CpmProtectionViolationVdoVrtrClientEntry Raised on class: sitesec.RouterControlTrafficViolation	Severity: warning Specific problem: Not Applicable Implicitly cleared: false Default probable cause: denialOfService	Release: • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when a per-source rate limit violation is detected for a client address of a Real-time Control Protocol (RTCP) control traffic in router context.		
Raising condition: ('Number of Rate Violations' NOT EQUAL '0L')		
Remedial action: A device in the network is sending traffic to the NE at a rate which is higher than expected. The source of the traffic must be identified and if the behavior is undesired then the device should be disabled. It is also possible that the threshold has been configured at a level which is lower than acceptable, in which case the configuration should be aligned with the expected traffic levels.

Description: The tmnxDhcpSvrUserDbUnknown notification is generated when the local DHCP server instance drops a DHCP message because a local user database with the name specified for this server instance could not be found.		
Remedial action: Please specify a valid local user database for this server instance.		

Table 19-398 ServiceSiteDown

Alarm	Attributes	Applicable major release
Name: ServiceSiteDown (97) Type: serviceAlarm Package: service.ServiceSiteDown Raised on class: service.Site	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: siteDown	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when all SAPs on a site are operationally down, or when the service tunnels for the site are operationally down. For Backhaul Sites, this alarm is raised when one or more Backhaul Adjacencies is operationally down.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'All Spoke SDP Bindings are Standby'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'All Spoke SDP Bindings are Standby'))		
Remedial action: The network resources (i.e. physical ports for SAPs or Backhaul Sites, or physical ports/LSP) associated with the service site should be examined to determine if/why they are operationally down. The underlying transport network supporting the site may also be unreliable.		

Table 19-399 SessionDown

Alarm	Attributes	Applicable major release
Name: SessionDown (73) Type: ProtocolAlarm Package: rsvp.SessionDown Raised on class: rsvp.Session	Severity: critical Specific problem: Not Applicable Implicitly cleared: true Default probable cause: interfaceDown	Release: • 10.0 • 11.0 • 12.0 • 13.0 • 14.0
Description: The alarm is raised when an RSVP session is operationally down.		
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' EQUAL 'Up')
