSignal Raised on class: equipment.ProcessorCard	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PTPReferenceLossOfSignal	Release: • N/A
Description: The alarm is raised on the Standby CPM when the PTP reference on an NE is not qualified due to Loss of Signal.		

Table 39-799 PTPReferenceLossOfSignal (equipment) (continued)

Alarm	Attributes	Applicable major release
Remedial action: Check the communication path is up between the local PTP slave clock and its selected master		

Table 39-800 PTPReferenceOutOfFrequency (equipment)

Alarm	Attributes	Applicable major release
Name: PTPReferenceOutOfFrequency (3614) Type: communicationsAlarm Package: equipment.PTPReferenceOutOfFrequency Raised on class: equipment.ProcessorCard	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PTPReferenceOutOfFrequency	Release: • N/A
Description: The alarm is raised on the Standby CPM when the PTP Reference on an NE is not qualified due to Out of frequency.		
Remedial action: Make sure that frequency configured for Reference One is correct.		

Table 39-801 PTPReferenceOutOfPollInRange (equipment)

Alarm	Attributes	Applicable major release
Name: PTPReferenceOutOfPollInRange (3615) Type: communicationsAlarm Package: equipment.PTPReferenceOutOfPollInRange Raised on class: equipment.ProcessorCard	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PTPReferenceOutOfPollInRange	Release: • N/A
Description: The alarm is raised on the Standby CPM when the PTP Reference on an NE is not qualified state due to Out of poll in range.		
Remedial action: If there is packet flow, the PTP slave clock is in it's initial acquiring states where the sync-if-timing reference does not qualify just wait.		

Table 39-802 PurgeFilesToFreeDiskSpace

Alarm	Attributes	Applicable major release
Name: PurgeFilesToFreeDiskSpace (1937) Type: serverAlarm Package: server.PurgeFilesToFreeDiskSpace Raised on class: server.SamServer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: diskSpaceIssue	Release: • N/A
Description: The alarm is raised when the 5620 SAM server deletes files in order to free disk space.		
Remedial action: Informational - this is a generic error if SAM Server free disk space is below acceptable levels and files must be purged to free the disk space. The additional text field of the alarm will provide more details of the specific problem. Reduce the disk space by purging the files using the commands available in the SAM GUI. It may be necessary to add additional disk space to the system to resolve the problem.		

Table 39-803 QChipBufferMemoryEvent

Alarm	Attributes	Applicable major release
Name: QChipBufferMemoryEvent (4990) Type: hardwareAnomaly Package: equipment.QChipBufferMemoryEvent Raised on class: equipment.Card	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bufMemoryError	Release: • N/A
Description: The alarm is raised when a Q-chip experiences an occurrence of a buffer memory error on IOM or CPM.		
Remedial action: A fault has been detected in the hardware if the problem persists please contact your Nokia support representative for assistance.		

Table 39-804 QChipIntMemoryEvent

Alarm	Attributes	Applicable major release
Name: QChipIntMemoryEvent (4993) Type: hardwareAnomaly Package: equipment.QChipIntMemoryEvent Raised on class: equipment.Card	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: intMemoryError	Release: • N/A
Description: The alarm is raised when a Q-chip experiences an occurrence of an internal memory error on IOM or CPM.		
Remedial action: A fault has been detected in the hardware if the problem persists please contact your Nokia support representative for assistance.		

Table 39-805 QChipStatsMemoryEvent

Alarm	Attributes	Applicable major release
Name: QChipStatsMemoryEvent (4994) Type: hardwareAnomaly Package: equipment.QChipStatsMemoryEvent Raised on class: equipment.Card	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: statsMemoryError	Release: • N/A
Description: The alarm is raised when a Q-chip experiences an occurrence of a statistics memory error on IOM or CPM.		
Remedial action: A fault has been detected in the hardware if the problem persists please contact your Nokia support representative for assistance.		

Table 39-806 QueryVerMismatch

Alarm	Attributes	Applicable major release
Name: QueryVerMismatch (159) Type: configurationAlarm Package: igmp.QueryVerMismatch Raised on class: igmp.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: InvalidVersionofQueryMes-sageReceived	Release: • N/A

Table 39-806 QueryVerMismatch (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when an interface configured for IGMPv3 receives a query message for an earlier IGMP version. The interface subsequently enters an IGMP mode that is compatible with the earlier version. The alarm information includes the IGMP version on the interface and the IGMP version of the received query.		
Remedial action: Informational - no corrective action required.		

Table 39-807 RadAcctOnOngoing

Alarm	Attributes	Applicable major release
Name: RadAcctOnOngoing (4971) Type: radiusAccountingPolicyAlarm Package: aaa.RadAcctOnOngoing Raised on class: aaa.RadiusServerPolicy	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: TooManyUnacknowledgedRadiusAccountingOnMessages Applicable probable causes: • TooManyUnacknowledgedRadiusAccountingOnMessages • MisconfiguredPolicy • RadiusServerUnreachable • MissingClientInformation	Release: • N/A
Description: The alarm is raised each time when the RADIUS client has sent 10 RADIUS Accounting-On messages without receiving any acknowledgement from the RADIUS server.		
Remedial action: Ensure that:\n1.The RADIUS server is up and running.\n2.The RADIUS server policy configuration is correct.\n\nPlease note that this system will keep on retrying indefinitely until it receives an acknowledgement from the RADIUS server.		

Table 39-808 RadioEncryptionMismatch (mwa)

Alarm	Attributes	Applicable major release
Name: RadioEncryptionMismatch (8969) Type: communicationsAlarm Package: mwa.RadioEncryptionMismatch Raised on class: mwa.PortTermination	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: RadioEncryptionMismatch	Release: • N/A
Description: The alarm is raised when a MPT detects a radio encryption mismatch.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-809 RadioHop15TCA

Alarm	Attributes	Applicable major release
Name: RadioHop15TCA (4835) Type: communicationsAlarm Package: mwa.RadioHop15TCA Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ThresholdCrossed	Release: • N/A
Description: The alarm is raised when a MPT detects a threshold crossing - Radio hop 15 minutes TCA		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-810 RadioHop15UAT

Alarm	Attributes	Applicable major release
Name: RadioHop15UAT (4836) Type: communicationsAlarm Package: mwa.RadioHop15UAT Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: UnavailableTime	Release: • N/A
Description: The alarm is raised when a MPT detects a threshold crossing - Radio hop 15 minutes UAT		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-811 RadioHop24TCA

Alarm	Attributes	Applicable major release
Name: RadioHop24TCA (4837) Type: communicationsAlarm Package: mwa.RadioHop24TCA Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ThresholdCrossed	Release: • N/A
Description: The alarm is raised when a MPT detects a threshold crossing - Radio hop 24 Hours TCA		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-812 RadioHop24UAT

Alarm	Attributes	Applicable major release
Name: RadioHop24UAT (4838) Type: communicationsAlarm Package: mwa.RadioHop24UAT Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: UnavailableTime	Release: • N/A
Description: The alarm is raised when a MPT detects a threshold crossing - Radio hop 24 Hours UAT		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-813 RadioLink15TCA

Alarm	Attributes	Applicable major release
Name: RadioLink15TCA (4839) Type: communicationsAlarm Package: mwa.RadioLink15TCA Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ThresholdCrossed	Release: • N/A
Description: The alarm is raised when a MPT detects a threshold crossing - Radio Link 15 minutes TCA		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-814 RadioLink15UAT

Alarm	Attributes	Applicable major release
Name: RadioLink15UAT (4840) Type: communicationsAlarm Package: mwa.RadioLink15UAT Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: UnavailableTime	Release: • N/A
Description: The alarm is raised when a MPT detects a threshold crossing - Radio Link 15 minutes UAT		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-815 RadioLink24TCA

Alarm	Attributes	Applicable major release
Name: RadioLink24TCA (4841) Type: communicationsAlarm Package: mwa.RadioLink24TCA Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ThresholdCrossed	Release: • N/A
Description: The alarm is raised when a MPT detects a threshold crossing - Radio Link 24 Hours TCA		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-816 RadioLink24UAT

Alarm	Attributes	Applicable major release
Name: RadioLink24UAT (4842) Type: communicationsAlarm Package: mwa.RadioLink24UAT Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: UnavailableTime	Release: • N/A
Description: The alarm is raised when a MPT detects a threshold crossing - Radio Link 24 Hours UAT		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-817 RadioLoopProblemCh1

Alarm	Attributes	Applicable major release
Name: RadioLoopProblemCh1 (4843) Type: communicationsAlarm Package: mwa.RadioLoopProblemCh1 Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LoopProblem	Release: • N/A
Description: The alarm is raised when a MPT detects a ATPC/ACM Loop problem - CH1 Radio Loop Problem		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-818 RadioLoopProblemChx

Alarm	Attributes	Applicable major release
Name: RadioLoopProblemChx (4844) Type: communicationsAlarm Package: mwa.RadioLoopProblemChx Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LoopProblem	Release: • N/A
Description: The alarm is raised when a MPT detects a ATPC/ACM Loop problem - CHX Radio Loop Problem		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-819 RadioRdi

Alarm	Attributes	Applicable major release
Name: RadioRdi (4846) Type: communicationsAlarm Package: mwa.RadioRdi Raised on class: mwa.PortTermination	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: Rdi	Release: • N/A
Description: The alarm is raised when a microwave radio device receives a remote defect indication from the far end microwave radio.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-820 RadioSwPackageMissing

Alarm	Attributes	Applicable major release
Name: RadioSwPackageMissing (4848) Type: integrityViolation Package: mwa.RadioSwPackageMissing Raised on class: mwa.PortTermination	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SwPackageMissing	Release: • N/A
Description: The alarm is raised when a valid microwave radio software package is not present at startup.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-821 RadiusInsertedFltrEntryDropped

Alarm	Attributes	Applicable major release
Name: RadiusInsertedFltrEntryDropped (1152) Type: configurationAlarm Package: aclfilter.RadiusInsertedFltrEntryDropped Raised on class: aclfilter.FilterDefinition	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: FilterEntryDropped	Release: • N/A
Description: The alarm is raised when a request to insert a filter entry is not successful for a RADIUS application.		
Remedial action: A Configuration error has occurred. The request to insert a filter entry was not successful for Radius application. Check the configuration filter entry.		

Table 39-822 RadiusInsertSpaceThresholdAlarm

Alarm	Attributes	Applicable major release
Name: RadiusInsertSpaceThresholdAlarm (1151) Type: configurationAlarm Package: aclfilter.RadiusInsertSpaceThresholdAlarm Raised on class: aclfilter.FilterDefinition	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: UtilizationExceedConfigured-Limit	Release: • N/A
Description: The alarm is raised when the utilization of a filter entry range that is reserved for filter entry insertion increases to the configured maximum value for a RADIUS application insert range.		
Remedial action: The filter entry range reserved for filter entry insertion has increased to the configured high watermark for Radius application. Make an adjusted to the watermarks or to the filter.		

Table 39-823 radiusServerOverloaded (subscrauth)

Alarm	Attributes	Applicable major release
Name: radiusServerOverloaded (3913) Type: communicationsAlarm Package: subscrauth.radiusServerOverloaded Raised on class: subscrauth.RadiusEntry	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: radiusServerRequestLimi-tReached	Release: • N/A
Description: The alarm is raised when the RADIUS server is overloaded.		
Raising condition: (('Operational State' EQUAL 'Over Loaded'))		
Clearing condition: (('Operational State' NOT EQUAL 'Over Loaded'))		
Remedial action: Verify the RADIUS server is properly configured to process pending authentication requests at the desired rate and ensure that this rate matches the authentication request limit defined for this RADIUS server on the network element.		

Table 39-824 RadRouteDownloadFailed

Alarm	Attributes	Applicable major release
Name: RadRouteDownloadFailed (4418) Type: communicationsAlarm Package: aaa.RadRouteDownloadFailed Raised on class: aaa.RouteDownloadPolicy	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when a RADIUS route-download process fails.		
Remedial action: Ensure that:\n1.The routes defined in the RADIUS Server have a valid syntax.\n2.The number of downloaded routes is less than the maximum.\n3.There are no issues affecting the node's ability to populate the routes into the routing table.		

Table 39-825 RDI (mpr)

Alarm	Attributes	Applicable major release
Name: RDI (806) Type: communicationsAlarm Package: mpr.RDI Raised on class: mpr.IMALink	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: remoteDefectIndication	Release: • N/A
Description: The alarm is raised when a Remote Defect Indication signal is detected on an ASAP MDA.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 39-826 RDICh1

Alarm	Attributes	Applicable major release
Name: RDICh1 (4833) Type: communicationsAlarm Package: mwa.RDICh1 Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: RemoteDefectIndication	Release: • N/A
Description: The alarm is raised when a MPT receives a remote MPT CH1 remote defect indication		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-827 RDIChx

Alarm	Attributes	Applicable major release
Name: RDIChx (4834) Type: communicationsAlarm Package: mwa.RDIChx Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: RemoteDefectIndication	Release: • N/A
Description: The alarm is raised when a MPT receives a remote MPT CHX remote defect indication		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-828 RealignmentOfDatabase

Alarm	Attributes	Applicable major release
Name: RealignmentOfDatabase (613) Type: configurationAlarm Package: db.RealignmentOfDatabase Raised on class: db.DatabaseManager	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: databaseRealignment	Release: • N/A
Description: The alarm is raised when the primary 5620 SAM main server realigns itself with the preferred database by performing a database switchover to connect to the primary database.		
Remedial action: Informational - no corrective action required.		

Table 39-829 RealignmentOfDatabaseFailed

Alarm	Attributes	Applicable major release
Name: RealignmentOfDatabaseFailed (614) Type: configurationAlarm Package: db.RealignmentOfDatabaseFailed Raised on class: db.DatabaseManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: databaseRealignmentFailed	Release: • N/A
Description: The alarm is raised when a database switchover to realign the primary main server and primary database fails. The primary main server is not connected to the preferred database.		
Remedial action: The additional text field of the alarm will provide more details as will the EmsServer.log. Possible causes include a HW failure on the platform hosting the database function, loss of network connectivity between the primary and standby database platforms. If the alarm persists please contact your Nokia support representative for assistance.		

Table 39-830 ReceivedHigherBridgePriority

Alarm	Attributes	Applicable major release
Name: ReceivedHigherBridgePriority (504) Type: SdpBindingAlarm Package: l2fwd.ReceivedHigherBridgePriority Raised on class: l2fwd.CircuitStp	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: customerDeviceMisconfigured	Release: • N/A
Description: The alarm is raised when a customer NE is configured with a bridge priority of zero. The SDP binding that connects to the customer device is subsequently blocked.		
Remedial action: Remove the customer's device or reconfigure the customer's bridge priority with value greater than zero.		

Table 39-831 RedAlarmThresholdReached

Alarm	Attributes	Applicable major release
Name: RedAlarmThresholdReached (241) Type: communicationsAlarm Package: netw.RedAlarmThresholdReached Raised on class: netw.NmsSystem	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tooManyAlarms	Release: • N/A
Description: The alarm is raised when the number of outstanding 5620 SAM alarms reaches the critical threshold. When this happens, the 5620 SAM discards alarms to keep the number below the threshold.		
Remedial action: Informational - if the alarm persists or is occurring frequently perform root cause analysis to determine why the NEs in the network are consistently generating high rates of alarms.		

Table 39-832 RedundancySwitchover

Alarm	Attributes	Applicable major release
Name: RedundancySwitchover (181) Type: equipmentAlarm Package: netw.RedundancySwitchover Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: CPMSwitchover	Release: • N/A
Description: The alarm is raised when a 5620 SAM main server receives a CPMSwitchover trap from an NE, which indicates that the standby CPM detects an active CPM failure and is preparing to take over as the new active CPM.		
Remedial action: Informational.		

Table 39-833 RedundantIfMismatch

Alarm	Attributes	Applicable major release
Name: RedundantIfMismatch (419) Type: configurationAlarm Package: srrp.RedundantIfMismatch Raised on class: srrp.Instance	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: redundantIfNotProperlyPaired	Release: • N/A
Description: The alarm is raised when the local and remote redundant interfaces are not correctly paired.		
Remedial action: Reconfigure the redundant interfaces for the peer SRRP instances so that they match each other.		

Table 39-834 RedundantRadioLink

Alarm	Attributes	Applicable major release
Name: RedundantRadioLink (1081) Type: configurationAlarm Package: netw.RedundantRadioLink Raised on class: netw.RadioPhysicalLink	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: redundantRadioLinkConfig-ured	Release: • N/A

Table 39-834 RedundantRadioLink (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when a radio link is discovered between two nodes when there is already a physical link(s) between the same nodes.		
Remedial action: Informational-this alarm indicates that there is another radio link between the nodes involved.		

Table 39-835 ReferenceOneLossOfSignal (sonet)

Alarm	Attributes	Applicable major release
Name: ReferenceOneLossOfSignal (1953) Type: communicationsAlarm Package: sonet.ReferenceOneLossOfSignal Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReferenceOneLossOfSignal	Release: • N/A
Description: The alarm is raised when the Timing Reference One on an NE is not qualified due to Loss of Signal.		
Raising condition: (('Not Qualified Due To'anyBit'LOS'))		
Clearing condition: NOT ((('Not Qualified Due To'anyBit'LOS')))		
Remedial action: Make sure that peer connected to Reference One is properly configured.		

Table 39-836 ReferenceOneLossOfSignal (equipment)

Alarm	Attributes	Applicable major release
Name: ReferenceOneLossOfSignal (1953) Type: communicationsAlarm Package: equipment.ReferenceOneLossOfSignal Raised on class: equipment.ProcessorCard	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReferenceOneLossOfSignal	Release: • N/A
Description: The alarm is raised on the Standby CPM when the Timing Reference One on an NE is not qualified due to Loss of Signal.		
Remedial action: Make sure that peer connected to Reference One is properly configured.		

Table 39-837 ReferenceOneOutOfFrequency (equipment)

Alarm	Attributes	Applicable major release
Name: ReferenceOneOutOfFrequency (1954) Type: communicationsAlarm Package: equipment.ReferenceOneOutOfFrequency Raised on class: equipment.ProcessorCard	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReferenceOneOutOfFrequency	Release: • N/A
Description: The alarm is raised on the Standby CPM when the Timing Reference One on an NE is not qualified due to Out of frequency.		
Remedial action: Check the communication path is up between the local PTP slave clock and its selected master		

Table 39-838 ReferenceOneOutOfFrequency (sonet)

Alarm	Attributes	Applicable major release
Name: ReferenceOneOutOfFrequency (1954) Type: communicationsAlarm Package: sonet.ReferenceOneOutOfFrequency Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReferenceOneOutOfFrequency	Release: • N/A
Description: The alarm is raised when the Timing Reference One on an NE is not qualified due to Out of frequency.		
Raising condition: (('Not Qualified Due To'anyBit'OOF'))		
Clearing condition: NOT ((('Not Qualified Due To'anyBit'OOF')))		
Remedial action: Check the communication path is up between the local PTP slave clock and its selected master		

Table 39-839 ReferenceOneOutOfPollInRange (equipment)

Alarm	Attributes	Applicable major release
Name: ReferenceOneOutOfPollInRange (1955) Type: communicationsAlarm Package: equipment.ReferenceOneOutOfPollInRange Raised on class: equipment.ProcessorCard	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReferenceOneOutOfPollInRange	Release: • N/A
Description: The alarm is raised on the Standby CPM when the Timing Reference One on an NE is not qualified due to Out of poll in range.		
Remedial action: Check the timing reference is configured correctly. Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 39-840 ReferenceOneOutOfPollInRange (sonet)

Alarm	Attributes	Applicable major release
Name: ReferenceOneOutOfPollInRange (1955) Type: communicationsAlarm Package: sonet.ReferenceOneOutOfPollInRange Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReferenceOneOutOfPollInRange	Release: • N/A
Description: The alarm is raised when the Timing Reference One on an NE is not qualified due to Out of poll in range.		
Raising condition: (('Not Qualified Due To'anyBit'OOPIR'))		
Clearing condition: NOT ((('Not Qualified Due To'anyBit'OOPIR')))		
Remedial action: Check the timing reference is configured correctly. Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 39-841 ReferenceTwoLossOfSignal (sonet)

Alarm	Attributes	Applicable major release
Name: ReferenceTwoLossOfSignal (1956) Type: communicationsAlarm Package: sonet.ReferenceTwoLossOfSignal Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReferenceTwoLossOfSignal	Release: • N/A
Description: The alarm is raised when the Timing Reference Two on an NE is not qualified due to Loss of Signal.		
Raising condition: (('Not Qualified Due To'anyBit'LOS'))		
Clearing condition: NOT ((('Not Qualified Due To'anyBit'LOS')))		
Remedial action: Make sure that peer connected to Reference Two is properly configured.		

Table 39-842 ReferenceTwoLossOfSignal (equipment)

Alarm	Attributes	Applicable major release
Name: ReferenceTwoLossOfSignal (1956) Type: communicationsAlarm Package: equipment.ReferenceTwoLossOfSignal Raised on class: equipment.ProcessorCard	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReferenceTwoLossOfSignal	Release: • N/A
Description: The alarm is raised on the Standby CPM when the Timing Reference Two on an NE is not qualified due to Loss of Signal.		
Remedial action: Make sure that peer connected to Reference Two is properly configured.		

Table 39-843 ReferenceTwoOutOfFrequency (equipment)

Alarm	Attributes	Applicable major release
Name: ReferenceTwoOutOfFrequency (1957) Type: communicationsAlarm Package: equipment.ReferenceTwoOutOfFrequency Raised on class: equipment.ProcessorCard	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReferenceTwoOutOfFrequency	Release: • N/A
Description: The alarm is raised on the Standby CPM when the Timing Reference Two on an NE is not qualified due to Out of frequency.		
Remedial action: Make sure that frequency configured for Reference Two is correct.		

Table 39-844 ReferenceTwoOutOfFrequency (sonet)

Alarm	Attributes	Applicable major release
Name: ReferenceTwoOutOfFrequency (1957) Type: communicationsAlarm Package: sonet.ReferenceTwoOutOfFrequency Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReferenceTwoOutOfFrequency	Release: • N/A
Description: The alarm is raised when the Timing Reference Two on an NE is not qualified due to Out of frequency.		
Raising condition: (('Not Qualified Due To'anyBit'OOF'))		
Clearing condition: NOT ((('Not Qualified Due To'anyBit'OOF')))		
Remedial action: Make sure that frequency configured for Reference Two is correct.		

Table 39-845 ReferenceTwoOutOfPollInRange (sonet)

Alarm	Attributes	Applicable major release
Name: ReferenceTwoOutOfPollInRange (1958) Type: communicationsAlarm Package: sonet.ReferenceTwoOutOfPollInRange Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReferenceTwoOutOfPollInRange	Release: • N/A
Description: The alarm is raised when the Timing Reference Two on an NE is not qualified due to Out of poll in range.		
Raising condition: (('Not Qualified Due To'anyBit'OOPIR'))		
Clearing condition: NOT ((('Not Qualified Due To'anyBit'OOPIR')))		
Remedial action: Check the timing reference is configured correctly. Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 39-846 ReferenceTwoOutOfPollInRange (equipment)

Alarm	Attributes	Applicable major release
Name: ReferenceTwoOutOfPollInRange (1958) Type: communicationsAlarm Package: equipment.ReferenceTwoOutOfPollInRange Raised on class: equipment.ProcessorCard	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReferenceTwoOutOfPollInRange	Release: • N/A
Description: The alarm is raised on the Standby CPM when the Timing Reference Two on an NE is not qualified due to Out of poll in range.		
Remedial action: Check the timing reference is configured correctly. Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Contact your Nokia support representative if necessary.		

Table 39-847 ReinstantiateStandbyDatabase

Alarm	Attributes	Applicable major release
Name: ReinstantiateStandbyDatabase (252) Type: configurationAlarm Package: db.ReinstantiateStandbyDatabase Raised on class: db.DatabaseManager	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: reinstantiateStandbyDatabase	Release: • N/A
Description: The alarm is raised when a standby database reinstantiation occurs.		
Remedial action: Informational - no corrective action required.		

Table 39-848 ReinstantiateStandbyDatabaseFailed

Alarm	Attributes	Applicable major release
Name: ReinstantiateStandbyDatabaseFailed (253) Type: configurationAlarm Package: db.ReinstantiateStandbyDatabaseFailed Raised on class: db.DatabaseManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: reinstantiateStandbyDatabaseFailed	Release: • N/A
Description: The alarm is raised when a standby database reinstantiation fails.		
Remedial action: The additional text field of the alarm will provide more details as will the EmsServer.log. Possible causes include a HW failure on the platform hosting the database function, loss of network connectivity between the primary and standby database platforms. If the alarm persists please contact your Nokia support representative for assistance.		

Table 39-849 RemoteNEFailure

Alarm	Attributes	Applicable major release
Name: RemoteNEFailure (1173) Type: equipmentAlarm Package: equipment.RemoteNEFailure Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: remoteNEFailure	Release: • N/A
Description: The alarm is raised when a remote NE failure is detected.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 39-850 ReplicationLmtExceeded

Alarm	Attributes	Applicable major release
Name: ReplicationLmtExceeded (3968) Type: resourceAlarm Package: equipment.ReplicationLmtExceeded Raised on class: equipment.BaseCard	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: resourceLimitReached	Release: • N/A

Table 39-850 ReplicationLmtExceeded (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when an IOM fails to program an OIF for an (S,G) record because the replication limit for that (S,G) on that IOM has been reached. The replication limit per (S,G) entry on an IOM is currently 127.		
Remedial action: Informational - no corrective action required		

Table 39-851 ReservedRouteTargetMismatch

Alarm	Attributes	Applicable major release
Name: ReservedRouteTargetMismatch (6446) Type: configurationAlarm Package: l3fwd.ReservedRouteTargetMismatch Raised on class: l3fwd.ServiceSite	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: reservedRouteTargetChanged	Release: • N/A
Description: The alarm is raised when the 5620 SAM detects a pre-assigned route target on this VPRN has been modified. The alarm information includes the source, i.e., import or export, and the conflict reserved VPRN RT entry distinguished name.		
Remedial action: A configuration error has occurred which should be corrected. This VPRN's route target has been modified from its pre-reserved value defined in the Reserved VPRN Route Target Table.		

Table 39-852 ResiliencySapDeleted

Alarm	Attributes	Applicable major release
Name: ResiliencySapDeleted (688) Type: resiliencyAlarm Package: resiliency.ResiliencySapDeleted Raised on class: resiliency.HsdpaResiliency	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resiliencySapDeleted	Release: • N/A
Description: The alarm is raised when a SAP that is used for resiliency is deleted.		
Remedial action: Informational.		

Table 39-853 ResiliencyServiceSwitch

Alarm	Attributes	Applicable major release
Name: ResiliencyServiceSwitch (689) Type: resiliencyAlarm Package: resiliency.ResiliencyServiceSwitch Raised on class: resiliency.HsdpaResiliency	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: secondaryServiceSiteActive	Release: • N/A
Description: The alarm is raised when a secondary service becomes active.		
Remedial action: Informational.		

Table 39-854 ResiliencySiteDeleted

Alarm	Attributes	Applicable major release
Name: ResiliencySiteDeleted (690) Type: resiliencyAlarm Package: resiliency.ResiliencySiteDeleted Raised on class: resiliency.HsdpaResiliency	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: secondaryServiceSiteDeleted	Release: • N/A
Description: The alarm is raised when a secondary service site is deleted.		
Remedial action: Informational.		

Table 39-855 restoreFailureAlarm

Alarm	Attributes	Applicable major release
Name: restoreFailureAlarm (535) Type: softwareAlarm Package: sw.restoreFailureAlarm Raised on class: sw.SoftwareControlModule	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: restoreFailureAlarm	Release: • N/A
Description: The alarm is raised when the software restore process on an NE fails.		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 39-856 RevertiveMisMatch

Alarm	Attributes	Applicable major release
Name: RevertiveMisMatch (4899) Type: pathAlarm Package: mplstp.RevertiveMisMatch Raised on class: mplstp.PathMep	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: RevertiveMisMatch	Release: • N/A
Description: This alarm is generated when an MPLS-TP LSP revertive mode mismatch is detected on the protection MEP. The revertive mode must match on the local node and the far-end node.		
Remedial action: This alarm is generated when an MPLS-TP LSP revertive mode mismatch is detected on the protection MEP. The revertive mode must match on the local node and the far-end node.		

Table 39-857 RFSwitchFail (mwa)

Alarm	Attributes	Applicable major release
Name: RFSwitchFail (5425) Type: equipmentAlarm Package: mwa.RFSwitchFail Raised on class: mwa.PortTermination	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: RFSwitchFailure	Release: • N/A

Table 39-857 RFSwitchFail (mwa) (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when a MPT detects a Radio Frame Switch Failure.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-858 RingAuditProblem

Alarm	Attributes	Applicable major release
Name: RingAuditProblem (4995) Type: configurationAlarm Package: ethring.RingAuditProblem Raised on class: ethring.Ring	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: invalidConfiguation	Release: • N/A
Description: The alarm is raised when the Ring Audit has detected a problem.		
Remedial action: A configuration error has been made which must be corrected. Please see the additional test for more details.		

Table 39-859 RipAuthenticationFailure

Alarm	Attributes	Applicable major release
Name: RipAuthenticationFailure (70) Type: authenticationAlarm Package: rip.RipAuthenticationFailure Raised on class: rip.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: authFailure	Release: • N/A
Description: The alarm is raised when a peer authentication failure occurs. The alarm information includes the peer address.		
Remedial action: Informational - please check that RIP neighbor is sending the RIPv2 packet with the matching authentication key with this router.		

Table 39-860 RipAuthenticationMismatch

Alarm	Attributes	Applicable major release
Name: RipAuthenticationMismatch (71) Type: authenticationAlarm Package: rip.RipAuthenticationMismatch Raised on class: rip.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: authTypeMismatch	Release: • N/A
Description: The alarm is raised when a peer authentication mismatch occurs. The alarm indicates the peer address.		
Remedial action: Informational - please check that RIP neighbor is sending the RIPv2 packet with the matching authentication type with this router.		

Table 39-861 RipExportLimitDropped

Alarm	Attributes	Applicable major release
Name: RipExportLimitDropped (1927) Type: configurationAlarm Package: rip.RipExportLimitDropped Raised on class: rip.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: exportLimitDropped	Release: • N/A
Description: The alarm is raised when the total number of exported routes from the route table to this RIP level drops below the configured export limit		
Remedial action: Informational.		

Table 39-862 RipExportLimitReached

Alarm	Attributes	Applicable major release
Name: RipExportLimitReached (1928) Type: configurationAlarm Package: rip.RipExportLimitReached Raised on class: rip.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: exportLimitReached	Release: • N/A
Description: The alarm is raised when the total number of routes for the level is equal to the configured limit for exported routes		
Remedial action: Informational - Additional routes would not be exported into RIP from the route table.		

Table 39-863 RipExportLimitWarning

Alarm	Attributes	Applicable major release
Name: RipExportLimitWarning (1929) Type: configurationAlarm Package: rip.RipExportLimitWarning Raised on class: rip.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: exportLimitWarning	Release: • N/A
Description: The alarm is raised when the number of exported routes for the RIP level equals the percentage of the export limit configured in the Export Limit Log Percent parameter.		
Remedial action: Informational - Additional routes will continue to be exported into RIP from the route table till the export limit is reached.		

Table 39-864 ripRouteMaxLimitReached

Alarm	Attributes	Applicable major release
Name: ripRouteMaxLimitReached (1090) Type: ProtocolAlarm Package: rip.ripRouteMaxLimitReached Raised on class: rip.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: maxRouteReached	Release: • N/A

Table 39-864 ripRouteMaxLimitReached (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the number of RIP routes learned by an NE exceeds the maximum specified in the RIP configuration of the NE.		
Remedial action: Informational - no corrective action required		

Table 39-865 RootDirMaxFilesReached

Alarm	Attributes	Applicable major release
Name: RootDirMaxFilesReached (3699) Type: storageAlarm Package: equipment.RootDirMaxFilesReached Raised on class: equipment.FlashMemory	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: rootDirMaxFilesReached	Release: • N/A
Description: The alarm is raised when the number of files in the root directory reaches the maximum.		
Remedial action: This alarm has been raised due the fact that the number of files in the root directory of the compact flash has gone beyond the pre-defined limit. To rectify this issue please remove unused files from the root directory.		

Table 39-866 RouterLimitExceedDueToMultiAdditions

Alarm	Attributes	Applicable major release
Name: RouterLimitExceedDueToMultiAdditions (602) Type: cpamLicensingAlarm Package: security. RouterLimitExceedDueToMultiAdditions Raised on class: security.CpamLicense	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cpamRouterLimitExceedDu-eToMultiAdditions	Release: • N/A
Description: The alarm is raised when the 5650 CPAM cannot discover one or more routers because the license capacity is reached.		
Raising condition: ('License violation due to multiple routers addition' EQUAL 'true')		
Clearing condition: ('License violation due to multiple routers addition' EQUAL 'false')		
Remedial action: Informational - The number of router (Big/Small/Multicast/Third Party) licenses purchased and available on the CPAM server is insufficient as compared to the number of big/small/multicast/third party routers under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 39-867 RouteTargetConflict

Alarm	Attributes	Applicable major release
Name: RouteTargetConflict (6447) Type: configurationAlarm Package: l3fwd.RouteTargetConflict Raised on class: l3fwd.ServiceSite	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: routeTargetConflictWith-OtherService	Release: • N/A

Table 39-867 RouteTargetConflict (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the 5620 SAM detects a conflict between the configured route target on VPRN and the Reserved VPRN Table. The alarm information includes the source, i.e., import or export, and the conflict reserved VPRN RT entry distinguished name.		
Remedial action: A configuration error has occurred which should be corrected. The configured VPRN route target has a conflict with the Reserved VPRN Route Target Table. This route target has been been reserved by another service.		

Table 39-868 RouteTargetMisConfigured

Alarm	Attributes	Applicable major release
Name: RouteTargetMisConfigured (8139) Type: configurationAlarm Package: service.RouteTargetMisConfigured Raised on class: service.SvcResourceReservation	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: routeTargetMisConfigured	Release: • N/A
Description: This alarm is raised when the configured route targets associated with this Reserved Route Target entry has been misconfigured; i.e. the route target RT1 or RT2 is not configured when they are needed for associated VPRN service site creation. The affected route target's relative distinguished name is included in the alarm.		
Remedial action: A configuration error has occurred which should be corrected. This Reserved VPRN Route Target Table does not have all the configured route targets that are needed for the associated VPRN. This alarm needs to be explicitly cleared.		

Table 39-869 RowThresholdConstraintViolated

Alarm	Attributes	Applicable major release
Name: RowThresholdConstraintViolated (286) Type: configurationAlarm Package: db.RowThresholdConstraintViolated Raised on class: db.SizeConstraintPolicy	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: partialConstraintEnforcement	Release: • N/A
Description: The alarm is raised when the number of records in a database table exceeds the number specified in a size constraint policy.		
Raising condition: ('Cleanup partial (too many objects)' EQUAL 'true')		
Clearing condition: ('Cleanup partial (too many objects)' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 39-870 RSLHistoryUploadFailure

Alarm	Attributes	Applicable major release
Name: RSLHistoryUploadFailure (11468) Type: equipmentAlarm Package: mwa.RSLHistoryUploadFailure Raised on class: mwa.PortTermination	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: HistoryUploadFail	Release: • N/A
Description: This alarm is raised when microwave radio RSL History upload fails.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-871 RsyncDirectoryMismatch

Alarm	Attributes	Applicable major release
Name: RsyncDirectoryMismatch (1938) Type: serverAlarm Package: server.RsyncDirectoryMismatch Raised on class: server.SamServer	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: rsyncDirectoryMismatch	Release: • N/A
Description: The alarm is raised when the rsync directories on two 5620 SAM servers do not match.		
Remedial action: A configuration error has been made which must be corrected. Reconfigure the SAM servers so that the rsync directories match.		

Table 39-872 RsyncFilesToRemoteHost

Alarm	Attributes	Applicable major release
Name: RsyncFilesToRemoteHost (1939) Type: communicationsAlarm Package: server.RsyncFilesToRemoteHost Raised on class: server.SamServer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: rsyncFilesIssue	Release: • N/A
Description: The alarm is raised when a rsync operation cannot synchronize files with the remote server.		
Remedial action: Possible causes include a HW failure on the standby SAM server or standby AUX server or loss of network connectivity between the primary and standby platforms. Establish that the platform hosting the standby SAM server or standby AUX server has not suffered a HW or network failure.		

Table 39-873 RuleRegistrationError

Alarm	Attributes	Applicable major release
Name: RuleRegistrationError (364) Type: ConfigurationAlarm Package: rules.RuleRegistrationError Raised on class: rules.RuleSet	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ruleContentsError	Release: • N/A

Table 39-873 RuleRegistrationError (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when one or more internal 5620 SAM server rule-engine rules fails to compile. The cause is typically a rule syntax error or a system error.		
Raising condition: (('Name' EQUAL '\"N/A\"') OR ('compiled' EQUAL 'false'))		
Clearing condition: (('Name' NOT EQUAL '\"N/A\"') AND ('compiled' EQUAL 'true'))		
Remedial action: Informational - Please contact your Nokia support representative for assistance.		

Table 39-874 RxDiversityMissing

Alarm	Attributes	Applicable major release
Name: RxDiversityMissing (8970) Type: equipmentAlarm Package: mwa.RxDiversityMissing Raised on class: mwa.PortTermination	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: RxDiversityMissing	Release: • N/A
Description: The alarm is raised when a MPT detects missing diversity on receiver card.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-875 SapDHCPLeaseEntriesExceeded

Alarm	Attributes	Applicable major release
Name: SapDHCPLeaseEntriesExceeded (386) Type: communicationsAlarm Package: service.SapDHCPLeaseEntriesExceeded Raised on class: service.AccessInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: sapDHCPLeaseEntriesExceeded	Release: • N/A
Description: The alarm is raised when the number of DHCP lease-state entries on a SAP reaches the configured maximum value. This value is defined by sapTlsDhcpLeasePopulate for a TLS VLAN service, and by vRtrIfDHCPLeasePopulate for an IES or VPRN service.		
Remedial action: The Number of DHCP lease-state entries (e.g. subscribers) on the affected interface has crossed the leasePopulate threshold defined in the DHCP Relay configuration of that interface.\nPlease review the DHCP leasePopulate configuration and adjust the number of allowed leases to meet the network requirements. Alternately, the DHCP leases can be spread out across extra interfaces.		

Table 39-876 sapDHCPLseStatePopulateErr

Alarm	Attributes	Applicable major release
Name: sapDHCPLseStatePopulateErr (3908) Type: processingErrorAlarm Package: service.sapDHCPLseStatePopulateErr Raised on class: service.AccessInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: sapDHCPLseStatePopulateError	Release: • N/A
Description: The alarm is raised when an NE notifies the 5620 SAM that it cannot update the DHCP Lease State table upon reception of a DHCP ACK message.		
Remedial action: The alarm is raised when an NE notifies the 5620 SAM that it cannot update the DHCP Lease State table upon reception of a DHCP ACK message. Verify the local DHCP server configuration or the DHCP relay configuration. Additionally, verify the length of the auto-generated subscriber identification.		

Table 39-877 sapDHCPProxyServerError

Alarm	Attributes	Applicable major release
Name: sapDHCPProxyServerError (387) Type: communicationsAlarm Package: service.sapDHCPProxyServerError Raised on class: service.AccessInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: UnableProxyDHCPRequest	Release: • N/A
Description: The alarm is raised when the 5620 SAM is unable to proxy a DHCP request.		
Remedial action: Please verify your DHCP relay configuration. The local proxy server will not become operational without the emulated-server address being specified. Also ensure the Proxy server state is enabled on this SAP.		

Table 39-878 SapMismatch

Alarm	Attributes	Applicable major release
Name: SapMismatch (417) Type: configurationAlarm Package: srrp.SapMismatch Raised on class: srrp.Instance	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: remoteSapMismatch	Release: • N/A
Description: The alarm is raised when the SRRP SAPs on the local interface do not match the SRRP SAPs on the remote interface.		
Remedial action: Reconfigure the Service Access Interfaces for the Group Interface so that they connecting to each other for the peer SRRPs.		

Table 39-879 sapReceivedProtSrcMac

Alarm	Attributes	Applicable major release
Name: sapReceivedProtSrcMac (393) Type: accessInterfaceAlarm Package: l2fwd.sapReceivedProtSrcMac Raised on class: l2fwd.AccessInterfaceFib	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ProtectedSourceMacLearned	Release: • N/A
Description: The alarm is raised when a restricted SAP receives a re-learn request for a protected MAC address.		
Remedial action: Informational - no corrective action required.		

Table 39-880 SapStaticHost6DynamicMacConflict

Alarm	Attributes	Applicable major release
Name: SapStaticHost6DynamicMacConflict (9021) Type: configurationAlarm Package: antispoof. SapStaticHost6DynamicMacConflict Raised on class: antispoof.SapStaticIPv6Hosts	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: LearnedDynamicMacAl-readyLearned	Release: • N/A
Description: The alarm is generated when the system was unable to update the MAC address of a static IPv6 host.		
Remedial action: Informational - The NE has detected an existing FIB entry with the same MAC address, created for another IPv6 static host. Clearing the FIB entries could fix it.		

Table 39-881 SapStaticHostDynamicMacConflict

Alarm	Attributes	Applicable major release
Name: SapStaticHostDynamicMacConflict (313) Type: configurationAlarm Package: antispoof.SapStaticHostDynamicMacConflict Raised on class: antispoof.AntiSpoofingStaticHosts	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: LearnedDynamicMacAl-readyLearned	Release: • N/A
Description: The alarm is raised when an NE tries to learn a dynamic MAC address from an IP-only static host.		
Remedial action: Informational - The NE has detected an existing FIB entry with the same MAC address, created for another static host. Clearing the FIB entries could fix it.		

Table 39-882 SapTagMismatch

Alarm	Attributes	Applicable major release
Name: SapTagMismatch (418) Type: configurationAlarm Package: srrp.SapTagMismatch Raised on class: srrp.Instance	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: remoteSyncTagMismatch	Release: • N/A

Table 39-882 SapTagMismatch (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the tag of a local SAP does not match the tag of a remote SAP.		
Remedial action: Reconfigure the SAPs for the peer SRRP instances so that their tags match each other.		

Table 39-883 SapVlanSubTypeConflict

Alarm	Attributes	Applicable major release
Name: SapVlanSubTypeConflict (290) Type: configurationAlarm Package: vlan.SapVlanSubTypeConflict Raised on class: vlan.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: topologyMisconfigured	Release: • N/A
Description: The alarm is raised when a SAP resynchronization indicates that the VLAN subtype of the SAP is different from the site subtype. The alarm information includes the ID of the associated port.		
Remedial action: Ensure that the VLAN Subtype of the SAP matches the VLAN Subtype of the Site.		

Table 39-884 SasAccountingAlarm

Alarm	Attributes	Applicable major release
Name: SasAccountingAlarm (691) Type: oamAlarm Package: sas.SasAccountingAlarm Raised on class: sas.TestSuite	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: noAccountingPolicy	Release: • N/A
Description: The alarm is raised when the 5620 SAM cannot find an SAA Accounting Policy.		
Remedial action: A configuration error has been made which must be corrected. An SAA Accounting policy is required but has not been configured - please perform the required configuration.		

Table 39-885 SasPmBinAlarmLimitReached

Alarm	Attributes	Applicable major release
Name: SasPmBinAlarmLimitReached (5413) Type: configurationAlarm Package: server.SasPmBinAlarmLimitReached Raised on class: server.SamServer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tooManyAlarmsRaisedByBin-Stats	Release: • N/A
Description: The alarm is raised when PM Bin Statistics has exceeded the limit of alarms for an interval.		
Remedial action: Informational - the maximum number of bin threshold alarms that can be raised in the reset interval has been reached. After the Bin alarm reset interval has passed, alarms can be raised again for the next interval until the number of alarms reaches the limit again.		

Table 39-886 SasPmBinStatThresholdExceeded

Alarm	Attributes	Applicable major release
Name: SasPmBinStatThresholdExceeded (5412) Type: misConfiguration Package: sas.SasPmBinStatThresholdExceeded Raised on class: sas.TestManager	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: SasPmBinStatThresholdExceeded	Release: • N/A
Description: The alarm is raised if sas pm bin stats count exceeds threshold limit. This Alarm has to be cleared Manually.		
Remedial action: The alarm is raised if sas pm bin stats count exceeds Threshold Limit.This Alarm has to be cleared Manually.		

Table 39-887 SasResultCollectionThresholdExceeded

Alarm	Attributes	Applicable major release
Name: SasResultCollectionThresholdExceeded (5158) Type: misConfiguration Package: sas.SasResultCollectionThresholdExceeded Raised on class: sas.TestManager	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: sasResultCollectionThresholdExceeded	Release: • N/A
Description: The alarm is raised if test result count exceeds maximum allowed Limit.		
Remedial action: collection Rate Greater Than expected.		

Table 39-888 SasResyncWorkerQueueOverflow

Alarm	Attributes	Applicable major release
Name: SasResyncWorkerQueueOverflow (8137) Type: misConfiguration Package: sas.SasResyncWorkerQueueOverflow Raised on class: sas.TestManager	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tooManySasResyncTasks	Release: • N/A
Description: The alarm is raised when incoming OAM traps can not be handled because the number of tasks that await processing on the SasResyncWorkerPool queue by the 5620 SAM surpasses the servers capacity to process them. The trap tasks mainly include incoming test results and threshold crossing events.		
Remedial action: Consider stopping some SNMP based tests or using accounting-file based tests instead. The alarm has to be cleared manually.		

Table 39-889 SasThresholdExceededAlarm

Alarm	Attributes	Applicable major release
Name: SasThresholdExceededAlarm (272) Type: oamAlarm Package: sas.SasThresholdExceededAlarm Raised on class: sas.Test	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when a rising or falling threshold is crossed by a jitter, latency, or loss value. The alarm is raised only against a scheduled test. The alarm information includes the threshold type, the threshold setting, and the current rising or falling value.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-890 SasTooManyTestsOnNodeAlarm

Alarm	Attributes	Applicable major release
Name: SasTooManyTestsOnNodeAlarm (287) Type: oamAlarm Package: sas.SasTooManyTestsOnNodeAlarm Raised on class: sas.NeAgent	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tooManyTestsDeployedOn-Node	Release: • N/A
Description: The alarm is raised when an NE reaches 60 percent of the allowed number of created or simultaneously executed OAM tests. An attempt to create or execute an NE schedulable test on an NE fails when the number of tests reaches 95 percent of the NE capacity. The alarm information includes the following: - the NE ID - the number of deployed tests on the NE - the allowed number of deployed tests on the NE		
Remedial action: Informational - 5620 SAM is close to or at the maximum number of OAM tests it can support.		

Table 39-891 scheduledTaskCompletionStatus

Alarm	Attributes	Applicable major release
Name: scheduledTaskCompletionStatus (528) Type: taskCompletionAlarm Package: schedule.scheduledTaskCompletionStatus Raised on class: schedule.ScheduledTask	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: scheduledTaskCompleted	Release: • N/A
Description: The alarm is raised when the execution of a SAM scheduled task completes.		
Raising condition: ('Status' EQUAL 'Completed')		
Remedial action: Informational		

Table 39-892 ScriptAlarm

Alarm	Attributes	Applicable major release
Name: ScriptAlarm (5131) Type: serverAlarm Package: script.ScriptAlarm Raised on class: script.AbstractScript	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ScriptAlarm	Release: • N/A
Description: This alarm was raised from within a SAM user script when certain conditions were met, as implemented by the script author. See the alarm's 'Additional Text' for any informative details the script author may have supplied.		
Remedial action: This is an alarm generated from within a SAM user script, and therefore the remedial action will vary. See the alarm's "Additional Text" for any remedial action the script author may have supplied.		

Table 39-893 SdpBindingMisconfigured

Alarm	Attributes	Applicable major release
Name: SdpBindingMisconfigured (293) Type: SdpBindingAlarm Package: svt.SdpBindingMisconfigured Raised on class: svt.SdpBinding	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: returnSdpBindingTypeMis-match	Release: • N/A
Description: The alarm is raised when the return SDP binding type does not match the originating SDP binding type, for example, when the return SDP binding is spoke and the originating SDP binding is mesh.		
Remedial action: A configuration error has occurred which must be corrected. The configuration on the endpoints of the SDP does not match causing the SDP to be down. Correct the configuration error and the SDP will come up.		

Table 39-894 sdpBindReceivedProtSrcMac

Alarm	Attributes	Applicable major release
Name: sdpBindReceivedProtSrcMac (3746) Type: SdpBindingAlarm Package: l2fwd.sdpBindReceivedProtSrcMac Raised on class: l2fwd.AbstractCircuitFib	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ProtectedSourceMacLearned	Release: • N/A
Description: The alarm is raised when a restricted SDP receives a re-learn request for a protected MAC address.		
Remedial action: Informational - no corrective action required.		

Table 39-895 SdpMldSnpgGrpDroppedLimitExceeded

Alarm	Attributes	Applicable major release
Name: SdpMldSnpgGrpDroppedLimitExceeded (738) Type: SdpBindingAlarm Package: vpls.SdpMldSnpgGrpDroppedLimitExceeded Raised on class: vpls.SdpBindingMldSnpgCfg	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: igmpSnpgGrpMaxN-brGrpsReached	Release: • N/A
Description: The alarm is raised when an SDP binding drops an MLD group because the configurable maximum number of MLD groups on the SDP binding is reached.		
Remedial action: Increase the maximum number of MLD groups for the SDP binding.		

Table 39-896 sdpPbbActvPwWithNonActvCtrlPwChg

Alarm	Attributes	Applicable major release
Name: sdpPbbActvPwWithNonActvCtrlPwChg (5416) Type: processingErrorAlarm Package: svt.sdpPbbActvPwWithNonActvCtrlPwChg Raised on class: svt.Tunnel	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: sdpPbbActvPwWithNonActvC-trlPwChg	Release: • N/A
Description: The alarm is raised when last pseudo-wire (PW) goes standby or down and when first PW becomes active on the Backbone Edge Bridge (BEB) where control PW is standby or down on that SDP.		
Remedial action: sdpPbbActvPwWithNonActvCtrlPwChg event with sdpPbbActvPwWithNonActvCtrlPw set to 'false' indicate clearing of sdpPbbActvPwWithNonActvCtrlPwChg with sdpPbbActvPwWithNonActvCtrlPw set to 'true'.		

Table 39-897 SecondaryBatteryFail (equipment)

Alarm	Attributes	Applicable major release
Name: SecondaryBatteryFail (3624) Type: equipmentAlarm Package: equipment.SecondaryBatteryFail Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: secondaryBatteryFail	Release: • N/A
Description: The alarm is raised when a secondary battery failure is detected.		
Remedial action: The battery on the CPM should be replaced or re-installed.		

Table 39-898 secondExpirationThresholdCrossed

Alarm	Attributes	Applicable major release
Name: secondExpirationThresholdCrossed (2913) Type: configurationAlarm Package: ranlicense. secondExpirationThresholdCrossed Raised on class: ranlicense.RANLicense	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ageingLicense	Release: • N/A
Description: The alarm is raised when the specified Second Expiration Threshold for RAN licensing is crossed.		
Remedial action: Ask for a new LKDI license file with a further expiration date.		

Table 39-899 secondUsageThresholdCrossed

Alarm	Attributes	Applicable major release
Name: secondUsageThresholdCrossed (2914) Type: configurationAlarm Package: ranlicense.secondUsageThresholdCrossed Raised on class: ranlicense.RANLicense	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: insufficientPurchasedLicenses	Release: • N/A
Description: The alarm is raised when the specified Second Usage Threshold for RAN licensing is crossed.		
Remedial action: Ask for a new LKDI license file with more tokens.		

Table 39-900 SerialChannelLoopback

Alarm	Attributes	Applicable major release
Name: SerialChannelLoopback (807) Type: configurationAlarm Package: tdmequipment.SerialChannelLoopback Raised on class: tdmequipment. SerialChannelSpecifics	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: serialChannelLoopback	Release: • N/A
Description: The alarm is raised when an NE reports that a serial channel has a loopback alarm condition.		
Remedial action: Informational only.		

Table 39-901 SerialControlLeadsSignalChange

Alarm	Attributes	Applicable major release
Name: SerialControlLeadsSignalChange (11191) Type: equipmentAlarm Package: tdmequipment. SerialControlLeadsSignalChange Raised on class: tdmequipment.SerialChannel	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: controlLeadStateTransition	Release: • N/A

Table 39-901 SerialControlLeadsSignalChange (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is generated when there is a change in the status of a serial control lead signal.		
Remedial action: Investigate status of attached DTE device.		

Table 39-902 ServiceMisConfigured

Alarm	Attributes	Applicable major release
Name: ServiceMisConfigured (8140) Type: configurationAlarm Package: service.ServiceMisConfigured Raised on class: service.SvcResourceReservation	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: serviceMisConfigured	Release: • N/A
Description: This alarm is raised when the VPRN service associated with a route target reservation entry has been modified, i.e., the service name is changed, or the service is deleted, or there is duplicate VPRN service with the same service and customer name detected. The associated service manager ID is attached with the alarm.		
Remedial action: A configuration error has occurred which should be corrected. The VPRN service associated with this Route Target Reservation entry has been modified, or there is duplicate VPRN service with the same service name detected.		

Table 39-903 serviceModified

Alarm	Attributes	Applicable major release
Name: serviceModified (11466) Type: communicationsAlarm Package: mpr.serviceModified Raised on class: mpr.BackhaulService	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: serviceModified	Release: • N/A
Description: The alarm is raised when any modification is done post deployment of the service.		
Raising condition: (('Topology Changed' EQUAL 'true') AND ('Connect Attempted' EQUAL 'true'))		
Clearing condition: (('Topology Changed' EQUAL 'false') AND ('Connect Attempted' EQUAL 'true'))		
Remedial action: The modified service must be reconnected.		

Table 39-904 SflowCpEntrySampling

Alarm	Attributes	Applicable major release
Name: SflowCpEntrySampling (8142) Type: communicationsAlarm Package: sflow.SflowCpEntrySampling Raised on class: sflow.Receiver	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: SflowCpSamplingInterrupt-edorStarted	Release: • N/A
Description: The alarm is raised when the sampling of an sFlow counter poller is interrupted or started.		

Table 39-904 SflowCpEntrySampling (continued)

Alarm	Attributes	Applicable major release
Remedial action: Counter sampling may not be available. Make sure counter poller is reachable from NE and no counter poller sequence reset happened.		

Table 39-905 SflowPacketTransmisionFailure

Alarm	Attributes	Applicable major release
Name: SflowPacketTransmisionFailure (8143) Type: communicationsAlarm Package: sflow.SflowPacketTransmisionFailure Raised on class: sflow.Receiver	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: SflowPacketTxFailure	Release: • N/A
Description: The alarm is raised when an sFlow packet fails to transmit from an active sFlow receiver.		
Remedial action: Packet transmission failed.Flow data may be lost. Please check the Receiver configurations and make sure it is up and running.		

Table 39-906 SGLimitExceeded

Alarm	Attributes	Applicable major release
Name: SGLimitExceeded (456) Type: resourceAlarm Package: equipment.SGLimitExceeded Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: pimSnpgSGGroupMaxSupportedLimitExceeded	Release: • N/A
Description: The alarm is raised when the number of PIM snooping source group records on a card exceeds the maximum.		
Remedial action: Informational - The alarm is raised when the number of PIM snooping source group records on a card exceeds the maximum. To rectify this issue please increase the max number of groups for the pim snooping associated with the card. The maximum number allowed is 16,000 (S,G) entries.		

Table 39-907 ShamLinkDbDescriptAuthFailure

Alarm	Attributes	Applicable major release
Name: ShamLinkDbDescriptAuthFailure (663) Type: authenticationAlarm Package: ospf.ShamLinkDbDescriptAuthFailure Raised on class: ospf.ShamLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: authTypeMismatch Applicable probable causes: • authTypeMismatch • authFailure	Release: • N/A

Table 39-907 ShamLinkDbDescriptAuthFailure (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when an NE receives a dbDescript packet on a sham link from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a dbDescript packet has been received on a sham link from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 39-908 ShamLinkDbDescriptConfig

Alarm	Attributes	Applicable major release
Name: ShamLinkDbDescriptConfig (664) Type: configurationAlarm Package: ospf.ShamLinkDbDescriptConfig Raised on class: ospf.ShamLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: badVersion Applicable probable causes: • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifAdminDown • ifPassive	Release: • N/A
Description: The alarm is raised when an NE receives a dbDescript packet on a sham link from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a dbDescript packet has been received on a sham link from the network whose configuration parameters conflict with the local NE's configurations.		

Table 39-909 ShamLinkHelloAuthFailure

Alarm	Attributes	Applicable major release
Name: ShamLinkHelloAuthFailure (666) Type: authenticationAlarm Package: ospf.ShamLinkHelloAuthFailure Raised on class: ospf.ShamLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: authTypeMismatch Applicable probable causes: • authTypeMismatch • authFailure	Release: • N/A
Description: The alarm is raised when an NE receives a hello packet on a sham link from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a hello packet has been received on a sham link from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 39-910 ShamLinkHelloConfig

Alarm	Attributes	Applicable major release
Name: ShamLinkHelloConfig (667) Type: configurationAlarm Package: ospf.ShamLinkHelloConfig Raised on class: ospf.ShamLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: badVersion Applicable probable causes: • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifAdminDown • ifPassive	Release: • N/A
Description: The alarm is raised when an NE receives a hello packet on a sham link from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a hello packet has been received on a sham link from the network whose configuration parameters conflict with the local NE's configurations.		

Table 39-911 ShamLinkLsAckAuthFailure

Alarm	Attributes	Applicable major release
Name: ShamLinkLsAckAuthFailure (668) Type: authenticationAlarm Package: ospf.ShamLinkLsAckAuthFailure Raised on class: ospf.ShamLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: authTypeMismatch Applicable probable causes: • authTypeMismatch • authFailure	Release: • N/A
Description: The alarm is raised when an NE receives an lsAck packet on a sham link from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a lsAck packet has been received on a sham link from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 39-912 ShamLinkLsAckConfig

Alarm	Attributes	Applicable major release
Name: ShamLinkLsAckConfig (669) Type: configurationAlarm Package: ospf.ShamLinkLsAckConfig Raised on class: ospf.ShamLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: badVersion Applicable probable causes: • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifAdminDown • ifPassive	Release: • N/A
Description: The alarm is raised when an NE receives an lsAck packet on a sham link from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a lsAck packet has been received on a sham link from the network whose configuration parameters conflict with the local NE's configurations.		

Table 39-913 ShamLinkLsReqAuthFailure

Alarm	Attributes	Applicable major release
Name: ShamLinkLsReqAuthFailure (670) Type: authenticationAlarm Package: ospf.ShamLinkLsReqAuthFailure Raised on class: ospf.ShamLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: authTypeMismatch Applicable probable causes: • authTypeMismatch • authFailure	Release: • N/A
Description: The alarm is raised when an NE receives an lsReq packet on a sham link from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a lsReq packet has been received on a sham link from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 39-914 ShamLinkLsReqConfig

Alarm	Attributes	Applicable major release
Name: ShamLinkLsReqConfig (671) Type: configurationAlarm Package: ospf.ShamLinkLsReqConfig Raised on class: ospf.ShamLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: badVersion Applicable probable causes: • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifAdminDown • ifPassive	Release: • N/A
Description: The alarm is raised when an NE receives an lsReq packet on a sham link from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a lsReq packet has been received on a sham link from the network whose configuration parameters conflict with the local NE's configurations.		

Table 39-915 ShamLinkLsUpdateAuthFailure

Alarm	Attributes	Applicable major release
Name: ShamLinkLsUpdateAuthFailure (672) Type: authenticationAlarm Package: ospf.ShamLinkLsUpdateAuthFailure Raised on class: ospf.ShamLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: authTypeMismatch Applicable probable causes: • authTypeMismatch • authFailure	Release: • N/A
Description: The alarm is raised when an NE receives an lsUpdate packet on a sham link from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a lsUpdate packet has been received on a sham link from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 39-916 ShamLinkLsUpdateConfig

Alarm	Attributes	Applicable major release
Name: ShamLinkLsUpdateConfig (673) Type: configurationAlarm Package: ospf.ShamLinkLsUpdateConfig Raised on class: ospf.ShamLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: badVersion Applicable probable causes: • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifAdminDown • ifPassive	Release: • N/A
Description: The alarm is raised when an NE receives an lsUpdate packet on a sham link from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a lsUpdate packet has been received on a sham link from the network whose configuration parameters conflict with the local NE's configurations.		

Table 39-917 ShamLinkNullPacketAuthFailure

Alarm	Attributes	Applicable major release
Name: ShamLinkNullPacketAuthFailure (674) Type: authenticationAlarm Package: ospf.ShamLinkNullPacketAuthFailure Raised on class: ospf.ShamLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: authTypeMismatch Applicable probable causes: • authTypeMismatch • authFailure	Release: • N/A
Description: The alarm is raised when an NE receives a null packet on a sham link from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a null packet has been received on a sham link from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 39-918 ShamLinkNullPacketConfig

Alarm	Attributes	Applicable major release
Name: ShamLinkNullPacketConfig (675) Type: configurationAlarm Package: ospf.ShamLinkNullPacketConfig Raised on class: ospf.ShamLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: badVersion Applicable probable causes: • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifAdminDown • ifPassive	Release: • N/A
Description: The alarm is raised when an NE receives a null packet on a sham link from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a null packet has been received on a sham link from the network whose configuration parameters conflict with the local NE's configurations.		

Table 39-919 ShamLinkRxBadPacket

Alarm	Attributes	Applicable major release
Name: ShamLinkRxBadPacket (676) Type: communicationsAlarm Package: ospf.ShamLinkRxBadPacket Raised on class: ospf.ShamLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: hello Applicable probable causes: • hello • dbDescript • lsReq • lsUpdate • lsAck • nullPacket	Release: • N/A
Description: The alarm is raised when an NE cannot parse an OSPF packet that it receives on a sham link.		
Remedial action: Informational - an NE cannot parse an OSPF packet that it receives on a sham link.		

Table 39-920 ShelfCPUAboveThreshold

Alarm	Attributes	Applicable major release
Name: ShelfCPUAboveThreshold (638) Type: configurationAlarm Package: equipment.ShelfCPUAboveThreshold Raised on class: equipment.HealthMonitoring	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ShelfCPUUtilizationCrossed-AboveThreshold	Release: • N/A
Description: The alarm is raised when shelf CPU usage exceeds the threshold value.		
Remedial action: Informational - Please contact your Nokia support representative for assistance.		

Table 39-921 ShelfMemoryAboveThreshold

Alarm	Attributes	Applicable major release
Name: ShelfMemoryAboveThreshold (639) Type: configurationAlarm Package: equipment.ShelfMemoryAboveThreshold Raised on class: equipment.HealthMonitoring	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ShelfMemoryUtilization-CrossedAboveThreshold	Release: • N/A
Description: The alarm is raised when shelf memory usage exceeds the threshold value.		
Remedial action: Informational - Please contact your Nokia support representative for assistance.		

Table 39-922 ShelfRxAboveThreshold

Alarm	Attributes	Applicable major release
Name: ShelfRxAboveThreshold (640) Type: configurationAlarm Package: equipment.ShelfRxAboveThreshold Raised on class: equipment.HealthMonitoring	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ShelfRxUtilizationCrossed-AboveThreshold	Release: • N/A
Description: The alarm is raised when shelf Rx exceeds the threshold value.		
Remedial action: Informational - Please contact your Nokia support representative for assistance.		

Table 39-923 ShelfRxTxAboveThreshold

Alarm	Attributes	Applicable major release
Name: ShelfRxTxAboveThreshold (641) Type: configurationAlarm Package: equipment.ShelfRxTxAboveThreshold Raised on class: equipment.HealthMonitoring	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ShelfRxTxUtilizationCrossed-AboveThreshold	Release: • N/A
Description: The alarm is raised when shelf Tx exceeds the threshold value.		
Remedial action: Informational - Please contact your Nokia support representative for assistance.		

Table 39-924 ShelfTemperatureAboveThreshold

Alarm	Attributes	Applicable major release
Name: ShelfTemperatureAboveThreshold (642) Type: configurationAlarm Package: equipment. ShelfTemperatureAboveThreshold Raised on class: equipment.HealthMonitoring	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ShelfTemperatureUtilization-CrossedAboveThreshold	Release: • N/A
Description: The alarm is raised when shelf temperature exceeds the threshold value.		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 39-925 SignalLabelMismatch

Alarm	Attributes	Applicable major release
Name: SignalLabelMismatch (3625) Type: communicationsAlarm Package: equipment.SignalLabelMismatch Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: signalLabelMismatch	Release: • N/A
Description: The alarm is raised when a signal label mismatch is detected.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 39-926 SiteBgpAdVplsIdMisconfiguration

Alarm	Attributes	Applicable major release
Name: SiteBgpAdVplsIdMisconfiguration (739) Type: configurationAlarm Package: vpls.SiteBgpAdVplsIdMisconfiguration Raised on class: vpls.BgpAdSite	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bgpAdVplsIdInconsistent	Release: • N/A
Description: The alarm is raised when the configured VPLS ID on a BGP AD object differs from the VPLS ID configured for the VPLS site.		
Remedial action: The VPLS ID on a BGP AD object must match the VPLS ID configured for the VPLS site.		

Table 39-927 SiteSyncDeploymentFailure

Alarm	Attributes	Applicable major release
Name: SiteSyncDeploymentFailure (589) Type: equipmentAlarm Package: sonet.SiteSyncDeploymentFailure Raised on class: sonet.SiteSync	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: siteSyncFailure	Release: • N/A
Description: The alarm is raised when the 5620 SAM tries to deploy a value for an object when a transaction that involves the object is in progress from a different context.		
Remedial action: Another transaction is updating the object, Please try after some time.		

Table 39-928 SnmpAuthenticationFailure

Alarm	Attributes	Applicable major release
Name: SnmpAuthenticationFailure (176) Type: authenticationAlarm Package: netw.SnmpAuthenticationFailure Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: authFailure	Release: • N/A

Table 39-928 SnmpAuthenticationFailure (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when an NE SNMP agent has received an SNMP message that is not properly authenticated. An NE typically does not, by default, send the notification that generates the alarm; the notification must be manually enabled through CLI.		
Remedial action: A configuration error has occurred which must be corrected. The authentication parameters for SNMP in the mediation policy is incorrect.		

Table 39-929 SnmpDaemonProblem

Alarm	Attributes	Applicable major release
Name: SnmpDaemonProblem (175) Type: communicationsAlarm Package: netw.SnmpDaemonProblem Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: snmpDaemonError	Release: • N/A
Description: The alarm is raised when one of the following occurs: - The 5620 SAM receives an unexpected response to an SNMP request, for example, when a managed NE sends the wrong object in response to an SMNP get or get-next request. - The 5620 SAM receives the TIMETRA-SYSTEM-MIB.tmnxSnmpdError trap from a managed NE.		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 39-930 SnmpDown

Alarm	Attributes	Applicable major release
Name: SnmpDown (410) Type: communicationsAlarm Package: netw.SnmpDown Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: snmpDown	Release: • N/A
Description: The alarm is raised when the SNMP agent is manually shut down on an NE and the NE sends a trap to indicate this.		
Remedial action: Informational		

Table 39-931 SnmpTrapDropped

Alarm	Attributes	Applicable major release
Name: SnmpTrapDropped (179) Type: communicationsAlarm Package: netw.SnmpTrapDropped Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: snmpDaemonOverloaded	Release: • N/A
Description: The alarm is raised when the 5620 SAM receives a tmnxTrapDropped notification from an NE to indicate that the NE has dropped a trap. As a result, the 5620 SAM resynchronizes the table associated with the dropped trap.		
Remedial action: Informational.		

Table 39-932 SoftwareBootFailure

Alarm	Attributes	Applicable major release
Name: SoftwareBootFailure (107) Type: softwareAlarm Package: sw.SoftwareBootFailure Raised on class: sw.CardSoftware	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: softwareBootProblem	Release: • N/A
Description: The alarm is raised when an NE fails to boot because of a software problem.		
Remedial action: Please contact your Nokia support representative for assistance.		

Table 39-933 SoftwareDownloading

Alarm	Attributes	Applicable major release
Name: SoftwareDownloading (109) Type: softwareAlarm Package: sw.SoftwareDownloading Raised on class: sw.CardSoftware	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: softwareDownloading	Release: • N/A
Description: The alarm is raised when an NE begins to download software to a IOM or CPM card.		
Remedial action: Informational		

Table 39-934 SoftwareFailureAlarm

Alarm	Attributes	Applicable major release
Name: SoftwareFailureAlarm (149) Type: softwareAlarm Package: equipment.SoftwareFailureAlarm Raised on class: equipment.ReplaceableUnit	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: loadFailed	Release: • N/A
Description: The alarm is raised when the CPM fails to load the software from the specified location. The alarm information includes the software location.		
Remedial action: The CPM card did not find the SW in the expected location. Reinstall the SW using 5620 SAM.		

Table 39-935 SoftwareInitialized

Alarm	Attributes	Applicable major release
Name: SoftwareInitialized (111) Type: softwareAlarm Package: sw.SoftwareInitialized Raised on class: sw.CardSoftware	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: softwareInitialized	Release: • N/A
Description: The alarm is raised when software initialization on an IOM or CPM card completes.		
Remedial action: Informational		

Table 39-936 SoftwareInitializing

Alarm	Attributes	Applicable major release
Name: SoftwareInitializing (110) Type: softwareAlarm Package: sw.SoftwareInitializing Raised on class: sw.CardSoftware	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: softwareInitializing	Release: • N/A
Description: The alarm is raised when software initialization on an IOM or CPM card begins.		
Remedial action: Informational		

Table 39-937 SoftwareUpgradeFailed

Alarm	Attributes	Applicable major release
Name: SoftwareUpgradeFailed (106) Type: configurationAlarm Package: sw.SoftwareUpgradeFailed Raised on class: sw.SoftwareUpgradeManager	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: fileAccessError	Release: • N/A
Description: The alarm is raised when an NE software upgrade using the 5620 SAM fails.		
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 39-938 SonetSDHLoopback

Alarm	Attributes	Applicable major release
Name: SonetSDHLoopback (407) Type: configurationAlarm Package: sonetequipment.SonetSDHLoopback Raised on class: sonetequipment.SonetPortSpecifics	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: sonetSDHLoopback	Release: • N/A
Description: The alarm is raised when a loopback test is provisioned on a SONET/SDH port.		
Remedial action: Remove the loopback test from the SONET/SDH port.		

Table 39-939 sourceSapChange

Alarm	Attributes	Applicable major release
Name: sourceSapChange (4813) Type: ConfigurationAlarm Package: mirror.sourceSapChange Raised on class: mirror.SourceInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tMirrorSourceSapChange	Release: • N/A
Description: The alarm is raised when a SAP that is associated with this mirror source is modified or deleted.		

Table 39-939 sourceSapChange (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational - no corrective action required.		

Table 39-940 SpbNbrMultAdjExists

Alarm	Attributes	Applicable major release
Name: SpbNbrMultAdjExists (4394) Type: configurationAlarm Package: spb.SpbNbrMultAdjExists Raised on class: spb.Site	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: multiAdj	Release: • N/A
Description: The alarm is sent when IS-IS SPB instance detects a neighbor to which it already has a direct adjacency on another interface.		
Remedial action: Check number of links to neighbor to make sure there is only one SPB link.		

Table 39-941 SpbRejectedAdjacency

Alarm	Attributes	Applicable major release
Name: SpbRejectedAdjacency (4395) Type: adjacencyAlarm Package: spb.SpbRejectedAdjacency Raised on class: spb.AbstractInterface	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceMismatch	Release: • N/A
Description: The alarm is raised when the 5620 SAM receives a vRtrIsisRejectedAdjacency trap, which indicates that an adjacency cannot be established in response to a Hello PDU from an IS because of a lack of resources.		
Remedial action: Informational, might have exceeded the maximum number of adjacencies allowed.		

Table 39-942 SRGMismatchAlarm

Alarm	Attributes	Applicable major release
Name: SRGMismatchAlarm (8423) Type: integrityViolation Package: gmpls.SRGMismatchAlarm Raised on class: gmpls.TeLink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: srgMismatch	Release: • N/A
Description: The alarm is raised when the SRGs configured on the endpoints of the TE Link do not match.		
Remedial action: This alarm indicates that the SRGs configured on the endpoints of the discovered TE Link do not match. Please make sure the SRGs match.		

Table 39-943 SSHLoginMaxAttempts

Alarm	Attributes	Applicable major release
Name: SSHLoginMaxAttempts (3702) Type: communicationsAlarm Package: netw.SSHLoginMaxAttempts Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: sshLoginMaxAttempts	Release: • N/A
Description: The alarm is raised when the number of CLI login failures due to incorrect user name or password using SSH session exceeds the configured value.		
Remedial action: The wrong password was entered by the user during SSH. Please try to log in again later.		

Table 39-944 SSHServerPreserveKeyFailure

Alarm	Attributes	Applicable major release
Name: SSHServerPreserveKeyFailure (406) Type: softwareAlarm Package: equipment.SSHServerPreserveKeyFailure Raised on class: equipment.FlashMemory	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: preserveKeyFailure	Release: • N/A
Description: The alarm is raised when the CPM fails to save the SSH server host key on the persistent drive.		
Remedial action: Information - if the alarm persists please contact your Nokia support representative for assistance.		

Table 39-945 SSLKeystoreCertificateExpired

Alarm	Attributes	Applicable major release
Name: SSLKeystoreCertificateExpired (5138) Type: serverAlarm Package: server.SSLKeystoreCertificateExpired Raised on class: server.SamServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SSLKeystoreCertificateHasExpired	Release: • N/A
Description: The alarm is raised when the SSL Keystore certificate for 5620 SAM has expired.		
Remedial action: Please reconfigure 5620 SAM with an unexpired SSL Keystore Certificate. Please refer to the 5620 SAM Installation and Upgrade guide.		

Table 39-946 SSLKeystoreCertificateExpiring

Alarm	Attributes	Applicable major release
Name: SSLKeystoreCertificateExpiring (5139) Type: serverAlarm Package: server.SSLKeystoreCertificateExpiring Raised on class: server.SamServer	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SSLKeystoreCertificateAboutToExpire	Release: • N/A

Table 39-946 SSLKeystoreCertificateExpiring (continued)

Alarm	Attributes	Applicable major release
Description: This alarm is raised when the 5620 SAM SSL Keystore certificate is expiring soon.		
Remedial action: Please reconfigure 5620 SAM with a newer SSL Keystore Certificate. Please refer to the 5620 SAM Installation and Upgrade guide.		

Table 39-947 StandbyArchiveLogDiskSpaceBelowThreshold

Alarm	Attributes	Applicable major release
Name: StandbyArchiveLogDiskSpaceBelowThreshold (2936) Type: databaseAlarm Package: db.StandbyArchiveLogDiskSpaceBelowThreshold Raised on class: db.DatabaseManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: diskSpaceIssue	Release: • N/A
Description: The alarm is raised when the standby database archived log disk space threshold specified in the nms-server.xml file is reached.		
Remedial action: Adequate disk space should be allocated on the database servers for archive log files. Performing a manual database backup is required to reduce the size of this directory. If the alarm persists then the frequency of database backups must be increased.		

Table 39-948 StandbyCPMManagementConnectionDown

Alarm	Attributes	Applicable major release
Name: StandbyCPMManagementConnectionDown (140) Type: communicationsAlarm Package: netw.StandbyCPMManagementConnectionDown Raised on class: netw.NodeDiscoveryControl	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: managementConnectionDown	Release: • N/A
Description: The alarm is raised when the 5620 SAM cannot reach a managed NE using the ping function.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM		

Table 39-949 StandbyDataFileDiskSpaceBelowThreshold

Alarm	Attributes	Applicable major release
Name: StandbyDataFileDiskSpaceBelowThreshold (539) Type: databaseAlarm Package: db.StandbyDataFileDiskSpaceBelowThreshold Raised on class: db.DatabaseManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: diskSpaceIssue	Release: • N/A
Description: The alarm is raised when the standby data file disk space threshold specified in the nms-server.xml file is reached.		
Remedial action: Informational - Please contact your Nokia support representative for assistance.		

Table 39-950 StandbyInstallDirectoryDiskSpaceBelowThreshold

Alarm	Attributes	Applicable major release
Name: StandbyInstallDirectory-DiskSpaceBelowThreshold (615) Type: databaseAlarm Package: db.StandbyInstallDirectoryDiskSpaceBelowThreshold Raised on class: db.DatabaseManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: diskSpaceIssue	Release: • N/A
Description: The alarm is raised when the standby database installation disk space threshold specified in the nms-server.xml file is reached.		
Remedial action: The Oracle Proxy purges the log based on database file policy configuration. Reducing the number of archives to keep and/or size of the log files or increasing the available disk space will resolve the problem. If alarm persists please contact your Nokia support representative for assistance.		

Table 39-951 StandbyOracleHomeDiskSpaceBelowThreshold

Alarm	Attributes	Applicable major release
Name: StandbyOracleHomeDiskSpaceBe-lowThreshold (540) Type: databaseAlarm Package: db.StandbyOracleHomeDiskSpaceBelowThreshold Raised on class: db.DatabaseManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: diskSpaceIssue	Release: • N/A
Description: The alarm is raised when the standby database Oracle disk space threshold specified in the nms-server.xml file is reached.		
Remedial action: The Oracle Proxy purges the log based on database file policy configuration. Reducing the number of archives to keep and/or size of the log files or increasing the available disk space will resolve the problem. If alarm persists please contact your Nokia support representative for assistance.		

Table 39-952 StandbyServerStatus

Alarm	Attributes	Applicable major release
Name: StandbyServerStatus (208) Type: communicationsAlarm Package: netw.StandbyServerStatus Raised on class: netw.NmsSystem	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: systemFailed	Release: • N/A
Description: The alarm is raised when the primary 5620 SAM main server cannot communicate with the 5620 SAM standby main server. The alarm clears when communication between the servers is restored.		
Remedial action: Informational		

Table 39-953 StatisticsCollectionThresholdExceeded

Alarm	Attributes	Applicable major release
Name: StatisticsCollectionThresholdExceeded (524) Type: communicationsAlarm Package: netw.StatisticsCollectionThresholdExceeded Raised on class: netw.NmsSystem	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: collectionRateGreater-ThanConfigured	Release: • N/A
Description: The alarm is raised when the accounting statistics collection rate exceeds the retention specifications.		
Remedial action: The rate at which accounting statistics are being collected must be reduced or the amount of disk space allocated to accounting statistics storage must be increased. Note that the latter may require adding additional disk space to the system to resolve the problem.		

Table 39-954 StatsPollerProblem

Alarm	Attributes	Applicable major release
Name: StatsPollerProblem (5404) Type: communicationsAlarm Package: netw.StatsPollerProblem Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resyncFailed	Release: • N/A
Description: The alarm is raised when the 5620 SAM is unable to poll a network stats object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 39-955 STMSystemMultiAuxAvailable

Alarm	Attributes	Applicable major release
Name: STMSystemMultiAuxAvailable (527) Type: misConfiguration Package: sas.STMSystemMultiAuxAvailable Raised on class: sas.TestManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: multiAuxiliaryServersAvailable	Release: • N/A
Description: The alarm is raised when the 5620 SAM detects multiple available auxiliary servers for test execution.		
Remedial action: Reserved for future use		

Table 39-956 STMSystemNotAvailable

Alarm	Attributes	Applicable major release
Name: STMSystemNotAvailable (526) Type: communicationsAlarm Package: sas.STMSystemNotAvailable Raised on class: sas.TestManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: noAuxiliaryServersAvailable	Release: • N/A
Description: The alarm is raised when the 5620 SAM detects no available auxiliary servers for test execution.		
Remedial action: Reserved for future use		

Table 39-957 STMTestIdRangeMistmatch

Alarm	Attributes	Applicable major release
Name: STMTestIdRangeMistmatch (792) Type: oamAlarm Package: sas.STMTestIdRangeMistmatch Raised on class: sas.TestManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: testIdRangeMismatch	Release: • N/A
Description: The alarm is raised when the 5620 SAM detects an STM test ID range mismatch between the primary and standby main servers.		
Remedial action: The configuration on the primary and standby servers must be aligned to resolve this problem. Please contact your Nokia support representative for assistance.		

Table 39-958 STMTestsOutsideRange

Alarm	Attributes	Applicable major release
Name: STMTestsOutsideRange (793) Type: oamAlarm Package: sas.STMTestsOutsideRange Raised on class: sas.TestManager	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: testsOutsideRange	Release: • N/A
Description: The alarm is raised when the 5620 SAM detects one or more STM Tests that have IDs outside the specified range.		

Table 39-958 STMTestsOutsideRange (continued)

Alarm	Attributes	Applicable major release
Remedial action: A configuration error has been made which must be corrected. The testId in a STM test definition must be within the testId range specified within the nms-server.xml file		

Table 39-959 STMTrailDown

Alarm	Attributes	Applicable major release
Name: STMTrailDown (9001) Type: communicationsAlarm Package: optical.STMTrailDown Raised on class: optical.STMTrail	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OperationalStateDown	Release: • N/A
Description: The alarm is raised when the termination point(s) of the STM trail are operationally down.		
Remedial action: Informational - If the alarm persists or is occurring frequently then investigation is required by looking at the active alarms on the hops to understand why the underlying transport network is unreliable.		

Table 39-960 SubIpoeInvalidCidRidChange (service)

Alarm	Attributes	Applicable major release
Name: SubIpoeInvalidCidRidChange (8412) Type: processingErrorAlarm Package: service.SubIpoeInvalidCidRidChange Raised on class: service.GroupInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: SubIpoeInvalidCidRidChange	Release: • N/A
Description: The alarm is raised when this system fails to create an IPoE session due to an invalid Circuit ID or Remote ID change.		
Remedial action: The IPoE session Circuit ID or Remote ID change is invalid. Review the alarm's additional text for further details.		

Table 39-961 SubIpoeInvalidCidRidChange (vpls)

Alarm	Attributes	Applicable major release
Name: SubIpoeInvalidCidRidChange (8412) Type: processingErrorAlarm Package: vpls.SubIpoeInvalidCidRidChange Raised on class: vpls.L2AccessInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: SubIpoeInvalidCidRidChange	Release: • N/A
Description: The alarm is raised when this system fails to create an IPoE session due to an invalid Circuit ID or Remote ID change.		
Remedial action: The IPoE session Circuit ID or Remote ID change is invalid. Review the alarm's additional text for further details.		

Table 39-962 SubIpoeInvalidSessionKey (service)

Alarm	Attributes	Applicable major release
Name: SubIpoeInvalidSessionKey (8413) Type: processingErrorAlarm Package: service.SubIpoeInvalidSessionKey Raised on class: service.GroupInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: SubIpoeInvalidSessionKey	Release: • N/A
Description: The alarm is raised when this system fails to create an IPoE session due to an invalid session key.		
Remedial action: There is a mismatch between the session key sent by the Access Node and the session key configured in the IPoE session policy. Check the configuration and ensure that it matches. Review the alarm's additional text for further details.		

Table 39-963 SubIpoeInvalidSessionKey (vpls)

Alarm	Attributes	Applicable major release
Name: SubIpoeInvalidSessionKey (8413) Type: processingErrorAlarm Package: vpls.SubIpoeInvalidSessionKey Raised on class: vpls.L2AccessInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: SubIpoeInvalidSessionKey	Release: • N/A
Description: The alarm is raised when this system fails to create an IPoE session due to an invalid session key.		
Remedial action: There is a mismatch between the session key sent by the Access Node and the session key configured in the IPoE session policy. Check the configuration and ensure that it matches. Review the alarm's additional text for further details.		

Table 39-964 SubIPoEMigrationHostDelete (vpls)

Alarm	Attributes	Applicable major release
Name: SubIPoEMigrationHostDelete (9596) Type: processingErrorAlarm Package: vpls.SubIPoEMigrationHostDelete Raised on class: vpls.L2AccessInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: SubIPoEMigrationHostDelete	Release: • N/A
Description: The alarm is raised when system deletes a host for IPoE session migration.		
Remedial action: No action required. The system is performing an IPoE session migration.		

Table 39-965 SubIPoEMigrationHostDelete (service)

Alarm	Attributes	Applicable major release
Name: SubIPoEMigrationHostDelete (9596) Type: processingErrorAlarm Package: service.SubIPoEMigrationHostDelete Raised on class: service.GroupInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: SubIPoEMigrationHostDelete	Release: • N/A
Description: The alarm is raised when system deletes a host for IPoE session migration.		

Table 39-965 SubIPoEMigrationHostDelete (service) (continued)

Alarm	Attributes	Applicable major release
Remedial action: No action required. The system is performing an IPoE session migration.		

Table 39-966 SubIpoePersistenceRecovery (vpls)

Alarm	Attributes	Applicable major release
Name: SubIpoePersistenceRecovery (8414) Type: processingErrorAlarm Package: vpls.SubIpoePersistenceRecovery Raised on class: vpls.L2AccessInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: SubIpoePersistenceRecovery	Release: • N/A
Description: The alarm is raised when the NE fails to initialize an IPoE session because it is busy re-initiating objects from persistence files.		
Remedial action: No action required. IPoE Session creation will resume once the NE has finished recovering all persisted objects.		

Table 39-967 SubIpoePersistenceRecovery (service)

Alarm	Attributes	Applicable major release
Name: SubIpoePersistenceRecovery (8414) Type: processingErrorAlarm Package: service.SubIpoePersistenceRecovery Raised on class: service.GroupInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: SubIpoePersistenceRecovery	Release: • N/A
Description: The alarm is raised when the NE fails to initialize an IPoE session because it is busy re-initiating objects from persistence files.		
Remedial action: No action required. IPoE Session creation will resume once the NE has finished recovering all persisted objects.		

Table 39-968 SubIpoeSessionLimitReached (vpls)

Alarm	Attributes	Applicable major release
Name: SubIpoeSessionLimitReached (8415) Type: processingErrorAlarm Package: vpls.SubIpoeSessionLimitReached Raised on class: vpls.L2AccessInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: SubIpoeSessionLimitReached	Release: • N/A
Description: The alarm is raised when this system fails to create an IPoE session because the IPoE session limit is reached.		
Remedial action: The total number of IPoE sessions exceed the session limit. Additional sessions cannot be created. Increase the Session Limit/SAP Session Limit in the IES/VPRN Group Interface.		

Table 39-969 SubIpoeSessionLimitReached (service)

Alarm	Attributes	Applicable major release
Name: SubIpoeSessionLimitReached (8415) Type: processingErrorAlarm Package: service.SubIpoeSessionLimitReached Raised on class: service.GroupInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: SubIpoeSessionLimitReached	Release: • N/A
Description: The alarm is raised when this system fails to create an IPoE session because the IPoE session limit is reached.		
Remedial action: The total number of IPoE sessions exceed the session limit. Additional sessions cannot be created. Increase the Session Limit/SAP Session Limit in the IES/VPRN Group Interface.		

Table 39-970 SubMngdHostCreationFail

Alarm	Attributes	Applicable major release
Name: SubMngdHostCreationFail (10270) Type: processingErrorAlarm Package: vpls.SubMngdHostCreationFail Raised on class: vpls.L2AccessInterface	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: subMngdHostCreationFail	Release: • N/A
Description: The alarm indicates an attempt to create a managed host has failed. [CAUSE] A failure occurs while trying to create a managed host. [EFFECT] The context for the managed host is not created. The system cannot provide network connectivity to the host. [RECOVERY] The recovery action depends on the root cause of the failure. The root cause may be a misconfiguration in the client device, the access network, in this system, or in the AAA server configuration.		
Remedial action: The recovery action depends on the root cause of the failure. The root cause may be a misconfiguration in the client device, the access network, in this system, or in the AAA server configuration.		

Table 39-971 SubMngdHostOverride

Alarm	Attributes	Applicable major release
Name: SubMngdHostOverride (10269) Type: processingErrorAlarm Package: service.SubMngdHostOverride Raised on class: service.ServiceAccessPoint	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: SubMngdHostOverride	Release: • N/A
Description: [CAUSE] The alarm indicates a new managed host replaces an existing host with the same IP address. [EFFECT] The existing host is removed from the system. [RECOVERY] None.		
Remedial action: The alarm is raised when a new managed host replaces an existing host with the same IP address. No action is required.		

Table 39-972 SubnetBindingFailed

Alarm	Attributes	Applicable major release
Name: SubnetBindingFailed (4988) Type: processingErrorAlarm Package: dhcp.SubnetBindingFailed Raised on class: dhcp.AddressPool	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tmnxDhcpSvrSubnetBinding-Failed	Release: • N/A
Description: This alarm is raised when a DHCP server instance cannot offer an IP address to a host, because a subnet binding with its access node (service) is required but not available anymore in the pool.		
Remedial action: The configuration of the Local DHCP Server IP Address Pool and/or the access node (service) must be changed in order to make more subnets available.		

Table 39-973 SubnetFailCtrlError

Alarm	Attributes	Applicable major release
Name: SubnetFailCtrlError (5156) Type: configurationAlarm Package: dhcp.SubnetFailCtrlError Raised on class: dhcp.Subnet	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: leaseWithInconsistent-FailoverConfiguration	Release: • N/A
Description: The alarm is raised each time a lease is created in a subnet with an inconsistent failover configuration		
Remedial action: A subnet lease has an inconsistent failover configuration, where the failover control type is not identical for all subnet ranges while the pool subnet binding key is not equal to 'none'. Please restore consistency of the failover control configuration for all subnet ranges in this subnet.		

Table 39-974 SubnetMismatch

Alarm	Attributes	Applicable major release
Name: SubnetMismatch (415) Type: configurationAlarm Package: srrp.SubnetMismatch Raised on class: srrp.Instance	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ipAddressListMismatch	Release: • N/A
Description: The alarm is raised when the IP address list received from the master does not match the local IP address list.		
Remedial action: Check the IP address of the Subscriber interface and make sure the address for the peer SRRP instances are in the same subnet.		

Table 39-975 SubRackBatteryFail

Alarm	Attributes	Applicable major release
Name: SubRackBatteryFail (5426) Type: equipmentAlarm Package: mpr.SubRackBatteryFail Raised on class: mpr.SubRack	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: batteryFail	Release: • N/A
Description: The alarm is raised when the battery fails or is missing on SubRack.		
Remedial action: The battery on the subrack should be replaced or re-installed.		

Table 39-976 SubRackSecondaryBatteryFail

Alarm	Attributes	Applicable major release
Name: SubRackSecondaryBatteryFail (5427) Type: equipmentAlarm Package: mpr.SubRackSecondaryBatteryFail Raised on class: mpr.SubRack	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: secondaryBatteryFail	Release: • N/A
Description: The alarm is raised when a secondary battery failure is detected on SubRack.		
Remedial action: The battery on the subrack should be replaced or re-installed.		

Table 39-977 SubscrAuthPolicyMisconfigured (vpls)

Alarm	Attributes	Applicable major release
Name: SubscrAuthPolicyMisconfigured (271) Type: ConfigurationAlarm Package: vpls.SubscrAuthPolicyMisconfigured Raised on class: vpls.L2AccessItfDhcpRelayCfg	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SubscrAuthPolicyNotFound	Release: • N/A
Description: The alarm is raised when a subscriber authentication policy for DHCP relay is misconfigured.		
Remedial action: Check the local and global configuration for the subscriber authentication policy for DHCP relay.		

Table 39-978 SubscrAuthPolicyMisconfigured (rtr)

Alarm	Attributes	Applicable major release
Name: SubscrAuthPolicyMisconfigured (271) Type: ConfigurationAlarm Package: rtr.SubscrAuthPolicyMisconfigured Raised on class: rtr.VirtualInterfaceConfiguration	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SubscrAuthPolicyNotFound	Release: • N/A
Description: The alarm is raised when a subscriber authentication policy for DHCP relay is misconfigured.		
Remedial action: This alarm is raised on L2 and L3 access interfaces when the authentication policy specified for DHCP Relay does not exist. Please make sure to select an authentication policy that exists or to configure a new authentication policy with that name.		

Table 39-979 SubscriberMisConfigured

Alarm	Attributes	Applicable major release
Name: SubscriberMisConfigured (8141) Type: configurationAlarm Package: service.SubscriberMisConfigured Raised on class: service.SvcResourceReservation	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: subscriberMisConfigured	Release: • N/A
Description: This alarm is raised when the customer associated with a route target reservation entry has been modified, i.e., the customer name can be changed, or the customer is deleted.		
Remedial action: A configuration error has occurred which should be corrected. This customer associated with the Reserved VPRN Route Target Table has been modified.		

Table 39-980 SubSlaacOverride

Alarm	Attributes	Applicable major release
Name: SubSlaacOverride (5414) Type: processingErrorAlarm Package: service.SubSlaacOverride Raised on class: service.ServiceAccessPoint	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: subSlaacAddressOverlap	Release: • N/A
Description: The alarm is raised when an NE notifies the 5620 SAM that an IPv6 client requests a DHCPv6 non-temporary address (IA_NA) which overrides an existing SLAAC prefix that is assigned to a host. This configuration causes the SLAAC host to be removed from the system.		
Remedial action: Provide a non-overlapping IPv6 Address for the SLAAC host.		

Table 39-981 SubSlaacSetupFailure

Alarm	Attributes	Applicable major release
Name: SubSlaacSetupFailure (3906) Type: processingErrorAlarm Package: service.SubSlaacSetupFailure Raised on class: service.ServiceAccessPoint	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: SubSlaacSetupFailure	Release: • N/A
Description: The alarm is raised when an NE notifies the 5620 SAM that it cannot create or update a SLAAC host in the tmnxSubSlaacTable.		
Remedial action: The alarm is raised when an NE notifies SAM that it cannot create or update a SLAAC host in the tmnxSubSlaacTable. Verify the service configuration.		

Table 39-982 SubVirtualSubnetHostsDeleted

Alarm	Attributes	Applicable major release
Name: SubVirtualSubnetHostsDeleted (5411) Type: configurationAlarm Package: ressubscr.SubVirtualSubnetHostsDeleted Raised on class: ressubscr.ResidentialSubscriberInstance	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: subVirtualSubnetHostsDeleted	Release: • N/A
Description: This alarm is raised when the NE deletes all existing hosts for a subscriber associated with a virtual subnet because a new default router and/or subnet were assigned. This is the consequence of a configuration change on the server that assigns the subnet.		
Remedial action: The hosts must transmit DHCP requests if they require a connection.		

Table 39-983 svcArpHostPopulateErr

Alarm	Attributes	Applicable major release
Name: svcArpHostPopulateErr (3909) Type: processingErrorAlarm Package: service.svcArpHostPopulateErr Raised on class: service.AccessInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: svcArpHostPopulateError	Release: • N/A
Description: The alarm is raised when an NE notifies the 5620 SAM that it cannot update the ARP Host table upon reception of an ARP message.		
Remedial action: The alarm is raised when an NE notifies the 5620 SAM that it cannot update the ARP Host table upon reception of an ARP message. Verify the service configuration. Additionally, verify the length of the auto-generated subscriber identification.		

Table 39-984 svcFdbMimDestTableFull

Alarm	Attributes	Applicable major release
Name: svcFdbMimDestTableFull (588) Type: resourceAlarm Package: netw.svcFdbMimDestTableFull Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceLimitReached	Release: • N/A
Description: The alarm is raised when the number of backbone MAC address indices on an NE reaches the maximum allowed value. The alarm clears when the number of backbone MAC address indices on the NE falls below 95 percent of the maximum allowed value.		
Remedial action: Informational		

Table 39-985 SvcNameUpgradeScriptFailed

Alarm	Attributes	Applicable major release
Name: SvcNameUpgradeScriptFailed (1082) Type: scriptAlarm Package: netw.SvcNameUpgradeScriptFailed Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cliConnectionFailed Applicable probable causes: • cliConnectionFailed • cliLoginFailed • executionFailed	Release: • N/A
Description: The alarm is raised when a generated NE-upgrade CLI script fails. Typical causes include the following: - invalid CLI login information in the mediation policy - an unreachable NE Manual script execution from the NE properties form may provide more information about the failure.		
Remedial action: The alarm is raised in the following scenarios: the NE is unreachable; security credential issues. The remedial actions for the scenarios above are respectively as follows: NE unreachable - investigate and resolve the underlying transport network issue;		

Table 39-986 SWIncompatibility

Alarm	Attributes	Applicable major release
Name: SWIncompatibility (471) Type: configurationAlarm Package: equipment.SWIncompatibility Raised on class: equipment.StackConfiguration	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: elementNotCompatibleWith-ExistingStack	Release: • N/A
Description: The alarm is raised when a slot is not compatible with the current stack. The slot subsequently enters pass-through mode.		
Remedial action: Login to switch console, and install same software load on primary and secondary slot and synchronize them and reload switch.		

Table 39-987 SwitchOverDatabase

Alarm	Attributes	Applicable major release
Name: SwitchOverDatabase (203) Type: configurationAlarm Package: db.SwitchOverDatabase Raised on class: db.DatabaseManager	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: switchOverDatabase	Release: • N/A
Description: The alarm is raised when a database switchover occurs.		
Remedial action: Informational - no corrective action required.		

Table 39-988 SwitchOverDatabaseFailed

Alarm	Attributes	Applicable major release
Name: SwitchOverDatabaseFailed (204) Type: configurationAlarm Package: db.SwitchOverDatabaseFailed Raised on class: db.DatabaseManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: switchOverDatabaseFailed	Release: • N/A
Description: The alarm is raised when a database switchover fails.		
Remedial action: The additional text field of the alarm will provide more details as will the EmsServer.log. Possible causes include a HW failure on the platform hosting the database function, loss of network connectivity between the primary and standby database platforms. If the alarm persists please contact your Nokia support representative for assistance.		

Table 39-989 SychronizationLossOfSignal

Alarm	Attributes	Applicable major release
Name: SychronizationLossOfSignal (799) Type: communicationsAlarm Package: equipment.SychronizationLossOfSignal Raised on class: equipment.Shelf	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lossOfSignal	Release: • N/A
Description: The alarm is raised when an SLOS signal is detected on a PDH tributary.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 39-990 SyncCertFailed

Alarm	Attributes	Applicable major release
Name: SyncCertFailed (3912) Type: equipmentAlarm Package: sitesec.SyncCertFailed Raised on class: sitesec.SiteSystemSecurityPublicKey	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SyncCertFailed	Release: • N/A
Description: The alarm is raised when the synchronization of certificate files between the primary and secondary CPMs is stopped due to errors.		
Remedial action: The synchronization of certificate files between the primary and secondary CPMs is stopped due to errors. Depending on the reason specified, corrective action should be taken		

Table 39-991 synchroFailureAlarm

Alarm	Attributes	Applicable major release
Name: synchroFailureAlarm (534) Type: softwareAlarm Package: sw.synchroFailureAlarm Raised on class: sw.SoftwareControlModule	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: synchroFailureAlarm	Release: • N/A
Description: The alarm is raised when the flash card synchronization on an NE fails.		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 39-992 SystemCorruption

Alarm	Attributes	Applicable major release
Name: SystemCorruption (9582) Type: equipmentAlarm Package: netw.SystemCorruption Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: SystemCorruption	Release: • N/A
Description: The alarm is raised when a client-specific persistence event occurs (e.g. the start and completion of a recover action after system startup).		
Remedial action: Please perform a file repair.		

Table 39-993 SystemMemoryConsumption

Alarm	Attributes	Applicable major release
Name: SystemMemoryConsumption (225) Type: communicationsAlarm Package: netw.SystemMemoryConsumption Raised on class: netw.NmsSystem	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tooManyTrapsBuffered	Release: • N/A
Description: The alarm is raised when the global number of SNMP traps that await processing by the 5620 SAM surpasses the system red threshold for trap memory management specified in the base configuration of the 5620 SAM server. Caution: Nokia strongly recommends against modifying NE trap management threshold values; modifying these values can seriously degrade 5620 SAM performance. The alarm clears when the number of traps that await processing falls below the system red threshold. The 5620 SAM resynchronizes the NEs, if required.		
Remedial action: Informational - if the alarm persists or is occurring frequently perform root cause analysis to determine why the NEs in the network are consistently generating high rates of alarms.		

Table 39-994 SystemModeChange

Alarm	Attributes	Applicable major release
Name: SystemModeChange (1923) Type: equipmentAlarm Package: optical.SystemModeChange Raised on class: optical.OpticalNeProperties	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: systemModeChange	Release: • N/A
Description: The alarm is raised when an NE undergoes a system mode change, for example, from SONET to SDH mode. The alarm information includes the Site ID, old system mode value and new system mode value.		
Remedial action: Informational.The alarm is raised when an NE undergoes a system mode change, for ex. from SONET to SDH mode.		

Table 39-995 SystemNameChange

Alarm	Attributes	Applicable major release
Name: SystemNameChange (228) Type: equipmentAlarm Package: netw.SystemNameChange Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemNameChange	Release: • N/A
Description: The alarm is raised when an NE undergoes a system name change. The alarm information includes the old system name and the new system name.		
Remedial action: Informational - this alarm indicates that the name of the NE has been changed via CLI directly on the NE. The new name will not appear in the SAM GUI. Unmanage and re-manage this node for new name to take effect. Please contact your Nokia support representative for assistance.		

Table 39-996 TableSpaceAboveThreshold

Alarm	Attributes	Applicable major release
Name: TableSpaceAboveThreshold (454) Type: databaseAlarm Package: db.TableSpaceAboveThreshold Raised on class: db.DatabaseManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: HighStatisticsCollectionRate	Release: • N/A
Description: The alarm is raised when the database table space becomes too full, which may indicate that the performance statistics collection rate or the statistics retention time is too high.		
Remedial action: Purging the performance statistics log records, reducing the performance statistics retention time or reducing the frequency of collection should resolve this issue. If this is not possible then it may be necessary to add additional disk capacity to the platform. If the alarm persists please contact your Nokia support representative for assistance.		

Table 39-997 TCAAlarmLimitReached

Alarm	Attributes	Applicable major release
Name: TCAAlarmLimitReached (3687) Type: configurationAlarm Package: server.TCAAlarmLimitReached Raised on class: server.SamServer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tooManyAlarmsRaisedByTCA	Release: • N/A
Description: The alarm is raised when a TCA execute server reaches the limit of alarms for an interval.		
Remedial action: Informational - the maximum number of threshold crossing alarms that can be raised in the reset interval has been reached. After the TCA alarm reset interval has passed, alarms can be raised again for the next interval until the number of alarms reaches the limit again.		

Table 39-998 TCEAssignmentProblem

Alarm	Attributes	Applicable major release
Name: TCEAssignmentProblem (5140) Type: processingErrorAlarm Package: server.TCEAssignmentProblem Raised on class: server.TCE	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: configurationOrCustomization-Error	Release: • N/A
Description: This alarm is raised when the NE state does not allow SAM to assign the NE to the TCE during the load balancing or the manual operator assignment.\nSAM automatically clears the TCE alarm on succeeded assignment.		
Remedial action: Ensure the NE is managed, reachable and that no configuration operation is in progress on that NE and relaunch the operation.		

Table 39-999 TChipMemoryError

Alarm	Attributes	Applicable major release
Name: TChipMemoryError (5183) Type: hardwareAnomaly Package: equipment.TChipMemoryError Raised on class: equipment.BaseCard	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tchipMemoryParityError	Release: • N/A
Description: This Alarm is raised when a T-chip experiences an occurrence of an internal memory parity error.		
Remedial action: A fault has been detected in the hardware. If the problem persists please contact your Nokia support representative for assistance.		

Table 39-1000 TCMonitorMismatchAlarm

Alarm	Attributes	Applicable major release
Name: TCMonitorMismatchAlarm (8424) Type: integrityViolation Package: gmpls.TCMonitorMismatchAlarm Raised on class: gmpls.DbLink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tcmMismatch	Release: • N/A
Description: The alarm is raised when the TCM configured on the endpoints of the DB Link do not match.		
Remedial action: This alarm indicates that the TCM configured on the endpoints of the discovered DB Link do not match. Please make sure the TCM is the same on the databearers at each end.		

Table 39-1001 TeLinkPropertyMismatch

Alarm	Attributes	Applicable major release
Name: TeLinkPropertyMismatch (8392) Type: operationalViolation Package: lmp.TeLinkPropertyMismatch Raised on class: lmp.TeLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: propertyMismatch	Release: • N/A
Description: The alarm is raised when a Traffic-Engineering Link property mismatch is detected on the node. This notification is only generated the first time a mismatch is detected.		
Remedial action: A network configuration issue has been detected. Ensure the Traffic-Engineering Link configuration between the local node and the peer node is consistent.		

Table 39-1002 TemplateInconsistency

Alarm	Attributes	Applicable major release
Name: TemplateInconsistency (189) Type: ConfigurationAlarm Package: policy.TemplateInconsistency Raised on class: policy.PolicyDefinition	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: templatePolicyMismatch	Release: • N/A
Description: The alarm is raised when there is a parameter type or value mismatch between a global policy and a local policy.		
Remedial action: Informational - this alarm indicates that during the a policy comparison audit a mismatch was detected between local policy deployed on a NE vs the global policy which was used to perform the original configuration on NE. Re-distributing the global policy to the outlined NE and/or re-configuring the distribution mode of the local policy to be Sync With Global.		

Table 39-1003 TemporaryCommunicationFailure

Alarm	Attributes	Applicable major release
Name: TemporaryCommunicationFailure (800) Type: equipmentAlarm Package: equipment.TemporaryCommunicationFailure Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: temporaryCommunication-Problem	Release: • N/A
Description: The alarm is raised when a temporary communication failure is detected.		
Remedial action: 5620 SAM has temporarily lost contact with an NE. This may have been caused by the NE restarting, the NE being taken off-line via operator intervention or by a loss of connectivity to the NE. If the NE restarted then there will be an alarm indicating th		

Table 39-1004 TestFailedAlarm (bgp)

Alarm	Attributes	Applicable major release
Name: TestFailedAlarm (3708) Type: oamAlarm Package: bgp.TestFailedAlarm Raised on class: bgp.Site	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 39-1005 TestFailedAlarm (mirror)

Alarm	Attributes	Applicable major release
Name: TestFailedAlarm (3708) Type: oamAlarm Package: mirror.TestFailedAlarm Raised on class: mirror.Mirror	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1006 TestFailedAlarm (mpls)

Alarm	Attributes	Applicable major release
Name: TestFailedAlarm (3708) Type: oamAlarm Package: mpls.TestFailedAlarm Raised on class: mpls.Lsp	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A

Table 39-1006 TestFailedAlarm (mpls) (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1007 TestFailedAlarm (svt)

Alarm	Attributes	Applicable major release
Name: TestFailedAlarm (3708) Type: oamAlarm Package: svt.TestFailedAlarm Raised on class: svt.Tunnel	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1008 TestFailedAlarm (ldp)

Alarm	Attributes	Applicable major release
Name: TestFailedAlarm (3708) Type: oamAlarm Package: ldp.TestFailedAlarm Raised on class: ldp.Site	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 39-1009 TestFailedAlarm (pim)

Alarm	Attributes	Applicable major release
Name: TestFailedAlarm (3708) Type: oamAlarm Package: pim.TestFailedAlarm Raised on class: pim.Site	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 39-1010 TestFailedAlarm (rtr)

Alarm	Attributes	Applicable major release
Name: TestFailedAlarm (3708) Type: oamAlarm Package: rtr.TestFailedAlarm Raised on class: rtr.VirtualRouter	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1011 TestFailedAlarm (vprn)

Alarm	Attributes	Applicable major release
Name: TestFailedAlarm (3708) Type: oamAlarm Package: vprn.TestFailedAlarm Raised on class: vprn.Vprn	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1012 TestFailedAlarm (netw)

Alarm	Attributes	Applicable major release
Name: TestFailedAlarm (3708) Type: oamAlarm Package: netw.TestFailedAlarm Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when TestFailedAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1013 TestFailedAlarm (service)

Alarm	Attributes	Applicable major release
Name: TestFailedAlarm (3708) Type: oamAlarm Package: service.TestFailedAlarm Raised on class: service.SpokeConnector	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A

Table 39-1013 TestFailedAlarm (service) (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when TestFailedAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1014 TestFailedAlarm (lte)

Alarm	Attributes	Applicable major release
Name: TestFailedAlarm (3708) Type: oamAlarm Package: lte.TestFailedAlarm Raised on class: lte.EPSPath	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when TestFailedAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 39-1015 TestFailedAlarm (ethernetoam)

Alarm	Attributes	Applicable major release
Name: TestFailedAlarm (3708) Type: oamAlarm Package: ethernetoam.TestFailedAlarm Raised on class: ethernetoam.MaintAssociation	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 39-1016 TestFailedAlarm (mplstp)

Alarm	Attributes	Applicable major release
Name: TestFailedAlarm (3708) Type: oamAlarm Package: mplstp.TestFailedAlarm Raised on class: mplstp.TPLsp	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1017 TestFailedAlarm (lteservice)

Alarm	Attributes	Applicable major release
Name: TestFailedAlarm (3708) Type: oamAlarm Package: lteservice.TestFailedAlarm Raised on class: lteservice.MobileService	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1018 TestFailedAlarm (monpath)

Alarm	Attributes	Applicable major release
Name: TestFailedAlarm (3708) Type: oamAlarm Package: monpath.TestFailedAlarm Raised on class: monpath.MonitoredIpPath	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1019 TestFailedAlarm (vll)

Alarm	Attributes	Applicable major release
Name: TestFailedAlarm (3708) Type: oamAlarm Package: vll.TestFailedAlarm Raised on class: vll.Vll	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1020 TestFailedAlarm (atm)

Alarm	Attributes	Applicable major release
Name: TestFailedAlarm (3708) Type: oamAlarm Package: atm.TestFailedAlarm Raised on class: atm.PvcConnection	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A

Table 39-1020 TestFailedAlarm (atm) (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 39-1021 TestFailedAlarm (vpls)

Alarm	Attributes	Applicable major release
Name: TestFailedAlarm (3708) Type: oamAlarm Package: vpls.TestFailedAlarm Raised on class: vpls.AbstractVpls	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1022 TestFailedAlarm2 (ethernetoam)

Alarm	Attributes	Applicable major release
Name: TestFailedAlarm2 (3739) Type: oamAlarm Package: ethernetoam.TestFailedAlarm2 Raised on class: ethernetoam.Mep	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 39-1023 TestFailedAlarm2 (lte)

Alarm	Attributes	Applicable major release
Name: TestFailedAlarm2 (3739) Type: oamAlarm Package: lte.TestFailedAlarm2 Raised on class: lte.EPSPeer	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when TestFailedAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 39-1024 TestFailedAlarm2 (rtr)

Alarm	Attributes	Applicable major release
Name: TestFailedAlarm2 (3739) Type: oamAlarm Package: rtr.TestFailedAlarm2 Raised on class: rtr.LDPTunnelInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1025 TestFailedAlarm2 (mpls)

Alarm	Attributes	Applicable major release
Name: TestFailedAlarm2 (3739) Type: oamAlarm Package: mpls.TestFailedAlarm2 Raised on class: mpls.P2MPDynamicLsp	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1026 TestFailedAlarm2 (service)

Alarm	Attributes	Applicable major release
Name: TestFailedAlarm2 (3739) Type: oamAlarm Package: service.TestFailedAlarm2 Raised on class: service.Site	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when TestFailedAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1027 TestFailedAlarm2 (svt)

Alarm	Attributes	Applicable major release
Name: TestFailedAlarm2 (3739) Type: oamAlarm Package: svt.TestFailedAlarm2 Raised on class: svt.SdpBinding	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A

Table 39-1027 TestFailedAlarm2 (svt) (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1028 TestFailedAlarm2 (atm)

Alarm	Attributes	Applicable major release
Name: TestFailedAlarm2 (3739) Type: oamAlarm Package: atm.TestFailedAlarm2 Raised on class: atm.VPConnection	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 39-1029 TestFailedAlarm3 (svt)

Alarm	Attributes	Applicable major release
Name: TestFailedAlarm3 (3886) Type: oamAlarm Package: svt.TestFailedAlarm3 Raised on class: svt.SpokeSdpFec	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1030 TestFailedAlarm3 (service)

Alarm	Attributes	Applicable major release
Name: TestFailedAlarm3 (3886) Type: oamAlarm Package: service.TestFailedAlarm3 Raised on class: service.CompositeService	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1031 TestFailedAlarm3 (mpls)

Alarm	Attributes	Applicable major release
Name: TestFailedAlarm3 (3886) Type: oamAlarm Package: mpls.TestFailedAlarm3 Raised on class: mpls.LspPath	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1032 TestFailureAlarm

Alarm	Attributes	Applicable major release
Name: TestFailureAlarm (3903) Type: oamAlarm Package: sas.TestFailureAlarm Raised on class: sas.Test	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: This alarm is raised when a test failure trap is received from the node.		
Remedial action: Fix network connections issues.		

Table 39-1033 TestThresholdExceededAlarm (vlan)

Alarm	Attributes	Applicable major release
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm Package: vlan.TestThresholdExceededAlarm Raised on class: vlan.Vlan	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1034 TestThresholdExceededAlarm (vll)

Alarm	Attributes	Applicable major release
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm Package: vll.TestThresholdExceededAlarm Raised on class: vll.Vll	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		

Table 39-1034 TestThresholdExceededAlarm (vll) (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1035 TestThresholdExceededAlarm (netw)

Alarm	Attributes	Applicable major release
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm Package: netw.TestThresholdExceededAlarm Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1036 TestThresholdExceededAlarm (rtr)

Alarm	Attributes	Applicable major release
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm Package: rtr.TestThresholdExceededAlarm Raised on class: rtr.VirtualRouter	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object reports that the test threshold has been exceeded.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1037 TestThresholdExceededAlarm (service)

Alarm	Attributes	Applicable major release
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm Package: service.TestThresholdExceededAlarm Raised on class: service.SpokeConnector	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1038 TestThresholdExceededAlarm (ethernetoam)

Alarm	Attributes	Applicable major release
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm Package: ethernetoam.TestThresholdExceededAlarm Raised on class: ethernetoam.MaintAssociation	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 39-1039 TestThresholdExceededAlarm (svt)

Alarm	Attributes	Applicable major release
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm Package: svt.TestThresholdExceededAlarm Raised on class: svt.Tunnel	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1040 TestThresholdExceededAlarm (lteservice)

Alarm	Attributes	Applicable major release
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm Package: lteservice.TestThresholdExceededAlarm Raised on class: lteservice.MobileService	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1041 TestThresholdExceededAlarm (mirror)

Alarm	Attributes	Applicable major release
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm Package: mirror.TestThresholdExceededAlarm Raised on class: mirror.Mirror	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A

Table 39-1041 TestThresholdExceededAlarm (mirror) (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1042 TestThresholdExceededAlarm (ldp)

Alarm	Attributes	Applicable major release
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm Package: ldp.TestThresholdExceededAlarm Raised on class: ldp.Site	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 39-1043 TestThresholdExceededAlarm (bgp)

Alarm	Attributes	Applicable major release
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm Package: bgp.TestThresholdExceededAlarm Raised on class: bgp.Site	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 39-1044 TestThresholdExceededAlarm (monpath)

Alarm	Attributes	Applicable major release
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm Package: monpath.TestThresholdExceededAlarm Raised on class: monpath.MonitoredIpPath	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1045 TestThresholdExceededAlarm (vpls)

Alarm	Attributes	Applicable major release
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm Package: vpls.TestThresholdExceededAlarm Raised on class: vpls.AbstractVpls	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1046 TestThresholdExceededAlarm (lte)

Alarm	Attributes	Applicable major release
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm Package: lte.TestThresholdExceededAlarm Raised on class: lte.EPSPath	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 39-1047 TestThresholdExceededAlarm (atm)

Alarm	Attributes	Applicable major release
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm Package: atm.TestThresholdExceededAlarm Raised on class: atm.PvcConnection	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 39-1048 TestThresholdExceededAlarm (mpls)

Alarm	Attributes	Applicable major release

Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1049 TestThresholdExceededAlarm (vprn)

Alarm	Attributes	Applicable major release
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm Package: vprn.TestThresholdExceededAlarm Raised on class: vprn.Vprn	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1050 TestThresholdExceededAlarm (pim)

Alarm	Attributes	Applicable major release
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm Package: pim.TestThresholdExceededAlarm Raised on class: pim.Site	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 39-1051 TestThresholdExceededAlarm (mplstp)

Alarm	Attributes	Applicable major release
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm Package: mplstp.TestThresholdExceededAlarm Raised on class: mplstp.TPLsp	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1052 TestThresholdExceededAlarm2 (ethernetoam)

Alarm	Attributes	Applicable major release
Name: TestThresholdExceededAlarm2 (1918) Type: oamAlarm Package: ethernetoam.TestThresholdExceededAlarm2 Raised on class: ethernetoam.Mep	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object reports that the test threshold has been exceeded.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1053 TestThresholdExceededAlarm2 (mpls)

Alarm	Attributes	Applicable major release
Name: TestThresholdExceededAlarm2 (1918) Type: oamAlarm Package: mpls.TestThresholdExceededAlarm2 Raised on class: mpls.P2MPDynamicLsp	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object reports that the test threshold has been exceeded.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1054 TestThresholdExceededAlarm2 (atm)

Alarm	Attributes	Applicable major release
Name: TestThresholdExceededAlarm2 (1918) Type: oamAlarm Package: atm.TestThresholdExceededAlarm2 Raised on class: atm.VPConnection	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 39-1055 TestThresholdExceededAlarm2 (rtr)

Alarm	Attributes	Applicable major release
Name: TestThresholdExceededAlarm2 (1918) Type: oamAlarm Package: rtr.TestThresholdExceededAlarm2 Raised on class: rtr.LDPTunnelInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A

Table 39-1055 TestThresholdExceededAlarm2 (rtr) (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1056 TestThresholdExceededAlarm2 (service)

Alarm	Attributes	Applicable major release
Name: TestThresholdExceededAlarm2 (1918) Type: oamAlarm Package: service.TestThresholdExceededAlarm2 Raised on class: service.Site	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1057 TestThresholdExceededAlarm2 (svt)

Alarm	Attributes	Applicable major release
Name: TestThresholdExceededAlarm2 (1918) Type: oamAlarm Package: svt.TestThresholdExceededAlarm2 Raised on class: svt.SdpBinding	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object reports that the test threshold has been exceeded.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1058 TestThresholdExceededAlarm2 (lte)

Alarm	Attributes	Applicable major release
Name: TestThresholdExceededAlarm2 (1918) Type: oamAlarm Package: lte.TestThresholdExceededAlarm2 Raised on class: lte.EPSPeer	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 39-1059 TestThresholdExceededAlarm3 (mpls)

Alarm	Attributes	Applicable major release
Name: TestThresholdExceededAlarm3 (1919) Type: oamAlarm Package: mpls.TestThresholdExceededAlarm3 Raised on class: mpls.LspPath	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object reports that a test threshold is exceeded.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1060 TestThresholdExceededAlarm3 (service)

Alarm	Attributes	Applicable major release
Name: TestThresholdExceededAlarm3 (1919) Type: oamAlarm Package: service.TestThresholdExceededAlarm3 Raised on class: service.CompositeService	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1061 TestThresholdExceededAlarm3 (svt)

Alarm	Attributes	Applicable major release
Name: TestThresholdExceededAlarm3 (1919) Type: oamAlarm Package: svt.TestThresholdExceededAlarm3 Raised on class: svt.SpokeSdpFec	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: networkDegradation	Release: • N/A
Description: The alarm is raised when an OAM test on the object reports that the test threshold has been exceeded.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 39-1062 ThresholdCrossingAlarm (netw)

Alarm	Attributes	Applicable major release
Name: ThresholdCrossingAlarm (14) Type: thresholdCrossed Package: netw.ThresholdCrossingAlarm Raised on class: netw.NetworkElement	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: thresholdCrossed	Release: • N/A

Table 39-1062 ThresholdCrossingAlarm (netw) (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when a value crosses a configured rising or falling threshold. The alarm information includes the current threshold value, the default threshold value, and the threshold name.		
Remedial action: Informational - A TCA set in the statistics policy associated with the counter has fired. The counter in question should be examined to determine if further action is required.		

Table 39-1063 ThresholdCrossingAlarm (equipment)

Alarm	Attributes	Applicable major release
Name: ThresholdCrossingAlarm (14) Type: thresholdCrossed Package: equipment.ThresholdCrossingAlarm Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • N/A
Description: The alarm is raised when a port value crosses a threshold.		
Remedial action: Informational - A TCA set in the statistics policy associated with the counter has fired. The counter in question should be examined to determine if further action is required.		

Table 39-1064 ThresholdCrossingAlarm (generic)

Alarm	Attributes	Applicable major release
Name: ThresholdCrossingAlarm (14) Type: thresholdCrossed Package: generic.ThresholdCrossingAlarm Raised on class: generic.GenericObject	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • N/A
Description: The alarm is raised when a monitored object statistics-counter value exceeds a threshold value in the associated statistics policy.		
Remedial action: Informational - A TCA set in the statistics policy associated with the counter has fired. The counter in question should be examined to determine if further action is required.		

Table 39-1065 ThresholdCrossingAlarm (tca)

Alarm	Attributes	Applicable major release
Name: ThresholdCrossingAlarm (14) Type: thresholdCrossed Package: tca.ThresholdCrossingAlarm Raised on class: tca.SpecificTCAPolicy	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: thresholdCrossed	Release: • N/A
Description: The alarm is raised when a monitored object statistics-counter value exceeds a threshold value in the associated statistics policy.		

Table 39-1065 ThresholdCrossingAlarm (tca) (continued)

Alarm	Attributes	Applicable major release
Remedial action: This alarm is generated when a threshold is crossed on an object or attribute supported by 5620 SAM. The object or attribute must be examined to determine the nature of the issue and the load on the entity must be examined to determine if it is appropriate.		

Table 39-1066 ThresholdCrossingAlarmCard

Alarm	Attributes	Applicable major release
Name: ThresholdCrossingAlarmCard (2097) Type: thresholdCrossed Package: equipment.ThresholdCrossingAlarmCard Raised on class: equipment.BaseCard	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: thresholdCrossed	Release: • N/A
Description: The alarm is raised when a card value crosses a TCA threshold.		
Remedial action: A condition set when a counter exceeds a user-selected high or low threshold. A TCA does not generate an alarm but is available on demand through the CIT.Please refer 1830 Troubleshooting guide for more details.		

Table 39-1067 ThresholdCrossingAlarmDbl

Alarm	Attributes	Applicable major release
Name: ThresholdCrossingAlarmDbl (226) Type: thresholdCrossed Package: generic.ThresholdCrossingAlarmDbl Raised on class: generic.GenericObject	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • N/A
Description: The alarm is raised when a value crosses a configured rising or falling threshold. The alarm information includes the current threshold value, the default threshold value, and the threshold name.		
Remedial action: Informational - A TCA set in the statistics policy associated with the counter has fired. The counter in question should be examined to determine if further action is required.		

Table 39-1068 ThresholdCrossingAlarmOduk

Alarm	Attributes	Applicable major release
Name: ThresholdCrossingAlarmOduk (4949) Type: thresholdCrossed Package: oth.ThresholdCrossingAlarmOduk Raised on class: oth.Oduk	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: thresholdCrossed	Release: • N/A
Description: The alarm is raised when a ODUk value crosses a TCA threshold.		
Remedial action: A condition set when a counter exceeds a user-selected high or low threshold. A TCA does not generate an alarm but is available on demand through the CIT.Please refer 1830 Troubleshooting guide for more details.		

Table 39-1069 ThresholdCrossingAlarmOtuk

Alarm	Attributes	Applicable major release
Name: ThresholdCrossingAlarmOtuk (4950) Type: thresholdCrossed Package: oth.ThresholdCrossingAlarmOtuk Raised on class: oth.Otuk	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: thresholdCrossed	Release: • N/A
Description: The alarm is raised when a OTUk value crosses a TCA threshold.		
Remedial action: A condition set when a counter exceeds a user-selected high or low threshold. A TCA does not generate an alarm but is available on demand through the CIT.Please refer 1830 Troubleshooting guide for more details.		

Table 39-1070 ThresholdCrossingAlarmPort

Alarm	Attributes	Applicable major release
Name: ThresholdCrossingAlarmPort (2098) Type: thresholdCrossed Package: equipment.ThresholdCrossingAlarmPort Raised on class: equipment.PhysicalPort	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: thresholdCrossed	Release: • N/A
Description: The alarm is raised when a port value crosses a TCA threshold.		
Remedial action: A condition set when a counter exceeds a user-selected high or low threshold. A TCA does not generate an alarm but is available on demand through the CIT.Please refer 1830 Troubleshooting guide for more details.		

Table 39-1071 ThresholdCrossingAlert

Alarm	Attributes	Applicable major release
Name: ThresholdCrossingAlert (8407) Type: oamAlarm Package: sas.ThresholdCrossingAlert Raised on class: sas.PMSessionTest	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • N/A
Description: The alarm is raised when a TCA is generated by the node.		
Remedial action: The alarm is raised if a sas pm test exceeds Threshold Limit.		

Table 39-1072 ThresholdCrossingMDAResvCBSAlarm

Alarm	Attributes	Applicable major release
Name: ThresholdCrossingMDAResvCBSAlarm (3626) Type: thresholdCrossed Package: equipment. ThresholdCrossingMDAResvCBSAlarm Raised on class: equipment.DaughterCard	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • N/A

Table 39-1072 ThresholdCrossingMDAResvCBSAlarm (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the reserved CBS of an MDA crosses a threshold.		
Remedial action: This alarm is raised when the traffic rates being received on an MDA are exceeding the amount of buffer allocated for the MDA in the committed burst size configuration parameter. In all probability the QoS being delivered by the MDA is degraded. Steps must be taken to shed traffic from the ports/links associated with the MDA.		

Table 39-1073 ThresholdCrossingPortResvCBSAlarm

Alarm	Attributes	Applicable major release
Name: ThresholdCrossingPortResvCBSAlarm (3627) Type: thresholdCrossed Package: equipment.ThresholdCrossingPortResvCBSAlarm Raised on class: equipment.PhysicalPort	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: thresholdCrossed	Release: • N/A
Description: The alarm is raised when the reserved CBS of a port crosses a threshold.		
Remedial action: This alarm is raised when the traffic rates being received on a port are exceeding the amount of buffer allocated for the port in the committed burst size configuration parameter. In all probability the QoS being delivered by the port is degraded. Steps must be taken to shed traffic from the port in question..		

Table 39-1074 TimedLicenseExpiryNotice

Alarm	Attributes	Applicable major release
Name: TimedLicenseExpiryNotice (263) Type: licensingAlarm Package: security.TimedLicenseExpiryNotice Raised on class: security.AbstractLicense	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: timedLicenseExpiryNotice	Release: • N/A
Description: The alarm is raised when the 5620 SAM license timer expires. The alarm information includes the license expiry date.		
Remedial action: Informational - The SAM license key is about to expire. Please contact your Nokia sales representative to request either an extension for the license or a permanent license key.		

Table 39-1075 TimeMismatch

Alarm	Attributes	Applicable major release
Name: TimeMismatch (436) Type: configurationAlarm Package: server.TimeMismatch Raised on class: server.AuxiliaryServer	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: timeMismatch	Release: • N/A
Description: The alarm is raised when the system time on a 5620 SAM auxiliary server station differs from the system time on a main server station.		

Table 39-1075 TimeMismatch (continued)

Alarm	Attributes	Applicable major release
Remedial action: A configuration error has been made which must be corrected. The system time on the AUX server must match the system time on the main SAM server.		

Table 39-1076 TimeRefDisqualified

Alarm	Attributes	Applicable major release
Name: TimeRefDisqualified (8072) Type: communicationsAlarm Package: netw.TimeRefDisqualified Raised on class: netw.Time	Severity: info Specific problem: Not Applicable Implicitly cleared: true Default probable cause: TimeRefDisqualified	Release: • N/A
Description: The alarm is raised when a system time input reference is disqualified.		
Remedial action: Informational- no corrective action required.		

Table 39-1077 TimeRefSelect

Alarm	Attributes	Applicable major release
Name: TimeRefSelect (8073) Type: communicationsAlarm Package: netw.TimeRefSelect Raised on class: netw.TimeSource	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: TimeRefSelect	Release: • N/A
Description: The alarm is raised when a system time input reference is selected.		
Remedial action: Informational - no corrective action required.		

Table 39-1078 TimingHoldover (equipment)

Alarm	Attributes	Applicable major release
Name: TimingHoldover (734) Type: communicationsAlarm Package: equipment.TimingHoldover Raised on class: equipment.ProcessorCard	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: timingHoldover	Release: • N/A
Description: The alarm is raised when the Standby CPM goes into or out of Timing holdover state.		
Remedial action: Informational only.		

Table 39-1079 TimingHoldover (sonet)

Alarm	Attributes	Applicable major release
Name: TimingHoldover (734) Type: communicationsAlarm Package: sonet.TimingHoldover Raised on class: sonet.SiteSync	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: timingHoldover	Release: • N/A
Description: The alarm is raised when the timing of an NE is in the Holdover state.		
Raising condition: (('Status' EQUAL 'Master Holdover'))		
Clearing condition: (('Status' NOT EQUAL 'Master Holdover'))		
Remedial action: Informational only.		

Table 39-1080 TimingReferenceOneNotQualified

Alarm	Attributes	Applicable major release
Name: TimingReferenceOneNotQualified (545) Type: communicationsAlarm Package: sonet.TimingReferenceOneNotQualified Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: timingReferenceNotQualified	Release: • N/A
Description: The alarm is raised when Timing Reference One on an NE is not in the Qualified state.		
Raising condition: (('Qualified For Use' EQUAL 'Not Qualified') AND ('Administrative State' NOT EQUAL 'Down'))		
Clearing condition: (('Qualified For Use' NOT EQUAL 'Not Qualified') OR ('Administrative State' EQUAL 'Down'))		
Remedial action: Make sure that Timing Reference One is qualified.		

Table 39-1081 TimingReferenceTwoNotQualified

Alarm	Attributes	Applicable major release
Name: TimingReferenceTwoNotQualified (546) Type: communicationsAlarm Package: sonet.TimingReferenceTwoNotQualified Raised on class: sonet.SiteSync	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: timingReferenceNotQualified	Release: • N/A
Description: The alarm is raised when Timing Reference Two on an NE is not in the Qualified state.		
Raising condition: (('Qualified For Use' EQUAL 'Not Qualified') AND ('Administrative State' NOT EQUAL 'Down'))		
Clearing condition: (('Qualified For Use' NOT EQUAL 'Not Qualified') OR ('Administrative State' EQUAL 'Down'))		
Remedial action: Make sure that Timing Reference Two is qualified.		

Table 39-1082 TMNLossofSignal (mpr)

Alarm	Attributes	Applicable major release
Name: TMNLossofSignal (1920) Type: communicationsAlarm Package: mpr.TMNLossofSignal Raised on class: mpr.MprTMN	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tmnLOS	Release: • N/A
Description: The alarm is raised when a Loss of Signal occurs on the TMN Interface.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 39-1083 TmnxBsxUrlListFailure

Alarm	Attributes	Applicable major release
Name: TmnxBsxUrlListFailure (8374) Type: processingErrorAlarm Package: aapolicy.TmnxBsxUrlListFailure Raised on class: aapolicy.AAUrlListPolicy	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: TmnxBsxUrlListFailure	Release: • N/A
Description: This alarm is generated when a URL list has failed.		
Raising condition: (('Operational State' EQUAL 'Down') AND ('isLocal' EQUAL 'true'))		
Clearing condition: ('Operational State' EQUAL 'Up')		
Remedial action: The URL list has failed. Ensure the correct file is configured in the File URL. Administratively disable and re-enable or use CLI command 'upgrade' to restart the URL List.		

Table 39-1084 TmnxBsxUrlListUpdate

Alarm	Attributes	Applicable major release
Name: TmnxBsxUrlListUpdate (8375) Type: processingErrorAlarm Package: aapolicy.TmnxBsxUrlListUpdate Raised on class: aapolicy.AAUrlListPolicy	Severity: info Specific problem: Not Applicable Implicitly cleared: false Default probable cause: TmnxBsxUrlListUpdate	Release: • N/A
Description: This alarm is generated when a URL list has been updated.		
Remedial action: Informational - The URL list has been updated. No corrective action required.		

Table 39-1085 tmnxMcSyncClientAlarm

Alarm	Attributes	Applicable major release
Name: tmnxMcSyncClientAlarm (423) Type: communicationsAlarm Package: multichassis.tmnxMcSyncClientAlarm Raised on class: multichassis.PeerSynchronizationProtocol	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: locallyDeletedEntryInMCSync-Database	Release: • N/A
Description: The alarm is raised when a MC synchronization database entry is deleted locally.		
Remedial action: Informational only.		

Table 39-1086 TodSuiteAssignmentFailure (service)

Alarm	Attributes	Applicable major release
Name: TodSuiteAssignmentFailure (312) Type: todSuiteAlarm Package: service.TodSuiteAssignmentFailure Raised on class: service.AccessInterface	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: configConflictOrResourceFull	Release: • N/A
Description: The alarm is raised when a Time of Day suite cannot be assigned to an aggregation scheduler, or to an L2 or L3 access interface, because of a configuration conflict or a lack of resources. The alarm is not raised against a SAP.		
Remedial action: A configuration error has been made which must be corrected. The TOD cannot be assigned to the Aggregation Scheduler due to a configuration conflict or lack of resources.		

Table 39-1087 TodSuiteAssignmentFailure (svq)

Alarm	Attributes	Applicable major release
Name: TodSuiteAssignmentFailure (312) Type: todSuiteAlarm Package: svq.TodSuiteAssignmentFailure Raised on class: svq.AggregationScheduler	Severity: minor Specific problem: Not Applicable Implicitly cleared: false Default probable cause: assignmentFailure	Release: • N/A
Description: The alarm is raised when an object fails to perform the action specified in a Time of Day suite.		
Remedial action: A configuration error has been made which must be corrected. The TOD cannot be assigned to the Aggregation Scheduler due to a configuration conflict or lack of resources.		

Table 39-1088 TooManyCpaaPerIsisArea

Alarm	Attributes	Applicable major release
Name: TooManyCpaaPerIsisArea (385) Type: configurationAlarm Package: topology.TooManyCpaaPerIsisArea Raised on class: topology.Cpaa	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tooManyCpaaPeIsisArea	Release: • N/A

Table 39-1088 TooManyCpaaPerIsisArea (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when there are too many 7701 CPAAs for an ISIS L1 area.		
Remedial action: Check the configuration of CPAA and make sure there is at most one CPAA configured for an ISIS area within an administrative domain.		

Table 39-1089 TopologyIsisSystemError

Alarm	Attributes	Applicable major release
Name: TopologyIsisSystemError (373) Type: topologyAlarm Package: topology.TopologyIsisSystemError Raised on class: topology.AutonomousSystem	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: isisSystemNotAdvertisingTeR-outerId	Release: • N/A
Description: The alarm is raised when an IS-IS topology system error is detected.		
Remedial action: Alarm contains the systemId of the router which is not advertising ISIS TE RouterId. User should either configure the ISIS TE routerId on the node or configure a routerId for that system in "ISIS System ID Mapping" menu. Configuring the routerId in systemID mapping will not clear the alarm.		

Table 39-1090 TopologyMisconfigured

Alarm	Attributes	Applicable major release
Name: TopologyMisconfigured (95) Type: configurationAlarm Package: service.TopologyMisconfigured Raised on class: service.Service	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: topologyMisconfigured	Release: • N/A
Description: This alarm is raised when service sites are not fully connected.		
Raising condition: ('topologyMisconfigured' EQUAL 'true')		
Clearing condition: ('topologyMisconfigured' EQUAL 'false')		
Remedial action: Connect the service sites with SDP Bindings, Vlan Uplinks, or PBB tunnels.		

Table 39-1091 topologyMisconfigured

Alarm	Attributes	Applicable major release
Name: topologyMisconfigured (11467) Type: communicationsAlarm Package: mpr.topologyMisconfigured Raised on class: mpr.BackhaulService	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: topologyMisconfigured	Release: • N/A
Description: The alarm is raised when any configuration mismatch are present in a service.		

Table 39-1091 topologyMisconfigured (continued)

Alarm	Attributes	Applicable major release
Raising condition: ('Topology Misconfigured' EQUAL 'true')		
Clearing condition: ('Topology Misconfigured' EQUAL 'false')		
Remedial action: Check for any configuration mismatch in the physical topology.		

Table 39-1092 TopologyRuleExecutionError

Alarm	Attributes	Applicable major release
Name: TopologyRuleExecutionError (365) Type: configurationAlarm Package: tunnelmgmt.TopologyRuleExecutionError Raised on class: tunnelmgmt.TopologyRule	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: ruleErrorOrRuleEngineError	Release: • N/A
Description: The alarm is raised when the 5620 SAM cannot execute a topology rule or when rule execution generates an error. Rule execution is the process that determines which tunnel elements require creation, modification, or deletion. The alarm typically indicates that the rule is misconfigured.		
Remedial action: A configuration error has been made which must be corrected. The topology rule in question must be re-configured correctly.		

Table 39-1093 TraceError

Alarm	Attributes	Applicable major release
Name: TraceError (289) Type: equipmentAlarm Package: netw.TraceError Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: traceError	Release: • N/A
Description: The alarm is raised when unusual error log trace messages are generated on an NE. The alarm information includes the title of the logged event and message details.		
Remedial action: Informational - This alarm is generated by the SR platforms to indicate that the node has encountered a reportable problem. The additional text field of the alarm will contain additional information regarding the alarm. If the alarm persists please contact your Nokia support representative for assistance.		

Table 39-1094 TrafficElectricalEthernetLinkDown

Alarm	Attributes	Applicable major release
Name: TrafficElectricalEthernetLinkDown (8401) Type: communicationsAlarm Package: mwa.TrafficElectricalEthernetLinkDown Raised on class: mwa.PortTermination	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: linkDown	Release: • N/A
Description: The alarm is raised when the electrical ethernet link goes down.		

Table 39-1094 TrafficElectricalEthernetLinkDown (continued)

Alarm	Attributes	Applicable major release
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-1095 TrafficOpticalEthernetLinkDown

Alarm	Attributes	Applicable major release
Name: TrafficOpticalEthernetLinkDown (8971) Type: communicationsAlarm Package: mwa.TrafficOpticalEthernetLinkDown Raised on class: mwa.PortTermination	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: linkDown	Release: • N/A
Description: The alarm is raised when the optical ethernet link goes down.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-1096 TrafficPortSFPCardFail

Alarm	Attributes	Applicable major release
Name: TrafficPortSFPCardFail (8972) Type: equipmentAlarm Package: mwa.TrafficPortSFPCardFail Raised on class: mwa.PortTermination	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReplaceableUnitProblem	Release: • N/A
Description: The alarm is raised when a MPT detects a traffic port SFP card failure.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-1097 TrafficPortSFPMissing

Alarm	Attributes	Applicable major release
Name: TrafficPortSFPMissing (8973) Type: equipmentAlarm Package: mwa.TrafficPortSFPMissing Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReplaceableUnitMissing	Release: • N/A
Description: This alarm is raised when traffic port SFP is missing.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-1098 TrailDegrade

Alarm	Attributes	Applicable major release
Name: TrailDegrade (8101) Type: communicationsAlarm Package: optical.TrailDegrade Raised on class: optical.Trail	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ProtectionDegrade	Release: • N/A
Description: The alarm is raised when either Trail Path of Protected Trail is Operationally down.		
Remedial action: Informational - If the alarm persists or is occurring frequently then investigation is required by looking at the active alarms on APS Group's work and protect TPs to understand why trail protection is degraded.		

Table 39-1099 TrailPathDown

Alarm	Attributes	Applicable major release
Name: TrailPathDown (5128) Type: communicationsAlarm Package: optical.TrailPathDown Raised on class: optical.TrailPath	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OperationalStateDown	Release: • N/A
Description: The alarm is raised when the termination point(s) of the trail path are operationally down.		
Remedial action: Informational - If the alarm persists or is occurring frequently then investigation is required by looking at the active alarms on the hops to understand why the underlying transport network is unreliable.		

Table 39-1100 TrailSignalFail

Alarm	Attributes	Applicable major release
Name: TrailSignalFail (798) Type: communicationsAlarm Package: bundle.TrailSignalFail Raised on class: bundle.Interface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trailSignalFailure	Release: • N/A
Description: The alarm is raised when a a local or remote failure in an IMA group generates a Trail Signal Fail message.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 39-1101 TransportServerDegrade

Alarm	Attributes	Applicable major release
Name: TransportServerDegrade (10268) Type: communicationsAlarm Package: optical.TransportServerDegrade Raised on class: optical.TransportService	Severity: cleared Specific problem: Not Applicable Implicitly cleared: true Default probable cause: UnderlyingServerDegraded	Release: • N/A
Description: The alarm is raised when any of the underlying protected server trail in the service is degraded		

Table 39-1101 TransportServerDegrade (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational - If the alarm persists or is occurring frequently then investigation is required by looking at the active alarms on Server Trails to understand why trail protection is unreliable.		

Table 39-1102 TransportServerFailure

Alarm	Attributes	Applicable major release
Name: TransportServerFailure (8104) Type: communicationsAlarm Package: optical.TransportServerFailure Raised on class: optical.TransportService	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: UnderlyingServerDown	Release: • N/A
Description: The alarm is raised when any of the server trails in the service is operationally down		
Remedial action: Informational - If the alarm persists or is occurring frequently then investigation is required by looking at the active alarms on Server Trails to understand why transport service protection is unreliable.		

Table 39-1103 TransportServiceDegrade

Alarm	Attributes	Applicable major release
Name: TransportServiceDegrade (8105) Type: communicationsAlarm Package: optical.TransportServiceDegrade Raised on class: optical.TransportService	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ProtectionDegrade	Release: • N/A
Description: The alarm is raised when either work or protect path of Protected Transport Service is operationally down		
Remedial action: Informational - If the alarm persists or is occurring frequently then investigation is required by looking at the active alarms on APS Group's work and protect TPs to understand why transport service protection is degraded.		

Table 39-1104 TransportServiceDown

Alarm	Attributes	Applicable major release
Name: TransportServiceDown (2906) Type: communicationsAlarm Package: optical.TransportServiceDown Raised on class: optical.TransportService	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OperationalStateDown	Release: • N/A
Description: The alarm is raised when: 1. The termination point(s) or VTS XC's of the service path(s) are operationally down. 2. There are missing VTS XCs in any of the service path(s) of this transport service.		
Remedial action: Informational - If the alarm persists or is occurring frequently then investigation is required by looking at the active alarms on the hops to understand why the underlying transport network is unreliable.		

Table 39-1105 TransportServicePathDown

Alarm	Attributes	Applicable major release
Name: TransportServicePathDown (4402) Type: communicationsAlarm Package: optical.TransportServicePathDown Raised on class: optical.ServicePath	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OperationalStateDown	Release: • N/A
Description: The alarm is raised when the termination point(s) of the service path are operationally down.		
Remedial action: Informational - If the alarm persists or is occurring frequently then investigation is required by looking at the active alarms on the hops to understand why the underlying transport network is unreliable.		

Table 39-1106 TrapMalformed

Alarm	Attributes	Applicable major release
Name: TrapMalformed (135) Type: communicationsAlarm Package: netw.TrapMalformed Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: trapSchemaMismatch	Release: • N/A
Description: The alarm is raised when the number of varbinds in an incoming SNMP trap is fewer than the number expected.		
Remedial action: Informational - If the alarm persists please contact your Nokia support representative for assistance		

Table 39-1107 TrapMapperQueueFull

Alarm	Attributes	Applicable major release
Name: TrapMapperQueueFull (797) Type: queueFull Package: trapmapper.TrapMapperQueueFull Raised on class: trapmapper.TrapMapperManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: trapRateTooHigh	Release: • N/A
Description: The alarm is raised when the 5620 SAM detects that the queue for traps that are to be mapped to alarms is full. Until queue space is available, the 5620 SAM drops traps that are to be mapped to alarms.		
Remedial action: Informational - if the alarm persists or is occurring frequently perform root cause analysis to determine why the NEs in the network are consistently generating high rates of alarms.		

Table 39-1108 TrapRateThresholdExceeded

Alarm	Attributes	Applicable major release
Name: TrapRateThresholdExceeded (412) Type: communicationsAlarm Package: netw.TrapRateThresholdExceeded Raised on class: netw.NmsSystem	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: trapRateGreaterThanConfig-ured	Release: • N/A

Table 39-1108 TrapRateThresholdExceeded (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the incoming SNMP trap rate is greater than the configured trap rate threshold.		
Remedial action: Informational - if the alarm persists or is occurring frequently perform root cause analysis to determine why the NEs in the network are consistently generating high rates of alarms.		

Table 39-1109 TunnelElementCreationError

Alarm	Attributes	Applicable major release
Name: TunnelElementCreationError (366) Type: configurationAlarm Package: tunnelmgmt.TunnelElementCreationError Raised on class: tunnelmgmt.TopologyRule	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: unableToCreateTunnelElement	Release: • N/A
Description: The alarm is raised when the creation of a missing tunnel element fails.		
Remedial action: A configuration error has been made which must be corrected. Please resolve the configuration error preventing the creation of the tunnel element.		

Table 39-1110 TunnelElementDeleteError

Alarm	Attributes	Applicable major release
Name: TunnelElementDeleteError (367) Type: configurationAlarm Package: tunnelmgmt.TunnelElementDeleteError Raised on class: tunnelmgmt.TopologyRule	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tunnelElementInUse	Release: • N/A
Description: The alarm is raised when the deletion of an obsolete or unused tunnel element fails.		
Remedial action: A configuration error has occurred which must be corrected. The correction of this error must be done via CLI - please log into the NE and delete the tunnel element.		

Table 39-1111 TunnelElementInUseWarning

Alarm	Attributes	Applicable major release
Name: TunnelElementInUseWarning (368) Type: configurationAlarm Package: tunnelmgmt.TunnelElementInUseWarning Raised on class: tunnelmgmt.TopologyRule	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tunnelElementInUse	Release: • N/A
Description: The alarm is raised when the 5620 SAM does not attempt to delete an obsolete or unused tunnel element because the element is in use by another object.		
Remedial action: A configuration error has been made which must be corrected. The tunnel object to be deleted must be removed from the service or services which are referring to it.		

Table 39-1112 TunnelOverbooked

Alarm	Attributes	Applicable major release
Name: TunnelOverbooked (590) Type: resourceAlarm Package: svt.TunnelOverbooked Raised on class: svt.Tunnel	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tunnelOverbooked	Release: • N/A
Description: The alarm is raised when the allocated SDP binding bandwidth specified by sdpBookedBandwidth exceeds the sdpMaxBookableBandwidth value.		
Clearing condition: ('SDP Available Bandwidth' NOT EQUAL '0')		
Remedial action: Please set the maximum bookable bandwidth parameter to a more appropriate value or offload traffic from the SDP in question to another SDP.		

Table 39-1113 TunnelSelBlacklistFull

Alarm	Attributes	Applicable major release
Name: TunnelSelBlacklistFull (4626) Type: processingErrorAlarm Package: l2tp.TunnelSelBlacklistFull Raised on class: l2tp.Site	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: tmnxL2tpTunnelSelBlacklistFull	Release: • N/A
Description: This alarm is raised when the number of tunnels and peers in the tunnel-selection-blacklist reaches the limit configured on the L2TP Site, and is cleared when the limit is no longer reached.		
Remedial action: Either increase Max List Length in Tunnel Selection Blacklist configuration or fix blacklisted tunnels or peers.		

Table 39-1114 TwampReflectorAlarm

Alarm	Attributes	Applicable major release
Name: TwampReflectorAlarm (8138) Type: oamAlarm Package: sas.TwampReflectorAlarm Raised on class: sas.TWLSession	Severity: info Specific problem: Not Applicable Implicitly cleared: true Default probable cause: missingTwlReflectorConfiguration	Release: • N/A
Description: This alarm is raised when a Twamp-Light Session is configured without a matching Reflector Prefix.		
Remedial action: This alarm is raised when a Twamp-Light Session is configured without a matching Reflector Prefix.		

Table 39-1115 TwampSrvInactivityTimeout

Alarm	Attributes	Applicable major release
Name: TwampSrvInactivityTimeout (3319) Type: communicationsAlarm Package: sas.TwampSrvInactivityTimeout Raised on class: sas.TwampSrv	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: TWAMPServerInactivityTimeout	Release: • N/A
Description: The alarm is raised when a TWAMP control connection is disconnected by the TWAMP server due to the connection being inactive for a period exceeding the server's inactivity timeout, which generates a TWAMP Server InactivityTimeout notification.		
Remedial action: Verify the value of the inactivity-timeout parameter and modify it according to the operational needs.		

Table 39-1116 TwampSrvMaxConnsExceeded

Alarm	Attributes	Applicable major release
Name: TwampSrvMaxConnsExceeded (3320) Type: communicationsAlarm Package: sas.TwampSrvMaxConnsExceeded Raised on class: sas.TwampSrv	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: TWAMPServerMaxConnsExceeded	Release: • N/A
Description: The alarm is raised when the maximum number of concurrent TWAMP control connections for the server has been reached. [EFFECT] The TWAMP client cannot request test runs on the rejected connection. [RECOVERY] Configure the system-level maximum number of concurrent TWAMP control connections to a larger value, or disconnect any TWAMP control connection.'		
Remedial action: Verify the value of the max-conn-server parameter and modify it according to the operational needs.		

Table 39-1117 TwampSrvMaxSessExceeded

Alarm	Attributes	Applicable major release
Name: TwampSrvMaxSessExceeded (3321) Type: communicationsAlarm Package: sas.TwampSrvMaxSessExceeded Raised on class: sas.TwampSrv	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: TWAMPServerMaxSessExceeded	Release: • N/A
Description: The alarm is raised when the maximum number of concurrent TWAMP sessions for the server has been reached. [EFFECT] The TWAMP client cannot request test runs on the rejected session. [RECOVERY] Configure the system-level maximum number of concurrent TWAMP sessions to a larger value, or disconnect any TWAMP session.'		
Remedial action: Verify the max-sess-server parameter and modify it according to the operational needs.		

Table 39-1118 TwampSrvPfxMaxConnsExceeded

Alarm	Attributes	Applicable major release
Name: TwampSrvPfxMaxConnsExceeded (3322) Type: communicationsAlarm Package: sas.TwampSrvPfxMaxConnsExceeded Raised on class: sas.TwampSrv	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: TWAMPServerPrefixxMax-ConnsExceeded	Release: • N/A
Description: The alarm is raised when the maximum number of concurrent TWAMP control connections for a TWAMP client prefix has been reached. [EFFECT] The TWAMP client cannot request test runs on the rejected connection. [RECOVERY] Configure the prefix's maximum number of concurrent TWAMP control connections to a larger value, or disconnect a TWAMP control connection which uses the prefix.		
Remedial action: Verify the max-conn-prefix parameter and modify it according to the operational needs.		

Table 39-1119 TwampSrvPfxMaxSessExceeded

Alarm	Attributes	Applicable major release
Name: TwampSrvPfxMaxSessExceeded (3323) Type: communicationsAlarm Package: sas.TwampSrvPfxMaxSessExceeded Raised on class: sas.TwampSrv	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: TWAMPServerPrefixMaxSes-sExceeded	Release: • N/A
Description: The alarm is raised when the maximum number of concurrent TWAMP sessions for a TWAMP client prefix has been reached. [EFFECT] The TWAMP client cannot request test runs on the rejected session. [RECOVERY] Configure the prefix's maximum number of concurrent TWAMP sessions to a larger value, or disconnect a TWAMP session which uses the prefix.'		
Remedial action: Verify the max sess-prefix parameter and modify it according to the operational needs.		

Table 39-1120 TwoPrimaryDatabase

Alarm	Attributes	Applicable major release
Name: TwoPrimaryDatabase (202) Type: configurationAlarm Package: db.TwoPrimaryDatabase Raised on class: db.DatabaseManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: twoPrimaryDatabase	Release: • N/A
Description: The alarm is raised when the standby database initializes as a primary database because of a database failover. The alarm clears when the original primary database is operational as the new standby database.		
Remedial action: Informational - The root cause of the failure of the primary database server should be investigated. Possible causes include a HW failure on the platform hosting the database function, loss of network connectivity between the primary and standby database.		

Table 39-1121 TxFail

Alarm	Attributes	Applicable major release
Name: TxFail (1175) Type: communicationsAlarm Package: equipment.TxFail Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: txFail	Release: • N/A
Description: The alarm is raised when a transmission failure is detected.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 39-1122 TxFailure

Alarm	Attributes	Applicable major release
Name: TxFailure (3931) Type: communicationsAlarm Package: equipment.TxFailure Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: txFail	Release: • N/A
Description: The alarm is raised when a txFail (a fail of the Tx subfunction) defect raise.		
Remedial action: The alarm is raised when a txFail (a fail of the Tx subfunction) defect raise.		

Table 39-1123 TxRetransmit

Alarm	Attributes	Applicable major release
Name: TxRetransmit (266) Type: communicationsAlarm Package: ospf.TxRetransmit Raised on classes: • ospf.ShamLink • ospf.VirtualLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: hello Applicable probable causes: • hello • dbDescript • lsReq • lsUpdate • lsAck • nullPacket	Release: • N/A
Description: The alarm is raised when an NE retransmits an OSPF packet on a non-virtual interface. The alarm information includes the NE ID of the OSPF neighbor.		
Remedial action: Informational - an NE retransmits an OSPF packet on a non-virtual interface. The alarm information includes the NE ID of the OSPF neighbor.		

Table 39-1124 TypeMismatch

Alarm	Attributes	Applicable major release
Name: TypeMismatch (96) Type: configurationAlarm Package: service.TypeMismatch Raised on class: service.Service	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: serviceSiteTypeMisconfigured	Release: • N/A
Description: The alarm is raised when a VLAN type for a Site doesn't match what has been configured on the Service.		
Raising condition: ('serviceTypeInconsistent' EQUAL 'true')		
Clearing condition: ('serviceTypeInconsistent' EQUAL 'false')		
Remedial action: Configure the VLAN subtype on the site same as the service VLAN subtype.		

Table 39-1125 UnableDeleteArchivedLogs

Alarm	Attributes	Applicable major release
Name: UnableDeleteArchivedLogs (200) Type: databaseAlarm Package: db.UnableDeleteArchivedLogs Raised on class: db.DatabaseManager	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: archivedLogsIssue	Release: • N/A
Description: The alarm is raised when database disk space is low and the 5620 SAM is unable to delete the archive logs.		
Remedial action: Informational - Please contact your Nokia support representative for assistance.		

Table 39-1126 UnableGetArchivedLogDiskInfo

Alarm	Attributes	Applicable major release
Name: UnableGetArchivedLogDiskInfo (4976) Type: databaseAlarm Package: db.UnableGetArchivedLogDiskInfo Raised on class: db.DatabaseManager	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: archivedLogsIssue	Release: • N/A
Description: The alarm is raised when the 5620 SAM is unable to get the archive log filesystem information.		
Remedial action: Informational - Please check archive logs file system. The 5620 SAM cannot access the file system. If the problem persists then please contact your Nokia support representative for assistance.		

Table 39-1127 UnavailableTime

Alarm	Attributes	Applicable major release
Name: UnavailableTime (644) Type: communicationsAlarm Package: equipment.UnavailableTime Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unavailableTime	Release: • N/A

Table 39-1127 UnavailableTime (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when a port experiences 10 consecutive SES.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 39-1128 UnavailableTimeHigherOrderVCPath

Alarm	Attributes	Applicable major release
Name: UnavailableTimeHigherOrderVCPath (9009) Type: communicationsAlarm Package: tdm.UnavailableTimeHigherOrderVCPath Raised on class: tdm.AUn	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: UATHOVC	Release: • N/A
Description: The alarm is raised on Unavailable Time, Higher Order VC path (NEND).		
Remedial action: Unavailable Time, Higher Order VC path (NEND).		

Table 39-1129 UnconfiguredEquipmentPresent

Alarm	Attributes	Applicable major release
Name: UnconfiguredEquipmentPresent (645) Type: equipmentAlarm Package: equipment.UnconfiguredEquipmentPresent Raised on class: equipment.Equipment	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unconfiguredEquipmentPresent	Release: • N/A
Description: The alarm is raised when unconfigured equipment is detected.		
Remedial action: A configuration error has occurred which must be corrected. The card slot has not been configured		

Table 39-1130 UndefinedSchedulerReference

Alarm	Attributes	Applicable major release
Name: UndefinedSchedulerReference (118) Type: configurationAlarm Package: vs.UndefinedSchedulerReference Raised on class: vs.ServiceTypeDefinition	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: undefinedSchedulerReference	Release: • N/A
Description: The alarm is raised when a queue specified in the access ingress or access egress policy of an L2 access interface is not referenced by the scheduler policy for the interface.		
Raising condition: (('numberReferences' > '0') AND ('numberOfDefinitions' EQUAL '0'))		

Table 39-1130 UndefinedSchedulerReference (continued)

Alarm	Attributes	Applicable major release
Clearing condition: (('numberReferences' EQUAL '0') OR ('numberOfDefinitions' > '0'))		
Remedial action: A queue specified in the access ingress/egress policy used by an L2 access interface is not referencing a scheduler policy. Ensure all required queues created in the access ingress/egress policy is referencing a scheduler.		

Table 39-1131 UnderlyingResourceDegrade

Alarm	Attributes	Applicable major release
Name: UnderlyingResourceDegrade (1176) Type: communicationsAlarm Package: equipment.UnderlyingResourceDegrade Raised on class: equipment.Port	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: underlyingResourceDegrade	Release: • N/A
Description: The alarm is raised when degradation of an underlying radio interface resource is detected.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 39-1132 UnknownKeyGroupKeysDetected (nge)

Alarm	Attributes	Applicable major release
Name: UnknownKeyGroupKeysDetected (8977) Type: configurationAlarm Package: nge.UnknownKeyGroupKeysDetected Raised on class: nge.KeyGroup	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: UnknownNGEConfiguration	Release: • N/A
Description: The alarm is raised when Key Group Keys are detected that were not created by NGE Manager.		
Remedial action: Check for similar alarms on the Network Element or KeyGroup objects, and take the action specified.		

Table 39-1133 UnknownNGEInstancesDetected

Alarm	Attributes	Applicable major release
Name: UnknownNGEInstancesDetected (8997) Type: configurationAlarm Package: nge.UnknownNGEInstancesDetected Raised on class: nge. NetworkGroupEncryptionManager	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: UnknownNGEConfiguration	Release: • N/A
Description: The alarm is raised when Group Encryption configurations are detected which were not created by NGE Manager.		
Remedial action: Look for alarms on individual security objects and take appropriate action.		

Table 39-1134 UnknownSDPKeyGroupIdDetected (svt)

Alarm	Attributes	Applicable major release
Name: UnknownSDPKeyGroupIdDetected (8978) Type: configurationAlarm Package: svt.UnknownSDPKeyGroupIdDetected Raised on class: svt.Tunnel	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: UnknownNGEConfiguration	Release: • N/A
Description: The alarm is raised when a Key Group Id is configured on an SDP which was not configured by NGE manager.		
Remedial action: Remove encryption configuration for this SDP from node CLI.		

Table 39-1135 UnmanagedMplsTpSDPTunnelSite

Alarm	Attributes	Applicable major release
Name: UnmanagedMplsTpSDPTunnelSite (8147) Type: configurationAlarm Package: svt.UnmanagedMplsTpSDPTunnelSite Raised on class: svt.Tunnel	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unmanagedMplsTpSDPTunnelSite	Release: • N/A
Description: The alarm is raised when the MPLS-TP SDP Tunnel has configured with a non-managed site.		
Remedial action: Investigation is required to resolve the following possible scenarios: The far-end site at the MPLS-TP SDP Tunnel is non-managed Site. Please start to manage the NE with SAM or change the far-end site id to a correct MPLS-TP site at MPLS-TP SDP Tunnel form.		

Table 39-1136 UNREGISTERED_ALARM (racfl)

Alarm	Attributes	Applicable major release
Name: UNREGISTERED_ALARM (11596) Type: processingErrorAlarm Package: racfl.UNREGISTERED_ALARM Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: UNREGISTERED ALARM Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • N/A
Description: UNREGISTERED ALARM		
Remedial action: Contact Nokia support team for additional information if the problem persists.		

Table 39-1137 UNREGISTERED_ALARM (racloms)

Alarm	Attributes	Applicable major release
Name: UNREGISTERED_ALARM (11596) Type: processingErrorAlarm Package: racloms.UNREGISTERED_ALARM Raised on class: racloms.OMS	Severity: indeterminate Specific problem: UNREGISTERED ALARM Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • N/A

Table 39-1137 UNREGISTERED_ALARM (racloms) (continued)

Alarm	Attributes	Applicable major release
Description: UNREGISTERED ALARM		
Remedial action: Contact Nokia support team for additional information if the problem persists.		

Table 39-1138 UnresolvedVirtualPortConfiguration

Alarm	Attributes	Applicable major release
Name: UnresolvedVirtualPortConfiguration (4908) Type: virtualPortAlarm Package: dctr.UnresolvedVirtualPortConfiguration Raised on class: dctr.AbstractVirtualPort	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: UnableToResolveNetwork-Configuration	Release: • N/A
Description: The alarm is raised when VSD was not able to resolve network configuration for this virtual port. The virtual port will not be assigned an ip address and there is no service associated with it.		
Remedial action: This alarm can be cleared when VSD is able to resolve the network configuration of the virtual port. This notification reports that VSD cannot assign service objects to this virtual port. This could be one or more of the domain, zone, subnet, user, or permission are missing, mismatched or not properly configured in VSD. Please make sure the settings in VSD are correct for this virtual port.		

Table 39-1139 UnsupportedNode

Alarm	Attributes	Applicable major release
Name: UnsupportedNode (288) Type: configurationAlarm Package: netw.UnsupportedNode Raised on class: netw.Topology	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: unsupportedNode	Release: • N/A
Description: The alarm is raised when, during network discovery, the 5620 SAM detects an NE that uses an unsupported device software version. The alarm information includes the IP address of the NE.		
Remedial action: The SW version of the NE must be upgraded to a version supported by 5620 SAM.		

Table 39-1140 UserSuspended

Alarm	Attributes	Applicable major release
Name: UserSuspended (1123) Type: communicationsAlarm Package: security.UserSuspended Raised on class: security.User	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: multipleSecurityViolations	Release: • N/A
Description: The alarm is raised when a user account is suspended.		

Table 39-1140 UserSuspended (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational - the user is suspended due to either a) the user account has been dormant longer than system's age threshold for account expiry, b) the password for the user has expired, or c) the number of authentication failures threshold before lockout has been reached.		

Table 39-1141 VirtualLinkDbDescriptAuthFailure

Alarm	Attributes	Applicable major release
Name: VirtualLinkDbDescriptAuthFailure (61) Type: authenticationAlarm Package: ospf.VirtualLinkDbDescriptAuthFailure Raised on class: ospf.VirtualLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: authTypeMismatch Applicable probable causes: • authTypeMismatch • authFailure	Release: • N/A
Description: The alarm is raised when an NE receives a dbDescript packet on a virtual link from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a dbDescript packet has been received on a virtual link from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 39-1142 VirtualLinkDbDescriptConfig

Alarm	Attributes	Applicable major release
Name: VirtualLinkDbDescriptConfig (55) Type: configurationAlarm Package: ospf.VirtualLinkDbDescriptConfig Raised on class: ospf.VirtualLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: badVersion Applicable probable causes: • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifAdminDown • ifPassive	Release: • N/A
Description: The alarm is raised when an NE receives a dbDescript packet on a virtual link from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a dbDescript packet has been received on a virtual link from the network whose configuration parameters conflict with the local NE's configurations.		

Table 39-1143 VirtualLinkHelloAuthFailure

Alarm	Attributes	Applicable major release
Name: VirtualLinkHelloAuthFailure (60) Type: authenticationAlarm Package: ospf.VirtualLinkHelloAuthFailure Raised on class: ospf.VirtualLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: authTypeMismatch Applicable probable causes: • authTypeMismatch • authFailure	Release: • N/A
Description: The alarm is raised when an NE receives a hello packet on a virtual link from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a hello packet has been received on a virtual link from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 39-1144 VirtualLinkHelloConfig

Alarm	Attributes	Applicable major release
Name: VirtualLinkHelloConfig (54) Type: configurationAlarm Package: ospf.VirtualLinkHelloConfig Raised on class: ospf.VirtualLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: badVersion Applicable probable causes: • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifAdminDown • ifPassive	Release: • N/A
Description: The alarm is raised when an NE receives a hello packet on a virtual link from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a hello packet has been received on a virtual link from the network whose configuration parameters conflict with the local NE's configurations.		

Table 39-1145 VirtualLinkLsAckAuthFailure

Alarm	Attributes	Applicable major release
Name: VirtualLinkLsAckAuthFailure (64) Type: authenticationAlarm Package: ospf.VirtualLinkLsAckAuthFailure Raised on class: ospf.VirtualLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: authTypeMismatch Applicable probable causes: • authTypeMismatch • authFailure	Release: • N/A
Description: The alarm is raised when an NE receives an lsAck packet on a virtual link from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a lsAck packet has been received on a virtual link from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 39-1146 VirtualLinkLsAckConfig

Alarm	Attributes	Applicable major release
Name: VirtualLinkLsAckConfig (58) Type: configurationAlarm Package: ospf.VirtualLinkLsAckConfig Raised on class: ospf.VirtualLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: badVersion Applicable probable causes: • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifAdminDown • ifPassive	Release: • N/A
Description: The alarm is raised when an NE receives an lsAck packet on a virtual link from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a lsAck packet has been received on a virtual link from the network whose configuration parameters conflict with the local NE's configurations.		

Table 39-1147 VirtualLinkLsReqAuthFailure

Alarm	Attributes	Applicable major release
Name: VirtualLinkLsReqAuthFailure (62) Type: authenticationAlarm Package: ospf.VirtualLinkLsReqAuthFailure Raised on class: ospf.VirtualLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: authTypeMismatch Applicable probable causes: • authTypeMismatch • authFailure	Release: • N/A
Description: The alarm is raised when an NE receives an lsReq packet on a virtual link from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a lsReq packet has been received on a virtual link from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 39-1148 VirtualLinkLsReqConfig

Alarm	Attributes	Applicable major release
Name: VirtualLinkLsReqConfig (56) Type: configurationAlarm Package: ospf.VirtualLinkLsReqConfig Raised on class: ospf.VirtualLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: badVersion Applicable probable causes: • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifAdminDown • ifPassive	Release: • N/A
Description: The alarm is raised when an NE receives an lsReq packet on a virtual link from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a lsReq packet has been received on a virtual link from the network whose configuration parameters conflict with the local NE's configurations.		

Table 39-1149 VirtualLinkLsUpdateAuthFailure

Alarm	Attributes	Applicable major release
Name: VirtualLinkLsUpdateAuthFailure (63) Type: authenticationAlarm Package: ospf.VirtualLinkLsUpdateAuthFailure Raised on class: ospf.VirtualLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: authTypeMismatch Applicable probable causes: • authTypeMismatch • authFailure	Release: • N/A
Description: The alarm is raised when an NE receives an lsReq packet on a virtual link from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a lsUpdate packet has been received on a virtual link from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 39-1150 VirtualLinkLsUpdateConfig

Alarm	Attributes	Applicable major release
Name: VirtualLinkLsUpdateConfig (57) Type: configurationAlarm Package: ospf.VirtualLinkLsUpdateConfig Raised on class: ospf.VirtualLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: badVersion Applicable probable causes: • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifAdminDown • ifPassive	Release: • N/A
Description: The alarm is raised when an NE receives an lsUpdate packet on a virtual link from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a lsUpdate packet has been received on a virtual link from the network whose configuration parameters conflict with the local NE's configurations.		

Table 39-1151 VirtualLinkNullPacketAuthFailure

Alarm	Attributes	Applicable major release
Name: VirtualLinkNullPacketAuthFailure (65) Type: authenticationAlarm Package: ospf.VirtualLinkNullPacketAuthFailure Raised on class: ospf.VirtualLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: authTypeMismatch Applicable probable causes: • authTypeMismatch • authFailure	Release: • N/A
Description: The alarm is raised when an NE receives a null packet on a virtual link from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a null packet has been received on a virtual link which authentication key or authentication type conflicts with the local NE's configuration.		

Table 39-1152 VirtualLinkNullPacketConfig

Alarm	Attributes	Applicable major release
Name: VirtualLinkNullPacketConfig (59) Type: configurationAlarm Package: ospf.VirtualLinkNullPacketConfig Raised on class: ospf.VirtualLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: badVersion Applicable probable causes: • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifAdminDown • ifPassive	Release: • N/A
Description: The alarm is raised when an NE receives a null packet on a virtual link from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a null packet has been received on a virtual link which configuration parameters conflict with the local NE's configurations.		

Table 39-1153 VirtualLinkRxBadPacket

Alarm	Attributes	Applicable major release
Name: VirtualLinkRxBadPacket (66) Type: communicationsAlarm Package: ospf.VirtualLinkRxBadPacket Raised on class: ospf.VirtualLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: hello Applicable probable causes: • hello • dbDescript • lsReq • lsUpdate • lsAck • nullPacket	Release: • N/A
Description: The alarm is raised when an NE cannot parse an OSPF packet that it receives on a virtual interface.		

Table 39-1153 VirtualLinkRxBadPacket (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational - an NE cannot parse an OSPF packet that it receives on a virtual interface.		

Table 39-1154 VirtualMachineDown

Alarm	Attributes	Applicable major release
Name: VirtualMachineDown (4909) Type: vmAlarm Package: dctr.VirtualMachineDown Raised on class: dctr.VirtualMachine	Severity: info Specific problem: Not Applicable Implicitly cleared: true Default probable cause: VirtualMachineShutDownOr-DeletedOrCrashed	Release: • N/A
Description: The alarm is raised when VM is shutdown.		
Remedial action: This alarm can be cleared when virtual machine is up.		

Table 39-1155 VirtualMachineSuspended

Alarm	Attributes	Applicable major release
Name: VirtualMachineSuspended (4911) Type: vmAlarm Package: dctr.VirtualMachineSuspended Raised on class: dctr.VirtualMachine	Severity: info Specific problem: Not Applicable Implicitly cleared: true Default probable cause: UserInitiatatedOrRequire-dResourceIdBeingBlocked	Release: • N/A
Description: The alarm is raised when VM state changes to Paused on this object.		
Raising condition: (('Virtual Machine State' EQUAL 'Paused'))		
Clearing condition: (('Virtual Machine State' NOT EQUAL 'Paused'))		
Remedial action: This alarm can be cleared when the virtual machine is resumed.		

Table 39-1156 VirtualPortDown

Alarm	Attributes	Applicable major release
Name: VirtualPortDown (5434) Type: virtualPortAlarm Package: dctr.VirtualPortDown Raised on class: dctr.AbstractVirtualPort	Severity: info Specific problem: Not Applicable Implicitly cleared: true Default probable cause: VirtualPortDownOrDeleted	Release: • N/A
Description: The alarm is raised when VP is shutdown.		
Remedial action: This alarm can be cleared when virtual port is up.		

Table 39-1157 VirtualRouterDown

Alarm	Attributes	Applicable major release
Name: VirtualRouterDown (277) Type: configurationAlarm Package: vrrp.VirtualRouterDown Raised on class: vrrp.VrrpVirtualRouter	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: virtualRouterDown	Release: • N/A
Description: The alarm is raised when the aggregated Operational State of a VR is Down.		
Raising condition: (('Aggregated Operational State' EQUAL 'Down'))		
Clearing condition: (('Aggregated Operational State' NOT EQUAL 'Down'))		
Remedial action: Check the configuration of both VRRP instances for the VRRP virtual router.		

Table 39-1158 VirtualServicesControllerDown

Alarm	Attributes	Applicable major release
Name: VirtualServicesControllerDown (8430) Type: virtualSwitchControllerAlarm Package: dctr.VirtualServicesControllerDown Raised on class: dctr.VirtualSwitchController	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ControllerNotOperationallyUp	Release: • N/A
Description: The alarm is raised when Virtual Services Controller is not operationally up.		
Raising condition: (('Operational State' EQUAL 'Down'))		
Clearing condition: (('Operational State' EQUAL 'Up'))		
Remedial action: This alarm can be cleared when virtual services controller is operationally up.		

Table 39-1159 VirtualSwitchDown

Alarm	Attributes	Applicable major release
Name: VirtualSwitchDown (4913) Type: virtualSwitchAlarm Package: dctr.VirtualSwitchDown Raised on class: dctr.AbstractVirtualSwitchGlobal	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ControllerDownOrPhysi-calPortDownOrInterfaceDown	Release: • N/A
Description: The alarm is raised when Openflow session to the virtual switch is lost.		
Remedial action: This alarm can be cleared when virtual switch is operationally up.		

Table 39-1160 VirtualSwitchIpAddressDuplicated

Alarm	Attributes	Applicable major release
Name: VirtualSwitchIpAddressDuplicated (5435) Type: virtualSwitchAlarm Package: dctr.VirtualSwitchIpAddressDuplicated Raised on class: dctr.AbstractVirtualSwitchGlobal	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: VirtualSwitchIpAddressMis-Configuration	Release: • N/A
Description: The alarm is raised when more than one virtual switches in the same domain have the same ip address. Virtual switches that are not belong or have not been associated to any domain are considered to be in 'undefined' domain.		
Remedial action: This might have caused by a network configuration. Please check the status of the Admin Domain and/or the Virtual Switch ip address and controller state. Please make sure the CPAA is managed, Admin Domain is operational, then unmanage the node with duplicate virtual switch ip address and remanage it again. This alarm must be cleared manually.		

Table 39-1161 VirtVpnBGPPrefixConflict

Alarm	Attributes	Applicable major release
Name: VirtVpnBGPPrefixConflict (5431) Type: virtualPortAlarm Package: dctr.VirtVpnBGPPrefixConflict Raised on class: dctr.AbstractVirtualPort	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: DuplicateVswNextHop_ VmExistsOnTwoLocations	Release: • N/A
Description: The alarm is raised when routes or service context could be stuck in compute or the network.		
Remedial action: Routes or service context could be stuck in compute or the network. Reapply compute or network policies to reset the network attachment.		

Table 39-1162 VirtVpnBGPPrefixUnreachable

Alarm	Attributes	Applicable major release
Name: VirtVpnBGPPrefixUnreachable (5432) Type: virtualPortAlarm Package: dctr.VirtVpnBGPPrefixUnreachable Raised on class: dctr.AbstractVirtualPort	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: VportCannotBeReachedFrom-BgpVpn	Release: • N/A
Description: The alarm is raised when there is no route for the VPN regardless of routing on the virtual port.		
Remedial action: There is no route for the VPN regardless of routing on the virtual port. This may be an RR/VSC policy issue or internal VSD policy issue; e.g. no route assigned.		

Table 39-1163 VirtVpnBGPPrefixUnstable (vpls)

Alarm	Attributes	Applicable major release
Name: VirtVpnBGPPrefixUnstable (9010) Type: serviceAlarm Package: vpls.VirtVpnBGPPrefixUnstable Raised on class: vpls.AbstractVpls	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: BgpNetworkUnstable	Release: • N/A
Description: The alarm is raised when BGP Prefix defined in Data Center BGP Profile has been matched and Alarm requested by user. The alarm is raised based on 1 min accumulation interval: if during this interval any appropriate BGP Prefix went unreachable OR flapped OR lost redundancy the alarm shall be raised.		
Remedial action: Navigate to DC Historical Correlation Events to see affected prefixes. Based on this info debug BGP Network		

Table 39-1164 VirtVpnBGPPrefixUnstable (vprn)

Alarm	Attributes	Applicable major release
Name: VirtVpnBGPPrefixUnstable (9010) Type: serviceAlarm Package: vprn.VirtVpnBGPPrefixUnstable Raised on class: vprn.Vprn	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: BgpNetworkUnstable	Release: • N/A
Description: The alarm is raised when BGP Prefix defined in Data Center BGP Profile has been matched and Alarm requested by user. The alarm is raised based on 1 min accumulation interval: if during this interval any appropriate BGP Prefix went unreachable OR flapped OR lost redundancy the alarm shall be raised.		
Remedial action: Navigate to DC Historical Correlation Events to see affected prefixes. Based on this info debug BGP Network		

Table 39-1165 VirtVpnBGPPrefixWithdrawnNotReceived

Alarm	Attributes	Applicable major release
Name: VirtVpnBGPPrefixWithdrawnNotReceived (5433) Type: virtualPortAlarm Package: dctr. VirtVpnBGPPrefixWithdrawnNotReceived Raised on class: dctr.AbstractVirtualPort	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: VportAddressMismatchWithB-gpRoute	Release: • N/A
Description: The alarm is raised when there is no route on virtual port whereas BGP RIB has a route or routes which do not match.		
Remedial action: There is no route on virtual port whereas BGP RIB has a route or routes which do not match. Check compute and Nuage virtualization policies.		

Table 39-1166 VlanSubTypeConflict

Alarm	Attributes	Applicable major release
Name: VlanSubTypeConflict (227) Type: configurationAlarm Package: vlan.VlanSubTypeConflict Raised on class: vlan.Vlan	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: topologyMisconfigured	Release: • N/A
Description: The alarm is raised when more than one type of VLAN service has the same VLAN ID. The alarm is raised against a service.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		
Remedial action: Ensure that the VLAN Subtype of the Site matches the VLAN Subtype of the Service.		

Table 39-1167 VLanUplinkDown

Alarm	Attributes	Applicable major release
Name: VLanUplinkDown (1146) Type: VLanUplinkAlarm Package: service.VLanUplinkDown Raised on class: service.VlanUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: VLanUplinkDown	Release: • N/A
Description: The alarm is raised when a VLAN uplink is operationally down.		
Raising condition: (('Aggregation Operational State' EQUAL 'Partially Down') OR ('Aggregation Operational State' EQUAL 'Down'))		
Clearing condition: (('Aggregation Operational State' NOT EQUAL 'Partially Down') AND ('Aggregation Operational State' NOT EQUAL 'Down'))		
Remedial action: Check the underlying physical link for the SAPs.		

Table 39-1168 VLanUplinkNotCreated

Alarm	Attributes	Applicable major release
Name: VLanUplinkNotCreated (1147) Type: VLanUplinkAlarm Package: service.VLanUplinkNotCreated Raised on class: service.Service	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: VLanUplinkNotCreated	Release: • N/A
Description: The alarm is raised when an expected VLAN uplink does not exist.		
Remedial action: Make sure the two participating ports which hold the uplink SAPs of the service are physically connected and operationally up. And make sure a physical link is created and is operationally up either by enabling LLDP or manually creating a physical link between those ports.If the physical link already exists and operationally up, make sure the uplink SAPs has been created with matching encapsulation values, in case the uplink SAPs has already been created with different encapsulation values, please delete those uplink SAPs and create the uplink SAPs with same encapsulation values.		

Table 39-1169 VNFCDown

Alarm	Attributes	Applicable major release
Name: VNFCDown (9583) Type: ConfigurationAlarm Package: nfv.VNFCDown Raised on class: nfv.VNFComponent	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: vmNotActive	Release: • N/A
Description: The alarm is raised when Virtual Network Function VM is not active.		
Remedial action: This alarm can be cleared when virtual network function resource is active.		

Table 39-1170 VnfResourceOperationFailed

Alarm	Attributes	Applicable major release
Name: VnfResourceOperationFailed (9612) Type: ConfigurationAlarm Package: nfv.VnfResourceOperationFailed Raised on class: nfv.VirtualNetworkFunction	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ResourceManagementAPI-CallToCloudManagerFail	Release: • N/A
Description: The alarm is raised when Virtual Network Function resource is not operationally up.		
Remedial action: User can check for the statusReason to find the cause of failure and retry. This alarm can be cleared when virtual network function request is successful.		

Table 39-1171 VoiceChannelLoopback

Alarm	Attributes	Applicable major release
Name: VoiceChannelLoopback (1148) Type: configurationAlarm Package: tdmequipment.VoiceChannelLoopback Raised on class: tdmequipment.VoiceChannelSpecifics	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: voiceChannelLoopback	Release: • N/A
Description: The alarm is raised when an NE reports that a voice channel has a loopback alarm condition.		
Remedial action: Informational only.		

Table 39-1172 vPortHostMatchFailure

Alarm	Attributes	Applicable major release
Name: vPortHostMatchFailure (3628) Type: configurationAlarm Package: equipment.vPortHostMatchFailure Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tPortEgrVPortHostMatchFail-ure	Release: • N/A

Table 39-1172 vPortHostMatchFailure (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when a host match lookup fails to resolve the egress virtual port.		
Remedial action: This alarm is raised when the subscriber host with an intermediate destination ID that does not match the host-match destination set under the V-port. \nModify the intermediate destination ID of the subscriber host to match the host-match defined in the v-port; Or modify the host-match destination ID to match the intermediate destination ID of the subscriber host.		

Table 39-1173 VprnTypeMismatched

Alarm	Attributes	Applicable major release
Name: VprnTypeMismatched (8149) Type: configurationAlarm Package: vprn.VprnTypeMismatched Raised on class: vprn.Vprn	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: vprnTypeMismatched	Release: • N/A
Description: The alarm is raised when the newly created VPRN Site has a VPRN type that is of a different topology from existing VPRN Sites of the service, i.e, mesh vs hub/spoke, or vice versa.		
Remedial action: A configuration error has occurred which should be corrected. The VPRN type of the created site is of a different topology type from the existing VPRN Sites of the service, i.e., mesh and hub/spoke sites shall not be mixed in the same service. The service shall be deleted and re-created with consistent type.		

Table 39-1174 VSiteServiceImpacted

Alarm	Attributes	Applicable major release
Name: VSiteServiceImpacted (5430) Type: serviceAlarm Package: dctr.VSiteServiceImpacted Raised on class: dctr.AbstractVirtualSite	Severity: info Specific problem: Not Applicable Implicitly cleared: true Default probable cause: VirtualPortReachability	Release: • N/A
Description: The alarm is raised on the VSite object when there is an alarm on VPort that affects service.		
Remedial action: One or more virtual ports are down or have BGP reachability problem such as stuck or unreachable prefix. This alarm can be cleared when the corresponding alarms on virtual ports are cleared.		

Table 39-1175 VwmShelfCardRemoved

Alarm	Attributes	Applicable major release
Name: VwmShelfCardRemoved (5661) Type: equipmentAlarm Package: equipment.VwmShelfCardRemoved Raised on class: equipment.VWMCardSlot	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: VwmShelfCardRemoved	Release: • N/A
Description: The alarm is raised when a vwm card is removed.		
Remedial action: Informational - a vwm shelf card has been removed from the NE		

Table 39-1176 VwmShelfMismatch

Alarm	Attributes	Applicable major release
Name: VwmShelfMismatch (4941) Type: equipmentAlarm Package: equipment.VwmShelfMismatch Raised on class: equipment.VwmShelf	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: VwmShelfMismatch	Release: • N/A
Description: The alarm is raised when the configured vwm shelf id is different than the equipped vwm shelf.		
Remedial action: This alarm is raised when the detected VWM shelf id does not match the provisioned id. Please follow the below steps to clear this alarm:\n a. Check the id on the rotary dial on the VWM SHelf.\n b. Use any of the following commands to clear the alarm. \n c. To change the VWM shelf id("config system vwm-shelf <shelf-id> .\n d. To delete an existing shelf("config system no vwm-shelf <shelf-id>").		

Table 39-1177 VwmShelfRemoved

Alarm	Attributes	Applicable major release
Name: VwmShelfRemoved (4942) Type: equipmentAlarm Package: equipment.VwmShelfRemoved Raised on class: equipment.VwmShelf	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: VwmShelfRemoved	Release: • N/A
Description: The alarm is raised when a vwm shelf is removed.		
Remedial action: Informational - a vwm shelf has been removed from the NE		

Table 39-1178 WaitToRevertMismatchAlarm

Alarm	Attributes	Applicable major release
Name: WaitToRevertMismatchAlarm (8425) Type: integrityViolation Package: gmpls.WaitToRevertMismatchAlarm Raised on class: gmpls.DbLink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: waitToRevertMismatch	Release: • N/A
Description: The alarm is raised when the Wait to Revert (WTR) configured on the endpoints of the DB Link do not match.		
Remedial action: This alarm indicates that the Wait to Revert (WTR) configured on the endpoints of the discovered DB Link do not match. Please make sure the WTR is the same on the databearers at each end.		

Table 39-1179 WmmLSS_nodeGroupOOS

Alarm	Attributes	Applicable major release
Name: WmmLSS_nodeGroupOOS (4808) Type: mmeAlarm Package: ltemme.WmmLSS_nodeGroupOOS Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • N/A

Table 39-1179 WmmLSS_nodeGroupOOS (continued)

Alarm	Attributes	Applicable major release
Description: This Major alarm occurs when a Node Group state enters Redundancy. This Critical alarm occurs when a Node Group state enters Fault.		
Remedial action: The alarm is cleared when the node group state changed to Normal, i.e. all the nodes in this node group enter In Service(unblocked) state.\nDetermine that there are no errors within the IP network. If errors exist, follow the operating procedures to correct these errors.\nDetermine that the Ethernet Switch Card (ESC) is in service. If not, follow the local operating procedures to restore the ESC to service.\nDetermine that the DNS is provisioned with correct IP addresses for the Destination URI. If not, correctly provision the DNS with the correct IP addresses for the Destination URI.		

Table 39-1180 WmmLSS_nodeOOS

Alarm	Attributes	Applicable major release
Name: WmmLSS_nodeOOS (4809) Type: mmeAlarm Package: ltemme.WmmLSS_nodeOOS Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • N/A
Description: This alarm indicates the state of a Node has changed from in-service to out-of-service.		
Remedial action: Determine if the destination URI is in service and is able to respond to the SIP heartbeat. If not, follow the operating procedures to restore the destination URI to service.\nDetermine that there are no errors within the IP network. If errors exist, follow the operating procedures to correct these errors.\nDetermine that the Ethernet Switch Card (ESC) is in service. If not, follow the local operating procedures to restore the ESC to service.\nDetermine that the DNS is provisioned with correct IP addresses for the Destination URI. If not, correctly provision the DNS with the correct IP addresses for the Destination URI.		

Table 39-1181 WmmLSS_rccInhibitedMode

Alarm	Attributes	Applicable major release
Name: WmmLSS_rccInhibitedMode (4810) Type: mmeAlarm Package: ltemme.WmmLSS_rccInhibitedMode Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • N/A
Description: This alarm will be raised when RCC is set to inhibited mode on a host. Inhibited mode will prevent any service on that host from being switched over to its mate, or from failing over to its mate, and is typically used only during maintenance activities such as software upgrade or patching.		
Remedial action: The alarm will clear automatically when the RCC inhibit flag is cleared on the affected host.\n1. To display the RCC inhibit flag on a host, run this command on the MI: For ATCA: rcc_adm --action disp_inhibit --host <amp value="'lt'/>hostname<amp value='gt'/> For cPSB: rccInhibit -d <amp value='lt'/>hostname<amp value='gt'/> where <amp value='lt'/>hostname<amp value='gt'/> is the affected host name\n2. To clear the RCC inhibit flag on a host, run this command from the MI: For ATCA: rcc_adm --action clr_inhibit --host <amp value='lt'/>hostname<amp value='gt'/> For cPSB: rccInhibit -a CLEAR <amp value='lt'/>hostname<amp value='gt'/> where <amp value='lt'/>hostname<amp value='gt'/> is the affected host name\nIf the alarm does not clear after clearing the RCC inhibit flag, contact your Nokia support representative"		

Table 39-1182 WmmLSS_sipLinkSetMaxQuarantineList

Alarm	Attributes	Applicable major release
Name: WmmLSS_sipLinkSetMaxQuarantineList (4811) Type: mmeAlarm Package: ltemme.WmmLSS_sipLinkSetMaxQuarantineList Raised on class: ltemme.MmeAlarmEntry	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason	Release: • N/A
Description: This alarm occurs when the maximum number of out of service SIP linkset has been reached in the quarantine list.		
Remedial action: need manual procedure to clear the alarm		

Table 39-1183 WMMSoftwareUpgradeInProgress

Alarm	Attributes	Applicable major release
Name: WMMSoftwareUpgradeInProgress (9603) Type: configurationAlarm Package: sw.WMMSoftwareUpgradeInProgress Raised on class: sw.SoftwareUpgradeManager	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: softwareUpgradeInProgress	Release: • N/A
Description: This alarm is raised when SAM detects that a WWM Software Upgrade status is 'in-progress' on server start-up.		
Remedial action: SAM has detected that the WMM Software Upgrade status is 'in-progress' on server start-up. Run a Software Inventory to correctly update the status or Continue if 'Image Files Transfer Failed'. You may have to wait until the operation finishes executing on the node in order to get into a 'Continue' state.		

Table 39-1184 WriteFileToDisk

Alarm	Attributes	Applicable major release
Name: WriteFileToDisk (1940) Type: serverAlarm Package: server.WriteFileToDisk Raised on class: server.SamServer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: false Default probable cause: diskSpaceIssue	Release: • N/A
Description: The alarm is raised when SAM cannot write a file to disk.		
Remedial action: Check the additional text of the alarm for more details. Possible causes are lack of disk space or insufficient file permissions. The additional text will provide guidance as to the specifics of the problem.		

Table 39-1185 XPICCableLoss

Alarm	Attributes	Applicable major release
Name: XPICCableLoss (4851) Type: communicationsAlarm Package: mwa.XPICCableLoss Raised on class: mwa.PortTermination	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: DemodulatorXPICLossOfSignal	Release: • N/A
Description: The alarm is raised when a MPT detects a XPIC plug-in cable loss		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 39-1186 XpIIngrError

Alarm	Attributes	Applicable major release
Name: XpIIngrError (8382) Type: hardwareAnomaly Package: equipment.XpIIngrError Raised on class: equipment.DaughterCard	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: XpIIngrError	Release: • N/A
Description: The alarm is raised when an MDA reports persistent Ingress XPL Errors.		
Remedial action: Informational - if the condition persists then the MDA indicated in the alarm should be replaced.		

Table 39-1187 YellowAlarmThresholdReached

Alarm	Attributes	Applicable major release
Name: YellowAlarmThresholdReached (245) Type: communicationsAlarm Package: netw.YellowAlarmThresholdReached Raised on class: netw.NmsSystem	Severity: critical Specific problem: Not Applicable Implicitly cleared: false Default probable cause: tooManyAlarms	Release: • N/A
Description: The alarm is raised when the number of outstanding 5620 SAM alarms reaches the yellow threshold. When this happens, the 5620 SAM discards non-critical alarms to keep the number below the threshold.		
Remedial action: Informational - if the alarm persists or is occurring frequently perform root cause analysis to determine why the NEs in the network are consistently generating high rates of alarms.		

40 Nokia - FDD Airscale

40.1 Alarms

Alarms

Note: Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see Chapter 39, “Unspecified NE”.

Table 40-1 ActiveAbnormalCondition

Alarm	Attributes	Applicable major release
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm Package: netw.ActiveAbnormalCondition Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState	Release: • FL16A
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

Table 40-2 AGWDiameterPeerDown

Alarm	Attributes	Applicable major release
Name: AGWDiameterPeerDown (844) Type: EpcAlarm Package: lte.AGWDiameterPeerDown Raised on class: lte.AGWDiameterPeer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerDown	Release: • FL16A
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 40-3 AUTO_NEGO_MIS_MATCH

Alarm	Attributes	Applicable major release
Name: AUTO_NEGO_MIS_MATCH (11513) Type: communicationsAlarm Package: racfl.AUTO_NEGO_MIS_MATCH Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: AUTO NEGO MIS MATCH Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: AUTO NEGO MIS MATCH\n\nThis alarm indicates that there is a mismatch between the BTS configuration and the auto-negotiation result.\n\nIf the alarm is active, a synchronization loop is possible.\n\n		
Remedial action: Flexi BTS FDD, Flexi BTS TDD, AirScale BTS FDD, AirScale BTS TDD:\nTry with local management or site support equipment.\n\nFlexi Zone Micro FDD, Flexi Zone Micro TDD, Flexi Zone:\nConfirm that the Ethernet Synchronization master/slave settings are correct on the Flexi Zone Micro BTS or Flexi Zone Access Point and backhaul equipment. \nNote: The Flexi Zone Micro BTS and Flexi Zone Access Point only support slave mode.		

Table 40-4 AuxiliaryServerStatus

Alarm	Attributes	Applicable major release
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm Package: server.AuxiliaryServerStatus Raised on class: server.AuxiliaryServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • FL16A
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 40-5 BareMetalReachabilityDown

Alarm	Attributes	Applicable major release
Name: BareMetalReachabilityDown (10273) Type: virtualPortAlarm Package: dctr.BareMetalReachabilityDown Raised on class: dctr.BMDevice	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BareMetalReachability-DownOrDeleted	Release: • FL16A
Description: The alarm is raised when Bare Metal server is reachability down.		
Raising condition: (('bgpReachabilityState' NOT EQUAL '0'))		
Clearing condition: (('bgpReachabilityState' EQUAL '0'))		
Remedial action: This alarm can be cleared when bare metal device BGP prefix is up. Check for virtual switch controller down or virtual switch down or interface/port down in underlay network (hence the BGP prefix not advertised).		

Table 40-6 BASE_STATION_CONNECTIVITY_DEGRADED

Alarm	Attributes	Applicable major release
Name: BASE_STATION_CONNECTIVITY_ DEGRADED (11514) Type: communicationsAlarm Package: racfl.BASE_STATION_CONNECTIVITY_ DEGRADED Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: BASE STATION CONNECTIVITY DEGRADED Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: BASE STATION CONNECTIVITY DEGRADED\n\nA major fault (or faults) has occured in the base station interface. Check the reason for the fault from the supplementary text field of the alarm.\n\nThe effect of the fault on the functioning of the network element depends on the fault description. For more information, see base station fault descriptions in LTE System Libraries.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		

Table 40-6 BASE_STATION_CONNECTIVITY_DEGRADED (continued)

Alarm	Attributes	Applicable major release
Remedial action: FAULT NAME\nGTP-U Path Failure\n\nFAULT ID\n6150: EFaultId_GtpuPathFailure\n\nMEANING\nIn GTP-U supervision, a network element did not respond to the GTP-U: Echo Request message within the allotted time.\n\nINSTRUCTIONS\n1. Check the GTP-U path supervision configuration of the eNB. \n2. Check if the supervised network element is operating correctly.\n3. Check the communication equipment between the eNB and the supervised network element.\n\nIn case actDualUPlaneIpAddress =" true, the S-GW might still be reachable although an alarm caused by fault 6150 is reported.\nCheck whether other alarms caused by fault 6150 are active, and check whether all GTP-U paths to the S-GW are concerned or not. If you find that all GTP-U paths to the same S-GW are faulty, the S-GW is not reachable anymore.\n\n\n\n\nFAULT NAME\nM3 interface recovery failure\n\nFAULT ID\n6850: EFaultId_M3ResetRetryOut\n\nMEANING\nM3 interface reset has failed after several attempts. This indicates that a severe failure has occurred. There might be some configuration problem, there is no M3 connectivity, MME has failed, and so on.\n\nINSTRUCTIONS\nNote: Perform the steps below in the listed order until the alarm disappears.\n\n1. Check the availability of MME.\n2. Check the connection with MME.\n3. Disconnect and reconnect MME.\n\n\n\n\nFAULT NAME\nM3 interface setup failure\n\nFAULT ID\n6851: EFaultId_M3SetupFailure\n\nMEANING\nThere is no M3 connectivity to an MME, the MME has failed, and so on. If the fault is canceled, autonomous recovery actions (reset) have solved the fault situation.\n\nINSTRUCTIONS\nNote: Perform the steps below in the listed order until the alarm disappears:\n\n1. Check availability of MME.\n2. Check other faults on MME and BTS.\n3. Check the parameters related to M3 interface in the BTS and MME.\n4. Reset the BTS.\n\n\n\n\nFAULT NAME\nRIM interface error\n\nFAULT ID\n6323: EFaultId_RimInterfaceError\n\nMEANING\n1. An RIM association could not be established because an RIM Error PDU has been received for an RIM-enabled GERAN neighbor cell.\n2. An RIM Application Error has been detected.\n3. S1 links to all configured MMEs are active, but the routing of RIM PDU to the RIM-enabled WCDMA neighbor cell is not available.\n\nINSTRUCTIONS\nCheck the value of the parameter "rimStatus" in LNADJG or LNADJW (according to the alarm source) objects to find all impacted RIM associations.\n\nIf only a few LNADJG or LNADJW objects have "rimStatus" Unavailable, check if LNADJG or LNADJW identifiers (cell global ID) of related GERAN or UTRAN cells are correct.\n\nIf many LNADJG or LNADJW objects have "rimStatus" Unavailable, check the connectivity to GSM or WCDMA network (MME<->SGSN<->BSC).\n\nNote that only one alarm for one PLMN is raised due to the RIM faults for GERAN and only one for UTRAN, no matter how many LNADJGs or LNADJWs are affected at a given time. The alarm is raised for the first LNAJDG or LNADJW where the fault is detected. The alarm additional information contains the parameters of the first LNADJG or LNADJW, even if the RIM fault is already inactive for the LNADJG or LNADJW, but the fault is still active for other LNADJG or LNADJW supporting the same PLMN.\n\n\n\n\nFAULT NAME\nRIM interface timeout\n\nFAULT ID\n6322: EFaultId_ RimInterfaceTimeout\n\nMEANING\nA RIM request to the serving BSS has failed after several attempts. This means that the System Information for the related GERAN or UTRAN neighbor cells is not reliable.\n\nINSTRUCTIONS\nCheck the value of the parameter "rimStatus" in LNADJG or LNADJW (according to the alarm source) objects to find all impacted RIM associations.\n\nIf only a few LNADJG or LNADJW objects have "rimStatus" Unavailable, check if the LNADJG or LNADJW identifiers (cell global ID) of the related GERAN or UTRAN cells are correct.\n\nIf many LNADJG or LNADJW objects have "rimStatus" Unavailable, check the connectivity to the GSM or WCDMA network (MME<->SGSN<->BSC).\n\nNote that only one alarm for one PLMN is raised due to the RIM faults for GERAN, and only one for UTRAN no matter how many LNADJGs or LNADJWs are affected at a given time. The alarm is raised for the first LNAJDG or LNADJW where the fault is detected. The alarm additional information contains the parameters of the first LNADJG or LNADJW even if the RIM fault is already inactive for the LNADJG or LNADJW, but the fault is still active for other LNADJG or LNADJW supporting the same PLMN.\n\n\n\n\nFAULT NAME\nS1 interface recovery failure\n\nFAULT ID\n6317: EFaultId_S1ResetRetryOut\n\nMEANING\nThe S1 interface reset has failed after several attempts. This indicates that a severe failure has occurred: there is some configuration problem; there is no S1 connectivity; MME has failed; and so on.\n\nINSTRUCTIONS\nNote: Perform the steps below in the listed order until the alarm disappears:\n\n1. Check the availability of the MME.\n2. Check the connection with the MME.\n3. Disconnect and reconnect the MME.\n\n\n\n\nFAULT NAME\nS1 interface setup failure\n\nFAULT ID\n6308: EFaultId_ S1SetupRetryOut\n\nMEANING\nFlexi BTS FDD, Flexi BTS TDD, AirScale BTS FDD, AirScale BTS TDD:\nThere is no S1 connectivity to an MME. \n\nThe fault is generated if the S1 setup procedure has subsequently been attempted but failed the number of times equal to "maxS1SetRetry".\n\nFlexi Zone Micro FDD, Flexi Zone Micro TDD:\nThere is no S1 connectivity to an MME, the MME has failed, and so on. If the fault is cancelled, autonomous recovery actions (reset) will solve the fault situation.\n\nINSTRUCTIONS\nNote: Perform the steps below in the listed order until the alarm disappears:\n\n1. Check the availability of the MME.\n2. Check other faults on the MME and BTS.\n3. Check the parameters related to the S1 interface in the BTS and MME.\n4. Reset the BTS.\n\n\n\n\nFAULT NAME\nS1 SCTP path failure\n\nFAULT ID\n6204: EFaultId_S1SctpPathAl\n\nMEANING\nOne of the transport paths (SCTP) in SCTP connection to the MME has failed. This is only applicable when SCTP multi-homing is supported. An alternate transport path is available to continue operation.\n\nINSTRUCTIONS\n1. Check whether the transport path is alive.\2. Check the configuration of transport addresses at MME.\n\n\n\n\nFAULT NAME\nToggling: <Fault name>\n\nFAULT ID\n4026: EFaultId_TogglingAl\n\nMEANING\nThis alarm is used to inform the operator that another BTS fault (the original fault) is toggling.\nThe alarm that is related to the original fault is suppressed and the new alarm, which is related to fault 4026: EFaultId_TogglingAlFault, is raised.\n\nToggling alarms that are related to the original faults are suppressed until the toggling condition is cleared.\n\nThe severity of this BTS fault is the same as the severity of the original\ntoggling BTS fault.\n\nINSTRUCTIONS\n1. Check the fault name of the toggling BTS fault. \n2. Follow the instructions of the toggling BTS fault to clear the problem.\n \nNote: Detailed information about the toggling frequency can be found in the alarm history file, which can be downloaded using BTS Site Manager. The log file is available with Snapshot.\n\n\n\n\nFAULT NAME\nTransport layer connection failure in M3 interface\n\nFAULT ID\n6205: EFaultId_M3SctpEndpointAl\n\nMEANING\nThe transport path (SCTP) for connection to MME has been broken. The reason for this can be an unplugged cable to MME. No transport path is available to pursue operation on the faulty connection with the MME.\n\nINSTRUCTIONS\nNote: Perform the steps below in the listed order until the alarm disappears:\n1. Check the connection with MME, particularly whether the M3 link is broken.\n2. Check if the MME is operational.\n3. Check if the speed and duplex setting of eNB M3 port is consistent with switch port, which is connected directly to the eNB for example both "Autodetect" or both "1000 Mbit/s Full duplex".\n\nIf this fault happens right after a commissioning or a configuration change, verify the following configuration data: IP address of the MME.\n\n\n\n\nFAULT NAME\nTransport layer connection failure in S1 interface\n\nFAULT ID\n6202: EFaultId_S1SctpEndpointAl\n\nMEANING\nThe transport path (SCTP) for connection to the MME is broken. This might be because of an unplugged cable to the MME. There is no transport path available to continue operation on the faulty connection with the MME.\n\nINSTRUCTIONS\nNote: Perform the steps below in the listed order until the alarm disappears:\n\n1.		

Table 40-7 BASE_STATION_CONNECTIVITY_LOST

Alarm	Attributes	Applicable major release
Name: BASE_STATION_CONNECTIVITY_LOST (11515) Type: communicationsAlarm Package: racfl.BASE_STATION_CONNECTIVITY_LOST Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: BASE STATION CONNECTIVITY LOST Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: BASE STATION CONNECTIVITY LOST\n\nA critical fault (or faults) has occured in the base station interface.\nCheck the reason for the fault from the supplementary text field of the\nalarm.\n\nThe effect of the fault on the functioning of the network element depends on the fault description. For more information, see base station fault descriptions in LTE System Libraries.\n\nDo not cancel the alarm. The system automatically cancels the alarm when\nthe fault has been corrected.		
Remedial action: FAULT NAME\nS1 interface recovery failure\n\nFAULT ID\n6317: EFaultId_S1ResetRetryOut\n\nMEANING\nThe S1 interface reset has failed after several attempts. This indicates that a severe failure has occurred: there is some configuration problem; there is no S1 connectivity; MME has failed; and so on.\n\nINSTRUCTIONS\nNote: Perform the steps below in the listed order until the alarm disappears:\n\n1. Check the availability of the MME.\n2. Check the connection with the MME.\n3. Disconnect and reconnect the MME.\n\n\n\n\nFAULT NAME\nS1 interface setup failure\n\nFAULT ID\n6308: EFaultId_S1SetupRetryOut\n\nMEANING\nFlexi BTS FDD, Flexi BTS TDD, AirScale BTS FDD, AirScale BTS TDD:\nThere is no S1 connectivity to an MME. \n\nThe fault is generated if the S1 setup procedure has subsequently been attempted but failed the number of times equal to "maxS1SetRetry".\n\nFlexi Zone Micro FDD, Flexi Zone Micro TDD:\nThere is no S1 connectivity to an MME, the MME has failed, and so on. If the fault is cancelled, autonomous recovery actions (reset) will solve the fault situation.\n\nINSTRUCTIONS\nNote: Perform the steps below in the listed order until the alarm disappears:\n\n1. Check the availability of the MME.\n2. Check other faults on the MME and BTS.\n3. Check the parameters related to the S1 interface in the BTS and MME.\n4. Reset the BTS.\n\n\n\n\nFAULT NAME\nToggling: <Fault name>\n\nFAULT ID\n4026: EFaultId_TogglingAl\n\nMEANING\nThis alarm is used to inform the operator that another BTS fault (the original fault) is toggling.\nThe alarm that is related to the original fault is suppressed and the new alarm, which is related to fault 4026: EFaultId_TogglingAlFault, is raised.\n\nToggling alarms that are related to the original faults are suppressed until the toggling condition is cleared.\n\nThe severity of this BTS fault is the same as the severity of the original\ntoggling BTS fault.\n\nINSTRUCTIONS\n1. Check the fault name of the toggling BTS fault. \n2. Follow the instructions of the toggling BTS fault to clear the problem.\n \nNote: Detailed information about the toggling frequency can be found in the alarm history file, which can be downloaded using BTS Site Manager. The log file is available with Snapshot.\n\n\n\n\nFAULT NAME\nTransport layer connection failure in S1 interface\n\nFAULT ID\n6202: EFaultId_S1SctpEndpointAl\n\nMEANING\nThe transport path (SCTP) for connection to the MME is broken. This might be because of an unplugged cable to the MME. There is no transport path available to continue operation on the faulty connection with the MME.\n\nINSTRUCTIONS\nNote: Perform the steps below in the listed order until the alarm disappears:\n\n1. Check the connection with the MME, accordingly, based on whether the S1 link is broken.\n2. Check if the MME is operational.\n3. Check if the speed and duplex setting of the eNB S1 port is consistent with the switch port that is connected directly to the eNB (for example, they are both "Autodetect" or both "1000 Mbit/s Full duplex").\n\nIf this fault happens right after a commissioning or a configuration change, verify the IP address of the MME.		

Table 40-8 BASE_STATION_FAULTY

Alarm	Attributes	Applicable major release
Name: BASE_STATION_FAULTY (11516) Type: equipmentAlarm Package: racfl.BASE_STATION_FAULTY Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: BASE STATION FAULTY Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: BASE STATION FAULTY\n\nA critical fault (or faults) has occurred in the base station.\n\nCheck the reason for the fault from the supplementary text field of the alarm.\n\nThe effect of the fault on the functioning of the network element depends on the fault description. For more information, see base station fault descriptions in LTE System Libraries.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		

Table 40-8 BASE_STATION_FAULTY (continued)

Alarm	Attributes	Applicable major release
Remedial action: Verify the configuration of a BTS by checking the commissioning, cabling and correct installation of the units/modules at the BTS. Make sure the environment does not cause the fault.\n\nBefore a unit/module is replaced at the BTS, the site should be reset to recover from any temporary faults which might have caused the malfunctioning of the unit/module. When an active alarm is a 'Start' alarm, a site reset is required to cancel the alarm. If the site reset or module block/unblock does not help, replace the faulty unit/module (see the source of the alarm and instructions fields of the corresponding alarms). \n\nIn case of the FSM failure (FSM or FSM sub-unit is reported as source) it is possible that other units are also reported as faulty since it is impossible for them to continue functioning without a system module. In such case replace the system module first and check if the modules previously marked as Faulty are now in Working state.\n\n\nBelow is the list of BTS fault(s) which may have caused this alarm in BTS FL16A/TL16A release. In the case of an earlier SW release and if you need more detailed fault descriptions, LTE System Libraries. The BTS fault descriptions are also included in BTS SW release documentation. If that does not help, contact your local customer support. \n\nFAULT NAME\nAntenna link is down\n\nFAULT ID\n476: EFaultId_Rp3BusError\n\nMEANING\nThe antenna (RP3) link is down. The transmitter or receiver drops from synchronization.\n\nINSTRUCTIONS\nFlexi BTS FDD, Flexi BTS TDD, AirScale BTS FDD, AirScale BTS TDD:\n1. Restart the BTS.\n2. If that does not help, replace the alarming module. \n\nFlexi BTS FDD/TDD: In case the FSP is causing the alarm, replace the FSM because the alarm is related to the fixed FSP inside the FSM. \n\nFlexi BTS FDD/TDD, AirScale BTS FDD/TDD: If FBBx or ABIx is causing the alarm, replace the FBBx or ABIx.\n\nFlexi Zone Micro FDD, Flexi Zone Micro TDD, Flexi Zone, Flexi Zone SFN Antenna: Replace the Flexi Zone Micro BTS, Flexi Zone Access Point, or Flexi Zone SFN Antenna.\n\n\n\n\nFAULT NAME\nAP blocked\n\nFAULT ID\n4260: EFaultId_ApBlockedAl\n\nMEANING\nThe Flexi Zone Access Point is blocked by the BTS Site Manager. This is done to avoid fault indications that might be raised during a Flexi Zone Access Point maintenance task.\n\nINSTRUCTIONS\nTo cancel the fault, unblock the Flexi Zone Access Point.\n\n\n\n\nFAULT NAME\nBaseband bus configuration of <x> was rejected\n\nFAULT ID\n1811: EFaultId_BbBus_ConfFailedAl\n\nMEANING\nThe baseband-bus-related configuration of <x> has been rejected by the HW SW, DSP, or RF SW.\n\nINSTRUCTIONS\nFlexi BTS FDD, Flexi BTS TDD, AirScale BTS FDD, AirScale BTS TDD:\nReplace the alarming module.\n\nFlexi Zone Micro FDD, Flexi Zone Micro TDD:\n1. Download the correct configuration.\n2. Reset the BTS.\n3. Replace the BTS.\n\nFlexi Zone:\n1. Download the correct configuration.\n2. Reset the Flexi Zone Access Point from the BTSSM.\n3. Replace the Flexi Zone Access Point.\n\nFlexi Zone SFN Antenna:\n1. Download the correct configuration.\n2. Reset the Flexi Zone SFN Antenna from the BTSSM.\n3. Replace the Flexi Zone SFN Antenna.\n\n\n\n\nFAULT NAME\nBaseband bus failure\n\nFAULT ID\n3020: EFaultId_BaseBandBusFailure\n\nMEANING\nThe Flexi BTS has detected an abnormal operation or a failure in the BTS\ninternal or external (optical link) baseband bus. The failure cannot be\nattributed to a specific module and there are several possible fault sources.\n\nINSTRUCTIONS\nNote: Perform the steps below in the listed order until the BTS fault disappears.\n\n1. Check the other active BTS faults and act accordingly.\n\n2. Check the cables between the System Module and RF Module.\n\n3. Reset the RF Module and/or System Module, depending on the alarm source:\n a. Reset the RF Module by blocking and unblocking it.\n b. Reset the System Module by blocking and unblocking it.\n\n4. Replace the alarming RF Module.\n\n5. If the System Module is the source, or replacing the RF Module does not clear the fault situation, replace the alarming System Module.\n\n\n\n\nFAULT NAME\nBaseband resources mapping to cells failure\n\nFAULT ID\n12: EFaultId_TcomConfigAl\n\nMEANING\nA failure is detected when the eNodeB O&M system presents available FSPs to C-plane software in order to map FSPs to a cell. The FSPs related to the faulty operation cannot be taken into use. The reason for the failure might be an internal problem in the eNodeB O&M system.\n\nINSTRUCTIONS\n1. Block and unblock the BTS.\n2. Perform a power-off reset. \n3. If steps 1 and 2 do not help, replace the module that is causing the\nalarm. \n\n\n\n\nFAULT NAME\nBB bus reception error (summing device)\n\nFAULT ID\n2016: EFaultId_Muksu_SMTimeOffAl\n\nMEANING\nThe master frame in the received baseband bus frame is not in the correct place related to the internally-generated master frame pulse. Either the frame has been set into the wrong place (PI delay), or the data itself is in the wrong place.\n\nINSTRUCTIONS\n1. Check the cables between the system module and the RF module, the cable between the FBBx/ABIx module and the RF module, and the cable between the system module and the FBBx module.\n\n2. Replace the unit that causes the alarm (system module or FBBx/ABIx).\n\n\n\n\nFAULT NAME\nBB bus transmission error\n\nFAULT ID\n2017: EFaultId_Muksu_SRx10b8bAl\n\nMEANING\nA decoding error has been detected in the baseband internal link. The data packet is lost, or the content is corrupted.\n\nThis situation also occurs when the links are not synchronized with each other.\n\nINSTRUCTIONS\n1. Check the cables between the system module and the RF module, and the cable between the FBBx/ABIA module and the RF module.\n\n2. Reset the system module.\n\n3. Replace the alarming module (system module).\n\n\n\n\nFAULT NAME\nBoot configuration inconsistency detected\n\nFAULT ID\n4102: EFaultId_BootConfigurationInconsistencyAl\n\nMEANING\nDuring SW update, the configurations of the active and passive SW in the HW unit have been detected to be the same. Active and passive SW configurations are compared at these periods:\n- before SW download\n- during SW activation, before active and passive SW switch\n- during start-up\n\nINSTRUCTIONS\nFlexi Zone Micro FDD, Flexi Zone Micro TDD:\n1. Block/unblock the Flexi Zone Micro BTS to reset.\n2. If blocking or unblocking the Flexi Zone Micro BTS does not solve the problem, replace the faulty Flexi Zone Micro BTS.\n\nFlexi Zone Access Point, Flexi Zone SFN Antenna:\nNone\n\n\n\n\nFAULT NAME\nBTS blocked\n\nFAULT ID\n50: EFaultId_BTSBlockedAl\n\nMEANING\nThe BTS is blocked with the BTS Site Manager. The purpose is to avoid fault indications that might be raised during a BTS maintenance task.\n\nINSTRUCTIONS\nUnblock the BTS to cancel the fault. Unblocking the BTS causes a BTS reset.\n\n\n\n\nFAULT NAME\nBTS file error\n\nFAULT ID\n1802: EFaultId_FileRequestFlashAl\n\nMEANING\nA software download to FSP, DSP, ABIx or FR has failed.\n\nINSTRUCTIONS\nNote: Perform the following steps in the listed order until the fault disappears:\n\n1. Use BTS Site Manager to perform a full commissioning to the BTS using the NetAct backup upload SCF file as template.\n\n2. Download two different software packages so that the faulty file is removed from the BTS.\n\n3. Download the software again.\n\n4. Replace the System Module.\n\n\n\n\nFAULT NAME\nBTS internal SW management problem\n\nFAULT ID\n3090: EFaultId_BtsInternalSwManagementProblem\n\nMEANING\nA software update to a module or sub-assembly has failed, or a corrupted SW file has been detected in the FLASH.\n\nINSTRUCTIONS\nNote: Perform the steps below in the listed order until the BTS fault disappears:\n\nFlexi BTS FDD, Flexi BTS TDD, AirScale BTS FDD, AirScale BTS TDD:\n1. Check the other active BTS faults. If the ROM disk is corrupted, change the alarming module.\n2. Reset the RF Module and/or System Module (depending on the fault source) by blocking/unblocking it.\n3. Update and activate the SW to the BTS.\n4. Check the SW files.\n5. Replace the alarming module.\n\nFlexi Zone Micro FDD, Flexi Zone Micro TDD:\n1. Check the other active Flexi Zone Micro BTS or Flexi Zone Access Point faults. If the ROM disk is corrupted, change the Flexi Zone Micro BTS or Flexi Zone Access Point.\n2. Reset the Flexi Zone Micro BTS		

Table 40-9 BASE_STATION_LICENSE_LIMITATION

Alarm	Attributes	Applicable major release
Name: BASE_STATION_LICENSE_LIMITATION (11517) Type: qualityOfServiceAlarm Package: racfl.BASE_STATION_LICENSE_LIMITATION Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: BASE STATION LICENSE LIMITATION Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: BASE STATION LICENSE LIMITATION\n\nA critical fault (or faults) has occurred in the base station connectivity/interface. Check the reason for the fault from the supplementary text field of the alarm.\n\nThe effect of the fault on the functioning of the network element depends on\nthe fault description. For more information, see base station fault descriptions\nin LTE System Libraries.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		
Remedial action: FAULT NAME\nActive users license limitation\n\nFAULT ID\n4337: EFaultId_ActiveUsersLimitAl \n\nMEANING\nThe eNB enters capacity limited mode due to missing licenses. Calls from excess users will be rejected except for handover and emergency calls.\n\nINSTRUCTIONS\nAdd licenses to the Centralized License Server to avoid call limitation.\nSee "Centralized License Server Help" document in NOLS for details.\n\n\n\n\n\nFAULT NAME\nCell Shutdown Due To Baseband Capacity License Limit\n\nFAULT ID\n4349: EFaultId_CellShutdownDueToBasebandCapacityLicenseLimitAl\n\nMEANING\nThe cell is shut down because it occupies baseband capacity that is over the licensed limit.\n\n\nINSTRUCTIONS\nAdd licenses to the Centralized License Server to avoid the traffic limitation.\nSee "Centralized License Server Help" document in NOLS for details.\n\n\n\n\n\nFAULT NAME\nIP Traffic Capacity Limit\n\nFAULT ID\n4293: EFaultId_IPTrafficCapacityLimitAl\n\nMEANING\nThe user's eNB IP traffic is throttled because of a missing license.\n\nINSTRUCTIONS\nRead the alarm diagnostic information to know when the missing license was detected and at what level the IP traffic is currently throttled in relation to the peak rate.\n\nAdd licenses to CLS to avoid the traffic limitation.\n\nIf licenses are not added, the level will be decreased to the lowest level, which is 50% of peak rate.		

Table 40-10 BASE_STATION_NOTIFICATION

Alarm	Attributes	Applicable major release
Name: BASE_STATION_NOTIFICATION (11518) Type: equipmentAlarm Package: racfl.BASE_STATION_NOTIFICATION Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: BASE STATION NOTIFICATION Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: BASE STATION NOTIFICATION\n\nA minor fault (or faults) has occurred in the base station.\n\nCheck the reason for the fault from the supplementary text field of the alarm.\n\nThe effect of the fault on the functioning of the network element depends on the fault description. For more information, see base station fault descriptions in LTE System Libraries.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		

Table 40-10 BASE_STATION_NOTIFICATION (continued)

Alarm	Attributes	Applicable major release
Remedial action: Verify the configuration of a BTS by checking the commissioning, cabling and correct installation of the units/modules at the BTS. Make sure the environment does not cause the fault.\n\nBefore a unit/module is replaced at the BTS, the site should be reset to recover from any temporary faults which might have caused the malfunctioning of the unit/module. When an active alarm is a 'Start' alarm, a site reset is required to cancel the alarm. If the site reset or module block/unblock does not help, replace the faulty unit/module (see source of the alarm and instructions fields of the corresponding alarms). \n\nBelow is the list of BTS faults which might have caused this alarm in BTS FL16A/TL16A release. In case of earlier SW release and in case you need more detailed fault descriptions refer to LTE System Libraries. The BTS fault descriptions are also included in BTS SW release documentation. If that does not help, contact your local customer support. \n\n----------\nFAULT NAME\n# autonomous reset as recovery action\n\nFAULT ID\n52: EFaultId_UnitAutonomousResetAl\n\nMEANING\nFlexi BTS FDD, Flexi BTS TDD, AirScale BTS FDD, AirScale BTS TDD:\nThe fault informs the operator that the BTS is trying to correct a fault situation by performing a recovery reset to a unit, the site, or the BTS. \nIn case of an RF module reset in RF chaining configuration, the BTS also resets all RF modules that are further in the chain.\n\nFlexi Zone Micro FDD, Flexi Zone Micro TDD, Flexi Zone, Flexi Zone SFN Antenna:\nThe BTS tries to recover from a fault situation by performing a site reset.\n\nINSTRUCTIONS\nCheck the fault history and other active faults of the unit.\n\nNote: This fault does not require any (special) actions.\n\n\n\n\nFAULT NAME\n10b8b coding error in optical interface device\n\nFAULT ID\n2004: EFaultId_OIC_LVDSRecAl\n\nMEANING\nThe fiber cable is experiencing interference; data transmission is faulty.\n\nA physical connection failure between the optical interface and the summing function has occurred.\n\nThe reason of the fault might be a low-quality or polluted SFP, or a low-quality optical cable used to connect radio module to system module/extension baseband module.\n\n\nINSTRUCTIONS\nNote: Perform the steps in the listed order until the fault is resolved.\n\n1. Reset the radio module behind the cable reported as the fault source by blocking/unblocking it. \n2. Reset the system module. \n3. Replace the SFP on the radio module port where the cable reported as fault source is terminated.\n4. Replace the SFP on the system module or extension baseband module port where the cable reported as fault source is terminated.\n5. Replace the optical cable reported as fault source.\n6. Replace the radio module behind the cable reported as fault source.\n7. If the system module reset helped but the fault is reported again after some time or if the actions mentioned above have not cleared the fault situation, replace the extension baseband module (if the fault is reported on the cable connected to the baseband module) or the system module (if the fault is reported on the cable connected to the system module).\n\n\n\n\nFAULT NAME\n2M external reference missing\n\nFAULT ID\n1899: EFaultId_2MExtRefMissAl\n\nMEANING\nThe reference clock monitoring has detected a signal loss of 2.048 MHz received from an external reference source, connected to Sync In interface of the System Module.\n\nINSTRUCTIONS\nNote: Perform the steps below in the listed order until the alarm disappears.\n\n1. Check the cabling (connected to Sync In interface).\n\n2. Check if the 2.048 MHz reference source is working normally, and the 2.048 MHz signal is available.\n\n3. Replace the alarming module.\n\n\n\n\nFAULT NAME\n3GPP/AISG communication administratively disabled\n\nFAULT ID\n4142: EFaultId_Communication3gppAdministrativelyDisabledAl\n\nMEANING\nThe HDLC link has been disabled for the reporting Antenna Line or IUANT port.\n\nINSTRUCTIONS\nEnable the parameter "Communication3gppEnabled" for the reporting Antenna Line to revert changes.\n\n\n\n\nFAULT NAME\nAbnormal CPRI interface to next hop <OptIf ID>\n\nFAULT ID\n1974: EFaultId_AbnormalCpriInterfaceToNextHopAl\n\nMEANING\nThe optical interface is not working properly.\nThe CPRI transmission is not working properly.\nThis fault is valid only for radio modules in a chain configuration.\nNote: The Optif is from the perspective of the previous radio.\n\nINSTRUCTIONS\n1. Check the cables between the RF module that is reported as the fault source and the RF module that is closer to the system module or ABIA. \n2. Reset the RF module. \n3. If that does not help, block or unblock the site. \n4. If that does not help, replace the RF module that is causing the alarm (connected to the faulty optical link, to the end farther from the system module).\n\n\n\n\nFAULT NAME\nAbnormal CPRI interface to upper hop <OptIf ID>\n\nFAULT ID\n1965: EFaultId_AbnormalCpriInterfaceToUpperHopAl\n\nMEANING\nThe optical interface does not work properly. CPRI transmission to the upper hop does not work properly.\n\nINSTRUCTIONS\nExecute the following steps in the ordered sequence. If any of the step does not help, execute the next one:\n\n1. Reset the radio module behind the cable reported as the fault source. \n2. Reset the system module. \n3. Replace the SFP on the radio module port where the cable reported as the fault source is terminated.\n4. Replace the SFP on the system module or the extension baseband module port where the cable reported as the fault source is terminated.\n5. Replace the optical cable reported as the fault source.\n6. Replace the radio module behind the cable reported as the fault source.\n7. If the actions mentioned above did not clear the faulty situation, replace the extension baseband module (if the fault is reported on the cable connected to the baseband module) or the system module (if the fault is reported on the cable connected to the system module).\n\n\n\n\nFAULT NAME\nAbnormal reception on SFP to next hop <OptIf ID>\n\nFAULT ID\n1973: EFaultId_AbnormalReceptionOnSfpToNextHopAl\n\nMEANING\nThe optical interface is not working properly.\nThis fault is valid only for radio modules in a chain configuration.\nNote: The Optif is from the perspective of the previous radio.\n\nINSTRUCTIONS\n1. Check the cables between the RF module that is reported as the fault source and the RF module that is closer to the system module or ABIA. \n2. Reset the RF module. \n3. If that does not help, block or unblock the site. \n4. If that does not help, replace the RF module that is generating the alarm.\n\n\n\n\nFAULT NAME\nAbnormal reception on SFP to upper hop <OptIf ID>\n\nFAULT ID\n1971: EFaultId_AbnormalReceptionOnSfpToUpperHopAl\n\nMEANING\nThe optical interface is not working properly. There is abnormal signal reception from the upper hop FR. This fault is valid only for radio modules in chain configuration.\n\nINSTRUCTIONS\n1. Check the cables between the system module and the RF module. \n2. Reset the RF module. \n3. If those do not help, block and unblock the site. \n4. If those do not help, replace the RF module that is generating the alarm.\n\n\n\n\nFAULT NAME\nAccess panel port(s) enabled\n\nFAULT ID\n234: EFaultId_AccessPanelPortEnaAl\n\nMEANING\nThe FlexiZone Micro BTS, Flexi Zone Access Point, or Flexi Zone SFN Antenna has detected that one or more access panel ports is enabled.\n\nThis state of elevated security risk is not expected in field conditions.\n\nINSTRUCTIONS\n1. Determine if this event is expected. Investigate audit logs as necessary.\n2. If this action is unexpected, use SSH to disable access panel port(s) and/or physically inspect site installation.\n\n\n\n\nFAULT NAME\nALD port configuration failure\n\nFAULT ID\n4255: EFaultId_AldPortFailureAl\n\nMEANING\nThe Radio Module has detected switch configuration mismatch on the ALD port.\n\nINSTRUCTIONS\n1. Check the configuration of the ALD port.\n\n2. The alarm is cancelled only when the RF Module is reset, or the BTS is reset.\n\n\n\n\nFAULT NAME\nALD Port power failure\n\nFAULT ID\n4069: EFaultId_Rs485PowerFailureAl\n\nMEANING\nOBSAI interface:\nThe Radio Module has detected an over-current condition in the RS485 IUANT port.\nSome antenna line device is causing overload. Antenna line devices powered by the RS485 IUANT are out of		

Table 40-11 BASE_STATION_OPERATION_DEGRADED

Alarm	Attributes	Applicable major release
Name: BASE_STATION_OPERATION_DEGRADED (11519) Type: equipmentAlarm Package: racfl.BASE_STATION_OPERATION_DEGRADED Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: BASE STATION OPERATION DEGRADED Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: BASE STATION OPERATION DEGRADED\n\nA major fault (or faults) has occurred in the base station.\n\nCheck the reason for the fault from the supplementary text field of the alarm.\n\nThe effect of the fault on the functioning of the network element depends on the fault description. For more information, see base station fault descriptions in LTE System Libraries.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		

Table 40-11 BASE_STATION_OPERATION_DEGRADED (continued)

Alarm	Attributes	Applicable major release
Remedial action: Verify the configuration of a BTS by checking the commissioning, cabling and correct installation of the units/modules at the BTS. Make sure the environment does not cause the fault.\n\nBefore a unit/module is replaced at the BTS, the site should be reset to recover from any temporary faults which might have caused the malfunctioning of the unit/module. When an active alarm is a 'Start' alarm, a site reset is required to cancel the alarm. If the site reset or module block/unblock does not help, replace the faulty unit/module (see the source of the alarm and instructions fields of the corresponding alarms). \n\nBelow is the list of BTS fault(s) which might have caused this alarm in BTS FL16A/TL16A release. In case of earlier SW release and in case you need more detailed fault descriptions refer to LTE System Libraries. The BTS fault descriptions are also included in BTS SW release documentation. If that does not help, contact your local customer support. \n\nFAULT NAME\n2M external reference missing\n\nFAULT ID\n1899: EFaultId_ 2MExtRefMissAl\n\nMEANING\nThe reference clock monitoring has detected a signal loss of 2.048 MHz received from an external reference source, connected to Sync In interface of the System Module.\n\nINSTRUCTIONS\nNote: Perform the steps below in the listed order until the alarm disappears.\n\n1. Check the cabling (connected to Sync In interface).\n\n2. Check if the 2.048 MHz reference source is working normally, and the 2.048 MHz signal is available.\n\n3. Replace the alarming module.\n\n\n\n\nFAULT NAME\nAddress mismatch in summing\n\nFAULT ID\n2019: EFaultId_Muksu_SsubMmAl\n\nMEANING\nThere is a baseband bus address mismatch in the summing. There are two possible causes:\n\n1. A configuration error (two different baseband units functioning) - after an acknowledgement, the fault returns.\n\n2. Data corruption on the bus - appears once when an unsynchronized data is sent by the baseband.\n\nINSTRUCTIONS\nCheck the antenna mapping to the local cells in the commissioning file.\n\n\n\n\nFAULT NAME\nAntenna link is down\n\nFAULT ID\n476: EFaultId_Rp3BusError\n\nMEANING\nThe antenna (RP3) link is down. The transmitter or receiver drops from synchronization.\n\nINSTRUCTIONS\nFlexi BTS FDD, Flexi BTS TDD, AirScale BTS FDD, AirScale BTS TDD:\n1. Restart the BTS.\n2. If that does not help, replace the alarming module. \n\nFlexi BTS FDD/TDD: In case the FSP is causing the alarm, replace the FSM because the alarm is related to the fixed FSP inside the FSM. \n\nFlexi BTS FDD/TDD, AirScale BTS FDD/TDD: If FBBx or ABIx is causing the alarm, replace the FBBx or ABIx.\n\nFlexi Zone Micro FDD, Flexi Zone Micro TDD, Flexi Zone, Flexi Zone SFN Antenna: Replace the Flexi Zone Micro BTS, Flexi Zone Access Point, or Flexi Zone SFN Antenna.\n\n\n\n\ nFAULT NAME\nBaseband bus configuration of <x> was rejected\n\nFAULT ID\n1811: EFaultId_BbBus_ConfFailedAl\n\nMEANING\ nThe baseband-bus-related configuration of <x> has been rejected by the HW SW, DSP, or RF SW.\n\nINSTRUCTIONS\nFlexi BTS FDD, Flexi BTS TDD, AirScale BTS FDD, AirScale BTS TDD:\nReplace the alarming module.\n\nFlexi Zone Micro FDD, Flexi Zone Micro TDD:\n1. Download the correct configuration.\n2. Reset the BTS.\n3. Replace the BTS.\n\nFlexi Zone:\n1. Download the correct configuration.\n2. Reset the Flexi Zone Access Point from the BTSSM.\n3. Replace the Flexi Zone Access Point.\n\nFlexi Zone SFN Antenna:\n1. Download the correct configuration.\n2. Reset the Flexi Zone SFN Antenna from the BTSSM.\n3. Replace the Flexi Zone SFN Antenna.\n\n\n\n\nFAULT NAME\nBaseband bus failure\n\nFAULT ID\n3020: EFaultId_BaseBandBusFailure\n\nMEANING\nThe Flexi BTS has detected an abnormal operation or a failure in the BTS\ninternal or external (optical link) baseband bus. The failure cannot be\nattributed to a specific module and there are several possible fault sources.\n\nINSTRUCTIONS\nNote: Perform the steps below in the listed order until the BTS fault disappears.\n\n1. Check the other active BTS faults and act accordingly.\n\n2. Check the cables between the System Module and RF Module.\n\n3. Reset the RF Module and/or System Module, depending on the alarm source:\n a. Reset the RF Module by blocking and unblocking it.\n b. Reset the System Module by blocking and unblocking it.\n\n4. Replace the alarming RF Module.\n\n5. If the System Module is the source, or replacing the RF Module does not clear the fault situation, replace the alarming System Module.\n\n\n\n\nFAULT NAME\nBB bus reception error (summing device)\n\nFAULT ID\n2016: EFaultId_Muksu_SMTimeOffAl\n\nMEANING\nThe master frame in the received baseband bus frame is not in the correct place related to the internally-generated master frame pulse. Either the frame has been set into the wrong place (PI delay), or the data itself is in the wrong place.\n\nINSTRUCTIONS\n1. Check the cables between the system module and the RF module, the cable between the FBBx/ABIx module and the RF module, and the cable between the system module and the FBBx module.\n\n2. Replace the unit that causes the alarm (system module or FBBx/ABIx).\n\n\n\n\nFAULT NAME\nBB bus transmission error\n\nFAULT ID\n2017: EFaultId_Muksu_SRx10b8bAl\n\nMEANING\nA decoding error has been detected in the baseband internal link. The data packet is lost, or the content is corrupted.\n\nThis situation also occurs when the links are not synchronized with each other.\n\nINSTRUCTIONS\n1. Check the cables between the system module and the RF module, and the cable between the FBBx/ABIA module and the RF module.\n\n2. Reset the system module.\n\n3. Replace the alarming module (system module).\n\n\n\n\nFAULT NAME\nBTS file error\n\nFAULT ID\n1802: EFaultId_FileRequestFlashAl\n\nMEANING\nA software download to FSP, DSP, ABIx or FR has failed.\n\nINSTRUCTIONS\nNote: Perform the following steps in the listed order until the fault disappears:\n\n1. Use BTS Site Manager to perform a full commissioning to the BTS using the NetAct backup upload SCF file as template.\n\n2. Download two different software packages so that the faulty file is removed from the BTS.\n\n3. Download the software again.\n\n4. Replace the System Module.\n\n\n\n\nFAULT NAME\nBTS internal SW management problem\n\nFAULT ID\n3090: EFaultId_ BtsInternalSwManagementProblem\n\nMEANING\nA software update to a module or sub-assembly has failed, or a corrupted SW file has been detected in the FLASH.\n\nINSTRUCTIONS\nNote: Perform the steps below in the listed order until the BTS fault disappears:\n\nFlexi BTS FDD, Flexi BTS TDD, AirScale BTS FDD, AirScale BTS TDD:\n1. Check the other active BTS faults. If the ROM disk is corrupted, change the alarming module.\n2. Reset the RF Module and/or System Module (depending on the fault source) by blocking/unblocking it.\n3. Update and activate the SW to the BTS.\n4. Check the SW files.\n5. Replace the alarming module.\n\nFlexi Zone Micro FDD, Flexi Zone Micro TDD:\n1. Check the other active Flexi Zone Micro BTS or Flexi Zone Access Point faults. If the ROM disk is corrupted, change the Flexi Zone Micro BTS or Flexi Zone Access Point.\n2. Reset the Flexi Zone Micro BTS or Flexi Zone Access Point by blocking/unblocking it.\n3. Update and activate the SW to the BTS.\n4. Check the SW files.\n\nFlexi Zone:\n1. Check the other active Flexi Zone Access Point faults. If the ROM disk is corrupted, change the Flexi Zone Access Point.\n2. Reset the Flexi Zone Access Point to trigger new SW load.\n3. Check the SW files.\n\nFlexi Zone SFN Antenna:\n1. Check the other active Flexi Zone SFN Antenna faults. If the ROM disk is corrupted, change the Flexi Zone SFN Antenna.\n2. Reset the Flexi Zone SFN Antenna to trigger new SW load.\n3. Check the SW files.\n\n\n\n\nFAULT NAME\nBTS master clock tuning failure\n\nFAULT ID\n1818: EFaultId_Ov_OscAl\n\nMEANING\nFlexi BTS FDD, Flexi BTS TDD, AirScale BTS FDD, AirScale BTS TDD: \nThe OCXO adjustment area is reaching its limit value. The DAC word value of the OCXO is less than or equal to the Min.OcxoControlValue.Alarm.Set value specified in BPF, or greater than or equal to the Max.OcxoControlValue.Alarm.Set value specified in BPF.\n\nFlexi Zone Micro FDD, Flexi Zone Micro TDD, Flexi Zone SFN Antenna:\nThe master clock frequency is tuned to within 5% of its minimum or maximum offset.		

Table 40-12 BASE_STATION_TRANSMISSION_ALARM

Alarm	Attributes	Applicable major release
Name: BASE_STATION_TRANSMISSION_ALARM (11520) Type: communicationsAlarm Package: racfl.BASE_STATION_TRANSMISSION_ALARM Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: BASE STATION TRANSMISSION ALARM Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: BASE STATION TRANSMISSION ALARM\n\nA transmission fault (or faults) has occured in the BTS. This alarm is an encapsulation alarm that is used to transfer the Flexi Transport Submodule (FTM) alarm data over the BTS O&M connection through iOMS to NetAct. In NetAct this alarm is shown in opened format. This means that the alarm number, alarm text, and supplementary information are shown in the original FTM format. Check the reason for the fault from the supplementary information fields and supplementary text field of the alarm.\n\nThe effect of the fault on the functioning of the network element depends on the fault description. For more information, see base station fault descriptions in LTE System Libraries.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		

Table 40-12 BASE_STATION_TRANSMISSION_ALARM (continued)

Alarm	Attributes	Applicable major release
Remedial action: FAULT NAME\n$Protocol Timing source lost [on unit $U] [, interface $IF]\n\nFAULT ID\n61059: FTM_TIMING_ SOURCE_LOS\n\nMEANING\nOne of the synchronization sources in the configured priority list is unavailable.\nThis can be the primary or the secondary clock source.\n\nIn the alarm: Protocol can be PDH, Timing over Packet (ToP), and Synchronuous ethernet.\n\nUnit Number is optional:\n- For PDH and Synchronous Ethernet, Unit number is 0 or 1.\n- It is not present for Timing Over Packet(TOP).\n\ nThe interface value is optional:\n- For PDH, the value range depends on the hardware unit type: 1-16.\n- For Synchonuous Ethernet, the value range is 1-3.\n- It is not present for Timing over Packet.\n\nINSTRUCTIONS\nUse BTS Site Manager to check which interfaces have been configured as\nsynchronization sources. For all interfaces, do as follows:\n\n1. Check that the cables are connected to the correct connectors.\n2. Check whether the interface at the far end is switched on.\n3. Check whether there are active alarms at the far end. If there are,\nfollow the instructions on handling those alarms.\n4. Connect a loop cable and check whether the alarm disappears to verify that the hardware of the interface unit works correctly.\n\nMonitor the quality of the received clock.\n\n\n\n\ nFAULT NAME\nAIS on unit $U, interface $IF\n\nFAULT ID\n61151: FTM_AIS\n\nMEANING\nAlarm indication signal is received. This signal is generated by an intermediate PDH device in the forward direction because it detects a problem in its received signal.\n\nAll other transmission alarms related to this signal are suppressed.\n\nProbable cause: There is a transmission problem somewhere in the intermediate network, and AIS is sent instead of user traffic.\n\nINSTRUCTIONS\nCheck the intermediate transmission network for alarms indicating the root cause and follow the instructions for handling these alarms.\n\n\n\n\nFAULT NAME\nAutomatic BTS Operator Certificate retrieval unsuccessful\n\nFAULT ID\n61510: NO_CERTIFICATE\n\nMEANING\nA requested certificate could not be retrieved from the certificate authority (CA).\nA requested certificate could not be renewed from the certificate authority (CA).\n\nA requested certificate could not be retrieved as the number of certificates received from repository server (RA) or certificate authority (CA) are more than expected.\n\nA requested certificate could not be stored in the remaining storage available on the BTS. Operator cleanup (e.g. via site manager or NetAct) of old, unused trust chains may be required.\n\nINSTRUCTIONS\nProvide the certificate.\n\n\n\n\nFAULT NAME\nAuto-negotiation mismatch, on unit $U, Ethernet interface $IF\n\nFAULT ID\n61607: AUTO NEGO MIS MATCH\n\nMEANING\ nThis alarm indicates that there is a mismatch between the BTS configuration and the auto-negotiation result.\n\nINSTRUCTIONS\ nFlexi BTS FDD, Flexi BTS TDD, AirScale BTS FDD, AirScale BTS TDD:\nTry with local management or site support equipment.\n\ nFlexi Zone Micro FDD, Flexi Zone Micro TDD, Flexi Zone:\nConfirm that the Ethernet Synchronization master/slave settings are correct on the Flexi Zone Micro BTS or Flexi Zone Access Point and backhaul equipment. \nNote: The Flexi Zone Micro BTS and Flexi Zone Access Point only support slave mode.\n\n\n\n\nFAULT NAME\nBFD $session down, egress, $sourceIP to $destinationIP\n\ nFAULT ID\n61606: BFD DOWN Egress\n\nMEANING\nThe alarm is raised if the alarm is enabled, the BFD state of the session is not "AdminDown", and the BFD packet from the far end contains the diagnostic code =" "Control Detection Time Expired" and no ingress alarm is present.\n\nINSTRUCTIONS\nCheck the BFD configuration at the local end.\n\n\n\n\n\nFAULT NAME\nBFD $session down, ingress, $sourceIP to $destinationIP\n\nFAULT ID\n61605: BFD DOWN Ingress\n\nMEANING\nThe alarm is raised if the alarm is enabled, the BFD state for the session is not "AdminDown", and nevertheless, no BFD packet is received at the local end during the detection time.\n\nINSTRUCTIONS\n1. Check the network between both BFD peers for physical link failures or misconfigurations.\n\n2. Check if the BFD functionality in the peer is switched on and that the configurations of the BFD peers match.\n\n\n\n\nFAULT NAME\nBFD group $bfdGrpId down\n\nFAULT ID\n61022: BFD DOWN\n\nMEANING\nThe alarm is raised if the BFD service is not available on the BTS for all BFD sessions belonging to that BFD group.\n\nINSTRUCTIONS\n1. Check if the far end has BFD switched on.\n2. Check the cabling and network connections of the far end.\n\n\n\n\nFAULT NAME\nBluetooth enabled\n\nFAULT ID\n61520: BLUETOOTH_ENABLED\n\nMEANING\nIf the actBluetoothTransAlarm parameter allows, this fault is raised to indicate that the bluetooth has been enabled because of any of the following:\n- The bluetooth config mode set to explicitly enabled\n- The bluetooth config mode AutoFallback logic, which automatically enables the bluetooth upon loss of connection to the iOMS or NetAct\n\ nINSTRUCTIONS\n1. Determine if the bluetooth should be enabled.\n2. If this action is unexpected, disable the bluetooth.\n\n\n\n\ nFAULT NAME\nBluetooth network connected\n\nFAULT ID\n61522: BLUETOOTH_CONNECTED\n\nMEANING\nThe Flexi Zone Micro BTS or Flexi Zone Access Point has detected a bluetooth network connection.\n\nINSTRUCTIONS\n1. Determine if this event is expected. Investigate audit logs as necessary.\n2. If this action is unexpected, disable the bluetooth.\n\n\n\n\nFAULT NAME\nBluetooth Paired\n\nFAULT ID\n61521: BLUETOOTH_PAIRED\n\nMEANING\nThe Flexi Zone Micro BTS or Flexi Zone Access Point has detected a successful pairing.\n\nINSTRUCTIONS\n1. Determine if this event is expected. Investigate audit logs as necessary.\n2. If this action is unexpected, disable the bluetooth.\n\n\n\n\nFAULT NAME\nBluetooth repeated authentication failure\n\nFAULT ID\n61523: BLUETOOTH_AUTH_FAIL\n\nMEANING\nThe Flexi Zone Micro BTS or Flexi Zone Access Point has detected repeated bluetooth authentication failures. This could signal that a passkey or pin guessing attack is ongoing.\n\nINSTRUCTIONS\n1. Determine if this event is expected. Investigate audit logs as necessary.\n2. If this action is unexpected, disable the bluetooth.\n\n\n\n\nFAULT NAME\nBTS and/or peer trust anchor expired or due to expire\n\nFAULT ID\n61618: TRUST_ANCHOR_EXPIRING\n\nMEANING\nThe network element stores trust anchors for its own trust chain and for peers. When its own or any trust anchors are about to expire or are expired, this alarm is sent.\n\n\nINSTRUCTIONS\nUpdate the trust anchors.\n\n\n\n\nFAULT NAME\nBTS booted at $date due to $RCause\n\nFAULT ID\n61006: FTM_RESET\n\nMEANING\nThe transport part of the BTS has been reset at the date and time given in the notification.\n\n1. FSMr2 supports the following cause for the reset:\n\n"trs power-on reset": Cold start \n"trs watchdog reset": System overload\n"trs startup failure": Failure during startup \n"trs software failure": Software failure\n"trs management reset": Reset triggered by management interface\n"trs fallback": Fallback executed\n\nFSMr3/AirScale supports the following cause for the reset:\n\n"trs power-on reset": Cold start\n"trs watchdog reset": System overload\n"trs software failure": Software failure\n"trs management reset": Reset triggered by management interface\n"trs spurious reset": Reset reason detection failed\n\n2. The "$date" format is the local time stamp (GMT+/-xx:xx). For example: 2014-04-12 00:51:26 GMT+0530\n\nINSTRUCTIONS\nNo actions are required.\n\n\n\n\nFAULT NAME\nBTS Local OAM user account $A has been locked\n\nFAULT ID\n61642: FTM_SECURITY_USER_ ACCOUNT\n\nMEANING\nA specific BTS local operator account has been locked.\nThe number of failed login attempts for a BTS local operator account has exceeded the threshold, and the account has been locked on the BTS. No further logins are permitted for this account until it is unlocked.\n\nINSTRUCTIONS\nCheck the validity of the username and password of the account.\n\n\n\n\nFAULT NAME\nBTS reset required\n\nFAULT ID\n61010: FTM_BTS_RESET_REQUIRED\n\nMEANING\nA change to the BTS IP settings has been received from the BTS Site Manager. The BTS should be restarted to activate the change.\n\nINSTRUCTIONS\nReset the BTS when all the required BTS IP settings have been set.\n\n\n\n\nFAULT NAME\nCCM fault level $ prio $p cause $c\n\nFAULT ID\n61410:			

Table 40-13 BFD_DOWN

Alarm	Attributes	Applicable major release
Name: BFD_DOWN (11521) Type: communicationsAlarm Package: racfl.BFD_DOWN Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: BFD DOWN Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: BFD DOWN\n\nThe alarm is raised if the BFD service is not available on the BTS for all BFD sessions belonging to that BFD group.\n\nThe communication link between the BTS and the BFD peer is defective. No communication is possible.\n\nThe system cancels the alarm autonomously once the BFD functionality is available again.		
Remedial action: 1. Check if the far end has BFD switched on.\n2. Check the cabling and network connections of the far end.		

Table 40-14 BFD_DOWN_Egress

Alarm	Attributes	Applicable major release
Name: BFD_DOWN_Egress (11522) Type: communicationsAlarm Package: racfl.BFD_DOWN_Egress Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: BFD DOWN Egress Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: BFD DOWN Egress\n\nThe alarm is raised if the alarm is enabled, the BFD state of the session is not 'AdminDown', and the BFD packet from the far end contains the diagnostic code =" 'Control Detection Time Expired' and no ingress alarm is present.\n\nThe communication link between the BTS and the BFD peer is defective. No communication is possible.\n\nThe system cancels the alarm autonomously once the local BFD session receives error-free BFD packets from its BFD peer."		
Remedial action: Check the BFD configuration at the local end.		

Table 40-15 BFD_DOWN_Ingress

Alarm	Attributes	Applicable major release
Name: BFD_DOWN_Ingress (11523) Type: communicationsAlarm Package: racfl.BFD_DOWN_Ingress Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: BFD DOWN Ingress Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: BFD DOWN Ingress\n\nThe alarm is raised if the alarm is enabled, the BFD state for the session is not 'AdminDown', and nevertheless, no BFD packet is received at the local end during the detection time.\n\nThe communication link between the BTS and the BTS peer is defective, or the peer itself is defective. No communication is possible.\n\nThe system cancels the alarm autonomously if the local BFD peer receives BFD packets from the remote BFD peer.		
Remedial action: 1. Check the network between both BFD peers for physical link failures or misconfigurations.\n\n2. Check if the BFD functionality in the peer is switched on and that the configurations of the BFD peers match.		

Table 40-16 BLUETOOTH_AUTH_FAIL

Alarm	Attributes	Applicable major release
Name: BLUETOOTH_AUTH_FAIL (11524) Type: communicationsAlarm Package: racfl.BLUETOOTH_AUTH_FAIL Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: BLUETOOTH_AUTH_FAIL Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: BLUETOOTH_AUTH_FAIL\n\nThe Flexi Zone Micro BTS or Flexi Zone Access Point has detected repeated bluetooth authentication failures. This could signal that a passkey or pin guessing attack is ongoing.\n\nTo prevent a DoS attack, this fault does not disable the bluetooth. Instead, the offending devices are subjected to exponential backoff for authentication attempts and might be blacklisted.\n\n		
Remedial action: 1. Determine if this event is expected. Investigate audit logs as necessary.\n2. If this action is unexpected, disable the bluetooth.		

Table 40-17 BLUETOOTH_CONNECTED

Alarm	Attributes	Applicable major release
Name: BLUETOOTH_CONNECTED (11525) Type: communicationsAlarm Package: racfl.BLUETOOTH_CONNECTED Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: BLUETOOTH_CONNECTED Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: BLUETOOTH_CONNECTED\n\nThe Flexi Zone Micro BTS or Flexi Zone Access Point has detected a bluetooth network connection.\n\nNone\n\n		
Remedial action: 1. Determine if this event is expected. Investigate audit logs as necessary.\n2. If this action is unexpected, disable the bluetooth.		

Table 40-18 BLUETOOTH_ENABLED

Alarm	Attributes	Applicable major release
Name: BLUETOOTH_ENABLED (11526) Type: communicationsAlarm Package: racfl.BLUETOOTH_ENABLED Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: BLUETOOTH_ENABLED Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: BLUETOOTH_ENABLED\n\nIf the actBluetoothTransAlarm parameter allows, this fault is raised to indicate that the bluetooth has been enabled because of any of the following:\n- The bluetooth config mode set to explicitly enabled\n- The bluetooth config mode AutoFallback logic, which automatically enables the bluetooth upon loss of connection to the iOMS or NetAct\n\nAs a risk mitigation, this fault warns the operator that the bluetooth is enabled. While the bluetooth is enabled, the site is open to wireless local maintenance over bluetooth.\n\n		
Remedial action: 1. Determine if the bluetooth should be enabled.\n2. If this action is unexpected, disable the bluetooth.		

Table 40-19 BLUETOOTH_PAIRED

Alarm	Attributes	Applicable major release
Name: BLUETOOTH_PAIRED (11527) Type: communicationsAlarm Package: racfl.BLUETOOTH_PAIRED Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: BLUETOOTH_PAIRED Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: BLUETOOTH_PAIRED\n\nThe Flexi Zone Micro BTS or Flexi Zone Access Point has detected a successful pairing.\n\nNone\n\n		
Remedial action: 1. Determine if this event is expected. Investigate audit logs as necessary.\n2. If this action is unexpected, disable the bluetooth.		

Table 40-20 BootableConfigBackupFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigBackupFailed (103) Type: configurationAlarm Package: sw.BootableConfigBackupFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • FL16A
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 40-21 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm Package: sw.BootableConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • FL16A
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 40-22 BootParametersMisconfigured

Alarm	Attributes	Applicable major release
Name: BootParametersMisconfigured (35) Type: configurationAlarm Package: netw.BootParametersMisconfigured Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistentIndexFailure Applicable probable causes: • persistentIndexFailure • configFileBootFailure	Release: • FL16A
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND ((('Config File Status' NOT EQUAL 'Executed Successfully') AND ('Config File Status' NOT EQUAL 'configFileStatus_unspecified')) OR (('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded') AND ('Persistent Index Status' NOT EQUAL 'persistentIndexStatus_unspecified'))))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

Table 40-23 BTSHardwareResynchronization

Alarm	Attributes	Applicable major release
Name: BTSHardwareResynchronization (11472) Type: configurationAlarm Package: netw.BTSHardwareResynchronization Raised on class: netw.NetworkElement	Severity: major Specific problem: Hardware Resynchronization Failure. Implicitly cleared: true Default probable cause: FILE_ERROR	Release: • FL16A
Description: The alarm is raised when the hardware configuration resynchronization failed. The detail of the error is set in the additional information of the alarm.		
Remedial action: Investigation is required to resolve the following possible scenarios: the BTS or OMS is unreachable (including underlying transport network issue); loss of connectivity to the BTS or OMS during transfer; CORBA and HTTP security credential issues; OMS or BTS internal errors. Once the problem solved in the system, the BTS hardware configuration has to be resynchronized from SAM using BTS full resynchronization.		

Table 40-24 CELL_FAULTY

Alarm	Attributes	Applicable major release
Name: CELL_FAULTY (11528) Type: qualityOfServiceAlarm Package: racfl.CELL_FAULTY Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: CELL FAULTY Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A

Table 40-24 CELL_FAULTY (continued)

Alarm	Attributes	Applicable major release
Description: CELL FAULTY\n\nA critical fault (or faults) has occurred in a unit (or units) that belong to the sector indicated in the alarm.\n\nCheck the reason for the fault from the supplementary text field of the alarm.\n\nThe effect of the fault on the functioning of the network element depends on the fault description. For more information, see base station fault descriptions in LTE System Libraries.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		

Table 40-24 CELL_FAULTY (continued)

Alarm	Attributes	Applicable major release
Remedial action: Verify the configuration of a BTS by checking the commissioning, cabling and correct installation of the units/modules at the BTS. Make sure the environment does not cause the fault.\n\nBefore a unit/module is replaced at the BTS, the site should be reset to recover from any temporary faults which might have caused the malfunctioning of the unit/module. When an active alarm is a 'Start' alarm, a site reset is required to cancel the alarm. If the site reset or module block/unblock does not help, replace the faulty unit/module (see the source of the alarm and instructions fields of the corresponding alarms). \n\nBelow is the list of BTS fault(s) which might have caused this alarm in BTS FL16A/TL16A release. In case of earlier SW release and in case you need more detailed fault descriptions refer to LTE System Libraries. The BTS fault descriptions are also included in BTS SW release documentation. If that does not help, contact your local customer support. \n----------\n\nFAULT NAME\nAbnormal CPRI interface to next hop <OptIf ID>\n\nFAULT ID\n1974: EFaultId_AbnormalCpriInterfaceToNextHopAl\n\nMEANING\nThe optical interface is not working properly.\nThe CPRI transmission is not working properly.\nThis fault is valid only for radio modules in a chain configuration.\nNote: The Optif is from the perspective of the previous radio.\n\nINSTRUCTIONS\n1. Check the cables between the RF module that is reported as the fault source and the RF module that is closer to the system module or ABIA. \n2. Reset the RF module. \n3. If that does not help, block or unblock the site. \n4. If that does not help, replace the RF module that is causing the alarm (connected to the faulty optical link, to the end farther from the system module).\n\n\n\n\nFAULT NAME\nAbnormal reception on SFP to next hop <OptIf ID>\n\nFAULT ID\n1973: EFaultId_AbnormalReceptionOnSfpToNextHopAl\n\nMEANING\nThe optical interface is not working properly.\nThis fault is valid only for radio modules in a chain configuration.\nNote: The Optif is from the perspective of the previous radio.\n\nINSTRUCTIONS\n1. Check the cables between the RF module that is reported as the fault source and the RF module that is closer to the system module or ABIA. \n2. Reset the RF module. \n3. If that does not help, block or unblock the site. \n4. If that does not help, replace the RF module that is generating the alarm.\n\n\n\n\nFAULT NAME\nAbnormal reception on SFP to upper hop <OptIf ID>\n\nFAULT ID\n1971: EFaultId_AbnormalReceptionOnSfpToUpperHopAl\n\nMEANING\nThe optical interface is not working properly. There is abnormal signal reception from the upper hop FR. This fault is valid only for radio modules in chain configuration.\n\nINSTRUCTIONS\n1. Check the cables between the system module and the RF module. \n2. Reset the RF module. \n3. If those do not help, block and unblock the site. \n4. If those do not help, replace the RF module that is generating the alarm.\n\n\n\n\nFAULT NAME\nAntenna calibration error caused by transmission path failure \n\nFAULT ID\n1987: EFaultId_CalibrationErrorCausedByTransmissionPathFailureAl\n\nMEANING\nAntenna calibration has failed on at least 3 antennas because of a transmission path failure.\n\nThe path means all units between the signaling processor (DSP) and the antenna inside the radio module.\n\nINSTRUCTIONS\nNote: Perform the steps below in the listed order until the fault is resolved:\n1. Check if other alarms are not reported at the same time. If other alarms are reported, follow the necessary instructions to clear them.\n2. Reset the radio module, which is the fault source.\n3. Reset the BTS.\n4. Replace the radio module, which is the fault source.\n\n\n\n\nFAULT NAME\nAntenna Line Device failure\n\nFAULT ID\n3100: EFaultId_AntennaLineFailure\n\nMEANING\nThe System Module, or the device itself, has detected an abnormal operation or a failure in the antenna line device.\n\nINSTRUCTIONS\nNote: Perform the steps below in the listed order until the BTS fault disappears.\n\n1. Check the antenna line and antenna line devices. Ensure that the antenna line connectors are in the right torque.\n\n2. Block and unblock the alarming RF module to reset it.\n\n3. Replace the faulty parts and/or devices along the antenna line.\n\n4. Replace the RF Module.\n\n\n\n\nFAULT NAME\nAntenna line failure\n\nFAULT ID\n1836: EFaultId_ALOvercurrentAl\n\nMEANING\nThe radio module or filter has detected overcurrent on the antenna line. The antenna line might be damaged (short-circuited), or some antenna line device is causing overload. All antenna line devices powered by the antenna line are out of order.\n\nINSTRUCTIONS\n1. Check the antenna line and antenna line devices. Fix or replace the faulty parts or devices.\n2. For CPRI-A radios, the fault might cancel automatically if the fault condition is cleared within 1 minute of detection. For some CPRI-A radios, the fault might cancel automatically after the fault condition is cleared regardless of when the condition is cleared. If the fault is not canceled automatically, the fault is canceled when the RF module is blocked or unblocked, or when the RF module or the BTS is reset. \n3. For all other radios, the fault is canceled only when the RF module or the BTS is reset.\n\n\n\n\nFAULT NAME\nAntenna line faulty \n\nFAULT ID\n4045: EFaultId_AntennaLineFaultyAl\n\nMEANING\nAn alarm message has been received from the antenna line. The antenna line is faulty.\n\nINSTRUCTIONS\nThe following instructions should be performed on the master RAT side:\n\n1. Check the antenna line and antenna line device that causes the alarm.\n2. Fix or replace the faulty parts or devices.\n3. Perform a radio module reset (only the master RAT in sharing mode can request for such an operation to be performed).\n\n\n\n\nFAULT NAME\nAntenna line switched off due to high VSWR\n\nFAULT ID\n1957: EFaultId_AntennaLineSwitchedOffAl\n\nMEANING\nTx in the RF module has been switched off to protect the radio module hardware, which might be damaged because of high-reflection (VSWR) conditions.\n\nINSTRUCTIONS\n1. The VSWR measured at the RF (transmitter) exceeds values that are acceptable by the RF module.\n2. Check the impedance matching of the Antenna Line System (replace elements that cause mismatch).\n3. To check if the above-mentioned steps have solved the problem, reset the RF module.\n\n*Forcing the RF HW to work under such conditions might result in permanent damage to the RF HW.\n\n\n\n\nFAULT NAME\nAntenna link is down\n\nFAULT ID\n476: EFaultId_Rp3BusError\n\nMEANING\nThe antenna (RP3) link is down. The transmitter or receiver drops from synchronization.\n\nINSTRUCTIONS\nFlexi BTS FDD, Flexi BTS TDD, AirScale BTS FDD, AirScale BTS TDD:\n1. Restart the BTS.\n2. If that does not help, replace the alarming module. \n\nFlexi BTS FDD/TDD: In case the FSP is causing the alarm, replace the FSM because the alarm is related to the fixed FSP inside the FSM. \n\nFlexi BTS FDD/TDD, AirScale BTS FDD/TDD: If FBBx or ABIx is causing the alarm, replace the FBBx or ABIx.\n\nFlexi Zone Micro FDD, Flexi Zone Micro TDD, Flexi Zone, Flexi Zone SFN Antenna: Replace the Flexi Zone Micro BTS, Flexi Zone Access Point, or Flexi Zone SFN Antenna.\n\n\n\n\nFAULT NAME\nBaseband bus configuration of <x> was rejected\n\nFAULT ID\n1811: EFaultId_BbBus_ConfFailedAl\n\nMEANING\nThe baseband-bus-related configuration of <x> has been rejected by the HW SW, DSP, or RF SW.\n\nINSTRUCTIONS\nFlexi BTS FDD, Flexi BTS TDD, AirScale BTS FDD, AirScale BTS TDD:\nReplace the alarming module.\n\nFlexi Zone Micro FDD, Flexi Zone Micro TDD:\n1. Download the correct configuration.\n2. Reset the BTS.\n3. Replace the BTS.\n\nFlexi Zone:\n1. Download the correct configuration.\n2. Reset the Flexi Zone Access Point from the BTSSM.\n3. Replace the Flexi Zone Access Point.\n\nFlexi Zone SFN Antenna:\n1. Download the correct configuration.\n2. Reset the Flexi Zone SFN Antenna from the BTSSM.\n3. Replace the Flexi Zone SFN Antenna.\n\n\n\n\nFAULT NAME\nBaseband bus failure\n\nFAULT ID\n3020: EFaultId_BaseBandBusFailure\n\nMEANING\nThe Flexi BTS has detected an abnormal operation or a failure in the BTS\ninternal or external (optical link) baseband bus. The failure cannot be\nattributed to a specific module and there are several possible fault sources.\n\nINSTRUCTIONS\nNote: Perform the steps below in the listed order until the BTS fault disappears.\n\n1. Check the other		

Table 40-25 CELL_NOTIFICATION

Alarm	Attributes	Applicable major release
Name: CELL_NOTIFICATION (11529) Type: qualityOfServiceAlarm Package: racfl.CELL_NOTIFICATION Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: CELL NOTIFICATION Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: CELL NOTIFICATION\n\nA minor fault (or faults) has occurred in a unit (or units) that belong to the sector indicated in the alarm.\n\nCheck the reason for the fault from the supplementary text field of the alarm.\n\nThe effect of the fault on the functioning of the network element depends on the fault description. For more information, see base station fault descriptions in LTE System Libraries.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		

Table 40-25 CELL_NOTIFICATION (continued)

Alarm	Attributes	Applicable major release
Remedial action: Verify the configuration of a BTS by checking the commissioning, cabling and correct installation of the units/modules at the BTS. Make sure the environment does not cause the fault.\n\nBefore a unit/module is replaced at the BTS, the site should be reset to recover from any temporary faults which might have caused the malfunctioning of the unit/module. When an active alarm is a 'Start' alarm, a site reset is required to cancel the alarm. If the site reset or module block/unblock does not help, replace the faulty unit/module (see the source of the alarm and instructions fields of the corresponding alarms). \n\nBelow is the list of BTS fault(s) which may have caused this alarm in BTS FL16A/TL16A release. In case of earlier SW release and in case you need more detailed fault descriptions refer to LTE System Libraries. The BTS fault descriptions are also included in BTS SW release documentation. If that does not help, contact your local customer support. \n\n----------\n\nFAULT NAME\nAntenna Line Device failure\n\nFAULT ID\n3100: EFaultId_AntennaLineFailure\n\nMEANING\nThe System Module, or the device itself, has detected an abnormal operation or a failure in the antenna line device.\n\nINSTRUCTIONS\nNote: Perform the steps below in the listed order until the BTS fault disappears.\n\n1. Check the antenna line and antenna line devices. Ensure that the antenna line connectors are in the right torque.\n\n2. Block and unblock the alarming RF module to reset it.\n\n3. Replace the faulty parts and/or devices along the antenna line.\n\n4. Replace the RF Module.\n\n\n\n\nFAULT NAME\nAntenna Line Device Operation Failure\n\nFAULT ID\n1871: EFaultId_BusyAl\n1872: EFaultId_FormatErrorAl \n1873: EFaultId_UnsupportedProcedureAl \n1874: EFaultId_OutOfRangeAl \n\nMEANING\nThe device is not working properly, the configuration is not valid, or a given parameter is incorrect.\n\nINSTRUCTIONS\n1. Check the functionality of the antenna line device.\n\n2. Check the compatibility between the antenna line device and the BTS.\n\n3. Check that the given parameters are in the valid range.\n\n\n\n\nFAULT NAME\nAntenna line device SW download failure\n\nFAULT ID\n4047: EFaultId_FileCrcErrorAl\n4048: EFaultId_FileContentErrorAl\n\nMEANING\nAn SW download to an antenna line device has failed because of an incorrect checksum or file format.\n\nINSTRUCTIONS\nNote: Perform the steps below in the listed order until the BTS fault disappears:\n\n1. Check the SW package.\n2. Download the SW to the antenna line device again.\n\n\n\nFAULT NAME\nAntenna line failure\n\nFAULT ID\n1836: EFaultId_ALOvercurrentAl\n\nMEANING\nThe radio module or filter has detected overcurrent on the antenna line. The antenna line might be damaged (short-circuited), or some antenna line device is causing overload. All antenna line devices powered by the antenna line are out of order.\n\nINSTRUCTIONS\n1. Check the antenna line and antenna line devices. Fix or replace the faulty parts or devices.\n2. For CPRI-A radios, the fault might cancel automatically if the fault condition is cleared within 1 minute of detection. For some CPRI-A radios, the fault might cancel automatically after the fault condition is cleared regardless of when the condition is cleared. If the fault is not canceled automatically, the fault is canceled when the RF module is blocked or unblocked, or when the RF module or the BTS is reset. \n3. For all other radios, the fault is canceled only when the RF module or the BTS is reset.\n\n\n\n\nFAULT NAME\nBaseband bus failure\n\nFAULT ID\n3020: EFaultId_BaseBandBusFailure\n\nMEANING\nThe Flexi BTS has detected an abnormal operation or a failure in the BTS\ninternal or external (optical link) baseband bus. The failure cannot be\nattributed to a specific module and there are several possible fault sources.\n\nINSTRUCTIONS\nNote: Perform the steps below in the listed order until the BTS fault disappears.\n\n1. Check the other active BTS faults and act accordingly.\n\n2. Check the cables between the System Module and RF Module.\n\n3. Reset the RF Module and/or System Module, depending on the alarm source:\n a. Reset the RF Module by blocking and unblocking it.\n b. Reset the System Module by blocking and unblocking it.\n\n4. Replace the alarming RF Module.\n\n5. If the System Module is the source, or replacing the RF Module does not clear the fault situation, replace the alarming System Module.\n\n\n\n\nFAULT NAME\nBTS internal SW management problem\n\nFAULT ID\n3090: EFaultId_BtsInternalSwManagementProblem\n\nMEANING\nA software update to a module or sub-assembly has failed, or a corrupted SW file has been detected in the FLASH.\n\nINSTRUCTIONS\nNote: Perform the steps below in the listed order until the BTS fault disappears:\n\nFlexi BTS FDD, Flexi BTS TDD, AirScale BTS FDD, AirScale BTS TDD:\n1. Check the other active BTS faults. If the ROM disk is corrupted, change the alarming module.\n2. Reset the RF Module and/or System Module (depending on the fault source) by blocking/unblocking it.\n3. Update and activate the SW to the BTS.\n4. Check the SW files.\n5. Replace the alarming module.\n\nFlexi Zone Micro FDD, Flexi Zone Micro TDD:\n1. Check the other active Flexi Zone Micro BTS or Flexi Zone Access Point faults. If the ROM disk is corrupted, change the Flexi Zone Micro BTS or Flexi Zone Access Point.\n2. Reset the Flexi Zone Micro BTS or Flexi Zone Access Point by blocking/unblocking it.\n3. Update and activate the SW to the BTS.\n4. Check the SW files.\n\nFlexi Zone:\n1. Check the other active Flexi Zone Access Point faults. If the ROM disk is corrupted, change the Flexi Zone Access Point.\n2. Reset the Flexi Zone Access Point to trigger new SW load.\n3. Check the SW files.\n\nFlexi Zone SFN Antenna:\n1. Check the other active Flexi Zone SFN Antenna faults. If the ROM disk is corrupted, change the Flexi Zone SFN Antenna.\n2. Reset the Flexi Zone SFN Antenna to trigger new SW load.\n3. Check the SW files.\n\n\n\n\nFAULT NAME\nBTS SW download or activation failed\n\nFAULT ID\n29: EFaultId_FileCorruptionAl\n30: EFaultId_SwUpdateAl\n\nMEANING\nThe SW update to the BTS has failed. The error can be caused by a module reset during the SW update, a hardware problem in the module, or a corrupted flash file system.\n\n\n\nINSTRUCTIONS\nFlexi BTS FDD, Flexi BTS TDD, AirScale BTS FDD, AirScale BTS TDD:\n1. Retry the SW update.\n2. If other flash memory-related faults are active for the alarming module at the same time, replace the alarming module.\n\nFlexi Zone Micro FDD, Flexi Zone Micro TDD, Flexi Zone Controller:\n1. Retry the SW update.\n2. If other flash memory-related faults are active for the BTS at the same time, replace the BTS.\n\nFlexi Zone Access Point:\n1. Retry the SW update by resetting the Flexi Zone Access Point using the BTS SM.\n2. If other flash memory-related faults are active for the Flexi Zone Access Point at the same time, replace the Access Point.\n\nFlexi Zone SFN Antenna:\n1. Retry the SW update by resetting the Flexi Zone SFN Antenna using the BTS SM.\n2. If other flash memory-related faults are active for the Flexi Zone SFN Antenna at the same time, replace the Flexi Zone SFN Antenna.\n\n\n\n\nFAULT NAME\nConfiguration error: <x>\n\nFAULT ID\n3070: EFaultId_ConfigurationError \n\nMEANING\nThere is a compatibility problem in the BTS HW/SW versions or the HW/HW configuration. Another possibility is that there is a mismatch in the BTS configuration.\n\nINSTRUCTIONS\nNote: Perform the steps below in the listed order until the BTS fault disappears:\n\n1. Check the installed HW/SW version compatibility and the HW compatibility with the current BTS configuration.\n\n2. Check that the BTS cell parameters from the Network management system match\nthe BTS HW configuration (for example, frequency, power).\n\n3. Check the Network management system alarms for the alarming local cell (LCR).\n\n4. Recommission the BTS to ensure that all parameters are correctly configured.\n\n\n\n\nFAULT NAME\nCorrectable bit toggling error\n\nFAULT ID\n6700: EFaultId_CorrectableBitTogglingError\n\nMEANING\nA correctable bit toggling error is detected in DSP memory.\n\nINSTRUCTIONS\nThe fault doesn't require any special action because it was already autonomously corrected.\n\n\n\n\nFAULT NAME\nCritical bit toggling error\n\nFAULT ID\n6701: EFaultId_CriticalBitTogglingError\n\nMEANING\nA non-correctable, bit-toggling error has been detected in the critical DSP			

Table 40-26 CELL_OPERATION_DEGRADED

Alarm	Attributes	Applicable major release
Name: CELL_OPERATION_DEGRADED (11530) Type: qualityOfServiceAlarm Package: racfl.CELL_OPERATION_DEGRADED Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: CELL OPERATION DEGRADED Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: CELL OPERATION DEGRADED\n\nA major fault (or faults) has occurred in a unit (or units) that belong to the sector indicated in the alarm.\n\nCheck the reason for the fault from the supplementary text field of the alarm.\n\nThe effect of the fault on the functioning of the network element depends on the fault description. For more information, see base station fault descriptions in LTE System Libraries.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		

Table 40-26 CELL_OPERATION_DEGRADED (continued)

Alarm	Attributes	Applicable major release
Remedial action: Verify the configuration of a BTS by checking the commissioning, cabling and correct installation of the units/modules at the BTS. Make sure the environment does not cause the fault.\n\nBefore a unit/module is replaced at the BTS, the site should be reset to recover from any temporary faults which might have caused the malfunctioning of the unit/module. When an active alarm is a 'Start' alarm, a site reset is required to cancel the alarm. If the site reset or module block/unblock does not help, replace the faulty unit/module (see the source of the alarm and instructions fields of the corresponding alarms). \n\nBelow is the list of BTS fault(s) which might have caused this alarm in BTS FL16A/TL16A release. In case of earlier SW release and in case you need more detailed fault descriptions refer to LTE System Libraries. The BTS fault descriptions are also included in BTS SW release documentation. If that does not help, contact your local customer support. \n\n----------\n\nFAULT NAME\n10b8b coding error in optical interface device\n\nFAULT ID\n2004: EFaultId_OIC_LVDSRecAl\n\nMEANING\nThe fiber cable is experiencing interference; data transmission is faulty.\n\nA physical connection failure between the optical interface and the summing function has occurred.\n\nThe reason of the fault might be a low-quality or polluted SFP, or a low-quality optical cable used to connect radio module to system module/extension baseband module.\n\n\nINSTRUCTIONS\nNote: Perform the steps in the listed order until the fault is resolved.\n\n1. Reset the radio module behind the cable reported as the fault source by blocking/unblocking it. \n2. Reset the system module. \n3. Replace the SFP on the radio module port where the cable reported as fault source is terminated.\n4. Replace the SFP on the system module or extension baseband module port where the cable reported as fault source is terminated.\n5. Replace the optical cable reported as fault source.\n6. Replace the radio module behind the cable reported as fault source.\n7. If the system module reset helped but the fault is reported again after some time or if the actions mentioned above have not cleared the fault situation, replace the extension baseband module (if the fault is reported on the cable connected to the baseband module) or the system module (if the fault is reported on the cable connected to the system module).\n\n\n\n\nFAULT NAME\n3GPP/AISG communication administratively disabled\n\nFAULT ID\n4142: EFaultId_Communication3gppAdministrativelyDisabledAl\n\nMEANING\nThe HDLC link has been disabled for the reporting Antenna Line or IUANT port.\n\nINSTRUCTIONS\nEnable the parameter "Communication3gppEnabled" for the reporting Antenna Line to revert changes.\n\n\n\n\nFAULT NAME\nAbnormal CPRI interface to next hop <OptIf ID>\n\nFAULT ID\n1974: EFaultId_AbnormalCpriInterfaceToNextHopAl\n\nMEANING\nThe optical interface is not working properly.\nThe CPRI transmission is not working properly.\nThis fault is valid only for radio modules in a chain configuration.\nNote: The OptIf is from the perspective of the previous radio.\n\nINSTRUCTIONS\n1. Check the cables between the RF module that is reported as the fault source and the RF module that is closer to the system module or ABIA. \n2. Reset the RF module. \n3. If that does not help, block or unblock the site. \n4. If that does not help, replace the RF module that is causing the alarm (connected to the faulty optical link, to the end farther from the system module).\n\n\n\n\nFAULT NAME\nAbnormal CPRI interface to upper hop <OptIf ID>\n\nFAULT ID\n1965: EFaultId_AbnormalCpriInterfaceToUpperHopAl\n\nMEANING\nThe optical interface does not work properly. CPRI transmission to the upper hop does not work properly.\n\nINSTRUCTIONS\nExecute the following steps in the ordered sequence. If any of the step does not help, execute the next one:\n\n1. Reset the radio module behind the cable reported as the fault source. \n2. Reset the system module. \n3. Replace the SFP on the radio module port where the cable reported as the fault source is terminated.\n4. Replace the SFP on the system module or the extension baseband module port where the cable reported as the fault source is terminated.\n5. Replace the optical cable reported as the fault source.\n6. Replace the radio module behind the cable reported as the fault source.\n7. If the actions mentioned above did not clear the faulty situation, replace the extension baseband module (if the fault is reported on the cable connected to the baseband module) or the system module (if the fault is reported on the cable connected to the system module).\n\n\n\n\nFAULT NAME\nAbnormal reception on SFP to next hop <OptIf ID>\n\nFAULT ID\n1973: EFaultId_ AbnormalReceptionOnSfpToNextHopAl\n\nMEANING\nThe optical interface is not working properly.\nThis fault is valid only for radio modules in a chain configuration.\nNote: The OptIf is from the perspective of the previous radio.\n\nINSTRUCTIONS\n1. Check the cables between the RF module that is reported as the fault source and the RF module that is closer to the system module or ABIA. \n2. Reset the RF module. \n3. If that does not help, block or unblock the site. \n4. If that does not help, replace the RF module that is generating the alarm.\n\n\n\n\nFAULT NAME\nAbnormal reception on SFP to upper hop <OptIf ID>\n\nFAULT ID\n1971: EFaultId_AbnormalReceptionOnSfpToUpperHopAl\n\nMEANING\nThe optical interface is not working properly. There is abnormal signal reception from the upper hop FR. This fault is valid only for radio modules in chain configuration.\n\nINSTRUCTIONS\n1. Check the cables between the system module and the RF module. \n2. Reset the RF module. \n3. If those do not help, block and unblock the site. \n4. If those do not help, replace the RF module that is generating the alarm.\n\n\n\n\nFAULT NAME\nAddress mismatch in summing\n\nFAULT ID\n2019: EFaultId_Muksu_SsubMmAl\n\nMEANING\nThere is a baseband bus address mismatch in the summing. There are two possible causes:\n\n1. A configuration error (two different baseband units functioning) - after an acknowledgement, the fault returns.\n\n2. Data corruption on the bus - appears once when an unsynchronized data is sent by the baseband.\n\nINSTRUCTIONS\nCheck the antenna mapping to the local cells in the commissioning file.\n\n\n\n\nFAULT NAME\nAntenna line device configuration failure\n\nFAULT ID\n1888: EFaultId_AlConfigurationFailureAl\n\nMEANING\nAntenna Line Device is not properly configured.\nAntenna Line Device set-up fails, for example due to protocol error or interoperability problem.\n\nINSTRUCTIONS\n1. Check/correct the antenna line configuration.\n\n2. If that does not help, replace the antenna line device.\n\n\n\n\nFAULT NAME\nAntenna Line Device failure\n\nFAULT ID\n3100: EFaultId_AntennaLineFailure\n\nMEANING\nThe System Module, or the device itself, has detected an abnormal operation or a failure in the antenna line device.\n\nINSTRUCTIONS\nNote: Perform the steps below in the listed order until the BTS fault disappears.\n\n1. Check the antenna line and antenna line devices. Ensure that the antenna line connectors are in the right torque.\n\n2. Block and unblock the alarming RF module to reset it.\n\n3. Replace the faulty parts and/or devices along the antenna line.\n\n4. Replace the RF Module.\n\n\n\n\nFAULT NAME\nAntenna line device HW failure\n\nFAULT ID\n1847: EFaultId_HardwareErrorAl\n\nMEANING\nA hardware failure has been reported by ALD (RET, MHA).\n\nINSTRUCTIONS\n1. Reset the radio module to give a power-off reset to the antenna line devices.\n2. If step 1 does not help, replace the antenna line device.\n\n\n\n\nFAULT NAME\nAntenna line device missing software\n\nFAULT ID\n1848: EFaultId_WorkingSoftwareMissingAl \n\nMEANING\nThe unit is in download mode state. This fault is returned when an unsupported procedure occurs in download mode.\n\nINSTRUCTIONS\n1. Upload the correct SW to the device (if possible) or perform an ALD power reset (for example, by RF module reset).\n2. If that does not help, replace the antenna line device.\n\n\n\n\nFAULT NAME\nAntenna line device operation failure\n\nFAULT ID\n4239: EFaultId_AldOperationFailureAl\n\nMEANING\nThe radio module indicated an error upon execution of remote electrical tilt (RET)-related logical operation.\n\nINSTRUCTIONS\n1. Check the antenna		

Table 40-27 ClientDelegateServerStatus

Alarm	Attributes	Applicable major release
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm Package: server.ClientDelegateServerStatus Raised on class: server.ClientDelegateServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • FL16A
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 40-28 CmuManagementFailed

Alarm	Attributes	Applicable major release
Name: CmuManagementFailed (10040) Type: communicationsAlarm Package: lte.CmuManagementFailed Raised on class: lte.CompactMobilityUnit	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ftpFailed	Release: • FL16A
Description: The alarm is raised when SAM fails to manage a 9430 Compact Mobility Unit due to an FTP failure.		
Raising condition: ('Management State' EQUAL 'FTP Failed')		
Clearing condition: ('Management State' EQUAL 'Managed')		
Remedial action: Verify FTP connectivity between the 5620 SAM and the 9430 Compact Mobility Unit, then re-attempt to manage.		

Table 40-29 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm Package: equipment.ContainingEquipmentAdministrativelyDown Raised on class: equipment.Port	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentAdministrativelyDown	Release: • FL16A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 40-30 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm Package: equipment.ContainingEquipmentMismatch Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentMismatch	Release: • FL16A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 40-31 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm Package: equipment. ContainingEquipmentOperationallyDown Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentDown	Release: • FL16A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationllyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

Table 40-32 CorruptImageFile

Alarm	Attributes	Applicable major release
Name: CorruptImageFile (171) Type: configurationAlarm Package: mediation.CorruptImageFile Raised on class: mediation. AbstractSoftwareFolderDescriptor	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile	Release: • FL16A
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		

Table 40-32 CorruptImageFile (continued)

Alarm	Attributes	Applicable major release
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 40-33 CRL_Update_failure

Alarm	Attributes	Applicable major release
Name: CRL_Update_failure (11531) Type: communicationsAlarm Package: racfl.CRL_Update_failure Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: CRL Update failure Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: CRL Update failure\n\nThis alarm is raised if the BTS cannot update the Certificate Revocation List (CRL). Please refer to PDDB parameter 'CERTH::CRLInfo: CRLUpdateFailureReason' for failure reasons.\n\nThe Certificate Revocation List could not be updated. New revoked certificates\nremain unknown to the BTS.\n\nThe alarm is cleared after a successful update of the Certificate Revocation List in a new attempt.		
Remedial action: Execute general configuration checks:\n- Configuration of CMP server IP address and port, and DNS server IP address.\n- Configuration of routing entries towards remote peers.\n- Configuration of IPSec policies towards remote peers.\nCheck remote peers and intermediate network elements interconnections.\nCheck the LDAP connection towards the Certificate Revocation List server.\nCheck DNS names.\nCheck the size of the file at the Certificate Revocation List server.		

Table 40-34 downgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: downgradedCardAlarm (256) Type: softwareAlarm Package: equipment.downgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: downgradedCard	Release: • FL16A
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 40-35 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm Package: equipment.EquipmentAdministrativelyDown Raised on class: equipment.Equipment	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentAdministratively-Down	Release: • FL16A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 40-36 EquipmentDown

Alarm	Attributes	Applicable major release
Name: EquipmentDown (10) Type: equipmentAlarm Package: equipment.EquipmentDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: inoperableEquipment	Release: • FL16A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 40-37 EquipmentInTest

Alarm	Attributes	Applicable major release
Name: EquipmentInTest (11) Type: equipmentAlarm Package: equipment.EquipmentInTest Raised on class: equipment.Equipment	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentInTest	Release: • FL16A
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 40-38 EquipmentMismatch

Alarm	Attributes	Applicable major release
Name: EquipmentMismatch (9) Type: equipmentAlarm Package: equipment.EquipmentMismatch Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentTypeMismatch	Release: • FL16A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 40-39 EquipmentRemoved

Alarm	Attributes	Applicable major release
Name: EquipmentRemoved (8) Type: equipmentAlarm Package: equipment.EquipmentRemoved Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved	Release: • FL16A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: ((('isEquipped' EQUAL 'false') OR ('compositeEquipmentState' EQUAL 'Removed')) AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Removed') AND ('isEquipped' EQUAL 'true'))		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 40-40 Ethernet_OAM_CCM_fault

Alarm	Attributes	Applicable major release
Name: Ethernet_OAM_CCM_fault (11558) Type: communicationsAlarm Package: racfl.Ethernet_OAM_CCM_fault Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: Ethernet OAM CCM fault Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A

Table 40-40 Ethernet_OAM_CCM_fault (continued)

Alarm	Attributes	Applicable major release
Description: Ethernet OAM CCM fault\n\nThe alarm is triggered whenever a service OAM error related to the transmission of Continuity Check Messages (CCM) persists on a given Ethernet interface as soon as one of the error conditions below occur:\n\nThe following alarms are defined:\n\n1. MDL_MISMATCH, priority 5 (highest priority): A CCM is received with an MDL that is lower than the highest configured one in the BTS, and does not match any of the configured ones.\nExample: CCM fault level - prio 5 cause MDL_MISMATCH\nNote: For MDL_MISMATCH cases, it might not be possible to display the local MDL where the fault was detected.\n\n2. MAID_MISMATCH priority 5: A CCM is received with an MDL that is configured in the BTS, but with an MAID that does not match any MA configured in the BTS on this MDL.\nExample: CCM fault level 5 prio 5 cause MAID_MISMATCH\n\n3. MAID_MISMATCH priority 5: A CCM is received with matching MDL and MAID, but the VLAN membership of the received frame does not match the VLAN configuration of the addressed MA.\nExample: CCM fault level 5 prio 5 cause MAID_MISMATCH\n\n4. ERR_CCM, priority 4: A CCM is received with known MDL and MAID, but the MEPID is not configured in the Remote MEP list of the MA.\nExample: CCM fault level 5 prio 4 cause REMOTEMEP_NOT_CONFIGURED\n\n5. ERR_CCM, priority 4: A CCM is received with known MDL, MAID, and MEPID, but the CCM interval coded in the received CCM does not match the interval configured in the BTS.\nEx: CCM fault level 5 prio 4 cause WRONG_CCM_INTERVAL \n\n6. REMOTE_CCM, priority 3: A CCM was not received for 3.5 intervals from at least one remote MEP in the MA.\nEx: CCM fault level 5 prio 3 cause REMOTE_CCM_DEFECT \n\n7. RDI_CCM, priority 1 (lowest priority): An RDI flag is detected in the CCM frames from one remote peer.\nExample: CCM fault level 5 prio 1 cause REMOTE_DEFECT_INDICATION\n\nThe alarm displays the following information:\n- Alarm Name\n- Alarm Priority\n- Alarm cause: if different sources produce the same alarm\n- MD level at which the alarm was detected\n\nThe transport connection toward the remote peer might be defective. Traffic might get lost.\n\nThe alarm is cleared when the CCM fault condition has stopped for at least 10 seconds, and no other CCM fault condition with a lower priority is active.		
Remedial action: 1. Check the cabling.\n2. Check the CCM configuration at the remote peer.		

Table 40-41 Ethernet_OAM_ETH_AIS_fault

Alarm	Attributes	Applicable major release
Name: Ethernet_OAM_ETH_AIS_fault (11559) Type: communicationsAlarm Package: racfl.Ethernet_OAM_ETH_AIS_fault Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: Ethernet OAM ETH_AIS_fault Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: Ethernet OAM ETH_AIS_fault\n\nWhen an MEP receives a valid ETH-AIS frame and AIS is enabled, it shall trigger an AIS alarm containing the following information:\n- receiving interface\n- MD level\n- Source MAC address\n\nNote:For FSMr3/AirScale unit types, interface is provided as: 'module type name' EIF 'interface number'. \nFor Flexi Zone Micro BTS, interface is provided as: EIF 'interface number'.\n\nThe transport connection towards the remote peer may be defective. Traffic may get lost.\n\nThe alarm is cancelled if no ETH_AIS message was received within 3.5 times the configurable ETH_AIS transmission period. This is either within 3.5 seconds or 3.5 minutes.		
Remedial action: 1. Check cabling.\n2. Check the configuration at the remote peer.		

Table 40-42 EXTERNAL_AL_1

Alarm	Attributes	Applicable major release
Name: EXTERNAL_AL_1 (11532) Type: environmentalAlarm Package: racfl.EXTERNAL_AL_1 Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: EXTERNAL AL 1 Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A

Table 40-42 EXTERNAL_AL_1 (continued)

Alarm	Attributes	Applicable major release
Description: EXTERNAL AL 1\n\nThis is an external user-defined alarm. The alarm is defined by the user in a hardware database. Not applicable to Flexi Zone Micro platform and Flexi Zone platform.\n\nThe effect of the alarm depends on the purpose that was configured for the user-defined alarm input in the BTS.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		
Remedial action: The operation depends on the type of alarm that is used as external alarm number 1.		

Table 40-43 EXTERNAL_AL_10

Alarm	Attributes	Applicable major release
Name: EXTERNAL_AL_10 (11533) Type: environmentalAlarm Package: racfl.EXTERNAL_AL_10 Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: EXTERNAL AL 10 Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: EXTERNAL AL 10\n\nThis is an external user-defined alarm. The alarm is defined by the user in a hardware database. Not applicable to Flexi Zone Micro platform and Flexi Zone platform.\n\nThe effect of the alarm depends on the purpose that was configured for the user-defined alarm input in the BTS.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		
Remedial action: The operation depends on the type of alarm that is used as external alarm number 10.		

Table 40-44 EXTERNAL_AL_11

Alarm	Attributes	Applicable major release
Name: EXTERNAL_AL_11 (11534) Type: environmentalAlarm Package: racfl.EXTERNAL_AL_11 Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: EXTERNAL AL 11 Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: EXTERNAL AL 11\n\nThis is an external user-defined alarm. The alarm is defined by the user in a hardware database.\n\nThe effect of the alarm depends on the purpose that was configured for the user-defined alarm input in the BTS.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		
Remedial action: The operation depends on the type of alarm that is used as external alarm number 11.		

Table 40-45 EXTERNAL_AL_12

Alarm	Attributes	Applicable major release
Name: EXTERNAL_AL_12 (11535) Type: environmentalAlarm Package: racfl.EXTERNAL_AL_12 Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: EXTERNAL AL 12 Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A

Table 40-45 EXTERNAL_AL_12 (continued)

Alarm	Attributes	Applicable major release
Description: EXTERNAL AL 12\n\nThis is an external user-defined alarm. The alarm is defined by the user in a hardware database.\n\nThe effect of the alarm depends on the purpose that was configured for the user-defined alarm input in the BTS.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		
Remedial action: The operation depends on the type of alarm that is used as external alarm number 12.		

Table 40-46 EXTERNAL_AL_13

Alarm	Attributes	Applicable major release
Name: EXTERNAL_AL_13 (11536) Type: environmentalAlarm Package: racfl.EXTERNAL_AL_13 Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: EXTERNAL AL 13 Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: EXTERNAL AL 13\n\nThis is an external user-defined alarm. The alarm is defined by the user in a hardware database.\n\nThe effect of the alarm depends on the purpose that was configured for the user-defined alarm input in the BTS.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		
Remedial action: The operation depends on the type of alarm that is used as external alarm number 13.		

Table 40-47 EXTERNAL_AL_14

Alarm	Attributes	Applicable major release
Name: EXTERNAL_AL_14 (11537) Type: environmentalAlarm Package: racfl.EXTERNAL_AL_14 Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: EXTERNAL AL 14 Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: EXTERNAL AL 14\n\nThis is an external user-defined alarm. The alarm is defined by the user in a hardware database. Not applicable to Flexi Zone Micro platform and Flexi Zone platform.\n\nThe effect of the alarm depends on the purpose that was configured for the user-defined alarm input in the BTS.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		
Remedial action: The operation depends on the type of alarm that is used as external alarm number 14.		

Table 40-48 EXTERNAL_AL_15

Alarm	Attributes	Applicable major release
Name: EXTERNAL_AL_15 (11538) Type: environmentalAlarm Package: racfl.EXTERNAL_AL_15 Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: EXTERNAL AL 15 Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A

Table 40-48 EXTERNAL_AL_15 (continued)

Alarm	Attributes	Applicable major release
Description: EXTERNAL AL 15\n\nThis is an external user-defined alarm. The alarm is defined by the user in a hardware database. Not applicable to Flexi Zone Micro platform and Flexi Zone platform.\n\nThe effect of the alarm depends on the purpose that was configured for the user-defined alarm input in the BTS.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		
Remedial action: The operation depends on the type of alarm that is used as external alarm number 15.		

Table 40-49 EXTERNAL_AL_16

Alarm	Attributes	Applicable major release
Name: EXTERNAL_AL_16 (11539) Type: environmentalAlarm Package: racfl.EXTERNAL_AL_16 Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: EXTERNAL AL 16 Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: EXTERNAL AL 16\n\nThis is an external user-defined alarm. The alarm is defined by the user in a hardware database.\n\nThe effect of the alarm depends on the purpose that was configured for the user-defined alarm input in the BTS.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		
Remedial action: The operation depends on the type of alarm that is used as external alarm number 16.		

Table 40-50 EXTERNAL_AL_17

Alarm	Attributes	Applicable major release
Name: EXTERNAL_AL_17 (11540) Type: environmentalAlarm Package: racfl.EXTERNAL_AL_17 Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: EXTERNAL AL 17 Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: EXTERNAL AL 17\n\nThis is an external user-defined alarm. The alarm is defined by the user in a hardware database. Not applicable to Flexi Zone Micro platform and Flexi Zone platform.\n\nThe effect of the alarm depends on the purpose that was configured for the user-defined alarm input in the BTS.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		
Remedial action: The operation depends on the type of alarm that is used as external alarm number 17.		

Table 40-51 EXTERNAL_AL_18

Alarm	Attributes	Applicable major release
Name: EXTERNAL_AL_18 (11541) Type: environmentalAlarm Package: racfl.EXTERNAL_AL_18 Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: EXTERNAL AL 18 Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A

Table 40-51 EXTERNAL_AL_18 (continued)

Alarm	Attributes	Applicable major release
Description: EXTERNAL AL 18\n\nThis is an external user-defined alarm. The alarm is defined by the user in a hardware database.\n\nThe effect of the alarm depends on the purpose that was configured for the user-defined alarm input in the BTS.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		
Remedial action: The operation depends on the type of alarm that is used as external alarm number 18.		

Table 40-52 EXTERNAL_AL_19

Alarm	Attributes	Applicable major release
Name: EXTERNAL_AL_19 (11542) Type: environmentalAlarm Package: racfl.EXTERNAL_AL_19 Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: EXTERNAL AL 19 Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: EXTERNAL AL 19\n\nThis is an external user-defined alarm. The alarm is defined by the user in a hardware database.\n\nThe effect of the alarm depends on the purpose that was configured for the user-defined alarm input in the BTS.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		
Remedial action: The operation depends on the type of alarm that is used as external alarm number 19.		

Table 40-53 EXTERNAL_AL_2

Alarm	Attributes	Applicable major release
Name: EXTERNAL_AL_2 (11543) Type: environmentalAlarm Package: racfl.EXTERNAL_AL_2 Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: EXTERNAL AL 2 Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: EXTERNAL AL 2\n\nThis is an external user-defined alarm. The alarm is defined by the user in a hardware database. Not applicable to Flexi Zone Micro platform and Flexi Zone platform.\n\nThe effect of the alarm depends on the purpose that was configured for the user-defined alarm input in the BTS.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		
Remedial action: The operation depends on the type of alarm that is used as external alarm number 2.		

Table 40-54 EXTERNAL_AL_20

Alarm	Attributes	Applicable major release
Name: EXTERNAL_AL_20 (11544) Type: environmentalAlarm Package: racfl.EXTERNAL_AL_20 Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: EXTERNAL AL 20 Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A

Table 40-54 EXTERNAL_AL_20 (continued)

Alarm	Attributes	Applicable major release
Description: EXTERNAL AL 20\n\nThis is an external user-defined alarm. The alarm is defined by the user in a hardware database. Not applicable to Flexi Zone Micro platform and Flexi Zone platform.\n\nThe effect of the alarm depends on the purpose that was configured for the user-defined alarm input in the BTS.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		
Remedial action: The operation depends on the type of alarm that is used as external alarm number 20.		

Table 40-55 EXTERNAL_AL_21

Alarm	Attributes	Applicable major release
Name: EXTERNAL_AL_21 (11545) Type: environmentalAlarm Package: racfl.EXTERNAL_AL_21 Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: EXTERNAL AL 21 Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: EXTERNAL AL 21\n\nThis is an external user-defined alarm. The alarm is defined by the user in a hardware database.\n\nThe effect of the alarm depends on the purpose that was configured for the user-defined alarm input in the BTS.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		
Remedial action: The operation depends on the type of alarm that is used as external alarm number 21.		

Table 40-56 EXTERNAL_AL_22

Alarm	Attributes	Applicable major release
Name: EXTERNAL_AL_22 (11546) Type: environmentalAlarm Package: racfl.EXTERNAL_AL_22 Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: EXTERNAL AL 22 Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: EXTERNAL AL 22\n\nThis is an external user-defined alarm. The alarm is defined by the user in a hardware database. Not applicable to Flexi Zone Micro platform and Flexi Zone platform.\n\nThe effect of the alarm depends on the purpose that was configured for the user-defined alarm input in the BTS.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		
Remedial action: The operation depends on the type of alarm that is used as external alarm number 22.		

Table 40-57 EXTERNAL_AL_23

Alarm	Attributes	Applicable major release
Name: EXTERNAL_AL_23 (11547) Type: environmentalAlarm Package: racfl.EXTERNAL_AL_23 Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: EXTERNAL AL 23 Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A

Table 40-57 EXTERNAL_AL_23 (continued)

Alarm	Attributes	Applicable major release
Description: EXTERNAL AL 23\n\nThis is an external user-defined alarm. The alarm is defined by the user in a hardware database. Not applicable to Flexi Zone Micro platform and Flexi Zone platform.\n\nThe effect of the alarm depends on the purpose that was configured for the user-defined alarm input in the BTS.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		
Remedial action: The operation depends on the type of alarm that is used as external alarm number 23.		

Table 40-58 EXTERNAL_AL_24

Alarm	Attributes	Applicable major release
Name: EXTERNAL_AL_24 (11548) Type: environmentalAlarm Package: racfl.EXTERNAL_AL_24 Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: EXTERNAL AL 24 Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: EXTERNAL AL 24\n\nThis is an external user-defined alarm. The alarm is defined by the user in a hardware database. Not applicable to Flexi Zone Micro platform and Flexi Zone platform.\n\nThe effect of the alarm depends on the purpose that was configured for the user-defined alarm input in the BTS.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		
Remedial action: The operation depends on the type of alarm that is used as external alarm number 24.		

Table 40-59 EXTERNAL_AL_25

Alarm	Attributes	Applicable major release
Name: EXTERNAL_AL_25 (11549) Type: environmentalAlarm Package: racfl.EXTERNAL_AL_25 Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: EXTERNAL AL 25 Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: EXTERNAL AL 25\n\nThis is an external user-defined alarm. The alarm is defined by the user\nin a hardware database.\n\nThe effect of the alarm depends on the purpose that was configured for\nthe user-defined alarm input in the BTS.\n\nDo not cancel the alarm. The system automatically cancels the alarm when\nthe fault has been corrected.		
Remedial action: The operation depends on the type of alarm that is used as external alarm\nnumber 25.		

Table 40-60 EXTERNAL_AL_26

Alarm	Attributes	Applicable major release
Name: EXTERNAL_AL_26 (11550) Type: environmentalAlarm Package: racfl.EXTERNAL_AL_26 Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: EXTERNAL AL 26 Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A

Table 40-60 EXTERNAL_AL_26 (continued)

Alarm	Attributes	Applicable major release
Description: EXTERNAL AL 26\n\nThis is an external user-defined alarm. The alarm is defined by the user\nin a hardware database.\n\nThe effect of the alarm depends on the purpose that was configured for\nthe user-defined alarm input in the BTS.\n\nDo not cancel the alarm. The system automatically cancels the alarm when\nthe fault has been corrected.		
Remedial action: The operation depends on the type of alarm that is used as external alarm\nnumber 26.		

Table 40-61 EXTERNAL_AL_3

Alarm	Attributes	Applicable major release
Name: EXTERNAL_AL_3 (11551) Type: environmentalAlarm Package: racfl.EXTERNAL_AL_3 Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: EXTERNAL AL 3 Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: EXTERNAL AL 3\n\nThis is an external user-defined alarm. The alarm is defined by the user in a hardware database. Not applicable to Flexi Zone Micro platform and Flexi Zone platform.\n\nThe effect of the alarm depends on the purpose that was configured for the user-defined alarm input in the BTS.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		
Remedial action: The operation depends on the type of alarm that is used as external alarm number 3.		

Table 40-62 EXTERNAL_AL_4

Alarm	Attributes	Applicable major release
Name: EXTERNAL_AL_4 (11552) Type: environmentalAlarm Package: racfl.EXTERNAL_AL_4 Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: EXTERNAL AL 4 Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: EXTERNAL AL 4\n\nThis is an external user-defined alarm. The alarm is defined by the user in a hardware database.\n\nThe effect of the alarm depends on the purpose that was configured for the user-defined alarm input in the BTS.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		
Remedial action: The operation depends on the type of alarm that is used as external alarm number 4.		

Table 40-63 EXTERNAL_AL_5

Alarm	Attributes	Applicable major release
Name: EXTERNAL_AL_5 (11553) Type: environmentalAlarm Package: racfl.EXTERNAL_AL_5 Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: EXTERNAL AL 5 Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A

Table 40-63 EXTERNAL_AL_5 (continued)

Alarm	Attributes	Applicable major release
Description: EXTERNAL AL 5\n\nThis is an external user-defined alarm. The alarm is defined by the user in a hardware database. Not applicable to Flexi Zone Micro platform and Flexi Zone platform.\n\nThe effect of the alarm depends on the purpose that was configured for the user-defined alarm input in the BTS.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		
Remedial action: The operation depends on the type of alarm that is used as external alarm number 5.		

Table 40-64 EXTERNAL_AL_6

Alarm	Attributes	Applicable major release
Name: EXTERNAL_AL_6 (11554) Type: environmentalAlarm Package: racfl.EXTERNAL_AL_6 Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: EXTERNAL AL 6 Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: EXTERNAL AL 6\n\nThis is an external user-defined alarm. The alarm is defined by the user in a hardware database.\n\nThe effect of the alarm depends on the purpose that was configured for the user-defined alarm input in the BTS.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		
Remedial action: The operation depends on the type of alarm that is used as external alarm number 6.		

Table 40-65 EXTERNAL_AL_7

Alarm	Attributes	Applicable major release
Name: EXTERNAL_AL_7 (11555) Type: environmentalAlarm Package: racfl.EXTERNAL_AL_7 Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: EXTERNAL AL 7 Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: EXTERNAL AL 7\n\nThis is an external user-defined alarm. The alarm is defined by the user in a hardware database.\n\nThe effect of the alarm depends on the purpose that was configured for the user-defined alarm input in the BTS.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		
Remedial action: The operation depends on the type of alarm that is used as external alarm number 7.		

Table 40-66 EXTERNAL_AL_8

Alarm	Attributes	Applicable major release
Name: EXTERNAL_AL_8 (11556) Type: environmentalAlarm Package: racfl.EXTERNAL_AL_8 Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: EXTERNAL AL 8 Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A

Table 40-66 EXTERNAL_AL_8 (continued)

Alarm	Attributes	Applicable major release
Description: EXTERNAL AL 8\n\nThis is an external user-defined alarm. The alarm is defined by the user in a hardware database. Not applicable to Flexi Zone Micro platform and Flexi Zone platform.\n\nThe effect of the alarm depends on the purpose that was configured for the user-defined alarm input in the BTS.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		
Remedial action: The operation depends on the type of alarm that is used as external alarm number 8.		

Table 40-67 EXTERNAL_AL_9

Alarm	Attributes	Applicable major release
Name: EXTERNAL_AL_9 (11557) Type: environmentalAlarm Package: racfl.EXTERNAL_AL_9 Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: EXTERNAL AL 9 Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: EXTERNAL AL 9\n\nThis is an external user-defined alarm. The alarm is defined by the user in a hardware database. Not applicable to Flexi Zone Micro platform and Flexi Zone platform.\n\nThe effect of the alarm depends on the purpose that was configured for the user-defined alarm input in the BTS.\n\nDo not cancel the alarm. The system automatically cancels the alarm when the fault has been corrected.		
Remedial action: The operation depends on the type of alarm that is used as external alarm number 9.		

Table 40-68 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major release
Name: FrameSizeProblem (37) Type: configurationAlarm Package: netw.FrameSizeProblem Raised on class: netw.StatefullConnectableInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: frameSizeProblem	Release: • FL16A
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL '0L'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL '0L'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 40-69 FTM_AIS

Alarm	Attributes	Applicable major release
Name: FTM_AIS (11560) Type: communicationsAlarm Package: racfl.FTM_AIS Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: FTM_AIS Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: FTM_AIS\n\nAlarm indication signal is received. This signal is generated by an intermediate PDH device in the forward direction because it detects a problem in its received signal.\n\nAll other transmission alarms related to this signal are suppressed.\n\nProbable cause: There is a transmission problem somewhere in the intermediate network, and AIS is sent instead of user traffic.\n\nPossible impact on the connections over the interface in question:\n- no calls are possible\n- loss of remote management access to other network elements in the RAN\n\n		
Remedial action: Check the intermediate transmission network for alarms indicating the root cause and follow the instructions for handling these alarms.		

Table 40-70 FTM_BTS_RESET_REQUIRED

Alarm	Attributes	Applicable major release
Name: FTM_BTS_RESET_REQUIRED (11561) Type: communicationsAlarm Package: racfl.FTM_BTS_RESET_REQUIRED Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: FTM_BTS_RESET_REQUIRED Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: FTM_BTS_RESET_REQUIRED\n\nA change to the BTS IP settings has been received from the BTS Site Manager. The BTS should be restarted to activate the change.\n\nThe BTS does not take the new settings into use before a reset.\n\n		
Remedial action: Reset the BTS when all the required BTS IP settings have been set.		

Table 40-71 FTM_DPD

Alarm	Attributes	Applicable major release
Name: FTM_DPD (11562) Type: communicationsAlarm Package: racfl.FTM_DPD Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: FTM_DPD Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: FTM_DPD\n\nA dead peer has been detected in one of the IPsec associations of the FTM.\nThere is no response to the requests sent to the peer during the IKE SA setup, the IPsec SA setup, or during DPD.\n\nNote: When the IPSec backup tunnel feature is enabled, this alarm should not be raised because of failures when trying to set up primary IPSec tunnel in 'Secondary_Active_Probing_Primary' state.\n\nPossible reasons:\n- a cable is cut or there is no cable connected to the interface\n- the signal is excessively attenuated\n- the port at the connected far end node is switched off\n\nPossible effects:\n- No calls are possible.\n- loss of remote management access to other network elements in the RAN\n- loss of synchronization if the interface is used as a synchronization source\n- IKE SAs and IPSec SAs cannot be established or re-keyed.\n\nThe alarm condition for a protect policy does not exist anymore if the latest IKE message is answered by the peer.\n\nThe alarm is canceled as soon as the alarm condition does not exist for any protect policy.\n\nNote: When the IPSec backup tunnel feature is enabled, a DPD alarm caused by the primary tunnel failure is cleared when switch-over is successful for all primary tunnels (that is, all secondary tunnels are successfully established).\nSimilarly, any DPD alarm raised because of a secondary tunnel failure is cleared when switchback is successful for secondary tunnels (that is, all primary tunnels are successfully established).		

Table 40-71 FTM_DPD (continued)

Alarm	Attributes	Applicable major release
Remedial action: 1. Check that the cables are connected to the correct connectors.\n2. Check that the interface at the far-end interface is switched on.\n3. Check whether there are active alarms at the far end. If there are, follow the instructions for handling those alarms.		

Table 40-72 FTM_EBER

Alarm	Attributes	Applicable major release
Name: FTM_EBER (11563) Type: communicationsAlarm Package: racfl.FTM_EBER Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: FTM_EBER Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: FTM_EBER\n\nExcessive bit error rate: The measured bit error rate exceeds the threshold value of BER-3 (10E-3).\n\nProbable causes:\n- the signal level is too low (optical connectors or cables are dirty, electrical connectors or cables are corroded)\n- the specified maximum length of the cable is exceeded\n- the connector is not properly connected to the unit\n- the receiver or the far-end transmitter has failed\n\nPossible impact:\n- slow management access to the WBTS and other network elements in the RAN\n- poor voice quality and data performance\n- if this interface is part of an IMA group, this IMA link should be temporarily suspended from operation\n\n		
Remedial action: 1. Clean the cables and connectors.\n\n2. Check that the connectors are properly connected to the unit.\n\n3. Check that the cable connected to the interface in question is not damaged and is within the specifications.\n\n4. Follow the signal in the network and check whether any other alarms concerning the fault are on (such as Laser End of Life). If they are, follow the instructions for handling those alarms.		

Table 40-73 FTM_FAULT_TOGGLING

Alarm	Attributes	Applicable major release
Name: FTM_FAULT_TOGGLING (11564) Type: communicationsAlarm Package: racfl.FTM_FAULT_TOGGLING Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: FTM_FAULT_TOGGLING Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: FTM_FAULT_TOGGLING\n\nAn FTM fault, for which the fault name appears in the Fault name field, is toggling in the FTM. Toggling fault condition is informed to the user with this new FTM fault. Toggling faults are supressed until the toggling alarm condition is cleared. Severity of this FTM fault is the same as the severity of the toggling FTM fault.\n\n\n\n		
Remedial action: 1. Check the fault name of the toggling FTM fault from the Fault name of\nthis fault.\n2. Follow the instructions of the toggling FTM fault to clear the problem.\n \nNote: Detailed information about the toggling frequency can be found in\nalarm history file, which can be downloaded using the BTS Site Manager. The log file is available with Snapshot.		

Table 40-74 FTM_LOF

Alarm	Attributes	Applicable major release
Name: FTM_LOF (11565) Type: communicationsAlarm Package: racfl.FTM_LOF Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: FTM_LOF Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: FTM_LOF\n\nLoss of frame: It is not possible to carry traffic on the interface referenced in the alarm text. All other transmission alarms related to this signal are suppressed.\n\nProbable cause for E1 interfaces: The interface at the far end is not configured to be a framed E1 interface.\n\nProbable cause for T1 interfaces: The interface at the far end is not configured to be a T1 interface.\n\nPossible impact on the connections over this interface:\n- no calls are possible\n- loss of remote management access to other network elements in the RAN\n- loss of synchronization if the interface is used as synchronization source\n\n		
Remedial action: E1 interfaces: Check that the interface type of the far-end interface is also configured to be a framed E1 interface. If this is not the case, reconfigure the interfaces so that they match each other.\n\nJT1 interfaces: Check that the interface type of the far-end interface is also configured to be a JT1 interface. If this is not the case, reconfigure the interfaces so that they match each other.		

Table 40-75 FTM_LOMF

Alarm	Attributes	Applicable major release
Name: FTM_LOMF (11566) Type: communicationsAlarm Package: racfl.FTM_LOMF Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: FTM_LOMF Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: FTM_LOMF\n\nLoss of multi-frame: The interface referenced in the alarm text has lost the multi-frame alignment.\n\nProbable cause: The interface type has not been configured to meet the framing of the interface at the far end. For E1 interfaces, the configuration of the far-end node should be E1 Multiframe.\n\nPossible impact: The performance management data collected on this interface becomes invalid.\n\n		
Remedial action: Check that the configured interface type matches the configured interface type of the far-end interface. If this is the case, the problem is somewhere in the transmission network.		

Table 40-76 FTM_LOS

Alarm	Attributes	Applicable major release
Name: FTM_LOS (11567) Type: communicationsAlarm Package: racfl.FTM_LOS Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: FTM_LOS Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A

Table 40-76 FTM_LOS (continued)

Alarm	Attributes	Applicable major release
Description: FTM_LOS\n\nFlexi BTS FDD, Flexi BTS TDD, AirScale BTS FDD/TDD:\nNo signal is received on the interface referenced in the alarm text. All other transmission alarms related to this signal are suppressed.\n\nProbable causes for Ethernet interfaces:\n- a cable is cut, or there is no cable connected to the interface\n- the electrical signal is excessively reduced\n- the port at the connected far-end node is switched off\n\nFlexi Zone Micro FDD, Flexi Zone Micro TDD:\nNo signal is received on the interface referenced in the alarm text. All other transmission alarms related to this signal are suppressed.\n\nProbable causes for Ethernet interfaces:\n- a cable is cut, or there is no cable connected to the interface\n- the electrical signal is excessively reduced\n- the port at the connected far-end node is switched off\n\nThe fault is generated only when the interface is not configured as LMP (that is, generated only when the interface is configured as the primary BH port, or when daisy chaining (enableLayer2Switching) is enabled).\n\nPossible impacts on the connections over this interface are:\n- no calls are possible\n- loss of remote management access to other network elements in the RAN\n- loss of synchronization if the interface is used as a synchronization source\n\n		
Remedial action: 1. Check that the cables are connected to the correct connectors.\n\n2. Check that the interface at the far-end interface is switched on.\n\n3. Check whether there are active alarms at the far end. If there are, follow the instructions for handling those alarms.\n\n4. Connect a loop cable and check whether the alarm disappears to verify that the hardware of the interface unit works correctly.		

Table 40-77 FTM_RDI

Alarm	Attributes	Applicable major release
Name: FTM_RDI (11568) Type: communicationsAlarm Package: racfl.FTM_RDI Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: FTM_RDI Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: FTM_RDI\n\nRemote defect indication: It is sent by the intermediate or the far-end equipment because it detects a serious fault in the received signal.\n\nProbable cause: The far end has a LOS, LOF, or AIS alarm on its receiving interface.\n\nPossible impact on the connections over this interface:\n- no calls are possible\n- loss of remote management access to other network elements in the RAN\n- loss of synchronization if the interface is used as a synchronization source\n\n		
Remedial action: 1. Check the intermediate transmission network for alarms indicating the root cause and follow the instructions for handling these alarms.\n\n2. Connect a loop cable and check that no alarms appear for this interface to check the transmit hardware.		

Table 40-78 FTM_RESET

Alarm	Attributes	Applicable major release
Name: FTM_RESET (11569) Type: communicationsAlarm Package: racfl.FTM_RESET Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: FTM_RESET Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: FTM_RESET\n\nThe transport part of the BTS has been reset at the date and time given in the notification.\n\n1. FSMr2 supports the following cause for the reset:\n\n'trs power-on reset': Cold start \n'trs watchdog reset': System overload\n'trs startup failure': Failure during startup \n'trs software failure': Software failure\n'trs management reset': Reset triggered by management interface\n'trs fallback': Fallback executed\n\nFSMr3/AirScale supports the following cause for the reset:\n\n'trs power-on reset': Cold start\n'trs watchdog reset': System overload\n'trs software failure': Software failure\n'trs management reset': Reset triggered by management interface\n'trs spurious reset': Reset reason detection failed\n\n2. The '$date' format is the local time stamp (GMT+/-xx:xx). For example: 2014-04-12 00:51:26 GMT+0530\n\nThe fault has no further consequences.\n\n		

Table 40-78 FTM_RESET (continued)

Alarm	Attributes	Applicable major release
Remedial action: No actions are required.		

Table 40-79 FTM_SECURITY_USER_ACCOUNT

Alarm	Attributes	Applicable major release
Name: FTM_SECURITY_USER_ACCOUNT (11570) Type: communicationsAlarm Package: racfl.FTM_SECURITY_USER_ACCOUNT Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: FTM_SECURITY_USER_ACCOUNT Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: FTM_SECURITY_USER_ACCOUNT\n\nA specific BTS local operator account has been locked.\nThe number of failed login attempts for a BTS local operator account has exceeded the threshold, and the account has been locked on the BTS. No further logins are permitted for this account until it is unlocked.\n\nNo further logins are permitted for that account until it is unlocked.\n\n		
Remedial action: Check the validity of the username and password of the account.		

Table 40-80 FTM_SFP

Alarm	Attributes	Applicable major release
Name: FTM_SFP (11571) Type: communicationsAlarm Package: racfl.FTM_SFP Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: FTM_SFP Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: FTM_SFP\n\nFlexi BTS FDD, Flexi BTS TDD, AirScale BTS FDD/TDD:\nThe Small Form-Factor Pluggable (SFP) module detected in the interface connector does not comply with security requirements. It does not have a class 1 laser.\n\nFlexi Zone Micro FDD, Flexi Zone Micro TDD:\nThe Small Form-Factor Pluggable (SFP) module is not supported, not present, or could not be recognized.\nThe SFP module detected in the interface connector does not comply with the SFP module types supported by the BTS element. The SFP module type is checked to ensure that only laser class 1-compliant standard Ethernet SFP modules are used.\nThe SFP module was expected by the SW, but found missing.\nProbable causes:\n- No SFP module is inserted at the SFP-based Ethernet interface.\n- The interface contacts of the SFP module are corroded or dirty, preventing either read access to the SFP module at the time of reading compliance data from the SFP, or preventing detection of the module.\n- The SFP module type is not supported.\n\nThe fault is generated only when the interface is not configured as LMP (that is, generated only when the interface is configured as the primary BH port or when daisy chaining (enableLayer2Switching) is enabled).\n\nFlexi BTS FDD, Flexi BTS TDD, AirScale BTS FDD/TDD:\nThe interface cannot be used for transmission.\n\nFlexi Zone Micro FDD, Flexi Zone Micro TDD:\nThe interface cannot be used for transmission. Conditionally, Bluetooth is enabled when the backhaul goes down.\nThe laser of the SFP module is not switched on, or no SFP module was detected at all.\nThe Ethernet Link is down.\nAn Ethernet Link cannot be successfully established.\nNo Ethernet data or clock information is exchanged between this interface.\n\nPossible impact on the connections over this interface:\n- Voice calls or data connections cannot be established.\n- Remote management connectivity cannot be established.\n- Loss of synchronization if the interface is used as a synchronization source.\n- Depending on use of the Ethernet interface, the above-described impact can occur for the local BTS and/or other BTS elements if they are chained through the Ethernet interface.\n\n		
Remedial action: Flexi BTS FDD, Flexi BTS TDD, AirScale BTS FDD, AirScale BTS TDD:\nInsert a Small Form-Factor Pluggable (SFP) module with the correct laser type (class 1) to the Gigabit Ethernet interface of the unit.\n\nFlexi Zone Micro FDD, Flexi Zone Micro TDD:\n1. Plug-out and plug-in the SFP module.\n2. Check for SFP validity (could be wrong type).\n3. Insert a compliant SFP module.		

Table 40-81 FTM_SFP_WARNING

Alarm	Attributes	Applicable major release
Name: FTM_SFP_WARNING (11572) Type: communicationsAlarm Package: racfl.FTM_SFP_WARNING Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: FTM_SFP_WARNING Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: FTM_SFP_WARNING\n\nThere is an issue with the SFP module used for backhaul. The fault is based on the SFP alarm and warning flags associated with temperature, supply voltage, TX bias current, and TX output power. Warning flags indicate conditions outside the normally-guaranteed bounds but not necessarily causes of immediate link failures while alarm flags can indicate pending, possible, or both pending and possible failure conditions. Certain warning flags might also be defined by the manufacturer as end-of-life indicators (such as for higher than expected bias currents in a constant power control loop). Warning flags are provided as an optional function with SFPs. The exact thresholds for the alarms and warnings are defined by the individual SFP manufacturer.\n\nThe backhaul via the SFP is in a degraded condition. The FZM BTS must be monitored for proper operation.\n\n		
Remedial action: Check the datasheet of the specific SFP used, whether the SFP warning flags are latching or non-latching. In case they are latching, reset the FZM or FZAP to determine whether the fault persists before taking further actions.\n1. Check whether the alarm is caused by exceeded temperature, internal supply voltage, or TX BIAS/TX output power.\n2. If exceeded temperature causes the alarm, investigate if the current operating conditions are outside the high or low temperature specifications for FZM or FZAP. If so, the warning clears when the temperature is within range. If it is inside the FZM- or FZAP-specified range, replace the SFP with an SFP supporting the full FZM or FZAP temperature range.\n3. If the internal supply voltage causes the alarm, check if the FZM or FZAP power input voltage is within the supported operating voltage range. If the FZM or FZAP power input is within the supported operating voltage range, then replace the SFP. Check the specifications of the SFP and whether it is interoperable with the FZM or FZAP. If the fault persists because of the internal supply voltage, replace the FZM or FZAP. If the FZM or FZAP power input voltage is outside the supported operating voltage range of the FZM or FZAP, correct the FZMor FZAP power input voltage.\n4. If the TX BIAS/TX output power causes the alarm, replace the SFP module.		

Table 40-82 FTM_SYNC_LOSS

Alarm	Attributes	Applicable major release
Name: FTM_SYNC_LOSS (11573) Type: communicationsAlarm Package: racfl.FTM_SYNC_LOSS Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: FTM_SYNC_LOSS Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: FTM_SYNC_LOSS\n\nPrimary and secondary timing sources are lost. The LTE is utilizing the Global Navigation Satellite System (GNSS) source (if available) or in synchronization hold-over mode.\n\nThe first and second synchronization sources from the configured priority list are unavailable. On failure, the LTE switches automatically to the next clock source in the priority list.\n\nProbable cause: The transmission links selected for clock source are faulty. The reason can be alarms on the interfaces (for example, LOS).\n\nPossible impact: The BTS is not synchronized to the network anymore.\n\n		
Remedial action: Use the BTS Site Manager to check which interfaces have been configured as synchronization sources.\n\n1. Check that the cables are connected to the correct connectors.\n2. Check whether the interface at the far end is switched on.\n3. Check whether there are active alarms at the far end. If there are, follow the instructions on handling those alarms.\n4. Connect a loop cable and check whether the alarm disappears to verify that the hardware of the interface unit works correctly.		

Table 40-83 FTM_TIMING_SOURCE_LOS

Alarm	Attributes	Applicable major release
Name: FTM_TIMING_SOURCE_LOS (11574) Type: communicationsAlarm Package: racfl.FTM_TIMING_SOURCE_LOS Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: FTM_TIMING_SOURCE_LOS Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: FTM_TIMING_SOURCE_LOS\n\nOne of the synchronization sources in the configured priority list is unavailable.\nThis can be the primary or the secondary clock source.\n\nIn the alarm: Protocol can be PDH, Timing over Packet (ToP), and Synchronuous ethernet.\n\nUnit Number is optional:\n- For PDH and Synchronous Ethernet, Unit number is 0 or 1.\n- It is not present for Timing Over Packet(TOP).\n\nThe interface value is optional:\n- For PDH, the value range depends on the hardware unit type: 1-16.\n- For Synchonuous Ethernet, the value range is 1-3.\n- It is not present for Timing over Packet.\n\nThe BTS may have to use a synchronization interface that has a lower clock\nquality: if the primary clock source has been lost, the BTS switches\nautomatically to the secondary clock source. If both the primary and the\nsecondary clock sources are lost, the BTS switches to the internal clock.\n\n		
Remedial action: Use BTS Site Manager to check which interfaces have been configured as\nsynchronization sources. For all interfaces, do as follows:\n\n1. Check that the cables are connected to the correct connectors.\n2. Check whether the interface at the far end is switched on.\n3. Check whether there are active alarms at the far end. If there are,\nfollow the instructions on handling those alarms.\n4. Connect a loop cable and check whether the alarm disappears to verify that the hardware of the interface unit works correctly.\n\nMonitor the quality of the received clock.		

Table 40-84 GaPeerDown

Alarm	Attributes	Applicable major release
Name: GaPeerDown (3303) Type: EpcAlarm Package: lteggsn.GaPeerDown Raised on class: lteggsn.GaPeer	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerDown	Release: • FL16A
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 40-85 IncompleteConfiguration

Alarm	Attributes	Applicable major release
Name: IncompleteConfiguration (1942) Type: operationalViolation Package: netw.IncompleteConfiguration Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompleteConfig	Release: • FL16A
Description: The alarm is raised when a pre-provisioned NE has no objects configured beneath it.		

Table 40-85 IncompleteConfiguration (continued)

Alarm	Attributes	Applicable major release
Raising condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' EQUAL '\"\"'))		
Clearing condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' NOT EQUAL '\"\"'))		
Remedial action: A configuration error has been made which must be corrected. The configuration of the pre-provisioned NE is incomplete. A work order was not associated with the pre-provisioned NE and as a consequence the attempt to auto-configure the NE failed.		

Table 40-86 IPSEC_EMERGENCY_BYPASS_ACTIVE

Alarm	Attributes	Applicable major release
Name: IPSEC_EMERGENCY_BYPASS_ACTIVE (11575) Type: communicationsAlarm Package: racfl.IPSEC_EMERGENCY_BYPASS_ACTIVE Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: IPSEC_EMERGENCY_BYPASS_ACTIVE Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: IPSEC_EMERGENCY_BYPASS_ACTIVE\n\nThe BTS has entered the IPsec emergency bypass active state, where configured IPsec policies are ignored and the entire traffic is sent unprotected.\n\nConfigured IPsec policies are ignored, and the entire traffic is sent unprotected.\n\n		
Remedial action: Start IPsec emergency bypass by making the security gateway not reachable either\nby plugging out the cable or configuring wrong security gateway address.		

Table 40-87 IPSEC_EXPERT_MODE

Alarm	Attributes	Applicable major release
Name: IPSEC_EXPERT_MODE (11576) Type: communicationsAlarm Package: racfl.IPSEC_EXPERT_MODE Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: IPSEC_EXPERT_MODE Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: IPSEC_EXPERT_MODE\n\nBTS is in IPSec Expert Mode. This mode allows online tuning of IPSec related parameters for troubleshooting or workaround implementation via BTS Site Manager. It is meant for R&D troubleshooting only. When the fault is active, normal IPSec configuration changes are not recommended.\n\nIPSec expert settings can be configured on BTS via BTS Site Manager only if IPSec Expert Mode is activated.\n\n		
Remedial action: None.		

Table 40-88 IPsec_tunnel_switchover

Alarm	Attributes	Applicable major release
Name: IPsec_tunnel_switchover (11579) Type: communicationsAlarm Package: racfl.IPsec_tunnel_switchover Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: IPsec_tunnel_switchover Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: IPsec_tunnel_switchover\n\nThis alarm will be triggered when at least one primary IPSec tunnel fails, and BTS has switched over to a secondary IPSec tunnel.\nAs a result of failure in at least one primary IPSec tunnel, BTS has automatically switched over to a secondary IPSec tunnel terminating on secondary security gateway.\n\nBTS traffic has switched over from the primary IPSec tunnel to the secondary (backup) IPSec tunnel terminating on secondary security gateway.\n\nThe fault is cancelled when BTS has switched back all secondary tunnels to the primary IPSec tunnels due to automatic switchback or manual switchback request from the operator. This applies to the following state transitions:\n- Secondary_Active_Probing_Primary --> Primary_Active\n- Secondary_Active_No_Probing_Primary --> Primary_Active\n\nNote: The clear should also be sent when IPSec backup tunnel feature or IPSec feature is disabled, or BTS is rebooted.		
Remedial action: The operator can check the current remote tunnel endpoint parameter (ipSecBkupTunCurrRemoteEndpoint) on NetAct or BTS SM to verify the remote endpoint of a tunnel. The alarm will be cleared when the tunnel is switched back to the primary remote tunnel endpoint.		

Table 40-89 IPV6_DUPLICATE_ADDRESS_DETECTED

Alarm	Attributes	Applicable major release
Name: IPV6_DUPLICATE_ADDRESS_DETECTED (11577) Type: communicationsAlarm Package: racfl.IPV6_DUPLICATE_ADDRESS_DETECTED Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: IPV6_DUPLICATE_ADDRESS_DETECTED Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: IPV6_DUPLICATE_ADDRESS_DETECTED\n\nDuring the IP address configuration of the BTS, it tests the directly-attached network whether other, already configured BTSs, on the network already uses the same IP addresses on their network IP interfaces. The DAD detects those duplicated IP addresses and prohibits the operation of these IP addresses in the BTS. The warning shall contain the corresponding IP address. A separate reporting shall be indicated for each DAD event.\n\nThe remote peer to come online with the same IP address on the same subnet as\nlocal peer would just disable their network interface and give an error until\nthe situation is resolved by the administrator.\nThis allows the local peer to continue functioning without disruption, but completely breaks IP base communications for the connected network.\n\n		
Remedial action: 1.Check for duplicate IPv6 addresses configured in the BTS.\n2.Change or delete the identified duplicate IPv6 addresses.		

Table 40-90 IP_TRAFFIC_CAPTURE_ONGOING

Alarm	Attributes	Applicable major release
Name: IP_TRAFFIC_CAPTURE_ONGOING (11578) Type: communicationsAlarm Package: racfl.IP_TRAFFIC_CAPTURE_ONGOING Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: IP_TRAFFIC_CAPTURE_ONGOING Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A

Table 40-90 IP_TRAFFIC_CAPTURE_ONGOING (continued)

Alarm	Attributes	Applicable major release
Description: IP_TRAFFIC_CAPTURE_ONGOING\n\nThe base station is currently capturing an IP traffic towards a local port or into a file on the base station.\nIf the traffic capturing is happening towards a local port, a port and destination MAC address must be provided.\nPort values can be LMP or < HW MODULE NAME >-<PORT ID>.\n(For E.g: LMP or FSM-EIF1, FSM-EIF2 or FTIF-EIF1)\n\nNone\n\n		
Remedial action: An IP Traffic Capturing session is ongoing and a base station traffic is captured to a local Ethernet interface or into a file on the base station.		

Table 40-91 LicensedLimitExceeded

Alarm	Attributes	Applicable major release
Name: LicensedLimitExceeded (127) Type: licensingAlarm Package: security.LicensedLimitExceeded Raised on class: security.SamLicensePoints	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: licensedLimitExceeded	Release: • FL16A
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 40-92 LinkDown (equipment)

Alarm	Attributes	Applicable major release
Name: LinkDown (12) Type: communicationsAlarm Package: equipment.LinkDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: portLinkProblem	Release: • FL16A
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 40-93 Link_OAM_critical_link_event__alarm

Alarm	Attributes	Applicable major release
Name: Link_OAM_critical_link_event__alarm (11581) Type: communicationsAlarm Package: racfl.Link_OAM_critical_link_event__alarm Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: Link OAM critical link event alarm Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: Link OAM critical link event alarm\n\nA Link OAM PDU containing a critical link event flag was received on the Ethernet interface. The alarm is raised with the first detection of the flag.\n\nThe following critical link events are possible:\n- Critical Event: either an Errored Symbol Period Event, an Errored Frame Event, an Errored Frame Period Event, or an Errored Frame Seconds Summary Event was detected.\n- Dying Gasp: either the local or the remote peer has a fatal error and is about to restart.\n- Link Fault: the local peer has detected a physical link fault in receiving direction, for example, a LOS.\n\nNote:\nIn case a received OAMPDU has more than one critical event flag set, the following shall be reported in the alarm:\nLink Fault bit set |Dying Gasp bit set|Critical Event bit set| Reported\n x x x Link Fault\n x x Link Fault\n x x Link Fault\n x x Dying Gasp\n\nAlways the latest received critical link event shall be reported.\n\nThe Ethernet interface is defective, or the remote peer is defective. Traffic might get lost.\n\nThe alarm shall be cleared only if OAMPDUs with cleared flag have been received for a configurable period of time (this assumes that the remote peer clears the flag when the error condition was solved).\nIt shall also be cleared when the Link OAM functionality on the interface is being reset.		
Remedial action: 1. Inspect details of the type of the critical event through online configuration management.\n2. Check the Link OAM state information of the interface.\n3. Check the cabling and network connections to the far end.\n4. Check the Ethernet interface configuration at the local and remote sides.\n5. Insert a Link OAM loopback.		

Table 40-94 Link_OAM_link_lost_alarm

Alarm	Attributes	Applicable major release
Name: Link_OAM_link_lost_alarm (11582) Type: communicationsAlarm Package: racfl.Link_OAM_link_lost_alarm Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: Link OAM link lost alarm Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: Link OAM link lost alarm\n\nOn an interface for which the Link OAM functionality was switched on, no Link OAM PDUs were received during the period specified in configuration parameter 'linkLostTime' (2-10 seconds, step 1 second).\n\nThe Ethernet interface might be out of order, or the remote peer might be out of order. Traffic might get lost.\n\nThe alarm is cleared automatically if link OAM PDUs are received continuously again during the same period specified in the parameter 'linkLostTime' (2-10 seconds, step 1 second).		
Remedial action: 1. Check the cabling and network connections to the far end.\n2. Check the Link OAM event information and the Link OAM state information.\n3. Check the Ethernet interface configuration at the local and remote sides.\n4. Insert a Link OAM loopback.		

Table 40-95 Link_OAM_loopback_alarm

Alarm	Attributes	Applicable major release
Name: Link_OAM_loopback_alarm (11583) Type: communicationsAlarm Package: racfl.Link_OAM_loopback_alarm Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: Link OAM loopback alarm Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A

Table 40-95 Link_OAM_loopback_alarm (continued)

Alarm	Attributes	Applicable major release
Description: Link OAM loopback alarm\n\nA loopback is requested for an Ethernet interface either locally at the BTS, or the Link OAM client of the BTS is set into loopback mode by the remote Link OAM peer.\n\nNormal traffic is interrupted. Only loopback OAM frames are transmitted and received over the interface. If the test frame generator is switched on, test frames are transmitted.\n\nFor a loopback inserted by the local peer, the alarm is cancelled automatically after the loopback has ended by expiration of configured loopback time. For a loopback inserted at the remote peer, the alarm is cancelled after detecting loopback end from the remote peer.		
Remedial action: None		

Table 40-96 LMP_CARRIER_DETECTED

Alarm	Attributes	Applicable major release
Name: LMP_CARRIER_DETECTED (11580) Type: communicationsAlarm Package: racfl.LMP_CARRIER_DETECTED Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: LMP_CARRIER_DETECTED Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: LMP_CARRIER_DETECTED\n\nThe Flexi Zone Micro BTS or Flexi Zone Access Point detects, using carrier state, that someone is locally connected to the small cell using LMP port.\n\nUpdate audit logs.\n\n		
Remedial action: 1. Determine if this event is expected: whether a qualified personnel is utilizing LMP ethernet port cable connection for diagnostic purposes. \n2. Otherwise, it shall be treated as a security warning.		

Table 40-97 MobileConnectorDown

Alarm	Attributes	Applicable major release
Name: MobileConnectorDown (1064) Type: EpcAlarm Package: lteservice.MobileConnectorDown Raised on class: lteservice.MobileServiceConnector	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EpcDown	Release: • FL16A
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL '\"\"')		
Clearing condition: ('EPS Path' NOT EQUAL '\"\"')		
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

Table 40-98 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major release
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm Package: netw.NeManagementAndTrapManagementMismatch Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: neManagementChange	Release: • FL16A
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		
Raising condition: ((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band')))		
Clearing condition: ((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band')))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

Table 40-99 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major release
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm Package: security.NewSsh2ServerKeyDetected Raised on class: security.KnownHostKey	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch	Release: • FL16A
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 40-100 NEW_CONFIG_REJECTED

Alarm	Attributes	Applicable major release
Name: NEW_CONFIG_REJECTED (11584) Type: communicationsAlarm Package: racfl.NEW_CONFIG_REJECTED Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: NEW_CONFIG_REJECTED Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: NEW_CONFIG_REJECTED\n\nThis alarm is triggered once the new configuration file is rejected and the\nM-Plane connection is established with fallback configuration as a result\nof M-plane recovery action. It will be visible until next site reset.\n\nThe active base station configuration is not the same as requested in the configuration change.\n\n		
Remedial action: None		

Table 40-101 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major release
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm Package: netw.NodeDatabaseFallbackDetected Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeDatabaseFallback	Release: • FL16A
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 40-102 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major release
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm Package: netw.NodeDatabaseMisalignmentDetected Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment	Release: • FL16A
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

Table 40-103 NodeSuspended

Alarm	Attributes	Applicable major release
Name: NodeSuspended (5123) Type: communicationsAlarm Package: netw.NodeSuspended Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NodeSuspend	Release: • FL16A
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element.The alarm will be cleared when the network element is managed back.		

Table 40-104 NO_CERTIFICATE

Alarm	Attributes	Applicable major release
Name: NO_CERTIFICATE (11585) Type: communicationsAlarm Package: racfl.NO_CERTIFICATE Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: NO_CERTIFICATE Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: NO_CERTIFICATE\n\nA requested certificate could not be retrieved from the certificate authority (CA).\nA requested certificate could not be renewed from the certificate authority (CA).\n\nA requested certificate could not be retrieved as the number of certificates received from repository server (RA) or certificate authority (CA) are more than expected.\n\nA requested certificate could not be stored in the remaining storage available on the BTS. Operator cleanup (e.g. via site manager or NetAct) of old, unused trust chains may be required.\n\nThe requested service is not available.\n\n		
Remedial action: Provide the certificate.		

Table 40-105 NTP_SERVER_UNREACHABLE

Alarm	Attributes	Applicable major release
Name: NTP_SERVER_UNREACHABLE (11586) Type: communicationsAlarm Package: racfl.NTP_SERVER_UNREACHABLE Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: NTP_SERVER_UNREACHABLE Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A

Table 40-105 NTP_SERVER_UNREACHABLE (continued)

Alarm	Attributes	Applicable major release
Description: NTP_SERVER_UNREACHABLE\n\nFlexi BTS FDD, Flexi BTS TDD, AirScale BTS FDD/TDD, Flexi Zone Micro FDD, Flexi Zone Micro TDD:\nA BTS reports this alarm for each instance of the configured NTP server if that\nparticular NTP server is not accessible or cannot be used after waiting for\na threshold timeout defined by the INTP::ntpAlarmThreshold configuration parameter in PDDB.\n\nThe raised alarm displays the IP address of the NTP server that is not reachable\nin the additional information field 'alarmNotif::argumentInfo'.\n\nNote : For each NTP server instance, timers are started separately and a separate\nalarm is raised. This threshold time is not used to clear the alarm.\n\nFlexi Zone:\nFlexi Zone Access Point reports this alarm for each instance of the configured\nNTP server if that particular NTP server is not accessible or cannot be used\nafter waiting for a threshold time-out defined by the configuration parameter\nINTP::ntpAlarmThreshold in PDDB.\n\nThe raised alarm displays the IP address of the NTP server that is not reachable\nin the additional information field 'alarmNotif::argumentInfo'.\n\nNote : For each NTS server instance, timers are started separately and a separate\nalarm is raised. This threshold time is not used to clear the alarm.\n\nThe BTS might lose time synchronization if there are problems with multiple NTP servers, or the BTS will have no time synchronization at all if all NTP servers are down.\n\nFlexi Zone:\nFlexi Zone Access Point might lose time synchronization if there are problems with multiple NTP servers, or the BTS will have no time synchronization at all if all NTP servers are down.\n\n		
Remedial action: 1. Check the connectivity to the NTP server.\n2. Check the NTP server configuration at the BTS.\n3. Check the configured threshold value for the NTP server.		

Table 40-106 PartialResyncProblem

Alarm	Attributes	Applicable major release
Name: PartialResyncProblem (4401) Type: communicationsAlarm Package: netw.PartialResyncProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: partialResyncProblem	Release: • FL16A
Description: The alarm is raised when a partial resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 40-107 PartialVPRNEncryption

Alarm	Attributes	Applicable major release
Name: PartialVPRNEncryption (8992) Type: configurationAlarm Package: nge.PartialVPRNEncryption Raised on class: nge.VprnEncryptService	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConfigMismatch	Release: • FL16A
Description: The alarm is raised when one or more sites are not encryption enabled in a VPRN service.		
Raising condition: (('VPRN Service Encryption Status' EQUAL 'Partial'))		

Table 40-107 PartialVPRNEncryption (continued)

Alarm	Attributes	Applicable major release
Clearing condition: (('VPRN Service Encryption Status' NOT EQUAL 'Partial'))		
Remedial action: This site is newly added to the VPRN service, Perform the encrypt operation on the KeyGroup to clear the alarm.		

Table 40-108 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major release
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm Package: netw. PersistentIndexParametersMisconfigured Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistentIndexConfiguration-Mismatch	Release: • FL16A
Description: The alarm is raised when persistence is set to Off in the NE BOF.		
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

Table 40-109 PLR_THRESHOLD_CROSSED

Alarm	Attributes	Applicable major release
Name: PLR_THRESHOLD_CROSSED (11587) Type: communicationsAlarm Package: racfl.PLR_THRESHOLD_CROSSED Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: PLR_THRESHOLD_CROSSED Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: PLR_THRESHOLD_CROSSED\n\nThe alarm is raised if the packet loss ratio equals or exceeds the configured\ nthreshold value during the current observation interval of 15 minutes.\n\nThis alarm is an indication that the backhaul capacity for traffic with same\nprofile as this TWAMP session (DSCP value, packet size), may be much too small,\nbecause some of the measurement packets seem to have been thrown away.\n\nThe TWAMP measurement packets are lost because of degraded traffic throughput.\n\n		
Remedial action: 1. Check the backhaul usage and if other applications with the same or higher\nPHB may compete against this TWAMP session about the capacity. An increase in\nthe priority of TWAMP session or of the backhaul capacity may clear the alarm.\n\n2. Check if destination is unreachable by IP connectivity test. Send an ICMP\necho request (ping) to the UDP port of the TWAMP reflector at the destination\nIP.If ICMP echo reply indicates that the destination is unreachable but you\nhave access to TWAMP reflector, you can check its status. If the status is disabled\nor down try to activate it again and check if alarm disappears.\n\n3. Check configured PLR threshold. Setting PLR to 0% should be avoided, because\nevery lost measurement packet will trigger the alarm and it cannot be cleared\nagain (PLR>="0)."		

Table 40-110 PollerProblem

Alarm	Attributes	Applicable major release
Name: PollerProblem (31) Type: communicationsAlarm Package: netw.PollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resyncFailed	Release: • FL16A
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 40-111 PrimaryImageBootFailure

Alarm	Attributes	Applicable major release
Name: PrimaryImageBootFailure (191) Type: configurationAlarm Package: sw.PrimaryImageBootFailure Raised on class: sw.CardSoftware	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured	Release: • FL16A
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 40-112 RadiusOperStatusDown

Alarm	Attributes	Applicable major release
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm Package: netw.RadiusOperStatusDown Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: radiusOperationStatusDown	Release: • FL16A
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up.Check the connectivity between SAM server and radius server configured on the Network element.		

Table 40-113 ReachabilityProblem

Alarm	Attributes	Applicable major release
Name: ReachabilityProblem (243) Type: communicationsAlarm Package: netw.ReachabilityProblem Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReachabilityTestFailed	Release: • FL16A
Description: The alarm is raised when a mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. The polling interval depends on the NE type and is configurable in nms-server.xml. By default, the 5620 SAM polls a managed NE every four minutes. If a poll fails, the alarm is raised. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 40-114 ReconfigFailure

Alarm	Attributes	Applicable major release
Name: ReconfigFailure (1949) Type: communicationsAlarm Package: netw.ReconfigFailure Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: failedReconfig	Release: • FL16A
Description: This alarm is raised when the reconfig action failed.		
Raising condition: ('State' EQUAL 'Failed')		
Clearing condition: ('State' NOT EQUAL 'Failed')		
Remedial action: Verify that the object is configured as expected.		

Table 40-115 RTT_THRESHOLD_CROSSED

Alarm	Attributes	Applicable major release
Name: RTT_THRESHOLD_CROSSED (11588) Type: communicationsAlarm Package: racfl.RTT_THRESHOLD_CROSSED Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: RTT_THRESHOLD_CROSSED Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: RTT_THRESHOLD_CROSSED\n\nThe RTT threshold alarm is sent in case the average value of the RTT exceeds or equals the configured threshold for a 1-min period.\n\nThis alarm is an indication that the backhaul capacity for traffic with the\nsame profile as this TWAMP session (DSCP value, packet size) may be too small,\nbecause the measurement packets are scheduled later than before.\n\n		

Table 40-115 RTT_THRESHOLD_CROSSED (continued)

Alarm	Attributes	Applicable major release
Remedial action: 1. Check the backhaul usage and if other applications with the same or higher\nPHB may compete against this TWAMP session about the capacity. An increase in\nthe priority of TWAMP session or of the backhaul capacity may clear the alarm.\n\n2. Check the last measured RTT values of this TWAMP session and verify that\nthe configured RTT threshold value is not too close to average measured RTT\nvalues, so that this alarm could be result of sporadic mis-measurement.		

Table 40-116 SaveConfigFailed

Alarm	Attributes	Applicable major release
Name: SaveConfigFailed (105) Type: configurationAlarm Package: sw.SaveConfigFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileAccessError	Release: • FL16A
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact your Nokia support representative for assistance.		

Table 40-117 ScheduledPollerProblem

Alarm	Attributes	Applicable major release
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm Package: netw.ScheduledPollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: scheduledResyncFailed	Release: • FL16A
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 40-118 SFP_HW_Failure

Alarm	Attributes	Applicable major release
Name: SFP_HW_Failure (11589) Type: communicationsAlarm Package: racfl.SFP_HW_Failure Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: SFP HW Failure Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: SFP HW Failure\n\nA malfunctioning of the SFP transceiver was detected. \nThe SFP has reported a transmission fault condition and has disabled the laser transmitter.\n\nThe SFP is not operational.\n\nThe BTS checks if the HW unit is working correctly.		
Remedial action: Replace the faulty SFP. Note that only the SFP might be faulty, not necessarily the entire hardware unit.		

Table 40-119 SSH_ENABLED

Alarm	Attributes	Applicable major release
Name: SSH_ENABLED (11590) Type: communicationsAlarm Package: racfl.SSH_ENABLED Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: SSH_ENABLED Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: SSH_ENABLED\n\nThe Flexi Zone Micro BTS or Flexi Zone Access Point detects that the SSH access to the site is enabled.\n\nNote: The SSH access to the site is disabled by default. To mitigate the risk in field scenarios, SSH should only be enabled for limited periods time on an as-needed basis.\n\nUpdate audit logs.\n\n		
Remedial action: 1. Determine if this event is expected.\nNote: The SSH access to the site is disabled by the default. SHH should only be enabled for limited periods time on an as-needed basis.		

Table 40-120 SSM_POORQUALITY

Alarm	Attributes	Applicable major release
Name: SSM_POORQUALITY (11591) Type: communicationsAlarm Package: racfl.SSM_POORQUALITY Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: SSM_POORQUALITY Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: SSM_POORQUALITY\n\nThis alarm is raised when the received SSM indicates lower clock quality (for example, 'do not use' or 'EEC') than required.\n\nNote: The interface numbering shall be similar to ETHLK.\nE.g: DN:SYNC-1/STPG-1/STPU-1-4 for unit 1,interface 4.\n\nFlexi Zone Micro FDD, Flexi Zone Micro TDD:\nSyncE is no longer a working synchronization source.\n\nThe alarm is cleared if one SSM is received again showing sufficient quality level.		
Remedial action: Flexi Zone Micro FDD, AirScale BTS FDD/TDD, Flexi Zone Micro TDD, Flexi Zone:\n1. Confirm that SyncE is desired as a synchronization source.\n2. Confirm that eNB configuration settings for ssmEnabled are correct.\n3. Troubleshoot with Backhaul provider on the reason SSM errors.		

Table 40-121 SSM_TIMEOUT

Alarm	Attributes	Applicable major release
Name: SSM_TIMEOUT (11592) Type: communicationsAlarm Package: racfl.SSM_TIMEOUT Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: SSM_TIMEOUT Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: SSM_TIMEOUT\n\nThis alarm is raised if the incoming SSM is not received for a certain time period (configured through the parameter 'ssmTimeout').\n\nNote: The interface numbering is similar to ETHLK.\nExample: DN:SYNC-1/STPG-1/STPU-1-4 for unit 1, interface 4\n\nSyncE is no longer a working synchronization source.\n\n		
Remedial action: 1. Confirm that SyncE is desired as a synchronization source.\n2. Confirm that configuration settings for ssmEnabled are correct.\n3. Troubleshoot with backhaul provider about the reason for SSM errors.		

Table 40-122 StatsRetrieveFailed

Alarm	Attributes	Applicable major release
Name: StatsRetrieveFailed (244) Type: configurationAlarm Package: sw.StatsRetrieveFailed Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: fileTransferFailure	Release: • FL16A
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 40-123 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major release
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed Package: netw.SubscriberSystemNextHopUsageHigh Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • FL16A
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

Table 40-124 TOP_MASTER_UNUSABLE

Alarm	Attributes	Applicable major release
Name: TOP_MASTER_UNUSABLE (11593) Type: communicationsAlarm Package: racfl.TOP_MASTER_UNUSABLE Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: TOP_MASTER_UNUSABLE Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: TOP_MASTER_UNUSABLE\n\nThe reference clock monitoring has detected a loss of ToP reference clock signal received from the master clock behind $IP:\n- The eNB does not receive a reply from ToP Master within a certain time (5 sec) upon sending a sync request message.\n- The eNB receives from ToP Master granted message rates (sync message rate, delay message rate), that do not match the requested rate by the eNB.\n\nThere might be another synchronization source available at eNB. In that case, the BTS switches automatically to the other clock source.\n\nIf no other synchronization source is available at eNB, it runs in hold-over mode. \n\nPlease refer to status of '3080: EFaultId_BtsReferenceClockMissing'.\n\n		
Remedial action: 1. Check the cable connectivity.\n2. Check the TOP configuration.		

Table 40-125 TRANSPORT_MODULE_MISSING

Alarm	Attributes	Applicable major release
Name: TRANSPORT_MODULE_MISSING (11594) Type: communicationsAlarm Package: racfl.TRANSPORT_MODULE_MISSING Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: TRANSPORT_MODULE_MISSING Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: TRANSPORT_MODULE_MISSING\n\nA unit is missing. The slot has been configured to hold a unit, but the plug-in\nunit is not physically present in the slot.\n\nProbable causes:\n\n- The unit has been configured but not detected.\n- The unit is broken and therefore not detected.\n- The unit has been configured but some other unit is detected.\n\nNOTE: The unit variable should be replaced by appropriate HW names configured (unitTypeConfigured) during runtime reporting.\n\nPossible impacts:\n- No calls are possible for the connections over this unit.\n- Remote management access to other network elements in the RAN is lost.\n\n		
Remedial action: Replacing a faulty hardware:\n1. Plug in again the expected transport unit that is referenced in the alarm text.\n2. In case there is a unit present in the slot, remove it from the slot\nand plug it back in. If the unit is still not recognized and the alarm\nremains, replace the faulty unit with a new one. \n\nDecommissioning a previously commissioned hardware:\n1. Recommission to remove the hardware unit referenced in the alarm text.\n\nNOTE: Before recommissioning, the hardware unit must not be present in the slot.		

Table 40-126 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major release
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm Package: netw.TrapDestinationMisconfigured Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trapDestinationMisconfigured Applicable probable causes: • trapDestinationMisconfigured • duplicateTrapLogId	Release: • FL16A
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		

Table 40-126 TrapDestinationMisconfigured (continued)

Alarm	Attributes	Applicable major release
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 40-127 TrapReceivingFailure

Alarm	Attributes	Applicable major release
Name: TrapReceivingFailure (1083) Type: communications Package: netw.TrapReceivingFailure Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: trapsWillNotBeSent	Release: • FL16A
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		
Raising condition: ((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')))		
Clearing condition: ((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

Table 40-128 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major release
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications Package: netw.TrapRoutePreferenceRedundancyMissing Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trapsRedundancyMissing	Release: • FL16A
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: ((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')))		
Clearing condition: ((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None')))		
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

Table 40-129 TRUST_ANCHOR_EXPIRING

Alarm	Attributes	Applicable major release
Name: TRUST_ANCHOR_EXPIRING (11595) Type: communicationsAlarm Package: racfl.TRUST_ANCHOR_EXPIRING Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: TRUST_ANCHOR_EXPIRING Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: TRUST_ANCHOR_EXPIRING\n\nThe network element stores trust anchors for its own trust chain and for peers. When its own or any trust anchors are about to expire or are expired, this alarm is sent.\n\nNo immediate effect. If at all certificate expires without any action from operator due to this fault, secure communication to remote peers may fail.\n\n		
Remedial action: Update the trust anchors.		

Table 40-130 UnidentifiedNode

Alarm	Attributes	Applicable major release
Name: UnidentifiedNode (1922) Type: communicationsAlarm Package: netw.UnidentifiedNode Raised on class: netw.DiscoveredNode	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unidentifiedNode	Release: • FL16A
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		

Table 40-130 UnidentifiedNode (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 40-131 UnmanageFailed

Alarm	Attributes	Applicable major release
Name: UnmanageFailed (300) Type: discoveryControlAlarm Package: netw.UnmanageFailed Raised on class: netw.NodeDiscoveryControl	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unableToDeleteNode	Release: • FL16A
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'Unmanage Failed')		
Clearing condition: ('Site State' NOT EQUAL 'Unmanage Failed')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 40-132 UNSUPPORTED_HW_DEVICE

Alarm	Attributes	Applicable major release
Name: UNSUPPORTED_HW_DEVICE (11597) Type: communicationsAlarm Package: racfl.UNSUPPORTED_HW_DEVICE Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: UNSUPPORTED_HW_DEVICE Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: UNSUPPORTED_HW_DEVICE\n\nThe SW does not support the detected HW unit type.\n\nProbable causes:\n\n- The SW version of the system module is too old.\n- The supported HW variant is not present in the system module.\n\nThe possible impact is that no calls are possible for the connections over this unit.\n\n		
Remedial action: SW upgrading: Upgrade the FSM SW release to the latest version that includes the support for the new external transport device variant.\n\nUnit variant replacement: Replace the unsupported device variant to another one that supports the currently running SW release.		

Table 40-133 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major release
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm Package: netw.UpgradedBuildVersionMismatch Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: upgradedImageNotBooted	Release: • FL16A

Table 40-133 UpgradedBuildVersionMismatch (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 40-134 upgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: upgradedCardAlarm (255) Type: softwareAlarm Package: equipment.upgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: upgradedCard	Release: • FL16A
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 40-135 UplinkDown

Alarm	Attributes	Applicable major release
Name: UplinkDown (11062) Type: virtualSwitchAlarm Package: dctr.UplinkDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsAllDown	Release: • FL16A
Description: The alarm is raised when all connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '2'))		
Clearing condition: (('uplinkState' NOT EQUAL '2'))		
Remedial action: This alarm is raised when all connections associated to the uplink lost connectivity.		

Table 40-136 UplinkPartiallyDown

Alarm	Attributes	Applicable major release
Name: UplinkPartiallyDown (11063) Type: virtualSwitchAlarm Package: dctr.UplinkPartiallyDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsDown	Release: • FL16A
Description: The alarm is raised when some connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '3'))		
Clearing condition: (('uplinkState' NOT EQUAL '3'))		
Remedial action: This alarm is raised when a connection of the uplink lost connectivity but at least one connection remains connected.		

Table 40-137 VENDOR_CERTIFICATE_EXPIRING

Alarm	Attributes	Applicable major release
Name: VENDOR_CERTIFICATE_EXPIRING (11598) Type: communicationsAlarm Package: racfl.VENDOR_CERTIFICATE_EXPIRING Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: VENDOR_CERTIFICATE_EXPIRING Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: VENDOR_CERTIFICATE_EXPIRING\n\nThe BTS raises this alarm when the vendor BTS certificate is about to expire.\n\nThe period of advance notification is configurable, as well as the CA certificate expiry.\n\n1 day ... 4999 days with default 90 days\n\nNote: For Flexi Zone Controller, the period of advance notification is a non-configurable 90 days.\n\nAs long as BTS operator certificate is available and active on BTS, there is no impact. However, if BTS is reset to factory default, since vendor certificate is expired, the BTS may fail to derive a new BTS operator certificate.\n\n		
Remedial action: Flexi BTS FDD, Flexi BTS TDD, AirScale BTS FDD/TDD, Flexi Zone Micro FDD, Flexi Zone Micro TDD, Flexi Zone Access Point, Flexi Zone Controller:\nCheck the vendor BTS certificate expiry date. \nReplace the expired vendor BTS certificate if possible (for example, an older BTS like FSMr2).\nOtherwise, contact Nokia to investigate the need for hardware replacement or return to resolve the possible end-of-life indication implied by the expired Nokia vendor certificate.\n\nFor most BTS types (including at least FSMr3, Airscale, Flexi Zone Controller, FZAP, and Flexi Micro/Pico), a new vendor certificate can only be installed in the Nokia factory.		

Table 40-138 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm Package: sw.VersionConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: versionMismatch	Release: • FL16A
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		

Table 40-138 VersionConfigRestoreFailed (continued)

Alarm	Attributes	Applicable major release
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 40-139 WIFI_CARD_INVALID_TYPE

Alarm	Attributes	Applicable major release
Name: WIFI_CARD_INVALID_TYPE (11599) Type: communicationsAlarm Package: racfl.WIFI_CARD_INVALID_TYPE Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: WIFI_CARD_INVALID_TYPE Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: WIFI_CARD_INVALID_TYPE\n\nThe internal Wi-Fi module type is invalid.\n\nThe internal Wi-Fi module might not be operational.\n\n		
Remedial action: 1. Check the release notes of the downloaded BTS software if any known Wi-Fi module issues are reported.\n2. Replace the Flexi Zone Micro BTS.		

Table 40-140 WIFI_CARD_NOT_PRESENT

Alarm	Attributes	Applicable major release
Name: WIFI_CARD_NOT_PRESENT (11600) Type: communicationsAlarm Package: racfl.WIFI_CARD_NOT_PRESENT Raised on class: racfl.MRBTS	Severity: indeterminate Specific problem: WIFI_CARD_NOT_PRESENT Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • FL16A
Description: WIFI_CARD_NOT_PRESENT\n\nThe internal Wi-Fi module is not present.\n\nThe internal Wi-Fi module might be not operational.\n\n		
Remedial action: 1. Check the release notes of the downloaded BTS software if any known Wi-Fi module issues are reported.\n2. Replace the Flexi Zone BTS.		

Table 40-141 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major release
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm Package: netw.WrongCpaaSoftwareVersion Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion	Release: • FL16A
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL '\"TiMOS-B-3.0.Generic \"') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Clearing condition: (('Software Version' NOT EQUAL '\"TiMOS-B-3.0.Generic \"') AND ('Chassis Type' EQUAL '7701 CPAA'))		

Table 40-141 WrongCpaaSoftwareVersion (continued)

Alarm	Attributes	Applicable major release
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

41 LTE OMS

41.1 Alarms

Alarms

Note: Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see Chapter 39, “Unspecified NE”.

Table 41-1 ActiveAbnormalCondition

Alarm	Attributes	Applicable major release
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm Package: netw.ActiveAbnormalCondition Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState	Release: • LOMS16A
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

Table 41-2 ACTIVE_ALARM_OVERFLOW

Alarm	Attributes	Applicable major release
Name: ACTIVE_ALARM_OVERFLOW (11601) Type: qualityOfServiceAlarm Package: racloms.ACTIVE_ALARM_OVERFLOW Raised on class: racloms.OMS	Severity: indeterminate Specific problem: ACTIVE ALARM OVERFLOW Implicitly cleared: true Default probable cause: RESOURCE_AT_OR_NEARING_CAPACITY	Release: • LOMS16A
Description: ACTIVE ALARM OVERFLOW\n\nThe maximum limit for the amount of active alarms has been reached in AlarmSystem database.\n\nWhile the node has the maximum amount of active alarms, alarms originated from controller are rejected, alarms originated from OMS are cached in file. Clearing of the alarms is anyhow possible.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: Check active alarms on the overflowing node with alarm management application and correct them according to their instructions. If this is not possible or does not cause this alarm to be removed, fill in a Problem Report and send it to your local Nokia representative.		

Table 41-3 AGWDiameterPeerDown

Alarm	Attributes	Applicable major release
Name: AGWDiameterPeerDown (844) Type: EpcAlarm Package: lte.AGWDiameterPeerDown Raised on class: lte.AGWDiameterPeer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerDown	Release: • LOMS16A
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 41-4 ALARM_FROM_NE_CORRUPTED

Alarm	Attributes	Applicable major release
Name: ALARM_FROM_NE_CORRUPTED (11602) Type: qualityOfServiceAlarm Package: racloms.ALARM_FROM_NE_CORRUPTED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: ALARM FROM NE CORRUPTED Implicitly cleared: true Default probable cause: COMMUNICATION_ PROTOCOL_ERROR	Release: • LOMS16A
Description: ALARM FROM NE CORRUPTED\n\nOMS could not decode alarm message from NE.\n\nOMS does not have working alarm interface to that NE.\n\nDo not clear the alarm. OMS will clear the alarm automatically.		
Remedial action: Possible reason is false BTSOM interface version. Contact Nokia representative.		

Table 41-5 ALARM_LOG_FILE_INACCESSIBLE

Alarm	Attributes	Applicable major release
Name: ALARM_LOG_FILE_INACCESSIBLE (11603) Type: processingErrorAlarm Package: racloms.ALARM_LOG_FILE_ INACCESSIBLE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: ALARM LOG FILE INACCESSIBLE Implicitly cleared: true Default probable cause: FILE_ERROR	Release: • LOMS16A
Description: ALARM LOG FILE INACCESSIBLE\n\nAlarm processor cannot open or read the alarm log file.\n\nAlarm notifications recorded in the alarm log file cannot reach the alarm system, and as a result the control for the alarm situation in the network element is lost.\n\nThe alarm is cleared automatically by the alarm system when access to the alarm log file is restored.		

Table 41-5 ALARM_LOG_FILE_INACCESSIBLE (continued)

Alarm	Attributes	Applicable major release
Remedial action: 1. Check with the parameter management application that the alarm log file name in the alarm processor configuration in LDAP (fsParameterId="fsLogFileName, fsAlarmProcessorConfigurationId=Default, fsAlarmProcessorId= AlarmProcessor1, fsFragmentId= AlarmProcessors, fsFragmentId=AlarmMgmt, fsClusterId=ClusterRoot) is the same as the name specified in the Management Object Model in the SS_MOMfsAlarm document. \n2. If the value in LDAP is different, then modify the LDAP value and restart alarm processor with the following command:\nfshascli -r /<Node>/FSAlarmSystemServer/AlarmProcessor\ nwhere <Node> is the name of the node where alarm processor is deployed.\n3. If the values are the same, then fill in a problem report with the alarm data and send it to your Nokia representative."		

Table 41-6 ALARM_OVERFLOW_CACHE_FILE_INACCESSIBLE

Alarm	Attributes	Applicable major release
Name: ALARM_OVERFLOW_CACHE_FILE_ INACCESSIBLE (11604) Type: processingErrorAlarm Package: racloms.ALARM_OVERFLOW_CACHE_ FILE_INACCESSIBLE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: ALARM OVERFLOW CACHE FILE INACCESSIBLE Implicitly cleared: true Default probable cause: FILE_ERROR	Release: • LOMS16A
Description: ALARM OVERFLOW CACHE FILE INACCESSIBLE\n\nAlarm processor cannot open or read the alarm overflow cache file.\n\nIt's impossible to cache incoming alarm notifications if the Alarm System will be in overload state.\n\nDo not clear the alarm. The system will automatically clear the alarm.		
Remedial action: 1. Check if the name of the overflow cache alarm log file that is defined by the parameter fsOverflowAlarmCacheFile in the alarm processor configuration in Configuration Directory points out to the existing file name (excluding number suffix). \nldapsearch -LLL -H ldap://Directory:389 -x -b "fsClusterId="ClusterRoot" "(objectclass=FSAlarmProcessorConfiguration)"\n\n2. If these files (with number suffixes 0,1, etc..) don't exist, it's possible to leave existing defined filename or change it in the Configuration Directory (LDAP) using the following SCLI commands:\nldapmodify -x -y /opt/Nokia_BP/etc/ldapfiles/fssecldap.ldaproot -D uid=fsLDAPRoot,ou=People,fsFragmentId=Security,fsClusterId=ClusterRoot<<EOF\ndn: fsAlarmProcessorConfigurationId=Default, fsAlarmProcessorId=AlarmProcessor1,fsFragmentId=AlarmProcessors,fsFragmentId=AlarmMgmt,fsClusterId= ClusterRoot\nfsOverflowAlarmCacheFile: <correct_value> EOF\n\nThen restart the Alarm System using the following SCLI command:\nfshascli -r /AlarmSystem\n\nAfter the Alarm System restarts, files should be recreated anew in the given location.\n\n3. If alarm is still active after the Alarm System restart, prepare a problem report with the alarm data, and send it to your Nokia representative."		

Table 41-7 ALARM_PROCESSOR_CONFIGURATION_IS_OUT_OF_ORDER

Alarm	Attributes	Applicable major release
Name: ALARM_PROCESSOR_CONFIGURATION_ IS_OUT_OF_ORDER (11605) Type: processingErrorAlarm Package: racloms.ALARM_PROCESSOR_ CONFIGURATION_IS_OUT_OF_ORDER Raised on class: racloms.OMS	Severity: indeterminate Specific problem: ALARM PROCESSOR CONFIGURATION IS OUT OF ORDER Implicitly cleared: true Default probable cause: CONFIGURATION_OR_ CUSTOMIZING_ERROR	Release: • LOMS16A
Description: ALARM PROCESSOR CONFIGURATION IS OUT OF ORDER\n\nThe configuration of alarm processor contains an invalid attribute value or an attribute is missing.\n\nThe system ignores the invalid value and uses a default value.\n\nThe system clears the alarm automatically when the fault has been corrected.		

Table 41-7 ALARM_PROCESSOR_CONFIGURATION_IS_OUT_OF_ORDER (continued)

Alarm	Attributes	Applicable major release
Remedial action: 1. Use the parameter management application to correct the invalid value of the attribute. The distinguished name of the attribute - identifying its location in the LDAP - can be found in the 'Managed Object Id' field of the alarm. \n2. Restart alarm processor with the following command:\nfshascli -r /<Node>/FSAlarmSystemServer/AlarmProcessor\nwhere <Node> is the name of the node where alarm processor is deployed.\nThe default values of the alarm processor attributes used when correcting the situation are listed below:\nAttribute Default value\nfsNumProcessors: 5\nfsHasSimpleAware: true\nfsLogFileName: /var/log/master-alarms\ nfsLogParserSleepTime: 1\nfsAlarmNotificationCollectorSleepTime:\n 1\nfsParameterNotificationProcessorSleepTime:\n 15\nfsAlarmHistoryProcessorSleepTime:\n 60\nfsAlarmHistorySize: 1000000\nfsBatchSize: 120\nfsHeartbeatInterval: 300\ nfsAlarm70247raise: true\nfsSeverityChangeReRaise: false\nfsNotificationBatchSize: 20\nfsStrictAlarmTimeOrder: false\ nfsAllowedMCACAlarms: true\nfsDatSupport: true\nfsAutoAckedDAT: true\nfsTimeBasedAlarmHistorySize: false\ nfsDeletedAlarmHistorySize: 4000\nfsStoredAlarmNotificationsPerSecond: \n 0\nfsZeroTTLforWarnings: false\ nfsOriginalTimeAsAlarmTimeForExternals: \n rnw="0 crnc=0 fp=0\nfsUseTimeParamsForExternals: rnw=0 crnc=0 fp=0\ nfsRaise70280insteadOf70005forUnknownSP: \n true\nfsAlarmIndicationPreventionList:\n 70246=5\nfsExternalFlowControlValid: rnw=1 crnc=1 fp=1\nfsSendParameterChangeNotification: \n false\nfsSendRuleChangeNotification: false"		

Table 41-8 ALARM_SYSTEM_HEARTBEAT

Alarm	Attributes	Applicable major release
Name: ALARM_SYSTEM_HEARTBEAT (11606) Type: processingErrorAlarm Package: racloms.ALARM_SYSTEM_HEARTBEAT Raised on class: racloms.OMS	Severity: indeterminate Specific problem: ALARM SYSTEM HEARTBEAT Implicitly cleared: true Default probable cause: TIMEOUT_EXPIRED	Release: • LOMS16A
Description: ALARM SYSTEM HEARTBEAT\n\nThis is an informative alarm, which indicates that the alarm system itself is in operational state.\n\nThe alarm system is continuously (after each expiration of a heartbeat interval) raising or clearing this alarm, which means that the state of this alarm is constantly changing in a loop (new alarm -> cleared alarm -> new alarm -> cleared alarm -> new alarm -> ...) and the alarm time is updated by the time of the last raise/clear operation. If the refreshing of the alarm does not occur, it signals that the alarm system is faulty.\nNote that there is a delay before the raise/clear operation becomes visible in the alarm monitoring tool. If the system is under heavy load it might take even longer for the operation to be visible in the alarm monitoring tool.\n\nThe alarm system clears the alarm when the heartbeat interval expires.		
Remedial action: 1. If the used alarm monitor tool does not support an automatic alert in situations where the alarm system heartbeating is not functioning, check occasionally that the heartbeating functions properly. The time of the alarm and the value of the heartbeat interval (specified in the 'Application Additional Info' field) should be used in analysing the situation. \n2. Perform such checking also when the system does not generate any alarm events for a long time.\n3. If the checking shows that the alarm time is not continuously refreshed, restart the alarm processor with the following command:\nfshascli -r /<Node>/FSAlarmSystemServer/ AlarmProcessor\nwhere <Node> is the name of the node where the alarm processor is deployed.\n4. If restarting the alarm processor does not help, also restart the alarm system database with the following command:\nfshascli -r /AlarmDB		

Table 41-9 ALARM_SYSTEM_HEARTBEATING_SWITCHED_OFF

Alarm	Attributes	Applicable major release
Name: ALARM_SYSTEM_HEARTBEATING_ SWITCHED_OFF (11607) Type: processingErrorAlarm Package: racloms.ALARM_SYSTEM_ HEARTBEATING_SWITCHED_OFF Raised on class: racloms.OMS	Severity: indeterminate Specific problem: ALARM SYSTEM HEARTBEATING SWITCHED OFF Implicitly cleared: true Default probable cause: CONFIGURATION_OR_ CUSTOMIZING_ERROR	Release: • LOMS16A

Table 41-9 ALARM_SYSTEM_HEARTBEATING_SWITCHED_OFF (continued)

Alarm	Attributes	Applicable major release
Description: ALARM SYSTEM HEARTBEATING SWITCHED OFF\n\nThe alarm system heartbeating is switched off, which means that the alarm system does not raise or clear its heartbeat alarms.\n\nThe alarm system heartbeating is the simplest and most efficient way for the operator to monitor that the alarm system itself is healthy. If the system is in a switched off state, the operator cannot detect if the alarm system becomes faulty. This is why it is strongly recommended that you have the alarm system heartbeating always switched on. Nevertheless the alarm system heartbeating can be switched off if an alternative heartbeating exists. In the alarm system configuration, by setting the value of the fsAlarm70247raise configuration parameter to false, raising the 70247 alarm will be disabled.\n\nThe alarm system clears the alarm automatically after restart if the alarm system heartbeating is set as switched on in the configuration.		
Remedial action: 1. Use the parameter management application to set a non-zero (0 means that heartbeating is switched off) heartbeat interval in seconds for the fsParameterId=" fsHeartbeatInterval, fsAlarmProcessorConfigurationId=Default, fsAlarmProcessorId=AlarmProcessor1, fsFragmentId= AlarmProcessors, fsFragmentId=AlarmMgmt, fsClusterId=ClusterRoot attribute in the alarm system LDAP configuration. \n2. Use the parameter management application to set the value of the fsParameterId=fsAlarm70247raise, fsAlarmProcessorConfigurationId=Default, fsAlarmProcessorId=AlarmProcessor1, fsFragmentId= AlarmProcessors, fsFragmentId=AlarmMgmt, fsClusterId=ClusterRoot attribute to false in the alarm system LDAP configuration for the case when the alarm system heartbeating is desired to be switched off.\n3.Restart alarm processor with the following command:\nfshascli -r /<Node>/FSAlarmSystemServer/AlarmProcessor\nwhere <Node> is the name of the node where alarm processor is deployed."		

Table 41-10 ALARM_TYPE_PARAMETER_HAS_BEEN_MODIFIED

Alarm	Attributes	Applicable major release
Name: ALARM_TYPE_PARAMETER_HAS_BEEN_MODIFIED (11608) Type: processingErrorAlarm Package: racloms.ALARM_TYPE_PARAMETER_HAS_BEEN_MODIFIED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: ALARM TYPE PARAMETER HAS BEEN MODIFIED Implicitly cleared: true Default probable cause: CONFIGURATION_OR_CUSTOMIZING_ERROR	Release: • LOMS16A
Description: ALARM TYPE PARAMETER HAS BEEN MODIFIED\n\nSome parameters for alarm type have been modified.\n\nThe changed parameters affect the processing of the alarms, that belong to the alarm type in question.\n\nThe system clears the alarm automatically after its time to live\nhas expired.		
Remedial action: This is an informative alarm which indicates that an operator has modified some parameters for an alarm type. The alarm doesn't require any action.		

Table 41-11 APPLICATION_CONFIGURATION_IS_OUT_OF_ORDER

Alarm	Attributes	Applicable major release
Name: APPLICATION_CONFIGURATION_IS_OUT_OF_ORDER (11609) Type: processingErrorAlarm Package: racloms.APPLICATION_CONFIGURATION_IS_OUT_OF_ORDER Raised on class: racloms.OMS	Severity: indeterminate Specific problem: APPLICATION CONFIGURATION IS OUT OF ORDER Implicitly cleared: true Default probable cause: CONFIGURATION_OR_CUSTOMIZING_ERROR	Release: • LOMS16A

Table 41-11 APPLICATION_CONFIGURATION_IS_OUT_OF_ORDER (continued)

Alarm	Attributes	Applicable major release
Description: APPLICATION CONFIGURATION IS OUT OF ORDER\n\nThe configuration of an application contains an invalid attribute value or an attribute is missing.\n\nDepending on the alarm severity, application's start-up or run-time session can fail (CRITICAL severity), application can partially loose functionality (MAJOR severity) or ignore the invalid configuration and use default or the closest acceptable value(s) (MINOR severity).\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: 1. Observe the application in question by checking the 'Application Id' field of the alarm.\n\n2. Lock the application in the case of a CRITICAL severity alarm to prevent its infinite restart using command:\nfshascli -l <Application Id>\n\n3. Observe the invalid or missing attribute by checking the 'Identifying Additional Info' field of the alarm.\n\n4. Observe the configuration location by checking the 'Managed Object' field (which contains, for example, a branch for the LDAP-based configuration or a path for the file-based one).\n\n5. Add or correct the invalid attribute mentioned in the 'Identifying Additional Info' field. Follow the guidelines in the customer documentation for the application using the appropriate tool (for example, a text editor for the file-based configuration).\n\n6. Unlock (if the second step was used) or restart the application with commands:\n- unlock:\nfshascli -u <Application Id>\n- restart\nfshascli -r <Application Id>		

Table 41-12 AUTHENTICATION_FAILURE_IN_ETHERNET_DEVICE

Alarm	Attributes	Applicable major release
Name: AUTHENTICATION_FAILURE_IN_ ETHERNET_DEVICE (11610) Type: equipmentAlarm Package: racloms.AUTHENTICATION_FAILURE_IN_ ETHERNET_DEVICE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: AUTHENTICATION FAILURE IN ETHERNET DEVICE Implicitly cleared: false Default probable cause: PROTECTION_PATH_ FAILURE	Release: • LOMS16A
Description: AUTHENTICATION FAILURE IN ETHERNET DEVICE\n\nThe alarm is triggered by the authenticationFailure SNMP trap. The SNMP agents running in the Ethernet switches (switch blades or modules) generate the trap, if they receive SNMP requests that are not properly authenticated. SNMPv1 and SNMPv2c use community names to provide security, authentication, and access control:\n1. Each community name has an associated access mode (either read-only or read-write).\n2. Each community name has an associated IPv4 subnet/mask.\n3. Each community name may be enabled or disabled.\nThe SNMP agent rejects and discards any SNMP requests that do not contain a community name that matches one of the configured community names, or which do not contain an IPv4 source address that is allowed by the corresponding community name's IPv4 address and IPv4 mask. More specifically, the following authentication failures are detected for SNMP requests:\n1. Each getRequest, getNextRequest, or getBulkRequest that does not include one of the enabled read-only or read-write community names.\n2. Each setRequest that does not include one of the enabled read-write community names.\n3. Each SNMP message sent from an invalid IPv4 subnet.\n\nThe alarm may indicate that an SNMP tool used for sending SNMP requests to the SNMP agent, or the SNMP agent, is configured incorrectly. The alarm may also indicate malicious activity, meaning that an unauthorised user is trying to obtain information by sending SNMP requests.\n\nClear the alarm with the alarm management application after correcting the fault.		
Remedial action: Login to the switch by ssh and start the CLI (command line interface) of the switch by entering swc. Use the following CLI commands for verifying and modifying the configured SNMP community names:\nshow snmpcommunity\nconfig snmpcommunity accessmode <ro/rw> <community name>\nconfig snmpcommunity create <community name>\nconfig snmpcommunity delete <community name>\nconfig snmpcommunity ipaddr <IP Addr of switch> <community name>\nconfig snmpcommunity ipmask <ipmask> <community name>\nconfig snmpcommunity mode <enable/disable> <community name>\nconfig snmptrap create <Name> <IP Addr of SNMPMediator>		

Table 41-13 AuxiliaryServerStatus

Alarm	Attributes	Applicable major release
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm Package: server.AuxiliaryServerStatus Raised on class: server.AuxiliaryServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • LOMS16A
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 41-14 BACKEND_DATABASE_REQUIRED_BY_CORBA_NAMING_SERVICE_IS_UNAVAILABLE

Alarm	Attributes	Applicable major release
Name: BACKEND_DATABASE_REQUIRED_BY_CORBA_NAMING_SERVICE_IS_UNAVAILABLE (11611) Type: processingErrorAlarm Package: racloms.BACKEND_DATABASE_REQUIRED_BY_CORBA_NAMING_SERVICE_IS_UNAVAILABLE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BACKEND DATABASE REQUIRED BY CORBA NAMING SERVICE IS UNAVAILABLE Implicitly cleared: true Default probable cause: UNDERLYING_RESOURCE_UNAVAILABLE	Release: • LOMS16A
Description: BACKEND DATABASE REQUIRED BY CORBA NAMING SERVICE IS UNAVAILABLE\n\nThe MySQL database instance DB_CosNaming, used by the private CORBA naming service (NaS) instance, cannot be contacted by the NaS wrapper. Note that the recovery group that owns the backend database is NamingServiceDB and CORBA NaS instances belong to recovery group PrivateCosNaming.\n\nThe CORBA NaS is not able to store data in the database. Therefore the CORBA NaS is not functional.\n\nWhen CORBA NaS detects that MySQL database instance DB_CosNaming is available it re-establishes the connection to the database and clears the alarm.		
Remedial action: Check that the error situation still exists:\n /opt/Nokia/SS_Naming/bin/ns_listall\n /opt/Nokia/SS_Naming/bin/ns_listall public\nThese commands should list the content of the private and the public naming graphs when the NaS is working correctly. \nIf these commands throw exceptions, the NaS is not working correctly, which may result, for example, from an unavailable backend database. \n\nCheck if the backend database DB_CosNaming (RG NamingServiceDB) is unlocked and active. \n fshascli -s /NamingServiceDB\nIf the NamingServiceDB is locked, unlock it. \n fshascli -u /NamingServiceDB\nAfter a few seconds the database should have restarted and the NaS should have automatically re-established connections. Ensure the restart and the re-established connections by issuing the ns_listall commands mentioned above.\n\nIf this does not solve the problem, there is something wrong with the database deployment or configuration. In that case, also the alarm 70156 DISK DATABASE WATCHDOG START-UP FAILED , should be raised by the MySQL DB watchdog dedicated for the DB_CosNaming database instance.		

Table 41-15 BACKPLANE_LINK_FAULTY

Alarm	Attributes	Applicable major release
Name: BACKPLANE_LINK_FAULTY (11612) Type: communicationsAlarm Package: racloms.BACKPLANE_LINK_FAULTY Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BACKPLANE LINK FAULTY Implicitly cleared: true Default probable cause: LAN_ERROR	Release: • LOMS16A
Description: BACKPLANE LINK FAULTY\n\nThe local area network (LAN) monitoring software has declared a backplane\nlink faulty.\n\nThis is a serious condition as the redundancy level of the system is lowered due to the failed link.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: Check the severity of the alarm. \n\nIf the severity level is WARNING, the system is trying to recover the failed link. No actions are needed at this point.\n\nIf the severity level is MAJOR, there is a backplane link fault. This consists of one of three components, from which it is impossible for the system to distinguish the real cause. The components are:\n\n1. The physical port on the node.\n2. The physical port on the switch.\n3. The physical media between those two ports (i.e. the chassis).\n\nIf the are_resets_enabled parameter is true in the alarm info, the system has already tried to reset the components and the method of repairing the fault is to replace one or more of these components starting from the top.\n\nIf the are_resets_enabled parameter is off, it means that no automatic resets have been executed on these components and manual resets could be beneficial as instructed in the hardware maintenance documentation. The name and location of the node is included in the application additional info. \n\nRefer to the hardware maintenance documentation for how to change faulty components.\n\nAfter replacing any of the components and powering on the system or restarting a component, allow the system at least five (5) minutes to stabilize the fault information. During this time, other alarms might appear and the alarm might be cancelled for a while but it does not react to other alarms.		

Table 41-16 BACKUP_AND_RESTORE_CONNECTION_TO_NETACT_LOST

Alarm	Attributes	Applicable major release
Name: BACKUP_AND_RESTORE_CONNECTION_TO_NETACT_LOST (11613) Type: communicationsAlarm Package: racloms.BACKUP_AND_RESTORE_CONNECTION_TO_NETACT_LOST Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BACKUP AND RESTORE CONNECTION TO NETACT LOST Implicitly cleared: true Default probable cause: UNAVAILABLE	Release: • LOMS16A
Description: BACKUP AND RESTORE CONNECTION TO NETACT LOST\n\nRemote backup and restore operation was not able to send a reply to NetAct because of lost connection/communication to NetAct. This alarm informs the operator about a problem on OMS - NetAct communication which means that OMS message reply is not sent to NetAct.\n\nNetAct is not able to receive message from Nwi3BackupRestore. NetAct waits until it reaches timeout.\n\nThe system clears the alarm automatically when the fault has been corrected as presented in INSTRUCTIONS.		
Remedial action: Check communication between OMS and NetAct then restart Nwi3BackupRestore process on OMS [alarm is cleared automatically].		

Table 41-17 BareMetalReachabilityDown

Alarm	Attributes	Applicable major release
Name: BareMetalReachabilityDown (10273) Type: virtualPortAlarm Package: dctr.BareMetalReachabilityDown Raised on class: dctr.BMDevice	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BareMetalReachability-DownOrDeleted	Release: • LOMS16A
Description: The alarm is raised when Bare Metal server is reachability down.		
Raising condition: (('bgpReachabilityState' NOT EQUAL '0'))		
Clearing condition: (('bgpReachabilityState' EQUAL '0'))		
Remedial action: This alarm can be cleared when bare metal device BGP prefix is up. Check for virtual switch controller down or virtual switch down or interface/port down in underlay network (hence the BGP prefix not advertised).		

Table 41-18 BLADECENTER_BLOWER_SPEED_OUT_OF_LIMIT

Alarm	Attributes	Applicable major release
Name: BLADECENTER_BLOWER_SPEED_OUT_ OF_LIMIT (11614) Type: equipmentAlarm Package: racloms.BLADECENTER_BLOWER_ SPEED_OUT_OF_LIMIT Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BLADECENTER BLOWER SPEED OUT OF LIMIT Implicitly cleared: true Default probable cause: EQUIPMENT_ MALFUNCTION	Release: • LOMS16A
Description: BLADECENTER BLOWER SPEED OUT OF LIMIT\n\nThe reading of a single Intelligent Platform Management Interface (IPMI) fan sensor is out of limit. The rotation speed of a fan group is either low or abnormally high.\n\nHigh speed may indicate a temperature-related problem which might eventually cause hardware management to automatically shut down the plug-in units to prevent any physical damage to them.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: 1. Check the IBM BladeCenter Hardware Maintenance Manual and Troubleshooting Guide (ID MIGR-50053) for instructions at manufacturer's WWW pages http://www.ibm.com. \n2. If the problem remains, contact your local Nokia representative.		

Table 41-19 BLADECENTER_INCOMPATIBLE_HARDWARE_CONFIGURATION

Alarm	Attributes	Applicable major release
Name: BLADECENTER_INCOMPATIBLE_ HARDWARE_CONFIGURATION (11615) Type: equipmentAlarm Package: racloms.BLADECENTER_INCOMPATIBLE_ HARDWARE_CONFIGURATION Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BLADECENTER INCOMPATIBLE HARDWARE CONFIGURATION Implicitly cleared: true Default probable cause: EQUIPMENT_ MALFUNCTION	Release: • LOMS16A
Description: BLADECENTER INCOMPATIBLE HARDWARE CONFIGURATION\n\nIncompatible hardware configuration has been detected.\n\nConfiguration of a hardware contains a severe incompatibility problem. This may cause, for example, a blade to be inaccessible.\n\nThe system clears the alarm automatically when the fault has been corrected.		

Table 41-19 BLADECENTER_INCOMPATIBLE_HARDWARE_CONFIGURATION (continued)

Alarm	Attributes	Applicable major release
Remedial action: 1. Check the IBM BladeCenter Hardware Maintenance Manual and Troubleshooting Guide (ID MIGR-50053) for instructions at manufacturer's WWW pages http://www.ibm.com. \n2. If the problem remains, contact your local Nokia representative.\ nYou can find the details of the faulty plug-in unit in the Identifying Application Additional Info field of the alarm.		

Table 41-20 BLADECENTER_MANAGEMENT_MODULE_REDUNDANCY_LOST

Alarm	Attributes	Applicable major release
Name: BLADECENTER_MANAGEMENT_MODULE_ REDUNDANCY_LOST (11616) Type: equipmentAlarm Package: racloms.BLADECENTER_MANAGEMENT_ MODULE_REDUNDANCY_LOST Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BLADECENTER MANAGEMENT MODULE REDUNDANCY LOST Implicitly cleared: true Default probable cause: LOST_REDUNDANCY	Release: • LOMS16A
Description: BLADECENTER MANAGEMENT MODULE REDUNDANCY LOST\n\nOne of the management modules has failed or has been removed from the system. The active management module is still operational.\n\nThe system is fully operational with only a single management module. However, the faulty or removed management module should be replaced as soon as possible to ensure fault tolerant operability. If the redundant management module is not replaced and the active one fails, the whole system becomes inoperable.\n\nThe alarm is automatically cleared by the operating system's fault detector when a working management module is re-inserted in the chassis.		
Remedial action: 1. If there is only one management module present in the chassis, insert another module in the chassis to ensure fault tolerant operability. Check the IBM BladeCenter Advanced Management Module Installation Guide (ID MIGR-63781) for instructions in the manufacturer's WWW pages at http://www.ibm.com.\n\n2. If both management modules are present, try removing and re-inserting the standby management module. Check the IBM BladeCenter Troubleshooting Management Module issues (ID MIGR-58898) for instructions in the manufacturer's WWW pages at http://www.ibm.com. If the problem persists, replace the standby management module with a new one.\nIf the previous steps have not resolved the situation, contact your local Nokia representative.		

Table 41-21 BLADECENTER_PLUG_IN_UNIT_FAILURE

Alarm	Attributes	Applicable major release
Name: BLADECENTER_PLUG_IN_UNIT_FAILURE (11617) Type: equipmentAlarm Package: racloms.BLADECENTER_PLUG_IN_UNIT_ FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BLADECENTER PLUG-IN UNIT FAILURE Implicitly cleared: true Default probable cause: EQUIPMENT_ MALFUNCTION	Release: • LOMS16A
Description: BLADECENTER PLUG-IN UNIT FAILURE\n\nA fatal failure in the plug-in unit hardware has been detected.\n\nThere is a severe fault in the plug-in unit hardware. This may cause, for example, hardware management to automatically shut down the plug-in unit to prevent any physical damage to it.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: 1. Check the IBM BladeCenter Hardware Maintenance Manual and Troubleshooting Guide (ID MIGR-50053) for instructions at manufacturer's WWW pages http://www.ibm.com.\n2. If the problem remains, contact your local Nokia representative to replace the plug-in unit. Note that replacing an operational disk drive may cause loss of data.\nYou can find the details of the faulty plug-in unit in the Identifying Application Additional Info field of the alarm.		

Table 41-22 BLADECENTER_PLUG_IN_UNIT_TEMPERATURE_OUT_OF_LIMIT

Alarm	Attributes	Applicable major release
Name: BLADECENTER_PLUG_IN_UNIT_ TEMPERATURE_OUT_OF_LIMIT (11618) Type: equipmentAlarm Package: racloms.BLADECENTER_PLUG_IN_UNIT_ TEMPERATURE_OUT_OF_LIMIT Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BLADECENTER PLUG-IN UNIT TEMPERATURE OUT OF LIMIT Implicitly cleared: true Default probable cause: EQUIPMENT_ MALFUNCTION	Release: • LOMS16A
Description: BLADECENTER PLUG-IN UNIT TEMPERATURE OUT OF LIMIT\n\nThe reading of a single Intelligent Platform Management Interface (IPMI) temperature sensor is out of limit.\n\nIf the alarm is constantly raised, there is a severe temperature-related problem and the plug-in unit may behave unexpectedly.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: 1. Check the IBM BladeCenter Hardware Maintenance Manual and Troubleshooting Guide (ID MIGR-50053) for instructions at manufacturer's WWW pages http://www.ibm.com.\n2. If the problem remains, contact your local Nokia representative.\ nYou can find the details of the faulty plug-in unit in the Identifying Application Additional Info field of the alarm.		

Table 41-23 BLADECENTER_PLUG_IN_UNIT_VOLTAGE_OUT_OF_LIMIT

Alarm	Attributes	Applicable major release
Name: BLADECENTER_PLUG_IN_UNIT_VOLTAGE_ OUT_OF_LIMIT (11619) Type: equipmentAlarm Package: racloms.BLADECENTER_PLUG_IN_UNIT_ VOLTAGE_OUT_OF_LIMIT Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BLADECENTER PLUG-IN UNIT VOLTAGE OUT OF LIMIT Implicitly cleared: true Default probable cause: POWER_SUPPLY_FAILURE	Release: • LOMS16A
Description: BLADECENTER PLUG-IN UNIT VOLTAGE OUT OF LIMIT\n\nThe reading of a single Intelligent Platform Management Interface (IPMI) voltage sensor is out of limit.\n\nIf the alarm is constantly raised, there is a severe hardware problem and the plug-in unit may behave unexpectedly.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: 1. Check the IBM BladeCenter Hardware Maintenance Manual and Troubleshooting Guide (ID MIGR-50053) for instructions at manufacturer's WWW pages http://www.ibm.com.\n2. If the problem remains, contact your local Nokia representative.\ nYou can find the details of the faulty plug-in unit in the Identifying Application Additional Info field of the alarm.		

Table 41-24 BLADECENTER_POWER_SUPPLY_FAILURE

Alarm	Attributes	Applicable major release
Name: BLADECENTER_POWER_SUPPLY_FAILURE (11620) Type: equipmentAlarm Package: racloms.BLADECENTER_POWER_ SUPPLY_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BLADECENTER POWER SUPPLY FAILURE Implicitly cleared: true Default probable cause: POWER_SUPPLY_FAILURE	Release: • LOMS16A

Table 41-24 BLADECENTER_POWER_SUPPLY_FAILURE (continued)

Alarm	Attributes	Applicable major release
Description: BLADECENTER POWER SUPPLY FAILURE\n\nThere is a failure in one of the power modules.\n\nIf all the power entry modules are down, it results in degraded chassis power supply redundancy, or total loss of power.\n\nIn the IBM Reference documentation, Chapter 2 contains information on mapping of the event codes against the exact cause of the alarm. \n\nFor information on clearing the alarm, refer to the 'Recoverable' section of the reference documents. If the Recoverable section says 'yes', it means that the alarm generated will be automatically cleared. If the Recoverable section says 'no', the alarm has to be manually cleared using the alarm management application.		
Remedial action: 1. With the help of the Event code displayed in "Identifying Application additional info" (spTrapEvtName) of the alarm, find the exact cause from IBM reference documentation available at the following site: http://publib.boulder.ibm.com/infocenter/bladectr/documentation/topic/com.ibm.bladecenter.advmgtmod.doc/kp1avAMMMessagesGuide.pdf\n\n2. Perform the actions mentioned in the "User Response" section of the IBM reference documents.		

Table 41-25 BLADECENTER__BLADE_FAILURE

Alarm	Attributes	Applicable major release
Name: BLADECENTER__BLADE_FAILURE (11621) Type: equipmentAlarm Package: racloms.BLADECENTER__BLADE_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BLADECENTER: BLADE FAILURE Implicitly cleared: true Default probable cause: EXTERNAL_EQUIPMENT_FAILURE	Release: • LOMS16A
Description: BLADECENTER: BLADE FAILURE\n\nOne of the Blades has malfunctioned.\n\nThe system's boot process for the specified blade server, failed before the operating system was loaded.\n\nIn the IBM Reference documentation, Chapter 2 contains information on mapping of the event codes against the exact cause of the alarm. \n\nFor information on clearing the alarm, refer to the 'Recoverable' section of the reference documents. If the Recoverable section says 'yes', it means that the alarm generated will be automatically cleared. If the Recoverable section says 'no', the alarm has to be manually cleared using the alarm management application.		
Remedial action: 1. With the help of the Event code displayed in "Identifying Application additional info" (spTrapEvtName) of the alarm, find the exact cause from IBM reference documentation available at the following site: \nhttp://publib.boulder.ibm.com/infocenter/bladectr/documentation/topic/com.ibm.bladecenter.advmgtmod.doc/kp1avAMMMessagesGuide.pdf\n2. Perform the actions mentioned in the "User Response" section of the IBM reference documents.		

Table 41-26 BLADECENTER__CHASSIS_SYSTEM_MANAGEMENT_FAILURE

Alarm	Attributes	Applicable major release
Name: BLADECENTER__CHASSIS_SYSTEM_MANAGEMENT_FAILURE (11622) Type: equipmentAlarm Package: racloms.BLADECENTER__CHASSIS_SYSTEM_MANAGEMENT_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BLADECENTER: CHASSIS/SYSTEM MANAGEMENT FAILURE Implicitly cleared: true Default probable cause: EXTERNAL_EQUIPMENT_FAILURE	Release: • LOMS16A

Table 41-26 BLADECENTER__CHASSIS_SYSTEM_MANAGEMENT_FAILURE (continued)

Alarm	Attributes	Applicable major release
Description: BLADECENTER: CHASSIS/SYSTEM MANAGEMENT FAILURE\n\nSome hardware component in the Chassis has malfunctioned or has stopped working.\n\nThere can be multiple effects of this alarm. For example:\n\nThe advanced management module may not be able to determine the management module bay in which it is installed. Therefore, it may use management module bay 1 as the installed bay.\n\nIn the IBM Reference documentation, Chapter 2 contains information on mapping of the event codes against the exact cause of the alarm. \n\nFor information on clearing the alarm, refer to the 'Recoverable' section of the reference documents. If the Recoverable section says 'yes', it means that the alarm generated will be automatically cleared. If the Recoverable section says 'no', the alarm has to be manually cleared using the alarm management application.		
Remedial action: 1. With the help of the Event code displayed in "Identifying Application additional info" (spTrapEvtName) of the alarm, find the exact cause from IBM reference documentation available at the following site: \nhttp://publib.boulder.ibm.com/infocenter/bladectr/documentation/topic/com.ibm.bladecenter.advmgtmod.doc/kp1avAMMMessagesGuide.pdf\n 2. Perform the actions mentioned in the "User Response" section of the IBM reference documents.		

Table 41-27 BLADECENTER__COOLING_DEVICE_FAILURE

Alarm	Attributes	Applicable major release
Name: BLADECENTER__COOLING_DEVICE_FAILURE (11623) Type: environmentalAlarm Package: racloms.BLADECENTER__COOLING_DEVICE_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BLADECENTER: COOLING DEVICE FAILURE Implicitly cleared: true Default probable cause: COOLING_SYSTEM_FAILURE	Release: • LOMS16A
Description: BLADECENTER: COOLING DEVICE FAILURE\n\nThe specified fan or blower module is no longer operating.\n\nThe hardware component where the fan module is not operating, may stop functioning due to overheating.\n\nIn the IBM Reference documentation, Chapter 2 contains information on mapping of the event codes against the exact cause of the alarm. \n\nFor information on clearing the alarm, refer to the 'Recoverable' section of the reference documents. If the Recoverable section says 'yes', it means that the alarm generated will be automatically cleared. If the Recoverable section says 'no', the alarm has to be manually cleared using the alarm management application.		
Remedial action: 1. With the help of the Event code displayed in "Identifying Application\nadditional info" (spTrapEvtName) of the alarm, find the exact cause\nfrom IBM reference documentation available at the following site: \n\nhttp://publib.boulder.ibm.com/infocenter/bladectr/documentation/topic/com.ibm.bladecenter.advmgtmod.doc/kp1avAMMMessagesGuide.pdf\n 2. Perform the actions mentioned in the "User Response" section\nof the IBM reference documents.		

Table 41-28 BLADECENTER__I_O_MODULE_FAILURE

Alarm	Attributes	Applicable major release
Name: BLADECENTER__I_O_MODULE_FAILURE (11624) Type: equipmentAlarm Package: racloms.BLADECENTER__I_O_MODULE_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BLADECENTER: I/O MODULE FAILURE Implicitly cleared: true Default probable cause: EXTERNAL_EQUIPMENT_FAILURE	Release: • LOMS16A

Table 41-28 BLADECENTER__I_O_MODULE_FAILURE (continued)

Alarm	Attributes	Applicable major release
Description: BLADECENTER: I/O MODULE FAILURE\n\nOne of the I/O (Input/Ouput) module has failed,or is malfunctioning.\n\nThe advanced management module is unable to read the status of the specified I/O module due to a fault.\n\nIn the IBM Reference documentation, Chapter 2 contains information on mapping of the event codes against the exact cause of the alarm. \n\nFor information on clearing the alarm, refer to the 'Recoverable' section of the reference documents. If the Recoverable section says 'yes', it means that the alarm generated will be automatically cleared. If the Recoverable section says 'no', the alarm has to be manually cleared using the alarm management application.		
Remedial action: 1. With the help of the Event code displayed in "Identifying Application additional info" (spTrapEvtName) of the alarm, find the exact cause from IBM reference documentation available at the following site: \nhttp://publib.boulder.ibm.com/infocenter/bladectr/documentation/topic/com.ibm.bladecenter.advmgtmod.doc/kp1avAMMMessagesGuide.pdf\n \n2. Perform the actions mentioned in the "User Response" section of the IBM reference documents.		

Table 41-29 BLADECENTER__STORAGE_MODULE_FAILURE

Alarm	Attributes	Applicable major release
Name: BLADECENTER__STORAGE_MODULE_FAILURE (11625) Type: equipmentAlarm Package: racloms.BLADECENTER__STORAGE_MODULE_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BLADECENTER: STORAGE MODULE FAILURE Implicitly cleared: true Default probable cause: EXTERNAL_EQUIPMENT_FAILURE	Release: • LOMS16A
Description: BLADECENTER: STORAGE MODULE FAILURE\n\nOne of the Storage modules has stopped working, or has malfunctioned.\n\nA fault has occurred in the battery backup unit used to back up the cache for the specified SAS (Serial Attached SCSI) RAID controller module.\n\nIn the IBM Reference documentation, Chapter 2 contains information on mapping of the event codes against the exact cause of the alarm. \n\nFor information on clearing the alarm, refer to the 'Recoverable' section of the reference documents. If the Recoverable section says 'yes', it means that the alarm generated will be automatically cleared. If the Recoverable section says 'no', the alarm has to be manually cleared using the alarm management application.		
Remedial action: 1. With the help of the Event code displayed in "Identifying Application\nadditional info" (spTrapEvtName) of the alarm, find the exact cause\nfrom IBM reference documentation available at the following site: \nhttp://publib.boulder.ibm.com/infocenter/bladectr/documentation/topic/com.ibm.bladecenter.advmgtmod.doc/kp1avAMMMessagesGuide.pdf\n\n2. Perform the actions mentioned in the "User Response" section\nof the IBM reference documents.		

Table 41-30 BLADESYSTEM_CHASSIS_POWER_PROBLEM

Alarm	Attributes	Applicable major release
Name: BLADESYSTEM_CHASSIS_POWER_PROBLEM (11626) Type: equipmentAlarm Package: racloms.BLADESYSTEM_CHASSIS_POWER_PROBLEM Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BLADESYSTEM CHASSIS POWER PROBLEM Implicitly cleared: true Default probable cause: POWER_SUPPLY_FAILURE	Release: • LOMS16A

Table 41-30 BLADESYSTEM_CHASSIS_POWER_PROBLEM (continued)

Alarm	Attributes	Applicable major release
Description: BLADESYSTEM CHASSIS POWER PROBLEM\n\nEither the input power limit to the power subsystem AC facility has been exceeded for this enclosure, or there is a DC power problem.\n\nThe system is still usable, but the power enclosure should be checked as soon as possible to ensure fault tolerant operability.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: 1. Check the power enclosure and power supplies. Replace any failed or degraded power supplies.\nCheck the HP BladeSystem Enclosure Maintenance and Service Guide for instructions in the manufacturer's WWW pages at http://www.hp.com.\n\n2. If the problem persists, contact your local NSN representative.		

Table 41-31 BLADESYSTEM_FAN_FAILURE

Alarm	Attributes	Applicable major release
Name: BLADESYSTEM_FAN_FAILURE (11627) Type: equipmentAlarm Package: racloms.BLADESYSTEM_FAN_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BLADESYSTEM FAN FAILURE Implicitly cleared: true Default probable cause: EQUIPMENT_ MALFUNCTION	Release: • LOMS16A
Description: BLADESYSTEM FAN FAILURE\n\nThe enclosure fan status has been set to 'failed' or 'degraded' or a fan has been removed. If the status has been set to failed no other operating fans exist in the redundant fan group. If the status has been set to degraded, an enclosure fan has failed, but other fans in the redundant fan group are still operating.\n\nThis may result in overheating of the enclosure.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: 1. Check all fans and replace the removed or defective fans as soon as possible.\nCheck the HP BladeSystem Enclosure Maintenance and Service Guide for instructions in the manufacturer's WWW pages at http://www.hp.com.\n\n\n2. If the problem persists, contact your local NSN representative.		

Table 41-32 BLADESYSTEM_FUSE_OPEN

Alarm	Attributes	Applicable major release
Name: BLADESYSTEM_FUSE_OPEN (11628) Type: equipmentAlarm Package: racloms.BLADESYSTEM_FUSE_OPEN Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BLADESYSTEM FUSE OPEN Implicitly cleared: true Default probable cause: POWER_SUPPLY_FAILURE	Release: • LOMS16A
Description: BLADESYSTEM FUSE OPEN\n\nFuse open. The fuse has been tripped.\n\nThe server blade loses power and any activity on the server operating system will be lost.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: 1. Check enclosure and/or blade power connections and reset the fuse. \nCheck the HP BladeSystem p-Class 1U power enclosure technology brief for instructions in the manufacturer's WWW pages at http://www.hp.com.\n\n2. If the problem persists, contact your local NSN representative.		

Table 41-33 BLADESYSTEM_INTERCONNECT_FAILURE

Alarm	Attributes	Applicable major release
Name: BLADESYSTEM_INTERCONNECT_FAILURE (11629) Type: equipmentAlarm Package: racloms.BLADESYSTEM_ INTERCONNECT_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BLADESYSTEM INTERCONNECT FAILURE Implicitly cleared: true Default probable cause: LOST_REDUNDANCY	Release: • LOMS16A
Description: BLADESYSTEM INTERCONNECT FAILURE\n\nThe interconnect status has been set to 'failed' or 'degraded' or the interconnect has been removed.\n\nThe connectability of the system has been compromised.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: 1. Replace the interconnect as soon as possible.\nCheck the HP BladeSystem Enclosure Maintenance and Service Guide for instructions in the manufacturer's WWW pages at http://www.hp.com.\n\n2. If the problem persists, contact your local NSN representative.		

Table 41-34 BLADESYSTEM_LINE_VOLTAGE_PROBLEM

Alarm	Attributes	Applicable major release
Name: BLADESYSTEM_LINE_VOLTAGE_PROBLEM (11630) Type: equipmentAlarm Package: racloms.BLADESYSTEM_LINE_VOLTAGE_ PROBLEM Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BLADESYSTEM LINE VOLTAGE PROBLEM Implicitly cleared: true Default probable cause: POWER_SUPPLY_FAILURE	Release: • LOMS16A
Description: BLADESYSTEM LINE VOLTAGE PROBLEM\n\nThe rack power supply has detected an input line voltage problem.\n\nIf the alarm is set off constantly, there is a severe hardware problem and the server blade may behave unexpectedly.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: 1. Check the power input for the power supply and replace any failed power supplies.\nCheck the HP BladeSystem Enclosure Maintenance and Service Guide for instructions in the manufacturer's WWW pages at http://www.hp.com.\n\n2. If the problem persists, contact your local NSN representative.		

Table 41-35 BLADESYSTEM_ONBOARD_ADMINISTRATOR_REDUNDANCY_LOST

Alarm	Attributes	Applicable major release
Name: BLADESYSTEM_ONBOARD_ ADMINISTRATOR_REDUNDANCY_LOST (11631) Type: equipmentAlarm Package: racloms.BLADESYSTEM_ONBOARD_ ADMINISTRATOR_REDUNDANCY_LOST Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BLADESYSTEM ONBOARD ADMINISTRATOR REDUNDANCY LOST Implicitly cleared: true Default probable cause: LOST_REDUNDANCY	Release: • LOMS16A
Description: BLADESYSTEM ONBOARD ADMINISTRATOR REDUNDANCY LOST\n\nThe Onboard Administrator has been removed or its status has been set to 'degraded'.\n\nThis alarm signifies that an Onboard Administrator has been removed or it has failed but the other Onboard Administrator is still operating.\n\nThe system clears the alarm automatically when the fault has been corrected.		

Table 41-35 BLADESYSTEM_ONBOARD_ADMINISTRATOR_REDUNDANCY_LOST (continued)

Alarm	Attributes	Applicable major release
Remedial action: 1. Replace the Onboard Administrator as soon as possible.\nCheck the HP BladeSystem Enclosure Maintenance and Service Guide for instructions in the manufacturer's WWW pages at http://www.hp.com.\n\n2. If the problem persists, contact your local NSN representative.		

Table 41-36 BLADESYSTEM_POWER_CHASSIS_NOT_LOAD_BALANCED

Alarm	Attributes	Applicable major release
Name: BLADESYSTEM_POWER_CHASSIS_NOT_LOAD_BALANCED (11632) Type: equipmentAlarm Package: racloms.BLADESYSTEM_POWER_CHASSIS_NOT_LOAD_BALANCED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BLADESYSTEM POWER CHASSIS NOT LOAD BALANCED Implicitly cleared: true Default probable cause: POWER_SUPPLY_FAILURE	Release: • LOMS16A
Description: BLADESYSTEM POWER CHASSIS NOT LOAD BALANCED\n\nPower subsystem not load balanced.\n\nThe system is still usable, but the power enclosure should be checked as soon as possible to ensure fault tolerant operability.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: 1. Check the power enclosure and power supplies. Replace any failed or degraded power supplies. Add additional power supplies if needed.\nCheck the HP BladeSystem Enclosure Maintenance and Service Guide for instructions in the manufacturer's WWW pages at http://www.hp.com.\n\n2. If the problem persists, contact your local NSN representative.		

Table 41-37 BLADESYSTEM_POWER_ON_FAILED

Alarm	Attributes	Applicable major release
Name: BLADESYSTEM_POWER_ON_FAILED (11633) Type: equipmentAlarm Package: racloms.BLADESYSTEM_POWER_ON_FAILED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BLADESYSTEM POWER ON FAILED Implicitly cleared: true Default probable cause: POWER_SUPPLY_FAILURE	Release: • LOMS16A
Description: BLADESYSTEM POWER ON FAILED\n\nInadequate power to turn on.\n\nThere is not enough power to power up the server blade, or not enough power to power it up while maintaining redundancy for the other blades in the enclosure.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: 1. Check power connections or add power supplies.\nCheck the HP BladeSystem Enclosure Maintenance and Service Guide for instructions in the manufacturer's WWW pages at http://www.hp.com.\n\n2. If the problem persists, contact your local NSN representative.		

Table 41-38 BLADESYSTEM_POWER_SHED_AUTO_SHUTDOWN

Alarm	Attributes	Applicable major release
Name: BLADESYSTEM_POWER_SHED_AUTO_SHUTDOWN (11634) Type: equipmentAlarm Package: racloms.BLADESYSTEM_POWER_SHED_AUTO_SHUTDOWN Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BLADESYSTEM POWER SHED AUTO SHUTDOWN Implicitly cleared: true Default probable cause: POWER_SUPPLY_FAILURE	Release: • LOMS16A
Description: BLADESYSTEM POWER SHED AUTO SHUTDOWN\n\nThe server blade was shutdown due to a lack of power.\n\nThe server blade is out of use.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: 1. Check power connections or add power supplies.\nCheck the HP BladeSystem Enclosure Maintenance and Service Guide for instructions in the manufacturer's WWW pages at http://www.hp.com.\n\n2. If the problem persists, contact your local NSN representative.		

Table 41-39 BLADESYSTEM_POWER_SUBSYSTEM_NOT_REDUNDANT

Alarm	Attributes	Applicable major release
Name: BLADESYSTEM_POWER_SUBSYSTEM_NOT_REDUNDANT (11635) Type: equipmentAlarm Package: racloms.BLADESYSTEM_POWER_SUBSYSTEM_NOT_REDUNDANT Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BLADESYSTEM POWER SUBSYSTEM NOT REDUNDANT Implicitly cleared: true Default probable cause: POWER_SUPPLY_FAILURE	Release: • LOMS16A
Description: BLADESYSTEM POWER SUBSYSTEM NOT REDUNDANT\n\nRack power supply not redundant.\n\nThe rack power subsystem is no longer in a redundant state.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: 1. Replace any failed or degraded power supplies to return the system to a redundant state.\nCheck the HP BladeSystem Enclosure Maintenance and Service Guide for instructions in the manufacturer's WWW pages at http://www.hp.com.\n\n2. If the problem persists, contact your local NSN representative.		

Table 41-40 BLADESYSTEM_POWER_SUBSYSTEM_OVERLOAD_CONDITION

Alarm	Attributes	Applicable major release
Name: BLADESYSTEM_POWER_SUBSYSTEM_OVERLOAD_CONDITION (11636) Type: equipmentAlarm Package: racloms.BLADESYSTEM_POWER_SUBSYSTEM_OVERLOAD_CONDITION Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BLADESYSTEM POWER SUBSYSTEM OVERLOAD CONDITION Implicitly cleared: true Default probable cause: POWER_SUPPLY_FAILURE	Release: • LOMS16A
Description: BLADESYSTEM POWER SUBSYSTEM OVERLOAD CONDITION\n\nThe rack power subsystem has an overload condition.\n\nThe system is still usable, but in order to ensure full fault tolerant operability any failed power supplies should be replaced as soon as possible.\n\nThe system clears the alarm automatically when the fault has been corrected.		

Table 41-40 BLADESYSTEM_POWER_SUBSYSTEM_OVERLOAD_CONDITION (continued)

Alarm	Attributes	Applicable major release
Remedial action: 1. Replace any failed power supplies as soon as possible to return the system to a redundant state. \nCheck the HP BladeSystem Enclosure Maintenance and Service Guide for instructions in the manufacturer's WWW pages at http://www.hp.com.\n\n2. If the problem persists, contact your local NSN representative.		

Table 41-41 BLADESYSTEM_POWER_SUPPLY_FAILURE

Alarm	Attributes	Applicable major release
Name: BLADESYSTEM_POWER_SUPPLY_FAILURE (11637) Type: equipmentAlarm Package: racloms.BLADESYSTEM_POWER_SUPPLY_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BLADESYSTEM POWER SUPPLY FAILURE Implicitly cleared: true Default probable cause: POWER_SUPPLY_FAILURE	Release: • LOMS16A
Description: BLADESYSTEM POWER SUPPLY FAILURE\n\nA power supply has been removed or the power supply status has been set to 'failed' or 'degraded'.\n\nDepending on the alarm severity, this alarm signifies that a power supply has been removed (WARNING severity), degraded (MAJOR) or failed (CRITICAL).\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: 1. Replace the power supply as soon as possible.\nCheck the HP BladeSystem Enclosure Maintenance and Service Guide for instructions in the manufacturer's WWW pages at http://www.hp.com.\n\n2. If the problem persists, contact your local NSN representative.		

Table 41-42 BLADESYSTEM_REMOTE_INSIGHT_BATTERY_FAILED

Alarm	Attributes	Applicable major release
Name: BLADESYSTEM_REMOTE_INSIGHT_BATTERY_FAILED (11638) Type: equipmentAlarm Package: racloms.BLADESYSTEM_REMOTE_INSIGHT_BATTERY_FAILED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BLADESYSTEM REMOTE INSIGHT BATTERY FAILED Implicitly cleared: true Default probable cause: EQUIPMENT_MALFUNCTION	Release: • LOMS16A
Description: BLADESYSTEM REMOTE INSIGHT BATTERY FAILED\n\nThe Remote Insight battery has failed.\n\niLO 2 remote control and management functionality may become unavailable.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: 1. Replace the Remote Insight battery. Check the HP ProLiant BL465c Server Blade Maintenance and Service Guide for instructions in the manufacturer's WWW pages at http://www.hp.com. \n\n2. If the problem persists, contact your local NSN representative.		

Table 41-43 BLADESYSTEM_REMOTE_INSIGHT_ERROR

Alarm	Attributes	Applicable major release
Name: BLADESYSTEM_REMOTE_INSIGHT_ERROR (11639) Type: equipmentAlarm Package: racloms.BLADESYSTEM_REMOTE_INSIGHT_ERROR Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BLADESYSTEM REMOTE INSIGHT ERROR Implicitly cleared: true Default probable cause: EQUIPMENT_MALFUNCTION	Release: • LOMS16A
Description: BLADESYSTEM REMOTE INSIGHT ERROR\n\nThe host operating system has detected an error in the Remote Insight/ Integrated Lights-Out interface or the Remote Insight/ Integrated Lights-Out firmware has detected a Remote Insight self test error.\n\nThe Remote Insight/ Integrated Lights-Out control and management functionality may not be completely available.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: Contact your local NSN representative.		

Table 41-44 BLADESYSTEM_REMOTE_INSIGHT_POWER_OUTAGE

Alarm	Attributes	Applicable major release
Name: BLADESYSTEM_REMOTE_INSIGHT_POWER_OUTAGE (11640) Type: equipmentAlarm Package: racloms.BLADESYSTEM_REMOTE_INSIGHT_POWER_OUTAGE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BLADESYSTEM REMOTE INSIGHT POWER OUTAGE Implicitly cleared: false Default probable cause: EQUIPMENT_MALFUNCTION	Release: • LOMS16A
Description: BLADESYSTEM REMOTE INSIGHT POWER OUTAGE\n\nThe Remote Insight/ Integrated Lights-Out firmware has detected server power failure.\n\nThe server blade is out of power.\n\nClear the alarm with an alarm management application after correcting the fault as presented in INSTRUCTIONS.		
Remedial action: 1. Check that the blade has not been powered off and verify the power inputs and supplies.\n\n2. If the problem persists, contact your local NSN representative.		

Table 41-45 BLADESYSTEM_TEMPERATURE_OUT_OF_LIMIT

Alarm	Attributes	Applicable major release
Name: BLADESYSTEM_TEMPERATURE_OUT_OF_LIMIT (11641) Type: equipmentAlarm Package: racloms.BLADESYSTEM_TEMPERATURE_OUT_OF_LIMIT Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BLADESYSTEM TEMPERATURE OUT OF LIMIT Implicitly cleared: true Default probable cause: EQUIPMENT_MALFUNCTION	Release: • LOMS16A
Description: BLADESYSTEM TEMPERATURE OUT OF LIMIT\n\nThe enclosure temperature status has been set to 'failed' or 'degraded'. If the status has been set to degraded, an enclosure temperature sensor has been tripped indicating a possible overheat condition. If the status has been set to failed, an enclosure temperature sensor has been tripped indicating an overheat condition.\n\nIf the alarm is set off constantly, there is a severe temperature-related problem and the server blade may behave unexpectedly.\n\nThe system clears the alarm automatically when the fault has been corrected.		

Table 41-45 BLADESYSTEM_TEMPERATURE_OUT_OF_LIMIT (continued)

Alarm	Attributes	Applicable major release
Remedial action: 1. Shutdown the enclosure and possibly the rack as soon as possible. Ensure all fans are working properly and that air flow in the rack has not been blocked.\n\n2. If the problem persists, contact your local NSN representative.		

Table 41-46 BLADESYSTEM_UNKNOWN_POWER_CONSUMPTION

Alarm	Attributes	Applicable major release
Name: BLADESYSTEM_UNKNOWN_POWER_CONSUMPTION (11642) Type: equipmentAlarm Package: racloms.BLADESYSTEM_UNKNOWN_POWER_CONSUMPTION Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BLADESYSTEM UNKNOWN POWER CONSUMPTION Implicitly cleared: true Default probable cause: POWER_SUPPLY_FAILURE	Release: • LOMS16A
Description: BLADESYSTEM UNKNOWN POWER CONSUMPTION\n\nThere is an unknown power consumer drawing power.\n\nUnknown power consumption may result in degraded chassis power supply redundancy or total loss of power.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: 1. Check the power enclosure and power supplies. Replace any failed or degraded power supplies.\nCheck the HP BladeSystem Enclosure Maintenance and Service Guide for instructions in the manufacturer's WWW pages at http://www.hp.com.\n\n2. If the problem persists, contact your local NSN representative.		

Table 41-47 BLOCK_STORAGE_FOR_ADDITIONAL_PARTITION_MISSING

Alarm	Attributes	Applicable major release
Name: BLOCK_STORAGE_FOR_ADDITIONAL_PARTITION_MISSING (11643) Type: processingErrorAlarm Package: racloms.BLOCK_STORAGE_FOR_ADDITIONAL_PARTITION_MISSING Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BLOCK STORAGE FOR ADDITIONAL PARTITION MISSING Implicitly cleared: true Default probable cause: CONFIGURATION_OR_CUSTOMIZING_ERROR	Release: • LOMS16A
Description: BLOCK STORAGE FOR ADDITIONAL PARTITION MISSING\n\nSome of partitions are missing additional bock storage\n\nAdditional OMS partition is not accessible because of missing storage block device.\n\nOMS system clears the alarm automatically whenever partition storage is recovered.		
Remedial action: Check the additional information for maintenance action details		

Table 41-48 BootableConfigBackupFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigBackupFailed (103) Type: configurationAlarm Package: sw.BootableConfigBackupFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • LOMS16A

Table 41-48 BootableConfigBackupFailed (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 41-49 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm Package: sw.BootableConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • LOMS16A
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 41-50 BOOTING_FAILURE

Alarm	Attributes	Applicable major release
Name: BOOTING_FAILURE (11644) Type: equipmentAlarm Package: racloms.BOOTING_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BOOTING FAILURE Implicitly cleared: false Default probable cause: EQUIPMENT_ MALFUNCTION	Release: • LOMS16A
Description: BOOTING FAILURE\n\nA booting failure has taken place. \n\nPossible causes are:\nNo bootable media\nThe pre-boot execution environment (PXE) server is not found\nInvalid boot sector\nTimeout waiting for user selection of boot source\n\nThe unit boot-up may be failing.\n\nClear the alarm with the alarm management application after correcting the fault, according to the instructions.		
Remedial action: 1. Try to restart the unit.\n\n2. Select the boot source at the prompt.\n\n3. Check that boot media exists.\n\n4. Check the validity of the boot media (such as, the disk is bootable or the PXE server is available).\n\n5. If the problem remains after following these instructions, please contact your local customer support.		

Table 41-51 BootParametersMisconfigured

Alarm	Attributes	Applicable major release
Name: BootParametersMisconfigured (35) Type: configurationAlarm Package: netw.BootParametersMisconfigured Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistentIndexFailure Applicable probable causes: • persistentIndexFailure • configFileBootFailure	Release: • LOMS16A
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND ((('Config File Status' NOT EQUAL 'Executed Successfully') AND ('Config File Status' NOT EQUAL 'configFileStatus_unspecified')) OR (('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded') AND ('Persistent Index Status' NOT EQUAL 'persistentIndexStatus_unspecified'))))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

Table 41-52 BTS_O_M_TOTAL_CONNECTION_LIMIT_EXCEEDED

Alarm	Attributes	Applicable major release
Name: BTS_O_M_TOTAL_CONNECTION_LIMIT_EXCEEDED (11645) Type: processingErrorAlarm Package: racloms.BTS_O_M_TOTAL_CONNECTION_LIMIT_EXCEEDED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: BTS O&M TOTAL CONNECTION LIMIT EXCEEDED Implicitly cleared: true Default probable cause: CONFIGURATION_OR_CUSTOMIZING_ERROR	Release: • LOMS16A
Description: BTS O&M TOTAL CONNECTION LIMIT EXCEEDED\n\nNumber of connected network elements has exceeded the maximum allowed value.\n\nFurther connection attempts to the OMS are rejected.\n\nDo not clear the alarm. The system cancels the alarm automatically after its lifetime has elapsed or the problem has been solved.		
Remedial action: Disconnect the network elements which exceeded the maximum allowed connection limit.		

Table 41-53 CANNOT_WRITE_TO_DISK

Alarm	Attributes	Applicable major release
Name: CANNOT_WRITE_TO_DISK (11646) Type: equipmentAlarm Package: racloms.CANNOT_WRITE_TO_DISK Raised on class: racloms.OMS	Severity: indeterminate Specific problem: CANNOT WRITE TO DISK Implicitly cleared: true Default probable cause: DISK_PROBLEM	Release: • LOMS16A

Table 41-53 CANNOT_WRITE_TO_DISK (continued)

Alarm	Attributes	Applicable major release
Description: CANNOT WRITE TO DISK\n\nDisk write operation fails because the disk is inoperable or partially full.\n\nLog entries or data structure image cannot be written to disk. Data structure can be read but update operations are not accepted until the disk is writable.\n\nThe system automatically clears the alarm when the fault has been corrected.		
Remedial action: This problem is directly related to disk problems. Use the df command to check if the disk partition is full. The mount point can be seen in the File name field of this alarm. After the next checkpoint of the FDS, there should be more space on the disk, because the FDS log files are purged. The checkpoint is taken on the basis of time, successful update, or number of updates, depending on the configuration.\n\nIf the problem cannot be solved otherwise, contact your local Nokia representative and provide them with the information you obtained from alarm notification's fields.		

Table 41-54 CAPACITY_USAGE_WARNING_LIMIT_IS_REACHED

Alarm	Attributes	Applicable major release
Name: CAPACITY_USAGE_WARNING_LIMIT_IS_REACHED (11647) Type: qualityOfServiceAlarm Package: racloms.CAPACITY_USAGE_WARNING_LIMIT_IS_REACHED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: CAPACITY USAGE WARNING LIMIT IS REACHED Implicitly cleared: true Default probable cause: THRESHOLD_CROSSED	Release: • LOMS16A
Description: CAPACITY USAGE WARNING LIMIT IS REACHED\n\nThis is an informative alarm which indicates that a capacity usage level of a licensed feature has reached one of its predefined warning limits: the capacity usage warning limit or the full capacity limit. \n\nFor each warning limit there is a corresponding alarm severity. The alarm severity increases as the warning limit becomes closer to the full capacity limit.\n\nIf a warning limit with value less than 100% is reached, this alarm has no effect. If the full capacity limit (100%) is reached, the application implementing the licensed feature may stop operating.\n\nThe alarm is cleared automatically if a new licence with additional capacity has been installed or the capacity usage has been decreased. \n\nOtherwise, manual clearing is required; clear the alarm with alarm management application after correcting the fault as presented in Instructions.		
Remedial action: Verify the licensed capacity for the feature. If the feature requires additional capacity, install a new licence. \n\n\n1. To check the amount of currently used licensed capacity execute following command:\n lmcli getFeatureCapacityUsage <FeatureCode> \n\nwhere <FeatureCode> is the code of the feature to be checked. \n\n2. If it is necessary to increase the capacity, a new licence has to be installed. To install a licence execute following command:\n\n lmcli importLicence <LicenceFilename> \n\nwhere <LicenceFilename> is a fully qualified filename of the licence file to be installed.\n\n3. In case of a false alarm, fill in the problem report and send it to your local Nokia representative.		

Table 41-55 CERTIFICATES_DISCREPANCY

Alarm	Attributes	Applicable major release
Name: CERTIFICATES_DISCREPANCY (11648) Type: processingErrorAlarm Package: racloms.CERTIFICATES_DISCREPANCY Raised on class: racloms.OMS	Severity: indeterminate Specific problem: CERTIFICATES DISCREPANCY Implicitly cleared: true Default probable cause: VERSION_MISMATCH	Release: • LOMS16A

Table 41-55 CERTIFICATES_DISCREPANCY (continued)

Alarm	Attributes	Applicable major release
Description: CERTIFICATES DISCREPANCY\n\nThis alarm indicates that CA certificate received in TLS connection differs from CA certificate with the same issuer name and subject name which is installed in OMS (e.g. it has been installed in OMS to support CRL Distribution Point parameter defined in OMS for downloading related CRL).\nMost likely other NE uses newer CA certificate and it should be installed manually in OMS as well.\n\nThere is a risk that CRL being in usage, formerly downloaded to OMS, is not up to date or its validation in the next CRL download might fail with the old CA certificate present in OMS.\n\nClear the alarm with the alarm management application after checking correctness of the CA certificate and CRL Distribution Point parameter		
Remedial action: Perform the following actions:\n\n1. Verify certificate in question which is installed in OMS and on the other NE, then install a new version of CA certificate in OMS if needed.\n2. If CA certificate installation was required in OMS then verify related CRL Distribution Point parameter (if it had been defined in OMS) and update it if needed.\n3. If CRL Distribution point parameter has been changed then initiate CRL update operation.		

Table 41-56 CERTIFICATE_CAPACITY_REACHED

Alarm	Attributes	Applicable major release
Name: CERTIFICATE_CAPACITY_REACHED (11649) Type: qualityOfServiceAlarm Package: racloms.CERTIFICATE_CAPACITY_REACHED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: CERTIFICATE CAPACITY REACHED Implicitly cleared: true Default probable cause: RESOURCE_AT_OR_NEARING_CAPACITY	Release: • LOMS16A
Description: CERTIFICATE CAPACITY REACHED\n\nThis alarm is raised when its own CA certificate storage capacity or CRL storage space is about to be reached.\n\nCA Certificate or CRL storage capacity was reached, so new certificate or CRL cannot be installed.\n\nThe alarm is cleared automatically by the alarm system after CA certificate storage capacity is below its minimum acceptable limit (i.e. unnecessary or invalid certificates are deleted) or CRLs are within the acceptable disk space limit.		
Remedial action: OMS detected excess of certificates in its own CA certificate storage capacity or excess of CRLs in disk storage space. In order to clear this alarm any new certificate exceeding the quantity of 12 certificates shall be deleted.		

Table 41-57 CERTIFICATE_EXPIRED

Alarm	Attributes	Applicable major release
Name: CERTIFICATE_EXPIRED (11650) Type: processingErrorAlarm Package: racloms.CERTIFICATE_EXPIRED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: CERTIFICATE EXPIRED Implicitly cleared: true Default probable cause: TIMEOUT_EXPIRED	Release: • LOMS16A
Description: CERTIFICATE EXPIRED\n\nThis alarm is raised when its own EE or intermediate CA or root CA certificate expires.\n\nThe alarm may have effect on the OMS security. Expired certificates cannot be used, so secure connections will not work.\n\nAlarm will be cleared automatically after a new certificate with proper lifetime is installed to the system.		
Remedial action: The operator should install a new certificate with proper lifetime as soon as possible.		

Table 41-58 CERTIFICATE_EXPIRING

Alarm	Attributes	Applicable major release
Name: CERTIFICATE_EXPIRING (11651) Type: processingErrorAlarm Package: racloms.CERTIFICATE_EXPIRING Raised on class: racloms.OMS	Severity: indeterminate Specific problem: CERTIFICATE EXPIRING Implicitly cleared: true Default probable cause: TIMEOUT_EXPIRED	Release: • LOMS16A
Description: CERTIFICATE EXPIRING\n\nThe alarm means that End Entity (EE) or Certificate Authority (CA) certificate expiry is close.\n\nIt will not be possible to use expired certificate. Secure connection will not be working. At the worst case the whole OMS will not be functioning.\n\nAlarm will be cleared automatically by the alarm system after a new certificate with proper lifetime is installed to the system.		
Remedial action: The operator should install a new certificate with proper lifetime as soon as possible.		

Table 41-59 CERTIFICATE_REVOKED

Alarm	Attributes	Applicable major release
Name: CERTIFICATE_REVOKED (11652) Type: processingErrorAlarm Package: racloms.CERTIFICATE_REVOKED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: CERTIFICATE REVOKED Implicitly cleared: true Default probable cause: TIMEOUT_EXPIRED	Release: • LOMS16A
Description: CERTIFICATE REVOKED\n\nThe alarm is raised if the Network Element certificate cannot be validated against Certificate Revocation List (CRL). It means certificate is not valid anymore.\n\nThe alarm may have effect on the OMS security. The revoked certificate cannot be used.\n\nThe alarm is cleared in case of successful certificate validation against CRL.		
Remedial action: The operator should provide new valid NE certificate.		

Table 41-60 ClientDelegateServerStatus

Alarm	Attributes	Applicable major release
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm Package: server.ClientDelegateServerStatus Raised on class: server.ClientDelegateServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • LOMS16A
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 41-61 CLUSTER_OPERATION_INITIATED_BY_OPERATOR

Alarm	Attributes	Applicable major release
Name: CLUSTER_OPERATION_INITIATED_BY_ OPERATOR (11653) Type: qualityOfServiceAlarm Package: racloms.CLUSTER_OPERATION_ INITIATED_BY_OPERATOR Raised on class: racloms.OMS	Severity: indeterminate Specific problem: CLUSTER OPERATION INITIATED BY OPERATOR Implicitly cleared: true Default probable cause: CONGESTION	Release: • LOMS16A
Description: CLUSTER OPERATION INITIATED BY OPERATOR\n\nThis is an informative alarm which indicates that an operator has initiated\na cluster operation on the specified managed object (MO). The MO can be to the whole cluster, a node, a recovery unit (RU), or a process. The platform high availability services (HAS) is now executing the operation. The operation can be\n- switchover\n- restart\n- power-off.\n\nThe operations have different effects: \n\nSwitchover \n- Applicable only to recovery groups (RG). The active RU instance of the RG is terminated and a standby instance on another node started or, in case of a hot active standby RG, activated. The service provided by the named RU is down until the switchover is complete. \n\nRestart \n- For the cluster and nodes this means a physical restart (reboot) of node(s). For other MOs, the named MO is stopped and restarted. The services provided by the named MO are down during the restart.\n\nPower-off \n- Applicable only to nodes. The named node is being powered off.\n\nThe alarm system clears the alarm automatically after its time to live has expired.		
Remedial action: This is an informative alarm and does not require any actions.		

Table 41-62 CLUSTER_STARTED__RESTARTED_

Alarm	Attributes	Applicable major release
Name: CLUSTER_STARTED__RESTARTED_ (11654) Type: processingErrorAlarm Package: racloms.CLUSTER_STARTED__ RESTARTED_ Raised on class: racloms.OMS	Severity: indeterminate Specific problem: CLUSTER STARTED (RESTARTED) Implicitly cleared: false Default probable cause: SOFTWARE_ ENVIRONMENT_PROBLEM	Release: • LOMS16A
Description: CLUSTER STARTED (RESTARTED)\n\nThe whole cluster is starting or restarting.\n\nStarting or restarting of the whole cluster means (re)starting of all managed objects within the cluster.\nThe (re)start may have been initiated by an operator or be caused by fatal errors in some critical hardware or software component.\nWhen the cluster is restarted, the alarm system clears all alarms that were raised by the cluster's managed objects before the restart.\n\nClear the alarm after carefully checking the alarm status in the cluster.		
Remedial action: This alarm is an informative alarm indicating that the whole cluster has been (re)started. As this operation is critical for software and hardware, check carefully the alarm status in the cluster after the restart.		

Table 41-63 CMP_CERT_RETRIEVAL_FAILURE

Alarm	Attributes	Applicable major release
Name: CMP_CERT_RETRIEVAL_FAILURE (11655) Type: communicationsAlarm Package: racloms.CMP_CERT_RETRIEVAL_ FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: CMP CERT RETRIEVAL FAILURE Implicitly cleared: true Default probable cause: TRANSMISSION_ERROR	Release: • LOMS16A

Table 41-63 CMP_CERT_RETRIEVAL_FAILURE (continued)

Alarm	Attributes	Applicable major release
Description: CMP CERT RETRIEVAL FAILURE\n\nThe alarm means that the End Entity (EE) certificate was not received from Certificate Authority server, and old EE certificate is used.\n\nNot-trusted certificate might be used.\n\nThe alarm is cleared if OMS has retrieved certificates successfully.		
Remedial action: User should check CMP server parameters in OMS LDAP. If parameters stored in LDAP are correct, the connectivity to CMP server should be also checked. If the above mentioned steps have been done the CMP initialize operation can be repeated.		

Table 41-64 CmuManagementFailed

Alarm	Attributes	Applicable major release
Name: CmuManagementFailed (10040) Type: communicationsAlarm Package: lte.CmuManagementFailed Raised on class: lte.CompactMobilityUnit	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ftpFailed	Release: • LOMS16A
Description: The alarm is raised when SAM fails to manage a 9430 Compact Mobility Unit due to an FTP failure.		
Raising condition: ('Management State' EQUAL 'FTP Failed')		
Clearing condition: ('Management State' EQUAL 'Managed')		
Remedial action: Verify FTP connectivity between the 5620 SAM and the 9430 Compact Mobility Unit, then re-attempt to manage.		

Table 41-65 COMPACTING_IN_MEMORY_DATABASE_FAILED

Alarm	Attributes	Applicable major release
Name: COMPACTING_IN_MEMORY_DATABASE_FAILED (11656) Type: processingErrorAlarm Package: racloms.COMPACTING_IN_MEMORY_DATABASE_FAILED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: COMPACTING IN-MEMORY DATABASE FAILED Implicitly cleared: true Default probable cause: APPLICATION_SUBSYSTEM_FAILURE	Release: • LOMS16A
Description: COMPACTING IN-MEMORY DATABASE FAILED\n\nDefragmentation of the in-memory database is not completed.\n\nThe database is not compacted to reduce memory fragmentation. This does not affect the functioning of the system. In an extreme case, it is possible that some executions may become slower.\n\nThe alarm system clears the alarm automatically after next successful database compact operation.		

Table 41-65 COMPACTING_IN_MEMORY_DATABASE_FAILED (continued)

Alarm	Attributes	Applicable major release
Remedial action: Note: In these instructions TimesTen is referring to the concept in-memory database.\n\n1. Use the parameter management application to check the value of fsdbCompactInterval or fsdbCompactTime for the database in question.\n\n2. After the next compaction operation (as defined in fsdbCompactInterval or fsdbCompactTime), check with the alarm management application if the alarm is still active. \n3. If the compacting failed, check the alarm reason in the application additional information field 2 and continue according to the respective procedures:\n\nIf the reason is TIMEOUT or FAIL:\n\n1. Copy the original master-syslog to the temporary directory:\ncp /var/log/master-syslog /tmp/<filenameA>.<extension>\n(Choose filenameA and extension, for example, 70169_syslog.log)\n\n2. Go to the tmp directory:\ncd /tmp\n\n3. In the node where the alarm was raised, determine the TimesTen status:\nttStatus -v > /tmp/<filenameB>.txt\n(Choose filename, for example, 70169_ttstatus.log; filenameB must be different from the filenameA.)\n\n4. Compress the files with the tar command:\ntar -cf <tarname>.tar <filenameA>.<extension> <filenameB>.txt\n(Choose tarname, for example, 70169.tar.)\n\nNote that the tar command does not delete the original files. When the files are not needed anymore, they can be deleted. \n\n5. Contact your local Nokia representative with the information gathered (<tarname>.tar).\n\n\nIf the reason is ATTRIBUTE:\n\n1. Use the parameter management application to check the values of fsdbCompactInterval and fsdbCompactTime.\n\n2. If the values are correct, follow the procedure for TIMEOUT or FAIL and contact your local Nokia representative with the information described in the TIMEOUT or FAIL section.\n\nIf the values are not correct, proceed as follows:\n\n1. Use the parameter management application to change the values of fsdbCompactInterval, fsdbCompactQuantum, or fsdbCompactTimevalues for the database in question. The database can be found from the entry fsdbFragmentId DB. \n\n2. Perform graceful shutdown to the managed object (MO) of TimesTen Watchdog and start it up to activate the changed parameters.\n\n3. Search the TimesTen Watchdog MO.\nfshascli -v | grep InMemoryDB\n\n4. From the result, search the information of process.\n\n/<node>/FSInMemoryDB<x>Server/TimestenWD<x>\ncommand="(opt/Nokia/SS_DBHAforTT/bin/TimesTenWD <Database Name>)\n\nwhere <node> is the node for which the alarm is raised, <x> is a letter for the distinctive part of the process type name (see Application Id of the alarm), and <Database Name> is the database in question. For example:\n\nProcess /TA-A/FSInMemoryDBaServer/TimesTenWDa\ncommand=(opt/Nokia/SS_DBHAforTT/bin/TimesTenWD DB_Name)\n\n5. Shut down the TimesTen Watchdog process gracefully:\nfshascli -X /<node>/FSInMemoryDB<x>Server/TimesTenWD<x>\n\n6. Start up the TimesTen Watchdog process to activate the parameter values:\nfshascli -u /<node>/FSInMemoryDB<x>Server/TimesTenWD<x>\n\n7. After the next compaction operation, check with alarm management application if the alarm is still active."		

Table 41-66 CONFIGURATION_OF_NWI3_ADAPTER_IS_OUT_OF_ORDER

Alarm	Attributes	Applicable major release
Name: CONFIGURATION_OF_NWI3_ADAPTER_IS_OUT_OF_ORDER (11657) Type: processingErrorAlarm Package: racloms.CONFIGURATION_OF_NWI3_ADAPTER_IS_OUT_OF_ORDER Raised on class: racloms.OMS	Severity: indeterminate Specific problem: CONFIGURATION OF NWI3 ADAPTER IS OUT OF ORDER Implicitly cleared: false Default probable cause: CONFIGURATION_OR_CUSTOMIZING_ERROR	Release: • LOMS16A
Description: CONFIGURATION OF NWI3 ADAPTER IS OUT OF ORDER\n\nThe configuration of NWI3 adapter contains invalid attribute values. Depending on the release, the configuration is stored only in the configuration files, or files and LDAP.\n\nThe system ignores the invalid parameters and uses the default values or the closest acceptable value. For example, value 2000 is greater than the highest acceptable value (1440) for heartbeatPeriod (see the table in the Instructions for operator field) and causes this alarm. In this case, 1440 would be used as the heartbeatPeriod.\n\nClear the alarm with an alarm management application after correcting the fault as presented in Instructions.		

Table 41-66 CONFIGURATION_OF_NWI3_ADAPTER_IS_OUT_OF_ORDER (continued)

Alarm	Attributes	Applicable major release
Remedial action: 1. Correct the invalid attribute value. The attribute name is displayed in the Identifying Application Additional Info field. The name of the configuration file or LDAP branch is displayed in the Application Additional info field. \nThe attributes that can cause this alarm are mainly stored in file /var/opt/Nokia/SS_Nwi3Adapter/config/nwi3mdcorba.ini or LDAP branch fsFragmentId="mediator, fsFragmentId=NWI3, fsClusterId=ClusterRoot. The valid values, as well as the default values, of these attributes are presented in the table below. The attribute names in the LDAP are prefixed with "fsnwi3".\n\nName Type Default\n(fsnwi3)takeIntoUseNext boolean: (0=false,1=true) in nwi3mdcorba.ini and (false,true) in LDAP 0 \n(fsnwi3)registrationServiceIOR string, a valid IOR to NetAct'sregistration service \n(fsnwi3)heartbeatPeriod short, [0..1440], granularity:1 minute 15\n(fsnwi3)reRegistrationPeriod short: [15..1440], \ngranularity:1 minute 60\n(fsnwi3)registrationRetryBasePeriod short: [5..240], \ngranularity:1 minute 15\ n(fsnwi3)retryRandom short: [5..240], \ngranularity:1 minute 5\n(fsnwi3)rePublicationPeriod short [1..60], \ngranularity:1 minute 3\n(fsnwi3)getPublicationServiceRetryPeriod short [1..60], \ngranularity:1 minute 15\n\n2. This alarm can also be caused by the parameter mediatorSessionManagerIOR located in file /var/opt/Nokia/www/SessionManager_V1.ior\nRestart NWI3 adapter to generate mediatorSessionManagerIOR into SessionManager_V1.ior \nIn normal conditions, the restart generates the parameter with the valid value.\n\n3. If the problem is the results from the parameter systemID in file /var/opt/Nokia/www/systemid.txt, the probable cause is that the file systemid.txt is missing. The value in systemID should be the same as in the file. \nCopy /etc/cluster-id to /var/opt/Nokia/www/ systemid.txt and restart the NWI3 adapter."		

Table 41-67 CONFIGURATION_OF_SNMP_MEDIATOR_IS_OUT_OF_ORDER

Alarm	Attributes	Applicable major release
Name: CONFIGURATION_OF_SNMP_MEDIATOR_ IS_OUT_OF_ORDER (11658) Type: processingErrorAlarm Package: racloms.CONFIGURATION_OF_SNMP_ MEDIATOR_IS_OUT_OF_ORDER Raised on class: racloms.OMS	Severity: indeterminate Specific problem: CONFIGURATION OF SNMP MEDIATOR IS OUT OF ORDER Implicitly cleared: true Default probable cause: CORRUPT_DATA_M3100	Release: • LOMS16A
Description: CONFIGURATION OF SNMP MEDIATOR IS OUT OF ORDER\n\nConfiguration of the SNMP mediator contains values that are unacceptable.\n\nThe invalid part of configuration is ignored. This causes partial loss of functionality. The SNMP traps may be lost.\n\nThe alarm will be cleared automatically by the alarm system after five minutes. If the configuration is still out of order after that, the alarm is raised again.		
Remedial action: Use the parameter management application to correct the configuration branch that is out of order. The Application Additional Information field displays the attribute or entry name that has an unacceptable value. For example, the following entry causes alarm 70001, if xxx is not a hostname that can be resolved:\nfssnmpNEId="xxx,\nfssnmpAttributeType=NEattrs,\ nfssnmpMediatorName=1,fsFragmentId=SNMP,\nfsClusterId=ClusterRoot\nTesting instructions section below provides instructions for creating an invalid entry."		

Table 41-68 CONNECTION_LOST_TO_MASTER_FDS_SERVER

Alarm	Attributes	Applicable major release
Name: CONNECTION_LOST_TO_MASTER_FDS_ SERVER (11659) Type: communicationsAlarm Package: racloms.CONNECTION_LOST_TO_ MASTER_FDS_SERVER Raised on class: racloms.OMS	Severity: indeterminate Specific problem: CONNECTION LOST TO MASTER FDS SERVER Implicitly cleared: true Default probable cause: UNAVAILABLE	Release: • LOMS16A

Table 41-68 CONNECTION_LOST_TO_MASTER_FDS_SERVER (continued)

Alarm	Attributes	Applicable major release
Description: CONNECTION LOST TO MASTER FDS SERVER\n\nReplica Fast Data Structure (FDS) server has lost contact to Master FDS server.\n\nUpdates made to Master FDS will not be replicated to this replica until it has been able to reconnect to Master FDS Server.\n\nWhen Replica FDS Server has been able to reconnect to master FDS Server, it clears the alarm.		
Remedial action: 1. Check that the node where the master FDS Server should be running has started properly. \n\n2. Check also that the connection between the nodes is ok and that the replica in question has been configured in master's start-up parameters. \n\nIf these actions do not work, contact your local Nokia representative and provide them with information from the information fields of the alarm.		

Table 41-69 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm Package: equipment.ContainingEquipmentAdministrativelyDown Raised on class: equipment.Port	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentAdministrativelyDown	Release: • LOMS16A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 41-70 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm Package: equipment.ContainingEquipmentMismatch Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentMismatch	Release: • LOMS16A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 41-71 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm Package: equipment. ContainingEquipmentOperationallyDown Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentDown	Release: • LOMS16A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationllyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

Table 41-72 CORRUPTED_ALARM_DATA

Alarm	Attributes	Applicable major release
Name: CORRUPTED_ALARM_DATA (11660) Type: processingErrorAlarm Package: racloms.CORRUPTED_ALARM_DATA Raised on class: racloms.OMS	Severity: indeterminate Specific problem: CORRUPTED ALARM DATA Implicitly cleared: false Default probable cause: CORRUPT_DATA_M3100	Release: • LOMS16A
Description: CORRUPTED ALARM DATA\n\nCorrupted data found in the alarm log file.\n\nThe corrupted record in the alarm log file is ignored, meaning that it is possible that an alarm notification was lost or a more serious system error has occurred.\n\nClear the alarm with alarm management application after correcting the fault as presented in INSTRUCTIONS.		
Remedial action: 1. Fill in a problem report with the alarm data and send it to your local Nokia representative.		

Table 41-73 CORRUPTED_LDAP_DATABASE_RECOVERED

Alarm	Attributes	Applicable major release
Name: CORRUPTED_LDAP_DATABASE_ RECOVERED (11661) Type: processingErrorAlarm Package: racloms.CORRUPTED_LDAP_DATABASE_ RECOVERED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: CORRUPTED LDAP DATABASE RECOVERED Implicitly cleared: true Default probable cause: CORRUPT_DATA_M3100	Release: • LOMS16A
Description: CORRUPTED LDAP DATABASE RECOVERED\n\nA primary or secondary LDAP (Lightweight Database Access Protocol) database was corrupted but it has been successfully recovered. The LDAP databases can get corrupted, for example, when\n- a disk becomes full while the database is being updated\n- a node failure and/or ungraceful node restart happens while the database is being updated.\n\nThe platform software has automatically recovered the database from an operational primary or secondary database. Some applications may have been impacted by the temporary unavailability of the LDAP database. As the platform restarts the failed applications, the problem should not have caused permanent problems.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: This is an informative alarm. No operator actions required.		

Table 41-74 CorruptImageFile

Alarm	Attributes	Applicable major release
Name: CorruptImageFile (171) Type: configurationAlarm Package: mediation.CorruptImageFile Raised on class: mediation.AbstractSoftwareFolderDescriptor	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile	Release: • LOMS16A
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 41-75 CPU_MALFUNCTION

Alarm	Attributes	Applicable major release
Name: CPU_MALFUNCTION (11662) Type: equipmentAlarm Package: racloms.CPU_MALFUNCTION Raised on class: racloms.OMS	Severity: indeterminate Specific problem: CPU MALFUNCTION Implicitly cleared: false Default probable cause: PROCESSOR_PROBLEM_M3100	Release: • LOMS16A
Description: CPU MALFUNCTION\n\nA problem in the central processing unit (CPU) functionality has been detected.\n\nPossible error types are:\n\nIERR (internal error)\nThermal Trip\nFRB1/BIST (fault resilient boot/built-in self-test) failure\nFRB2/Hang in POST (power-on self-test) failure (believed to be due to a\nprocess failure or related to a processor failure)\nFRB3/Processor Startup/Initialization failure (CPU didn't start)\nConfiguration Error\nSM BIOS (system management basic input/output system) 'Uncorrectable CPU-complex\nError'\nProcessor Presence not detected\nProcessor disabled\nTerminator Presence Detected\n\nThe CPU may be out of service.\n\nClear the alarm after correcting the fault, according to the instructions provided.		
Remedial action: 1. Check that the affected unit is healthy, and is plugged-in properly.\n\n2. Restart the unit, if necessary.\n\n3. Replace the unit, if necessary.\n\n4. If the problem exists even after following these instructions, please contact your local Nokia representative.		

Table 41-76 CPU_USAGE_OVER_LIMIT

Alarm	Attributes	Applicable major release
Name: CPU_USAGE_OVER_LIMIT (11663) Type: qualityOfServiceAlarm Package: racloms.CPU_USAGE_OVER_LIMIT Raised on class: racloms.OMS	Severity: indeterminate Specific problem: CPU USAGE OVER LIMIT Implicitly cleared: true Default probable cause: THRESHOLD_CROSSED	Release: • LOMS16A

Table 41-76 CPU_USAGE_OVER_LIMIT (continued)

Alarm	Attributes	Applicable major release
Description: CPU USAGE OVER LIMIT\n\nA processor is being used at a very high throughput level because the execution of some processes takes a lot of CPU time.\n\nThere is a risk that the node is unable to fulfil the tasks allocated to it. This depends on to what extent certain processes are taking the most of the CPU time and blocking other processes from getting runtime on the CPU, and whether there is a temporary or a permanent increase on the throughput.\n\nIf the processor is constantly used at a very high throughput level, the system might appear very slow. For example, the execution of commands takes a long time to finish.\n\nDo not clear the alarm. The alarm is cleared automatically by the fault detector of the operating system when CPU usage is on a low enough level. The raising or clearing thresholds are different to prevent unnecessary trashing.		
Remedial action: 1. Run "top" Linux command on the node that reports the alarm. The command gives a repetitive update of processor activity in real time. It gives a listing of the most CPU-intensive tasks of the system.\n\n2. If the problem persists, contact your Nokia representative and provide the information gathered in the previous step.		

Table 41-77 CRL_DOWNLOAD_FAILURE

Alarm	Attributes	Applicable major release
Name: CRL_DOWNLOAD_FAILURE (11664) Type: communicationsAlarm Package: racloms.CRL_DOWNLOAD_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: CRL DOWNLOAD FAILURE Implicitly cleared: false Default probable cause: TRANSMISSION_ERROR	Release: • LOMS16A
Description: CRL DOWNLOAD FAILURE\n\nDownload of valid CRL for peer certificate from CRL Distribution Point has failed\n\nThe alarm is raised when OMS Platform fails to retrieve or validate a Certificate Revocation List for peer certificate from the server\n\nClear the alarm with the alarm management application after checking correctness of URL for CRL distribution point server, connectivity to the server or validity of signature for related CRL		
Remedial action: Depending on the reason information perform one of the following checks:\n\n1. Verify URL of CRL distribution point server in certificate extension. If URL stored in certificate extension is correct, then connectivity to the CRL distribution point server should be also checked.\n\n2. Verify URL of CRL distribution point server in certificate extension. If URL stored in certificate extension is correct, then check LDAP configuration on CMP server.\n\n3. Verify signature of CRL available at indicated URL.		

Table 41-78 CRL_UPDATE_FAILURE

Alarm	Attributes	Applicable major release
Name: CRL_UPDATE_FAILURE (11665) Type: communicationsAlarm Package: racloms.CRL_UPDATE_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: CRL UPDATE FAILURE Implicitly cleared: true Default probable cause: TRANSMISSION_ERROR	Release: • LOMS16A
Description: CRL UPDATE FAILURE\n\nThe alarm is raised when the OMS fails to retrieve or validate a Certificate Revocation List from the server.\n\nThe alarm may have effect on the OMS security. If the certificate revocation list (CRL) cannot be updated it is not possible to validate used certificates against CRL.\n\nThe alarm is cleared automatically by the alarm system after NE can reach CR server.		

Table 41-78 CRL_UPDATE_FAILURE (continued)

Alarm	Attributes	Applicable major release
Remedial action: Depending on the reason information perform one of the following checks:\n\n1. Verify CMP server parameters in OMS LDAP. If parameters stored in LDAP are correct, then connectivity to the CRL distribution point server should be also checked.\n2. Verify CMP server parameters in OMS LDAP. If parameters stored in LDAP are correct, then check LDAP configuration on CMP server.\n3. Verify size and signature of CRL available at indicated CR server.\n4. Verify if DP (Distribution Point) for cert xx is defined, or check CRL client configuration for DP retrieval.\n\nWhen the above mentioned steps have been done, the CRL update operation should be repeated.		

Table 41-79 CURRENT_OUT_OF_LIMIT

Alarm	Attributes	Applicable major release
Name: CURRENT_OUT_OF_LIMIT (11666) Type: equipmentAlarm Package: racloms.CURRENT_OUT_OF_LIMIT Raised on class: racloms.OMS	Severity: indeterminate Specific problem: CURRENT OUT OF LIMIT Implicitly cleared: false Default probable cause: POWER_SUPPLY_FAILURE	Release: • LOMS16A
Description: CURRENT OUT OF LIMIT\n\nThe unit's current has exceeded the programmed threshold.\n\nThe unit may behave erratically.\n\nClear the alarm after correcting the fault, according to the instructions provided.		
Remedial action: 1. Check the power feed in the cabinet for proper input current.\n\n2. Check that the affected unit is healthy, and is plugged-in properly.\n\n3. Restart the unit, if necessary.\n\n4. Replace the unit, if necessary.\n\n5. If the problem exists even after following these instructions, please contact your local customer support.		

Table 41-80 DIAMETER_BASE_PROTOCOL_CONFIGURATION_FAILURE

Alarm	Attributes	Applicable major release
Name: DIAMETER_BASE_PROTOCOL_ CONFIGURATION_FAILURE (11667) Type: processingErrorAlarm Package: racloms.DIAMETER_BASE_PROTOCOL_ CONFIGURATION_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: DIAMETER BASE PROTOCOL CONFIGURATION FAILURE Implicitly cleared: false Default probable cause: CONFIGURATION_OR_ CUSTOMIZING_ERROR	Release: • LOMS16A
Description: DIAMETER BASE PROTOCOL CONFIGURATION FAILURE\n\nThe Diameter base protocol configuration has failed due to the invalid Diameter base protocol configuration data in the lightweight directory access protocol (LDAP). One of the mandatory fields or its value is missing.\n\nThe Diameter service is unavailable. The Diameter service cannot be used by the applications until the configuration has been corrected.\n\nClear the alarm with Alarm Browser after correcting the fault as presented in Instructions.		

Table 41-80 DIAMETER_BASE_PROTOCOL_CONFIGURATION_FAILURE (continued)

Alarm	Attributes	Applicable major release
Remedial action: Check the Application Additional Info field to find out the mandatory field that has been incorrectly configured in the Diameter base protocol LDAP configuration data. \n\nCorrect the configuration data (see the error lists below) and restart the application. \n\nFor further details on the problem, see the error logs in syslog. \nIf the configuration is correct, contact your local Nokia Customer Service Center. \n\nThe Diameter application defines the location of the Diameter base protocol configuration in the LDAP. The exact location is described in the configuration instructions of the application. For more information how to browse and modify the LDAP objects or attributes, see Parameter Management customer documentation.\n\nIf the Additional Info can be found in the following list, the corresponding entry is missing from the Diameter base protocol LDAP configuration:\n\nMAIN_CONFIG_DOES_NOT_EXIST: fsdiaMainConfiguration\nPEERTABLE_CONF_DOES_NOT_EXIST: fsdiaPeerTableConfiguration\nREALMTABLE_CONF_DOES_NOT_EXIST:fsdiaRealmTableConfiguration\nPEERRECORD_MISSING: fsdiaPeerRecord\nREALMRECORD_MISSING: fsdiaRealmRecord\nSCTP_CONFIG_MISSING:fsdiaSctpConfig\nINVALID_SCTP_PORT: fsdiaSctpPortEntry\nSCTP_FQDN_MISSING: fsdiaSctpFqdnEntry \nTCP_CONFIG_MISSING: fsdiaTcpConfig\nTCP_FQDN_MISSING: fsdiaTcpFqdnEntry\nINVALID_TCP_PORT: fsdiaTcpPortEntry \n\nIf Additional Info can be found in the following list, the corresponding attribute is missing from the Diameter base protocol LDAP configuration:\n\nDIAMETER_ID_MISSING: fsdiaDiameterId in entry fsdiaPeerRecord\nACTION_MISSING: fsdiaAction in entry fsdiaRealmRecord\nAPPLICATION_ID_MISSING: fsdiaApplicationId in entry fsdiaRealmRecord \nREALM_NAME_MISSING: fsdiaRealmName in entry fsdiaRealmRecord\nORIGIN_REALM_MISSING: fsdiaOriginRealm in entry fsdiaMainConfiguration\nPRODUCT_NAME_MISSING: fsdiaProductName in entry fsdiaMainConfiguration\nVENDOR_ID_MISSING: fsdiaVendorId in entry fsdiaMainConfiguration\nINVALID_SCTP_FQDN: fsdiaSctpFqdn in entry fsdiaSctpFqdnEntry \nINVALID_TCP_FQDN: fsdiaTcpFqdn in entry fsdiaTcpFqdnEntry\n\nOther errors:\nCONFIGURATION_PARSING_FAILED: The logging facility is incorrectly initialized. Fill in a problem report and send it to your local Nokia Customer Service Center. Include in the Problem Report the error logs from syslog.\nINCORRECT_PATH: \nThe path for retrieving the Diameter configuration parameters is incorrectly set by the Diameter application. Fill in a problem report and send it to your local Nokia Customer Service Center. Include in the problem report the error logs from the syslog.\nREALMTABLE_CONFIGURATION_PARSING_FAILED:\nAn unexpected error occurred when parsing configuration in fsdiaRealmTableConfiguration="realmTable entry. Check and correct the realmTable configuration.\nGETHOSTNAME_ERROR\nConstructing the default value for the parameter fsdiaOriginHost in entry fsdiaMainConfiguration=mainConfiguration has failed. Add a value to the parameter."		

Table 41-81 DISK_DATABASE_IS_GETTING_FULL

Alarm	Attributes	Applicable major release
Name: DISK_DATABASE_IS_GETTING_FULL (11668) Type: processingErrorAlarm Package: racloms.DISK_DATABASE_IS_GETTING_FULL Raised on class: racloms.OMS	Severity: indeterminate Specific problem: DISK DATABASE IS GETTING FULL Implicitly cleared: true Default probable cause: STORAGE_CAPACITY_PROBLEM_M3100	Release: • LOMS16A
Description: DISK DATABASE IS GETTING FULL\n\nThe disk storage area reserved for disk database is filling up.\n\nThe disk database is still fully operational. If the database fills up completely, its services cannot be used anymore.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: The actions to be done in order to avoid a completely full database are database-specific, so contact your local Nokia representative immediately and provide them with the information you obtained from the alarm notification's fields.		

Table 41-82 DISK_DATABASE_WATCHDOG_START_UP_FAILED

Alarm	Attributes	Applicable major release
Name: DISK_DATABASE_WATCHDOG_START_UP_FAILED (11669) Type: processingErrorAlarm Package: racloms.DISK_DATABASE_WATCHDOG_START_UP_FAILED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: DISK DATABASE WATCHDOG START-UP FAILED Implicitly cleared: true Default probable cause: CONFIGURATION_OR_CUSTOMIZING_ERROR	Release: • LOMS16A
Description: DISK DATABASE WATCHDOG START-UP FAILED\n\nStart-up of the disk database watchdog has failed due to a configuration error, or\nother reasons.\n\nBecause the disk database and its watchdog belong to the same recovery unit (RU), the disk database watchdog start-up failure means that the database is not available.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: Check the Application Additional Information field for a reason for the configuration error: \n\nReason 1: Disk database watchdog failed to read the parameters from parameter management\nReason 2: Invalid or missing parameter value\n\nand continue according to the following procedure:\n\n1. Check that the following parameters exist in parameter management for each database entry in the database fragment with the DN (Distinguished Name) "fsFragmentId="DB, fsClusterId=ClusterRoot":\nfsdbRedundancyModel\nfsdbDataSourceName\nfsdbFillRatioAlarmLimit\nfsdbFillRatioCheckFreq\n2. Use Parameter Tool to get the values of those parameters for the database in question. To find the the parameters, use the value of the Managed Object -field in the alarm management application, for example:\nfsdbName=DB_Alarm,fsFragmentId=DB,fsClusterId=ClusterRoot\n3. Send the values found and/or parameters that do not exist to your Nokia representative."		

Table 41-83 downgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: downgradedCardAlarm (256) Type: softwareAlarm Package: equipment.downgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: downgradedCard	Release: • LOMS16A
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 41-84 DRBD_HARDWARE_FAILURE

Alarm	Attributes	Applicable major release
Name: DRBD_HARDWARE_FAILURE (11670) Type: equipmentAlarm Package: racloms.DRBD_HARDWARE_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: DRBD HARDWARE FAILURE Implicitly cleared: false Default probable cause: EQUIPMENT_MALFUNCTION	Release: • LOMS16A

Table 41-84 DRBD_HARDWARE_FAILURE (continued)

Alarm	Attributes	Applicable major release
Description: DRBD HARDWARE FAILURE\n\nA physical disk partition of a Distributed Replicated Block Device (DRBD) is broken or is reporting errors. \nDRBD is used to replicate data of an application partition between two nodes. The nodes form an active/standby redundancy pair where a standby node can take over in case the active node or application fails. \nThe identified DRBD partition or logical volume is currently unavailable or functioning poorly.\n\nThe service that the application provides is not impacted if the other node and the DRBD device are still functioning. In this case, the application is however no longer redundant, and recovery from possible forthcoming failures may take longer or may not be possible at all. \nThe service provided by the application is down if also the other node or partition is not functioning.\n\nClear the alarm manually after the disk has been replaced.		
Remedial action: This situation is most likely caused by a hardware fault. Contact your Nokia representative to have the disk replaced.		

Table 41-85 DRBD_SYNCHRONIZATION_FAILURE

Alarm	Attributes	Applicable major release
Name: DRBD_SYNCHRONIZATION_FAILURE (11671) Type: qualityOfServiceAlarm Package: racloms.DRBD_SYNCHRONIZATION_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: DRBD SYNCHRONIZATION FAILURE Implicitly cleared: true Default probable cause: SYSTEM_RESOURCES_OVERLOAD	Release: • LOMS16A
Description: DRBD SYNCHRONIZATION FAILURE\n\nA secondary Distributed Replicated Block Device (DRBD) does not synchronise or synchronises very slowly with the primary DRBD device. \nDRBD is used to replicate data of an application partition between two nodes. The nodes form an active/standby redundancy pair where a standby node can take over in case the active node or application fails. When the two disk images are not identical (for example, following a node reboot) they are synchronised by copying the changed data from the primary DRBD to the secondary DRBD. \nCurrently synchronisation to the identified secondary DRBD partition or logical volume is not proceeding or proceeds extremely slowly.\n\nIf the node running the primary DRBD (and the application) is functioning, there is no immediate impact to the service that the application provides. The identified DRBD partition or logical volume is, however, not currently available as a backup resource. Any failure in the node that currently runs the application causes a long or permanent service interruption.\nThe service is down if the node with the primary DRBD is not functioning.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: This situation can be caused by a node or network overload. Contact your Nokia representative to get assistance in the analysis.		

Table 41-86 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm Package: equipment.EquipmentAdministrativelyDown Raised on class: equipment.Equipment	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentAdministratively-Down	Release: • LOMS16A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		

Table 41-86 EquipmentAdministrativelyDown (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational - no corrective action required.		

Table 41-87 EquipmentDown

Alarm	Attributes	Applicable major release
Name: EquipmentDown (10) Type: equipmentAlarm Package: equipment.EquipmentDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: inoperableEquipment	Release: • LOMS16A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 41-88 EquipmentInTest

Alarm	Attributes	Applicable major release
Name: EquipmentInTest (11) Type: equipmentAlarm Package: equipment.EquipmentInTest Raised on class: equipment.Equipment	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentInTest	Release: • LOMS16A
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 41-89 EquipmentMismatch

Alarm	Attributes	Applicable major release
Name: EquipmentMismatch (9) Type: equipmentAlarm Package: equipment.EquipmentMismatch Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentTypeMismatch	Release: • LOMS16A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		

Table 41-89 EquipmentMismatch (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 41-90 EquipmentRemoved

Alarm	Attributes	Applicable major release
Name: EquipmentRemoved (8) Type: equipmentAlarm Package: equipment.EquipmentRemoved Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved	Release: • LOMS16A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: ((('isEquipped' EQUAL 'false') OR ('compositeEquipmentState' EQUAL 'Removed')) AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Removed') AND ('isEquipped' EQUAL 'true'))		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 41-91 ETHERNET_INTERFACE_USAGE_OVER_LIMIT

Alarm	Attributes	Applicable major release
Name: ETHERNET_INTERFACE_USAGE_OVER_LIMIT (11672) Type: qualityOfServiceAlarm Package: racloms.ETHERNET_INTERFACE_USAGE_OVER_LIMIT Raised on class: racloms.OMS	Severity: indeterminate Specific problem: ETHERNET INTERFACE USAGE OVER LIMIT Implicitly cleared: true Default probable cause: THRESHOLD_CROSSED	Release: • LOMS16A
Description: ETHERNET INTERFACE USAGE OVER LIMIT\n\nThe Ethernet interface is used at a very high level. This alarm may be raised, for example, when large files are copied over the network causing a lot of network file system (NFS) traffic.\n\nPackages are not lost yet but if the interface is loaded increasingly, packages might eventually be lost.\n\nDo not clear the alarm. The alarm is automatically cleared by the operating system's fault detector once the Ethernet load has decreased to a tolerable level.		
Remedial action: This is an informative alarm and does not require direct actions.		

Table 41-92 ETHERNET_LINK_FAILURE

Alarm	Attributes	Applicable major release
Name: ETHERNET_LINK_FAILURE (11673) Type: equipmentAlarm Package: racloms.ETHERNET_LINK_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: ETHERNET LINK FAILURE Implicitly cleared: true Default probable cause: LINK_FAILURE	Release: • LOMS16A
Description: ETHERNET LINK FAILURE\n\nThe redundancy of Ethernet is lost because of an Ethernet link failure. The error might have been caused by a hardware failure. It can either be a broken Ethernet port by an unplugged cable on the front panel of the gateway (GW) node, or if some program or user issued a command shutting down the Ethernet interface.\n\nIn case of a subsequent link failure, Ethernet packages are lost. This means that the node cannot receive or transmit data over the network.\n\nThe alarm is automatically cleared by the operating system's fault detector when the Ethernet link comes up. If raised due to unused Ethernet interfaces, the alarm is cleared as soon as the admin state of those interfaces is set to DOWN.		
Remedial action: 1. If the alarm is raised for an external Ethernet interface, check that the cable is properly connected on the front panel of the GW node.\n\n2. Take a console connection to the node with the alarming interface.\n\n3. Check the status of the interface with the following command: \n\nifconfig -a <interface> \n\nFor example, ifconfig -a eth0\n\n4. Assuming that the interface does not have the UP and RUNNING flags set, try to configure the interface UP with the following command: \n\nifup <interface>\n\nFor example, ifup eth0\n\n5. For every single Ethernet link interface, an Alarm 70164 is raised even for those that are not connected. To suppress such alarms, the port admin state of unused interfaces should be 'DOWN'.\n\n6. If the environment is a box controller node (BCN) with less than 6 box setup, alarms will be raised. To suppress these alarms, the port admin state should be set to 'DOWN' in all local management processors (LMPs).\n\n- If a user adds/removes BCNs to the existing BCN setup (dynamically) and the total number of BCN boxes is still less than 6, then the user should change the port admin state to 'DOWN' for suppressing these alarms. \n\n- If a user adds new BCNs to the existing BCN setup (dynamically) and the total number of BCN boxes are 6, then the user should change the port admin state to 'UP' for all existing BCNs boxes to trigger back the alarms.\n \nThe following SCLI commands can be used for making SwitchPortAdminState UP/DOWN\n\nFor example, set config-mode on\n set config attribute fsClusterId="ClusterRoot fsFragmentId=HA \n fsFragmentId=LMP fsipHostName=LMP-x-x-x fsFragmentId=Switch \n fsipSwitchPortName=xxxx attribute-list fsipSwitchPortAdminState up/down\n set config-mode off\n\n7. If the above steps cannot resolve the situation, contact your local customer support.\n\nNote: In a deployment where not all external interfaces are used, a number of alarms equal to the number of unused Ethernet links will be raised. To avoid getting those deceptive alarms (since they are actually the result of unused links and not of failing links), the operator is advised to set the admin state of all unused links DOWN using the following SCLI command:\n\nset networking interface iface <iface-name> admin down"		

Table 41-93 EXCESSIVE_NUMBER_OF_IPMI_EVENTS

Alarm	Attributes	Applicable major release
Name: EXCESSIVE_NUMBER_OF_IPMI_EVENTS (11674) Type: equipmentAlarm Package: racloms.EXCESSIVE_NUMBER_OF_IPMI_EVENTS Raised on class: racloms.OMS	Severity: indeterminate Specific problem: EXCESSIVE NUMBER OF IPMI EVENTS Implicitly cleared: true Default probable cause: EQUIPMENT_MALFUNCTION	Release: • LOMS16A
Description: EXCESSIVE NUMBER OF IPMI EVENTS\n\nThe limit of the number of events from a single chassis in a specified time window has been exceeded. The event adapter discards events until the number of the events in the time window falls below the limit.\n\nWhen the alarm is active, the IPMI (Intelligent Platform Management Interface) event adapter discards all events. After the alarm has been cancelled, the alarm database may not correspond to the actual alarm state.\nNote that some IPMI events may have been lost due to the incident.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: If the alarm is not cleared automatically, contact your local Nokia representative.		

Table 41-94 EXTERNAL_ETHERNET_SWITCH_CONNECTION_FAILURE

Alarm	Attributes	Applicable major release
Name: EXTERNAL_ETHERNET_SWITCH_ CONNECTION_FAILURE (11675) Type: communicationsAlarm Package: racloms.EXTERNAL_ETHERNET_ SWITCH_CONNECTION_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: EXTERNAL ETHERNET SWITCH CONNECTION FAILURE Implicitly cleared: true Default probable cause: LAN_ERROR	Release: • LOMS16A
Description: EXTERNAL ETHERNET SWITCH CONNECTION FAILURE\n\nThe LAN (Local Area Network) monitoring software has detected a fault in all the interfaces connecting to the same external Ethernet switch.\n\nThis is a serious condition as the redundancy level of the system is lowered due to the failed switch. All traffic going through the external network can be disrupted. The user is required to check the state of the external network components immediately.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: Check the severity of the alarm. \nIf the severity is WARNING, then:\nThe system is trying to recover the interfaces connecting to the switch: no actions are needed at this point.\nIf the severity is MAJOR, then:\nIf the "are_resets_enabled" parameter is true in the alarm info, the system has already tried to reset the interfaces connecting to the switch and the method of repairing the fault is to replace the switch.\nIf "are_resets_enabled" is off, however, it means that no automatic resets have been executed and manual reset could be beneficial as detailed in the hardware maintenance documentation.\nThe name of the switch is included in the application additional info. As the switch is external, its 'location' cannot be specified. The interfaces connecting to the switch are configured into the LDAP beforehand as part of the deployment.\nRefer to the hardware maintenance documentation for how to change a faulty switch. After replacing the switch and powering it on or restarting it, allow the system at least five (5) minutes to stabilise the fault information. During that time other alarms might appear and this alarm might be cancelled for a while but do not react to the other alarms.		

Table 41-95 EXTERNAL_LDAP_FAILURE

Alarm	Attributes	Applicable major release
Name: EXTERNAL_LDAP_FAILURE (11676) Type: processingErrorAlarm Package: racloms.EXTERNAL_LDAP_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: EXTERNAL LDAP FAILURE Implicitly cleared: true Default probable cause: UNDERLYING_RESOURCE_ UNAVAILABLE	Release: • LOMS16A

Table 41-95 EXTERNAL_LDAP_FAILURE (continued)

Alarm	Attributes	Applicable major release
Description: EXTERNAL LDAP FAILURE\n\nA network element (NE) experiences problems with the connection to the NetAct external Lightweight Directory Access Protocol (LDAP) server.\nThe alarm is raised for the following types of problems:\n1. Both primary and secondary NetAct LDAP servers are down, unreachable, not responding within certain time, or replying with a return code indicating that LDAP is busy. This indicates a failure.\n2. The NE account is not accepted by neither the primary nor the secondary NetAct LDAP servers. This case affects the long-term functionality. Note that if the NE is configured to fallback to the initial registration account if the NE account is invalid, an alarm in this case does not indicate inability of the NE to use NetAct LDAP, because initial registration account is used temporarily. \n3. Both the NE account and the initial registration account are not accepted by neither the primary nor the secondary NetAct LDAP servers. This indicates a failure.\n4. Bad LDAP data (for example, loops in referrals, too big a result set).\n5. Other type of problem, for example invalid RUIM configuration in the local LDAP server.\n\nThe NE is trying to contact the external NetAct LDAP server in the following scenarios:\n1. NE connects to the NetAct LDAP server to verify the password information of the external user.\n2. NE connects to the NetAct LDAP server to obtain the authorisation data of the external user. There are several use cases when this scenario is triggered:\na. User authorisation data is fetched and replicated locally during the first login of an external user into the NE or a login occuring after the replicated user account is removed from NE internal user database due to cache expiry. This scenario occurs after external user's password has been verified in the context of user authentication.\nb. User authorisation data replication triggered by NE Name Service Switch (NSS) module, for example, by using id command.\nc. User authorisation data is fetched and replicated after a Command Line Interface (CLI) command using fsruimrepcli tool is issued. Please see user manual page for fsruimrepcli for details.\nd. User authorsation data is fetched and replicated due to a scheduled cache update. Scheduled cache updates are performed by RuimReplicator process of the RuimRep Recovery Group automatically and regularly with time interval in between replications as configured by the following property in RuimReplicator property file (in /opt/Nokia_BP/SS_AAA/etc/):\n// automatic cache refresh interval in seconds\nruim.replicator.refresh_interval\n\nProblem 2 does not prevent any scenario from successful completion. If this problem occurs, an alarm is raised.\nProblems 1 and 3 prevent successful completion of all scenarios and effect of those problems is described below:\nIn scenarios 1 and 2a, external user's login is denied with the appropriate PAM (Pluggable Authentication Module) error code. \nIn scenario 2b, there can be various problems related to user-to-group mappings for external users. \nIn scenario 2c, no alarm is raised (CLI).\nIn scenario 2d RuimReplicator process of the RuimRep Recovery Group performs time-based replication automatically and regularly with time interval in between replications as configured by the following property in RuimReplicator property file (in /opt/Nokia_BP/SS_AAA/etc/):\n// automatic cache refresh interval in seconds\nruim.replicator.refresh_interval\n\nIf the time-based replication fails due to the NetAct LDAP server unavailability (problem 1), RuimReplicator process starts to recover from the failure by retrying the replication according to the following properties:\n// retry count incase of cache refresh failure\nruim.replicator.refresh_retry_count\n\n// sleep between cache refresh tries in seconds\nruim.replicator.refresh_retry_interval\n\nIf LDAP server is still not available after ruim.replicator.refresh_retry_count retries, RuimReplicator switches to the secondary NetAct LDAP server. An alarm is raised if the secondary NetAct LDAP server is not available either.\nIn case of problems 2 and 3, during time-based replication, RuimReplicator raises an alarm without retrying.\nWhile RuimReplicator is experiencing problems with external LDAP it is possible that there were access control changes made in NetAct, which are not propagated to the NE. If there are users logged in, for example, the sessions still operate with permissions based on the last successfully replicated data.\n\nAlarm is automatically cleared by the RuimReplicator when replication is successful. The alarm is also cleared when a new alarm with the same specific problem but with different Identifying Application Additional Info is raised by the RuimReplicator.		
Remedial action: Depending on the problem type (see Identifying Application Additional Info) the cause for the problem can be:\n- Network configuration problems. Check that the primary and secondary NetAct LDAP server addresses defined in the active configuration fragment under NWI3 Mediator fragment in internal LDAP server (fsFragmentId="mediator,fsFragmentId=NWI3, fsClusterId=ClusterRoot) are reachable with the ping command.\n- NE account expired or deleted in NetAct. Check that the NE account stored in the internal LDAP server in the NWI3 security fragment configuration in LDAP (fsFragmentId=security, fsFragmentId=NWI3, fsClusterId=ClusterRoot) exists also in the primary NetAct LDAP servers and has not expired.\n- NetAct generated a new NE account, but the NE did not receive it. Check that the NE account username and password stored in the NE's internal LDAP fragment (fsFragmentId=security, fsFragmentId=NWI3,fsClusterId=ClusterRoot) are the same as the ones stored in the NetAct LDAP server.\n- NetAct LDAP is overloaded or shut down."		

Table 41-96 EXTERNAL_STORAGE_SYSTEM_FAILURE

Alarm	Attributes	Applicable major release
Name: EXTERNAL_STORAGE_SYSTEM_FAILURE (11677) Type: equipmentAlarm Package: racloms.EXTERNAL_STORAGE_SYSTEM_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: EXTERNAL STORAGE SYSTEM FAILURE Implicitly cleared: true Default probable cause: EQUIPMENT_MALFUNCTION	Release: • LOMS16A
Description: EXTERNAL STORAGE SYSTEM FAILURE\n\nFailure in the external storage system has been detected.\n\nThe external storage system is behaving erratically, is non-responsive, or becomes non-responsive if this error is not solved. More details can be found in the eventText description of the Application Additional Info field.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: 1. For instructions, check the manufacturer's documentation for EMC CLARiiON storage system.\n2. If the problem remains, contact your local Nokia representative to replace the external storage unit. \nCaution: Risk of data loss. Before replacing an operational disk drive, take the\nnecessary backups.\nYou can find the details of the faulty storage unit in the Identifying Application Additional Info field and Application Additional Info field of the alarm.		

Table 41-97 EXTERNAL_USER_ACCOUNT_VALIDATION_FAILED

Alarm	Attributes	Applicable major release
Name: EXTERNAL_USER_ACCOUNT_VALIDATION_FAILED (11678) Type: processingErrorAlarm Package: racloms.EXTERNAL_USER_ACCOUNT_VALIDATION_FAILED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: EXTERNAL USER ACCOUNT VALIDATION FAILED Implicitly cleared: false Default probable cause: CONFIGURATION_OR_CUSTOMIZING_ERROR	Release: • LOMS16A
Description: EXTERNAL USER ACCOUNT VALIDATION FAILED\n\nNetwork element (NE) has detected that according to the NetAct Remote User Information Management (RUIM) LDAP (Lightweight Directory Access Protocol) access control lists, an external user account defined in NetAct LDAP user database has permissions for this NE. According to the NE security architecture, remote user accounts are replicated locally. The validation check performed before the replication for the user account did not pass and therefore the user account was not replicated. \nPossible reasons for a failing validation check are:\n1. External username is the same as one of the NE internal usernames. This should not happen if NetAct is following the agreed way of naming users.\n2. External username is a reserved username. \n3. External username is invalid, for example, too long (supported usernames are up to 31 characters long).\n4. External username contains invalid characters.\n5. Account is not assigned with any valid permissions.\n6. External user ID is the same as one of internal user IDs.\n7. External user ID is not in the supported range.\n8. Some permissions do not map to any valid groups.\n9. User ID is not a valid number.\n\nThe user account cannot be used to log into the NE (except for case 8 above, where user is still able to log in).\n\nClear the alarm with an alarm management application after correcting the fault as presented in Instructions.		
Remedial action: Check that the username complies with the restrictions imposed by the NE and correct the account information in NetAct LDAP.\nThe restrictions (based on /RUIMFLEXI/) are the following:\n- the username must be created according to [a-zA-Z0-9_.][a-zA-Z0-9_-.]{0,30}{a-zA-Z0-9_.$-]? (32 characters maximum)\n- the username cannot start with one of the prefixes reserved for network elements: "_nok", "_nsn"\n- the username cannot be the same as one of the reserved names from the list (defined in /RUIMFLEXI/): root, wheel, daemon, adm, sync, shutdown, halt, lp, mail, uucp, operator, games, nobody, gopher, nfs, nfsnobody, named, ntp, ldap, mysql, postgres, apache, sshd, rpm, dbus, vcsa, nscd\n- the numeric user ID of a RUIM user must be in the range of [1.000, 9.999.999], that is, greater or equal to one thousand and less than ten million.\n- the account must be assigned with at least one valid permission. Valid permissions are those that allow mapping an external user account to one or more network element groups.		

Table 41-98 FailedStatsCollectionAtAcknowledge

Alarm	Attributes	Applicable major release
Name: FailedStatsCollectionAtAcknowledge (11695) Type: communicationsAlarm Package: racloms. FailedStatsCollectionAtAcknowledge Raised on class: racloms.OMS	Severity: major Specific problem: PM Collection Issue while acknowledging PM files Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • LOMS16A
Description: PM Collection Issue while acknowledging PM files\nThe alarm will be cleared automatically at the next successful request.		
Remedial action: Please refer to the LTE Nokia Node Maintenance manual for remedial action information.		

Table 41-99 FailedStatsProcessing

Alarm	Attributes	Applicable major release
Name: FailedStatsProcessing (11696) Type: processingErrorAlarm Package: racloms.FailedStatsProcessing Raised on class: racloms.OMS	Severity: minor Specific problem: PM Collection Issue while processing PM files Implicitly cleared: true Default probable cause: corruptData	Release: • LOMS16A
Description: PM Collection Issue while converting PM files\nThe alarm will be cleared automatically at the next convertion period.		
Remedial action: Please refer to the LTE Nokia Node Maintenance manual for remedial action information.		

Table 41-100 FAILED_TO_CREATE_NETACT_CONNECTION

Alarm	Attributes	Applicable major release
Name: FAILED_TO_CREATE_NETACT_ CONNECTION (11679) Type: communicationsAlarm Package: racloms.FAILED_TO_CREATE_NETACT_ CONNECTION Raised on class: racloms.OMS	Severity: indeterminate Specific problem: FAILED TO CREATE NETACT CONNECTION Implicitly cleared: true Default probable cause: CALL_ESTABLISHMENT_ ERROR	Release: • LOMS16A
Description: FAILED TO CREATE NETACT CONNECTION\n\nThe NWI3 adapter failed to register to Nokia NetActTM.\n\nNetAct cannot subscribe to notifications or be used for managing the network element via network interface 3 (NWI3).\n\nThe alarm is cleared once NetAct has connected to OMS, and NWI3Adapter\nhas successfully re-registered itself to NetAct at the specified time interval.\n\nIf the connection between NetAct and OMS has been successfully established, but NWI3Adapter is not re-registered with NetAct, the alarm will remain active until the next attempt for re-registration is successful (after the specified time interval; approximately 15+ minutes). \n\nBut between the time that the alarm is active, NetAct can still perform some operations like alarm upload and CM, because it is physically connected with the OMS and contains the IOR of the NWI3Adapter's session manager. \n\nUsing this IOR, NetAct can trigger some operations with NWI3Adapter, though logically both NWi3Adapter and NetAct are not connected.		

Table 41-100 FAILED_TO_CREATE_NETACT_CONNECTION (continued)

Alarm	Attributes	Applicable major release
Remedial action: 1. If file /var/opt/Nokia/SS_Nwi3Adapter/config/nwi3mdcorba.ini exists:\na) Make sure that the NetAct Registration Service IOR (parameter registrationServiceIOR) is filled and check the correctness of the interoperable object reference (IOR). The command printIOR can be used for viewing the IP address and port included in the IOR.\nb) Verify that there is a valid username (parameter registrationServiceUsername) and password (registrationServicePassword) to the registration service of NetAct in file /var/opt/Nokia/SS_Nwi3Adapter/config/nwi3mdcorba.ini.\nc) Check the value of the takeIntoUseNext parameter in the nwi3mdcorba.ini file. The value of the parameter in an active section should be 1, and the value of the configurationActive parameter should also be 1. The system sets the value of the configurationActive parameter automatically to 1 when a parameter set is used.\n\n2. If file /var/opt/Nokia/SS_Nwi3Adapter/config/nwi3mdcorba.ini does not\nexist and NWI3 adapter's configuration is stored under branch fsFragmentId="mediator, fsFragmentId=NWI3, and fsClusterId=ClusterRoot in the LDAP:\na) Verify that there is an LDAP entry fsnwi3N3CFId=<id>, fsFragmentId=mediator, and fsFragmentId=NWI3 with attribute fsnwi3takeIntoUseNext=true, which defines the active attribute set.\nb) Make sure that the NetAct Registration Service IOR (attribute fsnwi3registrationServiceIOR) has been specified for the active set and check the correctness of the IOR. Command printIOR can be used for viewing the IP address and port included in the IOR.\nc) If attributes fsnwi3NEAccountUsername and fsnwi3NEAccountPassword exist under branch fsFragmentId=security and fsFragmentId=NWI3, they are used for NetAct registration. Verify that both are valid.\nd) If attributes fsnwi3NEAccountUsername and fsnwi3NEAccountPassword do not exist under branch fsFragmentId=security and fsFragmentId=NWI3, the initial username (attribute fsnwi3initialRegistrationUsername) and password (fsnwi3initialRegistrationPassword) defined in the active set are used for NetAct registration. Verify that both are valid.\n3. Verify that NetAct is up and running and check the connection between\nthe network element and NetAct. \n4. Check that the NetAct host name is configured to the external DNS in\nuse."		

Table 41-101 FALLBACK_OCCURED

Alarm	Attributes	Applicable major release
Name: FALLBACK_OCCURED (11680) Type: processingErrorAlarm Package: racloms.FALLBACK_OCCURED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: FALLBACK OCCURED Implicitly cleared: false Default probable cause: SOFTWARE_ERROR	Release: • LOMS16A
Description: FALLBACK OCCURED\n\nThe alarm is raised if there are errors during a major software upgrade (MSU) procedure, which will prevent the new version of FlexiPlatform from running after an upgrade. If this alarm is raised, it means either there were errors during the boot of the new FlexiPlatform-based system or during the last configuration steps of an application.\n\nThis alarm is raised when errors prevented the MSU procedure from being executed. If this alarm is active, it means that the old installation is still running.\n\nAfter correcting the fault, clear the alarm with an alarm management application.		
Remedial action: Fill in a problem report and send it to your local Nokia representative. The operator should verify the msu.log and check the cause of the MSU error.		

Table 41-102 FAST_DATA_STRUCTURE_AUTOMATIC_RECOVERY_FAILED

Alarm	Attributes	Applicable major release
Name: FAST_DATA_STRUCTURE_AUTOMATIC_RECOVERY_FAILED (11681) Type: processingErrorAlarm Package: racloms.FAST_DATA_STRUCTURE_AUTOMATIC_RECOVERY_FAILED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: FAST DATA STRUCTURE AUTOMATIC RECOVERY FAILED Implicitly cleared: true Default probable cause: CORRUPT_DATA_M3100	Release: • LOMS16A

Table 41-102 FAST_DATA_STRUCTURE_AUTOMATIC_RECOVERY_FAILED (continued)

Alarm	Attributes	Applicable major release
Description: FAST DATA STRUCTURE AUTOMATIC RECOVERY FAILED\n\nA fast data structure (FDS) server was coming up and loading the data structure to memory, but a checkpoint file and/or log file was corrupted.\n\nThe FDS does not start, and client applications cannot access it. In addition, the data of the FDS may be lost.\n\nThe alarm is cleared once the fault in question has been repaired.\n\nIn this case, the application raises an alarm and then restarts, as it cannot function with the fault in question. Due to its restart, the alarm system assumes that the alarm is obsolete and clears it immediately. This process continues till the defect that caused the alarm has been removed.		
Remedial action: 1. If the role of the FDS is MASTER and the application that uses the FDS is not capable of re-creating the FDS contents, restore the datastore from the latest backup.\n\nfsrestore <path> -D <FDS name>\n\n2. If the role of the FDS is REPLICA or the application using the FDS is capable of re-creating the FDS contents, delete all FDS files from disk by executing the following command in the same node the FDS is running:\n\n $ fshascli -l <RU>\n $ rm -f <path>/*.cp\n $ rm -f <path>/FDSlog*\n $ rm -f <path>/*.lck\n $ fshascli -u <RU>\n\nThe <RU> is the recovery unit (RU) of the FDS and it can be extracted from the MOId related to this alarm (for example, if the MOId is \n/TA-A/FSFDSTestServer/FDSTest, the <RU> is /TA-A/FSFDSTestServer). \n\nThe <path> is the path to the directory that holds the FDS files. The directory is the same as the directory of the corrupted file in the additional information field 1.		

Table 41-103 FAST_DATA_STRUCTURE_IS_CORRUPTED

Alarm	Attributes	Applicable major release
Name: FAST_DATA_STRUCTURE_IS_CORRUPTED (11682) Type: processingErrorAlarm Package: racloms.FAST_DATA_STRUCTURE_IS_CORRUPTED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: FAST DATA STRUCTURE IS CORRUPTED Implicitly cleared: true Default probable cause: CORRUPT_DATA_M3100	Release: • LOMS16A
Description: FAST DATA STRUCTURE IS CORRUPTED\n\nA fast data structure (FDS) server was updating a data structure but detected that the data structure is corrupted. In most cases, this indicates that the FDS is corrupted in disk as well.\n\nThe FDS remains partially available, but all the updates and queries that concern the corrupted item will fail. The data of the FDS may also be lost.\n\nThe alarm system clears the alarm automatically when the FDS is restarted. If the next restart is not successful, the alarm will be raised again.		
Remedial action: 1. Restart the FDS\n \n $ fshascli -l <RU>\n $ fshascli -u <RU>\n\nThe <RU> is the recovery unit (RU) name of the FDS and it can be extracted from the MOId related to this alarm (for example, if the MOId is \n/TA-A/FSFDSTestServer/FDSTest, the <RU> is /TA-A/FSFDSTestServer). \n\nIf this alarm re-appears relatively soon, it might indicate that the disk copy of the FDS is corrupted. \n\n2. If the role of the FDS is MASTER or the application using the FDS is not capable of re-generating the contents of the data structure, restore the data structure from the latest backup (fsrestore <path> -D <FDS name>).\n\n3. If the role of the FDS is REPLICA or the application using the FDS is capable of re-generating the contents of the FDS, delete the corrupted FDS files by entering the following commands:\n\n $ fshascli -l <RU>\n $ rm -f <path>/*.cp\n $ rm -f <path>/FDSlog*\n $ rm -f <path>/*.lck\n $ fshascli -u <RU>\n\nThe <path> is the directory path of the FDS files.\n\n4. If the alarm still re-appears and restoring the data structure from the latest backup has already been performed, the last backup set may contain the same corruption as the original set of the FDS files. In that case, use an older backup set. \n\nIf this does not solve the problem, contact your Nokia representative.		

Table 41-104 FAST_DATA_STRUCTURE_START_UP_FAILED

Alarm	Attributes	Applicable major release
Name: FAST_DATA_STRUCTURE_START_UP_ FAILED (11683) Type: processingErrorAlarm Package: racloms.FAST_DATA_STRUCTURE_ START_UP_FAILED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: FAST DATA STRUCTURE START-UP FAILED Implicitly cleared: true Default probable cause: CONFIGURATION_OR_ CUSTOMIZING_ERROR	Release: • LOMS16A
Description: FAST DATA STRUCTURE START-UP FAILED\n\nThe start-up of a fast data structure (FDS) server failed due to a configuration error in the start-up parameters.\n\nThe FDS does not start and client applications cannot access it.\n\nThe alarm is cleared once the fault in question has been repaired. \n\nIn this case, the application raises an alarm and then restarts, as it cannot function with the fault in question. Due to its restart, the alarm system assumes the that alarm is obsolete and clears it immediately. This process continues till the defect that caused the alarm has been removed.		
Remedial action: Contact your Nokia representative.		

Table 41-105 FIBRE_CHANNEL_CONTROLLER_ERROR

Alarm	Attributes	Applicable major release
Name: FIBRE_CHANNEL_CONTROLLER_ERROR (11684) Type: equipmentAlarm Package: racloms.FIBRE_CHANNEL_ CONTROLLER_ERROR Raised on class: racloms.OMS	Severity: indeterminate Specific problem: FIBRE CHANNEL CONTROLLER ERROR Implicitly cleared: false Default probable cause: EQUIPMENT_ MALFUNCTION	Release: • LOMS16A
Description: FIBRE CHANNEL CONTROLLER ERROR\n\nFibre channel (FC) controller errors exceed the threshold value. The fibre channel controller has been reset due to a severe communication deadlock.\n\nIf the problem is persistent it may affect the storage access reliability and performance.\n\nClear the alarm with the alarm management application after correcting the fault as detailed in the Instructions.		
Remedial action: Consecutive alarms indicate FC-related hardware or firmware problems. \n\nIf the hardware is FlexiServer Blade Hardware, then follow these instructions:\n1. If the alarm source is a single CPI (CPU Intel Type), check/replace it.\n2. Otherwise check/replace the Switch and Service Unit (SWSE). \nSee the corresponding adapter number in information field 1. Adapter 0 is the SWSE in slot 8 and adapter 1 is the SWSE in slot 7. \n3. Also check/replace the hard disk fibre channel (HDF) used.\n\nIf the hardware is IBM Blade Center, then follow these instructions:\n1. Check that all fibre channel cables at the back of the chassis are properly connected to their corresponding fibre channel switch modules.\n2. If all cables are connected and the problem persists, try replacing the fibre channel SFP transceiver and the fibre channel cable.\n3. If the problem still persists, replace the affected fibre channel switch module in the chassis.\n\nRefer to the hardware maintenance documentation for detailed replacement instructions.\n\nIf the faulty component cannot be identified and the situation is not resolved, contact your local Nokia representative.		

Table 41-106 FIBRE_CHANNEL_DEVICE_ERROR

Alarm	Attributes	Applicable major release
Name: FIBRE_CHANNEL_DEVICE_ERROR (11685) Type: equipmentAlarm Package: racloms.FIBRE_CHANNEL_DEVICE_ERROR Raised on class: racloms.OMS	Severity: indeterminate Specific problem: FIBRE CHANNEL DEVICE ERROR Implicitly cleared: false Default probable cause: EQUIPMENT_MALFUNCTION	Release: • LOMS16A
Description: FIBRE CHANNEL DEVICE ERROR\n\nFibre channel (FC) device errors have exceeded the threshold value. The FC driver has detected unexpected behaviour such as direct memory access (DMA) underflow, device queue overflow, unknown command completion status, or unknown packet completion bits.\n\nIf the problem is persistent, it may affect storage access reliability and performance.\n\nClear the alarm with the alarm management application after correcting the fault as detailed in the Instructions.		
Remedial action: Consecutive alarms indicate FC related hardware or firmware problems. \n\nIf the hardware is FlexiServer Blade Hardware, then follow these instructions:\n1. If the alarm source is a single CPI (CPU Intel Type), check/replace it.\n2. Otherwise, check/replace Switch and Service Unit (SWSE). See the corresponding adapter number in information field 1. Adapter 0 is the SWSE in slot 8 and adapter 1 is the SWSE in slot 7. \n3. Also check/replace the hard disk fibre channel (HDF) used.\n\nIf the hardware is IBM Blade Center, then follow these instructions:\n1. Check that all fibre channel cables at the back of the chassis are properly connected to their corresponding fibre channel switch modules.\n2. If all cables are connected and the problem persists, try replacing the fibre channel SFP transceiver and the fibre channel cable.\n3. If the problem still persists, replace the affected fibre channel switch module in the chassis.\n\nRefer to the hardware maintenance documentation for detailed replacement instructions.\n\nIf the faulty component cannot be identified and the situation is not resolved, contact your local Nokia representative.		

Table 41-107 FIBRE_CHANNEL_FRAME_TRANSMISSION__CRC__ERROR

Alarm	Attributes	Applicable major release
Name: FIBRE_CHANNEL_FRAME_TRANSMISSION__CRC__ERROR (11686) Type: equipmentAlarm Package: racloms.FIBRE_CHANNEL_FRAME_TRANSMISSION__CRC__ERROR Raised on class: racloms.OMS	Severity: indeterminate Specific problem: FIBRE CHANNEL FRAME TRANSMISSION (CRC) ERROR Implicitly cleared: true Default probable cause: EQUIPMENT_MALFUNCTION	Release: • LOMS16A
Description: FIBRE CHANNEL FRAME TRANSMISSION (CRC) ERROR\n\nThe threshold value of the fibre channel (FC) cyclic redundancy check (CRC) error counter has been exceeded. The system has detected an excessive number of corrupted FC frames within a server node. Resetting nodes commonly causes some frames to be incomplete, resulting in CRC errors.\n\nNote that in addition to equipment failure this alarm can result from an abruptly terminated frame transmission caused by a lower level FC operation (for example, a loop initialisation).\n\nThis alarm indicates that an excessive number of CRC errors has been detected. If the problem is persistent it may affect storage access reliability and performance.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: This is an informative alarm which does not require any direct actions.\nHowever, consecutive alarms might indicate FC-related hardware or firmware problems, especially if other FC related alarms are raised as well. \n \nIf the hardware is FlexiServer Blade Hardware, then follow these instructions:\n1. If the alarm source is a single CPI (CPU Intel Type), check it and replace it if necessary.\n2. Otherwise, check the Switch and Service Unit (SWSE) and replace it if necessary. See the corresponding adapter number in additional information field 1. Adapter 0 is the SWSE in slot 8 and adapter 1 is the SWSE in slot 7. \n3. Also check/replace the hard disk fibre channel (HDF) used.\n\nIf the hardware is IBM Blade Center, then follow these instructions:\n1. Check that all fibre channel cables at the back of the chassis are properly connected to their corresponding fibre channel switch modules.\n2. If all cables are connected and the problem persists, try replacing the fibre channel SFP transceiver and the fibre channel cable.\n3. If the problem still persists, replace the affected fibre channel switch module in the chassis.\n\nRefer to the hardware maintenance documentation for detailed replacement instructions.\n\nIf the faulty component cannot be identified and the situation is not resolved, contact your local Nokia representative.		

Table 41-108 FIBRE_CHANNEL_LINK_ERROR

Alarm	Attributes	Applicable major release
Name: FIBRE_CHANNEL_LINK_ERROR (11687) Type: equipmentAlarm Package: racloms.FIBRE_CHANNEL_LINK_ERROR Raised on class: racloms.OMS	Severity: indeterminate Specific problem: FIBRE CHANNEL LINK ERROR Implicitly cleared: true Default probable cause: EQUIPMENT_ MALFUNCTION	Release: • LOMS16A
Description: FIBRE CHANNEL LINK ERROR\n\nThe fibre channel (FC) link errors have exceeded the threshold value. The link errors result from basic signal-related problems, such as loss of signal, loss of synchronisation, and link timeout errors.\n\nThe recovery at link level disturbs the normal frame flow. If the problem is persistent, it may affect storage access reliability and performance.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: This is an informative alarm and does not require direct actions. \nHowever, consecutive alarms might indicate FC-related hardware or firmware problems, especially if other FC-related alarms are raised as well. \n\nIf the hardware is FlexiServer Blade Hardware, then follow these instructions:\n1. If the alarm source is a single CPI (CPU Intel Type), check it and replace it if necessary.\n2. Otherwise, check the Switch and Service Unit (SWSE) and replace it if necessary.\nSee the corresponding adapter number in additional information field 1. Adapter 0 is the SWSE in slot 8 and adapter 1 is the SWSE in slot 7. \n3. Check the hard disk fibre channel (HDF) and replace it if necessary.\n\nIf the hardware is IBM Blade Center, then follow these instructions:\n1. Check that all fibre channel cables at the back of the chassis are properly connected to their corresponding fibre channel switch modules.\n2. If all cables are connected and the problem persists, try replacing the fibre channel SFP transceiver and the fibre channel cable.\n3. If the problem still persists, replace the affected fibre channel switch module in the chassis.\n \nRefer to the hardware maintenance documentation for detailed replacement instructions.\n\nIf the faulty component cannot be identified and the situation is not resolved, contact your local Nokia representative.\n\nNote that this alarm will appear if a node which has direct disk access has been bypassed in the FC loop - for example, with the swc tool of the SWSE. Follow the instructions below to check whether some nodes in a loop have been bypassed:\n\n1. Connect to the switch from /Directory:\nssh switch-0\n\n2. Check the status of the ports with the swc tool. For example:\n\n~# swc\n(RadiSys SWSE Switch) >show fibre port all\n\nFC Admin Port\nPort Mode Status\n------- ------- -------\n 1 Enable Up Inserted\n 2 Enable Up Inserted\n 3 Enable Up Inserted\n 4 Enable Up Inserted\n 5 Enable Up Inserted\n 6 Enable Up Inserted\n 9 Enable Up Inserted\n10 Disable Down Generic Bypass\n11 Enable Up Inserted\n12 Enable Up Inserted\n13 Enable Up Inserted\n14 Enable Up Inserted\n1f (Front Panel) Enable Down Manual Bypass\n2f (Front Panel) Enable Down Manual Bypass\n3f (Front Panel) Enable Down Manual Bypass\n4f (Front Panel) Enable Down Manual Bypass\nHub Interconnect Enable Up Inserted\n\n3. Exit the swc tool:\n\n(RadiSys SWSE Switch) >quit\n\n4. Execute steps 1-3 for all switches in the network element (NE).\n\nThis alarm is automatically cleared when the bypassed node is added back into the loop.		

Table 41-109 FIBRE_CHANNEL_LINK_FAILURE

Alarm	Attributes	Applicable major release
Name: FIBRE_CHANNEL_LINK_FAILURE (11688) Type: equipmentAlarm Package: racloms.FIBRE_CHANNEL_LINK_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: FIBRE CHANNEL LINK FAILURE Implicitly cleared: true Default probable cause: LINK_FAILURE	Release: • LOMS16A
Description: FIBRE CHANNEL LINK FAILURE\n\nOne of the fibre channel switch modules has lost its connection. The error might have been caused by a hardware failure, that is, a potentially broken fibre channel switch module, a broken simple form-factor pluggable (SFP) transceiver or by an unplugged or broken fibre channel cable.\n\nUsually there are at least two fibre channel switch modules equipped and the fibre channel connection is still fully operational if at least one fibre channel link is up. However, the lost connection should be re-established as soon as possible to ensure fault tolerant operability. If the redundant connection is not re-established and the only remaining link goes down, the devices attached to the fibre channel become inaccessible.\n\nThe alarm is automatically cleared by the fault detector of the operating system when the corresponding fibre channel link comes up.		

Table 41-109 FIBRE_CHANNEL_LINK_FAILURE (continued)

Alarm	Attributes	Applicable major release
Remedial action: 1. If the alarm is raised, check that all fibre channel cables at the back of the chassis are properly connected to their corresponding fibre channel switch modules.\n\n2. If all the cables are connected and the problem persists, try replacing the fibre channel SFP transceiver and the fibre channel cable.\n\n3. If the problem still persists, replace the affected fibre channel switch module in the chassis\n\n4. If the previous steps have not resolved the situation, contact your local Nokia representative.		

Table 41-110 FIBRE_CHANNEL_SWITCH_PORT_STATUS_CHANGE

Alarm	Attributes	Applicable major release
Name: FIBRE_CHANNEL_SWITCH_PORT_STATUS_CHANGE (11689) Type: equipmentAlarm Package: racloms.FIBRE_CHANNEL_SWITCH_PORT_STATUS_CHANGE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: FIBRE CHANNEL SWITCH PORT STATUS CHANGE Implicitly cleared: true Default probable cause: EQUIPMENT_MALFUNCTION	Release: • LOMS16A
Description: FIBRE CHANNEL SWITCH PORT STATUS CHANGE\n\nThe protocol status for some of the switch ports has changed. There can be several reasons for this alarm, such as changes in the configuration that make the port unable to process the protocol, or manually/automatically isolating the port from loop or fabric. Port Status and Port State values will give the clear reason for raising this alarm.\n\nUsually there are at least two fibre channel switch modules equipped and the fibre channel connection is still fully operational if the redundant link via the redundant switch is up. However, the redundant connection should be re-established as soon as possible to ensure fault tolerant operability. If the redundant connection is not re-established and the only remaining link goes down, the devices attached to fibre channel become inaccessible.\n\nThe alarm is automatically cleared by the system when the corresponding fibre channel port comes up. If the switch module needs to be replaced, the alarm has to be cleared manually.		
Remedial action: 1. If the value of Port Status is other than OK, the reason for triggering this alarm has to be studied properly. If the cause of the alarm appears to be in the application software or configuration, it has to be corrected.\n2. If the problem still persists, replace the affected fibre channel switch module in the chassis.\n3. If the previous steps have not solved the situation, contact your local NSN representative.		

Table 41-111 FIBRE_CHANNEL_SWITCH_STATUS_CHANGE

Alarm	Attributes	Applicable major release
Name: FIBRE_CHANNEL_SWITCH_STATUS_CHANGE (11690) Type: equipmentAlarm Package: racloms.FIBRE_CHANNEL_SWITCH_STATUS_CHANGE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: FIBRE CHANNEL SWITCH STATUS CHANGE Implicitly cleared: true Default probable cause: EQUIPMENT_MALFUNCTION	Release: • LOMS16A
Description: FIBRE CHANNEL SWITCH STATUS CHANGE\n\nThe operational status of the connectivity unit (Fibre Channel Switch) has changed. There can be several reasons for this alarm, such as changes in the configuration causing the online unit to be offline or a malfunctioning switch. Unit Status and Unit State values will give the clear reason for the alarm.\n\nUsually there are at least two fibre channel switch modules equipped in the system and the fibre channel connection is still fully operational if the redundant link via the redundant switch is up. However, the lost connection should be re-established as soon as possible to ensure fault-tolerant operability. If the redundant connection is not re-established and the only remaining link goes down, the devices attached to fibre channel become inaccessible.\n\nThe alarm is automatically cleared by the system if the fibre channel switch recovers from the malfunction. If the switch module needs to be replaced, the alarm has to be cleared manually.		

Table 41-111 FIBRE_CHANNEL_SWITCH_STATUS_CHANGE (continued)

Alarm	Attributes	Applicable major release
Remedial action: 1. If the value of Switch Status is other than OK, check that all fibre channel cables at the back of the chassis are properly connected to their corresponding fibre channel switch modules.\n2. If the problem still persists, replace the affected fibre channel switch module in the chassis.\n3. If the previous steps have not solved the situation, contact your local NSN representative.		

Table 41-112 FIBRE_CHANNEL_TOTAL_LOSS_OF_SYNC

Alarm	Attributes	Applicable major release
Name: FIBRE_CHANNEL_TOTAL_LOSS_OF_SYNC (11691) Type: equipmentAlarm Package: racloms.FIBRE_CHANNEL_TOTAL_LOSS_OF_SYNC Raised on class: racloms.OMS	Severity: indeterminate Specific problem: FIBRE CHANNEL TOTAL LOSS OF SYNC Implicitly cleared: true Default probable cause: EQUIPMENT_MALFUNCTION	Release: • LOMS16A
Description: FIBRE CHANNEL TOTAL LOSS OF SYNC\n\nThe fibre channel (FC) total loss of sync has exceeded the threshold value. The synchronisation of the input signal has failed at either bit or word level.\n\nIf the problem is persistent it may affect storage access reliability and performance.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: This is an informative alarm and does not require any direct actions.\nHowever, consecutive alarms might indicate FC-related hardware or firmware problems, especially if other FC-related alarms are raised as well. \n\nIf the hardware is FlexiServer Blade Hardware, then follow these instructions:\n1. If the alarm source is a single CPI (CPU Intel Type), check it and replace it if necessary.\n2. Otherwise, check the Switch and Service Unit (SWSE) and replace it if necessary. See the corresponding adapter number in the additional information field 1. Adapter 0 is the SWSE in slot 8 and adapter 1 is the SWSE in slot 7. \n3. Check the hard disk fibre channel (HDF) and replace it if necessary.\n\nIf the hardware is IBM Blade Center, then follow these instructions:\n1. Check that all fibre channel cables at the back of the chassis are properly connected to their corresponding fibre channel switch modules.\n2. If all cables are connected and the problem persists, try replacing the fibre channel SFP transceiver and the fibre channel cable.\n3. If the problem still persists, replace the affected fibre channel switch module in the chassis.\n\nRefer to the hardware maintenance documentation for detailed replacement instructions.\n\nIf the faulty component cannot be identified and the situation is not resolved, contact your local Nokia representative.		

Table 41-113 FIELD_REPLACEABLE_UNIT_UNAVAILABLE

Alarm	Attributes	Applicable major release
Name: FIELD_REPLACEABLE_UNIT_UNAVAILABLE (11692) Type: equipmentAlarm Package: racloms.FIELD_REPLACEABLE_UNIT_UNAVAILABLE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: FIELD-REPLACEABLE UNIT UNAVAILABLE Implicitly cleared: true Default probable cause: EQUIPMENT_MALFUNCTION	Release: • LOMS16A
Description: FIELD-REPLACEABLE UNIT UNAVAILABLE\n\nThe field-replaceable unit (FRU) has been removed from the system or is not healthy.\n\nFRU is a hardware component that can be removed and replaced on-site. Typical FRUs include cards, power supply units, and chassis components.\n\nSystem functionality and performance may degrade, or the system may not work at all.\n\nThe system automatically clears the alarm when the fault has been corrected.		
Remedial action: 1. Check that all the FRUs are plugged-in, and are healthy.\n\n2. If the problem exists even after following the instructions, please contact your local customer support.		

Table 41-114 FILE_SYSTEM_USAGE_OVER_LIMIT

Alarm	Attributes	Applicable major release
Name: FILE_SYSTEM_USAGE_OVER_LIMIT (11693) Type: qualityOfServiceAlarm Package: racloms.FILE_SYSTEM_USAGE_OVER_LIMIT Raised on class: racloms.OMS	Severity: indeterminate Specific problem: FILE SYSTEM USAGE OVER LIMIT Implicitly cleared: true Default probable cause: THRESHOLD_CROSSED	Release: • LOMS16A
Description: FILE SYSTEM USAGE OVER LIMIT\n\nThe available disk space on a partition is smaller than the minimum requirement. The partition can be filled up by crashing programs, resulting to large core files, or by large log files if the rotation of logs does not function.\n\nThere is a risk that some data cannot be written on the disk.\n\nDo not clear the alarm. This alarm is automatically cleared by the operating system's fault detector once the amount of available disk space increases above the specified limit. The raising/clearing thresholds are different to prevent unnecessary trashing.		
Remedial action: 1. Run the df -h <mount point> Linux command on the node that reports the alarm to get a report of the usage of the file system disk space.\n\nSee the mountpoint in the Identifying Application Additional Information field of the alarm.\n\n2. Unnecessary files can be deleted from the mount point. \n\nTypically, there are unnecessary files in the /tmp, /var/tmp, /var/log and in /var/crash directories.\n\nNOTE: Deleting files from the mount points may damage the system that will lead to system outage. \n\nMake sure that you know and understand the file system and directory hierarchy of network elements before deleting files.\n\n3. If the alarm is not cleared, contact your Nokia representative and provide the information gathered in the previous steps.		

Table 41-115 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major release
Name: FrameSizeProblem (37) Type: configurationAlarm Package: netw.FrameSizeProblem Raised on class: netw.StatefullConnectableInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: frameSizeProblem	Release: • LOMS16A
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL '0L'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL '0L'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 41-116 FRONTPANEL_LINK_FAULTY

Alarm	Attributes	Applicable major release
Name: FRONTPANEL_LINK_FAULTY (11694) Type: communicationsAlarm Package: racloms.FRONTPANEL_LINK_FAULTY Raised on class: racloms.OMS	Severity: indeterminate Specific problem: FRONTPANEL LINK FAULTY Implicitly cleared: true Default probable cause: LAN_ERROR	Release: • LOMS16A
Description: FRONTPANEL LINK FAULTY\n\nThe LAN (Local Area Network) monitoring software has declared a frontpanel\nlink faulty.\n\nThis is a serious condition as the redundancy level of the system is lowered due to the failed link.\n\nThe system clears the alarm automatically when the fault has been corrected.		

Table 41-116 FRONTPANEL_LINK_FAULTY (continued)

Alarm	Attributes	Applicable major release
Remedial action: Check the severity of the alarm. \nIf the severity is WARNING, then:\nthe system is trying to recover the failed link so currently no actions are needed.\nIf the severity is MAJOR, then:\nA frontplane link consists of one of three components from which it is impossible for the system to distinguish the real cause. The components\nare:\n1. The physical frontpanel cable\n2. The physical port on the blade 1 OR a FlexiServer external peer\n3. The physical port on the blade 2 OR a FlexiServer external peer\nIf the "are_resets_enabled" parameter is true in the alarm info,\nthen the system has already tried to reset the components and the method\nof repairing the fault is to replace one or more of these components starting\nfrom the top, except if the peer is an external entity. In the case of\nan external entity, the LAN monitoring software has no influence over it.\nIf the "are_resets_enabled" is false, however, it means that no\nautomatic resets have been executed on these components and manual resets\ncould be beneficial as instructed in the hardware maintenance documentation.\n\nRefer to the hardware maintenance documentation for how to change faulty components.\nAfter replacing any components and powering on the system or restarting\na component, allow the system at least five (5) minutes to stabilise the\nfault information. During this time other alarms might appear and this\nalarm might be cancelled for a while but do not react to the other alarms.		

Table 41-117 GaPeerDown

Alarm	Attributes	Applicable major release
Name: GaPeerDown (3303) Type: EpcAlarm Package: lteggsn.GaPeerDown Raised on class: lteggsn.GaPeer	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerDown	Release: • LOMS16A
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 41-118 GUEST_HW_MISCONFIGURATION

Alarm	Attributes	Applicable major release
Name: GUEST_HW_MISCONFIGURATION (11697) Type: processingErrorAlarm Package: racloms.GUEST_HW_MISCONFIGURATION Raised on class: racloms.OMS	Severity: indeterminate Specific problem: GUEST HW MISCONFIGURATION Implicitly cleared: true Default probable cause: CONFIGURATION_OR_CUSTOMIZING_ERROR	Release: • LOMS16A
Description: GUEST HW MISCONFIGURATION\n\nVirtual OMS sets this alarm when guest machine HW configuration does not meet any of defined HW profiles (flavors).\n\n\n\n		
Remedial action: Verify the defined hardware configuration profiles (flavors) and reconfigure the OMS guest machine accordingly.		

Table 41-119 HARD_DISK_DRIVE_FAILURE

Alarm	Attributes	Applicable major release
Name: HARD_DISK_DRIVE_FAILURE (11698) Type: equipmentAlarm Package: racloms.HARD_DISK_DRIVE_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: HARD DISK DRIVE FAILURE Implicitly cleared: false Default probable cause: DISK_PROBLEM	Release: • LOMS16A
Description: HARD DISK DRIVE FAILURE\n\nThis alarm is raised when the kernel indicates that the disk has failed. The disk failure may be caused by a physically broken hard drive or a solid state disk, problem with the disk controller, device driver, or incorrect wiring. As the software cannot run with a failed hard drive, the node does not operate correctly.\n\nThe given node is not functional as the disk drive has a critical problem. The faulty node must be locked as soon as possible.\n\nClear the alarm with an alarm management application after correcting the fault as presented in the Instructions.		
Remedial action: Follow the instructions provided in customer documentation for replacing the hard drive.		

Table 41-120 ID_CONFLICT_IN_BTS_O_M_CONNECTION

Alarm	Attributes	Applicable major release
Name: ID_CONFLICT_IN_BTS_O_M_CONNECTION (11699) Type: communicationsAlarm Package: racloms.ID_CONFLICT_IN_BTS_O_M_CONNECTION Raised on class: racloms.OMS	Severity: indeterminate Specific problem: ID CONFLICT IN BTS O&M CONNECTION Implicitly cleared: false Default probable cause: COMMUNICATION_PROTOCOL_ERROR	Release: • LOMS16A
Description: ID CONFLICT IN BTS O&M CONNECTION\n\nTwo or more network elements, that try to communicate to OMS, have the same network element id.\n\nOMS can not communicate with the network elements that have the same id.\n\nClear the alarm when ID CONFLICT problem has been solved.		
Remedial action: Give unique id for the network elements.		

Table 41-121 ILLEGAL_USAGE_OF_EXTERNAL_ALARM_TIME

Alarm	Attributes	Applicable major release
Name: ILLEGAL_USAGE_OF_EXTERNAL_ALARM_TIME (11700) Type: processingErrorAlarm Package: racloms.ILLEGAL_USAGE_OF_EXTERNAL_ALARM_TIME Raised on class: racloms.OMS	Severity: indeterminate Specific problem: ILLEGAL USAGE OF EXTERNAL ALARM TIME Implicitly cleared: false Default probable cause: SOFTWARE_PROGRAM_ERROR	Release: • LOMS16A
Description: ILLEGAL USAGE OF EXTERNAL ALARM TIME\n\nThis alarm indicates that the application has raised or cleared an alarm containing an internal MOId (Managed Object Id) and provided its own alarm time. \nIt is also raised if the application has raised or cleared an alarm originated outside of the Network Element or issued by an external alarm system, but did not provide its original alarm time.\n\nThe original alarm is discarded.\n\nClear the alarm with the alarm management application after correcting the fault as presented in Instructions.		
Remedial action: Fill in a problem report with the alarm data and send it to your Nokia representative.		

Table 41-122 IncompleteConfiguration

Alarm	Attributes	Applicable major release
Name: IncompleteConfiguration (1942) Type: operationalViolation Package: netw.IncompleteConfiguration Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompleteConfig	Release: • LOMS16A
Description: The alarm is raised when a pre-provisioned NE has no objects configured beneath it.		
Raising condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' EQUAL '\"\"'))		
Clearing condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' NOT EQUAL '\"\"'))		
Remedial action: A configuration error has been made which must be corrected. The configuration of the pre-provisioned NE is incomplete. A work order was not associated with the pre-provisioned NE and as a consequence the attempt to auto-configure the NE failed.		

Table 41-123 INCOMPLETE_OR_CORRUPTED_USER_DATA_FOR_VIRTUAL_OMS_DEPLOYMENT

Alarm	Attributes	Applicable major release
Name: INCOMPLETE_OR_CORRUPTED_USER_DATA_FOR_VIRTUAL_OMS_DEPLOYMENT (11701) Type: processingErrorAlarm Package: racloms.INCOMPLETE_OR_CORRUPTED_USER_DATA_FOR_VIRTUAL_OMS_DEPLOYMENT Raised on class: racloms.OMS	Severity: indeterminate Specific problem: INCOMPLETE OR CORRUPTED USER DATA FOR VIRTUAL OMS DEPLOYMENT Implicitly cleared: true Default probable cause: CONFIGURATION_OR_CUSTOMIZING_ERROR	Release: • LOMS16A
Description: INCOMPLETE OR CORRUPTED USER DATA FOR VIRTUAL OMS DEPLOYMENT\n\nVirtual OMS sets this alarm when user data for virtual OMS deployment is incomplete or corrupted.\n\nVirtual OMS automatic cloud deployment was not fully successful, some adjustments\non existing system might be needed.\n\nClear the alarm with an alarm management application after correcting the fault as presented in the instructions.		
Remedial action: 1. Check the cloud-deployment output log file under /var/log/cloud-deployment.log against the deployment parameters.\n\n2a. If the OMS fails to get the deployment userdata from the metadata service, alarm is triggered by missing the following deployment parameters:\n* Cluster-id\n* OMS IP configuration (default gateway(s), IP address(es), network mask(s))\n* Public key for OMS users (Nemuadmin and _nokfsoperator)\n* Timezone\n* NTP external server IP\n* DNS external server IP\n\n2b. If the OMS was able to get deployment userdata from the metadata service, alarm is triggered because: \n* Network logic is not met for OMS IP configuration\n* Timezone is in a wrong format\n\n3. Use virtual infrastructure manager console and the root account to access virtual OMS and perform the manual post-configuration using OMS CLI scripts.\nFor details refer to the OMS Operating Documentation troubleshooting instructions.		

Table 41-124 INCORRECT_ALARM_DATA

Alarm	Attributes	Applicable major release
Name: INCORRECT_ALARM_DATA (11702) Type: processingErrorAlarm Package: racloms.INCORRECT_ALARM_DATA Raised on class: racloms.OMS	Severity: indeterminate Specific problem: INCORRECT ALARM DATA Implicitly cleared: false Default probable cause: INVALID_PARAMETER	Release: • LOMS16A

Table 41-124 INCORRECT_ALARM_DATA (continued)

Alarm	Attributes	Applicable major release
Description: INCORRECT ALARM DATA\n\nThe alarm system has been requested to raise or clear an alarm with incorrect alarm data. One or more arguments provided with the request might have an invalid value or meaning: null or they might be empty, too long, out of specified range, contain non-printable characters, or have an incorrect format. The alarm number (Specific Problem) might also be unknown.\n\nAn incorrect format in this case means, for example, that a character value was entered where a numeric value was expected. A special case of an incorrect format is if the quotes (') surrounding the value of an info field are missing from an alarm notification record in the syslog.\n\nThe alarm which is requested to be raised or cleared with incorrect data is not processed further, but the information is put as additional info in this alarm. If the alarm number is unknown, then the actual fault for which the alarm has been raised is also left unknown.\n\nClear the alarm with the alarm management application after correcting the fault as presented in the Instructions, in other words, after sending the report to the local Nokia representative.		
Remedial action: Fill in a problem report, and then send it to your local Nokia representative.		

Table 41-125 INCORRECT_BIOS_SETTINGS

Alarm	Attributes	Applicable major release
Name: INCORRECT_BIOS_SETTINGS (11703) Type: processingErrorAlarm Package: racloms.INCORRECT_BIOS_SETTINGS Raised on class: racloms.OMS	Severity: indeterminate Specific problem: INCORRECT BIOS SETTINGS Implicitly cleared: true Default probable cause: CONFIGURATION_OR_CUSTOMIZING_ERROR	Release: • LOMS16A
Description: INCORRECT BIOS SETTINGS\n\nCurrent BIOS settings of underlying hardware may cause some functions to be disabled or degraded.\nThe BIOS setting enables boot from USB device with higher priority than secondary disks. This setting together with USB device inserted in USB port may break software management operation such as disk lock, cut-over, and software set activation.\n\nThe alarm is raised if FlexiPlatform verifies that BIOS was incorrectly configured, for example when USB is not disabled from boot order settings in BIOS.\n\nThe alarm is automatically canceled once the BIOS settings are found to be correct during the next checking period.		
Remedial action: Check the additional information for maintenance action details		

Table 41-126 INCORRECT_CONFIGURATION_DATA_IN_LDAP

Alarm	Attributes	Applicable major release
Name: INCORRECT_CONFIGURATION_DATA_IN_LDAP (11704) Type: processingErrorAlarm Package: racloms.INCORRECT_CONFIGURATION_DATA_IN_LDAP Raised on class: racloms.OMS	Severity: indeterminate Specific problem: INCORRECT CONFIGURATION DATA IN LDAP Implicitly cleared: false Default probable cause: SOFTWARE_ERROR	Release: • LOMS16A

Table 41-126 INCORRECT_CONFIGURATION_DATA_IN_LDAP (continued)

Alarm	Attributes	Applicable major release
Description: INCORRECT CONFIGURATION DATA IN LDAP\n\nThe LDAP (Lightweight Directory Access Protocol) holds incorrect configuration data for an application.\nApplications usually retrieve their configuration data from the LDAP either directly or by using configuration translation scripts that will convert the data in the LDAP into configuration files. In this case the translation script has detected that the configuration information is incorrect and the application cannot therefore function properly.\n\nThe application may be unusable or behave incorrectly due to incorrect configuration data stored in the LDAP.\nIf the error happened after issuing the fsconfigure --translate_config command the application may still be operating using the old configuration. If the old configuration was working, the application should keep running normally until restarted or switched over to another recovery unit if running in active / standby recovery group.\nIf the error happened after a cluster restart or after issuing the fsconfigure --activate_config command the application will be started using the incorrect configuration. In this case the application may fail or function incorrectly. It is recommended to lock the recovery unit / group in question to prevent damage to the system.\n\nClear the alarm with an alarm management application after correcting the fault as described in the Instructions section.		
Remedial action: If the application fails or uses the incorrect configuration lock the application recovery group with the fshascli command. For example, the /TestAppl recovery group can be locked by issuing the following command:\n$ fshascli --lock /TestAppl\nThe application configuration data in the LDAP must be corrected and the application re-activated by issuing the following fsconfigure commands:\n$ fsconfigure --translate_config\n$ fsconfigure --activate_config\nThe first command executes the configuration translation scripts that will take the corrected values into use. The second command executes activation scripts that will restart the application. Following these two commands, the corrected values should now be in use.		

Table 41-127 INSECURE_O_M_CONNECTION

Alarm	Attributes	Applicable major release
Name: INSECURE_O_M_CONNECTION (11705) Type: communicationsAlarm Package: racloms.INSECURE_O_M_CONNECTION Raised on class: racloms.OMS	Severity: indeterminate Specific problem: INSECURE O&M CONNECTION Implicitly cleared: true Default probable cause: UNSPECIFIED_REASON	Release: • LOMS16A
Description: INSECURE O&M CONNECTION\n\nNetwork element has established a connection with insecure protocol, while the mediator is configured in 'Probing' security mode. In 'Probing' mode the security connections are preferred, i.e. the alarm may be an indication of a failure in setting up a secure connection.\n\nThe O&M mediator detects an unsecure connection from a network element, while the mediator is configured in 'Probing' security mode\n\nThe alarm shall be cancelled when NE is disconnected, or the security mode is changed to 'Off' or 'Forced'		
Remedial action: The alarm may be an indication of a failure in setting up a secure connection. Check the configuration of the secure mode in the OMS and the RNC/ADA/MRBTS. The RNC/ADA/MRBTS secure mode might be in the "Off" state.		

Table 41-128 INVALID_ACTIVE_SESSIONS

Alarm	Attributes	Applicable major release
Name: INVALID_ACTIVE_SESSIONS (11706) Type: processingErrorAlarm Package: racloms.INVALID_ACTIVE_SESSIONS Raised on class: racloms.OMS	Severity: indeterminate Specific problem: INVALID ACTIVE SESSIONS Implicitly cleared: false Default probable cause: DATABASE_ INCONSISTENCY	Release: • LOMS16A

Table 41-128 INVALID_ACTIVE_SESSIONS (continued)

Alarm	Attributes	Applicable major release
Description: INVALID ACTIVE SESSIONS\n\nCurrently there are open sessions to the network element (NE) that operates according to outdated authorisation profiles. This situation occurs when there are changes in NetAct Lightweight Directory Access Protocol (LDAP) affecting those external Remote User Information Management (RUIM) user accounts (or permissions associated with those accounts) which were replicated into the NE's local user database. The change can be one of the following:\n\nuser account has been removed in NetAct,\n\nuser account cannot be used to access the NE anymore,\n\npermissions associated with this account have changed in NetAct.\n\nCurrently there are active user sessions, opened before the above-mentioned changes were detected in the NE. Within those already created user sessions, access control changes are not automatically taken into effect. Users logged in with affected user accounts still continue to operate with the old permission set.\n\nPlease note that only sessions maintained in /var/run/utmp are monitored. Currently those are only SSH sessions (ftp sessions opened with vsftpd are also visible in /var/run/utmp, but ftp sessions are not possible with external user accounts according to the platform configuration). For other types of sessions no alarm is raised.\n\nNote: the session list in /var/run/utmp is not currently accessible with SCLI.\n\nThis alarm can indicate that some users operate within the NE with higher permissions than allowed by NetAct according to a changed user account authorisation profile. There are four possible reasons for this:\n\n1.A non-existent user is still logged into the NE (user account removed in NetAct).\n\n2.A user with no permissions for the NE is logged in (user account has been detached from the NE according to RUIM Access Control Lists).\n\n3.A user has higher permissions than defined in NetAct (permissions for the user account were lowered).\n\n4.A user has lower permissions than defined in NetAct (permissions for the user account were raised)\n\nNote that cases 1-3 indicate a security risk.\n\nAfter correcting the fault, as presented in the Instructions section, clear the alarm in NE using the following SCLI command:\n>set alarm clear alarm-id <alarm id of the alarm>\n\nIf the alarm id of the alarm is unknown, use the following SCLI command (that requires the full alarm information):\n>set alarm clear-matching-alarms filter-by specific-problem 70269 managed-object <managed object of the alarm> application-id <application id of the alarm> identifying-application-additional-info <identifying application additional info of the alarm>		
Remedial action: All currently active SSH sessions based on user accounts mentioned in the Application Additional Info field of the alarm must be closed and reopened if needed. After reopening a session correct permissions are taken into use, if the account is still in use for the NE.\n \nInitiate ssh sessions\n1.Log into the active CLA.\n2.To check the open ssh sessions, execute the following command:\n# utmpdump /var/run/utmp\nNote: there is currently no equivalent SCLI command.\n\nFor example, the result of invoking utmpdump may look as follows:\n# utmpdump /var/run/utmp\n...\n[6] [06306] [co] [LOGIN] [ttyS1] [ ] [196.144.10.0] [Tue Nov 14 16:20:58 2006 EET]\n[7] [32610] [ts/0] [testuser] [pts/0] [fle4gr01.ntc.nsn.com] [172.21.216.104] [Tue Nov 21 19:06:11 2006 EET]\n[7] [32679] [ts/1] [testuser] [pts/1] [fle4gr01.ntc.nsn.com] [172.21.216.104] [Tue Nov 21 19:07:07 2006 EET]\n[7] [32743] [ts/2] [testuser] [pts/2] [fle4gr01.ntc.nsn.com] [172.21.216.104] [Tue Nov 21 19:07:45 2006 EET]\n[7] [00361] [ts/3] [testuser] [pts/3] [fle4gr01.ntc.nsn.com] [172.21.216.104] [Tue Nov 21 19:08:50 2006 EET]\n[7] [17382] [ts/4] [root] [pts/4] [flegrp13.ntc.nsn.com] [172.21.220.61] [Fri Dec 01 14:59:47 2006 EET]\n[7] [01256] [ts/5] [extuser] [pts/5] [esfleg03.ntc.nsn.com] [172.21.216.127] [Sun Dec 03 13:05:44 2006 EET]\n[7] [04574] [ts/6] [root] [pts/6] [esfleg02.ntc.nsn.com] [172.21.216.126] [Fri Dec 01 12:29:21 2006 EET]\n\n...\n3.Preferred way of closing a session is a graceful exit. It is, however, possible to close it forcefully. The following example illustrates forceful cleanup of a session for user "extuser".\n\n4.First, check the sshd process id of the child process of "01256": \n# ps -ef | grep 1256\nroot 1256 7701 0 13:05 ? 00:00:00 sshd: extuser [priv]\n10009 1276 1256 0 13:05 ? 00:00:00 sshd: extuser@pts/5\nroot 2504 17382 0 13:06 pts/4 00:00:00 grep 1256\n\nand terminate it:\n# kill -9 1276\n\nNote: there are currently no equivalent SCLI commands.\n\nssh session for user "extuser" is terminated.		

Table 41-129 INVALID_IP_CONFIGURATION

Alarm	Attributes	Applicable major release
Name: INVALID_IP_CONFIGURATION (11707) Type: processingErrorAlarm Package: racloms.INVALID_IP_CONFIGURATION Raised on class: racloms.OMS	Severity: indeterminate Specific problem: INVALID IP CONFIGURATION Implicitly cleared: false Default probable cause: CONFIGURATION_OR_CUSTOMIZING_ERROR	Release: • LOMS16A

Table 41-129 INVALID_IP_CONFIGURATION (continued)

Alarm	Attributes	Applicable major release
Description: INVALID IP CONFIGURATION\n\nThe system contains a daemon process that is responsible for creating the Internet Protocol (IP) related configuration - e.g. interfaces, addresses and routes - based on the data stored in the system lightweight directory access protocol (LDAP) directories. Note that typically all or most of this configuration data is created during the system commissioning. \nThe daemon reads the LDAP directories and creates the configuration typically during the start up phase of the system, e.g. after the system reboot. However, the configuration may also be deliberately changed in a live network element as part of maintenance operations, for example, during an upgrade of the system. \nThe daemon creating the configuration raises this alarm if it reads semantically illegal IP configuration data from the LDAP directories and cannot create such a configuration. Examples of this kind of data would be a non-existing interface or a route to such an interface.\n\nThe daemon process will ignore the illegal data and attempts to continue the configuration using other valid data. The effect and severity of the encountered error condition depends on the actual unsuccessful configuration action. \nMost likely these kinds of errors would be experienced when configuring the external connectivity (that is, external interfaces, addresses and routes) of the network element. Especially in these situations the network element would lack the required site connectivity and would not be able to fully provide the intended services.\n\nClear the alarm with an alarm management application after correcting the fault as presented in the instructions.		
Remedial action: As already indicated above, the number of potential errors in the configuration data is large. First, check carefully the additional info fields of the alarm; the daemon attempts to pinpoint the error it encountered.\nTry to identify whether the illegal data relates to the external connectivity configuration or some other "internal" configuration. The latter case is more difficult in the sense that it most likely requires re-commissioning of the entire system. Note that this situation would most likely occur during the first commissioning of the system; if this error would be encountered spontaneously e.g. after rebooting of an earlier commissioned network element, this would most likely indicate a corrupted LDAP directory. \nThe distinguished name in the alarm identifies the invalid object in LDAP which caused the alarm. Try to fix the object (or delete it if fixing seems impossible) with fsip* tools. Once the problem is fixed inform NetworkManager to reload the configuration:\n$ fsnetworkmanagerreload		

Table 41-130 INVALID_SNMP_TRAP_COMMUNITY_STRING

Alarm	Attributes	Applicable major release
Name: INVALID_SNMP_TRAP_COMMUNITY_ STRING (11708) Type: processingErrorAlarm Package: racloms.INVALID_SNMP_TRAP_ COMMUNITY_STRING Raised on class: racloms.OMS	Severity: indeterminate Specific problem: INVALID SNMP TRAP COMMUNITY STRING Implicitly cleared: false Default probable cause: CORRUPT_DATA_M3100	Release: • LOMS16A
Description: INVALID SNMP TRAP COMMUNITY STRING\n\nThe simple network management protocol (SNMP) Mediator has received an SNMP trap that contains an invalid trap community string that does not match the community string in the SNMP Mediator's configuration. Community strings are passwords that are used to authenticate the senders of SNMP traps.\n\nIf such an invalid trap is received, it is ignored.\n\nClear the alarm with the alarm management application after correcting the fault as presented in the Instructions.		
Remedial action: 1. Check the IP address of the SNMP agent that sent the trap. The IP address is displayed in the Identifying Application Additional Information field 1 of the alarm.\n\n2. Check the community string that was received in the trap. The community string is displayed in the Application Additional Information field 2 of the alarm.\n\n3. Use the parameter management application to check the community string that the SNMP Mediator expects. Attribute fssnmpCommunityString of the\nfollowing entry defines the community string:\nfssnmpTrapSource="<agent ip / hostname>\nfssnmpAttributeType=Commstrings,\nfssnmpMediatorName=1,\ nfsFragmentId=SNMP,\nfsClusterId=ClusterRoot\n\n4. Modify the community string in the Configuration Directory to match the community string received in the trap, or configure the SNMP agent to use the community string that the SNMP Mediator expects. \n\nNote that if no community string has been specified for an IP address in the Configuration Directory, the SNMP Mediator accepts all community strings from that address."		

Table 41-131 IN_MEMORY_DATABASE_DISK_PARTITION_PROBLEM_DETECTED

Alarm	Attributes	Applicable major release
Name: IN_MEMORY_DATABASE_DISK_PARTITION_PROBLEM_DETECTED (11709) Type: processingErrorAlarm Package: racloms.IN_MEMORY_DATABASE_DISK_PARTITION_PROBLEM_DETECTED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: IN-MEMORY DATABASE DISK PARTITION PROBLEM DETECTED Implicitly cleared: true Default probable cause: UNDERLYING_RESOURCE_UNAVAILABLE	Release: • LOMS16A
Description: IN-MEMORY DATABASE DISK PARTITION PROBLEM DETECTED\n\nIn-memory database disk partition is mounted read-only or the mount point is missing.\n\nIn-memory database is not able to write to disk, checkpointing and transaction logging fail.\n\nThe system clears the alarm automatically when InMemoryDB restarts or if the problem clears itself.		
Remedial action: If the disk partition is mounted read-only, database high availability (HA) service for the in-memory database tries to correct the situation by restarting the InMemory recovery unit. If the mount point is missing, InMemoryDB RU restart may be tried to see if it clears the situation. If InMemoryDB restart does not help and the alarm is raised again contact your local NSN representative and provide them with the information you obtained alarm notification's fields.		

Table 41-132 IN_MEMORY_DATABASE_IS_ERRONEOUSLY_CONFIGURED

Alarm	Attributes	Applicable major release
Name: IN_MEMORY_DATABASE_IS_ERRONEOUSLY_CONFIGURED (11710) Type: processingErrorAlarm Package: racloms.IN_MEMORY_DATABASE_IS_ERRONEOUSLY_CONFIGURED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: IN-MEMORY DATABASE IS ERRONEOUSLY CONFIGURED Implicitly cleared: false Default probable cause: CONFIGURATION_OR_CUSTOMIZING_ERROR	Release: • LOMS16A
Description: IN-MEMORY DATABASE IS ERRONEOUSLY CONFIGURED\n\nConfiguration of an in-memory database is missing or invalid.\n\nNone of the in-memory databases of the node containing an instance of the erroneously configured database are available.\n\nClear the alarm with alarm management application after correcting the fault as explained in the instructions.		
Remedial action: Attempt to restore the LDAP directory to the state where this problem did not exist. If the database configuration has recently been modified via the parameter management tool, undo the changes by using the parameter management tool or by restoring the LDAP Directory contents from a backup set. If the restoration did not help or cannot be done, contact your local NSN representative and provide the information you obtained from the alarm notification fields.		

Table 41-133 IN_MEMORY_DATABASE_IS_FAULTY

Alarm	Attributes	Applicable major release
Name: IN_MEMORY_DATABASE_IS_FAULTY (11711) Type: processingErrorAlarm Package: racloms.IN_MEMORY_DATABASE_IS_FAULTY Raised on class: racloms.OMS	Severity: indeterminate Specific problem: IN-MEMORY DATABASE IS FAULTY Implicitly cleared: true Default probable cause: APPLICATION_SUBSYSTEM_FAILURE	Release: • LOMS16A

Table 41-133 IN_MEMORY_DATABASE_IS_FAULTY (continued)

Alarm	Attributes	Applicable major release
Description: IN-MEMORY DATABASE IS FAULTY\n\nThe watchdog process of the in-memory database cannot perform certain operation for a database. From the watchdog process point of view the database is faulty.\n\nThe database at issue is most likely unavailable for applications. In the case of a replicated database, the replication is also most likely out of service and alarm 70205 is raised for this reason. If the database role is Active, the watchdog process attempts to force a switchover of configured application recovery groups by failing the recovery units running in the same node as the faulty database instance.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: This alarm is relatively general. The system logs (/var/log/master-syslog on the active CLA node) must be investigated for further details. Investigate the string "Data Manager" for error messages of the database server, and the string "TimesTenWD" for error messages of the watchdog process. The watchdog error messages are especially interesting because it contains the database ODBC-driver error messages. A typical error message is as follows:\nJun 19 08:55:57 info TA-A FSInMemoryDBaServer/TimesTenWD[16672]: DB_TestTT3 connect 1 S1000 9994 {[TimesTen][TimesTen 6.0.4 ODBC Driver][TimesTen]TT9994: Loading data store from disk into RAM in progress -- file \"db.c\", lineno 8806, procedure \"sbDbConnect()\"}, pgrp="16629, tid=1084229984, uid=0, gid=0 SQLThread.cpp:2395 DBSlave\nUse the native error code (9994 in the example above) to search for additional information from documentation of the in-memory database. The error messages should be read in conjunction with the reason code: \nDBConnectFailed: The watchdog process is not able to connect to the database. The system log should contain an error ODBC-driver error message that explains the reason for the problem.\nStartMonitoringFailed: The watchdog process is not able to execute certain SQL statements in the database. The system log should contain an error ODBC-driver error message that explains the reason for the problem.\nDBReconnectFailed: The watchdog process is not able to re-connect to the database after a failed heartbeat check. The system log should contain an error ODBC-driver error message that explains the reason for the problem.\nHeartbeatFailed: The watchdog process is not able to execute a heartbeat check for the database. The system log should contain an error ODBC-driver error message that explains the reason for the problem.\nDBSlave: The heartbeat check or SQL statement execution has timed out. The system log may contain some additional information about the watchdog process. This reason is usually not so serious as others.\nIf this alarm stays in the active alarm list and no obvious corrective actions can be derived from the system log error messages and in-memory database documentation, contact your local NSN representative and provide the information you obtained from the alarm notification fields and system log."		

Table 41-134 IN_MEMORY_DATABASE_PARTITION_GETTING_FULL

Alarm	Attributes	Applicable major release
Name: IN_MEMORY_DATABASE_PARTITION_ GETTING_FULL (11712) Type: qualityOfServiceAlarm Package: racloms.IN_MEMORY_DATABASE_ PARTITION_GETTING_FULL Raised on class: racloms.OMS	Severity: indeterminate Specific problem: IN-MEMORY DATABASE PARTITION GETTING FULL Implicitly cleared: true Default probable cause: THRESHOLD_CROSSED	Release: • LOMS16A
Description: IN-MEMORY DATABASE PARTITION GETTING FULL\n\nThe datastore's fill ratio has exceeded the user defined threshold. If the memory space is completely filled up before any corrective action has been done, applications using main memory database management system will notice the degradation in the level of service provided by the database management system. In the worst case, updates and inserts will be aborted and if the database management system's internal work area (referred as temporary memory partition) is exhausted, also the queries to the datastore will fail.\n\nThe alarm implies that the datastore has grown too large to fit in the memory space that has been allocated for it. If the space is completely filled up, the service level of the main memory database management system will be degraded during the time when the fault is effective.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: Contact immediately your local Nokia representative and provide them with the information from the fields of this alarm notification.		

Table 41-135 IN_MEMORY_DATABASE_SERVER_IS_FAULTY

Alarm	Attributes	Applicable major release
Name: IN_MEMORY_DATABASE_SERVER_IS_FAULTY (11713) Type: processingErrorAlarm Package: racloms.IN_MEMORY_DATABASE_SERVER_IS_FAULTY Raised on class: racloms.OMS	Severity: indeterminate Specific problem: IN-MEMORY DATABASE SERVER IS FAULTY Implicitly cleared: true Default probable cause: APPLICATION_SUBSYSTEM_FAILURE	Release: • LOMS16A
Description: IN-MEMORY DATABASE SERVER IS FAULTY\n\nThe in-memory database server cannot be started (reason 'UnableToStart') or died unexpectedly (reason 'UnexpectedDeath').\n\nNone of the in-memory databases of the node running the failed server are available.\n\nThe system clears the alarm automatically when the fault has been corrected. When the in-memory database watchdog process also fails this alarm is cleared, but the alarm 70159 with the explanation 'in-memory database server is faulty' is raised instead. The in-memory database watchdog tries a couple of times to start the server again couple of times before it, too, fails.		
Remedial action: Check the system logs (/var/log/master-syslog on the active CLA node) for the errors issued by the database server (search for "Data Manager") and in-memory database watchdog (search for the managed object name or string "TimesTenWD"). You can alternatively or in addition look at events that occurred before this alarm was raised. Contact your local NSN representative and provide the information you obtained from the alarm notification fields and system logs.		

Table 41-136 IN_MEMORY_DATABASE_SWITCHED_TO_LESS_RELIABLE_REPLICATION_PROTOCO

Alarm	Attributes	Applicable major release
Name: IN_MEMORY_DATABASE_SWITCHED_TO_LESS_RELIABLE_REPLICATION_PROTOCO (11714) Type: qualityOfServiceAlarm Package: racloms.IN_MEMORY_DATABASE_SWITCHED_TO_LESS_RELIABLE_REPLICATION_PROTOCO Raised on class: racloms.OMS	Severity: indeterminate Specific problem: IN-MEMORY DATABASE SWITCHED TO LESS RELIABLE REPLICATION PROTOCO Implicitly cleared: true Default probable cause: RESPONSE_TIME_EXCESSIVE	Release: • LOMS16A
Description: IN-MEMORY DATABASE SWITCHED TO LESS RELIABLE REPLICATION PROTOCO\n\nThe replication agent of a TimesTen database turned off the return service of the replication protocol used. The agent does this if the replication is stopped or a peer (replica) database does not acknowledge transactions within certain period of time. The root cause of the latter problem can be an overload situation or some other replication-related fault (alarm 70205 is raised for that). TimesTen replication is used to maintain a copy of the database for cold or hot active-standby redundancy.\n\nThe database can be used as normally but the replication protocol is less reliable and somewhat slower than normal. The slowness is caused by the fact that the database needs to write all updates to disc before it can take advantage of them. Normally it is enough to transmit the updates to the peer database; this is usually more efficient than writing to a disc. This alarm needs no immediate actions.\n\nThe system clears the alarm automatically when the return service is turned on again.		
Remedial action: Check first if alarm 70205 is raised for the same database and if it is, follow the instructions of that alarm. Otherwise, try to ascertain whether this alarm stays continuously raised or is raised and cancelled often. This alarm may be sign of performance problems in the node where the database is running, the node where the peer database is running or the local area network. Also, the timeouts related to the replication protocol may be too tight for the average workload. You may need to resolve the performance or replication protocol configuration problems by co-operating with your local NSN Customer Service Center.		

Table 41-137 IN_MEMORY_DATABASE_WATCHDOG_START_UP_FAILED

Alarm	Attributes	Applicable major release
Name: IN_MEMORY_DATABASE_WATCHDOG_START_UP_FAILED (11715) Type: processingErrorAlarm Package: racloms.IN_MEMORY_DATABASE_WATCHDOG_START_UP_FAILED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: IN-MEMORY DATABASE WATCHDOG START-UP FAILED Implicitly cleared: false Default probable cause: CONFIGURATION_OR_CUSTOMIZING_ERROR	Release: • LOMS16A
Description: IN-MEMORY DATABASE WATCHDOG START-UP FAILED\n\nThe in-memory database watchdog cannot start up because its start arguments are invalid.\n\nAll in-memory databases of the node of the failed watchdog process are unavailable.\n\nClear the alarm with alarm management application after correcting the fault as explained in INSTRUCTIONS.		
Remedial action: Contact your local Nokia representative and provide them with the information you obtained from the alarm notification fields.		

Table 41-138 IPMI_INTERNAL_FAILURE

Alarm	Attributes	Applicable major release
Name: IPMI_INTERNAL_FAILURE (11716) Type: equipmentAlarm Package: racloms.IPMI_INTERNAL_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: IPMI INTERNAL FAILURE Implicitly cleared: true Default probable cause: EQUIPMENT_MALFUNCTION	Release: • LOMS16A
Description: IPMI INTERNAL FAILURE\n\nIPMI (Intelligent Platform Management Interface) internal failure has occurred.\n\nThe service level of the IPMI may have degraded. As a result, the hardware management monitoring and controlling functions may fail for the faulty plug-in unit in question.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: 1. If the alarm is not cancelled automatically, replace the faulty plug-in unit if it can be identified. \n\nRefer to the hardware maintenance documentation for detailed replacing\ninstructions.\n\n2. If the faulty plug-in unit cannot be identified, contact your local Nokia representative.\n\nThe details of the faulty plug-in unit are found in the application additional info fields 5 to 7 of the alarm (cabinet, chassis and slot).		

Table 41-139 JUNIPER_NEW_MASTER_IN_VIRTUAL_ROUTER_REDUNDANCY_PROTOCOL_MODE

Alarm	Attributes	Applicable major release
Name: JUNIPER_NEW_MASTER_IN_VIRTUAL_ROUTER_REDUNDANCY_PROTOCOL_MODE (11717) Type: communicationsAlarm Package: racloms.JUNIPER_NEW_MASTER_IN_VIRTUAL_ROUTER_REDUNDANCY_PROTOCOL_MODE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: JUNIPER NEW MASTER IN VIRTUAL ROUTER REDUNDANCY PROTOCOL MODE Implicitly cleared: true Default probable cause: LOCAL_ALARM_INDICATION	Release: • LOMS16A

Table 41-139 JUNIPER_NEW_MASTER_IN_VIRTUAL_ROUTER_REDUNDANCY_PROTOCOL_MODE (continued)

Alarm	Attributes	Applicable major release
Description: JUNIPER NEW MASTER IN VIRTUAL ROUTER REDUNDANCY PROTOCOL MODE\n\nThere is a new switch which has taken up the role of the master in Virtual Router Redundancy Protocol (VRRP) configuration mode.\n\nThe new Master alarm indicates that the router has transitioned to 'Master' state. \nAn Owner router is assigned to forward traffic designated for the Virtual Router (VR). If the Owner is forwarding traffic for the VR, it is the Master router for that VR.\n\nOne or more prioritized Backup routers (If a Backup router is forwarding traffic for the VR), has replaced the Owner as the Master router for that VR.\n\nThe system clears the alarm automatically after its time to live has expired.		
Remedial action: This is an informative alarm. The Master IP address is the primary IP address of the Master router. This is the IP address listed as the source in VRRP advertisement, last received by this virtual router. This can be used by Network Management System (NMS) as an indication to sync with the new Master and show the switchover/failover to the user. This is just an informative alarm for the operator about this event.		

Table 41-140 JUNIPER_SWITCH_FAN_FAILURE

Alarm	Attributes	Applicable major release
Name: JUNIPER_SWITCH_FAN_FAILURE (11718) Type: environmentalAlarm Package: racloms.JUNIPER_SWITCH_FAN_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: JUNIPER SWITCH FAN FAILURE Implicitly cleared: true Default probable cause: COOLING_FAN_FAILURE	Release: • LOMS16A
Description: JUNIPER SWITCH FAN FAILURE\n\nFan failure has occurred and fan is not functional.\n\nWhen only one fan has failed, there is no service impact. The remaining fans increase speed to compensate. However, you must resolve the problem before another fan fails. This alarm is repeated every hour until the fan failure is fixed.\n\nThe system clears the alarm automatically once the fault has been corrected.		
Remedial action: To determine the source of the failure, you must physically inspect the switch, and the fuses. For more information, see the hardware installation guide for Juniper switch model at the following link:\n\nhttp://www.juniper.net/techpubs/en_US/release-independent/junos/information-products/pathway-pages/ex-series/hardware/ex3200-ex4200.html		

Table 41-141 JUNIPER_SWITCH_FIELD_REPLACEABLE_UNIT_FAILURE_

Alarm	Attributes	Applicable major release
Name: JUNIPER_SWITCH_FIELD_REPLACEABLE_ UNIT_FAILURE_ (11719) Type: equipmentAlarm Package: racloms.JUNIPER_SWITCH_FIELD_ REPLACEABLE_UNIT_FAILURE_ Raised on class: racloms.OMS	Severity: indeterminate Specific problem: JUNIPER SWITCH FIELD REPLACEABLE UNIT FAILURE. Implicitly cleared: true Default probable cause: EQUIPMENT_ MALFUNCTION	Release: • LOMS16A
Description: JUNIPER SWITCH FIELD REPLACEABLE UNIT FAILURE.\n\nA Field Replaceable Unit (FRU) has failed in the chassis.\n\nFRU is not powering up or is unable to load kernel.\n\nThe system clears the alarm automatically once the fault has been corrected.		
Remedial action: FRU replacement may be required.		

Table 41-142 JUNIPER_SWITCH_OVER_TEMPERATURE

Alarm	Attributes	Applicable major release
Name: JUNIPER_SWITCH_OVER_TEMPERATURE (11720) Type: environmentalAlarm Package: racloms.JUNIPER_SWITCH_OVER_ TEMPERATURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: JUNIPER SWITCH OVER TEMPERATURE Implicitly cleared: true Default probable cause: HIGH_TEMPERATURE	Release: • LOMS16A
Description: JUNIPER SWITCH OVER TEMPERATURE\n\nThe temperature of the switch has risen beyond acceptable conditions.\n\nThe service impact of this alarm depends on the temperature of the switch. In general, the switch increases the speed of the fans when any component exceeds 55 °C. The fans remain at a higher speed until the temperature decreases below the threshold. In this case, there is no service impact. However, if the temperature exceeds 75 °C, the switch transmits a warning and automatically shuts down. This scenario creates a significant service impact because the shutdown affects additional switches and equipment. This alarm is repeated every minute until the temperature is brought down to normal.\n\nThe system clears the alarm automatically once the fault has been corrected.		
Remedial action: To determine the source of the high temperature, you must physically inspect the switch to check if any fan has failed in the switch.		

Table 41-143 JUNIPER_SWITCH_POWER_SUPPLY_FAILURE_

Alarm	Attributes	Applicable major release
Name: JUNIPER_SWITCH_POWER_SUPPLY_ FAILURE_ (11721) Type: equipmentAlarm Package: racloms.JUNIPER_SWITCH_POWER_ SUPPLY_FAILURE_ Raised on class: racloms.OMS	Severity: indeterminate Specific problem: JUNIPER SWITCH POWER SUPPLY FAILURE. Implicitly cleared: true Default probable cause: POWER_SUPPLY_FAILURE	Release: • LOMS16A
Description: JUNIPER SWITCH POWER SUPPLY FAILURE.\n\nPower supply failure can occur from one of the following:\n\n- switch circuit breaker failure\n- power circuit failure\n- power outage\n\nWhen only one of the power supplies has failed, the service impact is minimal. One power supply can provide the necessary power for a fully loaded switch. To determine the source of the failure, you must physically inspect the switch. This alarm is repeated every hour until the power supply is restored.\n\nThe system clears the alarm automatically once the fault has been corrected.		
Remedial action: To determine the source of the failure, you must physically inspect the switch, taking care to check the fuses. See the hardware installation guide for Juniper switch model for more information.		

Table 41-144 LDAP_DATABASE_CORRUPTED

Alarm	Attributes	Applicable major release
Name: LDAP_DATABASE_CORRUPTED (11722) Type: processingErrorAlarm Package: racloms.LDAP_DATABASE_CORRUPTED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: LDAP DATABASE CORRUPTED Implicitly cleared: true Default probable cause: CORRUPT_DATA_M3100	Release: • LOMS16A

Table 41-144 LDAP_DATABASE_CORRUPTED (continued)

Alarm	Attributes	Applicable major release
Description: LDAP DATABASE CORRUPTED\n\nA primary or secondary LDAP (Lightweight Database Access Protocol) database is corrupted and cannot be accessed anymore. An LDAP database can get corrupted, for example, when: \n- a disk becomes full while the database is being updated\n- a node failure and/or ungraceful node restart happens while the database is being updated\n\nThe identified LDAP database is currently unavailable. \nIn case of a secondary database, the only impact is that the node start-ups can take slightly longer because some platform services attempt to use the secondary database(s) by default.\nFailure of the primary database has a more significant impact. Most application processes cannot be (re)started anymore and applications that update LDAP will fail. If a secondary database is still available, nodes can still be (re)started but only basic platform services will be able to start.\nIf the primary and all secondary databases have failed, the network element (the cluster or any of the nodes) cannot (re)start anymore. \nThe system will next automatically try to recover the corrupted database from an operational primary or secondary database.\n\nThe alarm is cleared automatically if the automatic recovery operation is successful. The alarm must be cleared manually, in case the database has to be manually restored from a backup.		
Remedial action: The system will automatically attempt to recover the corrupted database from a functional copy. If the automatic recovery is successful, this alarm is automatically cleared and the system raises a new "CORRUPTED LDAP DATABASE RECOVERED" warning alarm. The automatic recovery, if successful, takes less than a minute. \nIf the primary and secondary database(s) are all corrupted you, must restore them from a backup. DO NOT ATTEMPT TO RESTART THE CLUSTER OR ANY OF ITS NODES BEFORE ENSURING THAT THE PRIMARY DATABASE IS OPERATIONAL. The applications can still be providing service normally and a service interruption only happens if an unsuccessful restart attempt is made.\nNotice, however, that the automatic recovery will fail if the node or database disk has become full. In this case, you can attempt to solve the situation by making space to the disk, and then allowing the system to retry automatic recovery. To do this, perform the following steps:\n1. Log into the node that has the corrupted database as root user. For example, log into the node (usually CLA-0 or CLA-1) where the directory service is active:\nssh root@mycluster-directory\n<password>\n2. Check the available disk space with the "df" command, for example:\ndf -k\nroot@CLA-1(mycluster):~# df -k \nFilesystem 1k-blocks Used Available Use% Mounted on\n/dev/rd/0 15863 10698 4346 72% /\ntmpfs 1029260 8 1029252 1% /tmp\n/dev/md/0 4999712 1401348 3598364 29% /var/mnt/local/localimg\ndirectory:/var/mnt/local/sysimg\n 49998408 49998408 0 100% /var/mnt/remote/sysimg_rw\ndirectory:/var/mnt/local/sysimg\n 49998408 49998408 0 100% /var/mnt/remote/sysimg_ro\n/dev/md/1 49998404 49998408 0 100% /var/mnt/local/sysimg\n/dev/md/9 19999256 32840 19966416 1% /var/mnt/local/backup\n3. If the database partition (in this example the system image partition) is full, release space, for example, by deleting excess core and syslog files. You can locate large files from the partition using the "find" command: Use the "cd" command to go to the partition mount point directory and search files below it, for example,\ncd /var/mnt/local/sysimg\nfind . -type f -name "syslog*" -size +1000000\nYou can also locate core files using the "find" command, for example,\ncd /var/mnt/local/sysimg\nfind . -type f -name "*core"\nWhen the disk has at least 100 MB of free space, make the system trying the recovery: \n- In case of a secondary database, reboot the node. For example, execute the following command:\nshutdown -r now \n- In case of the primary database, use fshascli command to restart the Directory service: \nfshascli -rnF /Directory \nNote that this will terminate your terminal connection, thus you will need to log in again.\nIf the database was not corrupted because of a full disk, or the automatic recovery fails again, for example, because all LDAP databases are corrupted, you must restore the databases from a backup copy. For instructions on the restore process, see the backup and restore customer documentation.		

Table 41-145 LICENCE_DATA_IS_CORRUPTED

Alarm	Attributes	Applicable major release
Name: LICENCE_DATA_IS_CORRUPTED (11723) Type: processingErrorAlarm Package: racloms.LICENCE_DATA_IS_CORRUPTED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: LICENCE DATA IS CORRUPTED Implicitly cleared: false Default probable cause: CORRUPT_DATA_M3100	Release: • LOMS16A
Description: LICENCE DATA IS CORRUPTED\n\nThe configuration of licence management contains corrupted licence data.\n\nIf corrupted licence data is detected in the configuration of licence management, the network element does not take the licence into use. \n\nAs a result, the application implementing the licensed feature may not operate properly. The feature capacity usage may also be affected.\n\nAfter correcting the fault as presented in Instructions, clear the alarm with alarm management application.		

Table 41-145 LICENCE_DATA_IS_CORRUPTED (continued)

Alarm	Attributes	Applicable major release
Remedial action: Fill in a problem report and send it to your local Nokia representative.		

Table 41-146 LicensedLimitExceeded

Alarm	Attributes	Applicable major release
Name: LicensedLimitExceeded (127) Type: licensingAlarm Package: security.LicensedLimitExceeded Raised on class: security.SamLicensePoints	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: licensedLimitExceeded	Release: • LOMS16A
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 41-147 LICENSE_MANAGEMENT_INTERNAL_MESSAGE_AUTHENTICATION_FAILED

Alarm	Attributes	Applicable major release
Name: LICENSE_MANAGEMENT_INTERNAL_ MESSAGE_AUTHENTICATION_FAILED (11724) Type: processingErrorAlarm Package: racloms.LICENSE_MANAGEMENT_ INTERNAL_MESSAGE_AUTHENTICATION_FAILED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: LICENSE MANAGEMENT INTERNAL MESSAGE AUTHENTICATION FAILED Implicitly cleared: false Default probable cause: CORRUPT_DATA_M3100	Release: • LOMS16A
Description: LICENSE MANAGEMENT INTERNAL MESSAGE AUTHENTICATION FAILED\n\nAn attempt to tamper with the communication between the license manager server and the application implementing the licensed feature has been detected.\n\nThe application implementing the licensed feature may not operate properly.\n\nAfter correcting the fault as presented in Instructions, clear the alarm with alarm management application.		
Remedial action: Fill in a problem report and send it to your local Nokia representative.		

Table 41-148 LinkDown (equipment)

Alarm	Attributes	Applicable major release
Name: LinkDown (12) Type: communicationsAlarm Package: equipment.LinkDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: portLinkProblem	Release: • LOMS16A

Table 41-148 LinkDown (equipment) (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 41-149 MAJOR_SW_UPGRADE_DATA_IMPORT_FAILURE

Alarm	Attributes	Applicable major release
Name: MAJOR_SW_UPGRADE_DATA_IMPORT_ FAILURE (11725) Type: processingErrorAlarm Package: racloms.MAJOR_SW_UPGRADE_DATA_ IMPORT_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: MAJOR SW UPGRADE DATA IMPORT FAILURE Implicitly cleared: false Default probable cause: INVALID_PARAMETER	Release: • LOMS16A
Description: MAJOR SW UPGRADE DATA IMPORT FAILURE\n\nImporting configuration data to LDAP database has partly failed when performing major software upgrade.\n\nThe seriousness of the alarm varies depending on the data, which importing has failed. It may vary from serious problem(s) in cluster availability to loss of configuration data of single subsystem.\n\nClear the alarm with an alarm management application after correcting the fault as presented in instructions field.		
Remedial action: 1. Log into the cluster. \nIn worst case, you might need a console connection to do this. \n2. Check from additional information field in which phase the import has failed. Usually pre-phase indicates a more serious problem.\n3. Check the fp_import and postconfig logs in /var/log directory for more detailed information.\n4. After fault analysis and corrective action(s), execute fsswcli --major --postconfigure again.		

Table 41-150 MANAGED_OBJECT_FAILED

Alarm	Attributes	Applicable major release
Name: MANAGED_OBJECT_FAILED (11726) Type: processingErrorAlarm Package: racloms.MANAGED_OBJECT_FAILED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: MANAGED OBJECT FAILED Implicitly cleared: true Default probable cause: SOFTWARE_PROGRAM_ ABNORMALLY_TERMINATED	Release: • LOMS16A

Table 41-150 MANAGED_OBJECT_FAILED (continued)

Alarm	Attributes	Applicable major release
Description: MANAGED OBJECT FAILED\n\nThe named managed object has failed. The managed object can be a software, hardware, or logical entity. The type of managed object identifies the following: \n\nNode: The physical computing node, its system software or operating system has failed, or the node has been manually restarted. \n\nRecovery unit (RU): A recovery unit contains one or more processes. A recovery unit failure is usually caused by a process failure. \n\nProcess: The process has crashed, terminated abnormally, or stopped responding.\n\nRecovery group (RG): A recovery group consists of one or more recovery units. A recovery group failure alarm is raised for an active-standby configuration, when both redundant components (recovery units of the recovery group) have failed. This is always a serious situation, as it indicates a double failure (for example two nodes have failed at the same time).\n\nThe effect of the situation depends on the managed object type:\n\nNode: Any important services/functions that are provided with an active-standby or N+M recovery group may be taken over by other operational nodes. Services may be down if standby/spare nodes are also down. \n\nRecovery unit (RU): If the recovery unit belongs to an active-standby or N+M recovery group, the service may be taken over by an operational standby/spare recovery unit.\n\nProcess: The service or function that the process provides is not available. A process failure can cause a recovery unit level recovery action, or the system may attempt to restart the failed process.\n\nRecovery group (RG): The service provided by the recovery group is not available. Manual correction is required, as the automatic system repair actions have not solved the problem.\n\nThe system high availability services (HAS) will periodically attempt to solve the problem with corrective actions, such as switchovers or restarts. The alarm system also clears the obsolete alarms that may have been raised by this managed object, or by its child managed objects.\n\nThe system automatically clears the alarm when the fault has been corrected.		
Remedial action: 1. Log in to the cluster, and check that the named managed object has been successfully restarted. \n\n2. Verify also that the MO did not raise any new alarms that would explain the failure. You can check the status of an MO with the HAS user interface tool fshascli. An operational MO has the value ENABLED in the operational state attribute and in an empty procedural status attribute. \n\nFor example, the state of the process NodeDNS in the recovery unit FSNodeDNSServer of the node AS-5 can be seen as follows: \n$ fshascli --state /AS-5/FSNodeDNSServer/NodeDNS \n/AS-5/FSNodeDNSServer/NodeDNS:\nadministrative(UNLOCKED) \noperational(ENABLED) \nusage(ACTIVE) \nprocedural() \navailability( ) \nunknown(FALSE) \nrole(ACTIVE)\n\nIf the MO is not operational, perform the following steps:\n \n1. With a node MO, you can wait for a node restart. The system will raise another alarm (70011 NODE NOT RESPONDING) if the node does not come up within some time.\n\n2. Check the system logs (/var/log/master-syslog on the active CLA node) for error(s) that have occurred, by searching for the MO's name and/or by looking at events that occurred before this alarm was raised.\n\n3. You can also use the HAS user interface tool to initiate an immediate restart attempt of the failed MO using the -r (--restart) command line option: \n$ fshascli --restart /AS-5/FSNodeDNSServer\n\nThe restart operation is mostly useful after a problem has been corrected. Verify the result from the syslog, and by checking the status of the MO.\n\n4. Alarm for a recovery group implies a multiple error situation (for example, multiple node failures) or a persistent configuration, or corruption problem. In this case, contact your Nokia representative for assistance.		

Table 41-151 MANAGED_OBJECT_LOCKED

Alarm	Attributes	Applicable major release
Name: MANAGED_OBJECT_LOCKED (11727) Type: processingErrorAlarm Package: racloms.MANAGED_OBJECT_LOCKED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: MANAGED OBJECT LOCKED Implicitly cleared: true Default probable cause: SOFTWARE_PROGRAM_ABNORMALLY_TERMINATED	Release: • LOMS16A
Description: MANAGED OBJECT LOCKED\n\nThe administrative state of the named managed object (MO) which can be a cluster, a node, or a recovery unit (RU) has changed to LOCKED as a result of a user action (graceful shutdown or lock operation).\n\nThe named MO and its child MOs have been stopped and will not be started before a corresponding unlock operation is performed by the user. The service provided by the MO is not available, unless the MO is a RU with some operational and UNLOCKED redundant resources. \n\nWhen an MO is locked, the alarm system of the cluster clears the alarms raised by the MO and its child MOs.\n\nDo not clear the alarm. This is an informative alarm and will be cleared automatically by the alarm system after its time to live has expired.		
Remedial action: This is an informative alarm and does not require any actions.		

Table 41-152 MANAGED_OBJECT_SHUTDOWN_BY_OPERATOR

Alarm	Attributes	Applicable major release
Name: MANAGED_OBJECT_SHUTDOWN_BY_OPERATOR (11728) Type: qualityOfServiceAlarm Package: racloms.MANAGED_OBJECT_SHUTDOWN_BY_OPERATOR Raised on class: racloms.OMS	Severity: indeterminate Specific problem: MANAGED OBJECT SHUTDOWN BY OPERATOR Implicitly cleared: true Default probable cause: CONGESTION	Release: • LOMS16A
Description: MANAGED OBJECT SHUTDOWN BY OPERATOR\n\nThis is an informative alarm which indicates that the specified managed object (MO) is being shutdown. The MO can be to the whole cluster, a node, or a recovery unit (RU). The named MO and all its unlocked sub-resources are now terminating.\n\nThe MO is being shutdown by an operator. All services provided by the named MO are terminating. Once the operation is completed, the administrative state of the MO and all its sub-MOs will be changed to locked. \n\nNote that a shutdown request may take a long time if the maximum duration for the operation has not been specified. The shutdown request can be forced to completion by issuing a lock command. In that case the platform high availability services (HAS) will terminate the services ungracefully.\n\nThe alarm system clears this alarm automatically after its time to live has expired.		
Remedial action: This is an informative alarm which requires no user actions.		

Table 41-153 MANAGED_OBJECT_UNLOCKED_BY_OPERATOR

Alarm	Attributes	Applicable major release
Name: MANAGED_OBJECT_UNLOCKED_BY_OPERATOR (11729) Type: qualityOfServiceAlarm Package: racloms.MANAGED_OBJECT_UNLOCKED_BY_OPERATOR Raised on class: racloms.OMS	Severity: indeterminate Specific problem: MANAGED OBJECT UNLOCKED BY OPERATOR Implicitly cleared: true Default probable cause: CONGESTION	Release: • LOMS16A
Description: MANAGED OBJECT UNLOCKED BY OPERATOR\n\nThis is an informative alarm which indicates that the specified managed object (MO) which can be the whole cluster, a node, or a recovery unit (RU) has been unlocked. The named MO and its unlocked sub-resources (if there are any) can now be activated.\n\nNotice that the MO (or its sub-MOs) can remain locked because of the dependency on a higher level MOs. That is, the unlock operation will not have effect on the MO in question before the higher level MOs are unlocked. For example, an RU in a node will remain locked, if the node or the cluster MO is locked.\n\nThe MO has been set to the unlocked state. If all the higher level MOs are unlocked as well, the services provided by the MO are activated.\n\nThe alarm system clears the alarm automatically after its time to live has expired.		
Remedial action: This is an informative alarm and does no require any actions.		

Table 41-154 MANUAL_NODE_ISOLATION_VERIFICATION_NEEDED

Alarm	Attributes	Applicable major release
Name: MANUAL_NODE_ISOLATION_VERIFICATION_NEEDED (11730) Type: equipmentAlarm Package: racloms.MANUAL_NODE_ISOLATION_VERIFICATION_NEEDED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: MANUAL NODE ISOLATION VERIFICATION NEEDED Implicitly cleared: true Default probable cause: EQUIPMENT_MALFUNCTION	Release: • LOMS16A

Table 41-154 MANUAL_NODE_ISOLATION_VERIFICATION_NEEDED (continued)

Alarm	Attributes	Applicable major release
Description: MANUAL NODE ISOLATION VERIFICATION NEEDED\n\nThe platform high availability services (HAS) subsystem is unable to reset a faulty node with Intelligent Platform Management Interface (IPMI). The operational state of the node is not known, and therefore, it is not known if the node still holds and/or updates the shared resources. \n\nThis is a severe platform error that may result, for example, from:\n\n- a double hardware fault, \n- an IPMI configuration error, \n- a network partitioning problem or \n- manual power-off of a complete chassis. \n\n\nAs the HAS subsystem is not able to determine the state of the node, the active/standby recovery groups (RG) are delaying the switchovers until the node has become operational again or the node is manually set to isolation state.\n\nThe possible active/standby RGs, which have an active recovery unit (RU) instance running on the failed node, cannot recover from the situation by applying a switchover to another node. The services provided by these RGs are currently down.\n\nAlarm is cancelled automatically. \n\nIf the automatic cancellation does not succeed then after correcting the fault clear the alarm using the following SCLI command:\n\nset alarm clear alarm-id <alarm id of the alarm>\n\nIf the alarm id of the alarm is unknown, use the following SCLI command\n(that requires the full alarm information):\n\nset alarm clear-matching-alarms filter-by specific-problem <concrete\nspecific problem> managed-object\n<managed object of the alarm> application-id <application id of\nthe alarm> identifying-application-additional-info <identifying application\nadditional info of the alarm>		
Remedial action: The node may currently restart, but this cannot be verified by HAS. The immediate priority is to ensure that services can be activated. If the node becomes available, which happens if the node is merely restarting, HAS performs recovery actions, and no user action is required.\n\nHowever, if the node does not restart itself within a few minutes, HAS recovery operations will be pending, waiting for the verification that the node has been isolated (that is, it cannot access any databases or other shared resources). In this case, you must manually verify that the node is down:\n\n- press the hot swap button of the blade \n- remove the blade and wait for a while \n- re-insert the blade\n\nOnce the node has been reset, set it to the isolation state by using the command line interface:\n\n1. Log into the cluster \n\n2. Set the node to the isolated state by using the following SCLI command: \n\n> set has isolate managed-object /AS-10 \n\nAfter the node isolation has been set, HAS performs recovery actions that were pending because of this node. \n\n3. Check from the cluster syslog (/var/log/master-syslog) that no errors were reported following the node isolation. Node isolation will leave log entries, such as: \n\n INFO Managed object - set isolated - operation initiated. Target="/AS-10 \n INFO Managed object - set isolated - operation completed. Target=/AS-10 \n\nNote that if the isolation state of a node is set without actually verifying that the node is down, some serious data corruption may happen.\n \nContact your Nokia representative for finding out the reason for the failure."		

Table 41-155 MAXIMUM_THRESHOLD_HAS_BEEN_CROSSED

Alarm	Attributes	Applicable major release
Name: MAXIMUM_THRESHOLD_HAS_BEEN_ CROSSED (11731) Type: qualityOfServiceAlarm Package: racloms.MAXIMUM_THRESHOLD_HAS_ BEEN_CROSSED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: MAXIMUM THRESHOLD HAS BEEN CROSSED Implicitly cleared: true Default probable cause: THRESHOLD_CROSSED	Release: • LOMS16A
Description: MAXIMUM THRESHOLD HAS BEEN CROSSED\n\nA maximum threshold crossing, based on the threshold rule defined for the measurement result, has been detected. The seriousness of this alarm depends on the measurement(s) that reached the defined threshold value.\n\nThe precise effect of this alarm cannot be determined since the nature of the alarm depends on the measurement(s) involved in the measurement result.\n\nThe system clears the alarm automatically when the measurement result goes down and is continuously held at the maximum threshold clearing level or below.		
Remedial action: The user has configured the threshold rules so that the events the user is interested in will be notified. As a result, any detailed instructions cannot be given. \n\nUse the performance management application to get detailed information on the measurement(s) that caused this alarm.		

Table 41-156 MEASUREMENT_DATA_ERROR

Alarm	Attributes	Applicable major release
Name: MEASUREMENT_DATA_ERROR (11732) Type: processingErrorAlarm Package: racloms.MEASUREMENT_DATA_ERROR Raised on class: racloms.OMS	Severity: indeterminate Specific problem: MEASUREMENT DATA ERROR Implicitly cleared: true Default probable cause: CORRUPT_DATA_M3100	Release: • LOMS16A
Description: MEASUREMENT DATA ERROR\n\nMeasurement file could not be processed.\n\nSome measurement data could have been lost due to invalid measurement file content.\n\n-		
Remedial action: Do not clear the alarm. Alarm System will clear the alarm automatically.		

Table 41-157 MEASUREMENT_DATA_NOT_TRANSFERRED

Alarm	Attributes	Applicable major release
Name: MEASUREMENT_DATA_NOT_ TRANSFERRED (11733) Type: qualityOfServiceAlarm Package: racloms.MEASUREMENT_DATA_NOT_ TRANSFERRED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: MEASUREMENT DATA NOT TRANSFERRED Implicitly cleared: true Default probable cause: QUEUE_SIZE_EXCEEDED	Release: • LOMS16A
Description: MEASUREMENT DATA NOT TRANSFERRED\n\nThe number of files waiting to be transferred to NetAct has exceeded a defined threshold.\n\nSome measurement data may not have been transferred to NetAct or file transfer acknowledgments from NetAct to OMS are not working correctly.\n\nDo not clear the alarm. Alarm System will clear the alarm when the amount of untransferred files decreases below a defined threshold.		
Remedial action: If NetAct connection is wanted to be disabled, the alarm will get cancelled automatically within 10 minutes after setting LDAP parameter PMFileBufferAlarmEnabled to value 0 (zero).		

Table 41-158 MEASUREMENT_THRESHOLD_MONITORING_LIMIT_EXCEEDED

Alarm	Attributes	Applicable major release
Name: MEASUREMENT_THRESHOLD_ MONITORING_LIMIT_EXCEEDED (11734) Type: qualityOfServiceAlarm Package: racloms.MEASUREMENT_THRESHOLD_ MONITORING_LIMIT_EXCEEDED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: MEASUREMENT THRESHOLD MONITORING LIMIT EXCEEDED Implicitly cleared: true Default probable cause: THRESHOLD_CROSSED	Release: • LOMS16A

Table 41-158 MEASUREMENT_THRESHOLD_MONITORING_LIMIT_EXCEEDED (continued)

Alarm	Attributes	Applicable major release
Description: MEASUREMENT THRESHOLD MONITORING LIMIT EXCEEDED\n\nWhen this alarm has been triggered, it means that a threshold monitoring rule has been evaluated as true by OMS for some WCDMA cell object in some other RNW measurement than Cell Resource measurement for which threshold limit breaks are reported with alarm WCEL THRESHOLD MONITORING LIMIT EXCEEDED. More information on the event can be seen with the NE Threshold Management application in OMS Element Manager.\n\nThreshold monitoring makes it easier to detect faults, identify bottlenecks and optimise the network. Using OMS Element Manager GUI, appropriate performance thresholds are determined for each important variable, and exceeding these thresholds indicates a problem worth of attention. These variables can be either single counters or Key Performance Indicators (KPIs), which can be a combination of several counters.\n\nWhen performance data is gathered on variables of interest from the measured objects in the network, their values are compared against any active threshold limits. When a performance threshold is exceeded, an alarm is generated and sent to the network management system. In addition to this, a threshold event log is saved in the network element for further study of the events which have occurred in that NE during a certain period of time.\n\n-\n\nDo not clear the alarm. This alarm has a lifetime of 65 minutes.		
Remedial action: Threshold alarm does not necessarily mean that there are problems in the network element, because thresholds can be freely set by the operator, and some rules may have been set incorrectly.\n\nTo get further information on the reason of the threshold alarm:\n\n- Connect to the network element with OMS Element Manager.\n\n- Open the NE Threshold Management application.\n\n- Select "Show Threshold Log" from the View menu and check the threshold log.\n\nWhen the target object and other information of the alarm have been checked from the log, you can obtain more information from the performance counters of measurements and, if necessary, take appropriate action to correct the problem. The counters can be browsed with RNW Measurement Presentation application or by using NetAct reporting tools.		

Table 41-159 MEMORY_ERROR

Alarm	Attributes	Applicable major release
Name: MEMORY_ERROR (11735) Type: equipmentAlarm Package: racloms.MEMORY_ERROR Raised on class: racloms.OMS	Severity: indeterminate Specific problem: MEMORY ERROR Implicitly cleared: false Default probable cause: EQUIPMENT_ MALFUNCTION	Release: • LOMS16A
Description: MEMORY ERROR\n\nA memory error has been detected. The possible causes are:\n\nCorrectable error-correcting code(ECC) or other correctable memory error\nUncorrectable ECC or other uncorrectable memory error\nParity error\nMemory Scrub Failed (stuck bit)\nMemory Device Disabled\nCorrectable ECC or other correctable memory error logging limit reached\n\nThe unit may have erratic behavior or decreased functionality.\n\nClear the alarm with the alarm management application after correcting the fault, according to the instructions provided.		
Remedial action: 1. Check that the affected unit is healthy, and is plugged-in properly.\n\n2. Restart the unit, if necessary.\n\n3. Replace the unit, if necessary.\n\n4. If the problem exists even after following these instructions, please contact your local Nokia representative.		

Table 41-160 MEMORY_USAGE_OVER_LIMIT

Alarm	Attributes	Applicable major release
Name: MEMORY_USAGE_OVER_LIMIT (11736) Type: qualityOfServiceAlarm Package: racloms.MEMORY_USAGE_OVER_LIMIT Raised on class: racloms.OMS	Severity: indeterminate Specific problem: MEMORY USAGE OVER LIMIT Implicitly cleared: true Default probable cause: THRESHOLD_CROSSED	Release: • LOMS16A

Table 41-160 MEMORY_USAGE_OVER_LIMIT (continued)

Alarm	Attributes	Applicable major release
Description: MEMORY USAGE OVER LIMIT\n\nMemory consumption is too high because some processes are using too much memory.\n\nThere is a risk that the node is unable to fulfill the tasks allocated to it because the processes cannot reserve enough memory for their use. As a result, the processes cannot perform the tasks allocated to them.\n\nDo not clear the alarm. The alarm is automatically cleared by the fault detector of the operating system when the memory usage is on a low enough level. The raising / clearing thresholds are different to prevent unnecessary trashing.		
Remedial action: 1. Run the\n"top" \nLinux command on the node that reports the alarm to view a snapshot of the current global memory. \n\nPress "M" to sort the processes in the node based on their memory resident size to check which processes consume the most memory.\n\n2. If the problem persists, contact your Nokia representative and provide them with the information gathered in the previous step.		

Table 41-161 MINIMUM_THRESHOLD_HAS_BEEN_REACHED

Alarm	Attributes	Applicable major release
Name: MINIMUM_THRESHOLD_HAS_BEEN_ REACHED (11737) Type: qualityOfServiceAlarm Package: racloms.MINIMUM_THRESHOLD_HAS_ BEEN_REACHED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: MINIMUM THRESHOLD HAS BEEN REACHED Implicitly cleared: true Default probable cause: THRESHOLD_CROSSED	Release: • LOMS16A
Description: MINIMUM THRESHOLD HAS BEEN REACHED\n\nThis alarm indicates that a minimum threshold crossing, based on the threshold rule defined for the measurement result, has been detected. The seriousness of the alarm depends on the measurement(s) that reached the defined threshold value.\n\nThe precise effect of this alarm cannot be determined since the nature of this alarm depends on the measurement(s) involved in the measurement result.\n\nThe system clears the alarm automatically when the measurement result goes\nup and is continuously held at the minimum threshold clearing level or above.		
Remedial action: The user has configured the threshold rules so that the events the user is interested in will be notified. As a result, no detailed instructions\ncan be given.\n\nUse the performance management application to get detailed information on the measurement(s) that caused this alarm.		

Table 41-162 MissedStatsCollectionAtRecovery

Alarm	Attributes	Applicable major release
Name: MissedStatsCollectionAtRecovery (11738) Type: communicationsAlarm Package: racloms.MissedStatsCollectionAtRecovery Raised on class: racloms.OMS	Severity: minor Specific problem: PM Collection Issue while recovering available PM files Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • LOMS16A
Description: PM Collection Issue while recovering available PM files\nThe alarm will be cleared automatically the next time where SAM is able to get the full list of files specified in a PIFileQuery.		
Remedial action: Please refer to the LTE Nokia Node Maintenance manual for remedial action information.		

Table 41-163 MissedStatsCollectionAtRequest

Alarm	Attributes	Applicable major release
Name: MissedStatsCollectionAtRequest (11739) Type: communicationsAlarm Package: racloms.MissedStatsCollectionAtRequest Raised on class: racloms.OMS	Severity: major Specific problem: PM Collection Issue while requesting available PM files Implicitly cleared: true Default probable cause: communicationsProtocolError	Release: • LOMS16A
Description: PM Collection Issue while requesting available PM files\nThe alarm will be cleared automatically at the next successful request.		
Remedial action: Please refer to the LTE Nokia Node Maintenance manual for remedial action information.		

Table 41-164 MobileConnectorDown

Alarm	Attributes	Applicable major release
Name: MobileConnectorDown (1064) Type: EpcAlarm Package: lteservice.MobileConnectorDown Raised on class: lteservice.MobileServiceConnector	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EpcDown	Release: • LOMS16A
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL '\"\"')		
Clearing condition: ('EPS Path' NOT EQUAL '\"\"')		
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

Table 41-165 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major release
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm Package: netw. NeManagementAndTrapManagementMismatch Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: neManagementChange	Release: • LOMS16A
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		

Table 41-165 NeManagementAndTrapManagementMismatch (continued)

Alarm	Attributes	Applicable major release
Raising condition: ((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band')))		
Clearing condition: ((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band')))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

Table 41-166 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major release
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm Package: security.NewSsh2ServerKeyDetected Raised on class: security.KnownHostKey	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch	Release: • LOMS16A
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 41-167 NE_CONNECTION_REJECTED

Alarm	Attributes	Applicable major release
Name: NE_CONNECTION_REJECTED (11740) Type: processingErrorAlarm Package: racloms.NE_CONNECTION_REJECTED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: NE CONNECTION REJECTED Implicitly cleared: true Default probable cause: CONFIGURATION_OR_CUSTOMIZING_ERROR	Release: • LOMS16A
Description: NE CONNECTION REJECTED\n\nOMS has rejected connection establishment from NE. Reason for rejection is either that OMS capacity has been exceeded or that NE tried to open connection to a secondary OMS.\n\nNetwork element connection was rejected.\n\nDo not clear the alarm. The system cancels the alarm automatically after\nits lifetime has elapsed.		
Remedial action: -		

Table 41-168 NE_O_M_CONNECTION_FAILURE

Alarm	Attributes	Applicable major release
Name: NE_O_M_CONNECTION_FAILURE (11741) Type: communicationsAlarm Package: racloms.NE_O_M_CONNECTION_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: NE O&M CONNECTION FAILURE Implicitly cleared: true Default probable cause: COMMUNICATION_ PROTOCOL_ERROR	Release: • LOMS16A
Description: NE O&M CONNECTION FAILURE\n\nThis alarm is raised when the BTS O&M connection between the OMS and a network element fails.\n\nThe managed network element is not reachable by the centralized O&M systems like the OMS or the NetAct.\n\nDo not clear the alarm unless the conditions given in the instructions on the manual clearing are fulfilled. This alarm is cancelled automatically by the system after the fault has been corrected. Alarm with certificate validation failure is cancelled automatically by the system if OMS OM security mode has been set to value 'Off' and insecure O&M connection has been established successfully.		
Remedial action: Normally, the alarm does not need to be cleared but the system cancels the alarm automatically when the connection is working again. However, if the related network element is removed altogether from the network, it may be necessary to cancel the alarm manually using Element Manager.\n\nIn case of certificate validation failure this alarm is cancelled automatically by the system when valid certificates are installed to NE and secure O&M connection has been restored or alternatively alarm is cancelled automatically by the system if OMS OM security mode has been set to value 'Off' and insecure O&M connection has been established successfully. However, if IP address of NE is changed before successful connection attempt, it is necessary to cancel the alarm manually using Element Manager.		

Table 41-169 NE_O_M_UPDATE_CRL_MEDIATION_FAILURE

Alarm	Attributes	Applicable major release
Name: NE_O_M_UPDATE_CRL_MEDIATION_ FAILURE (11742) Type: communicationsAlarm Package: racloms.NE_O_M_UPDATE_CRL_ MEDIATION_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: NE O&M UPDATE CRL MEDIATION FAILURE Implicitly cleared: true Default probable cause: TRANSMISSION_ERROR	Release: • LOMS16A
Description: NE O&M UPDATE CRL MEDIATION FAILURE\n\nThe request for Certificate Revocation List (CRL) update manually triggered from NetAct is not confirmed by NE.\n\nThe alarm is raised when OMS has not received response from NE for update CRL request or response informs about a failure in request delivery to NE. So most likely Certificate Revocation List (CRL) has not been updated in NE.\n\nThe system cancels the alarm when OMS receives manual request from NetAct for Certificate Revocation List (CRL) update and the request is successfully delivered to the given NE or when the alarm time to live expires.		
Remedial action: Verify the connectivity to the NE and manually request CRL update for given NE again.		

Table 41-170 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major release
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm Package: netw.NodeDatabaseFallbackDetected Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeDatabaseFallback	Release: • LOMS16A

Table 41-170 NodeDatabaseFallbackDetected (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 41-171 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major release
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm Package: netw.NodeDatabaseMisalignmentDetected Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment	Release: • LOMS16A
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

Table 41-172 NodeSuspended

Alarm	Attributes	Applicable major release
Name: NodeSuspended (5123) Type: communicationsAlarm Package: netw.NodeSuspended Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NodeSuspend	Release: • LOMS16A
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element.The alarm will be cleared when the network element is managed back.		

Table 41-173 NODE_FAILED

Alarm	Attributes	Applicable major release
Name: NODE_FAILED (11743) Type: communicationsAlarm Package: racloms.NODE_FAILED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: NODE FAILED Implicitly cleared: false Default probable cause: UNAVAILABLE	Release: • LOMS16A
Description: NODE FAILED\n\nExternal supervision indicates that a FlexiServer node has failed. The node is down due to a software or hardware failure.\nThe services of External supervision subsystem are used in extreme cases of supervision, when the sevices of the normally used High Availability Services (HAS) are not usable. External supervision observes the behaviour of entities and announces their failure through a known channel to an information consumer outside the network element itself.\nIn case of a CLM node failure HAS cannot raise alarms 70159 - MANAGED OBJECT FAILED and 70011 - NODE NOT RESPONDING. If another node failed the alarms might be raised in addition to this alarm.\n\nThe node and any service on the node is unreachable.\nIn case of a CLM node failure this will lead to cluster failure. Functionality of the Flexiserver cluster is seriously affected. Situation is critical as there is no access to any applications in Flexi cluster and signalling/traffic has been interrupted. CLM failure also prevents further alarms from appearing.\n\nClear the alarm with Alarm Browser after correcting the fault.		
Remedial action: 1. Restart the node.\n\n2. Investigate whether the hardware for the NODE chassis, NODE chassis switch or NODE blade is broken.\n\n3. Collect all relevant data from NODE's /var/crash to ensure that it will not be deleted in periodical system cleanups.\n\n4. Contact your Nokia representative.		

Table 41-174 NODE_NOT_RESPONDING

Alarm	Attributes	Applicable major release
Name: NODE_NOT_RESPONDING (11744) Type: equipmentAlarm Package: racloms.NODE_NOT_RESPONDING Raised on class: racloms.OMS	Severity: indeterminate Specific problem: NODE NOT RESPONDING Implicitly cleared: true Default probable cause: EQUIPMENT_ MALFUNCTION	Release: • LOMS16A
Description: NODE NOT RESPONDING\n\nA physical computing node has not restarted despite of restart attempts. The node may be broken, is unable to restart, or is stuck.\n\nAny important services/functions that are provided with an active-standby recovery group may have been taken over by other operational nodes. Services may be down if standby nodes are also down.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: Perform the following steps to verify the state of the node: \n\n1. Log into the cluster as root user. \n\n2. Use the hwcli command to verify the state of the node. For example, the state of the node /CLA-1 can be checked as follows:\n$ hwcli CLA-0\nCLA-1: available (FlexiSvr CPI1 000157:0108 01.02)\n\n3. Previous hwcli output shows that CLA-0 node is physically available. The high availability services (HAS) of the system attempts, after about 30 minutes, to restart a failed node by issuing a power-off, power-on and restart sequence. If you do not want to wait for this, you can perform the power-off, power-on and restart sequence manually. \n\nFor example: \n$ hwcli --power off CLA-0\nATTAMPTING TO POWER OFF NODE: CLA-0\nARE YOU SURE YOU WANT TO PROCEED? [no/yes] yes\nPowering off CLA-0: OK\n\n$ hwcli --power on CLA-0\nPowering on CLA-0: OK\n\n$ hwcli --reset CLA-0\nATTAMPTING TO RESET NODE: CLA-0\nARE YOU SURE YOU WANT TO PROCEED? [no/yes] yes\nResetting CLA-0: OK\n\n4. If the node does not start within a few minutes or the hwcli does not show that the node is available, check if the CPU board has any error lights on. If it does, you can try to restore the node into service by removing and re-inserting the node. \n\n5. Contact your Nokia representative even if these operations bring the node up, because it is possible that the computing node needs to be replaced or it may, for example, need a BIOS upgrade.		

Table 41-175 NO_OPERATIONAL_RECOVERY_UNIT_FOR_SERVICE_INSTANCE

Alarm	Attributes	Applicable major release
Name: NO_OPERATIONAL_RECOVERY_UNIT_FOR_SERVICE_INSTANCE (11745) Type: processingErrorAlarm Package: racloms.NO_OPERATIONAL_RECOVERY_UNIT_FOR_SERVICE_INSTANCE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: NO OPERATIONAL RECOVERY UNIT FOR SERVICE INSTANCE Implicitly cleared: true Default probable cause: SOFTWARE_PROGRAM_ABNORMALLY_TERMINATED	Release: • LOMS16A
Description: NO OPERATIONAL RECOVERY UNIT FOR SERVICE INSTANCE\n\nAn N+M recovery group does not have an unlocked operational recovery unit for the service instance. \nAn N+M recovery group has N active recovery units that provide service and M spare recovery units. All unlocked recovery units that have been assigned a service instance workload are active and providing service. The rest of the unlocked recovery units that have not been assigned a service instance workload are spare recovery units.\nAt this moment, the system cannot assign the workload of the named service instance to any recovery unit, because there are no unlocked operational recovery units without service assignments. This can happen, for example, in the following situations:\n- Multiple node reboots have been initiated.\n- Multiple node failures have happened.\n- One or more service instances have problems causing failures for the recovery units where it has been assigned. \n- All spare recovery units are locked when a recovery unit failure happens.\n\nThe workload associated with the named service instance (part of the service provided by the recovery group) is currently down.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: This problem can indicate one or both of the following: \n- A hardware-related situation that is, for example, caused by node reboots or node failures. In these cases, the alarm severity is MINOR and the problem is likely to disappear quickly. The severity of this alarm will be raised to MAJOR if the node(s) do not restart within a few minutes. \n- An application problem caused, for example, by a program error, a configuration error, or data corruption. In this case, the alarm severity is MAJOR and manual intervention may be needed. \nIf the severity of this alarm is MINOR, you may choose to wait a few minutes to see if the alarm is cancelled. In node reboot and transient failure situations, the system will cancel the alarm as soon as the node reboots have completed and the service instance(s) has been successfully reassigned and the recovery unit restarted.\nIf the severity of this alarm is MAJOR, perform the following steps:\n1. Log into the active CLA as root user. \n2. Check the system syslog (/var/log/master-syslog) for possible failure reasons and contact your Nokia representative if you need assistance.		

Table 41-176 NO_REPLY_TO_SNMP_REQUEST

Alarm	Attributes	Applicable major release
Name: NO_REPLY_TO_SNMP_REQUEST (11746) Type: processingErrorAlarm Package: racloms.NO_REPLY_TO_SNMP_REQUEST Raised on class: racloms.OMS	Severity: indeterminate Specific problem: NO REPLY TO SNMP REQUEST Implicitly cleared: false Default probable cause: CORRUPT_DATA_M3100	Release: • LOMS16A
Description: NO REPLY TO SNMP REQUEST\n\nSNMP Mediator has sent an SNMP request to an SNMP agent but it has not received a response. \nExample: \n1. A filter condition has been added for the authenticationFailure (.1.3.6.1.6.3.1.1.5.5) trap. Thus the following entry can be viewed by the parameter management tool\nfssnmpV2TrapId=".1.3.6.1.6.3.1.1.5.5\nfssnmpAttributeType=V2traps, \nfssnmpMediatorName=1,\nfsFragmentId=SNMP,\nfsClusterId=ClusterRoot\nThe filter condition is defined by the attribute fssnmpFilterCondition. fssnmpFilterCondition may have, for example, the value (.1.3.6.1.2.1.1.1.0=*Linux*). See RFC 2254 for more information about the filter syntax.\n2. The SNMP Mediator receives the authenticationFailure trap that does not contain the value of variable .1.3.6.1.2.1.1.1.0.\n3. The SNMP Mediator queries the value of .1.3.6.1.2.1.1.1.0 from the SNMP agent, but does not receive a response.\n\nThe SNMP is not able to handle the trap correctly, because it is not able to query or modify variables in the SNMP agent.\n\nClear the alarm with the alarm management application after correcting the fault."		

Table 41-176 NO_REPLY_TO_SNMP_REQUEST (continued)

Alarm	Attributes	Applicable major release
Remedial action: 1. Check the IP address of the SNMP agent that sent the trap. The IP address is displayed in the Application Additional Information field 1 of the alarm.\n2. The net-snmp command line tools (snmpget, snmpset etc.) provided by the operating system may be used to verify the functioning of the SNMP agent.\n3. Use the parameter management tool to check the attributes defined for the SNMP agent. The attributes are located under the following entry: \nfssnmpNEId="<agent IP / hostname>,\ nfssnmpAttributeType=NEattrs,\nfssnmpMediatorName=1,\nfsFragmentId=SNMP,\nfsClusterId=ClusterRoot\n4. Verify that the optional attribute fssnmpUDPPort has the value that the SNMP agent is listening to. The default value is 161.\n5. Verify that the optional attribute fssnmpProtocolVersion is the same that the SNMP agent supports. The default value is V2c.\n6. Verify that the optional attributes fssnmpReadCommString and fssnmpWriteCommString are the ones that the SNMP agent expects."		

Table 41-177 NTP_TIME_SYNCHRONISATION_LEADING_TO_LDAP_REPLICATION_FAILURE

Alarm	Attributes	Applicable major release
Name: NTP_TIME_SYNCHRONISATION_LEADING_ TO_LDAP_REPLICATION_FAILURE (11747) Type: processingErrorAlarm Package: racloms.NTP_TIME_SYNCHRONISATION_ LEADING_TO_LDAP_REPLICATION_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: NTP TIME SYNCHRONISATION LEADING TO LDAP REPLICATION FAILURE Implicitly cleared: true Default probable cause: CONFIGURATION_OR_ CUSTOMIZING_ERROR	Release: • LOMS16A
Description: NTP TIME SYNCHRONISATION LEADING TO LDAP REPLICATION FAILURE\n\nIf the time of the cluster differs from the time of the NTP server (Network Time Protocol) the time of the cluster will be synchronised with the NTP server. This causes the time of the cluster to shift either forwards or backwards and may lead to a failure in the replication of the LDAP server, which generates the alarm. \n\nFor example, if the cluster is commissioned with an NTP Server in the UK (GMT) and with a FEWS (field engineering workstation) from GMT+2, the time will be shifted 2 hours backwards when the cluster boots for the first time and synchronises its time with the NTP Server.\n\nThe replication of the LDAP server is not working. This means that the LDAP data in the primary and secondary LDAP databases are not synchronised. If a switchover in the Directory recovery group happens, changes that were made to LDAP data after the time was reset will be lost.\n\nDo not clear the alarm. It will be cleared automatically by the alarm system after its time to live has expired.		
Remedial action: 1. Log into the cluster.\n\n2. Go to the node where the Directory recovery group is running: \n$ ssh Directory\n\n3. Make a backup of the primary LDAP server to a file:\n$ fsLDAPBackupCreate -p -v > ldap.txt\n\n4. Use the backup of the Primary LDAP server to restore the secondary LDAP server in the node where the Directory is running:\n$ fsLDAPBackupRestore -s -v < ldap.txt\n\n5. If there is another CLA node (non-Directory CLA node) in the deployment, restore the secondary LDAP server in that node with the backup of the Primary LDAP server.\nFor example:\n$ fsLDAPBackupRestore -s -n CLA-1 -v < ldap.txt		

Table 41-178 NUMBER_OF_SYNHCRONOUS_REPLICAS_TOO_LOW

Alarm	Attributes	Applicable major release
Name: NUMBER_OF_SYNHCRONOUS_REPLICAS_ TOO_LOW (11748) Type: communicationsAlarm Package: racloms.NUMBER_OF_SYNHCRONOUS_ REPLICAS_TOO_LOW Raised on class: racloms.OMS	Severity: indeterminate Specific problem: NUMBER OF SYNHCRONOUS REPLICAS TOO LOW Implicitly cleared: true Default probable cause: UNAVAILABLE	Release: • LOMS16A

Table 41-178 NUMBER_OF_SYNHCRONOUS_REPLICAS_TOO_LOW (continued)

Alarm	Attributes	Applicable major release
Description: NUMBER OF SYNHCRONOUS REPLICAS TOO LOW\n\nMaster fast data structure (FDS) server has lost connection to one of the Synchronous Replica FDS servers and the number of current connected Synchronous Replica is too low.\n\nClient updates to the fast data structure cannot be made.\n\nWhen the number of connected Synchronous replicas is in the level of the required number, the alarm will be cleared.		
Remedial action: 1. Check that the node where the replica in question should be running has started properly and that the connection between the nodes is working. \n2. If that does not help, contact your local Nokia representative and provide them with the information from the alarm notification's fields.		

Table 41-179 NWI3_NOTIFICATION_MISSING

Alarm	Attributes	Applicable major release
Name: NWI3_NOTIFICATION_MISSING (11749) Type: communicationsAlarm Package: racloms.NWI3_NOTIFICATION_MISSING Raised on class: racloms.OMS	Severity: indeterminate Specific problem: NWI3 NOTIFICATION MISSING Implicitly cleared: true Default probable cause: COMMUNICATION_ PROTOCOL_ERROR	Release: • LOMS16A
Description: NWI3 NOTIFICATION MISSING\n\nThe OMS sends notifications to the NMS when the configuration in the network element has been updated. The notification event is related to either configuration or topology changes in the network element. The alarm is set if all the notifications related to the configuration and topology changes cannot be sent to the NMS. The reason is notification handling error in the OMS or in the NMS. The alarm is set for OMS.\n\nThere might be incoherent information in the NMS about the network configuration and/or topology.\n\nThe alarm does not need to be cleared, but the system cancels the alarm automatically when the error situation is cleared.		
Remedial action: Upload the information related to the NWI3 fragment in question from the NMS to get the configuration information from network elements up-to-date.		

Table 41-180 OMS_ALARM_UPLOAD_FROM_NE_FAILED

Alarm	Attributes	Applicable major release
Name: OMS_ALARM_UPLOAD_FROM_NE_FAILED (11750) Type: communicationsAlarm Package: racloms.OMS_ALARM_UPLOAD_FROM_ NE_FAILED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: OMS ALARM UPLOAD FROM NE FAILED Implicitly cleared: true Default probable cause: COMMUNICATION_ PROTOCOL_ERROR	Release: • LOMS16A
Description: OMS ALARM UPLOAD FROM NE FAILED\n\nAlarm upload from NE to OMS has failed.\n\nActive alarm situation between NE and OMS may be out of synchronization.\n\nManual clearing is not necessary. Alarm is cleared automatically when next time alarm upload from NE to OMS succeeds or when Time-to-Live has passed.		
Remedial action: Check the cause of failure from Application Additional Information field.		

Table 41-181 OMS_FILE_TRANSFER_CONNECTION_COULD_NOT_BE_OPENED

Alarm	Attributes	Applicable major release
Name: OMS_FILE_TRANSFER_CONNECTION_ COULD_NOT_BE_OPENED (11751) Type: communicationsAlarm Package: racloms.OMS_FILE_TRANSFER_ CONNECTION_COULD_NOT_BE_OPENED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: OMS FILE TRANSFER CONNECTION COULD NOT BE OPENED Implicitly cleared: true Default probable cause: COMMUNICATION_ PROTOCOL_ERROR	Release: • LOMS16A
Description: OMS FILE TRANSFER CONNECTION COULD NOT BE OPENED\n\nStarting of a new file transfer connection has failed.\n\nFile transfer between the OMS and a target network element is not working.\n\nAlarm will be cleared automatically by the alarm system after its lifetime has expired. This alarm has a lifetime of 10 minutes.		
Remedial action: The error can be caused by many different reasons (configuration error, for example a faulty IP address, out of memory, load is too high, and so on). Follow the steps to find out the reason for the error:\n\n1. Open web browser.\n\n2. Go to page https://<OMS IP address>/\n\n3. Select "Element Manager Login" and open Log Viewer.\n\n4. Check the log for errors.\n\nIf the problem persists, see the troubleshooting documentation for how to fix the problem. If that does not provide a solution, contact the local Nokia representative.		

Table 41-182 OMS_MEASUREMENT_DATA_PROCESSING_OVERLOAD

Alarm	Attributes	Applicable major release
Name: OMS_MEASUREMENT_DATA_ PROCESSING_OVERLOAD (11752) Type: qualityOfServiceAlarm Package: racloms.OMS_MEASUREMENT_DATA_ PROCESSING_OVERLOAD Raised on class: racloms.OMS	Severity: indeterminate Specific problem: OMS MEASUREMENT DATA PROCESSING OVERLOAD Implicitly cleared: true Default probable cause: SYSTEM_RESOURCES_ OVERLOAD	Release: • LOMS16A
Description: OMS MEASUREMENT DATA PROCESSING OVERLOAD\n\nThe time used for processing performance measurement data in OMS has exceeded the defined limit. This does not necessarily indicate any loss of measurement data but the measurement parameters should be changed to decrease load and prevent possible problems caused by the overload.\n\nThe limits used to set and cancel this alarm can be changed by the user from OMS LDAP parameters.\n\nToo much measurement data is produced in the network elements and OMS overload causes a risk for losing some data.\n\n-		
Remedial action: Do not clear the alarm. Alarm System will clear the alarm after data processing load decreases to normal level.		

Table 41-183 OPERATING_SYSTEM_MONITORING_FAILURE

Alarm	Attributes	Applicable major release
Name: OPERATING_SYSTEM_MONITORING_ FAILURE (11753) Type: processingErrorAlarm Package: racloms.OPERATING_SYSTEM_ MONITORING_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: OPERATING SYSTEM MONITORING FAILURE Implicitly cleared: true Default probable cause: SYSTEM_CALL_ UNSUCCESSFUL	Release: • LOMS16A

Table 41-183 OPERATING_SYSTEM_MONITORING_FAILURE (continued)

Alarm	Attributes	Applicable major release
Description: OPERATING SYSTEM MONITORING FAILURE\n\nThe fault detector in the operating system has failed to capture the statistics of the usage of a given resource.\n\nThe state of the named device cannot be discovered, which may indicate that there are some fundamental problems with it.\n\nDo not clear the alarm. The alarm is automatically cleared when the fault detector of the operating system is able to capture the statistics of the failed resource..		
Remedial action: If the alarm is not cleared automatically, contact your local customer support.		

Table 41-184 ORACLE_CLUSTER_ALERT

Alarm	Attributes	Applicable major release
Name: ORACLE_CLUSTER_ALERT (11754) Type: processingErrorAlarm Package: racloms.ORACLE_CLUSTER_ALERT Raised on class: racloms.OMS	Severity: indeterminate Specific problem: ORACLE CLUSTER ALERT Implicitly cleared: false Default probable cause: APPLICATION_ SUBSYSTEM_FAILURE	Release: • LOMS16A
Description: ORACLE CLUSTER ALERT\n\nAlerts are generated for different types of problem or failure regarding Automatic Storage Management, Oracle Clusterware or Oracle Database Instance. Examine the alert log and Oracle documentation(from Oracle website) for additional information. There might be different alarms for different database instances and alert log files.\n\nThe effect varies for different problems or failures. Please refer to the Oracle documentation to identify the severity of the problem.\n\nThis alarm does not automatically clear since there is no automatic way of determining when the problem has been resolved..You will need to clear the alarm manually with alarm management application once the problem is fixed.		
Remedial action: Check alarms and alert logs that occurred before this alarm was raised; check the Oracle documentation for advice according to error code and symptom. Alternatively, you can contact your local NSN representative and provide the information you obtained (alarm notification's fields and alert logs). \nThe following alert log files can be found in database node:\n${ORACLE_BASE}/admin/<ORACLE_DB_NAME>/bdump/alert_<ORACLE_SID>.log\n${ORACLE_BASE}/admin/+ASM/bdump/alert_<ASM_SID>.log\n${ORA_CRS_HOME}/log/$(hostname)/alert<hostname>.log		

Table 41-185 ORACLE_CLUSTER_ASM_GROUP_IS_GETTING_FULL

Alarm	Attributes	Applicable major release
Name: ORACLE_CLUSTER_ASM_GROUP_IS_ GETTING_FULL (11755) Type: processingErrorAlarm Package: racloms.ORACLE_CLUSTER_ASM_ GROUP_IS_GETTING_FULL Raised on class: racloms.OMS	Severity: indeterminate Specific problem: ORACLE CLUSTER ASM GROUP IS GETTING FULL Implicitly cleared: true Default probable cause: STORAGE_CAPACITY_ PROBLEM_M3100	Release: • LOMS16A
Description: ORACLE CLUSTER ASM GROUP IS GETTING FULL\n\nOracle cluster ASM (automatic storage management) is reaching the space limit.\n\nOracle database instance might prevent adding or updating data because it is running out of disk space.\n\nThe system clears the alarm automatically when the fill ratio of Automatic Storage Management is below the threshold limit.		
Remedial action: Clean up obsolete data or add a new storage device. In the latter case check the Oracle documentation for instructions on adding new disks.\nAlternatively, increase the value of the fsdbFillRatioAlarmLimit attribute of the Oracle database in the LDAP fsdbFragement if the free space is sufficiently large. The Oracle watchdog will need to be restarted in order to make it aware of the change to the threshold limit.		

Table 41-186 ORACLE_CLUSTER_COMPONENT_IS_FAULTY

Alarm	Attributes	Applicable major release
Name: ORACLE_CLUSTER_COMPONENT_IS_FAULTY (11756) Type: processingErrorAlarm Package: racloms.ORACLE_CLUSTER_COMPONENT_IS_FAULTY Raised on class: racloms.OMS	Severity: indeterminate Specific problem: ORACLE CLUSTER COMPONENT IS FAULTY Implicitly cleared: true Default probable cause: APPLICATION_SUBSYSTEM_FAILURE	Release: • LOMS16A
Description: ORACLE CLUSTER COMPONENT IS FAULTY\n\nOne or more Oracle database server component(s) become unexpectedly unavailable, such as one Oracle database instance or listener is down. There might be more than one different alarm, e.g. different database instance.\n\nThe effect may be various depending on the severity of the failure. In addition, Oracle Real Application Clusters has got its own high availability, so it might recover from the fault by itself, later. The worst situation is that all the Oracle database services are unavailable because all database instances are unavailable.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: Issue crs_stat to check the status of the Oracle cluster database, and check the Oracle alert logs on the faulty node for the errors issued by the Oracle server. In addition look at events that occurred before this alarm was raised. You can alternatively contact your local NSN representative and provide the information you obtained (alarm notification's fields and alert logs).		

Table 41-187 O_M_MEDIATION_FAILURE

Alarm	Attributes	Applicable major release
Name: O_M_MEDIATION_FAILURE (11757) Type: communicationsAlarm Package: racloms.O_M_MEDIATION_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: O&M MEDIATION FAILURE Implicitly cleared: true Default probable cause: COMMUNICATION_PROTOCOL_ERROR	Release: • LOMS16A
Description: O&M MEDIATION FAILURE\n\nNWI3 connection problem between OMS and NetAct.\n\nThis alarm is set by OMS unit when WBTS O&M operation reply sending from OMS to NetAct has failed.\n\nIn case of NWI3 problem the WBTS O&M mediation tasks done by OMS unit cannot be performed (SW download, SW version upload, HW configuration upload).\n\nDo not clear the alarm. This alarm is cancelled automatically by the system.\n\nAfter the problem in NWI3 connection has been corrected, the system will cancel the alarm only when the next O&M mediation event is successfully sent to NetAct. Thus it is normal behavior that alarm stays active for a while after the problem has been corrected.		
Remedial action: No actions required from the operator.		

Table 41-188 PartialResyncProblem

Alarm	Attributes	Applicable major release
Name: PartialResyncProblem (4401) Type: communicationsAlarm Package: netw.PartialResyncProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: partialResyncProblem	Release: • LOMS16A
Description: The alarm is raised when a partial resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		

Table 41-188 PartialResyncProblem (continued)

Alarm	Attributes	Applicable major release
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 41-189 PartialVPRNEncryption

Alarm	Attributes	Applicable major release
Name: PartialVPRNEncryption (8992) Type: configurationAlarm Package: nge.PartialVPRNEncryption Raised on class: nge.VprnEncryptService	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConfigMismatch	Release: • LOMS16A
Description: The alarm is raised when one or more sites are not encryption enabled in a VPRN service.		
Raising condition: (('VPRN Service Encryption Status' EQUAL 'Partial'))		
Clearing condition: (('VPRN Service Encryption Status' NOT EQUAL 'Partial'))		
Remedial action: This site is newly added to the VPRN service, Perform the encrypt operation on the KeyGroup to clear the alarm.		

Table 41-190 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major release
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm Package: netw. PersistentIndexParametersMisconfigured Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistentIndexConfiguration-Mismatch	Release: • LOMS16A
Description: The alarm is raised when persistence is set to Off in the NE BOF.		
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

Table 41-191 PLUG_IN_UNIT_FAILURE

Alarm	Attributes	Applicable major release
Name: PLUG_IN_UNIT_FAILURE (11758) Type: equipmentAlarm Package: racloms.PLUG_IN_UNIT_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: PLUG-IN UNIT FAILURE Implicitly cleared: false Default probable cause: EQUIPMENT_ MALFUNCTION	Release: • LOMS16A
Description: PLUG-IN UNIT FAILURE\n\nA fatal failure in the plug-in unit hardware has been detected.\n\nThere is a severe fault in the plug-in unit hardware. This may cause, for example, the plug-in unit to be automatically shut down by the hardware management to prevent physical damage to it.\n\nClear the alarm with alarm management application after correcting the fault as presented in Instructions.		
Remedial action: Replace the plug-in unit. Note that replacing an operational disk drive may cause loss of data.\n\nDetails of the faulty plug-in unit are found in the Application Additional Info field of the alarm (cabinet, chassis and slot).		

Table 41-192 PLUG_IN_UNIT_TEMPERATURE_OUT_OF_LIMIT

Alarm	Attributes	Applicable major release
Name: PLUG_IN_UNIT_TEMPERATURE_OUT_OF_ LIMIT (11759) Type: equipmentAlarm Package: racloms.PLUG_IN_UNIT_TEMPERATURE_ OUT_OF_LIMIT Raised on class: racloms.OMS	Severity: indeterminate Specific problem: PLUG-IN UNIT TEMPERATURE OUT OF LIMIT Implicitly cleared: true Default probable cause: EQUIPMENT_ MALFUNCTION	Release: • LOMS16A
Description: PLUG-IN UNIT TEMPERATURE OUT OF LIMIT\n\nThe reading of a single IPMI (Intelligent Platform Management Interface) temperature sensor is out of limit.\n\nIf the alarm is set off constantly, there is a severe temperature-related problem and the plug-in unit may behave unexpectedly.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: 1. Check that the air flows freely through the cabinet and the chassis. \n\n2. If the alarm is persistent, replace the faulty plug-in unit. \n\n Refer to the hardware maintenance documentation for detailed replacing\n instructions.\n\n3. If there are numerous alarms of this kind from several plug-in units, check the air conditioning and temperature in the network element (NE) equipment room.\n\nThe details of the faulty plug-in unit (cabinet, chassis and slot) are found in the Application Additional Info field of the alarm.		

Table 41-193 PLUG_IN_UNIT_VOLTAGE_OUT_OF_LIMIT

Alarm	Attributes	Applicable major release
Name: PLUG_IN_UNIT_VOLTAGE_OUT_OF_LIMIT (11760) Type: equipmentAlarm Package: racloms.PLUG_IN_UNIT_VOLTAGE_OUT_ OF_LIMIT Raised on class: racloms.OMS	Severity: indeterminate Specific problem: PLUG-IN UNIT VOLTAGE OUT OF LIMIT Implicitly cleared: true Default probable cause: POWER_SUPPLY_FAILURE	Release: • LOMS16A
Description: PLUG-IN UNIT VOLTAGE OUT OF LIMIT\n\nThe reading of a single IPMI (Intelligent Platform Management Interface) voltage sensor is out of limit.\n\nIf the alarm is set off constantly, there is a severe hardware problem and the plug-in unit may behave unexpectedly.\n\nThe system clears the alarm automatically when the fault has been corrected.		

Table 41-193 PLUG_IN_UNIT_VOLTAGE_OUT_OF_LIMIT (continued)

Alarm	Attributes	Applicable major release
Remedial action: 1. Verify the network element (NE) power supply by checking if there are any alarms from the power entry modules of the chassis. \n\n2. Check that the power failure is limited to a single plug-in unit. \n\n3. If the alarm is not automatically cancelled within 20 minutes or there are other indications of plug-in unit power failures, replace the plug-in unit.\n\nRefer to the hardware maintenance documentation for detailed replacing\ninstructions.\n\nThe details of the faulty plug-in unit (cabinet, chassis and slot) are found in the Application Additional Info field of the alarm.		

Table 41-194 PM_FTP_CONNECTION_FAILED

Alarm	Attributes	Applicable major release
Name: PM_FTP_CONNECTION_FAILED (11761) Type: communicationsAlarm Package: racloms.PM_FTP_CONNECTION_FAILED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: PM FTP CONNECTION FAILED Implicitly cleared: true Default probable cause: COMMUNICATION_ PROTOCOL_ERROR	Release: • LOMS16A
Description: PM FTP CONNECTION FAILED\n\nFile transfer operation failed when trying to upload measurement file from a network element to OMS. IP-address in the additional information field tells which interface the problem concerns.\n\nThis alarm will not be set immediately after a file transfer operation fails, but only after the file transfer has failed to the same IP-address consequently over the duration defined by LDAP parameter OMS/OMSRNC/SS_RNCPM/OMSMeaHandler/BTSFTPAlarmSetDelay.\n\nMeasurement data may be lost or delayed.\n\n-		
Remedial action: Normally the alarm does not need to be cleared but the system cancels the alarm automatically when the file transfer operation is successful. However, if the related network element is removed altogether from the network or its IP-address is changed, it may be necessary to cancel the alarm manually using Element Manager.		

Table 41-195 PollerProblem

Alarm	Attributes	Applicable major release
Name: PollerProblem (31) Type: communicationsAlarm Package: netw.PollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resyncFailed	Release: • LOMS16A
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 41-196 POSSIBLE_SECURITY_THREAT_IN_NETWORK_ELEMENT

Alarm	Attributes	Applicable major release
Name: POSSIBLE_SECURITY_THREAT_IN_NETWORK_ELEMENT (11762) Type: qualityOfServiceAlarm Package: racloms.POSSIBLE_SECURITY_THREAT_IN_NETWORK_ELEMENT Raised on class: racloms.OMS	Severity: indeterminate Specific problem: POSSIBLE SECURITY THREAT IN NETWORK ELEMENT Implicitly cleared: false Default probable cause: THRESHOLD_CROSSED	Release: • LOMS16A
Description: POSSIBLE SECURITY THREAT IN NETWORK ELEMENT\n\nThere is reason to suspect that someone is trying to intrude a network element. This condition emerges if there are too many subsequent failed login attempts.\n\nSomeone may be trying to intrude a network element.\n\nClear the alarm with the alarm management application after correcting the fault.		
Remedial action: Security log data must be checked - /var/log/auth.log. Specially investigate the login entries that were made just before the alarm was raised. Check information about account name that was accessed and source address of possible attack.		

Table 41-197 POWER_SUPPLY_FAILURE

Alarm	Attributes	Applicable major release
Name: POWER_SUPPLY_FAILURE (11763) Type: equipmentAlarm Package: racloms.POWER_SUPPLY_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: POWER SUPPLY FAILURE Implicitly cleared: true Default probable cause: POWER_SUPPLY_FAILURE	Release: • LOMS16A
Description: POWER SUPPLY FAILURE\n\nThere is a failure in one of the power modules.\n\nIf all power entry modules are down, the result is degraded chassis power supply redundancy or total loss of power.\n\nDo not clear the alarm. The system clears the alarm automatically when the fault has been corrected.		
Remedial action: Check the power supply voltages to the chassis. Switch on the power entry module circuit breaker if operated. Check the chassis power enable switch. Replace the faulty power module.		

Table 41-198 PrimaryImageBootFailure

Alarm	Attributes	Applicable major release
Name: PrimaryImageBootFailure (191) Type: configurationAlarm Package: sw.PrimaryImageBootFailure Raised on class: sw.CardSoftware	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured	Release: • LOMS16A
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 41-199 PROCESSING_OF_ALARMS_IS_STARTED_ANEW

Alarm	Attributes	Applicable major release
Name: PROCESSING_OF_ALARMS_IS_STARTED_ANEW (11764) Type: communicationsAlarm Package: racloms.PROCESSING_OF_ALARMS_IS_STARTED_ANEW Raised on class: racloms.OMS	Severity: indeterminate Specific problem: PROCESSING OF ALARMS IS STARTED ANEW Implicitly cleared: true Default probable cause: COMMUNICATION_PROTOCOL_ERROR	Release: • LOMS16A
Description: PROCESSING OF ALARMS IS STARTED ANEW\n\nA centralised part of the alarm system, functioning in an active\nmaintenance computer, has become active in such a way that it is\nstarting the processing of the alarms of the network element in\nquestion from the beginning. This situation occurs when the system\nrestarts, and as a result of an uncontrolled maintenance computer\nswitchover.\n\nAlarm upload to NetAct is starting.\n\nAlarm is cleared automatically after Time-to-Live expires.		
Remedial action: The alarm requires no actions.		

Table 41-200 PROCESS_START_UP_FAILED_DUE_TO_AN_UNAVAILABLE_SERVICE

Alarm	Attributes	Applicable major release
Name: PROCESS_START_UP_FAILED_DUE_TO_AN_UNAVAILABLE_SERVICE (11765) Type: processingErrorAlarm Package: racloms.PROCESS_START_UP_FAILED_DUE_TO_AN_UNAVAILABLE_SERVICE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: PROCESS START-UP FAILED DUE TO AN UNAVAILABLE SERVICE Implicitly cleared: true Default probable cause: UNDERLYING_RESOURCE_UNAVAILABLE	Release: • LOMS16A
Description: PROCESS START-UP FAILED DUE TO AN UNAVAILABLE SERVICE\n\nA service required for the application's functionality is unavailable.\n\nDepending on the alarm severity, an application's start-up or run-time session can either fail (CRITICAL severity) or partially lose functionality (MAJOR severity).\n\nThe alarm will be cleared automatically by the alarm system after five minutes. If the service is still unavailable, the alarm is raised again.		
Remedial action: 1. Observe the application dependent on the service by checking the "Application Id" field of the alarm.\n \n2. Observe the service in question by checking the "Managed Object" field of the alarm that contains the service's recovery group (RG).\n\n3. Lock the application in case of a CRITICAL severity alarm to prevent its infinite restart by using the command:\n\nfshascli -l <Application Id>\n\n4. Follow the troubleshooting instructions found in customer documentation for the application in question and try to repair the service. For example, a service can be locked by high availability services (HAS) and its recovery assumes unlocking of the service.\n\n5. Check for any potential alarm(s) for the service in the list of active ones. The corresponding alarm manual(s) describe recovery actions for the service.\n\n6. Check the troubleshooting instructions in the service customer documentation.\n\n7. If the service was successfully recovered, unlock (if the third step was used) the application with the following command:\n\nfshascli -u <Application Id>\n\n8. If the previous steps cannot resolve the situation, contact your local Nokia representative.		

Table 41-201 RadiusOperStatusDown

Alarm	Attributes	Applicable major release
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm Package: netw.RadiusOperStatusDown Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: radiusOperationStatusDown	Release: • LOMS16A

Table 41-201 RadiusOperStatusDown (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up.Check the connectivity between SAM server and radius server configured on the Network element.		

Table 41-202 RAID_ARRAY_HAS_BEEN_DEGRADED

Alarm	Attributes	Applicable major release
Name: RAID_ARRAY_HAS_BEEN_DEGRADED (11766) Type: equipmentAlarm Package: racloms.RAID_ARRAY_HAS_BEEN_DEGRADED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: RAID ARRAY HAS BEEN DEGRADED Implicitly cleared: true Default probable cause: DISK_PROBLEM	Release: • LOMS16A
Description: RAID ARRAY HAS BEEN DEGRADED\n\nRedundancy of the RAID array is lost. A device belonging to the RAID array can be marked faulty by the system. The alarm may be caused by either errors in the fibre channel (FC) or small computer system interface (SCSI) bus or by a potentially broken disk media.\n\nIn the case of a subsequent disk failure, data will be lost.\n\nThe alarm is automatically cleared by the operating system's fault detector once the redundancy of the RAID array is restored.		
Remedial action: If the hardware is FlexiServer Blade Hardware, then follow these instructions:\n1. Use the command cat /proc/mdstat to check the status of the RAID array found in the Identifying additional information field of the alarm on the node that reports the alarm. \nThe [UU] field printed by the command describes whether both of the disks are in the RAID array or not. If this field contains [_U] or [U_], one of the disks is not in the RAID array.\n2. The redundancy of the RAID array should be automatically restored by the system within an hour. If the problem persists and the alarm is not cleared within an hour, contact your local Nokia representative.\n3. If the problem persists, try changing the faulty disk according to the hardware maintenance instructions. If that does not help, contact your local Nokia representative.\n\nIf the hardware is IBM BladeCenter, then follow these instructions:\n1. Check the Maintenance Module and find the faulty Disk and the possible cause of the fault. Replace the faulty disk with a new disk, referring to the hardware maintenance documentation for detailed replacement instructions.\n2. The redundancy of the RAID array should be automatically restored by the system within an hour. If the problem persists and the alarm is not cleared within an hour, contact your local Nokia representative.		

Table 41-203 ReachabilityProblem

Alarm	Attributes	Applicable major release
Name: ReachabilityProblem (243) Type: communicationsAlarm Package: netw.ReachabilityProblem Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReachabilityTestFailed	Release: • LOMS16A

Table 41-203 ReachabilityProblem (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when a mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. The polling interval depends on the NE type and is configurable in nms-server.xml. By default, the 5620 SAM polls a managed NE every four minutes. If a poll fails, the alarm is raised. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 41-204 ReconfigFailure

Alarm	Attributes	Applicable major release
Name: ReconfigFailure (1949) Type: communicationsAlarm Package: netw.ReconfigFailure Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: failedReconfig	Release: • LOMS16A
Description: This alarm is raised when the reconfig action failed.		
Raising condition: ('State' EQUAL 'Failed')		
Clearing condition: ('State' NOT EQUAL 'Failed')		
Remedial action: Verify that the object is configured as expected.		

Table 41-205 RECOVERY_ACTIONS_BANNED_FOR_MANAGED_OBJECT

Alarm	Attributes	Applicable major release
Name: RECOVERY_ACTIONS_BANNED_FOR_ MANAGED_OBJECT (11767) Type: processingErrorAlarm Package: racloms.RECOVERY_ACTIONS_BANNED_ FOR_MANAGED_OBJECT Raised on class: racloms.OMS	Severity: indeterminate Specific problem: RECOVERY ACTIONS BANNED FOR MANAGED OBJECT Implicitly cleared: true Default probable cause: SOFTWARE_ERROR	Release: • LOMS16A

Table 41-205 RECOVERY_ACTIONS_BANNED_FOR_MANAGED_OBJECT (continued)

Alarm	Attributes	Applicable major release
Description: RECOVERY ACTIONS BANNED FOR MANAGED OBJECT\n\nAn operator has set the specified managed object to an inert mode. The managed object identifies a node. If the inert mode is set for the whole cluster, this alarm is raised separately for each node. \nWhile the inert mode is on, high availability services (HAS) does not attempt to recover services from failures, for example, by restarting nodes or applications, or by performing switchovers within the specified managed objects. Note that the inert mode should be used only by qualified supplier's representatives when analysing problems in the system.\nThe inert mode is switched on by issuing an fshascli command, for example:\n$ fshascli --inert-mode on /CLA-0\nThe command above switches the inert mode on for the /CLA-0 node. Accordingly, the inert mode can be switched off by using the fshascli command:\n$ fshascli --inert-mode off /CLA-0\n\nThis alarm is raised when an operator switches the inert mode on for either a set of nodes or the cluster.\nThe inert mode has the following effects on the behaviour of the system in nodes for which the inert mode has been switched on:\n - If there are no failures, the service provided by the network element is not affected.\n - If failures occur, no recovery actions are performed and the service may be affected. For example, if a process fails, it is not restarted by HAS.\n - Process failures are still propagated to the recovery unit level, but the recovery unit level fault recovery does not take place. In practice, this means that the propagated process failure does not cause restarts of other recovery unit processes, and switchovers do not take place with active/standby recovery groups.\n - HAS logs pending recovery actions to master syslog (/var/log/master-syslog on the active CLA node) in the form 'INFO Inert mode set for <managed object name>. Recovery action \'restart\' pending.'.\n - HAS does not raise any alarms for managed objects in the inert mode. The inert mode for a node sets all managed objects within the node to the inert mode.\n - The inert mode sustains in the nodes over node or cluster restarts.\n - Only the node and cluster restart, power on and power off fshascli commands work while the inert mode is set for the nodes or the cluster.\nNote that fault recovery in the nodes that are not in the inert mode works normally.\n\nThe system clears the alarm when the inert mode is switched off from the managed object.		
Remedial action: 1. To ensure proper functionality of the system, switch off the inert mode after the problem analysis is done. \n2. You can switch off the inert mode from all nodes of the cluster by issuing the fshascli command:\n$ fshascli --inert-mode off /\nNote that this should be done by the supplier's field engineer that is currently analysing the system. \nWhen the inert mode is switched off, pending recovery actions take place. For example, if an important severity process in a cold active/standby recovery group has failed in a node that was in the inert mode, switching the inert mode off for the node causes a switchover of the recovery group.		

Table 41-206 RECOVERY_GROUP_SWITCHOVER

Alarm	Attributes	Applicable major release
Name: RECOVERY_GROUP_SWITCHOVER (11768) Type: processingErrorAlarm Package: racloms.RECOVERY_GROUP_ SWITCHOVER Raised on class: racloms.OMS	Severity: indeterminate Specific problem: RECOVERY GROUP SWITCHOVER Implicitly cleared: true Default probable cause: SOFTWARE_PROGRAM_ ABNORMALLY_TERMINATED	Release: • LOMS16A
Description: RECOVERY GROUP SWITCHOVER\n\nThe platform high availability services (HAS) has initiated a switchover. This may be a recovery action to a recovery unit (RU) failure or result from an administrative operation such as lock or shutdown of the active RU or a switchover request from an explicit recovery group (RG). The new active recovery use is now starting (a cold active standby RG) or being activated (a hot active standby RG).\n\nThe service provided by the RG is currently unavailable. The normal operation will resume if the switchover operation is successful.\n\nThe alarm system will clear the alarm automatically after the problem is solved (the switchover succeeds).		

Table 41-206 RECOVERY_GROUP_SWITCHOVER (continued)

Alarm	Attributes	Applicable major release
Remedial action: Verify that the switchover operation is successful. This alarm is automatically cleared if the switchover succeeds. However, depending on the type of the application, the time for starting (or activating) a standby RU can vary from a few seconds to tens of minutes. The state of the new active RU can be checked using the HAS user interface fshascli: \n\n1. Log into the cluster.\n2. Use the fshascli -s option to see the state of the new active RU. The MO name of the new active RU can be found in the application additional information field 1.\nFor example, execute the following command to check the state of the fictitious /AS-10/ApplServer-0 recovery unit: \nfshascli -s /AS-10/ApplServer-0 \n\nAn operational RU has UNLOCKED administrative state, ENABLED operational state, an empty procedural status, and "ACTIVE" role. The procedural status of INITIALIZING means that the RU is still starting up. If the switchover fails (operational state of the new active RU is DISABLED), check the syslog for a possible explanation for the failure and if required, contact your Nokia representative. \n\nNote that if both RUs in the active standby RG fail repeatedly, this alarm may be raised for both RUs. In that case the situation has to be corrected immediately.		

Table 41-207 RECREATING_STANDBY_IN_MEMORY_DATABASE_FAILED

Alarm	Attributes	Applicable major release
Name: RECREATING_STANDBY_IN_MEMORY_DATABASE_FAILED (11769) Type: processingErrorAlarm Package: racloms.RECREATING_STANDBY_IN_MEMORY_DATABASE_FAILED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: RECREATING STANDBY IN-MEMORY DATABASE FAILED Implicitly cleared: true Default probable cause: APPLICATION_SUBSYSTEM_FAILURE	Release: • LOMS16A
Description: RECREATING STANDBY IN-MEMORY DATABASE FAILED\n\nThe watchdog process failed to copy the database from the active database to standby at start-up, either after switchover or after failover.\n\nThe standby database does not exist any more or contains out-of-date data. High availability of the database cannot be guaranteed. Typically, the active database raises the alarms 70205 and 71065 because the standby database replication agents are not functional.\n\nThe alarm is cleared automatically by the watchdog process when recreating finally succeeds.		
Remedial action: If the reason for the failure is SyncError, \n1. Get the recovery unit name of the peer watchdog by using the command\nfshascli -v / | grep '^RecoveryUnit.*InMemoryDB'\nThe correct recovery unit is the one that has the prefix /<node>, where <node> is the peer node name in the additional information field #2.\n2. Check the status of the recovery unit with the command\nfshascli -s <RU name>\n3. If the administrative state of the recovery unit is LOCKED, unlock the recovery unit with the command\nfshascli -LN <RU name>\n4. If the problem does not disappear, contact your Nokia representative and provide them with the information in the alarm notification and the results of the actions described above.\nIn other cases contact your Nokia representative and provide them with the information in the alarm notification and system log.		

Table 41-208 RegistrationServiceConfiguration

Alarm	Attributes	Applicable major release
Name: RegistrationServiceConfiguration (11773) Type: configurationAlarm Package: racloms.RegistrationServiceConfiguration Raised on class: racloms.OMS	Severity: major Specific problem: Failed to configure the CORBA Registration Service in OMS Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • LOMS16A
Description: Failed to configure the CORBA Registration Service in OMS. The additional information of the alarm contains the detail of the error.		

Table 41-208 RegistrationServiceConfiguration (continued)

Alarm	Attributes	Applicable major release
Remedial action: Please refer to the LTE RAN User Guide to know how to manually set the Registration Service in OMS.		

Table 41-209 REPLICATION_FAILING_FOR_IN_MEMORY_DATABASE

Alarm	Attributes	Applicable major release
Name: REPLICATION_FAILING_FOR_IN_MEMORY_DATABASE (11770) Type: processingErrorAlarm Package: racloms.REPLICATION_FAILING_FOR_IN_MEMORY_DATABASE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: REPLICATION FAILING FOR IN-MEMORY DATABASE Implicitly cleared: true Default probable cause: APPLICATION_SUBSYSTEM_FAILURE	Release: • LOMS16A
Description: REPLICATION FAILING FOR IN-MEMORY DATABASE\n\nReplication for the in-memory database is not functioning.\n\nUpdates from the active to the standby database are not replicated. The standby database cannot become active (no successful failover for database application) unless replication starts functioning again (or the database is copied from the active node as a part of start-up or switchover recovery).\n\nLog files may not be purged; this may eventually fill the database disk partition making further updates to the database impossible.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: 1. See the reason for the failure from field 1 of the application additional info.\n\n2. If the reason is "NoReplication-Agent" the watchdog process attempts to restart the agent automatically after raising the alarm. Use the parameter management application to check the value of fsdbReplicationStatusCheckInterval attribute. The value defines how often the watchdog checks the status of the replication. Wait until the next status check takes place. If the alarm still remains in the active alarms list, copy the current contents of syslog and give item to your local Nokia representative.\n\n3. If the reason is "ReplicationStopped" somebody has stopped the replication typically intentionally. The watchdog process does not attempt to restart the replication automatically. The replication must be restarted manually with the command\nttAdmin -repStart <DB-name>\nIf the alarm does not go away from or re-appears soon the active alarm list, copy the current contents of syslog and contact your local Nokia representative.\n\n4. If the reason is "ReplicationFallenBehind", the database instance having active role is not able to keep the standby database synchronised as required by the fsdbReplicationStatusCheckLimit attribute. Typically, one of the two nodes running peer database instances or network is overloaded when this alarm is raised. A peak in transaction flow produced by the database applications may also cause this alarm.\nIf this alarm persists in the active alarms list, use top and ifconfig tools to estimate the current load in your system and contact your local Nokia representative.\n\n5. If the reason is "CommunicationProblem" use\nfshascli -s /<node>/<RU-name>\nto verify that the status of the peer in-memory database recovery unit (<node> is of the 3 from application additional info and that the<RU-name> can be derived from the Application field of the alarm). If the peer recovery unit is locked, unlock it with the command\nfshascli -u /<node>/<RU-name>\nIf the alarm still persists , copy the current contents of syslog and contact your local Nokia representative.		

Table 41-210 RESOURCE_ALLOCATION_OR_DE_ALLOCATION_FAILURE

Alarm	Attributes	Applicable major release
Name: RESOURCE_ALLOCATION_OR_DE_ALLOCATION_FAILURE (11771) Type: processingErrorAlarm Package: racloms.RESOURCE_ALLOCATION_OR_DE_ALLOCATION_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: RESOURCE ALLOCATION OR DE-ALLOCATION FAILURE Implicitly cleared: true Default probable cause: SOFTWARE_PROGRAM_ABNORMALLY_TERMINATED	Release: • LOMS16A

Table 41-210 RESOURCE_ALLOCATION_OR_DE_ALLOCATION_FAILURE (continued)

Alarm	Attributes	Applicable major release
Description: RESOURCE ALLOCATION OR DE-ALLOCATION FAILURE\n\nAllocation or deallocation of resources to or from a computer node in the cluster has failed. Applications running in the cluster are often identified with resources that are allocated to the node before the application is started and released from the node, and after the application has terminated. Such resources can, for example, be TCP/IP addresses that are associated with the service provided by the software, or a disk partition that, for example, contains the application database. In addition, the application can allocate and deallocate other resources (for example, start and stop 3rd party applications) in its control scripts. An operation failure has been reported for the defined recovery unit, while it was starting or stopping.\n\nIf the error occurred when an application was starting, application start-up is aborted. In case of a permanent fault, the service provided by the application is now down. With a transient or node-specific fault, and provided that the application has a standby resource, the application may have been restarted successfully on another node. If the fault happened while the application was terminating, the node on which the error happened has now been restarted to restore it to a known state. If the node has restarted successfully or the application has a standby resource, the application has likely already restarted, and service is again available.\n\nThe system automatically clears the alarm when the fault has been corrected.		
Remedial action: 1. Log in to the network element as root user to check the situation. \n\n2. Use the fshascli command to check the state of all recovery units within the recovery group (the name of the recovery group is in the Application Additional Information field). If the recovery group is providing service, each of its UNLOCKED recovery unit that has the ACTIVE role has the ENABLED operational state, and an empty procedural status. For example, the state of recovery units of the /Directory recovery groups can be checked as follows: \n$ fshascli -se Directory --filter ru\n/CLA-0/FSDirectoryServer:\nadministrative(UNLOCKED)\noperational(ENABLED)\nusage(IDLE)\nprocedural(NOTINITIALIZED)\navailability()\nunknown(FALSE)\nalarm()\nnrole(COLDSTANDBY)\n\n/CLA-1/FSDirectoryServer:\nadministrative(UNLOCKED)\noperational(ENABLED)\nusage(ACTIVE)\nprocedural()\navailability()\nunknown(FALSE)\nalarm()\nrole(ACTIVE)\n\nIn the case above, the recovery unit of the CLA-0 node is acting as a cold standby backup, and the recovery unit on CLA-1 is running the service normally. Note that the grep command in the example is used to filter out information regarding individual processes in each recovery unit. \n\nSince this is a situation that may be caused by various faults, contact your Nokia representative to analyze the root-cause.		

Table 41-211 RUIMRMEX_LDAP_DATA_DISTRIBUTION_FAILURE

Alarm	Attributes	Applicable major release
Name: RUIMRMEX_LDAP_DATA_DISTRIBUTION_FAILURE (11772) Type: communicationsAlarm Package: racloms.RUIMRMEX_LDAP_DATA_DISTRIBUTION_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: RUIMRMEX LDAP DATA DISTRIBUTION FAILURE Implicitly cleared: false Default probable cause: REMOTE_NODE_TRANSMISSION_ERROR	Release: • LOMS16A
Description: RUIMRMEX LDAP DATA DISTRIBUTION FAILURE\n\nIn the Manager side: Reading RUIM related external NetAct LDAP access data from the manager node's LDAP server or sending it to resource side failed.\n\nIn the Resource side: Writing RUIM related external NetAct LDAP access data to the resource node's LDAP server failed.\n\nA NetAct RUIM user cannot access a resource network element since that resource node has wrong RUIM related external NetAct LDAP access configuration data.\n\nClear the alarm with alarm management application after correcting the fault as presented in Instructions.		
Remedial action: Alarm reported in Manager side: check that \n1) the network connection to the resource node in question is working\nCorrection: Repair the network connection.\n2) the resource node in question, or the RUEM RMEX RG in it, are up and running\nCorrection: Reboot the node or the RUEM RMEX RG.\n3) the access to the node's LDAP server is allowed\nCorrection: Check that the node's LDAP server is up and running OR that the credentials used for the local LDAP access are correct.\n\nAlarm reported in the Resource side: check that \n1)the access to the node's LDAP server is allowed\nCorrection: Check that the node's LDAP server is up and running OR that the credentials used for the local LDAP access are correct.		

Table 41-212 SaveConfigFailed

Alarm	Attributes	Applicable major release
Name: SaveConfigFailed (105) Type: configurationAlarm Package: sw.SaveConfigFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileAccessError	Release: • LOMS16A
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact your Nokia support representative for assistance.		

Table 41-213 ScheduledPollerProblem

Alarm	Attributes	Applicable major release
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm Package: netw.ScheduledPollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: scheduledResyncFailed	Release: • LOMS16A
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 41-214 SERVICE_LEVEL_DEGRADED_BELOW_THRESHOLD

Alarm	Attributes	Applicable major release
Name: SERVICE_LEVEL_DEGRADED_BELOW_ THRESHOLD (11774) Type: equipmentAlarm Package: racloms.SERVICE_LEVEL_DEGRADED_ BELOW_THRESHOLD Raised on class: racloms.OMS	Severity: indeterminate Specific problem: SERVICE LEVEL DEGRADED BELOW THRESHOLD Implicitly cleared: true Default probable cause: EQUIPMENT_ MALFUNCTION	Release: • LOMS16A

Table 41-214 SERVICE_LEVEL_DEGRADED_BELOW_THRESHOLD (continued)

Alarm	Attributes	Applicable major release
Description: SERVICE LEVEL DEGRADED BELOW THRESHOLD\n\nThe number of active recovery units within the load sharing group has dropped below the predefined threshold. This can happen because of \n\n1) management actions (number of recovery units or nodes have been locked),\n2) a series of node failures or\n3) continuous failure to restart the recovery unit(s) within the load sharing group.\n\nThe alarm is informative by nature and it indicates that the load sharing group cannot maintain the acceptable service level.\n\nDo not clear the alarm. The system clears the alarm automatically when the number of operational RUs goes above the defined threshold.		
Remedial action: The alarm does not require any particular corrective actions if it is preceded by either deliberate management action(s) or node failures. In the latter case separate alarms indicating the node failures would have been raised. \n\nIf, however, the reason is that the recovery units have failed and system is not able to restart the software, the problem is in the applications forming the load sharing group. Basically, there could be several reasons why an application cannot be restarted and therefore it is difficult to give exact or detailed instructions on how to deal with the situation. \n\nThe first thing to be checked is the availability statuses of the failed recovery units. If RU's availability status has value failed, system has already attempted to restart it with no success. Note, that it is possible to try to restart the recovery unit also manually with e.g. fshascli -r command. If also manual restarting fails, the log writings should be detected: a typical cause for failing restart might be missing configuration file, incorrect configuration file content or even lack of some critical resources, e.g. the amount of available physical memory.		

Table 41-215 SS7___SIGTRAN_PROTOCOL_STACK_CONFIGURATION_FAILURE

Alarm	Attributes	Applicable major release
Name: SS7___SIGTRAN_PROTOCOL_STACK_CONFIGURATION_FAILURE (11775) Type: processingErrorAlarm Package: racloms.SS7___SIGTRAN_PROTOCOL_STACK_CONFIGURATION_FAILURE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: SS7 / SIGTRAN PROTOCOL STACK CONFIGURATION FAILURE Implicitly cleared: false Default probable cause: SOFTWARE_ERROR	Release: • LOMS16A
Description: SS7 / SIGTRAN PROTOCOL STACK CONFIGURATION FAILURE\n\nA protocol \n\n- MTP3-user adaptation layer (M3UA) \n- signalling connection control part (SCCP)\n- transaction capabilities application part (TCAP)\n\nin the SS7/ SIGTRAN stack cannot be started properly due to an initialization\nor configuration problem.\n\nThe SS7/SIGTRAN service is not available, neither SCCP nor TCAP traffic can be sent or received.\n\nClear the alarm with alarm management application after the problem has been corrected as presented in Instructions.		

Table 41-215 SS7___SIGTRAN_PROTOCOL_STACK_CONFIGURATION_FAILURE (continued)

Alarm	Attributes	Applicable major release
Remedial action: See the possible error in the Application Additional Info field and proceed according to the respective procedure.\n\n- AAI_ISS_INIT_NOK: Initialisation of SS7/SIGTRAN stack has failed. \n\n- AAI_SCCP_INIT_NOK: SCCP initialisation has failed. For further information, see the error logs in the syslog.\n\n1. Check the value of SS7 Standard in the SS7/SIGTRAN Load Balancing Service data in the LDAP tree. \n\n2. Check that the value of the fsss7MinSCCPReferenceNbr is lower than the value of the fsss7MaxSCCPReferenceNbr in the configuration data of the process which raised the alarm in the LDAP. \n\n- AAI_GTT_INIT_NOK: Initialisation of GlobalTitleTranslation library has failed. For further information, see the error logs in the syslog.\n \n1. Check the SS7 configuration in the LDAP. \n \n- AAI_TCAP_INIT_NOK: TCAP initialisation has failed. For further information, see the error logs in the syslog. \n\n1. Check the value of SS7 Standard in the SS7/SIGTRAN Load Balancing Service data in the LDAP. \n\n- AAI_M3UA_SCU_NOK: M3UA configuration has failed. For further information, see the error logs in the syslog.\n\n1. Check SS7 configuration in the LDAP. \n\n- AAI_SCCP_SCU_NOK: SCCP configuration has failed. For further information, see the error logs in the syslog. \n\n1. Check the SS7 configuration in the LDAP. \n\n- AAI_TCAP_CONFIG_TRID_NOK: TCAP configuration has failed. For further information, see the error logs in the syslog.\n\n1. Check that the value of the fsss7MinTransactionid is lower than the value of the fsss7MaxTransactionId in the configuration data of the process which raised the alarm in the LDAP.\n\nIf the configuration data is correct but the alarm occurs, contact your Nokia representative and provide them with the information gathered by the following steps:\n\n1. Set tracing on for all protocols in the SS7/Debug fragment (attribute value 1). \n\n2. Change in files /opt/Nokia/SS_SS7LM/script/ss_ss7lm_start.sh and /opt/Nokia/SS_SS7NM/script/ss_ss7nm_start.sh logging on with command: export SS7_LOGOPTS="15\n\n3. Lock the SS7/Sigtran recovery groups (RGs). \n\n4. Unlock the SS7/Sigtran RGs. \n\n5. Check if the following files exist in the node in which the alarm was raised \n /tmp/ss7nmlog.log \n /tmp/ss7lmlog.log \n /tmp/ss7debug.log \n\n6. If the files can be found, copy them and attach them to the problem report. Include in the report also the syslog information from the time the RGs were started."		

Table 41-216 SSL_CONNECTION_CANNOT_BE_MADE_BY_RUIM

Alarm	Attributes	Applicable major release
Name: SSL_CONNECTION_CANNOT_BE_MADE_BY_RUIM (11776) Type: processingErrorAlarm Package: racloms.SSL_CONNECTION_CANNOT_BE_MADE_BY_RUIM Raised on class: racloms.OMS	Severity: indeterminate Specific problem: SSL CONNECTION CANNOT BE MADE BY RUIM Implicitly cleared: true Default probable cause: UNDERLYING_RESOURCE_UNAVAILABLE	Release: • LOMS16A
Description: SSL CONNECTION CANNOT BE MADE BY RUIM\n\nThis alarm indicates that the Remote User Information Management (RUIM) configured to make an SSL connection to the external NetAct LDAP server has failed. \n\nThis alarm is raised due to the following reasons: \n1. The certificate is missing or rejected by the external NetAct LDAP server.\n2. The external NetAct LDAP server is not supporting SSL connections or connections to it cannot be established for any other reason (also see alarm 70268). \n\nNote that, when an SSL connection is attempted but no connection is made because of a connection problem, which is not specific to SSL (for example, wrong IP address), both the alarms 70268 and 70358 are raised. If only the alarm 70358 is raised, then the TLS_OR_PLAIN_TEXT mode is used and the plain text connection has succeeded.\n\nThis alarm indicates that the SSL connection is unsuccessful by RUIM.\nNote that the user will still be able to log in using 'TLS_OR_PLAIN_TEXT' or 'PLAIN_TEXT' modes in RUIM.\n\nThe system clears the alarm automatically when the SSL connection is established with the external LDAP Server.		
Remedial action: Check why SSL connections cannot be made and potentially disable RUIM for the time of investigation (as possible plain-text connections are dangerous). \n\nTo disable RUIM, enter the following command: \n# fscontrolRUIM --disable \n\nDepending on the problem type (see Identifying Application Additional Info) the cause for the problem can be: \n- Certificates are not present in default or RUIM domain\n- Wrong server certificate is used\n- External LDAP does not support SSL protocol		

Table 41-217 STAGING_AREA_IN_INCONSISTENT_STATE

Alarm	Attributes	Applicable major release
Name: STAGING_AREA_IN_INCONSISTENT_STATE (11777) Type: environmentalAlarm Package: racloms.STAGING_AREA_IN_INCONSISTENT_STATE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: STAGING AREA IN INCONSISTENT STATE Implicitly cleared: false Default probable cause: INDETERMINATE	Release: • LOMS16A
Description: STAGING AREA IN INCONSISTENT STATE\n\nInstallation of Incremental Delivery failed, recovery was not performed. Staging Area may be in inconsistent state.\n\nOperator action is needed to perform manual recovery.\n\nOperator shall clear alarm manually after performing manual recovery.		
Remedial action: Operator shall check Nwi3SWAgent logs to determine what caused installation failure. Operator shall use FlexiPlatform Software Management tools or OMS CLI Software Management tools to perform manual recovery.		

Table 41-218 StatsRetrieveFailed

Alarm	Attributes	Applicable major release
Name: StatsRetrieveFailed (244) Type: configurationAlarm Package: sw.StatsRetrieveFailed Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: fileTransferFailure	Release: • LOMS16A
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 41-219 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major release
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed Package: netw.SubscriberSystemNextHopUsageHigh Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • LOMS16A
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

Table 41-220 SWITCH_AND_SERVICE_UNIT__FABRIC_BROADCAST_STORM

Alarm	Attributes	Applicable major release
Name: SWITCH_AND_SERVICE_UNIT__FABRIC_BROADCAST_STORM (11778) Type: qualityOfServiceAlarm Package: racloms.SWITCH_AND_SERVICE_UNIT__FABRIC_BROADCAST_STORM Raised on class: racloms.OMS	Severity: indeterminate Specific problem: SWITCH AND SERVICE UNIT: FABRIC BROADCAST STORM Implicitly cleared: true Default probable cause: SYSTEM_RESOURCES_OVERLOAD	Release: • LOMS16A
Description: SWITCH AND SERVICE UNIT: FABRIC BROADCAST STORM\n\nA broadcast storm control condition has started within the last 250 milliseconds.\n\nThe switch will drop broadcast frames for a fixed period of 250 milliseconds.\n\nThe system clears the alarm automatically.		
Remedial action: No specific actions are required. \n\nHowever, it should be noted that a broadcast storm is traditionally considered as an indication of the existence of a loop in the network. Loops, however, should not be encountered in FlexiServer-based systems since rapid spanning tree protocol (RSTP) is used for blocking the redundant links.\n\nTherefore, if the system does not clear this alarm automatically, it indicates severe error(s) in the elementary system configuration. In this case, handle the alarm as additional debugging information and add it, for example, to a problem report to your local customer support.		

Table 41-221 SWITCH_AND_SERVICE_UNIT__IPMI_SYSTEM_EVENT_LOG_FULL

Alarm	Attributes	Applicable major release
Name: SWITCH_AND_SERVICE_UNIT__IPMI_SYSTEM_EVENT_LOG_FULL (11779) Type: qualityOfServiceAlarm Package: racloms.SWITCH_AND_SERVICE_UNIT__IPMI_SYSTEM_EVENT_LOG_FULL Raised on class: racloms.OMS	Severity: indeterminate Specific problem: SWITCH AND SERVICE UNIT: IPMI SYSTEM EVENT LOG FULL Implicitly cleared: false Default probable cause: RECUCED_LOGGING_CAPABILITY	Release: • LOMS16A
Description: SWITCH AND SERVICE UNIT: IPMI SYSTEM EVENT LOG FULL\n\nThe Intelligent Platform Management Interface (IPMI) System Event Log (SEL) is periodically read to /var/log/system.log@<ip address of Switch and Service Unit (SWSE)> file and then cleared by the IPMI event log daemon program, seld. If this alarm appears, the seld program has failed to clear the log.\n\nAny subsequent IPMI event will still be propagated out by the SWSE but they will not be logged in the SEL.\n\nClear the alarm with an alarm management application after correcting the fault as presented in Instructions.		
Remedial action: 1. Check if the seld program is running by executing the following command in the node where the /Directory recovery group is running\n\nps ax | grep -i seld\n\n2. If the seld is running but the log has become full, contact your Nokia representative.\n\n3. If the seld is not running you can try to restart it manually.\n\n/opt/Nokia_BP/bin/seld daemonize\n\n4. If the restart of seld was not successful, read and clear the logs on the switch identified in the alarm. With the -l option you can save the IPMI SEL to a file.\n\nevent -p <IP address of the switch> -d -l log.txt\n\n5. Contact your Nokia representative to find out the root cause for the SEL clearing failure.		

Table 41-222 SWITCH_AND_SERVICE_UNIT__QUEUE_ENGINE_MEMORY_FULL

Alarm	Attributes	Applicable major release
Name: SWITCH_AND_SERVICE_UNIT__QUEUE_ENGINE_MEMORY_FULL (11780) Type: qualityOfServiceAlarm Package: racloms.SWITCH_AND_SERVICE_UNIT__QUEUE_ENGINE_MEMORY_FULL Raised on class: racloms.OMS	Severity: indeterminate Specific problem: SWITCH AND SERVICE UNIT: QUEUE ENGINE MEMORY FULL Implicitly cleared: true Default probable cause: SYSTEM_RESOURCES_OVERLOAD	Release: • LOMS16A
Description: SWITCH AND SERVICE UNIT: QUEUE ENGINE MEMORY FULL\n\nThe queue engine inside the switch fabric processor has detected that the link memory is full. This is an indication of some level of congestion in the internal communication network.\n\nThe Ethernet switch may not be able to duplicate packets correctly to all the links because the buffer is either full or becoming full. This is not a fatal error, but if the situation is prolonged, for example, because of heavy congestion in the communication network, the switch will have to drop some packets and packet forwarding will be greatly delayed.\n\nThe system will tolerate these disturbances to some extent without noticeable problems. However, if the situation is prolonged, it will eventually cause more severe problems. For example, software will start to report problems in peer-to-peer communication, and in severe cases, the system heartbeats will be lost, which can lead to some software and/or nodes being restarted.\n\nThe alarm system clears the alarm automatically after its time to live has expired.		
Remedial action: No specific actions are required.		

Table 41-223 SWITCH_AND_SERVICE_UNIT__QUEUE_ENGINE_RESTART

Alarm	Attributes	Applicable major release
Name: SWITCH_AND_SERVICE_UNIT__QUEUE_ENGINE_RESTART (11781) Type: processingErrorAlarm Package: racloms.SWITCH_AND_SERVICE_UNIT__QUEUE_ENGINE_RESTART Raised on class: racloms.OMS	Severity: indeterminate Specific problem: SWITCH AND SERVICE UNIT: QUEUE ENGINE RESTART Implicitly cleared: false Default probable cause: SOFTWARE_ERROR	Release: • LOMS16A
Description: SWITCH AND SERVICE UNIT: QUEUE ENGINE RESTART\n\nThe queue engine inside the switch fabric processor has detected a fatal error, and a queue engine restart has occurred. The switch will not forward traffic before the engine has restarted.\n\nThe fabric processor is restarted. The part of the system using this Ethernet switch experiences a small connectivity break and some data frames are lost. The system will tolerate this. However, other disturbances such as error log writings s from the applications' software will most likely be encountered during the restart. Also, other alarms indicating, for example, network topology change, may be raised.\n\nClear the alarm with an alarm management application after correcting the fault as presented in INSTRUCTIONS.		
Remedial action: 1. Provide your local Nokia representative with the following information:\n\n- the type of the switch blade, its serial number, software version, fabricQueueEngineRestartReason \n\n- information provided by the "show inventory" command:\n\n1. Connect to the switch blade, for example, from the CLA-0 node.\n2. Start the switch management program by issuing the "swc" shell command.\n3. Execute the "show inventory" command.\n\nIn addition to these, provide your local Nokia representative with as much information about the type of applications and traffic patterns in the switch blade prior to the error as possible.		

Table 41-224 SWITCH_AND_SERVICE_UNIT__RSTP_NEW_ROOT

Alarm	Attributes	Applicable major release
Name: SWITCH_AND_SERVICE_UNIT__RSTP_NEW_ROOT (11782) Type: equipmentAlarm Package: racloms.SWITCH_AND_SERVICE_UNIT__RSTP_NEW_ROOT Raised on class: racloms.OMS	Severity: indeterminate Specific problem: SWITCH AND SERVICE UNIT: RSTP NEW ROOT Implicitly cleared: true Default probable cause: EQUIPMENT_MALFUNCTION	Release: • LOMS16A
Description: SWITCH AND SERVICE UNIT: RSTP NEW ROOT\n\nThis switch is now the root for the rapid spanning tree protocol (RSTP) instance.\nThe former root switch blade of the cluster has gone down (or is not accessible\nfor some other reason) forcing this switch blade to be the new root, or this switch blade has come up as a root.\n\nThe altered connectivity topology will most likely cause small disturbances in the communication of the system. Some data frames may be lost or data frame forwarding will be greatly delayed. These disturbances do not affect the functioning of the system.\n\nHowever, other disturbances, such as error log writing from the applications' software will most likely be encountered during the restart. In addition, other alarms indicating, for example, network topology change may be encountered. \n\nNote: Even though this alarm does not indicate that the former root switch has necessarily failed, this alarm would be raised in that situation as well.\n\nThe alarm system clears the alarm automatically after its time to live has expired.		
Remedial action: This alarm does not require any actions.		

Table 41-225 SWITCH_AND_SERVICE_UNIT___RSTP__TOPOLOGY_CHANGE

Alarm	Attributes	Applicable major release
Name: SWITCH_AND_SERVICE_UNIT___RSTP__TOPOLOGY_CHANGE (11783) Type: equipmentAlarm Package: racloms.SWITCH_AND_SERVICE_UNIT___RSTP__TOPOLOGY_CHANGE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: SWITCH AND SERVICE UNIT: (RSTP) TOPOLOGY CHANGE Implicitly cleared: true Default probable cause: EQUIPMENT_MALFUNCTION	Release: • LOMS16A
Description: SWITCH AND SERVICE UNIT: (RSTP) TOPOLOGY CHANGE\n\nRSTP (rapid spanning tree protocol) has changed the topology of the communication network. Possible reasons are, for example, a switch has crashed or encountered a spontaneous restart, a switch blade might have been replaced or a new switch might have been added to the communication network during a system upgrade.\n\nThe topology change, that is, blocking/unblocking of some links, causes small communication disturbances and in many cases loss of some data frames. The system will tolerate this, but as a symptom, some error logs or other warnings may be encountered momentarily.\n\nDo not clear the alarm. The alarm system clears the alarm automatically after its time to live has expired.		
Remedial action: No specific actions are required.		

Table 41-226 SWITCH_FAULTY

Alarm	Attributes	Applicable major release
Name: SWITCH_FAULTY (11784) Type: communicationsAlarm Package: racloms.SWITCH_FAULTY Raised on class: racloms.OMS	Severity: indeterminate Specific problem: SWITCH FAULTY Implicitly cleared: true Default probable cause: LAN_ERROR	Release: • LOMS16A

Table 41-226 SWITCH_FAULTY (continued)

Alarm	Attributes	Applicable major release
Description: SWITCH FAULTY\n\nThe LAN (Local Area Network) monitoring software has declared a switch faulty.\n\nThis is a serious condition as the redundancy level of the system is lowered due to the failed switch.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: Check the severity of the alarm. \nIf the severity is WARNING, then:\nThe system is trying to recover the switch and no user actions are needed.\nIf the severity is MAJOR, then:\nIf the "are_resets_enabled" parameter is true in the alarm info,\nthen the system has already tried to reset the switch and the switch must therefore be replaced.\nIf "are_resets_enabled" is off, however, it means that no automatic\nresets have been executed on this switch and manual reset could be beneficial\nas instructed in the hardware maintenance documentation.\nThe name of the switch is included in the application additional info.\n\nRefer to the hardware maintenance documentation for how to change faulty switch.\nAfter replacing the switch and powering it on or restarting it, allow the\nsystem at least five (5) minutes to stabilise the fault information. During\nthat time other alarms might appear and this alarm might be cancelled for\na time but do not react the other alarms.		

Table 41-227 SWITCH_LINK_DOWN

Alarm	Attributes	Applicable major release
Name: SWITCH_LINK_DOWN (11785) Type: equipmentAlarm Package: racloms.SWITCH_LINK_DOWN Raised on class: racloms.OMS	Severity: indeterminate Specific problem: SWITCH LINK DOWN Implicitly cleared: true Default probable cause: LINK_FAILURE	Release: • LOMS16A
Description: SWITCH LINK DOWN\n\nA linkDown simple network management protocol (SNMP) trap triggers this alarm. It is an indication that an Ethernet switch port changes from up state to down state.\n\nOnce a port (or link) is in down state, it can't transport any traffic. This is not necessarily an error condition, but this can follow from a maintenance operation such as replacing a cable between two switches, or closing a switch port via management interface. A link may also go to down state if, for example, the host computer or switch at the other end of the link is shut down, restarted, or removed. \n\nHowever, a spontaneous state change may indicate a serious failure, even though the system will typically tolerate these failures to some extent because of redundant networking infrastructure. Note that a linkDown SNMP trap is paired with a linkUp SNMP trap that will trigger a cancelling of the alarm. For example, when replacing a computer node, one would first see the raising of this alarm when the replaced unit is shut down and the automatic cancelling of this alarm when the new blade is taken into use.\n\nThe system automatically clears the alarm when the fault has been corrected.		

Table 41-227 SWITCH_LINK_DOWN (continued)

Alarm	Attributes	Applicable major release
Remedial action: As explained above, this alarm does not typically indicate an error condition, but this relates to other maintenance actions or state changes in the system. However, if there is no clear reason for this alarm and especially if the alarm system does not cancel the alarm automatically within reasonable time (depending on the state of the system), certain corrective actions should be performed.\n\nStart by trying to detect whether the link should be up or not. Note that "link" refers to either hardwired Ethernet connections in the backplane/midplane or Ethernet cables between switches and other devices. During normal operation, all links between active switches and other devices should be up. Try to rule out the possibility that a device at the other end of the link is down because of a power feed failure. For example, in addition, check the administrative statuses of both ends of the link. In a switch, this can be done using the management interface of the switch.\n\nIdentify the link from the management interface. Check from the system logs. And from the current configuration of the switch if, for example, a configuration change or an incorrect configuration has forced the link to a down state. Refer to the documentation provided by the switch manufacturer, if necessary. \n\nIn a host computer, check the network connectivity. In Linux based systems, you can use the command "ethtool <INTERFACE>" to get information from a physical layer of the interface connected to a switch. Use the command "man ethtool" to get help and usage information. If both devices are up and running and their administrative states indicate that they should be able to connect, the next probable cause of a link being down is a loose cable. Check for a bad connectivity, especially if "link" refers to a cable. Even in a case of a backplane/midplane link, check that all relevant blades are firmly and correctly placed in their slots. If connectivity seems to be OK, try rebooting the connected devices. \n\nIf this does not help and the system does not cancel the alarm, try to replace the components:\n\n1. First replace the cable. Note that even in a case of a backplane/midplane link it is possible that the signal wires are broken. However, this is highly unlikely. Backplane failure and backplane replacement should be only considered as the last resort.\n\n2. Next, if the other device is a CPU blade, replace that. Visually inspect the condition of both backplane connectors and the blade connectors: a twisted or broken connector pin can easily cause symptoms such as lost connectivity.\n\n3. As the last option (excluding replacing the chassis backplane as explained above), replace the switch.		

Table 41-228 SWITCH_RESTARTED

Alarm	Attributes	Applicable major release
Name: SWITCH_RESTARTED (11786) Type: equipmentAlarm Package: racloms.SWITCH_RESTARTED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: SWITCH RESTARTED Implicitly cleared: false Default probable cause: EQUIPMENT_ MALFUNCTION	Release: • LOMS16A
Description: SWITCH RESTARTED\n\nThe alarm is triggered by a coldStart Simple Network Management Protocol (SNMP) trap sent by an Ethernet switch. The coldStart trap signifies that the sending protocol entity is reinitializing itself and that the management agent's configuration or the protocol entity implementation may have been altered. The warmStart trap signifies that the sending protocol entity is reinitializing itself and that neither the management agent configuration nor the protocol entity implementation is altered.\n\nThe alarm indicates that the switch has restarted and is now reinitializing itself. This is not necessarily an error condition but might be caused by maintenance operations such as powering up a new switch or intentional restarting of a switch after a software or configuration update. In these cases, this alarm can be safely ignored.\nHowever, a spontaneous restart should be considered as an indication of a serious problem even though the system with its redundant Ethernet infrastructure will tolerate it.\n\nClear the alarm with an alarm management application after correcting the\nfault as presented in Instructions.		

Table 41-228 SWITCH_RESTARTED (continued)

Alarm	Attributes	Applicable major release
Remedial action: The alarm can be safely ignored if restarting of the switch was intentional, for example, as a part of a system reboot. In case of a random, spontaneous restart it can be very difficult to determine the cause of the abnormal behavior. \nRule out possible operation errors such as accidental issuing of a restart command or physical removal and reinsertion of the switch. Note that depending on your hardware, there may be other functions - like fibre channel (FC) switches - integrated in the same blade with the Ethernet switch. In these cases, operations done with the FC switch may, as a side effect, cause restarting of the Ethernet switch.\nTry to rule out possible power feed problems. For example:\n1. If the chassis has a management unit - such as Advanced Management Module in IBM BladeCenter environments or Onboard Administrator in HP BladeSystem environments - log in to the active management unit and check the logs and power status of the chassis.\n2. Watch for other alarms indicating a failing power stage.\n3. Watch for alarms indicating that other units are restarting in the same chassis at the same time.\n4. Rule out the possibility of someone accidentally turning the power off of the whole chassis.\n5. Rule out the possibility of a power cut in the general power supply.\nConnect to the restarted switch and try to find any indication of problems. For example:\n1. Check the switch log and look for log entries indicating hardware or software problems: for example, buffer overflows, need to restart queue engine or bad sensor readings.\n2. Check the switch statistics and look for signs of, for example, abnormally high error counter readings or buffering delays. These can be an indication of failing hardware.\n3. Check also for abnormally high load figures: problems and/or poorly configured network (for example loops) can cause major switching problems.\nMake sure that you are using a correct/recommended switch software version. If there is a version recommended by the platform, use it.\nIf the cause of the spontaneous restart cannot be found, and the switch seems to be operating correctly, ignore the alarm. However, if the problem persists and/or reappears, replace the switch blade.		

Table 41-229 SW_SET_ACTIVATION_FAILED

Alarm	Attributes	Applicable major release
Name: SW_SET_ACTIVATION_FAILED (11787) Type: environmentalAlarm Package: racloms.SW_SET_ACTIVATION_FAILED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: SW SET ACTIVATION FAILED Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • LOMS16A
Description: SW SET ACTIVATION FAILED\n\nSoftware Set activation has failed.\n\nOMS will not be restarted with the new SW Set. Old SW Set will be still active. No SW Set status (active/passive) will change.\n\nAlarm shall be cleared automatically after OMS restart or when new request for activation was received or manually by the Operator.		
Remedial action: Operator shall check Nwi3SWAgent logs to determine what caused activation failure.		

Table 41-230 SW_SET_POSTACTIVATION_SCRIPT_EXECUTION_ERROR

Alarm	Attributes	Applicable major release
Name: SW_SET_POSTACTIVATION_SCRIPT_ EXECUTION_ERROR (11788) Type: environmentalAlarm Package: racloms.SW_SET_POSTACTIVATION_ SCRIPT_EXECUTION_ERROR Raised on class: racloms.OMS	Severity: indeterminate Specific problem: SW SET POSTACTIVATION SCRIPT EXECUTION ERROR Implicitly cleared: false Default probable cause: INDETERMINATE	Release: • LOMS16A
Description: SW SET POSTACTIVATION SCRIPT EXECUTION ERROR\n\nError has occurred during the Postactivation Scripts execution.\n\nNewly activated Software Set may not be fully functional as postactivation commands were not performed.\n\nThe user should clear the alarm manually.		

Table 41-230 SW_SET_POSTACTIVATION_SCRIPT_EXECUTION_ERROR (continued)

Alarm	Attributes	Applicable major release
Remedial action: The user should check Nwi3SWAgent and Postactivation Scripts logs to determine\nwhat caused failure. The user should execute the remaining part of the scripts manually.		

Table 41-231 SYSTEM_CLOCK_OUT_OF_SYNC_WITH_NTP_SERVER

Alarm	Attributes	Applicable major release
Name: SYSTEM_CLOCK_OUT_OF_SYNC_WITH_ NTP_SERVER (11789) Type: equipmentAlarm Package: racloms.SYSTEM_CLOCK_OUT_OF_ SYNC_WITH_NTP_SERVER Raised on class: racloms.OMS	Severity: indeterminate Specific problem: SYSTEM CLOCK OUT-OF-SYNC WITH NTP SERVER Implicitly cleared: true Default probable cause: CLOCK_ SYNCHRONISATION_PROBLEM	Release: • LOMS16A
Description: SYSTEM CLOCK OUT-OF-SYNC WITH NTP SERVER\n\nThe local clock is not accurately synchronized with the Network Time Protocol (NTP) time sources. This alarm is raised because the time difference between local and NTP sources is longer than the configured number of seconds.\n\nWhen this alarm is raised, the system time is not in sync with the NTP server and is noticeable by the operator. The system cannot be used for distributed applications that require correctly synchronized network time (i.e. IPSEC-VPN establishment). This will make system logs unreliable. Incorrect timestamps will be done by the system leading to security vulnerabilities, wrong auditing, accounting and authentication and incorrect functioning of the network file system (NFS). An inaccurate system clock also affects the operator billing system.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: Disclaimer: The instructions below use either unsupported SCLI commands,\nor commands from the unsupported full bash shell. Please carefully read\nthe disclaimer that is shown when either entering the unsupported SCLI\nvendor mode or the full bash shell. Do not use the commands in any other\ncontext. Please check from the product documentation or from your local\ntechnical support for more information.\n\n1. Execute the following SCLI command to start an external bash shell session:\n\nshell bash full\n\n2. Execute the following command to check whether /ClusterNTP is in sync with\nserver ntp:\n\nntpdc -np\n\nIn the output, there should be an asterisk mark (*) on the ntp server IP, which\nindicates that it is synching with the ntp server and the alarm has been cleared\nautomatically.\n\nIf there is a cross mark (x) on the ntp server ip, refer step 8.\n\n3. Use the "exit" command to exit the bash shell.\n\n4. Execute the following SCLI command to find the ntp server IP:\n\nshow networking-service ntp\n\n5. If the asterisk (*) is not present on the ntp server IP (in output of step\n# 2), then wait for approximately 20 minutes and check whether alarm has been\ncleared using the following SCLI command:\n\nshow alarm active filter-by specific-problem 70377\n\n6. If alarm is not cleared, use the following SCLI command to sync the system\nclock with the NTP server by restarting the /ClusterNTP.\n\nset has restart managed-object /ClusterNTP\n\n7. In case you need to sync the clock of other nodes (that is, NLN), use the\nfollowing SCLI command:\n\nset has restart managed-object /NodeNTP\n\n8. If the cross mark (x) is present on the ntp server IP (in output of step\n# 2), it means the ntpd has declared the server as falseticker. This situation\narises when configured servers (two servers configuration) are not stable (not\ngiving consistent time), it results in high "jitter" and "delay"\nvalue and it will not be syncing with that server. The ntp configuration with\ntwo servers is not recommended because when there are two servers, and both\nof them claim to be authoritative but provides different times, the ntpd will\nnot be able to decide between them. Hence it will consider both the servers\nas charlatans and mark them as falsetickers.\n\nAs a solution to this problem, use either one or three servers in the ntp configuration\nfor clock sync. \n\na. If there are two existing servers and it is decided to have three servers,\nuse the below SCLI command to configure the additional server:\n\nset networking-service ntp add-forwarder <server ip-address>\n\nb. If there are two existing servers and it is decided to have one server, use\nthe below command to remove the extra server:\n\nset networking-service ntp delete-forwarder <server ip-address>		

Table 41-232 TAKING_CHECKPOINT_OF_IN_MEMORY_DATABASE_FAILED

Alarm	Attributes	Applicable major release
Name: TAKING_CHECKPOINT_OF_IN_MEMORY_DATABASE_FAILED (11790) Type: processingErrorAlarm Package: racloms.TAKING_CHECKPOINT_OF_IN_MEMORY_DATABASE_FAILED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: TAKING CHECKPOINT OF IN-MEMORY DATABASE FAILED Implicitly cleared: true Default probable cause: UNDERLYING_RESOURCE_UNAVAILABLE	Release: • LOMS16A
Description: TAKING CHECKPOINT OF IN-MEMORY DATABASE FAILED\n\nAn attempt to take a checkpoint of an in-memory database has been failed.\n\nThe new checkpoint file is not written to the disk. The transaction log files are not purged. The accumulation of log files may cause the disk to run out of space and thus to total unavailability of the database instance. Moreover, the accumulation may result in a lengthy recovery operation in the case of a data store crash.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: 1. Refer to /var/opt/TimesTen/sys.odbc.ini of the node running the database instance in question. Try to determine the time of the next checkpoint from CkptFrequency and the CkptLogVolume attributes. \n2. Use the parameter management application to check when the checkpoint status is next checked. Attribute fsdbCheckpointStatusCheckInterval of the database defines the checking interval.\n3. Wait until the next checkpoint takes place and the check is completed; use the alarm management application to check whether the alarm stays in active alarms list.\n4. If the next checkpoint also fails, check the reason for the failure and continue according to the respective procedures.\nIf the reason for the alarm is "OngoingBackupOrCheckpoint"\n1. A backup or some other checkpoint operation for the data storage is in progress. The completion time for the backup depends on the size of the database: in some cases it may take a couple of minutes. Wait until the ongoing backup or checkpoint operation is completed.\n2. Wait until the next scheduled checkpoint takes place and the check is completed; use the alarm management application to check whether the alarm stays in the active alarms list.\n3. Wait until the next checkpoint takes place and the check is completed; use the alarm management application to check whether the alarm stays in active alarms list.\n4. If also next checkpoint fails contact your local Nokia representative.\nIf the reason for the alarm is "TimeOut" or "Failure"\n1. Collect following information:\n- contents of current syslog (/var/log/master-syslog)\n- output of command 'ttStatus -v'\nand contact your local Nokia representative and provide them with this information.		

Table 41-233 TAKING_SCHEDULED_CHECKPOINT_OF_IN_MEMORY_DATABASE_FAILED

Alarm	Attributes	Applicable major release
Name: TAKING_SCHEDULED_CHECKPOINT_OF_IN_MEMORY_DATABASE_FAILED (11791) Type: processingErrorAlarm Package: racloms.TAKING_SCHEDULED_CHECKPOINT_OF_IN_MEMORY_DATABASE_FAILED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: TAKING SCHEDULED CHECKPOINT OF IN-MEMORY DATABASE FAILED Implicitly cleared: false Default probable cause: APPLICATION_SUBSYSTEM_FAILURE	Release: • LOMS16A
Description: TAKING SCHEDULED CHECKPOINT OF IN-MEMORY DATABASE FAILED\n\nTaking scheduled checkpoint of in-memory database failed.\n\nThe new checkpoint file is not written to the disc. The transaction log files are not purged. The accumulation of log files may cause the disk to run out of space. Moreover, the accumulation may result in a lengthy recovery operation in the case of a data store crash.\n\nClear the alarm with alarm management application after correcting the fault as presented in INSTRUCTIONS.		

Table 41-233 TAKING_SCHEDULED_CHECKPOINT_OF_IN_MEMORY_DATABASE_FAILED (continued)

Alarm	Attributes	Applicable major release
Remedial action: Note: In these instructions, TimesTen is referring to the concept in-memory database.\n\n1. Determine the node from the Identifying Additional Info field of the alarm, in other words, the node where the database in question resides.\n\n2. Log into the database node.\n\n3. In the node where the alarm was raised, determine the directory of the checkpoint files (.ds0 and .ds1) for the database in question with the following command:\n\n ttStatus\n\nSee data management documentation for more instructions about the ttStatus command.\n\n4. Check the timestamps of the checkpoint files of the database.\n\nIf the timestamp of one of the checkpoints is later than the time of the alarm, the next checkpoint has been successful and the alarm can be cleared.\n\n5. If the alarm still has the latest timestamp compared to the checkpoint files of the database, gather the following information:\n\n a. Copy the original master-syslog to the temporary directory.\n cp /var/log/master-syslog /tmp/<filenameA>.<extension>\n Select filenameA and extension, for example, <alarm_number>_syslog.log.\n\n b. Move to the tmp directory.\n cd /tmp\n\n c. In the node where the alarm was raised, determine the TimesTen status.\n ttStatus -v > /tmp/<filenameB>.txt\n Select filenameB, for example, <alarm number>_ttstatus.log. The requirement is that filenameB differs from filenameA.\n\n d. Compress the files with the tar command. \n tar -cf <tarname>.tar <filenameA>.<extension> <filenameB>.txt\n Select tarname, for example, <alarm number>.tar.\n\nNote that the tar command does not delete the original files. When the files are not needed anymore, they can be deleted. \n\n e. Contact your Nokia representative with the information gathered.		

Table 41-234 THRESHOLD_MONITORING_LIMIT_EXCEEDED

Alarm	Attributes	Applicable major release
Name: THRESHOLD_MONITORING_LIMIT_ EXCEEDED (11792) Type: qualityOfServiceAlarm Package: racloms.THRESHOLD_MONITORING_ LIMIT_EXCEEDED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: THRESHOLD MONITORING LIMIT EXCEEDED Implicitly cleared: true Default probable cause: THRESHOLD_CROSSED	Release: • LOMS16A
Description: THRESHOLD MONITORING LIMIT EXCEEDED\n\nThreshold monitoring makes it easier to detect faults, identify bottlenecks and optimize the network. Using Element Manager GUI, appropriate performance thresholds are determined for each important variable, and exceeding these thresholds indicates a problem worth of attention. These variables can be either single counters or Key Performance Indicators (KPIs), which can be a combination of several counters.\n \nWhen performance data is gathered on variables of interest from the measured objects in the network, their values are compared against any active threshold limits. When a performance threshold is exceeded, an alarm is generated and sent to the network management system. In addition to this, a threshold event log is saved in the network element for further study of the events which have occurred in that NE during a certain period of time.\n \nWhen this alarm has been triggered, it means that a threshold monitoring rule has been evaluated as true by OMS. The object of this alarm is always OMS, even if the threshold rule had been targeted to some other measured object. The real object of the threshold alarm and more information on the event can be seen with the NE Threshold Management application.\n\nThe effect of this alarm is dependent on what is the operator defined threshold rule that triggered the alarm setting.\n\nDo not clear the alarm. This alarm is cancelled automatically by the system after 15 seconds.		
Remedial action: Threshold alarm does not necessarily mean that there are problems in the network element, because thresholds can be freely set by the operator, and some rules may have been set incorrectly.\n \nTo get further information on the reason of the threshold alarm:\n \n- Connect to the network element with Element Manager.\n- Open the NE Threshold Management application.\n- Select "Show Threshold Log" from the View menu and check the threshold log.\n \nWhen the target object and other information of the alarm have been checked from the log, you can obtain more information from the performance counters of measurements and, if necessary, take appropriate action to correct the problem. The counters can be browsed either by using Element Manager applications (NE Measurement Explorer or RNW Measurement Presentation) or by using NetAct reporting tools.		

Table 41-235 THRESHOLD_VALUE_EXCEEDED_IN_ETHERNET_DEVICE

Alarm	Attributes	Applicable major release
Name: THRESHOLD_VALUE_EXCEEDED_IN_ETHERNET_DEVICE (11793) Type: qualityOfServiceAlarm Package: racloms.THRESHOLD_VALUE_EXCEEDED_IN_ETHERNET_DEVICE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: THRESHOLD VALUE EXCEEDED IN ETHERNET DEVICE Implicitly cleared: false Default probable cause: THRESHOLD_CROSSED	Release: • LOMS16A
Description: THRESHOLD VALUE EXCEEDED IN ETHERNET DEVICE\n\nThe Utilization Flag indicates that the utilization value has been exceeded from the port/interface. \n\nThe Remote Monitoring system periodically takes statistical samples from the various Ethernet variables, the oversize/undersize packet count, number of broadcast packets, Octets of data etc. and compares these to thresholds that have been configured. The alarm table stores configuration entries that each defines a variable, polling period, and threshold parameters. If a sample is found to cross the threshold values, an event is generated. This mechanism generates one event as a threshold is crossed in the appropriate direction. No more events are generated for that threshold until the opposite threshold is crossed. This object can be used as a reasonable estimate of Ethernet utilization. The result equation is the value Utilization that is the percent utilization of the Ethernet segment on a scale of 0 to 100 percent.\n\nThe Rising RMON Alarm trap is generated when an alarm entry crosses its rising threshold and generates an event that is configured for sending SNMP traps. \n\nThe Falling RMON Alarm trap that is generated when an alarm entry crosses its falling threshold and generates an event that is configured for sending SNMP traps.\n\nThese traps indicate a change in the threshold of one or more of the Ethernet counters. If the traffic through some port/interface is too heavy, it can prevent some important service or server functionality behind that port/interface.\n\nClear the alarm with the Alarm Browser after correcting the fault as presented in INSTRUCTIONS.		
Remedial action: Check the LAN configuration. Check the interface(s) that have sent Rising/Falling Alarm. Check also the network topology and the reason for the increased traffic in the interface.		

Table 41-236 TRACE_CONNECTION_TO_NE_IS_LOST

Alarm	Attributes	Applicable major release
Name: TRACE_CONNECTION_TO_NE_IS_LOST (11794) Type: communicationsAlarm Package: racloms.TRACE_CONNECTION_TO_NE_IS_LOST Raised on class: racloms.OMS	Severity: indeterminate Specific problem: TRACE CONNECTION TO NE IS LOST Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • LOMS16A
Description: TRACE CONNECTION TO NE IS LOST\n\nTrace connection to NE is lost. This might happen when synchronization with NE to OMS is lost, connection is interrupted or there is overload situation.\n\n-\n\nAlarm is cancelled automatically after time to live for the alarm has elapsed.		
Remedial action: -		

Table 41-237 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major release
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm Package: netw.TrapDestinationMisconfigured Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trapDestinationMisconfigured Applicable probable causes: • trapDestinationMisconfigured • duplicateTrapLogId	Release: • LOMS16A
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 41-238 TrapReceivingFailure

Alarm	Attributes	Applicable major release
Name: TrapReceivingFailure (1083) Type: communications Package: netw.TrapReceivingFailure Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: trapsWillNotBeSent	Release: • LOMS16A
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		
Raising condition: ((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')))		
Clearing condition: ((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))))		

Table 41-238 TrapReceivingFailure (continued)

Alarm	Attributes	Applicable major release
Remedial action: A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

Table 41-239 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major release
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications Package: netw.TrapRoutePreferenceRedundancyMissing Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trapsRedundancyMissing	Release: • LOMS16A
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: ((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')))		
Clearing condition: ((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None')))		
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

Table 41-240 TROUBLESHOOTING_DATA_CREATION_OR_UPLOAD_FAILED

Alarm	Attributes	Applicable major release
Name: TROUBLESHOOTING_DATA_CREATION_OR_UPLOAD_FAILED (11795) Type: communicationsAlarm Package: racloms.TROUBLESHOOTING_DATA_CREATION_OR_UPLOAD_FAILED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: TROUBLESHOOTING DATA CREATION OR UPLOAD FAILED Implicitly cleared: true Default probable cause: TRANSMISSION_FAILURE	Release: • LOMS16A
Description: TROUBLESHOOTING DATA CREATION OR UPLOAD FAILED\n\nThere was a problem in requesting troubleshooting data collection or during troubleshooting data upload.\n\nTroubleshooting data is not available.\n\nDo not clear the alarm. System clears the alarm automatically.		
Remedial action: Depending on the failure reason the operation of troubleshooting data request may be renewed. In particular, if there was some problem during file transfer or operation timeout happened.		

Table 41-241 TROUBLESHOOTING_DATA_RECEIVED

Alarm	Attributes	Applicable major release
Name: TROUBLESHOOTING_DATA_RECEIVED (11796) Type: environmentalAlarm Package: racloms.TROUBLESHOOTING_DATA_RECEIVED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: TROUBLESHOOTING DATA RECEIVED Implicitly cleared: true Default probable cause: INDETERMINATE	Release: • LOMS16A
Description: TROUBLESHOOTING DATA RECEIVED\n\nTroubleshooting file is received from the NE.\n\nThe file is available in OMS disk.\n\nDo not clear the alarm. System will clear the alarm automatically.		
Remedial action: Troubleshooting file uploaded by NE is available in OMS disk from /var/opt/OMSftproot/NE/TroubleshootingData.\nThe troubleshooting file is kept in OMS disk for a configurable amount of time (the default value, configured by the dwNELogDaysSpan parameter, is 10 days).\n\nHowever, this troubleshooting file is automatically deleted in OMS in the following cases:\n\n1) If the available storage space in OMS is getting full, also younger files - that is files stored for at least 2 hours (or equivalently, 120 minutes, as per the default value of the related configuration parameter - dwBTSLogObsolescenceTimeMins) - shall be deleted.\n\n2) When the troubleshooting data file is already uploaded to NetAct in the following situations:\n\n a) For Troubleshooting Data Collection and Upload requested by NetAct User, OMS notifies NetAct about availability of file/s and NetAct uploads the file/s from OMS.\n\n b) For NE triggered troubleshooting log collection, OMS notifies NetAct about availability of the file and NetAct uploads the file from OMS.\n\n \nNote 1: When the troubleshooting data file is still available in OMS disk, it can be viewed in OMS Web UI and can also be downloaded to user's local disk.\nNote 2: When the troubleshooting data file is already uploaded to NetAct:\n\n - In OSS5.x system troubleshooting files can be found from /var/opt/nokia/oss/global/ltemei/lte_ne_symptom_file in CS-2 server.\n\n - In NetAct8 system troubleshooting files can be found from /var/opt/oss/global/nwi3/ne_symptom_files.		

Table 41-242 UNEXPECTED_CONNECTIONS_TO_IN_MEMORY_DATABASE_HAVING_STANDBY_ROLE

Alarm	Attributes	Applicable major release
Name: UNEXPECTED_CONNECTIONS_TO_IN_MEMORY_DATABASE_HAVING_STANDBY_ROLE (11797) Type: processingErrorAlarm Package: racloms.UNEXPECTED_CONNECTIONS_TO_IN_MEMORY_DATABASE_HAVING_STANDBY_ROLE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: UNEXPECTED CONNECTIONS TO IN-MEMORY DATABASE HAVING STANDBY ROLE Implicitly cleared: true Default probable cause: SOFTWARE_ERROR	Release: • LOMS16A
Description: UNEXPECTED CONNECTIONS TO IN-MEMORY DATABASE HAVING STANDBY ROLE\n\nOne or more connections exist to an in-memory database that has a standby role.\n\nThe Level of the database high availability is slightly reduced. In a case of serious replication problems the in-memory database watchdog process is not able to attempt to fix the problem by duplicating the database. In this case the database is, in effect, a standalone database and a separate alarm (70171) is raised.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: Wait for a while and check whether the alarm persists. If the alarm is not cleared automatically within minute, check the processes that are connected to the database as follows:\n1. Connect to the node having the database instance as root.\n2. Check identifiers of processes that are connected to the database by running the ttStatus command. The command lists connections to each database in that node. Concentrate on the database of this alarm and look at connections of the type Process or Server.\n3. For each type of Process connection look at the process identifier (pid) of the connected process and run the command\nps p <pid>\n(<pid> is the process identifier) in same node where the database is located in order to see the connected process.\n4. For each type of Server connection look at the client information below and pick process identifier (pid) and node name. Run the following command\nssh <node> "ps p <pid>"\n(<node> is the node and <pid> process identifier you picked from the client information) to see the connected process.\nContact your local NSN representative and provide the information you obtained from the ttStatus and ps commands.		

Table 41-243 UNEXPECTED_PERSISTENT_STATUS_DATA_VALUES_FOR_IN_MEMORY_DATABASE

Alarm	Attributes	Applicable major release
Name: UNEXPECTED_PERSISTENT_STATUS_DATA_VALUES_FOR_IN_MEMORY_DATABASE (11798) Type: processingErrorAlarm Package: racloms.UNEXPECTED_PERSISTENT_STATUS_DATA_VALUES_FOR_IN_MEMORY_DATABASE Raised on class: racloms.OMS	Severity: indeterminate Specific problem: UNEXPECTED PERSISTENT STATUS DATA VALUES FOR IN-MEMORY DATABASE Implicitly cleared: false Default probable cause: APPLICATION_SUBSYSTEM_FAILURE	Release: • LOMS16A
Description: UNEXPECTED PERSISTENT STATUS DATA VALUES FOR IN-MEMORY DATABASE\n\nPersistent status data values for a replicated pair of in-memory databases have become corrupted (inconsistent combination of values or erroneous single value).\n\nThe database high availability (HA) service for the in-memory database cannot determine which of the databases should accept the active role. The watchdog process cannot enable the database and application does not connect to any of the database instances. Manual recovery is required.\n\nClear the alarm with alarm management application after correcting the fault as explained in INSTRUCTIONS.		
Remedial action: 1. Check the persistent status info in application additional info for types or invalid combinations. The valid combinations are:\n("","","","")\n("active","sync","","")\n("active","oosync","","")\n("active","oosync", "active","sync")\n("active","duplicate","","")\n("active","duplicate","active","sync")\n("standby", "sync","active","sync")\n("standby","sync","active","oosync")\n("standby","sync","active", "duplicate")\n("standby","oosync","active","sync")\n("standby","oosync","active","oosync")\n("standby","oosync","active,"duplicate")\nplus all the combinations made from above combinations by swapping persistent role and peer persistent role, and persistent status and peer persistent status.\n\n2. If a typo is found and it is known that the values have been updated manually, correct the value with the fshascli command as illustrated in the following example:\nfshascli -S Role="active fsdbHostName=TA-A,fsdbName=DB_TestTT, fsFragmentId=DB,fsClusterId=ClusterRoot\n\n3. If an invalid value combination is found, try to validate it if one of the database instances is able to play an active role. Then, use the fshascli-command to set the correct combination. For example, if an instance of node TA-A gets the active role an and instance of TA-B the standby role, use the following commands to correct the status:\nfshascli -S Role=standby fsdbHostName=TA-B,fsdbName=DB_TestTT,fsFragmentId=DB,fsClusterId=ClusterRoot\nfshascli -S State=oosync fsdbHostName=TA-B,fsdbName=DB_TestTT,fsFragmentId=DB,fsClusterId=ClusterRoot\nfshascli -S Role=active fsdbHostName=TA-A, fsdbName=DB_TestTT,fsFragmentId=DB,fsClusterId=ClusterRoot\nfshascli -S State=oosync fsdbHostName=TA-A,fsdbName=DB_TestTT,fsFragmentId=DB,fsClusterId=ClusterRoot\nThe in-memory database watchdog process checks periodically the persistent status data and will enable the TA-A instance after a while."		

Table 41-244 UnidentifiedNode

Alarm	Attributes	Applicable major release
Name: UnidentifiedNode (1922) Type: communicationsAlarm Package: netw.UnidentifiedNode Raised on class: netw.DiscoveredNode	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unidentifiedNode	Release: • LOMS16A
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 41-245 UNKNOWN_SNMP_TRAP

Alarm	Attributes	Applicable major release
Name: UNKNOWN_SNMP_TRAP (11799) Type: processingErrorAlarm Package: racloms.UNKNOWN_SNMP_TRAP Raised on class: racloms.OMS	Severity: indeterminate Specific problem: UNKNOWN SNMP TRAP Implicitly cleared: false Default probable cause: CORRUPT_DATA_M3100	Release: • LOMS16A
Description: UNKNOWN SNMP TRAP\n\nThe SNMP Mediator has received an SNMP trap that it is unaware of. The trap is unknown to the SNMP Mediator, if\n1) the IP address of the SNMP agent that sends the trap is missing from the SNMP Mediator's configuration, or\n2) the OID (object identifier) of the trap is unknown to the SNMP Mediator.\n\n1) Unknown traps may contain information that could be useful. \n2) Unnecessary traps waste network capacity.\n\nClear the alarm with the fault management application after correcting the fault.		
Remedial action: 1. Using the parameter management application, check that the IP address of the SNMP agent is stored in the SNMP Mediator's configuration. An entry of the following format should be found:\nfssnmpNEId="<agent IP or hostname>,\nfssnmpAttribute-Type=NEattrs, \nfssnmpMediatorName=1,\nfsFragmentId=SNMP,\nfsClusterId=ClusterRoot\n\n2. If the trap is unnecessary, \n check whether there is a way to disable the sending of the trap in the SNMP agent or \n use filtering in the SNMP Mediator. The SNMP Mediator may be configured to filter out traps by adding an entry of the following format:\nfssnmpV2TrapId=<trap OID>\ nfssnmpAttributeType=V2traps, \nfssnmpMediatorName=1,\nfsFragmentId=SNMP,\nfsClusterId=ClusterRoot\nIf the above entry without attributes exists in the configuration, the SNMP Mediator will ignore the trap and no alarm is raised. Additionally, filtering attributes fssnmpAcceptFrom or fssnmpDiscardFrom may be used to define the IP addresses from where the trap should be accepted or ignored. Attribute fssnmpFilterCondition may be used for filtering away traps based on variables within the trap itself. See RFC 2254 for information about the filter syntax ("approx", "extensible" and "escaping mechanism" are not supported).\n3. If the trap contains important information, the implementation of the SNMP Mediator should be updated. The rules that define what the SNMP Mediator does when it receives traps are part of the implementation. Fill in a problem report and send it to your local Nokia representative."		

Table 41-246 UNKNOWN_SPECIFIC_PROBLEM

Alarm	Attributes	Applicable major release
Name: UNKNOWN_SPECIFIC_PROBLEM (11800) Type: processingErrorAlarm Package: racloms.UNKNOWN_SPECIFIC_PROBLEM Raised on class: racloms.OMS	Severity: indeterminate Specific problem: UNKNOWN SPECIFIC PROBLEM Implicitly cleared: true Default probable cause: CONFIGURATION_OR_ CUSTOMIZING_ERROR	Release: • LOMS16A
Description: UNKNOWN SPECIFIC PROBLEM\n\nThis alarm indicates detection of an alarm notification for a specific problem (alarm number) that is unknown to the alarm system (the corresponding alarm type isn't defined in the reference data).\n\nThe unknown specific problem can be the result of either using a dynamic alarm type (a type that isn't inherently predefined and correspondingly not ported to the alarm system) or a mistake due to a missing import of the existing alarm definition in the alarm system.\n\nThe alarm system creates a new type of alarm on the fly, using data from the alarm notification to set the alarm type parameters. This alarm type is stored persistently in the alarm system database reference data and applied to subsequent new alarm notifications that contain the specific problem in question, which results in no longer raising alarm 70280 in a case of the recently registered specific problem.\n\nThe alarm system clears the alarm automatically after its time to live\nhas expired.		

Table 41-246 UNKNOWN_SPECIFIC_PROBLEM (continued)

Alarm	Attributes	Applicable major release
Remedial action: The alarm either announces the use of a dynamic alarm type in alarm notification or indicates an undefined alarm in the alarm system (the exact reason can be identified by checking the list of known alarms in the customer documentation). In the latter case contact your Nokia representative to upgrade the system with the missing alarm definition.\n\nThe alarm system creates a new alarm type using the following values for its parameters:\n\nA. Static parameters:\n\n1. Alarm text - the value of a special field in the alarm notification; if the field isn't defined then the text takes the following form: "ALARM NNN" where NNN is the specific problem in question.\n2. Probable cause - 0 (INDETERMINATE).\n3. Event type - Environmental.\n4. Specific problem - the specific problem in question.\n5. Clearing info - automatic clearing.\n\nB. Dynamic parameters:\n\n6. Default severity - the perceived severity of the alarm notification; if it isn't set then the INDETERMINATE value is used.\n7. Autoacknowledgment - yes, if the fsParameterId= "fsAutoAckedDAT,\nfsAlarmProcessorConfigurationId=Default, fsAlarmProcessorId=AlarmProcessor1,\nfsFragmentId= AlarmProcessors, fsFragmentId=AlarmMgmt, fsClusterId=ClusterRootdefined attribute in the alarm system LDAP configuration is set to "true"; otherwise - no.\n8. Switch over update - no.\n9. Clearing delay - 0.\n10. Informing delay - 0.\n11. Time to live - 0.\n12. Operation Instructions - "Not defined".\n \nIf required, the static parameters can be changed with an alarm management application."		

Table 41-247 UnmanageFailed

Alarm	Attributes	Applicable major release
Name: UnmanageFailed (300) Type: discoveryControlAlarm Package: netw.UnmanageFailed Raised on class: netw.NodeDiscoveryControl	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unableToDeleteNode	Release: • LOMS16A
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'Unmanage Failed')		
Clearing condition: ('Site State' NOT EQUAL 'Unmanage Failed')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 41-248 UNRECOMMENDED_CONFIGURATION_FORCED_BY_OPERATOR

Alarm	Attributes	Applicable major release
Name: UNRECOMMENDED_CONFIGURATION_ FORCED_BY_OPERATOR (11801) Type: equipmentAlarm Package: racloms.UNRECOMMENDED_ CONFIGURATION_FORCED_BY_OPERATOR Raised on class: racloms.OMS	Severity: indeterminate Specific problem: UNRECOMMENDED CONFIGURATION FORCED BY OPERATOR Implicitly cleared: true Default probable cause: EQUIPMENT_ MALFUNCTION	Release: • LOMS16A

Table 41-248 UNRECOMMENDED_CONFIGURATION_FORCED_BY_OPERATOR (continued)

Alarm	Attributes	Applicable major release
Description: UNRECOMMENDED CONFIGURATION FORCED BY OPERATOR\n\nServices that are critical to the system operation are provided in the CLA-0 and CLA-1 nodes using an active-standby redundancy model. The most important service is called Directory. \nOne of the following has happened: \n\na) An operator has, by issuing a switchover or lock command, forced the Directory service to run in the same node as the Cluster Management Functionality (CMF). \n\nb) An operator has locked the current standby FSDirectoryServer recovery unit. The Directory and Cluster Management Functionality services are, however, not running in the same node.\n\nc) An operator has, by issuing CFM yield or CMF disable command, forced the master CMF to run in the same node with Directory service.\n\nd) An operator has disabled both CMF services using CMF disable command and then started CMF in the same node with Directory service by issuing CMF enable command.\n\nThe system attempts to keep the services on separate nodes. If a failure or an operator action forces the services to the same node the system automatically tries to move CMF service to another node after some time. The automatic service separation however will not work if one of the CMF services is disabled or the CMF service was forced to run in the same node with Directory service by issuing a CMF yield command.\n\nThe situation has no immediate impact to system operation. The system provides services normally as long as the currently operational CLA node(s) and their services remain functional. \nAn operator can choose to set this configuration if, for example, one CLA node needs maintenance. \nIf the critical system services are currently running in the same node, a node failure causes their services to be down for some time. Especially the Directory service switchover can last considerably longer than usual. Directory service downtime has often immediate impact on the services provided by the network element, because the shared system disk is unavailable.\nIf the critical services of the system are running on separate CLA nodes, but the FSDirectoryServer recovery unit is locked in one CLA node, failure of the node that provides the Directory service causes the Directory service to be down for a few minutes (until the node has successfully rebooted) or permanently (if the node fails to start).\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: Find out why the Directory service has been forced to run in the same node as the Cluster Management Functionality or why an FSDirectoryServer recovery unit has been locked.\nIf the situation was not intentional, the system can be restored to a safer state by performing the following steps: \n1. Log into the system as root user. \n2. Check the status of the FSDirectoryServer recovery units using the fshascli command: \n$ fshascli --state "/*/FSDirectoryServer"\n/CLA-0/FSDirectoryServer:\nadministrative(UNLOCKED)\noperational(ENABLED)\nusage(ACTIVE)\nprocedural()\navailability()\nunknown(FALSE)\nalarm()\nrole(ACTIVE)\n\n/CLA-1/FSDirectoryServer:\nadministrative(LOCKED)\noperational(ENABLED)\nusage(IDLE)\nprocedural(NOTINITIALIZED)\navailability(OFFDUTY)\nunknown(FALSE)\nalarm()\nrole(COLDSTANDBY)\n\n3. If one of the recovery units is LOCKED, unlock it using the fshascli command. For example: \n$ fshascli --unlock /CLA-1/FSDirectoryServer\n/CLA-1/FSDirectoryServer is unlocked successfully.\n\n4. Once both recovery units are unlocked, you need to check if the Directory service is running in the same CLA node as the Cluster Management Functionality. Use the fshascli command to check which one of CLA node is providing the service. \n$ fshascli --state "/*/FSDirectoryServer"\n/CLA-0/FSDirectoryServer:\nadministrative(UNLOCKED)\noperational(ENABLED)\nusage(ACTIVE)\nprocedural()\navailability()\nunknown(FALSE)\nalarm()\nrole(ACTIVE)\n\n/CLA-1/FSDirectoryServer:\nadministrative(UNLOCKED)\noperational(ENABLED)\nusage(IDLE)\nprocedural(NOTINITIALIZED)\navailability()\nunknown(FALSE)\nalarm()\nrole(COLDSTANDBY)\n\nThe recovery unit that has the ACTIVE role is providing the service. Note that the operational recovery unit must also have operational state ENABLED, usage state ACTIVE and the procedural status value must be empty. \n\n5. Use the fscmfcli command to check which node is providing the Cluster Management Functionality. Note that with the --status option, the fscmfcli expects the node managed object name of an operational CLA node. If both CLA nodes are operational, it does not matter which one is specified. For example, \n$ fscmfcli --status /CLA-0\nCLA-0: CMF-SERVING priority: 5\nCLA-1: CMF-DISABLED priority: 6 \n\n6. If the services are provided by different nodes, no further actions are required. \nIn the example situation the services are both provided by the CLA-0 node. The situation can be solved by forcing either Directory or CMF service to another node. Usually a CMF switchover is recommended as the Directory service switchover takes more time and applications using the services provided by the Directory will be un-operational during the switchover. In this case the backup CMF is disabled which will prevent the CMF switchover. The backup CMF needs to be enabled first;\n$ fscmfcli --enable /CLA-1\nCluster management functionality enabled on host CLA-1\n$ fscmfcli -s /CLA-0\nCLA-0: CMF-SERVING priority: 5\nCLA-1: CMF-BACKUP priority: 6\n\n7. After both of the CMF services are enabled the CMF service can be switched over to backup node:\n$ fscmfcli --yield /CLA-0\nHost CLA-0 is giving up active role.\n$ fscmfcli -s /CLA-0\nCLA-0: CMF-BACKUP priority: 5\nCLA-1: CMF-SERVING priority: 6\n\n8. If you choose to execute a Directory service switchover, enter the following fshascli switchover command: \n$ fshascli --switchover --nowarning --force /Directory\n/Directory switchover done successfully\n\nNote that if your terminal connection to the cluster was established to the Directory service IP address, your terminal connection is closed and you must log in again.		

Table 41-249 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major release
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm Package: netw.UpgradedBuildVersionMismatch Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: upgradedImageNotBooted	Release: • LOMS16A
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 41-250 upgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: upgradedCardAlarm (255) Type: softwareAlarm Package: equipment.upgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: upgradedCard	Release: • LOMS16A
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 41-251 UplinkDown

Alarm	Attributes	Applicable major release
Name: UplinkDown (11062) Type: virtualSwitchAlarm Package: dctr.UplinkDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsAllDown	Release: • LOMS16A
Description: The alarm is raised when all connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '2'))		
Clearing condition: (('uplinkState' NOT EQUAL '2'))		
Remedial action: This alarm is raised when all connections associated to the uplink lost connectivity.		

Table 41-252 UplinkPartiallyDown

Alarm	Attributes	Applicable major release
Name: UplinkPartiallyDown (11063) Type: virtualSwitchAlarm Package: dctr.UplinkPartiallyDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsDown	Release: • LOMS16A
Description: The alarm is raised when some connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '3'))		
Clearing condition: (('uplinkState' NOT EQUAL '3'))		
Remedial action: This alarm is raised when a connection of the uplink lost connectivity but at least one connection remains connected.		

Table 41-253 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm Package: sw.VersionConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: versionMismatch	Release: • LOMS16A
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 41-254 VOLTAGE_OUT_OF_LIMIT

Alarm	Attributes	Applicable major release
Name: VOLTAGE_OUT_OF_LIMIT (11802) Type: equipmentAlarm Package: racloms.VOLTAGE_OUT_OF_LIMIT Raised on class: racloms.OMS	Severity: indeterminate Specific problem: VOLTAGE OUT OF LIMIT Implicitly cleared: true Default probable cause: POWER_SUPPLY_FAILURE	Release: • LOMS16A
Description: VOLTAGE OUT OF LIMIT\n\nThe unit's voltage has exceeded the programmed threshold value(high or low values).\n\nThe unit may behave erratically.\n\nThe system clears the alarm automatically when the fault has been corrected.		
Remedial action: 1. Check that the input voltage of the power feed in the cabinet is correct.\n\n2. Check that the affected unit is healthy, and is plugged-in properly.\n\n3. Restart the unit, if necessary.\n\n4. Replace the unit, if necessary.\n\n5. If the problem exists even after following the instructions, please contact your local customer support.		

Table 41-255 WARNINGS_REPORTED_FOR_MSU_AUTOMATIC_POSTCONFIGURATION

Alarm	Attributes	Applicable major release
Name: WARNINGS_REPORTED_FOR_MSU_AUTOMATIC_POSTCONFIGURATION (11803) Type: environmentalAlarm Package: racloms.WARNINGS_REPORTED_FOR_MSU_AUTOMATIC_POSTCONFIGURATION Raised on class: racloms.OMS	Severity: indeterminate Specific problem: WARNINGS REPORTED FOR MSU AUTOMATIC POSTCONFIGURATION Implicitly cleared: false Default probable cause: INDETERMINATE	Release: • LOMS16A
Description: WARNINGS REPORTED FOR MSU AUTOMATIC POSTCONFIGURATION\n\nThe OMS has detected WARNINGS in the log files. The warnings were reported in the last phase of a major software upgrade (MSU) procedure. The found warnings did not trigger a fallback to the previous OMS release. The OMS is working properly, but it is possible that the user data was not migrated completely.\n\nThe alarm is raised if OMS encounters warnings during checking of automatic postconfiguration logs.\n\nClear the alarm with alarm management application once the reported warnings have been investigated as presented in the Instructions.		
Remedial action: Operator should inspect WARNING entries in listed log files. In case of lack of knowledge about warnings meaning, listed log files have to be gathered by Operator into package and sent to troubleshooting team.		

Table 41-256 WCEL_THRESHOLD_MONITORING_LIMIT_EXCEEDED

Alarm	Attributes	Applicable major release
Name: WCEL_THRESHOLD_MONITORING_LIMIT_EXCEEDED (11804) Type: qualityOfServiceAlarm Package: racloms.WCEL_THRESHOLD_MONITORING_LIMIT_EXCEEDED Raised on class: racloms.OMS	Severity: indeterminate Specific problem: WCEL THRESHOLD MONITORING LIMIT EXCEEDED Implicitly cleared: true Default probable cause: THRESHOLD_CROSSED	Release: • LOMS16A
Description: WCEL THRESHOLD MONITORING LIMIT EXCEEDED\n\nWhen this alarm has been triggered, it means that a threshold monitoring rule has been evaluated as true by OMS for some WCDMA cell object in the Cell Resource measurement. More information on the event can be seen with the NE Threshold Management application in OMS Element Manager.\n\nThreshold monitoring makes it easier to detect faults, identify bottlenecks and optimize the network. Using OMS Element Manager GUI, appropriate performance thresholds are determined for each important variable, and exceeding these thresholds indicates a problem worth of attention. These variables can be either single counters or Key Performance Indicators (KPIs), which can be a combination of several counters.\n\nWhen performance data is gathered on variables of interest from the measured objects in the network, their values are compared against any active threshold limits. When a performance threshold is exceeded, an alarm is generated and sent to the network management system. In addition to this, a threshold event log is saved in the network element for further study of the events which have occurred in that NE during a certain period of time.\n\n-\n\nDo not clear the alarm. This alarm has a lifetime of 65 minutes.		
Remedial action: Threshold alarm does not necessarily mean that there are problems in the network element, because thresholds can be freely set by the operator, and some rules may have been set incorrectly.\n\nTo get further information on the reason of the threshold alarm:\n\n- Connect to the network element with Element Manager.\n\n- Open the NE Threshold Management application.\n\n- Select "Show Threshold Log" from the View menu and check the threshold log.\n\nWhen the target object and other information of the alarm have been checked from the log, you can obtain more information from the performance counters of measurements and, if necessary, take appropriate action to correct the problem. The counters can be browsed with RNW Measurement Presentation application or by using NetAct reporting tools.		

Table 41-257 WEBSPHERE_INTERNAL_ERROR

Alarm	Attributes	Applicable major release
Name: WEBSPHERE_INTERNAL_ERROR (11805) Type: processingErrorAlarm Package: racloms.WEBSPHERE_INTERNAL_ERROR Raised on class: racloms.OMS	Severity: indeterminate Specific problem: WEBSPHERE INTERNAL ERROR Implicitly cleared: true Default probable cause: SOFTWARE_PROGRAM_ERROR	Release: • LOMS16A
Description: WEBSPHERE INTERNAL ERROR\n\nWebSphere internal error is raised if there are new exceptions in the WebSphere log files. The exception can be located in the application Server SystemOut.log or under the WebSphere ffdc logs directory.\n\nThe raised Alarm is an indication of a problem that can cause the applications running inside WebSphere not to run correctly. The problem can also cause that the FlexiServer Element Manager is not able to contact the Application Server or the application deployed to WebSphere.\n\nClear the alarm with Alarm Browser after correcting the fault as presented in INSTRUCTIONS.		
Remedial action: If this alarm is raised, the operator has to make an immediate collection of the logs of WebSphere using its collector tool. The collector tool is located under the profile path bin directory </var/mnt/local/<partion_name>/profiles/<profile_name>/bin/collector.sh>. \nAs a result of using the collector tool, a new file will be created to the system "<node>-<cell_name>-<node_name>-<server_name>-WASenv.jar". This file contains all the logs from WebSphere. This file is valuable for error detection and fixing the problems. The file will be created to the same directory from which it is executed.		

Table 41-258 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major release
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm Package: netw.WrongCpaaSoftwareVersion Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion	Release: • LOMS16A
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL '\"TiMOS-B-3.0.Generic \"') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Clearing condition: (('Software Version' NOT EQUAL '\"TiMOS-B-3.0.Generic \"') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

42 OpenFlow

42.1 Alarms

Alarms

Note: Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see Chapter 39, “Unspecified NE”.

Table 42-1 AGWDiameterPeerDown

Alarm	Attributes	Applicable major release
Name: AGWDiameterPeerDown (844) Type: EpcAlarm Package: lte.AGWDiameterPeerDown Raised on class: lte.AGWDiameterPeer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerDown	Release: • N/A
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 42-2 AuxiliaryServerStatus

Alarm	Attributes	Applicable major release
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm Package: server.AuxiliaryServerStatus Raised on class: server.AuxiliaryServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • N/A
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 42-3 BareMetalReachabilityDown

Alarm	Attributes	Applicable major release
Name: BareMetalReachabilityDown (10273) Type: virtualPortAlarm Package: dctr.BareMetalReachabilityDown Raised on class: dctr.BMDevice	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BareMetalReachability-DownOrDeleted	Release: • N/A
Description: The alarm is raised when Bare Metal server is reachability down.		
Raising condition: (('bgpReachabilityState' NOT EQUAL '0'))		
Clearing condition: (('bgpReachabilityState' EQUAL '0'))		
Remedial action: This alarm can be cleared when bare metal device BGP prefix is up. Check for virtual switch controller down or virtual switch down or interface/port down in underlay network (hence the BGP prefix not advertised).		

Table 42-4 BootableConfigBackupFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigBackupFailed (103) Type: configurationAlarm Package: sw.BootableConfigBackupFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • N/A
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 42-5 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm Package: sw.BootableConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • N/A
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		

Table 42-5 BootableConfigRestoreFailed (continued)

Alarm	Attributes	Applicable major release
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 42-6 ClientDelegateServerStatus

Alarm	Attributes	Applicable major release
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm Package: server.ClientDelegateServerStatus Raised on class: server.ClientDelegateServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • N/A
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 42-7 CmuManagementFailed

Alarm	Attributes	Applicable major release
Name: CmuManagementFailed (10040) Type: communicationsAlarm Package: lte.CmuManagementFailed Raised on class: lte.CompactMobilityUnit	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ftpFailed	Release: • N/A
Description: The alarm is raised when SAM fails to manage a 9430 Compact Mobility Unit due to an FTP failure.		
Raising condition: ('Management State' EQUAL 'FTP Failed')		
Clearing condition: ('Management State' EQUAL 'Managed')		
Remedial action: Verify FTP connectivity between the 5620 SAM and the 9430 Compact Mobility Unit, then re-attempt to manage.		

Table 42-8 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm Package: equipment.ContainingEquipmentAdministrativelyDown Raised on class: equipment.Port	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentAdministrativelyDown	Release: • N/A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 42-9 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm Package: equipment.ContainingEquipmentMismatch Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentMismatch	Release: • N/A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 42-10 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm Package: equipment.ContainingEquipmentOperationallyDown Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentDown	Release: • N/A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationllyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		

Table 42-10 ContainingEquipmentOperationallyDown (continued)

Alarm	Attributes	Applicable major release
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

Table 42-11 CorruptImageFile

Alarm	Attributes	Applicable major release
Name: CorruptImageFile (171) Type: configurationAlarm Package: mediation.CorruptImageFile Raised on class: mediation.AbstractSoftwareFolderDescriptor	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile	Release: • N/A
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 42-12 downgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: downgradedCardAlarm (256) Type: softwareAlarm Package: equipment.downgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: downgradedCard	Release: • N/A
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 42-13 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm Package: equipment.EquipmentAdministrativelyDown Raised on class: equipment.Equipment	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentAdministratively-Down	Release: • N/A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 42-14 EquipmentDown

Alarm	Attributes	Applicable major release
Name: EquipmentDown (10) Type: equipmentAlarm Package: equipment.EquipmentDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: inoperableEquipment	Release: • N/A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 42-15 EquipmentInTest

Alarm	Attributes	Applicable major release
Name: EquipmentInTest (11) Type: equipmentAlarm Package: equipment.EquipmentInTest Raised on class: equipment.Equipment	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentInTest	Release: • N/A
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 42-16 EquipmentMismatch

Alarm	Attributes	Applicable major release
Name: EquipmentMismatch (9) Type: equipmentAlarm Package: equipment.EquipmentMismatch Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentTypeMismatch	Release: • N/A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 42-17 EquipmentRemoved

Alarm	Attributes	Applicable major release
Name: EquipmentRemoved (8) Type: equipmentAlarm Package: equipment.EquipmentRemoved Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved	Release: • N/A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: ((('isEquipped' EQUAL 'false') OR ('compositeEquipmentState' EQUAL 'Removed')) AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Removed') AND ('isEquipped' EQUAL 'true'))		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 42-18 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major release
Name: FrameSizeProblem (37) Type: configurationAlarm Package: netw.FrameSizeProblem Raised on class: netw.StatefullConnectableInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: frameSizeProblem	Release: • N/A
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL '0L'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL '0L'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 42-19 GaPeerDown

Alarm	Attributes	Applicable major release
Name: GaPeerDown (3303) Type: EpcAlarm Package: lteggsn.GaPeerDown Raised on class: lteggsn.GaPeer	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerDown	Release: • N/A
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 42-20 LicensedLimitExceeded

Alarm	Attributes	Applicable major release
Name: LicensedLimitExceeded (127) Type: licensingAlarm Package: security.LicensedLimitExceeded Raised on class: security.SamLicensePoints	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: licensedLimitExceeded	Release: • N/A
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 42-21 LinkDown (equipment)

Alarm	Attributes	Applicable major release
Name: LinkDown (12) Type: communicationsAlarm Package: equipment.LinkDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: portLinkProblem	Release: • N/A
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		

Table 42-21 LinkDown (equipment) (continued)

Alarm	Attributes	Applicable major release
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 42-22 MobileConnectorDown

Alarm	Attributes	Applicable major release
Name: MobileConnectorDown (1064) Type: EpcAlarm Package: lteservice.MobileConnectorDown Raised on class: lteservice.MobileServiceConnector	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EpcDown	Release: • N/A
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL '\"\"')		
Clearing condition: ('EPS Path' NOT EQUAL '\"\"')		
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

Table 42-23 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major release
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm Package: security.NewSsh2ServerKeyDetected Raised on class: security.KnownHostKey	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch	Release: • N/A
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 42-24 PartialVPRNEncryption

Alarm	Attributes	Applicable major release
Name: PartialVPRNEncryption (8992) Type: configurationAlarm Package: nge.PartialVPRNEncryption Raised on class: nge.VprnEncryptService	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConfigMismatch	Release: • N/A

Table 42-24 PartialVPRNEncryption (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when one or more sites are not encryption enabled in a VPRN service.		
Raising condition: (('VPRN Service Encryption Status' EQUAL 'Partial'))		
Clearing condition: (('VPRN Service Encryption Status' NOT EQUAL 'Partial'))		
Remedial action: This site is newly added to the VPRN service, Perform the encrypt operation on the KeyGroup to clear the alarm.		

Table 42-25 PrimaryImageBootFailure

Alarm	Attributes	Applicable major release
Name: PrimaryImageBootFailure (191) Type: configurationAlarm Package: sw.PrimaryImageBootFailure Raised on class: sw.CardSoftware	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured	Release: • N/A
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 42-26 SaveConfigFailed

Alarm	Attributes	Applicable major release
Name: SaveConfigFailed (105) Type: configurationAlarm Package: sw.SaveConfigFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileAccessError	Release: • N/A
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact your Nokia support representative for assistance.		

Table 42-27 StatsRetrieveFailed

Alarm	Attributes	Applicable major release
Name: StatsRetrieveFailed (244) Type: configurationAlarm Package: sw.StatsRetrieveFailed Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: fileTransferFailure	Release: • N/A
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 42-28 UnidentifiedNode

Alarm	Attributes	Applicable major release
Name: UnidentifiedNode (1922) Type: communicationsAlarm Package: netw.UnidentifiedNode Raised on class: netw.DiscoveredNode	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unidentifiedNode	Release: • N/A
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 42-29 UnmanageFailed

Alarm	Attributes	Applicable major release
Name: UnmanageFailed (300) Type: discoveryControlAlarm Package: netw.UnmanageFailed Raised on class: netw.NodeDiscoveryControl	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unableToDeleteNode	Release: • N/A
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'Unmanage Failed')		
Clearing condition: ('Site State' NOT EQUAL 'Unmanage Failed')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 42-30 upgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: upgradedCardAlarm (255) Type: softwareAlarm Package: equipment.upgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: upgradedCard	Release: • N/A
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 42-31 UplinkDown

Alarm	Attributes	Applicable major release
Name: UplinkDown (11062) Type: virtualSwitchAlarm Package: dctr.UplinkDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsAllDown	Release: • N/A
Description: The alarm is raised when all connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '2'))		
Clearing condition: (('uplinkState' NOT EQUAL '2'))		
Remedial action: This alarm is raised when all connections associated to the uplink lost connectivity.		

Table 42-32 UplinkPartiallyDown

Alarm	Attributes	Applicable major release
Name: UplinkPartiallyDown (11063) Type: virtualSwitchAlarm Package: dctr.UplinkPartiallyDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsDown	Release: • N/A
Description: The alarm is raised when some connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '3'))		
Clearing condition: (('uplinkState' NOT EQUAL '3'))		
Remedial action: This alarm is raised when a connection of the uplink lost connectivity but at least one connection remains connected.		

Table 42-33 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm Package: sw.VersionConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: versionMismatch	Release: • N/A
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

43 OS10K

43.1 Alarms

Alarms

Note: Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see Chapter 39, “Unspecified NE”.

Table 43-1 AccessInterfaceDown

Alarm	Attributes	Applicable major release
Name: AccessInterfaceDown (249) Type: AccessInterfaceAlarm Package: service.AccessInterfaceDown Raised on class: service.AccessInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceDown	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when an L2 or L3 interface operational state is Down. The alarm is not raised against an L2 access interface that is associated with an MC ring or MC LAG in the standby state.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'Standby For MC-Ring') AND ('State Cause' NOT EQUAL 'Standby For MC Protocol') AND ('State Cause' NOT EQUAL 'Standby For BGP Multi-homing'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'Standby For MC-Ring') OR ('State Cause' EQUAL 'Standby For MC Protocol') OR ('State Cause' EQUAL 'Standby For BGP Multi-homing'))		
Remedial action: The condition exists because the physical interface is down either because it is administratively disabled, faulty or a cabling fault has occurred. Ensure that the interface is administratively up. Check for a poor cable connection to the port or for a faulty cable/fiber. If neither appears to be the problem run diagnostics on the port to determine if it is faulty.		

Table 43-2 ActiveAbnormalCondition

Alarm	Attributes	Applicable major release
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm Package: netw.ActiveAbnormalCondition Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		

Table 43-2 ActiveAbnormalCondition (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

Table 43-3 AggregatedVFLPortDown

Alarm	Attributes	Applicable major release
Name: AggregatedVFLPortDown (5436) Type: equipmentAlarm Package: equipment.AggregatedVFLPortDown Raised on class: equipment.Shelf	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: connectivityIssue	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is generated when the aggregated virtual fabric link on the virtual chassis slot is down.		
Raising condition: (('Shelf Type' EQUAL '7850') AND ('Total Slots' EQUAL '4') AND ('Virtual Fabric Link State' NOT EQUAL 'Up'))		
Clearing condition: (('Shelf Type' EQUAL '7850') AND ('Total Slots' EQUAL '4') AND ('Virtual Fabric Link State' EQUAL 'Up'))		
Remedial action: The alarm is raised when the aggregated virtual fabric link on the virtual chassis is down. Please check the virtual fabric links for the virtual chassis setup.		

Table 43-4 AGWDiameterPeerDown

Alarm	Attributes	Applicable major release
Name: AGWDiameterPeerDown (844) Type: EpcAlarm Package: lte.AGWDiameterPeerDown Raised on class: lte.AGWDiameterPeer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerDown	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 43-5 AreaTypeMismatch

Alarm	Attributes	Applicable major release
Name: AreaTypeMismatch (38) Type: configurationAlarm Package: ospf.AreaTypeMismatch Raised on class: ospf.Area	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: areaTypeMisconfigured	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when an OSPF area on one NE is configured as an NSSA and the same OSPF area on another NE is configured as a stub area.		
Raising condition: ('Type Mismatch' EQUAL 'true')		
Clearing condition: ('Type Mismatch' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The OSPF area type configured for the NE does not match with the same OSPF area configured on another NE. Compare the configuration on the endpoint and correct the mismatch.		

Table 43-6 AtcaFanFailure

Alarm	Attributes	Applicable major release
Name: AtcaFanFailure (1124) Type: equipmentAlarm Package: equipment.AtcaFanFailure Raised on class: equipment.Fan	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fanFailure	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the associated fan is not operationally Up.		
Raising condition: (('operationalState' EQUAL 'Disabled') OR ('operationalState' EQUAL 'Down'))		
Clearing condition: (('operationalState' EQUAL 'Enabled') OR ('operationalState' EQUAL 'Up'))		
Remedial action: This alarm is raised if the fan speed falls below 500 rpm. If the alarm persists, replace the appropriate (upper or lower) fan tray.		

Table 43-7 AuxiliaryServerStatus

Alarm	Attributes	Applicable major release
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm Package: server.AuxiliaryServerStatus Raised on class: server.AuxiliaryServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		

Table 43-7 AuxiliaryServerStatus (continued)

Alarm	Attributes	Applicable major release
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 43-8 BareMetalReachabilityDown

Alarm	Attributes	Applicable major release
Name: BareMetalReachabilityDown (10273) Type: virtualPortAlarm Package: dctr.BareMetalReachabilityDown Raised on class: dctr.BMDevice	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BareMetalReachability-DownOrDeleted	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when Bare Metal server is reachability down.		
Raising condition: (('bgpReachabilityState' NOT EQUAL '0'))		
Clearing condition: (('bgpReachabilityState' EQUAL '0'))		
Remedial action: This alarm can be cleared when bare metal device BGP prefix is up. Check for virtual switch controller down or virtual switch down or interface/port down in underlay network (hence the BGP prefix not advertised).		

Table 43-9 BgpDown

Alarm	Attributes	Applicable major release
Name: BgpDown (6) Type: ProtocolAlarm Package: bgp.BgpDown Raised on class: bgp.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a BGP instance has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The BGP protocol entity is down - administratively disable BGP and re-enable. If the problem persists please contact your Nokia support representative for assistance.		

Table 43-10 BootableConfigBackupFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigBackupFailed (103) Type: configurationAlarm Package: sw.BootableConfigBackupFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 43-11 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm Package: sw.BootableConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 43-12 BootParametersMisconfigured

Alarm	Attributes	Applicable major release
Name: BootParametersMisconfigured (35) Type: configurationAlarm Package: netw.BootParametersMisconfigured Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistentIndexFailure Applicable probable causes: • persistentIndexFailure • configFileBootFailure	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND ((('Config File Status' NOT EQUAL 'Executed Successfully') AND ('Config File Status' NOT EQUAL 'configFileStatus_unspecified')) OR (('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded') AND ('Persistent Index Status' NOT EQUAL 'persistentIndexStatus_unspecified'))))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

Table 43-13 ClientDelegateServerStatus

Alarm	Attributes	Applicable major release
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm Package: server.ClientDelegateServerStatus Raised on class: server.ClientDelegateServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 43-14 CmuManagementFailed

Alarm	Attributes	Applicable major release
Name: CmuManagementFailed (10040) Type: communicationsAlarm Package: lte.CmuManagementFailed Raised on class: lte.CompactMobilityUnit	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ftpFailed	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when SAM fails to manage a 9430 Compact Mobility Unit due to an FTP failure.		
Raising condition: ('Management State' EQUAL 'FTP Failed')		
Clearing condition: ('Management State' EQUAL 'Managed')		
Remedial action: Verify FTP connectivity between the 5620 SAM and the 9430 Compact Mobility Unit, then re-attempt to manage.		

Table 43-15 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm Package: equipment. ContainingEquipmentAdministrativelyDown Raised on class: equipment.Port	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentAdminist-rativelyDown	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 43-16 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm Package: equipment.ContainingEquipmentMismatch Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentMismatch	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		

Table 43-16 ContainingEquipmentMismatch (continued)

Alarm	Attributes	Applicable major release
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 43-17 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm Package: equipment. ContainingEquipmentOperationallyDown Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentDown	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationllyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

Table 43-18 CorruptImageFile

Alarm	Attributes	Applicable major release
Name: CorruptImageFile (171) Type: configurationAlarm Package: mediation.CorruptImageFile Raised on class: mediation. AbstractSoftwareFolderDescriptor	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 43-19 downgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: downgradedCardAlarm (256) Type: softwareAlarm Package: equipment.downgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: downgradedCard	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 43-20 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm Package: equipment.EquipmentAdministrativelyDown Raised on class: equipment.Equipment	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentAdministratively-Down	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 43-21 EquipmentDegraded

Alarm	Attributes	Applicable major release
Name: EquipmentDegraded (604) Type: equipmentAlarm Package: equipment.EquipmentDegraded Raised on class: equipment.FanTray	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: singleFanFailure	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a single fan fails. The chassis attempts to continue operating within the normal temperature range using only the remaining fans.		
Raising condition: ('Device State' EQUAL 'MinorFailure')		

Table 43-21 EquipmentDegraded (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ('Device State' NOT EQUAL 'MinorFailure')		
Remedial action: The failed fan unit should be replaced.		

Table 43-22 EquipmentDown

Alarm	Attributes	Applicable major release
Name: EquipmentDown (10) Type: equipmentAlarm Package: equipment.EquipmentDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: inoperableEquipment	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 43-23 EquipmentFailure

Alarm	Attributes	Applicable major release
Name: EquipmentFailure (145) Type: equipmentAlarm Package: equipment.EquipmentFailure Raised on class: equipment.ReplaceableUnit	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: cardFailure	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a I/O card or control processor or power-supply tray reports a failure. When the object type is ControlProcessor, a CPM may be unable to boot. When the object type is Power Supply Tray and the alarm is raised during device discovery, a power-supply tray may be out of service. When the object type is a Power Supply Tray and the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: ('operationalState' EQUAL 'Failed')		
Clearing condition: ('operationalState' NOT EQUAL 'Failed')		
Remedial action: If the alarm indicates that the CPM card or I/O card has a fault, remove the card and reset it. If this does not clear the alarm then please contact your Nokia support representative for assistance. If the alarm indicates that the Power Supply tray is out of service ensure that the NE is properly connected to power. If the problem persists please contact your Nokia support representative for assistance.		

Table 43-24 EquipmentInTest

Alarm	Attributes	Applicable major release
Name: EquipmentInTest (11) Type: equipmentAlarm Package: equipment.EquipmentInTest Raised on class: equipment.Equipment	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentInTest	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 43-25 EquipmentMismatch

Alarm	Attributes	Applicable major release
Name: EquipmentMismatch (9) Type: equipmentAlarm Package: equipment.EquipmentMismatch Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentTypeMismatch	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 43-26 EquipmentRemoved

Alarm	Attributes	Applicable major release
Name: EquipmentRemoved (8) Type: equipmentAlarm Package: equipment.EquipmentRemoved Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: ((('isEquipped' EQUAL 'false') OR ('compositeEquipmentState' EQUAL 'Removed')) AND ('isEquipmentInserted' EQUAL 'true'))		

Table 43-26 EquipmentRemoved (continued)

Alarm	Attributes	Applicable major release
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Removed') AND ('isEquipped' EQUAL 'true'))		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 43-27 EthernetPortConfiguredLoopback

Alarm	Attributes	Applicable major release
Name: EthernetPortConfiguredLoopback (801) Type: configurationAlarm Package: ethernetequipment. EthernetPortConfiguredLoopback Raised on class: ethernetequipment. EthernetPortSpecifics	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ethernetPortConfiguredLoop-back	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a timed loopback is in effect for an Ethernet port.		
Raising condition: (('Type' NOT EQUAL 'None'))		
Clearing condition: (('Type' EQUAL 'None'))		
Remedial action: This alarm has been raised bye the node because "Timed Loopback" option of the specific port's Ethernet property has been enabled. To resolve this problem from "Ethernet" tab of "Physical Port" properties form configure "Timed Loopback" Type property as "None".		

Table 43-28 EthernetPortDuplicateLane

Alarm	Attributes	Applicable major release
Name: EthernetPortDuplicateLane (3557) Type: communicationsAlarm Package: ethernetequipment. EthernetPortDuplicateLane Raised on class: ethernetequipment. EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: DuplicateLane	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a device reports a Duplicate Lane on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane')))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 43-29 EthernetPortHighBer

Alarm	Attributes	Applicable major release
Name: EthernetPortHighBer (307) Type: communicationsAlarm Package: ethernetequipment.EthernetPortHighBer Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: HighBer	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a device reports a high bit-error rate on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate')))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 43-30 EthernetPortLocalFault

Alarm	Attributes	Applicable major release
Name: EthernetPortLocalFault (305) Type: communicationsAlarm Package: ethernetequipment.EthernetPortLocalFault Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LocalFault	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a device reports a local fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault')))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 43-31 EthernetPortNoAmLock

Alarm	Attributes	Applicable major release
Name: EthernetPortNoAmLock (3558) Type: communicationsAlarm Package: ethernetequipment.EthernetPortNoAmLock Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NoAmLock	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a device reports a No Am Lock on an Ethernet port.		

Table 43-31 EthernetPortNoAmLock (continued)

Alarm	Attributes	Applicable major release
Raising condition: (('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock')))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 43-32 EthernetPortNoBlockLock

Alarm	Attributes	Applicable major release
Name: EthernetPortNoBlockLock (3559) Type: communicationsAlarm Package: ethernetequipment. EthernetPortNoBlockLock Raised on class: ethernetequipment. EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NoBlockLock	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a device reports a No Block Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock')))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 43-33 EthernetPortNoFrameLock

Alarm	Attributes	Applicable major release
Name: EthernetPortNoFrameLock (306) Type: communicationsAlarm Package: ethernetequipment. EthernetPortNoFrameLock Raised on class: ethernetequipment. EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NoFrameLock	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a device reports No Frame Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock')))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 43-34 EthernetPortRemoteFault

Alarm	Attributes	Applicable major release
Name: EthernetPortRemoteFault (304) Type: communicationsAlarm Package: ethernetequipment.EthernetPortRemoteFault Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: RemoteFault	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a device reports a remote fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault')))		
Remedial action: One of the following conditions exists on the remote physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 43-35 EthernetPortSignalFailure

Alarm	Attributes	Applicable major release
Name: EthernetPortSignalFailure (303) Type: communicationsAlarm Package: ethernetequipment.EthernetPortSignalFailure Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SignalFailure	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a device reports a signal failure on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure')))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 43-36 FanFailure (equipment)

Alarm	Attributes	Applicable major release
Name: FanFailure (624) Type: equipmentAlarm Package: equipment.FanFailure Raised on class: equipment.FanTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fanFailure	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the associated fan is not operationally Up.		

Table 43-36 FanFailure (equipment) (continued)

Alarm	Attributes	Applicable major release
Raising condition: (('Device State' EQUAL 'Failed') OR ('Device State' EQUAL 'Unknown') OR ('Device State' EQUAL 'OutOfservice'))		
Clearing condition: ('Device State' EQUAL 'OK')		
Remedial action: Remove and reset the fan unit. If this does not resolve the problem replace the fan.		

Table 43-37 FanTrayRemoved

Alarm	Attributes	Applicable major release
Name: FanTrayRemoved (569) Type: equipmentAlarm Package: equipment.FanTrayRemoved Raised on class: equipment.FanTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: FanTrayRemoved	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the deviceState attribute has a value of deviceNotEquipped.		
Raising condition: ('Device State' EQUAL 'Not Equipped')		
Clearing condition: ('Device State' NOT EQUAL 'Not Equipped')		
Remedial action: Informational - a fan tray has been removed from the NE.		

Table 43-38 FrameSizeProblem (svt)

Alarm	Attributes	Applicable major release
Name: FrameSizeProblem (37) Type: configurationAlarm Package: svt.FrameSizeProblem Raised on class: svt.SdpBinding	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: frameSizeProblem	Release: • 7.3.2
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('Operational State' EQUAL 'MTU Mismatch') OR ('Operational State' EQUAL 'Tunnel MTU Too Small') OR ('State Cause'anyBit'Tunnel MTU Too Small') OR ('State Cause'anyBit'Service MTU Mismatch'))		
Clearing condition: (('Operational State' NOT EQUAL 'MTU Mismatch') AND ('Operational State' NOT EQUAL 'Tunnel MTU Too Small') AND NOT ((('State Cause'anyBit'Tunnel MTU Too Small') OR ('State Cause'anyBit'Service MTU Mismatch'))))		
Remedial action: The MTU value must be changed such that is is less than or equal to the supported MTU size value.		

Table 43-39 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major release
Name: FrameSizeProblem (37) Type: configurationAlarm Package: netw.FrameSizeProblem Raised on class: netw.StatefullConnectableInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: frameSizeProblem	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL '0L'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL '0L'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 43-40 GaPeerDown

Alarm	Attributes	Applicable major release
Name: GaPeerDown (3303) Type: EpcAlarm Package: lteggsn.GaPeerDown Raised on class: lteggsn.GaPeer	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerDown	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 43-41 IfVlanSubTypeConflict

Alarm	Attributes	Applicable major release
Name: IfVlanSubTypeConflict (213) Type: configurationAlarm Package: vlan.IfVlanSubTypeConflict Raised on class: vlan.L2AccessInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: topologyMisconfigured	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2

Table 43-41 IfVlanSubTypeConflict (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when more than one type of VLAN service is configured with the same VLAN ID. The alarm is raised against an L2 access interface.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		
Remedial action: Ensure that only one type of VLAN Service is configured with the VLAN ID used by this Interface.		

Table 43-42 IgmpDown

Alarm	Attributes	Applicable major release
Name: IgmpDown (158) Type: ProtocolAlarm Package: igmp.IgmpDown Raised on class: igmp.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when an IGMP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: While configured under VPRN, check if VPRN site is admin down, or if route distinguisher is not configured.		

Table 43-43 IgmpSnoopingDown

Alarm	Attributes	Applicable major release
Name: IgmpSnoopingDown (161) Type: ProtocolAlarm Package: layer2.IgmpSnoopingDown Raised on class: layer2.Bridge	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when IGMP snooping is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('IGMP Snooping' EQUAL 'Disabled')		
Clearing condition: ('IGMP Snooping' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable IGMP Snooping under the Bridge Instance.		

Table 43-44 IncompleteConfiguration

Alarm	Attributes	Applicable major release
Name: IncompleteConfiguration (1942) Type: operationalViolation Package: netw.IncompleteConfiguration Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompleteConfig	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a pre-provisioned NE has no objects configured beneath it.		
Raising condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' EQUAL '\"\"'))		
Clearing condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' NOT EQUAL '\"\"'))		
Remedial action: A configuration error has been made which must be corrected. The configuration of the pre-provisioned NE is incomplete. A work order was not associated with the pre-provisioned NE and as a consequence the attempt to auto-configure the NE failed.		

Table 43-45 InterfaceDown (netw)

Alarm	Attributes	Applicable major release
Name: InterfaceDown (36) Type: InterfaceAlarm Package: netw.InterfaceDown Raised on class: netw.StatefullConnectableInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceDown	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when an interface or underlying resource fails, as indicated by an interface compositeState attribute value of failed or underlyingResourceFailed.		
Raising condition: (('compositeState' EQUAL 'Inoperable') OR ('compositeState' EQUAL 'Underlying Resource Inoperable'))		
Clearing condition: (('compositeState' NOT EQUAL 'Inoperable') AND ('compositeState' NOT EQUAL 'Underlying Resource Inoperable'))		
Remedial action: A physical port (physical interface, LAG, channel) associated with the network interface in not operational. Ensure that the interface is cabled and there are no configuration errors (i.e. MTU size set incorrectly etc) on the interface.		

Table 43-46 IsisDown

Alarm	Attributes	Applicable major release
Name: IsisDown (19) Type: ProtocolAlarm Package: isis.IsisDown Raised on class: isis.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2

Table 43-46 IsisDown (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when an IS-IS site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The protocol is not working anymore, could be a problem with IP addresses, resources on the device, ...		

Table 43-47 LabelProblem

Alarm	Attributes	Applicable major release
Name: LabelProblem (98) Type: CircuitAlarm Package: svt.LabelProblem Raised on class: svt.SdpBinding	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: labelProblem	Release: • 7.3.2
Description: The alarm is raised when an ingress or an egress label is missing.		
Raising condition: (('Operational State' EQUAL 'No Egress Label') OR ('Operational State' EQUAL 'No Ingress Label') OR ('Operational State' EQUAL 'No Labels') OR ('State Cause'anyBit'No Egress VC Label') OR ('State Cause'anyBit'No Ingress VC Label') OR ('State Cause'anyBit'Label Manager Has Ran Out Of Labels'))		
Clearing condition: (('Operational State' NOT EQUAL 'No Egress Label') AND ('Operational State' NOT EQUAL 'No Ingress Label') AND ('Operational State' NOT EQUAL 'No Labels') AND NOT ((('State Cause'anyBit'No Egress VC Label') OR ('State Cause'anyBit'No Ingress VC Label') OR ('State Cause'anyBit'Label Manager Has Ran Out Of Labels'))))		
Remedial action: An ingress or egress label is missing for the SDP binding.		

Table 43-48 LagDown

Alarm	Attributes	Applicable major release
Name: LagDown (20) Type: equipmentAlarm Package: lag.LagDown Raised on class: lag.Interface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lagDown	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when all ports in a LAG are operationally down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This alarm indicates that all physical Ethernet links associated with a LAG are operationally down. The reasons for the links to be down may vary from link to link. The following possible causes of this alarm should be investigated. The physical port (near end or far end may have failed - this can be remedied by replacing the interface card in question. The physical links may have been turned down administratively - re-enable the links. A cable failure or disconnect may have occurred - please ensure that the cables are properly connected to the physical port and and that the cable has not been damaged.		

Table 43-49 LagPortAddFailed

Alarm	Attributes	Applicable major release
Name: LagPortAddFailed (422) Type: equipmentAlarm Package: equipment.LagPortAddFailed Raised on class: equipment.PhysicalPort	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: linkDown	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the Lag Port Add function Fails.		
Raising condition: (('state' EQUAL 'Link Down') AND ('LAG ID' > '0'))		
Clearing condition: (('state' NOT EQUAL 'Link Down') OR ('LAG ID' EQUAL '0'))		
Remedial action: A configuration error has occurred which must be corrected. The link that was to be added to the LAG group may be of the wrong type (i.e. non ethernet) or the limit of the number of links supported in a LAG may have been reached.		

Table 43-50 LicensedLimitExceeded

Alarm	Attributes	Applicable major release
Name: LicensedLimitExceeded (127) Type: licensingAlarm Package: security.LicensedLimitExceeded Raised on class: security.SamLicensePoints	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: licensedLimitExceeded	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 43-51 LinkDown (equipment)

Alarm	Attributes	Applicable major release
Name: LinkDown (12) Type: communicationsAlarm Package: equipment.LinkDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: portLinkProblem	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		

Table 43-51 LinkDown (equipment) (continued)

Alarm	Attributes	Applicable major release
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 43-52 LowTemperatureDetected

Alarm	Attributes	Applicable major release
Name: LowTemperatureDetected (1127) Type: environmentalAlarm Package: equipment.LowTemperatureDetected Raised on class: equipment.Shelf	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentOvercooled	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the chassis temperature falls below the minimum threshold.		
Raising condition: ('Low Temperature State' EQUAL 'Low')		
Clearing condition: ('Low Temperature State' NOT EQUAL 'Low')		
Remedial action: The NE has detected internal temperatures which are abnormally low. This may happen when the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 43-53 LowTemperatureThresholdCrossed

Alarm	Attributes	Applicable major release
Name: LowTemperatureThresholdCrossed (1128) Type: environmentalAlarm Package: equipment. LowTemperatureThresholdCrossed Raised on class: equipment.Environment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentOvercooled	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a low-temperature threshold is crossed.		
Raising condition: ('lowTemperatureThresholdCrossed' EQUAL 'true')		
Clearing condition: ('lowTemperatureThresholdCrossed' EQUAL 'false')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 43-54 LpsViolation

Alarm	Attributes	Applicable major release
Name: LpsViolation (518) Type: learnedPortSecurityAlarm Package: lps.LpsViolation Raised on class: lps.LearnedPortSecurity	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: learnedPortSecurityViolation	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the 5620 SAM detects an LPS violation.		
Raising condition: ('Operational State' EQUAL 'Security Violated')		
Clearing condition: ('Operational State' EQUAL 'Down')		
Remedial action: Port reset is required to return the port to normal operation.		

Table 43-55 macMoveRateExceeded (service)

Alarm	Attributes	Applicable major release
Name: macMoveRateExceeded (3690) Type: accessInterfaceAlarm Package: service.macMoveRateExceeded Raised on class: service.AccessInterface	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MacMoveRateExceeded	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the SAP exceeds the MAC Move Frequency of the service site.		
Raising condition: ('State Cause'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('State Cause'anyBit'Relearn Limit Exceeded'))		
Remedial action: Informational.		

Table 43-56 MepAISReceivedAlarm

Alarm	Attributes	Applicable major release
Name: MepAISReceivedAlarm (2945) Type: oamAlarm Package: ethernetoam.MepAISReceivedAlarm Raised on class: ethernetoam.Mep	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: missingRemoteMep	Release: • 7.3.1 • 7.3.2
Description: The alarm is raised when a MEP receives AIS test frames from one or more of its sub-layer MEPs.		
Raising condition: (('AIS Received (AisRx)' EQUAL 'true') AND ('Facility VLAN ID' EQUAL '0'))		
Clearing condition: ('AIS Received (AisRx)' EQUAL 'false')		
Remedial action: This alarm indicates that it has received a MEP fault from a sub-layer MEP, user should investigate the fault cause on the sub-layer MEP and resolve this root cause issue.		

Table 43-57 MobileConnectorDown

Alarm	Attributes	Applicable major release
Name: MobileConnectorDown (1064) Type: EpcAlarm Package: lteservice.MobileConnectorDown Raised on class: lteservice.MobileServiceConnector	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EpcDown	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL '\"\"')		
Clearing condition: ('EPS Path' NOT EQUAL '\"\"')		
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

Table 43-58 MvrSiteDown

Alarm	Attributes	Applicable major release
Name: MvrSiteDown (162) Type: ProtocolAlarm Package: layer2.MvrSiteDown Raised on class: layer2.MvrSite	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('MVR Admin Status' EQUAL 'Disabled')		
Clearing condition: ('MVR Admin Status' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable MVR Admin Status under the Bridge Instance.		

Table 43-59 NeighborDown

Alarm	Attributes	Applicable major release
Name: NeighborDown (121) Type: NeighborDown Package: ospf.NeighborDown Raised on class: ospf.AbstractNeighbor	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NeighborDown	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when an OSPF interface neighbor is operationally Down.		

Table 43-59 NeighborDown (continued)

Alarm	Attributes	Applicable major release
Raising condition: ('Operational State' NOT EQUAL 'full')		
Clearing condition: ('Operational State' EQUAL 'full')		
Remedial action: This alarm is raised when the OSPF interface neighbor is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 43-60 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major release
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm Package: netw. NeManagementAndTrapManagementMismatch Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: neManagementChange	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		
Raising condition: ((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band')))		
Clearing condition: ((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band')))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

Table 43-61 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major release
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm Package: security.NewSsh2ServerKeyDetected Raised on class: security.KnownHostKey	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		

Table 43-61 NewSsh2ServerKeyDetected (continued)

Alarm	Attributes	Applicable major release
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 43-62 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major release
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm Package: netw.NodeDatabaseFallbackDetected Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeDatabaseFallback	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 43-63 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major release
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm Package: netw.NodeDatabaseMisalignmentDetected Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

Table 43-64 NodeSuspended

Alarm	Attributes	Applicable major release
Name: NodeSuspended (5123) Type: communicationsAlarm Package: netw.NodeSuspended Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NodeSuspend	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element.The alarm will be cleared when the network element is managed back.		

Table 43-65 OspfInterfaceDown

Alarm	Attributes	Applicable major release
Name: OspfInterfaceDown (141) Type: OspfInterfaceDown Package: ospf.OspfInterfaceDown Raised on class: ospf.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: OspfInterfaceDown	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when an OSPF interface is operationally down.		
Raising condition: ('operationalState' EQUAL 'Down')		
Clearing condition: ('operationalState' NOT EQUAL 'Down')		
Remedial action: This alarm is raised when the OSPF interface is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 43-66 OverTemperatureDetected

Alarm	Attributes	Applicable major release
Name: OverTemperatureDetected (388) Type: environmentalAlarm Package: equipment.OverTemperatureDetected Raised on class: equipment.Shelf	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentOverheated	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the chassis temperature exceeds the maximum threshold value.		

Table 43-66 OverTemperatureDetected (continued)

Alarm	Attributes	Applicable major release
Raising condition: ('Over Temperature State' EQUAL 'Over')		
Clearing condition: ('Over Temperature State' NOT EQUAL 'Over')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 43-67 PartialResyncProblem

Alarm	Attributes	Applicable major release
Name: PartialResyncProblem (4401) Type: communicationsAlarm Package: netw.PartialResyncProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: partialResyncProblem	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a partial resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 43-68 PartialVPRNEncryption

Alarm	Attributes	Applicable major release
Name: PartialVPRNEncryption (8992) Type: configurationAlarm Package: nge.PartialVPRNEncryption Raised on class: nge.VprnEncryptService	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConfigMismatch	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when one or more sites are not encryption enabled in a VPRN service.		
Raising condition: (('VPRN Service Encryption Status' EQUAL 'Partial'))		
Clearing condition: (('VPRN Service Encryption Status' NOT EQUAL 'Partial'))		
Remedial action: This site is newly added to the VPRN service, Perform the encrypt operation on the KeyGroup to clear the alarm.		

Table 43-69 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major release
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm Package: netw. PersistentIndexParametersMisconfigured Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistentIndexConfiguration-Mismatch	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when persistence is set to Off in the NE BOF.		
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

Table 43-70 PimDown

Alarm	Attributes	Applicable major release
Name: PimDown (184) Type: ProtocolAlarm Package: pim.PimDown Raised on class: pim.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a PIM site is administratively Up but operationally Down. The alarm is cleared when the PIM site becomes operationally Up but administratively Down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This should never happen. Contact your Nokia support representative for assistance.		

Table 43-71 PollerProblem

Alarm	Attributes	Applicable major release
Name: PollerProblem (31) Type: communicationsAlarm Package: netw.PollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resyncFailed	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2

Table 43-71 PollerProblem (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 43-72 PortEtherSymMonSDAlarm

Alarm	Attributes	Applicable major release
Name: PortEtherSymMonSDAlarm (5662) Type: communicationsAlarm Package: ethernetequipment. PortEtherSymMonSDAlarm Raised on class: ethernetequipment. EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: etherPortSymMonSDThrehol-dExceededAlarm	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when an Ethernet port Symbol Monitor Failure alarm condition is detected (Signal Degradation Threshold exceeded).		
Raising condition: ('Symbol Alarm Reason' EQUAL 'SD Threshold Exceeded')		
Clearing condition: ('Symbol Alarm Reason' NOT EQUAL 'SD Threshold Exceeded')		
Remedial action: Symbol monitor signal degradation alarm could be cleared by changing/disabling the associated threshold/multiplier values or it is self clearing and will clear once the error rate drops below 1/10th of the configured rate.		

Table 43-73 PortEtherSymMonSFAlarm

Alarm	Attributes	Applicable major release
Name: PortEtherSymMonSFAlarm (5663) Type: communicationsAlarm Package: ethernetequipment. PortEtherSymMonSFAlarm Raised on class: ethernetequipment. EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: etherPortSymMonSFThrehold-ExceededAlarm	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when an Ethernet port Symbol Monitor Failure alarm condition is detected (Signal Failure Threshold exceeded).		
Raising condition: ('Symbol Alarm Reason' EQUAL 'SF Threshold Exceeded')		
Clearing condition: ('Symbol Alarm Reason' NOT EQUAL 'SF Threshold Exceeded')		

Table 43-73 PortEtherSymMonSFAlarm (continued)

Alarm	Attributes	Applicable major release
Remedial action: Symbol monitor signal failure alarm could be cleared by changing/disabling the associated threshold/multiplier values or by taking the port out of service (eg. shutdown, card/mda reset, physical link loss).		

Table 43-74 PowerSupplyAcFailure

Alarm	Attributes	Applicable major release
Name: PowerSupplyAcFailure (9644) Type: equipmentAlarm Package: equipment.PowerSupplyAcFailure Raised on class: equipment.PowerSupplyTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyAcFailure	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: This notification is generated when an AC failure occurs on the power supply.		
Raising condition: ('AC Voltage Status' EQUAL 'Out of Range')		
Clearing condition: (('AC Voltage Status' EQUAL 'Not Equipped') OR ('AC Voltage Status' EQUAL 'OK'))		
Remedial action: Insert a new power supply. If the problem persists please contact your Nokia support representative for assistance.		

Table 43-75 PowerSupplyDcFailure

Alarm	Attributes	Applicable major release
Name: PowerSupplyDcFailure (9645) Type: equipmentAlarm Package: equipment.PowerSupplyDcFailure Raised on class: equipment.PowerSupplyTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyDcFailure	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: This notification is generated when a DC failure occurs on the power supply.		
Raising condition: ('DC Voltage Status' EQUAL 'Out of Range')		
Clearing condition: (('DC Voltage Status' EQUAL 'Not Equipped') OR ('DC Voltage Status' EQUAL 'OK'))		
Remedial action: Insert a new power supply. If the problem persists please contact your Nokia support representative for assistance.		

Table 43-76 PowerSupplyFailure (equipment)

Alarm	Attributes	Applicable major release
Name: PowerSupplyFailure (633) Type: equipmentAlarm Package: equipment.PowerSupplyFailure Raised on class: equipment.PowerSupplyTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyFailure	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a power-supply tray reports a failure. When the alarm is raised during device discovery, a power-supply tray may be out of service. When the alarm is raised while the device is in the managed state, a power-supply tray may be out of service or the AC or DC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: (('Power Supply 1 Status' EQUAL 'Not Equipped') OR ('Power Supply 1 Status' EQUAL 'Failed'))		
Clearing condition: (('Power Supply 1 Status' EQUAL 'OK'))		
Remedial action: Ensure that the NE is properly connected to power. If the problem persists please contact your Nokia support representative for assistance.		

Table 43-77 PowerSupplyInputFailure

Alarm	Attributes	Applicable major release
Name: PowerSupplyInputFailure (9622) Type: equipmentAlarm Package: equipment.PowerSupplyInputFailure Raised on class: equipment.PowerSupplyTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyInputFailure	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: Generated when one of the chassis's power source supplies fails.		
Raising condition: ('Power Supply Input Status' EQUAL 'Failed')		
Clearing condition: (('Power Supply Input Status' EQUAL 'Not Equipped') OR ('Power Supply Input Status' EQUAL 'OK'))		
Remedial action: Ensure that the NE is properly connected to power. If the problem persists please contact your Nokia support representative for assistance.		

Table 43-78 PowerSupplyInputFeedDown

Alarm	Attributes	Applicable major release
Name: PowerSupplyInputFeedDown (5422) Type: equipmentAlarm Package: equipment.PowerSupplyInputFeedDown Raised on class: equipment.PowerSupplyTray	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyInputFeedDown	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: This alarm is generated if any one of the input feeds for a given power supply is not supplying power.		

Table 43-78 PowerSupplyInputFeedDown (continued)

Alarm	Attributes	Applicable major release
Raising condition: (('inputFeedStatus' EQUAL 'Input A Down') OR ('inputFeedStatus' EQUAL 'Input B Down') OR (('inputFeedStatus'allBits'Input A Down') AND ('inputFeedStatus'allBits'Input B Down')))		
Clearing condition: ('inputFeedStatus' EQUAL 'None')		
Remedial action: Restore all of the input feeds that are not supplying power.		

Table 43-79 PowerSupplyOutputFailure

Alarm	Attributes	Applicable major release
Name: PowerSupplyOutputFailure (9623) Type: equipmentAlarm Package: equipment.PowerSupplyOutputFailure Raised on class: equipment.PowerSupplyTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyOutputFailure	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: Generated when one of the chassis's power output fails.		
Raising condition: ('Power Supply Output Status' EQUAL 'Failed')		
Clearing condition: (('Power Supply Output Status' EQUAL 'Not Equipped') OR ('Power Supply Output Status' EQUAL 'OK'))		
Remedial action: Ensure that the NE is properly connected to power. If the problem persists please contact your Nokia support representative for assistance.		

Table 43-80 PowerSupplyOverTemperature

Alarm	Attributes	Applicable major release
Name: PowerSupplyOverTemperature (9646) Type: equipmentAlarm Package: equipment.PowerSupplyOverTemperature Raised on class: equipment.PowerSupplyTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyOverTemperature	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: This notification is generated when a power supply temperature surpasses the threshold of the particular physical chassis.		
Raising condition: ('Temperature Status' EQUAL 'Out of Range')		
Clearing condition: (('Temperature Status' EQUAL 'Not Equipped') OR ('Temperature Status' EQUAL 'OK'))		
Remedial action: Check input feed and/or insert a new power supply. If the problem persists please contact your Nokia support representative for assistance.		

Table 43-81 PowerSupplyRemoved

Alarm	Attributes	Applicable major release
Name: PowerSupplyRemoved (542) Type: equipmentAlarm Package: equipment.PowerSupplyRemoved Raised on class: equipment.PowerSupplyTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PowerSupplyRemoved	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a chassis power supply is removed.		
Raising condition: ('Power Supply 1 Status' EQUAL 'Not Equipped')		
Clearing condition: ('Power Supply 1 Status' NOT EQUAL 'Not Equipped')		
Remedial action: To recover from this event, the customer is requested to add a new power supply to the system, or change a faulty power supply with a working one.		

Table 43-82 PrimaryImageBootFailure

Alarm	Attributes	Applicable major release
Name: PrimaryImageBootFailure (191) Type: configurationAlarm Package: sw.PrimaryImageBootFailure Raised on class: sw.CardSoftware	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 43-83 RadiusOperStatusDown

Alarm	Attributes	Applicable major release
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm Package: netw.RadiusOperStatusDown Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: radiusOperationStatusDown	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		

Table 43-83 RadiusOperStatusDown (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up.Check the connectivity between SAM server and radius server configured on the Network element.		

Table 43-84 ReachabilityProblem

Alarm	Attributes	Applicable major release
Name: ReachabilityProblem (243) Type: communicationsAlarm Package: netw.ReachabilityProblem Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReachabilityTestFailed	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. The polling interval depends on the NE type and is configurable in nms-server.xml. By default, the 5620 SAM polls a managed NE every four minutes. If a poll fails, the alarm is raised. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 43-85 RedundantMepMisconfiguration

Alarm	Attributes	Applicable major release
Name: RedundantMepMisconfiguration (3631) Type: oamAlarm Package: ethernetoam. RedundantMepMisconfiguration Raised on class: ethernetoam.Mep	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: misconfiguredRedundantMep	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when an Active and Redundant MEP do not have the same ID, Operational MAC Address or Sub Group configured.		
Raising condition: ('validRedundantMepConfig' EQUAL 'false')		
Clearing condition: ('validRedundantMepConfig' EQUAL 'true')		
Remedial action: MC-LAG redundant MEP configuration (MEP ID or Mac Address) for Active & Standby Interfaces do not match, this could cause issues with CFM or CCM tests if Active interface changes. Delete and Re-create Standby MEP to match Active.		

Table 43-86 RedundantMepMissing

Alarm	Attributes	Applicable major release
Name: RedundantMepMissing (3632) Type: oamAlarm Package: ethernetoam.RedundantMepMissing Raised on class: ethernetoam.Mep	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: missingRedundantMep	Release: • 7.3.1 • 7.3.2
Description: The alarm is raised when a MEP misses a redundant counterpart on LAG or SAP.		
Raising condition: (('MC-LAG Inactive' NOT EQUAL 'Not Applicable') AND ('Redundant MEP' EQUAL '\"\"'))		
Clearing condition: (('MC-LAG Inactive' EQUAL 'Not Applicable') OR (('MC-LAG Inactive' NOT EQUAL 'Not Applicable') AND ('Redundant MEP' NOT EQUAL '\"\"')))		
Remedial action: MC-LAG redundant MEP is missing Active & Standby Interfaces, this will cause issues with CFM or CCM tests if Active interface changes. Create missing Active/Standby MEP to match existing.		

Table 43-87 RemoteMepCCMAlarm

Alarm	Attributes	Applicable major release
Name: RemoteMepCCMAlarm (502) Type: oamAlarm Package: ethernetoam.RemoteMepCCMAlarm Raised on class: ethernetoam.Mep	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: missingRemoteMep	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a MEP loses connectivity with one or more remote MEPs. The Remote MEP DB State tab on a MEP lists the missing remote MEPs.		
Raising condition: ('High-Priority Defect' NOT EQUAL '0')		
Clearing condition: ('High-Priority Defect' EQUAL '0')		
Remedial action: MEP has lost communication with Remote MEP defined in Maintenance Association (MEG) Remote MEP list, Either Remote MEP list is incorrect or diagnose connection fault and resolve.		

Table 43-88 RipDown

Alarm	Attributes	Applicable major release
Name: RipDown (72) Type: ProtocolAlarm Package: rip.RipDown Raised on class: rip.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a RIP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		

Table 43-88 RipDown (continued)

Alarm	Attributes	Applicable major release
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The RIP Site is down while it is administratively up. Please check the node e.g, IOM is not shutdown or installed.		

Table 43-89 RipInterfaceDown

Alarm	Attributes	Applicable major release
Name: RipInterfaceDown (11187) Type: InterfaceAlarm Package: rip.RipInterfaceDown Raised on class: rip.Interface	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: underlyingResourceUnavailable	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when an RIP interface is operationally down.		
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' NOT EQUAL 'Down')		
Remedial action: This alarm is raised when the RIP interface is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 43-90 SaveConfigFailed

Alarm	Attributes	Applicable major release
Name: SaveConfigFailed (105) Type: configurationAlarm Package: sw.SaveConfigFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileAccessError	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact your Nokia support representative for assistance.		

Table 43-91 ScheduledPollerProblem

Alarm	Attributes	Applicable major release
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm Package: netw.ScheduledPollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: scheduledResyncFailed	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 43-92 SdpBindingDown

Alarm	Attributes	Applicable major release
Name: SdpBindingDown (221) Type: SdpBindingAlarm Package: svt.SdpBindingDown Raised on class: svt.SdpBinding	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SdpBindingNotReady	Release: • 7.3.2
Description: The alarm is raised when an SDP binding has an Operational State other than Up.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'Standby For BGP Multi-Homing'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'Standby For BGP Multi-Homing'))		
Remedial action: To resolve this alarm check the SDP binding to determine if a configuration mismatch exists. If configuration is determined to be correct then the associated network interface may be down. Further investigation is required to determine why the underlying network interface is down.		

Table 43-93 SdpBindingTunnelDown

Alarm	Attributes	Applicable major release
Name: SdpBindingTunnelDown (222) Type: CircuitAlarm Package: svt.SdpBindingTunnelDown Raised on class: svt.SdpBinding	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SdpTunnelNotReady	Release: • 7.3.2
Description: The alarm is raised when an SDP binding tunnel has an Operational State other than Up.		
Raising condition: (('Operational State' EQUAL 'Tunnel Not Ready') OR ('Operational State' EQUAL 'Tunnel Down') OR ('State Cause'anyBit'Tunnel Oper Down'))		

Table 43-93 SdpBindingTunnelDown (continued)

Alarm	Attributes	Applicable major release
Clearing condition: (('Operational State' NOT EQUAL 'Tunnel Not Ready') AND ('Operational State' NOT EQUAL 'Tunnel Down') AND NOT (('State Cause'anyBit'Tunnel Oper Down')))		
Remedial action: To resolve this alarm check the endpoints of the SDP binding to determine if a configuration mismatch exists. If configuration matches then the underlying network resource between the endpoints of the SDP may be down. Further investigation is required to determine why the underlying transport network is down.		

Table 43-94 ServiceSiteDown

Alarm	Attributes	Applicable major release
Name: ServiceSiteDown (97) Type: serviceAlarm Package: service.ServiceSiteDown Raised on class: service.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: siteDown	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when all SAPs on a site are operationally down, or when the service tunnels for the site are operationally down. For Backhaul Sites, this alarm is raised when one or more Backhaul Adjacencies is operationally down.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'All Spoke SDP Bindings are Standby'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'All Spoke SDP Bindings are Standby'))		
Remedial action: The network resources (i.e. physical ports for SAPs or Backhaul Sites, or physical ports/LSP) associated with the service site should be examined to determine if/why they are operationally down. The underlying transport network supporting the site may also be unreliable.		

Table 43-95 SiteManagementVlanConflict

Alarm	Attributes	Applicable major release
Name: SiteManagementVlanConflict (223) Type: configurationAlarm Package: vlan.SiteManagementVlanConflict Raised on class: vlan.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: topologyMisconfigured	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the management VLAN ID is used for another type of service.		
Raising condition: ('managementVlanConflict' EQUAL 'true')		
Clearing condition: ('managementVlanConflict' EQUAL 'false')		
Remedial action: Ensure that the VLAN ID of this Management Service Site is not used on any other type of VLAN Service Site.		

Table 43-96 SiteVlanSubTypeConflict

Alarm	Attributes	Applicable major release
Name: SiteVlanSubTypeConflict (224) Type: configurationAlarm Package: vlan.SiteVlanSubTypeConflict Raised on class: vlan.Site	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: topologyMisconfigured	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when more than one type of VLAN service has the same VLAN ID. The alarm is raised against a site.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		
Remedial action: Ensure that only one type of VLAN Service is configured with the VLAN ID used by this Site.		

Table 43-97 SpbSiteDown

Alarm	Attributes	Applicable major release
Name: SpbSiteDown (4396) Type: ProtocolAlarm Package: spb.SpbSiteDown Raised on class: spb.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 7.3.2
Description: The alarm is raised when an SPB site has an Operational State other than Up.		
Raising condition: ('Operational State' NOT EQUAL 'Up')		
Clearing condition: ('Operational State' EQUAL 'Up')		
Remedial action: Check if the administrative state is down. If the administrative state is up, then check the ISIS instance associated with the SPB and make sure it is up.		

Table 43-98 StatsRetrieveFailed

Alarm	Attributes	Applicable major release
Name: StatsRetrieveFailed (244) Type: configurationAlarm Package: sw.StatsRetrieveFailed Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: fileTransferFailure	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		

Table 43-98 StatsRetrieveFailed (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 43-99 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major release
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed Package: netw.SubscriberSystemNextHopUsageHigh Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

Table 43-100 SubSysChassMemoryUsageHi

Alarm	Attributes	Applicable major release
Name: SubSysChassMemoryUsageHi (5656) Type: thresholdCrossed Package: equipment.SubSysChassMemoryUsageHi Raised on class: equipment.Shelf	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: This alarm is raised when the memory usage by subscriber management on this system or chassis reaches its high watermark ('true').		
Raising condition: ('Memory Usage High' EQUAL 'True')		
Clearing condition: (('Memory Usage High' EQUAL 'False') OR ('Memory Usage High' EQUAL 'unspecified'))		
Remedial action: The memory usage by subscriber management on this system has reached its high watermark. Please check your memory usage.		

Table 43-101 TemperatureThresholdCrossed

Alarm	Attributes	Applicable major release
Name: TemperatureThresholdCrossed (7) Type: environmentalAlarm Package: equipment.TemperatureThresholdCrossed Raised on class: equipment.Environment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentOverheated	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a temperature crosses a threshold.		
Raising condition: ('temperatureThresholdCrossed' EQUAL 'true')		
Clearing condition: ('temperatureThresholdCrossed' EQUAL 'false')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 43-102 TmnxEqPortEtherLoopDetected

Alarm	Attributes	Applicable major release
Name: TmnxEqPortEtherLoopDetected (461) Type: portEtherLoopDetected Package: ethernetequipment. TmnxEqPortEtherLoopDetected Raised on class: ethernetequipment. EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: HighBer	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a device detects a physical loop on an Ethernet port.		
Raising condition: (('Down When Looped Status' EQUAL 'Loop Detected'))		
Clearing condition: (('Down When Looped Status' EQUAL 'No Loop Detected'))		
Remedial action: An Ethernet port has been mis-cabled - please remove the loopback cable on the port.		

Table 43-103 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major release
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm Package: netw.TrapDestinationMisconfigured Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trapDestinationMisconfigured Applicable probable causes: • trapDestinationMisconfigured • duplicateTrapLogId	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		

Table 43-103 TrapDestinationMisconfigured (continued)

Alarm	Attributes	Applicable major release
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 43-104 TrapReceivingFailure

Alarm	Attributes	Applicable major release
Name: TrapReceivingFailure (1083) Type: communications Package: netw.TrapReceivingFailure Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: trapsWillNotBeSent	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		
Raising condition: ((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')))		
Clearing condition: ((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

Table 43-105 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major release
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications Package: netw. TrapRoutePreferenceRedundancyMissing Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trapsRedundancyMissing	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: ((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')))		
Clearing condition: ((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None')))		
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

Table 43-106 UnidentifiedNode

Alarm	Attributes	Applicable major release
Name: UnidentifiedNode (1922) Type: communicationsAlarm Package: netw.UnidentifiedNode Raised on class: netw.DiscoveredNode	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unidentifiedNode	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 43-107 UnmanageFailed

Alarm	Attributes	Applicable major release
Name: UnmanageFailed (300) Type: discoveryControlAlarm Package: netw.UnmanageFailed Raised on class: netw.NodeDiscoveryControl	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unableToDeleteNode	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'Unmanage Failed')		
Clearing condition: ('Site State' NOT EQUAL 'Unmanage Failed')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 43-108 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major release
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm Package: netw.UpgradedBuildVersionMismatch Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: upgradedImageNotBooted	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 43-109 upgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: upgradedCardAlarm (255) Type: softwareAlarm Package: equipment.upgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: upgradedCard	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		

Table 43-109 upgradedCardAlarm (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 43-110 UplinkDown

Alarm	Attributes	Applicable major release
Name: UplinkDown (11062) Type: virtualSwitchAlarm Package: dctr.UplinkDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsAllDown	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when all connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '2'))		
Clearing condition: (('uplinkState' NOT EQUAL '2'))		
Remedial action: This alarm is raised when all connections associated to the uplink lost connectivity.		

Table 43-111 UplinkPartiallyDown

Alarm	Attributes	Applicable major release
Name: UplinkPartiallyDown (11063) Type: virtualSwitchAlarm Package: dctr.UplinkPartiallyDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsDown	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when some connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '3'))		
Clearing condition: (('uplinkState' NOT EQUAL '3'))		
Remedial action: This alarm is raised when a connection of the uplink lost connectivity but at least one connection remains connected.		

Table 43-112 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm Package: sw.VersionConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: versionMismatch	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 43-113 VirtualLinkDown

Alarm	Attributes	Applicable major release
Name: VirtualLinkDown (122) Type: VirtualLinkAlarm Package: ospf.VirtualLinkDown Raised on class: ospf.VirtualLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: VirtualLinkDown	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when a virtual link is Down.		
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' NOT EQUAL 'Down')		
Remedial action: This alarm is raised when the OSPF virtual link is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 43-114 VirtualNeighborDown

Alarm	Attributes	Applicable major release
Name: VirtualNeighborDown (123) Type: VirtualNeighborDown Package: ospf.VirtualNeighborDown Raised on classes: • ospf.ShamLink • ospf.VirtualLink	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: VirtualNeighborDown	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2

Table 43-114 VirtualNeighborDown (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when a neighbor virtual link is operationally down.		
Raising condition: ('neighborCount' EQUAL '0L')		
Clearing condition: ('neighborCount' NOT EQUAL '0L')		
Remedial action: This alarm is raised when the OSPF neighbor virtual link is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 43-115 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major release
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm Package: netw.WrongCpaaSoftwareVersion Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion	Release: • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL '\"TiMOS-B-3.0.Generic \"') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Clearing condition: (('Software Version' NOT EQUAL '\"TiMOS-B-3.0.Generic \"') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

44 OS6250

44.1 Alarms

Alarms

Note: Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see Chapter 39, “Unspecified NE”.

Table 44-1 AccessInterfaceDown

Alarm	Attributes	Applicable major release
Name: AccessInterfaceDown (249) Type: AccessInterfaceAlarm Package: service.AccessInterfaceDown Raised on class: service.AccessInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceDown	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when an L2 or L3 interface operational state is Down. The alarm is not raised against an L2 access interface that is associated with an MC ring or MC LAG in the standby state.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'Standby For MC-Ring') AND ('State Cause' NOT EQUAL 'Standby For MC Protocol') AND ('State Cause' NOT EQUAL 'Standby For BGP Multi-homing'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'Standby For MC-Ring') OR ('State Cause' EQUAL 'Standby For MC Protocol') OR ('State Cause' EQUAL 'Standby For BGP Multi-homing'))		
Remedial action: The condition exists because the physical interface is down either because it is administratively disabled, faulty or a cabling fault has occurred. Ensure that the interface is administratively up. Check for a poor cable connection to the port or for a faulty cable/fiber. If neither appears to be the problem run diagnostics on the port to determine if it is faulty.		

Table 44-2 ActiveAbnormalCondition

Alarm	Attributes	Applicable major release
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm Package: netw.ActiveAbnormalCondition Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

Table 44-3 AggregatedVFLPortDown

Alarm	Attributes	Applicable major release
Name: AggregatedVFLPortDown (5436) Type: equipmentAlarm Package: equipment.AggregatedVFLPortDown Raised on class: equipment.Shelf	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: connectivityIssue	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is generated when the aggregated virtual fabric link on the virtual chassis slot is down.		
Raising condition: (('Shelf Type' EQUAL '7850') AND ('Total Slots' EQUAL '4') AND ('Virtual Fabric Link State' NOT EQUAL 'Up'))		
Clearing condition: (('Shelf Type' EQUAL '7850') AND ('Total Slots' EQUAL '4') AND ('Virtual Fabric Link State' EQUAL 'Up'))		
Remedial action: The alarm is raised when the aggregated virtual fabric link on the virtual chassis is down. Please check the virtual fabric links for the virtual chassis setup.		

Table 44-4 AGWDiameterPeerDown

Alarm	Attributes	Applicable major release
Name: AGWDiameterPeerDown (844) Type: EpcAlarm Package: lte.AGWDiameterPeerDown Raised on class: lte.AGWDiameterPeer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerDown	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 44-5 AuxiliaryServerStatus

Alarm	Attributes	Applicable major release
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm Package: server.AuxiliaryServerStatus Raised on class: server.AuxiliaryServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 44-6 BareMetalReachabilityDown

Alarm	Attributes	Applicable major release
Name: BareMetalReachabilityDown (10273) Type: virtualPortAlarm Package: dctr.BareMetalReachabilityDown Raised on class: dctr.BMDevice	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BareMetalReachability-DownOrDeleted	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when Bare Metal server is reachability down.		
Raising condition: (('bgpReachabilityState' NOT EQUAL '0'))		
Clearing condition: (('bgpReachabilityState' EQUAL '0'))		
Remedial action: This alarm can be cleared when bare metal device BGP prefix is up. Check for virtual switch controller down or virtual switch down or interface/port down in underlay network (hence the BGP prefix not advertised).		

Table 44-7 BootableConfigBackupFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigBackupFailed (103) Type: configurationAlarm Package: sw.BootableConfigBackupFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 44-8 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm Package: sw.BootableConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 44-9 BootParametersMisconfigured

Alarm	Attributes	Applicable major release
Name: BootParametersMisconfigured (35) Type: configurationAlarm Package: netw.BootParametersMisconfigured Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistentIndexFailure Applicable probable causes: • persistentIndexFailure • configFileBootFailure	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND ((('Config File Status' NOT EQUAL 'Executed Successfully') AND ('Config File Status' NOT EQUAL 'configFileStatus_unspecified')) OR (('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded') AND ('Persistent Index Status' NOT EQUAL 'persistentIndexStatus_unspecified'))))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

Table 44-10 ClientDelegateServerStatus

Alarm	Attributes	Applicable major release
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm Package: server.ClientDelegateServerStatus Raised on class: server.ClientDelegateServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 44-11 CmuManagementFailed

Alarm	Attributes	Applicable major release
Name: CmuManagementFailed (10040) Type: communicationsAlarm Package: lte.CmuManagementFailed Raised on class: lte.CompactMobilityUnit	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ftpFailed	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when SAM fails to manage a 9430 Compact Mobility Unit due to an FTP failure.		
Raising condition: ('Management State' EQUAL 'FTP Failed')		
Clearing condition: ('Management State' EQUAL 'Managed')		
Remedial action: Verify FTP connectivity between the 5620 SAM and the 9430 Compact Mobility Unit, then re-attempt to manage.		

Table 44-12 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm Package: equipment.ContainingEquipmentAdministrativelyDown Raised on class: equipment.Port	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentAdministrativelyDown	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 44-13 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm Package: equipment.ContainingEquipmentMismatch Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentMismatch	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 44-14 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm Package: equipment. ContainingEquipmentOperationallyDown Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentDown	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationllyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

Table 44-15 CorruptImageFile

Alarm	Attributes	Applicable major release
Name: CorruptImageFile (171) Type: configurationAlarm Package: mediation.CorruptImageFile Raised on class: mediation. AbstractSoftwareFolderDescriptor	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 44-16 downgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: downgradedCardAlarm (256) Type: softwareAlarm Package: equipment.downgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: downgradedCard	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 44-17 EfmOamAlarm

Alarm	Attributes	Applicable major release
Name: EfmOamAlarm (4617) Type: equipmentAlarm Package: ethernetequipment.EfmOamAlarm Raised on class: ethernetequipment.Dot3Oam	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EFMOAMOperationalstate-OutofService	Release: • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when EFM Ignore status is Enabled and EFM Operation Status has a fault that is not propagated to the Physical Port Operational State.		
Raising condition: ((('Operational Status' EQUAL 'Link Fault') OR ('Operational Status' EQUAL 'Active Send Local')) AND ('Ignore EFM State' EQUAL 'true'))		
Clearing condition: ((('Operational Status' NOT EQUAL 'Link Fault') AND ('Operational Status' NOT EQUAL 'Active Send Local')) OR ('Ignore EFM State' EQUAL 'false'))		
Remedial action: Informational - The alarm indicates that EFM has detected an error condition but has not affected the operation state of the port.		

Table 44-18 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm Package: equipment.EquipmentAdministrativelyDown Raised on class: equipment.Equipment	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentAdministratively-Down	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 44-19 EquipmentDegraded

Alarm	Attributes	Applicable major release
Name: EquipmentDegraded (604) Type: equipmentAlarm Package: equipment.EquipmentDegraded Raised on class: equipment.FanTray	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: singleFanFailure	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when a single fan fails. The chassis attempts to continue operating within the normal temperature range using only the remaining fans.		
Raising condition: ('Device State' EQUAL 'MinorFailure')		
Clearing condition: ('Device State' NOT EQUAL 'MinorFailure')		
Remedial action: The failed fan unit should be replaced.		

Table 44-20 EquipmentDown

Alarm	Attributes	Applicable major release
Name: EquipmentDown (10) Type: equipmentAlarm Package: equipment.EquipmentDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: inoperableEquipment	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 44-21 EquipmentInTest

Alarm	Attributes	Applicable major release
Name: EquipmentInTest (11) Type: equipmentAlarm Package: equipment.EquipmentInTest Raised on class: equipment.Equipment	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentInTest	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 44-22 EquipmentMismatch

Alarm	Attributes	Applicable major release
Name: EquipmentMismatch (9) Type: equipmentAlarm Package: equipment.EquipmentMismatch Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentTypeMismatch	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 44-23 EquipmentRemoved

Alarm	Attributes	Applicable major release
Name: EquipmentRemoved (8) Type: equipmentAlarm Package: equipment.EquipmentRemoved Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: ((('isEquipped' EQUAL 'false') OR ('compositeEquipmentState' EQUAL 'Removed')) AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Removed') AND ('isEquipped' EQUAL 'true'))		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 44-24 EthernetPortConfiguredLoopback

Alarm	Attributes	Applicable major release
Name: EthernetPortConfiguredLoopback (801) Type: configurationAlarm Package: ethernetequipment. EthernetPortConfiguredLoopback Raised on class: ethernetequipment. EthernetPortSpecifics	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ethernetPortConfiguredLoop-back	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when a timed loopback is in effect for an Ethernet port.		
Raising condition: (('Type' NOT EQUAL 'None'))		
Clearing condition: (('Type' EQUAL 'None'))		
Remedial action: This alarm has been raised bye the node because "Timed Loopback" option of the specific port's Ethernet property has been enabled. To resolve this problem from "Ethernet" tab of "Physical Port" properties form configure "Timed Loopback" Type property as "None".		

Table 44-25 EthernetPortDuplicateLane

Alarm	Attributes	Applicable major release
Name: EthernetPortDuplicateLane (3557) Type: communicationsAlarm Package: ethernetequipment. EthernetPortDuplicateLane Raised on class: ethernetequipment. EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: DuplicateLane	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when a device reports a Duplicate Lane on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane')))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 44-26 EthernetPortHighBer

Alarm	Attributes	Applicable major release
Name: EthernetPortHighBer (307) Type: communicationsAlarm Package: ethernetequipment.EthernetPortHighBer Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: HighBer	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when a device reports a high bit-error rate on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate')))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 44-27 EthernetPortLocalFault

Alarm	Attributes	Applicable major release
Name: EthernetPortLocalFault (305) Type: communicationsAlarm Package: ethernetequipment.EthernetPortLocalFault Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: LocalFault	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when a device reports a local fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault')))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 44-28 EthernetPortNoAmLock

Alarm	Attributes	Applicable major release
Name: EthernetPortNoAmLock (3558) Type: communicationsAlarm Package: ethernetequipment.EthernetPortNoAmLock Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NoAmLock	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when a device reports a No Am Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock')))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 44-29 EthernetPortNoBlockLock

Alarm	Attributes	Applicable major release
Name: EthernetPortNoBlockLock (3559) Type: communicationsAlarm Package: ethernetequipment.EthernetPortNoBlockLock Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NoBlockLock	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when a device reports a No Block Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock')))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 44-30 EthernetPortNoFrameLock

Alarm	Attributes	Applicable major release
Name: EthernetPortNoFrameLock (306) Type: communicationsAlarm Package: ethernetequipment.EthernetPortNoFrameLock Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NoFrameLock	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when a device reports No Frame Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock')))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 44-31 EthernetPortRemoteFault

Alarm	Attributes	Applicable major release
Name: EthernetPortRemoteFault (304) Type: communicationsAlarm Package: ethernetequipment.EthernetPortRemoteFault Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: RemoteFault	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when a device reports a remote fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault')))		
Remedial action: One of the following conditions exists on the remote physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 44-32 EthernetPortSignalFailure

Alarm	Attributes	Applicable major release
Name: EthernetPortSignalFailure (303) Type: communicationsAlarm Package: ethernetequipment.EthernetPortSignalFailure Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: SignalFailure	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when a device reports a signal failure on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))		
Clearing condition: NOT ((('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure')))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 44-33 FanFailure (equipment)

Alarm	Attributes	Applicable major release
Name: FanFailure (624) Type: equipmentAlarm Package: equipment.FanFailure Raised on class: equipment.FanTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fanFailure	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the associated fan is not operationally Up.		
Raising condition: (('Device State' EQUAL 'Failed') OR ('Device State' EQUAL 'Unknown') OR ('Device State' EQUAL 'OutOfservice'))		
Clearing condition: ('Device State' EQUAL 'OK')		
Remedial action: Remove and reset the fan unit. If this does not resolve the problem replace the fan.		

Table 44-34 FanTrayRemoved

Alarm	Attributes	Applicable major release
Name: FanTrayRemoved (569) Type: equipmentAlarm Package: equipment.FanTrayRemoved Raised on class: equipment.FanTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: FanTrayRemoved	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the deviceState attribute has a value of deviceNotEquipped.		
Raising condition: ('Device State' EQUAL 'Not Equipped')		
Clearing condition: ('Device State' NOT EQUAL 'Not Equipped')		
Remedial action: Informational - a fan tray has been removed from the NE.		

Table 44-35 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major release
Name: FrameSizeProblem (37) Type: configurationAlarm Package: netw.FrameSizeProblem Raised on class: netw.StatefullConnectableInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: frameSizeProblem	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL '0L'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL '0L'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 44-36 GaPeerDown

Alarm	Attributes	Applicable major release
Name: GaPeerDown (3303) Type: EpcAlarm Package: lteggsn.GaPeerDown Raised on class: lteggsn.GaPeer	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerDown	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 44-37 IfVlanSubTypeConflict

Alarm	Attributes	Applicable major release
Name: IfVlanSubTypeConflict (213) Type: configurationAlarm Package: vlan.IfVlanSubTypeConflict Raised on class: vlan.L2AccessInterface	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: topologyMisconfigured	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when more than one type of VLAN service is configured with the same VLAN ID. The alarm is raised against an L2 access interface.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		
Remedial action: Ensure that only one type of VLAN Service is configured with the VLAN ID used by this Interface.		

Table 44-38 IgmpDown

Alarm	Attributes	Applicable major release
Name: IgmpDown (158) Type: ProtocolAlarm Package: igmp.IgmpDown Raised on class: igmp.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when an IGMP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: While configured under VPRN, check if VPRN site is admin down, or if route distinguisher is not configured.		

Table 44-39 IgmpSnoopingDown

Alarm	Attributes	Applicable major release
Name: IgmpSnoopingDown (161) Type: ProtocolAlarm Package: layer2.IgmpSnoopingDown Raised on class: layer2.Bridge	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when IGMP snooping is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('IGMP Snooping' EQUAL 'Disabled')		
Clearing condition: ('IGMP Snooping' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable IGMP Snooping under the Bridge Instance.		

Table 44-40 IncompleteConfiguration

Alarm	Attributes	Applicable major release
Name: IncompleteConfiguration (1942) Type: operationalViolation Package: netw.IncompleteConfiguration Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: incompleteConfig	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when a pre-provisioned NE has no objects configured beneath it.		
Raising condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' EQUAL '\"\"'))		
Clearing condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' NOT EQUAL '\"\"'))		
Remedial action: A configuration error has been made which must be corrected. The configuration of the pre-provisioned NE is incomplete. A work order was not associated with the pre-provisioned NE and as a consequence the attempt to auto-configure the NE failed.		

Table 44-41 InterfaceDown (netw)

Alarm	Attributes	Applicable major release
Name: InterfaceDown (36) Type: InterfaceAlarm Package: netw.InterfaceDown Raised on class: netw.StatefullConnectableInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceDown	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when an interface or underlying resource fails, as indicated by an interface compositeState attribute value of failed or underlyingResourceFailed.		
Raising condition: (('compositeState' EQUAL 'Inoperable') OR ('compositeState' EQUAL 'Underlying Resource Inoperable'))		
Clearing condition: (('compositeState' NOT EQUAL 'Inoperable') AND ('compositeState' NOT EQUAL 'Underlying Resource Inoperable'))		
Remedial action: A physical port (physical interface, LAG, channel) associated with the network interface in not operational. Ensure that the interface is cabled and there are no configuration errors (i.e. MTU size set incorrectly etc) on the interface.		

Table 44-42 LagDown

Alarm	Attributes	Applicable major release
Name: LagDown (20) Type: equipmentAlarm Package: lag.LagDown Raised on class: lag.Interface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: lagDown	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when all ports in a LAG are operationally down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This alarm indicates that all physical Ethernet links associated with a LAG are operationally down. The reasons for the links to be down may vary from link to link. The following possible causes of this alarm should be investigated. The physical port (near end or far end may have failed - this can be remedied by replacing the interface card in question. The physical links may have been turned down administratively - re-enable the links. A cable failure or disconnect may have occurred - please ensure that the cables are properly connected to the physical port and and that the cable has not been damaged.		

Table 44-43 LagPortAddFailed

Alarm	Attributes	Applicable major release
Name: LagPortAddFailed (422) Type: equipmentAlarm Package: equipment.LagPortAddFailed Raised on class: equipment.PhysicalPort	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: linkDown	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the Lag Port Add function Fails.		
Raising condition: (('state' EQUAL 'Link Down') AND ('LAG ID' > '0'))		
Clearing condition: (('state' NOT EQUAL 'Link Down') OR ('LAG ID' EQUAL '0'))		
Remedial action: A configuration error has occurred which must be corrected. The link that was to be added to the LAG group may be of the wrong type (i.e. non ethernet) or the limit of the number of links supported in a LAG may have been reached.		

Table 44-44 LicensedLimitExceeded

Alarm	Attributes	Applicable major release
Name: LicensedLimitExceeded (127) Type: licensingAlarm Package: security.LicensedLimitExceeded Raised on class: security.SamLicensePoints	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: licensedLimitExceeded	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact your Nokia sales representative to purchase additional licenses.		

Table 44-45 LinkDown (equipment)

Alarm	Attributes	Applicable major release
Name: LinkDown (12) Type: communicationsAlarm Package: equipment.LinkDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: portLinkProblem	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 44-46 LowTemperatureDetected

Alarm	Attributes	Applicable major release
Name: LowTemperatureDetected (1127) Type: environmentalAlarm Package: equipment.LowTemperatureDetected Raised on class: equipment.Shelf	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentOvercooled	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the chassis temperature falls below the minimum threshold.		
Raising condition: ('Low Temperature State' EQUAL 'Low')		
Clearing condition: ('Low Temperature State' NOT EQUAL 'Low')		
Remedial action: The NE has detected internal temperatures which are abnormally low. This may happen when the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 44-47 LowTemperatureThresholdCrossed

Alarm	Attributes	Applicable major release
Name: LowTemperatureThresholdCrossed (1128) Type: environmentalAlarm Package: equipment. LowTemperatureThresholdCrossed Raised on class: equipment.Environment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentOvercooled	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when a low-temperature threshold is crossed.		
Raising condition: ('lowTemperatureThresholdCrossed' EQUAL 'true')		
Clearing condition: ('lowTemperatureThresholdCrossed' EQUAL 'false')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 44-48 LpsViolation

Alarm	Attributes	Applicable major release
Name: LpsViolation (518) Type: learnedPortSecurityAlarm Package: lps.LpsViolation Raised on class: lps.LearnedPortSecurity	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: learnedPortSecurityViolation	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the 5620 SAM detects an LPS violation.		
Raising condition: ('Operational State' EQUAL 'Security Violated')		
Clearing condition: ('Operational State' EQUAL 'Down')		
Remedial action: Port reset is required to return the port to normal operation.		

Table 44-49 macMoveRateExceeded (service)

Alarm	Attributes	Applicable major release
Name: macMoveRateExceeded (3690) Type: accessInterfaceAlarm Package: service.macMoveRateExceeded Raised on class: service.AccessInterface	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: MacMoveRateExceeded	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the SAP exceeds the MAC Move Frequency of the service site.		
Raising condition: ('State Cause'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('State Cause'anyBit'Relearn Limit Exceeded'))		
Remedial action: Informational.		

Table 44-50 MepAISReceivedAlarm

Alarm	Attributes	Applicable major release
Name: MepAISReceivedAlarm (2945) Type: oamAlarm Package: ethernetoam.MepAISReceivedAlarm Raised on class: ethernetoam.Mep	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: missingRemoteMep	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when a MEP receives AIS test frames from one or more of its sub-layer MEPs.		
Raising condition: (('AIS Received (AisRx)' EQUAL 'true') AND ('Facility VLAN ID' EQUAL '0'))		
Clearing condition: ('AIS Received (AisRx)' EQUAL 'false')		
Remedial action: This alarm indicates that it has received a MEP fault from a sub-layer MEP, user should investigate the fault cause on the sub-layer MEP and resolve this root cause issue.		

Table 44-51 MobileConnectorDown

Alarm	Attributes	Applicable major release
Name: MobileConnectorDown (1064) Type: EpcAlarm Package: lteservice.MobileConnectorDown Raised on class: lteservice.MobileServiceConnector	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EpcDown	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL '\"\"')		
Clearing condition: ('EPS Path' NOT EQUAL '\"\"')		
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

Table 44-52 MvrSiteDown

Alarm	Attributes	Applicable major release
Name: MvrSiteDown (162) Type: ProtocolAlarm Package: layer2.MvrSiteDown Raised on class: layer2.MvrSite	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('MVR Admin Status' EQUAL 'Disabled')		
Clearing condition: ('MVR Admin Status' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable MVR Admin Status under the Bridge Instance.		

Table 44-53 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major release
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm Package: netw. NeManagementAndTrapManagementMismatch Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: neManagementChange	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		
Raising condition: ((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band')))		
Clearing condition: ((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band')))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

Table 44-54 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major release
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm Package: security.NewSsh2ServerKeyDetected Raised on class: security.KnownHostKey	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 44-55 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major release
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm Package: netw.NodeDatabaseFallbackDetected Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeDatabaseFallback	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 44-56 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major release
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm Package: netw.NodeDatabaseMisalignmentDetected Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

Table 44-57 NodeSuspended

Alarm	Attributes	Applicable major release
Name: NodeSuspended (5123) Type: communicationsAlarm Package: netw.NodeSuspended Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NodeSuspend	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element.The alarm will be cleared when the network element is managed back.		

Table 44-58 NTPOperDown

Alarm	Attributes	Applicable major release
Name: NTPOperDown (4879) Type: communicationsAlarm Package: ntp.NTPOperDown Raised on class: ntp.NTP	Severity: info Specific problem: Not Applicable Implicitly cleared: true Default probable cause: NTPOperDown	Release: • 6.6.5 • 6.7.1
Description: The alarm is generated when the NTP Operational State is down for NTP.		
Raising condition: (('Operational State' EQUAL 'Down') AND ('NTP State' EQUAL 'Enabled'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('NTP State' EQUAL 'Disabled'))		
Remedial action: Please check if NTP is administratively enabled (Admin State in NTP General Tab). If admin state down, enable it to make NTP operationally up.		

Table 44-59 OverTemperatureDetected

Alarm	Attributes	Applicable major release
Name: OverTemperatureDetected (388) Type: environmentalAlarm Package: equipment.OverTemperatureDetected Raised on class: equipment.Shelf	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentOverheated	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the chassis temperature exceeds the maximum threshold value.		
Raising condition: ('Over Temperature State' EQUAL 'Over')		
Clearing condition: ('Over Temperature State' NOT EQUAL 'Over')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 44-60 PartialResyncProblem

Alarm	Attributes	Applicable major release
Name: PartialResyncProblem (4401) Type: communicationsAlarm Package: netw.PartialResyncProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: partialResyncProblem	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when a partial resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 44-61 PartialVPRNEncryption

Alarm	Attributes	Applicable major release
Name: PartialVPRNEncryption (8992) Type: configurationAlarm Package: nge.PartialVPRNEncryption Raised on class: nge.VprnEncryptService	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConfigMismatch	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when one or more sites are not encryption enabled in a VPRN service.		
Raising condition: (('VPRN Service Encryption Status' EQUAL 'Partial'))		
Clearing condition: (('VPRN Service Encryption Status' NOT EQUAL 'Partial'))		
Remedial action: This site is newly added to the VPRN service, Perform the encrypt operation on the KeyGroup to clear the alarm.		

Table 44-62 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major release
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm Package: netw.PersistentIndexParametersMisconfigured Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistentIndexConfiguration-Mismatch	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when persistence is set to Off in the NE BOF.		
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

Table 44-63 PollerProblem

Alarm	Attributes	Applicable major release
Name: PollerProblem (31) Type: communicationsAlarm Package: netw.PollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resyncFailed	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 44-64 PortEtherSymMonSDAlarm

Alarm	Attributes	Applicable major release
Name: PortEtherSymMonSDAlarm (5662) Type: communicationsAlarm Package: ethernetequipment. PortEtherSymMonSDAlarm Raised on class: ethernetequipment. EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: etherPortSymMonSDThrehol-dExceededAlarm	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when an Ethernet port Symbol Monitor Failure alarm condition is detected (Signal Degradation Threshold exceeded).		
Raising condition: ('Symbol Alarm Reason' EQUAL 'SD Threshold Exceeded')		
Clearing condition: ('Symbol Alarm Reason' NOT EQUAL 'SD Threshold Exceeded')		
Remedial action: Symbol monitor signal degradation alarm could be cleared by changing/disabling the associated threshold/multiplier values or it is self clearing and will clear once the error rate drops below 1/10th of the configured rate.		

Table 44-65 PortEtherSymMonSFAlarm

Alarm	Attributes	Applicable major release
Name: PortEtherSymMonSFAlarm (5663) Type: communicationsAlarm Package: ethernetequipment. PortEtherSymMonSFAlarm Raised on class: ethernetequipment. EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: etherPortSymMonSFThrehold-ExceededAlarm	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when an Ethernet port Symbol Monitor Failure alarm condition is detected (Signal Failure Threshold exceeded).		
Raising condition: ('Symbol Alarm Reason' EQUAL 'SF Threshold Exceeded')		
Clearing condition: ('Symbol Alarm Reason' NOT EQUAL 'SF Threshold Exceeded')		
Remedial action: Symbol monitor signal failure alarm could be cleared by changing/disabling the associated threshold/multiplier values or by taking the port out of service (eg. shutdown, card/mda reset, physical link loss).		

Table 44-66 PowerSupplyAcFailure

Alarm	Attributes	Applicable major release
Name: PowerSupplyAcFailure (9644) Type: equipmentAlarm Package: equipment.PowerSupplyAcFailure Raised on class: equipment.PowerSupplyTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyAcFailure	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: This notification is generated when an AC failure occurs on the power supply.		
Raising condition: ('AC Voltage Status' EQUAL 'Out of Range')		
Clearing condition: (('AC Voltage Status' EQUAL 'Not Equipped') OR ('AC Voltage Status' EQUAL 'OK'))		
Remedial action: Insert a new power supply. If the problem persists please contact your Nokia support representative for assistance.		

Table 44-67 PowerSupplyDcFailure

Alarm	Attributes	Applicable major release
Name: PowerSupplyDcFailure (9645) Type: equipmentAlarm Package: equipment.PowerSupplyDcFailure Raised on class: equipment.PowerSupplyTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyDcFailure	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: This notification is generated when a DC failure occurs on the power supply.		
Raising condition: ('DC Voltage Status' EQUAL 'Out of Range')		
Clearing condition: (('DC Voltage Status' EQUAL 'Not Equipped') OR ('DC Voltage Status' EQUAL 'OK'))		
Remedial action: Insert a new power supply. If the problem persists please contact your Nokia support representative for assistance.		

Table 44-68 PowerSupplyFailure (equipment)

Alarm	Attributes	Applicable major release
Name: PowerSupplyFailure (633) Type: equipmentAlarm Package: equipment.PowerSupplyFailure Raised on class: equipment.PowerSupplyTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyFailure	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when a power-supply tray reports a failure. When the alarm is raised during device discovery, a power-supply tray may be out of service. When the alarm is raised while the device is in the managed state, a power-supply tray may be out of service or the AC or DC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: (('Power Supply 1 Status' EQUAL 'Not Equipped') OR ('Power Supply 1 Status' EQUAL 'Failed'))		
Clearing condition: (('Power Supply 1 Status' EQUAL 'OK'))		
Remedial action: Ensure that the NE is properly connected to power. If the problem persists please contact your Nokia support representative for assistance.		

Table 44-69 PowerSupplyInputFailure

Alarm	Attributes	Applicable major release
Name: PowerSupplyInputFailure (9622) Type: equipmentAlarm Package: equipment.PowerSupplyInputFailure Raised on class: equipment.PowerSupplyTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyInputFailure	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: Generated when one of the chassis's power source supplies fails.		
Raising condition: ('Power Supply Input Status' EQUAL 'Failed')		
Clearing condition: (('Power Supply Input Status' EQUAL 'Not Equipped') OR ('Power Supply Input Status' EQUAL 'OK'))		
Remedial action: Ensure that the NE is properly connected to power. If the problem persists please contact your Nokia support representative for assistance.		

Table 44-70 PowerSupplyInputFeedDown

Alarm	Attributes	Applicable major release
Name: PowerSupplyInputFeedDown (5422) Type: equipmentAlarm Package: equipment.PowerSupplyInputFeedDown Raised on class: equipment.PowerSupplyTray	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyInputFeedDown	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: This alarm is generated if any one of the input feeds for a given power supply is not supplying power.		
Raising condition: (('inputFeedStatus' EQUAL 'Input A Down') OR ('inputFeedStatus' EQUAL 'Input B Down') OR (('inputFeedStatus'allBits'Input A Down') AND ('inputFeedStatus'allBits'Input B Down')))		
Clearing condition: ('inputFeedStatus' EQUAL 'None')		
Remedial action: Restore all of the input feeds that are not supplying power.		

Table 44-71 PowerSupplyOutputFailure

Alarm	Attributes	Applicable major release
Name: PowerSupplyOutputFailure (9623) Type: equipmentAlarm Package: equipment.PowerSupplyOutputFailure Raised on class: equipment.PowerSupplyTray	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyOutputFailure	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: Generated when one of the chassis's power output fails.		
Raising condition: ('Power Supply Output Status' EQUAL 'Failed')		
Clearing condition: (('Power Supply Output Status' EQUAL 'Not Equipped') OR ('Power Supply Output Status' EQUAL 'OK'))		
Remedial action: Ensure that the NE is properly connected to power. If the problem persists please contact your Nokia support representative for assistance.		

Table 44-72 PowerSupplyOverTemperature

Alarm	Attributes	Applicable major release
Name: PowerSupplyOverTemperature (9646) Type: equipmentAlarm Package: equipment.PowerSupplyOverTemperature Raised on class: equipment.PowerSupplyTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: powerSupplyOverTemperature	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: This notification is generated when a power supply temperature surpasses the threshold of the particular physical chassis.		
Raising condition: ('Temperature Status' EQUAL 'Out of Range')		
Clearing condition: (('Temperature Status' EQUAL 'Not Equipped') OR ('Temperature Status' EQUAL 'OK'))		
Remedial action: Check input feed and/or insert a new power supply. If the problem persists please contact your Nokia support representative for assistance.		

Table 44-73 PowerSupplyRemoved

Alarm	Attributes	Applicable major release
Name: PowerSupplyRemoved (542) Type: equipmentAlarm Package: equipment.PowerSupplyRemoved Raised on class: equipment.PowerSupplyTray	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: PowerSupplyRemoved	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when a chassis power supply is removed.		
Raising condition: ('Power Supply 1 Status' EQUAL 'Not Equipped')		
Clearing condition: ('Power Supply 1 Status' NOT EQUAL 'Not Equipped')		
Remedial action: To recover from this event, the customer is requested to add a new power supply to the system, or change a faulty power supply with a working one.		

Table 44-74 PrimaryImageBootFailure

Alarm	Attributes	Applicable major release
Name: PrimaryImageBootFailure (191) Type: configurationAlarm Package: sw.PrimaryImageBootFailure Raised on class: sw.CardSoftware	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 44-75 RadiusOperStatusDown

Alarm	Attributes	Applicable major release
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm Package: netw.RadiusOperStatusDown Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: radiusOperationStatusDown	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up.Check the connectivity between SAM server and radius server configured on the Network element.		

Table 44-76 ReachabilityProblem

Alarm	Attributes	Applicable major release
Name: ReachabilityProblem (243) Type: communicationsAlarm Package: netw.ReachabilityProblem Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ReachabilityTestFailed	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when a mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. The polling interval depends on the NE type and is configurable in nms-server.xml. By default, the 5620 SAM polls a managed NE every four minutes. If a poll fails, the alarm is raised. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 44-77 RedundantMepMisconfiguration

Alarm	Attributes	Applicable major release
Name: RedundantMepMisconfiguration (3631) Type: oamAlarm Package: ethernetoam. RedundantMepMisconfiguration Raised on class: ethernetoam.Mep	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: misconfiguredRedundantMep	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when an Active and Redundant MEP do not have the same ID, Operational MAC Address or Sub Group configured.		
Raising condition: ('validRedundantMepConfig' EQUAL 'false')		
Clearing condition: ('validRedundantMepConfig' EQUAL 'true')		
Remedial action: MC-LAG redundant MEP configuration (MEP ID or Mac Address) for Active & Standby Interfaces do not match, this could cause issues with CFM or CCM tests if Active interface changes. Delete and Re-create Standby MEP to match Active.		

Table 44-78 RedundantMepMissing

Alarm	Attributes	Applicable major release
Name: RedundantMepMissing (3632) Type: oamAlarm Package: ethernetoam.RedundantMepMissing Raised on class: ethernetoam.Mep	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: missingRedundantMep	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when a MEP misses a redundant counterpart on LAG or SAP.		
Raising condition: (('MC-LAG Inactive' NOT EQUAL 'Not Applicable') AND ('Redundant MEP' EQUAL '\"\"'))		
Clearing condition: (('MC-LAG Inactive' EQUAL 'Not Applicable') OR (('MC-LAG Inactive' NOT EQUAL 'Not Applicable') AND ('Redundant MEP' NOT EQUAL '\"\"')))		
Remedial action: MC-LAG redundant MEP is missing Active & Standby Interfaces, this will cause issues with CFM or CCM tests if Active interface changes. Create missing Active/Standby MEP to match existing.		

Table 44-79 RemoteMepCCMAlarm

Alarm	Attributes	Applicable major release
Name: RemoteMepCCMAlarm (502) Type: oamAlarm Package: ethernetoam.RemoteMepCCMAlarm Raised on class: ethernetoam.Mep	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: missingRemoteMep	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when a MEP loses connectivity with one or more remote MEPs. The Remote MEP DB State tab on a MEP lists the missing remote MEPs.		
Raising condition: ('High-Priority Defect' NOT EQUAL '0')		
Clearing condition: ('High-Priority Defect' EQUAL '0')		
Remedial action: MEP has lost communication with Remote MEP defined in Maintenance Association (MEG) Remote MEP list, Either Remote MEP list is incorrect or diagnose connection fault and resolve.		

Table 44-80 RipDown

Alarm	Attributes	Applicable major release
Name: RipDown (72) Type: ProtocolAlarm Package: rip.RipDown Raised on class: rip.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when a RIP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The RIP Site is down while it is administratively up. Please check the node e.g, IOM is not shutdown or installed.		

Table 44-81 SaveConfigFailed

Alarm	Attributes	Applicable major release
Name: SaveConfigFailed (105) Type: configurationAlarm Package: sw.SaveConfigFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileAccessError	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact your Nokia support representative for assistance.		

Table 44-82 ScheduledPollerProblem

Alarm	Attributes	Applicable major release
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm Package: netw.ScheduledPollerProblem Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: scheduledResyncFailed	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP or Netconf security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 44-83 ServiceSiteDown

Alarm	Attributes	Applicable major release
Name: ServiceSiteDown (97) Type: serviceAlarm Package: service.ServiceSiteDown Raised on class: service.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: siteDown	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when all SAPs on a site are operationally down, or when the service tunnels for the site are operationally down. For Backhaul Sites, this alarm is raised when one or more Backhaul Adjacencies is operationally down.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'All Spoke SDP Bindings are Standby'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'All Spoke SDP Bindings are Standby'))		
Remedial action: The network resources (i.e. physical ports for SAPs or Backhaul Sites, or physical ports/LSP) associated with the service site should be examined to determine if/why they are operationally down. The underlying transport network supporting the site may also be unreliable.		

Table 44-84 SiteManagementVlanConflict

Alarm	Attributes	Applicable major release
Name: SiteManagementVlanConflict (223) Type: configurationAlarm Package: vlan.SiteManagementVlanConflict Raised on class: vlan.Site	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: topologyMisconfigured	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the management VLAN ID is used for another type of service.		
Raising condition: ('managementVlanConflict' EQUAL 'true')		
Clearing condition: ('managementVlanConflict' EQUAL 'false')		
Remedial action: Ensure that the VLAN ID of this Management Service Site is not used on any other type of VLAN Service Site.		

Table 44-85 SiteVlanSubTypeConflict

Alarm	Attributes	Applicable major release
Name: SiteVlanSubTypeConflict (224) Type: configurationAlarm Package: vlan.SiteVlanSubTypeConflict Raised on class: vlan.Site	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: topologyMisconfigured	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when more than one type of VLAN service has the same VLAN ID. The alarm is raised against a site.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		
Remedial action: Ensure that only one type of VLAN Service is configured with the VLAN ID used by this Site.		

Table 44-86 StatsRetrieveFailed

Alarm	Attributes	Applicable major release
Name: StatsRetrieveFailed (244) Type: configurationAlarm Package: sw.StatsRetrieveFailed Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: fileTransferFailure	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 44-87 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major release
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed Package: netw.SubscriberSystemNextHopUsageHigh Raised on class: netw.NetworkElement	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

Table 44-88 SubSysChassMemoryUsageHi

Alarm	Attributes	Applicable major release
Name: SubSysChassMemoryUsageHi (5656) Type: thresholdCrossed Package: equipment.SubSysChassMemoryUsageHi Raised on class: equipment.Shelf	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: resourceFull	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: This alarm is raised when the memory usage by subscriber management on this system or chassis reaches its high watermark ('true').		
Raising condition: ('Memory Usage High' EQUAL 'True')		
Clearing condition: (('Memory Usage High' EQUAL 'False') OR ('Memory Usage High' EQUAL 'unspecified'))		
Remedial action: The memory usage by subscriber management on this system has reached its high watermark. Please check your memory usage.		

Table 44-89 TemperatureThresholdCrossed

Alarm	Attributes	Applicable major release
Name: TemperatureThresholdCrossed (7) Type: environmentalAlarm Package: equipment.TemperatureThresholdCrossed Raised on class: equipment.Environment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentOverheated	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when a temperature crosses a threshold.		
Raising condition: ('temperatureThresholdCrossed' EQUAL 'true')		
Clearing condition: ('temperatureThresholdCrossed' EQUAL 'false')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 44-90 TlsSiteDown

Alarm	Attributes	Applicable major release
Name: TlsSiteDown (163) Type: ProtocolAlarm Package: layer2.TlsSiteDown Raised on class: layer2.TlsSite	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: protocolDown	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('TLS Admin Status' EQUAL 'Disabled')		
Clearing condition: ('TLS Admin Status' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable TLS Admin Status under the Bridge Instance.		

Table 44-91 TmnxEqPortEtherLoopDetected

Alarm	Attributes	Applicable major release
Name: TmnxEqPortEtherLoopDetected (461) Type: portEtherLoopDetected Package: ethernetequipment. TmnxEqPortEtherLoopDetected Raised on class: ethernetequipment. EthernetPortSpecifics	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: HighBer	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when a device detects a physical loop on an Ethernet port.		
Raising condition: (('Down When Looped Status' EQUAL 'Loop Detected'))		
Clearing condition: (('Down When Looped Status' EQUAL 'No Loop Detected'))		
Remedial action: An Ethernet port has been mis-cabled - please remove the loopback cable on the port.		

Table 44-92 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major release
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm Package: netw.TrapDestinationMisconfigured Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trapDestinationMisconfigured Applicable probable causes: • trapDestinationMisconfigured • duplicateTrapLogId	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 44-93 TrapReceivingFailure

Alarm	Attributes	Applicable major release
Name: TrapReceivingFailure (1083) Type: communications Package: netw.TrapReceivingFailure Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: false Default probable cause: trapsWillNotBeSent	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		
Raising condition: ((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')))		

Table 44-93 TrapReceivingFailure (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band'))) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')))) **Remedial action:** A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

Table 44-94 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major release
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications Package: netw. TrapRoutePreferenceRedundancyMissing Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: trapsRedundancyMissing	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: ((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')))		
Clearing condition: ((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None')))		
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

Table 44-95 UnidentifiedNode

Alarm	Attributes	Applicable major release
Name: UnidentifiedNode (1922) Type: communicationsAlarm Package: netw.UnidentifiedNode Raised on class: netw.DiscoveredNode	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unidentifiedNode	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 44-96 UnmanageFailed

Alarm	Attributes	Applicable major release
Name: UnmanageFailed (300) Type: discoveryControlAlarm Package: netw.UnmanageFailed Raised on class: netw.NodeDiscoveryControl	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: unableToDeleteNode	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'Unmanage Failed')		
Clearing condition: ('Site State' NOT EQUAL 'Unmanage Failed')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 44-97 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major release
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm Package: netw.UpgradedBuildVersionMismatch Raised on class: netw.NetworkElement	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: upgradedImageNotBooted	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact your Nokia support representative for assistance		

Table 44-98 upgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: upgradedCardAlarm (255) Type: softwareAlarm Package: equipment.upgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: upgradedCard	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 44-99 UplinkDown

Alarm	Attributes	Applicable major release
Name: UplinkDown (11062) Type: virtualSwitchAlarm Package: dctr.UplinkDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsAllDown	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when all connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '2'))		
Clearing condition: (('uplinkState' NOT EQUAL '2'))		
Remedial action: This alarm is raised when all connections associated to the uplink lost connectivity.		

Table 44-100 UplinkPartiallyDown

Alarm	Attributes	Applicable major release
Name: UplinkPartiallyDown (11063) Type: virtualSwitchAlarm Package: dctr.UplinkPartiallyDown Raised on class: dctr.AbstractUplink	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ConnectionsDown	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when some connections of the Uplink are down.		
Raising condition: (('uplinkState' EQUAL '3'))		
Clearing condition: (('uplinkState' NOT EQUAL '3'))		
Remedial action: This alarm is raised when a connection of the uplink lost connectivity but at least one connection remains connected.		

Table 44-101 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm Package: sw.VersionConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: versionMismatch	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact your Nokia support representative for assistance.		

Table 44-102 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major release
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm Package: netw.WrongCpaaSoftwareVersion Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion	Release: • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4 • 6.6.5 • 6.7.1
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL '\"TiMOS-B-3.0.Generic \"') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Clearing condition: (('Software Version' NOT EQUAL '\"TiMOS-B-3.0.Generic \"') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

45 OS6400

45.1 Alarms

Alarms

Note: Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see Chapter 39, “Unspecified NE”.

Table 45-1 AccessInterfaceDown

Alarm	Attributes	Applicable major release
Name: AccessInterfaceDown (249) Type: AccessInterfaceAlarm Package: service.AccessInterfaceDown Raised on class: service.AccessInterface	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceDown	Release: • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when an L2 or L3 interface operational state is Down. The alarm is not raised against an L2 access interface that is associated with an MC ring or MC LAG in the standby state.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'Standby For MC-Ring') AND ('State Cause' NOT EQUAL 'Standby For MC Protocol') AND ('State Cause' NOT EQUAL 'Standby For BGP Multi-homing'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'Standby For MC-Ring') OR ('State Cause' EQUAL 'Standby For MC Protocol') OR ('State Cause' EQUAL 'Standby For BGP Multi-homing'))		
Remedial action: The condition exists because the physical interface is down either because it is administratively disabled, faulty or a cabling fault has occurred. Ensure that the interface is administratively up. Check for a poor cable connection to the port or for a faulty cable/fiber. If neither appears to be the problem run diagnostics on the port to determine if it is faulty.		

Table 45-2 ActiveAbnormalCondition

Alarm	Attributes	Applicable major release
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm Package: netw.ActiveAbnormalCondition Raised on class: netw.NetworkElement	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState	Release: • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

Table 45-3 AggregatedVFLPortDown

Alarm	Attributes	Applicable major release
Name: AggregatedVFLPortDown (5436) Type: equipmentAlarm Package: equipment.AggregatedVFLPortDown Raised on class: equipment.Shelf	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: connectivityIssue	Release: • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is generated when the aggregated virtual fabric link on the virtual chassis slot is down.		
Raising condition: (('Shelf Type' EQUAL '7850') AND ('Total Slots' EQUAL '4') AND ('Virtual Fabric Link State' NOT EQUAL 'Up'))		
Clearing condition: (('Shelf Type' EQUAL '7850') AND ('Total Slots' EQUAL '4') AND ('Virtual Fabric Link State' EQUAL 'Up'))		
Remedial action: The alarm is raised when the aggregated virtual fabric link on the virtual chassis is down. Please check the virtual fabric links for the virtual chassis setup.		

Table 45-4 AGWDiameterPeerDown

Alarm	Attributes	Applicable major release
Name: AGWDiameterPeerDown (844) Type: EpcAlarm Package: lte.AGWDiameterPeerDown Raised on class: lte.AGWDiameterPeer	Severity: indeterminate Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EPSPeerDown	Release: • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 45-5 AuxiliaryServerStatus

Alarm	Attributes	Applicable major release
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm Package: server.AuxiliaryServerStatus Raised on class: server.AuxiliaryServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		

Table 45-5 AuxiliaryServerStatus (continued)

Alarm	Attributes	Applicable major release
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 45-6 BareMetalReachabilityDown

Alarm	Attributes	Applicable major release
Name: BareMetalReachabilityDown (10273) Type: virtualPortAlarm Package: dctr.BareMetalReachabilityDown Raised on class: dctr.BMDevice	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: BareMetalReachability-DownOrDeleted	Release: • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when Bare Metal server is reachability down.		
Raising condition: (('bgpReachabilityState' NOT EQUAL '0'))		
Clearing condition: (('bgpReachabilityState' EQUAL '0'))		
Remedial action: This alarm can be cleared when bare metal device BGP prefix is up. Check for virtual switch controller down or virtual switch down or interface/port down in underlay network (hence the BGP prefix not advertised).		

Table 45-7 BootableConfigBackupFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigBackupFailed (103) Type: configurationAlarm Package: sw.BootableConfigBackupFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 45-8 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major release
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm Package: sw.BootableConfigRestoreFailed Raised on class: sw.BackupRestoreManager	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: fileTransferFailure	Release: • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 45-9 BootParametersMisconfigured

Alarm	Attributes	Applicable major release
Name: BootParametersMisconfigured (35) Type: configurationAlarm Package: netw.BootParametersMisconfigured Raised on class: netw.NetworkElement	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: persistentIndexFailure Applicable probable causes: • persistentIndexFailure • configFileBootFailure	Release: • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND ((('Config File Status' NOT EQUAL 'Executed Successfully') AND ('Config File Status' NOT EQUAL 'configFileStatus_unspecified')) OR (('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded') AND ('Persistent Index Status' NOT EQUAL 'persistentIndexStatus_unspecified'))))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

Table 45-10 ClientDelegateServerStatus

Alarm	Attributes	Applicable major release
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm Package: server.ClientDelegateServerStatus Raised on class: server.ClientDelegateServer	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: systemFailed	Release: • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 45-11 CmuManagementFailed

Alarm	Attributes	Applicable major release
Name: CmuManagementFailed (10040) Type: communicationsAlarm Package: lte.CmuManagementFailed Raised on class: lte.CompactMobilityUnit	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ftpFailed	Release: • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when SAM fails to manage a 9430 Compact Mobility Unit due to an FTP failure.		
Raising condition: ('Management State' EQUAL 'FTP Failed')		
Clearing condition: ('Management State' EQUAL 'Managed')		
Remedial action: Verify FTP connectivity between the 5620 SAM and the 9430 Compact Mobility Unit, then re-attempt to manage.		

Table 45-12 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm Package: equipment.ContainingEquipmentAdministrativelyDown Raised on class: equipment.Port	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentAdministrativelyDown	Release: • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		

Table 45-12 ContainingEquipmentAdministrativelyDown (continued)

Alarm	Attributes	Applicable major release
Remedial action: Informational - no corrective action required.		

Table 45-13 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm Package: equipment.ContainingEquipmentMismatch Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentMismatch	Release: • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 45-14 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major release
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm Package: equipment. ContainingEquipmentOperationallyDown Raised on class: equipment.Port	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: containingEquipmentDown	Release: • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationllyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

Table 45-15 CorruptImageFile

Alarm	Attributes	Applicable major release
Name: CorruptImageFile (171) Type: configurationAlarm Package: mediation.CorruptImageFile Raised on class: mediation. AbstractSoftwareFolderDescriptor	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile	Release: • 6.4.3 • 6.4.4 • 6.4.5

Table 45-15 CorruptImageFile (continued)

Alarm	Attributes	Applicable major release
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 45-16 downgradedCardAlarm

Alarm	Attributes	Applicable major release
Name: downgradedCardAlarm (256) Type: softwareAlarm Package: equipment.downgradedCardAlarm Raised on class: equipment.Card	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: downgradedCard	Release: • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 45-17 EfmOamAlarm

Alarm	Attributes	Applicable major release
Name: EfmOamAlarm (4617) Type: equipmentAlarm Package: ethernetequipment.EfmOamAlarm Raised on class: ethernetequipment.Dot3Oam	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: EFMOAMOperationalstate-OutofService	Release: • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when EFM Ignore status is Enabled and EFM Operation Status has a fault that is not propagated to the Physical Port Operational State.		
Raising condition: ((('Operational Status' EQUAL 'Link Fault') OR ('Operational Status' EQUAL 'Active Send Local')) AND ('Ignore EFM State' EQUAL 'true'))		
Clearing condition: ((('Operational Status' NOT EQUAL 'Link Fault') AND ('Operational Status' NOT EQUAL 'Active Send Local')) OR ('Ignore EFM State' EQUAL 'false'))		
Remedial action: Informational - The alarm indicates that EFM has detected an error condition but has not affected the operation state of the port.		

Table 45-18 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major release
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm Package: equipment.EquipmentAdministrativelyDown Raised on class: equipment.Equipment	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentAdministratively-Down	Release: • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 45-19 EquipmentDegraded

Alarm	Attributes	Applicable major release
Name: EquipmentDegraded (604) Type: equipmentAlarm Package: equipment.EquipmentDegraded Raised on class: equipment.FanTray	Severity: minor Specific problem: Not Applicable Implicitly cleared: true Default probable cause: singleFanFailure	Release: • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when a single fan fails. The chassis attempts to continue operating within the normal temperature range using only the remaining fans.		
Raising condition: ('Device State' EQUAL 'MinorFailure')		
Clearing condition: ('Device State' NOT EQUAL 'MinorFailure')		
Remedial action: The failed fan unit should be replaced.		

Table 45-20 EquipmentDown

Alarm	Attributes	Applicable major release
Name: EquipmentDown (10) Type: equipmentAlarm Package: equipment.EquipmentDown Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: inoperableEquipment	Release: • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 45-21 EquipmentInTest

Alarm	Attributes	Applicable major release
Name: EquipmentInTest (11) Type: equipmentAlarm Package: equipment.EquipmentInTest Raised on class: equipment.Equipment	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentInTest	Release: • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 45-22 EquipmentMismatch

Alarm	Attributes	Applicable major release
Name: EquipmentMismatch (9) Type: equipmentAlarm Package: equipment.EquipmentMismatch Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: equipmentTypeMismatch	Release: • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 45-23 EquipmentRemoved

Alarm	Attributes	Applicable major release
Name: EquipmentRemoved (8) Type: equipmentAlarm Package: equipment.EquipmentRemoved Raised on class: equipment.Equipment	Severity: major Specific problem: Not Applicable Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved	Release: • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: ((('isEquipped' EQUAL 'false') OR ('compositeEquipmentState' EQUAL 'Removed')) AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Removed') AND ('isEquipped' EQUAL 'true'))		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 45-24 EthernetPortConfiguredLoopback

Alarm	Attributes	Applicable major release
Name: EthernetPortConfiguredLoopback (801) Type: configurationAlarm Package: ethernetequipment.EthernetPortConfiguredLoopback Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: warning Specific problem: Not Applicable Implicitly cleared: true Default probable cause: ethernetPortConfiguredLoopback	Release: • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when a timed loopback is in effect for an Ethernet port.		
Raising condition: (('Type' NOT EQUAL 'None'))		
Clearing condition: (('Type' EQUAL 'None'))
