<p>InterfaceReceiveStats</p> <p>MIB entry name: tmnxOspfNgIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgIfStatsTable represents additional columns for statistics for an OSPF interface.</p> <p>Table description (for tmnxOspfNgIfStatsTable): The tmnxOspfNgIfStatsTable provides an extension of the tmnxOspfNgIfTable for statistics for an OSPF interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Interface</p>		
databaseDescriptionPackets [Database Description Packets] (tmnxOspfNgIfRxDBDs)	long	The value of tmnxOspfNgIfRxDBDs indicates the total number of OSPF Database Description packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.
helloPackets [Hello Packets] (tmnxOspfNgIfRxHellos)	long	The value of tmnxOspfNgIfRxHellos indicates the total number of OSPF Hello packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.

Table 336 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfNgIfRxLSAcks)	long	The value of tmnxOspfNgIfRxLSAcks indicates the total number of Link State Acknowledgements received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateRequests [Link State Requests] (tmnxOspfNgIfRxLSRs)	long	The value of tmnxOspfNgIfRxLSRs indicates the total number of Link State Requests (LSRs) received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateUpdates [Link State Updates] (tmnxOspfNgIfRxLSUs)	long	The value of tmnxOspfNgIfRxLSUs indicates the total number of Link State Updates (LSUs) received on this interface since tmnxOspfAdminState was last set to 'enabled'.
lsasWithBadChecksums [Lsas With Bad Checksums] (tmnxOspfNgIfRxBadChecksums)	long	The value of tmnxOspfNgIfRxBadChecksums indicates the count of LSAs received with bad checksums.
totalPackets [Total Packets] (tmnxOspfNgIfRxPackets)	long	The value of tmnxOspfNgIfRxPackets indicates the total number of OSPF packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.
InterfaceStatusStats MIB entry name: tmnxOspfNgIfStatsEntry Entry description: Each row entry in the tmnxOspfNgIfStatsTable represents additional columns for statistics for an OSPF interface. Table description (for tmnxOspfNgIfStatsTable): The tmnxOspfNgIfStatsTable provides an extension of the tmnxOspfNgIfTable for statistics for an OSPF interface. Supports realtime plotting Supports scheduled collection Monitored class: ospf.Interface		
authorizationFailures [Authorization Failures] (tmnxOspfNgIfAuthFailures)	long	The value of tmnxOspfNgIfAuthFailures indicates the total number of OSPF packets received with an invalid authorization key since tmnxOspfAdminState was last set to 'enabled'.

Table 336 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badAreas [Bad Areas] (tmnxOspfNglfBadAreas)	long	The value of tmnxOspfNglfBadAreas indicates the total number of OSPF packets received with an area mismatch since tmnxOspfAdminState was last set to 'enabled'.
badAuthorizationTypes [Bad Authorization Types] (tmnxOspfNglfBadAuthTypes)	long	The value of tmnxOspfNglfBadAuthTypes indicates the total number of OSPF packets received with an invalid authorization type since tmnxOspfAdminState was last set to 'enabled'.
badDeadIntervals [Bad Dead Intervals] (tmnxOspfNglfBadDeadIntervals)	long	The value of tmnxOspfNglfBadDeadIntervals indicates the total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this interface since tmnxOspfAdminState was last set to 'enabled'.
badDestinationAddresses [Bad Destination Addresses] (tmnxOspfNglfBadDstAddrs)	long	The value of tmnxOspfNglfBadDstAddrs indicates the total number of OSPF packets received with the incorrect IP destination address since tmnxOspfAdminState was last set to 'enabled'.
badHelloIntervals [Bad Hello Intervals] (tmnxOspfNglfBadHelloIntervals)	long	The value of tmnxOspfNglfBadHelloIntervals indicates the total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this interface since tmnxOspfAdminState was last set to 'enabled'.
badLengths [Bad Lengths] (tmnxOspfNglfBadLengths)	long	The value of tmnxOspfNglfBadLengths indicates the total number of OSPF packets received on this interface with a total length not equal to the length given in the packet itself since tmnxOspfAdminState was last set to 'enabled'.
badNeighbors [Bad Neighbors] (tmnxOspfNglfBadNeighbors)	long	The value of tmnxOspfNglfBadNeighbors indicates the total number of OSPF packets received where the neighbor information does not match the information this router has for the neighbor since tmnxOspfAdminState was last set to 'enabled'.

Table 336 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badNetworks [Bad Networks] (tmnxOspfNgIfBadNetworks)	long	The value of tmnxOspfNgIfBadNetworks indicates the total number of OSPF packets received with invalid network or mask since tmnxOspfAdminState was last set to 'enabled'.
badOptions [Bad Options] (tmnxOspfNgIfBadOptions)	long	The value of tmnxOspfNgIfBadOptions indicates the total number of OSPF packets received with an option that does not match those configured for this interface or area since tmnxOspfAdminState was last set to 'enabled'.
badPacketTypes [Bad Packet Types] (tmnxOspfNgIfBadPacketTypes)	long	The value of tmnxOspfNgIfBadPacketTypes indicates the total number of OSPF packets received with an invalid OSPF packet type since tmnxOspfAdminState was last set to 'enabled'.
badVersions [Bad Versions] (tmnxOspfNgIfBadVersions)	long	The value of tmnxOspfNgIfBadVersions indicates the total number of OSPF packets received with bad OSPF version numbers since tmnxOspfAdminState was last set to 'enabled'.
badVirtualLinks [Bad Virtual Links] (tmnxOspfNgIfBadVirtualLinks)	long	The value of tmnxOspfNgIfBadVirtualLinks indicates the total number of OSPF packets received on this interface that are destined to a virtual link that does not exist since tmnxOspfAdminState was last set to 'enabled'.
discardPackets [Discard Packets] (tmnxOspfNgIfDiscardPackets)	long	The value of tmnxOspfNgIfDiscardPackets indicates the total number of OSPF packets discarded on this interface since tmnxOspfAdminState was last set to 'enabled'.
retransmitOuts [Retransmit Outs] (tmnxOspfNgIfRetransmitOuts)	long	The value of tmnxOspfNgIfRetransmitOuts indicates the total number of OSPF Retransmits sent on this interface since tmnxOspfAdminState was last set to 'enabled'.

events [Events] (tmnxOspfNgNbrEvents)	long	The value of tmnxOspfNgNbrEvents indicates the number of times this neighbor relationship has changed state, or an error has occurred.
retransmissionQueueLength [Retransmission Queue Length] (tmnxOspfNgNbrLsRetransQLen)	long	The value of tmnxOspfNgNbrLsRetransQLen indicates the current length of the retransmission queue.
<p>NeighborStatusStats</p> <p>MIB entry name: tmnxOspfNgNbrStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgNbrStatsTable represents additional columns for statistics for an OSPF neighbor.</p> <p>Table description (for tmnxOspfNgNbrStatsTable): The tmnxOspfNgNbrStatsTable provides an extension of the tmnxOspfNgNbrTable for statistics for an OSPF neighbor.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Neighbor</p>		

Table 336 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badMtus [Bad Mtus] (tmnxOspfNgNbrBadMTUs)	long	The value of tmnxOspfNgNbrBadMTUs indicates the total number of times when the MTU in a received database description packet was larger than the MTU of the receiving interface since tmnxOspfAdminState was last set to 'enabled'.
badNeighborStates [Bad Neighbor States] (tmnxOspfNgNbrBadNbrStates)	long	The value of tmnxOspfNgNbrBadNbrStates indicates the total number of OSPF packets received when the neighbor state was not expecting to receive this packet type since tmnxOspfAdminState was last set to 'enabled'.
badPackets [Bad Packets] (tmnxOspfNgNbrBadPackets)	long	The value of tmnxOspfNgNbrBadPackets indicates the total number of times when an LS update was received with an illegal LS type or an option mismatch since tmnxOspfAdminState was last set to 'enabled'.
badSequenceNumbers [Bad Sequence Numbers] (tmnxOspfNgNbrBadSeqNums)	long	The value of tmnxOspfNgNbrBadSeqNums indicates the total number of times when a database description packet was received with a sequence number mismatch since tmnxOspfAdminState was last set to 'enabled'.
duplicates [Duplicates] (tmnxOspfNgNbrDuplicates)	long	The value of tmnxOspfNgNbrDuplicates indicates the total number of times when a duplicate database description packet was received during the Exchange state since tmnxOspfAdminState was last set to 'enabled'.
lsaInstallFailed [Lsa Install Failed] (tmnxOspfNgNbrLsaInstallFailed)	long	The value of tmnxOspfNgNbrLsaInstallFailed indicates the total number of times an LSA could not be installed into the LSDB due to a resource allocation issue since tmnxOspfAdminState was last set to 'enabled'.
lsaNotInLSDB [Lsa Not In LSDB] (tmnxOspfNgNbrLsaNotInLsdb)	long	The value of tmnxOspfNgNbrLsaNotInLsdb indicates the total number of times when an LS request was received for an LSA not installed in the LSDB of this router since tmnxOspfAdminState was last set to 'enabled'.
numberOfRestarts [Number Of Restarts] (tmnxOspfNgNbrNumRestarts)	long	The value of tmnxOspfNgNbrNumRestarts indicates the number of times the neighbor has attempted restart.

Table 336 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
optionMismatches [Option Mismatches] (tmnxOspfNgNbrOptionMismatches)	long	The value of tmnxOspfNgNbrOptionMismatches indicates the total number of times when a LS update was received with an option mismatch since tmnxOspfAdminState was last set to 'enabled'.
<p>ShamLinkGeneralStats</p> <p>MIB entry name: tmnxOspfShamLfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfShamLfStatsTable represents additional columns for statistics for an OSPF sham link.</p> <p>Table description (for tmnxOspfShamLfStatsTable): The tmnxOspfShamLfStatsTable provides an extension of the tmnxOspfShamLfTable for statistics for an OSPF sham link.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.ShamLink</p>		
events [Events] (tmnxOspfShamLfEvents)	long	The value of tmnxOspfShamLfEvents indicates the number of state changes or error events on this sham link.
<p>ShamLinkReceiveStats</p> <p>MIB entry name: tmnxOspfShamLfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfShamLfStatsTable represents additional columns for statistics for an OSPF sham link.</p> <p>Table description (for tmnxOspfShamLfStatsTable): The tmnxOspfShamLfStatsTable provides an extension of the tmnxOspfShamLfTable for statistics for an OSPF sham link.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.ShamLink</p>		
databaseDescriptionPackets [Database Description Packets] (tmnxOspfShamLfRxDBDs)	long	The value of tmnxOspfShamLfRxDBDs indicates the total number of OSPF Database Description packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.

Table 336 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
helloPackets [Hello Packets] (tmnxOspfShamIfRxHellos)	long	The value of tmnxOspfShamIfRxHellos indicates the total number of OSPF Hello packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfShamIfRxLSAcks)	long	The value of tmnxOspfShamIfRxLSAcks indicates the total number of Link State Acknowledgements received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateRequests [Link State Requests] (tmnxOspfShamIfRxLSRs)	long	The value of tmnxOspfShamIfRxLSRs indicates the total number of Link State Requests (LSRs) received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateUpdates [Link State Updates] (tmnxOspfShamIfRxLSUs)	long	The value of tmnxOspfShamIfRxLSUs indicates the total number of Link State Updates (LSUs) received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
lsasWithBadChecksums [Lsas With Bad Checksums] (tmnxOspfShamIfRxBadChecksums)	long	The value of tmnxOspfShamIfRxBadChecksums indicates the count of LSAs received with bad checksums.
totalPackets [Total Packets] (tmnxOspfShamIfRxPackets)	long	The value of tmnxOspfShamIfRxPackets indicates the total number of OSPF packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.

addRouteFailed [Add Route Failed] (tmnxOspfRoutesAddsFailed)	long	The value of tmnxOspfRoutesAddsFailed indicates the number of times an attempt to add a route to the Route Table Manager (RTM) failed for this OSPF instance.
cspfDroppedRequests [Cspf Dropped Requests] (tmnxOspfCSPFDroppedRequests)	long	The value of tmnxOspfCSPFDroppedRequests indicates the number of dropped CSPF requests made by the OSPF protocol.
cspfPathsFound [Cspf Paths Found] (tmnxOspfCSPFPathsFound)	long	The value of tmnxOspfCSPFPathsFound indicates the number of of paths found for the requests made to OSPF protocol.
cspfPathsNotFound [Cspf Paths Not Found] (tmnxOspfCSPFPathsNotFound)	long	The value of tmnxOspfCSPFPathsNotFound indicates the number of of paths not found for the requests made to OSPF protocol.
cspfRequests [Cspf Requests] (tmnxOspfCSPFRequests)	long	The value of tmnxOspfCSPFRequests indicates the number of CSPF requests made to the OSPF protocol.
deleteRouteFailed [Delete Route Failed] (tmnxOspfRoutesDelsFailed)	long	The value of tmnxOspfRoutesDelsFailed indicates the number of times an attempt to delete a route from the Route Table Manager (RTM) failed for this instance of OSPF.

Table 336 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
inOverflowCount [In Overflow Count] (tmnxOspfNumTimesInOverflow)	long	The value of tmnxOspfNumTimesInOverflow indicates the count of the number of times the system was in the overflow state.
inOverloadCount [In Overload Count] (tmnxOspfNumTimesInOverload)	long	The value of tmnxOspfNumTimesInOverload indicates the count of the number of times the system was overloaded.
modifyRouteFailed [Modify Route Failed] (tmnxOspfRoutesModsFailed)	long	The value of tmnxOspfRoutesModsFailed indicates the number of times an attempt to modify a route in the Route Table Manager (RTM) failed for this instance of OSPF.
newLsasOriginated [New Lsas Originated] (tmnxOspfOriginateNewLsas)	long	The value of tmnxOspfOriginateNewLsas indicates the number of new link-state advertisements that have been originated. This number is incremented each time the router originates a new LSA.
newLsasReceived [New Lsas Received] (tmnxOspfRxNewLsas)	long	The value of tmnxOspfRxNewLsas indicates the number of link-state advertisements received determined to be new instantiations. This number does not include newer instantiations of self-originated link-state advertisements.
spfAttemptsFailed [Spf Attempts Failed] (tmnxOspfSpfAttemptsFailed)	long	The value of tmnxOspfSpfAttemptsFailed indicates the number of times an attempt to run SPF has failed because SPF runs have been stopped as a result of insufficient memory resources.

databaseDescriptionPackets [Database Description Packets] (tmnxOspfVirtIfRxDBDs)	long	The value of tmnxOspfVirtIfRxDBDs indicates the total number of OSPF Database Description packets received on this virtual interface.
helloPackets [Hello Packets] (tmnxOspfVirtIfRxHellos)	long	The value of tmnxOspfVirtIfRxHellos indicates the total number of OSPF Hello packets received on this virtual interface.

Table 336 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfVirtIfRxLSAcks)	long	The value of tmnxOspfVirtIfRxLSAcks indicates the total number of Link State Acknowledgements received on this virtual interface.
linkStateRequests [Link State Requests] (tmnxOspfVirtIfRxLSRs)	long	The value of tmnxOspfVirtIfRxLSRs indicates the total number of OSPF Link State Requests (LSRs) received on this virtual interface.
linkStateUpdates [Link State Updates] (tmnxOspfVirtIfRxLSUs)	long	The value of tmnxOspfVirtIfRxLSUs indicates the total number of OSPF Link State Updates (LSUs) received on this virtual interface.
lsasWithBadChecksums [Lsas With Bad Checksums] (tmnxOspfVirtIfRxBadChecksums)	long	The value of tmnxOspfVirtIfRxBadChecksums indicates the count of LSAs received with bad checksums.
totalPackets [Total Packets] (tmnxOspfVirtIfRxPackets)	long	The value of tmnxOspfVirtIfRxPackets indicates the total number of OSPF packets received on this virtual interface since it was created.
VirtualLinkStatusStats MIB entry name: tmnxOspfVirtIfStatsEntry Entry description: Each row entry in the tmnxOspfVirtIfStatsTable represents additional columns for statistics for an OSPF virtual interface. Table description (for tmnxOspfVirtIfStatsTable): The tmnxOspfVirtIfStatsTable provides an extension of the tmnxOspfVirtIfTable for statistics for an OSPF virtual interface. Supports realtime plotting Supports scheduled collection Monitored class: ospf.VirtualLink		
authorizationFailures [Authorization Failures] (tmnxOspfVirtIfAuthFailures)	long	The value of tmnxOspfVirtIfAuthFailures indicates the total number of OSPF packets received on this virtual interface with invalid authentication keys.

Table 336 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badAreas [Bad Areas] (tmnxOspfVirtIfBadAreas)	long	The value of tmnxOspfVirtIfBadAreas indicates the total number of OSPF packets received on this virtual interface with area mismatches.
badAuthorizationTypes [Bad Authorization Types] (tmnxOspfVirtIfBadAuthTypes)	long	The value of tmnxOspfVirtIfBadAuthTypes indicates the total number of OSPF packets received on this virtual interface with invalid authentication types.
badDeadIntervals [Bad Dead Intervals] (tmnxOspfVirtIfBadDeadIntervals)	long	The value of tmnxOspfVirtIfBadDeadIntervals indicates the total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this virtual interface since tmnxOspfAdminState was last set to 'enabled'.
badDestinationAddresses [Bad Destination Addresses] (tmnxOspfVirtIfBadDstAdrs)	long	The value of tmnxOspfVirtIfBadDstAdrs indicates the total number of OSPF packets received on this virtual interface with invalid destination IP address.
badHelloIntervals [Bad Hello Intervals] (tmnxOspfVirtIfBadHelloIntervals)	long	The value of tmnxOspfVirtIfBadHelloIntervals indicates the total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this virtual interface since tmnxOspfAdminState was last set to 'enabled'.
badLengths [Bad Lengths] (tmnxOspfVirtIfBadLengths)	long	The value of tmnxOspfVirtIfBadLengths indicates the total number of OSPF packets received on this virtual interface with a total length not equal to the length given in the packet itself since tmnxOspfAdminState was last set to 'enabled'.
badNeighbors [Bad Neighbors] (tmnxOspfVirtIfBadNeighbors)	long	The value of tmnxOspfVirtIfBadNeighbors indicates the total number of OSPF packets received where the neighbor information does not match the configuration this router has for the neighbor.
badNetworks [Bad Networks] (tmnxOspfVirtIfBadNetworks)	long	The value of tmnxOspfVirtIfBadNetworks indicates the total number of OSPF packets received on this virtual interface with invalid network or mask fields.

Table 336 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badOptions [Bad Options] (tmnxOspfVirtIfBadOptions)	long	The value of tmnxOspfVirtIfBadOptions indicates the total number of OSPF packets received with an option that does not match those configured for this virtual interface or transit-area since tmnxOspfAdminState was last set to 'enabled'.
badPacketTypes [Bad Packet Types] (tmnxOspfVirtIfBadPacketTypes)	long	The value of tmnxOspfVirtIfBadPacketTypes indicates the total number of OSPF packets received on this virtual interface with invalid OSPF packet types.
badVersions [Bad Versions] (tmnxOspfVirtIfBadVersions)	long	The value of tmnxOspfVirtIfBadVersions indicates the total number of OSPF packets received on this virtual interface with invalid OSPF version numbers.
discardPackets [Discard Packets] (tmnxOspfVirtIfDiscardPackets)	long	The value of tmnxOspfVirtIfDiscardPackets indicates the total number of OSPF packets discarded on this virtual interface.
retransmitOuts [Retransmit Outs] (tmnxOspfVirtIfRetransmitOuts)	long	The value of tmnxOspfVirtIfRetransmitOuts indicates the total number of OSPF packets retransmitted on this virtual interface.
<p>VirtualLinkTransmitStats MIB entry name: tmnxOspfVirtIfStatsEntry Entry description: Each row entry in the tmnxOspfVirtIfStatsTable represents additional columns for statistics for an OSPF virtual interface. Table description (for tmnxOspfVirtIfStatsTable): The tmnxOspfVirtIfStatsTable provides an extension of the tmnxOspfVirtIfTable for statistics for an OSPF virtual interface. Supports realtime plotting Supports scheduled collection Monitored class: ospf.VirtualLink</p>		

Table 336 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
databaseDescriptionPackets [Database Description Packets] (tmnxOspfVirtIfRxDBDs)	long	The value of tmnxOspfVirtIfRxDBDs indicates the total number of OSPF Database Description packets received on this virtual interface.
helloPackets [Hello Packets] (tmnxOspfVirtIfRxHellos)	long	The value of tmnxOspfVirtIfRxHellos indicates the total number of OSPF Hello packets received on this virtual interface.
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfVirtIfRxLSAcks)	long	The value of tmnxOspfVirtIfRxLSAcks indicates the total number of Link State Acknowledgements received on this virtual interface.
linkStateRequests [Link State Requests] (tmnxOspfVirtIfRxLSRs)	long	The value of tmnxOspfVirtIfRxLSRs indicates the total number of OSPF Link State Requests (LSRs) received on this virtual interface.
linkStateUpdates [Link State Updates] (tmnxOspfVirtIfRxLSUs)	long	The value of tmnxOspfVirtIfRxLSUs indicates the total number of OSPF Link State Updates (LSUs) received on this virtual interface.
totalPackets [Total Packets] (tmnxOspfVirtIfRxPackets)	long	The value of tmnxOspfVirtIfRxPackets indicates the total number of OSPF packets received on this virtual interface since it was created.
<p>VirtualNeighborGeneralStats</p> <p>MIB entry name: tmnxOspfVirtNbrStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfVirtNbrStatsTable represents additional columns for statistics for an OSPF virtual neighbor.</p> <p>Table description (for tmnxOspfVirtNbrStatsTable): The tmnxOspfVirtNbrStatsTable provides an extension of the tmnxOspfVirtNbrTable for statistics for an OSPF virtual neighbor.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.VirtualNeighbor</p>		

Table 336 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
events [Events] (tmnxOspfVirtNbrEvents)	long	The value of tmnxOspfVirtNbrEvents indicates the number of times this virtual link has changed its state, or an error has occurred.
retransmissionQueueLength [Retransmission Queue Length] (tmnxOspfVirtNbrLsRetransQLen)	long	The value of tmnxOspfVirtNbrLsRetransQLen indicates the current length of the retransmission queue.
<p>VirtualNeighborStatusStats MIB entry name: tmnxOspfVirtNbrStatsEntry Entry description: Each row entry in the tmnxOspfVirtNbrStatsTable represents additional columns for statistics for an OSPF virtual neighbor. Table description (for tmnxOspfVirtNbrStatsTable): The tmnxOspfVirtNbrStatsTable provides an extension of the tmnxOspfVirtNbrTable for statistics for an OSPF virtual neighbor. Supports realtime plotting Supports scheduled collection Monitored class: ospf.VirtualNeighbor</p>		
badMtus [Bad Mtus] (tmnxOspfVirtNbrBadMTUs)	long	The value of tmnxOspfVirtNbrBadMTUs indicates the total number of times when the MTU in a received database description packet was larger than the MTU of the receiving interface since tmnxOspfAdminState was last set to 'enabled'.
badPackets [Bad Packets] (tmnxOspfVirtNbrBadPackets)	long	The value of tmnxOspfVirtNbrBadPackets indicates the total number of times when an LS update was received with an illegal LS type or an option mismatch since tmnxOspfAdminState was last set to 'enabled'.
badSequenceNumbers [Bad Sequence Numbers] (tmnxOspfVirtNbrBadSeqNums)	long	The value of tmnxOspfVirtNbrBadSeqNums indicates the total number of times when a database description packet was received with a sequence number mismatch since tmnxOspfAdminState was last set to 'enabled'.

Table 336 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badVirtualNeighborStates [Bad Virtual Neighbor States] (tmnxOspfVirtNbrBadNbrStates)	long	The value of tmnxOspfVirtNbrBadNbrStates indicates the total number of OSPF packets received when the virtual neighbor state was not expecting to receive this packet type since tmnxOspfAdminState was last set to 'enabled'.
duplicates [Duplicates] (tmnxOspfVirtNbrDuplicates)	long	The value of tmnxOspfVirtNbrDuplicates indicates the total number of times when a duplicate database description packet was received during the Exchange state since tmnxOspfAdminState was last set to 'enabled'.
lsaInstallFailed [Lsa Install Failed] (tmnxOspfVirtNbrLsaInstallFail)	long	The value of tmnxOspfVirtNbrLsaInstallFail indicates the total number of times when an LSA could not be installed into the LSDB due to a resource allocation issue since tmnxOspfAdminState was last set to 'enabled'.
lsaNotInLSDB [Lsa Not In LSDB] (tmnxOspfVirtNbrLsaNotInLsdb)	long	The value of tmnxOspfVirtNbrLsaNotInLsdb indicates the total number of times when an LS request was received for an LSA not installed in the LSDB of this router since tmnxOspfAdminState was last set to 'enabled'.
numberOfRestarts [Number Of Restarts] (tmnxOspfVirtNbrNumRestarts)	long	The value of tmnxOspfVirtNbrNumRestarts indicates the number of times the virtual neighbor has attempted restart since tmnxOspfAdminState was last set to 'enabled'.
optionMismatches [Option Mismatches] (tmnxOspfVirtNbrOptionMismatch)	long	The value of tmnxOspfVirtNbrOptionMismatch indicates the total number of times when a LS update was received with an option mismatch since tmnxOspfAdminState was last set to 'enabled'.

Table 337 pae802_1x statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PaePortAuthenticatorDiagStats</p> <p>MIB entry name: dot1xAuthDiagEntry</p> <p>Entry description: The diagnostics information for an Authenticator PAE.</p> <p>Table description (for dot1xAuthDiagTable): A table that contains the diagnostics objects for the Authenticator PAE associated with each Port. An entry appears in this table for each port that may authenticate access to itself.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort 		
dot1xAuthAuthEapLogoffWhileAuthenticated [Dot 1 x Auth Auth Eap Logoff While Authenticated] (dot1xAuthAuthEapLogoffWhileAuthenticated)	long	Counts the number of times that the state machine transitions from AUTHENTICATED to DISCONNECTED, as a result of an EAPOL-Logoff message being received from the Supplicant.
dot1xAuthAuthEapLogoffWhileAuthenticating [Dot 1 x Auth Auth Eap Logoff While Authenticating] (dot1xAuthAuthEapLogoffWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of an EAPOL-Logoff message being received from the Supplicant.
dot1xAuthAuthEapStartsWhileAuthenticated [Dot 1 x Auth Auth Eap Starts While Authenticated] (dot1xAuthAuthEapStartsWhileAuthenticated)	long	Counts the number of times that the state machine transitions from AUTHENTICATED to CONNECTING, as a result of an EAPOL-Start message being received from the Supplicant.
dot1xAuthAuthEapStartsWhileAuthenticating [Dot 1 x Auth Auth Eap Starts While Authenticating] (dot1xAuthAuthEapStartsWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of an EAPOL-Start message being received from the Supplicant.

Table 337 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthAuthFailWhileAuthenticating [Dot 1 x Auth Auth Fail While Authenticating] (dot1xAuthAuthFailWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to HELD, as a result of the Backend Authentication state machine indicating authentication failure (authFail = TRUE).
dot1xAuthAuthReauthsWhileAuthenticated [Dot 1 x Auth Auth Reauths While Authenticated] (dot1xAuthAuthReauthsWhileAuthenticated)	long	Counts the number of times that the state machine transitions from AUTHENTICATED to CONNECTING, as a result of a reauthentication request (reAuthenticate = TRUE).
dot1xAuthAuthReauthsWhileAuthenticating [Dot 1 x Auth Auth Reauths While Authenticating] (dot1xAuthAuthReauthsWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of a reauthentication request (reAuthenticate = TRUE).
dot1xAuthAuthSuccessWhileAuthenticating [Dot 1 x Auth Auth Success While Authenticating] (dot1xAuthAuthSuccessWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to AUTHENTICATED, as a result of the Backend Authentication state machine indicating successful authentication of the Supplicant (authSuccess = TRUE).
dot1xAuthAuthTimeoutsWhileAuthenticating [Dot 1 x Auth Auth Timeouts While Authenticating] (dot1xAuthAuthTimeoutsWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of the Backend Authentication state machine indicating authentication timeout (authTimeout = TRUE).
dot1xAuthBackendAccessChallenges [Dot 1 x Auth Backend Access Challenges] (dot1xAuthBackendAccessChallenges)	long	Counts the number of times that the state machine receives an initial Access-Challenge packet from the Authentication server (i.e., aReq becomes TRUE, causing exit from the RESPONSE state). Indicates that the Authentication Server has communication with the Authenticator.
dot1xAuthBackendAuthFails [Dot 1 x Auth Backend Auth Fails] (dot1xAuthBackendAuthFails)	long	Counts the number of times that the state machine receives an EAP-Failure message from the Authentication Server (i.e., aFail becomes TRUE, causing a transition from RESPONSE to FAIL). Indicates that the Supplicant has not authenticated to the Authentication Server.

Table 337 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthBackendAuthSuccesses [Dot 1 x Auth Backend Auth Successes] (dot1xAuthBackendAuthSuccesses)	long	Counts the number of times that the state machine receives an EAP-Success message from the Authentication Server (i.e., aSuccess becomes TRUE, causing a transition from RESPONSE to SUCCESS). Indicates that the Supplicant has successfully authenticated to the Authentication Server.
dot1xAuthBackendNonNakResponsesFromSupplicant [Dot 1 x Auth Backend Non Nak Responses From Supplicant] (dot1xAuthBackendNonNakResponsesFromSupplicant)	long	Counts the number of times that the state machine receives a response from the Supplicant to an initial EAP-Request, and the response is something other than EAP-NAK (i.e., rxResp becomes TRUE, causing the state machine to transition from REQUEST to RESPONSE, and the response is not an EAP-NAK). Indicates that the Supplicant can respond to the Authenticator's chosen EAP-method.
dot1xAuthBackendOtherRequestsToSupplicant [Dot 1 x Auth Backend Other Requests To Supplicant] (dot1xAuthBackendOtherRequestsToSupplicant)	long	Counts the number of times that the state machine sends an EAP-Request packet (other than an Identity, Notification, Failure or Success message) to the Supplicant (i.e., executes txReq on entry to the REQUEST state). Indicates that the Authenticator chose an EAP-method.
dot1xAuthBackendResponses [Dot 1 x Auth Backend Responses] (dot1xAuthBackendResponses)	long	Counts the number of times that the state machine sends an initial Access-Request packet to the Authentication server (i.e., executes sendRespToServer on entry to the RESPONSE state). Indicates that the Authenticator attempted communication with the Authentication Server.
dot1xAuthEapLogoffsWhileConnecting [Dot 1 x Auth Eap Logoffs While Connecting] (dot1xAuthEapLogoffsWhileConnecting)	long	Counts the number of times that the state machine transitions from CONNECTING to DISCONNECTED as a result of receiving an EAPOL-Logoff message.
dot1xAuthEntersAuthenticating [Dot 1 x Auth Enters Authenticating] (dot1xAuthEntersAuthenticating)	long	Counts the number of times that the state machine transitions from CONNECTING to AUTHENTICATING, as a result of an EAP-Response/Identity message being received from the Supplicant.

Table 337 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthEntersConnecting [Dot 1 x Auth Enters Connecting] (dot1xAuthEntersConnecting)	long	Counts the number of times that the state machine transitions to the CONNECTING state from any other state.
<p>PaePortAuthenticatorSessionStats MIB entry name: dot1xAuthSessionStatsEntry Entry description: The session statistics information for an Authenticator PAE. This shows the current values being collected for each session that is still in progress, or the final values for the last valid session on each port where there is no session currently active. Table description (for dot1xAuthSessionStatsTable): A table that contains the session statistics objects for the Authenticator PAE associated with each Port. An entry appears in this table for each port that may authenticate access to itself. Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort </p>		
dot1xAuthSessionAuthenticMethod [Dot 1 x Auth Session Authentic Method] (dot1xAuthSessionAuthenticMethod)	int	The authentication method used to establish the session.
dot1xAuthSessionFramesRx [Dot 1 x Auth Session Frames Rx] (dot1xAuthSessionFramesRx)	long	The number of user data frames received on this Port during the session.
dot1xAuthSessionFramesTx [Dot 1 x Auth Session Frames Tx] (dot1xAuthSessionFramesTx)	long	The number of user data frames transmitted on this Port during the session.
dot1xAuthSessionOctetsRx [Dot 1 x Auth Session Octets Rx] (dot1xAuthSessionOctetsRx)	java. math. BigInteger	The number of octets received in user data frames on this Port during the session.

Table 337 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthSessionOctetsTx [Dot 1 x Auth Session Octets Tx] (dot1xAuthSessionOctetsTx)	java. math. BigInteger	The number of octets transmitted in user data frames on this Port during the session.
dot1xAuthSessionTerminateCause [Dot 1 x Auth Session Terminate Cause] (dot1xAuthSessionTerminateCause)	int	The reason for the session termination.
dot1xAuthSessionTime [Dot 1 x Auth Session Time] (dot1xAuthSessionTime)	long	The duration of the session in seconds.
<p>PaePortAuthenticatorStats</p> <p>MIB entry name: dot1xAuthStatsEntry</p> <p>Entry description: The statistics information for an Authenticator PAE.</p> <p>Table description (for dot1xAuthStatsTable): A table that contains the statistics objects for the Authenticator PAE associated with each Port. An entry appears in this table for each port that may authenticate access to itself.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort 		
dot1xAuthEapLengthErrorFramesRx [Dot 1 x Auth Eap Length Error Frames Rx] (dot1xAuthEapLengthErrorFramesRx)	long	The number of EAPOL frames that have been received by this Authenticator in which the Packet Body Length field is invalid.
dot1xAuthEapolFramesRx [Dot 1 x Auth Eapol Frames Rx] (dot1xAuthEapolFramesRx)	long	The number of valid EAPOL frames of any type that have been received by this Authenticator.

Table 337 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthEapolFramesTx [Dot 1 x Auth Eapol Frames Tx] (dot1xAuthEapolFramesTx)	long	The number of EAPOL frames of any type that have been transmitted by this Authenticator.
dot1xAuthEapolLogoffFramesRx [Dot 1 x Auth Eapol Logoff Frames Rx] (dot1xAuthEapolLogoffFramesRx)	long	The number of EAPOL Logoff frames that have been received by this Authenticator.
dot1xAuthEapolReqFramesTx [Dot 1 x Auth Eapol Req Frames Tx] (dot1xAuthEapolReqFramesTx)	long	The number of EAP Request frames (other than Rq/Id frames) that have been transmitted by this Authenticator.
dot1xAuthEapolReqIdFramesTx [Dot 1 x Auth Eapol Req Id Frames Tx] (dot1xAuthEapolReqIdFramesTx)	long	The number of EAP Req/Id frames that have been transmitted by this Authenticator.
dot1xAuthEapolRespFramesRx [Dot 1 x Auth Eapol Resp Frames Rx] (dot1xAuthEapolRespFramesRx)	long	The number of valid EAP Response frames (other than Resp/Id frames) that have been received by this Authenticator.
dot1xAuthEapolRespIdFramesRx [Dot 1 x Auth Eapol Resp Id Frames Rx] (dot1xAuthEapolRespIdFramesRx)	long	The number of EAP Resp/Id frames that have been received by this Authenticator.
dot1xAuthEapolStartFramesRx [Dot 1 x Auth Eapol Start Frames Rx] (dot1xAuthEapolStartFramesRx)	long	The number of EAPOL Start frames that have been received by this Authenticator.
dot1xAuthInvalidEapolFramesRx [Dot 1 x Auth Invalid Eapol Frames Rx] (dot1xAuthInvalidEapolFramesRx)	long	The number of EAPOL frames that have been received by this Authenticator in which the frame type is not recognized.
dot1xAuthLastEapolFrameVersion [Dot 1 x Auth Last Eapol Frame Version] (dot1xAuthLastEapolFrameVersion)	long	The protocol version number carried in the most recently received EAPOL frame.

Table 338 pim statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceAdditionalStats MIB entry name: vRtrPimNgIfStatsEntry Entry description: An entry in the vRtrPimNgIfStatsTable. Table description (for vRtrPimNgIfStatsTable): The table listing the PIM statistics for a particular interface. Supports realtime plotting Supports scheduled collection Monitored class: pim.Interface</p>		
bootstrapExpPolicyDrops [Bootstrap Exp Policy Drops] (vRtrPimNgIfBtrExpPolicyDrops)	long	The value of vRtrPimNgIfBtrExpPolicyDrops indicates the number of Bootstrap Messages that were not transmitted on this interface because of Bootstrap export policy. PIM Bootstrap export policies are configured using bootstrap export policy objects in vRtrPimNgGenPolicyTable.
bootstrapImpPolicyDrops [Bootstrap Imp Policy Drops] (vRtrPimNgIfBtrImpPolicyDrops)	long	The value of vRtrPimNgIfBtrImpPolicyDrops indicates the number of Bootstrap Messages received on this interface but were dropped because of Bootstrap import policy. PIM Bootstrap import policies are configured using bootstrap import policy objects in vRtrPimNgGenPolicyTable.
joinPolicyDrops [Join Policy Drops] (vRtrPimNgIfJoinPolicyDrops)	long	The value of vRtrPimNgIfJoinPolicyDrops indicates the number of times the join policy match resulted in dropping PIM Join-Prune Message or one of the source group contained in the message. PIM Join policies are configured using join policy objects in vRtrPimNgGenPolicyTable.
registerPolicyDrops [Register Policy Drops] (vRtrPimNgIfRegisterPolicyDrops)	long	The value of vRtrPimNgIfRegisterPolicyDrops indicates the number of times the register policy match resulted in dropping PIM Register Message. PIM Register policies are configured using the register policy objects in vRtrPimNgGenPolicyTable.
rxBSMNoRouterAlertDrops [Rx BSMNo Router Alert Drops] (vRtrPimNgIfRxBSMNoRouterAlertDrops)	long	The value of vRtrPimNgIfRxBSMNoRouterAlertDrops indicates the number of BSM messages that were dropped because router alert option was not present.

Table 338 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxBSMWrongIfDrops [Rx BSMWrong If Drops] (vRtrPimNgIfRxBSMWrongIfDrops)	long	The value of vRtrPimNgIfRxBSMWrongIfDrops indicates the number of BSM messages that were dropped either because they were not sent by the correct RPF neighbor or because they arrived on the wrong interface.
rxInvalidJoinPrunes [Rx Invalid Join Prunes] (vRtrPimNgIfRxInvalidJoinPrunes)	long	The value of vRtrPimNgIfRxInvalidJoinPrunes indicates the number of invalid PIM Join Prune messages received on this interface. A Join Prune message is invalid when the RP address in the message is not the RP for the group specified in the message. If such a message arrives, a vRtrPimNgInvalidJoinPrune notification is sent.
rxInvalidRegisters [Rx Invalid Registers] (vRtrPimNgIfRxInvalidRegisters)	long	The value of vRtrPimNgIfRxInvalidRegisters indicates the number of invalid PIM Register messages received on this interface. A Register message is invalid when the RP address in the message is not the RP for the group specified in the message. If such a message arrives, a vRtrPimNgInvalidRegister notification is sent.
rxJoinPruneErrs [Rx Join Prune Errs] (vRtrPimNgIfRxJoinPruneErrs)	long	The value of vRtrPimNgIfRxJoinPruneErrs indicates the number of errors while processing Join-Prune messages received on this interface.
rxJoinPrunes [Rx Join Prunes] (vRtrPimNgIfRxJoinPrunes)	long	The value of vRtrPimNgIfRxJoinPrunes indicates the number of PIM Join Prune messages received on this interface.
txJoinPrunes [Tx Join Prunes] (vRtrPimNgIfTxJoinPrunes)	long	The value of vRtrPimNgIfTxJoinPrunes indicates the number of PIM Join Prune messages transmitted on this interface.

Table 338 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
InterfaceStats MIB entry name: vRtrPimNgIfStatsEntry Entry description: An entry in the vRtrPimNgIfStatsTable. Table description (for vRtrPimNgIfStatsTable): The table listing the PIM statistics for a particular interface. Supports realtime plotting Supports scheduled collection Monitored class: pim.Interface		
bsmErrs [Bsm Errs] (vRtrPimNgIfTxBsmErrs)	long	The value of vRtrPimNgIfTxBsmErrs indicates the number of errors while transmitting PIM Bootstrap Messages (BSM) on this interface.
bsmPdus [Bsm Pdus] (vRtrPimNgIfTxBsmPdus)	long	The value of vRtrPimNgIfTxBsmPdus indicates the number of PIM Bootstrap Messages (BSM) transmitted on this interface.
registerStopErrs [Register Stop Errs] (vRtrPimNgIfTxRegisterStopErrs)	long	The value of vRtrPimNgIfTxRegisterStopErrs indicates the number of PIM errors while trasmitting PIM Register Stop messages on this interface.
registerStops [Register Stops] (vRtrPimNgIfTxRegisterStops)	long	The value of vRtrPimNgIfTxRegisterStops indicates the number of PIM Register Stop messages transmitted on this interface.
rxAssertErrs [Rx Assert Errs] (vRtrPimNgIfRxAssertErrs)	long	The value of vRtrPimNgIfRxAssertErrs indicates the number of errors while processing Assert messages received on this interface.
rxAsserts [Rx Asserts] (vRtrPimNgIfRxAsserts)	long	The value of vRtrPimNgIfRxAsserts indicates the number of PIM Assert messages received on this interface.

Table 338 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxBadChecksumDiscards [Rx Bad Checksum Discards] (vRtrPimNgIfRxBadChecksumDiscard)	long	The value of vRtrPimNgIfRxBadChecksumDiscard indicates the number of PIM messages received on this interface which were discarded because of bad checksum.
rxBadEncodings [Rx Bad Encodings] (vRtrPimNgIfRxBadEncodings)	long	The value of vRtrPimNgIfRxBadEncodings indicates the number of PIM messages with bad encodings received on this interface.
rxBadVersionDiscards [Rx Bad Version Discards] (vRtrPimNgIfRxBadVersionDiscard)	long	The value of vRtrPimNgIfRxBadVersionDiscard indicates the number of PIM messages with bad versions received on this interface.
rxBsmPduDrops [Rx Bsm Pdu Drops] (vRtrPimNgIfRxBsmPduDrops)	long	The value of vRtrPimNgIfRxBsmPduDrops indicates the number of Bootstrap Messages received on this interface but were dropped.
rxBsmPdus [Rx Bsm Pdus] (vRtrPimNgIfRxBsmPdus)	long	The value of vRtrPimNgIfRxBsmPdus indicates the number of Bootstrap Messages received on this interface.
rxCRPAdvNoRouterAlert [Rx CRPAdv No Router Alert] (vRtrPimNgIfRxCRPAdvNoRtrAlert)	long	The value of vRtrPimNgIfRxCRPAdvNoRtrAlert indicates the number of Candidate-RP Advertizements(C-RP-Adv) received on this interface which had no router alert option set.
rxHellos [Rx Hellos] (vRtrPimNgIfRxHellos)	long	The value of vRtrPimNgIfRxHellos indicates the number of PIM hello messages received on this interface.
rxHellosDropped [Rx Hellos Dropped] (vRtrPimNgIfRxHellosDropped)	long	The value of vRtrPimNgIfRxHellosDropped indicates the number of PIM Hello messages which were received on this interface but were dropped.

Table 338 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxNbrUnknown [Rx Nbr Unknown] (vRtrPimNgIfRxNbrUnknown)	long	The value of vRtrPimNgIfRxNbrUnknown indicates the number of PIM messages (other than Hello messages) which were received on this interface and were rejected because the adjacency with the neighbor router was not already established.
rxNullRegisters [Rx Null Registers] (vRtrPimNgIfRxNullRegisters)	long	The value of vRtrPimNgIfRxNullRegisters indicates the number of PIM Null Register messages received on this interface.
rxPkts [Rx Pkts] (vRtrPimNgIfRxPkts)	long	The value of vRtrPimNgIfRxPkts indicates the number of multicast data packets received on this interface.
rxRegisterErrs [Rx Register Errs] (vRtrPimNgIfRxRegisterErrs)	long	The value of vRtrPimNgIfRxRegisterErrs indicates the number of errors while processing Register messages received on this interface.
rxRegisterStopErrs [Rx Register Stop Errs] (vRtrPimNgIfRxRegisterStopErrs)	long	The value of vRtrPimNgIfRxRegisterStopErrs indicates the number of errors while processing Register Stop messages received on this interface.
rxRegisterStops [Rx Register Stops] (vRtrPimNgIfRxRegisterStops)	long	The value of vRtrPimNgIfRxRegisterStops indicates the number of PIM Register Stop messages received on this interface.
rxRegisters [Rx Registers] (vRtrPimNgIfRxRegisters)	long	The value of vRtrPimNgIfRxRegisters indicates the number of PIM Register messages received on this interface.
rxUnknownPdus [Rx Unknown Pdus] (vRtrPimNgIfRxUnknownPdus)	long	The value of vRtrPimNgIfRxUnknownPdus indicates the number of packets received with an unsupported PIM type.

Table 338 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sgTypes [Sg Types] (vRtrPimNgIfSGTypes)	long	The value of vRtrPimNgIfSGTypes indicates the number of entries in vRtrPimNgIfGrpSrcTable for which vRtrPimNgIfGrpSrcType is 'sg'.
starGTypes [Star GTypes] (vRtrPimNgIfStarGTypes)	long	The value of vRtrPimNgIfStarGTypes indicates the number of entries in vRtrPimNgIfGrpSrcTable for which vRtrPimNgIfGrpSrcType is 'starG'.
starStarRPTypes [Star Star RPTypes] (vRtrPimNgIfStarStarRPTypes)	long	The value of vRtrPimNgIfStarStarRPTypes indicates the number of entries in vRtrPimNgIfGrpSrcTable for which vRtrPimNgIfGrpSrcType is 'starStarRP'.
txAsserts [Tx Asserts] (vRtrPimNgIfTxAsserts)	long	The value of vRtrPimNgIfTxAsserts indicates the number of PIM Assert messages transmitted on this interface.
txHellos [Tx Hellos] (vRtrPimNgIfTxHellos)	long	The value of vRtrPimNgIfTxHellos indicates the number of PIM Hello messages transmitted on this interface.
txPkts [Tx Pkts] (vRtrPimNgIfTxPkts)	long	The value of vRtrPimNgIfTxPkts indicates the number of multicast data packets transmitted on this interface.
<p>PimGenSiteStats</p> <p>MIB entry name: vRtrPimNgGenStatEntry</p> <p>Entry description: An entry in the vRtrPimNgGenStatTable.</p> <p>Table description (for vRtrPimNgGenStatTable): vRtrPimNgGenStatTable lists PIM statistics for a particular PIM instance.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • pim.Site • pim.SiteExtension 		

Table 338 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
forwardCrpaDrops [Forward Crpa Drops] (vRtrPimNgGenStatFwdCrpaDrops)	long	The value of vRtrPimNgGenStatFwdCrpaDrops indicates the number of times the Candidate-RP Advertizements(C-RP-Adv) could not be forwarded by the router.
forwardCrpaPdus [Forward Crpa Pdu] (vRtrPimNgGenStatForwardCrpaPdus)	long	The value of vRtrPimNgGenStatForwardCrpaPdus indicates the number of Candidate-RP Advertizements(C-RP-Adv) that were forwarded by the router. C-RP-Adv's are forwarded when the received advertizement has a router alert set and the destination address is not the router's local address.
rxCrpaPduDrops [Rx Crpa Pdu Drops] (vRtrPimNgGenStatRxCrpaPduDrops)	long	The value of vRtrPimNgGenStatRxCrpaPduDrops indicates the number of PIM Candidate-RP Advertizements (C-RP-Adv) received by this instance, but were dropped.
rxCrpaPdus [Rx Crpa Pdu] (vRtrPimNgGenStatRxCrpaPdus)	long	The value of vRtrPimNgGenStatRxCrpaPdus indicates the number of PIM Candidate-RP Advertizements (C-RP-Adv) received by this instance.
sgTypes [Sg Types] (vRtrPimNgGenStatSGTypes)	long	The value of vRtrPimNgGenStatSGTypes indicates the number of entries in vRtrPimNgGrpSrcTable for which vRtrPimNgGrpSrcType is 'sg'.
starGTypes [Star GTypes] (vRtrPimNgGenStatStarGTypes)	long	The value of vRtrPimNgGenStatStarGTypes indicates the number of entries in vRtrPimNgGrpSrcTable for which vRtrPimNgGrpSrcType is 'starG'.
starStarRPTypes [Star Star RPTypes] (vRtrPimNgGenStatStarStarRPTypes)	long	The value of vRtrPimNgGenStatStarStarRPTypes indicates the number of entries in vRtrPimNgGrpSrcTable for which vRtrPimNgGrpSrcType is 'starStarRP'.
txCrpaPduErrs [Tx Crpa Pdu Errs] (vRtrPimNgGenStatTxCrpaPduErrs)	long	The value of vRtrPimNgGenStatTxCrpaPduErrs indicates the number of errors while transmitting PIM Candidate-RP Advertizements (C-RP-Adv).

Table 338 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txCrpaPdus [Tx Crpa Pdus] (vRtrPimNgGenStatTxCrpaPdus)	long	The value of vRtrPimNgGenStatTxCrpaPdus indicates the number of PIM Candidate-RP Advertisements (C-RP-Adv) transmitted by this router instance.
txNullRegisters [Tx Null Registers] (vRtrPimNgGenStatTxNullRegisters)	long	The value of vRtrPimNgGenStatTxNullRegisters indicates the number of PIM Null Register messages transmitted by this instance.
txRegisterErrs [Tx Register Errs] (vRtrPimNgGenStatTxRegisterErrs)	long	The value of vRtrPimNgGenStatTxRegisterErrs indicates the number the times there was an error while transmitting PIM Register messages by this instance.
txRegisterTTLDrops [Tx Register TTLDrops] (vRtrPimNgGenStatTxRegTTLDrops)	long	The value of vRtrPimNgGenStatTxRegTTLDrops indicates the number of multicast data packets which could not be encapsulated in Register messages because the Time To Live (TTL) was zero.
txRegisters [Tx Registers] (vRtrPimNgGenStatTxRegisters)	long	The value of vRtrPimNgGenStatTxRegisters indicates the number of PIM Register messages transmitted by this instance.
<p>PimGroupStats MIB entry name: vRtrPimNgGrpSrcStatEntry Entry description: An entry in the vRtrPimNgGrpSrcStatTable. Table description (for vRtrPimNgGrpSrcStatTable): vRtrPimNgGrpSrcStatTable contains statistics for the entries in the vRtrPimNgGrpSrcTable. These statistics are collected by the forwarding engine. Supports realtime plotting Supports scheduled collection Monitored class: pim.Groups</p>		
discardedPkts [Discarded Pkts] (vRtrPimNgGrpSrcStatDscrdPkts)	java. math. BigInteger	The value of vRtrPimNgGrpSrcStatDscrdPkts indicates the number of multicast packets that matched this source group entry but were discarded. For (S,G) entries, if the traffic is getting forwarded on the SPT, the packets arriving from the RPT will be discarded.

Table 338 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
forwardedOctets [Forwarded Octets] (vRtrPimNgGrpSrcStatFrdedOct)	java. math. BigInteger	The value of vRtrPimNgGrpSrcStatFrdedOct indicates the number of multicast octets that were forwarded to the interfaces in the outgoing interface list. vRtrPimNgGrpSrcIfTable lists all the interfaces in the outgoing interface list.
forwardedPkts [Forwarded Pkts] (vRtrPimNgGrpSrcStatFrwdedPkts)	java. math. BigInteger	The value of vRtrPimNgGrpSrcStatFrwdedPkts indicates the number of multicast packets that were forwarded to the interfaces in the outgoing interface list. vRtrPimNgGrpSrcIfTable lists all the interfaces in the outgoing interface list. This packet count is calculated before ingress QoS policing or shaping is applied.
rpfMismatches [Rpf Mismatches] (vRtrPimNgGrpSrcStatRPFMsmtch)	java. math. BigInteger	The value of vRtrPimNgGrpSrcStatRPFMsmtch indicates the number of multicast packets that matched this source group entry but they did not arrive on the the interface indicated by vRtrPimNgGrpSrcRpflfIndex.

Table 339 ppp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PppStats</p> <p>MIB entry name: tmnxPppEntry</p> <p>Entry description: Each row entry represents a port from the tmnxPortTable that is configured for PPP. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxPppTable): The tmnxPppTable has an entry for each port in the system that is configured for PPP.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ppp.Interface</p>		
keepaliveEchoReplyPacketsReceived [Keepalive Echo Reply Packets Received] (tmnxPppKaInPktCount)	long	The number of echo-reply packets received.
keepaliveEchoRequestPacketsSent [Keepalive Echo Request Packets Sent] (tmnxPppKaOutPktCount)	long	The number of echo-request packets sent.
keepaliveThresholdExceedsCount [Keepalive Threshold Exceeds Count] (tmnxPppKaThresholdExceedsCount)	long	The number of times that tmnxPppKaDropCount was reached.
lqmInRate [Lqm In Rate] (tmnxPppLqmInRate)	long	The average of 'SaveInPackets'/'PeerOutPackets' in the last five consecutive LQRs received.
lqmLqrPacketsReceived [Lqm Lqr Packets Received] (tmnxPppLqmInPktCount)	long	The number of LQR packets received.
lqmLqrPacketsSent [Lqm Lqr Packets Sent] (tmnxPppLqmOutPktCount)	long	The number of LQR packets sent.

Table 339 ppp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lqmOutRate [Lqm Out Rate] (tmnxPppLqmOutRate)	long	The average of 'PeerInPackets'/'LastOutPackets' in the last five consecutive LQRs received.
lqmThresholdExceedsCount [Lqm Threshold Exceeds Count] (tmnxPppLqmThresholdExceedsCount)	long	The number of times that either tmnxPppLqmInRate or tmnxPppLqmOutRate falls below the specified quality percentage when PPP quality or LQM is enforced.

Table 340 ptp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>IEEEPTPPortStats</p> <p>MIB entry name: tmnxPtpPortStatsEntry</p> <p>Entry description: The tmnxPtpPortStatsEntry contains the directional packet statistics for a specific Ethernet port configured for direct transport of PTP over Ethernet. Rows are created and destroyed by the system, when corresponding entries in the tmnxPtpPortTable are created and deleted.</p> <p>Table description (for tmnxPtpPortStatsTable): The tmnxPtpPortStatsTable contains packet statistics for Ethernet ports configured for direct transport of PTP over Ethernet.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ptp.IEEEPTPPort</p>		
ptpPortStatAnnounce [Ptp Port Stat Announce] (tmnxPtpPortStatAnnounce)	long	The value of tmnxPtpPortStatAnnounce indicates the number of accumulated PTP Announce packets transmitted or received on the Ethernet port.
ptpPortStatDelayRequest [Ptp Port Stat Delay Request] (tmnxPtpPortStatDelayRequest)	long	The value of tmnxPtpPortStatDelayRequest indicates the number of accumulated PTP Delay Request packets transmitted or received on the Ethernet port.
ptpPortStatDelayResponse [Ptp Port Stat Delay Response] (tmnxPtpPortStatDelayResponse)	long	The value of tmnxPtpPortStatDelayResponse indicates the number of accumulated PTP Delay Response packets transmitted or received on the Ethernet port.
ptpPortStatDirection [Ptp Port Stat Direction] (tmnxPtpPortStatDirection)	int	The value of tmnxPtpPortStatDirection specifies which direction the packet statistics for the particular row are accumulated.
ptpPortStatDropAltMaster [Ptp Port Stat Drop Alt Master] (tmnxPtpPortStatDropAltMaster)	long	The value of tmnxPtpPortStatDropAltMaster indicates the accumulated packet statistics for PTP packets dropped because the PTP header has the 'alternateMasterFlag' set. This object is accumulated for the 'rx' direction only.

Table 340 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ptpPortStatDropBadDomain [Ptp Port Stat Drop Bad Domain] (tmnxPtpPortStatDropBadDomain)	long	The value of tmnxPtpPortStatDropBadDomain indicates the accumulated packet statistics for PTP packets dropped because the PTP domain indicated in the packet does not match the configured PTP domain. This object is accumulated for the 'rx' direction only.
ptpPortStatDropOther [Ptp Port Stat Drop Other] (tmnxPtpPortStatDropOther)	long	The value of tmnxPtpPortStatDropOther indicates the accumulated packet statistics for PTP packets dropped and not counted in tmnxPtpPortStatDropBadDomain, tmnxPtpPortStatDropAltMaster, and tmnxPtpPortStatDropOutOfSeq. This object is accumulated for the 'rx' direction only.
ptpPortStatDropOutOfSeq [Ptp Port Stat Drop Out Of Seq] (tmnxPtpPortStatDropOutOfSeq)	long	The value of tmnxPtpPortStatDropOutOfSeq indicates the accumulated packet statistics for PTP packets dropped because the packets were received out of sequence. This object is accumulated for the 'rx' direction only.
ptpPortStatFollowUp [Ptp Port Stat Follow Up] (tmnxPtpPortStatFollowUp)	long	The value of tmnxPtpPortStatFollowUp indicates the number of accumulated PTP Follow-Up packets transmitted or received on the Ethernet port. Because 'tmnxPtpClockStep-Type' is 'oneStep (1)', the system will never transmit PTP Follow-Up packets. However, it may receive PTP Follow-Up packets from a two-step master or boundary clock.
ptpPortStatOther [Ptp Port Stat Other] (tmnxPtpPortStatOther)	long	The value of tmnxPtpPortStatOther indicates the number of accumulated PTP packets of all other types. This object is accumulated in the 'rx' direction only.
ptpPortStatSignaling [Ptp Port Stat Signaling] (tmnxPtpPortStatSignaling)	long	The value of tmnxPtpPortStatSignaling indicates the number of accumulated PTP Signaling packets received on the Ethernet port. This object is accumulated in the 'rx' direction only.
ptpPortStatSync [Ptp Port Stat Sync] (tmnxPtpPortStatSync)	long	The value of tmnxPtpPortStatSync indicates the number of accumulated PTP Sync packets transmitted or received on the Ethernet port.

Table 340 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ptpPortStatTimeStampCpm [Ptp Port Stat Time Stamp Cpm] (tmnxPtpPortStatTimeStampCpm)	long	The value of tmnxPtpPortStatTimeStampCpm indicates the accumulated packet statistics for PTP event packets where the timestamp is taken at the operating system kernel on the CPM card.
ptpPortStatTimeStampPort [Ptp Port Stat Time Stamp Port] (tmnxPtpPortStatTimeStampPort)	long	The value of tmnxPtpPortStatTimeStampPort indicates the accumulated packet statistics for PTP event packets on the Ethernet port where the timestamp is taken at the physical layer on the Ethernet port.
<p>PTPClockPacketStats</p> <p>MIB entry name: tmnxPtpClockPacketStatsEntry</p> <p>Entry description: The tmnxPtpClockPacketStatsEntry contain the directional packet statistics for the Precision Time Protocol (PTP). Rows are created and destroyed by the system.</p> <p>Table description (for tmnxPtpClockPacketStatsTable): The tmnxPtpClockPacketStatsTable consists of the packet statistics associated with the Precision Time Protocol (PTP).</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ptp.IEEEPTPClock</p>		
ptpClkPktStatsAnnounce [Ptp Clk Pkt Stats Announce] (tmnxPtpClkPktStatsAnnounce)	long	The value of tmnxPtpClkPktStatsAnnounce indicates the accumulated packet statistics for PTP Announce messages.
ptpClkPktStatsDelayRequest [Ptp Clk Pkt Stats Delay Request] (tmnxPtpClkPktStatsDelayRequest)	long	The value of tmnxPtpClkPktStatsDelayRequest indicates the accumulated packet statistics for PTP Delay Request messages.
ptpClkPktStatsDelayResp [Ptp Clk Pkt Stats Delay Resp] (tmnxPtpClkPktStatsDelayResp)	long	The value of tmnxPtpClkPktStatsDelayResp indicates the accumulated packet statistics for PTP Delay Response messages.
ptpClkPktStatsDirection [Ptp Clk Pkt Stats Direction] (tmnxPtpClkPktStatsDirection)	int	The value of tmnxPtpClkPktStatsDirection specifies which direction the packet statistics for the particular row are accumulated.

Table 340 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ptpClkPktStatsDropAltMaster [Ptp Clk Pkt Stats Drop Alt Master] (tmnxPtpClkPktStatsDropAltMaster)	long	The value of tmnxPtpClkPktStatsDropAltMaster indicates the accumulated packet statistics for PTP packets dropped because the PTP header has the 'alternateMasterFlag' set. This object is accumulated for the 'rx' direction only.
ptpClkPktStatsDropBadDomain [Ptp Clk Pkt Stats Drop Bad Domain] (tmnxPtpClkPktStatsDropBadDomain)	long	The value of tmnxPtpClkPktStatsDropBadDomain indicates the accumulated packet statistics for PTP packets dropped because the PTP domain indicated in the packet does not match the configured PTP domain. This object is accumulated for the 'rx' direction only.
ptpClkPktStatsDropOther [Ptp Clk Pkt Stats Drop Other] (tmnxPtpClkPktStatsDropOther)	long	The value of tmnxPtpClkPktStatsDropOther indicates the accumulated packet statistics for PTP packets dropped and not counted in the 'tmnxPtpClkPktStatsDropBadDomain', 'tmnxPtpClkPktStatsDropAltMaster', 'tmnxPtpClkPktStatsDropOutOfSeq', and 'tmnxPtpClkPktStatsDropPeerShut' objects. This object is accumulated for the 'rx' direction only.
ptpClkPktStatsDropOutOfSeq [Ptp Clk Pkt Stats Drop Out Of Seq] (tmnxPtpClkPktStatsDropOutOfSeq)	long	The value of tmnxPtpClkPktStatsDropOutOfSeq indicates the accumulated packet statistics for PTP packets dropped because the packets were received out of sequence. This object is accumulated for the 'rx' direction only.
ptpClkPktStatsFollowUp [Ptp Clk Pkt Stats Follow Up] (tmnxPtpClkPktStatsFollowUp)	long	The value of tmnxPtpClkPktStatsFollowUp indicates the accumulated packet statistics for PTP Follow Up messages.
ptpClkPktStatsOther [Ptp Clk Pkt Stats Other] (tmnxPtpClkPktStatsOther)	long	The value of tmnxPtpClkPktStatsOther indicates the accumulated packet statistics for all other PTP messages. This object is accumulated in the 'rx' direction only.
ptpClkPktStatsSignaling [Ptp Clk Pkt Stats Signaling] (tmnxPtpClkPktStatsSignaling)	long	The value of tmnxPtpClkPktStatsSignaling indicates the accumulated packet statistics for PTP signaling messages.

Table 340 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ptpClkPktStatsSync [Ptp Clk Pkt Stats Sync] (tmnxPtpClkPktStatsSync)	long	The value of tmnxPtpClkPktStatsSync indicates the accumulated packet statistics for PTP Sync messages.
ptpClkPktStatsTimeStampCpm [Ptp Clk Pkt Stats Time Stamp Cpm] (tmnxPtpClkPktStatsTimeStampCpm)	long	The value of tmnxPtpClkPktStatsTimeStampCpm indicates the accumulated packet statistics for PTP event packets where the timestamp point is at the operating system kernel.
ptpClkPktStatsTimeStampPort [Ptp Clk Pkt Stats Time Stamp Port] (tmnxPtpClkPktStatsTimeStampPort)	long	The value of tmnxPtpClkPktStatsTimeStampPort indicates the accumulated packet statistics for PTP event packets where the timestamp point is at the physical layer.
PTPClockRecoveryEventStats MIB entry name: tmnxPtpClockRecoveryStatistics Supports realtime plotting Supports scheduled collection Monitored class: ptp.IEEEEPTPClock		
tmnxPtpClockRecStatsDlyHiPktLss [Tmnx Ptp Clock Rec Stats Dly Hi Pkt Lss] (tmnxPtpClockRecStatsDlyHiPktLss)	long	The value of tmnxPtpClockRecStatsDlyHiPktLss indicates the number of times that the clock recovery process detected a large amount of packet loss in the delay request/response flow from the remote master clock. When this event occurs, the clock recovery process restarts.
tmnxPtpClockRecStatsDlyHighPDV [Tmnx Ptp Clock Rec Stats Dly High PDV] (tmnxPtpClockRecStatsDlyHighPDV)	long	The value of tmnxPtpClockRecStatsDlyHighPDV indicates the number of times that the clock recovery process has determined that a sample of delay request packets to the best master clock had too much packet delay variation to be useful in recovering the clock from the best master. When this event occurs, the entire sample of packets is not used in the clock recovery process.
tmnxPtpClockRecStatsDlyPktLoss [Tmnx Ptp Clock Rec Stats Dly Pkt Loss] (tmnxPtpClockRecStatsDlyPktLoss)	long	The value of tmnxPtpClockRecStatsDlyPktLoss indicates the number of times that the clock recovery process detected packet loss in the delay request/response packet flow from the best master clock.

Table 340 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tmnxPtpClockRecStatsDlyStep [Tmnx Ptp Clock Rec Stats Dly Step] (tmnxPtpClockRecStatsDlyStep)	long	The value of tmnxPtpClockRecStatsDlyStep indicates the number of times that the clock recovery process detected a large change in the amount of time taken for delay request packets to be sent to the best master clock. This normally occurs if the route taken by packets to the best master changes.
tmnxPtpClockRecStatsSyncHiPktLss [Tmnx Ptp Clock Rec Stats Sync Hi Pkt Lss] (tmnxPtpClockRecStatsSyncHiPktLss)	long	The value of tmnxPtpClockRecStatsSyncHiPktLss indicates the number of times that the clock recovery process detected a large amount of packet loss in the sync flow from the remote master clock. When this event occurs, the clock recovery process restarts.
tmnxPtpClockRecStatsSyncHighPDV [Tmnx Ptp Clock Rec Stats Sync High PDV] (tmnxPtpClockRecStatsSyncHighPDV)	long	The value of tmnxPtpClockRecStatsSyncHighPDV indicates the number of times that the clock recovery process has determined that a sample of sync packets from the best master clock had too much packet delay variation to be useful in recovering the clock from the best master. When this event occurs, the entire sample of packets is not used in the clock recovery process.
tmnxPtpClockRecStatsSyncPktLoss [Tmnx Ptp Clock Rec Stats Sync Pkt Loss] (tmnxPtpClockRecStatsSyncPktLoss)	long	The value of tmnxPtpClockRecStatsSyncPktLoss indicates the number of times that the clock recovery process detected packet loss in the sync packet flow from the best master clock.
tmnxPtpClockRecStatsSyncStep [Tmnx Ptp Clock Rec Stats Sync Step] (tmnxPtpClockRecStatsSyncStep)	long	The value of tmnxPtpClockRecStatsSyncStep indicates the number of times that the clock recovery process detected a large change in the amount of time taken for sync packets to be sent from the best master clock. This normally occurs if the route taken by packets from the best master changes.
PTPClockRecoveryStateStats MIB entry name: tmnxPtpClockRecoveryStatistics Supports realtime plotting Supports scheduled collection Monitored class: ptp.IEEEPTPClock		

Table 340 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tmnxPtpClockRecStatsAcquiring [Tmnx Ptp Clock Rec Stats Acquiring] (tmnxPtpClockRecStatsAcquiring)	java. math. BigInteger	The value of tmnxPtpClockRecStatsAcquiring indicate the number of seconds that the clock recovery system has been in the acquiring state.
tmnxPtpClockRecStatsHoldover [Tmnx Ptp Clock Rec Stats Holdover] (tmnxPtpClockRecStatsHoldover)	java. math. BigInteger	The value of tmnxPtpClockRecStatsHoldover indicate the number of seconds that the clock recovery system has been in the hold-over state.
tmnxPtpClockRecStatsInitial [Tmnx Ptp Clock Rec Stats Initial] (tmnxPtpClockRecStatsInitial)	java. math. BigInteger	The value of tmnxPtpClockRecStatsInitial indicates the number of seconds that the clock recovery system has been in the initial state.
tmnxPtpClockRecStatsLocked [Tmnx Ptp Clock Rec Stats Locked] (tmnxPtpClockRecStatsLocked)	java. math. BigInteger	The value of tmnxPtpClockRecStatsLocked indicate the number of seconds that the clock recovery system has been in the locked state.
tmnxPtpClockRecStatsPhaseTrack [Tmnx Ptp Clock Rec Stats Phase Track] (tmnxPtpClockRecStatsPhaseTrack)	java. math. BigInteger	The value of tmnxPtpClockRecStatsPhaseTrack indicate the number of seconds that the clock recovery system has been in the phase tracking state.
<p>PTPStats</p> <p>MIB entry name: aluPtpPeerPacketStatsEntry</p> <p>Entry description: Configuration information concerning IEEE 1588 PTP</p> <p>Table description (for aluPtpPeerPacketStatsTable): This table allows configuration to the IEEE 1588 PTP</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ptp.IEEEPTPPeer</p>		
aluPtpPeerAlternateMasterDisc [Alu Ptp Peer Alternate Master Disc] (aluPtpPeerAlternateMasterDisc)	java. math. BigInteger	aluPtpPeerAlternateMasterDisc indicates the number of packets discarded on ingress as a result of the processing as described in IEEE P1588 D2.2 section 9.1.

Table 340 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluPtpPeerAnnounceMsgRx [Alu Ptp Peer Announce Msg Rx] (aluPtpPeerAnnounceMsgRx)	java. math. BigInteger	Indicates the number of Announce packets received from the master.
aluPtpPeerAnnounceMsgTx [Alu Ptp Peer Announce Msg Tx] (aluPtpPeerAnnounceMsgTx)	java. math. BigInteger	aluPtpPeerAnnounceMsgTx indicates the number of Announce packets transmitted to the master.
aluPtpPeerBadDomainDisc [Alu Ptp Peer Bad Domain Disc] (aluPtpPeerBadDomainDisc)	java. math. BigInteger	aluPtpPeerBadDomainDisc indicates the number of packets discarded on ingress as a result of the processing as described in IEEE P1588 D2.2 section 9.5.1.
aluPtpPeerBadVersionDisc [Alu Ptp Peer Bad Version Disc] (aluPtpPeerBadVersionDisc)	java. math. BigInteger	aluPtpPeerBadVersionDisc indicates the number of packets discarded on ingress as a result of the IEEE P1588 D2.2 section 7.5.5 version number checking.
aluPtpPeerDelayReqMsgRx [Alu Ptp Peer Delay Req Msg Rx] (aluPtpPeerDelayReqMsgRx)	java. math. BigInteger	Indicates the number of Delay Request packets received from the master.
aluPtpPeerDelayReqMsgTx [Alu Ptp Peer Delay Req Msg Tx] (aluPtpPeerDelayReqMsgTx)	java. math. BigInteger	Indicates the number of Delay Request packets transmitted to the master.
aluPtpPeerDelayRespMsgRx [Alu Ptp Peer Delay Resp Msg Rx] (aluPtpPeerDelayRespMsgRx)	java. math. BigInteger	Indicates the number of Delay Response packets received from the master.
aluPtpPeerDelayRespMsgTx [Alu Ptp Peer Delay Resp Msg Tx] (aluPtpPeerDelayRespMsgTx)	java. math. BigInteger	Indicates the number of Delay Response packets transmitted to the master.

Table 340 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluPtpPeerDuplicateMsgDisc [Alu Ptp Peer Duplicate Msg Disc] (aluPtpPeerDuplicateMsgDisc)	java. math. BigInteger	aluPtpPeerDuplicateMsgDisc indicates the number of packets discarded on ingress as a result of processing described in IEEE P1588 D2.2 section 7.3.7.
aluPtpPeerOutOfOrderSyncPktRx [Alu Ptp Peer Out Of Order Sync Pkt Rx] (aluPtpPeerOutOfOrderSyncPktRx)	java. math. BigInteger	aluPtpPeerOutOfOrderSyncPktRx indicates the number of sync packets discarded on ingress as a sequence number processing
aluPtpPeerSignalingMsgRx [Alu Ptp Peer Signaling Msg Rx] (aluPtpPeerSignalingMsgRx)	java. math. BigInteger	Indicates the number of Signaling packets received from the master.
aluPtpPeerSignalingMsgTx [Alu Ptp Peer Signaling Msg Tx] (aluPtpPeerSignalingMsgTx)	java. math. BigInteger	Indicates the number of Signaling packets transmitted to the master.
aluPtpPeerStepRemovedGreaterThan255Disc [Alu Ptp Peer Step Removed Greater Than 255 Disc] (aluPtpPeerStepRemovedGreaterThan255Disc)	java. math. BigInteger	aluPtpPeerStepRemovedGreaterThan255Disc indicates the number of packets discarded on ingress as a result of processing as described in IEEE P1588 D2.2 section 9.3.2.5.
aluPtpPeerSyncMsgRx [Alu Ptp Peer Sync Msg Rx] (aluPtpPeerSyncMsgRx)	java. math. BigInteger	Indicates the number of Sync packets received from the master.
aluPtpPeerSyncMsgTx [Alu Ptp Peer Sync Msg Tx] (aluPtpPeerSyncMsgTx)	java. math. BigInteger	Indicates the number of Sync packets transmitted to the master.

Table 340 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluPtpPeerTotalUdpEventMsgRx [Alu Ptp Peer Total Udp Event Msg Rx] (aluPtpPeerTotalUdpEventMsgRx)	java. math. BigInteger	Indicates the number of packets received on UDP port 319.
aluPtpPeerTotalUdpEventMsgTx [Alu Ptp Peer Total Udp Event Msg Tx] (aluPtpPeerTotalUdpEventMsgTx)	java. math. BigInteger	Indicates the number of packets transmitted on UDP port 319.
aluPtpPeerTotalUdpGeneralMsgRx [Alu Ptp Peer Total Udp General Msg Rx] (aluPtpPeerTotalUdpGeneralMsgRx)	java. math. BigInteger	Indicates the number of packets received on UDP port 320.
aluPtpPeerTotalUdpGeneralMsgTx [Alu Ptp Peer Total Udp General Msg Tx] (aluPtpPeerTotalUdpGeneralMsgTx)	java. math. BigInteger	Indicates the number of packets transmitted on UDP port 320.
aluPtpPeerUcCancelAckAnnoRx [Alu Ptp Peer Uc Cancel Ack Anno Rx] (aluPtpPeerUcCancelAckAnnoRx)	java. math. BigInteger	Indicates the number of unicast announce cancel acknowledgement packets received.
aluPtpPeerUcCancelAckAnnoTx [Alu Ptp Peer Uc Cancel Ack Anno Tx] (aluPtpPeerUcCancelAckAnnoTx)	java. math. BigInteger	Indicates the number of unicast announce cancel acknowledgement packets transmitted.
aluPtpPeerUcCancelAckDelayRespRx [Alu Ptp Peer Uc Cancel Ack Delay Resp Rx] (aluPtpPeerUcCancelAckDelayRespRx)	java. math. BigInteger	Indicates the number of unicast Delay Response cancel acknowledgement packets received.

Table 340 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluPtpPeerUcCancelAckDelayRespTx [Alu Ptp Peer Uc Cancel Ack Delay Resp Tx] (aluPtpPeerUcCancelAckDelayRespTx)	java. math. BigInteger	Indicates the number of unicast Delay Response cancel acknowledgement packets transmitted.
aluPtpPeerUcCancelAckSyncRx [Alu Ptp Peer Uc Cancel Ack Sync Rx] (aluPtpPeerUcCancelAckSyncRx)	java. math. BigInteger	Indicates the number of unicast sync cancel acknowledgement packets received.
aluPtpPeerUcCancelAckSyncTx [Alu Ptp Peer Uc Cancel Ack Sync Tx] (aluPtpPeerUcCancelAckSyncTx)	java. math. BigInteger	Indicates the number of unicast sync cancel acknowledgement packets transmitted.
aluPtpPeerUcCancelAnnoRx [Alu Ptp Peer Uc Cancel Anno Rx] (aluPtpPeerUcCancelAnnoRx)	java. math. BigInteger	Indicates the number of unicast announce cancel request packets received.
aluPtpPeerUcCancelAnnoTx [Alu Ptp Peer Uc Cancel Anno Tx] (aluPtpPeerUcCancelAnnoTx)	java. math. BigInteger	Indicates the number of unicast announce cancel request packets transmitted.
aluPtpPeerUcCancelDelayRespRx [Alu Ptp Peer Uc Cancel Delay Resp Rx] (aluPtpPeerUcCancelDelayRespRx)	java. math. BigInteger	Indicates the number of unicast Delay Response cancel packets received.
aluPtpPeerUcCancelDelayRespTx [Alu Ptp Peer Uc Cancel Delay Resp Tx] (aluPtpPeerUcCancelDelayRespTx)	java. math. BigInteger	Indicates the number of unicast Delay Response cancel packets transmitted.

Table 340 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluPtpPeerUcCancelSyncRx [Alu Ptp Peer Uc Cancel Sync Rx] (aluPtpPeerUcCancelSyncRx)	java. math. BigInteger	Indicates the number of unicast sync cancel packets received.
aluPtpPeerUcCancelSyncTx [Alu Ptp Peer Uc Cancel Sync Tx] (aluPtpPeerUcCancelSyncTx)	java. math. BigInteger	Indicates the number of unicast sync cancel packets transmitted.
aluPtpPeerUcGrantAnnoRejected [Alu Ptp Peer Uc Grant Anno Rejected] (aluPtpPeerUcGrantAnnoRejected)	java. math. BigInteger	Indicates the number of times the a Grant indication, for an Announce unicast negotiation, was rejected.
aluPtpPeerUcGrantAnnoRx [Alu Ptp Peer Uc Grant Anno Rx] (aluPtpPeerUcGrantAnnoRx)	java. math. BigInteger	Indicates the number of unicast announce grant packets received.
aluPtpPeerUcGrantAnnoTx [Alu Ptp Peer Uc Grant Anno Tx] (aluPtpPeerUcGrantAnnoTx)	java. math. BigInteger	Indicates the number of unicast announce grant packets transmitted.
aluPtpPeerUcGrantDelayRespRejected [Alu Ptp Peer Uc Grant Delay Resp Rejected] (aluPtpPeerUcGrantDelayRespRejected)	java. math. BigInteger	Indicates the number of times the a Grant indication, for Delay Response unicast negotiations, was rejected.
aluPtpPeerUcGrantDelayRespRx [Alu Ptp Peer Uc Grant Delay Resp Rx] (aluPtpPeerUcGrantDelayRespRx)	java. math. BigInteger	Indicates the number of unicast Delay Response grant packets received.

Table 340 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluPtpPeerUcGrantDelayRespTx [Alu Ptp Peer Uc Grant Delay Resp Tx] (aluPtpPeerUcGrantDelayRespTx)	java. math. BigInteger	Indicates the number of unicast Delay Response grant packets transmitted.
aluPtpPeerUcGrantDenyAnnoTx [Alu Ptp Peer Uc Grant Deny Anno Tx] (aluPtpPeerUcGrantDenyAnnoTx)	java. math. BigInteger	Indicates the number of times a unicast request for Announce messages was received but not granted because the requested rate was not supported.
aluPtpPeerUcGrantDenyDelayRespTx [Alu Ptp Peer Uc Grant Deny Delay Resp Tx] (aluPtpPeerUcGrantDenyDelayRespTx)	java. math. BigInteger	Indicates the number of times a unicast request for Delay Response messages was received but not granted because the requested rate was not supported.
aluPtpPeerUcGrantDenySyncTx [Alu Ptp Peer Uc Grant Deny Sync Tx] (aluPtpPeerUcGrantDenySyncTx)	java. math. BigInteger	Indicates the number of times a unicast request for Sync messages was received but not granted because the requested rate was not supported.
aluPtpPeerUcGrantSyncRejected [Alu Ptp Peer Uc Grant Sync Rejected] (aluPtpPeerUcGrantSyncRejected)	java. math. BigInteger	Indicates the number of times the a Grant indication, for Sync unicast negotiations, was rejected.
aluPtpPeerUcGrantSyncRx [Alu Ptp Peer Uc Grant Sync Rx] (aluPtpPeerUcGrantSyncRx)	java. math. BigInteger	Indicates the number of unicast sync grant packets received.
aluPtpPeerUcGrantSyncTx [Alu Ptp Peer Uc Grant Sync Tx] (aluPtpPeerUcGrantSyncTx)	java. math. BigInteger	Indicates the number of unicast sync grant packets transmitted.

Table 340 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluPtpPeerUcNegRejectsAnno [Alu Ptp Peer Uc Neg Rejects Anno] (aluPtpPeerUcNegRejectsAnno)	java. math. BigInteger	Indicates the number of times the unicast negotiations for the announce message were rejected.
aluPtpPeerUcNegRejectsDelayResp [Alu Ptp Peer Uc Neg Rejects Delay Resp] (aluPtpPeerUcNegRejectsDelayResp)	java. math. BigInteger	Indicates the number of times the unicast negotiations for the Delay Response message were rejected.
aluPtpPeerUcNegRejectsSync [Alu Ptp Peer Uc Neg Rejects Sync] (aluPtpPeerUcNegRejectsSync)	java. math. BigInteger	Indicates the number of times the unicast negotiations for the sync message were rejected.
aluPtpPeerUcReqAnnoRx [Alu Ptp Peer Uc Req Anno Rx] (aluPtpPeerUcReqAnnoRx)	java. math. BigInteger	Indicates the number of unicast announce request packets received.
aluPtpPeerUcReqAnnoRxTimeout [Alu Ptp Peer Uc Req Anno Rx Timeout] (aluPtpPeerUcReqAnnoRxTimeout)	java. math. BigInteger	Indicates the number of times the grant for unicast negotiations for the Announce message expired.
aluPtpPeerUcReqAnnoTx [Alu Ptp Peer Uc Req Anno Tx] (aluPtpPeerUcReqAnnoTx)	java. math. BigInteger	Indicates the number of unicast announce request packets transmitted.
aluPtpPeerUcReqAnnoTxTimeout [Alu Ptp Peer Uc Req Anno Tx Timeout] (aluPtpPeerUcReqAnnoTxTimeout)	java. math. BigInteger	Indicates the number of times the unicast negotiations for the Announce message failed due to a timeout.
aluPtpPeerUcReqDelayRespRx [Alu Ptp Peer Uc Req Delay Resp Rx] (aluPtpPeerUcReqDelayRespRx)	java. math. BigInteger	Indicates the number of unicast Delay Response request packets received.

Table 340 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluPtpPeerUcReqDelayRespRxTimeout [Alu Ptp Peer Uc Req Delay Resp Rx Timeout] (aluPtpPeerUcReqDelayRespRxTimeout)	java. math. BigInteger	Indicates the number of times the grant for unicast negotiations for the Delay Response message expired.
aluPtpPeerUcReqDelayRespTx [Alu Ptp Peer Uc Req Delay Resp Tx] (aluPtpPeerUcReqDelayRespTx)	java. math. BigInteger	Indicates the number of unicast Delay Response request packets transmitted.
aluPtpPeerUcReqDelayRespTxTimeout [Alu Ptp Peer Uc Req Delay Resp Tx Timeout] (aluPtpPeerUcReqDelayRespTxTimeout)	java. math. BigInteger	Indicates the number of times the unicast negotiations for the Delay Response message failed due to a timeout.
aluPtpPeerUcReqSyncRx [Alu Ptp Peer Uc Req Sync Rx] (aluPtpPeerUcReqSyncRx)	java. math. BigInteger	Indicates the number of unicast sync request packets received.
aluPtpPeerUcReqSyncRxTimeout [Alu Ptp Peer Uc Req Sync Rx Timeout] (aluPtpPeerUcReqSyncRxTimeout)	java. math. BigInteger	Indicates the number of times the grant for unicast negotiations for the Sync message expired.
aluPtpPeerUcReqSyncTx [Alu Ptp Peer Uc Req Sync Tx] (aluPtpPeerUcReqSyncTx)	java. math. BigInteger	Indicates the number of unicast sync request packets transmitted.
aluPtpPeerUcReqSyncTxTimeout [Alu Ptp Peer Uc Req Sync Tx Timeout] (aluPtpPeerUcReqSyncTxTimeout)	java. math. BigInteger	Indicates the number of times the unicast negotiations for the Sync message failed due to a timeout.

Table 340 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PtpClockRecoveryAlgStats</p> <p>MIB entry name: aluPtpPeerClkRecAlgEntry</p> <p>Entry description: Defines an entry in aluPtpPeerClkRecAlgTable. Entries are created and deleted by the system depending on the PTP clock configuration.</p> <p>Table description (for aluPtpPeerClkRecAlgTable): Defines the Nokia 7705 IEEE 1588 PTP recovery statistics table for retrieving statistical information relating to the frequency and time recovery algorithm that is derived from PTP.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ptp.IEEEPTPPeer</p>		
aluPtpFreqRecAcquiringCount [Alu Ptp Freq Rec Acquiring Count] (aluPtpFreqRecAcquiringCount)	long	The number of seconds the frequency recovery algorithm was in Acquiring state.
aluPtpFreqRecExcessFreqErrCnt [Alu Ptp Freq Rec Excess Freq Err Cnt] (aluPtpFreqRecExcessFreqErrCnt)	long	The number of Excessive Frequency Error events that have been detected by the frequency recovery algorithm.
aluPtpFreqRecFreeRunCount [Alu Ptp Freq Rec Free Run Count] (aluPtpFreqRecFreeRunCount)	long	The number of seconds the frequency recovery algorithm was in Free Run state.
aluPtpFreqRecGapResetCnt [Alu Ptp Freq Rec Gap Reset Cnt] (aluPtpFreqRecGapResetCnt)	long	The number of Gap Rest events that have been detected by the frequency recovery algorithm.
aluPtpFreqRecHoldOverCount [Alu Ptp Freq Rec Hold Over Count] (aluPtpFreqRecHoldOverCount)	long	The number of seconds the frequency recovery algorithm was in Holdover state.
aluPtpFreqRecLockedCount [Alu Ptp Freq Rec Locked Count] (aluPtpFreqRecLockedCount)	long	The number of seconds the frequency recovery algorithm was in Locked state.

Table 340 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluPtpFreqRecLossResetCnt [Alu Ptp Freq Rec Loss Reset Cnt] (aluPtpFreqRecLossResetCnt)	long	The number of Packet Loss Reset events that have been detected by the frequency recovery algorithm.
aluPtpFreqRecPacketLossCnt [Alu Ptp Freq Rec Packet Loss Cnt] (aluPtpFreqRecPacketLossCnt)	long	The number of Packet Loss events that have been detected by the frequency recovery algorithm.
aluPtpFreqRecPdvStepCnt [Alu Ptp Freq Rec Pdv Step Cnt] (aluPtpFreqRecPdvStepCnt)	long	The number of PDV Step events that have been detected by the frequency recovery algorithm.
aluPtpFreqRecPhaseTrackCount [Alu Ptp Freq Rec Phase Track Count] (aluPtpFreqRecPhaseTrackCount)	long	The number of seconds the frequency recovery algorithm was in Phase Tracking state.
aluPtpFreqRecTripCnt [Alu Ptp Freq Rec Trip Cnt] (aluPtpFreqRecTripCnt)	long	The number of Trip events that have been detected by the frequency recovery algorithm.
aluPtpFreqRecVarTooHighCnt [Alu Ptp Freq Rec Var Too High Cnt] (aluPtpFreqRecVarTooHighCnt)	long	The number of Variance Too High events that have been detected by the frequency recovery algorithm.
<p>PtpClockRecoveryShortIntvlStats MIB entry name: aluPtpPeerRecClkStatsShortIntvlEntry Entry description: An entry in the IEEE PTP 1588 peer clock recovery interval table. Table description (for aluPtpPeerRecClkStatsShortIntvlTable): The PTP Port Recovered Clock Interval Table contains various statistics collected by 1588 PTP clock recovery instance over the previous 15 minutes. The past 15 minutes are broken into 15 1 minute intervals. Each row in this table represents one such interval (identified by AluPtpPeerRecClkStatsShortIntvlEntry). Supports realtime plotting Supports scheduled collection Monitored class: ptp.IEEEPTPPeer</p>		

Table 340 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluPtpPeerIntvlClockIndex [Alu Ptp Peer Intvl Clock Index] (aluPtpPeerIntvlClockIndex)	int	The index of the clock associated with this ptp master/peer.
aluPtpPeerIntvlIndex [Alu Ptp Peer Intvl Index] (aluPtpPeerIntvlIndex)	int	The index of the master/peer associated with this ptp port.
aluPtpPeerIntvlNumber [Alu Ptp Peer Intvl Number] (aluPtpPeerIntvlNumber)	int	A number between 1 and 15, where 1 is the most recently completed 1 minute interval and 15 is the 1 minutes interval completed 14 minutes prior to interval 1.
aluPtpPeerIntvlPhaseErrorMeanNs [Alu Ptp Peer Intvl Phase Error Mean Ns] (aluPtpPeerIntvlPhaseErrorMeanNs)	double	The mean of the phase error from the local oscillator clock in nano seconds during the interval.
aluPtpPeerIntvlPhaseErrorMeanPpb [Alu Ptp Peer Intvl Phase Error Mean Ppb] (aluPtpPeerIntvlPhaseErrorMeanPpb)	double	The mean phase error from the local oscillator clock in parts per billion during the interval.
aluPtpPeerIntvlPhaseErrorStdDevNs [Alu Ptp Peer Intvl Phase Error Std Dev Ns] (aluPtpPeerIntvlPhaseErrorStdDevNs)	long	The standard deviation of the phase error from the local oscillator clock in nano seconds during the interval.
aluPtpPeerIntvlPortIndex [Alu Ptp Peer Intvl Port Index] (aluPtpPeerIntvlPortIndex)	int	The index of the port associated with this ptp master/peer.
aluPtpPeerIntvlUpdateTime [Alu Ptp Peer Intvl Update Time] (aluPtpPeerIntvlUpdateTime)	long	The update time of the ACR interval statistics
aluPtpPeerIntvlValidData [Alu Ptp Peer Intvl Valid Data] (aluPtpPeerIntvlValidData)	boolean	This variable indicates if the data for this interval is valid.

Table 340 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PtpClockRecoveryStats</p> <p>MIB entry name: aluPtpPeerRecClkStatsEntry</p> <p>Entry description: Defines an entry in aluPtpPeerRecClkStatsTable. Entries are created and deleted by the system depending port configuration.</p> <p>Table description (for aluPtpPeerRecClkStatsTable): Defines the Nokia 7705 IEEE 1588 PTP clock recovery statistics table for retrieving statistical information relating to clock that is derived from the PTP.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ptp.IEEEPTPPeer</p>		
aluPtpPeerCurrent1MinFreqOffsetMeanPpb [Alu Ptp Peer Current 1 Min Freq Offset Mean Ppb] (aluPtpPeerCurrent1MinFreqOffsetMeanPpb)	double	The mean frequency offset from the local oscillator clock in parts per billion during the first interval.
aluPtpPeerCurrent1MinFreqOffsetStdDevPpb [Alu Ptp Peer Current 1 Min Freq Offset Std Dev Ppb] (aluPtpPeerCurrent1MinFreqOffsetStdDevPpb)	long	The standard deviation of the frequency offset from the local oscillator clock in nano seconds during the first interval.
aluPtpPeerCurrent1MinPhaseErrorMeanNs [Alu Ptp Peer Current 1 Min Phase Error Mean Ns] (aluPtpPeerCurrent1MinPhaseErrorMeanNs)	double	The mean of the phase error from the local oscillator clock in nano seconds during the first interval.
aluPtpPeerCurrent1MinPhaseErrorMeanPpb [Alu Ptp Peer Current 1 Min Phase Error Mean Ppb] (aluPtpPeerCurrent1MinPhaseErrorMeanPpb)	double	The mean phase error from the local oscillator clock in parts per billion during the first interval.
aluPtpPeerCurrent1MinPhaseErrorStdDevNs [Alu Ptp Peer Current 1 Min Phase Error Std Dev Ns] (aluPtpPeerCurrent1MinPhaseErrorStdDevNs)	long	The standard deviation of the phase error from the local oscillator clock in nano seconds during the first interval.

Table 340 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluPtpPeerCurrent1MinValidData [Alu Ptp Peer Current 1 Min Valid Data] (aluPtpPeerCurrent1MinValidData)	boolean	This variable indicates if the data for the first interval is valid.
aluPtpPeerCurrent24HourFreqOffsetMeanPpb [Alu Ptp Peer Current 24 Hour Freq Offset Mean Ppb] (aluPtpPeerCurrent24HourFreqOffsetMeanPpb)	double	aluPtpPeerCurrent24HourFreqOffsetMeanPpb indicates the mean frequency offset from the local oscillator clock in parts per billion for up to the last 24 hour.
aluPtpPeerCurrent24HourFreqOffsetStdDevPpb [Alu Ptp Peer Current 24 Hour Freq Offset Std Dev Ppb] (aluPtpPeerCurrent24HourFreqOffsetStdDevPpb)	long	aluPtpPeerCurrent24HourFreqOffsetStdDevPpb indicates the standard deviation of the frequency offset from the local oscillator clock in parts per billion for up to the last 24 hour.
aluPtpPeerMaxShortIntvlMinutes [Alu Ptp Peer Max Short Intvl Minutes] (aluPtpPeerMaxShortIntvlMinutes)	long	aluPtpPeerMaxShortIntvlMinutes the maximum number of aluPtpPeerIntvlNumber.
aluPtpPeerRecLastUpdateTime [Alu Ptp Peer Rec Last Update Time] (aluPtpPeerRecLastUpdateTime)	long	The last time the PTP peer clock recovery statistics were updated
aluPtpPeerTotalMinutesIn24Hour [Alu Ptp Peer Total Minutes In 24 Hour] (aluPtpPeerTotalMinutesIn24Hour)	long	The number of minutes in aluPtpPeerCurrent24HourFreqOffsetMeanPpb and aluPtpPeerCurrent24HourFreqOffsetStdDevPpb
aluPtpPeerTotalShortIntvlMinutes [Alu Ptp Peer Total Short Intvl Minutes] (aluPtpPeerTotalShortIntvlMinutes)	long	aluPtpPeerTotalShortIntvlMinutes is the number of aluPtpPeerIntvlNumber that have valid statistics

Table 341 radioequipment statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>RadioAnalogueMeasure</p> <p>MIB entry name: aluMwRadioPowerMeasuresEntry</p> <p>Entry description: An entry of the analogue measurements table. Each entry corresponds to a Radio Synchronous or Plesiochronous Physical Interface (RSPI or RPPI).</p> <p>Table description (for aluMwRadioPowerMeasuresTable): This table contains the radio analogue measurements.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.PhysicalPort • genericne.GenericNeInterface • mwa.PortTermination 		
localDiversityPowerdBm [Local Diversity Powerd Bm] (aluMwRadioLocalDiversityPower)	double	This object represents the local RSL power for SD (combiner) module input. It is an integer with associated measure unit expressed in decade of dBm.
localRxMainPowerdBm [Local Rx Main Powerd Bm] (aluMwRadioLocalRxMainPower)	double	This object represents the local received power level. In case of space diversity configuration with combiner function in base band it is used to represent the power at the input of the local main receiver. It is a negative integer with associated measure unit expressed in decade of dBm.
localTxPowerdBm [Local Tx Powerd Bm] (aluMwRadioLocalTxPower)	double	This object represents the local transmitted power level. It is an integer with associated measure unit expressed in decade of dBm.
remoteDiversityPowerdBm [Remote Diversity Powerd Bm] (aluMwRadioRemoteDiversityPower)	double	This object represents the remote RSL power for SD (combiner) module input. It is a negative integer with associated measure unit expressed in decade of dBm.

Table 341 radioequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
remoteRxMainPowerdBm [Remote Rx Main Powerd Bm] (aluMwRadioRemoteRxMainPower)	double	This object represents the remote received power level. In case of space diversity configuration with combiner function in base band it is used to represent the power at the input of the remote main receiver. It is a negative integer with associated measure unit expressed in decade of dBm.
remoteTxPowerdBm [Remote Tx Powerd Bm] (aluMwRadioRemoteTxPower)	double	This object represents the remote transmitted power level. It is an integer with associated measure unit expressed in decade of dBm.

Table 342 rip statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceReceiveStats</p> <p>MIB entry name: vRtrRipIfStatEntry</p> <p>Entry description: vRtrRipIfStatEntry is an entry (conceptual row) in the vRtrRipIfStatTable. Each entry represents statistical information for a RIP interface.</p> <p>Table description (for vRtrRipIfStatTable): vRtrRipIfStatTable is a read-only table which keeps statistical information about the interfaces monitoring RIP.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: rip.Interface</p>		
badPackets [Bad Packets] (vRtrRipIfStatAllRcvBadPackets)	long	vRtrRipIfStatAllRcvBadPackets is the number of RIP updates received on this interface that were discarded as invalid.
v1BadRoutes [V1 Bad Routes] (vRtrRipIfStatV1BadRoutes)	long	vRtrRipIfStatV1BadRoutes is the number of routes, in valid RIPv1 packets, which were ignored for any reason (e.g. unknown address family, or invalid metric).
v1Requests [V1 Requests] (vRtrRipIfStatV1RcvRequests)	long	vRtrRipIfStatV1RcvRequests is the number of RIPv1 request packets received by the RIP process.
v1RequestsIgnored [V1 Requests Ignored] (vRtrRipIfStatV1BadRequests)	long	vRtrRipIfStatV1BadRequests is the number of RIPv1 request packets received by the RIP process that were subsequently discarded for any reason.
v1Updates [V1 Updates] (vRtrRipIfStatV1RcvUpdates)	long	vRtrRipIfStatV1RcvUpdates is the number of RIPv1 response packets received by the RIP process.
v1UpdatesIgnored [V1 Updates Ignored] (vRtrRipIfStatV1BadUpdates)	long	vRtrRipIfStatV1BadUpdates is the number of RIPv1 response packets received by the RIP process which were subsequently discarded for any reason.

Table 342 rip statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v2AuthenticationErrors [V2 Authentication Errors] (vRtrRipIfStatAuthErrors)	long	vRtrRipIfStatAuthErrors is the number of RIPv2 packets received by the RIP process which were subsequently discarded because of an error authenticating the packet.
v2BadRoutes [V2 Bad Routes] (vRtrRipIfStatV2BadRoutes)	long	vRtrRipIfStatV2BadRoutes is the number of routes, in valid RIPv2 packets, which were ignored for any reason (e.g. unknown address family, or invalid metric).
v2Requests [V2 Requests] (vRtrRipIfStatV2RcvRequests)	long	vRtrRipIfStatV2RcvRequests is the number of RIPv2 request packets received by the RIP process.
v2RequestsIgnored [V2 Requests Ignored] (vRtrRipIfStatV2BadRequests)	long	vRtrRipIfStatV2BadRequests is the number of RIPv2 request packets received by the RIP process that were subsequently discarded for any reason.
v2Updates [V2 Updates] (vRtrRipIfStatV2RcvUpdates)	long	vRtrRipIfStatV2RcvUpdates is the number of RIPv2 response packets received by the RIP process.
v2UpdatesIgnored [V2 Updates Ignored] (vRtrRipIfStatV2BadUpdates)	long	vRtrRipIfStatV2BadUpdates is the number of RIPv2 response packets received by the RIP process which were subsequently discarded for any reason.
<p>InterfaceTransmitStats MIB entry name: vRtrRipIfStatEntry Entry description: vRtrRipIfStatEntry is an entry (conceptual row) in the vRtrRipIfStatTable. Each entry represents statistical information for a RIP interface. Table description (for vRtrRipIfStatTable): vRtrRipIfStatTable is a read-only table which keeps statistical information about the interfaces monitoring RIP. Supports realtime plotting Supports scheduled collection Monitored class: rip.Interface</p>		

Table 342 rip statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalUpdates [Total Updates] (vRtrRipIfStatAllSentUpdates)	long	vRtrRipIfStatAllSentUpdates is the number of all RIP updates actually sent on this interface. This explicitly does include full updates sent containing new information.
triggeredUpdates [Triggered Updates] (vRtrRipIfStatAllTriggeredUpdates)	long	vRtrRipIfStatAllTriggeredUpdates is the number of triggered RIP updates actually sent on this interface. This explicitly does include full updates sent containing new information.

Table 343 rsvp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AuthenticationKeyStats</p> <p>MIB entry name: vRtrRsvplfStatEntry</p> <p>Entry description: Each row entry represents an interface running the RSVP protocol within a virtual router. Entries in this table cannot be created and deleted via SNMP SET operations. An entry in this table is created by the agent when the RSVP protocol is configured on a virtual router interface. The entry is destroyed when RSVP is removed from the interface.</p> <p>Table description (for vRtrRsvplfStatTable): The vRtrRsvplfStatTable contains objects for reporting statistics associated with an interface running RSVP.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: rsvp.AuthenticationKey</p>		
errorPacketsReceived [Error Packets Received] (vRtrRsvplfStatRxAuthErrors)	java. math. BigInteger	The total number of RSVP packets with MD5 errors received on this RSVP interface.
errorPacketsTransmitted [Error Packets Transmitted] (vRtrRsvplfStatTxAuthErrors)	java. math. BigInteger	The total number of RSVP packets with MD5 errors sent by this RSVP interface.
<p>RsvpInterfaceReceiveStats</p> <p>MIB entry name: vRtrRsvplfStatEntry</p> <p>Entry description: Each row entry represents an interface running the RSVP protocol within a virtual router. Entries in this table cannot be created and deleted via SNMP SET operations. An entry in this table is created by the agent when the RSVP protocol is configured on a virtual router interface. The entry is destroyed when RSVP is removed from the interface.</p> <p>Table description (for vRtrRsvplfStatTable): The vRtrRsvplfStatTable contains objects for reporting statistics associated with an interface running RSVP.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: rsvp.Interface</p>		

Table 343 rsvp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
acks [Acks] (vRtrRsvplfStatRxAcks)	java. math. BigInteger	The total number of RSVP ACK messages received when refresh reduction is enabled on this RSVP interface.
bundles [Bundles] (vRtrRsvplfStatRxBundles)	java. math. BigInteger	The total number of RSVP bundled packets received on this RSVP interface. Bundled packets are sent when refresh reduction is enabled.
errorPackets [Error Packets] (vRtrRsvplfStatRxErrorPkts)	java. math. BigInteger	The total number of RSVP packets with errors received on this RSVP interface.
helloTimeout [Hello Timeout] (vRtrRsvplfStatHelloTimeout)	long	The total number of hello messages that timed out on this RSVP interface.
hellos [Hellos] (vRtrRsvplfStatRxHelloReqs)	java. math. BigInteger	The total number of RSVP HELLO REQ messages received on this RSVP interface.
packets [Packets] (vRtrRsvplfStatRxPkts)	java. math. BigInteger	The total number of error free RSVP packets received on this RSVP interface.
pathErrors [Path Errors] (vRtrRsvplfStatRxPathErrors)	java. math. BigInteger	The total number of RSVP PATH ERROR messages that have been transmitted on this RSVP interface.
pathTears [Path Tears] (vRtrRsvplfStatRxPathTears)	java. math. BigInteger	The total number of RSVP PATH TEAR messages that have been received on this RSVP interface.

Table 343 rsvp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
paths [Paths] (vRtrRsvplfStatRxPaths)	java. math. BigInteger	The total number of RSVP PATH messages that have been received on this RSVP interface.
refreshes [Refreshes] (vRtrRsvplfStatRxSRefreshes)	java. math. BigInteger	The total number of RSVP summary refresh, SREFRESH, messages received on this RSVP interface.
reserveConfirms [Reserve Confirms] (vRtrRsvplfStatRxResvConfirms)	java. math. BigInteger	The total number of RSVP RESV CONFIRM messages that have been received on this RSVP interface.
reserveErrors [Reserve Errors] (vRtrRsvplfStatRxResvErrors)	java. math. BigInteger	The total number of RSVP RESV ERROR messages that have been received on this RSVP interface.
reserveTears [Reserve Tears] (vRtrRsvplfStatRxResvTears)	java. math. BigInteger	The total number of RSVP RESV TEAR messages that have been received on this RSVP interface.
reserves [Reserves] (vRtrRsvplfStatRxResvs)	java. math. BigInteger	The total number of RSVP RESV messages that have been received on this RSVP interface.
totalPackets [Total Packets] (vRtrRsvplfStatRxTotalPkts)	java. math. BigInteger	The total number of RSVP packets, including errors, received on this RSVP interface.

Table 343 rsvp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>RsvpInterfaceStats</p> <p>MIB entry name: vRtrRsvplfEntry</p> <p>Entry description: Each row entry in the vRtrRsvplfTable represents additional columns for attributes specific to the Nokia 7x50 SR RSVP implementation.</p> <p>Table description (for vRtrRsvplfTable): The vRtrRsvplfTable provides an extension of the rsvplfTable in the RSVP-MIB.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: rsvp.Interface</p>		
activeReservations [Active Reservations] (vRtrRsvplfActiveReservationCount)	long	The total number of active RSVP sessions that have reserved bandwidth.
activeSessions [Active Sessions] (vRtrRsvplfActiveSessionCount)	long	The total number of active RSVP sessions on this interface. This count includes sessions that have requested bandwidth as well as sessions that have not requested any bandwidth.
bandwidth [Bandwidth] (vRtrRsvplfBandwidth)	long	The value of vRtrRsvplfBandwidth indicates the interface bandwidth in mega-bits per second (Mbps) for the RSVP protocol on this interface. This is typically the port Speed.
reservedBandwidth [Reserved Bandwidth] (vRtrRsvplfReservedBandwidth)	long	The value of vRtrRsvplfReservedBandwidth specifies the amount of bandwidth in mega-bits per second (Mbps) to reserved by the RSVP sessions on this interface. A value of zero (0) indicates that no bandwidth is reserved.
totalSessions [Total Sessions] (vRtrRsvplfTotalSessionCount)	long	The total number of RSVP sessions on this interface. This count includes sessions that are active as well as sessions that have been signalled but a response has not yet been received.

Entries in this table cannot be created and deleted via SNMP SET operations. An entry in this table is created by the agent when the RSVP protocol is configured on a virtual router interface. The entry is destroyed when RSVP is removed from the interface.</p> <p>Table description (for vRtrRsvplfStatTable): The vRtrRsvplfStatTable contains objects for reporting statistics associated with an interface running RSVP.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: rsvp.Interface</p>		
acks [Acks] (vRtrRsvplfStatRxAcks)	java. math. BigInteger	The total number of RSVP ACK messages received when refresh reduction is enabled on this RSVP interface.
bundles [Bundles] (vRtrRsvplfStatRxBundles)	java. math. BigInteger	The total number of RSVP bundled packets received on this RSVP interface. Bundled packets are sent when refresh reduction is enabled.
errorPackets [Error Packets] (vRtrRsvplfStatRxErrorPkts)	java. math. BigInteger	The total number of RSVP packets with errors received on this RSVP interface.
hellos [Hellos] (vRtrRsvplfStatRxHelloReqs)	java. math. BigInteger	The total number of RSVP HELLO REQ messages received on this RSVP interface.
packets [Packets] (vRtrRsvplfStatRxPkts)	java. math. BigInteger	The total number of error free RSVP packets received on this RSVP interface.

Table 343 rsvp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pathErrors [Path Errors] (vRtrRsvplfStatRxPathErrors)	java. math. BigInteger	The total number of RSVP PATH ERROR messages that have been transmitted on this RSVP interface.
pathTears [Path Tears] (vRtrRsvplfStatRxPathTears)	java. math. BigInteger	The total number of RSVP PATH TEAR messages that have been received on this RSVP interface.
paths [Paths] (vRtrRsvplfStatRxPaths)	java. math. BigInteger	The total number of RSVP PATH messages that have been received on this RSVP interface.
refreshes [Refreshes] (vRtrRsvplfStatRxSRefreshes)	java. math. BigInteger	The total number of RSVP summary refresh, SREFRESH, messages received on this RSVP interface.
reserveConfirms [Reserve Confirms] (vRtrRsvplfStatRxResvConfirms)	java. math. BigInteger	The total number of RSVP RESV CONFIRM messages that have been received on this RSVP interface.
reserveErrors [Reserve Errors] (vRtrRsvplfStatRxResvErrors)	java. math. BigInteger	The total number of RSVP RESV ERROR messages that have been received on this RSVP interface.
reserveTears [Reserve Tears] (vRtrRsvplfStatRxResvTears)	java. math. BigInteger	The total number of RSVP RESV TEAR messages that have been received on this RSVP interface.
reserves [Reserves] (vRtrRsvplfStatRxResvs)	java. math. BigInteger	The total number of RSVP RESV messages that have been received on this RSVP interface.

Table 343 rsvp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalPackets [Total Packets] (vRtrRsvpIpfStatRxTotalPkts)	java. math. BigInteger	The total number of RSVP packets, including errors, received on this RSVP interface.
<p>RsvpSessionStats</p> <p>MIB entry name: vRtrRsvpSessionStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an RSVP session. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrRsvpSessionStatTable): The vRtrRsvpSessionStatTable contains statistics for an RSVP session.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: rsvp.Session</p>		
detourAge [Detour Age] (vRtrRsvpSessionDetourAge)	long	vRtrRsvpSessionDetourAge is the age (i.e., time from creation till now) of this detour LSP in 10-millisecond periods.
detourTimeUp [Detour Time Up] (vRtrRsvpSessionDetourTimeUp)	long	vRtrRsvpSessionDetourTimeUp is the total time in 10-millisecond units that the detour LSP has been operational.
pathsReceived [Paths Received] (vRtrRsvpSessionRxPaths)	java. math. BigInteger	The total number of RSVP PATH messages received for this RSVP session.
pathsTransmitted [Paths Transmitted] (vRtrRsvpSessionTxPaths)	java. math. BigInteger	The total number of RSVP PATH messages transmitted for this RSVP session.

Table 343 rsvp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
refreshPathsReceived [Refresh Paths Received] (vRtrRsvpSessionRxSrefreshPaths)	java. math. BigInteger	The value of vRtrRsvpSessionRxSrefreshPaths indicates the number of times PATH was refreshed using message ID from full PATH refresh or Srefresh message for this RSVP session.
refreshPathsTransmitted [Refresh Paths Transmitted] (vRtrRsvpSessionTxSrefreshPaths)	java. math. BigInteger	The value of vRtrRsvpSessionTxSrefreshPaths indicates the number of times PATH refresh for the session was sent as a part of a Srefresh message.
refreshReservesReceived [Refresh Reserves Received] (vRtrRsvpSessionRxSrefreshResvs)	java. math. BigInteger	The value of vRtrRsvpSessionRxSrefreshResvs indicates the number of times RESV was refreshed using message ID from full RESV refresh or Srefresh message for this RSVP session.
refreshReservesTransmitted [Refresh Reserves Transmitted] (vRtrRsvpSessionTxSrefreshResvs)	java. math. BigInteger	The value of vRtrRsvpSessionTxSrefreshResvs indicates the number of times RESV refresh for the session was sent as a part of a Srefresh message.
reservesReceived [Reserves Received] (vRtrRsvpSessionRxResvs)	java. math. BigInteger	The total number of RSVP RESV messages received for this RSVP session.
reservesTransmitted [Reserves Transmitted] (vRtrRsvpSessionTxResvs)	java. math. BigInteger	The total number of RSVP RESV messages transmitted for this RSVP session.

Table 344 rtr statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CpeCheckStats</p> <p>MIB entry name: vRtrInetStatRteCpeChkStatsEntry</p> <p>Entry description: Each row entry represents a collection of Customer-Provided Equipment (CPE) availability statistics for a virtual router static route in the system with non-default values set for the vRtrInetStaticRouteCpeAddrType and vRtrInetStaticRouteCpeAddr objects. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrInetStatRteCpeChkStatsTable): The vRtrInetStatRteCpeChkStatsTable has an entry for each entry in the vRtrInetStaticRouteTable that has a non-default values set for the vRtrInetStaticRouteCpeAddrType and vRtrInetStaticRouteCpeAddr objects.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: rtr.StaticRoute</p>		
downTransitions [Down Transitions] (vRtrInetStatRteCpeChkDownTrans)	long	The value of vRtrInetStatRteCpeChkDownTrans indicates the number of times the CPE has transitioned to the unavailable state.
echoReplyPacketsReceived [Echo Reply Packets Received] (vRtrInetStatRteCpeChkInPktCnt)	long	The value of vRtrInetStatRteCpeChkInPktCnt indicates the number of echo-reply packets received.
echoRequestPacketsSent [Echo Request Packets Sent] (vRtrInetStatRteCpeChkOutPktCnt)	long	The value of vRtrInetStatRteCpeChkOutPktCnt indicates the number of echo-request packets sent.
hostUpDownTime [Host Up Down Time] (vRtrInetStatRteCpeChkUpTime)	long	The value of vRtrInetStatRteCpeChkUpTime indicates how long (in hundredths of a second) that the CPE has been available.
ttl [Ttl] (vRtrInetStatRteCpeChkTTL)	long	The value of vRtrInetStatRteCpeChkTTL indicates the time, in seconds, before the CPE will be declared down. Upon receipt of an echo reply, it has the value of vRtrInetStaticRouteCpeInterval * vRtrInetStaticRouteCpeDropCnt and is decremented by 1 every second.

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
upTransitions [Up Transitions] (vRtrInetStatRteCpeChkUpTrans)	long	The value of vRtrInetStatRteCpeChkUpTrans indicates the number of times the CPE has transitioned to the available state.
<p>DhcpRelayStats</p> <p>MIB entry name: vRtrIfDHCPRelayStatsEntry</p> <p>Entry description: Each row entry represents information related to DHCP Relay statistics for a virtual router interface in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrIfDHCPRelayStatsTable): The vRtrIfDHCPRelayStatsTable contains the statistics for the DHCP Relay agent.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • rtr.DhcpRelayConfiguration • rtr.GrplfDhcpRelayCfg • rtr.SublIfDhcpRelayCfg 		
clientPacketsDiscarded [Client Packets Discarded] (vRtrIfDHCPRelayClientPktsDiscarded)	long	vRtrIfDHCPRelayClientPktsDiscarded indicates the total number of client packets discarded by the DHCP relay agent.
clientPacketsRelayed [Client Packets Relayed] (vRtrIfDHCPRelayClientPktsRelayed)	long	vRtrIfDHCPRelayClientPktsRelayed indicates the total number of client packets relayed by the DHCP relay agent.
receivedMalformedPackets [Received Malformed Packets] (vRtrIfDHCPRelayRxMalformedPkts)	long	vRtrIfDHCPRelayRxMalformedPkts indicates the total number of malformed packets received by the DHCP relay agent.
receivedPackets [Received Packets] (vRtrIfDHCPRelayRxPkts)	long	vRtrIfDHCPRelayRxPkts indicates the total number of packets received by the DHCP relay agent.

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedUntrustedPackets [Received Untrusted Packets] (vRtrIfDHCPRelayRxUntrustedPkts)	long	vRtrIfDHCPRelayRxUntrustedPkts indicates the total number of untrusted packets received by the DHCP relay agent.
serverPacketsDiscarded [Server Packets Discarded] (vRtrIfDHCPRelayServerPktsDiscarded)	long	vRtrIfDHCPRelayServerPktsDiscarded indicates the total number of server packets discarded by the DHCP relay agent.
serverPacketsRelayed [Server Packets Relayed] (vRtrIfDHCPRelayServerPktsRelayed)	long	vRtrIfDHCPRelayServerPktsRelayed indicates the total number of server packets relayed by the DHCP relay agent.
transmittedPackets [Transmitted Packets] (vRtrIfDHCPRelayTxPkts)	long	vRtrIfDHCPRelayTxPkts indicates the total number of packets transmitted by the DHCP relay agent.
DhcpRelayV6Stats MIB entry name: svclfDHCP6MsgStatEntry Entry description: Each row entry represents a collection of counters for each DHCP6 message type for an interface in a service. Entries cannot be created and deleted via SNMP SET operations. Table description (for svclfDHCP6MsgStatTable): The vRtrDHCP6MsgStatTable has an entry for each interface defined in a service for which DHCP6 can be enabled. Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • rtr.DhcpRelayV6Configuration • rtr.DhcpRelayV6ProxyServer 		
droppedPackets [Dropped Packets] (svclfDHCP6MsgStatsDropped)	long	The value of svclfDHCP6MsgStatsDropped indicates the number of DHCP6 packets were dropped on this service interface.

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedPackets [Received Packets] (svclfdHCP6MsgStatsRcvd)	long	The value of svclfdHCP6MsgStatsRcvd indicates the number of DHCP6 packets were received on this service interface.
transmittedPackets [Transmitted Packets] (svclfdHCP6MsgStatsSent)	long	The value of svclfdHCP6MsgStatsSent indicates the number of DHCP6 packets were sent on this service interface.
<p>InterfaceSecurityStats MIB entry name: aluVRtrIfStatsEntry Entry description: Information about the extensions of vRtrIfStatsTable which represents the statistics per virtual router interface. Table description (for aluVRtrIfStatsTable): Information about the Nokia 7705 SAR extensions to the vRtrIfStatsTable. Supports realtime plotting Supports scheduled collection Monitored class: rtr.NetworkInterface</p>		
aluSARVRtrIfSecBadIcmpTypeDroBytes [Alu SARVRtr If Sec Bad Icmp Type Dro Bytes] (aluVRtrIfSecBadIcmpTypeDroBytes)	java. math. BigInteger	The value of aluVRtrIfSecBadIcmpTypeDroBytes indicates the number of discarded bytes due to unsupported ICMP type on this interface.
aluSARVRtrIfSecBadIcmpTypeDroPkts [Alu SARVRtr If Sec Bad Icmp Type Dro Pkts] (aluVRtrIfSecBadIcmpTypeDroPkts)	java. math. BigInteger	The value of aluVRtrIfSecBadIcmpTypeDroPkts indicates the number of discarded packets due to unsupported ICMP type on this interface.
aluSARVRtrIfSecBadProtoDroBytes [Alu SARVRtr If Sec Bad Proto Dro Bytes] (aluVRtrIfSecBadProtoDroBytes)	java. math. BigInteger	The value of aluVRtrIfSecBadProtoDroBytes indicates the number of discarded bytes due to unsupported protocol on this interface.

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluSARVRtrIfSecBadProtoDroPkts [Alu SARVRtr If Sec Bad Proto Dro Pkts] (aluVRtrIfSecBadProtoDroPkts)	java. math. BigInteger	The value of aluVRtrIfSecBadProtoDroPkts indicates the number of discarded packets due to unsupported protocol on this interface.
aluSARVRtrIfSecBadServiceDroBytes [Alu SARVRtr If Sec Bad Service Dro Bytes] (aluVRtrIfSecBadServiceDroBytes)	java. math. BigInteger	The value of aluVRtrIfSecBadServiceDroBytes indicates the number of discarded bytes due to unsupported service on this interface.
aluSARVRtrIfSecBadServiceDroPkts [Alu SARVRtr If Sec Bad Service Dro Pkts] (aluVRtrIfSecBadServiceDroPkts)	java. math. BigInteger	The value of aluVRtrIfSecBadServiceDroPkts indicates the number of discarded packets due to unsupported service on this interface.
aluSARVRtrIfSecFragmentsDroBytes [Alu SARVRtr If Sec Fragments Dro Bytes] (aluVRtrIfSecFragmentsDroBytes)	java. math. BigInteger	The value of aluVRtrIfSecNoSessionDroBytes indicates the number of discarded bytes due to fragmentation on this interface.
aluSARVRtrIfSecFragmentsDroPkts [Alu SARVRtr If Sec Fragments Dro Pkts] (aluVRtrIfSecFragmentsDroPkts)	java. math. BigInteger	The value of aluVRtrIfSecFragmentsDroPkts indicates the number of discarded fragmented packets on this interface.
aluSARVRtrIfSecNoSessionDroBytes [Alu SARVRtr If Sec No Session Dro Bytes] (aluVRtrIfSecNoSessionDroBytes)	java. math. BigInteger	The value of aluVRtrIfSecNoSessionDroBytes indicates the number of discarded bytes due to no existing session on this interface.
aluSARVRtrIfSecNoSessionDroPkts [Alu SARVRtr If Sec No Session Dro Pkts] (aluVRtrIfSecNoSessionDroPkts)	java. math. BigInteger	The value of aluVRtrIfSecNoSessionDroPkts indicates the number of discarded packets due to no existing session on this interface.
aluSARVRtrIfSecRouteLoopDroBytes [Alu SARVRtr If Sec Route Loop Dro Bytes] (aluVRtrIfSecRouteLoopDroBytes)	java. math. BigInteger	The value of aluVRtrIfSecRouteLoopDroBytes indicates the number of discarded bytes due to routing loop on this interface.

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluSARVRtrIfSecRouteLoopDroPkts [Alu SARVRtr If Sec Route Loop Dro Pkts] (aluVRtrIfSecRouteLoopDroPkts)	java. math. BigInteger	The value of aluVRtrIfSecRouteLoopDroPkts indicates the number of discarded packets due to detection of a routing loop on this interface.
aluSARVRtrIfSecRxV4DiscardBytes [Alu SARVRtr If Sec Rx V4 Discard Bytes] (aluVRtrIfRxV4DiscardBytes)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardBytes indicates the number of total IPv4 received bytes discarded by this interface.
aluSARVRtrIfSecRxV4DiscardPkts [Alu SARVRtr If Sec Rx V4 Discard Pkts] (aluVRtrIfRxV4DiscardPkts)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardPkts indicates the number of total IPv4 received packets discarded by this interface.
aluVRtrIfSecOtherDroBytes [Alu VRtr If Sec Other Dro Bytes] (aluVRtrIfSecOtherDroBytes)	java. math. BigInteger	The value of aluVRtrIfSecOtherDroBytes indicates the number of discarded bytes due to other reasons on this interface.
aluVRtrIfSecOtherDroPkts [Alu VRtr If Sec Other Dro Pkts] (aluVRtrIfSecOtherDroPkts)	java. math. BigInteger	The value of aluVRtrIfSecOtherDroPkts indicates the number of discarded packets due to other reasons on this interface.
<p>NetworkInterfaceEgressStats</p> <p>MIB entry name: aluVrtrIfNetEgrStatsEntry</p> <p>Entry description: Defines an entry in aluVrtrIfNetEgrStatsTable. Entries only exist when a valid aluVrtrIfNetworkEgrQueuePol is assigned to their interface.</p> <p>Table description (for aluVrtrIfNetEgrStatsTable): Defines the Nokia 7x50 SR series network router interface egress statistics table for providing, via SNMP, the capability of retrieving the traffic statistics for the physical queues being used for the router interface to forward the network egress traffic.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: rtr.NetworkInterface</p>		

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egressDropInProfOcts [Egress Drop In Prof Octs] (aluVrtrlfNetEgrDroInProfOcts)	java. math. BigInteger	aluVrtrlfNetEgrDroInProfOcts indicates the number of conforming network egress octets dropped on this interface using this queue.
egressDropInProfPkts [Egress Drop In Prof Pkts] (aluVrtrlfNetEgrDroInProfPkts)	java. math. BigInteger	aluVrtrlfNetEgrDroInProfPkts indicates the number of conforming network egress packets dropped on this interface using this queue.
egressDropOutProfOcts [Egress Drop Out Prof Octs] (aluVrtrlfNetEgrDroOutProfOcts)	java. math. BigInteger	aluVrtrlfNetEgrDroOutProfOcts indicates the number of exceeding network egress octets dropped on this interface using this queue.
egressDropOutProfPkts [Egress Drop Out Prof Pkts] (aluVrtrlfNetEgrDroOutProfPkts)	java. math. BigInteger	aluVrtrlfNetEgrDroOutProfPkts indicates the number of exceeding network egress packets dropped on this interface using this queue.
egressFwdInProfOcts [Egress Fwd In Prof Octs] (aluVrtrlfNetEgrFwdInProfOcts)	java. math. BigInteger	aluVrtrlfNetEgrFwdInProfOcts indicates the number of conforming network egress octets forwarded on this interface using this queue.
egressFwdInProfPkts [Egress Fwd In Prof Pkts] (aluVrtrlfNetEgrFwdInProfPkts)	java. math. BigInteger	aluVrtrlfNetEgrFwdInProfPkts indicates the number of conforming network egress packets forwarded on this interface using this queue.
egressFwdOutProfOcts [Egress Fwd Out Prof Octs] (aluVrtrlfNetEgrFwdOutProfOcts)	java. math. BigInteger	aluVrtrlfNetEgrFwdOutProfOcts indicates the number of exceeding network egress octets forwarded on this interface using this queue.
egressFwdOutProfPkts [Egress Fwd Out Prof Pkts] (aluVrtrlfNetEgrFwdOutProfPkts)	java. math. BigInteger	aluVrtrlfNetEgrFwdOutProfPkts indicates the number of exceeding network egress packets forwarded on this interface using this queue.

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egressQueueIndex [Egress Queue Index] (aluVrtrIfNetEgrQueueIndex)	long	aluVrtrIfNetEgrQueueIndex serves as the tertiary index. When used in conjunction with vRtrID and vRtrIfIndex, it uniquely identifies a network egress queue for the specified interface in the managed system.
<p>NgeKeygroupStats</p> <p>MIB entry name: aluVRtrIfStatsEntry</p> <p>Entry description: Information about the extensions of vRtrIfStatsTable which represents the statistics per virtual router interface.</p> <p>Table description (for aluVRtrIfStatsTable): Information about the Nokia 7705 SAR extensions to the vRtrIfStatsTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • rtr.NetworkInterface • service.L3AccessInterface • vprn.NetworkInterface 		
rxBytes [Rx Bytes] (aluVRtrIfKeygroupRxBytes)	java. math. BigInteger	The value of aluVRtrIfKeygroupRxBytes indicates the number of bytes successfully decrypted by the interface.
rxDropInvalidSpiBytes [Rx Drop Invalid Spi Bytes] (aluVRtrIfKeygroupRxDropInvalidSpiBytes)	java. math. BigInteger	The value of aluVRtrIfKeygroupRxDropInvalidSpiBytes indicates the number of bytes dropped before and during inbound (decryption) processing by the interface. This implies that 1) the received SPI does not exist within the system 2) the received SPI is not part of the associated inbound keygroup 3) un-encrypted packet has been received on SDP with an associated inbound keygroup

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxDropInvalidSpiPackets [Rx Drop Invalid Spi Packets] (aluVRtrIfKeygroupRxDropInvalidSpiPkts)	java. math. BigInteger	The value of aluVRtrIfKeygroupRxDropInvalidSpiPkts indicates the number of packets dropped before and during inbound (decryption) processing by the interface. This implies that 1) the received SPI does not exist within the system 2) the received SPI is not part of the associated inbound keygroup 3) un-encrypted packet has been received on SDP with an associated inbound keygroup
rxDropOtherBytes [Rx Drop Other Bytes] (aluVRtrIfKeygroupRxDropOtherBytes)	java. math. BigInteger	The value of aluVRtrIfKeygroupRxDropOtherBytes indicates the number of bytes dropped before and during inbound (decryption) processing by the interface for unspecified reasons.
rxDropOtherPackets [Rx Drop Other Packets] (aluVRtrIfKeygroupRxDropOtherPkts)	java. math. BigInteger	The value of aluVRtrIfKeygroupRxDropOtherPkts indicates the number of packets dropped before and during inbound (decryption) processing by the interface for unspecified reasons.
rxPackets [Rx Packets] (aluVRtrIfKeygroupRxPkts)	java. math. BigInteger	The value of aluVRtrIfKeygroupRxPkts indicates the number of packets successfully decrypted by the interface.
txBytes [Tx Bytes] (aluVRtrIfKeygroupTxBytes)	java. math. BigInteger	The value of aluVRtrIfKeygroupTxBytes indicates the number of bytes successfully encrypted by the interface.
txDropBytes [Tx Drop Bytes] (aluVRtrIfKeygroupTxDropBytes)	java. math. BigInteger	The value of aluVRtrIfKeygroupTxDropBytes indicates the number of bytes dropped before and during outbound (encryption) processing by the interface.
txDropPackets [Tx Drop Packets] (aluVRtrIfKeygroupTxDropPkts)	java. math. BigInteger	The value of aluVRtrIfKeygroupTxDropPkts indicates the number of packets dropped before and during outbound (encryption) processing by the interface.

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txPackets [Tx Packets] (aluVRtrIfKeygroupTxPkts)	java. math. BigInteger	The value of aluVRtrIfKeygroupTxPkts indicates the number of packets successfully encrypted by the interface.
<p>RouteStats</p> <p>MIB entry name: vRtrStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrStatTable): The vRtrStatTable has an entry for each virtual router configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • rtr.VirtualRouter • vprn.DVRSSite • vprn.RoutingInstanceSite • vprn.Site 		
activeARPEntries [Active ARPEntries] (vRtrStatActiveARPEntries)	long	vRtrStatActiveARPEntries indicates the number of active ARP entries for the specified virtual router in the system.
aggregateActiveRoutes [Aggregate Active Routes] (vRtrAggregateActiveRoutes)	long	vRtrAggregateActiveRoutes indicates the current number of active aggregate routes for this instance of the route table.
aggregateRoutes [Aggregate Routes] (vRtrAggregateRoutes)	long	vRtrAggregateRoutes indicates the current number of aggregate routes for this instance of the route table.
bgpActiveRoutes [Bgp Active Routes] (vRtrBGPActiveRoutes)	long	vRtrBGPActiveRoutes indicates the current number of active bgp routes for this instance of the route table.

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
bgpRoutes [Bgp Routes] (vRtrBGPRoutes)	long	vRtrBGPRoutes indicates the current number of bgp routes for this instance of the route table.
bgpVpnActiveRoutes [Bgp Vpn Active Routes] (vRtrStatBGPVpnActiveRoutes)	long	vRtrStatBGPVpnActiveRoutes indicates the current number of active VPN-IPV4 routes learned by MP-BGP for this virtual router.
bgpVpnRoutes [Bgp Vpn Routes] (vRtrStatBGPVpnRoutes)	long	vRtrStatBGPVpnRoutes indicates the current number of VPN-IPV4 routes learned by MP-BGP for this virtual router.
directActiveRoutes [Direct Active Routes] (vRtrDirectActiveRoutes)	long	vRtrDirectActiveRoutes indicates the current number of active direct routes for this instance of the route table.
directRoutes [Direct Routes] (vRtrDirectRoutes)	long	vRtrDirectRoutes indicates the current number of direct routes for this instance of the route table.
illegalLabelsReceived [Illegal Labels Received] (vRtrStatIllegalLabels)	long	vRtrStatIllegalLabels indicates the number of illegally received labels on this virtual router.
isisActiveRoutes [Isis Active Routes] (vRtrISISActiveRoutes)	long	vRtrISISActiveRoutes indicates the current number of active isis routes for this instance of the route table.
isisRoutes [Isis Routes] (vRtrISISRoutes)	long	vRtrISISRoutes indicates the current number of isis routes for this instance of the route table.
ldpActiveTunnels [Ldp Active Tunnels] (vRtrStatActiveLdpTunnels)	long	vRtrStatActiveLdpTunnels indicates the current number of rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'ldp'.

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ldpTunnels [Ldp Tunnels] (vRtrStatTotalLdpTunnels)	long	vRtrStatTotalLdpTunnels indicates the current number of both active and inactive LDP tunnels.
ospfActiveRoutes [Ospf Active Routes] (vRtrOSPFActiveRoutes)	long	vRtrOSPFActiveRoutes indicates the current number of active ospf routes for this instance of the route table.
ospfRoutes [Ospf Routes] (vRtrOSPFRoutes)	long	vRtrOSPFRoutes indicates the current number of ospf routes for this instance of the route table.
routerInterfacesActive [Router Interfaces Active] (vRtrStatActiveIfs)	long	vRtrStatActiveIfs indicates the current number of router interfaces with vRtrIfAdminState equal 'inService' on this virtual router.
routerInterfacesConfigured [Router Interfaces Configured] (vRtrStatConfiguredIfs)	long	vRtrStatConfiguredIfs indicates the current number of router interfaces configured on this virtual router.
routesInVrf [Routes In Vrf] (vRtrStatCurrNumRoutes)	long	vRtrStatCurrNumRoutes indicates the current number of routes in the VRF for this virtual router.
sdpActiveTunnels [Sdp Active Tunnels] (vRtrStatActiveSdpTunnels)	long	vRtrStatActiveSdpTunnels indicates the current number of rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'sdp'.
sdpTunnels [Sdp Tunnels] (vRtrStatTotalSdpTunnels)	long	vRtrStatTotalSdpTunnels indicates the current number of both active and inactive SDP tunnels.
staticActiveRoutes [Static Active Routes] (vRtrStaticActiveRoutes)	long	vRtrStaticActiveRoutes indicates the current number of active static routes for this instance of the route table.

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
staticRoutes [Static Routes] (vRtrStaticRoutes)	long	vRtrStaticRoutes indicates the current number of static routes for this instance of the route table.
totalARPEntries [Total ARPEntries] (vRtrStatTotalARPEntries)	long	vRtrStatTotalARPEntries indicates the total number of active and inactive ARP entries for the specified virtual router in the system.
<p>SarIpInterfaceStats MIB entry name: vRtrIfStatsEntry Entry description: Each row entry represents the statistics per virtual router interface. Entries are created and deleted when entries in the vRtrIfEntry are created and deleted. Table description (for vRtrIfStatsTable): The vRtrIfStatsTable table contains statistics per virtual router interface. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • ies.GroupInterface • rtr.NetworkInterface • service.L3AccessInterface • vprn.GroupInterface • vprn.NetworkInterface 		
ifSpeed [If Speed] (vRtrIfSpeed)	java. math. BigInteger	The value of vRtrIfSpeed indicates an estimate of the current bandwidth in bits per second for this interface.
rxBytes [Rx Bytes] (vRtrIfRxBytes)	java. math. BigInteger	The value of vRtrIfRxBytes indicates the number of bytes in IPv4 and IPv6 packets received by this interface.

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxPkts [Rx Pkts] (vRtrIfRxPkts)	java. math. BigInteger	The value of vRtrIfRxPkts indicates the number of IPv4 packets received by this interface.
rxV4Bytes [Rx V4 Bytes] (vRtrIfRxV4Bytes)	java. math. BigInteger	The value of vRtrIfRxV4Bytes indicates the number of bytes in IPv4 packets received by this interface.
rxV4Pkts [Rx V4 Pkts] (vRtrIfRxV4Pkts)	java. math. BigInteger	The value of vRtrIfRxV4Pkts indicates the number of IPv4 packets received by this interface.
rxV6Bytes [Rx V6 Bytes] (vRtrIfRxV6Bytes)	java. math. BigInteger	The value of vRtrIfRxV6Bytes indicates the number of bytes in IPv6 packets received by this interface.
rxV6BytesHigh32 [Rx V6 Bytes High 32] (vRtrIfRxV6BytesHigh32)	long	The value of vRtrIfRxV6BytesHigh32 indicates the high 32 bits word of the value of vRtrIfRxV6Bytes.
rxV6BytesLow32 [Rx V6 Bytes Low 32] (vRtrIfRxV6BytesLow32)	long	The value of vRtrIfRxV6BytesLow32 indicates the lower 32 bits word of the value of vRtrIfRxV6Bytes.
rxV6Pkts [Rx V6 Pkts] (vRtrIfRxV6Pkts)	java. math. BigInteger	The value of vRtrIfRxV6Pkts indicates the number of IPv6 packets received by this interface.
rxV6PktsHigh32 [Rx V6 Pkts High 32] (vRtrIfRxV6PktsHigh32)	long	The value of vRtrIfRxV6PktsHigh32 indicates the high 32 bits of the value of vRtrIfRxV6Pkts.

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxV6PktsLow32 [Rx V6 Pkts Low 32] (vRtrIfRxV6PktsLow32)	long	The value of vRtrIfRxV6PktsLow32 indicates the lower 32 bits of the value of vRtrIfRxV6Pkts.
txV4Bytes [Tx V4 Bytes] (vRtrIfTxV4Bytes)	java. math. BigInteger	The value of vRtrIfTxV4Bytes indicates the number of total IPv4 bytes sent from this interface.
txV4Pkts [Tx V4 Pkts] (vRtrIfTxV4Pkts)	java. math. BigInteger	The value of vRtrIfTxV4Pkts indicates the number of total IPv4 packets sent from this interface.
txV6Bytes [Tx V6 Bytes] (vRtrIfTxV6Bytes)	java. math. BigInteger	The value of vRtrIfTxV6Bytes indicates the number of total IPv6 bytes sent from this interface.
txV6Pkts [Tx V6 Pkts] (vRtrIfTxV6Pkts)	java. math. BigInteger	The value of vRtrIfTxV6Pkts indicates the number of total IPv6 packets sent from this interface.

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SarIpInterfaceStatsRxExtra</p> <p>MIB entry name: aluVRtrIfStatsEntry</p> <p>Entry description: Information about the extensions of vRtrIfStatsTable which represents the statistics per virtual router interface.</p> <p>Table description (for aluVRtrIfStatsTable): Information about the Nokia 7705 SAR extensions to the vRtrIfStatsTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • ies.GroupInterface • rtr.NetworkInterface • service.L3AccessInterface • vprn.GroupInterface • vprn.NetworkInterface 		
aluSARVRtrIfRxV4DiscardBlackHoleBytes [Alu SARVRtr If Rx V4 Discard Black Hole Bytes] (aluVRtrIfRxV4DiscardBlackHoleBytes)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardBlackHoleBytes indicates the number of IPv4 received bytes discarded by this interface due to blackhole.
aluSARVRtrIfRxV4DiscardBlackHolePkts [Alu SARVRtr If Rx V4 Discard Black Hole Pkts] (aluVRtrIfRxV4DiscardBlackHolePkts)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardBlackHolePkts indicates the number of IPv4 received packets discarded by this interface due to blackhole.
aluSARVRtrIfRxV4DiscardDestMartianAddrBytes [Alu SARVRtr If Rx V4 Discard Dest Martian Addr Bytes] (aluVRtrIfRxV4DiscardDestMartianAddrBytes)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardDestMartianAddrBytes indicates the number of IPv4 received bytes discarded by this interface due to martian destination address.
aluSARVRtrIfRxV4DiscardDestMartianAddrPkts [Alu SARVRtr If Rx V4 Discard Dest Martian Addr Pkts] (aluVRtrIfRxV4DiscardDestMartianAddrPkts)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardDestMartianAddrPkts indicates the number of IPv4 received packets discarded by this interface due to martian destination address.

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluSARVRtrIfRxV4DiscardDestUnreachBytes [Alu SARVRtr If Rx V4 Discard Dest Unreach Bytes] (aluVRtrIfRxV4DiscardDestUnreachBytes)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardDestUnreachBytes indicates the number of IPv4 received bytes discarded by this interface due to destination unreachable.
aluSARVRtrIfRxV4DiscardDestUnreachPkts [Alu SARVRtr If Rx V4 Discard Dest Unreach Pkts] (aluVRtrIfRxV4DiscardDestUnreachPkts)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardDestUnreachPkts indicates the number of IPv4 received packets discarded by this interface due to destination unreachable.
aluSARVRtrIfRxV4DiscardDirectBcastBytes [Alu SARVRtr If Rx V4 Discard Direct Bcast Bytes] (aluVRtrIfRxV4DiscardDirectBcastBytes)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardDirectBcastBytes indicates the number of IPv4 received directed broadcast bytes discarded by this interface due to interface is not enabled for directed broadcast.
aluSARVRtrIfRxV4DiscardDirectBcastPkts [Alu SARVRtr If Rx V4 Discard Direct Bcast Pkts] (aluVRtrIfRxV4DiscardDirectBcastPkts)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardDirectBcastPkts indicates the number of IPv4 received directed broadcast packets discarded by this interface due to interface is not enabled for directed broadcast.
aluSARVRtrIfRxV4DiscardFltrActionDropBytes [Alu SARVRtr If Rx V4 Discard Fltr Action Drop Bytes] (aluVRtrIfRxV4DiscardFltrActionDropBytes)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardFltrActionDropBytes indicates the number of IPv4 received bytes discarded by this interface due to filter action as 'drop'.
aluSARVRtrIfRxV4DiscardFltrActionDropPkts [Alu SARVRtr If Rx V4 Discard Fltr Action Drop Pkts] (aluVRtrIfRxV4DiscardFltrActionDropPkts)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardFltrActionDropPkts indicates the number of IPv4 received packets discarded by this interface due to filter action as 'drop'.
aluSARVRtrIfRxV4DiscardFltrNxtHopNotDirectBytes [Alu SARVRtr If Rx V4 Discard Fltr Nxt Hop Not Direct Bytes] (aluVRtrIfRxV4DiscardFltrNxtHopNotDirectBytes)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardFltrNxtHopNotDirectBytes indicates the number of IPv4 received bytes discarded by this interface due to PBR filter direct next-hop is not directly connected.

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluSARVRtrIfRxV4DiscardFltrNxtHopNotDirectPkts [Alu SARVRtr If Rx V4 Discard Fltr Nxt Hop Not Direct Pkts] (aluVRtrIfRxV4DiscardFltrNxtHopNotDirectPkts)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardFltrNxtHopNotDirectPkts indicates the number of IPv4 received packets discarded by this interface due to PBR filter direct next-hop is not directly connected.
aluSARVRtrIfRxV4DiscardFltrNxtHopUnreachBytes [Alu SARVRtr If Rx V4 Discard Fltr Nxt Hop Unreach Bytes] (aluVRtrIfRxV4DiscardFltrNxtHopUnreachBytes)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardFltrNxtHopUnreachBytes indicates the number of IPv4 received bytes discarded by this interface due to PBR filter next-hop unreachable.
aluSARVRtrIfRxV4DiscardFltrNxtHopUnreachPkts [Alu SARVRtr If Rx V4 Discard Fltr Nxt Hop Unreach Pkts] (aluVRtrIfRxV4DiscardFltrNxtHopUnreachPkts)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardFltrNxtHopUnreachPkts indicates the number of IPv4 received packets discarded by this interface due to PBR filter next-hop unreachable.
aluSARVRtrIfRxV4DiscardInvGREProtBytes [Alu SARVRtr If Rx V4 Discard Inv GREProt Bytes] (aluVRtrIfRxV4DiscardInvGREProtBytes)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardInvGREProtBytes indicates the number of IPv4 received bytes discarded by this interface due to invalid GRE protocol number for MPLS.
aluSARVRtrIfRxV4DiscardInvGREProtPkts [Alu SARVRtr If Rx V4 Discard Inv GREProt Pkts] (aluVRtrIfRxV4DiscardInvGREProtPkts)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardInvGREProtPkts indicates the number of IPv4 received packets discarded by this interface due to invalid GRE protocol number for MPLS.
aluSARVRtrIfRxV4DiscardInvHdrCRCBytes [Alu SARVRtr If Rx V4 Discard Inv Hdr CRCBytes] (aluVRtrIfRxV4DiscardInvHdrCRCBytes)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardInvHdrCRCBytes indicates the number of IPv4 received bytes discarded by this interface due to invalid IP header CRC.
aluSARVRtrIfRxV4DiscardInvHdrCRCPkts [Alu SARVRtr If Rx V4 Discard Inv Hdr CRCPkts] (aluVRtrIfRxV4DiscardInvHdrCRCPkts)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardInvHdrCRCPkts indicates the number of IPv4 received packets discarded by this interface due to invalid IP header CRC.

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluSARVRtrIfRxV4DiscardInvLenBytes [Alu SARVRtr If Rx V4 Discard Inv Len Bytes] (aluVRtrIfRxV4DiscardInvLenBytes)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardInvLenBytes indicates the number of IPv4 received bytes discarded by this interface due to invalid length of the IP packet.
aluSARVRtrIfRxV4DiscardInvLenPkts [Alu SARVRtr If Rx V4 Discard Inv Len Pkts] (aluVRtrIfRxV4DiscardInvLenPkts)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardInvLenPkts indicates the number of IPv4 received packets discarded by this interface due to invalid length of the IP packet.
aluSARVRtrIfRxV4DiscardInvMcastBytes [Alu SARVRtr If Rx V4 Discard Inv Mcast Bytes] (aluVRtrIfRxV4DiscardInvMcastBytes)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardInvMcastBytes indicates the number of IPv4 received bytes discarded by this interface due to invalid multicast address.
aluSARVRtrIfRxV4DiscardInvMcastPkts [Alu SARVRtr If Rx V4 Discard Inv Mcast Pkts] (aluVRtrIfRxV4DiscardInvMcastPkts)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardInvMcastPkts indicates the number of IPv4 received packets discarded by this interface due to invalid multicast address.
aluSARVRtrIfRxV4DiscardMtuExceededBytes [Alu SARVRtr If Rx V4 Discard Mtu Exceeded Bytes] (aluVRtrIfRxV4DiscardMtuExceededBytes)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardMtuExceededBytes indicates the number of IPv4 received bytes discarded by this interface due to MTU exceeded.
aluSARVRtrIfRxV4DiscardMtuExceededPkts [Alu SARVRtr If Rx V4 Discard Mtu Exceeded Pkts] (aluVRtrIfRxV4DiscardMtuExceededPkts)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardMtuExceededPkts indicates the number of IPv4 received packets discarded by this interface due to MTU exceeded.
aluSARVRtrIfRxV4DiscardSrcMartianAddrBytes [Alu SARVRtr If Rx V4 Discard Src Martian Addr Bytes] (aluVRtrIfRxV4DiscardSrcMartianAddrBytes)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardSrcMartianAddrBytes indicates the number of IPv4 received bytes discarded by this interface due to martian source address.

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluSARVRtrIfRxV4DiscardSrcMartianAddrPkts [Alu SARVRtr If Rx V4 Discard Src Martian Addr Pkts] (aluVRtrIfRxV4DiscardSrcMartianAddrPkts)	java. math. BigInte- ger	The value of aluVRtrIfRxV4DiscardSrcMartianAddrPkts indicates the number of IPv4 received packets discarded by this interface due to martian source address.
aluSARVRtrIfRxV4OtherDiscardsBytes [Alu SARVRtr If Rx V4 Other Discards Bytes] (aluVRtrIfRxV4OtherDiscardsBytes)	java. math. BigInte- ger	The value of aluVRtrIfRxV4OtherDiscardsBytes indicates the number of IPv4 received bytes discarded by this interface due to other reasons not specified above.
aluSARVRtrIfRxV4OtherDiscardsPkts [Alu SARVRtr If Rx V4 Other Discards Pkts] (aluVRtrIfRxV4OtherDiscardsPkts)	java. math. BigInte- ger	The value of aluVRtrIfRxV4OtherDiscardsPkts indicates the number of IPv4 received packets discarded by this interface due to other reasons not specified above.
aluSARVRtrIfRxV6DiscardMtuExceededBytes [Alu SARVRtr If Rx V6 Discard Mtu Exceeded Bytes] (aluVRtrIfRxV6DiscardMtuExceededBytes)	java. math. BigInte- ger	The value of aluVRtrIfRxV6DiscardMtuExceededBytes indicates the number of IPv6 received bytes discarded by this interface due to MTU exceeded.
aluSARVRtrIfRxV6DiscardMtuExceededPkts [Alu SARVRtr If Rx V6 Discard Mtu Exceeded Pkts] (aluVRtrIfRxV6DiscardMtuExceededPkts)	java. math. BigInte- ger	The value of aluVRtrIfRxV6DiscardMtuExceededPkts indicates the number of IPv6 received packets discarded by this interface due to MTU exceeded.

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>V6RouteStats</p> <p>MIB entry name: vRtrStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrStatTable): The vRtrStatTable has an entry for each virtual router configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • rtr.VirtualRouter • vprn.RoutingInstanceSite • vprn.Site 		
v6ActiveNbrEntries [V6 Active Nbr Entries] (vRtrV6StatActiveNbrEntries)	long	vRtrV6StatActiveNbrEntries indicates the number of active V6 neighbor discovery entries for the specified virtual router in the system.
v6AggregateActiveRoutes [V6 Aggregate Active Routes] (vRtrV6AggregateActiveRoutes)	long	vRtrV6AggregateActiveRoutes indicates the current number of active v6 aggregate routes for this instance of the route table.
v6AggregateRoutes [V6 Aggregate Routes] (vRtrV6AggregateRoutes)	long	vRtrV6AggregateRoutes indicates the current number of v6 aggregate routes for this instance of the route table.
v6BgpActiveRoutes [V6 Bgp Active Routes] (vRtrV6BGPAActiveRoutes)	long	vRtrV6BGPAActiveRoutes indicates the current number of v6 active bgp routes for this instance of the route table.
v6BgpRoutes [V6 Bgp Routes] (vRtrV6BGPRoutes)	long	vRtrV6BGPRoutes indicates the current number of v6 bgp routes for this instance of the route table.

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v6BgpVpnActiveRoutes [V6 Bgp Vpn Active Routes] (vRtrV6StatBGPVpnActiveRoutes)	long	vRtrV6StatBGPVpnActiveRoutes indicates the current number of active VPN-IPV6 routes learned by MP-BGP for this virtual router.
v6BgpVpnRoutes [V6 Bgp Vpn Routes] (vRtrV6StatBGPVpnRoutes)	long	vRtrV6StatBGPVpnRoutes indicates the current number of VPN-IPV6 routes learned by MP-BGP for this virtual router.
v6Dhcpv6NaActiveRoutes [V6 Dhcpv 6 Na Active Routes] (vRtrV6Dhcpv6NaActiveRoutes)	long	The value of vRtrV6Dhcpv6NaActiveRoutes indicates the current number of active IPv6 DHCPv6 non-temporary address routes for this instance of the route table.
v6Dhcpv6NaRoutes [V6 Dhcpv 6 Na Routes] (vRtrV6Dhcpv6NaRoutes)	long	The value of vRtrV6Dhcpv6NaRoutes indicates the current number of IPv6 DHCPv6 non-temporary address routes for this instance of the route table.
v6Dhcpv6PdActiveRoutes [V6 Dhcpv 6 Pd Active Routes] (vRtrV6Dhcpv6PdActiveRoutes)	long	The value of vRtrV6Dhcpv6PdActiveRoutes indicates the current number of active IPv6 DHCPv6 delegated prefix routes for this instance of the route table.
v6Dhcpv6PdExclActiveRoutes [V6 Dhcpv 6 Pd Excl Active Routes] (vRtrV6Dhcpv6PdExclActiveRoutes)	long	The value of vRtrV6Dhcpv6PdExclActiveRoutes indicates the current number of active IPv6 DHCPv6 delegated prefix exclude routes for this instance of the route table.
v6Dhcpv6PdExclRoutes [V6 Dhcpv 6 Pd Excl Routes] (vRtrV6Dhcpv6PdExclRoutes)	long	The value of vRtrV6Dhcpv6PdExclRoutes indicates the current number of IPv6 DHCPv6 delegated prefix exclude routes for this instance of the route table.
v6Dhcpv6PdRoutes [V6 Dhcpv 6 Pd Routes] (vRtrV6Dhcpv6PdRoutes)	long	The value of vRtrV6Dhcpv6PdRoutes indicates the current number of IPv6 DHCPv6 delegated prefix routes for this instance of the route table.
v6Dhcpv6TaActiveRoutes [V6 Dhcpv 6 Ta Active Routes] (vRtrV6Dhcpv6TaActiveRoutes)	long	The value of vRtrV6Dhcpv6TaActiveRoutes indicates the current number of active IPv6 DHCPv6 temporary address routes for this instance of the route table.

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v6Dhcpv6TaRoutes [V6 Dhcpv 6 Ta Routes] (vRtrV6Dhcpv6TaRoutes)	long	The value of vRtrV6Dhcpv6TaRoutes indicates the current number of IPv6 DHCPv6 temporary address routes for this instance of the route table.
v6DirectActiveRoutes [V6 Direct Active Routes] (vRtrV6DirectActiveRoutes)	long	vRtrV6DirectActiveRoutes indicates the current number of v6 active direct routes for this instance of the route table.
v6DirectRoutes [V6 Direct Routes] (vRtrV6DirectRoutes)	long	vRtrV6DirectRoutes indicates the current number of v6 direct routes for this instance of the route table.
v6HostActiveRoutes [V6 Host Active Routes] (vRtrV6HostActiveRoutes)	long	The value of vRtrV6HostActiveRoutes indicates the current number of v6 active direct routes with prefix value 128 for this instance of the route table.
v6HostRoutes [V6 Host Routes] (vRtrV6HostRoutes)	long	The value of vRtrV6HostRoutes indicates the current number of v6 direct routes with prefix value 128 for this instance of the route table.
v6IsisActiveRoutes [V6 Isis Active Routes] (vRtrV6ISISActiveRoutes)	long	vRtrV6ISISActiveRoutes indicates the current number of v6 active isis routes for this instance of the route table.
v6IsisRoutes [V6 Isis Routes] (vRtrV6ISISRoutes)	long	vRtrV6ISISRoutes indicates the current number of v6 isis routes for this instance of the route table.
v6LdpActiveTunnels [V6 Ldp Active Tunnels] (vRtrV6StatActiveLdpTunnels)	long	vRtrV6StatActiveLdpTunnels indicates the current number of v6 rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'ldp'.
v6LdpTunnels [V6 Ldp Tunnels] (vRtrV6StatTotalLdpTunnels)	long	vRtrV6StatTotalLdpTunnels indicates the current number of both active and inactive v6 LDP tunnels.

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v6ManagedActiveRoutes [V6 Managed Active Routes] (vRtrV6ManagedActiveRoutes)	long	The value of vRtrV6ManagedActiveRoutes indicates the total number of active IPv6 managed routes for the specified virtual router.
v6ManagedRoutes [V6 Managed Routes] (vRtrV6ManagedRoutes)	long	The value of vRtrV6ManagedRoutes indicates the total number of active and inactive IPv6 managed routes for the specified virtual router.
v6MulticastRoutes [V6 Multicast Routes] (vRtrV6MulticastRoutes)	long	vRtrV6MulticastRoutes indicates the current number of v6 rows in the vRtrPimNgGrpSrcTable.
v6NatActiveRoutes [V6 Nat Active Routes] (vRtrV6NatActiveRoutes)	long	The value of vRtrV6NatActiveRoutes indicates the current number of IPv6 active NAT routes for this instance of the route table.
v6NatRoutes [V6 Nat Routes] (vRtrV6NatRoutes)	long	The value of vRtrV6NatRoutes indicates the current number of IPv6 NAT routes for this instance of the route table.
v6OspfActiveRoutes [V6 Ospf Active Routes] (vRtrV6OSPFActiveRoutes)	long	vRtrV6OSPFActiveRoutes indicates the current number of v6 active ospf routes for this instance of the route table.
v6OspfRoutes [V6 Ospf Routes] (vRtrV6OSPFRoutes)	long	vRtrV6OSPFRoutes indicates the current number of v6 ospf routes for this instance of the route table.
v6PerActiveRoutes [V6 Per Active Routes] (vRtrV6PeriodicActiveRoutes)	long	The value of vRtrV6PeriodicActiveRoutes indicates the current number of active IPv6 periodic routes for this instance of the route table.
v6PerRoutes [V6 Per Routes] (vRtrV6PeriodicRoutes)	long	The value of vRtrV6PeriodicRoutes indicates the current number of IPv6 periodic routes for this instance of the route table.

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v6RipActiveRoutes [V6 Rip Active Routes] (vRtrV6RIPActiveRoutes)	long	vRtrV6RIPActiveRoutes indicates the current number of active v6 rip routes for this instance of the route table.
v6RipRoutes [V6 Rip Routes] (vRtrV6RIPRoutes)	long	vRtrV6RIPRoutes indicates the current number of v6 rip routes for this instance of the route table.
v6RouterInterfacesActive [V6 Router Interfaces Active] (vRtrV6StatActiveIfs)	long	vRtrV6StatActiveIfs indicates the current number of v6 router interfaces with vRtrIfAdminState equal 'inService' on this virtual router.
v6RouterInterfacesConfigured [V6 Router Interfaces Configured] (vRtrV6StatConfiguredIfs)	long	vRtrV6StatConfiguredIfs indicates the current number of v6 router interfaces configured on this virtual router.
v6RoutesInVrf [V6 Routes In Vrf] (vRtrV6StatCurrNumRoutes)	long	vRtrV6StatCurrNumRoutes indicates the current number of v6 routes in the VRF for this virtual router.
v6SdpActiveTunnels [V6 Sdp Active Tunnels] (vRtrV6StatActiveSdpTunnels)	long	vRtrV6StatActiveSdpTunnels indicates the current number of v6 rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'sdp'.
v6SdpTunnels [V6 Sdp Tunnels] (vRtrV6StatTotalSdpTunnels)	long	vRtrV6StatTotalSdpTunnels indicates the current number of both active and inactive v6 SDP tunnels.
v6StaticActiveRoutes [V6 Static Active Routes] (vRtrV6StaticActiveRoutes)	long	vRtrV6StaticActiveRoutes indicates the current number of v6 active static routes for this instance of the route table.
v6StaticRoutes [V6 Static Routes] (vRtrV6StaticRoutes)	long	vRtrV6StaticRoutes indicates the current number of v6 static routes for this instance of the route table.

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v6SubMgmtActiveRoutes [V6 Sub Mgmt Active Routes] (vRtrV6SubMgmtActiveRoutes)	long	vRtrV6SubMgmtActiveRoutes indicates the current number of v6 active subscriber management routes for this instance of the route table.
v6SubMgmtRoutes [V6 Sub Mgmt Routes] (vRtrV6SubMgmtRoutes)	long	vRtrV6SubMgmtRoutes indicates the current number of v6 subscriber management routes for this instance of the route table.
v6TotalNbrEntries [V6 Total Nbr Entries] (vRtrV6StatTotalNbrEntries)	long	vRtrV6StatTotalNbrEntries indicates the total number of active and inactive v6 neighbor discovery entries for the specified virtual router in the system.
v6VpnLeakActiveRoutes [V6 Vpn Leak Active Routes] (vRtrV6VPNLeakActiveRoutes)	long	vRtrV6VPNLeakActiveRoutes indicates the current number of v6 active VPN Leak routes for this instance of the route table.
v6VpnLeakRoutes [V6 Vpn Leak Routes] (vRtrV6VPNLeakRoutes)	long	vRtrV6VPNLeakRoutes indicates the current number of v6 VPN Leak routes for this instance of the route table.
<p>VirtualInterfaceIcmp6InStats MIB entry name: vRtrIfIcmp6Entry Entry description: Each row entry represents the ICMP statistics of a virtual router interface. Entries are created and deleted when entries in the vRtrIfTable are created and deleted. Table description (for vRtrIfIcmp6Table): The vRtrIfIcmp6Table table contains statistics of ICMPv6 messages that are received and sourced by a router interface. Supports realtime plotting Supports scheduled collection Monitored class: rtr.VirtualInterfaceIcmp6Configuration</p>		
inDestinationUnreachable [In Destination Unreachable] (vRtrIfIcmp6InDestUnreachs)	long	The value of vRtrIfIcmp6InDestUnreachs indicates the number of ICMP Destination Unreachable messages received by this interface.

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
inEchoReplies [In Echo Replies] (vRtrIfIcmp6InEchoReplies)	long	The value of vRtrIfIcmp6InEchoReplies indicates the number of ICMP Echo Reply messages received by this interface.
inEchoRequests [In Echo Requests] (vRtrIfIcmp6InEchos)	long	The value of vRtrIfIcmp6InEchos indicates the number of ICMP Echo (request) messages received by this interface.
inErrors [In Errors] (vRtrIfIcmp6InErrors)	long	The value of vRtrIfIcmp6InErrors indicates the number of ICMP messages which this interface received but determined as having ICMP-specific errors (bad ICMP checksums, bad length , etc.).
inNeighborAdvertisements [In Neighbor Advertisements] (vRtrIfIcmp6InNbrAdvertisements)	long	The value of vRtrIfIcmp6InNbrAdvertisements indicates the number of ICMP Neighbor Advertisement messages received by this interface.
inNeighborSolicits [In Neighbor Solicits] (vRtrIfIcmp6InNbrSolicits)	long	The value of vRtrIfIcmp6InNbrSolicits indicates the number of ICMP Neighbor Solicit messages received by this interface.
inPacketTooBig [In Packet Too Big] (vRtrIfIcmp6InPktTooBigs)	long	The value of vRtrIfIcmp6InPktTooBigs indicates the number of ICMP Packet Too Big messages received by this interface.
inRedirects [In Redirects] (vRtrIfIcmp6InRedirects)	long	The value of vRtrIfIcmp6InRedirects indicates number of ICMP Redirect messages received by this interface.
inRouterAdvertisements [In Router Advertisements] (vRtrIfIcmp6InRtrAdvertisements)	long	The value of vRtrIfIcmp6InRtrAdvertisements indicates the number of ICMP Router Advertisement messages received by this interface.

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
inRouterSolicits [In Router Solicits] (vRtrIflcmp6InRtrSolicits)	long	The value of vRtrIflcmp6InRtrSolicits indicates the number of ICMP Router Solicit messages received by this interface.
inTimeExceeded [In Time Exceeded] (vRtrIflcmp6InTimeExcds)	long	The value of vRtrIflcmp6InTimeExcds indicates the number of ICMP Time Exceeded messages received by this interface.
inTotalMessages [In Total Messages] (vRtrIflcmp6InMsgs)	long	The value of vRtrIflcmp6InMsgs indicates the total number of ICMP messages received by this interface which includes all those counted by vRtrIflcmp6InErrors. Note that this interface is the interface to which the ICMP messages were addressed which may not be necessarily the input interface for the messages.
<p>VirtualInterfaceIcmp6OutStats MIB entry name: vRtrIflcmp6Entry Entry description: Each row entry represents the ICMP statistics of a virtual router interface. Entries are created and deleted when entries in the vRtrIfTable are created and deleted. Table description (for vRtrIflcmp6Table): The vRtrIflcmp6Table table contains statistics of ICMPv6 messages that are received and sourced by a router interface. Supports realtime plotting Supports scheduled collection Monitored class: rtr.VirtualInterfaceIcmp6Configuration</p>		
outDestinationUnreachable [Out Destination Unreachable] (vRtrIflcmp6OutDestUnreachs)	long	The value of vRtrIflcmp6OutDestUnreachs indicates the number of ICMP Destination Unreachable messages sent by this interface.
outEchoReplies [Out Echo Replies] (vRtrIflcmp6OutEchoReplies)	long	The value of vRtrIflcmp6OutEchoReplies indicates the number of ICMP Echo Reply messages sent by this interface.

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outEchoRequests [Out Echo Requests] (vRtrIflcmp6OutEchos)	long	The value of vRtrIflcmp6OutEchos indicates the number of ICMP Echo Request messages sent by this interface.
outErrors [Out Errors] (vRtrIflcmp6OutErrors)	long	The value of vRtrIflcmp6OutErrors indicates the number of ICMP messages which this interface did not send due to problems discovered within ICMP such as a lack of buffers. This value should not include errors discovered outside the ICMP layer such as the inability of VRtr IPv6 to route the resultant datagram. In some implementations there may be no types of error which contribute to this counter's value.
outGrpMembQueries [Out Grp Memb Queries] (vRtrIflcmp6OutGrpMembQueries)	long	The value of vRtrIflcmp6OutGrpMembQueries indicates the number of ICMP Group Membership Query messages sent by this interface.
outGrpMembReductions [Out Grp Memb Reductions] (vRtrIflcmp6OutGrpMembReductions)	long	The value of vRtrIflcmp6OutGrpMembReductions indicates the number of ICMP Group Membership Reduction messages sent by this interface.
outGrpMembResponses [Out Grp Memb Responses] (vRtrIflcmp6OutGrpMembResponses)	long	The value of vRtrIflcmp6OutGrpMembResponses indicates the number of ICMP Group Membership Response messages sent by this interface.
outNeighborAdvertisements [Out Neighbor Advertisements] (vRtrIflcmp6OutNbrAdvertisements)	long	The value of vRtrIflcmp6OutNbrAdvertisements indicates the number of ICMP Neighbor Advertisement messages sent by this interface.
outNeighborSolicits [Out Neighbor Solicits] (vRtrIflcmp6OutNbrSolicits)	long	The value of vRtrIflcmp6OutNbrSolicits indicates the number of ICMP Neighbor Solicitation messages sent by this interface.
outPacketTooBig [Out Packet Too Big] (vRtrIflcmp6OutPktTooBigs)	long	The value of vRtrIflcmp6OutPktTooBigs indicates the number of ICMP Packet Too Big messages sent by this interface.

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outRedirects [Out Redirects] (vRtrIflcmp6OutRedirects)	long	The value of vRtrIflcmp6OutRedirects indicates the number of ICMP Redirect messages sent by this interface.
outRouterAdvertisements [Out Router Advertisements] (vRtrIflcmp6OutRtrAdvertisements)	long	The value of vRtrIflcmp6OutRtrAdvertisements indicates the number of ICMP Router Advertisement messages sent by this interface.
outRouterSolicits [Out Router Solicits] (vRtrIflcmp6OutRtrSolicits)	long	The value of vRtrIflcmp6OutRtrSolicits indicates the number of ICMP Router Solicitation messages sent by this interface.
outTimeExceeded [Out Time Exceeded] (vRtrIflcmp6OutTimeExcds)	long	The value of vRtrIflcmp6OutTimeExcds indicates the number of ICMP Time Exceeded messages sent by this interface.
outTotalMessages [Out Total Messages] (vRtrIflcmp6OutMsgs)	long	The value of vRtrIflcmp6OutMsgs indicates the total number of ICMP messages which this interface attempted to send. Note that this counter includes all those counted by icmpOutErrors.
<p>VirtualRouterIcmp6InStats</p> <p>MIB entry name: vRtrIcmp6Entry</p> <p>Entry description: Each row entry represents the ICMP statistics of a virtual router instance. Entries are created and deleted when entries in the vRtrConfEntry are created and deleted.</p> <p>Table description (for vRtrIcmp6Table): The vRtrIcmp6Table table contains statistics of ICMPv6 messages that are received and sourced by a router instance.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • rtr.VirtualRouter • vprn.DVRSSite • vprn.RoutingInstanceSite • vprn.Site 		

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
inDestinationUnreachable [In Destination Unreachable] (vRtrIcmp6InDestUnreachs)	long	The value of vRtrIcmp6InDestUnreachs indicates the number of ICMP Destination Unreachable messages received by this router instance.
inEchoReplies [In Echo Replies] (vRtrIcmp6InEchoReplies)	long	The value of vRtrIcmp6InEchoReplies indicates the number of ICMP Echo Reply messages received by this router instance.
inEchoRequests [In Echo Requests] (vRtrIcmp6InEchos)	long	The value of vRtrIcmp6InEchos indicates the number of ICMP Echo (request) messages received by this router instance.
inErrors [In Errors] (vRtrIcmp6InErrors)	long	The value of vRtrIcmp6InErrors indicates the number of ICMP messages which this router instance received but determined as having ICMP-specific errors (bad ICMP checksums, bad length , etc.).
inNeighborAdvertisements [In Neighbor Advertisements] (vRtrIcmp6InNbrAdvertisements)	long	The value of vRtrIcmp6InNbrAdvertisements indicates the number of ICMP Neighbor Advertisement messages received by this router instance.
inNeighborSolicits [In Neighbor Solicits] (vRtrIcmp6InNbrSolicits)	long	The value of vRtrIcmp6InNbrSolicits indicates the number of ICMP Neighbor Solicit messages received by this router instance.
inPacketTooBig [In Packet Too Big] (vRtrIcmp6InPktTooBigs)	long	The value of vRtrIcmp6InPktTooBigs indicates the number of ICMP Packet Too Big messages received by this router instance.
inRedirects [In Redirects] (vRtrIcmp6InRedirects)	long	The value of vRtrIcmp6InRedirects indicates number of ICMP Redirect messages received by this router instance.

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
inRouterAdvertisements [In Router Advertisements] (vRtrIcmp6InRtrAdvertisements)	long	The value of vRtrIcmp6InRtrAdvertisements indicates the number of ICMP Router Advertisement messages received by this router instance.
inRouterSolicits [In Router Solicits] (vRtrIcmp6InRtrSolicits)	long	The value of vRtrIcmp6InRtrSolicits indicates the number of ICMP Router Solicit messages received by this router instance.
inTimeExceeded [In Time Exceeded] (vRtrIcmp6InTimeExcds)	long	The value of vRtrIcmp6InTimeExcds indicates the number of ICMP Time Exceeded messages received by this router instance.
inTotalMessages [In Total Messages] (vRtrIcmp6InMsgs)	long	The value of vRtrIcmp6InMsgs indicates the total number of ICMP messages received by this router instance which includes all those counted by vRtrIcmp6InErrors.
<p>VirtualRouterIcmp6OutStats MIB entry name: vRtrIcmp6Entry Entry description: Each row entry represents the ICMP statistics of a virtual router instance. Entries are created and deleted when entries in the vRtrConfEntry are created and deleted. Table description (for vRtrIcmp6Table): The vRtrIcmp6Table table contains statistics of ICMPv6 messages that are received and sourced by a router instance. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • rtr.VirtualRouter • vprn.DVRSSite • vprn.RoutingInstanceSite • vprn.Site 		
outDestinationUnreachable [Out Destination Unreachable] (vRtrIcmp6OutDestUnreachs)	long	The value of vRtrIcmp6OutDestUnreachs indicates the number of ICMP Destination Unreachable messages sent by this router instance.

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outEchoReplies [Out Echo Replies] (vRtrIcmp6OutEchoReplies)	long	The value of vRtrIcmp6OutEchoReplies indicates the number of ICMP Echo Reply messages sent by this router instance.
outEchoRequests [Out Echo Requests] (vRtrIcmp6OutEchos)	long	The value of vRtrIcmp6OutEchos indicates the number of ICMP Echo Request messages sent by this router instance.
outErrors [Out Errors] (vRtrIcmp6OutErrors)	long	The value of vRtrIcmp6OutErrors indicates the number of ICMP messages which this router instance did not send due to problems discovered within ICMP such as a lack of buffers. This value should not include errors discovered outside the ICMP layer such as the inability of VRtr IPv6 to route the resultant datagram. In some implementations there may be no types of error which contribute to this counter's value.
outGrpMembQueries [Out Grp Memb Queries] (vRtrIcmp6OutGrpMembQueries)	long	The value of vRtrIcmp6OutGrpMembQueries indicates the number of ICMP Group Membership Query messages sent by this router instance.
outGrpMembReductions [Out Grp Memb Reductions] (vRtrIcmp6OutGrpMembReductions)	long	The value of vRtrIcmp6OutGrpMembReductions indicates the number of ICMP Group Membership Reduction messages sent by this router instance.
outGrpMembResponses [Out Grp Memb Responses] (vRtrIcmp6OutGrpMembResponses)	long	The value of vRtrIcmp6OutGrpMembResponses indicates the number of ICMP Group Membership Response messages sent by this router instance.
outNeighborAdvertisements [Out Neighbor Advertisements] (vRtrIcmp6OutNbrAdvertisements)	long	The value of vRtrIcmp6OutNbrAdvertisements indicates the number of ICMP Neighbor Advertisement messages sent by this router instance.
outNeighborSolicits [Out Neighbor Solicits] (vRtrIcmp6OutNbrSolicits)	long	The value of vRtrIcmp6OutNbrSolicits indicates the number of ICMP Neighbor Solicitation messages sent by this router instance.

Table 344 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outPacketTooBig [Out Packet Too Big] (vRtrIcmp6OutPktTooBigs)	long	The value of vRtrIcmp6OutPktTooBigs indicates the number of ICMP Packet Too Big messages sent by this router instance.
outRedirects [Out Redirects] (vRtrIcmp6OutRedirects)	long	The value of vRtrIcmp6OutRedirects indicates the number of ICMP Redirect messages sent by this router instance.
outRouterAdvertisements [Out Router Advertisements] (vRtrIcmp6OutRtrAdvertisements)	long	The value of vRtrIcmp6OutRtrAdvertisements indicates the number of ICMP Router Advertisement messages sent by this router instance.
outRouterSolicits [Out Router Solicits] (vRtrIcmp6OutRtrSolicits)	long	The value of vRtrIcmp6OutRtrSolicits indicates the number of ICMP Router Solicitation messages sent by this router instance.
outTimeExceeded [Out Time Exceeded] (vRtrIcmp6OutTimeExcds)	long	The value of vRtrIcmp6OutTimeExcds indicates the number of ICMP Time Exceeded messages sent by this router instance.
outTotalMessages [Out Total Messages] (vRtrIcmp6OutMsgs)	long	The value of vRtrIcmp6OutMsgs indicates the total number of ICMP messages which this router instance attempted to send. Note that this counter includes all those counted by icmpOutErrors.

Table 345 sas statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PrefixSrvStats</p> <p>MIB entry name: tmnxTwampSrvPrefixEntry</p> <p>Entry description: tmnxTwampSrvPrefixEntry contains the TWAMP server configuration information for the IP prefix specified by the index values. Rows in this table are created and destroyed using the tmnxTwampSrvPrefixRowStatus object.</p> <p>Table description (for tmnxTwampSrvPrefixTable): tmnxTwampSrvPrefixTable contains per-prefix TWAMP server configuration information.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sas.PrefixSrv</p>		
prefixAddr [Prefix Addr] (tmnxTwampSrvPrefixAddr)	String	The value of tmnxTwampSrvPrefixAddr specifies, in conjunction with tmnxTwampSrvPrefixAddrType and tmnxTwampSrvPrefixLen, a prefix to be matched against a TWAMP client address. This is the second index for tmnxTwampSrvPrefixTable.
prefixAddrType [Prefix Addr Type] (tmnxTwampSrvPrefixAddrType)	int	The value of tmnxTwampSrvPrefixAddrType specifies the type of tmnxTwampSrvPrefixAddr. This is the first index for tmnxTwampSrvPrefixTable.
prefixLen [Prefix Len] (tmnxTwampSrvPrefixLen)	int	The value of tmnxTwampSrvPrefixLen specifies the number of bits to match when comparing a TWAMP client address in an incoming message to tmnxTwampSrvPrefixAddr. This is the third index for tmnxTwampSrvPrefixTable. Best-fit is used when matching a TWAMP client's IP address against the set of configured prefixes. For example, suppose the first row of this table has the prefix 138.120.0.0/16, and the second row has the prefix 138.120.214.0/24. The TWAMP client address 138.120.214.52 matches the second row.
srvPfxConnCount [Srv Pfx Conn Count] (tmnxTwampSrvPfxConnCount)	long	The value of tmnxTwampSrvPfxConnCount indicates, for the prefix specified by the index values, the number of control connections currently managed by the TWAMP server.

Table 345 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
srvPfxConnsRejected [Srv Pfx Conns Rejected] (tmnxTwampSrvPfxConnsRejected)	long	The value of tmnxTwampSrvPfxConnsRejected indicates, for the prefix specified by the index values, the number of control connection requests which have been rejected by the TWAMP server. An example reject reason: the prefix's limit on the number of active connections has been reached.
srvPfxSessionCount [Srv Pfx Session Count] (tmnxTwampSrvPfxSessionCount)	long	The value of tmnxTwampSrvPfxSessionCount indicates, for the prefix specified by the index values, the number of currently in-progress TWAMP test sessions.
srvPfxTestPacketsRx [Srv Pfx Test Packets Rx] (tmnxTwampSrvPfxTestPacketsRx)	long	The value of tmnxTwampSrvPfxTestPacketsRx indicates, for the prefix specified by the index values, the number of TWAMP test packets received by the TWAMP server.
srvPfxTestPacketsTx [Srv Pfx Test Packets Tx] (tmnxTwampSrvPfxTestPacketsTx)	long	The value of tmnxTwampSrvPfxTestPacketsTx indicates, for the prefix specified by the index values, the number of TWAMP test packets sent by the TWAMP server.
srvPfxTestSessAbort [Srv Pfx Test Sess Abort] (tmnxTwampSrvPfxTestSessAbort)	long	The value of tmnxTwampSrvPfxTestSessAbort indicates, for the prefix specified by the index values, the number of test sessions aborted by the TWAMP server.
srvPfxTestSessCompleted [Srv Pfx Test Sess Completed] (tmnxTwampSrvPfxTestSessCompleted)	long	The value of tmnxTwampSrvPfxTestSessCompleted indicates, for the prefix specified by the index values, the number of test sessions completed by the TWAMP server.
srvPfxTestSessRejected [Srv Pfx Test Sess Rejected] (tmnxTwampSrvPfxTestSessRejected)	long	The value of tmnxTwampSrvPfxTestSessRejected indicates, for the prefix specified by the index values, the number of test sessions rejected by the TWAMP server.

Table 345 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SrvConnsStats MIB entry name: tmnxTwampSrvConnStatsEntry Entry description: tmnxTwampSrvConnStatsEntry contains the statistics for the TWAMP control connection specified by the index values. A row is created by the system when a TWAMP control connection is established. Table description (for tmnxTwampSrvConnStatsTable): tmnxTwampSrvConnStatsTable contains the statistics for each active control connection managed by the TWAMP server. Supports realtime plotting Supports scheduled collection Monitored class: sas.PrefixSrv</p>		
clientAddr [Client Addr] (tmnxTwampSrvConnClientAddr)	String	The value of tmnxTwampSrvConnClientAddr specifies the TWAMP client's address. This is the fifth index for tmnxTwampSrvConnStatsTable.
clientAddrType [Client Addr Type] (tmnxTwampSrvConnClientAddrType)	int	The value of tmnxTwampSrvConnClientAddrType specifies the type of tmnxTwampSrvConnClientAddr. This is the fourth index for tmnxTwampSrvConnStatsTable.
connIdleTime [Conn Idle Time] (tmnxTwampSrvConnIdleTime)	long	The value of tmnxTwampSrvConnIdleTime specifies the elapsed time, in seconds, since a TWAMP message was received on this control connection. When this value exceeds tmnxTwampSrvInactTimeout, the connection will be torn down.
connSessionCount [Conn Session Count] (tmnxTwampSrvConnSessionCount)	long	The value of tmnxTwampSrvConnSessionCount indicates, for the connection specified by the index values, the number of currently in-progress TWAMP test sessions.
connState [Conn State] (tmnxTwampSrvConnState)	int	The value of tmnxTwampSrvConnState indicates the operational state of a control connection managed by the TWAMP server. Code points: setUp(1) - the connection is being established ready(2) - the connection is ready to accept test sessions running(3) - the connection is running a test.

Table 345 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
connTestPacketsRx [Conn Test Packets Rx] (tmnxTwampSrvConnTestPacketsRx)	long	The value of tmnxTwampSrvConnTestPacketsRx indicates, for the connection specified by the index values, the number of TWAMP test packets received by the TWAMP server.
connTestPacketsTx [Conn Test Packets Tx] (tmnxTwampSrvConnTestPacketsTx)	long	The value of tmnxTwampSrvConnTestPacketsTx indicates, for the connection specified by the index values, the number of TWAMP test packets sent by the TWAMP server.
connTestSessComplete [Conn Test Sess Complete] (tmnxTwampSrvConnTestSessComplete)	long	The value of tmnxTwampSrvConnTestSessComplete indicates, for the connection specified by the index values, the number of test sessions completed by the TWAMP server.
connTestSessRejected [Conn Test Sess Rejected] (tmnxTwampSrvConnTestSessRejected)	long	The value of tmnxTwampSrvConnTestSessRejected indicates, for the connection specified by the index values, the number of test sessions rejected by the TWAMP server.
prefixAddr [Prefix Addr] (tmnxTwampSrvPrefixAddr)	String	The value of tmnxTwampSrvPrefixAddr specifies, in conjunction with tmnxTwampSrvPrefixAddrType and tmnxTwampSrvPrefixLen, a prefix to be matched against a TWAMP client address. This is the second index for tmnxTwampSrvPrefixTable.
prefixAddrType [Prefix Addr Type] (tmnxTwampSrvPrefixAddrType)	int	The value of tmnxTwampSrvPrefixAddrType specifies the type of tmnxTwampSrvPrefixAddr. This is the first index for tmnxTwampSrvPrefixTable.
prefixLen [Prefix Len] (tmnxTwampSrvPrefixLen)	int	The value of tmnxTwampSrvPrefixLen specifies the number of bits to match when comparing a TWAMP client address in an incoming message to tmnxTwampSrvPrefixAddr. This is the third index for tmnxTwampSrvPrefixTable. Best-fit is used when matching a TWAMP client's IP address against the set of configured prefixes. For example, suppose the first row of this table has the prefix 138.120.0.0/16, and the second row has the prefix 138.120.214.0/24. The TWAMP client address 138.120.214.52 matches the second row.

Table 345 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
seqNum [Seq Num] (tmnxTwampSrvConnSeqNum)	int	The value of tmnxTwampSrvConnSeqNum specifies this control connection's sequence number. This is the sixth index for tmnxTwampSrvConnStatsTable - it allows n>1 rows (i.e. n>1 connections) for one client.
TwampSrvStats MIB entry name: tmnxTwampStatisticsScalarObjs Supports realtime plotting Supports scheduled collection Monitored class: sas.TwampSrv		
twampSrvConnectionCount [Twamp Srv Connection Count] (tmnxTwampSrvConnectionCount)	long	The value of tmnxTwampSrvConnectionCount indicates the number of control connections currently managed by the TWAMP server.
twampSrvConnectionsRejected [Twamp Srv Connections Rejected] (tmnxTwampSrvConnectionsRejected)	long	The value of tmnxTwampSrvConnectionsRejected indicates the total number of control connection requests which have been rejected by the TWAMP server. Example reject reasons: the server's limit on the number of active connections has been reached; the client's IP address does not match any of the prefixes configured on the TWAMP server.
twampSrvOperStat [Twamp Srv Oper Stat] (tmnxTwampSrvOperState)	long	The value of tmnxTwampSrvOperState indicates if the TWAMP server is operationally 'inService(2)', or 'outOfService(3)'.
twampSrvSessionCount [Twamp Srv Session Count] (tmnxTwampSrvSessionCount)	long	The value of tmnxTwampSrvSessionCount indicates the number of currently in-progress TWAMP test sessions.
twampSrvTestPacketsRx [Twamp Srv Test Packets Rx] (tmnxTwampSrvTestPacketsRx)	long	The value of tmnxTwampSrvTestPacketsRx indicates the total number of TWAMP test packets received by the TWAMP server.

Table 345 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
twampSrvTestPacketsTx [Twamp Srv Test Packets Tx] (tmnxTwampSrvTestPacketsTx)	long	The value of tmnxTwampSrvTestPacketsTx indicates the total number of TWAMP test packets sent by the TWAMP server.
twampSrvTestSessAborted [Twamp Srv Test Sess Aborted] (tmnxTwampSrvTestSessAborted)	long	The value of tmnxTwampSrvTestSessAborted indicates the total number of test sessions aborted by the TWAMP server.
twampSrvTestSessCompleted [Twamp Srv Test Sess Completed] (tmnxTwampSrvTestSessCompleted)	long	The value of tmnxTwampSrvTestSessCompleted indicates the total number of test sessions completed by the TWAMP server.
twampSrvTestSessRejected [Twamp Srv Test Sess Rejected] (tmnxTwampSrvTestSessRejected)	long	The value of tmnxTwampSrvTestSessRejected indicates the total number of test sessions rejected by the TWAMP server.
twampSrvUpTime [Twamp Srv Up Time] (tmnxTwampSrvUpTime)	long	The value of tmnxTwampSrvUpTime indicates the time elapsed, in seconds, since the most recent transition of tmnxTwampSrvOperState to 'inService(2)'. If tmnxTwampSrvOperState is not 'inService(2)', zero is returned.
<p>TwlReflectorStats</p> <p>MIB entry name: tmnxOamPmStsTwlRflEntry</p> <p>Entry description: tmnxOamPmStsTwlRflEntry contains the statistics for the specified OAM Performance Monitoring TWAMP-Light reflector. SROS creates a row in this table when a corresponding row is created in tmnxOamPmCfgTwlRflTable. SROS destroys a row in this table when a corresponding row is destroyed in tmnxOamPmCfgTwlRflTable. The encoding of the index is explained in the DESCRIPTION clause for tmnxOamPmCfgTwlRflEntry.</p> <p>Table description (for tmnxOamPmStsTwlRflTable): tmnxOamPmStsTwlRflTable contains the statistics for OAM Performance Monitoring TWAMP-Light reflectors.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sas.TwlReflector</p>		

Table 345 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
framesRx [Frames Rx] (tmnxOamPmStsTwIRflFramesRx)	long	The value of tmnxOamPmStsTwIRflFramesRx indicates the number of TWAMP-Test frames received by the specified reflector.
framesTx [Frames Tx] (tmnxOamPmStsTwIRflFramesTx)	long	The value of tmnxOamPmStsTwIRflFramesTx indicates the number of TWAMP-Test frames transmitted by the specified reflector.
upTime [Up Time] (tmnxOamPmStsTwIRflUpTime)	long	The value of tmnxOamPmStsTwIRflUpTime indicates the time elapsed since the most recent transition of the reflector's administrative status to 'enabled(1)'. Zero is returned if the reflector's administrative status is 'disabled(2)'.

Table 346 securitypolicy statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PolicerGroupStats</p> <p>MIB entry name: aluSecPolicerGrpOperEntry</p> <p>Entry description: Each row entry represents a particular security app group.</p> <p>Table description (for aluSecPolicerGrpOperTable): The aluSecPolicerGrpOperTable has an entry for each security policer group configured globally on this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: securitypolicy.PolicerGroup</p>		
policerFwdBytesPassed [Policer Fwd Bytes Passed] (aluSecPolicerGrpOperFwdBytesPassed)	java. math. BigInteger	Bytes passed thru policer in session forward direction.
policerFwdPktsDrop [Policer Fwd Pkts Drop] (aluSecPolicerGrpOperFwdPktsDrop)	java. math. BigInteger	Pkts dropped by policer in session forward direction.
policerFwdPktsPassed [Policer Fwd Pkts Passed] (aluSecPolicerGrpOperFwdPktsPassed)	java. math. BigInteger	Pkts passed thru policer in session forward direction.
policerGrpId [Policer Grp Id] (aluSecPolicerGrpOperId)	long	The value of the object aluSecPolicerGrpOperId specifies the unique policer group id.
policerGrpOperDescription [Policer Grp Oper Description] (aluSecPolicerGrpOperDescription)	String	Description of this security policer group.

Table 346 securitypolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
policerGrpOperName [Policer Grp Oper Name] (aluSecPolicerGrpOperName)	String	Name of the security policer group.
policerGrpRate [Policer Grp Rate] (aluSecPolicerGrpOperRate)	int	The aluSecPolicerGrpOperRate object specifies the maximum ingress bandwidth (in mega-bits per second) that the policer can receive. A value of -1 means that no policing will be performed.
policerGrpRateCbs [Policer Grp Rate Cbs] (aluSecPolicerGrpOperRateCbs)	long	aluSecPolicerGrpOperRateCbs specifies the committed burst size that hard policer can accept while complying to the ingress rate aluSecPolicerGrpOperRate.
policerRevBytesPassed [Policer Rev Bytes Passed] (aluSecPolicerGrpOperRevBytesPassed)	java. math. BigInteger	Bytes passed thru policer in session reverse direction.
policerRevPktsDrop [Policer Rev Pkts Drop] (aluSecPolicerGrpOperRevPktsDrop)	java. math. BigInteger	Pkts dropped by policer in session reverse direction.
policerRevPktsPassed [Policer Rev Pkts Passed] (aluSecPolicerGrpOperRevPktsPassed)	java. math. BigInteger	Pkts passed thru policer in session reverse direction.
policyRefCount [Policy Ref Count] (aluSecPolicerGrpOperPlcyRefCount)	int	Number of policy references.

Table 346 securitypolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SecuritySessionStats MIB entry name: aluSecSessionStatsEntry Entry description: Each row entry represents an active session. Table description (for aluSecSessionStatsTable): The aluSecSessionStatsTable has an entry for each active session. Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement</p>		
fwdBytesPassed [Fwd Bytes Passed] (aluSecSessionFwdBytesPassed)	java. math. BigInteger	Bytes passed thru session in forward direction.
fwdDropActionPkts [Fwd Drop Action Pkts] (aluSecSessionFwdDropActionPkts)	java. math. BigInteger	Packets/Fragments dropped due to session action being drop.
fwdDropIpOptPkts [Fwd Drop Ip Opt Pkts] (aluSecSessionFwdDropIpOptPkts)	java. math. BigInteger	Packets dropped due to containing prohibited IP Options for this session.
fwdDropMaxIcmpErr [Fwd Drop Max Icmp Err] (aluSecSessionFwdDropMaxIcmpErr)	java. math. BigInteger	ICMP Error Packets dropped due to exceeding the maximum number of errors permitted for this session.
fwdDropMaxPkts [Fwd Drop Max Pkts] (aluSecSessionFwdDropMaxPkts)	java. math. BigInteger	Packets dropped due to exceeding the maximum number of packets permitted for this session.
fwdPktsPassed [Fwd Pkts Passed] (aluSecSessionFwdPktsPassed)	java. math. BigInteger	Pkts passed thru session in forward direction.

Table 346 securitypolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fwdPolicerDrop [Fwd Policer Drop] (aluSecSessionFwdPolicerDrop)	java. math. BigInteger	Packets dropped due to rate exceeded in policer.
fwdSecDrop [Fwd Sec Drop] (aluSecSessionFwdSecurityDrop)	java. math. BigInteger	Packets dropped due to applications inseptions.
inboundZoneId [Inbound Zone Id] (aluSecSessionInboundZoneId)	long	The value of aluSecSessionInboundZoneId specifies the zone this session is entering.
outboundZoneId [Outbound Zone Id] (aluSecSessionOutboundZoneId)	long	The value of aluSecSessionOutboundZoneId specifies the zone this session is leaving.
revBytesPassed [Rev Bytes Passed] (aluSecSessionRevBytesPassed)	java. math. BigInteger	Bytes passed thru session in reverse direction.
revDropActionPkts [Rev Drop Action Pkts] (aluSecSessionRevDropActionPkts)	java. math. BigInteger	Packets/Fragments dropped due to session action being drop.
revDropIpOptPkts [Rev Drop Ip Opt Pkts] (aluSecSessionRevDropIpOptPkts)	java. math. BigInteger	Packets dropped due to containing prohibited IP Options for this session.
revDropMaxIcmpErr [Rev Drop Max Icmp Err] (aluSecSessionRevDropMaxIcmpErr)	java. math. BigInteger	ICMP Error Packets dropped due to exceeding the maximum number of errors permitted for this session.

Table 346 securitypolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
revDropMaxPkts [Rev Drop Max Pkts] (aluSecSessionRevDropMaxPkts)	java. math. BigInteger	Packets dropped due to exceeding the maximum number of packets permitted for this session.
revPktsPassed [Rev Pkts Passed] (aluSecSessionRevPktsPassed)	java. math. BigInteger	Pkts passed thru session in reverse direction.
revPolicerDrop [Rev Policer Drop] (aluSecSessionRevPolicerDrop)	java. math. BigInteger	Packets dropped due to rate exceeded in policer.
revSecDrop [Rev Sec Drop] (aluSecSessionRevSecurityDrop)	java. math. BigInteger	Packets dropped due to applications inspections.
sessionId [Session Id] (aluSecSessionId)	long	The value of aluSecSessionId specifies the session index for this active session.
<p>ZonePolicyStats MIB entry name: aluZonePlcyOperEntry Entry description: Each row entry represents a particular zone entry. Table description (for aluZonePlcyOperTable): The aluZonePlcyOperTable describes the active policy of this zone. This table is a flattened ordered list of rules for this zone based on the security policies that have been activated. Supports realtime plotting Supports scheduled collection Monitored class: securitypolicy.Zone</p>		
isActive [Is Active] (aluZonePlcyOperActive)	boolean	The value of the object aluZonePlcyOperActive indicates whether this rule is active for rule parsing in the zone policy.

Table 346 securitypolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ruleActiveSessions [Rule Active Sessions] (aluZonePlcyOperRuleActiveSessions)	java. math. BigInteger	The value of aluZonePlcyOperRuleActiveSessions specifies the number of currently active sessions this rule has outstanding.
ruleHitCount [Rule Hit Count] (aluZonePlcyOperRuleHitCount)	java. math. BigInteger	The value of aluZonePlcyOperRuleHitCount specifies the number of times this rule has been matched.
ruleId [Rule Id] (aluZonePlcyOperRuleId)	long	The value of the object aluZonePlcyOperRuleId rule id of each operational rule in the Zone. The rule id is assigned by the system based on the security policies that have been activated on this zone.
zoneId [Zone Id] (aluZoneOperId)	long	The value of the object aluZoneOperId specifies the unique id of the Zone in the system.
<p>ZoneQueueStats MIB entry name: aluSecZoneStatsEntry Entry description: Each row entry represents stats for a security zone. Table description (for aluSecZoneStatsTable): The aluSecZoneStatsTable has an entry for each security zone Supports realtime plotting Supports scheduled collection Monitored class: securitypolicy.Zone</p>		
rxCtrlQueueAutoBind [Rx Ctrl Queue Auto Bind] (aluSecZoneRxCtrlQueueAutoBind)	boolean	All Auto-Bind zones share a single Rx Control Queue. This object indicates whether this zone row is displaying the aggregates stats for all Auto-Bind Zones
rxCtrlQueueDropBytes [Rx Ctrl Queue Drop Bytes] (aluSecZoneRxCtrlQueueDroBytes)	java. math. BigInteger	Bytes dropped from the Receiving Security Control Queue

Table 346 securitypolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxCtrlQueueDropPkts [Rx Ctrl Queue Drop Pkts] (aluSecZoneRxCtrlQueueDroPkts)	java. math. BigInteger	Pkts dropped from the Receiving Security Control Queue
rxCtrlQueueFwdBytes [Rx Ctrl Queue Fwd Bytes] (aluSecZoneRxCtrlQueueFwdBytes)	java. math. BigInteger	Bytes forwarded from the Receiving Security Control Queue to security engine for further inspection
rxCtrlQueueFwdPkts [Rx Ctrl Queue Fwd Pkts] (aluSecZoneRxCtrlQueueFwdPkts)	java. math. BigInteger	Pkts forwarded from the Receiving Security Control Queue to security engine for further inspection
zoneld [Zone Id] (aluSecZoneld)	long	The value of aluSecZoneld specifies the security zone index for this row entry.
ZoneStats MIB entry name: aluZoneOperEntry Entry description: Each row entry represents a particular zone. Table description (for aluZoneOperTable): The aluZoneOperTable has an entry for each zone configured on this system. Supports realtime plotting Supports scheduled collection Monitored class: securitypolicy.Zone		
byPassZoneConfig [By Pass Zone Config] (aluZoneOperBypass)	boolean	The value of aluZoneOperBypass specifies whether this zone is being bypassed.
inActiveSessions [In Active Sessions] (aluZoneOperInActiveSessions)	java. math. BigInteger	The value of the object aluZoneOperInActiveSessions indicates the number of currently active inbound sessions for this zone.

Table 346 securitypolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
inBytesDefAction [In Bytes Def Action] (aluZoneOperInBytesDefAction)	java. math. BigInteger	The number of inbound bytes that the default action was applied.
inBytesDropped [In Bytes Dropped] (aluZoneOperInBytesDropped)	java. math. BigInteger	The number of inbound bytes dropped due to policy.
inDropAction [In Drop Action] (aluZoneOperInDropAction)	java. math. BigInteger	The accumulated number of inbound sessions with drop action.
inFwdAction [In Fwd Action] (aluZoneOperInFwdAction)	java. math. BigInteger	The accumulated number of inbound sessions with forward action.
inIcmpActiveSessions [In Icmp Active Sessions] (aluZoneOperInIcmpActSessions)	java. math. BigInteger	The value of the object aluZoneOperInIcmpActSessions indicates the number of active sessions with protocol ICMP.
inIcmpSessionLimit [In Icmp Session Limit] (aluZoneOperInIcmpSessLimit)	long	The value of the object aluZoneOperInIcmpSessLimit indicates the number of permitted active in sessions with protocol ICMP.
inNatAction [In Nat Action] (aluZoneOperInNatAction)	java. math. BigInteger	The accumulated number of inbound sessions with NAT action.
inOtherActiveSessions [In Other Active Sessions] (aluZoneOperInOthActSessions)	java. math. BigInteger	The value of the object aluZoneOperInOthActiveSessions indicates the number of active sessions of all other protocols.

Table 346 securitypolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
inOtherSessionLimit [In Other Session Limit] (aluZoneOperInOthSessLimit)	long	The value of the object aluZoneOperInOthSessLimit indicates the number of permitted active in sessions of all other protocols.
inPktsDefAction [In Pkts Def Action] (aluZoneOperInPktsDefAction)	java. math. BigInteger	The number of inbound packets that the default action was applied.
inPktsDropped [In Pkts Dropped] (aluZoneOperInPktsDropped)	java. math. BigInteger	The number of inbound packets dropped due to policy.
inSessionCount [In Session Count] (aluZoneOperInSessionCount)	java. math. BigInteger	The value of the object aluZoneOperInSessionCount indicates the total number of inbound sessions ever established for this zone.
inTcpActiveSessions [In Tcp Active Sessions] (aluZoneOperInTcpActSessions)	java. math. BigInteger	The value of the object aluZoneInOperTcpActSessions indicates the number of active sessions with protocol TCP.
inTcpSessionLimit [In Tcp Session Limit] (aluZoneOperInTcpSessLimit)	long	The value of the object aluZoneOperInTcpSessLimit indicates the number of permitted active in sessions with protocol TCP.
inUdpActiveSessions [In Udp Active Sessions] (aluZoneOperInUdpActSessions)	java. math. BigInteger	The value of the object aluZoneInOperUdpActSessions indicates the number of active sessions with protocol UDP.
inUdpSessionLimit [In Udp Session Limit] (aluZoneOperInUdpSessLimit)	long	The value of the object aluZoneOperInUdpSessLimit indicates the number of permitted active in sessions with protocol UDP.

Table 346 securitypolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outActiveSessions [Out Active Sessions] (aluZoneOperOutActiveSessions)	java. math. BigInteger	The value of the object aluZoneOperOutActiveSessions indicates the number of currently active outbound sessions for this zone.
outBytesDefAction [Out Bytes Def Action] (aluZoneOperOutBytesDefAction)	java. math. BigInteger	The number of outbound bytes that the default action was applied.
outBytesDropped [Out Bytes Dropped] (aluZoneOperOutBytesDropped)	java. math. BigInteger	The number of outbound bytes dropped due to policy.
outDropAction [Out Drop Action] (aluZoneOperOutDropAction)	java. math. BigInteger	The accumulated number of outbound sessions with drop action.
outFwdAction [Out Fwd Action] (aluZoneOperOutFwdAction)	java. math. BigInteger	The accumulated number of outbound sessions with forward action.
outIcmpActiveSessions [Out Icmp Active Sessions] (aluZoneOperOutIcmpActSessions)	java. math. BigInteger	The value of the object aluZoneOperOutIcmpActSessions indicates the number of active sessions with protocol ICMP.
outIcmpSessionLimit [Out Icmp Session Limit] (aluZoneOperOutIcmpSessLimit)	long	The value of the object aluZoneOperInIcmpSessLimit indicates the number of permitted active out sessions with protocol ICMP.
outNatAction [Out Nat Action] (aluZoneOperOutNatAction)	java. math. BigInteger	The accumulated number of outbound sessions with NAT action.

Table 346 securitypolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outOtherActiveSessions [Out Other Active Sessions] (aluZoneOperOutOthActSessions)	java. math. BigInteger	The value of the object aluZoneOperOutOthActSessions indicates the number of active sessions of all other protocols.
outOtherSessionLimit [Out Other Session Limit] (aluZoneOperOutOthSessLimit)	long	The value of the object aluZoneOperInOthSessLimit indicates the number of permitted active out sessions of all other protocols.
outPktsDefAction [Out Pkts Def Action] (aluZoneOperOutPktsDefAction)	java. math. BigInteger	The number of outbound packets that the default action was applied.
outPktsDropped [Out Pkts Dropped] (aluZoneOperOutPktsDropped)	java. math. BigInteger	The number of outbound packets dropped due to policy.
outSessionCount [Out Session Count] (aluZoneOperOutSessionCount)	java. math. BigInteger	The value of the object aluZoneOperOutSessionCount indicates the total number of outbound sessions ever established for this zone.
outTcpActiveSessions [Out Tcp Active Sessions] (aluZoneOperOutTcpActSessions)	java. math. BigInteger	The value of the object aluZoneOperOutTcpActSessions indicates the number of active sessions with protocol TCP.
outTcpSessionLimit [Out Tcp Session Limit] (aluZoneOperOutTcpSessLimit)	long	The value of the object aluZoneOperInTcpSessLimit indicates the number of permitted active outsessions with protocol TCP.
outUdpActiveSessions [Out Udp Active Sessions] (aluZoneOperOutUdpActSessions)	java. math. BigInteger	The value of the object aluZoneOperUdpActSessions indicates the number of active sessions with protocol UDP.

Table 346 securitypolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outUdpSessionLimit [Out Udp Session Limit] (aluZoneOperOutUdpSessLimit)	long	The value of the object aluZoneOperInUdpSessLimit indicates the number of permitted active out sessions with protocol UDP.
zoneId [Zone Id] (aluZoneOperId)	long	The value of the object aluZoneOperId specifies the unique id of the Zone in the system.
zoneName [Zone Name] (aluZoneOperName)	String	The value of the object aluZoneOperName specifies the name of the Zone in the system.
zonePlcyLastCommit [Zone Plcy Last Commit] (aluZoneOperPlcyLastCommit)	long	The last time a commit was performed on this zone.
zonePlcyRuleCount [Zone Plcy Rule Count] (aluZoneOperPlcyRuleCount)	int	The value of aluZoneOperPlcyRuleCount indicates the number of rules that this policy contains based on the security policies activated on this zone.
zoneSvcId [Zone Svc Id] (aluZoneOperSvcId)	int	Specifies the service this zone belongs to when zone type is 'service'.

Table 347 service statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CemSapStats MIB entry name: sapCemStatsEntry Entry description: Statistics for a specific CEM SAP. Table description (for sapCemStatsTable): A table that contains CEM SAP statistics. Supports realtime plotting Supports scheduled collection Monitored class: service.L2AccessInterface</p>		
cemStatsEgressDroppedPkts [Cem Stats Egress Dropped Pkts] (sapCemStatsEgressDroppedPkts)	long	The value of sapCemStatsEgressDroppedPkts indicates the total number of packets that were dropped due to errors.
cemStatsEgressESs [Cem Stats Egress ESs] (sapCemStatsEgressESs)	long	The value of sapCemStatsEgressESs indicates the number of Error Seconds (ESs) encountered. Any malformed packet, seq. error, LOPS and similar are considered as error seconds.
cemStatsEgressFailureCounts [Cem Stats Egress Failure Counts] (sapCemStatsEgressFailureCounts)	long	The value of sapCemStatsEgressFailureCounts indicates the number failure events. A failure event begins when the LOPS failure is declared, and ends when the failure is cleared.
cemStatsEgressForwardedPkts [Cem Stats Egress Forwarded Pkts] (sapCemStatsEgressForwardedPkts)	long	The value of sapCemStatsEgressForwardedPkts indicates the number of packets that were successfully forwarded.
cemStatsEgressJtrBfrDepth [Cem Stats Egress Jtr Bfr Depth] (sapCemStatsEgressJtrBfrDepth)	long	The value of sapCemStatsEgressJtrBfrDepth indicates the current packet depth of the jitter buffer.
cemStatsEgressJtrBfrOverruns [Cem Stats Egress Jtr Bfr Overruns] (sapCemStatsEgressJtrBfrOverruns)	long	The value of sapCemStatsEgressJtrBfrOverruns indicates the number of times a packet was dropped because it could not fit in the jitter buffer.

Table 347 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cemStatsEgressJtrBfrUnderruns [Cem Stats Egress Jtr Bfr Underruns] (sapCemStatsEgressJtrBfrUnderruns)	long	The value of sapCemStatsEgressJtrBfrUnderruns indicates the number of times a packet needed to be played out and the jitter buffer was empty.
cemStatsEgressLBitDropped [Cem Stats Egress LBit Dropped] (sapCemStatsEgressLBitDropped)	long	The value of sapCemStatsEgressLBitDropped indicates the number of packets dropped due to the L bit set by the far end.
cemStatsEgressMalformedPkts [Cem Stats Egress Malformed Pkts] (sapCemStatsEgressMalformedPkts)	long	The value of sapCemStatsEgressMalformedPkts indicates the number of packets detected with unexpected size, or bad headers' stack.
cemStatsEgressMisOrderDropped [Cem Stats Egress Mis Order Dropped] (sapCemStatsEgressMisOrderDropped)	long	The value of sapCemStatsEgressMisOrderDropped indicates the number of packets detected out of order (via control word sequence numbers), and could not be re-ordered, or could not be placed in the jitter buffer because it was out of the current window.
cemStatsEgressMissingPkts [Cem Stats Egress Missing Pkts] (sapCemStatsEgressMissingPkts)	long	The value of sapCemStatsEgressMissingPkts indicates the number of missing packets (as detected via control word sequence number gaps).
cemStatsEgressMultipleDropped [Cem Stats Egress Multiple Dropped] (sapCemStatsEgressMultipleDropped)	long	The value of sapCemStatsEgressMultipleDropped indicates the number of packets dropped due to multiple sequence numbers.
cemStatsEgressOverrunCounts [Cem Stats Egress Overrun Counts] (sapCemStatsEgressOverrunCounts)	long	The value of sapCemStatsEgressOverrunCounts indicates the number of times the jitter buffer went into an overrun state.
cemStatsEgressPktsReOrder [Cem Stats Egress Pkts Re Order] (sapCemStatsEgressPktsReOrder)	long	The value of sapCemStatsEgressPktsReOrder indicates the number of packets detected out of sequence (via control word sequence number), but successfully re-ordered.

Table 347 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cemStatsEgressSESSs [Cem Stats Egress SESSs] (sapCemStatsEgressSESSs)	long	The value of sapCemStatsEgressSESSs indicates the number of Severely Error Seconds (SESSs) encountered. This is when more than 30 percent of the packets within a one second window are missing.
cemStatsEgressUASs [Cem Stats Egress UASs] (sapCemStatsEgressUASs)	long	The value of sapCemStatsEgressUASs indicates the number of Unavailable Seconds (UASs) encountered. Any consecutive ten seconds of SESSs are counted as one UAS.
cemStatsEgressUnderrunCounts [Cem Stats Egress Underrun Counts] (sapCemStatsEgressUnderrunCounts)	long	The value of sapCemStatsEgressUnderrunCounts indicates the number of times the jitter buffer went into an underrun state.
cemStatsIngressDroppedPkts [Cem Stats Ingress Dropped Pkts] (sapCemStatsIngressDroppedPkts)	long	The value of sapCemStatsIngressDroppedPkts indicates the total number of packets that were dropped due to errors.
cemStatsIngressForwardedPkts [Cem Stats Ingress Forwarded Pkts] (sapCemStatsIngressForwardedPkts)	long	The value of sapCemStatsIngressForwardedPkts indicates the number of packets that were successfully forwarded.
<p>SapBaseStats MIB entry name: sapBaseStatsEntry Entry description: Basic statistics about a specific SAP. Table description (for sapBaseStatsTable): A table that contains basic SAP statistics. In the descriptions below 'Pchip' refers to the Nokia SROS series Packet Processing chip, while 'Qchip' refers to the Nokia SROS series QoS Queueing Engine chip. Table 347 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
customerId [Customer Id] (sapBaseStatsCustId)	long	The Customer ID for the associated service.
egressQChipDroppedInProfOctets [Egress QChip Dropped In Prof Octets] (sapBaseStatsEgressQchipDroppedInProfOctets)	java. math. BigInteger	The number of in-profile octets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
egressQChipDroppedInProfPackets [Egress QChip Dropped In Prof Packets] (sapBaseStatsEgressQchipDroppedInProfPackets)	java. math. BigInteger	The number of in-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
egressQChipDroppedOutProfOctets [Egress QChip Dropped Out Prof Octets] (sapBaseStatsEgressQchipDroppedOutProfOctets)	java. math. BigInteger	The number of out-of-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
egressQChipDroppedOutProfPackets [Egress QChip Dropped Out Prof Packets] (sapBaseStatsEgressQchipDroppedOutProfPackets)	java. math. BigInteger	The number of out-of-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
egressQChipForwardedInProfOctets [Egress QChip Forwarded In Prof Octets] (sapBaseStatsEgressQchipForwardedInProfOctets)	java. math. BigInteger	The number of in-profile octets (rate below CIR) forwarded by the egress Qchip.
egressQChipForwardedInProfPackets [Egress QChip Forwarded In Prof Packets] (sapBaseStatsEgressQchipForwardedInProfPackets)	java. math. BigInteger	The number of in-profile packets (rate below CIR) forwarded by the egress Qchip.

Table 347 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egressQChipForwardedOutProfOctets [Egress QChip Forwarded Out Prof Octets] (sapBaseStatsEgressQchipFor- wardedOutProfOctets)	java. math. BigInte- ger	The number of out-of-profile octets (rate above CIR) forwarded by the egress Qchip.
egressQChipForwardedOutProfPackets [Egress QChip Forwarded Out Prof Packets] (sapBaseStatsEgressQchipFor- wardedOutProfPackets)	java. math. BigInte- ger	The number of out-of-profile packets (rate above CIR) forwarded by the egress Qchip.
ingressPChipDroppedOctets [Ingress PChip Dropped Octets] (sapBaseStatsIngressPchipDroppedOctets)	java. math. BigInte- ger	The number of octets dropped by the ingress Pchip due to: SAP state, ingress MAC, IP or IPv6 filter, same segment discard, bad checksum, etc.
ingressPChipDroppedPackets [Ingress PChip Dropped Packets] (sapBaseStatsIngressPchip- DroppedPackets)	java. math. BigInte- ger	The number of packets dropped by the ingress Pchip due to: SAP state, ingress MAC, IP or IPv6 filter, same segment discard, bad checksum, etc.
ingressPChipOfferedHiPrioOctets [Ingress PChip Offered Hi Prio Octets] (sapBaseStatsIngressPchipOf- feredHiPrioOctets)	java. math. BigInte- ger	The number of high priority octets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressPChipOfferedHiPrioPackets [Ingress PChip Offered Hi Prio Packets] (sapBaseStatsIngressPchipOf- feredHiPrioPackets)	java. math. BigInte- ger	The number of high priority packets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressPChipOfferedLoPrioOctets [Ingress PChip Offered Lo Prio Octets] (sapBaseStatsIngressPchipOf- feredLoPrioOctets)	java. math. BigInte- ger	The number of low priority octets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.

Table 347 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingressPChipOfferedLoPrioPackets [Ingress PChip Offered Lo Prio Packets] (sapBaseStatsIngressPchipOf- feredLoPrioPackets)	java. math. BigInte- ger	The number of low priority packets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressQChipDroppedHiPrioOctets [Ingress QChip Dropped Hi Prio Octets] (sapBaseStatsIngressQchip- DroppedHiPrioOctets)	java. math. BigInte- ger	The number of high priority octets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipDroppedHiPrioPackets [Ingress QChip Dropped Hi Prio Packets] (sapBaseStatsIngressQchip- DroppedHiPrioPackets)	java. math. BigInte- ger	The number of high priority packets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipDroppedLoPrioOctets [Ingress QChip Dropped Lo Prio Octets] (sapBaseStatsIngressQchip- DroppedLoPrioOctets)	java. math. BigInte- ger	The number of low priority octets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipDroppedLoPrioPackets [Ingress QChip Dropped Lo Prio Packets] (sapBaseStatsIngressQchip- DroppedLoPrioPackets)	java. math. BigInte- ger	The number of low priority packets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipForwardedInProfOctets [Ingress QChip Forwarded In Prof Octets] (sapBaseStatsIngressQchipFor- wardedInProfOctets)	java. math. BigInte- ger	The number of in-profile octets (rate below CIR) forwarded by the ingress Qchip.
ingressQChipForwardedInProfPackets [Ingress QChip Forwarded In Prof Packets] (sapBaseStatsIngressQchipFor- wardedInProfPackets)	java. math. BigInte- ger	The number of in-profile packets (rate below CIR) forwarded by the ingress Qchip.

Table 347 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingressQChipForwardedOutProfOctets [Ingress QChip Forwarded Out Prof Octets] (sapBaseStatsIngressQchipForwardedOutProfOctets)	java. math. BigInteger	The number of out-of-profile octets (rate above CIR) forwarded by the ingress Qchip.
ingressQChipForwardedOutProfPackets [Ingress QChip Forwarded Out Prof Packets] (sapBaseStatsIngressQchipForwardedOutProfPackets)	java. math. BigInteger	The number of out-of-profile packets (rate above CIR) forwarded by the ingress Qchip.

packetsTransferredCount [Packets Transferred Count] (tmnxTestHdSessTransCount)	java. math. BigInteger	The total number of packets injected

Table 348 sitesec statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CpmIPV6FilterStats</p> <p>MIB entry name: tCpmIPV6FilterStatsEntry</p> <p>Entry description: Each row entry represents the statistics related to the tCpmIPV6FilterEntry indexed by the same tCpmIPV6FilterEntryId. Entries are created when tCpmIPV6FilterEntry rows are created.</p> <p>Table description (for tCpmIPV6FilterStatsTable): The tCpmIPV6FilterStatsTable has a stats entry for each entry in each CPM filter configured on this system. This table is not supported on SR-1 and ESS-1, where the value of TIMETRA-CHASSIS-MIB::tmnxChassisType is '5'.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sitesec.CpmIPV6FilterEntry</p>		
droppedPackets [Dropped Packets] (tCpmIPV6FilterStatsDroppedPkts)	java. math. BigInteger	The value of tCpmIPV6FilterStatsDroppedPkts indicates the number of packets dropped due to the tCpmIPV6FilterEntry with the same index.
forwardedPackets [Forwarded Packets] (tCpmIPV6FilterStatsForwardedPkts)	java. math. BigInteger	The value of tCpmIPV6FilterStatsForwardedPkts indicates the number of packets forwarded due to the tCpmIPV6FilterEntry with the same index.
<p>CpmIPFilterStats</p> <p>MIB entry name: tCpmIPFilterStatsEntry</p> <p>Entry description: Each row entry represents the statistics related to the tCpmIPFilterEntry indexed by the same tCpmIPFilterEntryId. Entries are created when tCpmIPFilterEntry rows are created.</p> <p>Table description (for tCpmIPFilterStatsTable): The tCpmIPFilterStatsTable has a stats entry for each entry in each CPM filter configured on this system. This table is not supported on SR-1 and ESS-1, where the value of TIMETRA-CHASSIS-MIB::tmnxChassisType is '5'.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sitesec.CpmIPFilterEntry</p>		

Table 348 sitesec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
droppedPackets [Dropped Packets] (tCpmlpFilterStatsDroppedPkts)	java. math. BigInteger	The value of tCpmlpFilterStatsDroppedPkts indicates the number of packets dropped due to the tCpmlpFilterEntry with the same index.
forwardedPackets [Forwarded Packets] (tCpmlpFilterStatsForwardedPkts)	java. math. BigInteger	The value of tCpmlpFilterStatsForwardedPkts indicates the number of packets forwarded due to the tCpmlpFilterEntry with the same index.
<p>MafEntryStats MIB entry name: tmnxIPMafMatchEntry Entry description: Each row entry contains information about a management access filter entry associated with a specific Management Access Filter (MAF). The filter criterion is applied in order according to the value of tmnxIPMafMatchIndex. The match algorithm is exited upon the first match found and then the action specified is executed. For this reason, entries must be sequenced from most to least explicit. An entry where tmnxIPMafMatchAction has a value of 'none' is not active. Rows can only be created for tmnxGenMafType's: - ipv4 (1), and - ipv6 (2). For mac Maf filters a dedicated table is provided (tmnxMacMafMatchTable). Table description (for tmnxIPMafMatchTable): This table replaces the tmnxMafMatchTable. It allows to define both IPv4 and IPv6 MAF IP entries. The tmnxIPMafMatchTable contains ipvx filter match criteria associated with Management Access Filters (MAFs) configured on the system. Supports realtime plotting Supports scheduled collection Monitored class: sitesec.MafEntry</p>		
matchCount [Match Count] (tmnxIPMafMatchCount)	java. math. BigInteger	The value of tmnxIPMafMatchCount indicates the number of times a management packet has matched this filter entry.
<p>PKICertMgrStats MIB entry name: tmnxCertMgrStatsGroup Supports realtime plotting Supports scheduled collection Monitored class: sitesec.SiteSystemSecurityPublicKey</p>		

Table 348 sitesec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
certMgrAuthFailed [Cert Mgr Auth Failed] (tmnxCertMgrAuthFailed)	long	The tmnxCertMgrAuthFailed indicates the number of authentication failures using the certificates.
certMgrAuthPassed [Cert Mgr Auth Passed] (tmnxCertMgrAuthPassed)	long	The tmnxCertMgrAuthPassed indicates the number of authentication checks passed using the certificates.
certMgrTotalAuth [Cert Mgr Total Auth] (tmnxCertMgrTotalAuth)	long	The tmnxCertMgrTotalAuth indicates the number of authentication attempts using the certificates.

sdpBndIgmPsnpgTxGrpSpecQueries [Sdp Bnd IgmP Snpg Tx Grp Spec Queries] (sdpBndIgmPsnpgTxGrpSpecQueries)	long	The value of the object sdpBndIgmPsnpgTxGrpSpecQueries indicates the number of IGMP Group-Specific Queries transmitted on this SDP Bind.
sdpBndIgmPsnpgTxSrcSpecQueries [Sdp Bnd IgmP Snpg Tx Src Spec Queries] (sdpBndIgmPsnpgTxSrcSpecQueries)	long	The value of the object sdpBndIgmPsnpgTxSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries transmitted on this SDP Bind.
sdpBndIgmPsnpgTxV1Reports [Sdp Bnd IgmP Snpg Tx V1 Reports] (sdpBndIgmPsnpgTxV1Reports)	long	The value of the object sdpBndIgmPsnpgTxV1Reports indicates the number of IGMPv1 Reports transmitted on this SDP Bind.
sdpBndIgmPsnpgTxV2Leaves [Sdp Bnd IgmP Snpg Tx V2 Leaves] (sdpBndIgmPsnpgTxV2Leaves)	long	The value of the object sdpBndIgmPsnpgTxV2Leaves indicates the number of IGMPv2 Leaves transmitted on this SDP Bind.
sdpBndIgmPsnpgTxV2Reports [Sdp Bnd IgmP Snpg Tx V2 Reports] (sdpBndIgmPsnpgTxV2Reports)	long	The value of the object sdpBndIgmPsnpgTxV2Reports indicates the number of IGMPv2 Reports transmitted on this SDP Bind.
sdpBndIgmPsnpgTxV3Reports [Sdp Bnd IgmP Snpg Tx V3 Reports] (sdpBndIgmPsnpgTxV3Reports)	long	The value of the object sdpBndIgmPsnpgTxV3Reports indicates the number of IGMPv3 Reports transmitted on this SDP Bind.
TunnelKeepAliveStats MIB entry name: sdplInfoEntry Entry description: Information about a specific SDP. Table description (for sdplInfoTable): A table that contains SDP information. Supports realtime plotting Supports scheduled collection Monitored class: svt.Tunnel		

Table 350 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lateHelloResponses [Late Hello Responses] (sdpKeepAliveNumLateHelloR- esponseMessages)	long	The number of SDP Echo Response messages received after the corresponding Request timeout timer expired.
receivedHelloMessages [Received Hello Messages] (sdpKeepAliveNumHelloRespon- seMessages)	long	The number of SDP Echo Response messages received since the keep-alive was administratively enabled or the counter was cleared.
transmittedHelloMessages [Transmitted Hello Messages] (sdpKeepAliveNumHelloRequestMessages)	long	The number of SDP Echo Request messages transmitted since the keep-alive was administratively enabled or the counter was cleared.

Table 351 tdmequipment statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AdaptiveClockRecoveryStats</p> <p>MIB entry name: aluPortAcrClkStatsEntry</p> <p>Entry description: Defines an entry in aluPortAcrClkStatsTable. Entries are created and deleted by the system depending port configuration.</p> <p>Table description (for aluPortAcrClkStatsTable): Defines the Nokia SAR series port adaptive clock recovery (ACR) statistics table for providing, via SNMP, the capability of retrieving statistical information relating to clock that is derived from the ACR CPIPE PW.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: tdmequipment.DS1E1Channel</p>		
freqOffsetMeanPastDay [Freq Offset Mean Past Day] (aluCurrent24HourFreqOffsetMeanPpb)	long	aluCurrent24HourFreqOffsetMeanPpb indicates the mean frequency offset from the local oscillator clock in parts per billion for up to the last 24 hour.
freqOffsetMeanPastMinute [Freq Offset Mean Past Minute] (aluCurrent1MinFreqOffsetMeanPpb)	long	The mean frequency offset from the local oscillator clock in parts per billion during the first interval.
freqOffsetStdDevPastDay [Freq Offset Std Dev Past Day] (aluCurrent24HourFreqOffsetStdDevPpb)	long	aluCurrent24HourFreqOffsetStdDevPpb indicates the standard deviation of the frequency offset from the local oscillator clock in parts per billion for up to the last 24 hour.
freqOffsetStdDevPastMinute [Freq Offset Std Dev Past Minute] (aluCurrent1MinFreqOffsetStdDevPpb)	long	The standard deviation of the frequency offset from the local oscillator clock in nano seconds during the first interval.
phaseErrorMeanPastMinuteTime [Phase Error Mean Past Minute Time] (aluCurrent1MinPhaseErrorMeanNs)	long	The mean of the phase error from the local oscillator clock in nano seconds during the first interval.

Table 351 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
phaseErrorStdDevPastMinute [Phase Error Std Dev Past Minute] (aluCurrent1MinPhaseErrorStdDevNs)	long	The standard deviation of the phase error from the local oscillator clock in nano seconds during the first interval.
<p>DS1CurrentStats MIB entry name: dsx1CurrentEntry Entry description: An entry in the DS1 Current table. Table description (for dsx1CurrentTable): The DS1 current table contains various statistics being collected for the current 15 minute interval. Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS1E1Channel</p>		
burstyErroredSeconds [Bursty Errored Seconds] (dsx1CurrentBESs)	long	The number of Bursty Errored Seconds.
controlledSlipSeconds [Controlled Slip Seconds] (dsx1CurrentCSSs)	long	The number of Controlled Slip Seconds.
degradedMinutes [Degraded Minutes] (dsx1CurrentDMs)	long	The number of Degraded Minutes.
erroredSeconds [Errored Seconds] (dsx1CurrentESs)	long	The number of Errored Seconds.
lineCodingViolations [Line Coding Violations] (dsx1CurrentLCVs)	long	The number of Line Code Violations (LCVs).

Table 351 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lineErroredSeconds [Line Errored Seconds] (dsx1CurrentLESs)	long	The number of Line Errored Seconds.
pBitCodingViolations [PBit Coding Violations] (dsx1CurrentPCVs)	long	The number of Path Coding Violations.
severelyErroredFramingSeconds [Severely Errored Framing Seconds] (dsx1CurrentSEFSs)	long	The number of Severely Errored Framing Seconds.
severelyErroredSeconds [Severely Errored Seconds] (dsx1CurrentSESSs)	long	The number of Severely Errored Seconds.
unavailableSeconds [Unavailable Seconds] (dsx1CurrentUASs)	long	The number of Unavailable Seconds.
DS1IntervalStats MIB entry name: dsx1IntervalEntry Entry description: An entry in the DS1 Interval table. Table description (for dsx1IntervalTable): The DS1 Interval Table contains various statistics collected by each DS1 Interface over the previous 24 hours of operation. The past 24 hours are broken into 96 completed 15 minute intervals. Each row in this table represents one such interval (identified by dsx1IntervalNumber) for one specific instance (identified by dsx1IntervalIndex). Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS1E1Channel		
burstyErroredSeconds [Bursty Errored Seconds] (dsx1IntervalBESs)	long	The number of Bursty Errored Seconds.

Table 351 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
controlledSlipSeconds [Controlled Slip Seconds] (dsx1IntervalCSSs)	long	The number of Controlled Slip Seconds.
degradedMinutes [Degraded Minutes] (dsx1IntervalDMs)	long	The number of Degraded Minutes.
erroredSeconds [Errored Seconds] (dsx1IntervalESs)	long	The number of Errored Seconds.
intervalNumber [Interval Number] (dsx1IntervalNumber)	int	A number between 1 and 96, where 1 is the most recently completed 15 minute interval and 96 is the 15 minutes interval completed 23 hours and 45 minutes prior to interval 1.
lineCodingViolations [Line Coding Violations] (dsx1IntervalLCVs)	long	The number of Line Code Violations.
lineErroredSeconds [Line Errored Seconds] (dsx1IntervalLESs)	long	The number of Line Errored Seconds.
pBitCodingViolations [PBit Coding Violations] (dsx1IntervalPCVs)	long	The number of Path Coding Violations.
severelyErroredFramingSeconds [Severely Errored Framing Seconds] (dsx1IntervalSEFSs)	long	The number of Severely Errored Framing Seconds.
severelyErroredSeconds [Severely Errored Seconds] (dsx1IntervalSESSs)	long	The number of Severely Errored Seconds.

Table 351 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
unavailableSeconds [Unavailable Seconds] (dsx1IntervalUASs)	long	The number of Unavailable Seconds. This object may decrease if the occurrence of unavailable seconds occurs across an interval boundary.
<p>DS1TotalStats MIB entry name: dsx1TotalEntry Entry description: An entry in the DS1 Total table. Table description (for dsx1TotalTable): The DS1 Total Table contains the cumulative sum of the various statistics for the 24 hour period preceding the current interval. Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS1E1Channel</p>		
burstyErroredSeconds [Bursty Errored Seconds] (dsx1TotalBESs)	long	The number of Bursty Errored Seconds (BESs) encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
controlledSlipSeconds [Controlled Slip Seconds] (dsx1TotalCSSs)	long	The number of Controlled Slip Seconds encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
degradedMinutes [Degraded Minutes] (dsx1TotalDMs)	long	The number of Degraded Minutes (DMs) encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
erroredSeconds [Errored Seconds] (dsx1TotalESs)	long	The sum of Errored Seconds encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
lineCodingViolations [Line Coding Violations] (dsx1TotalLCVs)	long	The number of Line Code Violations (LCVs) encountered by a DS1 interface in the current 15 minute interval. Invalid 15 minute intervals count as 0.

Table 351 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description

pBitCodingViolations [PBit Coding Violations] (dsx1TotalPCVs)	long	The number of Path Coding Violations encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
severelyErroredFramingSeconds [Severely Errored Framing Seconds] (dsx1TotalSEFSs)	long	The number of Severely Errored Framing Seconds encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
severelyErroredSeconds [Severely Errored Seconds] (dsx1TotalSEs)	long	The number of Severely Errored Seconds encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
unavailableSeconds [Unavailable Seconds] (dsx1TotalUASs)	long	The number of Unavailable Seconds encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
DS3CurrentStats MIB entry name: dsx3CurrentEntry Entry description: An entry in the DS3/E3 Current table. Table description (for dsx3CurrentTable): The DS3/E3 current table contains various statistics being collected for the current 15 minute interval. Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS3E3Channel		
cBitCodingViolations [CBit Coding Violations] (dsx3CurrentCCVs)	long	The number of C-bit Coding Violations.

Table 351 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cBitErroredSeconds [CBit Errored Seconds] (dsx3CurrentCESs)	long	The number of C-bit Errored Seconds.
cBitSeverelyErroredSeconds [CBit Severely Errored Seconds] (dsx3CurrentCSEs)	long	The number of C-bit Severely Errored Seconds.
lineCodingViolations [Line Coding Violations] (dsx3CurrentLCVs)	long	The counter associated with the number of Line Coding Violations.
lineErroredSeconds [Line Errored Seconds] (dsx3CurrentLESSs)	long	The number of Line Errored Seconds.
pBitCodingViolations [PBit Coding Violations] (dsx3CurrentPCVs)	long	The counter associated with the number of P-bit Coding Violations.
pBitErroredSeconds [PBit Errored Seconds] (dsx3CurrentPESs)	long	The counter associated with the number of P-bit Errored Seconds.
pBitSeverelyErroredSeconds [PBit Severely Errored Seconds] (dsx3CurrentPSEs)	long	The counter associated with the number of P-bit Severely Errored Seconds.
severelyErroredFramingSeconds [Severely Errored Framing Seconds] (dsx3CurrentSEFSs)	long	The counter associated with the number of Severely Errored Framing Seconds.
unavailableSeconds [Unavailable Seconds] (dsx3CurrentUASs)	long	The counter associated with the number of Unavailable Seconds.

Table 351 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>DS3FarEndCurrentStats</p> <p>MIB entry name: dsx3FarEndCurrentEntry</p> <p>Entry description: An entry in the DS3 Far End Current table.</p> <p>Table description (for dsx3FarEndCurrentTable): The DS3 Far End Current table contains various statistics being collected for the current 15 minute interval. The statistics are collected from the far end block error code within the C-bits.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: tdmequipment.DS3E3Channel</p>		
cBitCodingViolations [CBit Coding Violations] (dsx3FarEndCurrentCCVs)	long	The counter associated with the number of Far End C-bit Coding Violations reported via the far end block error count.
cBitErroredSeconds [CBit Errored Seconds] (dsx3FarEndCurrentCESs)	long	The counter associated with the number of Far End C-bit Errored Seconds.
cBitSeverelyErroredSeconds [CBit Severely Errored Seconds] (dsx3FarEndCurrentCSESs)	long	The counter associated with the number of Far End C-bit Severely Errored Seconds.
invalidIntervals [Invalid Intervals] (dsx3FarEndInvalidIntervals)	int	The number of intervals in the range from 0 to dsx3FarEndValidIntervals for which no data is available. This object will typically be zero except in cases where the data for some intervals are not available (e.g., in proxy situations).
timeElapsed [Time Elapsed] (dsx3FarEndTimeElapsed)	int	The number of seconds that have elapsed since the beginning of the far end current error-measurement period. If, for some reason, such as an adjustment in the system's time-of-day clock, the current interval exceeds the maximum value, the agent will return the maximum value.

Table 351 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
unavailableSeconds [Unavailable Seconds] (dsx3FarEndCurrentUASs)	long	The counter associated with the number of Far End unavailable seconds.
validIntervals [Valid Intervals] (dsx3FarEndValidIntervals)	int	The number of previous far end intervals for which data was collected. The value will be 96 unless the interface was brought online within the last 24 hours, in which case the value will be the number of complete 15 minute far end intervals since the interface has been online. In the case where the agent is a proxy, it is possible that some intervals are unavailable. In this case, this interval is the maximum interval number for which data is available.
<p>DS3FarEndIntervalStats MIB entry name: dsx3FarEndIntervalEntry Entry description: An entry in the DS3 Far End Interval table. Table description (for dsx3FarEndIntervalTable): The DS3 Far End Interval Table contains various statistics collected by each DS3 interface over the previous 24 hours of operation. The past 24 hours are broken into 96 completed 15 minute intervals. Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS3E3Channel</p>		
cBitCodingViolations [CBit Coding Violations] (dsx3FarEndIntervalCCVs)	long	The counter associated with the number of Far End C-bit Coding Violations reported via the far end block error count.
cBitErroredSeconds [CBit Errored Seconds] (dsx3FarEndIntervalCESs)	long	The counter associated with the number of Far End C-bit Errored Seconds encountered by a DS3 interface in one of the previous 96, individual 15 minute, intervals. In the case where the agent is a proxy and data is not available, return noSuchInstance.

Table 351 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cBitSeverelyErroredSeconds [CBit Severely Errored Seconds] (dsx3FarEndIntervalCSESSs)	long	The counter associated with the number of Far End C-bit Severely Errored Seconds.
intervalNumber [Interval Number] (dsx3FarEndIntervalNumber)	int	A number between 1 and 96, where 1 is the most recently completed 15 minute interval and 96 is the 15 minutes interval completed 23 hours and 45 minutes prior to interval 1.
unavailableSeconds [Unavailable Seconds] (dsx3FarEndIntervalUASs)	long	The counter associated with the number of Far End unavailable seconds.
<p>DS3FarEndTotalStats MIB entry name: dsx3FarEndTotalEntry Entry description: An entry in the DS3 Far End Total table. Table description (for dsx3FarEndTotalTable): The DS3 Far End Total Table contains the cumulative sum of the various statistics for the 24 hour period preceding the current interval. Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS3E3Channel</p>		
cBitCodingViolations [CBit Coding Violations] (dsx3FarEndTotalCCVs)	long	The counter associated with the number of Far End C-bit Coding Violations reported via the far end block error count encountered by a DS3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
cBitErroredSeconds [CBit Errored Seconds] (dsx3FarEndTotalCESs)	long	The counter associated with the number of Far End C-bit Errored Seconds encountered by a DS3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
cBitSeverelyErroredSeconds [CBit Severely Errored Seconds] (dsx3FarEndTotalCSESSs)	long	The counter associated with the number of Far End C-bit Severely Errored Seconds encountered by a DS3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.

Table 351 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
unavailableSeconds [Unavailable Seconds] (dsx3FarEndTotalUASs)	long	The counter associated with the number of Far End unavailable seconds encountered by a DS3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
<p>DS3IntervalStats</p> <p>MIB entry name: dsx3IntervalEntry</p> <p>Entry description: An entry in the DS3/E3 Interval table.</p> <p>Table description (for dsx3IntervalTable): The DS3/E3 Interval Table contains various statistics collected by each DS3/E3 Interface over the previous 24 hours of operation. The past 24 hours are broken into 96 completed 15 minute intervals. Each row in this table represents one such interval (identified by dsx3IntervalNumber) and for one specific interface (identified by dsx3IntervalIndex).</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: tdmequipment.DS3E3Channel</p>		
cBitCodingViolations [CBit Coding Violations] (dsx3IntervalCCVs)	long	The number of C-bit Coding Violations.
cBitErroredSeconds [CBit Errored Seconds] (dsx3IntervalCESs)	long	The number of C-bit Errored Seconds.
cBitSeverelyErroredSeconds [CBit Severely Errored Seconds] (dsx3IntervalCSESs)	long	The number of C-bit Severely Errored Seconds.
intervalNumber [Interval Number] (dsx3IntervalNumber)	int	A number between 1 and 96, where 1 is the most recently completed 15 minute interval and 96 is the 15 minutes interval completed 23 hours and 45 minutes prior to interval 1.

Table 351 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lineCodingViolations [Line Coding Violations] (dsx3IntervalLCVs)	long	The counter associated with the number of Line Coding Violations.
lineErroredSeconds [Line Errored Seconds] (dsx3IntervalLESSs)	long	The number of Line Errored Seconds (BPVs or illegal zero sequences).
pBitCodingViolations [PBit Coding Violations] (dsx3IntervalPCVs)	long	The counter associated with the number of P-bit Coding Violations.
pBitErroredSeconds [PBit Errored Seconds] (dsx3IntervalPESs)	long	The counter associated with the number of P-bit Errored Seconds.
pBitSeverelyErroredSeconds [PBit Severely Errored Seconds] (dsx3IntervalPSESs)	long	The counter associated with the number of P-bit Severely Errored Seconds.
severelyErroredFramingSeconds [Severely Errored Framing Seconds] (dsx3IntervalSEFSs)	long	The counter associated with the number of Severely Errored Framing Seconds.
unavailableSeconds [Unavailable Seconds] (dsx3IntervalUASs)	long	The counter associated with the number of Unavailable Seconds. This object may decrease if the occurrence of unavailable seconds occurs across an interval boundary.

Table 351 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
DS3TotalStats MIB entry name: dsx3TotalEntry Entry description: An entry in the DS3/E3 Total table. Table description (for dsx3TotalTable): The DS3/E3 Total Table contains the cumulative sum of the various statistics for the 24 hour period preceding the current interval. Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS3E3Channel		
cBitCodingViolations [CBit Coding Violations] (dsx3TotalCCVs)	long	The number of C-bit Coding Violations encountered by a DS3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
cBitErroredSeconds [CBit Errored Seconds] (dsx3TotalCESSs)	long	The number of C-bit Errored Seconds encountered by a DS3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
cBitSeverelyErroredSeconds [CBit Severely Errored Seconds] (dsx3TotalCSESs)	long	The number of C-bit Severely Errored Seconds encountered by a DS3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
lineCodingViolations [Line Coding Violations] (dsx3TotalLCVs)	long	The counter associated with the number of Line Coding Violations encountered by a DS3/E3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
lineErroredSeconds [Line Errored Seconds] (dsx3TotalLESSs)	long	The number of Line Errored Seconds (BPVs or illegal zero sequences) encountered by a DS3/E3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
pBitCodingViolations [PBit Coding Violations] (dsx3TotalPCVs)	long	The counter associated with the number of P-bit Coding Violations, encountered by a DS3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.

Table 351 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pBitErroredSeconds [PBit Errored Seconds] (dsx3TotalPESs)	long	The counter associated with the number of P-bit Errored Seconds, encountered by a DS3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
pBitSeverelyErroredSeconds [PBit Severely Errored Seconds] (dsx3TotalPSESs)	long	The counter associated with the number of P-bit Severely Errored Seconds, encountered by a DS3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
severelyErroredFramingSeconds [Severely Errored Framing Seconds] (dsx3TotalSEFSs)	long	The counter associated with the number of Severely Errored Framing Seconds, encountered by a DS3/E3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
unavailableSeconds [Unavailable Seconds] (dsx3TotalUASs)	long	The counter associated with the number of Unavailable Seconds, encountered by a DS3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
<p>VoiceChanStats</p> <p>MIB entry name: aluVoiceEntry</p> <p>Entry description: Each row entry represents a Voice channel on an IOM card in a chassis in the system. Channel entries for voice ports can be created and deleted via SNMP SET operations. For each aluVoiceEntry, there will be a corresponding entry in the tmnxPortTable and the ifTable.</p> <p>Table description (for aluVoiceTable): aluVoiceTable has an entry for each Voice channel on an IOM card in each chassis in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: tdmequipment.VoiceChannel</p>		
answeredIncomingCallTime [Answered Incoming Call Time] (aluVoiceIncomingCallTimeAns)	long	The total duration (in seconds) of all incoming calls that were answered. This count is accumulated since the last time the statistics were cleared.

Table 351 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
answeredIncomingCalls [Answered Incoming Calls] (aluVoiceIncomingCallCountAns)	long	The number of incoming calls (received by the circuit) that were answered. This count is accumulated since the last time the statistics were cleared.
answeredOutgoingCallTime [Answered Outgoing Call Time] (aluVoiceOutgoingCallTimeAns)	long	The total duration (in seconds) of all outgoing calls that were answered. This count is accumulated since the last time the statistics were cleared.
answeredOutgoingCalls [Answered Outgoing Calls] (aluVoiceOutgoingCallCountAns)	long	The number of outgoing calls (originated by the circuit) that were answered. This count is accumulated since the last time the statistics were cleared.
idleTime [Idle Time] (aluVoiceIdleTime)	long	The time in seconds for which the circuit was idle. This count is accumulated since the last time the statistics were cleared.
incomingCallTime [Incoming Call Time] (aluVoiceIncomingCallTime)	long	The total duration (in seconds) of all incoming calls. This count is accumulated since the last time the statistics were cleared.
incomingCalls [Incoming Calls] (aluVoiceIncomingCallCount)	long	The number of incoming calls (received by the circuit). This count is accumulated since the last time the statistics were cleared.
outOfServiceTime [Out Of Service Time] (aluVoiceOutOfServiceTime)	long	The time in seconds for which the circuit was unavailable for connection. This count is accumulated since the last time the statistics were cleared.
outgoingCallTime [Outgoing Call Time] (aluVoiceOutgoingCallTime)	long	The total duration (in seconds) of all outgoing calls. This count is accumulated since the last time the statistics were cleared.
outgoingCalls [Outgoing Calls] (aluVoiceOutgoingCallCount)	long	The number of outgoing calls (originated by the circuit). This count is accumulated since the last time the statistics were cleared.

Table 352 vpls statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfacePimSnoopingStats MIB entry name: tmnxPimSnpgIfStatsEntry Entry description: An entry in the tmnxPimSnpgIfStatsTable. Table description (for tmnxPimSnpgIfStatsTable): The table listing the PIM statistics for a particular interface. Supports realtime plotting Supports scheduled collection Monitored class: vpls.InterfacePimSnooping</p>		
tmnxPimSnpgIfJoinPolicyDrops [Tmnx Pim Snpg If Join Policy Drops] (tmnxPimSnpgIfJoinPolicyDrops)	long	The value of tmnxPimSnpgIfJoinPolicyDrops indicates the number of times the join policy match resulted in dropping PIM Join-Prune Message or one of the source group contained in the message.
tmnxPimSnpgIfRxBadChecksumDscrd [Tmnx Pim Snpg If Rx Bad Checksum Dscrd] (tmnxPimSnpgIfRxBadChecksumDscrd)	long	The value of tmnxPimSnpgIfRxBadChecksumDscrd indicates the number of PIM messages received on this interface which were discarded because of bad checksum.
tmnxPimSnpgIfRxBadEncodings [Tmnx Pim Snpg If Rx Bad Encodings] (tmnxPimSnpgIfRxBadEncodings)	long	The value of tmnxPimSnpgIfRxBadEncodings indicates the number of PIM messages with bad encodings received on this interface.
tmnxPimSnpgIfRxBadVersionDscrd [Tmnx Pim Snpg If Rx Bad Version Dscrd] (tmnxPimSnpgIfRxBadVersionDscrd)	long	The value of tmnxPimSnpgIfRxBadVersionDscrd indicates the number of PIM messages with bad versions received on this interface.
tmnxPimSnpgIfRxHellos [Tmnx Pim Snpg If Rx Hellos] (tmnxPimSnpgIfRxHellos)	long	The value of tmnxPimSnpgIfRxHellos indicates the number of PIM hello messages received on this interface.
tmnxPimSnpgIfRxHellosDropped [Tmnx Pim Snpg If Rx Hellos Dropped] (tmnxPimSnpgIfRxHellosDropped)	long	The value of tmnxPimSnpgIfRxHellosDropped indicates the number of PIM Hello messages which were received on this interface but were dropped.

Table 352 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tmnxPimSnpgIfRxJoinPruneErrs [Tmnx Pim Snpg If Rx Join Prune Errs] (tmnxPimSnpgIfRxJoinPruneErrs)	long	The value of tmnxPimSnpgIfRxJoinPruneErrs indicates the number of errors while processing Join-Prune messages received on this interface.
tmnxPimSnpgIfRxJoinPrunes [Tmnx Pim Snpg If Rx Join Prunes] (tmnxPimSnpgIfRxJoinPrunes)	long	The value of tmnxPimSnpgIfRxJoinPrunes indicates the number of PIM Join Prune messages received on this interface.
tmnxPimSnpgIfRxNbrUnknown [Tmnx Pim Snpg If Rx Nbr Unknown] (tmnxPimSnpgIfRxNbrUnknown)	long	The value of tmnxPimSnpgIfRxNbrUnknown indicates the number of PIM messages (other than Hello messages) which were received on this interface and were rejected because the adjacency with the neighbor router was not already established.
tmnxPimSnpgIfRxPkts [Tmnx Pim Snpg If Rx Pkts] (tmnxPimSnpgIfRxPkts)	long	The value of tmnxPimSnpgIfRxPkts indicates the number of multicast data packets received on this interface.
tmnxPimSnpgIfSGTypes [Tmnx Pim Snpg If SGTypes] (tmnxPimSnpgIfSGTypes)	long	The value of tmnxPimSnpgIfSGTypes indicates the number of (S,G) entries in tmnxPimSnpgIfGrpSrcTable.
tmnxPimSnpgIfStarGTypes [Tmnx Pim Snpg If Star GTypes] (tmnxPimSnpgIfStarGTypes)	long	The value of tmnxPimSnpgIfStarGTypes indicates the number of (*,G) entries in tmnxPimSnpgIfGrpSrcTable.
tmnxPimSnpgIfTxJoinPrunes [Tmnx Pim Snpg If Tx Join Prunes] (tmnxPimSnpgIfTxJoinPrunes)	long	The value of tmnxPimSnpgIfTxJoinPrunes indicates the number of PIM Join Prune messages transmitted on this interface.
tmnxPimSnpgIfTxPkts [Tmnx Pim Snpg If Tx Pkts] (tmnxPimSnpgIfTxPkts)	long	The value of tmnxPimSnpgIfTxPkts indicates the number of multicast data packets transmitted on this interface.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapMldSnpgFwdGrpSpecQueries [Sap Mld Snpg Fwd Grp Spec Queries] (sapMldSnpgFwdGrpSpecQueries)	long	The value of the object sapMldSnpgFwdGrpSpecQueries indicates the number of MLD Group-Specific Queries forwarded on this SAP.
sapMldSnpgFwdSrcSpecQueries [Sap Mld Snpg Fwd Src Spec Queries] (sapMldSnpgFwdSrcSpecQueries)	long	The value of the object sapMldSnpgFwdSrcSpecQueries indicates the number of MLD Group-And-Source-Specific Queries forwarded on this SAP.
sapMldSnpgFwdUnknownType [Sap Mld Snpg Fwd Unknown Type] (sapMldSnpgFwdUnknownType)	long	The value of the object sapMldSnpgFwdUnknownType indicates the number of MLD unknown type packets forwarded on this SAP.
sapMldSnpgFwdV1Leaves [Sap Mld Snpg Fwd V1 Leaves] (sapMldSnpgFwdV1Leaves)	long	The value of the object sapMldSnpgFwdV1Leaves indicates the number of MLDv1 Leaves forwarded on this SAP.
sapMldSnpgFwdV1Reports [Sap Mld Snpg Fwd V1 Reports] (sapMldSnpgFwdV1Reports)	long	The value of the object sapMldSnpgFwdV1Reports indicates the number of MLDv1 Reports forwarded on this SAP.
sapMldSnpgFwdV2Reports [Sap Mld Snpg Fwd V2 Reports] (sapMldSnpgFwdV2Reports)	long	The value of the object sapMldSnpgFwdV2Reports indicates the number of MLDv2 Reports forwarded on this SAP.
sapMldSnpgRxGenQueries [Sap Mld Snpg Rx Gen Queries] (sapMldSnpgRxGenQueries)	long	The value of the object sapMldSnpgRxGenQueries indicates the number of MLD General Queries received on this SAP.
sapMldSnpgRxGrpSpecQueries [Sap Mld Snpg Rx Grp Spec Queries] (sapMldSnpgRxGrpSpecQueries)	long	The value of the object sapMldSnpgRxGrpSpecQueries indicates the number of MLD Group-Specific Queries received on this SAP.
sapMldSnpgRxLocalScopePkts [Sap Mld Snpg Rx Local Scope Pkts] (sapMldSnpgRxLocalScopePkts)	long	The value of the object sapMldSnpgRxLocalScopePkts indicates the number of MLD packets received on the link-local scope IPv6 multicast address.

Table 352 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapMldSnpgRxRsvdScopePkts [Sap Mld Snpg Rx Rsvd Scope Pkts] (sapMldSnpgRxRsvdScopePkts)	long	The value of the object sapMldSnpgRxRsvdScopePkts indicates the number of MLD packets received on the reserved scope IPv6 multicast address.
sapMldSnpgRxSrcSpecQueries [Sap Mld Snpg Rx Src Spec Queries] (sapMldSnpgRxSrcSpecQueries)	long	The value of the object sapMldSnpgRxSrcSpecQueries indicates the number of MLD Group-And-Source-Specific Queries received on this SAP.
sapMldSnpgRxUnknownType [Sap Mld Snpg Rx Unknown Type] (sapMldSnpgRxUnknownType)	long	The value of the object sapMldSnpgRxUnknownType indicates the number of MLD unknown type packets received on this SAP.
sapMldSnpgRxV1Leaves [Sap Mld Snpg Rx V1 Leaves] (sapMldSnpgRxV1Leaves)	long	The value of the object sapMldSnpgRxV1Leaves indicates the number of MLDv1 Leaves received on this SAP.
sapMldSnpgRxV1Reports [Sap Mld Snpg Rx V1 Reports] (sapMldSnpgRxV1Reports)	long	The value of the object sapMldSnpgRxV1Reports indicates the number of MLDv1 Reports received on this SAP.
sapMldSnpgRxV2Reports [Sap Mld Snpg Rx V2 Reports] (sapMldSnpgRxV2Reports)	long	The value of the object sapMldSnpgRxV2Reports indicates the number of MLDv2 Reports received on this SAP.
sapMldSnpgTxGenQueries [Sap Mld Snpg Tx Gen Queries] (sapMldSnpgTxGenQueries)	long	The value of the object sapMldSnpgTxGenQueries indicates the number of MLD General Queries transmitted on this SAP.
sapMldSnpgTxGrpSpecQueries [Sap Mld Snpg Tx Grp Spec Queries] (sapMldSnpgTxGrpSpecQueries)	long	The value of the object sapMldSnpgTxGrpSpecQueries indicates the number of MLD Group-Specific Queries transmitted on this SAP.
sapMldSnpgTxSrcSpecQueries [Sap Mld Snpg Tx Src Spec Queries] (sapMldSnpgTxSrcSpecQueries)	long	The value of the object sapMldSnpgTxSrcSpecQueries indicates the number of MLD Group-And-Source-Specific Queries transmitted on this SAP.

Table 352 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapMldSnpgTxV1Leaves [Sap Mld Snpg Tx V1 Leaves] (sapMldSnpgTxV1Leaves)	long	The value of the object sapMldSnpgTxV1Leaves indicates the number of MLDv1 Leaves transmitted on this SAP.
sapMldSnpgTxV1Reports [Sap Mld Snpg Tx V1 Reports] (sapMldSnpgTxV1Reports)	long	The value of the object sapMldSnpgTxV1Reports indicates the number of MLDv1 Reports transmitted on this SAP.
sapMldSnpgTxV2Reports [Sap Mld Snpg Tx V2 Reports] (sapMldSnpgTxV2Reports)	long	The value of the object sapMldSnpgTxV2Reports indicates the number of MLDv2 Reports transmitted on this SAP.
L2AccessIrfDhcpRelayCfgStats MIB entry name: sapTlsDhcpStatsEntry Entry description: DHCP statistics for a TLS SAP. Table description (for sapTlsDhcpStatsTable): sapTlsDhcpStatsTable contains DHCP statistics related to a TLS SAP. This table complements sapTlsInfoTable, and contains an entry for each Tls SAP. Rows in this table are created and deleted automatically by the system. Supports realtime plotting Supports scheduled collection Monitored class: vpls.AbstractL2AccessInterface		
sapTlsDhcpStatsClntDropdPkts [Sap Tls Dhcp Stats Clnt Dropd Pkts] (sapTlsDhcpStatsClntDropdPkts)	long	The value of the object sapTlsDhcpStatsClntDropdPkts indicates the number of DHCP client packets that have been dropped on this SAP.
sapTlsDhcpStatsClntForwdPkts [Sap Tls Dhcp Stats Clnt Forwd Pkts] (sapTlsDhcpStatsClntForwdPkts)	long	The value of the object sapTlsDhcpStatsClntForwdPkts indicates the number of DHCP client packets that have been forwarded on this SAP.

Table 352 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapTlsDhcpStatsClntProxLSPckts [Sap Tls Dhcp Stats Clnt Prox LSPckts] (sapTlsDhcpStatsClntProxLSPckts)	long	The value of the object sapTlsDhcpStatsClntProxLSPckts indicates the number of DHCP client packets that have been proxied on this SAP based on a lease state. The lease itself can have been obtained from a DHCP or RADIUS server. This is the so called lease split functionality.
sapTlsDhcpStatsClntProxRadPckts [Sap Tls Dhcp Stats Clnt Prox Rad Pckts] (sapTlsDhcpStatsClntProxRadPckts)	long	The value of the object sapTlsDhcpStatsClntProxRadPckts indicates the number of DHCP client packets that have been proxied on this SAP based on data received from a RADIUS server.
sapTlsDhcpStatsClntSnoopdPckts [Sap Tls Dhcp Stats Clnt Snoopd Pckts] (sapTlsDhcpStatsClntSnoopdPckts)	long	The value of the object sapTlsDhcpStatsClntSnoopdPckts indicates the number of DHCP client packets that have been snooped on this SAP.
sapTlsDhcpStatsGenForceRenPckts [Sap Tls Dhcp Stats Gen Force Ren Pckts] (sapTlsDhcpStatsGenForceRenPckts)	long	The value of the object sapTlsDhcpStatsGenForceRenPckts indicates the number of DHCP FORCERENEW messages spoofed on this SAP to the DHCP clients.
sapTlsDhcpStatsGenReleasePckts [Sap Tls Dhcp Stats Gen Release Pckts] (sapTlsDhcpStatsGenReleasePckts)	long	The value of the object sapTlsDhcpStatsGenReleasePckts indicates the number of DHCP RELEASE messages spoofed on this SAP to the DHCP server.
sapTlsDhcpStatsSrvrDropdPckts [Sap Tls Dhcp Stats Srvr Dropd Pckts] (sapTlsDhcpStatsSrvrDropdPckts)	long	The value of the object sapTlsDhcpStatsSrvrDropdPckts indicates the number of DHCP server packets that have been dropped on this SAP.
sapTlsDhcpStatsSrvrForwdPckts [Sap Tls Dhcp Stats Srvr Forwd Pckts] (sapTlsDhcpStatsSrvrForwdPckts)	long	The value of the object sapTlsDhcpStatsSrvrForwdPckts indicates the number of DHCP server packets that have been forwarded on this SAP.
sapTlsDhcpStatsSrvrSnoopdPckts [Sap Tls Dhcp Stats Srvr Snoopd Pckts] (sapTlsDhcpStatsSrvrSnoopdPckts)	long	The value of the object sapTlsDhcpStatsSrvrSnoopdPckts indicates the number of DHCP server packets that have been snooped on this SAP.

<p>SdpBindingMldSnpgErrorStats</p> <p>MIB entry name: sdpBindMldSnpgStatsEntry</p> <p>Entry description: sdpBindMldSnpgStatsEntry is an entry in the sdpBindMldSnpgStatsTable. Each entry contains MLD snooping statics for a SDP Bind in a TIs.</p> <p>Table description (for sdpBindMldSnpgStatsTable): sdpBindMldSnpgStatsTable contains statistics on MLD snooping per SDP Bind.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: vpls.SdpBindingMldSnpgCfg</p>		
sdpBndMldSnpgImportPolicyDrops [Sdp Bnd Mld Snpg Import Policy Drops] (sdpBndMldSnpgImportPolicyDrops)	long	The value of the object sdpBndMldSnpgImportPolicyDrops indicates the number of times an MLD group or source is dropped because of applying an import policy on this SDP Bind.
sdpBndMldSnpgMaxNumGroupsDrops [Sdp Bnd Mld Snpg Max Num Groups Drops] (sdpBndMldSnpgMaxNumGroupsDrops)	long	The value of the object sdpBndMldSnpgMaxNumGroupsDrops indicates the number of times an MLD group is dropped because of exceeding the configured maximum number of groups on this SDP Bind.
sdpBndMldSnpgRxBadEncodedPkts [Sdp Bnd Mld Snpg Rx Bad Encoded Pkts] (sdpBndMldSnpgRxBadEncodedPkts)	long	The value of the object sdpBndMldSnpgRxBadEncodedPkts indicates the number of MLD packets dropped on this SDP Bind because of a bad encoding.
sdpBndMldSnpgRxBadLenPkts [Sdp Bnd Mld Snpg Rx Bad Len Pkts] (sdpBndMldSnpgRxBadLenPkts)	long	The value of the object sdpBndMldSnpgRxBadLenPkts indicates the number of MLD packets dropped on this SDP Bind because of a bad length.
sdpBndMldSnpgRxBadMldChksmPkts [Sdp Bnd Mld Snpg Rx Bad Mld Chksm Pkts] (sdpBndMldSnpgRxBadMldChksmPkts)	long	The value of the object sdpBndMldSnpgRxBadMldChksmPkts indicates the number of dropped MLD packets on this SDP Bind because of a bad MLD header checksum.

Table 352 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpBndMldSnpgRxLocalScopePkts [Sdp Bnd Mld Snpg Rx Local Scope Pkts] (sdpBndMldSnpgRxLocalScopePkts)	long	The value of the object sdpBndMldSnpgRxLocalScopePkts indicates the number of MLD packets received on the link-local scope IPv6 multicast address.
sdpBndMldSnpgRxNoRtrAlertPkts [Sdp Bnd Mld Snpg Rx No Rtr Alert Pkts] (sdpBndMldSnpgRxNoRtrAlertPkts)	long	The value of the object sdpBndMldSnpgRxNoRtrAlertPkts indicates the number of MLD packets dropped on this SDP Bind because the Router Alert Option in the IP packet is not set.
sdpBndMldSnpgRxRsvdScopePkts [Sdp Bnd Mld Snpg Rx Rsvd Scope Pkts] (sdpBndMldSnpgRxRsvdScopePkts)	long	The value of the object sdpBndMldSnpgRxRsvdScopePkts indicates the number of MLD packets received on the reserved scope IPv6 multicast address.
sdpBndMldSnpgRxWrongVersionPkts [Sdp Bnd Mld Snpg Rx Wrong Version Pkts] (sdpBndMldSnpgRxWrongVersionPkts)	long	The value of the object sdpBndMldSnpgRxWrongVersionPkts indicates the total number of MLD packets with a wrong version received on this SDP Bind.
sdpBndMldSnpgRxZeroSrcAdrPkts [Sdp Bnd Mld Snpg Rx Zero Src Adr Pkts] (sdpBndMldSnpgRxZeroSrcAdrPkts)	long	The value of the object sdpBndMldSnpgRxZeroSrcAdrPkts indicates the number of MLD packets dropped on this SDP Bind because they contain a zero source IPv6 address.
sdpBndMldSnpgSendQueryCfgDrops [Sdp Bnd Mld Snpg Send Query Cfg Drops] (sdpBndMldSnpgSendQueryCfgDrops)	long	The value of the object sdpBndMldSnpgSendQueryCfgDrops indicates the number of times an MLD Query is dropped because the object sdpBndMldSnpgCfgSendQueries for this SDP Bind is set to 'inService(2)'. SdpBindingMldSnpgStats MIB entry name: sdpBindMldSnpgStatsEntry Entry description: sdpBindMldSnpgStatsEntry is an entry in the sdpBindMldSnpgStatsTable. Table 352 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpBndMldSnpgFwdGenQueries [Sdp Bnd Mld Snpg Fwd Gen Queries] (sdpBndMldSnpgFwdGenQueries)	long	The value of the object sdpBndMldSnpgFwdGenQueries indicates the number of MLD General Queries forwarded on this SDP Bind.
sdpBndMldSnpgFwdGrpSpecQueries [Sdp Bnd Mld Snpg Fwd Grp Spec Queries] (sdpBndMldSnpgFwdGrpSpecQueries)	long	The value of the object sdpBndMldSnpgFwdGrpSpecQueries indicates the number of MLD Group-Specific Queries forwarded on this SDP Bind.
sdpBndMldSnpgFwdSrcSpecQueries [Sdp Bnd Mld Snpg Fwd Src Spec Queries] (sdpBndMldSnpgFwdSrcSpecQueries)	long	The value of the object sdpBndMldSnpgFwdSrcSpecQueries indicates the number of MLD Group-And-Source-Specific Queries forwarded on this SDP Bind.
sdpBndMldSnpgFwdUnknownType [Sdp Bnd Mld Snpg Fwd Unknown Type] (sdpBndMldSnpgFwdUnknownType)	long	The value of the object sdpBndMldSnpgFwdUnknownType indicates the number of MLD unknown type packets forwarded on this SDP Bind.
sdpBndMldSnpgFwdV1Leaves [Sdp Bnd Mld Snpg Fwd V1 Leaves] (sdpBndMldSnpgFwdV1Leaves)	long	The value of the object sdpBndMldSnpgFwdV1Leaves indicates the number of MLDv1 Leaves forwarded on this SDP Bind.
sdpBndMldSnpgFwdV1Reports [Sdp Bnd Mld Snpg Fwd V1 Reports] (sdpBndMldSnpgFwdV1Reports)	long	The value of the object sdpBndMldSnpgFwdV1Reports indicates the number of MLDv1 Reports forwarded on this SDP Bind.
sdpBndMldSnpgFwdV2Reports [Sdp Bnd Mld Snpg Fwd V2 Reports] (sdpBndMldSnpgFwdV2Reports)	long	The value of the object sdpBndMldSnpgFwdV2Reports indicates the number of MLDv2 Reports forwarded on this SDP Bind.
sdpBndMldSnpgRxGenQueries [Sdp Bnd Mld Snpg Rx Gen Queries] (sdpBndMldSnpgRxGenQueries)	long	The value of the object sdpBndMldSnpgRxGenQueries indicates the number of MLD General Queries received on this SDP Bind.
sdpBndMldSnpgRxGrpSpecQueries [Sdp Bnd Mld Snpg Rx Grp Spec Queries] (sdpBndMldSnpgRxGrpSpecQueries)	long	The value of the object sdpBndMldSnpgRxGrpSpecQueries indicates the number of MLD Group-Specific Queries received on this SDP Bind.

Table 352 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpBndMldSnpgRxSrcSpecQueries [Sdp Bnd Mld Snpg Rx Src Spec Queries] (sdpBndMldSnpgRxSrcSpecQueries)	long	The value of the object sdpBndMldSnpgRxSrcSpecQueries indicates the number of MLD Group-And-Source-Specific Queries received on this SDP Bind.
sdpBndMldSnpgRxUnknownType [Sdp Bnd Mld Snpg Rx Unknown Type] (sdpBndMldSnpgRxUnknownType)	long	The value of the object sdpBndMldSnpgRxUnknownType indicates the number of MLD unknown type packets received on this SDP Bind.
sdpBndMldSnpgRxV1Leaves [Sdp Bnd Mld Snpg Rx V1 Leaves] (sdpBndMldSnpgRxV1Leaves)	long	The value of the object sdpBndMldSnpgRxV1Leaves indicates the number of MLDv1 Leaves received on this SDP Bind.
sdpBndMldSnpgRxV1Reports [Sdp Bnd Mld Snpg Rx V1 Reports] (sdpBndMldSnpgRxV1Reports)	long	The value of the object sdpBndMldSnpgRxV1Reports indicates the number of MLDv1 Reports received on this SDP Bind.
sdpBndMldSnpgRxV2Reports [Sdp Bnd Mld Snpg Rx V2 Reports] (sdpBndMldSnpgRxV2Reports)	long	The value of the object sdpBndMldSnpgRxV2Reports indicates the number of MLDv2 Reports received on this SDP Bind.
sdpBndMldSnpgTxGenQueries [Sdp Bnd Mld Snpg Tx Gen Queries] (sdpBndMldSnpgTxGenQueries)	long	The value of the object sdpBndMldSnpgTxGenQueries indicates the number of MLD General Queries transmitted on this SDP Bind.
sdpBndMldSnpgTxGrpSpecQueries [Sdp Bnd Mld Snpg Tx Grp Spec Queries] (sdpBndMldSnpgTxGrpSpecQueries)	long	The value of the object sdpBndMldSnpgTxGrpSpecQueries indicates the number of MLD Group-Specific Queries transmitted on this SDP Bind.
sdpBndMldSnpgTxSrcSpecQueries [Sdp Bnd Mld Snpg Tx Src Spec Queries] (sdpBndMldSnpgTxSrcSpecQueries)	long	The value of the object sdpBndMldSnpgTxSrcSpecQueries indicates the number of MLD Group-And-Source-Specific Queries transmitted on this SDP Bind.
sdpBndMldSnpgTxV1Leaves [Sdp Bnd Mld Snpg Tx V1 Leaves] (sdpBndMldSnpgTxV1Leaves)	long	The value of the object sdpBndMldSnpgTxV1Leaves indicates the number of MLDv1 Leaves transmitted on this SDP Bind.

tmnxPimSnpGGrpSrcStatsFwdedOct [Tmnx Pim SnpG Grp Src Stats Fwded Oct] (tmnxPimSnpGGrpSrcStatsFwdedOct)	long	The value of tmnxPimSnpGGrpSrcStatsFwdedOct indicates the number of multicast octets that were forwarded to the interfaces in the outgoing interface list. tmnxPimSnpGGrpSrcClfTable lists all the interfaces in the outgoing interface list.
tmnxPimSnpGGrpSrcStatsFwdedPkts [Tmnx Pim SnpG Grp Src Stats Fwded Pkts] (tmnxPimSnpGGrpSrcStatsFwdedPkts)	long	The value of tmnxPimSnpGGrpSrcStatsFwdedPkts indicates the number of multicast packets that were forwarded to the interfaces in the outgoing interface list. tmnxPimSnpGGrpSrcClfTable lists all the interfaces in the outgoing interface list.

Table 353 vrrp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InstanceAdditionalStats</p> <p>MIB entry name: tmnxVrrpRouterStatsEntry</p> <p>Entry description: Each row entry in the tmnxVrrpRouterStatsTable represents additional columns in the vrrpRouterStatsTable for statistics specific to the Nokia SROS series VRRP implementation.</p> <p>Table description (for tmnxVrrpRouterStatsTable): The tmnxVrrpRouterStatsTable provides an extension of the vrrpRouterStatsTable in the VRRP-MIB. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vrrpRouterStatsTable, and the augmenting table, tmnxVrrpRouterStatsTable. This in effect extends the vrrpRouterStatsTable with additional columns.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: vrrp.Instance</p>		
addressListDiscards [Address List Discards] (tmnxVrrpStatsAddressListDiscards)	long	The total number of VRRP advertisement packets discarded because the address list did not match the locally configured list for the virtual router.
advertiseIntervalDiscards [Advertise Interval Discards] (tmnxVrrpStatsAdvertiseIntervalDiscards)	long	The total number of VRRP advertisement packets discarded because the advertisement interval in the received packet was different than the one configured for the local virtual router.
advertiseSent [Advertise Sent] (tmnxVrrpStatsAdvertiseSent)	long	The total number of VRRP advertisements sent by this virtual router.
masterChanges [Master Changes] (tmnxVrrpStatsMasterChanges)	long	The value for tmnxVrrpStatsMasterChanges specifies the total number of times the virtual router has seen the master virtual router change.
preemptEvents [Preempt Events] (tmnxVrrpStatsPreemptEvents)	long	The value for tmnxVrrpStatsPreemptEvents specifies the total number of times the virtual router has preempted another non-owner master with lower priority.

Table 353 vrrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
preemptedEvents [Preempted Events] (tmnxVrrpStatsPreemptedEvents)	long	The value for tmnxVrrpStatsPreemptedEvents specifies the total number of times the virtual router has been preempted by another non-owner master with higher priority.
totalDiscards [Total Discards] (tmnxVrrpStatsTotalDiscards)	long	The total number of VRRP advertisement packets discarded for any reason. This includes the packets discarded due to advertise interval mismatch and address list mismatch.
<p>InstanceStats MIB entry name: vrrpRouterStatsEntry Entry description: An entry in the table, containing statistics information about a given virtual router. Table description (for vrrpRouterStatsTable): Table of virtual router statistics. Supports realtime plotting Supports scheduled collection Monitored class: vrrp.Instance</p>		
addressListErrors [Address List Errors] (vrrpStatsAddressListErrors)	long	The total number of packets received for which the address list does not match the locally configured list for the virtual router.
advertiseIntervalErrors [Advertise Interval Errors] (vrrpStatsAdvertiseIntervalErrors)	long	The total number of VRRP advertisement packets received for which the advertisement interval is different than the one configured for the local virtual router.
advertiseRcvd [Advertise Rcvd] (vrrpStatsAdvertiseRcvd)	long	The total number of VRRP advertisements received by this virtual router.
authFailures [Auth Failures] (vrrpStatsAuthFailures)	long	The total number of VRRP packets received that do not pass the authentication check.

Table 353 vrrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
authTypeMismatch [Auth Type Mismatch] (vrrpStatsAuthTypeMismatch)	long	The total number of packets received with 'Auth Type' not equal to the locally configured authentication method ('vrrpOperAuthType').
becomeMaster [Become Master] (vrrpStatsBecomeMaster)	long	The total number of times that this virtual router's state has transitioned to MASTER.
invalidAuthType [Invalid Auth Type] (vrrpStatsInvalidAuthType)	long	The total number of packets received with an unknown authentication type.
invalidTypePktsRcvd [Invalid Type Pkts Rcvd] (vrrpStatsInvalidTypePktsRcvd)	long	The number of VRRP packets received by the virtual router with an invalid value in the 'type' field.
ipTtlErrors [Ip Ttl Errors] (vrrpStatsIpTtlErrors)	long	The total number of VRRP packets received by the virtual router with IP TTL (Time-To-Live) not equal to 255.
packetLengthErrors [Packet Length Errors] (vrrpStatsPacketLengthErrors)	long	The total number of packets received with a packet length less than the length of the VRRP header.
priorityZeroPktsRcvd [Priority Zero Pkts Rcvd] (vrrpStatsPriorityZeroPktsRcvd)	long	The total number of VRRP packets received by the virtual router with a priority of '0'.
priorityZeroPktsSent [Priority Zero Pkts Sent] (vrrpStatsPriorityZeroPktsSent)	long	The total number of VRRP packets sent by the virtual router with a priority of '0'.

sapAGIngQosQStatsUncolored- PacketsOffered [Sap AGIng Qos QStats Uncolored Packets Offered] (aluSapAGIngQosQStatsUncol- oredPacketsOffered)	java. math. BigInte- ger	The number of uncolored packets offered to the ingress.
sapAGIngQosQueueId [Sap AGIng Qos Queue Id] (aluSapAGIngQosQueueId)	long	The index of the ingress QoS queue of this SAP Aggregation Group.

Table 356 aps statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>ApsChannelStats MIB entry name: apsChanStatusEntry Entry description: A conceptual row in the apsChanStatusTable. Table description (for apsChanStatusTable): This table contains status information for all SONET LTE interfaces that are included in APS groups. Supports realtime plotting Supports scheduled collection Monitored class: aps.ApsChannel</p>		
discontinuityTime [Discontinuity Time] (apsChanStatusDiscontinuityTime)	long	The value of sysUpTime on the most recent occasion at which any one or more of this channel's counters suffered a discontinuity. The relevant counters are the specific instances associated with this channel of any Counter32 object contained in apsChanStatusTable. If no such discontinuities have occurred since the last re-initialization of the local management subsystem, then this object contains a zero value.
lastSwitchover [Last Switchover] (apsChanStatusLastSwitchover)	long	When queried with index value apsChanConfigNumber other than 0, this object will return the value of sysUpTime when this channel last completed a switch to the protection line. If this channel has never switched to the protection line, the value 0 will be returned. When queried with index value apsChanConfigNumber set to 0, which is the protection line, this object will return the value of sysUpTime the last time that a working channel was switched back to the working line from this protection line. If no working channel has ever switched back to the working line from this protection line, the value 0 will be returned.

Table 356 aps statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
signalDegrades [Signal Degrades] (apsChanStatusSignalDegrades)	long	A count of Signal Degrade conditions. This condition occurs when the line Bit Error Rate exceeds the currently configured value of the relevant instance of apsConfigSdBerThreshold. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsChanStatusDiscontinuityTime.
signalFailures [Signal Failures] (apsChanStatusSignalFailures)	long	A count of Signal Failure conditions that have been detected on the incoming signal. This condition occurs when a loss of signal, loss of frame, AIS-L or a Line bit error rate exceeding the currently configured value of the relevant instance of apsConfigSfBerThreshold. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsChanStatusDiscontinuityTime.
switchoverSeconds [Switchover Seconds] (apsChanStatusSwitchoverSeconds)	long	The cumulative Protection Switching Duration (PSD) time in seconds. For a working channel, this is the cumulative number of seconds that service was carried on the protection line. For the protection line, this is the cumulative number of seconds that the protection line has been used to carry any working channel traffic. This information is only valid if revertive switching is enabled. The value 0 will be returned otherwise. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsChanStatusDiscontinuityTime. For example, if the value of an instance of apsChanStatusSwitchoverSeconds changes from a non-zero value to zero due to revertive switching being disabled, it is expected that the corresponding value of apsChanStatusDiscontinuityTime will be updated to reflect the time of the configuration change.

Table 356 aps statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
switchovers [Switchovers] (apsChanStatusSwitchovers)	long	When queried with index value apsChanConfigNumber other than 0, this object will return the number of times this channel has switched to the protection line. When queried with index value apsChanConfigNumber set to 0, which is the protection line, this object will return the number of times that any working channel has been switched back to the working line from this protection line. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsChanStatusDiscontinuityTime.
<p>ApsGroupStats MIB entry name: apsStatusEntry Entry description: A conceptual row in the apsStatusTable. Table description (for apsStatusTable): This table provides status information about APS groups that have been configured on the system. Supports realtime plotting Supports scheduled collection Monitored class: aps.ApsGroup</p>		
channelMismatches [Channel Mismatches] (apsStatusChannelMismatches)	long	A count of Channel Mismatch conditions. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsStatusDiscontinuityTime.
discontinuityTime [Discontinuity Time] (apsStatusDiscontinuityTime)	long	The value of sysUpTime on the most recent occasion at which any one or more of this APS group's counters suffered a discontinuity. The relevant counters are the specific instances associated with this APS group of any Counter32 object contained in apsStatusTable. If no such discontinuities have occurred since the last re-initialization of the local management subsystem, then this object contains a zero value.

Table 356 aps statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fEPLFs [fEPLFs] (apsStatusfEPLFs)	long	A count of Far-End Protection-Line Failure conditions. This condition is declared based on receiving SF on the protection line in the K1 byte. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsStatusDiscontinuityTime.
modeMismatches [Mode Mismatches] (apsStatusModeMismatches)	long	A count of Mode Mismatch conditions. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsStatusDiscontinuityTime.
pSBFs [PSBFs] (apsStatusPSBFs)	long	A count of Protection Switch Byte Failure conditions. This condition occurs when either an inconsistent APS byte or an invalid code is detected. An inconsistent APS byte occurs when no three consecutive K1 bytes of the last 12 successive frames are identical, starting with the last frame containing a previously consistent byte. An invalid code occurs when the incoming K1 byte contains an unused code or a code irrelevant for the specific switching operation (e.g., Reverse Request while no switching request is outstanding) in three consecutive frames. An invalid code also occurs when the incoming K1 byte contains an invalid channel number in three consecutive frames. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsStatusDiscontinuityTime.

Table 357 atm statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AtmOamVplStatistics</p> <p>MIB entry name: tAtmOamVplStatisticsEntry</p> <p>Entry description: An entry in the tAtmVplStatisticsTable containing statistics information applicable to a particular VPL entry in the AToM MIB.</p> <p>Table description (for tAtmOamVplStatisticsTable): The tAtmOamVplStatisticsTable is used to gather oam statistics on a particular VPL entry in the RFC 2515 AToM MIB.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: atm.VPConnection</p>		
tAtmOamVplStatsAISCellsRxd [TAtm Oam Vpl Stats AISCells Rxd] (tAtmOamVplStatsAISCellsRxd)	long	The value of tAtmOamVplStatsAISCellsRxd indicates the number of AIS cells received on this VPL for both end to end and segment.
tAtmOamVplStatsAISCellsTxd [TAtm Oam Vpl Stats AISCells Txd] (tAtmOamVplStatsAISCellsTxd)	long	The value of tAtmOamVplStatsAISCellsTxd indicates the number of AIS cells transmitted on this VPL for both end to end and segment.
tAtmOamVplStatsCrc10Errors [TAtm Oam Vpl Stats Crc 10 Errors] (tAtmOamVplStatsCrc10Errors)	long	The value of tAtmOamVplStatsCrc10Errors indicates the number of OAM cells discarded on this VPL with CRC 10 errors.
tAtmOamVplStatsLoopbackCellsRxd [TAtm Oam Vpl Stats Loopback Cells Rxd] (tAtmOamVplStatsLoopbackCellsRxd)	long	The value of tAtmOamVplStatsLoopbackCellsRxd indicates the number of loopback requests and responses received on this VPL for both end to end and segment.
tAtmOamVplStatsLoopbackCellsTxd [TAtm Oam Vpl Stats Loopback Cells Txd] (tAtmOamVplStatsLoopbackCellsTxd)	long	The value of tAtmOamVplStatsLoopbackCellsTxd indicates the number of loopback requests and responses transmitted on this VPL for both end to end and segment.
tAtmOamVplStatsOtherCellsRxd [TAtm Oam Vpl Stats Other Cells Rxd] (tAtmOamVplStatsOtherCellsRxd)	long	This value of tAtmOamVplStatsOtherCellsRxd indicates the number of OAM cells that are received on this VPL but not identified.

Table 357 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tAtmOamVplStatsRDICellsRxd [TAtm Oam Vpl Stats RDICells Rxd] (tAtmOamVplStatsRDICellsRxd)	long	The value of tAtmOamVplStatsRDICellsRxd indicates the number of RDI cells received on this VPL for both end to end and segment.
tAtmOamVplStatsRDICellsTxd [TAtm Oam Vpl Stats RDICells Txd] (tAtmOamVplStatsRDICellsTxd)	long	The value of tAtmOamVplStatsRDICellsTxd indicates the number of RDI cells transmitted on this VPL for both end to end and segment.
<p>AtmVplStatistics MIB entry name: tAtmVplStatisticsEntry Entry description: An entry in the tAtmVplStatisticsTable containing statistics information applicable to a particular VPL entry in the AToM MIB. Table description (for tAtmVplStatisticsTable): The tAtmVplStatisticsTable is used to gather cell-level statistics on a particular VPL entry in the RFC 2515 AToM MIB. Supports realtime plotting Supports scheduled collection Monitored class: atm.VPConnection</p>		
tAtmVplStatsDrpCellsRxd [TAtm Vpl Stats Drp Cells Rxd] (tAtmVplStatsDrpCellsRxd)	long	The value of tAtmVplStatsDrpCellsRxd indicates the number of all policer cells discards (CLP=0+1) of the VPL. This excludes any buffer management discards (if applicable).
tAtmVplStatsDrpClp0CellsRxd [TAtm Vpl Stats Drp Clp 0 Cells Rxd] (tAtmVplStatsDrpClp0CellsRxd)	long	The value of tAtmVplStatsDrpClp0CellsRxd indicates the number of all policer CLP=0 cells discards of the VPL. This excludes any buffer management discards (if applicable).
tAtmVplStatsDrpClp0CellsTxd [TAtm Vpl Stats Drp Clp 0 Cells Txd] (tAtmVplStatsDrpClp0CellsTxd)	long	The value of tAtmVplStatsDrpClp0CellsTxd indicates the number of all CLP=0 cells discards of this VPL. This includes both discards due to buffer management and policer.
tAtmVplStatsTagCells [TAtm Vpl Stats Tag Cells] (tAtmVplStatsTagCells)	long	The value of tAtmVplStatsTagCells indicates the number of tagged CLP=0 cells of the VPL. The egress may or may not discard these cells.

Table 357 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tAtmVplStatsTotalBytesRxd [TAtm Vpl Stats Total Bytes Rxd] (tAtmVplStatsTotalBytesRxd)	java. math. BigInteger	The value of tAtmVplStatsTotalBytesRxd indicates the number of bytes received by this VPL. This is the number of tAtmVplStatsTotalCellsRxd multiplied by 53.
tAtmVplStatsTotalBytesTxd [TAtm Vpl Stats Total Bytes Txd] (tAtmVplStatsTotalBytesTxd)	java. math. BigInteger	The value of tAtmVplStatsTotalBytesTxd indicates the number of bytes transmitted by this VPL. This is the number of tAtmVplStatsTotalCellsTxd multiplied by 53.
tAtmVplStatsTotalCellsRxd [TAtm Vpl Stats Total Cells Rxd] (tAtmVplStatsTotalCellsRxd)	java. math. BigInteger	The value of tAtmVplStatsTotalCellsRxd indicates the number of valid ATM cells received by the VPL including both CLP=0 and CLP=1 cells. If traffic policing is implemented, then cells are counted prior to the application of traffic policing.
tAtmVplStatsTotalCellsTxd [TAtm Vpl Stats Total Cells Txd] (tAtmVplStatsTotalCellsTxd)	java. math. BigInteger	The value of tAtmVplStatsTotalCellsTxd indicates the number of valid ATM cells transmitted by the VPL including both CLP=0 and CLP=1 cells. If traffic policing is implemented, then cells are counted prior to the application of traffic policing.
tAtmVplStatsTotalClp0CellsRxd [TAtm Vpl Stats Total Clp 0 Cells Rxd] (tAtmVplStatsTotalClp0CellsRxd)	java. math. BigInteger	The value of tAtmVplStatsTotalClp0CellsRxd indicates the number of valid ATM CLP=0 cells received by the VPL. If traffic policing is implemented, then cells are counted prior to the application of traffic policing.
tAtmVplStatsTotalClp0CellsTxd [TAtm Vpl Stats Total Clp 0 Cells Txd] (tAtmVplStatsTotalClp0CellsTxd)	java. math. BigInteger	The value of tAtmVplStatsTotalClp0CellsTxd indicates the number of valid ATM CLP=0 cells transmitted by the VPL. If traffic policing is implemented, then cells are counted prior to the application of traffic policing.

Table 357 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceStats</p> <p>MIB entry name: tAtmIntfStatsEntry</p> <p>Entry description: An entry in the tAtmIntfStatsEntry containing statistics information applicable to an ATM interface.</p> <p>Table description (for tAtmIntfStatsTable): The tAtmIntfStatsTable contains ATM interface stats at the ATM Layer.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: atm.Interface</p>		
tAtmInterfaceStatsTotalBytesRxd [TAtm Interface Stats Total Bytes Rxd] (tAtmIntfStatsTotalBytesRxd)	java. math. BigInteger	The value of tAtmIntfStatsTotalBytesRxd indicates the number of bytes received on this interface. This is the number of tAtmIntfStatsTotalCellsRxd multiplied by 53.
tAtmInterfaceStatsTotalBytesTxd [TAtm Interface Stats Total Bytes Txd] (tAtmIntfStatsTotalBytesTxd)	java. math. BigInteger	The value of tAtmIntfStatsTotalBytesTxd indicates the number of bytes transmitted on this interface. This is the number of tAtmIntfStatsTotalCellsTxd multiplied by 53.
tAtmInterfaceStatsTotalCellsRxd [TAtm Interface Stats Total Cells Rxd] (tAtmIntfStatsTotalCellsRxd)	java. math. BigInteger	The value of tAtmIntfStatsTotalCellsRxd indicates the number of valid ATM cells received by the ATM interface including both CLP=0 and CLP=1 cells. If traffic policing is implemented, then cells are counted prior to the application of traffic policing.
tAtmInterfaceStatsTotalCellsTxd [TAtm Interface Stats Total Cells Txd] (tAtmIntfStatsTotalCellsTxd)	java. math. BigInteger	The value of tAtmIntfStatsTotalCellsTxd indicates the number of valid ATM cells transmitted by the ATM interface including both CLP=0 and CLP=1 cells.
tAtmInterfaceStatsTotalUnknownCellsDropped [TAtm Interface Stats Total Unknown Cells Dropped] (tAtmIntfStatsTotalUnknCellsDrp)	long	The value of tAtmIntfStatsTotalUnknCellsDrp indicates the number of cells dropped due to an unknown VPI/VCI.

Table 357 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PvcConnectionAal5PerformanceStats</p> <p>MIB entry name: aal5VccEntry</p> <p>Entry description: This list contains the AAL5 VCC performance parameters and is indexed by ifIndex values of AAL5 interfaces and the associated VPI/VCI values.</p> <p>Table description (for aal5VccTable): This table contains AAL5 VCC performance parameters.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: atm.PvcConnection</p>		
aal5CrcErrors [Aal5 Crc Errors] (aal5VccCrcErrors)	long	The number of AAL5 CPCS PDUs received with CRC-32 errors on this AAL5 VCC at the interface associated with an AAL5 entity.
aal5OverSizedSDUs [Aal5 Over Sized SDUs] (aal5VccOverSizedSDUs)	long	The number of AAL5 CPCS PDUs discarded on this AAL5 VCC at the interface associated with an AAL5 entity because the AAL5 SDUs were too large.
aal5SarTimeOuts [Aal5 Sar Time Outs] (aal5VccSarTimeOuts)	long	The number of partially re-assembled AAL5 CPCS PDUs which were discarded on this AAL5 VCC at the interface associated with an AAL5 entity because they were not fully re-assembled within the required time period. If the re-assembly timer is not supported, then this object contains a zero value.
<p>PvcConnectionAal5Stats</p> <p>MIB entry name: tAal5VccStatisticsEntry</p> <p>Entry description: An entry in the tAal5VccStatisticsTable containing statistics information applicable to a particular AAL5 VCC entry in the AToM MIB.</p> <p>Table description (for tAal5VccStatisticsTable): tAal5VccStatisticsTable is used to gather AAL5-level statistics on a particular AAL5 VCC entry in the RFC 2515 AToM MIB.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: atm.PvcConnection</p>		

Table 357 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aal5DroppedPacketsRxd [Aal5 Dropped Packets Rxd] (tAal5VccStatsDrpPacketsRxd)	java. math. BigInteger	The value of tAal5VccStatsDrpPacketsRxd indicates the number of dropped AAL-5 SDUs that have been received on the AAL-5 VCC.
aal5DroppedPacketsTxd [Aal5 Dropped Packets Txd] (tAal5VccStatsDrpPacketsTxd)	java. math. BigInteger	The value of tAal5VccStatsDrpPacketsTxd indicates the number of dropped AAL-5 SDUs that would have been transmitted on the AAL-5 VCC.
aal5PacketsRxd [Aal5 Packets Rxd] (tAal5VccStatsPacketsRxd)	java. math. BigInteger	The value of tAal5VccStatsPacketsRxd indicates the number of valid AAL-5 SDUs and AAL-5 SDUs with CRC-32 errors received by the AAL-5 VCC.
aal5PacketsTxd [Aal5 Packets Txd] (tAal5VccStatsPacketsTxd)	java. math. BigInteger	The value of tAal5VccStatsPacketsTxd indicates the number of AAL-5 SDUs transmitted by the AAL-5 VCC.
PvcConnectionOamStats MIB entry name: tAtmOamVclStatisticsEntry Entry description: An entry in the tAtmVclStatisticsTable containing statistics information applicable to a particular VCL entry in the AToM MIB. Table description (for tAtmOamVclStatisticsTable): The tAtmOamVclStatisticsTable is used to gather oam statistics on a particular VCL entry in the RFC 2515 AToM MIB. Supports realtime plotting Supports scheduled collection Monitored class: atm.PvcConnection		
oamAISCellsRxd [Oam AISCells Rxd] (tAtmOamVclStatsAISCellsRxd)	long	The value of tAtmOamVclStatsAISCellsRxd indicates the number of AIS cells received on this VC for both end to end and segment.

Table 357 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
oamAISCellsTxd [Oam AISCells Txd] (tAtmOamVclStatsAISCellsTxd)	long	The value of tAtmOamVclStatsAISCellsTxd indicates the number of AIS cells transmitted on this VC for both end to end and segment.
oamCrc10Errors [Oam Crc 10 Errors] (tAtmOamVclStatsCrc10Err)	long	The value of tAtmOamVclStatsCrc10Err indicates the number of oam cells discarded with CRC 10 Errors.
oamLoopbackCellsRxd [Oam Loopback Cells Rxd] (tAtmOamVclStatsLoopbackCellsRxd)	long	The value of tAtmOamVclStatsLoopbackCellsRxd indicates the number of loopback requests and responses received on this VC for both end to end and segment.
oamLoopbackCellsTxd [Oam Loopback Cells Txd] (tAtmOamVclStatsLoopbackCellsTxd)	long	The value of tAtmOamVclStatsLoopbackCellsTxd indicates the number of loopback requests and responses transmitted on this VC for both end to end and segment.
oamOtherCellsRxd [Oam Other Cells Rxd] (tAtmOamVclStatsOtherCellsRxd)	long	This value of tAtmOamVclStatsOtherCellsRxd indicates the number of oam cells that are received but not identified.
oamRDICellsRxd [Oam RDICells Rxd] (tAtmOamVclStatsRDICellsRxd)	long	The value of tAtmOamVclStatsRDICellsRxd indicates the number of RDI cells received on this VC for both end to end and segment.
oamRDICellsTxd [Oam RDICells Txd] (tAtmOamVclStatsRDICellsTxd)	long	The value of tAtmOamVclStatsRDICellsTxd indicates the number of RDI cells transmitted on this VC for both end to end and segment.

Table 357 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PvcConnectionStats</p> <p>MIB entry name: tAtmVclStatisticsEntry</p> <p>Entry description: An entry in the tAtmVclStatisticsTable containing statistics information applicable to a particular VCL entry in the AToM MIB.</p> <p>Table description (for tAtmVclStatisticsTable): The tAtmVclStatisticsTable is used to gather cell-level statistics on a particular VCL entry in the RFC 2515 AToM MIB.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: atm.PvcConnection</p>		
totalBytesRxd [Total Bytes Rxd] (tAtmVclStatsTotalBytesRxd)	java. math. BigInteger	The value of tAtmVclStatsTotalBytesRxd indicates the number of bytes received by this Vcl. This is the number of tAtmVclStatsTotalCellsRxd multiplied by 53.
totalBytesTxd [Total Bytes Txd] (tAtmVclStatsTotalBytesTxd)	java. math. BigInteger	The value of tAtmVclStatsTotalBytesTxd indicates the number of bytes transmitted by this Vcl. This is the number of tAtmVclStatsTotalCellsTxd multiplied by 53.
totalPacketsRxd [Total Packets Rxd] (tAtmVclStatsTotalCellsRxd)	java. math. BigInteger	The value of tAtmVclStatsTotalCellsRxd indicates the number of valid ATM cells received by the VCL including both CLP=0 and CLP=1 cells. If traffic policing is implemented, then cells are counted prior to the application of traffic policing.
totalPacketsTxd [Total Packets Txd] (tAtmVclStatsTotalCellsTxd)	java. math. BigInteger	The value of tAtmVclStatsTotalCellsTxd indicates the number of valid ATM cells transmitted by the VCL including both CLP=0 and CLP=1 cells. If traffic policing is implemented, then cells are counted prior to the application of traffic policing.

Table 357 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>TCStats</p> <p>MIB entry name: atmInterfaceTCEntry</p> <p>Entry description: This list contains TC Sublayer parameters and state variables at the ATM interface and is indexed by the ifIndex value of the ATM interface.</p> <p>Table description (for atmInterfaceTCTable): This table contains ATM interface TC Sublayer parameters and state variables, one entry per ATM interface port.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: atm.Interface</p>		
ocdEvents [Ocd Events] (atmInterfaceOCDEvents)	long	The number of times the Out of Cell Delineation (OCD) events occur. If seven consecutive ATM cells have Header Error Control (HEC) violations, an OCD event occurs. A high number of OCD events may indicate a problem with the TC Sublayer.
<p>TCSubLayerStats</p> <p>MIB entry name: tAtmTCSublayerEntry</p> <p>Entry description: An entry in the tAtmTCSublayerEntry containing additional management information about the Transmission Coverage Sublayer.</p> <p>Table description (for tAtmTCSublayerTable): The tAtmTCSublayerTable contains the Transmission Convergence Sublayer data.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: atm.Interface</p>		
hecErrors [Hec Errors] (tAtmTCSublayerHecErrors)	long	The value of tAtmTCSublayerHecErrors indicates the number of cells with uncorrectable HEC Errors on this interface.
hecErrorsFixed [Hec Errors Fixed] (tAtmTCSublayerHecErrorsFixed)	long	The value of tAtmTCSublayerHecErrorsFixed indicates the number of cells with correctable HEC Errors on this interface.

Table 358 bgp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PeerAdditionalStats</p> <p>MIB entry name: bgpPeerEntry</p> <p>Entry description: Entry containing information about the connection with a BGP peer.</p> <p>Table description (for bgpPeerTable): BGP peer table. This table contains, one entry per BGP peer, information about the connections with BGP peers.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bgp.Peer</p>		
fsmEstablishedTime [Fsm Established Time] (bgpPeerFsmEstablishedTime)	long	This timer indicates how long (in seconds) this peer has been in the Established state or how long since this peer was last in the Established state. It is set to zero when a new peer is configured or the router is booted.
<p>PeerRouteTargetStats</p> <p>MIB entry name: tBgpPeerNgOperEntry</p> <p>Entry description: Defines an entry (conceptual row) in the tBgpPeerNgOperTable. Entries in tBgpPeerNgOperTable are created when entries are created in tBgpPeerNgTable.</p> <p>Table description (for tBgpPeerNgOperTable): The tBgpPeerNgOperTable is the list of configured BGP Peers and their operational status information.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bgp.Peer</p>		
rtActivePfxs [Rt Active Pfxs] (tBgpPeerNgOperRtTgtActivePfxs)	long	The value of tBgpPeerNgOperRtTgtActivePfxs indicates the number of active route target prefixes from this peer.
rtRecvPfxs [Rt Recv Pfxs] (tBgpPeerNgOperRtTgtRecvPfxs)	long	The value of tBgpPeerNgOperRtTgtRecvPfxs indicates the number of route target prefixes received from this peer.

Table 358 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rtSentPfxs [Rt Sent Pfxs] (tBgpPeerNgOperRtTgtSentPfxs)	long	The value of tBgpPeerNgOperRtTgtSentPfxs indicates the number of route target prefixes transmitted to this peer.
rtSuppPfxDamp [Rt Supp Pfx Damp] (tBgpPeerNgOperRtTgtSuppPfxDamp)	long	The value of tBgpPeerNgOperRtTgtRecvPfxs indicates the number of route target prefixes from this peer, which have been suppressed by damping.
<p>PeerStats</p> <p>MIB entry name: tBgpPeerNgOperEntry</p> <p>Entry description: Defines an entry (conceptual row) in the tBgpPeerNgOperTable. Entries in tBgpPeerNgOperTable are created when entries are created in tBgpPeerNgTable.</p> <p>Table description (for tBgpPeerNgOperTable): The tBgpPeerNgOperTable is the list of configured BGP Peers and their operational status information.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bgp.Peer</p>		
flaps [Flaps] (tBgpPeerNgOperFlaps)	long	The value of tBgpPeerNgOperFlaps indicates the number of flaps of updates from this peer.
inputQueueMessages [Input Queue Messages] (tBgpPeerNgOperInputQueueMsgs)	long	The value of tBgpPeerNgOperInputQueueMsgs indicates the number of unprocessed messages in the queue, from this peer.
lastEvent [Last Event] (tBgpPeerNgOperLastEvent)	long	The value of tBgpPeerNgOperLastEvent indicates the last BGP event of this peer.
lastRestartTime [Last Restart Time] (tBgpPeerNgOperLastRestartTime)	long	The value of tBgpPeerNgOperLastRestartTime indicates the last time the peer attempted restart.

Table 358 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lastState [Last State] (tBgpPeerNgOperLastState)	long	The value of tBgpPeerNgOperLastState indicates the last BGP state of this peer.
mcastActivePrefixes [Mcast Active Prefixes] (tBgpPeerNgOperMCastV4ActivePfxs)	long	The value of tBgpPeerNgOperMCastV4ActivePfxs indicates the number of active IPv4 multicast prefixes from this peer.
mcastPrefixesSuppressedByDamping [Mcast Prefixes Suppressed By Damping] (tBgpPeerNgOperMCastV4SuppPfxDamp)	long	The value of tBgpPeerNgOperMCastV4SuppPfxDamp indicates the number of IPv4 multicast prefixes from this peer, which have been suppressed by damping.
mcastReceivedPrefixes [Mcast Received Prefixes] (tBgpPeerNgOperMCastV4RecvPfxs)	long	The value of tBgpPeerNgOperMCastV4RecvPfxs indicates the number of IPv4 multicast prefixes received from this peer.
mcastSentPrefixes [Mcast Sent Prefixes] (tBgpPeerNgOperMCastV4SentPfxs)	long	The value of tBgpPeerNgOperMCastV4SentPfxs indicates the number of IPv4 multicast prefixes transmitted to this peer.
messageOctetsReceived [Message Octets Received] (tBgpPeerNgOperMsgOctetsRcvd)	java. math. BigInteger	The value of tBgpPeerNgOperMsgOctetsRcvd indicates the number of octets received from this peer.
messageOctetsSent [Message Octets Sent] (tBgpPeerNgOperMsgOctetsSent)	java. math. BigInteger	The value of tBgpPeerNgOperMsgOctetsSent indicates the number of octets transmitted to this peer.
mvpnActivePrefixes [Mvpn Active Prefixes] (tBgpPeerNgOperMvpnV4ActivePfxs)	long	The value of tBgpPeerNgOperMvpnV4ActivePfxs indicates the number of active MVPN IPv4 prefixes from this peer.

Table 358 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mvpnPrefixesSuppressedByDamping [Mvpn Prefixes Suppressed By Damping] (tBgpPeerNgOperMvpnV4SuppPfxDamp)	long	The value of tBgpPeerNgOperMvpnV4SuppPfxDamp indicates the number of MVPN IPv4 prefixes from this peer, which have been suppressed by damping.
mvpnReceivedPrefixes [Mvpn Received Prefixes] (tBgpPeerNgOperMvpnV4RecvPfxs)	long	The value of tBgpPeerNgOperMvpnV4RecvPfxs indicates the number of MVPN IPv4 prefixes received from this peer.
mvpnSentPrefixes [Mvpn Sent Prefixes] (tBgpPeerNgOperMvpnV4SentPfxs)	long	The value of tBgpPeerNgOperMvpnV4SentPfxs indicates the number of MVPN IPv4 prefixes transmitted to this peer.
numberOfRestarts [Number Of Restarts] (tBgpPeerNgOperNumRestarts)	long	The value of tBgpPeerNgOperNumRestarts indicates the number of times the peer has attempted restart.
outputQueueMessages [Output Queue Messages] (tBgpPeerNgOperOutputQueueMsgs)	long	The value of tBgpPeerNgOperOutputQueueMsgs indicates the number of untransmitted messages in the queue, to this peer.
pathsReceived [Paths Received] (tBgpPeerNgOperReceivedPaths)	long	The value of tBgpPeerNgOperReceivedPaths indicates the number of paths received from this peer.
prefixesActive [Prefixes Active] (tBgpPeerNgOperActivePrefixes)	long	The value of tBgpPeerNgOperActivePrefixes indicates the number of active prefixes from this peer.
prefixesReceived [Prefixes Received] (tBgpPeerNgOperReceivedPrefixes)	long	The value of tBgpPeerNgOperReceivedPrefixes indicates the number of prefixes received from this peer.
prefixesSent [Prefixes Sent] (tBgpPeerNgOperSentPrefixes)	long	The value of tBgpPeerNgOperSentPrefixes indicates the number of prefixes transmitted to this peer.

Table 358 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
prefixesSuppressedByDamping [Prefixes Suppressed By Damping] (tBgpPeerNgOperV4SuppPfxDamp)	long	The value of tBgpPeerNgOperV4SuppPfxDamp indicates the number of IPv6 prefixes from this peer, which have been suppressed by damping.
v6ActivePrefixes [V6 Active Prefixes] (tBgpPeerNgOperV6ActivePrefixes)	long	The value of tBgpPeerNgOperV6ActivePrefixes indicates the number of active IPv6 prefixes from this peer.
v6PrefixesSuppressedByDamping [V6 Prefixes Suppressed By Damping] (tBgpPeerNgOperV6SuppPfxDamp)	long	The value of tBgpPeerNgOperV6SuppPfxDamp indicates the number of IPv6 prefixes from this peer, which have been suppressed by damping.
v6ReceivedPrefixes [V6 Received Prefixes] (tBgpPeerNgOperV6ReceivedPrefixes)	long	The value of tBgpPeerNgOperV6ReceivedPrefixes indicates the number of IPv6 prefixes received from this peer.
v6SentPrefixes [V6 Sent Prefixes] (tBgpPeerNgOperV6SentPrefixes)	long	The value of tBgpPeerNgOperV6SentPrefixes indicates the number of IPv6 prefixes transmitted to this peer.
vpnActivePrefixes [Vpn Active Prefixes] (tBgpPeerNgOperVpnActivePrefixes)	long	The value of tBgpPeerNgOperVpnActivePrefixes indicates the number of active VPN prefixes from this BGP peer.
vpnPrefixesSuppressedByDamping [Vpn Prefixes Suppressed By Damping] (tBgpPeerNgOperVpnSuppPfxDamp)	long	The value of tBgpPeerNgOperVpnSuppPfxDamp indicates the number of VPN IPv4 prefixes from this peer, which have been suppressed by damping.
vpnReceivedPrefixes [Vpn Received Prefixes] (tBgpPeerNgOperVpnRecvPrefixes)	long	The value of tBgpPeerNgOperVpnRecvPrefixes indicates the number of received VPN prefixes.
vpnSentPrefixes [Vpn Sent Prefixes] (tBgpPeerNgOperVpnSentPrefixes)	long	The value of tBgpPeerNgOperVpnSentPrefixes indicates the number of transmitted VPN prefixes.

Table 358 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PeerVprnlpv6Stats</p> <p>MIB entry name: tBgpPeerNgOperEntry</p> <p>Entry description: Defines an entry (conceptual row) in the tBgpPeerNgOperTable. Entries in tBgpPeerNgOperTable are created when entries are created in tBgpPeerNgTable.</p> <p>Table description (for tBgpPeerNgOperTable): The tBgpPeerNgOperTable is the list of configured BGP Peers and their operational status information.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bgp.Peer</p>		
vpnIpv6ActivePfxs [Vpn Ipv 6 Active Pfxs] (tBgpPeerNgOperVpnIpv6ActivePfxs)	long	The value of tBgpPeerNgOperVpnIpv6ActivePfxs indicates the number of active VPN IPv6 prefixes from this peer.
vpnIpv6RecvPfxs [Vpn Ipv 6 Recv Pfxs] (tBgpPeerNgOperVpnIpv6RecvPfxs)	long	The value of tBgpPeerNgOperVpnIpv6RecvPfxs indicates the number of VPN IPv6 prefixes received from this peer.
vpnIpv6SentPfxs [Vpn Ipv 6 Sent Pfxs] (tBgpPeerNgOperVpnIpv6SentPfxs)	long	The value of tBgpPeerNgOperVpnIpv6SentPfxs indicates the number of VPN IPv6 prefixes transmitted to this peer.
vpnIpv6SuppPfxDamp [Vpn Ipv 6 Supp Pfx Damp] (tBgpPeerNgOperVpnIpv6SuppPfxDamp)	long	The value of tBgpPeerNgOperVpnIpv6SuppPfxDamp indicates the number of VPN IPv6 prefixes from this peer, which have been suppressed by damping.

Table 359 bundle statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>BundleStats</p> <p>MIB entry name: tmnxBundleEntry</p> <p>Entry description: Each row entry represents a multilink bundle on a MDA. Entries can be created and deleted via SNMP SET operations using the tmnxBundleRowStatus object. The tmnxBundleBundleID will contain the bundle number encoded in it. The bundle number is unique for a MDA. For each tmnxBundleEntry, there will be a corresponding entry in the tmnxPortTable and the ifTable.</p> <p>Table description (for tmnxBundleTable): The tmnxBundleTable has an entry for a bundle created on the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bundle.Interface</p>		
inputDiscards [Input Discards] (tmnxBundleInputDiscards)	long	tmnxBundleInputDiscards indicates the number of LCP packets that were discarded. This object is only supported for a tmnxBundleType value of mlppp.
upTime [Up Time] (tmnxBundleUpTime)	long	tmnxBundleUpTime indicates the time since the bundle is operationally 'inService'.
<p>MultiClassMlpppStats</p> <p>MIB entry name: tmnxMcMlpppStatsEntry</p> <p>Entry description: Defines an entry in tmnxMcMlpppStatsTable. Entries are created and deleted by the system depending on the number of classes being used by a given MLPPP bundle.</p> <p>Table description (for tmnxMcMlpppStatsTable): Defines the Nokia SROS series Multiclass MLPPP statistics table for providing the capability of retrieving the traffic statistics for the physical queues being used for a class of a multiclass MLPPP bundle to forward the traffic.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bundle.MultiClassMlpppSpecifics</p>		

Table 359 bundle statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mcMlpppStatsEgressErrPkt [Mc Mlppp Stats Egress Err Pkt] (tmnxMcMlpppStatsEgressErrPkt)	long	The value of tmnxMcMlpppStatsEgressErrPkt indicates the total number of packets discarded due to segmentation errors on the bundle for the given class on egress.
mcMlpppStatsEgressOct [Mc Mlppp Stats Egress Oct] (tmnxMcMlpppStatsEgressOct)	long	The value of tmnxMcMlpppStatsEgressOct indicates the total number of octets in all packets received on the bundle for the given class on egress before segmentation.
mcMlpppStatsEgressPkt [Mc Mlppp Stats Egress Pkt] (tmnxMcMlpppStatsEgressPkt)	long	The value of tmnxMcMlpppStatsEgressPkt indicates the total number of packets forwarded on the bundle for the given class on egress towards the line.
mcMlpppStatsIngressErrPkt [Mc Mlppp Stats Ingress Err Pkt] (tmnxMcMlpppStatsIngressErrPkt)	long	The value of tmnxMcMlpppStatsIngressErrPkt indicates the total number of packets discarded due to reassembly errors on the bundle for the given class on ingress.
mcMlpppStatsIngressOct [Mc Mlppp Stats Ingress Oct] (tmnxMcMlpppStatsIngressOct)	long	The value of tmnxMcMlpppStatsIngressOct indicates the total number of octets in all packets received on the bundle for the given class on ingress before reassembly.
mcMlpppStatsIngressPkt [Mc Mlppp Stats Ingress Pkt] (tmnxMcMlpppStatsIngressPkt)	long	The value of tmnxMcMlpppStatsIngressPkt indicates the total number of packets forwarded on the bundle for the given class on ingress towards higher layer protocols.

Table 360 dhcp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>LocalDhcp6ServerPoolStats</p> <p>MIB entry name: tmnxDhcpsPoolStats6Entry</p> <p>Entry description: Each row entry in the tmnxDhcpsPoolStats6Table represents additional columns of operational data for a pool that belongs to the specified DHCPv6 server instance. The value of these columns is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)'.</p> <p>Table description (for tmnxDhcpsPoolStats6Table): The tmnxDhcpsPoolStats6Table has an entry for each pool that belongs to the specified DHCPv6 server instance.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: dhcp.Address6Pool</p>		
advertisedLeases [Advertised Leases] (tmnxDhcpsPoolStats6Advertise)	long	The value of tmnxDhcpsPoolStats6Advertise indicates the number of local leases in this pool that are in state 'advertised'.
extendedStatisticsEnabled [Extended Statistics Enabled] (tmnxDhcpsPoolStats6HasExt)	boolean	The value of tmnxDhcpsPoolStats6HasExt indicates whether the extended statistics collection for this prefix is enabled. These extended statistics are only collected when the length of the configured subnet is between /32 en /64.
freeBlocks [Free Blocks] (tmnxDhcpsPoolStats6FreeBlk)	java.math.BigInteger	The value of tmnxDhcpsPoolStats6FreeBlk indicates the number of provisioned but unused /64 blocks.
highestValAdvertisedLeases [Highest Val Advertised Leases] (tmnxDhcpsPoolStats6AdvertP)	long	The value of tmnxDhcpsPoolStats6AdvertP indicates the highest value of tmnxDhcpsPoolStats6Advertise since the last reset of the extended statistics.
highestValPctBlocksInUse [Highest Val Pct Blocks In Use] (tmnxDhcpsPoolStats6UsedPctP)	int	The value of tmnxDhcpsPoolStats6UsedPctP indicates the highest value of tmnxDhcpsPoolStats6UsedPct since the last reset of the extended statistics.

Table 360 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
highestValRemoteAdvertisedLeases [Highest Val Remote Advertised Leases] (tmnxDhcpsPoolStats6FoAdvertP)	long	The value of tmnxDhcpsPoolStats6FoAdvertP indicates the highest value of tmnxDhcpsPoolStats6FoAdvertise since the last reset of the extended statistics.
highestValRemotePctBlocksInUse [Highest Val Remote Pct Blocks In Use] (tmnxDhcpsPoolStats6FoUsedPctP)	int	The value of tmnxDhcpsPoolStats6FoUsedPctP indicates the highest value of tmnxDhcpsPoolStats6FoUsedPct since the last reset of the extended statistics.
highestValRemoteStableLeases [Highest Val Remote Stable Leases] (tmnxDhcpsPoolStats6FoStableP)	long	The value of tmnxDhcpsPoolStats6FoStableP indicates the highest value of tmnxDhcpsPoolStats6FoStable since the last reset of the extended statistics.
highestValStableLeases [Highest Val Stable Leases] (tmnxDhcpsPoolStats6StableP)	long	The value of tmnxDhcpsPoolStats6StableP indicates the highest value of tmnxDhcpsPoolStats6Stable since the last reset of the extended statistics.
lowestValOfFreeBlocks [Lowest Val Of Free Blocks] (tmnxDhcpsPoolStats6FreeBlkP)	java. math. BigInteger	The value of tmnxDhcpsPoolStats6FreeBlkP indicates the lowest value of tmnxDhcpsPoolStats6FreeBlk since the last reset of the extended statistics.
lowestValOfUnusedBlocks [Lowest Val Of Unused Blocks] (tmnxDhcpsPoolStats6UsedBlkP)	java. math. BigInteger	The value of tmnxDhcpsPoolStats6UsedBlkP indicates the lowest value of tmnxDhcpsPoolStats6UsedBlk since the last reset of the extended statistics.
lowestValPctBlocksUnused [Lowest Val Pct Blocks Unused] (tmnxDhcpsPoolStats6FreePctP)	int	The value of tmnxDhcpsPoolStats6FreePctP indicates the lowest value of tmnxDhcpsPoolStats6FreePct since the last reset of the extended statistics.
lowestValRemoteFreeBlocks [Lowest Val Remote Free Blocks] (tmnxDhcpsPoolStats6FoFreeBlkP)	java. math. BigInteger	The value of tmnxDhcpsPoolStats6FoFreeBlkP indicates the lowest value of tmnxDhcpsPoolStats6FoFreeBlk since the last reset of the extended statistics.

Table 360 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lowestValRemotePctBlocksUnused [Lowest Val Remote Pct Blocks Unused] (tmnxDhcpsPoolStats6FoFreePctP)	int	The value of tmnxDhcpsPoolStats6FoFreePctP indicates the lowest value of tmnxDhcpsPoolStats6FoFreePct since the last reset of the extended statistics.
lowestValRemoteUnusedBlocks [Lowest Val Remote Unused Blocks] (tmnxDhcpsPoolStats6FoUsedBlkP)	java. math. BigInteger	The value of tmnxDhcpsPoolStats6FoUsedBlkP indicates the lowest value of tmnxDhcpsPoolStats6FoUsedBlk since the last reset of the extended statistics.
pctBlocksInUse [Pct Blocks In Use] (tmnxDhcpsPoolStats6UsedPct)	int	The value of tmnxDhcpsPoolStats6UsedPct indicates the percentage of /64 blocks currently in use.
pctBlocksUnused [Pct Blocks Unused] (tmnxDhcpsPoolStats6FreePct)	int	The value of tmnxDhcpsPoolStats6FreePct indicates the percentage of /64 blocks currently unused.
provisionedBlocks [Provisioned Blocks] (tmnxDhcpsPoolStats6ProvBlk)	java. math. BigInteger	The value of tmnxDhcpsPoolStats6ProvBlk indicates the number of provisioned /64 blocks.
remoteAdvertisedLeases [Remote Advertised Leases] (tmnxDhcpsPoolStats6FoAdvertise)	long	The value of tmnxDhcpsPoolStats6FoAdvertise indicates the number of remote leases in this pool that are in state 'advertised'.
remoteFreeBlocks [Remote Free Blocks] (tmnxDhcpsPoolStats6FoFreeBlk)	java. math. BigInteger	The value of tmnxDhcpsPoolStats6FoFreeBlk indicates the remote number of provisioned but unused /64 blocks.
remotePctBlocksInUse [Remote Pct Blocks In Use] (tmnxDhcpsPoolStats6FoUsedPct)	int	The value of tmnxDhcpsPoolStats6FoUsedPct indicates the percentage of remote /64 blocks currently in use.

Table 360 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
remotePctBlocksUnused [Remote Pct Blocks Unused] (tmnxDhcpsPoolStats6FoFreePct)	int	The value of tmnxDhcpsPoolStats6FoFreePct indicates the percentage of remote /64 blocks currently unused.
remoteProvisionedBlocks [Remote Provisioned Blocks] (tmnxDhcpsPoolStats6FoProvBlk)	java. math. BigInteger	The value of tmnxDhcpsPoolStats6FoProvBlk indicates the remote number of provisioned /64 blocks.
remoteStableLeases [Remote Stable Leases] (tmnxDhcpsPoolStats6FoStable)	long	The value of tmnxDhcpsPoolStats6FoStable indicates the number of remote leases in this pool that are in state 'stable'.
remoteUnusedBlocks [Remote Unused Blocks] (tmnxDhcpsPoolStats6FoUsedBlk)	java. math. BigInteger	The value of tmnxDhcpsPoolStats6FoUsedBlk indicates the remote number of provisioned but unused /64 blocks.
slaacPrefixInternalRequests [Slaac Prefix Internal Requests] (tmnxDhcpsPoolStats6IntNoPfxSlaa)	long	The value of tmnxDhcpsPoolStats6IntNoPfxSlaa indicates the number of times the following event occurred: an internal request for a SLAAC prefix (IA_PD (Identity Association for Prefix Delegation)) fails because the pool does not have a subnet available where the value of tmnxDhcpSvrSubnetPrefixType is equal to 'wan-host'. An internal request is triggered by some packet received by this system and translated into an internal API (Application Program Interface) request to the local DHCP server.
stableLeases [Stable Leases] (tmnxDhcpsPoolStats6Stable)	long	The value of tmnxDhcpsPoolStats6Stable indicates the number of leases in this pool that are in state 'stable'.
timeSinceExtendedReset [Time Since Extended Reset] (tmnxDhcpsPoolStats6ExtResetT)	long	The value of tmnxDhcpsPoolStats6ExtResetT indicates the sysUpTime at the last reset of the extended statistics.

Table 360 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
timeSinceLastAdvertisedLeases [Time Since Last Advertised Leases] (tmnxDhcpsPoolStats6AdvertPT)	long	The value of tmnxDhcpsPoolStats6AdvertPT indicates the sysUpTime at the last change of tmnxDhcpsPoolStats6AdvertPT.
timeSinceLastFreeBlocks [Time Since Last Free Blocks] (tmnxDhcpsPoolStats6FreeBlkPT)	long	The value of tmnxDhcpsPoolStats6FreeBlkPT indicates the sysUpTime at the last change of tmnxDhcpsPoolStats6FreeBlkP.
timeSinceLastRemoteAdvertisedLeases [Time Since Last Remote Advertised Leases] (tmnxDhcpsPoolStats6FoAdvertPT)	long	The value of tmnxDhcpsPoolStats6FoAdvertPT indicates the sysUpTime at the last change of tmnxDhcpsPoolStats6FoAdvertP.
timeSinceLastRemoteFreeBlocks [Time Since Last Remote Free Blocks] (tmnxDhcpsPoolStats6FoFreeBlkPT)	long	The value of tmnxDhcpsPoolStats6FoFreeBlkPT indicates the sysUpTime at the last change of tmnxDhcpsPoolStats6FoFreeBlkP.
timeSinceLastRemoteStableLeases [Time Since Last Remote Stable Leases] (tmnxDhcpsPoolStats6FoStablePT)	long	The value of tmnxDhcpsPoolStats6FoStablePT indicates the sysUpTime at the last change of tmnxDhcpsPoolStats6FoStableP.
timeSinceLastStableLeases [Time Since Last Stable Leases] (tmnxDhcpsPoolStats6StablePT)	long	The value of tmnxDhcpsPoolStats6StablePT indicates the sysUpTime at the last change of tmnxDhcpsPoolStats6StableP.
unusedBlocks [Unused Blocks] (tmnxDhcpsPoolStats6UsedBlk)	java. math. BigInteger	The value of tmnxDhcpsPoolStats6UsedBlk indicates the number of provisioned but unused /64 blocks.

Table 360 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
wanAddressInternalRequests [Wan Address Internal Requests] (tmnxDhcpSvrSubnetStats6IntNoPfxWan)	long	The value of tmnxDhcpSvrSubnetStats6IntNoPfxWan indicates the number of times the following event occurred: an internal request for a WAN address (IA_NA (Identity association for non-temporary addresses)) fails because the pool does not have a subnet available where the value of tmnxDhcpSvrSubnetPrefixType is equal to 'wan-host'. An internal request is triggered by some packet received by this system and translated into an internal API (Application Program Interface) request to the local DHCP server.
<p>LocalDhcp6ServerPrefixStats</p> <p>MIB entry name: tmnxDhcpSvrSubnetStats6Entry</p> <p>Entry description: Each row entry in the tmnxDhcpSvrSubnetStats6Table represents additional columns of operational data for a subnet that belongs to the specified DHCPv6 server instance and pool.</p> <p>Table description (for tmnxDhcpSvrSubnetStats6Table): The tmnxDhcpSvrSubnetStats6Table has an entry for each subnet that belongs to the specified DHCPv6 server instance and pool.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: dhcp.Dhcp6AddressPrefix</p>		
advertisedLeases [Advertised Leases] (tmnxDhcpSvrSubnetStats6Advertise)	long	The value of tmnxDhcpSvrSubnetStats6Advertise indicates the number of leases in this subnet that are in state 'advertised'.
declinedAddresses [Declined Addresses] (tmnxDhcpSvrSubnetStats6Declined)	long	The value of tmnxDhcpSvrSubnetStats6Declined indicates the number of addresses in this subnet that are declined.
extendedStatisticsEnabled [Extended Statistics Enabled] (tmnxDhcpSvrSubnetStats6HasExt)	boolean	The value of tmnxDhcpSvrSubnetStats6HasExt indicates whether the extended statistics collection for this prefix is enabled. These extended statistics are only collected when the length of the configured subnet is between /32 en /64.

Table 360 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
freeBlocks [Free Blocks] (tmnxDhcpSvrSubnetStats6FreeBlk)	java. math. BigInteger	The value of tmnxDhcpSvrSubnetStats6FreeBlk indicates the number of provisioned but unused /64 blocks.
highestValAdvertisedLeases [Highest Val Advertised Leases] (tmnxDhcpSvrSubnetStats6AdvertP)	long	The value of tmnxDhcpSvrSubnetStats6AdvertP indicates the highest value of tmnxDhcpSvrSubnetStats6Advertise since the last reset of the extended statistics.
highestValPctBlocksInUse [Highest Val Pct Blocks In Use] (tmnxDhcpSvrSubnetStats6UsedPctP)	int	The value of tmnxDhcpSvrSubnetStats6UsedPctP indicates the highest value of tmnxDhcpSvrSubnetStats6UsedPct since the last reset of the extended statistics.
highestValStableLeases [Highest Val Stable Leases] (tmnxDhcpSvrSubnetStats6StableP)	long	The value of tmnxDhcpSvrSubnetStats6StableP indicates the highest value of tmnxDhcpSvrSubnetStats6Stable since the last reset of the extended statistics.
lowestValOfFreeBlocks [Lowest Val Of Free Blocks] (tmnxDhcpSvrSubnetStats6FreeBlkP)	java. math. BigInteger	The value of tmnxDhcpSvrSubnetStats6FreeBlkP indicates the lowest value of unused /64 blocks since the last reset of the extended statistics.
lowestValOfUnusedBlocks [Lowest Val Of Unused Blocks] (tmnxDhcpSvrSubnetStats6UsedBlkP)	java. math. BigInteger	The value of tmnxDhcpSvrSubnetStats6UsedBlkP indicates the lowest value of unused /64 blocks since the last reset of the extended statistics.
lowestValPctBlocksUnused [Lowest Val Pct Blocks Unused] (tmnxDhcpSvrSubnetStats6FreePctP)	int	The value of tmnxDhcpSvrSubnetStats6FreePctP indicates the lowest value of tmnxDhcpSvrSubnetStats6FreePct since the last reset of the extended statistics.
pctBlocksInUse [Pct Blocks In Use] (tmnxDhcpSvrSubnetStats6UsedPct)	int	The value of tmnxDhcpSvrSubnetStats6UsedPct indicates the percentage of /64 blocks currently in use.

Table 360 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pctBlocksUnused [Pct Blocks Unused] (tmnxDhcpSvrSubnetStats6FreePct)	int	The value of tmnxDhcpSvrSubnetStats6FreePct indicates the percentage of /64 blocks currently unused.
provisionedBlocks [Provisioned Blocks] (tmnxDhcpSvrSubnetStats6ProvBlk)	java. math. BigInteger	The value of tmnxDhcpSvrSubnetStats6ProvBlk indicates the number of provisioned /64 blocks.
reconfigurePendingLeases [Reconfigure Pending Leases] (tmnxDhcpSvrSubnetStats6RCPending)	long	The value of tmnxDhcpSvrSubnetStats6RCPending indicates the number of leases in this subnet that are in state 'reconfigurePending'.
removePendingLeases [Remove Pending Leases] (tmnxDhcpSvrSubnetStats6RmPending)	long	The value of tmnxDhcpSvrSubnetStats6RmPending indicates the number of leases in this subnet that are in state 'removePending'.
stableLeases [Stable Leases] (tmnxDhcpSvrSubnetStats6Stable)	long	The value of tmnxDhcpSvrSubnetStats6Stable indicates the number of leases in this subnet that are in state 'stable'.
timeSinceExtendedReset [Time Since Extended Reset] (tmnxDhcpSvrSubnetStats6ExtResetT)	long	The value of tmnxDhcpSvrSubnetStats6ExtResetT indicates the sysUpTime at the last reset of the extended statistics.
timeSinceLastAdvertisedLeases [Time Since Last Advertised Leases] (tmnxDhcpSvrSubnetStats6AdvertPT)	long	The value of tmnxDhcpSvrSubnetStats6AdvertPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStats6AdvertP.
timeSinceLastFreeBlocks [Time Since Last Free Blocks] (tmnxDhcpSvrSubnetStats6FreeBlkPT)	long	The value of tmnxDhcpSvrSubnetStats6FreeBlkPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStats6FreeBlkP.

Table 360 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
timeSinceLastPctBlocksInUse [Time Since Last Pct Blocks In Use] (tmnxDhcpSvrSubnetStats6UsedPctPT)	long	The value of tmnxDhcpSvrSubnetStats6UsedPctPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStats6UsedPctP.
timeSinceLastPctBlocksUnused [Time Since Last Pct Blocks Unused] (tmnxDhcpSvrSubnetStats6FreePctPT)	long	The value of tmnxDhcpSvrSubnetStats6FreePctPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStats6FreePctP.
timeSinceLastStableLeases [Time Since Last Stable Leases] (tmnxDhcpSvrSubnetStats6StablePT)	long	The value of tmnxDhcpSvrSubnetStats6StablePT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStats6StableP.
timeSinceLastUnusedBlocks [Time Since Last Unused Blocks] (tmnxDhcpSvrSubnetStats6UsedBlkPT)	long	The value of tmnxDhcpSvrSubnetStats6UsedBlkPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStats6UsedBlkP.
unusedBlocks [Unused Blocks] (tmnxDhcpSvrSubnetStats6UsedBlk)	java. math. BigInteger	The value of tmnxDhcpSvrSubnetStats6UsedBlk indicates the number of provisioned but unused /64 blocks.
<p>LocalDhcp6ServerStats MIB entry name: tmnxDhcpServerStats6Entry Entry description: Each row entry contains basic statistics about a particular DHCP server instance. Table description (for tmnxDhcpServerStats6Table): The tmnxDhcpServerStats6Table contains basic statistics about the DHCPv6 server instances. Supports realtime plotting Supports scheduled collection Monitored class: dhcp.LocalDhcp6Server</p>		
clientIgnoredOffers [Client Ignored Offers] (tmnxDhcpSvrStats6OffersIgnore)	long	The value of tmnxDhcpSvrStats6OffersIgnore indicates the number of DHCP OFFER (option 52 with value 2) packets sent by the DHCP server instance that were ignored by the clients.

Table 360 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
droppedBadPacket [Dropped Bad Packet] (tmnxDhcpSvrStats6DropBadPackets)	long	The value of tmnxDhcpSvrStats6DropBadPackets indicates the number of DHCP packets received which were corrupt.
droppedDestinedToOther [Dropped Destined To Other] (tmnxDhcpSvrStats6DropDestOther)	long	The value of tmnxDhcpSvrStats6DropDestOther indicates the number of DHCP requests dropped by the server instance because the (broadcast) request was not destined to this server.
droppedGenericError [Dropped Generic Error] (tmnxDhcpSvrStats6DropGenError)	long	The value of tmnxDhcpSvrStats6DropGenError indicates the number of DHCP packets dropped by the server instance because of a generic error.
droppedInternalConflicts [Dropped Internal Conflicts] (tmnxDhcpSvrStats6DropIntWConflct)	long	The value of tmnxDhcpSvrStats6DropIntWConflct indicates a DHCP host is trying to acquire an IP address that was handed through the local address assignment infrastructure, or the local address assignment infrastructure tries to use an IP address that was handed out to a DHCP client.
droppedInternalFailover [Dropped Internal Failover] (tmnxDhcpSvrStats6DropIntWFo)	long	The value of tmnxDhcpSvrStats6DropIntWFo indicates the number of internal calls from the local address assignment infrastructure dropped by the DHCP server instance because failover is enabled for the server instance.
droppedInternalIntIdMap [Dropped Internal Int Id Map] (tmnxDhcpSvrStats6DropIntWIfldMap)	long	The value of tmnxDhcpSvrStats6DropIntWFo indicates the number of internal calls from the local address assignment infrastructure dropped by the DHCP server instance because interface ID mapping is enabled for the server instance.
droppedInternalUserIdent [Dropped Internal User Ident] (tmnxDhcpSvrStats6DropIntWUserld)	long	The value of tmnxDhcpSvrStats6DropIntWFo indicates the number of internal calls from the local address assignment infrastructure dropped by the DHCP server instance because tmnxDhcpServerCfgUserIdent is not set to duid (2) for the server instance.

Table 360 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
droppedInvalidType [Dropped Invalid Type] (tmnxDhcpSvrStats6DropInvlIdTypes)	long	The value of tmnxDhcpSvrStats6DropInvlIdTypes indicates the number of DHCP packets received which had an invalid message type.
droppedLeaseNotReady [Dropped Lease Not Ready] (tmnxDhcpSvrStats6DropLseNotReady)	long	The value of tmnxDhcpSvrStats6DropLseNotReady indicates the number of DHCP packets dropped by the server instance before the lease database was ready.
droppedMaxLeasesReached [Dropped Max Leases Reached] (tmnxDhcpSvrStats6DropMaxReached)	long	The value of tmnxDhcpSvrStats6DropMaxReached indicates the number of DHCP packets dropped by the server instance because the maximum number of leases was reached. The maximum number of leases is indicated by the value of the object tmnxDhcpSvrMaxLeases.
droppedNotServingPool [Dropped Not Serving Pool] (tmnxDhcpSvrStats6DropNoSrvngPool)	long	The value of tmnxDhcpSvrStats6DropNoSrvngPool indicates the number of DHCP packets dropped by the server instance because there were no more free addresses in the pool.
droppedOverload [Dropped Overload] (tmnxDhcpSvrStats6DropOverload)	long	The value of tmnxDhcpSvrStats6DropOverload indicates the number of DHCP packets dropped by the server instance because they were received in excess of what the server instance can handle.
droppedPersistenceOverload [Dropped Persistence Overload] (tmnxDhcpSvrStats6DropPerOverload)	long	The value of tmnxDhcpSvrStats6DropPerOverload indicates the number of DHCP packets dropped by the server instance because they were received in excess of what the DHCP persistence system can handle. If this occurs, only releases and declines are still processed.
droppedServerShutdown [Dropped Server Shutdown] (tmnxDhcpSvrStats6DropSvrDown)	long	The value of tmnxDhcpSvrStats6DropSvrDown indicates the number of DHCP packets dropped by the server instance during server instance shutdown (while the value of the object tmnxDhcpServerCfgAdminState in the corresponding row was set equal to 'outOfService').

Table 360 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
duplicateRequestDropped [Duplicate Request Dropped] (tmnxDhcpSvrStats6DropDuplDiffRly)	long	The value of tmnxDhcpSvrStats6DropDuplDiffRly indicates the number of DHCP requests dropped by the server instance because they were received from a different Relay IP address within a timeframe of 10 seconds after a previous DHCPREQUEST.
leasesTimedOut [Leases Timed Out] (tmnxDhcpSvrStats6LeasesExpired)	long	The value of tmnxDhcpSvrStats6LeasesExpired indicates the number of DHCP leases that were expired (because no release was received).
receivedConfirmPackets [Received Confirm Packets] (tmnxDhcpSvrStats6RxConfirms)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxConfirms indicates the number of confirm messages received by the DHCP server instance.
receivedDeclinePackets [Received Decline Packets] (tmnxDhcpSvrStats6RxDeclines)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxDeclines indicates the number of decline messages received by the DHCP server instance.
receivedInformationRequestPackets [Received Information Request Packets] (tmnxDhcpSvrStats6RxInfRequests)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxInfRequests indicates the number of information-request messages received by the DHCP server instance.
receivedIntIpoeWanRequests [Received Int Ipoe Wan Requests] (tmnxDhcpSvrStats6RxIntReqIpoeWan)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxIntReqIpoeWan indicates the number of internal request calls received by the DHCP server instance from the local address assignment infrastructure for IPoE.
receivedIntPppSlaacRequests [Received Int Ppp Slaac Requests] (tmnxDhcpSvrStats6RxIntPppSlaac)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxIntPppSlaac indicates the number of internal request calls received by the DHCP server instance from the local address assignment infrastructure for PPP SLAAC (stateless autoconfiguration).

Table 360 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedInternalReleases [Received Internal Releases] (tmnxDhcpSvrStats6RxIntReleases)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxIntReleases indicates the number of internal release calls received by the DHCP server instance from the local address assignment infrastructure.
receivedRebindPackets [Received Rebind Packets] (tmnxDhcpSvrStats6RxRebinds)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxRebinds indicates the number of rebind messages received by the DHCP server instance.
receivedReleasePackets [Received Release Packets] (tmnxDhcpSvrStats6RxReleases)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxReleases indicates the number of release messages received by the DHCP server instance.
receivedRenewPackets [Received Renew Packets] (tmnxDhcpSvrStats6RxRenews)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxRenews indicates the number of renew messages received by the DHCP server instance.
receivedRequestPackets [Received Request Packets] (tmnxDhcpSvrStats6RxRequests)	java. math. BigInteger	The value of tmnxDhcpSvrStats6TxAdvertises indicates the number of request messages received by the DHCP server instance.
receivedSolicitPackets [Received Solicit Packets] (tmnxDhcpSvrStats6RxSolicits)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxSolicits indicates the number of solicit messages received by the DHCP server instance.
sentAdvertisePackets [Sent Advertise Packets] (tmnxDhcpSvrStats6TxAdvertises)	java. math. BigInteger	The value of tmnxDhcpSvrStats6TxAdvertises indicates the number of advertise messages sent by the DHCP server instance.
sentReconfigurePackets [Sent Reconfigure Packets] (tmnxDhcpSvrStats6TxReconfigures)	java. math. BigInteger	The value of tmnxDhcpSvrStats6TxReconfigures indicates the number of reconfigure messages sent by the DHCP server instance.

Table 360 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sentReplyPackets [Sent Reply Packets] (tmnxDhcpSvrStats6TxReplies)	java. math. BigInteger	The value of tmnxDhcpSvrStats6TxReplies indicates the number of reply messages sent by the DHCP server instance.
<p>LocalDhcpServerStats MIB entry name: tmnxDhcpServerStatsEntry Entry description: Each row entry contains basic statistics about a particular DHCP server instance. Table description (for tmnxDhcpServerStatsTable): The tmnxDhcpServerStatsTable contains basic statistics about the DHCP server instances. Supports realtime plotting Supports scheduled collection Monitored class: dhcp.LocalDhcpServer</p>		
addressUnavailableDropped [Address Unavailable Dropped] (tmnxDhcpSvrStatsDropAddrUnavail)	long	The value of tmnxDhcpSvrStatsDropAddrUnavail indicates the number of DHCP requests dropped by the server instance because the requested address is not available.
corruptedPacketsDropped [Corrupted Packets Dropped] (tmnxDhcpSvrStatsDropBadPackets)	long	The value of tmnxDhcpSvrStatsDropBadPackets indicates the number of DHCP packets received which were corrupt.
destinedToOtherDropped [Destined To Other Dropped] (tmnxDhcpSvrStatsDropDestOther)	long	The value of tmnxDhcpSvrStatsDropDestOther indicates the number of DHCP requests dropped by the server instance because the (broadcast) request was not destined to this server.
genericErrorDropped [Generic Error Dropped] (tmnxDhcpSvrStatsDropGenError)	long	The value of tmnxDhcpSvrStatsDropGenError indicates the number of DHCP packets dropped by the server instance because of a generic error.
invalidMessageTypesDropped [Invalid Message Types Dropped] (tmnxDhcpSvrStatsDropInvalidTypes)	long	The value of tmnxDhcpSvrStatsDropInvalidTypes indicates the number of DHCP packets received which had an invalid message type (option 53).

Table 360 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
invalidUserDropped [Invalid User Dropped] (tmnxDhcpSvrStatsDropInvalidUsr)	long	The value of tmnxDhcpSvrStatsDropInvalidUsr indicates the number of DHCP packets dropped by the server instance because the MAC address of the sender or the option 82 didn't match the host lease state.
leaseNotFoundDropped [Lease Not Found Dropped] (tmnxDhcpSvrStatsDropNoLeaseFound)	long	The value of tmnxDhcpSvrStatsDropNoLeaseFound indicates the number of DHCP packets dropped by the server instance because no (valid) lease was found.
leaseNotReadyDropped [Lease Not Ready Dropped] (tmnxDhcpSvrStatsDropLseNotReady)	long	The value of tmnxDhcpSvrStatsDropLseNotReady indicates the number of DHCP packets dropped by the server instance before the lease database was ready.
leasesExpired [Leases Expired] (tmnxDhcpSvrStatsLeasesExpired)	long	The value of tmnxDhcpSvrStatsLeasesExpired indicates the number of DHCP leases that were expired (because no release was received).
localUserDbNotFoundDropped [Local User Db Not Found Dropped] (tmnxDhcpSvrStatsDropNoUsrDbFound)	long	The value of tmnxDhcpSvrStatsDropNoUsrDbFound indicates the number of DHCP packets dropped because the value of the object tmnxDhcpServerCfgUserDatabase of this server instance is not equal to the default value and a local user database with that name could not be found.
noFreeAddressesInPoolDropped [No Free Addresses In Pool Dropped] (tmnxDhcpSvrStatsDropNotSrvngPool)	long	The value of tmnxDhcpSvrStatsDropNotSrvngPool indicates the number of DHCP packets dropped by the server instance because there were no more free addresses in the pool.
offersIgnored [Offers Ignored] (tmnxDhcpSvrStatsOffersIgnore)	long	The value of tmnxDhcpSvrStatsOffersIgnore indicates the number of DHCP OFFER (option 52 with value 2) packets sent by the DHCP server instance that were ignored by the clients.
overloadDropped [Overload Dropped] (tmnxDhcpSvrStatsDropOverload)	long	The value of tmnxDhcpSvrStatsDropOverload indicates the number of DHCP packets dropped by the server instance because they were received in excess of what the server instance can handle.

Table 360 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
persistenceOverloadDropped [Persistence Overload Dropped] (tmnxDhcpSvrStatsDropPersOverload)	long	The value of tmnxDhcpSvrStatsDropPersOverload indicates the number of DHCP packets dropped by the server instance because they were received in excess of what the DHCP persistence system can handle. If this occurs, only releases and declines are still processed.
receivedDhcpDeclines [Received Dhcp Declines] (tmnxDhcpSvrStatsRxDeclines)	java. math. BigInteger	The value of tmnxDhcpSvrStatsRxDeclines indicates the number of DHCPDECLINE (option 53 with value 4) packets received by the DHCP server instance.
receivedDhcpDiscovers [Received Dhcp Discovers] (tmnxDhcpSvrStatsRxDiscovers)	java. math. BigInteger	The value of tmnxDhcpSvrStatsRxDiscovers indicates the number of DHCPDISCOVER (option 53 with value 1) packets received by the DHCP server instance.
receivedDhcpInforms [Received Dhcp Informs] (tmnxDhcpSvrStatsRxInforms)	java. math. BigInteger	The value of tmnxDhcpSvrStatsRxInforms indicates the number of DHCPINFORM (option 53 with value 8) packets received by the DHCP server instance.
receivedDhcpReleases [Received Dhcp Releases] (tmnxDhcpSvrStatsRxReleases)	java. math. BigInteger	The value of tmnxDhcpSvrStatsRxReleases indicates the number of DHCPRELEASE (option 53 with value 7) packets received by the DHCP server instance.
receivedDhcpRequests [Received Dhcp Requests] (tmnxDhcpSvrStatsRxRequests)	java. math. BigInteger	The value of tmnxDhcpSvrStatsRxRequests indicates the number of DHCPREQUEST (option 53 with value 3) packets received by the DHCP server instance.
sentDhcpAcks [Sent Dhcp Acks] (tmnxDhcpSvrStatsTxAcks)	java. math. BigInteger	The value of tmnxDhcpSvrStatsTxAcks indicates the number of DHCPACK (option 53 with value 5) packets sent by the DHCP server instance.

Table 360 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sentDhcpForceRenews [Sent Dhcp Force Renews] (tmnxDhcpSvrStatsTxForceRenews)	java. math. BigInteger	The value of tmnxDhcpSvrStatsTxForceRenews indicates the number of DHCPFORCERENEW (option 53 with value 9) packets sent by the DHCP server instance.
sentDhcpNaks [Sent Dhcp Naks] (tmnxDhcpSvrStatsTxNaks)	java. math. BigInteger	The value of tmnxDhcpSvrStatsTxNaks indicates the number of DHCPNAK (option 53 with value 6) packets sent by the DHCP server instance.
sentDhcpOffers [Sent Dhcp Offers] (tmnxDhcpSvrStatsTxOffers)	java. math. BigInteger	The value of tmnxDhcpSvrStatsTxOffers indicates the number of DHCPPOFFER (option 53 with value 2) packets sent by the DHCP server instance.
unknownHostsDropped [Unknown Hosts Dropped] (tmnxDhcpSvrStatsDropUnknownHosts)	long	The value of tmnxDhcpSvrStatsDropUnknownHosts indicates the number of DHCP packets dropped from hosts which were not found in the user database when tmnxDhcpServerCfgUseGiAddress was disabled.
userNotAllowedDropped [User Not Allowed Dropped] (tmnxDhcpSvrStatsDropUserNotAllow)	long	The value of tmnxDhcpSvrStatsDropUserNotAllow indicates the number of DHCP packets dropped from hosts which are found in the user database, but which have no address or pool specified, nor has tmnxDhcpServerCfgUseGiAddress set to 'true'.
<p>LocalDhcpServerSubnetStats</p> <p>MIB entry name: tmnxDhcpSvrSubnetStatsEntry</p> <p>Entry description: Each row entry in the tmnxDhcpSvrSubnetStatsTable represents additional columns of operational data for a subnet that belongs to the specified DHCP server instance and pool.</p> <p>Table description (for tmnxDhcpSvrSubnetStatsTable): The tmnxDhcpSvrSubnetStatsTable has an entry for each subnet that belongs to the specified DHCP server instance and pool.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: dhcp.Subnet</p>		

Table 360 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
declinedAddresses [Declined Addresses] (tmnxDhcpSvrSubnetStatsDeclined)	long	The value of tmnxDhcpSvrSubnetStatsDeclined indicates the number of addresses in this subnet that are declined.
forceRenewPendingLeases [Force Renew Pending Leases] (tmnxDhcpSvrSubnetStatsFRPending)	long	The value of tmnxDhcpSvrSubnetStatsFRPending indicates the number of leases in this subnet that are in state 'forceRenewPending'.
freeAddresses [Free Addresses] (tmnxDhcpSvrSubnetStatsFree)	long	The value of tmnxDhcpSvrSubnetStatsFree indicates the number of addresses in this subnet that are free.
offeredLeases [Offered Leases] (tmnxDhcpSvrSubnetStatsOffered)	long	The value of tmnxDhcpSvrSubnetStatsOffered indicates the number of leases in this subnet that are in state 'offered'.
removePendingLeases [Remove Pending Leases] (tmnxDhcpSvrSubnetStatsRemPending)	long	The value of tmnxDhcpSvrSubnetStatsRemPending indicates the number of leases in this subnet that are in state 'removePending'.
stableLeases [Stable Leases] (tmnxDhcpSvrSubnetStatsStable)	long	The value of tmnxDhcpSvrSubnetStatsStable indicates the number of leases in this subnet that are in state 'stable'.

Table 361 equipment statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AccessPortControlStats</p> <p>MIB entry name: aluPortCtlStatsEntry</p> <p>Entry description: Defines an entry in aluPortCtlStatsTable. Entries are created and deleted by the system depending port configuration.</p> <p>Table description (for aluPortCtlStatsTable): Defines the Nokia SAR series port control statistics table for providing, via SNMP, the capability of retrieving the detailed control packet statistics for ports in access modes. This table is not applicable to ports in network or hybrid mode.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.PhysicalPort</p>		
accessCtlEgressDroOcts [Access Ctl Egress Dro Octs] (aluPortAccessCtlEgrDroOcts)	java. math. BigInteger	aluPortAccessCtlEgrDroOcts indicates the number of CTL octets that get dropped on access port egress .
accessCtlEgressDroPkts [Access Ctl Egress Dro Pkts] (aluPortAccessCtlEgrDroPkts)	java. math. BigInteger	aluPortAccessCtlEgrDroPkts indicates the number of CTL packets that get dropped on access port egress .
accessCtlEgressFwdOcts [Access Ctl Egress Fwd Octs] (aluPortAccessCtlEgrFwdOcts)	java. math. BigInteger	aluPortAccessCtlEgrFwdOcts indicates the number of CTL octets that get forwarded on access port egress .
accessCtlIngressDroOcts [Access Ctl Ingress Dro Octs] (aluPortAccessCtlInDroOcts)	java. math. BigInteger	aluPortAccessCtlInDroOcts indicates the number of CTL octets that get dropped on access port ingress .
accessCtlIngressDroPkts [Access Ctl Ingress Dro Pkts] (aluPortAccessCtlInDroPkts)	java. math. BigInteger	aluPortAccessCtlInDroPkts indicates the number of CTL packets that get dropped on access port ingress .

Table 361 equipment statistics (continued)

accessCtlIngressFwdOcts [Access Ctl Ingress Fwd Octs] (aluPortAccessCtlInFwdOcts)	java. math. BigInteger	aluPortAccessCtlInFwdOcts indicates the number of CTL octets that get forwarded on access port ingress .
accessCtlIngressFwdPkts [Access Ctl Ingress Fwd Pkts] (aluPortAccessCtlInFwdPkts)	java. math. BigInteger	aluPortAccessCtlInFwdPkts indicates the number of CTL packets that get forwarded on access port ingress .
accessCtlEgressFwdPkts [Access Ctl Egress Fwd Pkts] (aluPortAccessCtlEgrFwdPkts)	java. math. BigInteger	aluPortAccessCtlEgrFwdPkts indicates the number of CTL packets that get forwarded on access port egress .
AllocatedMemoryStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder		
allocatedMemory [Allocated Memory] (sgiMemoryPoolAllocated)	long	The value of sgiMemoryPoolAllocated indicates the total memory currently allocated in memory-pools on the system. This memory may or may not be currently in use, but is pre-allocated should the software need to use it. If the value is greater than the maximum value reportable by this object then this object reports its maximum value (4,294,967,295) and sgiKbMemoryPoolAllocated must be used to determine the total memory allocated in memory-pools.
AvailableMemoryStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder		

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
availableMemory [Available Memory] (sgiMemoryAvailable)	long	The value of sgiMemoryAvailable indicates the amount of free memory in the overall system that is not allocated to memory pools, but is available in case a memory pool needs to grow.
<p>CiscoHDLCStats MIB entry name: tmnxCiscoHDLCStatsEntry Entry description: An entry in the tmnxCiscoHDLCStatsTable. Table description (for tmnxCiscoHDLCStatsTable): The tmnxCiscoHDLCStatsTable has an entry for each port in the system that is configured for Cisco HDLC encapsulation. It contains Cisco HDLC protocol statistics for the particular port. Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • tdmequipment.DS0ChannelGroup • tdmequipment.DS3E3Channel </p>		
discardStatInPkts [Discard Stat In Pkts] (tmnxCiscoHDLCDiscardStatInPkts)	long	tmnxCiscoHDLCDiscardStatInPkts indicates the number of inbound Cisco HDLC packets discarded.
discardStatOutPkts [Discard Stat Out Pkts] (tmnxCiscoHDLCDiscardStatOutPkts)	long	tmnxCiscoHDLCDiscardStatOutPkts indicates the number of outbound Cisco HDLC packets discarded.
statInOctets [Stat In Octets] (tmnxCiscoHDLCStatInOctets)	long	tmnxCiscoHDLCStatInOctets indicates the number of inbound Cisco HDLC octets.
statInPkts [Stat In Pkts] (tmnxCiscoHDLCStatInPkts)	long	tmnxCiscoHDLCStatInPkts indicates the number of inbound Cisco HDLC packets.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
statOutOctets [Stat Out Octets] (tmnxCiscoHDLCStatOutOctets)	long	tmnxCiscoHDLCStatOutOctets indicates the number of outbound Cisco HDLC octets.
statOutPkts [Stat Out Pkts] (tmnxCiscoHDLCStatOutPkts)	long	tmnxCiscoHDLCStatOutPkts indicates the number of outbound Cisco HDLC packets.
<p>DDMStats</p> <p>MIB entry name: tmnxDigitalDiagMonitorEntry</p> <p>Entry description: Each row represents a particular SFF that supports Digital Diagnostic Monitoring. Entries are created and deleted internally by the system.</p> <p>Table description (for tmnxDigitalDiagMonitorTable): The tmnxDigitalDiagMonitorTable has an entry for each SFF in the system that supports Digital Diagnostic Monitoring (DDM). The table is indexed by TmnxPortID. Each row in this table is dynamically added and removed internally by the system based on the presence or absence of DDM capable SFF components.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.DigitalDiagnosticMonitoring</p>		
aux1 [Aux 1] (tmnxDDMAux1)	float	The value of tmnxDDMAux1 indicates the Manufacturer specific Auxiliary 1 information of the XFP.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aux1Type [Aux 1 Type] (tmnxDDMAux1Type)	int	The value of tmnxDDMAux1Type indicates the measurement type of the Manufacturer specific Auxiliary 1 information of the XFP: none (0) - not specified. adp-bias-voltage (1) - LSB is 10mV. reserved-2 (2) - reserved for future use. tec-current (3) - LSB is 100uA. laser-temp (4) - degrees Celsius(C). laser-wavelength (5) - LSB is 0.05 nm. voltage-50 (6) - 5.0 supply voltage, LSB=100uV. voltage-33 (7) - 3.3 supply voltage, LSB=100uV. voltage-18 (8) - 1.8 supply voltage, LSB=100uV, voltage-52 (9) - -5.2 supply voltage, LSB=100uV. current-50 (10) - 5.0V supply current, LSB=100uA. reserved-11 (11) - reserved for future use. reserved-12 (12) - reserved for future use. current-33 (13) - 3.3V supply current, LSB=100uA. current-18 (14) - 1.8V supply current, LSB=100uA. current-52 (15) - -5.2V supply current, LSB=100uA.
aux2 [Aux 2] (tmnxDDMAux2)	float	The value of tmnxDDMAux2 indicates the Manufacturer specific Auxiliary 2 information of the SFF.
aux2Type [Aux 2 Type] (tmnxDDMAux2Type)	int	The value of tmnxDDMAux2Type indicates the measurement type of the Manufacturer specific Auxiliary 2 information of the XFP: none (0) - not specified. adp-bias-voltage (1) - LSB is 10mV. reserved-2 (2) - reserved for future use. tec-current (3) - LSB is 100uA. laser-temp (4) - degrees Celsius(C). laser-wavelength (5) - LSB is 0.05 nm. voltage-50 (6) - 5.0 supply voltage, LSB=100uV. voltage-33 (7) - 3.3 supply voltage, LSB=100uV. voltage-18 (8) - 1.8 supply voltage, LSB=100uV, voltage-52 (9) - -5.2 supply voltage, LSB=100uV. current-50 (10) - 5.0V supply current, LSB=100uA. reserved-11 (11) - reserved for future use. reserved-12 (12) - reserved for future use. current-33 (13) - 3.3V supply current, LSB=100uA. current-18 (14) - 1.8V supply current, LSB=100uA. current-52 (15) - -5.2V supply current, LSB=100uA.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxOpticalPower [Rx Optical Power] (tmnxDDMRxOpticalPower)	float	The value of tmnxDDMRxOpticalPower indicates the current Received Optical Power of the SFF in one tenths of a microwatt (uW). If the SFF is externally calibrated, the objects tmnxDDMExtCalRxPower4, tmnxDDMExtCalRxPower3, tmnxDDMExtCalRxPower2, tmnxDDMExtCalRxPower1 and tmnxDDMExtCalRxPower0 affect the output power calculation. For example (internally calibrated SFF): Using the SNMP value of 790, and using units of tenths of microwatt, 790 becomes 79 microwatts or 0.079 milliwatts. Converting to dBm: $10 \times \log_{10}(0.079) = -11.0$ dBm
rxOpticalPowerType [Rx Optical Power Type] (tmnxDDMRxOpticalPowerType)	int	The value of tmnxDDMRxOpticalPowerType indicates whether the tmnxDDMRxOpticalPower was taken as an average, or as an Optical Modulation Amplitude (OMA).
supplyVoltage [Supply Voltage] (tmnxDDMSupplyVoltage)	float	The value of tmnxDDMSupplyVoltage indicates the current supply voltage of the SFF in 1/10000 of a Volt(V). If the SFF is externally calibrated, the objects tmnxDDMExtCalVoltageSlope and tmnxDDMExtCalVoltageOffset affect the voltage calculation. The formula for translating between the value of tmnxDDMSupplyVoltage and Voltage is: Internally Calibrated only: $\text{tmnxDDMSupplyVoltage} / 10000$ Externally Calibrated: $(\text{tmnxDDMSupplyVoltage} * (\text{tmnxDDMExtCalVoltageSlope} / 256) + \text{tmnxDDMExtCalVoltageOffset}) / 10000$ For example (internally calibrated SFF): The SNMP value 32851 is 3.2851 Volts (V).

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
temperature [Temperature] (tmnxDDMTemperature)	float	The value of tmnxDDMTemperature indicates the current temperature of the SFF in 1/256th degrees Celsius. If the SFF is externally calibrated, the objects tmnxDDMExtCalTemperatureSlope and tmnxDDMExtCalTemperatureOffset affect the temperature calculation. The formula for translating between the value of tmnxDDMTemperature and degrees Celsius is: Internally Calibrated only: $\text{tmnxDDMTemperature} / 256$ Externally Calibrated: $(\text{tmnxDDMTemperature} * (\text{tmnxDDMExtCalTemperatureSlope} / 256) + \text{tmnxDDMExtCalTemperatureOffset}) / 256$ For example (internally calibrated SFF): The SNMP value 5734 is 22.4 degrees Celsius.
txBiasCurrent [Tx Bias Current] (tmnxDDMTxBiasCurrent)	float	The value of tmnxDDMTxBiasCurrent indicates the current Transmit Bias Current of the SFF in 1/500 milliamperes (mA). If the SFF is externally calibrated, the objects tmnxDDMExtCalTxLaserBiasSlope and tmnxDDMExtCalTxLaserBiasOffset affect the ampere calculation. The formula for translating between the value of tmnxDDMTxBiasCurrent and amperes is: Internally Calibrated only: $\text{tmnxDDMTxBiasCurrent} / 500$ Externally Calibrated: $(\text{tmnxDDMTxBiasCurrent} * (\text{tmnxDDMExtCalTxLaserBiasSlope} / 256) + \text{tmnxDDMExtCalTxLaserBiasOffset}) / 500$ For example (internally calibrated SFF): The SNMP value 2565 is 5.1 milliamperes (mA).
txOutputPower [Tx Output Power] (tmnxDDMTxOutputPower)	float	The value of tmnxDDMTxOutputPower indicates the current Output Power of the SFF in one tenths of a microwatt (uW). If the SFF is externally calibrated, the objects tmnxDDMExtCalTemperatureSlope and tmnxDDMExtCalTemperatureOffset affect the output power calculation. For example (internally calibrated SFF): Using the SNMP value of 790, and using units of tenths of microwatt, 790 becomes 79 microwatts or 0.079 milliwatts. Converting to dBm: $10 \times \log_{10}(0.079) = -11.0$ dBm

inCsmQHiPriDiscards [In Csm QHi Pri Discards] (aluPortInCsmQHiPriDiscards)	java. math. BigInteger	aluPortInCsmQHiPriDiscards indicates the number of packets discarded in the Ingress CSM High Priority Queue.
inCsmQLowPriDiscards [In Csm QLow Pri Discards] (aluPortInCsmQLowPriDiscards)	java. math. BigInteger	aluPortInCsmQLowPriDiscards indicates the number of packets discarded in the Ingress CSM Low Priority Queue.
inCsmQMediumPriDiscards [In Csm QMedium Pri Discards] (aluPortInCsmQMediumPriDiscards)	java. math. BigInteger	aluPortInCsmQMediumPriDiscards indicates the number of packets discarded in the Ingress CSM Medium Priority Queue.
inHdlcCrcDiscards [In Hdlc Crc Discards] (aluPortInHdlcCrcDiscards)	java. math. BigInteger	aluPortInHdlcCrcDiscards indicates the number of packets discarded due to the HDLC frame containing a CRC error. This statistic is only applicable to interfaces that have an encapsulation type of PPP-AUTO.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
inIPAddrProtoDiscards [In IPAddr Proto Discards] (aluPortInIPAddrProtoDiscards)	java. math. BigInteger	aluPortInIPAddrProtoDiscards indicates the number of packets discarded that contained an invalid IP address or unsupported IP protocol.
inL2AddrProtoDiscards [In L2 Addr Proto Discards] (aluPortInL2AddrProtoDiscards)	java. math. BigInteger	aluPortInL2AddrProtoDiscards indicates the number of packets discarded that contained an unsupported type/protocol or unknown address at layer 2.
inMPLSLabelDiscards [In MPLSLabel Discards] (aluPortInMPLSLabelDiscards)	java. math. BigInteger	aluPortInMPLSLabelDiscards indicates the number of packets discarded that contained unknown mpls outer tunnels, unknown inner label or more than two unsupported labels.
inOtherDiscards [In Other Discards] (aluPortInOtherDiscards)	java. math. BigInteger	aluPortInOtherDiscards indicates the number of packets discarded at ingress for other reasons during processing.
outCsmQDiscards [Out Csm QDiscards] (aluPortOutCsmQDiscards)	java. math. BigInteger	aluPortOutCsmQDiscards indicates the number of packets discarded in the Egress CSM Queue.
outOtherDiscards [Out Other Discards] (aluPortOutOtherDiscards)	java. math. BigInteger	aluPortOutOtherDiscards indicates the number of packets discarded at egress for other reasons during processing.
outPortMtuDiscards [Out Port Mtu Discards] (aluPortOutPortMtuDiscards)	java. math. BigInteger	aluPortOutPortMtuDiscards indicates the number of packets discarded at egress due to the packet exceeding the configured port mtu.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>FabricDeviceStats</p> <p>MIB entry name: aluFabricDeviceStatsEntry</p> <p>Entry description: An entry in the aluFabricDeviceStatsTable contains stats collected from fabric device itself, either traffic to a specific fabric port designated to an MDA, or global total traffic egress from the fabric device. aluFabricDeviceStatsIndex indicates the MDA number for the fabric port stats or 0 for global stats. Fabric Stats are not available on Nokia SAR-M platform, therefore all objects of aluFabricDeviceStatsEntry are set to 0.</p> <p>Table description (for aluFabricDeviceStatsTable): This table contains statistics collected from Fabric Device of the Nokia 7705 system</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.DaughterCardSlot • equipment.SystemStatsHolder 		
fabricDeviceStatsDroOcts [Fabric Device Stats Dro Octs] (aluFabricDeviceStatsDroOcts)	java. math. BigInteger	aluFabricDeviceStatsDroOcts indicates the number of octets from dropped packets from the fabric to the indexed MDA. If the entry is a global counter then aluFabricDeviceStatsDroOcts indicates the total octets of all dropped packets at the fabric. aluFabricDeviceStatsDroOcts is not available on SAR-8 system, and is set to 0 in these cases.
fabricDeviceStatsDroPkts [Fabric Device Stats Dro Pkts] (aluFabricDeviceStatsDroPkts)	java. math. BigInteger	aluFabricDeviceStatsDroPkts indicates the number of dropped packets from the fabric to the indexed MDA. If the entry is a global counter then aluFabricDeviceStatsDroPkts indicates the total of all dropped packets at the fabric.
fabricDeviceStatsFwdOcts [Fabric Device Stats Fwd Octs] (aluFabricDeviceStatsFwdOcts)	java. math. BigInteger	aluFabricDeviceStatsFwdOcts indicates the number of forwarded octets from the fabric to the indexed MDA. If the entry is a global counter then aluFabricDeviceStatsFwdOcts indicates the total octets forwarded by the fabric. aluFabricDeviceStatsFwdOcts is not available for global counter entry on SAR-8 system, and it is set to 0 in these cases.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fabricDeviceStatsFwdPkts [Fabric Device Stats Fwd Pkts] (aluFabricDeviceStatsFwdPkts)	java. math. BigInteger	aluFabricDeviceStatsFwdPkts indicates the number of forwarded packets from the fabric to the indexed MDA. If the entry is a global counter then aluFabricDeviceStatsFwdPkts indicates the total of all forwarded packets from the fabric.
fabricDeviceStatsIndex [Fabric Device Stats Index] (aluFabricDeviceStatsIndex)	long	<p>aluFabricDeviceStatsIndex serves as the index that uniquely identify the fabric device counter. R2.x and R3.x of Nokia 7705 support two entries of fabric device counters as followed: 1) Entry with aluFabricDeviceStatsIndex = 0 is a global device counter which counts all egress traffic from the fabric. This is the sum of all fabric port traffic, including ports to all MDAs and ports to any other intalled cards such as inactive CSM. 2) Entry with aluFabricDeviceStatsIndex = 1 is a fabric port counter which counts all egress traffic toward the MDA that has aluExtTmnxMDAFabricStatsEnabled being TRUE in AluExtTmnxMDAEntry. Starting with R4.0, Nokia 7705 system supports multiple fabric port counters. One entry for each MDA, plus one entry for the global counters.</p> <p>aluFabricDeviceStatsIndex is numbered as followed: - Entry with aluFabricDeviceStatsIndex = 0 is a global device counter which counts all egress traffic from the fabric. This is the sum of all fabric port traffic, including ports to all MDAs and ports to any other intalled cards such as inactive CSM. - Otherwise aluFabricDeviceStatsIndex > 0 indicates the MDA slot number tmnxMDASlotNum. These entries contain fabric port counters of egress traffic from the fabric device to the MDA with slot number specified by aluFabricDeviceStatsIndex.</p> <p>aluExtTmnxMDAFabricStatsEnabled must be TRUE on the MDA for the stats to be valid. If aluExtTmnxMDAFabricStatsEnabled is FALSE, all stats in the entry are set to 0. Starting with release 7.0 Nokia 7705 uses entry with aluFabricDeviceStatsIndex = 0xff = 255 to contain counts of all firewall security traffic egress from the fabric.</p>

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fabricDeviceStatsMcastFwdPkts [Fabric Device Stats Mcast Fwd Pkts] (aluFabricDeviceStatsMcastFwdPkts)	java. math. BigInteger	aluFabricDeviceStatsMcastFwdPkts indicates the number of forwarded multicast packets (multipoint/broadcast/unknown traffic) from the fabric to the indexed MDA. If the entry is a global counter then aluFabricDeviceStatsMcastFwdPkts indicates the total of all forwarded multicast packets from the fabric to all MDAs.
fabricDeviceStatsUcastFwdPkts [Fabric Device Stats Ucast Fwd Pkts] (aluFabricDeviceStatsUcastFwdPkts)	java. math. BigInteger	aluFabricDeviceStatsUcastFwdPkts indicates the number of forwarded unicast packets from the fabric to the indexed MDA. If the entry is a global counter then aluFabricDeviceStatsUcastFwdPkts indicates the total of all forwarded unicast packets from the fabric.
<p>FibNextHopStats</p> <p>MIB entry name: vRtrFibStatNextHopEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an IOM card in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrFibStatNextHopTable): The vRtrFibStatNextHopTable has an entry for each IOM in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.BaseCard</p>		
ipActive [Ip Active] (vRtrFibStatNextHopIPActive)	long	vRtrFibStatNextHopIPActive indicates current active IP next-hop counts for the FIB on the IOM.
ipAvailable [Ip Available] (vRtrFibStatNextHopIPAvailable)	long	vRtrFibStatNextHopIPAvailable indicates the available IP next-hop counts for the FIB on the IOM.
tunnelActive [Tunnel Active] (vRtrFibStatNextHopTunnelActive)	long	vRtrFibStatNextHopTunnelActive indicates current active Tunnel next-hop counts for the FIB on the IOM.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tunnelAvailable [Tunnel Available] (vRtrFibStatNextHopTunnelAvailable)	long	vRtrFibStatNextHopTunnelAvailable indicates the available Tunnel next-hop counts for the FIB on the IOM.
<p>FibStats MIB entry name: vRtrFibStatEntry Entry description: Each row entry represents a collection of summarized statistics for each virtual router on an IOM card in the system. Entries cannot be created and deleted via SNMP SET operations. Table description (for vRtrFibStatTable): The vRtrStatTable has an entry for IOM card configured in the system. Supports realtime plotting Supports scheduled collection Monitored class: equipment.BaseCard</p>		
aggrRoutes [Aggr Routes] (vRtrFibStatAggrRoutes)	long	vRtrFibStatAggrRoutes indicates current aggregate route counts for the virtual router.
alarmCount [Alarm Count] (vRtrFibStatAlarmCount)	long	vRtrFibStatAlarmCount indicates the number of times the FIB has raised an alarm due to high FIB usage.
bgpRoutes [Bgp Routes] (vRtrFibStatBGPRoutes)	long	vRtrFibStatBGPRoutes indicates current BGP route counts for the virtual router.
bgpVpnRoutes [Bgp Vpn Routes] (vRtrFibStatBGPVpnRoutes)	long	vRtrFibStatBGPVpnRoutes indicates current BGP VPN route counts for the virtual router.
directRoutes [Direct Routes] (vRtrFibStatDirectRoutes)	long	vRtrFibStatDirectRoutes indicates current direct route counts for the virtual router.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
highUtilization [High Utilization] (vRtrFibStatHighUtilization)	boolean	vRtrFibStatHighUtilization indicates whether or not the FIB on the IOM is experiences persistent high occupancy.
hostRoutes [Host Routes] (vRtrFibStatHostRoutes)	long	vRtrFibStatHostRoutes indicates current host route counts for the virtual router.
isisRoutes [Isis Routes] (vRtrFibStatISISRoutes)	long	vRtrFibStatISISRoutes indicates current ISIS route counts for the virtual router.
lastAlarmTime [Last Alarm Time] (vRtrFibStatLastAlarmTime)	long	vRtrFibStatLastAlarmTime indicates the last time a high FIB usage alarm was raised.
managedRoutes [Managed Routes] (vRtrFibStatManagedRoutes)	long	vRtrFibStatManagedRoutes indicates current managed route counts for the virtual router.
ospfRoutes [Ospf Routes] (vRtrFibStatOSPFRoutes)	long	vRtrFibStatOSPFRoutes indicates current OSPF route counts for the virtual router.
overflows [Overflows] (vRtrFibStatOverflows)	long	vRtrFibStatOverflows indicates the number of times the FIB has run out of space.
ripRoutes [Rip Routes] (vRtrFibStatRIPRoutes)	long	vRtrFibStatRIPRoutes indicates current RIP route counts for the virtual router.
staticRoutes [Static Routes] (vRtrFibStatStaticRoutes)	long	vRtrFibStatStaticRoutes indicates current static route counts for the virtual router.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subMgmtRoutes [Sub Mgmt Routes] (vRtrFibStatSubMgmtRoutes)	long	vRtrFibStatSubMgmtRoutes indicates current Sub-management route counts for the virtual router.
<p>GponPortSpecificsStats MIB entry name: aluGponPortCurrentEntry Entry description: Defines an entry in aluGponPortCurrentTable. Entries are created and deleted by the system depending on port configuration. Table description (for aluGponPortCurrentTable): The aluGponPortCurrentTable contains various statistics being collected from the ONT for the current 15 minute interval. Supports realtime plotting Supports scheduled collection Monitored class: equipment.PhysicalPort</p>		
alignmentErr [Alignment Err] (aluGponPortCurrentAEs)	long	A count of frames having Alignment Errors.
badHeaders [Bad Headers] (aluGponPortCurrentBadHeaders)	long	A count of Received GEM Headers that are bad.
carrierSenseErr [Carrier Sense Err] (aluGponPortCurrentCSEs)	long	A count of Carrier Sense Errors.
deferredTx [Deferred Tx] (aluGponPortCurrentDTs)	long	A count of frames delayed due to Deferred Transmission.
dropFramesDn [Drop Frames Dn] (aluGponPortCurrentDropFrsDn)	long	A count of Dropped Frames Downstream.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dropFramesUp [Drop Frames Up] (aluGponPortCurrentDropFrsUp)	long	A count of Dropped Frames Upstream.
excessiveCollisions [Excessive Collisions] (aluGponPortCurrentECs)	long	A count of Excessive Collisions.
fcsErrors [Fcs Errors] (aluGponPortCurrentFCSEs)	long	A count of Frame Check Sequence(FCS)Errors.
internalMacRxErr [Internal Mac Rx Err] (aluGponPortCurrentIMREs)	long	A count of unsuccessfully received frames due to Internal MAC Receive Error.
internalMacTxErr [Internal Mac Tx Err] (aluGponPortCurrentIMTEs)	long	A count of unsuccessfully transmitted frames due to Internal MAC Transmit Error.
lateCollisions [Late Collisions] (aluGponPortCurrentLCs)	long	A count of Late Collisions.
lostFrgsDn [Lost Frags Dn] (aluGponPortCurrentLostFrgsDn)	long	A count of Lost GEM Fragments (downstream).
lostFrgsUp [Lost Frags Up] (aluGponPortCurrentLostFrgsUp)	long	A count of Lost GEM Fragments (upstream).
multipleCollisionFrames [Multiple Collision Frames] (aluGponPortCurrentMCFs)	long	A count of successfully transmitted Multiple Collision Frames.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxBufferOverflows [Rx Buffer Overflows] (aluGponPortCurrentRBOs)	long	A count of Receive Buffer Overflows.
rxEtherBytes [Rx Ether Bytes] (aluGponPortCurrentRxBytes)	long	A count of Received Ethernet Bytes.
rxEtherFrames [Rx Ether Frames] (aluGponPortCurrentRxFrames)	long	A count of Received Ethernet Frames.
rxFramesMcast [Rx Frames Mcast] (aluGponPortCurrentRxFrmsMcast)	long	A count of Received Multicast Ethernet Frames.
rxGemBlocks [Rx Gem Blocks] (aluGponPortCurrentRxBlocks)	long	A count of Received GEM Blocks.
rxGemFrag [Rx Gem Frags] (aluGponPortCurrentRxFrags)	long	A count of Received GEM Fragments.
singleCollisionFrames [Single Collision Frames] (aluGponPortCurrentSCFs)	long	A count of successfully transmitted Single Collision Frames.
sqeTestErrMsg [Sqe Test Err Msg] (aluGponPortCurrentSQEs)	long	A count of SQE Test Error messages generated.
tooLongFrames [Too Long Frames] (aluGponPortCurrentFTLs)	long	A count of Frames that are Too Long.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txBufferOverflows [Tx Buffer Overflows] (aluGponPortCurrentTBOs)	long	A count of Transmit Buffer Overflows.
txEtherBytes [Tx Ether Bytes] (aluGponPortCurrentTxBytes)	long	A count of Transmitted Ethernet Bytes.
txEtherFrames [Tx Ether Frames] (aluGponPortCurrentTxFrames)	long	A count of Transmitted Ethernet Frames.
txFramesMcast [Tx Frames Mcast] (aluGponPortCurrentTxFrsMcast)	long	A count of Transmitted Multicast Ethernet Frames.
txGemBlocks [Tx Gem Blocks] (aluGponPortCurrentTxBlocks)	long	A count of Transmitted GEM Blocks.
txGemFrag [Tx Gem Frags] (aluGponPortCurrentTxFrag)	long	A count of Transmitted GEM Fragments.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>HardwareTemperature</p> <p>MIB entry name: tmnxHwEntry</p> <p>Entry description: Each row entry represents an Nokia SROS series manufactured hardware component. Entries cannot be created and deleted via SNMP SET operations. When an entry is created in one of the card tables, IOM, CPM, Fabric or MDA, a tmnxHwEntry is created for the common hardware management information for that card in that chassis. When the card is removed from the chassis, its corresponding tmnxHwEntry is deleted. The tmnxHwIndex is bitmapped: 32 25 24 17 16 9 8 1 +-----+-----+-----+-----+ TmnxHwClass 00000000 Slot number +-----+-----+-----+-----+ The Slot field is only used for components on cards in slots. It is zero for all others. The number field starts from 1 and indicates which component. E.g. Power supply 1 or 2.</p> <p>Table description (for tmnxHwTable): The tmnxHwTable has an entry for each managed hardware component in the Nokia SROS series system's chassis. Examples of these hardware component types are IOM, Fabric, and CPM cards, MCM and CCM, and MDA modules. Similar information for physical ports is in the tmnxPortObjs.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.BaseCard • equipment.CCM • equipment.CardSlot • equipment.ControlProcessor • equipment.DaughterCard • equipment.FanTray • equipment.MCMCard • equipment.PowerSupplyTray • equipment.SwitchFabricProcessor 		
temperature [Temperature] (tmnxHwTemperature)	int	The current temperature reading in degrees celsius from this hardware component's temperature sensor. If this component does not contain a temperature sensor, then the value -1 is returned.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedBroadcastPackets [Received Broadcast Packets] (ifHCInBroadcastPkts)	java. math. BigInteger	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were addressed to a broadcast address at this sub-layer. This object is a 64-bit version of ifInBroadcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedMulticastPackets [Received Multicast Packets] (ifHCInMulticastPkts)	java. math. BigInteger	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were addressed to a multicast address at this sub-layer. For a MAC layer protocol, this includes both Group and Functional addresses. This object is a 64-bit version of ifInMulticastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedTotalOctets [Received Total Octets] (ifHCInOctets)	java. math. BigInteger	The total number of octets received on the interface, including framing characters. This object is a 64-bit version of ifInOctets. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedUnicastPackets [Received Unicast Packets] (ifHCInUcastPkts)	java. math. BigInteger	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were not addressed to a multicast or broadcast address at this sub-layer. This object is a 64-bit version of ifInUcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transmittedBroadcastPackets [Transmitted Broadcast Packets] (ifHCOutBroadcastPkts)	java. math. BigInteger	The total number of packets that higher-level protocols requested be transmitted, and which were addressed to a broadcast address at this sub-layer, including those that were discarded or not sent. This object is a 64-bit version of ifOutBroadcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedMulticastPackets [Transmitted Multicast Packets] (ifHCOutMulticastPkts)	java. math. BigInteger	The total number of packets that higher-level protocols requested be transmitted, and which were addressed to a multicast address at this sub-layer, including those that were discarded or not sent. For a MAC layer protocol, this includes both Group and Functional addresses. This object is a 64-bit version of ifOutMulticastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedTotalOctets [Transmitted Total Octets] (ifHCOutOctets)	java. math. BigInteger	The total number of octets transmitted out of the interface, including framing characters. This object is a 64-bit version of ifOutOctets. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedUnicastPackets [Transmitted Unicast Packets] (ifHCOutUcastPkts)	java. math. BigInteger	The total number of packets that higher-level protocols requested be transmitted, and which were not addressed to a multicast or broadcast address at this sub-layer, including those that were discarded or not sent. This object is a 64-bit version of ifOutUcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outboundBadPackets [Outbound Bad Packets] (ifOutErrors)	long	For packet-oriented interfaces, the number of outbound packets that could not be transmitted because of errors. For character-oriented or fixed-length interfaces, the number of outbound transmission units that could not be transmitted because of errors. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
outboundPacketsDiscarded [Outbound Packets Discarded] (ifOutDiscards)	long	The number of outbound packets which were chosen to be discarded even though no errors had been detected to prevent their being transmitted. One possible reason for discarding such a packet could be to free up buffer space. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedBadPackets [Received Bad Packets] (ifInErrors)	long	For packet-oriented interfaces, the number of inbound packets that contained errors preventing them from being deliverable to a higher-layer protocol. For character-oriented or fixed-length interfaces, the number of inbound transmission units that contained errors preventing them from being deliverable to a higher-layer protocol. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedOctets [Received Octets] (ifInOctets)	long	The total number of octets received on the interface, including framing characters. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedPacketsDiscarded [Received Packets Discarded] (ifInDiscards)	long	The number of inbound packets which were chosen to be discarded even though no errors had been detected to prevent their being deliverable to a higher-layer protocol. One possible reason for discarding such a packet could be to free up buffer space. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedUnicastPackets [Received Unicast Packets] (ifInUcastPkts)	long	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were not addressed to a multicast or broadcast address at this sub-layer. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedUnknownProtocolPackets [Received Unknown Protocol Packets] (ifInUnknownProtos)	long	For packet-oriented interfaces, the number of packets received via the interface which were discarded because of an unknown or unsupported protocol. For character-oriented or fixed-length interfaces that support protocol multiplexing the number of transmission units received via the interface which were discarded because of an unknown or unsupported protocol. For any interface that does not support protocol multiplexing, this counter will always be 0. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedOctets [Transmitted Octets] (ifOutOctets)	long	The total number of octets transmitted out of the interface, including framing characters. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transmittedUnicastPackets [Transmitted Unicast Packets] (ifOutUcastPkts)	long	The total number of packets that higher-level protocols requested be transmitted, and which were not addressed to a multicast or broadcast address at this sub-layer, including those that were discarded or not sent. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
IpSecMDAStats MIB entry name: tmnxIPsecMdaDpStatsEntry Entry description: Information about a single IPsec Mda Data Path Statistics entry. Table description (for tmnxIPsecMdaDpStatsTable): Table to retrieve the IPsec Mda Data Path Statistics entries. Supports realtime plotting Supports scheduled collection Monitored class: equipment.DaughterCardSlot		
decryptBytes [Decrypt Bytes] (tmnxIPsecMdaDpStatsDecryptBytes)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsDecryptBytes indicates the number of bytes encrypted by the IPsec data path.
decryptPackets [Decrypt Packets] (tmnxIPsecMdaDpStatsDecryptPkts)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsDecryptPkts indicates the number of packets encrypted by the IPsec data path.
dynamicIPsecTunnels [Dynamic IPsec Tunnels] (tmnxIPsecMdaDpDynIPsecTnls)	long	The value of tmnxIPsecMdaDpDynIPsecTnls indicates number of dynamic IPsec tunnels in use on the MDA.
encryptBytes [Encrypt Bytes] (tmnxIPsecMdaDpStatsEncryptBytes)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsEncryptBytes indicates the number of bytes encrypted by the IPsec data path.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
encryptPackets [Encrypt Packets] (tmnxIPsecMdaDpStatsEncryptPkts)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsEncryptPkts indicates the number of packets encrypted by the IPsec data path.
inboundIPDropPackets [Inbound IPDrop Packets] (tmnxIPsecMdaDpStatsInBDropPkts)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsInBDropPkts indicates the number of packets dropped before and during inbound (decryption) processing by the IPsec data path.
inboundIPDstSrcMismatches [Inbound IPDst Src Mismatches] (tmnxIPsecMdaDpStatsInBIP-DstSrcMismatches)	long	The value of tmnxIPsecMdaDpStatsInBIPDstSrcMismatches indicates the number of packets dropped before inbound (decryption) processing by the IPsec data path due to the received packet's outer IP destination or source address does not match the Tunnel's local or peer gateway address.
inboundSaMisses [Inbound Sa Misses] (tmnxIPsecMdaDpStatsInBSAMisses)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsInBSAMisses indicates the number of packets dropped before inbound (decryption) processing by the IPsec data path due to no SA (security association) present.
outboundIPDropPackets [Outbound IPDrop Packets] (tmnxIPsecMdaDpStatsOutBDropPkts)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsOutBDropPkts indicates the number of packets dropped before and during outbound (encryption) processing by the IPsec data path.
outboundPolicyEntryMisses [Outbound Policy Entry Misses] (tmnxIPsecMdaDpStatsOutBPoli- cyEntryMisses)	long	The value of tmnxIPsecMdaDpStatsOutBPolicyEntryMisses indicates the number of packets dropped before outbound (encryption) processing by the IPsec data path due to no matching Policy Entry.
outboundSaMisses [Outbound Sa Misses] (tmnxIPsecMdaDpStatsOutBSAMisses)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsOutBSAMisses indicates the number of packets dropped before outbound (encryption) processing by the IPsec data path due to no SA (security association) present.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
staticIPsecTunnels [Static IPsec Tunnels] (tmnxIPsecMdaDpStaticIPsecTnls)	long	The value of tmnxIPsecMdaDpStaticIPsecTnls indicates number of configured static IPsec tunnels on the MDA.
transmitPacketErrors [Transmit Packet Errors] (tmnxIPsecMdaDpStatsTxPktErrs)	long	The value of tmnxIPsecMdaDpStatsTxPktErrs indicates the number of packets transmit failures by the IPsec data path.
IpSecQueueCtlStats MIB entry name: aluIPsecCtrlQueueStatsEntry Entry description: Each row entry contains statistics collected from IPsec encryption Control Queue for a specific MDA. Table description (for aluIPsecCtrlQueueStatsTable): This table contains statistics collected from IPsec encryption Control Queues of a specific MDA in the Nokia 7705 system. Supports realtime plotting Supports scheduled collection Monitored class: equipment.DaughterCardSlot		
encryptionCtrlQueueDroppedBytes [Encryption Ctrl Queue Dropped Bytes] (aluIPsecCtrlQueueDroBytes)	java. math. BigInteger	aluIPsecCtrlQueueDroBytes indicates the number of bytes dropped from this control queue.
encryptionCtrlQueueDroppedPackets [Encryption Ctrl Queue Dropped Packets] (aluIPsecCtrlQueueDroPkts)	java. math. BigInteger	aluIPsecCtrlQueueDroPkts indicates the number of packets dropped from this control queue.
encryptionCtrlQueueFwdBytes [Encryption Ctrl Queue Fwd Bytes] (aluIPsecCtrlQueueFwdBytes)	java. math. BigInteger	aluIPsecCtrlQueueFwdBytes indicates the number of bytes forwarded from this control queue.
encryptionCtrlQueueFwdPackets [Encryption Ctrl Queue Fwd Packets] (aluIPsecCtrlQueueFwdPkts)	java. math. BigInteger	aluIPsecCtrlQueueFwdPkts indicates the number of packets forwarded from this control queue.

encryptionOutProfileDroppedPackets [Encryption Out Profile Dropped Packets] (aluSecQueueDroOutProfPkts)	java. math. BigInteger	aluSecQueueDroInProfPkts is only applicable and valid if aluSecQueueMode is profile. It indicates the number of out-profile security packets dropped from this queue.
encryptionOutProfileForwardedBytes [Encryption Out Profile Forwarded Bytes] (aluSecQueueFwdOutProfBytes)	java. math. BigInteger	aluSecQueueFwdOutProfBytes is only applicable and valid if aluSecQueueMode is profile. It indicates the number of out-profile security bytes forwarded from this queue.
encryptionOutProfileForwardedPackets [Encryption Out Profile Forwarded Packets] (aluSecQueueFwdOutProfPkts)	java. math. BigInteger	aluSecQueueFwdOutProfPkts is only applicable and valid if aluSecQueueMode is profile. It indicates the number of out-profile security packets forwarded from this queue.
<p>MediaIndependentStats</p> <p>MIB entry name: mediaIndependentEntry</p> <p>Entry description: Media independent statistics for promiscuous monitoring of any media.</p> <p>Table description (for mediaIndependentTable): Media independent statistics for promiscuous monitoring of any media. The following table defines media independent statistics that provide information for full and/or half-duplex links as well as high capacity links. For half-duplex links, or full-duplex-capable links operating in half-duplex mode, the mediaIndependentIn* objects shall be used and the mediaIndependentOut* objects shall not increment. For full-duplex links, the mediaIndependentOut* objects shall be present and shall increment. Whenever possible, the probe should count packets moving away from the closest terminating equipment as output packets. Failing that, the probe should count packets moving away from the DTE as output packets.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dropEvents [Drop Events] (mediaIndependentDropEvents)	long	The total number of events in which packets were dropped by the probe due to lack of resources. Note that this number is not necessarily the number of packets dropped; it is just the number of times this condition has been detected.
droppedFrames [Dropped Frames] (mediaIndependentDroppedFrames)	long	The total number of frames which were received by the probe and therefore not accounted for in the mediaIndependentDropEvents, but for which the probe chose not to count for this entry for whatever reason. Most often, this event occurs when the probe is out of some resources and decides to shed load from this collection. This count does not include packets that were not counted because they had MAC-layer errors. Note that, unlike the dropEvents counter, this number is the exact number of frames dropped.
duplex [Duplex] (mediaIndependentDuplexMode)	int	The current mode of this link. Note that if the link has full-duplex capabilities but is operating in half-duplex mode, this value will be halfduplex(1).
duplexChanges [Duplex Changes] (mediaIndependentDuplexChanges)	long	The number of times this link has changed from full-duplex mode to half-duplex mode or from half-duplex mode to full-duplex mode.
inputSpeed [Input Speed] (mediaIndependentInputSpeed)	long	The nominal maximum speed in kilobits per second of this half-duplex link or on the inbound connection of this full-duplex link. If the speed is unknown or there is no fixed maximum (e.g. a compressed link), this value shall be zero.
outputSpeed [Output Speed] (mediaIndependentOutputSpeed)	long	The nominal maximum speed in kilobits per second of this full-duplex link in the direction of the network. If the speed is unknown, the link is half-duplex, or there is no fixed maximum (e.g. a compressed link), this value shall be zero.
receivedBadPackets [Received Bad Packets] (mediaIndependentInErrors)	long	The total number of bad packets received on a half-duplex link or on the inbound connection of a full-duplex link.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedNonUnicastPackets [Received Non Unicast Packets] (mediaIndependentInNUCastHighCapacityPkts)	java. math. BigInteger	The total number of non-unicast packets (including bad packets) received on a half-duplex link or on the inbound connection of a full-duplex link.
receivedOctets [Received Octets] (mediaIndependentInHighCapacityOctets)	java. math. BigInteger	The total number of octets of data (including those in bad packets) received (excluding framing bits but including FCS octets) on a half-duplex link or on the inbound connection of a full-duplex link.
receivedPackets [Received Packets] (mediaIndependentInHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets, broadcast packets, and multicast packets) received on a half-duplex link or on the inbound connection of a full-duplex link.
transmittedBadPackets [Transmitted Bad Packets] (mediaIndependentOutErrors)	long	The total number of bad packets received on a full-duplex link in the direction of the network.
transmittedNonUnicastPackets [Transmitted Non Unicast Packets] (mediaIndependentOutNUCastHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets) received on a full-duplex link in the direction of the network.
transmittedOctets [Transmitted Octets] (mediaIndependentOutHighCapacityOctets)	java. math. BigInteger	The total number of octets of data (including those in bad packets) received on a full-duplex link in the direction of the network (excluding framing bits but including FCS octets).
transmittedPackets [Transmitted Packets] (mediaIndependentOutHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets, broadcast packets, and multicast packets) received on a full-duplex link in the direction of the network.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>MirrorQueueStats</p> <p>MIB entry name: aluMirrorQueueStatsEntry</p> <p>Entry description: Each row entry contains mirror queue statistics for an MDA.</p> <p>Table description (for aluMirrorQueueStatsTable): This table contains statistics collected from queues for mirror traffic of a specific MDA in the Nokia 7705 system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.DaughterCardSlot</p>		
inProfileDroppedBytes [In Profile Dropped Bytes] (aluMirrorQueueDroInProfBytes)	java. math. BigInteger	aluMirrorQueueDroInProfBytes indicates the number of in-profile bytes dropped from this queue.
inProfileDroppedPackets [In Profile Dropped Packets] (aluMirrorQueueDroInProfPkts)	java. math. BigInteger	aluMirrorQueueDroInProfPkts indicates the number of in-profile packets dropped from this queue.
inProfileForwardedBytes [In Profile Forwarded Bytes] (aluMirrorQueueFwdInProfBytes)	java. math. BigInteger	aluMirrorQueueFwdInProfBytes indicates the number of in-profile bytes forwarded from this queue.
inProfileForwardedPackets [In Profile Forwarded Packets] (aluMirrorQueueFwdInProfPkts)	java. math. BigInteger	aluMirrorQueueFwdInProfPkts indicates the number of in-profile packets forwarded from this queue.
outProfileDroppedBytes [Out Profile Dropped Bytes] (aluMirrorQueueDroOutProfBytes)	java. math. BigInteger	aluMirrorQueueDroOutProfBytes indicates the number of out-profile bytes dropped from this queue.

dropOctets [Drop Octets] (aluPortNetIngressControlDroOcts)	java. math. BigInteger	aluPortNetIngressControlDroOcts indicates the number of ingress control octets dropped on this port.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dropPackets [Drop Packets] (aluPortNetIngressControlDroPkts)	java. math. BigInteger	aluPortNetIngressControlDroPkts indicates the number of ingress control packets dropped on this port.
fwdOctets [Fwd Octets] (aluPortNetIngressControlFwdOcts)	java. math. BigInteger	aluPortNetIngressControlFwdOcts indicates the number of ingress control octets forwarded on this port.
fwdPackets [Fwd Packets] (aluPortNetIngressControlFwdPkts)	java. math. BigInteger	aluPortNetIngressControlFwdPkts indicates the number of ingress control packets forwarded on this port.
<p>NgeMdaStats MIB entry name: aluNgeMdaStatsEntry Entry description: Statistics for a single group encryption MDA. Table description (for aluNgeMdaStatsTable): Table to store group encryption MDA level statistics. Supports realtime plotting Supports scheduled collection Monitored class: equipment.DaughterCardSlot</p>		
ngeMdaDecryptBytes [Nge Mda Decrypt Bytes] (aluNgeMdaDecryptBytes)	java. math. BigInteger	The value of aluNgeMdaDecryptBytes indicates the number of bytes successfully decrypted by the group encryption data path.
ngeMdaDecryptPackets [Nge Mda Decrypt Packets] (aluNgeMdaDecryptPkts)	java. math. BigInteger	The value of aluNgeMdaDecryptPkts indicates the number of packets successfully decrypted by the group encryption data path.
ngeMdaEncryptBytes [Nge Mda Encrypt Bytes] (aluNgeMdaEncryptBytes)	java. math. BigInteger	The value of aluNgeMdaEncryptBytes indicates the number of bytes successfully encrypted by the group encryption data path.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ngeMdaEncryptPackets [Nge Mda Encrypt Packets] (aluNgeMdaEncryptPkts)	java. math. BigInteger	The value of aluNgeMdaEncryptPkts indicates the number of packets successfully encrypted by the group encryption data path.
ngeMdaInDropAuthFailure [Nge Mda In Drop Auth Failure] (aluNgeMdaInDropAuthFailure)	long	The value of aluNgeMdaInDropAuthFailure indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption data path. This implies that authentication failed on the received packets.
ngeMdaInDropControlWordMismatch [Nge Mda In Drop Control Word Mismatch] (aluNgeMdaInDropControlWordMismatch)	long	The value of aluNgeMdaInDropControlWordMismatch indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption data path. This implies that the decrypted control word does not match the outer control word.
ngeMdaInDropEnqueueError [Nge Mda In Drop Enqueue Error] (aluNgeMdaInDropEnqueueError)	long	The value of aluNgeMdaInDropEnqueueError indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption data path. This implies that there are enqueue errors in the encryption engine.
ngeMdaInDropInvalidSpi [Nge Mda In Drop Invalid Spi] (aluNgeMdaInDropInvalidSpi)	long	The value of aluNgeMdaInDropInvalidSpi indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption data path. This implies that 1) the received SPI does not exist within the system 2) the received SPI is not part of the associated inbound keygroup 3) un-encrypted packet has been received on SDP with an associated inbound keygroup
ngeMdaInDropPackets [Nge Mda In Drop Packets] (aluNgeMdaInDropPkts)	long	The value of aluNgeMdaInDropPkts indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption data path.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ngeMdaInDropPaddingFailure [Nge Mda In Drop Padding Failure] (aluNgeMdaInDropPaddingFailure)	long	The value of aluNgeMdaInDropPaddingFailure indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption data path. This implies that there are padding errors detected on the received packets.
ngeMdaOutDropEnqueueError [Nge Mda Out Drop Enqueue Error] (aluNgeMdaOutDropEnqueueError)	long	The value of aluNgeMdaDropOutEnqueueError indicates the number of packets dropped before and during outbound (encryption) processing by the group encryption data path. This implies that there are enqueue errors in the encryption engine.
ngeMdaOutDropPackets [Nge Mda Out Drop Packets] (aluNgeMdaOutDropPkts)	long	The value of aluNgeMdaOutDropPkts indicates the number of packets dropped before and during outbound (encryption) processing by the group encryption data path.
ngeMdaOutDropUnsupportedUplink [Nge Mda Out Drop Unsupported Uplink] (aluNgeMdaOutDropUnsupportedUplink)	long	The value of aluNgeMdaOutDropUnsupportedUplink indicates the number of packets dropped before and during outbound (encryption) processing by the group encryption data path. This implies that the resolved uplink does not support encryption.
<p>PortNetEgressStats</p> <p>MIB entry name: tmnxPortNetEgressStatsEntry</p> <p>Entry description: Defines an entry in tmnxPortNetEgressStatsTable. inProfileOctetsDropped [In Profile Octets Dropped] (aluPortNetRingAddDropDroInProfOcts)	java. math. BigInteger	aluPortNetRingAddDropDroInProfOcts indicates the number of conforming network add-drop octets dropped on this port using this queue.
inProfileOctetsForwarded [In Profile Octets Forwarded] (aluPortNetRingAddDropFwdInProfOcts)	java. math. BigInteger	aluPortNetRingAddDropFwdInProfOcts indicates the number of conforming network add-drop octets forwarded on this port using this queue.
inProfilePacketsDropped [In Profile Packets Dropped] (aluPortNetRingAddDropDroInProfPkts)	java. math. BigInteger	aluPortNetRingAddDropDroInProfPkts indicates the number of conforming network add-drop packets dropped on this port using this queue.
inProfilePacketsForwarded [In Profile Packets Forwarded] (aluPortNetRingAddDropFwdInProfPkts)	java. math. BigInteger	aluPortNetRingAddDropFwdInProfPkts indicates the number of conforming network add-drop packets forwarded on this port using this queue.
outProfileOctetsDropped [Out Profile Octets Dropped] (aluPortNetRingAddDropDroOutProfOcts)	java. math. BigInteger	aluPortNetRingAddDropDroOutProfOcts indicates the number of exceeding network add-drop octets dropped on this port using this queue.
outProfileOctetsForwarded [Out Profile Octets Forwarded] (aluPortNetRingAddDropFwdOutProfOcts)	java. math. BigInteger	aluPortNetRingAddDropFwdOutProfOcts indicates the number of exceeding network add-drop octets forwarded on this port using this queue.
outProfilePacketsDropped [Out Profile Packets Dropped] (aluPortNetRingAddDropDroOutProfPkts)	java. math. BigInteger	aluPortNetRingAddDropDroOutProfPkts indicates the number of exceeding network add-drop packets dropped on this port using this queue.
outProfilePacketsForwarded [Out Profile Packets Forwarded] (aluPortNetRingAddDropFwdOutProfPkts)	java. math. BigInteger	aluPortNetRingAddDropFwdOutProfPkts indicates the number of exceeding network add-drop packets forwarded on this port using this queue.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
queueId [Queue Id] (aluPortNetRingAddDropQueueIndex)	long	aluPortNetRingAddDropQueueIndex serves as the tertiary index. When used in conjunction with tmnxChassisIndex and tmnxPortPortID, it uniquely identifies a network ring add-drop queue for the specified port in the managed system.
<p>PortTerminationStats</p> <p>MIB entry name: tmnxBundleMemberImaEntry</p> <p>Entry description: Each row entry represents an IMA link associated with an IMA Group.</p> <p>Table description (for tmnxBundleMemberImaTable): The tmnxBundleMemberImaTable has an entry for an IMA link associated with an IMA Group.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bundle.PortTermination</p>		
bundleMemberImaErrorIcpCells [Bundle Member Ima Error Icp Cells] (tmnxBundleMemberImaErrorIcpCells)	long	tmnxBundleMemberImaErrorIcpCells indicates the number of ICP cells with HEC or CRC-10 errors.
bundleMemberImaFeRxNumFails [Bundle Member Ima Fe Rx Num Fails] (tmnxBundleMemberImaFeRxNumFails)	long	tmnxBundleMemberImaFeRxNumFails indicates the number of times that a far-end receive alarm is set on the IMA link.
bundleMemberImaFeRxUnuseSecs [Bundle Member Ima Fe Rx Unuse Secs] (tmnxBundleMemberImaFeRxUnuseSecs)	long	tmnxBundleMemberImaFeRxUnuseSecs indicates the number of unavailable seconds at the far-end receive link state machine.
bundleMemberImaFeSevErrSecs [Bundle Member Ima Fe Sev Err Secs] (tmnxBundleMemberImaFeSevErrSecs)	long	tmnxBundleMemberImaFeSevErrSecs indicates the number of one second intervals in which the far-end contains IMA-RDI defects.
bundleMemberImaFeTxNumFails [Bundle Member Ima Fe Tx Num Fails] (tmnxBundleMemberImaFeTxNumFails)	long	tmnxBundleMemberImaFeTxNumFails indicates the number of times that a far-end transmit alarm is set on the IMA link.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
bundleMemberImaFeTxUnuseSecs [Bundle Member Ima Fe Tx Unuse Secs] (tmnxBundleMemberImaFeTxUnuseSecs)	long	tmnxBundleMemberImaFeTxUnuseSecs indicates the number of unavailable seconds at the far-end transmit link state machine.
bundleMemberImaFeUnavailSecs [Bundle Member Ima Fe Unavail Secs] (tmnxBundleMemberImaFeUnavailSecs)	long	tmnxBundleMemberImaFeUnavailSecs indicates the number of unavailable seconds at the near-end.
bundleMemberImaLstRxlcpCells [Bundle Member Ima Lst Rx lcp Cells] (tmnxBundleMemberImaLstRxlcpCells)	long	tmnxBundleMemberImaLstRxlcpCells indicates the number of lost ICP cells at the expected offset.
bundleMemberImaNeRxNumFails [Bundle Member Ima Ne Rx Num Fails] (tmnxBundleMemberImaNeRxNumFails)	long	tmnxBundleMemberImaNeRxNumFails indicates the number of times that a near-end receive alarm is set on the IMA link.
bundleMemberImaNeRxUnuseSecs [Bundle Member Ima Ne Rx Unuse Secs] (tmnxBundleMemberImaNeRxUnuseSecs)	long	tmnxBundleMemberImaNeRxUnuseSecs indicates the number of unavailable seconds at the near-end receive link state machine.
bundleMemberImaNeSevErrSecs [Bundle Member Ima Ne Sev Err Secs] (tmnxBundleMemberImaNeSevErrSecs)	long	tmnxBundleMemberImaNeSevErrSecs indicates the number of one second intervals in which thirty percent or more of the near-end ICP cells are in violation, or link defects have occurred.
bundleMemberImaNeTxNumFails [Bundle Member Ima Ne Tx Num Fails] (tmnxBundleMemberImaNeTxNumFails)	long	tmnxBundleMemberImaNeTxNumFails indicates the number of times that a near-end transmit alarm is set on the IMA link.
bundleMemberImaNeTxUnuseSecs [Bundle Member Ima Ne Tx Unuse Secs] (tmnxBundleMemberImaNeTxUnuseSecs)	long	tmnxBundleMemberImaNeTxUnuseSecs indicates the number of unavailable seconds at the near-end transmit link state machine.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
bundleMemberImaNeUnavailSecs [Bundle Member Ima Ne Unavail Secs] (tmnxBundleMemberImaNeUnavailSecs)	long	tmnxBundleMemberImaNeUnavailSecs indicates the number of unavailable seconds at the near-end.
bundleMemberImaOifAnomalies [Bundle Member Ima Oif Anomalies] (tmnxBundleMemberImaOifAnomalies)	long	tmnxBundleMemberImaOifAnomalies indicates the number of OIF anomalies at the near-end.
bundleMemberImaRxlcpCells [Bundle Member Ima Rx lcp Cells] (tmnxBundleMemberImaRxlcpCells)	long	tmnxBundleMemberImaRxlcpCells indicates the number of ICP cells that have been received on the IMA link.
bundleMemberImaTxlcpCells [Bundle Member Ima Tx lcp Cells] (tmnxBundleMemberImaTxlcpCells)	long	tmnxBundleMemberImaTxlcpCells indicates the number of ICP cells that have been transmitted on the IMA link.
bundleMemberImaViolations [Bundle Member Ima Violations] (tmnxBundleMemberImaViolations)	long	tmnxBundleMemberImaViolations indicates the number of ICP violations including errored, invalid or missing ICP cells.
<p>ShDslLineStats MIB entry name: aluShdslLineStatsEntry Entry description: Defines an entry in aluShdslLineStatsTable. Entries are created and deleted by the system depending on port configuration. Table description (for aluShdslLineStatsTable): The aluShdslLineStatsTable contains the SHDSL Performance statistics being collected from the Socrate-4e for each physical SHDSL line on the 'SHDSL' tmnxPortType port. Supports realtime plotting Supports scheduled collection Monitored class: equipment.PhysicalPort</p>		
shdslLineStatsCvError [Shdsl Line Stats CvError] (aluShdslLineStatsCvError)	java. math. BigInte- ger	Code Violation Error Counter (Network Side). It is updated every second when the link is active.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
shdslLineStatsES [Shdsl Line Stats ES] (aluShdslLineStatsES)	java. math. BigInteger	Erroneous Seconds Counter (Network Side). It is updated every second when the link is active.
shdslLineStatsInvalidDataFlag [Shdsl Line Stats Invalid Data Flag] (aluShdslLineStatsInvalidDataFlag)	long	It indicates the validity of the PM data. It is set to 0 when the counters are reliable, otherwise it indicates that the far-end counters are not reliable.
shdslLineStatsLOSWS [Shdsl Line Stats LOSWS] (aluShdslLineStatsLOSWS)	java. math. BigInteger	LOSWS Counter (Network Side). It is updated every second when the link is active.
shdslLineStatsLinkLoss [Shdsl Line Stats Link Loss] (aluShdslLineStatsLinkLoss)	java. math. BigInteger	Link Loss Counter (Network Side). This counter is only valid for the local STU-R and is not polled by the STU-C,
shdslLineStatsSES [Shdsl Line Stats SES] (aluShdslLineStatsSES)	java. math. BigInteger	Severely Erroneous Seconds Counter (Network Side). It is updated every second when the link is active.
shdslLineStatsUAS [Shdsl Line Stats UAS] (aluShdslLineStatsUAS)	java. math. BigInteger	Unavailable Seconds Counter (Network Side). It is updated every second when the link is active.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SystemCpuMonStats</p> <p>MIB entry name: tmnxSysCpuMonEntry</p> <p>Entry description: tmnxSysCpuMonEntry contains the system level CPU monitoring statistics over a specified sample-time.</p> <p>Table description (for tmnxSysCpuMonTable): tmnxSysCpuMonTable consists of the system level CPU monitoring statistics.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.SystemStatsHolder</p>		
tmnxSysCpuMonBusyCoreUtil [Tmnx Sys Cpu Mon Busy Core Util] (tmnxSysCpuMonBusyCoreUtil)	float	The value of tmnxSysCpuMonBusyCoreUtil indicates the utilization percentage of the busiest processor core over the specified sample-time. On single core CPUs, this is the overall system utilization percentage over the specified sample-time.
tmnxSysCpuMonBusyGroupName [Tmnx Sys Cpu Mon Busy Group Name] (tmnxSysCpuMonBusyGroupName)	String	The value of tmnxSysCpuMonBusyGroupName indicates the name of the group that is running at the highest capacity utilization. Capacity utilization is the CPU utilization relative to the maximum CPU resources available to that group. A group is a set of related applications, services, tasks or protocol handlers that consumes some part of the system CPU resources. The capacity utilization of the busiest group is indicated by tmnxSysCpuMonBusyGroupUtil.
tmnxSysCpuMonBusyGroupUtil [Tmnx Sys Cpu Mon Busy Group Util] (tmnxSysCpuMonBusyGroupUtil)	float	The value of tmnxSysCpuMonBusyGroupUtil indicates the capacity utilization of the group that is running at the highest capacity utilization. Capacity utilization is the CPU utilization relative to the maximum CPU resources available to that group. A group is a set of related applications, services, tasks or protocol handlers that consumes some part of the system CPU resources. The name of the busiest group is indicated by tmnxSysCpuMonBusyGroupName.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tmnxSysCpuMonCpuIdle [Tmnx Sys Cpu Mon Cpu Idle] (tmnxSysCpuMonCpuIdle)	float	The value of tmnxSysCpuMonCpuIdle indicates the overall percentage of CPU idleness over the specified sample-time.
tmnxSysCpuMonSampleTime [Tmnx Sys Cpu Mon Sample Time] (tmnxSysCpuMonSampleTime)	int	The value of tmnxSysCpuMonSampleTime specifies the sample-time used to calculate the utilization results for the row.
SystemCpuStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder		
systemCpuUsage [System Cpu Usage] (sgiCpuUsage)	long	The value of sgiCpuUsage indicates the current CPU utilization for the system.
SystemMemoryStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder		
systemMemoryUsage [System Memory Usage] (sgiMemoryUsed)	long	The value of sgiMemoryUsed indicates the total pre-allocated pool memory currently in use on the system. If the value is greater than the maximum value reportable by this object then this object reports its maximum value (4,294,967,295) and sgiKbMemoryUsed must be used to determine the total pre-allocated pool memory.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description

xdslLineStatsFarEndAS [Xdsl Line Stats Far End AS] (aluXdslLineStatsFarEndAS)	java. math. BigInteger	A count of Available Seconds - Far-End: Count of 1 second intervals for which the ADSL line is available.
xdslLineStatsFarEndES [Xdsl Line Stats Far End ES] (aluXdslLineStatsFarEndES)	java. math. BigInteger	A count of Errored Seconds - Far-End: Count of 1-second intervals with one or more FEBE anomalies, or 1 or more LOS defects, or one or more RDI defects.
xdslLineStatsFarEndFECS [Xdsl Line Stats Far End FECS] (aluXdslLineStatsFarEndFECS)	java. math. BigInteger	A count of Forward Error Correction Seconds - Far-End: Count of 1-second intervals with one or more FEC corrections on either one of the active latencies at the far-end.
xdslLineStatsFarEndLEFTRS [Xdsl Line Stats Far End LEFTRS] (aluXdslLineStatsFarEndLEFTRS)	java. math. BigInteger	A count of Low Error-Free Troughput Rate Seconds - Far-End.
xdslLineStatsFarEndLOFS [Xdsl Line Stats Far End LOFS] (aluXdslLineStatsFarEndLOFS)	java. math. BigInteger	A count of Loss of Framing Seconds - Far-End: Count of 1-second intervals containing one or more SEF defects at the far-end.

Table 361 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
xdslLineStatsFarEndLOSS [Xdsl Line Stats Far End LOSS] (aluXdslLineStatsFarEndLOSS)	java. math. BigInteger	A count of Loss of Signal Seconds - Far-End: Count of 1-second intervals with one or more LOS defects present at the far-end.
xdslLineStatsFarEndLPRS [Xdsl Line Stats Far End LPRS] (aluXdslLineStatsFarEndLPRS)	java. math. BigInteger	A count of Loss of power Seconds - Far-End: Count of 1-second intervals containing one or more LPR defects at the far-end.
xdslLineStatsFarEndSES [Xdsl Line Stats Far End SES] (aluXdslLineStatsFarEndSES)	java. math. BigInteger	A count of Severely Errored Seconds - Far-End: Count of 1-second intervals with 18 or more FEBE anomalies, or 1 or more LOS defects, or one or more RDI defects.
xdslLineStatsFarEndUAS [Xdsl Line Stats Far End UAS] (aluXdslLineStatsFarEndUAS)	java. math. BigInteger	A count of Unavailable Seconds - Far-End: Count of 1-second intervals for which the ADSL line is not available (the line becomes unavailable at the onset of 10 continuous SES).
xdslLineStatsNearEndAS [Xdsl Line Stats Near End AS] (aluXdslLineStatsNearEndAS)	java. math. BigInteger	A count of Available Seconds - Near-End: Count of 1 second intervals for which the ADSL line is available.
xdslLineStatsNearEndES [Xdsl Line Stats Near End ES] (aluXdslLineStatsNearEndES)	java. math. BigInteger	A count of Errored Seconds - Near-End: Count of 1-second intervals with one or more FEBE anomalies, or 1 or more LOS defects, or one or more RDI defects.
xdslLineStatsNearEndFECS [Xdsl Line Stats Near End FECS] (aluXdslLineStatsNearEndFECS)	java. math. BigInteger	A count of Forward Error Correction Seconds - Near-End: Count of 1-second intervals with one or more FEC corrections on either one of the active latencies at the near-end.
xdslLineStatsNearEndLEFTRS [Xdsl Line Stats Near End LEFTRS] (aluXdslLineStatsNearEndLEFTRS)	java. math. BigInteger	A count of Low Error-Free Troughput Rate Seconds - Near-End.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
xdslLineStatsNearEndLOFS [Xdsl Line Stats Near End LOFS] (aluXdslLineStatsNearEndLOFS)	java. math. BigInteger	A count of Loss of Framing Seconds - Near-End: Count of 1-second intervals containing one or more SEF defects at the near-end.
xdslLineStatsNearEndLOSS [Xdsl Line Stats Near End LOSS] (aluXdslLineStatsNearEndLOSS)	java. math. BigInteger	A count of Loss of Signal Seconds - Near-End: Count of 1-second intervals with one or more LOS defects present at the near-end.
xdslLineStatsNearEndLPRS [Xdsl Line Stats Near End LPRS] (aluXdslLineStatsNearEndLPRS)	java. math. BigInteger	A count of Loss of power Seconds - Near-End: Count of 1-second intervals containing one or more LPR defects at the near-end.
xdslLineStatsNearEndSES [Xdsl Line Stats Near End SES] (aluXdslLineStatsNearEndSES)	java. math. BigInteger	A count of Severely Errored Seconds - Near-End: Count of 1-second intervals with 18 or more FEBE anomalies, or 1 or more LOS defects, or one or more RDI defects.
xdslLineStatsNearEndUAS [Xdsl Line Stats Near End UAS] (aluXdslLineStatsNearEndUAS)	java. math. BigInteger	A count of Unavailable Seconds - Near-End: Count of 1-second intervals for which the ADSL line is not available (the line becomes unavailable at the onset of 10 continuous SES).
xdslLineStatsUpTime [Xdsl Line Stats Up Time] (aluXdslLineStatsUpTime)	long	A count of the number of seconds already in showtime.

Table 362 ethernetequipment statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AdditionalEthernetStats</p> <p>MIB entry name: tmnxPortEtherEntry</p> <p>Entry description: Each row entry represents an Ethernet port on a IOM card in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. Before an IOM card entry can be deleted from the tmnxMDATable, its supported tmnxPortEntry and tmnxPortEtherEntry rows must be in the proper state for removal. The tmnxPortEtherEntry contains attributes that are unique to the Ethernet TmnxPortType.</p> <p>Table description (for tmnxPortEtherTable): The tmnxPortEtherTable has an entry for each Ethernet (faste, gige, xcme or xgige) port on each IOM card in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
highCapacityPackets1519toMaxFrameSize [High Capacity Packets 1519 to Max Frame Size] (tmnxPortEtherHCPkts1519toMax)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 1519 octets in length and the maximum frame size, usually 12287 octets inclusive (excluding framing bits but including FCS octets). The lower 32-bits of this 64-bit counter will equal the value of tmnxPortEtherHCPkts1519toMax. The high 32-bits of this counter will equal the value of tmnxPortEtherHCOverPkts1519toMax.
packets1519toMaxFrameSize [Packets 1519 to Max Frame Size] (tmnxPortEtherPkts1519toMax)	long	The total number of packets received that were longer than 1518 octets but less than the maximum frame size for the particular medium, usually 12287 octets (excluding framing bits, but including FCS octets) and were otherwise well formed.

Table 362 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>Dot3Stats</p> <p>MIB entry name: dot3StatsEntry</p> <p>Entry description: Statistics for a particular interface to an ethernet-like medium.</p> <p>Table description (for dot3StatsTable): Statistics for a collection of ethernet-like interfaces attached to a particular system. There will be one row in this table for each ethernet-like interface in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
<p>alignmentErrors [Alignment Errors] (dot3StatsAlignmentErrors)</p>	<p>long</p>	<p>A count of frames received on a particular interface that are not an integral number of octets in length and do not pass the FCS check. The count represented by an instance of this object is incremented when the alignmentError status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions pertain are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC. This counter does not increment for group encoding schemes greater than 4 bits per group. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsAlignmentErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.</p>

Table 362 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
carrierSenseErrors [Carrier Sense Errors] (dot3StatsCarrierSenseErrors)	long	The number of times that the carrier sense condition was lost or never asserted when attempting to transmit a frame on a particular interface. The count represented by an instance of this object is incremented at most once per transmission attempt, even if the carrier sense condition fluctuates during a transmission attempt. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
deferredTransmissions [Deferred Transmissions] (dot3StatsDeferredTransmissions)	long	A count of frames for which the first transmission attempt on a particular interface is delayed because the medium is busy. The count represented by an instance of this object does not include frames involved in collisions. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
duplex [Duplex] (dot3StatsDuplexStatus)	int	The current mode of operation of the MAC entity. 'unknown' indicates that the current duplex mode could not be determined. Management control of the duplex mode is accomplished through the MAU MIB. When an interface does not support autonegotiation, or when autonegotiation is not enabled, the duplex mode is controlled using ifMauDefaultType. When autonegotiation is supported and enabled, duplex mode is controlled using ifMauAutoNegAdvertisedBits. In either case, the currently operating duplex mode is reflected both in this object and in ifMauType. Note that this object provides redundant information with ifMauType. Normally, redundant objects are discouraged. However, in this instance, it allows a management application to determine the duplex status of an interface without having to know every possible value of ifMauType. This was felt to be sufficiently valuable to justify the redundancy.

Table 362 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
excessiveCollisions [Excessive Collisions] (dot3StatsExcessiveCollisions)	long	A count of frames for which transmission on a particular interface fails due to excessive collisions. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
fcsErrors [Fcs Errors] (dot3StatsFCSErrors)	long	A count of frames received on a particular interface that are an integral number of octets in length but do not pass the FCS check. This count does not include frames received with frame-too-long or frame-too-short error. The count represented by an instance of this object is incremented when the frameCheckError status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions pertain are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC. Note: Coding errors detected by the physical layer for speeds above 10 Mb/s will cause the frame to fail the FCS check. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsFCSErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 362 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
frameTooLongs [Frame Too Longs] (dot3StatsFrameTooLongs)	long	A count of frames received on a particular interface that exceed the maximum permitted frame size. The count represented by an instance of this object is incremented when the frameTooLong status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions pertain are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC. For interfaces operating at 10 Gb/s, this counter can roll over in less than 80 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsFrameTooLongs object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 362 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
internalMacReceiveErrors [Internal Mac Receive Errors] (dot3StatsInternalMacReceiveErrors)	long	A count of frames for which reception on a particular interface fails due to an internal MAC sublayer receive error. A frame is only counted by an instance of this object if it is not counted by the corresponding instance of either the dot3StatsFrameTooLongs object, the dot3StatsAlignmentErrors object, or the dot3StatsFCSErrors object. The precise meaning of the count represented by an instance of this object is implementation- specific. In particular, an instance of this object may represent a count of receive errors on a particular interface that are not otherwise counted. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsInternalMacReceiveErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 362 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
internalMacTransmitErrors [Internal Mac Transmit Errors] (dot3StatsInternalMacTransmitErrors)	long	A count of frames for which transmission on a particular interface fails due to an internal MAC sublayer transmit error. A frame is only counted by an instance of this object if it is not counted by the corresponding instance of either the dot3StatsLateCollisions object, the dot3StatsExcessiveCollisions object, or the dot3StatsCarrierSenseErrors object. The precise meaning of the count represented by an instance of this object is implementation- specific. In particular, an instance of this object may represent a count of transmission errors on a particular interface that are not otherwise counted. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsInternalMacTransmitErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
lateCollisions [Late Collisions] (dot3StatsLateCollisions)	long	The number of times that a collision is detected on a particular interface later than one slotTime into the transmission of a packet. A (late) collision included in a count represented by an instance of this object is also considered as a (generic) collision for purposes of other collision-related statistics. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 362 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
multipleCollisionFrames [Multiple Collision Frames] (dot3StatsMultipleCollisionFrames)	long	A count of frames that are involved in more than one collision and are subsequently transmitted successfully. A frame that is counted by an instance of this object is also counted by the corresponding instance of either the ifOutUcastPkts, ifOutMulticastPkts, or ifOutBroadcastPkts, and is not counted by the corresponding instance of the dot3StatsSingleCollisionFrames object. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
singleCollisionFrames [Single Collision Frames] (dot3StatsSingleCollisionFrames)	long	A count of frames that are involved in a single collision, and are subsequently transmitted successfully. A frame that is counted by an instance of this object is also counted by the corresponding instance of either the ifOutUcastPkts, ifOutMulticastPkts, or ifOutBroadcastPkts, and is not counted by the corresponding instance of the dot3StatsMultipleCollisionFrames object. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
sqeTestErrors [Sqe Test Errors] (dot3StatsSQETestErrors)	long	A count of times that the SQE TEST ERROR is received on a particular interface. The SQE TEST ERROR is set in accordance with the rules for verification of the SQE detection mechanism in the PLS Carrier Sense Function as described in IEEE Std. 802.3, 2000 Edition, section 7.2.4.6. This counter does not increment on interfaces operating at speeds greater than 10 Mb/s, or on interfaces operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 362 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
symbolErrors [Symbol Errors] (dot3StatsSymbolErrors)	long	<p>For an interface operating at 100 Mb/s, the number of times there was an invalid data symbol when a valid carrier was present. For an interface operating in half-duplex mode at 1000 Mb/s, the number of times the receiving media is non-idle (a carrier event) for a period of time equal to or greater than slotTime, and during which there was at least one occurrence of an event that causes the PHY to indicate 'Data reception error' or 'carrier extend error' on the GMII. For an interface operating in full-duplex mode at 1000 Mb/s, the number of times the receiving media is non-idle (a carrier event) for a period of time equal to or greater than minFrameSize, and during which there was at least one occurrence of an event that causes the PHY to indicate 'Data reception error' on the GMII. For an interface operating at 10 Gb/s, the number of times the receiving media is non-idle (a carrier event) for a period of time equal to or greater than minFrameSize, and during which there was at least one occurrence of an event that causes the PHY to indicate 'Receive Error' on the XGMII. The count represented by an instance of this object is incremented at most once per carrier event, even if multiple symbol errors occur during the carrier event. This count does not increment if a collision is present. This counter does not increment when the interface is operating at 10 Mb/s. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsSymbolErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.</p>

packets512to1023Octets [Packets 512 to 1023 Octets] (etherStatsHighCapacityPkts512to1023Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 512 and 1023 octets in length inclusive (excluding framing bits but including FCS octets).

Table 362 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
packets64Octets [Packets 64 Octets] (etherStatsHighCapacityPkts64Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were 64 octets in length (excluding framing bits but including FCS octets).
packets65to127Octets [Packets 65 to 127 Octets] (etherStatsHighCapacityPkts65to127Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 65 and 127 octets in length inclusive (excluding framing bits but including FCS octets).

Table 362 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalOctets [Total Octets] (etherStatsHighCapacityOctets)	java. math. BigInteger	The total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets). If the network is half-duplex Fast Ethernet, this object can be used as a reasonable estimate of utilization. If greater precision is desired, the etherStatsHighCapacityPkts and etherStatsHighCapacityOctets objects should be sampled before and after a common interval. The differences in the sampled values are Pkts and Octets, respectively, and the number of seconds in the interval is Interval. These values are used to calculate the Utilization as follows: $Pkts * (.96 + .64) + (Octets * .08)$ Utilization = - Interval * 10,000 The result of this equation is the value Utilization which is the percent utilization of the ethernet segment on a scale of 0 to 100 percent. This table is not appropriate for monitoring full-duplex ethernets. If the network is a full-duplex ethernet and the mediaIndependentTable is monitoring that network, the utilization can be calculated as follows: 1) Determine the utilization of the inbound path by using the appropriate equation (for ethernet or fast ethernet) to determine the utilization, substituting mediaIndependentInPkts for etherStatsHighCapacityPkts, and mediaIndependentInOctets for etherStatsHighCapacityOctets. Call the resulting utilization inUtilization. 2) Determine the utilization of the outbound path by using the same equation to determine the utilization, substituting mediaIndependentOutPkts for etherStatsHighCapacityPkts, and mediaIndependentOutOctets for etherStatsHighCapacityOctets. Call the resulting utilization outUtilization. 3) The utilization is the maximum of inUtilization and outUtilization. This metric shows the amount of percentage of bandwidth that is left before congestion will be experienced on the link.
totalPackets [Total Packets] (etherStatsHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets, broadcast packets, and multicast packets) received.

Table 362 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>EthernetStats</p> <p>MIB entry name: etherStatsEntry</p> <p>Entry description: A collection of statistics kept for a particular Ethernet interface. As an example, an instance of the etherStatsPkts object might be named etherStatsPkts.1</p> <p>Table description (for etherStatsTable): A list of Ethernet statistics entries.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
broadcastPackets [Broadcast Packets] (etherStatsBroadcastPkts)	long	The total number of good packets received that were directed to the broadcast address. Note that this does not include multicast packets.

Table 362 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
collisions [Collisions] (etherStatsCollisions)	long	The best estimate of the total number of collisions on this Ethernet segment. The value returned will depend on the location of the RMON probe. Section 8.2.1.3 (10BASE-5) and section 10.3.1.3 (10BASE-2) of IEEE standard 802.3 states that a station must detect a collision, in the receive mode, if three or more stations are transmitting simultaneously. A repeater port must detect a collision when two or more stations are transmitting simultaneously. Thus a probe placed on a repeater port could record more collisions than a probe connected to a station on the same segment would. Probe location plays a much smaller role when considering 10BASE-T. 14.2.1.4 (10BASE-T) of IEEE standard 802.3 defines a collision as the simultaneous presence of signals on the DO and RD circuits (transmitting and receiving at the same time). A 10BASE-T station can only detect collisions when it is transmitting. Thus probes placed on a station and a repeater, should report the same number of collisions. Note also that an RMON probe inside a repeater should ideally report collisions between the repeater and one or more other hosts (transmit collisions as defined by IEEE 802.3k) plus receiver collisions observed on any coax segments to which the repeater is connected.
crcAlignErrors [Crc Align Errors] (etherStatsCRCAAlignErrors)	long	The total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, but had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).
dropEvents [Drop Events] (etherStatsDropEvents)	long	The total number of events in which packets were dropped by the probe due to lack of resources. Note that this number is not necessarily the number of packets dropped; it is just the number of times this condition has been detected.

Table 362 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fragments [Fragments] (etherStatsFragments)	long	The total number of packets received that were less than 64 octets in length (excluding framing bits but including FCS octets) and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error). Note that it is entirely normal for etherStatsFragments to increment. This is because it counts both runts (which are normal occurrences due to collisions) and noise hits.
jabbers [Jabbers] (etherStatsJabbers)	long	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error). Note that this definition of jabber is different than the definition in IEEE-802.3 section 8.2.1.5 (10BASE5) and section 10.3.1.4 (10BASE2). These documents define jabber as the condition where any packet exceeds 20 ms. The allowed range to detect jabber is between 20 ms and 150 ms.
multicastPackets [Multicast Packets] (etherStatsMulticastPkts)	long	The total number of good packets received that were directed to a multicast address. Note that this number does not include packets directed to the broadcast address.
oversizePackets [Oversize Packets] (etherStatsOversizePkts)	long	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets) and were otherwise well formed.
packets1024to1518Octets [Packets 1024 to 1518 Octets] (etherStatsPkts1024to1518Octets)	long	The total number of packets (including bad packets) received that were between 1024 and 1518 octets in length inclusive (excluding framing bits but including FCS octets).
packets128to255Octets [Packets 128 to 255 Octets] (etherStatsPkts128to255Octets)	long	The total number of packets (including bad packets) received that were between 128 and 255 octets in length inclusive (excluding framing bits but including FCS octets).

NFM-P counter names: XML [displayed] (MIB)	Type	Description
packets256to511Octets [Packets 256 to 511 Octets] (etherStatsPkts256to511Octets)	long	The total number of packets (including bad packets) received that were between 256 and 511 octets in length inclusive (excluding framing bits but including FCS octets).
packets512to1023Octets [Packets 512 to 1023 Octets] (etherStatsPkts512to1023Octets)	long	The total number of packets (including bad packets) received that were between 512 and 1023 octets in length inclusive (excluding framing bits but including FCS octets).
packets64Octets [Packets 64 Octets] (etherStatsPkts64Octets)	long	The total number of packets (including bad packets) received that were 64 octets in length (excluding framing bits but including FCS octets).
packets65to127Octets [Packets 65 to 127 Octets] (etherStatsPkts65to127Octets)	long	The total number of packets (including bad packets) received that were between 65 and 127 octets in length inclusive (excluding framing bits but including FCS octets).
totalOctets [Total Octets] (etherStatsOctets)	long	The total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets). This object can be used as a reasonable estimate of 10-Megabit ethernet utilization. If greater precision is desired, the etherStatsPkts and etherStatsOctets objects should be sampled before and after a common interval. The differences in the sampled values are Pkts and Octets, respectively, and the number of seconds in the interval is Interval. These values are used to calculate the Utilization as follows: $Pkts * (9.6 + 6.4) + (Octets * .8)$ Utilization = - Interval * 10,000 The result of this equation is the value Utilization which is the percent utilization of the ethernet segment on a scale of 0 to 100 percent.
totalPackets [Total Packets] (etherStatsPkts)	long	The total number of packets (including bad packets, broadcast packets, and multicast packets) received.

Table 362 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
undersizePackets [Undersize Packets] (etherStatsUndersizePkts)	long	The total number of packets received that were less than 64 octets long (excluding framing bits, but including FCS octets) and were otherwise well formed.

Table 363 fr statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceStats</p> <p>MIB entry name: tmnxFRDlcmiEntry</p> <p>Entry description: The Parameters for a particular Data Link Connection Management Interface. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxFRDlcmiTable): The tmnxFRDlcmiTable has an entry for each port in the system that is configured for Frame Relay. It contains the parameters for the Data Link Connection Management Interface (DLCMI) for the frame relay service on this port.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: fr.Interface</p>		
lmiDiscardedMessages [Lmi Discarded Messages] (tmnxFRDlcmiDiscardedMsgs)	long	tmnxFRDlcmiDiscardedMsgs indicates the number of times the LMI agent discarded a received message because it wasn't expecting it, the type of message was incorrect, or the contents of the message were invalid.
lmiInvalidRxSeqNumMessages [Lmi Invalid Rx Seq Num Messages] (tmnxFRDlcmiInvRxSeqNumMsgs)	long	tmnxFRDlcmiInvRxSeqNumMsgs indicates the number of times the LMI agent received a message with an invalid receive sequence number: i.e. a sequence number that does not match the last transmitted sequence number of the agent.
lmiRxStatusEnquiryMessages [Lmi Rx Status Enquiry Messages] (tmnxFRDlcmiRxStatusEnqMsgs)	long	tmnxFRDlcmiRxStatusEnqMsgs indicates the number of LMI Status Enquiry messages received on this Frame Relay interface.
lmiRxStatusMessages [Lmi Rx Status Messages] (tmnxFRDlcmiRxStatusMsgs)	long	tmnxFRDlcmiRxStatusMsgs indicates the number of LMI Status messages received on this Frame Relay interface.
lmiStatusEnquiryMsgTimeouts [Lmi Status Enquiry Msg Timeouts] (tmnxFRDlcmiStatusEnqMsgTimeouts)	long	tmnxFRDlcmiStatusEnqMsgTimeouts indicates the number of times the LMI agent did not receive a Status Enquiry message within the allotted time.

Table 363 fr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lmiStatusMsgTimeouts [Lmi Status Msg Timeouts] (tmnxFRDlcmiStatusMsgTimeouts)	long	tmnxFRDlcmiStatusMsgTimeouts indicates the number of times the LMI agent did not receive a Status message within the allotted time.
lmiTxStatusEnquiryMessages [Lmi Tx Status Enquiry Messages] (tmnxFRDlcmiTxStatusEnqMsgs)	long	tmnxFRDlcmiTxStatusEnqMsgs indicates the number of LMI Status Enquiry messages transmitted on this Frame Relay interface.
lmiTxStatusMessages [Lmi Tx Status Messages] (tmnxFRDlcmiTxStatusMsgs)	long	tmnxFRDlcmiTxStatusMsgs indicates the number of LMI Status messages transmitted on this Frame Relay interface.

Table 364 igmp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceStats MIB entry name: vRtrIgmplfStatsEntry Entry description: An entry in the vRtrIgmplfStatsTable. Table description (for vRtrIgmplfStatsTable): The table listing the IGMP statistics for a particular interface. Supports realtime plotting Supports scheduled collection Monitored class: igmp.Interface</p>		
importPolicyDrops [Import Policy Drops] (vRtrIgmplfImportPolicyDrops)	long	The value of vRtrIgmplfImportPolicyDrops indicates the total number of times IGMP protocol instance matched the host IP address or group/source addresses specified in the import policy vRtrIgmplfImportPolicy.
mcacPolicyDrops [Mcac Policy Drops] (vRtrIgmplfStatsMcacPolicyDrops)	long	The value of the object vRtrIgmplfStatsMcacPolicyDrops indicates the number times an IGMP Group is dropped because of applying a multicast CAC policy on this interface.
rxBadChecksumPkts [Rx Bad Checksum Pkts] (vRtrIgmplfRxBadChecksumPkts)	long	The value of vRtrIgmplfRxBadChecksumPkts indicates the total number of IGMP packets with bad checksum received on this interface.
rxBadEncodings [Rx Bad Encodings] (vRtrIgmplfRxBadEncodings)	long	The value of vRtrIgmplfRxBadEncodings indicates the total number of IGMP packets received on this interface which were not encoded correctly.
rxBadLenPkts [Rx Bad Len Pkts] (vRtrIgmplfRxBadLenPkts)	long	The value of vRtrIgmplfRxBadLenPkts indicates the total number of IGMP packets with bad length received on this interface.
rxBadReceiveIfPkts [Rx Bad Receive If Pkts] (vRtrIgmplfRxBadReceiveIfPkts)	long	The value of vRtrIgmplfRxBadReceiveIfPkts indicates the total number of IGMP packets incorrectly received on this interface.

Table 364 igmp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxGenQueries [Rx Gen Queries] (vRtrIgmplfRxGenQueries)	long	The value of vRtrIgmplfRxGenQueries indicates the total number of IGMP General Queries received on this interface.
rxGrpQueries [Rx Grp Queries] (vRtrIgmplfRxGrpQueries)	long	The value of vRtrIgmplfRxGrpQueries indicates the number of IGMP Group Specific Queries received on this interface.
rxGrpSrcQueries [Rx Grp Src Queries] (vRtrIgmplfRxGrpSrcQueries)	long	The value of vRtrIgmplfRxGrpSrcQueries indicates the number of IGMP Group and Source Specific Queries received on this interface.
rxLeaves [Rx Leaves] (vRtrIgmplfRxLeaves)	long	The value of vRtrIgmplfRxLeaves indicates the total number of IGMP V2 Leaves received on this interface.
rxNoRtrAlertPkts [Rx No Rtr Alert Pkts] (vRtrIgmplfRxNoRtrAlertPkts)	long	The value of vRtrIgmplfRxNoRtrAlertPkts indicates the total number of IGMPv3 packets received on this interface which did not have the router alert flag set.
rxNonLocal [Rx Non Local] (vRtrIgmplfRxNonLocal)	long	The value of vRtrIgmplfRxNonLocal indicates the total number of IGMP packets received from a non-local sender.
rxPktDrops [Rx Pkt Drops] (vRtrIgmplfRxPktDrops)	long	The value of vRtrIgmplfRxPktDrops indicates the total number of IGMP packets that were received on this interface but were dropped.
rxUnknownTypePkts [Rx Unknown Type Pkts] (vRtrIgmplfRxUnknownTypePkts)	long	The value of vRtrIgmplfRxUnknownTypePkts indicates the total number of IGMP packets with unknown type received on this interface.
rxV1Reports [Rx V1 Reports] (vRtrIgmplfRxV1Reports)	long	The value of vRtrIgmplfRxV1Reports indicates the total number of IGMP V1 Reports received on this interface.

Table 364 igmp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxV2Reports [Rx V2 Reports] (vRtrIgmplfRxV2Reports)	long	The value of vRtrIgmplfRxV2Reports indicates the total number of IGMP V2 Reports received on this interface.
rxV3Reports [Rx V3 Reports] (vRtrIgmplfRxV3Reports)	long	The value of vRtrIgmplfRxV3Reports indicates the total number of IGMP V3 Reports received on this interface.
rxWrongVersions [Rx Wrong Versions] (vRtrIgmplfRxWrongVersions)	long	The value of vRtrIgmplfRxWrongVersions indicates the total number of IGMP packets with wrong versions received on this interface.
statsSGTypes [Stats SGTypes] (vRtrIgmplfStatsSGTypes)	long	The value of vRtrIgmplfStatsSGTypes indicates the number of entries on this interface for which the source type is 'sg'.
statsStarGTypes [Stats Star GTypes] (vRtrIgmplfStatsStarGTypes)	long	vRtrIgmplfStatsStarGTypes indicates the number of entries on this interface for which the source type is 'starG'.
txErrors [Tx Errors] (vRtrIgmplfTxErrors)	long	The value of vRtrIgmplfTxErrors indicates the total number of times there was an error transmitting IGMP packets on this interface..
txGenQueries [Tx Gen Queries] (vRtrIgmplfTxGenQueries)	long	The value of vRtrIgmplfTxGenQueries indicates the number of IGMP General Queries transmitted on this interface.
txGrpQueries [Tx Grp Queries] (vRtrIgmplfTxGrpQueries)	long	The value of vRtrIgmplfTxGrpQueries indicates the number of IGMP Group Specific Queries transmitted on this interface.
txGrpSrcQueries [Tx Grp Src Queries] (vRtrIgmplfTxGrpSrcQueries)	long	The value of vRtrIgmplfTxGrpSrcQueries indicates the number of IGMP Group and Source Specific Queries transmitted on this interface.

Table 364 igmp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txLeaves [Tx Leaves] (vRtrIgmplfTxLeaves)	long	The value of vRtrIgmplfTxLeaves indicates the total number of IGMP Leaves transmitted on this interface.
txV1Reports [Tx V1 Reports] (vRtrIgmplfTxV1Reports)	long	The value of vRtrIgmplfTxV1Reports indicates the total number of IGMP V1 Reports transmitted on this interface.
txV2Reports [Tx V2 Reports] (vRtrIgmplfTxV2Reports)	long	The value of vRtrIgmplfTxV2Reports indicates the total number of IGMP V2 Reports transmitted on this interface.
txV3Reports [Tx V3 Reports] (vRtrIgmplfTxV3Reports)	long	The value of vRtrIgmplfTxV3Reports indicates the total number of IGMP V3 Reports transmitted on this interface.
InterfaceStatsExtension MIB entry name: vRtrIgmplfStatsEntry Entry description: An entry in the vRtrIgmplfStatsTable. Table description (for vRtrIgmplfStatsTable): The table listing the IGMP statistics for a particular interface. Supports realtime plotting Supports scheduled collection Monitored class: igmp.Interface		
rxLocalScopePkts [Rx Local Scope Pkts] (vRtrIgmplfRxLocalScopePkts)	long	The value of the object vRtrIgmplfRxLocalScopePkts indicates the number of IGMP packets received on the link-local scope IPv4 multicast address.
rxRsvdScopePkts [Rx Rsvd Scope Pkts] (vRtrIgmplfRxRsvdScopePkts)	long	The value of the object vRtrIgmplfRxRsvdScopePkts indicates the number of IGMP packets received on the reserved scope IPv4 multicast address.

Table 365 ipsec statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>IPSecSAStats MIB entry name: tmnxIPsecSAStatsEntry Entry description: Information about a single IPsec SA Statistics entry. Table description (for tmnxIPsecSAStatsTable): Table to retrieve the IPsec SA Statistics entries. Supports realtime plotting Supports scheduled collection Monitored class: ipsec.IPSecSecurityAssociation</p>		
bytesProcessed [Bytes Processed] (tmnxIPsecSAStatsBytesProcessed)	java. math. BigInteger	The value of tmnxIPsecSAStatsBytesProcessed indicates the number of bytes successfully processed for this SA.
cryptoErrors [Crypto Errors] (tmnxIPsecSAStatsCryptoErrors)	long	The value of tmnxIPsecSAStatsCryptoErrors indicates the number of crypto errors encountered on this SA. The crypto errors include errors on packets where protocol does not match or if the check on authentication header length failed.
pktsProcessed [Pkts Processed] (tmnxIPsecSAStatsPktsProcessed)	java. math. BigInteger	The value of tmnxIPsecSAStatsPktsProcessed indicates the number of packets successfully processed for this SA.
policyErrors [Policy Errors] (tmnxIPsecSAStatsPolicyErrors)	long	The value of tmnxIPsecSAStatsPolicyErrors indicates the number of policy errors encountered on this SA. The policy errors include bundled SA, selector check and policy direction error.
replayErrors [Replay Errors] (tmnxIPsecSAStatsReplayErrors)	long	The value of tmnxIPsecSAStatsReplayErrors indicates the number of replay errors encountered on this SA.

Table 365 ipsec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
saErrors [Sa Errors] (tmnxIPsecSASStatsSAErrors)	long	The value of tmnxIPsecSASStatsSAErrors indicates the number of SA errors encountered on this SA. The SA errors include sequence number failure, invalid SA, ploicy version mismatch, illegal authentication algorithm, expanded packet too big, illegal configured algorithm and ttl decrement error.
IPSecTunnelStats MIB entry name: tmnxIPsecTunnelStatsEntry Entry description: Statistics for a single IPsec Tunnel. Table description (for tmnxIPsecTunnelStatsTable): Table to store IPsec Tunnel statistics Supports realtime plotting Supports scheduled collection Monitored class: ipsec.IPSecTunnel		
isakmpEstabTime [Isakmp Estab Time] (tmnxIPsecTunnellsakmpEstabTime)	long	The value of tmnxIPsecTunnellsakmpEstabTime indicates the sysUpTime at the time the IPsec phase 1 negotiation completed.
isakmpNegLifeTime [Isakmp Neg Life Time] (tmnxIPsecTunnellsakmpNegLifeTime)	long	The value of tmnxIPsecTunnellsakmpNegLifeTime indicates the lifetime negotiated for phase1 lke key.
isakmpState [Isakmp State] (tmnxIPsecTunnellsakmpState)	long	The value of tmnxIPsecTunnellsakmpState indicates the state of phase 1 IPsec negotiation.
numCtrlPktsRx [Num Ctrl Pkts Rx] (tmnxIPsecTunnelNumCtrlPktsRx)	long	The value of tmnxIPsecTunnelNumCtrlPktsRx indicates the number of control packets this IPsec Tunnel has received.
numCtrlPktsTx [Num Ctrl Pkts Tx] (tmnxIPsecTunnelNumCtrlPktsTx)	long	The value of tmnxIPsecTunnelNumCtrlPktsTx indicates the number of control packets this IPsec Tunnel has sent.

Table 365 ipsec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numCtrlRxErrors [Num Ctrl Rx Errors] (tmnxIPsecTunnelNumCtrlRxErrors)	long	The value of tmnxIPsecTunnelNumCtrlRxErrors indicates the number of control packet receive errors.
numCtrlTxErrors [Num Ctrl Tx Errors] (tmnxIPsecTunnelNumCtrlTxErrors)	long	The value of tmnxIPsecTunnelNumCtrlTxErrors indicates the number of control packet transmit errors.
numDpdAckRx [Num Dpd Ack Rx] (tmnxIPsecTunnelNumDpdAckRx)	long	The value of tmnxIPsecTunnelNumDpdAckRx indicates the number of Dead-Peer-Detection acknowledgement packets received.
numDpdAckTx [Num Dpd Ack Tx] (tmnxIPsecTunnelNumDpdAckTx)	long	The value of tmnxIPsecTunnelNumDpdAckTx indicates the number of Dead-Peer-Detection acknowledgement packets transmitted.
numDpdRx [Num Dpd Rx] (tmnxIPsecTunnelNumDpdRx)	long	The value of tmnxIPsecTunnelNumDpdRx indicates the number of Dead-Peer-Detection packets received.
numDpdTx [Num Dpd Tx] (tmnxIPsecTunnelNumDpdTx)	long	The value of tmnxIPsecTunnelNumDpdTx indicates the number of Dead-Peer-Detection packets transmitted.
numExpRx [Num Exp Rx] (tmnxIPsecTunnelNumExpRx)	long	The value of tmnxIPsecTunnelNumExpRx indicates the number of DPD R-U-THERE packets that have not been acknowledged.
numInvalidDpdRx [Num Invalid Dpd Rx] (tmnxIPsecTunnelNumInvalidDpdRx)	long	The value of tmnxIPsecTunnelNumInvalidDpdRx indicates the number of malformed DPD R-U-THERE acknowledgement packets received.

lfaRuns [Lfa Runs] (tmnxIsisStatsLfaRuns)	long	The value of the object tmnxIsisStatsLfaRuns indicates the number of times loopfree-alternate calculations have been made.
lspRegenerations [Lsp Regenerations] (tmnxIsisStatsLSPRegenerations)	long	The value of the object tmnxIsisStatsLSPRegenerations indicates the count of LSP regenerations.
spfRuns [Spf Runs] (tmnxIsisStatsSpfRuns)	long	The value of the object tmnxIsisStatsSpfRuns indicates the number of times shortest path first calculations have been made.

Table 367 I2fwd statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
AccessInterfaceStpStats MIB entry name: sapTlsInfoEntry Entry description: TLS specific information about a SAP. Table description (for sapTlsInfoTable): A table that contains TLS SAP information. Supports realtime plotting Supports scheduled collection Monitored class: I2fwd.AccessInterfaceStp		
forwardTransitions [Forward Transitions] (sapTlsStpForwardTransitions)	long	The value of the object sapTlsStpForwardTransitions indicates the number of times this port has transitioned from the Learning state to the Forwarding state.
inBadBpdus [In Bad Bpdus] (sapTlsStpInBadBpdus)	long	This object specifies the number of bad BPDUs received on this SAP.
inConfigBpdus [In Config Bpdus] (sapTlsStpInConfigBpdus)	long	The value of the object sapTlsStpInConfigBpdus indicates the number of Configuration BPDUs received on this SAP.
inRapidSpanningTreeBpdus [In Rapid Spanning Tree Bpdus] (sapTlsStpInRstBpdus)	long	The value of the object sapTlsStpInRstBpdus indicates the number of Rapid Spanning Tree (RST) BPDUs received on this SAP.
inTcnBpdus [In Tcn Bpdus] (sapTlsStpInTcnBpdus)	long	The value of the object sapTlsStpInTcnBpdus indicates the number of Topology Change Notification BPDUs received on this SAP.
outConfigBpdus [Out Config Bpdus] (sapTlsStpOutConfigBpdus)	long	The value of the object sapTlsStpOutConfigBpdus indicates the number of Configuration BPDUs sent out this SAP.

Table 367 I2fwd statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outRapidSpanningTreeBpdus [Out Rapid Spanning Tree Bpdus] (sapTlsStpOutRstBpdus)	long	The value of the object sapTlsStpOutRstBpdus indicates the number of Rapid Spanning Tree (RST) BPDUs sent out on this SAP.
outTcnBpdus [Out Tcn Bpdus] (sapTlsStpOutTcnBpdus)	long	This object specifies the number of Topology Change Notification BPDUs sent out this SAP.
SiteFibStats MIB entry name: svcTlsInfoEntry Entry description: TLS specific information about a service. Table description (for svcTlsInfoTable): A table that contains TLS service information. Supports realtime plotting Supports scheduled collection Monitored class: I2fwd.SiteFib		
entries [Entries] (svcTlsFdbNumEntries)	long	The value of the object svcTlsFdbNumEntries indicates the current number of entries in the FDB of this service.
provisionedSize [Provisioned Size] (svcTlsFdbTableSize)	long	The value of the object svcTlsFdbTableSize specifies the maximum number of learned and static entries allowed in the FDB of this service. The maximum value of svcTlsFdbTableSize is '511999', when the the value of TIMETRA-CHASSIS-MIB::tmnxChassisOperMode is 'd'. The maximum value of svcTlsFdbTableSize is '196607', when the the value of TIMETRA-CHASSIS-MIB::tmnxChassisOperMode is 'c'. In other cases, the maximum value of svcTlsFdbTableSize is '131071'.
staticEntries [Static Entries] (svcTlsFdbNumStaticEntries)	long	The value of the object svcTlsFdbNumStaticEntries indicates the current number of static entries in the FDB of this service.

Table 367 I2fwd statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SiteStpStats</p> <p>MIB entry name: svcTlsInfoEntry</p> <p>Entry description: TLS specific information about a service.</p> <p>Table description (for svcTlsInfoTable): A table that contains TLS service information.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: I2fwd.SiteStp</p>		
timeSinceTopologyChange [Time Since Topology Change] (svcTlsStpTimeSinceTopologyChange)	long	The value of the object svcTlsStpTimeSinceTopologyChange indicates the time (in hundredths of a second) since the last time a topology change was detected by the Spanning Tree Protocol instance associated with this service.
topologyChanges [Topology Changes] (svcTlsStpTopologyChanges)	long	The value of the object svcTlsStpTopologyChanges indicates the total number of topology changes detected by the Spanning Tree Protocol instance associated with this service since the management entity was last reset or initialized.

Table 368 lag statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>LagStats</p> <p>MIB entry name: tLagOperationEntry</p> <p>Entry description: An entry (conceptual row) in the tLagOperationTable. Each entry represents an active Link Aggregation Group.</p> <p>Table description (for tLagOperationTable): Operational information about each Link Aggregation Group.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: lag.Interface</p>		
portThresholdFalling [Port Threshold Falling] (tLagPortThresholdFalling)	long	counts the number of linkDown or dynamicCost events for the Link Aggregation Group caused by the number of physical ports being less than or equal to tLagPortThreshold value.
portThresholdRising [Port Threshold Rising] (tLagPortThresholdRising)	long	counts the number of linkUp or dynamicCost events for the Link Aggregation Group caused by the number of physical ports being greater than tLagPortThreshold value.
<p>MultiChassisLagMemberStats</p> <p>MIB entry name: tmnxMcLagLagStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a lag that participates in a multi-chassis configuration with a given peer. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxMcLagLagStatsTable): The tmnxMcLagLagStatsTable has an entry for each lag that participates in a multi-chassis configuration for the indicated peer.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • lag.MultiChassisLagMember • multichassis.MultiChassisLagMember 		
configPacketsReceived [Config Packets Received] (tmnxMcLagLagStatsPktsRxConfig)	long	The value of tmnxMcLagLagStatsPktsRxConfig indicates how many MC-Lag control packets of type lag config were received on this system from the peer for this lag.

Table 368 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
configPacketsTransmitted [Config Packets Transmitted] (tmnxMcLagLagStatsPktsTxConfig)	long	The value of tmnxMcLagLagStatsPktsTxConfig indicates how many MC-Lag control packets of type lag config were sent on this system to the peer for this lag.
failedPacketsTransmitted [Failed Packets Transmitted] (tmnxMcLagLagStatsPktsTxFailed)	long	The value of tmnxMcLagLagStatsPktsTxFailed indicates how many MC-Lag control packets failed to be transmitted on this system to the peer for this lag.
statePacketsReceived [State Packets Received] (tmnxMcLagLagStatsPktsRxState)	long	The value of tmnxMcLagLagStatsPktsRxState indicates how many MC-Lag control packets of type lag state were received on this system from the peer for this lag.
statePacketsTransmitted [State Packets Transmitted] (tmnxMcLagLagStatsPktsTxState)	long	The value of tmnxMcLagLagStatsPktsTxState indicates how many MC-Lag control packets of type lag state were sent on this system to the peer for this lag.
MultiChassisLagStats MIB entry name: tmnxMcRedundancyStatsObjs Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • equipment.CardSlot • netw.NetworkElement 		
configPacketsReceived [Config Packets Received] (tmnxMcLagStatsPktsRxConfig)	long	The value of tmnxMcLagStatsPktsRxConfig indicates how many valid MC-Lag control packets indicating the lag configuration were received on this system.
configPacketsTransmitted [Config Packets Transmitted] (tmnxMcLagStatsPktsTxConfig)	long	The value of tmnxMcLagStatsPktsTxConfig indicates how many MC-Lag control packets were transmitted from this system of type lag config.

Table 368 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
failedMD5AuthenticationPacketsDropped [Failed MD5 Authentication Packets Dropped] (tmnxMcLagStatsDropMD5)	long	The value of tmnxMcLagStatsDropMD5 indicates how many MC-Lag control packets were dropped on this system because they failed MD5 authentication.
failedPacketsTransmitted [Failed Packets Transmitted] (tmnxMcLagStatsPktsTxFailed)	long	The value of tmnxMcLagStatsPktsTxFailed indicates how many MC-Lag control packets failed to be transmitted.
invalidLagIdPacketsDropped [Invalid Lag Id Packets Dropped] (tmnxMcLagStatsDropTlvInvlLagId)	long	The value of tmnxMcLagStatsDropTlvInvlLagId indicates how many MC-Lag control packets were dropped on this system because they refer to an invalid or non multi-chassis lag.
invalidSizePacketsDropped [Invalid Size Packets Dropped] (tmnxMcLagStatsDropTlvInvalidSize)	long	The value of tmnxMcLagStatsDropTlvInvalidSize indicates how many MC-Lag control packets were dropped on this system because of invalid size.
keepalivePacketsReceived [Keepalive Packets Received] (tmnxMcLagStatsPktsRxKeepalive)	long	The value of tmnxMcLagStatsPktsRxKeepalive indicates how many valid MC-Lag control packets of type keepalive were received on this system.
keepalivePacketsTransmitted [Keepalive Packets Transmitted] (tmnxMcLagStatsPktsTxKeepalive)	long	The value of tmnxMcLagStatsPktsTxKeepalive indicates how many MC-Lag control packets were transmitted from this system of type keepalive.
outOfSequencePacketsDropped [Out Of Sequence Packets Dropped] (tmnxMcLagStatsDropOutOfSeq)	long	The value of tmnxMcLagStatsDropOutOfSeq indicates how many MC-Lag control packets were dropped on this system because they were out of sequence.
packetsDropped [Packets Dropped] (tmnxMcLagStatsDropPktKpaliveTask)	long	The value of tmnxMcLagStatsDropPktKpaliveTask indicates how many MC-Lag control packets were dropped on this system because of invalid size, authentication or unknown peer.

Table 368 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
packetsReceived [Packets Received] (tmnxMcLagStatsPktsRx)	long	The value of tmnxMcLagStatsPktsRx indicates how many MC-Lag control packets with valid authentication were received on this system.
packetsTransmitted [Packets Transmitted] (tmnxMcLagStatsPktsTx)	long	The value of tmnxMcLagStatsPktsTx indicates how many MC-Lag control packets were transmitted from this system.
peerConfigPacketsReceived [Peer Config Packets Received] (tmnxMcLagStatsPktsRxPeerConfig)	long	The value of tmnxMcLagStatsPktsRxPeerConfig indicates how many valid MC-Lag control packets indicating the peer configuration were received on this system.
peerConfigPacketsTransmitted [Peer Config Packets Transmitted] (tmnxMcLagStatsPktsTxPeerConfig)	long	The value of tmnxMcLagStatsPktsTxPeerConfig indicates how many MC-Lag control packets were transmitted from this system of type peer config.
statePacketsReceived [State Packets Received] (tmnxMcLagStatsPktsRxState)	long	The value of tmnxMcLagStatsPktsRxState indicates how many valid MC-Lag control packets indicating the lag state were received on this system.
statePacketsTransmitted [State Packets Transmitted] (tmnxMcLagStatsPktsTxState)	long	The value of tmnxMcLagStatsPktsTxState indicates how many MC-Lag control packets were transmitted from this system of type lag state.
tooShortPacketsDropped [Too Short Packets Dropped] (tmnxMcLagStatsDropPktTooShort)	long	The value of tmnxMcLagStatsDropPktTooShort indicates how many MC-Lag control packets were dropped on this system because the packet was too small.
unknownPeerPacketsDropped [Unknown Peer Packets Dropped] (tmnxMcLagStatsDropUnknownPeer)	long	The value of tmnxMcLagStatsDropUnknownPeer indicates how many MC-Lag control packets were dropped on this system because they are coming from an unknown peer.
unknownTlvPacketsDropped [Unknown Tlv Packets Dropped] (tmnxMcLagStatsDropUnknownTlv)	long	The value of tmnxMcLagStatsDropUnknownTlv indicates how many MC-Lag control packets were dropped on this system because they contained an unknown TLV.

Table 368 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
verifyFailedPacketsDropped [Verify Failed Packets Dropped] (tmnxMcLagStatsDropPktVerifyFaild)	long	The value of tmnxMcLagStatsDropPktVerifyFaild indicates how many MC-Lag control packets were dropped on this system because of invalid formatting.

Table 369 Ldp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceStats</p> <p>MIB entry name: vRtrLdpIfStatsEntry</p> <p>Entry description: A row in this table contains statistical information about an LDP Interface or Targeted peer. Some counters contained in a row are for fatal errors received during a former LDP Session associated with this entry. For example, an LDP Pdu received on a TCP connection during an LDP Session contains a fatal error. That error is counted here, because the session is terminated. If the error is NOT fatal (i.e. and the Session remains), then the error is counted in the vRtrLdpSessionStatsEntry.</p> <p>Table description (for vRtrLdpIfStatsTable): vRtrLdpIfStatsTable is a read-only table. The purpose of this table is to keep statistical information about the LDP Interfaces and Targeted peers on the LSR. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vRtrLdpIfTable, and the augmenting table, vRtrLdpIfStatsTable. This in effect extends the vRtrLdpIfTable with additional columns. Creation or deletion of a row in the vRtrLdpIfTable results in the same fate for the row in the vRtrLdpIfStatsTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ldp.Interface</p>		
existingAdjacencies [Existing Adjacencies] (vRtrLdpIfExistingAdjacencies)	long	The value of vRtrLdpIfExistingAdjacencies gives a count of the total active adjacencies on this LDP interface or with this targeted peer.

Table 369 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SessionStats</p> <p>MIB entry name: vRtrLdpSessionStatsEntry</p> <p>Entry description: A row in this table represents statistical information about a single session between an LDP entity and an LDP Peer.</p> <p>Table description (for vRtrLdpSessionStatsTable): vRtrLdpSessionStatsTable is a read-only table. The purpose of this table is to keep statistical information about a single session between an LDP entity and an LDP Peer. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vRtrLdpSessionTable, and the augmenting table, vRtrLdpSessionStatsTable. This in effect extends the vRtrLdpSessionTable with additional columns. Creation or deletion of a row in the vRtrLdpSessionTable results in the same fate for the row in the vRtrLdpSessionStatsTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Ldp.Session</p>		
addressMessagesReceived [Address Messages Received] (vRtrLdpSessStatsAddrIn)	long	The value of vRtrLdpSessStatsAddrIn counts the number of Address Messages that have been received during this session.
addressMessagesSent [Address Messages Sent] (vRtrLdpSessStatsAddrOut)	long	The value of vRtrLdpSessStatsAddrOut counts the number of Address Messages that have been sent during this session.
addressWithdrawMessagesReceived [Address Withdraw Messages Received] (vRtrLdpSessStatsAddrWithdrawIn)	long	The value of vRtrLdpSessStatsAddrWithdrawIn counts the number of Address Withdraw Messages that have been received during this session.
addressWithdrawMessagesSent [Address Withdraw Messages Sent] (vRtrLdpSessStatsAddrWithdrawOut)	long	The value of vRtrLdpSessStatsAddrWithdrawOut counts the number of Address Withdraw Messages that have been sent during this session.
fecReceived [Fec Received] (vRtrLdpSessStatsFECRecv)	long	The value of vRtrLdpSessStatsFECRecv counts the number of FECs received for this session.

Table 369 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fecSent [Fec Sent] (vRtrLdpSessStatsFECSent)	long	The value of vRtrLdpSessStatsFECSent counts the number of FECs sent for this session.
helloMessagesReceived [Hello Messages Received] (vRtrLdpSessStatsHelloIn)	long	The value of vRtrLdpSessStatsHelloIn counts the number of Hello Messages that have been received during this session.
helloMessagesSent [Hello Messages Sent] (vRtrLdpSessStatsHelloOut)	long	The value of vRtrLdpSessStatsHelloOut counts the number of Hello Messages that have been sent during this session.
initMessagesReceived [Init Messages Received] (vRtrLdpSessStatsInitIn)	long	The value of vRtrLdpSessStatsInitIn counts the number of Init Messages that have been received during this session.
initMessagesSent [Init Messages Sent] (vRtrLdpSessStatsInitOut)	long	The value of vRtrLdpSessStatsInitOut counts the number of Init Messages that have been sent during this session.
keepAliveMessagesReceived [Keep Alive Messages Received] (vRtrLdpSessStatsKeepaliveIn)	long	The value of vRtrLdpSessStatsKeepaliveIn counts the number of Keepalive Messages that have been received during this session.
keepAliveMessagesSent [Keep Alive Messages Sent] (vRtrLdpSessStatsKeepaliveOut)	long	The value of vRtrLdpSessStatsKeepaliveOut counts the number of Keepalive Messages that have been sent during this session.
labelAbortsReceived [Label Aborts Received] (vRtrLdpSessStatsLabelAbortIn)	long	The value of vRtrLdpSessStatsLabelAbortIn counts the number of Label Abort Messages that have been received during this session.
labelAbortsSent [Label Aborts Sent] (vRtrLdpSessStatsLabelAbortOut)	long	The value of vRtrLdpSessStatsLabelAbortOut counts the number of Label Abort Messages that have been sent during this session.

Table 369 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
labelMappingsReceived [Label Mappings Received] (vRtrLdpSessStatsLabelMappingIn)	long	The value of vRtrLdpSessStatsLabelMappingIn counts the number of Label Mapping Messages that have been received during this session.
labelMappingsSent [Label Mappings Sent] (vRtrLdpSessStatsLabelMappingOut)	long	The value of vRtrLdpSessStatsLabelMappingOut counts the number of Label Mapping Messages that have been sent during this session.
labelReleasesReceived [Label Releases Received] (vRtrLdpSessStatsLabelReleaseIn)	long	The value of vRtrLdpSessStatsLabelReleaseIn counts the number of Label Release Messages that have been received during this session.
labelReleasesSent [Label Releases Sent] (vRtrLdpSessStatsLabelReleaseOut)	long	The value of vRtrLdpSessStatsLabelReleaseOut counts the number of Label Release Messages that have been sent during this session.
labelRequestsReceived [Label Requests Received] (vRtrLdpSessStatsLabelRequestIn)	long	The value of vRtrLdpSessStatsLabelRequestIn counts the number of Label Request Messages that have been received during this session.
labelRequestsSent [Label Requests Sent] (vRtrLdpSessStatsLabelRequestOut)	long	The value of vRtrLdpSessStatsLabelRequestOut counts the number of Label Request Messages that have been sent during this session.
labelWithdrawsReceived [Label Withdraws Received] (vRtrLdpSessStatsLabelWithdrawIn)	long	The value of vRtrLdpSessStatsLabelWithdrawIn counts the number of Label Withdraw Messages that have been received during this session.
labelWithdrawsSent [Label Withdraws Sent] (vRtrLdpSessStatsLabelWithdrawOut)	long	The value of vRtrLdpSessStatsLabelWithdrawOut counts the number of Label Withdraw Messages that have been sent during this session.
linkAdjacencies [Link Adjacencies] (vRtrLdpSessStatsLinkAdj)	long	The value of vRtrLdpSessStatsLinkAdj specifies the number of link adjacencies for this session.

Table 369 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
notificationMessagesReceived [Notification Messages Received] (vRtrLdpSessStatsNotificationIn)	long	The value of vRtrLdpSessStatsNotificationIn counts the number of Notification Messages that have been received during this session.
notificationMessagesSent [Notification Messages Sent] (vRtrLdpSessStatsNotificationOut)	long	The value of vRtrLdpSessStatsNotificationOut counts the number of Notification Messages that have been sent during this session.
targetedAdjacencies [Targeted Adjacencies] (vRtrLdpSessStatsTargAdj)	long	The value of vRtrLdpSessStatsTargAdj specifies the number of targeted adjacencies for this session.
<p>SiteStats</p> <p>MIB entry name: vRtrLdpStatsEntry</p> <p>Entry description: A row in this table represents statistical information about an LDP instance.</p> <p>Table description (for vRtrLdpStatsTable): vRtrLdpStatsTable is a read-only table. The purpose of this table is to keep statistical information about an LDP Instance. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vRtrLdpGeneralTable, and the augmenting table, vRtrLdpStatsTable. This in effect extends the vRtrLdpGeneralTable with additional columns. Creation or deletion of a row in the vRtrLdpGeneralTable results in the same fate for the row in the vRtrLdpStatsTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Ldp.Site</p>		
activeAdjacencies [Active Adjacencies] (vRtrLdpStatsActiveAdjacencies)	long	The value of vRtrLdpStatsActiveAdjacencies specifies the number of active adjacencies (i.e. established sessions) associated with the LDP instance.
activeInterfaces [Active Interfaces] (vRtrLdpStatsActiveInterfaces)	long	The value of vRtrLdpStatsActiveInterfaces specifies the number of active (i.e. operationally up) interfaces associated with the LDP instance.

Table 369 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
activeSessions [Active Sessions] (vRtrLdpStatsActiveSessions)	long	The value of vRtrLdpStatsActiveSessions specifies the number of active sessions (i.e. session in some form of creation) associated with the LDP instance.
activeTargetedSessions [Active Targeted Sessions] (vRtrLdpStatsActiveTargSessions)	long	The value of vRtrLdpStatsActiveTargSessions specifies the number of configured targeted peers that are administratively up in an LDP instance.
addressFECsReceived [Address FECs Received] (vRtrLdpStatsAddrFECRecv)	long	The value of vRtrLdpStatsAddrFECRecv specifies the number of Address FECs received by the LDP instance from its neighbors.
addressFECsSent [Address FECs Sent] (vRtrLdpStatsAddrFECSent)	long	The value of vRtrLdpStatsAddrFECSent specifies the number of Address FECs sent by the LDP instance to its neighbors.
attemptedSessions [Attempted Sessions] (vRtrLdpStatsAttemptedSessions)	long	The value of vRtrLdpStatsAttemptedSessions specifies the total number of attempted sessions for this LDP instance.
badLdpIdentifierErrors [Bad Ldp Identifier Errors] (vRtrLdpStatsBadLdpIdentifierErrors)	long	The value of vRtrLdpStatsBadLdpIdentifierErrors gives the number of Bad LDP Identifier Fatal Errors detected for sessions associated with this LDP instance.
badMessageLengthErrors [Bad Message Length Errors] (vRtrLdpStatsBadMessageLengthErrors)	long	The value of vRtrLdpStatsBadMessageLengthErrors gives the number of Bad Message Length Fatal Errors detected for sessions associated with this LDP instance.
badPduLengthErrors [Bad Pdu Length Errors] (vRtrLdpStatsBadPduLengthErrors)	long	The value of vRtrLdpStatsBadPduLengthErrors gives the number of Bad Pdu Length Fatal Errors detected for sessions associated with this LDP instance.
badTlvLengthErrors [Bad Tlv Length Errors] (vRtrLdpStatsBadTlvLengthErrors)	long	The value of vRtrLdpStatsBadTlvLengthErrors gives the number of Bad TLV Length Fatal Errors detected for sessions associated with this LDP instance.

Table 369 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrFecPfxCount [Egr Fec Pfx Count] (vRtrLdpStatsEgrFecPfxCount)	long	The value of vRtrLdpStatsEgrFecPfxCount indicates the number of egress FEC prefix statistics configured for this LDP instance.
inactiveInterfaces [Inactive Interfaces] (vRtrLdpStatsInactiveInterfaces)	long	The value of vRtrLdpStatsInactiveInterfaces specifies the number of inactive (i.e. operationally down) interfaces associated with the LDP instance.
inactiveTargetedSessions [Inactive Targeted Sessions] (vRtrLdpStatsInactiveTargSessions)	long	The value of vRtrLdpStatsInactiveTargSessions specifies the number of inactive (i.e. operationally down) targeted sessions associated with the LDP instance.
keepAliveExpiredErrors [Keep Alive Expired Errors] (vRtrLdpStatsKeepAliveExpiredErrors)	long	The value of vRtrLdpStatsKeepAliveExpiredErrors gives the number of Session Keep Alive Timer Expired Errors detected for sessions associated with this LDP instance.
malformedTlvValueErrors [Malformed Tlv Value Errors] (vRtrLdpStatsMalformedTlvValueErrors)	long	The value of vRtrLdpStatsMalformedTlvValueErrors gives the number of Malformed TLV Value Fatal Errors detected for sessions associated with this LDP instance.
operDownEvents [Oper Down Events] (vRtrLdpStatsOperDownEvents)	long	The value of vRtrLdpStatsOperDownEvents specifies the number of times the LDP instance has gone operationally down since the instance was created.
serviceFECsReceived [Service FECs Received] (vRtrLdpStatsSvcFECRecv)	long	The value of vRtrLdpStatsSvcFECRecv specifies the number of Service FECs received by the LDP instance from its neighbors.
serviceFECsSent [Service FECs Sent] (vRtrLdpStatsSvcFECSent)	long	The value of vRtrLdpStatsSvcFECSent specifies the number of Service FECs sent by the LDP instance to its neighbors.

Table 369 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sessionRejectedAdvertisementModeErrors [Session Rejected Advertisement Mode Errors] (vRtrLdpStatsSessRejAdvErrors)	long	The value of vRtrLdpStatsSessRejAdvErrors gives the total number of Session Rejected/Parameters Advertisement Mode Error Notification Messages sent or received by this LDP instance.
sessionRejectedLabelRangeErrors [Session Rejected Label Range Errors] (vRtrLdpStatsSessRejLabelRangeErrors)	long	The value of vRtrLdpStatsSessRejLabelRangeErrors gives the total number of Session Rejected/Parameters Label Range Error Notification Messages sent or received by this LDP instance.
sessionRejectedMaxPduLengthErrors [Session Rejected Max Pdu Length Errors] (vRtrLdpStatsSessRejMaxPduErrors)	long	The value of vRtrLdpStatsSessRejMaxPduErrors gives the total number of Session Rejected/Parameters Max Pdu Length Error Notification Messages sent or received by this LDP instance.
sessionRejectedNoHelloErrors [Session Rejected No Hello Errors] (vRtrLdpStatsSessRejNoHelloErrors)	long	The value of vRtrLdpStatsSessRejNoHelloErrors gives the total number of Session Rejected/No Hello Error Notification Messages sent or received by this LDP instance.
shutdownNotificationsReceived [Shutdown Notifications Received] (vRtrLdpStatsShutdownNotifRecv)	long	The value of vRtrLdpStatsShutdownNotifRecv gives the number of Shutdown Notifications received related to sessions associated with this LDP instance.
shutdownNotificationsSent [Shutdown Notifications Sent] (vRtrLdpStatsShutdownNotifSent)	long	The value of vRtrLdpStatsShutdownNotifSent gives the number of Shutdown Notifications sent related to sessions associated with this LDP instance.
unknownTlvErrors [Unknown Tlv Errors] (vRtrLdpStatsUnknownTlvErrors)	long	The value of vRtrLdpStatsUnknownTlvErrors indicates the number of Unknown TLV Fatal Errors detected for sessions associated with this LDP instance.

existingAdjacencies [Existing Adjacencies] (vRtrLdpIfExistingAdjacencies)	long	The value of vRtrLdpIfExistingAdjacencies gives a count of the total active adjacencies on this LDP interface or with this targeted peer.

Table 370 Ildp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
LLDPRemoteSystemStats MIB entry name: IldpStatistics Supports realtime plotting Supports scheduled collection Monitored class: Ildp.LLDPConfiguration		
remTablesAgeouts [Rem Tables Ageouts] (IldpStatsRemTablesAgeouts)	long	The number of times the complete set of information advertised by a particular MSAP has been deleted from tables contained in IldpRemoteSystemsData and IldpExtensions objects because the information timeliness interval has expired. This counter should be incremented only once when the complete set of information is completely invalidated (aged out) from all related tables. Partial aging, similar to deletion case, is not allowed, and thus, should not change the value of this counter.
remTablesDeletes [Rem Tables Deletes] (IldpStatsRemTablesDeletes)	long	The number of times the complete set of information advertised by a particular MSAP has been deleted from tables contained in IldpRemoteSystemsData and IldpExtensions objects. This counter should be incremented only once when the complete set of information is completely deleted from all related tables. Partial deletions, such as deletion of rows associated with a particular MSAP from some tables, but not from all tables are not allowed, thus should not change the value of this counter.
remTablesDrops [Rem Tables Drops] (IldpStatsRemTablesDrops)	long	The number of times the complete set of information advertised by a particular MSAP could not be entered into tables contained in IldpRemoteSystemsData and IldpExtensions objects because of insufficient resources.

Table 370 Ildp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
remTablesInserts [Rem Tables Inserts] (IldpStatsRemTablesInserts)	long	The number of times the complete set of information advertised by a particular MSAP has been inserted into tables contained in IldpRemoteSystemsData and IldpExtensions objects. The complete set of information received from a particular MSAP should be inserted into related tables. If partial information cannot be inserted for a reason such as lack of resources, all of the complete set of information should be removed. This counter should be incremented only once after the complete set of information is successfully recorded in all related tables. Any failures during inserting information set which result in deletion of previously inserted information should not trigger any changes in IldpStatsRemTablesInserts since the insert is not completed yet or or in IldpStatsRemTablesDeletes, since the deletion would only be a partial deletion. If the failure was the result of lack of resources, the IldpStatsRemTablesDrops counter should be incremented once.
<p>LLDPRxPortStats</p> <p>MIB entry name: tnmxLldpStatsRxPortEntry</p> <p>Entry description: LLDP frame reception statistics for a particular port. The port must be contained in the same chassis as the LLDP agent. All counter values in a particular entry shall be maintained on a continuing basis and shall not be deleted upon expiration of rx Info TTL timing counters in the LLDP remote systems MIB of the receipt of a shutdown frame from a remote LLDP agent. All statistical counters associated with a particular port on the local LLDP agent become frozen whenever the admin status is disabled for the same port. Rows in this table can only be created for MAC addresses that can validly be used in association with the type of interface concerned, as defined by table 8-2. The contents of this table is persistent across re-initializations or re-boots.</p> <p>Table description (for tnmxLldpStatsRxPortTable): A table containing LLDP reception statistics for individual ports and destination MAC addresses. Entries are not required to exist in this table while the tnmxLldpPortCfgAdminStatus object is equal to 'disabled(4)'. Supports realtime plotting Supports scheduled collection Monitored class: Ildp.LLDPConfiguration</p>		

Table 370 lldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lldpStatsRxPortAgeouts [Lldp Stats Rx Port Ageouts] (tmnxLldpStatsRxPortAgeouts)	long	The counter that represents the number of age-outs that occurred on a given port. An age-out is the number of times the complete set of information advertised by a particular MSAP has been deleted from tables contained in tmnxLldpRemoteSystemsData and lldpExtensions objects because the information timeliness interval has expired. This counter is similar to lldpStatsRemTablesAgeouts, except that the counter is on a per port basis. This enables NMS to poll tables associated with the tmnxLldpRemoteSystemsData objects and all LLDP extension objects associated with remote systems on the indicated port only. This counter should be set to zero during agent initialization and its value should not be saved in non-volatile storage. When a port's admin status changes from 'disabled' to 'rxOnly', 'txOnly' or 'txAndRx', the counter associated with the same port should reset to 0. The agent should also flush all remote system information associated with the same port. This counter should be incremented only once when the complete set of information is invalidated (aged out) from all related tables on a particular port. Partial ageing is not allowed, and thus, should not change the value of this counter.
lldpStatsRxPortFrameDiscard [Lldp Stats Rx Port Frame Discard] (tmnxLldpStatsRxPortFrameDiscard)	long	The number of LLDP frames received by this LLDP agent on the indicated port, and then discarded for any reason. This counter can provide an indication that LLDP header formatting problems may exist with the local LLDP agent in the sending system or that LLDPDU validation problems may exist with the local LLDP agent in the receiving system.
lldpStatsRxPortFrameErrs [Lldp Stats Rx Port Frame Errs] (tmnxLldpStatsRxPortFrameErrs)	long	The number of invalid LLDP frames received by this LLDP agent on the indicated port, while this LLDP agent is enabled.
lldpStatsRxPortFrames [Lldp Stats Rx Port Frames] (tmnxLldpStatsRxPortFrames)	long	The number of valid LLDP frames received by this LLDP agent on the indicated port, while this LLDP agent is enabled.

Table 370 lldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lldpStatsRxPortTLVDiscard [Lldp Stats Rx Port TLVDiscard] (tmnxLldpStatsRxPortTLVDiscard)	long	The number of LLDP TLVs discarded for any reason by this LLDP agent on the indicated port.
lldpStatsRxPortTLVUnknown [Lldp Stats Rx Port TLVUnknown] (tmnxLldpStatsRxPortTLVUnknown)	long	The number of LLDP TLVs received on the given port that are not recognized by this LLDP agent on the indicated port. An unrecognized TLV is referred to as the TLV whose type value is in the range of reserved TLV types (000 1001 - 111 1110) in Table 9.1 of IEEE Std 802.1AB-2004. An unrecognized TLV may be a basic management TLV from a later LLDP version.
<p>LLDPTxPortStats</p> <p>MIB entry name: tmnxLldpStatsTxPortEntry</p> <p>Entry description: LLDP frame transmission statistics for a particular port and destination MAC address. The port must be contained in the same chassis as the LLDP agent. All counter values in a particular entry shall be maintained on a continuing basis and shall not be deleted upon expiration of rx Info TTL timing counters in the LLDP remote systems MIB of the receipt of a shutdown frame from a remote LLDP agent. All statistical counters associated with a particular port on the local LLDP agent become frozen whenever the admin status is disabled for the same port. Rows in this table can only be created for MAC addresses that can validly be used in association with the type of interface concerned, as defined by table 8-2. The contents of this table is persistent across re-initializations or re-boots.</p> <p>Table description (for tmnxLldpStatsTxPortTable): A table containing LLDP transmission statistics for individual port/destination address combinations. Entries are not required to exist in this table while the tmnxLldpPortConfigEntry object is equal to 'disabled(4)'. Supports realtime plotting Supports scheduled collection Monitored class: lldp.LLDPConfiguration</p>		
lldpStatsTxLLDPDULengthErrs [Lldp Stats Tx LLDPDULength Errs] (tmnxLldpStatsTxLLDPDULengthErrs)	long	The number of LLDPD Length Errors recorded for the Port.
lldpStatsTxPortFrames [Lldp Stats Tx Port Frames] (tmnxLldpStatsTxPortFrames)	long	The number of LLDP frames transmitted by this LLDP agent on the indicated port.

Table 371 mld statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>GroupSourceSummaryStats</p> <p>MIB entry name: vRtrMldGrpSrcSummaryEntry</p> <p>Entry description: An entry in the vRtrMldGrpSrcSummaryTable. Each entry represents the summary counters for each Group/Source combination.</p> <p>Table description (for vRtrMldGrpSrcSummaryTable): The table listing the IP multicast Group/Source summary counters.</p> <p>Does not support realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mld.Site</p>		
blockedGrpIntfSaps [Blocked Grp Intf Saps] (vRtrMldGrpSrcSummBlkGrpIfSaps)	long	vRtrMldGrpSrcSummBlkGrpIfSaps indicates the number of Grp If SAP's having this Group/Source combination in the blocking list.
blockedHosts [Blocked Hosts] (vRtrMldGrpSrcSummBlkHosts)	long	vRtrMldGrpSrcSummBlkHosts indicates the number of hosts having this Group/Source combination in the blocking list.
blockedInterfaces [Blocked Interfaces] (vRtrMldGrpSrcSummBlkInterfaces)	long	vRtrMldGrpSrcSummBlkInterfaces indicates the number of interfaces having this Group/Source combination in the blocking list.
fwdGrpIntfSaps [Fwd Grp Intf Saps] (vRtrMldGrpSrcSummFwdGrpIfSaps)	long	vRtrMldGrpSrcSummFwdGrpIfSaps indicates the number of Grp If SAP's having this Group/Source combination in the forwarding list.
fwdHosts [Fwd Hosts] (vRtrMldGrpSrcSummFwdHosts)	long	vRtrMldGrpSrcSummFwdHosts indicates the number of hosts having this Group/Source combination in the forwarding list.
fwdInterfaces [Fwd Interfaces] (vRtrMldGrpSrcSummFwdInterfaces)	long	vRtrMldGrpSrcSummFwdInterfaces indicates the number of interfaces having this Group/Source combination in the forwarding list.

Table 371 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
routerId [Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
InterfaceStats MIB entry name: vRtrMldIfStatsEntry Entry description: An entry in the vRtrMldIfStatsTable. Table description (for vRtrMldIfStatsTable): The vRtrMldIfStatsTable contains objects corresponding to the MLD statistics for a particular interface. Supports realtime plotting Supports scheduled collection Monitored class: mld.Interface		
importPolicyDrops [Import Policy Drops] (vRtrMldIfImportPolicyDrops)	long	The value of vRtrMldIfImportPolicyDrops indicates the total number of times the MLD protocol instance matched the host IP address or group or source addresses specified in the import policy vRtrMldIfImportPolicy.
rxBadChecksumPkts [Rx Bad Checksum Pkts] (vRtrMldIfRxBadChecksumPkts)	long	The value of vRtrMldIfRxBadChecksumPkts indicates the total number of MLD packets with bad checksum received on this interface.
rxBadEncodings [Rx Bad Encodings] (vRtrMldIfRxBadEncodings)	long	The value of vRtrMldIfRxBadEncodings indicates the total number of MLD packets received on this interface which were not encoded correctly.
rxBadLenPkts [Rx Bad Len Pkts] (vRtrMldIfRxBadLenPkts)	long	The value of vRtrMldIfRxBadLenPkts indicates the total number of MLD packets with bad length received on this interface.

Table 371 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxBadReceiveIfPkts [Rx Bad Receive If Pkts] (vRtrMldIfRxBadReceiveIfPkts)	long	The value of vRtrMldIfRxBadReceiveIfPkts indicates the total number of MLD packets incorrectly received on this interface.
rxGenQueries [Rx Gen Queries] (vRtrMldIfRxGenQueries)	long	The value of vRtrMldIfRxGenQueries indicates the total number of MLD General Queries received on this interface.
rxGrpQueries [Rx Grp Queries] (vRtrMldIfRxGrpQueries)	long	The value of vRtrMldIfRxGrpQueries indicates the number of MLD Group Specific Queries received on this interface.
rxGrpSrcQueries [Rx Grp Src Queries] (vRtrMldIfRxGrpSrcQueries)	long	The value of vRtrMldIfRxGrpSrcQueries indicates the number of MLD Group and Source Specific Queries received on this interface.
rxLeaves [Rx Leaves] (vRtrMldIfRxLeaves)	long	The value of vRtrMldIfRxLeaves indicates the total number of MLD V2 Leaves received on this interface.
rxLocalScopePkts [Rx Local Scope Pkts] (vRtrMldIfRxLocalScopePkts)	long	The value of the object vRtrMldIfRxLocalScopePkts indicates the number of MLD packets received on the link-local scope IPv6 multicast address.
rxNoRtrAlertPkts [Rx No Rtr Alert Pkts] (vRtrMldIfRxNoRtrAlertPkts)	long	The value of vRtrMldIfRxNoRtrAlertPkts indicates the total number of MLDv2 packets received on this interface which did not have the router alert flag set.
rxNonLocal [Rx Non Local] (vRtrMldIfRxNonLocal)	long	The value of vRtrMldIfRxNonLocal indicates the total number of MLD packets received from a non-local sender.
rxPktDrops [Rx Pkt Drops] (vRtrMldIfRxPktDrops)	long	The value of vRtrMldIfRxPktDrops indicates the total number of MLD packets that were received on this interface but were dropped.

Table 371 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxRsvdScopePkts [Rx Rsvd Scope Pkts] (vRtrMldIfRxRsvdScopePkts)	long	The value of the object vRtrMldIfRxRsvdScopePkts indicates the number of MLD packets received on the reserved scope IPv6 multicast address.
rxUnknownTypePkts [Rx Unknown Type Pkts] (vRtrMldIfRxUnknownTypePkts)	long	The value of vRtrMldIfRxUnknownTypePkts indicates the total number of MLD packets with unknown type received on this interface.
rxV1Reports [Rx V1 Reports] (vRtrMldIfRxV1Reports)	long	The value of vRtrMldIfRxV1Reports indicates the total number of MLD V1 Reports received on this interface.
rxV2Reports [Rx V2 Reports] (vRtrMldIfRxV2Reports)	long	The value of vRtrMldIfRxV2Reports indicates the total number of MLD V2 Reports received on this interface.
rxWrongVersions [Rx Wrong Versions] (vRtrMldIfRxWrongVersions)	long	The value of vRtrMldIfRxWrongVersions indicates the total number of MLD packets with wrong versions received on this interface.
statsSGTypes [Stats SGTypes] (vRtrMldIfStatsSGTypes)	long	The value of vRtrMldIfStatsSGTypes indicates the number of entries on this interface for which the source type is 'sg'.
statsStarGTypes [Stats Star GTypes] (vRtrMldIfStatsStarGTypes)	long	vRtrMldIfStatsStarGTypes indicates the number of entries on this interface for which the source type is 'starG'.
txErrors [Tx Errors] (vRtrMldIfTxErrors)	long	The value of vRtrMldIfTxErrors indicates the total number of times there was an error transmitting the MLD packets on this interface.
txGenQueries [Tx Gen Queries] (vRtrMldIfTxGenQueries)	long	The value of vRtrMldIfTxGenQueries indicates the number of MLD General Queries transmitted on this interface.

Table 371 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txGrpQueries [Tx Grp Queries] (vRtrMldIfTxGrpQueries)	long	The value of vRtrMldIfTxGrpQueries indicates the number of MLD Group Specific Queries transmitted on this interface.
txGrpSrcQueries [Tx Grp Src Queries] (vRtrMldIfTxGrpSrcQueries)	long	The value of vRtrMldIfTxGrpSrcQueries indicates the number of MLD Group and Source Specific Queries transmitted on this interface.
txLeaves [Tx Leaves] (vRtrMldIfTxLeaves)	long	The value of vRtrMldIfTxLeaves indicates the total number of MLD Leaves transmitted on this interface.
txV1Reports [Tx V1 Reports] (vRtrMldIfTxV1Reports)	long	The value of vRtrMldIfTxV1Reports indicates the total number of MLD V1 Reports transmitted on this interface.
txV2Reports [Tx V2 Reports] (vRtrMldIfTxV2Reports)	long	The value of vRtrMldIfTxV2Reports indicates the total number of MLD V2 Reports transmitted on this interface.
SiteStats MIB entry name: vRtrMldGenStatsEntry Entry description: Each row entry represents statistics for an instance of the MLD protocol running within a virtual router. Table description (for vRtrMldGenStatsTable): The vRtrMldGenStatsTable contains objects for general statistics for the MLD protocol instance within a virtual router. Supports realtime plotting Supports scheduled collection Monitored class: mld.Site		
statsSGTypes [Stats SGTypes] (vRtrMldGenStatsSGTypes)	long	The value of vRtrMldGenStatsSGTypes indicates the number of entries in vRtrMldGrpSrcTable for which the source type is 'sg'.

Table 371 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
statsStarGTypes [Stats Star GTypes] (vRtrMldGenStatsStarGTypes)	long	The value of vRtrMldGenStatsStarGTypes indicates the number of entries in vRtrMldGrpSrcTable for which the source type is 'starG'.

Table 372 mpls statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>DynamicLspStats</p> <p>MIB entry name: vRtrMplsLspStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspStatTable): The vRtrMplsLspStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • mpls.DynamicLsp • mpls.SegmentRoutingTeLsp 		
configuredPaths [Configured Paths] (vRtrMplsLspConfiguredPaths)	long	The number of paths configured for this LSP.
operationalPaths [Operational Paths] (vRtrMplsLspOperationalPaths)	long	The number of operational paths for this LSP. This includes the path currently active, as well as operational standby paths.
pathChanges [Path Changes] (vRtrMplsLspPathChanges)	long	The number of path changes this LSP has had. For every path change (path down, path up, path change), a corresponding syslog/trap (if enabled) is generated for it.
standbyPaths [Standby Paths] (vRtrMplsLspStandbyPaths)	long	The number of standby paths configured for this LSP.
timeSinceLastPathChange [Time Since Last Path Change] (vRtrMplsLspLastPathChange)	long	The time in 10-millisecond units since the last change occurred on this LSP.

Table 372 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
timeSinceLastPrimaryUpState [Time Since Last Primary Up State] (vRtrMplsLspPrimaryTimeUp)	long	The total time in 10-millisecond units that this LSP's primary path has been operational. For example, the percentage contribution of the primary path to the operational time is given by (vRtrMplsLspPrimaryTimeUp/vRtrMplsLspTimeUp * 100) %.
<p>LspPathStats</p> <p>MIB entry name: vRtrMplsLspPathStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an association between a Labeled Switch Path (LSP) in the vRtrMplsLspTable and a path (or tunnel) entry in the mplsTunnelTable. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspPathStatTable): The vRtrMplsLspPathStatTable has an entry for an association between a Labeled Switch Path (LSP) in the vRtrMplsLspTable and a path (or tunnel) entry in the mplsTunnelTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.LspPath</p>		
cspfQueries [Cspf Queries] (vRtrMplsLspPathCspfQueries)	long	The value of vRtrMplsLspPathCspfQueries specifies the number of CSPF queries that have been made for this LSP path.
retryAttempts [Retry Attempts] (vRtrMplsLspPathRetryAttempts)	long	The number of unsuccessful attempts which have been made to signal this path. As soon as the path gets signalled, this is set to 0.
timeDown [Time Down] (vRtrMplsLspPathTimeDown)	long	The total time in 10-millisecond units that this LSP Path has not been operational.
timeUp [Time Up] (vRtrMplsLspPathTimeUp)	long	The total time in 10-millisecond units that this LSP path has been operational. For example, the percentage up time can be determined by computing (vRtrMplsLspPathTimeUp/ vRtrMplsLspAge * 100 %).

Table 372 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transitionCount [Transition Count] (vRtrMplsLspPathTransitionCount)	long	The object vRtrMplsLspPathTransitionCount maintains the number of transitions that have occurred for this LSP.
<p>LspStats</p> <p>MIB entry name: vRtrMplsLspStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspStatTable): The vRtrMplsLspStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • mpls.BypassOnlyLsp • mpls.DynamicLsp • mpls.SegmentRoutingTeLsp • mpls.StaticLsp 		
age [Age] (vRtrMplsLspAge)	long	The age (i.e., time from creation till now) of this LSP in 10-millisecond periods.
timeSinceLastDownState [Time Since Last Down State] (vRtrMplsLspTimeDown)	long	The total time in 10-millisecond units that this LSP has not been operational.
timeSinceLastTransition [Time Since Last Transition] (vRtrMplsLspLastTransition)	long	The time in 10-millisecond units since the last transition occurred on this LSP.
timeSinceLastUpState [Time Since Last Up State] (vRtrMplsLspTimeUp)	long	The total time in 10-millisecond units that this LSP has been operational. For example, the percentage up time can be determined by computing (vRtrMplsLspTimeUp/ vRtrMplsLspAge * 100 %).

Table 372 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transitions [Transitions] (vRtrMplsLspTransitions)	long	The number of state transitions (up -> down and down -> up) this LSP has undergone.
<p>MplsInterfaceStats</p> <p>MIB entry name: vRtrMplsIfStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an interface on this virtual router that participates in the MPLS protocol. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsIfStatTable): The vRtrMplsIfStatTable has an entry for each router interface configured for MPLS in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.Interface</p>		
receiveOctets [Receive Octets] (vRtrMplsIfRxOctetCount)	java. math. BigInteger	The total number of bytes in MPLS labeled packets received on this interface.
receivePackets [Receive Packets] (vRtrMplsIfRxPktCount)	java. math. BigInteger	The total number of MPLS labeled packets received on this interface.
transmitOctets [Transmit Octets] (vRtrMplsIfTxOctetCount)	java. math. BigInteger	The total number of bytes in MPLS labeled packets transmitted on this interface.
transmitPackets [Transmit Packets] (vRtrMplsIfTxPktCount)	java. math. BigInteger	The total number of MPLS labeled packets transmitted from this interface.

Table 372 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SarMplsInterfaceStats</p> <p>MIB entry name: aluVRtrMplsIfStatEntry</p> <p>Entry description: Information about the extensions of vRtrMplsIfStatTable which represents a collection of statistics for an interface on this virtual router that participates in the MPLS protocol.</p> <p>Table description (for aluVRtrMplsIfStatTable): Information about the Nokia 7705 SAR extensions to the vRtrMplsIfStatTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.Interface</p>		
lastInvalidLabel [Last Invalid Label] (aluVRtrMplsIfLastInvalidLabel)	int	The value of aluVRtrMplsIfLastInvalidLabel indicates the last invalid MPLS label value.
lastInvalidPos [Last Invalid Pos] (aluVRtrMplsIfLastInvalidPos)	long	The value of aluVRtrMplsIfLastInvalidPos indicates the last invalid MPLS label position.
rxInvIpoMplsPkts [Rx Inv Ipo Mpls Pkts] (aluVRtrMplsIfRxInvIpoMplsPkts)	java. math. BigInteger	The value of aluVRtrMplsIfRxInvIpoMplsPkts indicates the total number of invalid IP over MPLS packets received on this interface.
rxInvLabels [Rx Inv Labels] (aluVRtrMplsIfRxInvLabels)	java. math. BigInteger	The value of aluVRtrMplsIfRxInvLabels indicates the total number of invalid MPLS labels received on this interface.
rxMoFRRBkupPathPkts [Rx Mo FRRBkup Path Pkts] (aluVRtrMplsIfRxMoFRRBkupPathPkts)	java. math. BigInteger	The value of aluVRtrMplsIfRxMoFRRBkupPathPkts indicates the total number of MPLS packets received on backup path for Multicast-only Fast ReRoute (MoFRR) on this interface.

Table 372 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxMtuExceedPkts [Rx Mtu Exceed Pkts] (aluVRtrMplsIfRxMtuExceedPkts)	java. math. BigInteger	The value of aluVRtrMplsIfRxMtuExceedPkts indicates the total number of MPLS Mtu Exceeded packets received on this interface.
rxOtherDiscardPkts [Rx Other Discard Pkts] (aluVRtrMplsIfRxOtherDiscardPkts)	java. math. BigInteger	The value of aluVRtrMplsIfRxOtherDiscardPkts indicates the total number of discarded packets on this interface due to other reasons.
rxQueueDiscardPkts [Rx Queue Discard Pkts] (aluVRtrMplsIfRxQueueDiscardPkts)	java. math. BigInteger	The value of aluVRtrMplsIfRxQueueDiscardPkts indicates the total number of MPLS packets discarded due to queue congestion or maintenance action on this interface.
rxStackTooBigPkts [Rx Stack Too Big Pkts] (aluVRtrMplsIfRxStackTooBigPkts)	java. math. BigInteger	The value of aluVRtrMplsIfRxStackTooBigPkts indicates the total number of MPLS stack too big packets received on this interface. This is the number of MPLS labels greater than 5.
rxTTLExpiredPkts [Rx TTLExpired Pkts] (aluVRtrMplsIfRxTTLExpiredPkts)	java. math. BigInteger	The value of aluVRtrMplsIfRxTTLExpiredPkts indicates the total number of MPLS TTL expired packets received on this interface.
txMtuExceedPkts [Tx Mtu Exceed Pkts] (aluVRtrMplsIfTxMtuExceedPkts)	java. math. BigInteger	The value of aluVRtrMplsIfTxMtuExceedPkts indicates the total number of MPLS Mtu Exceeded packets transmitted on this interface.
txOtherDiscardPkts [Tx Other Discard Pkts] (aluVRtrMplsIfTxOtherDiscardPkts)	java. math. BigInteger	The value of aluVRtrMplsIfTxOtherDiscardPkts indicates the total number of discarded packets to be transmitted on this interface due to other reasons.
txQueueDiscardPkts [Tx Queue Discard Pkts] (aluVRtrMplsIfTxQueueDiscardPkts)	java. math. BigInteger	The value of aluVRtrMplsIfTxQueueDiscardPkts indicates the total number of MPLS transmitted packets discarded due to queue congestion or maintenance action on this interface.

Table 372 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SiteStats</p> <p>MIB entry name: vRtrMplsGeneralStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an instance of the MPLS protocol running within a virtual router. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsGeneralStatTable): The vRtrMplsGeneralStatTable contains statistics for an MPLS protocol instance within a virtual router.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.Site</p>		
detourOriginate [Detour Originate] (vRtrMplsGeneralDetourLspOriginate)	long	The value of vRtrMplsGeneralDetourLspOriginate indicates the number of detour LSPs that originate at this virtual router.
detourTerminate [Detour Terminate] (vRtrMplsGeneralDetourLspTerminate)	long	The value of vRtrMplsGeneralDetourLspTerminate indicates the number of detour LSPs that terminate at this virtual router.
detourTransit [Detour Transit] (vRtrMplsGeneralDetourLspTransit)	long	The value of vRtrMplsGeneralDetourLspTransit indicates the number of detour LSPs that transit through this virtual router.
dynamicOriginate [Dynamic Originate] (vRtrMplsGeneralDynamicLspOriginate)	long	The value of vRtrMplsGeneralDynamicLspOriginate indicates the number of dynamic LSPs that originate at this virtual router.
dynamicTerminate [Dynamic Terminate] (vRtrMplsGeneralDynamicLspTerminate)	long	The value of vRtrMplsGeneralDynamicLspTerminate indicates the number of dynamic LSPs that terminate at this virtual router.
dynamicTransit [Dynamic Transit] (vRtrMplsGeneralDynamicLspTransit)	long	The value of vRtrMplsGeneralDynamicLspTransit indicates the number of dynamic LSPs that transit through this virtual router.

Table 372 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
staticOriginate [Static Originate] (vRtrMplsGeneralStaticLspOriginate)	long	The value of vRtrMplsGeneralStaticLspOriginate indicates the number of static LSPs that originate at this virtual router.
staticTerminate [Static Terminate] (vRtrMplsGeneralStaticLspTerminate)	long	The value of vRtrMplsGeneralStaticLspTerminate indicates the number of static LSPs that terminate at this virtual router.
staticTransit [Static Transit] (vRtrMplsGeneralStaticLspTransit)	long	The value of vRtrMplsGeneralStaticLspTransit indicates the number of static LSPs that transit through this virtual router.

Table 373 multichassis statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PeerStats</p> <p>MIB entry name: tmnxMcLagPeerStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a multi-chassis peer. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxMcLagPeerStatsTable): The tmnxMcLagPeerStatsTable has an entry for each multi-chassis peer configured on this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • multichassis.PSSPeer • multichassis.Peer 		
configPacketsReceived [Config Packets Received] (tmnxMcLagPeerStatsPktsRxConfig)	long	The value of tmnxMcLagPeerStatsPktsRxConfig indicates how many valid MC-Lag control packets of type lag config were received on this system from the peer.
failedMD5AuthenticationPacketsDropped [Failed MD5 Authentication Packets Dropped] (tmnxMcLagPeerStatsDropMD5)	long	The value of tmnxMcLagPeerStatsDropMD5 indicates how many MC-Lag control packets were dropped on this system from the peer because the packet failed MD5 authentication.
failedPacketsTransmitted [Failed Packets Transmitted] (tmnxMcLagPeerStatsPktsTxFailed)	long	The value of tmnxMcLagPeerStatsPktsTxFailed indicates how many MC-Lag control packets failed to be transmitted from this system to the peer.
invalidLagIdPacketsDropped [Invalid Lag Id Packets Dropped] (tmnxMcLagPeerStatsDropTlvInvlId)	long	The value of tmnxMcLagPeerStatsDropTlvInvlId indicates how many MC-Lag control packets were dropped on this system from the peer because the packet referred to an invalid or non multi-chassis lag.
invalidSizePacketsDropped [Invalid Size Packets Dropped] (tmnxMcLagPeerStatsDropTlvInvlSz)	long	The value of tmnxMcLagPeerStatsDropTlvInvlSz indicates how many MC-Lag control packets were dropped on this system from the peer because the packet size was invalid.

Table 373 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
keepAlivePacketsReceived [Keep Alive Packets Received] (tmnxMcLagPeerStatsPktsRxKpalive)	long	The value of tmnxMcLagPeerStatsPktsRxKpalive indicates how many valid MC-Lag control packets of type keepalive were received on this system from the peer.
keepalivePacketsTransmitted [Keepalive Packets Transmitted] (tmnxMcLagPeerStatsPktsTxKpalive)	long	The value of tmnxMcLagPeerStatsPktsTxKpalive indicates how many MC-Lag control packets of type keepalive were transmitted from this system to the peer.
outOfSequencePacketsDropped [Out Of Sequence Packets Dropped] (tmnxMcLagPeerStatsDropOutOfSeq)	long	The value of tmnxMcLagPeerStatsDropOutOfSeq indicates how many MC-Lag control packets were dropped on this system from the peer because the packet was out of sequence.
packetsReceived [Packets Received] (tmnxMcLagPeerStatsPktsRx)	long	The value of tmnxMcLagPeerStatsPktsRx indicates how many valid MC-Lag control packets were received on this system from the peer.
packetsTransmitted [Packets Transmitted] (tmnxMcLagPeerStatsPktsTx)	long	The value of tmnxMcLagPeerStatsPktsTx indicates how many MC-Lag control packets were transmitted from this system to the peer.
peerConfigPacketsReceived [Peer Config Packets Received] (tmnxMcLagPeerStatsPktsRxPeerCfg)	long	The value of tmnxMcLagPeerStatsPktsRxPeerCfg indicates how many valid MC-Lag control packets of type peer config were received on this system from the peer.
peerConfigPacketsTransmitted [Peer Config Packets Transmitted] (tmnxMcLagPeerStatsPktsTxPeerCfg)	long	The value of tmnxMcLagPeerStatsPktsTxPeerCfg indicates how many MC-Lag control packets of type peer config were transmitted from this system to the peer.
stateDisabledPacketsDropped [State Disabled Packets Dropped] (tmnxMcLagPeerStatsDropStateDsblid)	long	The value of tmnxMcLagPeerStatsDropStateDsblid indicates how many MC-Lag control packets were dropped on this system from the peer because the peer was administratively disabled.

Table 373 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
statePacketsReceived [State Packets Received] (tmnxMcLagPeerStatsPktsRxState)	long	The value of tmnxMcLagPeerStatsPktsRxState indicates how many valid MC-Lag control packets of type lag state were received on this system from the peer.
tooShortPacketsDropped [Too Short Packets Dropped] (tmnxMcLagPeerStatsDropPktTooShrt)	long	The value of tmnxMcLagPeerStatsDropPktTooShrt indicates how many MC-Lag control packets were dropped on this system from the peer because the packet was too short.
unknownTlvPacketsDropped [Unknown Tlv Packets Dropped] (tmnxMcLagPeerStatsDropUnknownTlv)	long	The value of tmnxMcLagPeerStatsDropUnknownTlv indicates how many MC-Lag control packets were dropped on this system from the peer because the packet contained an unknown TLV.
<p>PeerSynchronizationProtocolStats</p> <p>MIB entry name: tmnxMcPeerSyncStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a multi-chassis synchronization protocol entry. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxMcPeerSyncStatsTable): The tmnxMcPeerSyncStatsTable has an entry for each multi-chassis peer synchronization protocol entry.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: multichassis.PeerSynchronizationProtocol</p>		
bodyDecodeErrorPacketsReceived [Body Decode Error Packets Received] (tmnxMcPeerSyncPktsRxErrBody)	long	The value of tmnxMcPeerSyncPktsRxErrBody indicates the number of packets with body decode errors received from the multi-chassis peer.
dataPacketsReceived [Data Packets Received] (tmnxMcPeerSyncPktsRxData)	long	The value of tmnxMcPeerSyncPktsRxData indicates the number of hello packets received from the multi-chassis peer.
dataPacketsTransmitted [Data Packets Transmitted] (tmnxMcPeerSyncPktsTxData)	long	The value of tmnxMcPeerSyncPktsTxData indicates the number of data packets transmitted to the multi-chassis peer.

Table 373 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
erroneousPacketsReceived [Erroneous Packets Received] (tmnxMcPeerSyncPktsRxErr)	long	The value of tmnxMcPeerSyncPktsRxErr indicates the number of erroneous packets received from the multi-chassis peer.
headerDecodeErrorPacketsReceived [Header Decode Error Packets Received] (tmnxMcPeerSyncPktsRxErrHeader)	long	The value of tmnxMcPeerSyncPktsRxErrHeader indicates the number of packets with header decode errors received from the multi-chassis peer.
helloPacketsReceived [Hello Packets Received] (tmnxMcPeerSyncPktsRxHello)	long	The value of tmnxMcPeerSyncPktsRxHello indicates the number of hello packets received from the multi-chassis peer.
helloPacketsTransmitted [Hello Packets Transmitted] (tmnxMcPeerSyncPktsTxHello)	long	The value of tmnxMcPeerSyncPktsTxHello indicates the number of hello packets transmitted to the multi-chassis peer.
otherPacketsReceived [Other Packets Received] (tmnxMcPeerSyncPktsRxOther)	long	The value of tmnxMcPeerSyncPktsRxOther indicates the number of all other packet types received from the multi-chassis peer.
otherPacketsTransmitted [Other Packets Transmitted] (tmnxMcPeerSyncPktsTxOther)	long	The value of tmnxMcPeerSyncPktsTxOther indicates the number of all other packet types transmitted to the multi-chassis peer.
packetTransmissionErrors [Packet Transmission Errors] (tmnxMcPeerSyncPktsTxErr)	long	The value of tmnxMcPeerSyncPktsTxErr indicates the number of packet transmission errors.
sequenceNumberErrorPacketsReceived [Sequence Number Error Packets Received] (tmnxMcPeerSyncPktsRxErrSeqNum)	long	The value of tmnxMcPeerSyncPktsRxErrSeqNum indicates the number of packets with sequence number errors received from the multi-chassis peer.

Table 373 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalPacketsReceived [Total Packets Received] (tmnxMcPeerSyncPktsRxAll)	long	The value of tmnxMcPeerSyncPktsRxAll indicates the total number of packets received from the multi-chassis peer.
totalPacketsTransmitted [Total Packets Transmitted] (tmnxMcPeerSyncPktsTxAll)	long	The value of tmnxMcPeerSyncPktsTxAll indicates the total number of packets transmitted to the multi-chassis peer.

Table 374 mwa statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>MwLinkStats</p> <p>MIB entry name: aluMwLinkStatisticsEntry</p> <p>Entry description: Each row entry represents a Packet Microwave Link that is provisioned on the system.</p> <p>Table description (for aluMwLinkStatisticsTable): The aluMwLinkStatisticsTable has an entry for each Packet Microwave Link in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mwa.MwLink</p>		
mwLinkAggrDiscardedTx [Mw Link Aggr Discarded Tx] (aluMwLinkAggrDiscardedTx)	java. math. BigInteger	aluMwLinkAggrDiscardedTx specifies the number of frames discarded on the radio before transmission.
mwLinkAggrFramesTx [Mw Link Aggr Frames Tx] (aluMwLinkAggrFramesTx)	java. math. BigInteger	aluMwLinkAggrFramesTx specifies the number of ethernet frames to be transmitted over radio link.
mwLinkAggrOctetsTx [Mw Link Aggr Octets Tx] (aluMwLinkAggrOctetsTx)	java. math. BigInteger	aluMwLinkAggrOctetsTx specifies the number of octets to be transmitted over radio link.
mwLinkQueue1DiscardedTx [Mw Link Queue 1 Discarded Tx] (aluMwLinkQueue1DiscardedTx)	java. math. BigInteger	aluMwLinkQueue1DiscardedTx specifies the number of frames discarded on the radio from queue 1 before transmission.
mwLinkQueue1FramesTx [Mw Link Queue 1 Frames Tx] (aluMwLinkQueue1FramesTx)	java. math. BigInteger	aluMwLinkQueue1FramesTx specifies the number of ethernet frames to be transmitted from queue 1 over radio link.

Table 374 mwa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mwLinkQueue1OctetsTx [Mw Link Queue 1 Octets Tx] (aluMwLinkQueue1OctetsTx)	java. math. BigInteger	aluMwLinkQueue1OctetsTx specifies the number of octets to be transmitted from queue 1 over radio link.
mwLinkQueue2DiscardedTx [Mw Link Queue 2 Discarded Tx] (aluMwLinkQueue2DiscardedTx)	java. math. BigInteger	aluMwLinkQueue2DiscardedTx specifies the number of frames discarded on the radio from queue 2 before transmission.
mwLinkQueue2FramesTx [Mw Link Queue 2 Frames Tx] (aluMwLinkQueue2FramesTx)	java. math. BigInteger	aluMwLinkQueue2FramesTx specifies the number of ethernet frames to be transmitted from queue 2 over radio link.
mwLinkQueue2OctetsTx [Mw Link Queue 2 Octets Tx] (aluMwLinkQueue2OctetsTx)	java. math. BigInteger	aluMwLinkQueue2OctetsTx specifies the number of octets transmitted to be from queue 2 over radio link.
mwLinkQueue3DiscardedTx [Mw Link Queue 3 Discarded Tx] (aluMwLinkQueue3DiscardedTx)	java. math. BigInteger	aluMwLinkQueue3DiscardedTx specifies the number of frames discarded on the radio from queue 3 before transmission.
mwLinkQueue3FramesTx [Mw Link Queue 3 Frames Tx] (aluMwLinkQueue3FramesTx)	java. math. BigInteger	aluMwLinkQueue3FramesTx specifies the number of ethernet frames to be transmitted from queue 3 over radio link.
mwLinkQueue3OctetsTx [Mw Link Queue 3 Octets Tx] (aluMwLinkQueue3OctetsTx)	java. math. BigInteger	aluMwLinkQueue3OctetsTx specifies the number of octets to be transmitted from queue 3 over radio link.
mwLinkQueue4DiscardedTx [Mw Link Queue 4 Discarded Tx] (aluMwLinkQueue4DiscardedTx)	java. math. BigInteger	aluMwLinkQueue4DiscardedTx specifies the number of frames discarded on the radio from queue 4 before transmission.

Table 374 mwa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mwLinkQueue4FramesTx [Mw Link Queue 4 Frames Tx] (aluMwLinkQueue4FramesTx)	java. math. BigInteger	aluMwLinkQueue4FramesTx specifies the number of ethernet frames to be transmitted from queue 4 over radio link.
mwLinkQueue4OctetsTx [Mw Link Queue 4 Octets Tx] (aluMwLinkQueue4OctetsTx)	java. math. BigInteger	aluMwLinkQueue4OctetsTx specifies the number of octets to be transmitted from queue 4 over radio link.
mwLinkQueue5DiscardedTx [Mw Link Queue 5 Discarded Tx] (aluMwLinkQueue5DiscardedTx)	java. math. BigInteger	aluMwLinkQueue5DiscardedTx specifies the number of frames discarded on the radio from queue 5 before transmission.
mwLinkQueue5FramesTx [Mw Link Queue 5 Frames Tx] (aluMwLinkQueue5FramesTx)	java. math. BigInteger	aluMwLinkQueue5FramesTx specifies the number of ethernet frames to be transmitted from queue 5 over radio link.
mwLinkQueue5OctetsTx [Mw Link Queue 5 Octets Tx] (aluMwLinkQueue5OctetsTx)	java. math. BigInteger	aluMwLinkQueue5OctetsTx specifies the number of octets to be transmitted from queue 5 over radio link.

Table 375 netw statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SecurityEngineStats MIB entry name: aluSecEngineStatsEntry Entry description: Each row entry represents a security engine. Table description (for aluSecEngineStatsTable): The aluSecEngineStatsTable has an entry for security engine in the system. Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement</p>		
engineDropPkts [Engine Drop Pkts] (aluSecEngineDropPkts)	java. math. BigInteger	Pkts dropped by Engine due to security policy.
engineId [Engine Id] (aluSecEngineId)	long	The value of aluSecEngineId specifies the identifier for security engine.
engineRxQueueCtrlPkts [Engine Rx Queue Ctrl Pkts] (aluSecEngineRxQueueCtrlPkts)	java. math. BigInteger	Control Pkts forwarded to Engine from Rx Queue.
engineRxQueueDataPkts [Engine Rx Queue Data Pkts] (aluSecEngineRxQueueDataPkts)	java. math. BigInteger	Session Data Pkts forwarded to Engine from Rx Queue.
engineRxQueueDropPkts [Engine Rx Queue Drop Pkts] (aluSecEngineRxQueueDropPkts)	java. math. BigInteger	Pkts dropped by Engine Rx Queue.

Table 375 netw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
engineUtilization [Engine Utilization] (aluSecEngineUtilization)	long	The value of aluSecEngineUtilization specifies the percentage of the processing capacity in use over the last second.
SnmpAgentStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement		
sgiSnmpInGetBulks [Sgi Snmp In Get Bulks] (sgiSnmpInGetBulks)	long	The value of sgiSnmpInGetBulks indicates the total number of SNMP Get-Next PDUs which have been accepted and processed by the SNMP protocol entity.
snmpInASNParseErrs [Snmp In ASNParse Errs] (snmpInASNParseErrs)	long	The total number of ASN.1 or BER errors encountered by the SNMP entity when decoding received SNMP messages.
snmpInBadCommunityNames [Snmp In Bad Community Names] (snmpInBadCommunityNames)	long	The total number of community-based SNMP messages (for example, SNMPv1) delivered to the SNMP entity which used an SNMP community name not known to said entity. Also, implementations which authenticate community-based SNMP messages using check(s) in addition to matching the community name (for example, by also checking whether the message originated from a transport address allowed to use a specified community name) MAY include in this value the number of messages which failed the additional check(s). It is strongly RECOMMENDED that the documentation for any security model which is used to authenticate community-based SNMP messages specify the precise conditions that contribute to this value.

Table 375 netw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
snmpInBadCommunityUses [Snmp In Bad Community Uses] (snmpInBadCommunityUses)	long	The total number of community-based SNMP messages (for example, SNMPv1) delivered to the SNMP entity which represented an SNMP operation that was not allowed for the SNMP community named in the message. The precise conditions under which this counter is incremented (if at all) depend on how the SNMP entity implements its access control mechanism and how its applications interact with that access control mechanism. It is strongly RECOMMENDED that the documentation for any access control mechanism which is used to control access to and visibility of MIB instrumentation specify the precise conditions that contribute to this value.
snmpInBadVersions [Snmp In Bad Versions] (snmpInBadVersions)	long	The total number of SNMP messages which were delivered to the SNMP entity and were for an unsupported SNMP version.
snmpInPkts [Snmp In Pkts] (snmpInPkts)	long	The total number of messages delivered to the SNMP entity from the transport service.
snmpProxyDrops [Snmp Proxy Drops] (snmpProxyDrops)	long	The total number of Confirmed Class PDUs (such as GetRequest-PDUs, GetNextRequest-PDUs, GetBulkRequest-PDUs, SetRequest-PDUs, and InformRequest-PDUs) delivered to the SNMP entity which were silently dropped because the transmission of the (possibly translated) message to a proxy target failed in a manner (other than a time-out) such that no Response Class PDU (such as a Response-PDU) could be returned.

Table 375 netw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
snmpSilentDrops [Snmp Silent Drops] (snmpSilentDrops)	long	The total number of Confirmed Class PDUs (such as GetRequest-PDUs, GetNextRequest-PDUs, GetBulkRequest-PDUs, SetRequest-PDUs, and InformRequest-PDUs) delivered to the SNMP entity which were silently dropped because the size of a reply containing an alternate Response Class PDU (such as a Response-PDU) with an empty variable-bindings field was greater than either a local constraint or the maximum message size associated with the originator of the request.

Table 376 nge statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>KeyGroupSdpBindingStats</p> <p>MIB entry name: aluNgeKeygroupSdpBindStatsEntry</p> <p>Entry description: Information about a single NGE keygroup sdp binding statistics.</p> <p>Table description (for aluNgeKeygroupSdpBindStatsTable): Table to store the NGE keygroup sdp binding statistics.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • svt.MeshSdpBinding • svt.SpokeSdpBinding 		
decryptedBytes [Decrypted Bytes] (aluNgeKeygroupSdpBindDecryptBytes)	java. math. BigInteger	The value of aluNgeKeygroupSdpBindDecryptBytes indicates the number of bytes successfully decrypted by the sdp binding.
decryptedPackets [Decrypted Packets] (aluNgeKeygroupSdpBindDecryptPkts)	java. math. BigInteger	The value of aluNgeKeygroupSdpBindDecryptPkts indicates the number of packets successfully decrypted by the sdp binding.
encryptedBytes [Encrypted Bytes] (aluNgeKeygroupSdpBindEncryptBytes)	java. math. BigInteger	The value of aluNgeKeygroupSdpBindEncryptBytes indicates the number of bytes successfully encrypted by the sdp binding.
encryptedPackets [Encrypted Packets] (aluNgeKeygroupSdpBindEncryptPkts)	java. math. BigInteger	The value of aluNgeKeygroupSdpBindEncryptPkts indicates the number of packets successfully encrypted by the sdp binding.

Table 376 nge statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
inDroppedInvalidSpi [In Dropped Invalid Spi] (aluNgeKeygroupSdpBindIngDrop-InvalidSpi)	long	The value of aluNgeKeygroupSdpBindIngDropInvalidSpi indicates the number of packets dropped before and during inbound (decryption) processing by the sdp binding. This implies that 1) the received SPI does not exist within the system 2) the received SPI is not part of the associated inbound keygroup 3) un-encrypted packet has been received on SDP with an associated inbound keygroup
inDroppedOther [In Dropped Other] (aluNgeKeygroupSdpBindIngDropOtherPkts)	long	The value of aluNgeKeygroupSdpBindIngDropOtherPkts indicates the number of packets dropped before and during inbound (decryption) processing by the sdp binding for unspecified reasons.
outDroppedTotal [Out Dropped Total] (aluNgeKeygroupSdpBindEgDropPkts)	long	The value of aluNgeKeygroupSdpBindEgDropPkts indicates the number of packets dropped before and during outbound (encryption) processing by the sdp binding.
<p>KeyGroupSpiStats MIB entry name: aluNgeKeygroupSpiStatsEntry Entry description: Statistics for a single encryption keygroup SPI. decryptedBytes [Decrypted Bytes] (aluNgeKeygroupSpiDecryptBytes)	java. math. BigInteger	The value of aluNgeKeygroupSpiDecryptBytes indicates the number of bytes successfully decrypted by the group encryption keygroup SPI.
decryptedPackets [Decrypted Packets] (aluNgeKeygroupSpiDecryptPkts)	java. math. BigInteger	The value of aluNgeKeygroupSpiDecryptPkts indicates the number of packets successfully decrypted by the group encryption keygroup SPI.

Table 376 nge statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
encryptedBytes [Encrypted Bytes] (aluNgeKeygroupSpiEncryptBytes)	java. math. BigInteger	The value of aluNgeKeygroupSpiEncryptBytes indicates the number of bytes successfully encrypted by the group encryption keygroup SPI.
encryptedPackets [Encrypted Packets] (aluNgeKeygroupSpiEncryptPkts)	java. math. BigInteger	The value of aluNgeKeygroupSpiEncryptPkts indicates the number of packets successfully encrypted by the group encryption keygroup SPI.
inDroppedAuthenticationFailure [In Dropped Authentication Failure] (aluNgeKeygroupSpiInDropAuthFailure)	long	The value of aluNgeKeygroupSpiInDropAuthFailure indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption keygroup SPI. This implies that authentication failed on the received packets.
inDroppedControlWordMismatch [In Dropped Control Word Mismatch] (aluNgeKeygroupSpiInDropControlWordMismatch)	long	The value of aluNgeKeygroupSpiInDropControlWordMismatch indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption keygroup SPI. This implies that the decrypted control word does not match the outer control word.
inDroppedEnqueueError [In Dropped Enqueue Error] (aluNgeKeygroupSpiInDropEnqueueError)	long	The value of aluNgeKeygroupSpiInDropEnqueueError indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption keygroup SPI. This implies that there are enqueue errors in the encryption engine.
inDroppedOther [In Dropped Other] (aluNgeKeygroupSpiInDropOther)	long	The value of aluNgeKeygroupSpiInDropOther indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption keygroup SPI for unspecified reasons.
inDroppedPaddingFailure [In Dropped Padding Failure] (aluNgeKeygroupSpiInDropPaddingFailure)	long	The value of aluNgeKeygroupSpiInDropPaddingFailure indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption keygroup SPI. This implies that there are padding errors detected on the received packets.

Table 376 nge statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
inDroppedTotal [In Dropped Total] (aluNgeKeygroupSpiInDropPkts)	long	The value of aluNgeKeygroupSpiInDropPkts indicates the total number of packets dropped before and during inbound (decryption) processing by the group encryption keygroup SPI.
outDroppedEnqueueError [Out Dropped Enqueue Error] (aluNgeKeygroupSpiOutDropEnqueueError)	long	The value of aluNgeKeygroupSpiOutDropEnqueueError indicates the number of packets dropped before and during outbound (encryption) processing by the group encryption keygroup SPI. This implies that there are enqueue errors in the encryption engine.
outDroppedOther [Out Dropped Other] (aluNgeKeygroupSpiOutDropOther)	long	The value of aluNgeKeygroupSpiOutDropOther indicates the number of packets dropped before and during outbound (encryption) processing by the group encryption keygroup SPI for unspecified reasons.
outDroppedTotal [Out Dropped Total] (aluNgeKeygroupSpiOutDropPkts)	long	The value of aluNgeKeygroupSpiOutDropPkts indicates the total number of packets dropped before and during outbound (encryption) processing by the group encryption keygroup SPI.
KeyGroupStats MIB entry name: aluNgeKeygroupStatsEntry Entry description: Statistics for a single group encryption keygroup. Table description (for aluNgeKeygroupStatsTable): Table to store group encryption keygroup level statistics. Supports realtime plotting Supports scheduled collection Monitored class: nge.KeyGroup		
decryptedBytes [Decrypted Bytes] (aluNgeKeygroupDecryptBytes)	java. math. BigInteger	The value of aluNgeKeygroupDecryptBytes indicates the number of bytes successfully decrypted by the group encryption keygroup.

Table 376 nge statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
decryptedPackets [Decrypted Packets] (aluNgeKeygroupDecryptPkts)	java. math. BigInteger	The value of aluNgeKeygroupDecryptPkts indicates the number of packets successfully decrypted by the group encryption keygroup.
encryptedBytes [Encrypted Bytes] (aluNgeKeygroupEncryptBytes)	java. math. BigInteger	The value of aluNgeKeygroupEncryptBytes indicates the number of bytes successfully encrypted by the group encryption keygroup.
encryptedPackets [Encrypted Packets] (aluNgeKeygroupEncryptPkts)	java. math. BigInteger	The value of aluNgeKeygroupEncryptPkts indicates the number of packets successfully encrypted by the group encryption keygroup.
inDroppedAuthenticationFailure [In Dropped Authentication Failure] (aluNgeKeygroupInDropAuthFailure)	long	The value of aluNgeKeygroupInDropAuthFailure indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption keygroup. This implies that authentication failed on the received packets.
inDroppedControlWordMismatch [In Dropped Control Word Mismatch] (aluNgeKeygroupInDropControl- WordMismatch)	long	The value of aluNgeKeygroupInDropControlWordMismatch indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption keygroup. This implies that the decrypted control word does not match the outer control word.
inDroppedEnqueueError [In Dropped Enqueue Error] (aluNgeKeygroupInDropEnqueueError)	long	The value of aluNgeKeygroupInDropEnqueueError indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption keygroup. This implies that there are enqueue errors in the encryption engine.

Table 376 nge statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
inDroppedInvalidSpi [In Dropped Invalid Spi] (aluNgeKeygroupInDropInvalidSpi)	long	The value of aluNgeKeygroupInDropInvalidSpi indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption keygroup. This implies that 1) the received SPI does not exist within the system 2) the received SPI is not part of the associated inbound keygroup 3) un-encrypted packet has been received on SDP with an associated inbound keygroup
inDroppedOther [In Dropped Other] (aluNgeKeygroupInDropOther)	long	The value of aluNgeKeygroupInDropOther indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption keygroup for unspecified reasons.
inDroppedPaddingFailure [In Dropped Padding Failure] (aluNgeKeygroupInDropPaddingFailure)	long	The value of aluNgeKeygroupInDropPaddingFailure indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption keygroup. This implies that there are padding errors detected on the received packets.
inDroppedTotal [In Dropped Total] (aluNgeKeygroupInDropPkts)	long	The value of aluNgeKeygroupInDropPkts indicates the total number of packets dropped before and during inbound (decryption) processing by the group encryption keygroup.
inLastDroppedSpi [In Last Dropped Spi] (aluNgeKeygroupInLastDropSpi)	long	The value of aluNgeKeygroupInLastDropSpi indicates the last SPI value of the packet dropped before and during inbound (decryption) processing by the group encryption keygroup. If 0x00000000 is received, it implies that no discard involving SPIs has occurred. If 0xFFFFFFFF is received, it implies that discards occurred involving unencrypted traffic without encryption label. Any other values should be interpreted as a normal SPI ID.
outDroppedEnqueueError [Out Dropped Enqueue Error] (aluNgeKeygroupOutDropEnqueueError)	long	The value of aluNgeKeygroupOutDropEnqueueError indicates the number of packets dropped before and during outbound (encryption) processing by the group encryption keygroup. This implies that there are enqueue errors in the encryption engine.

Table 376 nge statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outDroppedOther [Out Dropped Other] (aluNgeKeygroupOutDropOther)	long	The value of aluNgeKeygroupOutDropOther indicates the number of packets dropped before and during outbound (encryption) processing by the group encryption keygroup for unspecified reasons.
outDroppedTotal [Out Dropped Total] (aluNgeKeygroupOutDropPkts)	long	The value of aluNgeKeygroupOutDropPkts indicates the total number of packets dropped before and during outbound (encryption) processing by the group encryption keygroup.
outDroppedUnsupportedUplink [Out Dropped Unsupported Uplink] (aluNgeKeygroupOutDropUnsup- portedUplink)	long	The value of aluNgeKeygroupOutDropUnsupportedUplink indicates the number of packets dropped before and during outbound (encryption) processing by the group encryption keygroup. This implies that the resolved uplink does not support encryption.

Table 377 ospf statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AreaBasicStats</p> <p>MIB entry name: tmnxOspfAreaEntry</p> <p>Entry description: The tmnxOspfAreaEntry contains information describing the configured parameters and cumulative statistics of one of the router's attached areas.</p> <p>Table description (for tmnxOspfAreaTable): The tmnxOspfAreaTable contains information describing the configured parameters and cumulative statistics of the router's attached areas.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.AreaSite</p>		
nssaTranslatorEvents [Nssa Translator Events] (tmnxOspfAreaNssaTranslatorEvents)	long	The value of tmnxOspfAreaNssaTranslatorEvents indicates the number of Translator State changes that have occurred since the last boot-up.
totalLSACount [Total LSACount] (tmnxOspfAreaScopeLsaCount)	long	The value of tmnxOspfAreaScopeLsaCount indicates the total number of Area-Scope link state advertisements in this area's link-state database.
totalSpfRuns [Total Spf Runs] (tmnxOspfAreaSpfRuns)	long	The value of tmnxOspfAreaSpfRuns indicates the number of times that the intra-area route table has been calculated using this area's link-state database. This is typically done using Dijkstra's algorithm.
totalUnknownLSACount [Total Unknown LSACount] (tmnxOspfAreaScopeUnkLsaCount)	long	The value of tmnxOspfAreaScopeUnkLsaCount indicates the total number of unknown Area-Scope link-state advertisements in this area's link-state database.

Table 377 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AreaSiteLfaStats</p> <p>MIB entry name: tmnxOspfLfaStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfLfaStatsTable represents information on LFA coverage for a given OSPF area</p> <p>Table description (for tmnxOspfLfaStatsTable): The tmnxOspfLfaStatsTable maintains information on loopfree-alternate (LFA) coverage for each instance of OSPF protocol.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.AreaSite</p>		
ospfLfaCoverage [Ospf Lfa Coverage] (tmnxOspfLfaCoverage)	long	The value of tmnxOspfLfaCoverage indicates how much LFA coverage is being obtained for the set of available LFA eligible nodes.
ospfLfaNodesCovered [Ospf Lfa Nodes Covered] (tmnxOspfLfaNodesCovered)	long	The value of tmnxOspfLfaNodesCovered indicates in absolute numbers the number of nodes for which an LFA is found.
ospfLfaPrefixCoverage [Ospf Lfa Prefix Coverage] (tmnxOspfLfaPfxCoverage)	long	The value of tmnxOspfLfaPfxCoverage indicates how much LFA prefix coverage is being obtained for the set of available LFA eligible prefixes.
ospfLfaPrefixCovered [Ospf Lfa Prefix Covered] (tmnxOspfLfaPfxCovered)	long	The value of tmnxOspfLfaPfxCovered indicates in absolute numbers the number of prefixes for which an LFA is found.
ospfLfaTotalNodes [Ospf Lfa Total Nodes] (tmnxOspfLfaTotalNodes)	long	The value of tmnxOspfLfaTotalNodes indicates in absolute numbers the number of nodes eligible for LFA calculation.
ospfLfaTotalPrefix [Ospf Lfa Total Prefix] (tmnxOspfLfaTotalPfx)	long	The value of tmnxOspfLfaTotalPfx indicates in absolute numbers the number of prefixes eligible for LFA calculation.

Table 377 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceGeneralStats</p> <p>MIB entry name: tmnxOspfNgIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgIfStatsTable represents additional columns for statistics for an OSPF interface.</p> <p>Table description (for tmnxOspfNgIfStatsTable): The tmnxOspfNgIfStatsTable provides an extension of the tmnxOspfNgIfTable for statistics for an OSPF interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Interface</p>		
events [Events] (tmnxOspfNgIfEvents)	long	The value of tmnxOspfNgIfEvents indicates the number of times this OSPF interface has changed its state, or an error has occurred.
<p>InterfaceReceiveStats</p> <p>MIB entry name: tmnxOspfNgIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgIfStatsTable represents additional columns for statistics for an OSPF interface.</p> <p>Table description (for tmnxOspfNgIfStatsTable): The tmnxOspfNgIfStatsTable provides an extension of the tmnxOspfNgIfTable for statistics for an OSPF interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Interface</p>		
databaseDescriptionPackets [Database Description Packets] (tmnxOspfNgIfRxDBDs)	long	The value of tmnxOspfNgIfRxDBDs indicates the total number of OSPF Database Description packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.
helloPackets [Hello Packets] (tmnxOspfNgIfRxHellos)	long	The value of tmnxOspfNgIfRxHellos indicates the total number of OSPF Hello packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.

Table 377 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfNgIfRxLSAcks)	long	The value of tmnxOspfNgIfRxLSAcks indicates the total number of Link State Acknowledgements received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateRequests [Link State Requests] (tmnxOspfNgIfRxLSRs)	long	The value of tmnxOspfNgIfRxLSRs indicates the total number of Link State Requests (LSRs) received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateUpdates [Link State Updates] (tmnxOspfNgIfRxLSUs)	long	The value of tmnxOspfNgIfRxLSUs indicates the total number of Link State Updates (LSUs) received on this interface since tmnxOspfAdminState was last set to 'enabled'.
lsasWithBadChecksums [Lsas With Bad Checksums] (tmnxOspfNgIfRxBadChecksums)	long	The value of tmnxOspfNgIfRxBadChecksums indicates the count of LSAs received with bad checksums.
totalPackets [Total Packets] (tmnxOspfNgIfRxPackets)	long	The value of tmnxOspfNgIfRxPackets indicates the total number of OSPF packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.
InterfaceStatusStats MIB entry name: tmnxOspfNgIfStatsEntry Entry description: Each row entry in the tmnxOspfNgIfStatsTable represents additional columns for statistics for an OSPF interface. Table description (for tmnxOspfNgIfStatsTable): The tmnxOspfNgIfStatsTable provides an extension of the tmnxOspfNgIfTable for statistics for an OSPF interface. Supports realtime plotting Supports scheduled collection Monitored class: ospf.Interface		
authorizationFailures [Authorization Failures] (tmnxOspfNgIfAuthFailures)	long	The value of tmnxOspfNgIfAuthFailures indicates the total number of OSPF packets received with an invalid authorization key since tmnxOspfAdminState was last set to 'enabled'.

Table 377 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badAreas [Bad Areas] (tmnxOspfNglfBadAreas)	long	The value of tmnxOspfNglfBadAreas indicates the total number of OSPF packets received with an area mismatch since tmnxOspfAdminState was last set to 'enabled'.
badAuthorizationTypes [Bad Authorization Types] (tmnxOspfNglfBadAuthTypes)	long	The value of tmnxOspfNglfBadAuthTypes indicates the total number of OSPF packets received with an invalid authorization type since tmnxOspfAdminState was last set to 'enabled'.
badDeadIntervals [Bad Dead Intervals] (tmnxOspfNglfBadDeadIntervals)	long	The value of tmnxOspfNglfBadDeadIntervals indicates the total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this interface since tmnxOspfAdminState was last set to 'enabled'.
badDestinationAddresses [Bad Destination Addresses] (tmnxOspfNglfBadDstAddrs)	long	The value of tmnxOspfNglfBadDstAddrs indicates the total number of OSPF packets received with the incorrect IP destination address since tmnxOspfAdminState was last set to 'enabled'.
badHelloIntervals [Bad Hello Intervals] (tmnxOspfNglfBadHelloIntervals)	long	The value of tmnxOspfNglfBadHelloIntervals indicates the total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this interface since tmnxOspfAdminState was last set to 'enabled'.
badLengths [Bad Lengths] (tmnxOspfNglfBadLengths)	long	The value of tmnxOspfNglfBadLengths indicates the total number of OSPF packets received on this interface with a total length not equal to the length given in the packet itself since tmnxOspfAdminState was last set to 'enabled'.
badNeighbors [Bad Neighbors] (tmnxOspfNglfBadNeighbors)	long	The value of tmnxOspfNglfBadNeighbors indicates the total number of OSPF packets received where the neighbor information does not match the information this router has for the neighbor since tmnxOspfAdminState was last set to 'enabled'.

Table 377 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badNetworks [Bad Networks] (tmnxOspfNgIfBadNetworks)	long	The value of tmnxOspfNgIfBadNetworks indicates the total number of OSPF packets received with invalid network or mask since tmnxOspfAdminState was last set to 'enabled'.
badOptions [Bad Options] (tmnxOspfNgIfBadOptions)	long	The value of tmnxOspfNgIfBadOptions indicates the total number of OSPF packets received with an option that does not match those configured for this interface or area since tmnxOspfAdminState was last set to 'enabled'.
badPacketTypes [Bad Packet Types] (tmnxOspfNgIfBadPacketTypes)	long	The value of tmnxOspfNgIfBadPacketTypes indicates the total number of OSPF packets received with an invalid OSPF packet type since tmnxOspfAdminState was last set to 'enabled'.
badVersions [Bad Versions] (tmnxOspfNgIfBadVersions)	long	The value of tmnxOspfNgIfBadVersions indicates the total number of OSPF packets received with bad OSPF version numbers since tmnxOspfAdminState was last set to 'enabled'.
badVirtualLinks [Bad Virtual Links] (tmnxOspfNgIfBadVirtualLinks)	long	The value of tmnxOspfNgIfBadVirtualLinks indicates the total number of OSPF packets received on this interface that are destined to a virtual link that does not exist since tmnxOspfAdminState was last set to 'enabled'.
discardPackets [Discard Packets] (tmnxOspfNgIfDiscardPackets)	long	The value of tmnxOspfNgIfDiscardPackets indicates the total number of OSPF packets discarded on this interface since tmnxOspfAdminState was last set to 'enabled'.
retransmitOuts [Retransmit Outs] (tmnxOspfNgIfRetransmitOuts)	long	The value of tmnxOspfNgIfRetransmitOuts indicates the total number of OSPF Retransmits sent on this interface since tmnxOspfAdminState was last set to 'enabled'.

Table 377 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceTransmitStats</p> <p>MIB entry name: tmnxOspfNgIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgIfStatsTable represents additional columns for statistics for an OSPF interface.</p> <p>Table description (for tmnxOspfNgIfStatsTable): The tmnxOspfNgIfStatsTable provides an extension of the tmnxOspfNgIfTable for statistics for an OSPF interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Interface</p>		
databaseDescriptionPackets [Database Description Packets] (tmnxOspfNgIfRxDBDs)	long	The value of tmnxOspfNgIfRxDBDs indicates the total number of OSPF Database Description packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.
helloPackets [Hello Packets] (tmnxOspfNgIfRxHellos)	long	The value of tmnxOspfNgIfRxHellos indicates the total number of OSPF Hello packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfNgIfRxLSAcks)	long	The value of tmnxOspfNgIfRxLSAcks indicates the total number of Link State Acknowledgements received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateRequests [Link State Requests] (tmnxOspfNgIfRxLSRs)	long	The value of tmnxOspfNgIfRxLSRs indicates the total number of Link State Requests (LSRs) received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateUpdates [Link State Updates] (tmnxOspfNgIfRxLSUs)	long	The value of tmnxOspfNgIfRxLSUs indicates the total number of Link State Updates (LSUs) received on this interface since tmnxOspfAdminState was last set to 'enabled'.
totalPackets [Total Packets] (tmnxOspfNgIfRxPackets)	long	The value of tmnxOspfNgIfRxPackets indicates the total number of OSPF packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.

Table 377 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>NeighborGeneralStats</p> <p>MIB entry name: tmnxOspfNgNbrStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgNbrStatsTable represents additional columns for statistics for an OSPF neighbor.</p> <p>Table description (for tmnxOspfNgNbrStatsTable): The tmnxOspfNgNbrStatsTable provides an extension of the tmnxOspfNgNbrTable for statistics for an OSPF neighbor.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • ospf.Neighbor • ospf.OspfNeighbor 		
events [Events] (tmnxOspfNgNbrEvents)	long	The value of tmnxOspfNgNbrEvents indicates the number of times this neighbor relationship has changed state, or an error has occurred.
retransmissionQueueLength [Retransmission Queue Length] (tmnxOspfNgNbrLsRetransQLen)	long	The value of tmnxOspfNgNbrLsRetransQLen indicates the current length of the retransmission queue.
<p>NeighborStatusStats</p> <p>MIB entry name: tmnxOspfNgNbrStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgNbrStatsTable represents additional columns for statistics for an OSPF neighbor.</p> <p>Table description (for tmnxOspfNgNbrStatsTable): The tmnxOspfNgNbrStatsTable provides an extension of the tmnxOspfNgNbrTable for statistics for an OSPF neighbor.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Neighbor</p>		

Table 377 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badMtus [Bad Mtus] (tmnxOspfNgNbrBadMTUs)	long	The value of tmnxOspfNgNbrBadMTUs indicates the total number of times when the MTU in a received database description packet was larger than the MTU of the receiving interface since tmnxOspfAdminState was last set to 'enabled'.
badNeighborStates [Bad Neighbor States] (tmnxOspfNgNbrBadNbrStates)	long	The value of tmnxOspfNgNbrBadNbrStates indicates the total number of OSPF packets received when the neighbor state was not expecting to receive this packet type since tmnxOspfAdminState was last set to 'enabled'.
badPackets [Bad Packets] (tmnxOspfNgNbrBadPackets)	long	The value of tmnxOspfNgNbrBadPackets indicates the total number of times when an LS update was received with an illegal LS type or an option mismatch since tmnxOspfAdminState was last set to 'enabled'.
badSequenceNumbers [Bad Sequence Numbers] (tmnxOspfNgNbrBadSeqNums)	long	The value of tmnxOspfNgNbrBadSeqNums indicates the total number of times when a database description packet was received with a sequence number mismatch since tmnxOspfAdminState was last set to 'enabled'.
duplicates [Duplicates] (tmnxOspfNgNbrDuplicates)	long	The value of tmnxOspfNgNbrDuplicates indicates the total number of times when a duplicate database description packet was received during the Exchange state since tmnxOspfAdminState was last set to 'enabled'.
lsaInstallFailed [Lsa Install Failed] (tmnxOspfNgNbrLsaInstallFailed)	long	The value of tmnxOspfNgNbrLsaInstallFailed indicates the total number of times an LSA could not be installed into the LSDB due to a resource allocation issue since tmnxOspfAdminState was last set to 'enabled'.
lsaNotInLSDB [Lsa Not In LSDB] (tmnxOspfNgNbrLsaNotInLsdb)	long	The value of tmnxOspfNgNbrLsaNotInLsdb indicates the total number of times when an LS request was received for an LSA not installed in the LSDB of this router since tmnxOspfAdminState was last set to 'enabled'.
numberOfRestarts [Number Of Restarts] (tmnxOspfNgNbrNumRestarts)	long	The value of tmnxOspfNgNbrNumRestarts indicates the number of times the neighbor has attempted restart.

Table 377 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
optionMismatches [Option Mismatches] (tmnxOspfNgNbrOptionMismatches)	long	The value of tmnxOspfNgNbrOptionMismatches indicates the total number of times when a LS update was received with an option mismatch since tmnxOspfAdminState was last set to 'enabled'.
<p>ShamLinkGeneralStats</p> <p>MIB entry name: tmnxOspfShamIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfShamIfStatsTable represents additional columns for statistics for an OSPF sham link.</p> <p>Table description (for tmnxOspfShamIfStatsTable): The tmnxOspfShamIfStatsTable provides an extension of the tmnxOspfShamIfTable for statistics for an OSPF sham link.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.ShamLink</p>		
events [Events] (tmnxOspfShamIfEvents)	long	The value of tmnxOspfShamIfEvents indicates the number of state changes or error events on this sham link.
<p>ShamLinkReceiveStats</p> <p>MIB entry name: tmnxOspfShamIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfShamIfStatsTable represents additional columns for statistics for an OSPF sham link.</p> <p>Table description (for tmnxOspfShamIfStatsTable): The tmnxOspfShamIfStatsTable provides an extension of the tmnxOspfShamIfTable for statistics for an OSPF sham link.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.ShamLink</p>		
databaseDescriptionPackets [Database Description Packets] (tmnxOspfShamIfRxDBDs)	long	The value of tmnxOspfShamIfRxDBDs indicates the total number of OSPF Database Description packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.

Table 377 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
helloPackets [Hello Packets] (tmnxOspfShamIfRxHellos)	long	The value of tmnxOspfShamIfRxHellos indicates the total number of OSPF Hello packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfShamIfRxLSAcks)	long	The value of tmnxOspfShamIfRxLSAcks indicates the total number of Link State Acknowledgements received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateRequests [Link State Requests] (tmnxOspfShamIfRxLSRs)	long	The value of tmnxOspfShamIfRxLSRs indicates the total number of Link State Requests (LSRs) received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateUpdates [Link State Updates] (tmnxOspfShamIfRxLSUs)	long	The value of tmnxOspfShamIfRxLSUs indicates the total number of Link State Updates (LSUs) received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
lsasWithBadChecksums [Lsas With Bad Checksums] (tmnxOspfShamIfRxBadChecksums)	long	The value of tmnxOspfShamIfRxBadChecksums indicates the count of LSAs received with bad checksums.
totalPackets [Total Packets] (tmnxOspfShamIfRxPackets)	long	The value of tmnxOspfShamIfRxPackets indicates the total number of OSPF packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
<p>ShamLinkStatusStats</p> <p>MIB entry name: tmnxOspfShamIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfShamIfStatsTable represents additional columns for statistics for an OSPF sham link.</p> <p>Table description (for tmnxOspfShamIfStatsTable): The tmnxOspfShamIfStatsTable provides an extension of the tmnxOspfShamIfTable for statistics for an OSPF sham link.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.ShamLink</p>		

Table 377 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
authorizationFailures [Authorization Failures] (tmnxOspfShamIfAuthFailures)	long	The value of tmnxOspfShamIfAuthFailures indicates the total number of OSPF packets received with an invalid authorization key since tmnxOspfAdminState was last set to 'enabled'.
badAreas [Bad Areas] (tmnxOspfShamIfBadAreas)	long	The value of tmnxOspfShamIfBadAreas indicates the total number of OSPF packets received with an area mismatch since tmnxOspfAdminState was last set to 'enabled'.
badAuthorizationTypes [Bad Authorization Types] (tmnxOspfShamIfBadAuthTypes)	long	The value of tmnxOspfShamIfBadAuthTypes indicates the total number of OSPF packets received with an invalid authorization type since tmnxOspfAdminState was last set to 'enabled'.
badDeadIntervals [Bad Dead Intervals] (tmnxOspfShamIfBadDeadIntervals)	long	The value of tmnxOspfShamIfBadDeadIntervals indicates the total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this sham link since tmnxOspfAdminState was last set to 'enabled'.
badDestinationAddresses [Bad Destination Addresses] (tmnxOspfShamIfBadDstAddrs)	long	The value of tmnxOspfShamIfBadDstAddrs indicates the total number of OSPF packets received with the incorrect IP destination address since tmnxOspfAdminState was last set to 'enabled'.
badHelloIntervals [Bad Hello Intervals] (tmnxOspfShamIfBadHelloIntervals)	long	The value of tmnxOspfShamIfBadHelloIntervals indicates the total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this sham link since tmnxOspfAdminState was last set to 'enabled'.
badLengths [Bad Lengths] (tmnxOspfShamIfBadLengths)	long	The value of tmnxOspfShamIfBadLengths indicates the total number of OSPF packets received on this sham link with a total length not equal to the length given in the packet itself since tmnxOspfAdminState was last set to 'enabled'.

Table 377 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badNeighbors [Bad Neighbors] (tmnxOspfShamIfBadNeighbors)	long	The value of tmnxOspfShamIfBadNeighbors indicates the total number of OSPF packets received where the neighbor information does not match the information this router has for the neighbor since tmnxOspfAdminState was last set to 'enabled'.
badNetworks [Bad Networks] (tmnxOspfShamIfBadNetworks)	long	The value of tmnxOspfShamIfBadNetworks indicates the total number of OSPF packets received with invalid network or mask since tmnxOspfAdminState was last set to 'enabled'.
badOptions [Bad Options] (tmnxOspfShamIfBadOptions)	long	The value of tmnxOspfShamIfBadOptions indicates the total number of OSPF packets received with an option that does not match those configured for this sham link or area since tmnxOspfAdminState was last set to 'enabled'.
badPacketTypes [Bad Packet Types] (tmnxOspfShamIfBadPacketTypes)	long	The value of tmnxOspfShamIfBadPacketTypes indicates the total number of OSPF packets received with an invalid OSPF packet type since tmnxOspfAdminState was last set to 'enabled'.
badVersions [Bad Versions] (tmnxOspfShamIfBadVersions)	long	The value of tmnxOspfShamIfBadVersions indicates the total number of OSPF packets received with bad OSPF version numbers since tmnxOspfAdminState was last set to 'enabled'.
discardPackets [Discard Packets] (tmnxOspfShamIfDiscardPackets)	long	The value of tmnxOspfShamIfDiscardPackets indicates the total number of OSPF packets discarded on this sham link since tmnxOspfAdminState was last set to 'enabled'.
retransmitOuts [Retransmit Outs] (tmnxOspfShamIfRetransmitOuts)	long	The value of tmnxOspfShamIfRetransmitOuts indicates the total number of OSPF Retransmits sent on this sham link since tmnxOspfAdminState was last set to 'enabled'.

Table 377 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>ShamLinkTransmitStats</p> <p>MIB entry name: tmnxOspfShamIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfShamIfStatsTable represents additional columns for statistics for an OSPF sham link.</p> <p>Table description (for tmnxOspfShamIfStatsTable): The tmnxOspfShamIfStatsTable provides an extension of the tmnxOspfShamIfTable for statistics for an OSPF sham link.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.ShamLink</p>		
databaseDescriptionPackets [Database Description Packets] (tmnxOspfShamIfRxDBDs)	long	The value of tmnxOspfShamIfRxDBDs indicates the total number of OSPF Database Description packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
helloPackets [Hello Packets] (tmnxOspfShamIfRxHellos)	long	The value of tmnxOspfShamIfRxHellos indicates the total number of OSPF Hello packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfShamIfRxLSAcks)	long	The value of tmnxOspfShamIfRxLSAcks indicates the total number of Link State Acknowledgements received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateRequests [Link State Requests] (tmnxOspfShamIfRxLSRs)	long	The value of tmnxOspfShamIfRxLSRs indicates the total number of Link State Requests (LSRs) received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateUpdates [Link State Updates] (tmnxOspfShamIfRxLSUs)	long	The value of tmnxOspfShamIfRxLSUs indicates the total number of Link State Updates (LSUs) received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
totalPackets [Total Packets] (tmnxOspfShamIfRxPackets)	long	The value of tmnxOspfShamIfRxPackets indicates the total number of OSPF packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.

Table 377 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SiteStats</p> <p>MIB entry name: tmnxOspfStatisticsEntry</p> <p>Entry description: Each row entry in the tmnxOspfStatisticsTable represents additional columns for statistics for an OSPF instance.</p> <p>Table description (for tmnxOspfStatisticsTable): The tmnxOspfStatisticsTable provides an extension of the tmnxOspfGeneralTable for statistics for an OSPF instance.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Site</p>		
addRouteFailed [Add Route Failed] (tmnxOspfRoutesAddsFailed)	long	The value of tmnxOspfRoutesAddsFailed indicates the number of times an attempt to add a route to the Route Table Manager (RTM) failed for this OSPF instance.
cspfDroppedRequests [Cspf Dropped Requests] (tmnxOspfCSPFDroppedRequests)	long	The value of tmnxOspfCSPFDroppedRequests indicates the number of dropped CSPF requests made by the OSPF protocol.
cspfPathsFound [Cspf Paths Found] (tmnxOspfCSPFPathsFound)	long	The value of tmnxOspfCSPFPathsFound indicates the number of of paths found for the requests made to OSPF protocol.
cspfPathsNotFound [Cspf Paths Not Found] (tmnxOspfCSPFPathsNotFound)	long	The value of tmnxOspfCSPFPathsNotFound indicates the number of of paths not found for the requests made to OSPF protocol.
cspfRequests [Cspf Requests] (tmnxOspfCSPFRequests)	long	The value of tmnxOspfCSPFRequests indicates the number of CSPF requests made to the OSPF protocol.
deleteRouteFailed [Delete Route Failed] (tmnxOspfRoutesDelsFailed)	long	The value of tmnxOspfRoutesDelsFailed indicates the number of times an attempt to delete a route from the Route Table Manager (RTM) failed for this instance of OSPF.

Table 377 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
inOverflowCount [In Overflow Count] (tmnxOspfNumTimesInOverflow)	long	The value of tmnxOspfNumTimesInOverflow indicates the count of the number of times the system was in the overflow state.
inOverloadCount [In Overload Count] (tmnxOspfNumTimesInOverload)	long	The value of tmnxOspfNumTimesInOverload indicates the count of the number of times the system was overloaded.
modifyRouteFailed [Modify Route Failed] (tmnxOspfRoutesModsFailed)	long	The value of tmnxOspfRoutesModsFailed indicates the number of times an attempt to modify a route in the Route Table Manager (RTM) failed for this instance of OSPF.
newLsasOriginated [New Lsas Originated] (tmnxOspfOriginateNewLsas)	long	The value of tmnxOspfOriginateNewLsas indicates the number of new link-state advertisements that have been originated. This number is incremented each time the router originates a new LSA.
newLsasReceived [New Lsas Received] (tmnxOspfRxNewLsas)	long	The value of tmnxOspfRxNewLsas indicates the number of link-state advertisements received determined to be new instantiations. This number does not include newer instantiations of self-originated link-state advertisements.
spfAttemptsFailed [Spf Attempts Failed] (tmnxOspfSpfAttemptsFailed)	long	The value of tmnxOspfSpfAttemptsFailed indicates the number of times an attempt to run SPF has failed because SPF runs have been stopped as a result of insufficient memory resources.

Table 377 ospf statistics (continued)

events [Events] (tmnxOspfVirtIfEvents)	long	The value of tmnxOspfVirtIfEvents indicates the number of state changes or error events on this Virtual Link
<p>VirtualLinkReceiveStats</p> <p>MIB entry name: tmnxOspfVirtIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfVirtIfStatsTable represents additional columns for statistics for an OSPF virtual interface.</p> <p>Table description (for tmnxOspfVirtIfStatsTable): The tmnxOspfVirtIfStatsTable provides an extension of the tmnxOspfVirtIfTable for statistics for an OSPF virtual interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.VirtualLink</p>		
databaseDescriptionPackets [Database Description Packets] (tmnxOspfVirtIfRxDBDs)	long	The value of tmnxOspfVirtIfRxDBDs indicates the total number of OSPF Database Description packets received on this virtual interface.
helloPackets [Hello Packets] (tmnxOspfVirtIfRxHellos)	long	The value of tmnxOspfVirtIfRxHellos indicates the total number of OSPF Hello packets received on this virtual interface.

Table 377 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfVirtIfRxLSAcks)	long	The value of tmnxOspfVirtIfRxLSAcks indicates the total number of Link State Acknowledgements received on this virtual interface.
linkStateRequests [Link State Requests] (tmnxOspfVirtIfRxLSRs)	long	The value of tmnxOspfVirtIfRxLSRs indicates the total number of OSPF Link State Requests (LSRs) received on this virtual interface.
linkStateUpdates [Link State Updates] (tmnxOspfVirtIfRxLSUs)	long	The value of tmnxOspfVirtIfRxLSUs indicates the total number of OSPF Link State Updates (LSUs) received on this virtual interface.
lsasWithBadChecksums [Lsas With Bad Checksums] (tmnxOspfVirtIfRxBadChecksums)	long	The value of tmnxOspfVirtIfRxBadChecksums indicates the count of LSAs received with bad checksums.
totalPackets [Total Packets] (tmnxOspfVirtIfRxPackets)	long	The value of tmnxOspfVirtIfRxPackets indicates the total number of OSPF packets received on this virtual interface since it was created.
VirtualLinkStatusStats MIB entry name: tmnxOspfVirtIfStatsEntry Entry description: Each row entry in the tmnxOspfVirtIfStatsTable represents additional columns for statistics for an OSPF virtual interface. Table description (for tmnxOspfVirtIfStatsTable): The tmnxOspfVirtIfStatsTable provides an extension of the tmnxOspfVirtIfTable for statistics for an OSPF virtual interface. Supports realtime plotting Supports scheduled collection Monitored class: ospf.VirtualLink		
authorizationFailures [Authorization Failures] (tmnxOspfVirtIfAuthFailures)	long	The value of tmnxOspfVirtIfAuthFailures indicates the total number of OSPF packets received on this virtual interface with invalid authentication keys.

Table 377 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badAreas [Bad Areas] (tmnxOspfVirtIfBadAreas)	long	The value of tmnxOspfVirtIfBadAreas indicates the total number of OSPF packets received on this virtual interface with area mismatches.
badAuthorizationTypes [Bad Authorization Types] (tmnxOspfVirtIfBadAuthTypes)	long	The value of tmnxOspfVirtIfBadAuthTypes indicates the total number of OSPF packets received on this virtual interface with invalid authentication types.
badDeadIntervals [Bad Dead Intervals] (tmnxOspfVirtIfBadDeadIntervals)	long	The value of tmnxOspfVirtIfBadDeadIntervals indicates the total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this virtual interface since tmnxOspfAdminState was last set to 'enabled'.
badDestinationAddresses [Bad Destination Addresses] (tmnxOspfVirtIfBadDstAdrs)	long	The value of tmnxOspfVirtIfBadDstAdrs indicates the total number of OSPF packets received on this virtual interface with invalid destination IP address.
badHelloIntervals [Bad Hello Intervals] (tmnxOspfVirtIfBadHelloIntervals)	long	The value of tmnxOspfVirtIfBadHelloIntervals indicates the total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this virtual interface since tmnxOspfAdminState was last set to 'enabled'.
badLengths [Bad Lengths] (tmnxOspfVirtIfBadLengths)	long	The value of tmnxOspfVirtIfBadLengths indicates the total number of OSPF packets received on this virtual interface with a total length not equal to the length given in the packet itself since tmnxOspfAdminState was last set to 'enabled'.
badNeighbors [Bad Neighbors] (tmnxOspfVirtIfBadNeighbors)	long	The value of tmnxOspfVirtIfBadNeighbors indicates the total number of OSPF packets received where the neighbor information does not match the configuration this router has for the neighbor.
badNetworks [Bad Networks] (tmnxOspfVirtIfBadNetworks)	long	The value of tmnxOspfVirtIfBadNetworks indicates the total number of OSPF packets received on this virtual interface with invalid network or mask fields.

Table 377 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badOptions [Bad Options] (tmnxOspfVirtIfBadOptions)	long	The value of tmnxOspfVirtIfBadOptions indicates the total number of OSPF packets received with an option that does not match those configured for this virtual interface or transit-area since tmnxOspfAdminState was last set to 'enabled'.
badPacketTypes [Bad Packet Types] (tmnxOspfVirtIfBadPacketTypes)	long	The value of tmnxOspfVirtIfBadPacketTypes indicates the total number of OSPF packets received on this virtual interface with invalid OSPF packet types.
badVersions [Bad Versions] (tmnxOspfVirtIfBadVersions)	long	The value of tmnxOspfVirtIfBadVersions indicates the total number of OSPF packets received on this virtual interface with invalid OSPF version numbers.
discardPackets [Discard Packets] (tmnxOspfVirtIfDiscardPackets)	long	The value of tmnxOspfVirtIfDiscardPackets indicates the total number of OSPF packets discarded on this virtual interface.
retransmitOuts [Retransmit Outs] (tmnxOspfVirtIfRetransmitOuts)	long	The value of tmnxOspfVirtIfRetransmitOuts indicates the total number of OSPF packets retransmitted on this virtual interface.
<p>VirtualLinkTransmitStats MIB entry name: tmnxOspfVirtIfStatsEntry Entry description: Each row entry in the tmnxOspfVirtIfStatsTable represents additional columns for statistics for an OSPF virtual interface. Table description (for tmnxOspfVirtIfStatsTable): The tmnxOspfVirtIfStatsTable provides an extension of the tmnxOspfVirtIfTable for statistics for an OSPF virtual interface. Supports realtime plotting Supports scheduled collection Monitored class: ospf.VirtualLink</p>		

Table 377 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
databaseDescriptionPackets [Database Description Packets] (tmnxOspfVirtIfRxDBDs)	long	The value of tmnxOspfVirtIfRxDBDs indicates the total number of OSPF Database Description packets received on this virtual interface.
helloPackets [Hello Packets] (tmnxOspfVirtIfRxHellos)	long	The value of tmnxOspfVirtIfRxHellos indicates the total number of OSPF Hello packets received on this virtual interface.
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfVirtIfRxLSAcks)	long	The value of tmnxOspfVirtIfRxLSAcks indicates the total number of Link State Acknowledgements received on this virtual interface.
linkStateRequests [Link State Requests] (tmnxOspfVirtIfRxLSRs)	long	The value of tmnxOspfVirtIfRxLSRs indicates the total number of OSPF Link State Requests (LSRs) received on this virtual interface.
linkStateUpdates [Link State Updates] (tmnxOspfVirtIfRxLSUs)	long	The value of tmnxOspfVirtIfRxLSUs indicates the total number of OSPF Link State Updates (LSUs) received on this virtual interface.
totalPackets [Total Packets] (tmnxOspfVirtIfRxPackets)	long	The value of tmnxOspfVirtIfRxPackets indicates the total number of OSPF packets received on this virtual interface since it was created.
<p>VirtualNeighborGeneralStats</p> <p>MIB entry name: tmnxOspfVirtNbrStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfVirtNbrStatsTable represents additional columns for statistics for an OSPF virtual neighbor.</p> <p>Table description (for tmnxOspfVirtNbrStatsTable): The tmnxOspfVirtNbrStatsTable provides an extension of the tmnxOspfVirtNbrTable for statistics for an OSPF virtual neighbor.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.VirtualNeighbor</p>		

Table 377 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
events [Events] (tmnxOspfVirtNbrEvents)	long	The value of tmnxOspfVirtNbrEvents indicates the number of times this virtual link has changed its state, or an error has occurred.
retransmissionQueueLength [Retransmission Queue Length] (tmnxOspfVirtNbrLsRetransQLen)	long	The value of tmnxOspfVirtNbrLsRetransQLen indicates the current length of the retransmission queue.
<p>VirtualNeighborStatusStats MIB entry name: tmnxOspfVirtNbrStatsEntry Entry description: Each row entry in the tmnxOspfVirtNbrStatsTable represents additional columns for statistics for an OSPF virtual neighbor. Table description (for tmnxOspfVirtNbrStatsTable): The tmnxOspfVirtNbrStatsTable provides an extension of the tmnxOspfVirtNbrTable for statistics for an OSPF virtual neighbor. Supports realtime plotting Supports scheduled collection Monitored class: ospf.VirtualNeighbor</p>		
badMtus [Bad Mtus] (tmnxOspfVirtNbrBadMTUs)	long	The value of tmnxOspfVirtNbrBadMTUs indicates the total number of times when the MTU in a received database description packet was larger than the MTU of the receiving interface since tmnxOspfAdminState was last set to 'enabled'.
badPackets [Bad Packets] (tmnxOspfVirtNbrBadPackets)	long	The value of tmnxOspfVirtNbrBadPackets indicates the total number of times when an LS update was received with an illegal LS type or an option mismatch since tmnxOspfAdminState was last set to 'enabled'.
badSequenceNumbers [Bad Sequence Numbers] (tmnxOspfVirtNbrBadSeqNums)	long	The value of tmnxOspfVirtNbrBadSeqNums indicates the total number of times when a database description packet was received with a sequence number mismatch since tmnxOspfAdminState was last set to 'enabled'.

Table 377 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badVirtualNeighborStates [Bad Virtual Neighbor States] (tmnxOspfVirtNbrBadNbrStates)	long	The value of tmnxOspfVirtNbrBadNbrStates indicates the total number of OSPF packets received when the virtual neighbor state was not expecting to receive this packet type since tmnxOspfAdminState was last set to 'enabled'.
duplicates [Duplicates] (tmnxOspfVirtNbrDuplicates)	long	The value of tmnxOspfVirtNbrDuplicates indicates the total number of times when a duplicate database description packet was received during the Exchange state since tmnxOspfAdminState was last set to 'enabled'.
lsaInstallFailed [Lsa Install Failed] (tmnxOspfVirtNbrLsaInstallFail)	long	The value of tmnxOspfVirtNbrLsaInstallFail indicates the total number of times when an LSA could not be installed into the LSDB due to a resource allocation issue since tmnxOspfAdminState was last set to 'enabled'.
lsaNotInLSDB [Lsa Not In LSDB] (tmnxOspfVirtNbrLsaNotInLsdb)	long	The value of tmnxOspfVirtNbrLsaNotInLsdb indicates the total number of times when an LS request was received for an LSA not installed in the LSDB of this router since tmnxOspfAdminState was last set to 'enabled'.
numberOfRestarts [Number Of Restarts] (tmnxOspfVirtNbrNumRestarts)	long	The value of tmnxOspfVirtNbrNumRestarts indicates the number of times the virtual neighbor has attempted restart since tmnxOspfAdminState was last set to 'enabled'.
optionMismatches [Option Mismatches] (tmnxOspfVirtNbrOptionMismatch)	long	The value of tmnxOspfVirtNbrOptionMismatch indicates the total number of times when a LS update was received with an option mismatch since tmnxOspfAdminState was last set to 'enabled'.

Table 378 pae802_1x statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PaePortAuthenticatorDiagStats</p> <p>MIB entry name: dot1xAuthDiagEntry</p> <p>Entry description: The diagnostics information for an Authenticator PAE.</p> <p>Table description (for dot1xAuthDiagTable): A table that contains the diagnostics objects for the Authenticator PAE associated with each Port. dot1xAuthAuthEapLogoffWhileAuthenticated [Dot 1 x Auth Auth Eap Logoff While Authenticated] (dot1xAuthAuthEapLogoffWhileAuthenticated)	long	Counts the number of times that the state machine transitions from AUTHENTICATED to DISCONNECTED, as a result of an EAPOL-Logoff message being received from the Supplicant.
dot1xAuthAuthEapLogoffWhileAuthenticating [Dot 1 x Auth Auth Eap Logoff While Authenticating] (dot1xAuthAuthEapLogoffWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of an EAPOL-Logoff message being received from the Supplicant.
dot1xAuthAuthEapStartsWhileAuthenticated [Dot 1 x Auth Auth Eap Starts While Authenticated] (dot1xAuthAuthEapStartsWhileAuthenticated)	long	Counts the number of times that the state machine transitions from AUTHENTICATED to CONNECTING, as a result of an EAPOL-Start message being received from the Supplicant.
dot1xAuthAuthEapStartsWhileAuthenticating [Dot 1 x Auth Auth Eap Starts While Authenticating] (dot1xAuthAuthEapStartsWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of an EAPOL-Start message being received from the Supplicant.

Table 378 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthAuthFailWhileAuthenticating [Dot 1 x Auth Auth Fail While Authenticating] (dot1xAuthAuthFailWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to HELD, as a result of the Backend Authentication state machine indicating authentication failure (authFail = TRUE).
dot1xAuthAuthReauthsWhileAuthenticated [Dot 1 x Auth Auth Reauths While Authenticated] (dot1xAuthAuthReauthsWhileAuthenticated)	long	Counts the number of times that the state machine transitions from AUTHENTICATED to CONNECTING, as a result of a reauthentication request (reAuthenticate = TRUE).
dot1xAuthAuthReauthsWhileAuthenticating [Dot 1 x Auth Auth Reauths While Authenticating] (dot1xAuthAuthReauthsWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of a reauthentication request (reAuthenticate = TRUE).
dot1xAuthAuthSuccessWhileAuthenticating [Dot 1 x Auth Auth Success While Authenticating] (dot1xAuthAuthSuccessWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to AUTHENTICATED, as a result of the Backend Authentication state machine indicating successful authentication of the Supplicant (authSuccess = TRUE).
dot1xAuthAuthTimeoutsWhileAuthenticating [Dot 1 x Auth Auth Timeouts While Authenticating] (dot1xAuthAuthTimeoutsWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of the Backend Authentication state machine indicating authentication timeout (authTimeout = TRUE).
dot1xAuthBackendAccessChallenges [Dot 1 x Auth Backend Access Challenges] (dot1xAuthBackendAccessChallenges)	long	Counts the number of times that the state machine receives an initial Access-Challenge packet from the Authentication server (i.e., aReq becomes TRUE, causing exit from the RESPONSE state). Indicates that the Authentication Server has communication with the Authenticator.
dot1xAuthBackendAuthFails [Dot 1 x Auth Backend Auth Fails] (dot1xAuthBackendAuthFails)	long	Counts the number of times that the state machine receives an EAP-Failure message from the Authentication Server (i.e., aFail becomes TRUE, causing a transition from RESPONSE to FAIL). Indicates that the Supplicant has not authenticated to the Authentication Server.

Table 378 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthBackendAuthSuccesses [Dot 1 x Auth Backend Auth Successes] (dot1xAuthBackendAuthSuccesses)	long	Counts the number of times that the state machine receives an EAP-Success message from the Authentication Server (i.e., aSuccess becomes TRUE, causing a transition from RESPONSE to SUCCESS). Indicates that the Supplicant has successfully authenticated to the Authentication Server.
dot1xAuthBackendNonNakResponsesFromSupplicant [Dot 1 x Auth Backend Non Nak Responses From Supplicant] (dot1xAuthBackendNonNakResponsesFromSupplicant)	long	Counts the number of times that the state machine receives a response from the Supplicant to an initial EAP-Request, and the response is something other than EAP-NAK (i.e., rxResp becomes TRUE, causing the state machine to transition from REQUEST to RESPONSE, and the response is not an EAP-NAK). Indicates that the Supplicant can respond to the Authenticator's chosen EAP-method.
dot1xAuthBackendOtherRequestsToSupplicant [Dot 1 x Auth Backend Other Requests To Supplicant] (dot1xAuthBackendOtherRequestsToSupplicant)	long	Counts the number of times that the state machine sends an EAP-Request packet (other than an Identity, Notification, Failure or Success message) to the Supplicant (i.e., executes txReq on entry to the REQUEST state). Indicates that the Authenticator chose an EAP-method.
dot1xAuthBackendResponses [Dot 1 x Auth Backend Responses] (dot1xAuthBackendResponses)	long	Counts the number of times that the state machine sends an initial Access-Request packet to the Authentication server (i.e., executes sendRespToServer on entry to the RESPONSE state). Indicates that the Authenticator attempted communication with the Authentication Server.
dot1xAuthEapLogoffsWhileConnecting [Dot 1 x Auth Eap Logoffs While Connecting] (dot1xAuthEapLogoffsWhileConnecting)	long	Counts the number of times that the state machine transitions from CONNECTING to DISCONNECTED as a result of receiving an EAPOL-Logoff message.
dot1xAuthEntersAuthenticating [Dot 1 x Auth Enters Authenticating] (dot1xAuthEntersAuthenticating)	long	Counts the number of times that the state machine transitions from CONNECTING to AUTHENTICATING, as a result of an EAP-Response/Identity message being received from the Supplicant.

Table 378 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthEntersConnecting [Dot 1 x Auth Enters Connecting] (dot1xAuthEntersConnecting)	long	Counts the number of times that the state machine transitions to the CONNECTING state from any other state.
<p>PaePortAuthenticatorSessionStats MIB entry name: dot1xAuthSessionStatsEntry Entry description: The session statistics information for an Authenticator PAE. This shows the current values being collected for each session that is still in progress, or the final values for the last valid session on each port where there is no session currently active. Table description (for dot1xAuthSessionStatsTable): A table that contains the session statistics objects for the Authenticator PAE associated with each Port. An entry appears in this table for each port that may authenticate access to itself. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort 		
dot1xAuthSessionAuthenticMethod [Dot 1 x Auth Session Authentic Method] (dot1xAuthSessionAuthenticMethod)	int	The authentication method used to establish the session.
dot1xAuthSessionFramesRx [Dot 1 x Auth Session Frames Rx] (dot1xAuthSessionFramesRx)	long	The number of user data frames received on this Port during the session.
dot1xAuthSessionFramesTx [Dot 1 x Auth Session Frames Tx] (dot1xAuthSessionFramesTx)	long	The number of user data frames transmitted on this Port during the session.
dot1xAuthSessionOctetsRx [Dot 1 x Auth Session Octets Rx] (dot1xAuthSessionOctetsRx)	java. math. BigInteger	The number of octets received in user data frames on this Port during the session.

Table 378 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthSessionOctetsTx [Dot 1 x Auth Session Octets Tx] (dot1xAuthSessionOctetsTx)	java. math. BigInteger	The number of octets transmitted in user data frames on this Port during the session.
dot1xAuthSessionTerminateCause [Dot 1 x Auth Session Terminate Cause] (dot1xAuthSessionTerminateCause)	int	The reason for the session termination.
dot1xAuthSessionTime [Dot 1 x Auth Session Time] (dot1xAuthSessionTime)	long	The duration of the session in seconds.
<p>PaePortAuthenticatorStats</p> <p>MIB entry name: dot1xAuthStatsEntry</p> <p>Entry description: The statistics information for an Authenticator PAE.</p> <p>Table description (for dot1xAuthStatsTable): A table that contains the statistics objects for the Authenticator PAE associated with each Port. dot1xAuthEapLengthErrorFramesRx [Dot 1 x Auth Eap Length Error Frames Rx] (dot1xAuthEapLengthErrorFramesRx)	long	The number of EAPOL frames that have been received by this Authenticator in which the Packet Body Length field is invalid.
dot1xAuthEapolFramesRx [Dot 1 x Auth Eapol Frames Rx] (dot1xAuthEapolFramesRx)	long	The number of valid EAPOL frames of any type that have been received by this Authenticator.

Table 378 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthEapolFramesTx [Dot 1 x Auth Eapol Frames Tx] (dot1xAuthEapolFramesTx)	long	The number of EAPOL frames of any type that have been transmitted by this Authenticator.
dot1xAuthEapolLogoffFramesRx [Dot 1 x Auth Eapol Logoff Frames Rx] (dot1xAuthEapolLogoffFramesRx)	long	The number of EAPOL Logoff frames that have been received by this Authenticator.
dot1xAuthEapolReqFramesTx [Dot 1 x Auth Eapol Req Frames Tx] (dot1xAuthEapolReqFramesTx)	long	The number of EAP Request frames (other than Rq/Id frames) that have been transmitted by this Authenticator.
dot1xAuthEapolReqIdFramesTx [Dot 1 x Auth Eapol Req Id Frames Tx] (dot1xAuthEapolReqIdFramesTx)	long	The number of EAP Req/Id frames that have been transmitted by this Authenticator.
dot1xAuthEapolRespFramesRx [Dot 1 x Auth Eapol Resp Frames Rx] (dot1xAuthEapolRespFramesRx)	long	The number of valid EAP Response frames (other than Resp/Id frames) that have been received by this Authenticator.
dot1xAuthEapolRespIdFramesRx [Dot 1 x Auth Eapol Resp Id Frames Rx] (dot1xAuthEapolRespIdFramesRx)	long	The number of EAP Resp/Id frames that have been received by this Authenticator.
dot1xAuthEapolStartFramesRx [Dot 1 x Auth Eapol Start Frames Rx] (dot1xAuthEapolStartFramesRx)	long	The number of EAPOL Start frames that have been received by this Authenticator.
dot1xAuthInvalidEapolFramesRx [Dot 1 x Auth Invalid Eapol Frames Rx] (dot1xAuthInvalidEapolFramesRx)	long	The number of EAPOL frames that have been received by this Authenticator in which the frame type is not recognized.
dot1xAuthLastEapolFrameVersion [Dot 1 x Auth Last Eapol Frame Version] (dot1xAuthLastEapolFrameVersion)	long	The protocol version number carried in the most recently received EAPOL frame.

Table 379 pim statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceAdditionalStats MIB entry name: vRtrPimNgIfStatsEntry Entry description: An entry in the vRtrPimNgIfStatsTable. Table description (for vRtrPimNgIfStatsTable): The table listing the PIM statistics for a particular interface. Supports realtime plotting Supports scheduled collection Monitored class: pim.Interface</p>		
bootstrapExpPolicyDrops [Bootstrap Exp Policy Drops] (vRtrPimNgIfBtrExpPolicyDrops)	long	The value of vRtrPimNgIfBtrExpPolicyDrops indicates the number of Bootstrap Messages that were not transmitted on this interface because of Bootstrap export policy. PIM Bootstrap export policies are configured using bootstrap export policy objects in vRtrPimNgGenPolicyTable.
bootstrapImpPolicyDrops [Bootstrap Imp Policy Drops] (vRtrPimNgIfBtrImpPolicyDrops)	long	The value of vRtrPimNgIfBtrImpPolicyDrops indicates the number of Bootstrap Messages received on this interface but were dropped because of Bootstrap import policy. PIM Bootstrap import policies are configured using bootstrap import policy objects in vRtrPimNgGenPolicyTable.
joinPolicyDrops [Join Policy Drops] (vRtrPimNgIfJoinPolicyDrops)	long	The value of vRtrPimNgIfJoinPolicyDrops indicates the number of times the join policy match resulted in dropping PIM Join-Prune Message or one of the source group contained in the message. PIM Join policies are configured using join policy objects in vRtrPimNgGenPolicyTable.
registerPolicyDrops [Register Policy Drops] (vRtrPimNgIfRegisterPolicyDrops)	long	The value of vRtrPimNgIfRegisterPolicyDrops indicates the number of times the register policy match resulted in dropping PIM Register Message. PIM Register policies are configured using the register policy objects in vRtrPimNgGenPolicyTable.
rxBSMNoRouterAlertDrops [Rx BSMNo Router Alert Drops] (vRtrPimNgIfRxBSMNoRouterAlertDrops)	long	The value of vRtrPimNgIfRxBSMNoRouterAlertDrops indicates the number of BSM messages that were dropped because router alert option was not present.

Table 379 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxBSMWrongIfDrops [Rx BSMWrong If Drops] (vRtrPimNgIfRxBSMWrongIfDrops)	long	The value of vRtrPimNgIfRxBSMWrongIfDrops indicates the number of BSM messages that were dropped either because they were not sent by the correct RPF neighbor or because they arrived on the wrong interface.
rxInvalidJoinPrunes [Rx Invalid Join Prunes] (vRtrPimNgIfRxInvalidJoinPrunes)	long	The value of vRtrPimNgIfRxInvalidJoinPrunes indicates the number of invalid PIM Join Prune messages received on this interface. A Join Prune message is invalid when the RP address in the message is not the RP for the group specified in the message. If such a message arrives, a vRtrPimNgInvalidJoinPrune notification is sent.
rxInvalidRegisters [Rx Invalid Registers] (vRtrPimNgIfRxInvalidRegisters)	long	The value of vRtrPimNgIfRxInvalidRegisters indicates the number of invalid PIM Register messages received on this interface. A Register message is invalid when the RP address in the message is not the RP for the group specified in the message. If such a message arrives, a vRtrPimNgInvalidRegister notification is sent.
rxJoinPruneErrs [Rx Join Prune Errs] (vRtrPimNgIfRxJoinPruneErrs)	long	The value of vRtrPimNgIfRxJoinPruneErrs indicates the number of errors while processing Join-Prune messages received on this interface.
rxJoinPrunes [Rx Join Prunes] (vRtrPimNgIfRxJoinPrunes)	long	The value of vRtrPimNgIfRxJoinPrunes indicates the number of PIM Join Prune messages received on this interface.
txJoinPrunes [Tx Join Prunes] (vRtrPimNgIfTxJoinPrunes)	long	The value of vRtrPimNgIfTxJoinPrunes indicates the number of PIM Join Prune messages transmitted on this interface.

Table 379 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
InterfaceStats MIB entry name: vRtrPimNgIfStatsEntry Entry description: An entry in the vRtrPimNgIfStatsTable. Table description (for vRtrPimNgIfStatsTable): The table listing the PIM statistics for a particular interface. Supports realtime plotting Supports scheduled collection Monitored class: pim.Interface		
bsmErrs [Bsm Errs] (vRtrPimNgIfTxBsmErrs)	long	The value of vRtrPimNgIfTxBsmErrs indicates the number of errors while transmitting PIM Bootstrap Messages (BSM) on this interface.
bsmPdus [Bsm Pdus] (vRtrPimNgIfTxBsmPdus)	long	The value of vRtrPimNgIfTxBsmPdus indicates the number of PIM Bootstrap Messages (BSM) transmitted on this interface.
registerStopErrs [Register Stop Errs] (vRtrPimNgIfTxRegisterStopErrs)	long	The value of vRtrPimNgIfTxRegisterStopErrs indicates the number of PIM errors while trasmitting PIM Register Stop messages on this interface.
registerStops [Register Stops] (vRtrPimNgIfTxRegisterStops)	long	The value of vRtrPimNgIfTxRegisterStops indicates the number of PIM Register Stop messages transmitted on this interface.
rxAssertErrs [Rx Assert Errs] (vRtrPimNgIfRxAssertErrs)	long	The value of vRtrPimNgIfRxAssertErrs indicates the number of errors while processing Assert messages received on this interface.
rxAsserts [Rx Asserts] (vRtrPimNgIfRxAsserts)	long	The value of vRtrPimNgIfRxAsserts indicates the number of PIM Assert messages received on this interface.

Table 379 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxBadChecksumDiscards [Rx Bad Checksum Discards] (vRtrPimNgIfRxBadChecksumDiscard)	long	The value of vRtrPimNgIfRxBadChecksumDiscard indicates the number of PIM messages received on this interface which were discarded because of bad checksum.
rxBadEncodings [Rx Bad Encodings] (vRtrPimNgIfRxBadEncodings)	long	The value of vRtrPimNgIfRxBadEncodings indicates the number of PIM messages with bad encodings received on this interface.
rxBadVersionDiscards [Rx Bad Version Discards] (vRtrPimNgIfRxBadVersionDiscard)	long	The value of vRtrPimNgIfRxBadVersionDiscard indicates the number of PIM messages with bad versions received on this interface.
rxBsmPduDrops [Rx Bsm Pdu Drops] (vRtrPimNgIfRxBsmPduDrops)	long	The value of vRtrPimNgIfRxBsmPduDrops indicates the number of Bootstrap Messages received on this interface but were dropped.
rxBsmPdus [Rx Bsm Pdus] (vRtrPimNgIfRxBsmPdus)	long	The value of vRtrPimNgIfRxBsmPdus indicates the number of Bootstrap Messages received on this interface.
rxCRPAdvNoRouterAlert [Rx CRPAdv No Router Alert] (vRtrPimNgIfRxCRPAdvNoRtrAlert)	long	The value of vRtrPimNgIfRxCRPAdvNoRtrAlert indicates the number of Candidate-RP Advertizements(C-RP-Adv) received on this interface which had no router alert option set.
rxHellos [Rx Hellos] (vRtrPimNgIfRxHellos)	long	The value of vRtrPimNgIfRxHellos indicates the number of PIM hello messages received on this interface.
rxHellosDropped [Rx Hellos Dropped] (vRtrPimNgIfRxHellosDropped)	long	The value of vRtrPimNgIfRxHellosDropped indicates the number of PIM Hello messages which were received on this interface but were dropped.

Table 379 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxNbrUnknown [Rx Nbr Unknown] (vRtrPimNgIfRxNbrUnknown)	long	The value of vRtrPimNgIfRxNbrUnknown indicates the number of PIM messages (other than Hello messages) which were received on this interface and were rejected because the adjacency with the neighbor router was not already established.
rxNullRegisters [Rx Null Registers] (vRtrPimNgIfRxNullRegisters)	long	The value of vRtrPimNgIfRxNullRegisters indicates the number of PIM Null Register messages received on this interface.
rxPkts [Rx Pkts] (vRtrPimNgIfRxPkts)	long	The value of vRtrPimNgIfRxPkts indicates the number of multicast data packets received on this interface.
rxRegisterErrs [Rx Register Errs] (vRtrPimNgIfRxRegisterErrs)	long	The value of vRtrPimNgIfRxRegisterErrs indicates the number of errors while processing Register messages received on this interface.
rxRegisterStopErrs [Rx Register Stop Errs] (vRtrPimNgIfRxRegisterStopErrs)	long	The value of vRtrPimNgIfRxRegisterStopErrs indicates the number of errors while processing Register Stop messages received on this interface.
rxRegisterStops [Rx Register Stops] (vRtrPimNgIfRxRegisterStops)	long	The value of vRtrPimNgIfRxRegisterStops indicates the number of PIM Register Stop messages received on this interface.
rxRegisters [Rx Registers] (vRtrPimNgIfRxRegisters)	long	The value of vRtrPimNgIfRxRegisters indicates the number of PIM Register messages received on this interface.
rxUnknownPdus [Rx Unknown Pdus] (vRtrPimNgIfRxUnknownPdus)	long	The value of vRtrPimNgIfRxUnknownPdus indicates the number of packets received with an unsupported PIM type.

Table 379 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sgTypes [Sg Types] (vRtrPimNgIfSGTypes)	long	The value of vRtrPimNgIfSGTypes indicates the number of entries in vRtrPimNgIfGrpSrcTable for which vRtrPimNgIfGrpSrcType is 'sg'.
starGTypes [Star GTypes] (vRtrPimNgIfStarGTypes)	long	The value of vRtrPimNgIfStarGTypes indicates the number of entries in vRtrPimNgIfGrpSrcTable for which vRtrPimNgIfGrpSrcType is 'starG'.
starStarRPTypes [Star Star RPTypes] (vRtrPimNgIfStarStarRPTypes)	long	The value of vRtrPimNgIfStarStarRPTypes indicates the number of entries in vRtrPimNgIfGrpSrcTable for which vRtrPimNgIfGrpSrcType is 'starStarRP'.
txAsserts [Tx Asserts] (vRtrPimNgIfTxAsserts)	long	The value of vRtrPimNgIfTxAsserts indicates the number of PIM Assert messages transmitted on this interface.
txHellos [Tx Hellos] (vRtrPimNgIfTxHellos)	long	The value of vRtrPimNgIfTxHellos indicates the number of PIM Hello messages transmitted on this interface.
txPkts [Tx Pkts] (vRtrPimNgIfTxPkts)	long	The value of vRtrPimNgIfTxPkts indicates the number of multicast data packets transmitted on this interface.
<p>PimGenSiteStats</p> <p>MIB entry name: vRtrPimNgGenStatEntry</p> <p>Entry description: An entry in the vRtrPimNgGenStatTable.</p> <p>Table description (for vRtrPimNgGenStatTable): vRtrPimNgGenStatTable lists PIM statistics for a particular PIM instance.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • pim.Site • pim.SiteExtension 		

Table 379 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
forwardCrpaDrops [Forward Crpa Drops] (vRtrPimNgGenStatFwdCrpaDrops)	long	The value of vRtrPimNgGenStatFwdCrpaDrops indicates the number of times the Candidate-RP Advertizements(C-RP-Adv) could not be forwarded by the router.
forwardCrpaPdus [Forward Crpa Pdu] (vRtrPimNgGenStatForwardCrpaPdus)	long	The value of vRtrPimNgGenStatForwardCrpaPdus indicates the number of Candidate-RP Advertizements(C-RP-Adv) that were forwarded by the router. C-RP-Adv's are forwarded when the received advertizement has a router alert set and the destination address is not the router's local address.
rxCrpaPduDrops [Rx Crpa Pdu Drops] (vRtrPimNgGenStatRxCrpaPduDrops)	long	The value of vRtrPimNgGenStatRxCrpaPduDrops indicates the number of PIM Candidate-RP Advertizements (C-RP-Adv) received by this instance, but were dropped.
rxCrpaPdus [Rx Crpa Pdu] (vRtrPimNgGenStatRxCrpaPdus)	long	The value of vRtrPimNgGenStatRxCrpaPdus indicates the number of PIM Candidate-RP Advertizements (C-RP-Adv) received by this instance.
sgTypes [Sg Types] (vRtrPimNgGenStatSGTypes)	long	The value of vRtrPimNgGenStatSGTypes indicates the number of entries in vRtrPimNgGrpSrcTable for which vRtrPimNgGrpSrcType is 'sg'.
starGTypes [Star GTypes] (vRtrPimNgGenStatStarGTypes)	long	The value of vRtrPimNgGenStatStarGTypes indicates the number of entries in vRtrPimNgGrpSrcTable for which vRtrPimNgGrpSrcType is 'starG'.
starStarRPTypes [Star Star RPTypes] (vRtrPimNgGenStatStarStarRPTypes)	long	The value of vRtrPimNgGenStatStarStarRPTypes indicates the number of entries in vRtrPimNgGrpSrcTable for which vRtrPimNgGrpSrcType is 'starStarRP'.
txCrpaPduErrs [Tx Crpa Pdu Errs] (vRtrPimNgGenStatTxCrpaPduErrs)	long	The value of vRtrPimNgGenStatTxCrpaPduErrs indicates the number of errors while transmitting PIM Candidate-RP Advertizements (C-RP-Adv).

Table 379 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txCrpaPdus [Tx Crpa Pdus] (vRtrPimNgGenStatTxCrpaPdus)	long	The value of vRtrPimNgGenStatTxCrpaPdus indicates the number of PIM Candidate-RP Advertisements (C-RP-Adv) transmitted by this router instance.
txNullRegisters [Tx Null Registers] (vRtrPimNgGenStatTxNullRegisters)	long	The value of vRtrPimNgGenStatTxNullRegisters indicates the number of PIM Null Register messages transmitted by this instance.
txRegisterErrs [Tx Register Errs] (vRtrPimNgGenStatTxRegisterErrs)	long	The value of vRtrPimNgGenStatTxRegisterErrs indicates the number the times there was an error while transmitting PIM Register messages by this instance.
txRegisterTTLDrops [Tx Register TTLDrops] (vRtrPimNgGenStatTxRegTTLDrops)	long	The value of vRtrPimNgGenStatTxRegTTLDrops indicates the number of multicast data packets which could not be encapsulated in Register messages because the Time To Live (TTL) was zero.
txRegisters [Tx Registers] (vRtrPimNgGenStatTxRegisters)	long	The value of vRtrPimNgGenStatTxRegisters indicates the number of PIM Register messages transmitted by this instance.
<p>PimGroupStats MIB entry name: vRtrPimNgGrpSrcStatEntry Entry description: An entry in the vRtrPimNgGrpSrcStatTable. Table description (for vRtrPimNgGrpSrcStatTable): vRtrPimNgGrpSrcStatTable contains statistics for the entries in the vRtrPimNgGrpSrcTable. These statistics are collected by the forwarding engine. Supports realtime plotting Supports scheduled collection Monitored class: pim.Groups</p>		
discardedPkts [Discarded Pkts] (vRtrPimNgGrpSrcStatDscrdPkts)	java. math. BigInteger	The value of vRtrPimNgGrpSrcStatDscrdPkts indicates the number of multicast packets that matched this source group entry but were discarded. For (S,G) entries, if the traffic is getting forwarded on the SPT, the packets arriving from the RPT will be discarded.

Table 379 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
forwardedOctets [Forwarded Octets] (vRtrPimNgGrpSrcStatFrdedOct)	java. math. BigInteger	The value of vRtrPimNgGrpSrcStatFrdedOct indicates the number of multicast octets that were forwarded to the interfaces in the outgoing interface list. vRtrPimNgGrpSrcIfTable lists all the interfaces in the outgoing interface list.
forwardedPkts [Forwarded Pkts] (vRtrPimNgGrpSrcStatFrwdedPkts)	java. math. BigInteger	The value of vRtrPimNgGrpSrcStatFrwdedPkts indicates the number of multicast packets that were forwarded to the interfaces in the outgoing interface list. vRtrPimNgGrpSrcIfTable lists all the interfaces in the outgoing interface list. This packet count is calculated before ingress QoS policing or shaping is applied.
rpfMismatches [Rpf Mismatches] (vRtrPimNgGrpSrcStatRPFMsmtch)	java. math. BigInteger	The value of vRtrPimNgGrpSrcStatRPFMsmtch indicates the number of multicast packets that matched this source group entry but they did not arrive on the the interface indicated by vRtrPimNgGrpSrcRpflfIndex.

Table 380 ppp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PppStats</p> <p>MIB entry name: tmnxPppEntry</p> <p>Entry description: Each row entry represents a port from the tmnxPortTable that is configured for PPP. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxPppTable): The tmnxPppTable has an entry for each port in the system that is configured for PPP.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ppp.Interface</p>		
keepaliveEchoReplyPacketsReceived [Keepalive Echo Reply Packets Received] (tmnxPppKaInPktCount)	long	The number of echo-reply packets received.
keepaliveEchoRequestPacketsSent [Keepalive Echo Request Packets Sent] (tmnxPppKaOutPktCount)	long	The number of echo-request packets sent.
keepaliveThresholdExceedsCount [Keepalive Threshold Exceeds Count] (tmnxPppKaThresholdExceedsCount)	long	The number of times that tmnxPppKaDropCount was reached.
lqmInRate [Lqm In Rate] (tmnxPppLqmInRate)	long	The average of 'SaveInPackets'/'PeerOutPackets' in the last five consecutive LQRs received.
lqmLqrPacketsReceived [Lqm Lqr Packets Received] (tmnxPppLqmInPktCount)	long	The number of LQR packets received.
lqmLqrPacketsSent [Lqm Lqr Packets Sent] (tmnxPppLqmOutPktCount)	long	The number of LQR packets sent.

Table 380 ppp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lqmOutRate [Lqm Out Rate] (tmnxPppLqmOutRate)	long	The average of 'PeerInPackets'/'LastOutPackets' in the last five consecutive LQRs received.
lqmThresholdExceedsCount [Lqm Threshold Exceeds Count] (tmnxPppLqmThresholdExceedsCount)	long	The number of times that either tmnxPppLqmInRate or tmnxPppLqmOutRate falls below the specified quality percentage when PPP quality or LQM is enforced.

Table 381 ptp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>IEEEPTPPortStats</p> <p>MIB entry name: tmnxPtpPortStatsEntry</p> <p>Entry description: The tmnxPtpPortStatsEntry contains the directional packet statistics for a specific Ethernet port configured for direct transport of PTP over Ethernet. Rows are created and destroyed by the system, when corresponding entries in the tmnxPtpPortTable are created and deleted.</p> <p>Table description (for tmnxPtpPortStatsTable): The tmnxPtpPortStatsTable contains packet statistics for Ethernet ports configured for direct transport of PTP over Ethernet.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ptp.IEEEPTPPort</p>		
ptpPortStatAnnounce [Ptp Port Stat Announce] (tmnxPtpPortStatAnnounce)	long	The value of tmnxPtpPortStatAnnounce indicates the number of accumulated PTP Announce packets transmitted or received on the Ethernet port.
ptpPortStatDelayRequest [Ptp Port Stat Delay Request] (tmnxPtpPortStatDelayRequest)	long	The value of tmnxPtpPortStatDelayRequest indicates the number of accumulated PTP Delay Request packets transmitted or received on the Ethernet port.
ptpPortStatDelayResponse [Ptp Port Stat Delay Response] (tmnxPtpPortStatDelayResponse)	long	The value of tmnxPtpPortStatDelayResponse indicates the number of accumulated PTP Delay Response packets transmitted or received on the Ethernet port.
ptpPortStatDirection [Ptp Port Stat Direction] (tmnxPtpPortStatDirection)	int	The value of tmnxPtpPortStatDirection specifies which direction the packet statistics for the particular row are accumulated.
ptpPortStatDropAltMaster [Ptp Port Stat Drop Alt Master] (tmnxPtpPortStatDropAltMaster)	long	The value of tmnxPtpPortStatDropAltMaster indicates the accumulated packet statistics for PTP packets dropped because the PTP header has the 'alternateMasterFlag' set. This object is accumulated for the 'rx' direction only.

Table 381 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ptpPortStatDropBadDomain [Ptp Port Stat Drop Bad Domain] (tmnxPtpPortStatDropBadDomain)	long	The value of tmnxPtpPortStatDropBadDomain indicates the accumulated packet statistics for PTP packets dropped because the PTP domain indicated in the packet does not match the configured PTP domain. This object is accumulated for the 'rx' direction only.
ptpPortStatDropOther [Ptp Port Stat Drop Other] (tmnxPtpPortStatDropOther)	long	The value of tmnxPtpPortStatDropOther indicates the accumulated packet statistics for PTP packets dropped and not counted in tmnxPtpPortStatDropBadDomain, tmnxPtpPortStatDropAltMaster, and tmnxPtpPortStatDropOutOfSeq. This object is accumulated for the 'rx' direction only.
ptpPortStatDropOutOfSeq [Ptp Port Stat Drop Out Of Seq] (tmnxPtpPortStatDropOutOfSeq)	long	The value of tmnxPtpPortStatDropOutOfSeq indicates the accumulated packet statistics for PTP packets dropped because the packets were received out of sequence. This object is accumulated for the 'rx' direction only.
ptpPortStatFollowUp [Ptp Port Stat Follow Up] (tmnxPtpPortStatFollowUp)	long	The value of tmnxPtpPortStatFollowUp indicates the number of accumulated PTP Follow-Up packets transmitted or received on the Ethernet port. Because 'tmnxPtpClockStep-Type' is 'oneStep (1)', the system will never transmit PTP Follow-Up packets. However, it may receive PTP Follow-Up packets from a two-step master or boundary clock.
ptpPortStatOther [Ptp Port Stat Other] (tmnxPtpPortStatOther)	long	The value of tmnxPtpPortStatOther indicates the number of accumulated PTP packets of all other types. This object is accumulated in the 'rx' direction only.
ptpPortStatSignaling [Ptp Port Stat Signaling] (tmnxPtpPortStatSignaling)	long	The value of tmnxPtpPortStatSignaling indicates the number of accumulated PTP Signaling packets received on the Ethernet port. This object is accumulated in the 'rx' direction only.
ptpPortStatSync [Ptp Port Stat Sync] (tmnxPtpPortStatSync)	long	The value of tmnxPtpPortStatSync indicates the number of accumulated PTP Sync packets transmitted or received on the Ethernet port.

Table 381 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ptpPortStatTimeStampCpm [Ptp Port Stat Time Stamp Cpm] (tmnxPtpPortStatTimeStampCpm)	long	The value of tmnxPtpPortStatTimeStampCpm indicates the accumulated packet statistics for PTP event packets where the timestamp is taken at the operating system kernel on the CPM card.
ptpPortStatTimeStampPort [Ptp Port Stat Time Stamp Port] (tmnxPtpPortStatTimeStampPort)	long	The value of tmnxPtpPortStatTimeStampPort indicates the accumulated packet statistics for PTP event packets on the Ethernet port where the timestamp is taken at the physical layer on the Ethernet port.
<p>PTPClockPacketStats</p> <p>MIB entry name: tmnxPtpClockPacketStatsEntry</p> <p>Entry description: The tmnxPtpClockPacketStatsEntry contain the directional packet statistics for the Precision Time Protocol (PTP). Rows are created and destroyed by the system.</p> <p>Table description (for tmnxPtpClockPacketStatsTable): The tmnxPtpClockPacketStatsTable consists of the packet statistics associated with the Precision Time Protocol (PTP).</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ptp.IEEEPTPClock</p>		
ptpClkPktStatsAnnounce [Ptp Clk Pkt Stats Announce] (tmnxPtpClkPktStatsAnnounce)	long	The value of tmnxPtpClkPktStatsAnnounce indicates the accumulated packet statistics for PTP Announce messages.
ptpClkPktStatsDelayRequest [Ptp Clk Pkt Stats Delay Request] (tmnxPtpClkPktStatsDelayRequest)	long	The value of tmnxPtpClkPktStatsDelayRequest indicates the accumulated packet statistics for PTP Delay Request messages.
ptpClkPktStatsDelayResp [Ptp Clk Pkt Stats Delay Resp] (tmnxPtpClkPktStatsDelayResp)	long	The value of tmnxPtpClkPktStatsDelayResp indicates the accumulated packet statistics for PTP Delay Response messages.
ptpClkPktStatsDirection [Ptp Clk Pkt Stats Direction] (tmnxPtpClkPktStatsDirection)	int	The value of tmnxPtpClkPktStatsDirection specifies which direction the packet statistics for the particular row are accumulated.

Table 381 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ptpClkPktStatsDropAltMaster [Ptp Clk Pkt Stats Drop Alt Master] (tmnxPtpClkPktStatsDropAltMaster)	long	The value of tmnxPtpClkPktStatsDropAltMaster indicates the accumulated packet statistics for PTP packets dropped because the PTP header has the 'alternateMasterFlag' set. This object is accumulated for the 'rx' direction only.
ptpClkPktStatsDropBadDomain [Ptp Clk Pkt Stats Drop Bad Domain] (tmnxPtpClkPktStatsDropBadDomain)	long	The value of tmnxPtpClkPktStatsDropBadDomain indicates the accumulated packet statistics for PTP packets dropped because the PTP domain indicated in the packet does not match the configured PTP domain. This object is accumulated for the 'rx' direction only.
ptpClkPktStatsDropOther [Ptp Clk Pkt Stats Drop Other] (tmnxPtpClkPktStatsDropOther)	long	The value of tmnxPtpClkPktStatsDropOther indicates the accumulated packet statistics for PTP packets dropped and not counted in the 'tmnxPtpClkPktStatsDropBadDomain', 'tmnxPtpClkPktStatsDropAltMaster', 'tmnxPtpClkPktStatsDropOutOfSeq', and 'tmnxPtpClkPktStatsDropPeerShut' objects. This object is accumulated for the 'rx' direction only.
ptpClkPktStatsDropOutOfSeq [Ptp Clk Pkt Stats Drop Out Of Seq] (tmnxPtpClkPktStatsDropOutOfSeq)	long	The value of tmnxPtpClkPktStatsDropOutOfSeq indicates the accumulated packet statistics for PTP packets dropped because the packets were received out of sequence. This object is accumulated for the 'rx' direction only.
ptpClkPktStatsFollowUp [Ptp Clk Pkt Stats Follow Up] (tmnxPtpClkPktStatsFollowUp)	long	The value of tmnxPtpClkPktStatsFollowUp indicates the accumulated packet statistics for PTP Follow Up messages.
ptpClkPktStatsOther [Ptp Clk Pkt Stats Other] (tmnxPtpClkPktStatsOther)	long	The value of tmnxPtpClkPktStatsOther indicates the accumulated packet statistics for all other PTP messages. This object is accumulated in the 'rx' direction only.
ptpClkPktStatsSignaling [Ptp Clk Pkt Stats Signaling] (tmnxPtpClkPktStatsSignaling)	long	The value of tmnxPtpClkPktStatsSignaling indicates the accumulated packet statistics for PTP signaling messages.

Table 381 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ptpClkPktStatsSync [Ptp Clk Pkt Stats Sync] (tmnxPtpClkPktStatsSync)	long	The value of tmnxPtpClkPktStatsSync indicates the accumulated packet statistics for PTP Sync messages.
ptpClkPktStatsTimeStampCpm [Ptp Clk Pkt Stats Time Stamp Cpm] (tmnxPtpClkPktStatsTimeStampCpm)	long	The value of tmnxPtpClkPktStatsTimeStampCpm indicates the accumulated packet statistics for PTP event packets where the timestamp point is at the operating system kernel.
ptpClkPktStatsTimeStampPort [Ptp Clk Pkt Stats Time Stamp Port] (tmnxPtpClkPktStatsTimeStampPort)	long	The value of tmnxPtpClkPktStatsTimeStampPort indicates the accumulated packet statistics for PTP event packets where the timestamp point is at the physical layer.
PTPClockRecoveryEventStats MIB entry name: tmnxPtpClockRecoveryStatistics Supports realtime plotting Supports scheduled collection Monitored class: ptp.IEEEPTPClock		
tmnxPtpClockRecStatsDlyHiPktLss [Tmnx Ptp Clock Rec Stats Dly Hi Pkt Lss] (tmnxPtpClockRecStatsDlyHiPktLss)	long	The value of tmnxPtpClockRecStatsDlyHiPktLss indicates the number of times that the clock recovery process detected a large amount of packet loss in the delay request/response flow from the remote master clock. When this event occurs, the clock recovery process restarts.
tmnxPtpClockRecStatsDlyHighPDV [Tmnx Ptp Clock Rec Stats Dly High PDV] (tmnxPtpClockRecStatsDlyHighPDV)	long	The value of tmnxPtpClockRecStatsDlyHighPDV indicates the number of times that the clock recovery process has determined that a sample of delay request packets to the best master clock had too much packet delay variation to be useful in recovering the clock from the best master. When this event occurs, the entire sample of packets is not used in the clock recovery process.
tmnxPtpClockRecStatsDlyPktLoss [Tmnx Ptp Clock Rec Stats Dly Pkt Loss] (tmnxPtpClockRecStatsDlyPktLoss)	long	The value of tmnxPtpClockRecStatsDlyPktLoss indicates the number of times that the clock recovery process detected packet loss in the delay request/response packet flow from the best master clock.

Table 381 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tmnxPtpClockRecStatsDlyStep [Tmnx Ptp Clock Rec Stats Dly Step] (tmnxPtpClockRecStatsDlyStep)	long	The value of tmnxPtpClockRecStatsDlyStep indicates the number of times that the clock recovery process detected a large change in the amount of time taken for delay request packets to be sent to the best master clock. This normally occurs if the route taken by packets to the best master changes.
tmnxPtpClockRecStatsSyncHiPktLss [Tmnx Ptp Clock Rec Stats Sync Hi Pkt Lss] (tmnxPtpClockRecStatsSyncHiPktLss)	long	The value of tmnxPtpClockRecStatsSyncHiPktLss indicates the number of times that the clock recovery process detected a large amount of packet loss in the sync flow from the remote master clock. When this event occurs, the clock recovery process restarts.
tmnxPtpClockRecStatsSyncHighPDV [Tmnx Ptp Clock Rec Stats Sync High PDV] (tmnxPtpClockRecStatsSyncHighPDV)	long	The value of tmnxPtpClockRecStatsSyncHighPDV indicates the number of times that the clock recovery process has determined that a sample of sync packets from the best master clock had too much packet delay variation to be useful in recovering the clock from the best master. When this event occurs, the entire sample of packets is not used in the clock recovery process.
tmnxPtpClockRecStatsSyncPktLoss [Tmnx Ptp Clock Rec Stats Sync Pkt Loss] (tmnxPtpClockRecStatsSyncPktLoss)	long	The value of tmnxPtpClockRecStatsSyncPktLoss indicates the number of times that the clock recovery process detected packet loss in the sync packet flow from the best master clock.
tmnxPtpClockRecStatsSyncStep [Tmnx Ptp Clock Rec Stats Sync Step] (tmnxPtpClockRecStatsSyncStep)	long	The value of tmnxPtpClockRecStatsSyncStep indicates the number of times that the clock recovery process detected a large change in the amount of time taken for sync packets to be sent from the best master clock. This normally occurs if the route taken by packets from the best master changes.
PTPClockRecoveryStateStats MIB entry name: tmnxPtpClockRecoveryStatistics Supports realtime plotting Supports scheduled collection Monitored class: ptp.IEEEPTPClock		

Table 381 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tmnxPtpClockRecStatsAcquiring [Tmnx Ptp Clock Rec Stats Acquiring] (tmnxPtpClockRecStatsAcquiring)	java. math. BigInteger	The value of tmnxPtpClockRecStatsAcquiring indicate the number of seconds that the clock recovery system has been in the acquiring state.
tmnxPtpClockRecStatsHoldover [Tmnx Ptp Clock Rec Stats Holdover] (tmnxPtpClockRecStatsHoldover)	java. math. BigInteger	The value of tmnxPtpClockRecStatsHoldover indicate the number of seconds that the clock recovery system has been in the hold-over state.
tmnxPtpClockRecStatsInitial [Tmnx Ptp Clock Rec Stats Initial] (tmnxPtpClockRecStatsInitial)	java. math. BigInteger	The value of tmnxPtpClockRecStatsInitial indicates the number of seconds that the clock recovery system has been in the initial state.
tmnxPtpClockRecStatsLocked [Tmnx Ptp Clock Rec Stats Locked] (tmnxPtpClockRecStatsLocked)	java. math. BigInteger	The value of tmnxPtpClockRecStatsLocked indicate the number of seconds that the clock recovery system has been in the locked state.
tmnxPtpClockRecStatsPhaseTrack [Tmnx Ptp Clock Rec Stats Phase Track] (tmnxPtpClockRecStatsPhaseTrack)	java. math. BigInteger	The value of tmnxPtpClockRecStatsPhaseTrack indicate the number of seconds that the clock recovery system has been in the phase tracking state.
<p>PTPStats</p> <p>MIB entry name: aluPtpPeerPacketStatsEntry</p> <p>Entry description: Configuration information concerning IEEE 1588 PTP</p> <p>Table description (for aluPtpPeerPacketStatsTable): This table allows configuration to the IEEE 1588 PTP</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ptp.IEEEPTPPeer</p>		
aluPtpPeerAlternateMasterDisc [Alu Ptp Peer Alternate Master Disc] (aluPtpPeerAlternateMasterDisc)	java. math. BigInteger	aluPtpPeerAlternateMasterDisc indicates the number of packets discarded on ingress as a result of the processing as described in IEEE P1588 D2.2 section 9.1.

Table 381 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluPtpPeerAnnounceMsgRx [Alu Ptp Peer Announce Msg Rx] (aluPtpPeerAnnounceMsgRx)	java. math. BigInteger	Indicates the number of Announce packets received from the master.
aluPtpPeerAnnounceMsgTx [Alu Ptp Peer Announce Msg Tx] (aluPtpPeerAnnounceMsgTx)	java. math. BigInteger	aluPtpPeerAnnounceMsgTx indicates the number of Announce packets transmitted to the master.
aluPtpPeerBadDomainDisc [Alu Ptp Peer Bad Domain Disc] (aluPtpPeerBadDomainDisc)	java. math. BigInteger	aluPtpPeerBadDomainDisc indicates the number of packets discarded on ingress as a result of the processing as described in IEEE P1588 D2.2 section 9.5.1.
aluPtpPeerBadVersionDisc [Alu Ptp Peer Bad Version Disc] (aluPtpPeerBadVersionDisc)	java. math. BigInteger	aluPtpPeerBadVersionDisc indicates the number of packets discarded on ingress as a result of the IEEE P1588 D2.2 section 7.5.5 version number checking.
aluPtpPeerDelayReqMsgRx [Alu Ptp Peer Delay Req Msg Rx] (aluPtpPeerDelayReqMsgRx)	java. math. BigInteger	Indicates the number of Delay Request packets received from the master.
aluPtpPeerDelayReqMsgTx [Alu Ptp Peer Delay Req Msg Tx] (aluPtpPeerDelayReqMsgTx)	java. math. BigInteger	Indicates the number of Delay Request packets transmitted to the master.
aluPtpPeerDelayRespMsgRx [Alu Ptp Peer Delay Resp Msg Rx] (aluPtpPeerDelayRespMsgRx)	java. math. BigInteger	Indicates the number of Delay Response packets received from the master.
aluPtpPeerDelayRespMsgTx [Alu Ptp Peer Delay Resp Msg Tx] (aluPtpPeerDelayRespMsgTx)	java. math. BigInteger	Indicates the number of Delay Response packets transmitted to the master.

Table 381 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluPtpPeerDuplicateMsgDisc [Alu Ptp Peer Duplicate Msg Disc] (aluPtpPeerDuplicateMsgDisc)	java. math. BigInteger	aluPtpPeerDuplicateMsgDisc indicates the number of packets discarded on ingress as a result of processing described in IEEE P1588 D2.2 section 7.3.7.
aluPtpPeerOutOfOrderSyncPktRx [Alu Ptp Peer Out Of Order Sync Pkt Rx] (aluPtpPeerOutOfOrderSyncPktRx)	java. math. BigInteger	aluPtpPeerOutOfOrderSyncPktRx indicates the number of sync packets discarded on ingress as a sequence number processing
aluPtpPeerSignalingMsgRx [Alu Ptp Peer Signaling Msg Rx] (aluPtpPeerSignalingMsgRx)	java. math. BigInteger	Indicates the number of Signaling packets received from the master.
aluPtpPeerSignalingMsgTx [Alu Ptp Peer Signaling Msg Tx] (aluPtpPeerSignalingMsgTx)	java. math. BigInteger	Indicates the number of Signaling packets transmitted to the master.
aluPtpPeerStepRemovedGreaterThan255Disc [Alu Ptp Peer Step Removed Greater Than 255 Disc] (aluPtpPeerStepRemovedGreaterThan255Disc)	java. math. BigInteger	aluPtpPeerStepRemovedGreaterThan255Disc indicates the number of packets discarded on ingress as a result of processing as described in IEEE P1588 D2.2 section 9.3.2.5.
aluPtpPeerSyncMsgRx [Alu Ptp Peer Sync Msg Rx] (aluPtpPeerSyncMsgRx)	java. math. BigInteger	Indicates the number of Sync packets received from the master.
aluPtpPeerSyncMsgTx [Alu Ptp Peer Sync Msg Tx] (aluPtpPeerSyncMsgTx)	java. math. BigInteger	Indicates the number of Sync packets transmitted to the master.

Table 381 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluPtpPeerTotalUdpEventMsgRx [Alu Ptp Peer Total Udp Event Msg Rx] (aluPtpPeerTotalUdpEventMsgRx)	java. math. BigInteger	Indicates the number of packets received on UDP port 319.
aluPtpPeerTotalUdpEventMsgTx [Alu Ptp Peer Total Udp Event Msg Tx] (aluPtpPeerTotalUdpEventMsgTx)	java. math. BigInteger	Indicates the number of packets transmitted on UDP port 319.
aluPtpPeerTotalUdpGeneralMsgRx [Alu Ptp Peer Total Udp General Msg Rx] (aluPtpPeerTotalUdpGeneralMsgRx)	java. math. BigInteger	Indicates the number of packets received on UDP port 320.
aluPtpPeerTotalUdpGeneralMsgTx [Alu Ptp Peer Total Udp General Msg Tx] (aluPtpPeerTotalUdpGeneralMsgTx)	java. math. BigInteger	Indicates the number of packets transmitted on UDP port 320.
aluPtpPeerUcCancelAckAnnoRx [Alu Ptp Peer Uc Cancel Ack Anno Rx] (aluPtpPeerUcCancelAckAnnoRx)	java. math. BigInteger	Indicates the number of unicast announce cancel acknowledgement packets received.
aluPtpPeerUcCancelAckAnnoTx [Alu Ptp Peer Uc Cancel Ack Anno Tx] (aluPtpPeerUcCancelAckAnnoTx)	java. math. BigInteger	Indicates the number of unicast announce cancel acknowledgement packets transmitted.
aluPtpPeerUcCancelAckDelayRespRx [Alu Ptp Peer Uc Cancel Ack Delay Resp Rx] (aluPtpPeerUcCancelAckDelayRespRx)	java. math. BigInteger	Indicates the number of unicast Delay Response cancel acknowledgement packets received.

Table 381 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluPtpPeerUcCancelAckDelayRespTx [Alu Ptp Peer Uc Cancel Ack Delay Resp Tx] (aluPtpPeerUcCancelAckDelayRespTx)	java. math. BigInteger	Indicates the number of unicast Delay Response cancel acknowledgement packets transmitted.
aluPtpPeerUcCancelAckSyncRx [Alu Ptp Peer Uc Cancel Ack Sync Rx] (aluPtpPeerUcCancelAckSyncRx)	java. math. BigInteger	Indicates the number of unicast sync cancel acknowledgement packets received.
aluPtpPeerUcCancelAckSyncTx [Alu Ptp Peer Uc Cancel Ack Sync Tx] (aluPtpPeerUcCancelAckSyncTx)	java. math. BigInteger	Indicates the number of unicast sync cancel acknowledgement packets transmitted.
aluPtpPeerUcCancelAnnoRx [Alu Ptp Peer Uc Cancel Anno Rx] (aluPtpPeerUcCancelAnnoRx)	java. math. BigInteger	Indicates the number of unicast announce cancel request packets received.
aluPtpPeerUcCancelAnnoTx [Alu Ptp Peer Uc Cancel Anno Tx] (aluPtpPeerUcCancelAnnoTx)	java. math. BigInteger	Indicates the number of unicast announce cancel request packets transmitted.
aluPtpPeerUcCancelDelayRespRx [Alu Ptp Peer Uc Cancel Delay Resp Rx] (aluPtpPeerUcCancelDelayRespRx)	java. math. BigInteger	Indicates the number of unicast Delay Response cancel packets received.
aluPtpPeerUcCancelDelayRespTx [Alu Ptp Peer Uc Cancel Delay Resp Tx] (aluPtpPeerUcCancelDelayRespTx)	java. math. BigInteger	Indicates the number of unicast Delay Response cancel packets transmitted.

Table 381 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluPtpPeerUcCancelSyncRx [Alu Ptp Peer Uc Cancel Sync Rx] (aluPtpPeerUcCancelSyncRx)	java. math. BigInteger	Indicates the number of unicast sync cancel packets received.
aluPtpPeerUcCancelSyncTx [Alu Ptp Peer Uc Cancel Sync Tx] (aluPtpPeerUcCancelSyncTx)	java. math. BigInteger	Indicates the number of unicast sync cancel packets transmitted.
aluPtpPeerUcGrantAnnoRejected [Alu Ptp Peer Uc Grant Anno Rejected] (aluPtpPeerUcGrantAnnoRejected)	java. math. BigInteger	Indicates the number of times the a Grant indication, for an Announce unicast negotiation, was rejected.
aluPtpPeerUcGrantAnnoRx [Alu Ptp Peer Uc Grant Anno Rx] (aluPtpPeerUcGrantAnnoRx)	java. math. BigInteger	Indicates the number of unicast announce grant packets received.
aluPtpPeerUcGrantAnnoTx [Alu Ptp Peer Uc Grant Anno Tx] (aluPtpPeerUcGrantAnnoTx)	java. math. BigInteger	Indicates the number of unicast announce grant packets transmitted.
aluPtpPeerUcGrantDelayRespRejected [Alu Ptp Peer Uc Grant Delay Resp Rejected] (aluPtpPeerUcGrantDelayRespRejected)	java. math. BigInteger	Indicates the number of times the a Grant indication, for Delay Response unicast negotiations, was rejected.
aluPtpPeerUcGrantDelayRespRx [Alu Ptp Peer Uc Grant Delay Resp Rx] (aluPtpPeerUcGrantDelayRespRx)	java. math. BigInteger	Indicates the number of unicast Delay Response grant packets received.

Table 381 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluPtpPeerUcGrantDelayRespTx [Alu Ptp Peer Uc Grant Delay Resp Tx] (aluPtpPeerUcGrantDelayRespTx)	java. math. BigInteger	Indicates the number of unicast Delay Response grant packets transmitted.
aluPtpPeerUcGrantDenyAnnoTx [Alu Ptp Peer Uc Grant Deny Anno Tx] (aluPtpPeerUcGrantDenyAnnoTx)	java. math. BigInteger	Indicates the number of times a unicast request for Announce messages was received but not granted because the requested rate was not supported.
aluPtpPeerUcGrantDenyDelayRespTx [Alu Ptp Peer Uc Grant Deny Delay Resp Tx] (aluPtpPeerUcGrantDenyDelayRespTx)	java. math. BigInteger	Indicates the number of times a unicast request for Delay Response messages was received but not granted because the requested rate was not supported.
aluPtpPeerUcGrantDenySyncTx [Alu Ptp Peer Uc Grant Deny Sync Tx] (aluPtpPeerUcGrantDenySyncTx)	java. math. BigInteger	Indicates the number of times a unicast request for Sync messages was received but not granted because the requested rate was not supported.
aluPtpPeerUcGrantSyncRejected [Alu Ptp Peer Uc Grant Sync Rejected] (aluPtpPeerUcGrantSyncRejected)	java. math. BigInteger	Indicates the number of times the a Grant indication, for Sync unicast negotiations, was rejected.
aluPtpPeerUcGrantSyncRx [Alu Ptp Peer Uc Grant Sync Rx] (aluPtpPeerUcGrantSyncRx)	java. math. BigInteger	Indicates the number of unicast sync grant packets received.
aluPtpPeerUcGrantSyncTx [Alu Ptp Peer Uc Grant Sync Tx] (aluPtpPeerUcGrantSyncTx)	java. math. BigInteger	Indicates the number of unicast sync grant packets transmitted.

Table 381 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluPtpPeerUcNegRejectsAnno [Alu Ptp Peer Uc Neg Rejects Anno] (aluPtpPeerUcNegRejectsAnno)	java. math. BigInteger	Indicates the number of times the unicast negotiations for the announce message were rejected.
aluPtpPeerUcNegRejectsDelayResp [Alu Ptp Peer Uc Neg Rejects Delay Resp] (aluPtpPeerUcNegRejectsDelayResp)	java. math. BigInteger	Indicates the number of times the unicast negotiations for the Delay Response message were rejected.
aluPtpPeerUcNegRejectsSync [Alu Ptp Peer Uc Neg Rejects Sync] (aluPtpPeerUcNegRejectsSync)	java. math. BigInteger	Indicates the number of times the unicast negotiations for the sync message were rejected.
aluPtpPeerUcReqAnnoRx [Alu Ptp Peer Uc Req Anno Rx] (aluPtpPeerUcReqAnnoRx)	java. math. BigInteger	Indicates the number of unicast announce request packets received.
aluPtpPeerUcReqAnnoRxTimeout [Alu Ptp Peer Uc Req Anno Rx Timeout] (aluPtpPeerUcReqAnnoRxTimeout)	java. math. BigInteger	Indicates the number of times the grant for unicast negotiations for the Announce message expired.
aluPtpPeerUcReqAnnoTx [Alu Ptp Peer Uc Req Anno Tx] (aluPtpPeerUcReqAnnoTx)	java. math. BigInteger	Indicates the number of unicast announce request packets transmitted.
aluPtpPeerUcReqAnnoTxTimeout [Alu Ptp Peer Uc Req Anno Tx Timeout] (aluPtpPeerUcReqAnnoTxTimeout)	java. math. BigInteger	Indicates the number of times the unicast negotiations for the Announce message failed due to a timeout.
aluPtpPeerUcReqDelayRespRx [Alu Ptp Peer Uc Req Delay Resp Rx] (aluPtpPeerUcReqDelayRespRx)	java. math. BigInteger	Indicates the number of unicast Delay Response request packets received.

Table 381 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluPtpPeerUcReqDelayRespRxTimeout [Alu Ptp Peer Uc Req Delay Resp Rx Timeout] (aluPtpPeerUcReqDelayRespRxTimeout)	java. math. BigInteger	Indicates the number of times the grant for unicast negotiations for the Delay Response message expired.
aluPtpPeerUcReqDelayRespTx [Alu Ptp Peer Uc Req Delay Resp Tx] (aluPtpPeerUcReqDelayRespTx)	java. math. BigInteger	Indicates the number of unicast Delay Response request packets transmitted.
aluPtpPeerUcReqDelayRespTxTimeout [Alu Ptp Peer Uc Req Delay Resp Tx Timeout] (aluPtpPeerUcReqDelayRespTxTimeout)	java. math. BigInteger	Indicates the number of times the unicast negotiations for the Delay Response message failed due to a timeout.
aluPtpPeerUcReqSyncRx [Alu Ptp Peer Uc Req Sync Rx] (aluPtpPeerUcReqSyncRx)	java. math. BigInteger	Indicates the number of unicast sync request packets received.
aluPtpPeerUcReqSyncRxTimeout [Alu Ptp Peer Uc Req Sync Rx Timeout] (aluPtpPeerUcReqSyncRxTimeout)	java. math. BigInteger	Indicates the number of times the grant for unicast negotiations for the Sync message expired.
aluPtpPeerUcReqSyncTx [Alu Ptp Peer Uc Req Sync Tx] (aluPtpPeerUcReqSyncTx)	java. math. BigInteger	Indicates the number of unicast sync request packets transmitted.
aluPtpPeerUcReqSyncTxTimeout [Alu Ptp Peer Uc Req Sync Tx Timeout] (aluPtpPeerUcReqSyncTxTimeout)	java. math. BigInteger	Indicates the number of times the unicast negotiations for the Sync message failed due to a timeout.

Table 381 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PtpClockRecoveryAlgStats</p> <p>MIB entry name: aluPtpPeerClkRecAlgEntry</p> <p>Entry description: Defines an entry in aluPtpPeerClkRecAlgTable. Entries are created and deleted by the system depending on the PTP clock configuration.</p> <p>Table description (for aluPtpPeerClkRecAlgTable): Defines the Nokia 7705 IEEE 1588 PTP recovery statistics table for retrieving statistical information relating to the frequency and time recovery algorithm that is derived from PTP.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ptp.IEEEPTPPeer</p>		
aluPtpFreqRecAcquiringCount [Alu Ptp Freq Rec Acquiring Count] (aluPtpFreqRecAcquiringCount)	long	The number of seconds the frequency recovery algorithm was in Acquiring state.
aluPtpFreqRecExcessFreqErrCnt [Alu Ptp Freq Rec Excess Freq Err Cnt] (aluPtpFreqRecExcessFreqErrCnt)	long	The number of Excessive Frequency Error events that have been detected by the frequency recovery algorithm.
aluPtpFreqRecFreeRunCount [Alu Ptp Freq Rec Free Run Count] (aluPtpFreqRecFreeRunCount)	long	The number of seconds the frequency recovery algorithm was in Free Run state.
aluPtpFreqRecGapResetCnt [Alu Ptp Freq Rec Gap Reset Cnt] (aluPtpFreqRecGapResetCnt)	long	The number of Gap Rest events that have been detected by the frequency recovery algorithm.
aluPtpFreqRecHoldOverCount [Alu Ptp Freq Rec Hold Over Count] (aluPtpFreqRecHoldOverCount)	long	The number of seconds the frequency recovery algorithm was in Holdover state.
aluPtpFreqRecLockedCount [Alu Ptp Freq Rec Locked Count] (aluPtpFreqRecLockedCount)	long	The number of seconds the frequency recovery algorithm was in Locked state.

Table 381 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluPtpFreqRecLossResetCnt [Alu Ptp Freq Rec Loss Reset Cnt] (aluPtpFreqRecLossResetCnt)	long	The number of Packet Loss Reset events that have been detected by the frequency recovery algorithm.
aluPtpFreqRecPacketLossCnt [Alu Ptp Freq Rec Packet Loss Cnt] (aluPtpFreqRecPacketLossCnt)	long	The number of Packet Loss events that have been detected by the frequency recovery algorithm.
aluPtpFreqRecPdvStepCnt [Alu Ptp Freq Rec Pdv Step Cnt] (aluPtpFreqRecPdvStepCnt)	long	The number of PDV Step events that have been detected by the frequency recovery algorithm.
aluPtpFreqRecPhaseTrackCount [Alu Ptp Freq Rec Phase Track Count] (aluPtpFreqRecPhaseTrackCount)	long	The number of seconds the frequency recovery algorithm was in Phase Tracking state.
aluPtpFreqRecTripCnt [Alu Ptp Freq Rec Trip Cnt] (aluPtpFreqRecTripCnt)	long	The number of Trip events that have been detected by the frequency recovery algorithm.
aluPtpFreqRecVarTooHighCnt [Alu Ptp Freq Rec Var Too High Cnt] (aluPtpFreqRecVarTooHighCnt)	long	The number of Variance Too High events that have been detected by the frequency recovery algorithm.
<p>PtpClockRecoveryShortIntvlStats MIB entry name: aluPtpPeerRecClkStatsShortIntvlEntry Entry description: An entry in the IEEE PTP 1588 peer clock recovery interval table. Table description (for aluPtpPeerRecClkStatsShortIntvlTable): The PTP Port Recovered Clock Interval Table contains various statistics collected by 1588 PTP clock recovery instance over the previous 15 minutes. The past 15 minutes are broken into 15 1 minute intervals. Each row in this table represents one such interval (identified by AluPtpPeerRecClkStatsShortIntvlEntry). Supports realtime plotting Supports scheduled collection Monitored class: ptp.IEEEPTPPeer</p>		

Table 381 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluPtpPeerIntvlClockIndex [Alu Ptp Peer Intvl Clock Index] (aluPtpPeerIntvlClockIndex)	int	The index of the clock associated with this ptp master/peer.
aluPtpPeerIntvlIndex [Alu Ptp Peer Intvl Index] (aluPtpPeerIntvlIndex)	int	The index of the master/peer associated with this ptp port.
aluPtpPeerIntvlNumber [Alu Ptp Peer Intvl Number] (aluPtpPeerIntvlNumber)	int	A number between 1 and 15, where 1 is the most recently completed 1 minute interval and 15 is the 1 minutes interval completed 14 minutes prior to interval 1.
aluPtpPeerIntvlPhaseErrorMeanNs [Alu Ptp Peer Intvl Phase Error Mean Ns] (aluPtpPeerIntvlPhaseErrorMeanNs)	double	The mean of the phase error from the local oscillator clock in nano seconds during the interval.
aluPtpPeerIntvlPhaseErrorMeanPpb [Alu Ptp Peer Intvl Phase Error Mean Ppb] (aluPtpPeerIntvlPhaseErrorMeanPpb)	double	The mean phase error from the local oscillator clock in parts per billion during the interval.
aluPtpPeerIntvlPhaseErrorStdDevNs [Alu Ptp Peer Intvl Phase Error Std Dev Ns] (aluPtpPeerIntvlPhaseErrorStdDevNs)	long	The standard deviation of the phase error from the local oscillator clock in nano seconds during the interval.
aluPtpPeerIntvlPortIndex [Alu Ptp Peer Intvl Port Index] (aluPtpPeerIntvlPortIndex)	int	The index of the port associated with this ptp master/peer.
aluPtpPeerIntvlUpdateTime [Alu Ptp Peer Intvl Update Time] (aluPtpPeerIntvlUpdateTime)	long	The update time of the ACR interval statistics
aluPtpPeerIntvlValidData [Alu Ptp Peer Intvl Valid Data] (aluPtpPeerIntvlValidData)	boolean	This variable indicates if the data for this interval is valid.

Table 381 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PtpClockRecoveryStats</p> <p>MIB entry name: aluPtpPeerRecClkStatsEntry</p> <p>Entry description: Defines an entry in aluPtpPeerRecClkStatsTable. Entries are created and deleted by the system depending port configuration.</p> <p>Table description (for aluPtpPeerRecClkStatsTable): Defines the Nokia 7705 IEEE 1588 PTP clock recovery statistics table for retrieving statistical information relating to clock that is derived from the PTP.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ptp.IEEEPTPPeer</p>		
aluPtpPeerCurrent1MinFreqOffsetMeanPpb [Alu Ptp Peer Current 1 Min Freq Offset Mean Ppb] (aluPtpPeerCurrent1MinFreqOffsetMeanPpb)	double	The mean frequency offset from the local oscillator clock in parts per billion during the first interval.
aluPtpPeerCurrent1MinFreqOffsetStdDevPpb [Alu Ptp Peer Current 1 Min Freq Offset Std Dev Ppb] (aluPtpPeerCurrent1MinFreqOffsetStdDevPpb)	long	The standard deviation of the frequency offset from the local oscillator clock in nano seconds during the first interval.
aluPtpPeerCurrent1MinPhaseErrorMeanNs [Alu Ptp Peer Current 1 Min Phase Error Mean Ns] (aluPtpPeerCurrent1MinPhaseErrorMeanNs)	double	The mean of the phase error from the local oscillator clock in nano seconds during the first interval.
aluPtpPeerCurrent1MinPhaseErrorMeanPpb [Alu Ptp Peer Current 1 Min Phase Error Mean Ppb] (aluPtpPeerCurrent1MinPhaseErrorMeanPpb)	double	The mean phase error from the local oscillator clock in parts per billion during the first interval.
aluPtpPeerCurrent1MinPhaseErrorStdDevNs [Alu Ptp Peer Current 1 Min Phase Error Std Dev Ns] (aluPtpPeerCurrent1MinPhaseErrorStdDevNs)	long	The standard deviation of the phase error from the local oscillator clock in nano seconds during the first interval.

Table 381 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluPtpPeerCurrent1MinValidData [Alu Ptp Peer Current 1 Min Valid Data] (aluPtpPeerCurrent1MinValidData)	boolean	This variable indicates if the data for the first interval is valid.
aluPtpPeerCurrent24HourFreqOffsetMeanPpb [Alu Ptp Peer Current 24 Hour Freq Offset Mean Ppb] (aluPtpPeerCurrent24HourFreqOffsetMeanPpb)	double	aluPtpPeerCurrent24HourFreqOffsetMeanPpb indicates the mean frequency offset from the local oscillator clock in parts per billion for up to the last 24 hour.
aluPtpPeerCurrent24HourFreqOffsetStdDevPpb [Alu Ptp Peer Current 24 Hour Freq Offset Std Dev Ppb] (aluPtpPeerCurrent24HourFreqOffsetStdDevPpb)	long	aluPtpPeerCurrent24HourFreqOffsetStdDevPpb indicates the standard deviation of the frequency offset from the local oscillator clock in parts per billion for up to the last 24 hour.
aluPtpPeerMaxShortIntvlMinutes [Alu Ptp Peer Max Short Intvl Minutes] (aluPtpPeerMaxShortIntvlMinutes)	long	aluPtpPeerMaxShortIntvlMinutes the maximum number of aluPtpPeerIntvlNumber.
aluPtpPeerRecLastUpdateTime [Alu Ptp Peer Rec Last Update Time] (aluPtpPeerRecLastUpdateTime)	long	The last time the PTP peer clock recovery statistics were updated
aluPtpPeerTotalMinutesIn24Hour [Alu Ptp Peer Total Minutes In 24 Hour] (aluPtpPeerTotalMinutesIn24Hour)	long	The number of minutes in aluPtpPeerCurrent24HourFreqOffsetMeanPpb and aluPtpPeerCurrent24HourFreqOffsetStdDevPpb
aluPtpPeerTotalShortIntvlMinutes [Alu Ptp Peer Total Short Intvl Minutes] (aluPtpPeerTotalShortIntvlMinutes)	long	aluPtpPeerTotalShortIntvlMinutes is the number of aluPtpPeerIntvlNumber that have valid statistics

Table 382 radioequipment statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>RadioAnalogueMeasure</p> <p>MIB entry name: aluMwRadioPowerMeasuresEntry</p> <p>Entry description: An entry of the analogue measurements table. Each entry corresponds to a Radio Synchronous or Plesiochronous Physical Interface (RSPI or RPPI).</p> <p>Table description (for aluMwRadioPowerMeasuresTable): This table contains the radio analogue measurements.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.PhysicalPort • genericne.GenericNeInterface • mwa.PortTermination 		
localDiversityPowerdBm [Local Diversity Power dBm] (aluMwRadioLocalDiversityPower)	double	This object represents the local RSL power for SD (combiner) module input. It is an integer with associated measure unit expressed in decade of dBm.
localRxMainPowerdBm [Local Rx Main Power dBm] (aluMwRadioLocalRxMainPower)	double	This object represents the local received power level. In case of space diversity configuration with combiner function in base band it is used to represent the power at the input of the local main receiver. It is a negative integer with associated measure unit expressed in decade of dBm.
localTxPowerdBm [Local Tx Power dBm] (aluMwRadioLocalTxPower)	double	This object represents the local transmitted power level. It is an integer with associated measure unit expressed in decade of dBm.
remoteDiversityPowerdBm [Remote Diversity Power dBm] (aluMwRadioRemoteDiversityPower)	double	This object represents the remote RSL power for SD (combiner) module input. It is a negative integer with associated measure unit expressed in decade of dBm.

Table 382 radioequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
remoteRxMainPowerdBm [Remote Rx Main Powerd Bm] (aluMwRadioRemoteRxMainPower)	double	This object represents the remote received power level. In case of space diversity configuration with combiner function in base band it is used to represent the power at the input of the remote main receiver. It is a negative integer with associated measure unit expressed in decade of dBm.
remoteTxPowerdBm [Remote Tx Powerd Bm] (aluMwRadioRemoteTxPower)	double	This object represents the remote transmitted power level. It is an integer with associated measure unit expressed in decade of dBm.

Table 383 rip statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceReceiveStats</p> <p>MIB entry name: vRtrRipIfStatEntry</p> <p>Entry description: vRtrRipIfStatEntry is an entry (conceptual row) in the vRtrRipIfStatTable. Each entry represents statistical information for a RIP interface.</p> <p>Table description (for vRtrRipIfStatTable): vRtrRipIfStatTable is a read-only table which keeps statistical information about the interfaces monitoring RIP.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: rip.Interface</p>		
badPackets [Bad Packets] (vRtrRipIfStatAllRcvBadPackets)	long	vRtrRipIfStatAllRcvBadPackets is the number of RIP updates received on this interface that were discarded as invalid.
v1BadRoutes [V1 Bad Routes] (vRtrRipIfStatV1BadRoutes)	long	vRtrRipIfStatV1BadRoutes is the number of routes, in valid RIPv1 packets, which were ignored for any reason (e.g. unknown address family, or invalid metric).
v1Requests [V1 Requests] (vRtrRipIfStatV1RcvRequests)	long	vRtrRipIfStatV1RcvRequests is the number of RIPv1 request packets received by the RIP process.
v1RequestsIgnored [V1 Requests Ignored] (vRtrRipIfStatV1BadRequests)	long	vRtrRipIfStatV1BadRequests is the number of RIPv1 request packets received by the RIP process that were subsequently discarded for any reason.
v1Updates [V1 Updates] (vRtrRipIfStatV1RcvUpdates)	long	vRtrRipIfStatV1RcvUpdates is the number of RIPv1 response packets received by the RIP process.
v1UpdatesIgnored [V1 Updates Ignored] (vRtrRipIfStatV1BadUpdates)	long	vRtrRipIfStatV1BadUpdates is the number of RIPv1 response packets received by the RIP process which were subsequently discarded for any reason.

Table 383 rip statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v2AuthenticationErrors [V2 Authentication Errors] (vRtrRipIfStatAuthErrors)	long	vRtrRipIfStatAuthErrors is the number of RIPv2 packets received by the RIP process which were subsequently discarded because of an error authenticating the packet.
v2BadRoutes [V2 Bad Routes] (vRtrRipIfStatV2BadRoutes)	long	vRtrRipIfStatV2BadRoutes is the number of routes, in valid RIPv2 packets, which were ignored for any reason (e.g. unknown address family, or invalid metric).
v2Requests [V2 Requests] (vRtrRipIfStatV2RcvRequests)	long	vRtrRipIfStatV2RcvRequests is the number of RIPv2 request packets received by the RIP process.
v2RequestsIgnored [V2 Requests Ignored] (vRtrRipIfStatV2BadRequests)	long	vRtrRipIfStatV2BadRequests is the number of RIPv2 request packets received by the RIP process that were subsequently discarded for any reason.
v2Updates [V2 Updates] (vRtrRipIfStatV2RcvUpdates)	long	vRtrRipIfStatV2RcvUpdates is the number of RIPv2 response packets received by the RIP process.
v2UpdatesIgnored [V2 Updates Ignored] (vRtrRipIfStatV2BadUpdates)	long	vRtrRipIfStatV2BadUpdates is the number of RIPv2 response packets received by the RIP process which were subsequently discarded for any reason.
InterfaceTransmitStats MIB entry name: vRtrRipIfStatEntry Entry description: vRtrRipIfStatEntry is an entry (conceptual row) in the vRtrRipIfStatTable. Each entry represents statistical information for a RIP interface. Table description (for vRtrRipIfStatTable): vRtrRipIfStatTable is a read-only table which keeps statistical information about the interfaces monitoring RIP. Supports realtime plotting Supports scheduled collection Monitored class: rip.Interface		

Table 383 rip statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalUpdates [Total Updates] (vRtrRipIfStatAllSentUpdates)	long	vRtrRipIfStatAllSentUpdates is the number of all RIP updates actually sent on this interface. This explicitly does include full updates sent containing new information.
triggeredUpdates [Triggered Updates] (vRtrRipIfStatAllTriggeredUpdates)	long	vRtrRipIfStatAllTriggeredUpdates is the number of triggered RIP updates actually sent on this interface. This explicitly does include full updates sent containing new information.

Table 384 rsvp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AuthenticationKeyStats</p> <p>MIB entry name: vRtrRsvplfStatEntry</p> <p>Entry description: Each row entry represents an interface running the RSVP protocol within a virtual router. Entries in this table cannot be created and deleted via SNMP SET operations. An entry in this table is created by the agent when the RSVP protocol is configured on a virtual router interface. The entry is destroyed when RSVP is removed from the interface.</p> <p>Table description (for vRtrRsvplfStatTable): The vRtrRsvplfStatTable contains objects for reporting statistics associated with an interface running RSVP.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: rsvp.AuthenticationKey</p>		
errorPacketsReceived [Error Packets Received] (vRtrRsvplfStatRxAuthErrors)	java. math. BigInteger	The total number of RSVP packets with MD5 errors received on this RSVP interface.
errorPacketsTransmitted [Error Packets Transmitted] (vRtrRsvplfStatTxAuthErrors)	java. math. BigInteger	The total number of RSVP packets with MD5 errors sent by this RSVP interface.
<p>RsvpInterfaceReceiveStats</p> <p>MIB entry name: vRtrRsvplfStatEntry</p> <p>Entry description: Each row entry represents an interface running the RSVP protocol within a virtual router. Table 384 rsvp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
acks [Acks] (vRtrRsvplfStatRxAcks)	java. math. BigInteger	The total number of RSVP ACK messages received when refresh reduction is enabled on this RSVP interface.
bundles [Bundles] (vRtrRsvplfStatRxBundles)	java. math. BigInteger	The total number of RSVP bundled packets received on this RSVP interface. Bundled packets are sent when refresh reduction is enabled.
errorPackets [Error Packets] (vRtrRsvplfStatRxErrorPkts)	java. math. BigInteger	The total number of RSVP packets with errors received on this RSVP interface.
helloTimeout [Hello Timeout] (vRtrRsvplfStatHelloTimeout)	long	The total number of hello messages that timed out on this RSVP interface.
hellos [Hellos] (vRtrRsvplfStatRxHelloReqs)	java. math. BigInteger	The total number of RSVP HELLO REQ messages received on this RSVP interface.
packets [Packets] (vRtrRsvplfStatRxPkts)	java. math. BigInteger	The total number of error free RSVP packets received on this RSVP interface.
pathErrors [Path Errors] (vRtrRsvplfStatRxPathErrors)	java. math. BigInteger	The total number of RSVP PATH ERROR messages that have been transmitted on this RSVP interface.
pathTears [Path Tears] (vRtrRsvplfStatRxPathTears)	java. math. BigInteger	The total number of RSVP PATH TEAR messages that have been received on this RSVP interface.

Table 384 rsvp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
paths [Paths] (vRtrRsvplfStatRxPaths)	java. math. BigInteger	The total number of RSVP PATH messages that have been received on this RSVP interface.
refreshes [Refreshes] (vRtrRsvplfStatRxSRefreshes)	java. math. BigInteger	The total number of RSVP summary refresh, SREFRESH, messages received on this RSVP interface.
reserveConfirms [Reserve Confirms] (vRtrRsvplfStatRxResvConfirms)	java. math. BigInteger	The total number of RSVP RESV CONFIRM messages that have been received on this RSVP interface.
reserveErrors [Reserve Errors] (vRtrRsvplfStatRxResvErrors)	java. math. BigInteger	The total number of RSVP RESV ERROR messages that have been received on this RSVP interface.
reserveTears [Reserve Tears] (vRtrRsvplfStatRxResvTears)	java. math. BigInteger	The total number of RSVP RESV TEAR messages that have been received on this RSVP interface.
reserves [Reserves] (vRtrRsvplfStatRxResvs)	java. math. BigInteger	The total number of RSVP RESV messages that have been received on this RSVP interface.
totalPackets [Total Packets] (vRtrRsvplfStatRxTotalPkts)	java. math. BigInteger	The total number of RSVP packets, including errors, received on this RSVP interface.

Table 384 rsvp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>RsvpInterfaceStats</p> <p>MIB entry name: vRtrRsvplfEntry</p> <p>Entry description: Each row entry in the vRtrRsvplfTable represents additional columns for attributes specific to the Nokia 7x50 SR RSVP implementation.</p> <p>Table description (for vRtrRsvplfTable): The vRtrRsvplfTable provides an extension of the rsvplfTable in the RSVP-MIB.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: rsvp.Interface</p>		
activeReservations [Active Reservations] (vRtrRsvplfActiveReservationCount)	long	The total number of active RSVP sessions that have reserved bandwidth.
activeSessions [Active Sessions] (vRtrRsvplfActiveSessionCount)	long	The total number of active RSVP sessions on this interface. This count includes sessions that have requested bandwidth as well as sessions that have not requested any bandwidth.
bandwidth [Bandwidth] (vRtrRsvplfBandwidth)	long	The value of vRtrRsvplfBandwidth indicates the interface bandwidth in mega-bits per second (Mbps) for the RSVP protocol on this interface. This is typically the port Speed.
reservedBandwidth [Reserved Bandwidth] (vRtrRsvplfReservedBandwidth)	long	The value of vRtrRsvplfReservedBandwidth specifies the amount of bandwidth in mega-bits per second (Mbps) to reserved by the RSVP sessions on this interface. A value of zero (0) indicates that no bandwidth is reserved.
totalSessions [Total Sessions] (vRtrRsvplfTotalSessionCount)	long	The total number of RSVP sessions on this interface. This count includes sessions that are active as well as sessions that have been signalled but a response has not yet been received.

Table 384 rsvp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>RsvpInterfaceTransmitStats</p> <p>MIB entry name: vRtrRsvplfStatEntry</p> <p>Entry description: Each row entry represents an interface running the RSVP protocol within a virtual router. Entries in this table cannot be created and deleted via SNMP SET operations. An entry in this table is created by the agent when the RSVP protocol is configured on a virtual router interface. The entry is destroyed when RSVP is removed from the interface.</p> <p>Table description (for vRtrRsvplfStatTable): The vRtrRsvplfStatTable contains objects for reporting statistics associated with an interface running RSVP.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: rsvp.Interface</p>		
acks [Acks] (vRtrRsvplfStatRxAcks)	java. math. BigInteger	The total number of RSVP ACK messages received when refresh reduction is enabled on this RSVP interface.

errorPackets [Error Packets] (vRtrRsvplfStatRxErrorPkts)	java. math. BigInteger	The total number of RSVP packets with errors received on this RSVP interface.
hellos [Hellos] (vRtrRsvplfStatRxHelloReqs)	java. math. BigInteger	The total number of RSVP HELLO REQ messages received on this RSVP interface.
packets [Packets] (vRtrRsvplfStatRXPkts)	java. math. BigInteger	The total number of error free RSVP packets received on this RSVP interface.

Table 384 rsvp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pathErrors [Path Errors] (vRtrRsvplfStatRxPathErrors)	java. math. BigInteger	The total number of RSVP PATH ERROR messages that have been transmitted on this RSVP interface.
pathTears [Path Tears] (vRtrRsvplfStatRxPathTears)	java. math. BigInteger	The total number of RSVP PATH TEAR messages that have been received on this RSVP interface.
paths [Paths] (vRtrRsvplfStatRxPaths)	java. math. BigInteger	The total number of RSVP PATH messages that have been received on this RSVP interface.
refreshes [Refreshes] (vRtrRsvplfStatRxSRefreshes)	java. math. BigInteger	The total number of RSVP summary refresh, SREFRESH, messages received on this RSVP interface.
reserveConfirms [Reserve Confirms] (vRtrRsvplfStatRxResvConfirms)	java. math. BigInteger	The total number of RSVP RESV CONFIRM messages that have been received on this RSVP interface.
reserveErrors [Reserve Errors] (vRtrRsvplfStatRxResvErrors)	java. math. BigInteger	The total number of RSVP RESV ERROR messages that have been received on this RSVP interface.
reserveTears [Reserve Tears] (vRtrRsvplfStatRxResvTears)	java. math. BigInteger	The total number of RSVP RESV TEAR messages that have been received on this RSVP interface.
reserves [Reserves] (vRtrRsvplfStatRxResvs)	java. math. BigInteger	The total number of RSVP RESV messages that have been received on this RSVP interface.

Table 384 rsvp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalPackets [Total Packets] (vRtrRsvpIpfStatRxTotalPkts)	java. math. BigInteger	The total number of RSVP packets, including errors, received on this RSVP interface.
<p>RsvpSessionStats</p> <p>MIB entry name: vRtrRsvpSessionStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an RSVP session. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrRsvpSessionStatTable): The vRtrRsvpSessionStatTable contains statistics for an RSVP session.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: rsvp.Session</p>		
detourAge [Detour Age] (vRtrRsvpSessionDetourAge)	long	vRtrRsvpSessionDetourAge is the age (i.e., time from creation till now) of this detour LSP in 10-millisecond periods.
detourTimeUp [Detour Time Up] (vRtrRsvpSessionDetourTimeUp)	long	vRtrRsvpSessionDetourTimeUp is the total time in 10-millisecond units that the detour LSP has been operational.
pathsReceived [Paths Received] (vRtrRsvpSessionRxPaths)	java. math. BigInteger	The total number of RSVP PATH messages received for this RSVP session.
pathsTransmitted [Paths Transmitted] (vRtrRsvpSessionTxPaths)	java. math. BigInteger	The total number of RSVP PATH messages transmitted for this RSVP session.

Table 384 rsvp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
refreshPathsReceived [Refresh Paths Received] (vRtrRsvpSessionRxSrefreshPaths)	java. math. BigInteger	The value of vRtrRsvpSessionRxSrefreshPaths indicates the number of times PATH was refreshed using message ID from full PATH refresh or Srefresh message for this RSVP session.
refreshPathsTransmitted [Refresh Paths Transmitted] (vRtrRsvpSessionTxSrefreshPaths)	java. math. BigInteger	The value of vRtrRsvpSessionTxSrefreshPaths indicates the number of times PATH refresh for the session was sent as a part of a Srefresh message.
refreshReservesReceived [Refresh Reserves Received] (vRtrRsvpSessionRxSrefreshResvs)	java. math. BigInteger	The value of vRtrRsvpSessionRxSrefreshResvs indicates the number of times RESV was refreshed using message ID from full RESV refresh or Srefresh message for this RSVP session.
refreshReservesTransmitted [Refresh Reserves Transmitted] (vRtrRsvpSessionTxSrefreshResvs)	java. math. BigInteger	The value of vRtrRsvpSessionTxSrefreshResvs indicates the number of times RESV refresh for the session was sent as a part of a Srefresh message.
reservesReceived [Reserves Received] (vRtrRsvpSessionRxResvs)	java. math. BigInteger	The total number of RSVP RESV messages received for this RSVP session.
reservesTransmitted [Reserves Transmitted] (vRtrRsvpSessionTxResvs)	java. math. BigInteger	The total number of RSVP RESV messages transmitted for this RSVP session.

Table 385 rtr statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CpeCheckStats</p> <p>MIB entry name: vRtrInetStatRteCpeChkStatsEntry</p> <p>Entry description: Each row entry represents a collection of Customer-Provided Equipment (CPE) availability statistics for a virtual router static route in the system with non-default values set for the vRtrInetStaticRouteCpeAddrType and vRtrInetStaticRouteCpeAddr objects. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrInetStatRteCpeChkStatsTable): The vRtrInetStatRteCpeChkStatsTable has an entry for each entry in the vRtrInetStaticRouteTable that has a non-default values set for the vRtrInetStaticRouteCpeAddrType and vRtrInetStaticRouteCpeAddr objects.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: rtr.StaticRoute</p>		
downTransitions [Down Transitions] (vRtrInetStatRteCpeChkDownTrans)	long	The value of vRtrInetStatRteCpeChkDownTrans indicates the number of times the CPE has transitioned to the unavailable state.
echoReplyPacketsReceived [Echo Reply Packets Received] (vRtrInetStatRteCpeChkInPktCnt)	long	The value of vRtrInetStatRteCpeChkInPktCnt indicates the number of echo-reply packets received.
echoRequestPacketsSent [Echo Request Packets Sent] (vRtrInetStatRteCpeChkOutPktCnt)	long	The value of vRtrInetStatRteCpeChkOutPktCnt indicates the number of echo-request packets sent.
hostUpDownTime [Host Up Down Time] (vRtrInetStatRteCpeChkUpTime)	long	The value of vRtrInetStatRteCpeChkUpTime indicates how long (in hundredths of a second) that the CPE has been available.
ttl [Ttl] (vRtrInetStatRteCpeChkTTL)	long	The value of vRtrInetStatRteCpeChkTTL indicates the time, in seconds, before the CPE will be declared down. Upon receipt of an echo reply, it has the value of vRtrInetStaticRouteCpeInterval * vRtrInetStaticRouteCpeDropCnt and is decremented by 1 every second.

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
upTransitions [Up Transitions] (vRtrInetStatRteCpeChkUpTrans)	long	The value of vRtrInetStatRteCpeChkUpTrans indicates the number of times the CPE has transitioned to the available state.
<p>DhcpRelayStats</p> <p>MIB entry name: vRtrIfDHCPRelayStatsEntry</p> <p>Entry description: Each row entry represents information related to DHCP Relay statistics for a virtual router interface in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrIfDHCPRelayStatsTable): The vRtrIfDHCPRelayStatsTable contains the statistics for the DHCP Relay agent.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • rtr.DhcpRelayConfiguration • rtr.GrplfDhcpRelayCfg • rtr.SublIfDhcpRelayCfg 		
clientPacketsDiscarded [Client Packets Discarded] (vRtrIfDHCPRelayClientPktsDiscarded)	long	vRtrIfDHCPRelayClientPktsDiscarded indicates the total number of client packets discarded by the DHCP relay agent.
clientPacketsRelayed [Client Packets Relayed] (vRtrIfDHCPRelayClientPktsRelayed)	long	vRtrIfDHCPRelayClientPktsRelayed indicates the total number of client packets relayed by the DHCP relay agent.
receivedMalformedPackets [Received Malformed Packets] (vRtrIfDHCPRelayRxMalformedPkts)	long	vRtrIfDHCPRelayRxMalformedPkts indicates the total number of malformed packets received by the DHCP relay agent.
receivedPackets [Received Packets] (vRtrIfDHCPRelayRxPkts)	long	vRtrIfDHCPRelayRxPkts indicates the total number of packets received by the DHCP relay agent.

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedUntrustedPackets [Received Untrusted Packets] (vRtrIfDHCPRelayRxUntrustedPkts)	long	vRtrIfDHCPRelayRxUntrustedPkts indicates the total number of untrusted packets received by the DHCP relay agent.
serverPacketsDiscarded [Server Packets Discarded] (vRtrIfDHCPRelayServerPktsDiscarded)	long	vRtrIfDHCPRelayServerPktsDiscarded indicates the total number of server packets discarded by the DHCP relay agent.
serverPacketsRelayed [Server Packets Relayed] (vRtrIfDHCPRelayServerPktsRelayed)	long	vRtrIfDHCPRelayServerPktsRelayed indicates the total number of server packets relayed by the DHCP relay agent.
transmittedPackets [Transmitted Packets] (vRtrIfDHCPRelayTxPkts)	long	vRtrIfDHCPRelayTxPkts indicates the total number of packets transmitted by the DHCP relay agent.
DhcpRelayV6Stats MIB entry name: svclfDHCP6MsgStatEntry Entry description: Each row entry represents a collection of counters for each DHCP6 message type for an interface in a service. Entries cannot be created and deleted via SNMP SET operations. Table description (for svclfDHCP6MsgStatTable): The vRtrDHCP6MsgStatTable has an entry for each interface defined in a service for which DHCP6 can be enabled. Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • rtr.DhcpRelayV6Configuration • rtr.DhcpRelayV6ProxyServer 		
droppedPackets [Dropped Packets] (svclfDHCP6MsgStatsDropped)	long	The value of svclfDHCP6MsgStatsDropped indicates the number of DHCP6 packets were dropped on this service interface.

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedPackets [Received Packets] (svclfdHCP6MsgStatsRcvd)	long	The value of svclfdHCP6MsgStatsRcvd indicates the number of DHCP6 packets were received on this service interface.
transmittedPackets [Transmitted Packets] (svclfdHCP6MsgStatsSent)	long	The value of svclfdHCP6MsgStatsSent indicates the number of DHCP6 packets were sent on this service interface.
InterfaceSecurityStats MIB entry name: aluVRtrIfStatsEntry Entry description: Information about the extensions of vRtrIfStatsTable which represents the statistics per virtual router interface. Table description (for aluVRtrIfStatsTable): Information about the Nokia 7705 SAR extensions to the vRtrIfStatsTable. Supports realtime plotting Supports scheduled collection Monitored class: rtr.NetworkInterface		
aluSARVRtrIfSecBadIcmpTypeDroBytes [Alu SARVRtr If Sec Bad Icmp Type Dro Bytes] (aluVRtrIfSecBadIcmpTypeDroBytes)	java. math. BigInteger	The value of aluVRtrIfSecBadIcmpTypeDroBytes indicates the number of discarded bytes due to unsupported ICMP type on this interface.
aluSARVRtrIfSecBadIcmpTypeDroPkts [Alu SARVRtr If Sec Bad Icmp Type Dro Pkts] (aluVRtrIfSecBadIcmpTypeDroPkts)	java. math. BigInteger	The value of aluVRtrIfSecBadIcmpTypeDroPkts indicates the number of discarded packets due to unsupported ICMP type on this interface.
aluSARVRtrIfSecBadProtoDroBytes [Alu SARVRtr If Sec Bad Proto Dro Bytes] (aluVRtrIfSecBadProtoDroBytes)	java. math. BigInteger	The value of aluVRtrIfSecBadProtoDroBytes indicates the number of discarded bytes due to unsupported protocol on this interface.

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluSARVRtrIfSecBadProtoDroPkts [Alu SARVRtr If Sec Bad Proto Dro Pkts] (aluVRtrIfSecBadProtoDroPkts)	java. math. BigInteger	The value of aluVRtrIfSecBadProtoDroPkts indicates the number of discarded packets due to unsupported protocol on this interface.
aluSARVRtrIfSecBadServiceDroBytes [Alu SARVRtr If Sec Bad Service Dro Bytes] (aluVRtrIfSecBadServiceDroBytes)	java. math. BigInteger	The value of aluVRtrIfSecBadServiceDroBytes indicates the number of discarded bytes due to unsupported service on this interface.
aluSARVRtrIfSecBadServiceDroPkts [Alu SARVRtr If Sec Bad Service Dro Pkts] (aluVRtrIfSecBadServiceDroPkts)	java. math. BigInteger	The value of aluVRtrIfSecBadServiceDroPkts indicates the number of discarded packets due to unsupported service on this interface.
aluSARVRtrIfSecFragmentsDroBytes [Alu SARVRtr If Sec Fragments Dro Bytes] (aluVRtrIfSecFragmentsDroBytes)	java. math. BigInteger	The value of aluVRtrIfSecNoSessionDroBytes indicates the number of discarded bytes due to fragmentation on this interface.
aluSARVRtrIfSecFragmentsDroPkts [Alu SARVRtr If Sec Fragments Dro Pkts] (aluVRtrIfSecFragmentsDroPkts)	java. math. BigInteger	The value of aluVRtrIfSecFragmentsDroPkts indicates the number of discarded fragmented packets on this interface.
aluSARVRtrIfSecNoSessionDroBytes [Alu SARVRtr If Sec No Session Dro Bytes] (aluVRtrIfSecNoSessionDroBytes)	java. math. BigInteger	The value of aluVRtrIfSecNoSessionDroBytes indicates the number of discarded bytes due to no existing session on this interface.
aluSARVRtrIfSecNoSessionDroPkts [Alu SARVRtr If Sec No Session Dro Pkts] (aluVRtrIfSecNoSessionDroPkts)	java. math. BigInteger	The value of aluVRtrIfSecNoSessionDroPkts indicates the number of discarded packets due to no existing session on this interface.
aluSARVRtrIfSecRouteLoopDroBytes [Alu SARVRtr If Sec Route Loop Dro Bytes] (aluVRtrIfSecRouteLoopDroBytes)	java. math. BigInteger	The value of aluVRtrIfSecRouteLoopDroBytes indicates the number of discarded bytes due to routing loop on this interface.

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluSARVRtrIfSecRouteLoopDroPkts [Alu SARVRtr If Sec Route Loop Dro Pkts] (aluVRtrIfSecRouteLoopDroPkts)	java. math. BigInteger	The value of aluVRtrIfSecRouteLoopDroPkts indicates the number of discarded packets due to detection of a routing loop on this interface.
aluSARVRtrIfSecRxV4DiscardBytes [Alu SARVRtr If Sec Rx V4 Discard Bytes] (aluVRtrIfRxV4DiscardBytes)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardBytes indicates the number of total IPv4 received bytes discarded by this interface.
aluSARVRtrIfSecRxV4DiscardPkts [Alu SARVRtr If Sec Rx V4 Discard Pkts] (aluVRtrIfRxV4DiscardPkts)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardPkts indicates the number of total IPv4 received packets discarded by this interface.
aluVRtrIfSecOtherDroBytes [Alu VRtr If Sec Other Dro Bytes] (aluVRtrIfSecOtherDroBytes)	java. math. BigInteger	The value of aluVRtrIfSecOtherDroBytes indicates the number of discarded bytes due to other reasons on this interface.
aluVRtrIfSecOtherDroPkts [Alu VRtr If Sec Other Dro Pkts] (aluVRtrIfSecOtherDroPkts)	java. math. BigInteger	The value of aluVRtrIfSecOtherDroPkts indicates the number of discarded packets due to other reasons on this interface.
<p>NetworkInterfaceEgressStats</p> <p>MIB entry name: aluVrtrIfNetEgrStatsEntry</p> <p>Entry description: Defines an entry in aluVrtrIfNetEgrStatsTable. Entries only exist when a valid aluVrtrIfNetworkEgrQueuePol is assigned to their interface.</p> <p>Table description (for aluVrtrIfNetEgrStatsTable): Defines the Nokia 7x50 SR series network router interface egress statistics table for providing, via SNMP, the capability of retrieving the traffic statistics for the physical queues being used for the router interface to forward the network egress traffic.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: rtr.NetworkInterface</p>		

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egressDropInProfOcts [Egress Drop In Prof Octs] (aluVrtrIfNetEgrDroInProfOcts)	java. math. BigInteger	aluVrtrIfNetEgrDroInProfOcts indicates the number of conforming network egress octets dropped on this interface using this queue.
egressDropInProfPkts [Egress Drop In Prof Pkts] (aluVrtrIfNetEgrDroInProfPkts)	java. math. BigInteger	aluVrtrIfNetEgrDroInProfPkts indicates the number of conforming network egress packets dropped on this interface using this queue.
egressDropOutProfOcts [Egress Drop Out Prof Octs] (aluVrtrIfNetEgrDroOutProfOcts)	java. math. BigInteger	aluVrtrIfNetEgrDroOutProfOcts indicates the number of exceeding network egress octets dropped on this interface using this queue.
egressDropOutProfPkts [Egress Drop Out Prof Pkts] (aluVrtrIfNetEgrDroOutProfPkts)	java. math. BigInteger	aluVrtrIfNetEgrDroOutProfPkts indicates the number of exceeding network egress packets dropped on this interface using this queue.
egressFwdInProfOcts [Egress Fwd In Prof Octs] (aluVrtrIfNetEgrFwdInProfOcts)	java. math. BigInteger	aluVrtrIfNetEgrFwdInProfOcts indicates the number of conforming network egress octets forwarded on this interface using this queue.
egressFwdInProfPkts [Egress Fwd In Prof Pkts] (aluVrtrIfNetEgrFwdInProfPkts)	java. math. BigInteger	aluVrtrIfNetEgrFwdInProfPkts indicates the number of conforming network egress packets forwarded on this interface using this queue.
egressFwdOutProfOcts [Egress Fwd Out Prof Octs] (aluVrtrIfNetEgrFwdOutProfOcts)	java. math. BigInteger	aluVrtrIfNetEgrFwdOutProfOcts indicates the number of exceeding network egress octets forwarded on this interface using this queue.
egressFwdOutProfPkts [Egress Fwd Out Prof Pkts] (aluVrtrIfNetEgrFwdOutProfPkts)	java. math. BigInteger	aluVrtrIfNetEgrFwdOutProfPkts indicates the number of exceeding network egress packets forwarded on this interface using this queue.

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egressQueueIndex [Egress Queue Index] (aluVrtrIfNetEgrQueueIndex)	long	aluVrtrIfNetEgrQueueIndex serves as the tertiary index. When used in conjunction with vRtrID and vRtrIfIndex, it uniquely identifies a network egress queue for the specified interface in the managed system.
<p>NgeKeygroupStats</p> <p>MIB entry name: aluVRtrIfStatsEntry</p> <p>Entry description: Information about the extensions of vRtrIfStatsTable which represents the statistics per virtual router interface.</p> <p>Table description (for aluVRtrIfStatsTable): Information about the Nokia 7705 SAR extensions to the vRtrIfStatsTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • rtr.NetworkInterface • service.L3AccessInterface • vprn.NetworkInterface 		
rxBytes [Rx Bytes] (aluVRtrIfKeygroupRxBytes)	java. math. BigInteger	The value of aluVRtrIfKeygroupRxBytes indicates the number of bytes successfully decrypted by the interface.
rxDropInvalidSpiBytes [Rx Drop Invalid Spi Bytes] (aluVRtrIfKeygroupRxDropInvalidSpiBytes)	java. math. BigInteger	The value of aluVRtrIfKeygroupRxDropInvalidSpiBytes indicates the number of bytes dropped before and during inbound (decryption) processing by the interface. This implies that 1) the received SPI does not exist within the system 2) the received SPI is not part of the associated inbound keygroup 3) un-encrypted packet has been received on SDP with an associated inbound keygroup

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxDropInvalidSpiPackets [Rx Drop Invalid Spi Packets] (aluVRtrIfKeygroupRxDropInvalidSpiPkts)	java. math. BigInteger	The value of aluVRtrIfKeygroupRxDropInvalidSpiPkts indicates the number of packets dropped before and during inbound (decryption) processing by the interface. This implies that 1) the received SPI does not exist within the system 2) the received SPI is not part of the associated inbound keygroup 3) un-encrypted packet has been received on SDP with an associated inbound keygroup
rxDropOtherBytes [Rx Drop Other Bytes] (aluVRtrIfKeygroupRxDropOtherBytes)	java. math. BigInteger	The value of aluVRtrIfKeygroupRxDropOtherBytes indicates the number of bytes dropped before and during inbound (decryption) processing by the interface for unspecified reasons.
rxDropOtherPackets [Rx Drop Other Packets] (aluVRtrIfKeygroupRxDropOtherPkts)	java. math. BigInteger	The value of aluVRtrIfKeygroupRxDropOtherPkts indicates the number of packets dropped before and during inbound (decryption) processing by the interface for unspecified reasons.
rxPackets [Rx Packets] (aluVRtrIfKeygroupRxPkts)	java. math. BigInteger	The value of aluVRtrIfKeygroupRxPkts indicates the number of packets successfully decrypted by the interface.
txBytes [Tx Bytes] (aluVRtrIfKeygroupTxBytes)	java. math. BigInteger	The value of aluVRtrIfKeygroupTxBytes indicates the number of bytes successfully encrypted by the interface.
txDropBytes [Tx Drop Bytes] (aluVRtrIfKeygroupTxDropBytes)	java. math. BigInteger	The value of aluVRtrIfKeygroupTxDropBytes indicates the number of bytes dropped before and during outbound (encryption) processing by the interface.
txDropPackets [Tx Drop Packets] (aluVRtrIfKeygroupTxDropPkts)	java. math. BigInteger	The value of aluVRtrIfKeygroupTxDropPkts indicates the number of packets dropped before and during outbound (encryption) processing by the interface.

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txPackets [Tx Packets] (aluVRtrIfKeygroupTxPkts)	java. math. BigInteger	The value of aluVRtrIfKeygroupTxPkts indicates the number of packets successfully encrypted by the interface.
<p>RouteStats</p> <p>MIB entry name: vRtrStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrStatTable): The vRtrStatTable has an entry for each virtual router configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • rtr.VirtualRouter • vprn.DVRSSite • vprn.RoutingInstanceSite • vprn.Site 		
activeARPEntries [Active ARPEntries] (vRtrStatActiveARPEntries)	long	vRtrStatActiveARPEntries indicates the number of active ARP entries for the specified virtual router in the system.
aggregateActiveRoutes [Aggregate Active Routes] (vRtrAggregateActiveRoutes)	long	vRtrAggregateActiveRoutes indicates the current number of active aggregate routes for this instance of the route table.
aggregateRoutes [Aggregate Routes] (vRtrAggregateRoutes)	long	vRtrAggregateRoutes indicates the current number of aggregate routes for this instance of the route table.
bgpActiveRoutes [Bgp Active Routes] (vRtrBGPActiveRoutes)	long	vRtrBGPActiveRoutes indicates the current number of active bgp routes for this instance of the route table.

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
bgpRoutes [Bgp Routes] (vRtrBGPRoutes)	long	vRtrBGPRoutes indicates the current number of bgp routes for this instance of the route table.
bgpVpnActiveRoutes [Bgp Vpn Active Routes] (vRtrStatBGPVpnActiveRoutes)	long	vRtrStatBGPVpnActiveRoutes indicates the current number of active VPN-IPV4 routes learned by MP-BGP for this virtual router.
bgpVpnRoutes [Bgp Vpn Routes] (vRtrStatBGPVpnRoutes)	long	vRtrStatBGPVpnRoutes indicates the current number of VPN-IPV4 routes learned by MP-BGP for this virtual router.
directActiveRoutes [Direct Active Routes] (vRtrDirectActiveRoutes)	long	vRtrDirectActiveRoutes indicates the current number of active direct routes for this instance of the route table.
directRoutes [Direct Routes] (vRtrDirectRoutes)	long	vRtrDirectRoutes indicates the current number of direct routes for this instance of the route table.
illegalLabelsReceived [Illegal Labels Received] (vRtrStatIllegalLabels)	long	vRtrStatIllegalLabels indicates the number of illegally received labels on this virtual router.
isisActiveRoutes [Isis Active Routes] (vRtrISISActiveRoutes)	long	vRtrISISActiveRoutes indicates the current number of active isis routes for this instance of the route table.
isisRoutes [Isis Routes] (vRtrISISRoutes)	long	vRtrISISRoutes indicates the current number of isis routes for this instance of the route table.
ldpActiveTunnels [Ldp Active Tunnels] (vRtrStatActiveLdpTunnels)	long	vRtrStatActiveLdpTunnels indicates the current number of rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'ldp'.

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ldpTunnels [Ldp Tunnels] (vRtrStatTotalLdpTunnels)	long	vRtrStatTotalLdpTunnels indicates the current number of both active and inactive LDP tunnels.
ospfActiveRoutes [Ospf Active Routes] (vRtrOSPFActiveRoutes)	long	vRtrOSPFActiveRoutes indicates the current number of active ospf routes for this instance of the route table.
ospfRoutes [Ospf Routes] (vRtrOSPFRoutes)	long	vRtrOSPFRoutes indicates the current number of ospf routes for this instance of the route table.
routerInterfacesActive [Router Interfaces Active] (vRtrStatActiveIfs)	long	vRtrStatActiveIfs indicates the current number of router interfaces with vRtrIfAdminState equal 'inService' on this virtual router.
routerInterfacesConfigured [Router Interfaces Configured] (vRtrStatConfiguredIfs)	long	vRtrStatConfiguredIfs indicates the current number of router interfaces configured on this virtual router.
routesInVrf [Routes In Vrf] (vRtrStatCurrNumRoutes)	long	vRtrStatCurrNumRoutes indicates the current number of routes in the VRF for this virtual router.
sdpActiveTunnels [Sdp Active Tunnels] (vRtrStatActiveSdpTunnels)	long	vRtrStatActiveSdpTunnels indicates the current number of rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'sdp'.
sdpTunnels [Sdp Tunnels] (vRtrStatTotalSdpTunnels)	long	vRtrStatTotalSdpTunnels indicates the current number of both active and inactive SDP tunnels.
staticActiveRoutes [Static Active Routes] (vRtrStaticActiveRoutes)	long	vRtrStaticActiveRoutes indicates the current number of active static routes for this instance of the route table.

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
staticRoutes [Static Routes] (vRtrStaticRoutes)	long	vRtrStaticRoutes indicates the current number of static routes for this instance of the route table.
totalARPEntries [Total ARPEntries] (vRtrStatTotalARPEntries)	long	vRtrStatTotalARPEntries indicates the total number of active and inactive ARP entries for the specified virtual router in the system.
<p>SarIpInterfaceStats MIB entry name: vRtrIfStatsEntry Entry description: Each row entry represents the statistics per virtual router interface. Entries are created and deleted when entries in the vRtrIfEntry are created and deleted. Table description (for vRtrIfStatsTable): The vRtrIfStatsTable table contains statistics per virtual router interface. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • ies.GroupInterface • rtr.NetworkInterface • service.L3AccessInterface • vprn.GroupInterface • vprn.NetworkInterface 		
ifSpeed [If Speed] (vRtrIfSpeed)	java. math. BigInteger	The value of vRtrIfSpeed indicates an estimate of the current bandwidth in bits per second for this interface.
rxBytes [Rx Bytes] (vRtrIfRxBytes)	java. math. BigInteger	The value of vRtrIfRxBytes indicates the number of bytes in IPv4 and IPv6 packets received by this interface.

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxPkts [Rx Pkts] (vRtrIfRxPkts)	java. math. BigInteger	The value of vRtrIfRxPkts indicates the number of IPv4 packets received by this interface.
rxV4Bytes [Rx V4 Bytes] (vRtrIfRxV4Bytes)	java. math. BigInteger	The value of vRtrIfRxV4Bytes indicates the number of bytes in IPv4 packets received by this interface.
rxV4Pkts [Rx V4 Pkts] (vRtrIfRxV4Pkts)	java. math. BigInteger	The value of vRtrIfRxV4Pkts indicates the number of IPv4 packets received by this interface.
rxV6Bytes [Rx V6 Bytes] (vRtrIfRxV6Bytes)	java. math. BigInteger	The value of vRtrIfRxV6Bytes indicates the number of bytes in IPv6 packets received by this interface.
rxV6BytesHigh32 [Rx V6 Bytes High 32] (vRtrIfRxV6BytesHigh32)	long	The value of vRtrIfRxV6BytesHigh32 indicates the high 32 bits word of the value of vRtrIfRxV6Bytes.
rxV6BytesLow32 [Rx V6 Bytes Low 32] (vRtrIfRxV6BytesLow32)	long	The value of vRtrIfRxV6BytesLow32 indicates the lower 32 bits word of the value of vRtrIfRxV6Bytes.
rxV6Pkts [Rx V6 Pkts] (vRtrIfRxV6Pkts)	java. math. BigInteger	The value of vRtrIfRxV6Pkts indicates the number of IPv6 packets received by this interface.
rxV6PktsHigh32 [Rx V6 Pkts High 32] (vRtrIfRxV6PktsHigh32)	long	The value of vRtrIfRxV6PktsHigh32 indicates the high 32 bits of the value of vRtrIfRxV6Pkts.

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxV6PktsLow32 [Rx V6 Pkts Low 32] (vRtrIfRxV6PktsLow32)	long	The value of vRtrIfRxV6PktsLow32 indicates the lower 32 bits of the value of vRtrIfRxV6Pkts.
txV4Bytes [Tx V4 Bytes] (vRtrIfTxV4Bytes)	java. math. BigInteger	The value of vRtrIfTxV4Bytes indicates the number of total IPv4 bytes sent from this interface.
txV4Pkts [Tx V4 Pkts] (vRtrIfTxV4Pkts)	java. math. BigInteger	The value of vRtrIfTxV4Pkts indicates the number of total IPv4 packets sent from this interface.
txV6Bytes [Tx V6 Bytes] (vRtrIfTxV6Bytes)	java. math. BigInteger	The value of vRtrIfTxV6Bytes indicates the number of total IPv6 bytes sent from this interface.
txV6Pkts [Tx V6 Pkts] (vRtrIfTxV6Pkts)	java. math. BigInteger	The value of vRtrIfTxV6Pkts indicates the number of total IPv6 packets sent from this interface.

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SarIpInterfaceStatsRxExtra</p> <p>MIB entry name: aluVRtrIfStatsEntry</p> <p>Entry description: Information about the extensions of vRtrIfStatsTable which represents the statistics per virtual router interface.</p> <p>Table description (for aluVRtrIfStatsTable): Information about the Nokia 7705 SAR extensions to the vRtrIfStatsTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • ies.GroupInterface • rtr.NetworkInterface • service.L3AccessInterface • vprn.GroupInterface • vprn.NetworkInterface 		
aluSARVRtrIfRxV4DiscardBlackHoleBytes [Alu SARVRtr If Rx V4 Discard Black Hole Bytes] (aluVRtrIfRxV4DiscardBlackHoleBytes)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardBlackHoleBytes indicates the number of IPv4 received bytes discarded by this interface due to blackhole.
aluSARVRtrIfRxV4DiscardBlackHolePkts [Alu SARVRtr If Rx V4 Discard Black Hole Pkts] (aluVRtrIfRxV4DiscardBlackHolePkts)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardBlackHolePkts indicates the number of IPv4 received packets discarded by this interface due to blackhole.
aluSARVRtrIfRxV4DiscardDestMartianAddrBytes [Alu SARVRtr If Rx V4 Discard Dest Martian Addr Bytes] (aluVRtrIfRxV4DiscardDestMartianAddrBytes)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardDestMartianAddrBytes indicates the number of IPv4 received bytes discarded by this interface due to martian destination address.
aluSARVRtrIfRxV4DiscardDestMartianAddrPkts [Alu SARVRtr If Rx V4 Discard Dest Martian Addr Pkts] (aluVRtrIfRxV4DiscardDestMartianAddrPkts)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardDestMartianAddrPkts indicates the number of IPv4 received packets discarded by this interface due to martian destination address.

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluSARVRtrIfRxV4DiscardDestUnreachBytes [Alu SARVRtr If Rx V4 Discard Dest Unreach Bytes] (aluVRtrIfRxV4DiscardDestUnreachBytes)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardDestUnreachBytes indicates the number of IPv4 received bytes discarded by this interface due to destination unreachable.
aluSARVRtrIfRxV4DiscardDestUnreachPkts [Alu SARVRtr If Rx V4 Discard Dest Unreach Pkts] (aluVRtrIfRxV4DiscardDestUnreachPkts)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardDestUnreachPkts indicates the number of IPv4 received packets discarded by this interface due to destination unreachable.
aluSARVRtrIfRxV4DiscardDirectBcastBytes [Alu SARVRtr If Rx V4 Discard Direct Bcast Bytes] (aluVRtrIfRxV4DiscardDirectBcastBytes)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardDirectBcastBytes indicates the number of IPv4 received directed broadcast bytes discarded by this interface due to interface is not enabled for directed broadcast.
aluSARVRtrIfRxV4DiscardDirectBcastPkts [Alu SARVRtr If Rx V4 Discard Direct Bcast Pkts] (aluVRtrIfRxV4DiscardDirectBcastPkts)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardDirectBcastPkts indicates the number of IPv4 received directed broadcast packets discarded by this interface due to interface is not enabled for directed broadcast.
aluSARVRtrIfRxV4DiscardFltrActionDropBytes [Alu SARVRtr If Rx V4 Discard Fltr Action Drop Bytes] (aluVRtrIfRxV4DiscardFltrActionDropBytes)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardFltrActionDropBytes indicates the number of IPv4 received bytes discarded by this interface due to filter action as 'drop'.
aluSARVRtrIfRxV4DiscardFltrActionDropPkts [Alu SARVRtr If Rx V4 Discard Fltr Action Drop Pkts] (aluVRtrIfRxV4DiscardFltrActionDropPkts)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardFltrActionDropPkts indicates the number of IPv4 received packets discarded by this interface due to filter action as 'drop'.
aluSARVRtrIfRxV4DiscardFltrNxtHopNotDirectBytes [Alu SARVRtr If Rx V4 Discard Fltr Nxt Hop Not Direct Bytes] (aluVRtrIfRxV4DiscardFltrNxtHopNotDirectBytes)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardFltrNxtHopNotDirectBytes indicates the number of IPv4 received bytes discarded by this interface due to PBR filter direct next-hop is not directly connected.

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluSARVRtrIfRxV4DiscardFltrNxtHopNotDirectPkts [Alu SARVRtr If Rx V4 Discard Fltr Nxt Hop Not Direct Pkts] (aluVRtrIfRxV4DiscardFltrNxtHopNotDirectPkts)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardFltrNxtHopNotDirectPkts indicates the number of IPv4 received packets discarded by this interface due to PBR filter direct next-hop is not directly connected.
aluSARVRtrIfRxV4DiscardFltrNxtHopUnreachBytes [Alu SARVRtr If Rx V4 Discard Fltr Nxt Hop Unreach Bytes] (aluVRtrIfRxV4DiscardFltrNxtHopUnreachBytes)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardFltrNxtHopUnreachBytes indicates the number of IPv4 received bytes discarded by this interface due to PBR filter next-hop unreachable.
aluSARVRtrIfRxV4DiscardFltrNxtHopUnreachPkts [Alu SARVRtr If Rx V4 Discard Fltr Nxt Hop Unreach Pkts] (aluVRtrIfRxV4DiscardFltrNxtHopUnreachPkts)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardFltrNxtHopUnreachPkts indicates the number of IPv4 received packets discarded by this interface due to PBR filter next-hop unreachable.
aluSARVRtrIfRxV4DiscardInvGREProtBytes [Alu SARVRtr If Rx V4 Discard Inv GREProt Bytes] (aluVRtrIfRxV4DiscardInvGREProtBytes)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardInvGREProtBytes indicates the number of IPv4 received bytes discarded by this interface due to invalid GRE protocol number for MPLS.
aluSARVRtrIfRxV4DiscardInvGREProtPkts [Alu SARVRtr If Rx V4 Discard Inv GREProt Pkts] (aluVRtrIfRxV4DiscardInvGREProtPkts)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardInvGREProtPkts indicates the number of IPv4 received packets discarded by this interface due to invalid GRE protocol number for MPLS.
aluSARVRtrIfRxV4DiscardInvHdrCRCBytes [Alu SARVRtr If Rx V4 Discard Inv Hdr CRCBytes] (aluVRtrIfRxV4DiscardInvHdrCRCBytes)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardInvHdrCRCBytes indicates the number of IPv4 received bytes discarded by this interface due to invalid IP header CRC.
aluSARVRtrIfRxV4DiscardInvHdrCRCPkts [Alu SARVRtr If Rx V4 Discard Inv Hdr CRCPkts] (aluVRtrIfRxV4DiscardInvHdrCRCPkts)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardInvHdrCRCPkts indicates the number of IPv4 received packets discarded by this interface due to invalid IP header CRC.

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluSARVRtrIfRxV4DiscardInvLenBytes [Alu SARVRtr If Rx V4 Discard Inv Len Bytes] (aluVRtrIfRxV4DiscardInvLenBytes)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardInvLenBytes indicates the number of IPv4 received bytes discarded by this interface due to invalid length of the IP packet.
aluSARVRtrIfRxV4DiscardInvLenPkts [Alu SARVRtr If Rx V4 Discard Inv Len Pkts] (aluVRtrIfRxV4DiscardInvLenPkts)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardInvLenPkts indicates the number of IPv4 received packets discarded by this interface due to invalid length of the IP packet.
aluSARVRtrIfRxV4DiscardInvMcastBytes [Alu SARVRtr If Rx V4 Discard Inv Mcast Bytes] (aluVRtrIfRxV4DiscardInvMcastBytes)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardInvMcastBytes indicates the number of IPv4 received bytes discarded by this interface due to invalid multicast address.
aluSARVRtrIfRxV4DiscardInvMcastPkts [Alu SARVRtr If Rx V4 Discard Inv Mcast Pkts] (aluVRtrIfRxV4DiscardInvMcastPkts)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardInvMcastPkts indicates the number of IPv4 received packets discarded by this interface due to invalid multicast address.
aluSARVRtrIfRxV4DiscardMtuExceededBytes [Alu SARVRtr If Rx V4 Discard Mtu Exceeded Bytes] (aluVRtrIfRxV4DiscardMtuExceededBytes)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardMtuExceededBytes indicates the number of IPv4 received bytes discarded by this interface due to MTU exceeded.
aluSARVRtrIfRxV4DiscardMtuExceededPkts [Alu SARVRtr If Rx V4 Discard Mtu Exceeded Pkts] (aluVRtrIfRxV4DiscardMtuExceededPkts)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardMtuExceededPkts indicates the number of IPv4 received packets discarded by this interface due to MTU exceeded.
aluSARVRtrIfRxV4DiscardSrcMartianAddrBytes [Alu SARVRtr If Rx V4 Discard Src Martian Addr Bytes] (aluVRtrIfRxV4DiscardSrcMartianAddrBytes)	java. math. BigInteger	The value of aluVRtrIfRxV4DiscardSrcMartianAddrBytes indicates the number of IPv4 received bytes discarded by this interface due to martian source address.

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aluSARVRtrIfRxV4DiscardSrcMartianAddrPkts [Alu SARVRtr If Rx V4 Discard Src Martian Addr Pkts] (aluVRtrIfRxV4DiscardSrcMartianAddrPkts)	java. math. BigInte- ger	The value of aluVRtrIfRxV4DiscardSrcMartianAddrPkts indicates the number of IPv4 received packets discarded by this interface due to martian source address.
aluSARVRtrIfRxV4OtherDiscardsBytes [Alu SARVRtr If Rx V4 Other Discards Bytes] (aluVRtrIfRxV4OtherDiscardsBytes)	java. math. BigInte- ger	The value of aluVRtrIfRxV4OtherDiscardsBytes indicates the number of IPv4 received bytes discarded by this interface due to other reasons not specified above.
aluSARVRtrIfRxV4OtherDiscardsPkts [Alu SARVRtr If Rx V4 Other Discards Pkts] (aluVRtrIfRxV4OtherDiscardsPkts)	java. math. BigInte- ger	The value of aluVRtrIfRxV4OtherDiscardsPkts indicates the number of IPv4 received packets discarded by this interface due to other reasons not specified above.
aluSARVRtrIfRxV6DiscardMtuExceededBytes [Alu SARVRtr If Rx V6 Discard Mtu Exceeded Bytes] (aluVRtrIfRxV6DiscardMtuExceededBytes)	java. math. BigInte- ger	The value of aluVRtrIfRxV6DiscardMtuExceededBytes indicates the number of IPv6 received bytes discarded by this interface due to MTU exceeded.
aluSARVRtrIfRxV6DiscardMtuExceededPkts [Alu SARVRtr If Rx V6 Discard Mtu Exceeded Pkts] (aluVRtrIfRxV6DiscardMtuExceededPkts)	java. math. BigInte- ger	The value of aluVRtrIfRxV6DiscardMtuExceededPkts indicates the number of IPv6 received packets discarded by this interface due to MTU exceeded.

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>V6RouteStats</p> <p>MIB entry name: vRtrStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrStatTable): The vRtrStatTable has an entry for each virtual router configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • rtr.VirtualRouter • vprn.RoutingInstanceSite • vprn.Site 		
v6ActiveNbrEntries [V6 Active Nbr Entries] (vRtrV6StatActiveNbrEntries)	long	vRtrV6StatActiveNbrEntries indicates the number of active V6 neighbor discovery entries for the specified virtual router in the system.
v6AggregateActiveRoutes [V6 Aggregate Active Routes] (vRtrV6AggregateActiveRoutes)	long	vRtrV6AggregateActiveRoutes indicates the current number of active v6 aggregate routes for this instance of the route table.
v6AggregateRoutes [V6 Aggregate Routes] (vRtrV6AggregateRoutes)	long	vRtrV6AggregateRoutes indicates the current number of v6 aggregate routes for this instance of the route table.
v6BgpActiveRoutes [V6 Bgp Active Routes] (vRtrV6BGPActiveRoutes)	long	vRtrV6BGPActiveRoutes indicates the current number of v6 active bgp routes for this instance of the route table.
v6BgpRoutes [V6 Bgp Routes] (vRtrV6BGPRoutes)	long	vRtrV6BGPRoutes indicates the current number of v6 bgp routes for this instance of the route table.

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v6BgpVpnActiveRoutes [V6 Bgp Vpn Active Routes] (vRtrV6StatBGPVpnActiveRoutes)	long	vRtrV6StatBGPVpnActiveRoutes indicates the current number of active VPN-IPV6 routes learned by MP-BGP for this virtual router.
v6BgpVpnRoutes [V6 Bgp Vpn Routes] (vRtrV6StatBGPVpnRoutes)	long	vRtrV6StatBGPVpnRoutes indicates the current number of VPN-IPV6 routes learned by MP-BGP for this virtual router.
v6Dhcpv6NaActiveRoutes [V6 Dhcpv 6 Na Active Routes] (vRtrV6Dhcpv6NaActiveRoutes)	long	The value of vRtrV6Dhcpv6NaActiveRoutes indicates the current number of active IPv6 DHCPv6 non-temporary address routes for this instance of the route table.
v6Dhcpv6NaRoutes [V6 Dhcpv 6 Na Routes] (vRtrV6Dhcpv6NaRoutes)	long	The value of vRtrV6Dhcpv6NaRoutes indicates the current number of IPv6 DHCPv6 non-temporary address routes for this instance of the route table.
v6Dhcpv6PdActiveRoutes [V6 Dhcpv 6 Pd Active Routes] (vRtrV6Dhcpv6PdActiveRoutes)	long	The value of vRtrV6Dhcpv6PdActiveRoutes indicates the current number of active IPv6 DHCPv6 delegated prefix routes for this instance of the route table.
v6Dhcpv6PdExclActiveRoutes [V6 Dhcpv 6 Pd Excl Active Routes] (vRtrV6Dhcpv6PdExclActiveRoutes)	long	The value of vRtrV6Dhcpv6PdExclActiveRoutes indicates the current number of active IPv6 DHCPv6 delegated prefix exclude routes for this instance of the route table.
v6Dhcpv6PdExclRoutes [V6 Dhcpv 6 Pd Excl Routes] (vRtrV6Dhcpv6PdExclRoutes)	long	The value of vRtrV6Dhcpv6PdExclRoutes indicates the current number of IPv6 DHCPv6 delegated prefix exclude routes for this instance of the route table.
v6Dhcpv6PdRoutes [V6 Dhcpv 6 Pd Routes] (vRtrV6Dhcpv6PdRoutes)	long	The value of vRtrV6Dhcpv6PdRoutes indicates the current number of IPv6 DHCPv6 delegated prefix routes for this instance of the route table.
v6Dhcpv6TaActiveRoutes [V6 Dhcpv 6 Ta Active Routes] (vRtrV6Dhcpv6TaActiveRoutes)	long	The value of vRtrV6Dhcpv6TaActiveRoutes indicates the current number of active IPv6 DHCPv6 temporary address routes for this instance of the route table.

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v6Dhcpv6TaRoutes [V6 Dhcpv 6 Ta Routes] (vRtrV6Dhcpv6TaRoutes)	long	The value of vRtrV6Dhcpv6TaRoutes indicates the current number of IPv6 DHCPv6 temporary address routes for this instance of the route table.
v6DirectActiveRoutes [V6 Direct Active Routes] (vRtrV6DirectActiveRoutes)	long	vRtrV6DirectActiveRoutes indicates the current number of v6 active direct routes for this instance of the route table.
v6DirectRoutes [V6 Direct Routes] (vRtrV6DirectRoutes)	long	vRtrV6DirectRoutes indicates the current number of v6 direct routes for this instance of the route table.
v6HostActiveRoutes [V6 Host Active Routes] (vRtrV6HostActiveRoutes)	long	The value of vRtrV6HostActiveRoutes indicates the current number of v6 active direct routes with prefix value 128 for this instance of the route table.
v6HostRoutes [V6 Host Routes] (vRtrV6HostRoutes)	long	The value of vRtrV6HostRoutes indicates the current number of v6 direct routes with prefix value 128 for this instance of the route table.
v6IsisActiveRoutes [V6 Isis Active Routes] (vRtrV6ISISActiveRoutes)	long	vRtrV6ISISActiveRoutes indicates the current number of v6 active isis routes for this instance of the route table.
v6IsisRoutes [V6 Isis Routes] (vRtrV6ISISRoutes)	long	vRtrV6ISISRoutes indicates the current number of v6 isis routes for this instance of the route table.
v6LdpActiveTunnels [V6 Ldp Active Tunnels] (vRtrV6StatActiveLdpTunnels)	long	vRtrV6StatActiveLdpTunnels indicates the current number of v6 rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'ldp'.
v6LdpTunnels [V6 Ldp Tunnels] (vRtrV6StatTotalLdpTunnels)	long	vRtrV6StatTotalLdpTunnels indicates the current number of both active and inactive v6 LDP tunnels.

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v6ManagedActiveRoutes [V6 Managed Active Routes] (vRtrV6ManagedActiveRoutes)	long	The value of vRtrV6ManagedActiveRoutes indicates the total number of active IPv6 managed routes for the specified virtual router.
v6ManagedRoutes [V6 Managed Routes] (vRtrV6ManagedRoutes)	long	The value of vRtrV6ManagedRoutes indicates the total number of active and inactive IPv6 managed routes for the specified virtual router.
v6MulticastRoutes [V6 Multicast Routes] (vRtrV6MulticastRoutes)	long	vRtrV6MulticastRoutes indicates the current number of v6 rows in the vRtrPimNgGrpSrcTable.
v6NatActiveRoutes [V6 Nat Active Routes] (vRtrV6NatActiveRoutes)	long	The value of vRtrV6NatActiveRoutes indicates the current number of IPv6 active NAT routes for this instance of the route table.
v6NatRoutes [V6 Nat Routes] (vRtrV6NatRoutes)	long	The value of vRtrV6NatRoutes indicates the current number of IPv6 NAT routes for this instance of the route table.
v6OspfActiveRoutes [V6 Ospf Active Routes] (vRtrV6OSPFActiveRoutes)	long	vRtrV6OSPFActiveRoutes indicates the current number of v6 active ospf routes for this instance of the route table.
v6OspfRoutes [V6 Ospf Routes] (vRtrV6OSPFRoutes)	long	vRtrV6OSPFRoutes indicates the current number of v6 ospf routes for this instance of the route table.
v6PerActiveRoutes [V6 Per Active Routes] (vRtrV6PeriodicActiveRoutes)	long	The value of vRtrV6PeriodicActiveRoutes indicates the current number of active IPv6 periodic routes for this instance of the route table.
v6PerRoutes [V6 Per Routes] (vRtrV6PeriodicRoutes)	long	The value of vRtrV6PeriodicRoutes indicates the current number of IPv6 periodic routes for this instance of the route table.

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v6RipActiveRoutes [V6 Rip Active Routes] (vRtrV6RIPActiveRoutes)	long	vRtrV6RIPActiveRoutes indicates the current number of active v6 rip routes for this instance of the route table.
v6RipRoutes [V6 Rip Routes] (vRtrV6RIPRoutes)	long	vRtrV6RIPRoutes indicates the current number of v6 rip routes for this instance of the route table.
v6RouterInterfacesActive [V6 Router Interfaces Active] (vRtrV6StatActiveIfs)	long	vRtrV6StatActiveIfs indicates the current number of v6 router interfaces with vRtrIfAdminState equal 'inService' on this virtual router.
v6RouterInterfacesConfigured [V6 Router Interfaces Configured] (vRtrV6StatConfiguredIfs)	long	vRtrV6StatConfiguredIfs indicates the current number of v6 router interfaces configured on this virtual router.
v6RoutesInVrf [V6 Routes In Vrf] (vRtrV6StatCurrNumRoutes)	long	vRtrV6StatCurrNumRoutes indicates the current number of v6 routes in the VRF for this virtual router.
v6SdpActiveTunnels [V6 Sdp Active Tunnels] (vRtrV6StatActiveSdpTunnels)	long	vRtrV6StatActiveSdpTunnels indicates the current number of v6 rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'sdp'.
v6SdpTunnels [V6 Sdp Tunnels] (vRtrV6StatTotalSdpTunnels)	long	vRtrV6StatTotalSdpTunnels indicates the current number of both active and inactive v6 SDP tunnels.
v6StaticActiveRoutes [V6 Static Active Routes] (vRtrV6StaticActiveRoutes)	long	vRtrV6StaticActiveRoutes indicates the current number of v6 active static routes for this instance of the route table.
v6StaticRoutes [V6 Static Routes] (vRtrV6StaticRoutes)	long	vRtrV6StaticRoutes indicates the current number of v6 static routes for this instance of the route table.

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v6SubMgmtActiveRoutes [V6 Sub Mgmt Active Routes] (vRtrV6SubMgmtActiveRoutes)	long	vRtrV6SubMgmtActiveRoutes indicates the current number of v6 active subscriber management routes for this instance of the route table.
v6SubMgmtRoutes [V6 Sub Mgmt Routes] (vRtrV6SubMgmtRoutes)	long	vRtrV6SubMgmtRoutes indicates the current number of v6 subscriber management routes for this instance of the route table.
v6TotalNbrEntries [V6 Total Nbr Entries] (vRtrV6StatTotalNbrEntries)	long	vRtrV6StatTotalNbrEntries indicates the total number of active and inactive v6 neighbor discovery entries for the specified virtual router in the system.
v6VpnLeakActiveRoutes [V6 Vpn Leak Active Routes] (vRtrV6VPNLeakActiveRoutes)	long	vRtrV6VPNLeakActiveRoutes indicates the current number of v6 active VPN Leak routes for this instance of the route table.
v6VpnLeakRoutes [V6 Vpn Leak Routes] (vRtrV6VPNLeakRoutes)	long	vRtrV6VPNLeakRoutes indicates the current number of v6 VPN Leak routes for this instance of the route table.
<p>VirtualInterfaceIcmp6InStats MIB entry name: vRtrIfIcmp6Entry Entry description: Each row entry represents the ICMP statistics of a virtual router interface. Entries are created and deleted when entries in the vRtrIfTable are created and deleted. Table description (for vRtrIfIcmp6Table): The vRtrIfIcmp6Table table contains statistics of ICMPv6 messages that are received and sourced by a router interface. Supports realtime plotting Supports scheduled collection Monitored class: rtr.VirtualInterfaceIcmp6Configuration</p>		
inDestinationUnreachable [In Destination Unreachable] (vRtrIfIcmp6InDestUnreachs)	long	The value of vRtrIfIcmp6InDestUnreachs indicates the number of ICMP Destination Unreachable messages received by this interface.

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
inEchoReplies [In Echo Replies] (vRtrIflcmp6InEchoReplies)	long	The value of vRtrIflcmp6InEchoReplies indicates the number of ICMP Echo Reply messages received by this interface.
inEchoRequests [In Echo Requests] (vRtrIflcmp6InEchos)	long	The value of vRtrIflcmp6InEchos indicates the number of ICMP Echo (request) messages received by this interface.
inErrors [In Errors] (vRtrIflcmp6InErrors)	long	The value of vRtrIflcmp6InErrors indicates the number of ICMP messages which this interface received but determined as having ICMP-specific errors (bad ICMP checksums, bad length , etc.).
inNeighborAdvertisements [In Neighbor Advertisements] (vRtrIflcmp6InNbrAdvertisements)	long	The value of vRtrIflcmp6InNbrAdvertisements indicates the number of ICMP Neighbor Advertisement messages received by this interface.
inNeighborSolicits [In Neighbor Solicits] (vRtrIflcmp6InNbrSolicits)	long	The value of vRtrIflcmp6InNbrSolicits indicates the number of ICMP Neighbor Solicit messages received by this interface.
inPacketTooBig [In Packet Too Big] (vRtrIflcmp6InPktTooBigs)	long	The value of vRtrIflcmp6InPktTooBigs indicates the number of ICMP Packet Too Big messages received by this interface.
inRedirects [In Redirects] (vRtrIflcmp6InRedirects)	long	The value of vRtrIflcmp6InRedirects indicates number of ICMP Redirect messages received by this interface.
inRouterAdvertisements [In Router Advertisements] (vRtrIflcmp6InRtrAdvertisements)	long	The value of vRtrIflcmp6InRtrAdvertisements indicates the number of ICMP Router Advertisement messages received by this interface.

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
inRouterSolicits [In Router Solicits] (vRtrIflcmp6InRtrSolicits)	long	The value of vRtrIflcmp6InRtrSolicits indicates the number of ICMP Router Solicit messages received by this interface.
inTimeExceeded [In Time Exceeded] (vRtrIflcmp6InTimeExcds)	long	The value of vRtrIflcmp6InTimeExcds indicates the number of ICMP Time Exceeded messages received by this interface.
inTotalMessages [In Total Messages] (vRtrIflcmp6InMsgs)	long	The value of vRtrIflcmp6InMsgs indicates the total number of ICMP messages received by this interface which includes all those counted by vRtrIflcmp6InErrors. Note that this interface is the interface to which the ICMP messages were addressed which may not be necessarily the input interface for the messages.
<p>VirtualInterfaceIcmp6OutStats MIB entry name: vRtrIflcmp6Entry Entry description: Each row entry represents the ICMP statistics of a virtual router interface. Entries are created and deleted when entries in the vRtrIfTable are created and deleted. Table description (for vRtrIflcmp6Table): The vRtrIflcmp6Table table contains statistics of ICMPv6 messages that are received and sourced by a router interface. Supports realtime plotting Supports scheduled collection Monitored class: rtr.VirtualInterfaceIcmp6Configuration</p>		
outDestinationUnreachable [Out Destination Unreachable] (vRtrIflcmp6OutDestUnreachs)	long	The value of vRtrIflcmp6OutDestUnreachs indicates the number of ICMP Destination Unreachable messages sent by this interface.
outEchoReplies [Out Echo Replies] (vRtrIflcmp6OutEchoReplies)	long	The value of vRtrIflcmp6OutEchoReplies indicates the number of ICMP Echo Reply messages sent by this interface.

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outEchoRequests [Out Echo Requests] (vRtrIflcmp6OutEchos)	long	The value of vRtrIflcmp6OutEchos indicates the number of ICMP Echo Request messages sent by this interface.
outErrors [Out Errors] (vRtrIflcmp6OutErrors)	long	The value of vRtrIflcmp6OutErrors indicates the number of ICMP messages which this interface did not send due to problems discovered within ICMP such as a lack of buffers. This value should not include errors discovered outside the ICMP layer such as the inability of VRtr IPv6 to route the resultant datagram. In some implementations there may be no types of error which contribute to this counter's value.
outGrpMembQueries [Out Grp Memb Queries] (vRtrIflcmp6OutGrpMembQueries)	long	The value of vRtrIflcmp6OutGrpMembQueries indicates the number of ICMP Group Membership Query messages sent by this interface.
outGrpMembReductions [Out Grp Memb Reductions] (vRtrIflcmp6OutGrpMembReductions)	long	The value of vRtrIflcmp6OutGrpMembReductions indicates the number of ICMP Group Membership Reduction messages sent by this interface.
outGrpMembResponses [Out Grp Memb Responses] (vRtrIflcmp6OutGrpMembResponses)	long	The value of vRtrIflcmp6OutGrpMembResponses indicates the number of ICMP Group Membership Response messages sent by this interface.
outNeighborAdvertisements [Out Neighbor Advertisements] (vRtrIflcmp6OutNbrAdvertisements)	long	The value of vRtrIflcmp6OutNbrAdvertisements indicates the number of ICMP Neighbor Advertisement messages sent by this interface.
outNeighborSolicits [Out Neighbor Solicits] (vRtrIflcmp6OutNbrSolicits)	long	The value of vRtrIflcmp6OutNbrSolicits indicates the number of ICMP Neighbor Solicitation messages sent by this interface.
outPacketTooBig [Out Packet Too Big] (vRtrIflcmp6OutPktTooBigs)	long	The value of vRtrIflcmp6OutPktTooBigs indicates the number of ICMP Packet Too Big messages sent by this interface.

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outRedirects [Out Redirects] (vRtrIflcmp6OutRedirects)	long	The value of vRtrIflcmp6OutRedirects indicates the number of ICMP Redirect messages sent by this interface.
outRouterAdvertisements [Out Router Advertisements] (vRtrIflcmp6OutRtrAdvertisements)	long	The value of vRtrIflcmp6OutRtrAdvertisements indicates the number of ICMP Router Advertisement messages sent by this interface.
outRouterSolicits [Out Router Solicits] (vRtrIflcmp6OutRtrSolicits)	long	The value of vRtrIflcmp6OutRtrSolicits indicates the number of ICMP Router Solicitation messages sent by this interface.
outTimeExceeded [Out Time Exceeded] (vRtrIflcmp6OutTimeExcds)	long	The value of vRtrIflcmp6OutTimeExcds indicates the number of ICMP Time Exceeded messages sent by this interface.
outTotalMessages [Out Total Messages] (vRtrIflcmp6OutMsgs)	long	The value of vRtrIflcmp6OutMsgs indicates the total number of ICMP messages which this interface attempted to send. Note that this counter includes all those counted by icmpOutErrors.
<p>VirtualRouterIcmp6InStats</p> <p>MIB entry name: vRtrIcmp6Entry</p> <p>Entry description: Each row entry represents the ICMP statistics of a virtual router instance. Entries are created and deleted when entries in the vRtrConfEntry are created and deleted.</p> <p>Table description (for vRtrIcmp6Table): The vRtrIcmp6Table table contains statistics of ICMPv6 messages that are received and sourced by a router instance.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • rtr.VirtualRouter • vprn.DVRSSite • vprn.RoutingInstanceSite • vprn.Site 		

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
inDestinationUnreachable [In Destination Unreachable] (vRtrIcmp6InDestUnreachs)	long	The value of vRtrIcmp6InDestUnreachs indicates the number of ICMP Destination Unreachable messages received by this router instance.
inEchoReplies [In Echo Replies] (vRtrIcmp6InEchoReplies)	long	The value of vRtrIcmp6InEchoReplies indicates the number of ICMP Echo Reply messages received by this router instance.
inEchoRequests [In Echo Requests] (vRtrIcmp6InEchos)	long	The value of vRtrIcmp6InEchos indicates the number of ICMP Echo (request) messages received by this router instance.
inErrors [In Errors] (vRtrIcmp6InErrors)	long	The value of vRtrIcmp6InErrors indicates the number of ICMP messages which this router instance received but determined as having ICMP-specific errors (bad ICMP checksums, bad length , etc.).
inNeighborAdvertisements [In Neighbor Advertisements] (vRtrIcmp6InNbrAdvertisements)	long	The value of vRtrIcmp6InNbrAdvertisements indicates the number of ICMP Neighbor Advertisement messages received by this router instance.
inNeighborSolicits [In Neighbor Solicits] (vRtrIcmp6InNbrSolicits)	long	The value of vRtrIcmp6InNbrSolicits indicates the number of ICMP Neighbor Solicit messages received by this router instance.
inPacketTooBig [In Packet Too Big] (vRtrIcmp6InPktTooBigs)	long	The value of vRtrIcmp6InPktTooBigs indicates the number of ICMP Packet Too Big messages received by this router instance.
inRedirects [In Redirects] (vRtrIcmp6InRedirects)	long	The value of vRtrIcmp6InRedirects indicates number of ICMP Redirect messages received by this router instance.

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
inRouterAdvertisements [In Router Advertisements] (vRtrIcmp6InRtrAdvertisements)	long	The value of vRtrIcmp6InRtrAdvertisements indicates the number of ICMP Router Advertisement messages received by this router instance.
inRouterSolicits [In Router Solicits] (vRtrIcmp6InRtrSolicits)	long	The value of vRtrIcmp6InRtrSolicits indicates the number of ICMP Router Solicit messages received by this router instance.
inTimeExceeded [In Time Exceeded] (vRtrIcmp6InTimeExcds)	long	The value of vRtrIcmp6InTimeExcds indicates the number of ICMP Time Exceeded messages received by this router instance.
inTotalMessages [In Total Messages] (vRtrIcmp6InMsgs)	long	The value of vRtrIcmp6InMsgs indicates the total number of ICMP messages received by this router instance which includes all those counted by vRtrIcmp6InErrors.
<p>VirtualRouterIcmp6OutStats MIB entry name: vRtrIcmp6Entry Entry description: Each row entry represents the ICMP statistics of a virtual router instance. Entries are created and deleted when entries in the vRtrConfEntry are created and deleted. outDestinationUnreachable [Out Destination Unreachable] (vRtrIcmp6OutDestUnreachs)	long	The value of vRtrIcmp6OutDestUnreachs indicates the number of ICMP Destination Unreachable messages sent by this router instance.

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outEchoReplies [Out Echo Replies] (vRtrIcmp6OutEchoReplies)	long	The value of vRtrIcmp6OutEchoReplies indicates the number of ICMP Echo Reply messages sent by this router instance.
outEchoRequests [Out Echo Requests] (vRtrIcmp6OutEchos)	long	The value of vRtrIcmp6OutEchos indicates the number of ICMP Echo Request messages sent by this router instance.
outErrors [Out Errors] (vRtrIcmp6OutErrors)	long	The value of vRtrIcmp6OutErrors indicates the number of ICMP messages which this router instance did not send due to problems discovered within ICMP such as a lack of buffers. This value should not include errors discovered outside the ICMP layer such as the inability of VRtr IPv6 to route the resultant datagram. In some implementations there may be no types of error which contribute to this counter's value.
outGrpMembQueries [Out Grp Memb Queries] (vRtrIcmp6OutGrpMembQueries)	long	The value of vRtrIcmp6OutGrpMembQueries indicates the number of ICMP Group Membership Query messages sent by this router instance.
outGrpMembReductions [Out Grp Memb Reductions] (vRtrIcmp6OutGrpMembReductions)	long	The value of vRtrIcmp6OutGrpMembReductions indicates the number of ICMP Group Membership Reduction messages sent by this router instance.
outGrpMembResponses [Out Grp Memb Responses] (vRtrIcmp6OutGrpMembResponses)	long	The value of vRtrIcmp6OutGrpMembResponses indicates the number of ICMP Group Membership Response messages sent by this router instance.
outNeighborAdvertisements [Out Neighbor Advertisements] (vRtrIcmp6OutNbrAdvertisements)	long	The value of vRtrIcmp6OutNbrAdvertisements indicates the number of ICMP Neighbor Advertisement messages sent by this router instance.
outNeighborSolicits [Out Neighbor Solicits] (vRtrIcmp6OutNbrSolicits)	long	The value of vRtrIcmp6OutNbrSolicits indicates the number of ICMP Neighbor Solicitation messages sent by this router instance.

Table 385 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outPacketTooBig [Out Packet Too Big] (vRtrIcmp6OutPktTooBigs)	long	The value of vRtrIcmp6OutPktTooBigs indicates the number of ICMP Packet Too Big messages sent by this router instance.
outRedirects [Out Redirects] (vRtrIcmp6OutRedirects)	long	The value of vRtrIcmp6OutRedirects indicates the number of ICMP Redirect messages sent by this router instance.
outRouterAdvertisements [Out Router Advertisements] (vRtrIcmp6OutRtrAdvertisements)	long	The value of vRtrIcmp6OutRtrAdvertisements indicates the number of ICMP Router Advertisement messages sent by this router instance.
outRouterSolicits [Out Router Solicits] (vRtrIcmp6OutRtrSolicits)	long	The value of vRtrIcmp6OutRtrSolicits indicates the number of ICMP Router Solicitation messages sent by this router instance.
outTimeExceeded [Out Time Exceeded] (vRtrIcmp6OutTimeExcds)	long	The value of vRtrIcmp6OutTimeExcds indicates the number of ICMP Time Exceeded messages sent by this router instance.
outTotalMessages [Out Total Messages] (vRtrIcmp6OutMsgs)	long	The value of vRtrIcmp6OutMsgs indicates the total number of ICMP messages which this router instance attempted to send. Note that this counter includes all those counted by icmpOutErrors.

Table 386 sas statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PrefixSrvStats</p> <p>MIB entry name: tmnxTwampSrvPrefixEntry</p> <p>Entry description: tmnxTwampSrvPrefixEntry contains the TWAMP server configuration information for the IP prefix specified by the index values. Rows in this table are created and destroyed using the tmnxTwampSrvPrefixRowStatus object.</p> <p>Table description (for tmnxTwampSrvPrefixTable): tmnxTwampSrvPrefixTable contains per-prefix TWAMP server configuration information.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sas.PrefixSrv</p>		
prefixAddr [Prefix Addr] (tmnxTwampSrvPrefixAddr)	String	The value of tmnxTwampSrvPrefixAddr specifies, in conjunction with tmnxTwampSrvPrefixAddrType and tmnxTwampSrvPrefixLen, a prefix to be matched against a TWAMP client address. This is the second index for tmnxTwampSrvPrefixTable.
prefixAddrType [Prefix Addr Type] (tmnxTwampSrvPrefixAddrType)	int	The value of tmnxTwampSrvPrefixAddrType specifies the type of tmnxTwampSrvPrefixAddr. This is the first index for tmnxTwampSrvPrefixTable.
prefixLen [Prefix Len] (tmnxTwampSrvPrefixLen)	int	The value of tmnxTwampSrvPrefixLen specifies the number of bits to match when comparing a TWAMP client address in an incoming message to tmnxTwampSrvPrefixAddr. This is the third index for tmnxTwampSrvPrefixTable. Best-fit is used when matching a TWAMP client's IP address against the set of configured prefixes. For example, suppose the first row of this table has the prefix 138.120.0.0/16, and the second row has the prefix 138.120.214.0/24. The TWAMP client address 138.120.214.52 matches the second row.
srvPfxConnCount [Srv Pfx Conn Count] (tmnxTwampSrvPfxConnCount)	long	The value of tmnxTwampSrvPfxConnCount indicates, for the prefix specified by the index values, the number of control connections currently managed by the TWAMP server.

Table 386 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
srvPfxConnsRejected [Srv Pfx Conns Rejected] (tmnxTwampSrvPfxConnsRejected)	long	The value of tmnxTwampSrvPfxConnsRejected indicates, for the prefix specified by the index values, the number of control connection requests which have been rejected by the TWAMP server. An example reject reason: the prefix's limit on the number of active connections has been reached.
srvPfxSessionCount [Srv Pfx Session Count] (tmnxTwampSrvPfxSessionCount)	long	The value of tmnxTwampSrvPfxSessionCount indicates, for the prefix specified by the index values, the number of currently in-progress TWAMP test sessions.
srvPfxTestPacketsRx [Srv Pfx Test Packets Rx] (tmnxTwampSrvPfxTestPacketsRx)	long	The value of tmnxTwampSrvPfxTestPacketsRx indicates, for the prefix specified by the index values, the number of TWAMP test packets received by the TWAMP server.
srvPfxTestPacketsTx [Srv Pfx Test Packets Tx] (tmnxTwampSrvPfxTestPacketsTx)	long	The value of tmnxTwampSrvPfxTestPacketsTx indicates, for the prefix specified by the index values, the number of TWAMP test packets sent by the TWAMP server.
srvPfxTestSessAbort [Srv Pfx Test Sess Abort] (tmnxTwampSrvPfxTestSessAbort)	long	The value of tmnxTwampSrvPfxTestSessAbort indicates, for the prefix specified by the index values, the number of test sessions aborted by the TWAMP server.
srvPfxTestSessCompleted [Srv Pfx Test Sess Completed] (tmnxTwampSrvPfxTestSessCompleted)	long	The value of tmnxTwampSrvPfxTestSessCompleted indicates, for the prefix specified by the index values, the number of test sessions completed by the TWAMP server.
srvPfxTestSessRejected [Srv Pfx Test Sess Rejected] (tmnxTwampSrvPfxTestSessRejected)	long	The value of tmnxTwampSrvPfxTestSessRejected indicates, for the prefix specified by the index values, the number of test sessions rejected by the TWAMP server.

Table 386 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SrvConnsStats MIB entry name: tmnxTwampSrvConnStatsEntry Entry description: tmnxTwampSrvConnStatsEntry contains the statistics for the TWAMP control connection specified by the index values. A row is created by the system when a TWAMP control connection is established. Table description (for tmnxTwampSrvConnStatsTable): tmnxTwampSrvConnStatsTable contains the statistics for each active control connection managed by the TWAMP server. Supports realtime plotting Supports scheduled collection Monitored class: sas.PrefixSrv</p>		
clientAddr [Client Addr] (tmnxTwampSrvConnClientAddr)	String	The value of tmnxTwampSrvConnClientAddr specifies the TWAMP client's address. This is the fifth index for tmnxTwampSrvConnStatsTable.
clientAddrType [Client Addr Type] (tmnxTwampSrvConnClientAddrType)	int	The value of tmnxTwampSrvConnClientAddrType specifies the type of tmnxTwampSrvConnClientAddr. This is the fourth index for tmnxTwampSrvConnStatsTable.
connIdleTime [Conn Idle Time] (tmnxTwampSrvConnIdleTime)	long	The value of tmnxTwampSrvConnIdleTime specifies the elapsed time, in seconds, since a TWAMP message was received on this control connection. When this value exceeds tmnxTwampSrvInactTimeout, the connection will be torn down.
connSessionCount [Conn Session Count] (tmnxTwampSrvConnSessionCount)	long	The value of tmnxTwampSrvConnSessionCount indicates, for the connection specified by the index values, the number of currently in-progress TWAMP test sessions.
connState [Conn State] (tmnxTwampSrvConnState)	int	The value of tmnxTwampSrvConnState indicates the operational state of a control connection managed by the TWAMP server. Code points: setUp(1) - the connection is being established ready(2) - the connection is ready to accept test sessions running(3) - the connection is running a test.

Table 386 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
connTestPacketsRx [Conn Test Packets Rx] (tmnxTwampSrvConnTestPacketsRx)	long	The value of tmnxTwampSrvConnTestPacketsRx indicates, for the connection specified by the index values, the number of TWAMP test packets received by the TWAMP server.
connTestPacketsTx [Conn Test Packets Tx] (tmnxTwampSrvConnTestPacketsTx)	long	The value of tmnxTwampSrvConnTestPacketsTx indicates, for the connection specified by the index values, the number of TWAMP test packets sent by the TWAMP server.
connTestSessComplete [Conn Test Sess Complete] (tmnxTwampSrvConnTestSessComplete)	long	The value of tmnxTwampSrvConnTestSessComplete indicates, for the connection specified by the index values, the number of test sessions completed by the TWAMP server.
connTestSessRejected [Conn Test Sess Rejected] (tmnxTwampSrvConnTestSessRejected)	long	The value of tmnxTwampSrvConnTestSessRejected indicates, for the connection specified by the index values, the number of test sessions rejected by the TWAMP server.
prefixAddr [Prefix Addr] (tmnxTwampSrvPrefixAddr)	String	The value of tmnxTwampSrvPrefixAddr specifies, in conjunction with tmnxTwampSrvPrefixAddrType and tmnxTwampSrvPrefixLen, a prefix to be matched against a TWAMP client address. This is the second index for tmnxTwampSrvPrefixTable.
prefixAddrType [Prefix Addr Type] (tmnxTwampSrvPrefixAddrType)	int	The value of tmnxTwampSrvPrefixAddrType specifies the type of tmnxTwampSrvPrefixAddr. This is the first index for tmnxTwampSrvPrefixTable.
prefixLen [Prefix Len] (tmnxTwampSrvPrefixLen)	int	The value of tmnxTwampSrvPrefixLen specifies the number of bits to match when comparing a TWAMP client address in an incoming message to tmnxTwampSrvPrefixAddr. This is the third index for tmnxTwampSrvPrefixTable. Best-fit is used when matching a TWAMP client's IP address against the set of configured prefixes. For example, suppose the first row of this table has the prefix 138.120.0/16, and the second row has the prefix 138.120.214.0/24. The TWAMP client address 138.120.214.52 matches the second row.

Table 386 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
seqNum [Seq Num] (tmnxTwampSrvConnSeqNum)	int	The value of tmnxTwampSrvConnSeqNum specifies this control connection's sequence number. This is the sixth index for tmnxTwampSrvConnStatsTable - it allows n>1 rows (i.e. n>1 connections) for one client.
TwampSrvStats MIB entry name: tmnxTwampStatisticsScalarObjs Supports realtime plotting Supports scheduled collection Monitored class: sas.TwampSrv		
twampSrvConnectionCount [Twamp Srv Connection Count] (tmnxTwampSrvConnectionCount)	long	The value of tmnxTwampSrvConnectionCount indicates the number of control connections currently managed by the TWAMP server.
twampSrvConnectionsRejected [Twamp Srv Connections Rejected] (tmnxTwampSrvConnectionsRejected)	long	The value of tmnxTwampSrvConnectionsRejected indicates the total number of control connection requests which have been rejected by the TWAMP server. Example reject reasons: the server's limit on the number of active connections has been reached; the client's IP address does not match any of the prefixes configured on the TWAMP server.
twampSrvOperStat [Twamp Srv Oper Stat] (tmnxTwampSrvOperState)	long	The value of tmnxTwampSrvOperState indicates if the TWAMP server is operationally 'inService(2)', or 'outOfService(3)'.
twampSrvSessionCount [Twamp Srv Session Count] (tmnxTwampSrvSessionCount)	long	The value of tmnxTwampSrvSessionCount indicates the number of currently in-progress TWAMP test sessions.
twampSrvTestPacketsRx [Twamp Srv Test Packets Rx] (tmnxTwampSrvTestPacketsRx)	long	The value of tmnxTwampSrvTestPacketsRx indicates the total number of TWAMP test packets received by the TWAMP server.

Table 386 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
twampSrvTestPacketsTx [Twamp Srv Test Packets Tx] (tmnxTwampSrvTestPacketsTx)	long	The value of tmnxTwampSrvTestPacketsTx indicates the total number of TWAMP test packets sent by the TWAMP server.
twampSrvTestSessAborted [Twamp Srv Test Sess Aborted] (tmnxTwampSrvTestSessAborted)	long	The value of tmnxTwampSrvTestSessAborted indicates the total number of test sessions aborted by the TWAMP server.
twampSrvTestSessCompleted [Twamp Srv Test Sess Completed] (tmnxTwampSrvTestSessCompleted)	long	The value of tmnxTwampSrvTestSessCompleted indicates the total number of test sessions completed by the TWAMP server.
twampSrvTestSessRejected [Twamp Srv Test Sess Rejected] (tmnxTwampSrvTestSessRejected)	long	The value of tmnxTwampSrvTestSessRejected indicates the total number of test sessions rejected by the TWAMP server.
twampSrvUpTime [Twamp Srv Up Time] (tmnxTwampSrvUpTime)	long	The value of tmnxTwampSrvUpTime indicates the time elapsed, in seconds, since the most recent transition of tmnxTwampSrvOperState to 'inService(2)'. If tmnxTwampSrvOperState is not 'inService(2)', zero is returned.
<p>TwlReflectorStats</p> <p>MIB entry name: tmnxOamPmStsTwlRflEntry</p> <p>Entry description: tmnxOamPmStsTwlRflEntry contains the statistics for the specified OAM Performance Monitoring TWAMP-Light reflector. SROS creates a row in this table when a corresponding row is created in tmnxOamPmCfgTwlRflTable. SROS destroys a row in this table when a corresponding row is destroyed in tmnxOamPmCfgTwlRflTable. The encoding of the index is explained in the DESCRIPTION clause for tmnxOamPmCfgTwlRflEntry.</p> <p>Table description (for tmnxOamPmStsTwlRflTable): tmnxOamPmStsTwlRflTable contains the statistics for OAM Performance Monitoring TWAMP-Light reflectors.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sas.TwlReflector</p>		

Table 386 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
framesRx [Frames Rx] (tmnxOamPmStsTwIRflFramesRx)	long	The value of tmnxOamPmStsTwIRflFramesRx indicates the number of TWAMP-Test frames received by the specified reflector.
framesTx [Frames Tx] (tmnxOamPmStsTwIRflFramesTx)	long	The value of tmnxOamPmStsTwIRflFramesTx indicates the number of TWAMP-Test frames transmitted by the specified reflector.
upTime [Up Time] (tmnxOamPmStsTwIRflUpTime)	long	The value of tmnxOamPmStsTwIRflUpTime indicates the time elapsed since the most recent transition of the reflector's administrative status to 'enabled(1)'. Zero is returned if the reflector's administrative status is 'disabled(2)'.

Table 387 securitypolicy statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PolicerGroupStats</p> <p>MIB entry name: aluSecPolicerGrpOperEntry</p> <p>Entry description: Each row entry represents a particular security app group.</p> <p>Table description (for aluSecPolicerGrpOperTable): The aluSecPolicerGrpOperTable has an entry for each security policer group configured globally on this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: securitypolicy.PolicerGroup</p>		
policerFwdBytesPassed [Policer Fwd Bytes Passed] (aluSecPolicerGrpOperFwdBytesPassed)	java. math. BigInteger	Bytes passed thru policer in session forward direction.
policerFwdPktsDrop [Policer Fwd Pkts Drop] (aluSecPolicerGrpOperFwdPktsDrop)	java. math. BigInteger	Pkts dropped by policer in session forward direction.
policerFwdPktsPassed [Policer Fwd Pkts Passed] (aluSecPolicerGrpOperFwdPktsPassed)	java. math. BigInteger	Pkts passed thru policer in session forward direction.
policerGrpId [Policer Grp Id] (aluSecPolicerGrpOperId)	long	The value of the object aluSecPolicerGrpOperId specifies the unique policer group id.
policerGrpOperDescription [Policer Grp Oper Description] (aluSecPolicerGrpOperDescription)	String	Description of this security policer group.

Table 387 securitypolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
policerGrpOperName [Policer Grp Oper Name] (aluSecPolicerGrpOperName)	String	Name of the security policer group.
policerGrpRate [Policer Grp Rate] (aluSecPolicerGrpOperRate)	int	The aluSecPolicerGrpOperRate object specifies the maximum ingress bandwidth (in mega-bits per second) that the policer can receive. A value of -1 means that no policing will be performed.
policerGrpRateCbs [Policer Grp Rate Cbs] (aluSecPolicerGrpOperRateCbs)	long	aluSecPolicerGrpOperRateCbs specifies the committed burst size that hard policer can accept while complying to the ingress rate aluSecPolicerGrpOperRate.
policerRevBytesPassed [Policer Rev Bytes Passed] (aluSecPolicerGrpOperRevBytesPassed)	java. math. BigInteger	Bytes passed thru policer in session reverse direction.
policerRevPktsDrop [Policer Rev Pkts Drop] (aluSecPolicerGrpOperRevPktsDrop)	java. math. BigInteger	Pkts dropped by policer in session reverse direction.
policerRevPktsPassed [Policer Rev Pkts Passed] (aluSecPolicerGrpOperRevPktsPassed)	java. math. BigInteger	Pkts passed thru policer in session reverse direction.
policyRefCount [Policy Ref Count] (aluSecPolicerGrpOperPlcyRefCount)	int	Number of policy references.

Table 387 securitypolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SecuritySessionStats MIB entry name: aluSecSessionStatsEntry Entry description: Each row entry represents an active session. Table description (for aluSecSessionStatsTable): The aluSecSessionStatsTable has an entry for each active session. Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement</p>		
fwdBytesPassed [Fwd Bytes Passed] (aluSecSessionFwdBytesPassed)	java. math. BigInteger	Bytes passed thru session in forward direction.
fwdDropActionPkts [Fwd Drop Action Pkts] (aluSecSessionFwdDropActionPkts)	java. math. BigInteger	Packets/Fragments dropped due to session action being drop.
fwdDropIpOptPkts [Fwd Drop Ip Opt Pkts] (aluSecSessionFwdDropIpOptPkts)	java. math. BigInteger	Packets dropped due to containing prohibited IP Options for this session.
fwdDropMaxIcmpErr [Fwd Drop Max Icmp Err] (aluSecSessionFwdDropMaxIcmpErr)	java. math. BigInteger	ICMP Error Packets dropped due to exceeding the maximum number of errors permitted for this session.
fwdDropMaxPkts [Fwd Drop Max Pkts] (aluSecSessionFwdDropMaxPkts)	java. math. BigInteger	Packets dropped due to exceeding the maximum number of packets permitted for this session.
fwdPktsPassed [Fwd Pkts Passed] (aluSecSessionFwdPktsPassed)	java. math. BigInteger	Pkts passed thru session in forward direction.

Table 387 securitypolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fwdPolicerDrop [Fwd Policer Drop] (aluSecSessionFwdPolicerDrop)	java. math. BigInteger	Packets dropped due to rate exceeded in policer.
fwdSecDrop [Fwd Sec Drop] (aluSecSessionFwdSecurityDrop)	java. math. BigInteger	Packets dropped due to applications inseptions.
inboundZoneId [Inbound Zone Id] (aluSecSessionInboundZoneId)	long	The value of aluSecSessionInboundZoneId specifies the zone this session is entering.
outboundZoneId [Outbound Zone Id] (aluSecSessionOutboundZoneId)	long	The value of aluSecSessionOutboundZoneId specifies the zone this session is leaving.
revBytesPassed [Rev Bytes Passed] (aluSecSessionRevBytesPassed)	java. math. BigInteger	Bytes passed thru session in reverse direction.
revDropActionPkts [Rev Drop Action Pkts] (aluSecSessionRevDropActionPkts)	java. math. BigInteger	Packets/Fragments dropped due to session action being drop.
revDropIpOptPkts [Rev Drop Ip Opt Pkts] (aluSecSessionRevDropIpOptPkts)	java. math. BigInteger	Packets dropped due to containing prohibited IP Options for this session.
revDropMaxIcmpErr [Rev Drop Max Icmp Err] (aluSecSessionRevDropMaxIcmpErr)	java. math. BigInteger	ICMP Error Packets dropped due to exceeding the maximum number of errors permitted for this session.

Table 387 securitypolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
revDropMaxPkts [Rev Drop Max Pkts] (aluSecSessionRevDropMaxPkts)	java. math. BigInteger	Packets dropped due to exceeding the maximum number of packets permitted for this session.
revPktsPassed [Rev Pkts Passed] (aluSecSessionRevPktsPassed)	java. math. BigInteger	Pkts passed thru session in reverse direction.
revPolicerDrop [Rev Policer Drop] (aluSecSessionRevPolicerDrop)	java. math. BigInteger	Packets dropped due to rate exceeded in policer.
revSecDrop [Rev Sec Drop] (aluSecSessionRevSecurityDrop)	java. math. BigInteger	Packets dropped due to applications inspections.
sessionId [Session Id] (aluSecSessionId)	long	The value of aluSecSessionId specifies the session index for this active session.
<p>ZonePolicyStats MIB entry name: aluZonePlcyOperEntry Entry description: Each row entry represents a particular zone entry. Table description (for aluZonePlcyOperTable): The aluZonePlcyOperTable describes the active policy of this zone. This table is a flattened ordered list of rules for this zone based on the security policies that have been activated. Supports realtime plotting Supports scheduled collection Monitored class: securitypolicy.Zone</p>		
isActive [Is Active] (aluZonePlcyOperActive)	boolean	The value of the object aluZonePlcyOperActive indicates whether this rule is active for rule parsing in the zone policy.

Table 387 securitypolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ruleActiveSessions [Rule Active Sessions] (aluZonePlcyOperRuleActiveSessions)	java. math. BigInteger	The value of aluZonePlcyOperRuleActiveSessions specifies the number of currently active sessions this rule has outstanding.
ruleHitCount [Rule Hit Count] (aluZonePlcyOperRuleHitCount)	java. math. BigInteger	The value of aluZonePlcyOperRuleHitCount specifies the number of times this rule has been matched.
ruleId [Rule Id] (aluZonePlcyOperRuleId)	long	The value of the object aluZonePlcyOperRuleId rule id of each operational rule in the Zone. The rule id is assigned by the system based on the security policies that have been activated on this zone.
zoneId [Zone Id] (aluZoneOperId)	long	The value of the object aluZoneOperId specifies the unique id of the Zone in the system.
<p>ZoneQueueStats MIB entry name: aluSecZoneStatsEntry Entry description: Each row entry represents stats for a security zone. Table description (for aluSecZoneStatsTable): The aluSecZoneStatsTable has an entry for each security zone Supports realtime plotting Supports scheduled collection Monitored class: securitypolicy.Zone</p>		
rxCtrlQueueAutoBind [Rx Ctrl Queue Auto Bind] (aluSecZoneRxCtrlQueueAutoBind)	boolean	All Auto-Bind zones share a single Rx Control Queue. This object indicates whether this zone row is displaying the aggregates stats for all Auto-Bind Zones
rxCtrlQueueDropBytes [Rx Ctrl Queue Drop Bytes] (aluSecZoneRxCtrlQueueDroBytes)	java. math. BigInteger	Bytes dropped from the Receiving Security Control Queue

Table 387 securitypolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxCtrlQueueDropPkts [Rx Ctrl Queue Drop Pkts] (aluSecZoneRxCtrlQueueDroPkts)	java. math. BigInteger	Pkts dropped from the Receiving Security Control Queue
rxCtrlQueueFwdBytes [Rx Ctrl Queue Fwd Bytes] (aluSecZoneRxCtrlQueueFwdBytes)	java. math. BigInteger	Bytes forwarded from the Receiving Security Control Queue to security engine for further inspection
rxCtrlQueueFwdPkts [Rx Ctrl Queue Fwd Pkts] (aluSecZoneRxCtrlQueueFwdPkts)	java. math. BigInteger	Pkts forwarded from the Receiving Security Control Queue to security engine for further inspection
zoneld [Zone Id] (aluSecZoneld)	long	The value of aluSecZoneld specifies the security zone index for this row entry.
<p>ZoneStats MIB entry name: aluZoneOperEntry Entry description: Each row entry represents a particular zone. Table description (for aluZoneOperTable): The aluZoneOperTable has an entry for each zone configured on this system. Supports realtime plotting Supports scheduled collection Monitored class: securitypolicy.Zone</p>		
byPassZoneConfig [By Pass Zone Config] (aluZoneOperBypass)	boolean	The value of aluZoneOperBypass specifies whether this zone is being bypassed.
inActiveSessions [In Active Sessions] (aluZoneOperInActiveSessions)	java. math. BigInteger	The value of the object aluZoneOperInActiveSessions indicates the number of currently active inbound sessions for this zone.

Table 387 securitypolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
inBytesDefAction [In Bytes Def Action] (aluZoneOperInBytesDefAction)	java. math. BigInteger	The number of inbound bytes that the default action was applied.
inBytesDropped [In Bytes Dropped] (aluZoneOperInBytesDropped)	java. math. BigInteger	The number of inbound bytes dropped due to policy.
inDropAction [In Drop Action] (aluZoneOperInDropAction)	java. math. BigInteger	The accumulated number of inbound sessions with drop action.
inFwdAction [In Fwd Action] (aluZoneOperInFwdAction)	java. math. BigInteger	The accumulated number of inbound sessions with forward action.
inIcmpActiveSessions [In Icmp Active Sessions] (aluZoneOperInIcmpActSessions)	java. math. BigInteger	The value of the object aluZoneOperInIcmpActSessions indicates the number of active sessions with protocol ICMP.
inIcmpSessionLimit [In Icmp Session Limit] (aluZoneOperInIcmpSessLimit)	long	The value of the object aluZoneOperInIcmpSessLimit indicates the number of permitted active in sessions with protocol ICMP.
inNatAction [In Nat Action] (aluZoneOperInNatAction)	java. math. BigInteger	The accumulated number of inbound sessions with NAT action.
inOtherActiveSessions [In Other Active Sessions] (aluZoneOperInOthActSessions)	java. math. BigInteger	The value of the object aluZoneOperInOthActiveSessions indicates the number of active sessions of all other protocols.

Table 387 securitypolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
inOtherSessionLimit [In Other Session Limit] (aluZoneOperInOthSessLimit)	long	The value of the object aluZoneOperInOthSessLimit indicates the number of permitted active in sessions of all other protocols.
inPktsDefAction [In Pkts Def Action] (aluZoneOperInPktsDefAction)	java. math. BigInteger	The number of inbound packets that the default action was applied.
inPktsDropped [In Pkts Dropped] (aluZoneOperInPktsDropped)	java. math. BigInteger	The number of inbound packets dropped due to policy.
inSessionCount [In Session Count] (aluZoneOperInSessionCount)	java. math. BigInteger	The value of the object aluZoneOperInSessionCount indicates the total number of inbound sessions ever established for this zone.
inTcpActiveSessions [In Tcp Active Sessions] (aluZoneOperInTcpActSessions)	java. math. BigInteger	The value of the object aluZoneInOperTcpActSessions indicates the number of active sessions with protocol TCP.
inTcpSessionLimit [In Tcp Session Limit] (aluZoneOperInTcpSessLimit)	long	The value of the object aluZoneOperInTcpSessLimit indicates the number of permitted active in sessions with protocol TCP.
inUdpActiveSessions [In Udp Active Sessions] (aluZoneOperInUdpActSessions)	java. math. BigInteger	The value of the object aluZoneInOperUdpActSessions indicates the number of active sessions with protocol UDP.
inUdpSessionLimit [In Udp Session Limit] (aluZoneOperInUdpSessLimit)	long	The value of the object aluZoneOperInUdpSessLimit indicates the number of permitted active in sessions with protocol UDP.

Table 387 securitypolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outActiveSessions [Out Active Sessions] (aluZoneOperOutActiveSessions)	java. math. BigInteger	The value of the object aluZoneOperOutActiveSessions indicates the number of currently active outbound sessions for this zone.
outBytesDefAction [Out Bytes Def Action] (aluZoneOperOutBytesDefAction)	java. math. BigInteger	The number of outbound bytes that the default action was applied.
outBytesDropped [Out Bytes Dropped] (aluZoneOperOutBytesDropped)	java. math. BigInteger	The number of outbound bytes dropped due to policy.
outDropAction [Out Drop Action] (aluZoneOperOutDropAction)	java. math. BigInteger	The accumulated number of outbound sessions with drop action.
outFwdAction [Out Fwd Action] (aluZoneOperOutFwdAction)	java. math. BigInteger	The accumulated number of outbound sessions with forward action.
outIcmpActiveSessions [Out Icmp Active Sessions] (aluZoneOperOutIcmpActSessions)	java. math. BigInteger	The value of the object aluZoneOperOutIcmpActSessions indicates the number of active sessions with protocol ICMP.
outIcmpSessionLimit [Out Icmp Session Limit] (aluZoneOperOutIcmpSessLimit)	long	The value of the object aluZoneOperInIcmpSessLimit indicates the number of permitted active out sessions with protocol ICMP.
outNatAction [Out Nat Action] (aluZoneOperOutNatAction)	java. math. BigInteger	The accumulated number of outbound sessions with NAT action.

Table 387 securitypolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outOtherActiveSessions [Out Other Active Sessions] (aluZoneOperOutOthActSessions)	java. math. BigInteger	The value of the object aluZoneOperOutOthActSessions indicates the number of active sessions of all other protocols.
outOtherSessionLimit [Out Other Session Limit] (aluZoneOperOutOthSessLimit)	long	The value of the object aluZoneOperInOthSessLimit indicates the number of permitted active out sessions of all other protocols.
outPktsDefAction [Out Pkts Def Action] (aluZoneOperOutPktsDefAction)	java. math. BigInteger	The number of outbound packets that the default action was applied.
outPktsDropped [Out Pkts Dropped] (aluZoneOperOutPktsDropped)	java. math. BigInteger	The number of outbound packets dropped due to policy.
outSessionCount [Out Session Count] (aluZoneOperOutSessionCount)	java. math. BigInteger	The value of the object aluZoneOperOutSessionCount indicates the total number of outbound sessions ever established for this zone.
outTcpActiveSessions [Out Tcp Active Sessions] (aluZoneOperOutTcpActSessions)	java. math. BigInteger	The value of the object aluZoneOperOutTcpActSessions indicates the number of active sessions with protocol TCP.
outTcpSessionLimit [Out Tcp Session Limit] (aluZoneOperOutTcpSessLimit)	long	The value of the object aluZoneOperInTcpSessLimit indicates the number of permitted active outsessions with protocol TCP.
outUdpActiveSessions [Out Udp Active Sessions] (aluZoneOperOutUdpActSessions)	java. math. BigInteger	The value of the object aluZoneOperUdpActSessions indicates the number of active sessions with protocol UDP.

Table 387 securitypolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outUdpSessionLimit [Out Udp Session Limit] (aluZoneOperOutUdpSessLimit)	long	The value of the object aluZoneOperInUdpSessLimit indicates the number of permitted active out sessions with protocol UDP.
zoneId [Zone Id] (aluZoneOperId)	long	The value of the object aluZoneOperId specifies the unique id of the Zone in the system.
zoneName [Zone Name] (aluZoneOperName)	String	The value of the object aluZoneOperName specifies the name of the Zone in the system.
zonePlcyLastCommit [Zone Plcy Last Commit] (aluZoneOperPlcyLastCommit)	long	The last time a commit was performed on this zone.
zonePlcyRuleCount [Zone Plcy Rule Count] (aluZoneOperPlcyRuleCount)	int	The value of aluZoneOperPlcyRuleCount indicates the number of rules that this policy contains based on the security policies activated on this zone.
zoneSvcId [Zone Svc Id] (aluZoneOperSvcId)	int	Specifies the service this zone belongs to when zone type is 'service'.

Table 388 service statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CemSapStats MIB entry name: sapCemStatsEntry Entry description: Statistics for a specific CEM SAP. Table description (for sapCemStatsTable): A table that contains CEM SAP statistics. Supports realtime plotting Supports scheduled collection Monitored class: service.L2AccessInterface</p>		
cemStatsEgressDroppedPkts [Cem Stats Egress Dropped Pkts] (sapCemStatsEgressDroppedPkts)	long	The value of sapCemStatsEgressDroppedPkts indicates the total number of packets that were dropped due to errors.
cemStatsEgressESs [Cem Stats Egress ESs] (sapCemStatsEgressESs)	long	The value of sapCemStatsEgressESs indicates the number of Error Seconds (ESs) encountered. Any malformed packet, seq. error, LOPS and similar are considered as error seconds.
cemStatsEgressFailureCounts [Cem Stats Egress Failure Counts] (sapCemStatsEgressFailureCounts)	long	The value of sapCemStatsEgressFailureCounts indicates the number failure events. A failure event begins when the LOPS failure is declared, and ends when the failure is cleared.
cemStatsEgressForwardedPkts [Cem Stats Egress Forwarded Pkts] (sapCemStatsEgressForwardedPkts)	long	The value of sapCemStatsEgressForwardedPkts indicates the number of packets that were successfully forwarded.
cemStatsEgressJtrBfrDepth [Cem Stats Egress Jtr Bfr Depth] (sapCemStatsEgressJtrBfrDepth)	long	The value of sapCemStatsEgressJtrBfrDepth indicates the current packet depth of the jitter buffer.
cemStatsEgressJtrBfrOverruns [Cem Stats Egress Jtr Bfr Overruns] (sapCemStatsEgressJtrBfrOverruns)	long	The value of sapCemStatsEgressJtrBfrOverruns indicates the number of times a packet was dropped because it could not fit in the jitter buffer.

Table 388 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cemStatsEgressJtrBfrUnderruns [Cem Stats Egress Jtr Bfr Underruns] (sapCemStatsEgressJtrBfrUnderruns)	long	The value of sapCemStatsEgressJtrBfrUnderruns indicates the number of times a packet needed to be played out and the jitter buffer was empty.
cemStatsEgressLBitDropped [Cem Stats Egress LBit Dropped] (sapCemStatsEgressLBitDropped)	long	The value of sapCemStatsEgressLBitDropped indicates the number of packets dropped due to the L bit set by the far end.
cemStatsEgressMalformedPkts [Cem Stats Egress Malformed Pkts] (sapCemStatsEgressMalformedPkts)	long	The value of sapCemStatsEgressMalformedPkts indicates the number of packets detected with unexpected size, or bad headers' stack.
cemStatsEgressMisOrderDropped [Cem Stats Egress Mis Order Dropped] (sapCemStatsEgressMisOrderDropped)	long	The value of sapCemStatsEgressMisOrderDropped indicates the number of packets detected out of order (via control word sequence numbers), and could not be re-ordered, or could not be placed in the jitter buffer because it was out of the current window.
cemStatsEgressMissingPkts [Cem Stats Egress Missing Pkts] (sapCemStatsEgressMissingPkts)	long	The value of sapCemStatsEgressMissingPkts indicates the number of missing packets (as detected via control word sequence number gaps).
cemStatsEgressMultipleDropped [Cem Stats Egress Multiple Dropped] (sapCemStatsEgressMultipleDropped)	long	The value of sapCemStatsEgressMultipleDropped indicates the number of packets dropped due to multiple sequence numbers.
cemStatsEgressOverrunCounts [Cem Stats Egress Overrun Counts] (sapCemStatsEgressOverrunCounts)	long	The value of sapCemStatsEgressOverrunCounts indicates the number of times the jitter buffer went into an overrun state.
cemStatsEgressPktsReOrder [Cem Stats Egress Pkts Re Order] (sapCemStatsEgressPktsReOrder)	long	The value of sapCemStatsEgressPktsReOrder indicates the number of packets detected out of sequence (via control word sequence number), but successfully re-ordered.

Table 388 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cemStatsEgressSESSs [Cem Stats Egress SESSs] (sapCemStatsEgressSESSs)	long	The value of sapCemStatsEgressSESSs indicates the number of Severely Error Seconds (SESSs) encountered. This is when more than 30 percent of the packets within a one second window are missing.
cemStatsEgressUASs [Cem Stats Egress UASs] (sapCemStatsEgressUASs)	long	The value of sapCemStatsEgressUASs indicates the number of Unavailable Seconds (UASs) encountered. Any consecutive ten seconds of SESSs are counted as one UAS.
cemStatsEgressUnderrunCounts [Cem Stats Egress Underrun Counts] (sapCemStatsEgressUnderrunCounts)	long	The value of sapCemStatsEgressUnderrunCounts indicates the number of times the jitter buffer went into an underrun state.
cemStatsIngressDroppedPkts [Cem Stats Ingress Dropped Pkts] (sapCemStatsIngressDroppedPkts)	long	The value of sapCemStatsIngressDroppedPkts indicates the total number of packets that were dropped due to errors.
cemStatsIngressForwardedPkts [Cem Stats Ingress Forwarded Pkts] (sapCemStatsIngressForwardedPkts)	long	The value of sapCemStatsIngressForwardedPkts indicates the number of packets that were successfully forwarded.
<p>SapBaseStats MIB entry name: sapBaseStatsEntry Entry description: Basic statistics about a specific SAP. Table description (for sapBaseStatsTable): A table that contains basic SAP statistics. In the descriptions below 'Pchip' refers to the Nokia SROS series Packet Processing chip, while 'Qchip' refers to the Nokia SROS series QoS Queueing Engine chip. Table 388 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
customerId [Customer Id] (sapBaseStatsCustId)	long	The Customer ID for the associated service.
egressQChipDroppedInProfOctets [Egress QChip Dropped In Prof Octets] (sapBaseStatsEgressQchipDroppedInProfOctets)	java. math. BigInteger	The number of in-profile octets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
egressQChipDroppedInProfPackets [Egress QChip Dropped In Prof Packets] (sapBaseStatsEgressQchipDroppedInProfPackets)	java. math. BigInteger	The number of in-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
egressQChipDroppedOutProfOctets [Egress QChip Dropped Out Prof Octets] (sapBaseStatsEgressQchipDroppedOutProfOctets)	java. math. BigInteger	The number of out-of-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
egressQChipDroppedOutProfPackets [Egress QChip Dropped Out Prof Packets] (sapBaseStatsEgressQchipDroppedOutProfPackets)	java. math. BigInteger	The number of out-of-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
egressQChipForwardedInProfOctets [Egress QChip Forwarded In Prof Octets] (sapBaseStatsEgressQchipForwardedInProfOctets)	java. math. BigInteger	The number of in-profile octets (rate below CIR) forwarded by the egress Qchip.
egressQChipForwardedInProfPackets [Egress QChip Forwarded In Prof Packets] (sapBaseStatsEgressQchipForwardedInProfPackets)	java. math. BigInteger	The number of in-profile packets (rate below CIR) forwarded by the egress Qchip.

Table 388 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egressQChipForwardedOutProfOctets [Egress QChip Forwarded Out Prof Octets] (sapBaseStatsEgressQchipFor- wardedOutProfOctets)	java. math. BigInte- ger	The number of out-of-profile octets (rate above CIR) forwarded by the egress Qchip.
egressQChipForwardedOutProfPackets [Egress QChip Forwarded Out Prof Packets] (sapBaseStatsEgressQchipFor- wardedOutProfPackets)	java. math. BigInte- ger	The number of out-of-profile packets (rate above CIR) forwarded by the egress Qchip.
ingressPChipDroppedOctets [Ingress PChip Dropped Octets] (sapBaseStatsIngressPchipDroppedOctets)	java. math. BigInte- ger	The number of octets dropped by the ingress Pchip due to: SAP state, ingress MAC, IP or IPv6 filter, same segment discard, bad checksum, etc.
ingressPChipDroppedPackets [Ingress PChip Dropped Packets] (sapBaseStatsIngressPchip- DroppedPackets)	java. math. BigInte- ger	The number of packets dropped by the ingress Pchip due to: SAP state, ingress MAC, IP or IPv6 filter, same segment discard, bad checksum, etc.
ingressPChipOfferedHiPrioOctets [Ingress PChip Offered Hi Prio Octets] (sapBaseStatsIngressPchipOf- feredHiPrioOctets)	java. math. BigInte- ger	The number of high priority octets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressPChipOfferedHiPrioPackets [Ingress PChip Offered Hi Prio Packets] (sapBaseStatsIngressPchipOf- feredHiPrioPackets)	java. math. BigInte- ger	The number of high priority packets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressPChipOfferedLoPrioOctets [Ingress PChip Offered Lo Prio Octets] (sapBaseStatsIngressPchipOf- feredLoPrioOctets)	java. math. BigInte- ger	The number of low priority octets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.

Table 388 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingressPChipOfferedLoPrioPackets [Ingress PChip Offered Lo Prio Packets] (sapBaseStatsIngressPchipOf- feredLoPrioPackets)	java. math. BigInte- ger	The number of low priority packets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressQChipDroppedHiPrioOctets [Ingress QChip Dropped Hi Prio Octets] (sapBaseStatsIngressQchip- DroppedHiPrioOctets)	java. math. BigInte- ger	The number of high priority octets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipDroppedHiPrioPackets [Ingress QChip Dropped Hi Prio Packets] (sapBaseStatsIngressQchip- DroppedHiPrioPackets)	java. math. BigInte- ger	The number of high priority packets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipDroppedLoPrioOctets [Ingress QChip Dropped Lo Prio Octets] (sapBaseStatsIngressQchip- DroppedLoPrioOctets)	java. math. BigInte- ger	The number of low priority octets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipDroppedLoPrioPackets [Ingress QChip Dropped Lo Prio Packets] (sapBaseStatsIngressQchip- DroppedLoPrioPackets)	java. math. BigInte- ger	The number of low priority packets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipForwardedInProfOctets [Ingress QChip Forwarded In Prof Octets] (sapBaseStatsIngressQchipFor- wardedInProfOctets)	java. math. BigInte- ger	The number of in-profile octets (rate below CIR) forwarded by the ingress Qchip.
ingressQChipForwardedInProfPackets [Ingress QChip Forwarded In Prof Packets] (sapBaseStatsIngressQchipFor- wardedInProfPackets)	java. math. BigInte- ger	The number of in-profile packets (rate below CIR) forwarded by the ingress Qchip.

Table 388 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingressQChipForwardedOutProfOctets [Ingress QChip Forwarded Out Prof Octets] (sapBaseStatsIngressQchipFor- wardedOutProfOctets)	java. math. BigInte- ger	The number of out-of-profile octets (rate above CIR) forwarded by the ingress Qchip.
ingressQChipForwardedOutProfPackets [Ingress QChip Forwarded Out Prof Packets] (sapBaseStatsIngressQchipFor- wardedOutProfPackets)	java. math. BigInte- ger	The number of out-of-profile packets (rate above CIR) forwarded by the ingress Qchip.
<p>SapEgrQosQueueStats MIB entry name: sapEgrQosQueueStatsEntry Entry description: Egress statistics about a specific SAP's QoS queue. Table description (for sapIngQosQueueStatsTable): A table that contains ingress QoS queue SAP statistics. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • service.IPsecInterface • service.L2AccessInterface • service.L3AccessInterface 		
customerId [Customer Id] (sapIngQosCustId)	long	The Customer ID for the associated service.
droppedHiPrioOctets [Dropped Hi Prio Octets] (sapIngQosQueueStatsDroppedHiPrioOctets)	java. math. BigInteger	The number of high priority octets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
droppedHiPrioPackets [Dropped Hi Prio Packets] (sapIngQosQueueStatsDroppedHiPrioPackets)	java. math. BigInteger	The number of high priority packets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
droppedLoPrioOctets [Dropped Lo Prio Octets] (sapIngQosQueueStatsDroppedLoPrioOctets)	java. math. BigInteger	The number of low priority octets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.

Table 388 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
droppedLoPrioPackets [Dropped Lo Prio Packets] (sapIngQosQueueStatsDroppedLoPrioPackets)	java. math. BigInteger	The number of low priority packets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
forwardedInProfOctets [Forwarded In Prof Octets] (sapIngQosQueueStatsForwardedInProfOctets)	java. math. BigInteger	The number of in-profile octets (rate below CIR) forwarded by the ingress Qchip.
forwardedInProfPackets [Forwarded In Prof Packets] (sapIngQosQueueStatsForwardedInProfPackets)	java. math. BigInteger	The number of in-profile packets (rate below CIR) forwarded by the ingress Qchip.
forwardedOutProfOctets [Forwarded Out Prof Octets] (sapIngQosQueueStatsForwardedOutProfOctets)	java. math. BigInteger	The number of out-of-profile octets (rate above CIR) forwarded by the ingress Qchip.
forwardedOutProfPackets [Forwarded Out Prof Packets] (sapIngQosQueueStatsForwardedOutProfPackets)	java. math. BigInteger	The number of out-of-profile packets (rate above CIR) forwarded by the ingress Qchip.
offeredHiPrioOctets [Offered Hi Prio Octets] (sapIngQosQueueStatsOfferedHiPrioOctets)	java. math. BigInteger	The number of high priority octets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
offeredHiPrioPackets [Offered Hi Prio Packets] (sapIngQosQueueStatsOfferedHiPrioPackets)	java. math. BigInteger	The number of high priority packets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.

Table 388 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
offeredLoPrioOctets [Offered Lo Prio Octets] (sapIngQosQueueStatsOfferedLoPrioOctets)	java. math. BigInteger	The number of low priority octets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
offeredLoPrioPackets [Offered Lo Prio Packets] (sapIngQosQueueStatsOfferedLoPrioPackets)	java. math. BigInteger	The number of low priority packets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
queueId [Queue Id] (sapIngQosQueueId)	long	The index of the ingress QoS queue of this SAP.
uncoloredOctetsOffered [Uncolored Octets Offered] (sapIngQosQueueStatsUncoloredOctetsOffered)	java. math. BigInteger	The number of uncolored octets offered to the ingress Qchip.
uncoloredPacketsOffered [Uncolored Packets Offered] (sapIngQosQueueStatsUncoloredPacketsOffered)	java. math. BigInteger	The number of uncolored packets offered to the ingress Qchip.
<p>Y1564TestHeadBiDirStats MIB entry name: tmnxTestHdSessEntry Entry description: Information about a particular testhead session. Entries are read-only for the user. Table description (for tmnxTestHdSessTable): This table maintains the information of test sessions. Supports realtime plotting Supports scheduled collection Monitored class: service.Y1564TestHeadBiDirectional</p>		

Table 388 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
maxLatency [Max Latency] (tmnxTestHdSessMaxLatency)	java. math. BigInteger	The Latency measured maximum for this test
measuredJitter [Measured Jitter] (tmnxTestHdSessMeasuredJitter)	long	The Jitter measured for this test
measuredLatency [Measured Latency] (tmnxTestHdSessMeasuredLatency)	java. math. BigInteger	The Latency measured for this test
minLatency [Min Latency] (tmnxTestHdSessMinLatency)	java. math. BigInteger	The Latency measured minimum for this test
packetsReceivedCount [Packets Received Count] (tmnxTestHdSessRecvCount)	java. math. BigInteger	The total number of packets received
packetsTransferredCount [Packets Transferred Count] (tmnxTestHdSessTransCount)	java. math. BigInteger	The total number of packets injected

Table 389 sitesec statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CpmIPv6FilterStats</p> <p>MIB entry name: tCpmIPv6FilterStatsEntry</p> <p>Entry description: Each row entry represents the statistics related to the tCpmIPv6FilterEntry indexed by the same tCpmIPv6FilterEntryId. Entries are created when tCpmIPv6FilterEntry rows are created.</p> <p>Table description (for tCpmIPv6FilterStatsTable): The tCpmIPv6FilterStatsTable has a stats entry for each entry in each CPM filter configured on this system. This table is not supported on SR-1 and ESS-1, where the value of TIMETRA-CHASSIS-MIB::tmnxChassisType is '5'.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sitesec.CpmIPv6FilterEntry</p>		
droppedPackets [Dropped Packets] (tCpmIPv6FilterStatsDroppedPkts)	java. math. BigInteger	The value of tCpmIPv6FilterStatsDroppedPkts indicates the number of packets dropped due to the tCpmIPv6FilterEntry with the same index.
forwardedPackets [Forwarded Packets] (tCpmIPv6FilterStatsForwardedPkts)	java. math. BigInteger	The value of tCpmIPv6FilterStatsForwardedPkts indicates the number of packets forwarded due to the tCpmIPv6FilterEntry with the same index.
<p>CpmIPFilterStats</p> <p>MIB entry name: tCpmIPFilterStatsEntry</p> <p>Entry description: Each row entry represents the statistics related to the tCpmIPFilterEntry indexed by the same tCpmIPFilterEntryId. Entries are created when tCpmIPFilterEntry rows are created.</p> <p>Table description (for tCpmIPFilterStatsTable): The tCpmIPFilterStatsTable has a stats entry for each entry in each CPM filter configured on this system. This table is not supported on SR-1 and ESS-1, where the value of TIMETRA-CHASSIS-MIB::tmnxChassisType is '5'.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sitesec.CpmIPFilterEntry</p>		

Table 389 sitesec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
droppedPackets [Dropped Packets] (tCpmlpFilterStatsDroppedPkts)	java. math. BigInteger	The value of tCpmlpFilterStatsDroppedPkts indicates the number of packets dropped due to the tCpmlpFilterEntry with the same index.
forwardedPackets [Forwarded Packets] (tCpmlpFilterStatsForwardedPkts)	java. math. BigInteger	The value of tCpmlpFilterStatsForwardedPkts indicates the number of packets forwarded due to the tCpmlpFilterEntry with the same index.
<p>MafEntryStats MIB entry name: tmnxIPMafMatchEntry Entry description: Each row entry contains information about a management access filter entry associated with a specific Management Access Filter (MAF). The filter criter is applied in order according to the value of tmnxIPMafMatchIndex. The match algorithm is exited upon the first match found and then the action specified is executed. For this reason, entries must be sequenced from most to least explicit. An entry where tmnxIPMafMatchAction has a value of 'none' is not active. Rows can only be created for tmnxGenMafType's: - ipv4 (1), and. - ipv6 (2). For mac Maf filters a dedicated table is provided (tmnxMacMafMatchTable). Table description (for tmnxIPMafMatchTable): This table replaces the tmnxMafMatchTable. It allows to define both IPv4 and IPv6 MAF IP entries. The tmnxIPMafMatchTable contains ipvx filter match criteria associated with Management Access Filters (MAFs) configured on the system. Supports realtime plotting Supports scheduled collection Monitored class: sitesec.MafEntry</p>		
matchCount [Match Count] (tmnxIPMafMatchCount)	java. math. BigInteger	The value of tmnxIPMafMatchCount indicates the number of times a management packet has matched this filter entry.
<p>PKICertMgrStats MIB entry name: tmnxCertMgrStatsGroup Supports realtime plotting Supports scheduled collection Monitored class: sitesec.SiteSystemSecurityPublicKey</p>		

Table 389 sitesec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
certMgrAuthFailed [Cert Mgr Auth Failed] (tmnxCertMgrAuthFailed)	long	The tmnxCertMgrAuthFailed indicates the number of authentication failures using the certificates.
certMgrAuthPassed [Cert Mgr Auth Passed] (tmnxCertMgrAuthPassed)	long	The tmnxCertMgrAuthPassed indicates the number of authentication checks passed using the certificates.
certMgrTotalAuth [Cert Mgr Total Auth] (tmnxCertMgrTotalAuth)	long	The tmnxCertMgrTotalAuth indicates the number of authentication attempts using the certificates.

Table 390 sonetequipment statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
SonetFarEndLineCurrentStats MIB entry name: sonetFarEndLineCurrentEntry Entry description: An entry in the SONET/SDH Far End Line Current table. Table description (for sonetFarEndLineCurrentTable): The SONET/SDH Far End Line Current table. Supports realtime plotting Supports scheduled collection Monitored class: equipment.PhysicalPort		
codingViolations [Coding Violations] (sonetFarEndLineCurrentCVs)	long	The counter associated with the number of Far End Coding Violations reported via the far end block error count encountered by a SONET/SDH Medium/Section/Line interface in the current 15 minute interval.
erroredSeconds [Errored Seconds] (sonetFarEndLineCurrentESs)	long	The counter associated with the number of Far End Errored Seconds encountered by a SONET/SDH interface in the current 15 minute interval.
severelyErroredSeconds [Severely Errored Seconds] (sonetFarEndLineCurrentSESs)	long	The counter associated with the number of Far End Severely Errored Seconds encountered by a SONET/SDH Medium/Section/Line interface in the current 15 minute interval.
unavailableSeconds [Unavailable Seconds] (sonetFarEndLineCurrentUASs)	long	The counter associated with the number of Far End Unavailable Seconds encountered by a SONET/SDH Medium/Section/Line interface in the current 15 minute interval.

Supports realtime plotting Supports scheduled collection Monitored class: sonetequipment.TributaryChannel		
codingViolations [Coding Violations] (sonetVtCurrentCVs)	long	The counter associated with the number of Coding Violations encountered by a SONET/SDH VT in the current 15 minute interval.
currentStatus [Current Status] (sonetVtCurrentStatus)	long	This variable indicates the status of the interface. The sonetVtCurrentStatus is a bit map represented as a sum, therefore, it can represent multiple defects and failures simultaneously. The sonetVtNoDefect should be set if and only if no other flag is set. The various bit positions are: 1 sonetVtNoDefect 2 sonetVtLOP 4 sonetVtPathAIS 8 sonetVtPathRDI 16 sonetVtPathRFI 32 sonetVtUnequipped 64 sonetVtSignalLabelMismatch
currentWidth [Current Width] (sonetVtCurrentWidth)	int	A value that indicates the type of the SONET VT and SDH VC. Assigned widths are VT1.5/VC11, VT2/VC12, VT3, VT6/VC2, and VT6c.

Table 390 sonetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
erroredSeconds [Errored Seconds] (sonetVTCurrentESs)	long	The counter associated with the number of Errored Seconds encountered by a SONET/SDH VT in the current 15 minute interval.
severelyErroredSeconds [Severely Errored Seconds] (sonetVTCurrentSESSs)	long	The counter associated with the number of Severely Errored Seconds encountered by a SONET/SDH VT in the current 15 minute interval.
unavailableSeconds [Unavailable Seconds] (sonetVTCurrentUASs)	long	The counter associated with the number of Unavailable Seconds encountered by a VT in the current 15 minute interval.
<p>SonetVTIntervalStats MIB entry name: sonetVTIntervalEntry Entry description: An entry in the SONET/SDH VT Interval table. Table description (for sonetVTIntervalTable): The SONET/SDH VT Interval table. Supports realtime plotting Supports scheduled collection Monitored class: sonetequipment.TributaryChannel</p>		
codingViolations [Coding Violations] (sonetVTIntervalCVs)	long	The counter associated with the number of Coding Violations encountered by a SONET/SDH VT in a particular 15-minute interval in the past 24 hours.
erroredSeconds [Errored Seconds] (sonetVTIntervalESs)	long	The counter associated with the number of Errored Seconds encountered by a SONET/SDH VT in a particular 15-minute interval in the past 24 hours.
intervalNumber [Interval Number] (sonetVTIntervalNumber)	int	A number between 1 and 96, which identifies the interval for which the set of statistics is available. The interval identified by 1 is the most recently completed 15 minute interval, and the interval identified by N is the interval immediately preceding the one identified by N-1.

Table 390 sonetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
severelyErroredSeconds [Severely Errored Seconds] (sonetVTIntervalSESs)	long	The counter associated with the number of Severely Errored Seconds encountered by a SONET/SDH VT in a particular 15-minute interval in the past 24 hours.
unavailableSeconds [Unavailable Seconds] (sonetVTIntervalUASs)	long	The counter associated with the number of Unavailable Seconds encountered by a VT in a particular 15-minute interval in the past 24 hours.

lineErroredSeconds [Line Errored Seconds] (dsx1CurrentLESs)	long	The number of Line Errored Seconds.
pBitCodingViolations [PBit Coding Violations] (dsx1CurrentPCVs)	long	The number of Path Coding Violations.
severelyErroredFramingSeconds [Severely Errored Framing Seconds] (dsx1CurrentSEFSs)	long	The number of Severely Errored Framing Seconds.
severelyErroredSeconds [Severely Errored Seconds] (dsx1CurrentSESSs)	long	The number of Severely Errored Seconds.
unavailableSeconds [Unavailable Seconds] (dsx1CurrentUASs)	long	The number of Unavailable Seconds.
DS1IntervalStats MIB entry name: dsx1IntervalEntry Entry description: An entry in the DS1 Interval table. Table description (for dsx1IntervalTable): The DS1 Interval Table contains various statistics collected by each DS1 Interface over the previous 24 hours of operation. The past 24 hours are broken into 96 completed 15 minute intervals. Each row in this table represents one such interval (identified by dsx1IntervalNumber) for one specific instance (identified by dsx1IntervalIndex). Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS1E1Channel		
burstyErroredSeconds [Bursty Errored Seconds] (dsx1IntervalBESs)	long	The number of Bursty Errored Seconds.

Table 392 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
controlledSlipSeconds [Controlled Slip Seconds] (dsx1IntervalCSSs)	long	The number of Controlled Slip Seconds.
degradedMinutes [Degraded Minutes] (dsx1IntervalDMs)	long	The number of Degraded Minutes.
erroredSeconds [Errored Seconds] (dsx1IntervalESs)	long	The number of Errored Seconds.
intervalNumber [Interval Number] (dsx1IntervalNumber)	int	A number between 1 and 96, where 1 is the most recently completed 15 minute interval and 96 is the 15 minutes interval completed 23 hours and 45 minutes prior to interval 1.
lineCodingViolations [Line Coding Violations] (dsx1IntervalLCVs)	long	The number of Line Code Violations.
lineErroredSeconds [Line Errored Seconds] (dsx1IntervalLESs)	long	The number of Line Errored Seconds.
pBitCodingViolations [PBit Coding Violations] (dsx1IntervalPCVs)	long	The number of Path Coding Violations.
severelyErroredFramingSeconds [Severely Errored Framing Seconds] (dsx1IntervalSEFSs)	long	The number of Severely Errored Framing Seconds.
severelyErroredSeconds [Severely Errored Seconds] (dsx1IntervalSESSs)	long	The number of Severely Errored Seconds.

Table 392 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
unavailableSeconds [Unavailable Seconds] (dsx1IntervalUASs)	long	The number of Unavailable Seconds. This object may decrease if the occurrence of unavailable seconds occurs across an interval boundary.
<p>DS1TotalStats MIB entry name: dsx1TotalEntry Entry description: An entry in the DS1 Total table. Table description (for dsx1TotalTable): The DS1 Total Table contains the cumulative sum of the various statistics for the 24 hour period preceding the current interval. Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS1E1Channel</p>		
burstyErroredSeconds [Bursty Errored Seconds] (dsx1TotalBESs)	long	The number of Bursty Errored Seconds (BESs) encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
controlledSlipSeconds [Controlled Slip Seconds] (dsx1TotalCSSs)	long	The number of Controlled Slip Seconds encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
degradedMinutes [Degraded Minutes] (dsx1TotalDMs)	long	The number of Degraded Minutes (DMs) encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
erroredSeconds [Errored Seconds] (dsx1TotalESs)	long	The sum of Errored Seconds encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
lineCodingViolations [Line Coding Violations] (dsx1TotalLCVs)	long	The number of Line Code Violations (LCVs) encountered by a DS1 interface in the current 15 minute interval. Invalid 15 minute intervals count as 0.

Table 392 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lineErroredSeconds [Line Errored Seconds] (dsx1TotalLEs)	long	The number of Line Errored Seconds encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
pBitCodingViolations [PBit Coding Violations] (dsx1TotalPCVs)	long	The number of Path Coding Violations encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
severelyErroredFramingSeconds [Severely Errored Framing Seconds] (dsx1TotalSEFSs)	long	The number of Severely Errored Framing Seconds encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
severelyErroredSeconds [Severely Errored Seconds] (dsx1TotalSEs)	long	The number of Severely Errored Seconds encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
unavailableSeconds [Unavailable Seconds] (dsx1TotalUAs)	long	The number of Unavailable Seconds encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
DS3CurrentStats MIB entry name: dsx3CurrentEntry Entry description: An entry in the DS3/E3 Current table. Table description (for dsx3CurrentTable): The DS3/E3 current table contains various statistics being collected for the current 15 minute interval. Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS3E3Channel		
cBitCodingViolations [CBit Coding Violations] (dsx3CurrentCCVs)	long	The number of C-bit Coding Violations.

Table 392 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cBitErroredSeconds [CBit Errored Seconds] (dsx3CurrentCESs)	long	The number of C-bit Errored Seconds.
cBitSeverelyErroredSeconds [CBit Severely Errored Seconds] (dsx3CurrentCSEs)	long	The number of C-bit Severely Errored Seconds.
lineCodingViolations [Line Coding Violations] (dsx3CurrentLCVs)	long	The counter associated with the number of Line Coding Violations.
lineErroredSeconds [Line Errored Seconds] (dsx3CurrentLESs)	long	The number of Line Errored Seconds.
pBitCodingViolations [PBit Coding Violations] (dsx3CurrentPCVs)	long	The counter associated with the number of P-bit Coding Violations.
pBitErroredSeconds [PBit Errored Seconds] (dsx3CurrentPESs)	long	The counter associated with the number of P-bit Errored Seconds.
pBitSeverelyErroredSeconds [PBit Severely Errored Seconds] (dsx3CurrentPSEs)	long	The counter associated with the number of P-bit Severely Errored Seconds.
severelyErroredFramingSeconds [Severely Errored Framing Seconds] (dsx3CurrentSEFSs)	long	The counter associated with the number of Severely Errored Framing Seconds.
unavailableSeconds [Unavailable Seconds] (dsx3CurrentUASs)	long	The counter associated with the number of Unavailable Seconds.

Table 392 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>DS3FarEndCurrentStats</p> <p>MIB entry name: dsx3FarEndCurrentEntry</p> <p>Entry description: An entry in the DS3 Far End Current table.</p> <p>Table description (for dsx3FarEndCurrentTable): The DS3 Far End Current table contains various statistics being collected for the current 15 minute interval. The statistics are collected from the far end block error code within the C-bits.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: tdmequipment.DS3E3Channel</p>		
cBitCodingViolations [CBit Coding Violations] (dsx3FarEndCurrentCCVs)	long	The counter associated with the number of Far End C-bit Coding Violations reported via the far end block error count.
cBitErroredSeconds [CBit Errored Seconds] (dsx3FarEndCurrentCESs)	long	The counter associated with the number of Far End C-bit Errored Seconds.
cBitSeverelyErroredSeconds [CBit Severely Errored Seconds] (dsx3FarEndCurrentCSESs)	long	The counter associated with the number of Far End C-bit Severely Errored Seconds.
invalidIntervals [Invalid Intervals] (dsx3FarEndInvalidIntervals)	int	The number of intervals in the range from 0 to dsx3FarEndValidIntervals for which no data is available. This object will typically be zero except in cases where the data for some intervals are not available (e.g., in proxy situations).
timeElapsed [Time Elapsed] (dsx3FarEndTimeElapsed)	int	The number of seconds that have elapsed since the beginning of the far end current error-measurement period. If, for some reason, such as an adjustment in the system's time-of-day clock, the current interval exceeds the maximum value, the agent will return the maximum value.

Table 392 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
unavailableSeconds [Unavailable Seconds] (dsx3FarEndCurrentUASs)	long	The counter associated with the number of Far End unavailable seconds.
validIntervals [Valid Intervals] (dsx3FarEndValidIntervals)	int	The number of previous far end intervals for which data was collected. The value will be 96 unless the interface was brought online within the last 24 hours, in which case the value will be the number of complete 15 minute far end intervals since the interface has been online. In the case where the agent is a proxy, it is possible that some intervals are unavailable. In this case, this interval is the maximum interval number for which data is available.
<p>DS3FarEndIntervalStats MIB entry name: dsx3FarEndIntervalEntry Entry description: An entry in the DS3 Far End Interval table. Table description (for dsx3FarEndIntervalTable): The DS3 Far End Interval Table contains various statistics collected by each DS3 interface over the previous 24 hours of operation. The past 24 hours are broken into 96 completed 15 minute intervals. Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS3E3Channel</p>		
cBitCodingViolations [CBit Coding Violations] (dsx3FarEndIntervalCCVs)	long	The counter associated with the number of Far End C-bit Coding Violations reported via the far end block error count.
cBitErroredSeconds [CBit Errored Seconds] (dsx3FarEndIntervalCESs)	long	The counter associated with the number of Far End C-bit Errored Seconds encountered by a DS3 interface in one of the previous 96, individual 15 minute, intervals. In the case where the agent is a proxy and data is not available, return noSuchInstance.

Table 392 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cBitSeverelyErroredSeconds [CBit Severely Errored Seconds] (dsx3FarEndIntervalCSESSs)	long	The counter associated with the number of Far End C-bit Severely Errored Seconds.
intervalNumber [Interval Number] (dsx3FarEndIntervalNumber)	int	A number between 1 and 96, where 1 is the most recently completed 15 minute interval and 96 is the 15 minutes interval completed 23 hours and 45 minutes prior to interval 1.
unavailableSeconds [Unavailable Seconds] (dsx3FarEndIntervalUASs)	long	The counter associated with the number of Far End unavailable seconds.
<p>DS3FarEndTotalStats MIB entry name: dsx3FarEndTotalEntry Entry description: An entry in the DS3 Far End Total table. Table description (for dsx3FarEndTotalTable): The DS3 Far End Total Table contains the cumulative sum of the various statistics for the 24 hour period preceding the current interval. Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS3E3Channel</p>		
cBitCodingViolations [CBit Coding Violations] (dsx3FarEndTotalCCVs)	long	The counter associated with the number of Far End C-bit Coding Violations reported via the far end block error count encountered by a DS3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
cBitErroredSeconds [CBit Errored Seconds] (dsx3FarEndTotalCESs)	long	The counter associated with the number of Far End C-bit Errored Seconds encountered by a DS3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
cBitSeverelyErroredSeconds [CBit Severely Errored Seconds] (dsx3FarEndTotalCSESSs)	long	The counter associated with the number of Far End C-bit Severely Errored Seconds encountered by a DS3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.

Table 392 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
unavailableSeconds [Unavailable Seconds] (dsx3FarEndTotalUASs)	long	The counter associated with the number of Far End unavailable seconds encountered by a DS3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
<p>DS3IntervalStats</p> <p>MIB entry name: dsx3IntervalEntry</p> <p>Entry description: An entry in the DS3/E3 Interval table.</p> <p>Table description (for dsx3IntervalTable): The DS3/E3 Interval Table contains various statistics collected by each DS3/E3 Interface over the previous 24 hours of operation. The past 24 hours are broken into 96 completed 15 minute intervals. Each row in this table represents one such interval (identified by dsx3IntervalNumber) and for one specific interface (identified by dsx3IntervalIndex).</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: tdmequipment.DS3E3Channel</p>		
cBitCodingViolations [CBit Coding Violations] (dsx3IntervalCCVs)	long	The number of C-bit Coding Violations.
cBitErroredSeconds [CBit Errored Seconds] (dsx3IntervalCESs)	long	The number of C-bit Errored Seconds.
cBitSeverelyErroredSeconds [CBit Severely Errored Seconds] (dsx3IntervalCSESs)	long	The number of C-bit Severely Errored Seconds.
intervalNumber [Interval Number] (dsx3IntervalNumber)	int	A number between 1 and 96, where 1 is the most recently completed 15 minute interval and 96 is the 15 minutes interval completed 23 hours and 45 minutes prior to interval 1.

Table 392 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lineCodingViolations [Line Coding Violations] (dsx3IntervalLCVs)	long	The counter associated with the number of Line Coding Violations.
lineErroredSeconds [Line Errored Seconds] (dsx3IntervalLESSs)	long	The number of Line Errored Seconds (BPVs or illegal zero sequences).
pBitCodingViolations [PBit Coding Violations] (dsx3IntervalPCVs)	long	The counter associated with the number of P-bit Coding Violations.
pBitErroredSeconds [PBit Errored Seconds] (dsx3IntervalPESs)	long	The counter associated with the number of P-bit Errored Seconds.
pBitSeverelyErroredSeconds [PBit Severely Errored Seconds] (dsx3IntervalPSESs)	long	The counter associated with the number of P-bit Severely Errored Seconds.
severelyErroredFramingSeconds [Severely Errored Framing Seconds] (dsx3IntervalSEFSs)	long	The counter associated with the number of Severely Errored Framing Seconds.
unavailableSeconds [Unavailable Seconds] (dsx3IntervalUASs)	long	The counter associated with the number of Unavailable Seconds. This object may decrease if the occurrence of unavailable seconds occurs across an interval boundary.

Table 392 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
DS3TotalStats MIB entry name: dsx3TotalEntry Entry description: An entry in the DS3/E3 Total table. Table description (for dsx3TotalTable): The DS3/E3 Total Table contains the cumulative sum of the various statistics for the 24 hour period preceding the current interval. Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS3E3Channel		
cBitCodingViolations [CBit Coding Violations] (dsx3TotalCCVs)	long	The number of C-bit Coding Violations encountered by a DS3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
cBitErroredSeconds [CBit Errored Seconds] (dsx3TotalCESS)	long	The number of C-bit Errored Seconds encountered by a DS3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
cBitSeverelyErroredSeconds [CBit Severely Errored Seconds] (dsx3TotalCSESS)	long	The number of C-bit Severely Errored Seconds encountered by a DS3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
lineCodingViolations [Line Coding Violations] (dsx3TotalLCVs)	long	The counter associated with the number of Line Coding Violations encountered by a DS3/E3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
lineErroredSeconds [Line Errored Seconds] (dsx3TotalLESS)	long	The number of Line Errored Seconds (BPVs or illegal zero sequences) encountered by a DS3/E3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
pBitCodingViolations [PBit Coding Violations] (dsx3TotalPCVs)	long	The counter associated with the number of P-bit Coding Violations, encountered by a DS3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.

Table 392 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pBitErroredSeconds [PBit Errored Seconds] (dsx3TotalPESs)	long	The counter associated with the number of P-bit Errored Seconds, encountered by a DS3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
pBitSeverelyErroredSeconds [PBit Severely Errored Seconds] (dsx3TotalPSESs)	long	The counter associated with the number of P-bit Severely Errored Seconds, encountered by a DS3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
severelyErroredFramingSeconds [Severely Errored Framing Seconds] (dsx3TotalSEFSs)	long	The counter associated with the number of Severely Errored Framing Seconds, encountered by a DS3/E3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
unavailableSeconds [Unavailable Seconds] (dsx3TotalUASs)	long	The counter associated with the number of Unavailable Seconds, encountered by a DS3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
<p>VoiceChanStats</p> <p>MIB entry name: aluVoiceEntry</p> <p>Entry description: Each row entry represents a Voice channel on an IOM card in a chassis in the system. Channel entries for voice ports can be created and deleted via SNMP SET operations. For each aluVoiceEntry, there will be a corresponding entry in the tmnxPortTable and the ifTable.</p> <p>Table description (for aluVoiceTable): aluVoiceTable has an entry for each Voice channel on an IOM card in each chassis in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: tdmequipment.VoiceChannel</p>		
answeredIncomingCallTime [Answered Incoming Call Time] (aluVoiceIncomingCallTimeAns)	long	The total duration (in seconds) of all incoming calls that were answered. This count is accumulated since the last time the statistics were cleared.

Table 392 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
answeredIncomingCalls [Answered Incoming Calls] (aluVoiceIncomingCallCountAns)	long	The number of incoming calls (received by the circuit) that were answered. This count is accumulated since the last time the statistics were cleared.
answeredOutgoingCallTime [Answered Outgoing Call Time] (aluVoiceOutgoingCallTimeAns)	long	The total duration (in seconds) of all outgoing calls that were answered. This count is accumulated since the last time the statistics were cleared.
answeredOutgoingCalls [Answered Outgoing Calls] (aluVoiceOutgoingCallCountAns)	long	The number of outgoing calls (originated by the circuit) that were answered. This count is accumulated since the last time the statistics were cleared.
idleTime [Idle Time] (aluVoiceIdleTime)	long	The time in seconds for which the circuit was idle. This count is accumulated since the last time the statistics were cleared.
incomingCallTime [Incoming Call Time] (aluVoiceIncomingCallTime)	long	The total duration (in seconds) of all incoming calls. This count is accumulated since the last time the statistics were cleared.
incomingCalls [Incoming Calls] (aluVoiceIncomingCallCount)	long	The number of incoming calls (received by the circuit). This count is accumulated since the last time the statistics were cleared.
outOfServiceTime [Out Of Service Time] (aluVoiceOutOfServiceTime)	long	The time in seconds for which the circuit was unavailable for connection. This count is accumulated since the last time the statistics were cleared.
outgoingCallTime [Outgoing Call Time] (aluVoiceOutgoingCallTime)	long	The total duration (in seconds) of all outgoing calls. This count is accumulated since the last time the statistics were cleared.
outgoingCalls [Outgoing Calls] (aluVoiceOutgoingCallCount)	long	The number of outgoing calls (originated by the circuit). This count is accumulated since the last time the statistics were cleared.

Table 393 vpls statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfacePimSnoopingStats MIB entry name: tmnxPimSnpgIfStatsEntry Entry description: An entry in the tmnxPimSnpgIfStatsTable. Table description (for tmnxPimSnpgIfStatsTable): The table listing the PIM statistics for a particular interface. Supports realtime plotting Supports scheduled collection Monitored class: vpls.InterfacePimSnooping</p>		
tmnxPimSnpgIfJoinPolicyDrops [Tmnx Pim Snpg If Join Policy Drops] (tmnxPimSnpgIfJoinPolicyDrops)	long	The value of tmnxPimSnpgIfJoinPolicyDrops indicates the number of times the join policy match resulted in dropping PIM Join-Prune Message or one of the source group contained in the message.
tmnxPimSnpgIfRxBadChecksumDscrd [Tmnx Pim Snpg If Rx Bad Checksum Dscrd] (tmnxPimSnpgIfRxBadChecksumDscrd)	long	The value of tmnxPimSnpgIfRxBadChecksumDscrd indicates the number of PIM messages received on this interface which were discarded because of bad checksum.
tmnxPimSnpgIfRxBadEncodings [Tmnx Pim Snpg If Rx Bad Encodings] (tmnxPimSnpgIfRxBadEncodings)	long	The value of tmnxPimSnpgIfRxBadEncodings indicates the number of PIM messages with bad encodings received on this interface.
tmnxPimSnpgIfRxBadVersionDscrd [Tmnx Pim Snpg If Rx Bad Version Dscrd] (tmnxPimSnpgIfRxBadVersionDscrd)	long	The value of tmnxPimSnpgIfRxBadVersionDscrd indicates the number of PIM messages with bad versions received on this interface.
tmnxPimSnpgIfRxHellos [Tmnx Pim Snpg If Rx Hellos] (tmnxPimSnpgIfRxHellos)	long	The value of tmnxPimSnpgIfRxHellos indicates the number of PIM hello messages received on this interface.
tmnxPimSnpgIfRxHellosDropped [Tmnx Pim Snpg If Rx Hellos Dropped] (tmnxPimSnpgIfRxHellosDropped)	long	The value of tmnxPimSnpgIfRxHellosDropped indicates the number of PIM Hello messages which were received on this interface but were dropped.

Table 393 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tmnxPimSnpgIfRxJoinPruneErrs [Tmnx Pim Snpg If Rx Join Prune Errs] (tmnxPimSnpgIfRxJoinPruneErrs)	long	The value of tmnxPimSnpgIfRxJoinPruneErrs indicates the number of errors while processing Join-Prune messages received on this interface.
tmnxPimSnpgIfRxJoinPrunes [Tmnx Pim Snpg If Rx Join Prunes] (tmnxPimSnpgIfRxJoinPrunes)	long	The value of tmnxPimSnpgIfRxJoinPrunes indicates the number of PIM Join Prune messages received on this interface.
tmnxPimSnpgIfRxNbrUnknown [Tmnx Pim Snpg If Rx Nbr Unknown] (tmnxPimSnpgIfRxNbrUnknown)	long	The value of tmnxPimSnpgIfRxNbrUnknown indicates the number of PIM messages (other than Hello messages) which were received on this interface and were rejected because the adjacency with the neighbor router was not already established.
tmnxPimSnpgIfRxPkts [Tmnx Pim Snpg If Rx Pkts] (tmnxPimSnpgIfRxPkts)	long	The value of tmnxPimSnpgIfRxPkts indicates the number of multicast data packets received on this interface.
tmnxPimSnpgIfSGTypes [Tmnx Pim Snpg If SGTypes] (tmnxPimSnpgIfSGTypes)	long	The value of tmnxPimSnpgIfSGTypes indicates the number of (S,G) entries in tmnxPimSnpgIfGrpSrcTable.
tmnxPimSnpgIfStarGTypes [Tmnx Pim Snpg If Star GTypes] (tmnxPimSnpgIfStarGTypes)	long	The value of tmnxPimSnpgIfStarGTypes indicates the number of (*,G) entries in tmnxPimSnpgIfGrpSrcTable.
tmnxPimSnpgIfTxJoinPrunes [Tmnx Pim Snpg If Tx Join Prunes] (tmnxPimSnpgIfTxJoinPrunes)	long	The value of tmnxPimSnpgIfTxJoinPrunes indicates the number of PIM Join Prune messages transmitted on this interface.
tmnxPimSnpgIfTxPkts [Tmnx Pim Snpg If Tx Pkts] (tmnxPimSnpgIfTxPkts)	long	The value of tmnxPimSnpgIfTxPkts indicates the number of multicast data packets transmitted on this interface.

Table 393 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>L2AccessInterfacelgmpSnpgErrorStats</p> <p>MIB entry name: saplgmpSnpgStatsEntry</p> <p>Entry description: saplgmpSnpgStatsEntry is an entry in the saplgmpSnpgStatsTable. saplgmpSnpgImportPolicyDrops [Sap Igmp Snpg Import Policy Drops] (saplgmpSnpgImportPolicyDrops)	long	The value of the object saplgmpSnpgImportPolicyDrops indicates the number of times an IGMP Group or Source is dropped because of applying an import policy on this SAP.
saplgmpSnpgMaxNumGroupsDrops [Sap Igmp Snpg Max Num Groups Drops] (saplgmpSnpgMaxNumGroupsDrops)	long	The value of the object saplgmpSnpgMaxNumGroupsDrops indicates the number of times an IGMP Group is dropped because of exceeding the configured maximum number of groups on this SAP.
saplgmpSnpgMaxNumGrpSourcesDrops [Sap Igmp Snpg Max Num Grp Sources Drops] (saplgmpSnpgMaxNumGrpSrcsDrops)	long	The value of the object saplgmpSnpgMaxNumGrpSrcsDrops indicates the number of times an IGMP Group Source is dropped because of exceeding the configured maximum number of group sources per group on this SAP.
saplgmpSnpgMaxNumSourcesDrops [Sap Igmp Snpg Max Num Sources Drops] (saplgmpSnpgMaxNumSourcesDrops)	long	The value of the object saplgmpSnpgMaxNumSourcesDrops indicates the number of times an IGMP Source is dropped because of exceeding the configured maximum number of sources per group on this SAP.
saplgmpSnpgMcacPolicyDrops [Sap Igmp Snpg Mcac Policy Drops] (saplgmpSnpgMcacPolicyDrops)	long	The value of the object saplgmpSnpgMcacPolicyDrops indicates the number of times an IGMP Group is dropped because of applying a multicast CAC policy on this SAP.

Table 393 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
saplgmpSnpGmcsFailures [Sap Igmp SnpG Mcs Failures] (saplgmpSnpGmcsFailures)	long	The value of the object saplgmpSnpGmcsFailures indicates the number of times an IGMP Group on this SAP could not be synced to the MCS (multi-chassis synchronization) database.
saplgmpSnpGRxBadEncodedPkts [Sap Igmp SnpG Rx Bad Encoded Pkts] (saplgmpSnpGRxBadEncodedPkts)	long	The value of the object saplgmpSnpGRxBadEncodedPkts indicates the number of IGMP packets dropped on this SAP because of a bad encoding.
saplgmpSnpGRxBadIgmpChkSmPkts [Sap Igmp SnpG Rx Bad Igmp ChkSm Pkts] (saplgmpSnpGRxBadIgmpChkSmPkts)	long	The value of the object saplgmpSnpGRxBadIgmpChkSmPkts indicates the number of dropped IGMP packets on this SAP because of a bad IGMP header checksum.
saplgmpSnpGRxBadIpChkSmPkts [Sap Igmp SnpG Rx Bad Ip ChkSm Pkts] (saplgmpSnpGRxBadIpChkSmPkts)	long	The value of the object saplgmpSnpGRxBadIpChkSmPkts indicates the number of dropped IGMP packets on this SAP because of a bad IPv4 header checksum.
saplgmpSnpGRxBadLenPkts [Sap Igmp SnpG Rx Bad Len Pkts] (saplgmpSnpGRxBadLenPkts)	long	The value of the object saplgmpSnpGRxBadLenPkts indicates the number of IGMP packets dropped on this SAP because of a bad length.
saplgmpSnpGRxNoRtrAlertPkts [Sap Igmp SnpG Rx No Rtr Alert Pkts] (saplgmpSnpGRxNoRtrAlertPkts)	long	The value of the object saplgmpSnpGRxNoRtrAlertPkts indicates the number of IGMP packets dropped on this SAP because the Router Alert Option in the IP packet is not set.
saplgmpSnpGRxWrongVersionPkts [Sap Igmp SnpG Rx Wrong Version Pkts] (saplgmpSnpGRxWrongVersionPkts)	long	The value of the object saplgmpSnpGRxWrongVersionPkts indicates the total number of IGMP packets with a wrong version received on this SAP.
saplgmpSnpGRxZeroSrcAdrPkts [Sap Igmp SnpG Rx Zero Src Adr Pkts] (saplgmpSnpGRxZeroSrcAdrPkts)	long	The value of the object saplgmpSnpGRxZeroSrcAdrPkts indicates the number of IGMP packets dropped on this SAP because they contain a zero source IPv4 address.

Table 393 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
saplgmpSnpGSendQueryCfgDrops [Sap Igmp SnpG Send Query Cfg Drops] (saplgmpSnpGSendQueryCfgDrops)	long	The value of the object saplgmpSnpGSendQueryCfgDrops indicates the number of times an IGMP Query is dropped because the object saplgmpSnpGCfgSendQueries for this SAP is set to 'enabled(1)'.
<p>L2AccessInterfaceIgmPStats</p> <p>MIB entry name: saplgmpSnpGStatsEntry</p> <p>Entry description: saplgmpSnpGStatsEntry is an entry in the saplgmpSnpGStatsTable. sapIgmPsnpgTxV3Reports [Sap Igmp Snpg Tx V3 Reports] (sapIgmPsnpgTxV3Reports)	long	The value of the object sapIgmPsnpgTxV3Reports indicates the number of IGMPv3 Reports transmitted on this SAP.
<p>L2AccessInterfaceMldSnpgErrorStats MIB entry name: sapMldSnpgStatsEntry Entry description: sapMldSnpgStatsEntry is an entry in the sapMldSnpgStatsTable. Each entry contains MLD snooping statistics for a SAP in a Tls. Table description (for sapMldSnpgStatsTable): sapMldSnpgStatsTable contains statistics on MLD snooping per SAP. Supports realtime plotting Supports scheduled collection Monitored class: vpls.AbstractL2AccessInterface</p>		
sapMldSnpgImportPolicyDrops [Sap Mld Snpg Import Policy Drops] (sapMldSnpgImportPolicyDrops)	long	The value of the object sapMldSnpgImportPolicyDrops indicates the number of times an MLD group or source is dropped because of applying an import policy on this SAP.
sapMldSnpgMaxNumGroupsDrops [Sap Mld Snpg Max Num Groups Drops] (sapMldSnpgMaxNumGroupsDrops)	long	The value of the object sapMldSnpgMaxNumGroupsDrops indicates the number of times an MLD group is dropped because of exceeding the configured maximum number of groups on this SAP.
sapMldSnpgMcsFailures [Sap Mld Snpg Mcs Failures] (sapMldSnpgMcsFailures)	long	The value of the object sapMldSnpgMcsFailures indicates the number of times an MLD group on this SAP could not be synced to the MCS (multi-chassis synchronization) database.
sapMldSnpgRxBadEncodedPkts [Sap Mld Snpg Rx Bad Encoded Pkts] (sapMldSnpgRxBadEncodedPkts)	long	The value of the object sapMldSnpgRxBadEncodedPkts indicates the number of MLD packets dropped on this SAP because of a bad encoding.
sapMldSnpgRxBadLenPkts [Sap Mld Snpg Rx Bad Len Pkts] (sapMldSnpgRxBadLenPkts)	long	The value of the object sapMldSnpgRxBadLenPkts indicates the number of MLD packets dropped on this SAP because of a bad length.

Table 393 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapMldSnpgRxBadMldChksmPkts [Sap Mld Snpg Rx Bad Mld Chksm Pkts] (sapMldSnpgRxBadMldChksmPkts)	long	The value of the object sapMldSnpgRxBadMldChksmPkts indicates the number of dropped MLD packets on this SAP because of a bad MLD header checksum.
sapMldSnpgRxNoRtrAlertPkts [Sap Mld Snpg Rx No Rtr Alert Pkts] (sapMldSnpgRxNoRtrAlertPkts)	long	The value of the object sapMldSnpgRxNoRtrAlertPkts indicates the number of MLD packets dropped on this SAP because the Router Alert Option in the IP packet is not set.
sapMldSnpgRxWrongVersionPkts [Sap Mld Snpg Rx Wrong Version Pkts] (sapMldSnpgRxWrongVersionPkts)	long	The value of the object sapMldSnpgRxWrongVersionPkts indicates the total number of MLD packets with a wrong version received on this SAP.
sapMldSnpgRxZeroSrcAdrPkts [Sap Mld Snpg Rx Zero Src Adr Pkts] (sapMldSnpgRxZeroSrcAdrPkts)	long	The value of the object sapMldSnpgRxZeroSrcAdrPkts indicates the number of MLD packets dropped on this SAP because they contain a zero source IPv6 address.
sapMldSnpgSendQueryCfgDrops [Sap Mld Snpg Send Query Cfg Drops] (sapMldSnpgSendQueryCfgDrops)	long	The value of the object sapMldSnpgSendQueryCfgDrops indicates the number of times an MLD Query is dropped because the object sapMldSnpgCfgSendQueries for this SAP is set to 'inService(2)'.
<p>L2AccessInterfaceMldSnpgStats</p> <p>MIB entry name: sapMldSnpgStatsEntry</p> <p>Entry description: sapMldSnpgStatsEntry is an entry in the sapMldSnpgStatsTable. Each entry contains MLD snooping statics for a SAP in a TIs.</p> <p>Table description (for sapMldSnpgStatsTable): sapMldSnpgStatsTable contains statistics on MLD snooping per SAP.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: vpls.AbstractL2AccessInterface</p>		
sapMldSnpgFwdGenQueries [Sap Mld Snpg Fwd Gen Queries] (sapMldSnpgFwdGenQueries)	long	The value of the object sapMldSnpgFwdGenQueries indicates the number of MLD General Queries forwarded on this SAP.

Table 393 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapMldSnpgFwdGrpSpecQueries [Sap Mld Snpg Fwd Grp Spec Queries] (sapMldSnpgFwdGrpSpecQueries)	long	The value of the object sapMldSnpgFwdGrpSpecQueries indicates the number of MLD Group-Specific Queries forwarded on this SAP.
sapMldSnpgFwdSrcSpecQueries [Sap Mld Snpg Fwd Src Spec Queries] (sapMldSnpgFwdSrcSpecQueries)	long	The value of the object sapMldSnpgFwdSrcSpecQueries indicates the number of MLD Group-And-Source-Specific Queries forwarded on this SAP.
sapMldSnpgFwdUnknownType [Sap Mld Snpg Fwd Unknown Type] (sapMldSnpgFwdUnknownType)	long	The value of the object sapMldSnpgFwdUnknownType indicates the number of MLD unknown type packets forwarded on this SAP.
sapMldSnpgFwdV1Leaves [Sap Mld Snpg Fwd V1 Leaves] (sapMldSnpgFwdV1Leaves)	long	The value of the object sapMldSnpgFwdV1Leaves indicates the number of MLDv1 Leaves forwarded on this SAP.
sapMldSnpgFwdV1Reports [Sap Mld Snpg Fwd V1 Reports] (sapMldSnpgFwdV1Reports)	long	The value of the object sapMldSnpgFwdV1Reports indicates the number of MLDv1 Reports forwarded on this SAP.
sapMldSnpgFwdV2Reports [Sap Mld Snpg Fwd V2 Reports] (sapMldSnpgFwdV2Reports)	long	The value of the object sapMldSnpgFwdV2Reports indicates the number of MLDv2 Reports forwarded on this SAP.
sapMldSnpgRxGenQueries [Sap Mld Snpg Rx Gen Queries] (sapMldSnpgRxGenQueries)	long	The value of the object sapMldSnpgRxGenQueries indicates the number of MLD General Queries received on this SAP.
sapMldSnpgRxGrpSpecQueries [Sap Mld Snpg Rx Grp Spec Queries] (sapMldSnpgRxGrpSpecQueries)	long	The value of the object sapMldSnpgRxGrpSpecQueries indicates the number of MLD Group-Specific Queries received on this SAP.
sapMldSnpgRxLocalScopePkts [Sap Mld Snpg Rx Local Scope Pkts] (sapMldSnpgRxLocalScopePkts)	long	The value of the object sapMldSnpgRxLocalScopePkts indicates the number of MLD packets received on the link-local scope IPv6 multicast address.

Table 393 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapMldSnpgRxRsvdScopePkts [Sap Mld Snpg Rx Rsvd Scope Pkts] (sapMldSnpgRxRsvdScopePkts)	long	The value of the object sapMldSnpgRxRsvdScopePkts indicates the number of MLD packets received on the reserved scope IPv6 multicast address.
sapMldSnpgRxSrcSpecQueries [Sap Mld Snpg Rx Src Spec Queries] (sapMldSnpgRxSrcSpecQueries)	long	The value of the object sapMldSnpgRxSrcSpecQueries indicates the number of MLD Group-And-Source-Specific Queries received on this SAP.
sapMldSnpgRxUnknownType [Sap Mld Snpg Rx Unknown Type] (sapMldSnpgRxUnknownType)	long	The value of the object sapMldSnpgRxUnknownType indicates the number of MLD unknown type packets received on this SAP.
sapMldSnpgRxV1Leaves [Sap Mld Snpg Rx V1 Leaves] (sapMldSnpgRxV1Leaves)	long	The value of the object sapMldSnpgRxV1Leaves indicates the number of MLDv1 Leaves received on this SAP.
sapMldSnpgRxV1Reports [Sap Mld Snpg Rx V1 Reports] (sapMldSnpgRxV1Reports)	long	The value of the object sapMldSnpgRxV1Reports indicates the number of MLDv1 Reports received on this SAP.
sapMldSnpgRxV2Reports [Sap Mld Snpg Rx V2 Reports] (sapMldSnpgRxV2Reports)	long	The value of the object sapMldSnpgRxV2Reports indicates the number of MLDv2 Reports received on this SAP.
sapMldSnpgTxGenQueries [Sap Mld Snpg Tx Gen Queries] (sapMldSnpgTxGenQueries)	long	The value of the object sapMldSnpgTxGenQueries indicates the number of MLD General Queries transmitted on this SAP.
sapMldSnpgTxGrpSpecQueries [Sap Mld Snpg Tx Grp Spec Queries] (sapMldSnpgTxGrpSpecQueries)	long	The value of the object sapMldSnpgTxGrpSpecQueries indicates the number of MLD Group-Specific Queries transmitted on this SAP.
sapMldSnpgTxSrcSpecQueries [Sap Mld Snpg Tx Src Spec Queries] (sapMldSnpgTxSrcSpecQueries)	long	The value of the object sapMldSnpgTxSrcSpecQueries indicates the number of MLD Group-And-Source-Specific Queries transmitted on this SAP.

Table 393 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapMldSnpgTxV1Leaves [Sap Mld Snpg Tx V1 Leaves] (sapMldSnpgTxV1Leaves)	long	The value of the object sapMldSnpgTxV1Leaves indicates the number of MLDv1 Leaves transmitted on this SAP.
sapMldSnpgTxV1Reports [Sap Mld Snpg Tx V1 Reports] (sapMldSnpgTxV1Reports)	long	The value of the object sapMldSnpgTxV1Reports indicates the number of MLDv1 Reports transmitted on this SAP.
sapMldSnpgTxV2Reports [Sap Mld Snpg Tx V2 Reports] (sapMldSnpgTxV2Reports)	long	The value of the object sapMldSnpgTxV2Reports indicates the number of MLDv2 Reports transmitted on this SAP.
L2AccessIrfDhcpRelayCfgStats MIB entry name: sapTlsDhcpStatsEntry Entry description: DHCP statistics for a TLS SAP. Table description (for sapTlsDhcpStatsTable): sapTlsDhcpStatsTable contains DHCP statistics related to a TLS SAP. This table complements sapTlsInfoTable, and contains an entry for each Tls SAP. Rows in this table are created and deleted automatically by the system. Supports realtime plotting Supports scheduled collection Monitored class: vpls.AbstractL2AccessInterface		
sapTlsDhcpStatsClntDropdPkts [Sap Tls Dhcp Stats Clnt Dropd Pkts] (sapTlsDhcpStatsClntDropdPkts)	long	The value of the object sapTlsDhcpStatsClntDropdPkts indicates the number of DHCP client packets that have been dropped on this SAP.
sapTlsDhcpStatsClntForwdPkts [Sap Tls Dhcp Stats Clnt Forwd Pkts] (sapTlsDhcpStatsClntForwdPkts)	long	The value of the object sapTlsDhcpStatsClntForwdPkts indicates the number of DHCP client packets that have been forwarded on this SAP.

Table 393 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapTlsDhcpStatsClntProxLSPckts [Sap Tls Dhcp Stats Clnt Prox LSPckts] (sapTlsDhcpStatsClntProxLSPckts)	long	The value of the object sapTlsDhcpStatsClntProxLSPckts indicates the number of DHCP client packets that have been proxied on this SAP based on a lease state. The lease itself can have been obtained from a DHCP or RADIUS server. This is the so called lease split functionality.
sapTlsDhcpStatsClntProxRadPckts [Sap Tls Dhcp Stats Clnt Prox Rad Pckts] (sapTlsDhcpStatsClntProxRadPckts)	long	The value of the object sapTlsDhcpStatsClntProxRadPckts indicates the number of DHCP client packets that have been proxied on this SAP based on data received from a RADIUS server.
sapTlsDhcpStatsClntSnoopdPckts [Sap Tls Dhcp Stats Clnt Snoopd Pckts] (sapTlsDhcpStatsClntSnoopdPckts)	long	The value of the object sapTlsDhcpStatsClntSnoopdPckts indicates the number of DHCP client packets that have been snooped on this SAP.
sapTlsDhcpStatsGenForceRenPckts [Sap Tls Dhcp Stats Gen Force Ren Pckts] (sapTlsDhcpStatsGenForceRenPckts)	long	The value of the object sapTlsDhcpStatsGenForceRenPckts indicates the number of DHCP FORCERENEW messages spoofed on this SAP to the DHCP clients.
sapTlsDhcpStatsGenReleasePckts [Sap Tls Dhcp Stats Gen Release Pckts] (sapTlsDhcpStatsGenReleasePckts)	long	The value of the object sapTlsDhcpStatsGenReleasePckts indicates the number of DHCP RELEASE messages spoofed on this SAP to the DHCP server.
sapTlsDhcpStatsSrvrDropdPckts [Sap Tls Dhcp Stats Srvr Dropd Pckts] (sapTlsDhcpStatsSrvrDropdPckts)	long	The value of the object sapTlsDhcpStatsSrvrDropdPckts indicates the number of DHCP server packets that have been dropped on this SAP.
sapTlsDhcpStatsSrvrForwdPckts [Sap Tls Dhcp Stats Srvr Forwd Pckts] (sapTlsDhcpStatsSrvrForwdPckts)	long	The value of the object sapTlsDhcpStatsSrvrForwdPckts indicates the number of DHCP server packets that have been forwarded on this SAP.
sapTlsDhcpStatsSrvrSnoopdPckts [Sap Tls Dhcp Stats Srvr Snoopd Pckts] (sapTlsDhcpStatsSrvrSnoopdPckts)	long	The value of the object sapTlsDhcpStatsSrvrSnoopdPckts indicates the number of DHCP server packets that have been snooped on this SAP.

These statistics are collected by the forwarding engine.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • vpls.SitePimSnooping • vpls.SiteSourceGroupRecord 		
tmnxPimSnpGGrpSrcStatsFwdedOct [Tmnx Pim SnpG Grp Src Stats Fwded Oct] (tmnxPimSnpGGrpSrcStatsFwdedOct)	long	The value of tmnxPimSnpGGrpSrcStatsFwdedOct indicates the number of multicast octets that were forwarded to the interfaces in the outgoing interface list. tmnxPimSnpGGrpSrcClfTable lists all the interfaces in the outgoing interface list.
tmnxPimSnpGGrpSrcStatsFwdedPkts [Tmnx Pim SnpG Grp Src Stats Fwded Pkts] (tmnxPimSnpGGrpSrcStatsFwdedPkts)	long	The value of tmnxPimSnpGGrpSrcStatsFwdedPkts indicates the number of multicast packets that were forwarded to the interfaces in the outgoing interface list. tmnxPimSnpGGrpSrcClfTable lists all the interfaces in the outgoing interface list.

Table 394 vrrp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InstanceAdditionalStats</p> <p>MIB entry name: tmnxVrrpRouterStatsEntry</p> <p>Entry description: Each row entry in the tmnxVrrpRouterStatsTable represents additional columns in the vrrpRouterStatsTable for statistics specific to the Nokia SROS series VRRP implementation.</p> <p>Table description (for tmnxVrrpRouterStatsTable): The tmnxVrrpRouterStatsTable provides an extension of the vrrpRouterStatsTable in the VRRP-MIB. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vrrpRouterStatsTable, and the augmenting table, tmnxVrrpRouterStatsTable. This in effect extends the vrrpRouterStatsTable with additional columns.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: vrrp.Instance</p>		
addressListDiscards [Address List Discards] (tmnxVrrpStatsAddressListDiscards)	long	The total number of VRRP advertisement packets discarded because the address list did not match the locally configured list for the virtual router.
advertiseIntervalDiscards [Advertise Interval Discards] (tmnxVrrpStatsAdvertiseIntervalDiscards)	long	The total number of VRRP advertisement packets discarded because the advertisement interval in the received packet was different than the one configured for the local virtual router.
advertiseSent [Advertise Sent] (tmnxVrrpStatsAdvertiseSent)	long	The total number of VRRP advertisements sent by this virtual router.
masterChanges [Master Changes] (tmnxVrrpStatsMasterChanges)	long	The value for tmnxVrrpStatsMasterChanges specifies the total number of times the virtual router has seen the master virtual router change.
preemptEvents [Preempt Events] (tmnxVrrpStatsPreemptEvents)	long	The value for tmnxVrrpStatsPreemptEvents specifies the total number of times the virtual router has preempted another non-owner master with lower priority.

Table 394 vrrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
preemptedEvents [Preempted Events] (tmnxVrrpStatsPreemptedEvents)	long	The value for tmnxVrrpStatsPreemptedEvents specifies the total number of times the virtual router has been preempted by another non-owner master with higher priority.
totalDiscards [Total Discards] (tmnxVrrpStatsTotalDiscards)	long	The total number of VRRP advertisement packets discarded for any reason. This includes the packets discarded due to advertise interval mismatch and address list mismatch.
<p>InstanceStats MIB entry name: vrrpRouterStatsEntry Entry description: An entry in the table, containing statistics information about a given virtual router. Table description (for vrrpRouterStatsTable): Table of virtual router statistics. Supports realtime plotting Supports scheduled collection Monitored class: vrrp.Instance</p>		
addressListErrors [Address List Errors] (vrrpStatsAddressListErrors)	long	The total number of packets received for which the address list does not match the locally configured list for the virtual router.
advertiseIntervalErrors [Advertise Interval Errors] (vrrpStatsAdvertiseIntervalErrors)	long	The total number of VRRP advertisement packets received for which the advertisement interval is different than the one configured for the local virtual router.
advertiseRcvd [Advertise Rcvd] (vrrpStatsAdvertiseRcvd)	long	The total number of VRRP advertisements received by this virtual router.
authFailures [Auth Failures] (vrrpStatsAuthFailures)	long	The total number of VRRP packets received that do not pass the authentication check.

Table 394 vrrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
authTypeMismatch [Auth Type Mismatch] (vrrpStatsAuthTypeMismatch)	long	The total number of packets received with 'Auth Type' not equal to the locally configured authentication method ('vrrpOperAuthType').
becomeMaster [Become Master] (vrrpStatsBecomeMaster)	long	The total number of times that this virtual router's state has transitioned to MASTER.
invalidAuthType [Invalid Auth Type] (vrrpStatsInvalidAuthType)	long	The total number of packets received with an unknown authentication type.
invalidTypePktsRcvd [Invalid Type Pkts Rcvd] (vrrpStatsInvalidTypePktsRcvd)	long	The number of VRRP packets received by the virtual router with an invalid value in the 'type' field.
ipTtlErrors [Ip Ttl Errors] (vrrpStatsIpTtlErrors)	long	The total number of VRRP packets received by the virtual router with IP TTL (Time-To-Live) not equal to 255.
packetLengthErrors [Packet Length Errors] (vrrpStatsPacketLengthErrors)	long	The total number of packets received with a packet length less than the length of the VRRP header.
priorityZeroPktsRcvd [Priority Zero Pkts Rcvd] (vrrpStatsPriorityZeroPktsRcvd)	long	The total number of VRRP packets received by the virtual router with a priority of '0'.
priorityZeroPktsSent [Priority Zero Pkts Sent] (vrrpStatsPriorityZeroPktsSent)	long	The total number of VRRP packets sent by the virtual router with a priority of '0'.

Table 395 aaa statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>RadPSStats</p> <p>MIB entry name: tmnxRadProxSrvEntry</p> <p>Entry description: Each conceptual row represents information about a particular RADIUS Proxy Server. Entries in this table can be created or deleted via SNMP operations.</p> <p>Table description (for tmnxRadProxSrvTable): The tmnxRadProxSrvTable contains objects to configure the RADIUS Proxy Servers of this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: aaa.RadiusProxyServer</p>		
proxSrvName [Prox Srv Name] (tmnxRadProxSrvName)	String	The value of tmnxRadProxSrvName specifies the name of this RADIUS Proxy server.
radPSStatsRxAcctRequest [Rad PSSStats Rx Acct Request] (tmnxRadPSStatsRxAcctRequest)	long	The value of tmnxRadPSStatsRxAcctRequest indicates the number of Accounting-Request packets received by this RADIUS Proxy Server.
radPSStatsRxAdminDown [Rad PSSStats Rx Admin Down] (tmnxRadPSStatsRxAdminDown)	long	The value of tmnxRadPSStatsRxAdminDown indicates the number of packets received by this RADIUS Proxy Server that were rejected because it is administratively shut down.
radPSStatsRxAuthRequest [Rad PSSStats Rx Auth Request] (tmnxRadPSStatsRxAuthRequest)	long	The value of tmnxRadPSStatsRxAuthRequest indicates the number of Access-Request packets received by this RADIUS Proxy Server.
radPSStatsRxDropped [Rad PSSStats Rx Dropped] (tmnxRadPSStatsRxDropped)	long	The value of tmnxRadPSStatsRxDropped indicates the number of packets received by this RADIUS Proxy Server but dropped.
radPSStatsRxDroppedByPython [Rad PSSStats Rx Dropped By Python] (tmnxRadPSStatsRxDroppedByPython)	long	The value of tmnxRadPSStatsRxDroppedByPython indicates the number of packets received by this RADIUS Proxy Server but dropped by Python.

Table 395 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
radPSStatsRxInvAcctAuth [Rad PSSStats Rx Inv Acct Auth] (tmnxRadPSStatsRxInvAcctAuth)	long	The value of tmnxRadPSStatsRxInvAcctAuth indicates the number of accounting packets received by this RADIUS Proxy Server that were rejected because they contained an invalid Authenticator field.
radPSStatsRxInvAcctStatusTyp [Rad PSSStats Rx Inv Acct Status Typ] (tmnxRadPSStatsRxInvAcctStatusTyp)	long	The value of tmnxRadPSStatsRxInvAcctStatusTyp indicates the number of accounting packets received by this RADIUS Proxy Server that were rejected because they contained an invalid Acct-Status-Type attribute.
radPSStatsRxInvAttr [Rad PSSStats Rx Inv Attr] (tmnxRadPSStatsRxInvAttr)	long	The value of tmnxRadPSStatsRxInvAttr indicates the number of packets received by this RADIUS Proxy Server that were rejected because one of the attributes was incorrectly encoded.
radPSStatsRxInvCode [Rad PSSStats Rx Inv Code] (tmnxRadPSStatsRxInvCode)	long	The value of tmnxRadPSStatsRxInvCode indicates the number of packets received by this RADIUS Proxy Server that were rejected because they had an invalid Code field.
radPSStatsRxInvLen [Rad PSSStats Rx Inv Len] (tmnxRadPSStatsRxInvLen)	long	The value of tmnxRadPSStatsRxInvLen indicates the number of packets received by this RADIUS Proxy Server that were rejected because their length was invalid.
radPSStatsRxInvMsgAuth [Rad PSSStats Rx Inv Msg Auth] (tmnxRadPSStatsRxInvMsgAuth)	long	The value of tmnxRadPSStatsRxInvMsgAuth indicates the number of packets received by this RADIUS Proxy Server that were rejected because they contained an invalid Message-Authenticator attribute.
radPSStatsRxInvPassword [Rad PSSStats Rx Inv Password] (tmnxRadPSStatsRxInvPassword)	long	The value of tmnxRadPSStatsRxInvPassword indicates the number of packets received by this RADIUS Proxy Server that were rejected because the User-Password attribute could not be decoded.
radPSStatsRxInvUserName [Rad PSSStats Rx Inv User Name] (tmnxRadPSStatsRxInvUserName)	long	The value of tmnxRadPSStatsRxInvUserName indicates the number of packets received by this RADIUS Proxy Server that were rejected because they contained an invalid User-Name attribute.

Table 395 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
radPSStatsRxNoAaaPol [Rad PSSStats Rx No Aaa Pol] (tmnxRadPSStatsRxNoAaaPol)	long	The value of tmnxRadPSStatsRxNoAaaPol indicates the number of packets received by this RADIUS Proxy Server that were rejected because it has no RADIUS server policy configured for that type of packet.
radPSStatsRxNoAcctStatusTyp [Rad PSSStats Rx No Acct Status Typ] (tmnxRadPSStatsRxNoAcctStatusTyp)	long	The value of tmnxRadPSStatsRxNoAcctStatusTyp indicates the number of accounting packets received by this RADIUS Proxy Server that were rejected because they contained no Acct-Status-Type attribute.
radPSStatsRxNoLoadBKey [Rad PSSStats Rx No Load BKey] (tmnxRadPSStatsRxNoLoadBKey)	long	The value of tmnxRadPSStatsRxNoLoadBKey indicates the number of packets received by this RADIUS Proxy Server that were rejected because the selected RADIUS server policy's algorithm (tmnxRadSrvPlcyAlgorithm) is set to 'hashBased' and no load balance key (tmnxRadProxSrvLoadBalanceKey) is configured.
radPSStatsRxNoMemory [Rad PSSStats Rx No Memory] (tmnxRadPSStatsRxNoMemory)	long	The value of tmnxRadPSStatsRxNoMemory indicates the number of packets that were rejected by this RADIUS server because there was not enough memory to store them.
radPSStatsRxPacket [Rad PSSStats Rx Packet] (tmnxRadPSStatsRxPacket)	long	The value of tmnxRadPSStatsRxPacket indicates the number of packets received by this RADIUS Proxy Server.
radPSStatsRxRetransmit [Rad PSSStats Rx Retransmit] (tmnxRadPSStatsRxRetransmit)	long	The value of tmnxRadPSStatsRxRetransmit indicates the number of packets received by this RADIUS Proxy Server that were rejected because they are retransmitted.
radPSStatsRxUserOverload [Rad PSSStats Rx User Overload] (tmnxRadPSStatsRxUserOverload)	long	The value of tmnxRadPSStatsRxUserOverload indicates the number of packets that were rejected by this RADIUS server because the registered user indicated to be in overload.
radPSStatsTxAcctResponse [Rad PSSStats Tx Acct Response] (tmnxRadPSStatsTxAcctResponse)	long	The value of tmnxRadPSStatsTxAcctResponse indicates the number of Accounting-Response packets transmitted by this RADIUS Proxy Server.

Table 395 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
radPSStatsTxAuthAck [Rad PSSStats Tx Auth Ack] (tmnxRadPSStatsTxAuthAck)	long	The value of tmnxRadPSStatsTxAuthAck indicates the number of Access-Accept packets transmitted by this RADIUS Proxy Server.
radPSStatsTxAuthChallenge [Rad PSSStats Tx Auth Challenge] (tmnxRadPSStatsTxAuthChallenge)	long	The value of tmnxRadPSStatsTxAuthChallenge indicates the number of Access-Challenge packets transmitted by this RADIUS Proxy Server.
radPSStatsTxAuthReject [Rad PSSStats Tx Auth Reject] (tmnxRadPSStatsTxAuthReject)	long	The value of tmnxRadPSStatsTxAuthReject indicates the number of Access-Reject packets transmitted by this RADIUS Proxy Server.
radPSStatsTxCacheAttrTooLong [Rad PSSStats Tx Cache Attr Too Long] (tmnxRadPSStatsTxCacheAttrTooLong)	long	The value of tmnxRadPSStatsTxCacheAttrTooLong indicates the number of packets that could not be cached by this RADIUS Proxy Server because the total length of the attributes is too long.
radPSStatsTxCacheKeyTooLong [Rad PSSStats Tx Cache Key Too Long] (tmnxRadPSStatsTxCacheKeyTooLong)	long	The value of tmnxRadPSStatsTxCacheKeyTooLong indicates the number of packets that could not be cached by this RADIUS Proxy Server because the key information present in the packet was too long.
radPSStatsTxCacheMaxEntries [Rad PSSStats Tx Cache Max Entries] (tmnxRadPSStatsTxCacheMaxEntries)	long	The value of tmnxRadPSStatsTxCacheMaxEntries indicates the number of packets that could not be cached by this RADIUS Proxy Server because the limit has been reached.
radPSStatsTxCacheNoKey [Rad PSSStats Tx Cache No Key] (tmnxRadPSStatsTxCacheNoKey)	long	The value of tmnxRadPSStatsTxCacheNoKey indicates the number of packets that could not be cached by this RADIUS Proxy Server because the key information was not present in the packet.
radPSStatsTxDropped [Rad PSSStats Tx Dropped] (tmnxRadPSStatsTxDropped)	long	The value of tmnxRadPSStatsTxDropped indicates the number of packets dropped by this RADIUS Proxy Server before transmission.

Table 395 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
radPSStatsTxDroppedByPython [Rad PSSStats Tx Dropped By Python] (tmnxRadPSStatsTxDroppedByPython)	long	The value of tmnxRadPSStatsTxDroppedByPython indicates the number of packets that were dropped by this RADIUS server because the packet was dropped by the Python script.
radPSStatsTxNoMemory [Rad PSSStats Tx No Memory] (tmnxRadPSStatsTxNoMemory)	long	The value of tmnxRadPSStatsTxNoMemory indicates the number of packets that could not be transmitted by this RADIUS Proxy Server because there was not enough memory.
radPSStatsTxNoRadiusServer [Rad PSSStats Tx No Radius Server] (tmnxRadPSStatsTxNoRadiusServer)	long	The value of tmnxRadPSStatsTxNoRadiusServer indicates the number of packets that were dropped by this RADIUS server because the RADIUS server policy has no servers configured.
radPSStatsTxSendFailure [Rad PSSStats Tx Send Failure] (tmnxRadPSStatsTxSendFailure)	long	The value of tmnxRadPSStatsTxSendFailure indicates the number of packets that were dropped by this RADIUS server because the packet could not get transmitted to one of the servers in the RADIUS server policy.
radPSStatsTxServerAuthFail [Rad PSSStats Tx Server Auth Fail] (tmnxRadPSStatsTxServerAuthFail)	long	The value of tmnxRadPSStatsTxServerAuthFail indicates the number of packets that were dropped because the RADIUS server replied with a packet which failed authentication (invalid response Authenticator or Message-Authenticator attribute).
radPSStatsTxServerInvAttr [Rad PSSStats Tx Server Inv Attr] (tmnxRadPSStatsTxServerInvAttr)	long	The value of tmnxRadPSStatsTxServerInvAttr indicates the number of packets that were dropped because the RADIUS server replied with a packet with an invalid attribute.
radPSStatsTxServerInvCode [Rad PSSStats Tx Server Inv Code] (tmnxRadPSStatsTxServerInvCode)	long	The value of tmnxRadPSStatsTxServerInvCode indicates the number of packets that were dropped because the RADIUS server replied with a packet with an invalid Code field.
radPSStatsTxServerTimeout [Rad PSSStats Tx Server Timeout] (tmnxRadPSStatsTxServerTimeout)	long	The value of tmnxRadPSStatsTxServerTimeout indicates the number of packets that were dropped because the RADIUS servers have timed out.

Table 395 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
radPSStatsTxUserOverload [Rad PSSStats Tx User Overload] (tmnxRadPSStatsTxUserOverload)	long	The value of tmnxRadPSStatsTxUserOverload indicates the number of packets that were dropped because the registered user indicated to be in overload.
routerId [Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
<p>RadPSStatus</p> <p>MIB entry name: tmnxRadProxSrvEntry</p> <p>Entry description: Each conceptual row represents information about a particular RADIUS Proxy Server. Entries in this table can be created or deleted via SNMP operations.</p> <p>Table description (for tmnxRadProxSrvTable): The tmnxRadProxSrvTable contains objects to configure the RADIUS Proxy Servers of this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: aaa.RadiusProxyServer</p>		
proxSrvName [Prox Srv Name] (tmnxRadProxSrvName)	String	The value of tmnxRadProxSrvName specifies the name of this RADIUS Proxy server.
radPSStatusCacheEntries [Rad PSSStatus Cache Entries] (tmnxRadPSStatusCacheEntries)	long	The value of tmnxRadPSStatusCacheEntries indicates the number of entries in the cache of this RADIUS Proxy Server.
radPSStatusCacheEntriesReg [Rad PSSStatus Cache Entries Reg] (tmnxRadPSStatusCacheEntriesReg)	long	The value of tmnxRadPSStatusCacheEntriesReg indicates the number of entries in the cache of this RADIUS Proxy Server. Pending entries have a registered application. An example of an application that could register to a cache entry is Subscriber Management of DHCP clients.

Table 395 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
routerId [Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
<p>RadRouteDownloadStats MIB entry name: tmnxRadRDStatsEntry Entry description: Each conceptual row represents statistics about a particular Route Downloader. Rows are created and destroyed automatically by the system. Table description (for tmnxRadRDStatsTable): The tmnxRadRDStatsTable contains statistics about the RADIUS Route Downloaders of this system. Supports realtime plotting Supports scheduled collection Monitored class: aaa.RouteDownloadPolicy</p>		
accessAcceptedPkts [Access Accepted Pkts] (tmnxRadRDStatsRxAccessAccept)	long	The value of tmnxRadRDStatsRxAccessReject indicates the number of Access-Accept packets received by this Route Downloader.
accessDroppedPkts [Access Dropped Pkts] (tmnxRadRDStatsRxAccessAcceptDrop)	long	The value of tmnxRadRDStatsRxAccessAcceptDrop indicates the number of Access-Accept packets received but dropped by this Route Downloader.
accessRejectedPkts [Access Rejected Pkts] (tmnxRadRDStatsRxAccessReject)	long	The value of tmnxRadRDStatsRxAccessReject indicates the number of Access-Reject packets received by this Route Downloader.
accessRequests [Access Requests] (tmnxRadRDStatsTxAccessRequest)	long	The value of tmnxRadRDStatsTxAccessRequest indicates the number of Access-Requests sent by this Route Downloader.

Table 395 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
accessRetries [Access Retries] (tmnxRadRDStatsTxAccessReqRetry)	long	The value of tmnxRadRDStatsTxAccessReqRetry indicates the number of Access-Requests retries for this Route Downloader.
installingFailures [Installing Failures] (tmnxRadRDStatsRtmFailures)	long	The value of tmnxRadRDStatsRtmFailures indicates the number of times installing received routes failed for this Route Downloader.
lastAccessAccept [Last Access Accept] (tmnxRadRDStatsRxLastAccessAccept)	long	The value of tmnxRadRDStatsRxLastAccessAccept indicates when this Route Downloader last received an Access-Accept packet.
lastAccessReject [Last Access Reject] (tmnxRadRDStatsRxLastAccessReject)	long	The value of tmnxRadRDStatsRxLastAccessReject indicates when this Route Downloader last received an Access-Reject packet.
lastAccessRequest [Last Access Request] (tmnxRadRDStatsTxLastAccessReq)	long	The value of tmnxRadRDStatsTxLastAccessReq indicates when this Route Downloader last sent an Access-Request packet.
lastAccessRetry [Last Access Retry] (tmnxRadRDStatsTxLastAccReqRetry)	long	The value of tmnxRadRDStatsTxLastAccReqRetry indicates the time of the last Access-Request retry.
numOfDownloads [Num Of Downloads] (tmnxRadRDStatsDownloads)	long	The value of tmnxRadRDStatsDownloads indicates the number of downloads started by this Route Downloader.
remainingTime [Remaining Time] (tmnxRadRDStatsRemainingDownlTime)	long	The value of tmnxRadRDStatsRemainingDownlTime indicates the remaining time before the next download attempt.
retryTime [Retry Time] (tmnxRadRDStatsRemainingRetryTime)	long	The value of tmnxRadRDStatsRemainingRetryTime indicates the remaining time before the next download retry.

Table 395 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
routesReceived [Routes Received] (tmnxRadRDStatsRoutesReceived)	long	The value of tmnxRadRDStatsRoutesReceived indicates the number of routes received in the last completed route download process.
<p>RadSrvPlcyMsgBufStats</p> <p>MIB entry name: tmnxRadSrvPlcyEntry</p> <p>Entry description: Each entry represents the configuration for a specific RADIUS servers policy. Entries in this table can be created and deleted via SNMP SET operations to tmnxRadSrvPlcyRowStatus.</p> <p>Table description (for tmnxRadSrvPlcyTable): The tmnxRadSrvPlcyTable allows configuration of how to access a group of RADIUS servers.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: aaa.RadiusServerPolicy</p>		
bufMsgPlcyName [Buf Msg Plcy Name] (tmnxRadSrvPlcyName)	String	The value of tmnxRadSrvPlcyName specifies a specific RADIUS servers policy.
lastBufClean [Last Buf Clean] (tmnxRadSrvPlcyLastBufClean)	long	The value of tmnxRadSrvPlcyLastBufClean indicates the sysUpTime at the time of the most recent reset (empty) of the message buffer.
lastBufStatsClean [Last Buf Stats Clean] (tmnxRadSrvPlcyLastBufStatsClean)	long	The value of tmnxRadSrvPlcyLastBufStatsClean indicates the sysUpTime at the time of the most recent reset of the message buffer statistics.
nbrAcctInterimBuf [Nbr Acct Interim Buf] (tmnxRadSrvPlcyNbrAcctInterimBuf)	long	The value of tmnxRadSrvPlcyNbrAcctInterimBuf indicates the number of RADIUS accounting interim update messages that are currently buffered for this radius server policy.
nbrAcctInterimDrop [Nbr Acct Interim Drop] (tmnxRadSrvPlcyNbrAcctInterimDrop)	long	The value of tmnxRadSrvPlcyNbrAcctInterimDrop indicates the number of RADIUS accounting interim update messages that were dropped from the buffer because their lifetime expired.

Table 395 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
nbrAcctStopBuf [Nbr Acct Stop Buf] (tmnxRadSrvPlcyNbrAcctStopBuf)	long	The value of tmnxRadSrvPlcyNbrAcctStopBuf indicates the number of RADIUS accounting stop messages that are currently buffered for this radius server policy.
nbrAcctStopDrop [Nbr Acct Stop Drop] (tmnxRadSrvPlcyNbrAcctStopDrop)	long	The value of tmnxRadSrvPlcyNbrAcctStopDrop indicates the number of RADIUS accounting stop messages that were dropped from the buffer because their lifetime expired.
<p>RadSrvPlcyStats MIB entry name: tmnxRadSrvPlcyEntry Entry description: Each entry represents the configuration for a specific RADIUS servers policy. Entries in this table can be created and deleted via SNMP SET operations to tmnxRadSrvPlcyRowStatus. Table description (for tmnxRadSrvPlcyTable): The tmnxRadSrvPlcyTable allows configuration of how to access a group of RADIUS servers. Supports realtime plotting Supports scheduled collection Monitored class: aaa.RadiusServerPolicy</p>		
plcyName [Plcy Name] (tmnxRadSrvPlcyName)	String	The value of tmnxRadSrvPlcyName specifies a specific RADIUS servers policy.
radSrvPlcyStatsAcctFailed [Rad Srv Plcy Stats Acct Failed] (tmnxRadSrvPlcyStatsAcctFailed)	long	The value of tmnxRadSrvPlcyStatsAcctFailed indicates the number of accounting failures for this policy.
radSrvPlcyStatsAuthFailed [Rad Srv Plcy Stats Auth Failed] (tmnxRadSrvPlcyStatsAuthFailed)	long	The value of tmnxRadSrvPlcyStatsAuthFailed indicates the number of authentication failures for this policy.
radSrvPlcyStatsRatioFailure [Rad Srv Plcy Stats Ratio Failure] (tmnxRadSrvPlcyStatsFailureRatio)	int	The value of tmnxRadSrvPlcyStatsFailureRatio indicates the transaction failure ratio for this policy.

Table 395 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
radSrvPlcyStatsRatioReject [Rad Srv Plcy Stats Ratio Reject] (tmnxRadSrvPlcyStatsRejectRatio)	int	The value of tmnxRadSrvPlcyStatsRejectRatio indicates the ratio of access-rejects in the auth responses for this policy.
radSrvPlcyStatsRatioSuccess [Rad Srv Plcy Stats Ratio Success] (tmnxRadSrvPlcyStatsSuccessRatio)	int	The value of tmnxRadSrvPlcyStatsSuccessRatio indicates the transaction success ratio for this policy.
radSrvPlcyStatsReqRejected [Rad Srv Plcy Stats Req Rejected] (tmnxRadSrvPlcyStatsReqRejected)	long	The value of tmnxRadSrvPlcyStatsReqRejected indicates the number of RADIUS transaction requests that were not transmitted due to unacceptable configuration.
radSrvPlcyStatsReqSendFail [Rad Srv Plcy Stats Req Send Fail] (tmnxRadSrvPlcyStatsReqSendFail)	long	The value of tmnxRadSrvPlcyStatsReqSendFail indicates the number of RADIUS transaction requests that could not be transmitted.
radSrvPlcyStatsReqSendRetry [Rad Srv Plcy Stats Req Send Retry] (tmnxRadSrvPlcyStatsReqSendRetry)	long	The value of tmnxRadSrvPlcyStatsReqSendRetry indicates the number of times a RADIUS request packet was retransmitted to a server.
radSrvPlcyStatsReqTimeout [Rad Srv Plcy Stats Req Timeout] (tmnxRadSrvPlcyStatsReqTimeout)	long	The value of tmnxRadSrvPlcyStatsReqTimeout indicates the number of RADIUS transaction requests that have timed out.
radSrvPlcyStatsRxResponses [Rad Srv Plcy Stats Rx Responses] (tmnxRadSrvPlcyStatsRxResponses)	long	The value of tmnxRadSrvPlcyStatsRxResponses indicates the number of RADIUS transaction responses received.
radSrvPlcyStatsTxRequests [Rad Srv Plcy Stats Tx Requests] (tmnxRadSrvPlcyStatsTxRequests)	long	The value of tmnxRadSrvPlcyStatsTxRequests indicates the number of RADIUS transaction requests transmitted.

Table 395 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>RadSrvStats</p> <p>MIB entry name: tmnxRadSrvPlcyEntry</p> <p>Entry description: Each entry represents the configuration for a specific RADIUS servers policy. Entries in this table can be created and deleted via SNMP SET operations to tmnxRadSrvPlcyRowStatus.</p> <p>Table description (for tmnxRadSrvPlcyTable): The tmnxRadSrvPlcyTable allows configuration of how to access a group of RADIUS servers.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: aaa.ServerEntry</p>		
plcyName [Plcy Name] (tmnxRadSrvPlcyName)	String	The value of tmnxRadSrvPlcyName specifies a specific RADIUS servers policy.
radSrvStatsAcctAvgDelay10 [Rad Srv Stats Acct Avg Delay 10] (tmnxRadSrvStatsAcctAvgDelay10)	long	The value of tmnxRadSrvStatsAcctAvgDelay10 indicates in microseconds, the average response delay for the last 10 accounting packets.
radSrvStatsAcctAvgDelay100 [Rad Srv Stats Acct Avg Delay 100] (tmnxRadSrvStatsAcctAvgDelay100)	long	The value of tmnxRadSrvStatsAcctAvgDelay100 indicates in microseconds, the average response delay for the last 100 accounting packets.
radSrvStatsAcctAvgDelay1000 [Rad Srv Stats Acct Avg Delay 1000] (tmnxRadSrvStatsAcctAvgDelay1000)	long	The value of tmnxRadSrvStatsAcctAvgDelay1000 indicates in microseconds, the average response delay for the last 1000 accounting packets.
radSrvStatsAcctAvgDelay10000 [Rad Srv Stats Acct Avg Delay 10000] (tmnxRadSrvStatsAcctAvgDelay10000)	long	The value of tmnxRadSrvStatsAcctAvgDelay10000 indicates in microseconds, the average response delay for the last 10000 accounting packets.
radSrvStatsAuthAvgDelay10 [Rad Srv Stats Auth Avg Delay 10] (tmnxRadSrvStatsAuthAvgDelay10)	long	The value of tmnxRadSrvStatsAuthAvgDelay10 indicates in microseconds, the average response delay for the last 10 authentication packets.

Table 395 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
radSrvStatsAuthAvgDelay100 [Rad Srv Stats Auth Avg Delay 100] (tmnxRadSrvStatsAuthAvgDelay100)	long	The value of tmnxRadSrvStatsAuthAvgDelay100 indicates in microseconds, the average response delay for the last 100 authentication packets.
radSrvStatsAuthAvgDelay1000 [Rad Srv Stats Auth Avg Delay 1000] (tmnxRadSrvStatsAuthAvgDelay1000)	long	The value of tmnxRadSrvStatsAuthAvgDelay1000 indicates in microseconds, the average response delay for the last 1000 authentication packets.
radSrvStatsAuthAvgDelay10000 [Rad Srv Stats Auth Avg Delay 10000] (tmnxRadSrvStatsAuthAvgDelay10000)	long	The value of tmnxRadSrvStatsAuthAvgDelay10000 indicates in microseconds, the average response delay for the last 10000 authentication packets.
radSrvStatsFailedAcct [Rad Srv Stats Failed Acct] (tmnxRadSrvStatsAcctFailed)	long	The value of tmnxRadSrvStatsAcctFailed indicates the number of accounting failures for this server.
radSrvStatsFailedAuth [Rad Srv Stats Failed Auth] (tmnxRadSrvStatsAuthFailed)	long	The value of tmnxRadSrvStatsAuthFailed indicates the number of authentication failures for this server.
radSrvStatsReqOvrlSendFail [Rad Srv Stats Req Ovr Id Send Fail] (tmnxRadSrvStatsReqOvrlSendFail)	long	The value of tmnxRadSrvStatsReqOvrlSendFail indicates the number of RADIUS request packets that could not be transmitted while the RADIUS server was in overload.
radSrvStatsReqPending [Rad Srv Stats Req Pending] (tmnxRadSrvStatsReqPending)	long	The value of tmnxRadSrvStatsReqPending indicates the number of RADIUS request packets that are currently waiting for reply from this server.
radSrvStatsReqSendFailure [Rad Srv Stats Req Send Failure] (tmnxRadSrvStatsReqSendFailure)	long	The value of tmnxRadSrvStatsReqSendFailure indicates the number of RADIUS request packets that could not be transmitted for this server.
radSrvStatsReqTimeout [Rad Srv Stats Req Timeout] (tmnxRadSrvStatsReqTimeout)	long	The value of tmnxRadSrvStatsReqTimeout indicates the number of RADIUS request packets that have timed out for this server.

Table 395 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
radSrvStatsRespInvAuth [Rad Srv Stats Resp Inv Auth] (tmnxRadSrvStatsRespInvAuth)	long	The value of tmnxRadSrvStatsRespInvAuth indicate the number of RADIUS response packets with an invalid Authenticator received from this server.
radSrvStatsRespInvMsgAuth [Rad Srv Stats Resp Inv Msg Auth] (tmnxRadSrvStatsRespInvMsgAuth)	long	The value of tmnxRadSrvStatsRespInvMsgAuth indicate the number of RADIUS response packets with an invalid Message-Authenticator attribute received from this server.
radSrvStatsRxResponses [Rad Srv Stats Rx Responses] (tmnxRadSrvStatsRxResponses)	long	The value of tmnxRadSrvStatsRxResponses indicates the number of RADIUS response packets received from this server.
radSrvStatsTxRequests [Rad Srv Stats Tx Requests] (tmnxRadSrvStatsTxRequests)	long	The value of tmnxRadSrvStatsTxRequests indicates the number of RADIUS request packets transmitted for this server.

Table 396 acfilter statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>HitCountStats</p> <p>MIB entry name: tIPFilterParamsEntry</p> <p>Entry description: Information about a particular IP Filter entry. Every IP Filter can have zero or more IP Filter match entries. a filter entry with no match criteria set will match every packet, and the entry action will be taken. Entries are created/deleted by user. Additional parameters can be found in tIPFilterParamsExtTable. There is no StorageType object, entries have a presumed StorageType of nonVolatile.</p> <p>Table description (for tIPFilterParamsTable): A table of all IP filter match entries for all IP filters.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: acfilter.IpFilterEntry</p>		
egressHitByteCount [Egress Hit Byte Count] (tIPFilterParamsEgrHitByteCount)	java. math. BigInteger	The value of tIPFilterParamsEgrHitByteCount indicates the number of bytes of all egress packets that matched this entry.
egressHitCount [Egress Hit Count] (tIPFilterParamsEgressHitCount)	java. math. BigInteger	This object indicates the number of times an egress packet matched this entry.
ingressHitByteCount [Ingress Hit Byte Count] (tIPFilterParamsIngrHitByteCount)	java. math. BigInteger	The value of tIPFilterParamsIngrHitByteCount indicates the number of bytes of all ingress packets that matched this entry.
ingressHitCount [Ingress Hit Count] (tIPFilterParamsIngressHitCount)	java. math. BigInteger	This object indicates the number of times an ingress packet matched this entry.

Table 396 acfilter statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>Ipv6HitCountStats</p> <p>MIB entry name: tIPv6FilterParamsEntry</p> <p>Entry description: Information about a particular IPv6 Filter entry. Every IPv6 Filter can have zero or more IPv6 Filter match entries. A filter entry with no match criteria set will match every packet, and the entry action will be taken. Entries are created/deleted by user. Additional match criteria can be found in tIPv6FilterParamsExtTable. There is no StorageType object, entries have a presumed StorageType of nonVolatile.</p> <p>Table description (for tIPv6FilterParamsTable): A table of all IPv6 filter match entries for all IPv6 filters</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: acfilter.Ipv6FilterEntry</p>		
egressHitByteCount [Egress Hit Byte Count] (tIPv6FilterParamsEgrHitByteCount)	java. math. BigInteger	This tIPv6FilterParamsEgrHitByteCount indicates the number of bytes of all egress packets that matched this entry.
egressHitCount [Egress Hit Count] (tIPv6FilterParamsEgressHitCount)	java. math. BigInteger	This object indicates the number of times an egress packet matched this entry.
ingressHitByteCount [Ingress Hit Byte Count] (tIPv6FilterParamsIngrHitByteCount)	java. math. BigInteger	The value of tIPv6FilterParamsIngrHitByteCount indicates the number of bytes of all ingress packets that matched this entry.
ingressHitCount [Ingress Hit Count] (tIPv6FilterParamsIngressHitCount)	java. math. BigInteger	This object indicates the number of times an ingress packet matched this entry.

ancpString [Ancp String] (tmnxAncpMssIngMntrAncpString)	String	The value of tmnxAncpMssIngMntrAncpString indicates the ANCP-string received in the GSMP 'PortUp' message which contains the PIR value as described in tmnxAncpMssIngMntrQosShedPIR.
qosShedName [Qos Shed Name] (tmnxAncpMssIngMntrQosShedName)	String	The value of tmnxAncpMssIngMntrQosShedName indicates the ingress Qos Scheduler name (defined in the table TIMETRA-QOS-MIB::tVirtualSchedulerTable applied to this MSS.
qosShedPIR [Qos Shed PIR] (tmnxAncpMssIngMntrQosShedPIR)	java. math. BigInteger	The value of tmnxAncpMssIngMntrQosShedPIR indicates the ingress Qos Scheduler PIR (Peak Info rate). This value is received via ANCP, and potentially modified by the system using the ANCP policy. This object is obsoleted in 11.0 Release. It is replaced by tmnxAncpMssIngMntrQosShedPIRHi and tmnxAncpMssIngMntrQosShedPIRLo.
siteName [Site Name] (custMultSvcSiteName)	String	The value of object custMultSvcSiteName specifies the customer's Multi-Service Site name.
subscriberId [Subscriber Id] (custId)	long	Customer identifier. This ID must be unique within a service domain.

Table 398 ancp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AncpCustomerStaticMapMonitorStats</p> <p>MIB entry name: tmnxAncpMssMonitorEntry</p> <p>Entry description: Each row contains statistics information about ANCP for every MSS that maps on an known ANCP string. Rows are created/deleted automatically by the system. The table contains read-only information only.</p> <p>Table description (for tmnxAncpMssMonitorTable): The table tmnxAncpMssMonitorTable contains ANCP information for every MSS that maps on an known ANCP string.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ancp.AncpCustomerStaticMap</p>		
ancpString [Ancp String] (tmnxAncpMssMntrAncpString)	String	The value of tmnxAncpMssMntrAncpString indicates the ANCP-string received in the GSMP 'PortUp' message which contains the Scheduler rate limit as described in tmnxAncpMssMntrEgrAggRateLimit.
egrAggRateLimit [Egr Agg Rate Limit] (tmnxAncpMssMntrEgrAggRateLimit)	long	The value of tmnxAncpMssMntrEgrAggRateLimit indicates the Qos Scheduler rate limit. This value is received via ANCP, potentially modified by the system using the ANCP policy.
siteName [Site Name] (custMultSvcSiteName)	String	The value of object custMultSvcSiteName specifies the customer's Multi-Service Site name.
subscriberId [Subscriber Id] (custId)	long	Customer identifier. This ID must be unique within a service domain.

Table 398 ancp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AncpSapEgrSchedMonitorStats</p> <p>MIB entry name: tmnxAncpSapEgrSchedMonitorEntry</p> <p>Entry description: Each row contains statistics information about ANCP for every SAP that maps on an known ANCP string. Rows are created/deleted automatically by the system. The table contains read-only information only.</p> <p>Table description (for tmnxAncpSapEgrSchedMonitorTable): The table tmnxAncpSapEgrSchedMonitorTable contains ANCP ingress information for every SAP that maps on an known ANCP string.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ancp.AncpStaticMap</p>		
ancpString [Ancp String] (tmnxAncpSapEgrMntrAncpString)	String	The value of tmnxAncpSapEgrMntrAncpString indicates the ANCP-string received in the GSMP 'PortUp' message which contains the PIR value as described in tmnxAncpSapEgrMntrQosShedPIR.
portId [Port Id] (sapPortId)	long	The ID of the access port where this SAP is defined.
qosShedName [Qos Shed Name] (tmnxAncpSapEgrMntrQosShedName)	String	The value of tmnxAncpSapEgrMntrQosShedName indicates the ingress Qos Scheduler name (defined in the table TIMETRA-QOS-MIB::tVirtualSchedulerTable applied to this SAP.
qosShedPIR [Qos Shed PIR] (tmnxAncpSapEgrMntrQosShedPIRLo)	java. math. BigInteger	The value of tmnxAncpSapIngMntrQosShedPIRLo indicates lower 32 bits of the egress Qos Scheduler PIR (Peak Info rate). This value is received via ANCP, and potentially modified by the system using the ANCP policy. When the value of tmnxAncpSapIngMntrQosShedPIRHi along with the value of tmnxAncpSapIngMntrQosShedPIRLo is equal to 4294967295 (0xFFFFFFFF), rate for this scheduler indicates maximum rate. The value of tmnxAncpSapIngMntrQosShedPIRHi equal to 4294967295 (0xFFFFFFFF) and the value of tmnxAncpSapIngMntrQosShedPIRLo equal to 4294967294 (0xFFFFFFFFE) indicates no overrides.

Table 398 ancp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapEncapValue [Sap Encap Value] (sapEncapValue)	long	The value of the label used to identify this SAP on the access port specified by sapPortId.
svclId [Svc Id] (svclId)	long	The value of the object svclId specifies the Service identifier. This value should be unique within the service domain.
<p>AncpSapIngSchedMonitorStats MIB entry name: tmnxAncpSapIngSchedMonitorEntry Entry description: Each row contains statistics information about ANCP for every SAP that maps on an known ANCP string. Rows are created/deleted automatically by the system. The table contains read-only information only. Table description (for tmnxAncpSapIngSchedMonitorTable): The table tmnxAncpSapIngSchedMonitorTable contains ANCP ingress information for every SAP that maps on an known ANCP string. Supports realtime plotting Supports scheduled collection Monitored class: ancp.AncpStaticMap</p>		
ancpString [Ancp String] (tmnxAncpSapIngMntrAncpString)	String	The value of tmnxAncpSapIngMntrAncpString indicates the ANCP-string received in the GSMP 'PortUp' message which contains the PIR value as described in tmnxAncpSapIngMntrQosShedPIR.
portId [Port Id] (sapPortId)	long	The ID of the access port where this SAP is defined.
qosShedName [Qos Shed Name] (tmnxAncpSapIngMntrQosShedName)	String	The value of tmnxAncpSapIngMntrQosShedName indicates the ingress Qos Scheduler name (defined in the table TIMETRA-QOS-MIB::tVirtualSchedulerTable applied to this SAP.

Table 398 ancp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
qosShedPIR [Qos Shed PIR] (tmnxAncpSapIngMntrQosShedPIRLo)	java. math. BigInteger	The value of tmnxAncpSapIngMntrQosShedPIRLo indicates lower 32 bits of the ingress Qos Scheduler PIR (Peak Info rate). This value is received via ANCP, and potentially modified by the system using the ANCP policy. When the value of tmnxAncpSapIngMntrQosShedPIRHi along with the value of tmnxAncpSapIngMntrQosShedPIRLo is equal to 4294967295 (0xFFFFFFFF), rate for this scheduler indicates maximum rate. The value of tmnxAncpSapIngMntrQosShedPIRHi equal to 4294967295 (0xFFFFFFFF) and the value of tmnxAncpSapIngMntrQosShedPIRLo equal to 4294967294 (0xFFFFF7FE) indicates no overrides.
sapEncapValue [Sap Encap Value] (sapEncapValue)	long	The value of the label used to identify this SAP on the access port specified by sapPortId.
svclId [Svc Id] (svclId)	long	The value of the object svclId specifies the Service identifier. This value should be unique within the service domain.
<p>AncpSapMonitorStats</p> <p>MIB entry name: tmnxAncpSapMonitorEntry</p> <p>Entry description: Each row contains statistics information about ANCP for every SAP that maps on an known ANCP string. ancpString [Ancp String] (tmnxAncpSapMntrAncpString)	String	The value of tmnxAncpSapMntrAncpString indicates the ANCP-string received in the GSMP 'PortUp' message which contains the aggregate rate limit as described in tmnxAncpSapMntrEgrAggRateLimit.

Table 398 ancp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrAggRateLimit [Egr Agg Rate Limit] (tmnxAncpSapMntrEgrAggRateLimit)	long	The value of tmnxAncpSapMntrEgrAggRateLimit indicates the Qos Scheduler aggregate rate limit. This value is received via ANCP, potentially modified by the system using the ANCP policy.
portId [Port Id] (sapPortId)	long	The ID of the access port where this SAP is defined.
sapEncapValue [Sap Encap Value] (sapEncapValue)	long	The value of the label used to identify this SAP on the access port specified by sapPortId.
svclId [Svc Id] (svclId)	long	The value of the object svclId specifies the Service identifier. This value should be unique within the service domain.
<p>AncpSubMonitorStats MIB entry name: tmnxAncpSubMonitorEntry Entry description: Each row contains statistics information about ANCP for every subscriber that maps on an known ANCP string. Rows are created/deleted automatically by the system. The table contains read-only information only. Table description (for tmnxAncpSubMonitorTable): The table tmnxAncpSubMonitorTable contains ANCP information for every subscriber that maps on an known ANCP string. Supports realtime plotting Supports scheduled collection Monitored class: ressubscr.ResidentialSubscriberInstance</p>		
egrAggRateLimit [Egr Agg Rate Limit] (tmnxAncpSubMntrEgrAggRateLimit)	java. math. BigInteger	The value of tmnxAncpSubMntrEgrAggRateLimit indicates the Qos Scheduler rate limit. This value is received via ANCP, potentially modified by the system using the ANCP policy.

Table 398 ancp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrQosShedName [Egr Qos Shed Name] (tmnxAncpSubMntrEgrQosShedName)	String	The value of tmnxAncpSubMntrEgrQosShedName indicates the egress Qos Scheduler name (defined in the table TIMETRA-QOS-MIB::tVirtualSchedulerTable applied to this subscriber.
egrQosShedPIR [Egr Qos Shed PIR] (tmnxAncpSubMntrEgrQosShedPIRLo)	java. math. BigInteger	The value of tmnxAncpSubMntrEgrQosShedPIRLo indicates lower 32 bits of the egress Qos Scheduler PIR (Peak Info rate). This value is received via ANCP, and potentially modified by the system using the ANCP policy. When the value of tmnxAncpSubMntrEgrQosShedPIRHi along with the value of tmnxAncpSubMntrEgrQosShedPIRLo is equal to 4294967295 (0xFFFFFFFF), rate for this scheduler indicates maximum rate. The value of tmnxAncpSubMntrEgrQosShedPIRHi equal to 4294967295 (0xFFFFFFFF) and the value of tmnxAncpSubMntrEgrQosShedPIRLo equal to 4294967294 (0xFFFFFFFFE) indicates no overrides.
ingQosShedName [Ing Qos Shed Name] (tmnxAncpSubMntrIngQosShedName)	String	The value of tmnxAncpSubMntrIngQosShedName indicates the ingress Qos Scheduler name (defined in the table TIMETRA-QOS-MIB::tVirtualSchedulerTable applied to this subscriber.
ingQosShedPIR [Ing Qos Shed PIR] (tmnxAncpSubMntrIngQosShedPIRLo)	java. math. BigInteger	The value of tmnxAncpSubMntrIngQosShedPIRLo indicates lower 32 bits of the ingress Qos Scheduler PIR (Peak Info rate). This value is received via ANCP, and potentially modified by the system using the ANCP policy. When the value of tmnxAncpSubMntrIngQosShedPIRHi along with the value of tmnxAncpSubMntrIngQosShedPIRLo is equal to 4294967295 (0xFFFFFFFF), rate for this scheduler indicates maximum rate. The value of tmnxAncpSubMntrIngQosShedPIRHi equal to 4294967295 (0xFFFFFFFF) and the value of tmnxAncpSubMntrIngQosShedPIRLo equal to 4294967294 (0xFFFFFFFFE) indicates no overrides.
subscrIdent [Subscr Ident] (tmnxSubInfoSubIdent)	String	The value of tmnxSubInfoSubIdent specifies the subscriber identification of this subscriber.

Table 399 aps statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>ApsChannelStats MIB entry name: apsChanStatusEntry Entry description: A conceptual row in the apsChanStatusTable. Table description (for apsChanStatusTable): This table contains status information for all SONET LTE interfaces that are included in APS groups. Supports realtime plotting Supports scheduled collection Monitored class: aps.ApsChannel</p>		
discontinuityTime [Discontinuity Time] (apsChanStatusDiscontinuityTime)	long	The value of sysUpTime on the most recent occasion at which any one or more of this channel's counters suffered a discontinuity. The relevant counters are the specific instances associated with this channel of any Counter32 object contained in apsChanStatusTable. If no such discontinuities have occurred since the last re-initialization of the local management subsystem, then this object contains a zero value.
lastSwitchover [Last Switchover] (apsChanStatusLastSwitchover)	long	When queried with index value apsChanConfigNumber other than 0, this object will return the value of sysUpTime when this channel last completed a switch to the protection line. If this channel has never switched to the protection line, the value 0 will be returned. When queried with index value apsChanConfigNumber set to 0, which is the protection line, this object will return the value of sysUpTime the last time that a working channel was switched back to the working line from this protection line. If no working channel has ever switched back to the working line from this protection line, the value 0 will be returned.

Table 399 aps statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
signalDegrades [Signal Degrades] (apsChanStatusSignalDegrades)	long	A count of Signal Degrade conditions. This condition occurs when the line Bit Error Rate exceeds the currently configured value of the relevant instance of apsConfigSdBerThreshold. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsChanStatusDiscontinuityTime.
signalFailures [Signal Failures] (apsChanStatusSignalFailures)	long	A count of Signal Failure conditions that have been detected on the incoming signal. This condition occurs when a loss of signal, loss of frame, AIS-L or a Line bit error rate exceeding the currently configured value of the relevant instance of apsConfigSfBerThreshold. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsChanStatusDiscontinuityTime.
switchoverSeconds [Switchover Seconds] (apsChanStatusSwitchoverSeconds)	long	The cumulative Protection Switching Duration (PSD) time in seconds. For a working channel, this is the cumulative number of seconds that service was carried on the protection line. For the protection line, this is the cumulative number of seconds that the protection line has been used to carry any working channel traffic. This information is only valid if revertive switching is enabled. The value 0 will be returned otherwise. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsChanStatusDiscontinuityTime. For example, if the value of an instance of apsChanStatusSwitchoverSeconds changes from a non-zero value to zero due to revertive switching being disabled, it is expected that the corresponding value of apsChanStatusDiscontinuityTime will be updated to reflect the time of the configuration change.

Table 399 aps statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
switchovers [Switchovers] (apsChanStatusSwitchovers)	long	When queried with index value apsChanConfigNumber other than 0, this object will return the number of times this channel has switched to the protection line. When queried with index value apsChanConfigNumber set to 0, which is the protection line, this object will return the number of times that any working channel has been switched back to the working line from this protection line. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsChanStatusDiscontinuityTime.
<p>ApsGroupStats MIB entry name: apsStatusEntry Entry description: A conceptual row in the apsStatusTable. Table description (for apsStatusTable): This table provides status information about APS groups that have been configured on the system. Supports realtime plotting Supports scheduled collection Monitored class: aps.ApsGroup</p>		
channelMismatches [Channel Mismatches] (apsStatusChannelMismatches)	long	A count of Channel Mismatch conditions. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsStatusDiscontinuityTime.
discontinuityTime [Discontinuity Time] (apsStatusDiscontinuityTime)	long	The value of sysUpTime on the most recent occasion at which any one or more of this APS group's counters suffered a discontinuity. The relevant counters are the specific instances associated with this APS group of any Counter32 object contained in apsStatusTable. If no such discontinuities have occurred since the last re-initialization of the local management subsystem, then this object contains a zero value.

Table 399 aps statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fEPLFs [FEPLFs] (apsStatusFEPLFs)	long	A count of Far-End Protection-Line Failure conditions. This condition is declared based on receiving SF on the protection line in the K1 byte. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsStatusDiscontinuityTime.
modeMismatches [Mode Mismatches] (apsStatusModeMismatches)	long	A count of Mode Mismatch conditions. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsStatusDiscontinuityTime.
pSBFs [PSBFs] (apsStatusPSBFs)	long	A count of Protection Switch Byte Failure conditions. This condition occurs when either an inconsistent APS byte or an invalid code is detected. An inconsistent APS byte occurs when no three consecutive K1 bytes of the last 12 successive frames are identical, starting with the last frame containing a previously consistent byte. An invalid code occurs when the incoming K1 byte contains an unused code or a code irrelevant for the specific switching operation (e.g., Reverse Request while no switching request is outstanding) in three consecutive frames. An invalid code also occurs when the incoming K1 byte contains an invalid channel number in three consecutive frames. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsStatusDiscontinuityTime.

Table 400 arp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SapArpHostStats</p> <p>MIB entry name: sapArpHostStatEntry</p> <p>Entry description: ARP host specific status and statistics information about a SAP.</p> <p>Table description (for sapArpHostStatTable): A table that contains ARP host status and statistics information about SAP's.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • ies.ServiceAccessPoint • vpls.AbstractL2AccessInterface • vprn.ServiceAccessPoint 		
numAuthReq [Num Auth Req] (sapArpHostStatNumAuthReq)	long	The value of sapArpHostStatNumAuthReq indicates the number of times that the system initiated an authentication request for an ARP host on this SAP since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.
numCreated [Num Created] (sapArpHostStatNumCreated)	long	The value of sapArpHostStatNumCreated indicates the number of times that an ARP host was created on this SAP since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.
numDeleted [Num Deleted] (sapArpHostStatNumDeleted)	long	The value of sapArpHostStatNumDeleted indicates the number of times that an ARP host was deleted on this SAP since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.
numForcedVerif [Num Forced Verif] (sapArpHostStatNumForcedVerif)	long	The value of sapArpHostStatNumForcedVerif indicates the number of times that the system started a forced subscriber host connectivity verification for an ARP host on this SAP since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.

Table 400 arp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numHosts [Num Hosts] (sapArpHostStatNumHosts)	long	The value of sapArpHostStatNumHosts indicates the actual number of ARP hosts on this SAP.
numUpdated [Num Updated] (sapArpHostStatNumUpdated)	long	The value of sapArpHostStatNumUpdated indicates the number of times that an ARP host was updated on this SAP since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.
trigIgnQFull [Trig Ign QFull] (sapArpHostStatTrigIgnQFull)	long	The value of sapArpHostStatTrigIgnQFull indicates the number of ARP triggers received on this SAP that did not result in the creation of a new ARP host because the internal ARP trigger event queue of the system was full, since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.
triggersIgnored [Triggers Ignored] (sapArpHostStatTriggersIgnored)	long	The value of sapArpHostStatTriggersIgnored indicates the number of ARP triggers received on this SAP that did not result in the creation of a new ARP host since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared. This number does not include the number indicated by sapArpHostStatTrigIgnQFull.
triggersRx [Triggers Rx] (sapArpHostStatTriggersRx)	long	The value of sapArpHostStatTriggersRx indicates the number of ARP triggers received on this SAP since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.

Table 401 atm statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AtmIfcStatistics</p> <p>MIB entry name: tAtmIfcStatisticsEntry</p> <p>Entry description: An entry in the tAtmIfcStatisticsTable containing statistics information applicable to a particular IFC entry.</p> <p>Table description (for tAtmIfcStatisticsTable): The tAtmIfcStatisticsTable is used to gather cell-level statistics on a particular IFC entry.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: atm.IfConnection</p>		
tAtmIfcStatsDrpCellsRxd [TAtm Ifc Stats Drp Cells Rxd] (tAtmIfcStatsDrpCellsRxd)	long	The value of tAtmIfcStatsDrpCellsRxd indicates the number of all policer cells discards (CLP=0+1) of the IFC. This excludes any buffer management discards (if applicable).
tAtmIfcStatsDrpClp0CellsRxd [TAtm Ifc Stats Drp Clp 0 Cells Rxd] (tAtmIfcStatsDrpClp0CellsRxd)	long	The value of tAtmIfcStatsDrpClp0CellsRxd indicates the number of all policer CLP=0 cells discards of the IFC. This excludes any buffer management discards (if applicable).
tAtmIfcStatsDrpClp0CellsTxd [TAtm Ifc Stats Drp Clp 0 Cells Txd] (tAtmIfcStatsDrpClp0CellsTxd)	long	The value of tAtmIfcStatsDrpClp0CellsTxd indicates the number of all CLP=0 cells discards of this IFC. This includes both discards due to buffer management and policer.
tAtmIfcStatsTagCells [TAtm Ifc Stats Tag Cells] (tAtmIfcStatsTagCells)	long	The value of tAtmIfcStatsTagCells indicates the number of tagged CLP=0 cells of the IFC. The egress may or may not discard these cells.
tAtmIfcStatsTotalBytesRxd [TAtm Ifc Stats Total Bytes Rxd] (tAtmIfcStatsTotalBytesTxd)	java. math. BigInteger	The value of tAtmIfcStatsTotalBytesTxd indicates the number of bytes transmitted by this IFC. This is the number of tAtmIfcStatsTotalCellsTxd multiplied by 53.

Table 401 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tAtmIfcStatsTotalBytesTxd [TAtm Ifc Stats Total Bytes Txd] (tAtmIfcStatsTotalBytesRxd)	java. math. BigInteger	The value of tAtmIfcStatsTotalBytesRxd indicates the number of bytes received by this IFC. This is the number of tAtmIfcStatsTotalCellsRxd multiplied by 53.
tAtmIfcStatsTotalCellsRxd [TAtm Ifc Stats Total Cells Rxd] (tAtmIfcStatsTotalCellsRxd)	java. math. BigInteger	The value of tAtmIfcStatsTotalCellsRxd indicates the number of valid ATM cells received by the IFC including both CLP=0 and CLP=1 cells. If traffic policing is implemented, then cells are counted prior to the application of traffic policing.
tAtmIfcStatsTotalCellsTxd [TAtm Ifc Stats Total Cells Txd] (tAtmIfcStatsTotalCellsTxd)	java. math. BigInteger	The value of tAtmIfcStatsTotalCellsTxd indicates the number of valid ATM cells transmitted by the IFC including both CLP=0 and CLP=1 cells. If traffic policing is implemented, then cells are counted prior to the application of traffic policing.
tAtmIfcStatsTotalClp0CellsRxd [TAtm Ifc Stats Total Clp 0 Cells Rxd] (tAtmIfcStatsTotalClp0CellsRxd)	java. math. BigInteger	The value of tAtmIfcStatsTotalClp0CellsRxd indicates the number of valid ATM CLP=0 cells received by the IFC. If traffic policing is implemented, then cells are counted prior to the application of traffic policing.
tAtmIfcStatsTotalClp0CellsTxd [TAtm Ifc Stats Total Clp 0 Cells Txd] (tAtmIfcStatsTotalClp0CellsTxd)	java. math. BigInteger	The value of tAtmIfcStatsTotalClp0CellsTxd indicates the number of valid ATM CLP=0 cells transmitted by the IFC. If traffic policing is implemented, then cells are counted prior to the application of traffic policing.
<p>AtmOamVplStatistics</p> <p>MIB entry name: tAtmOamVplStatisticsEntry</p> <p>Entry description: An entry in the tAtmVplStatisticsTable containing statistics information applicable to a particular VPL entry in the AToM MIB.</p> <p>Table description (for tAtmOamVplStatisticsTable): The tAtmOamVplStatisticsTable is used to gather oam statistics on a particular VPL entry in the RFC 2515 AToM MIB.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: atm.VPConnection</p>		

Table 401 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tAtmOamVplStatsAISCCellsRxd [TAtm Oam Vpl Stats AISCCells Rxd] (tAtmOamVplStatsAISCCellsRxd)	long	The value of tAtmOamVplStatsAISCCellsRxd indicates the number of AIS cells received on this VPL for both end to end and segment.
tAtmOamVplStatsAISCCellsTxd [TAtm Oam Vpl Stats AISCCells Txd] (tAtmOamVplStatsAISCCellsTxd)	long	The value of tAtmOamVplStatsAISCCellsTxd indicates the number of AIS cells transmitted on this VPL for both end to end and segment.
tAtmOamVplStatsCrc10Errors [TAtm Oam Vpl Stats Crc 10 Errors] (tAtmOamVplStatsCrc10Errors)	long	The value of tAtmOamVplStatsCrc10Errors indicates the number of OAM cells discarded on this VPL with CRC 10 errors.
tAtmOamVplStatsLoopbackCellsRxd [TAtm Oam Vpl Stats Loopback Cells Rxd] (tAtmOamVplStatsLoopbackCellsRxd)	long	The value of tAtmOamVplStatsLoopbackCellsRxd indicates the number of loopback requests and responses received on this VPL for both end to end and segment.
tAtmOamVplStatsLoopbackCellsTxd [TAtm Oam Vpl Stats Loopback Cells Txd] (tAtmOamVplStatsLoopbackCellsTxd)	long	The value of tAtmOamVplStatsLoopbackCellsTxd indicates the number of loopback requests and responses transmitted on this VPL for both end to end and segment.
tAtmOamVplStatsOtherCellsRxd [TAtm Oam Vpl Stats Other Cells Rxd] (tAtmOamVplStatsOtherCellsRxd)	long	This value of tAtmOamVplStatsOtherCellsRxd indicates the number of OAM cells that are received on this VPL but not identified.
tAtmOamVplStatsRDICellsRxd [TAtm Oam Vpl Stats RDICells Rxd] (tAtmOamVplStatsRDICellsRxd)	long	The value of tAtmOamVplStatsRDICellsRxd indicates the number of RDI cells received on this VPL for both end to end and segment.
tAtmOamVplStatsRDICellsTxd [TAtm Oam Vpl Stats RDICells Txd] (tAtmOamVplStatsRDICellsTxd)	long	The value of tAtmOamVplStatsRDICellsTxd indicates the number of RDI cells transmitted on this VPL for both end to end and segment.

aal5DroppedPacketsRxd [Aal5 Dropped Packets Rxd] (tAal5VccStatsDrpPacketsRxd)	java. math. BigInteger	The value of tAal5VccStatsDrpPacketsRxd indicates the number of dropped AAL-5 SDUs that have been received on the AAL-5 VCC.
aal5DroppedPacketsTxd [Aal5 Dropped Packets Txd] (tAal5VccStatsDrpPacketsTxd)	java. math. BigInteger	The value of tAal5VccStatsDrpPacketsTxd indicates the number of dropped AAL-5 SDUs that would have been transmitted on the AAL-5 VCC.
aal5PacketsRxd [Aal5 Packets Rxd] (tAal5VccStatsPacketsRxd)	java. math. BigInteger	The value of tAal5VccStatsPacketsRxd indicates the number of valid AAL-5 SDUs and AAL-5 SDUs with CRC-32 errors received by the AAL-5 VCC.
aal5PacketsTxd [Aal5 Packets Txd] (tAal5VccStatsPacketsTxd)	java. math. BigInteger	The value of tAal5VccStatsPacketsTxd indicates the number of AAL-5 SDUs transmitted by the AAL-5 VCC.

Table 401 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PvcConnectionOamStats</p> <p>MIB entry name: tAtmOamVclStatisticsEntry</p> <p>Entry description: An entry in the tAtmVclStatisticsTable containing statistics information applicable to a particular VCL entry in the AToM MIB.</p> <p>Table description (for tAtmOamVclStatisticsTable): The tAtmOamVclStatisticsTable is used to gather oam statistics on a particular VCL entry in the RFC 2515 AToM MIB.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: atm.PvcConnection</p>		
oamAISCellsRxd [Oam AISCells Rxd] (tAtmOamVclStatsAISCellsRxd)	long	The value of tAtmOamVclStatsAISCellsRxd indicates the number of AIS cells received on this VC for both end to end and segment.
oamAISCellsTxd [Oam AISCells Txd] (tAtmOamVclStatsAISCellsTxd)	long	The value of tAtmOamVclStatsAISCellsTxd indicates the number of AIS cells transmitted on this VC for both end to end and segment.
oamCrc10Errors [Oam Crc 10 Errors] (tAtmOamVclStatsCrc10Err)	long	The value of tAtmOamVclStatsCrc10Err indicates the number of oam cells discarded with CRC 10 Errors.
oamLoopbackCellsRxd [Oam Loopback Cells Rxd] (tAtmOamVclStatsLoopbackCellsRxd)	long	The value of tAtmOamVclStatsLoopbackCellsRxd indicates the number of loopback requests and responses received on this VC for both end to end and segment.
oamLoopbackCellsTxd [Oam Loopback Cells Txd] (tAtmOamVclStatsLoopbackCellsTxd)	long	The value of tAtmOamVclStatsLoopbackCellsTxd indicates the number of loopback requests and responses transmitted on this VC for both end to end and segment.
oamOtherCellsRxd [Oam Other Cells Rxd] (tAtmOamVclStatsOtherCellsRxd)	long	This value of tAtmOamVclStatsOtherCellsRxd indicates the number of oam cells that are received but not identified.

Table 401 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
oamRDICellsRxd [Oam RDICells Rxd] (tAtmOamVclStatsRDICellsRxd)	long	The value of tAtmOamVclStatsRDICellsRxd indicates the number of RDI cells received on this VC for both end to end and segment.
oamRDICellsTxd [Oam RDICells Txd] (tAtmOamVclStatsRDICellsTxd)	long	The value of tAtmOamVclStatsRDICellsTxd indicates the number of RDI cells transmitted on this VC for both end to end and segment.
<p>PvcConnectionStats MIB entry name: tAtmVclStatisticsEntry Entry description: An entry in the tAtmVclStatisticsTable containing statistics information applicable to a particular VCL entry in the AToM MIB. Table description (for tAtmVclStatisticsTable): The tAtmVclStatisticsTable is used to gather cell-level statistics on a particular VCL entry in the RFC 2515 AToM MIB. Supports realtime plotting Supports scheduled collection Monitored class: atm.PvcConnection</p>		
totalBytesRxd [Total Bytes Rxd] (tAtmVclStatsTotalBytesRxd)	java. math. BigInteger	The value of tAtmVclStatsTotalBytesRxd indicates the number of bytes received by this Vcl. This is the number of tAtmVclStatsTotalCellsRxd multiplied by 53.
totalBytesTxd [Total Bytes Txd] (tAtmVclStatsTotalBytesTxd)	java. math. BigInteger	The value of tAtmVclStatsTotalBytesTxd indicates the number of bytes transmitted by this Vcl. This is the number of tAtmVclStatsTotalCellsTxd multiplied by 53.
totalPacketsRxd [Total Packets Rxd] (tAtmVclStatsTotalCellsRxd)	java. math. BigInteger	The value of tAtmVclStatsTotalCellsRxd indicates the number of valid ATM cells received by the VCL including both CLP=0 and CLP=1 cells. If traffic policing is implemented, then cells are counted prior to the application of traffic policing.

Table 401 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalPacketsTxd [Total Packets Txd] (tAtmVclStatsTotalCellsTxd)	java. math. BigInteger	The value of tAtmVclStatsTotalCellsTxd indicates the number of valid ATM cells transmitted by the VCL including both CLP=0 and CLP=1 cells. If traffic policing is implemented, then cells are counted prior to the application of traffic policing.
<p>TCStats</p> <p>MIB entry name: atmInterfaceTCEntry</p> <p>Entry description: This list contains TC Sublayer parameters and state variables at the ATM interface and is indexed by the ifIndex value of the ATM interface.</p> <p>Table description (for atmInterfaceTCTable): This table contains ATM interface TC Sublayer parameters and state variables, one entry per ATM interface port.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: atm.Interface</p>		
ocdEvents [Ocd Events] (atmInterfaceOCDEvents)	long	The number of times the Out of Cell Delineation (OCD) events occur. If seven consecutive ATM cells have Header Error Control (HEC) violations, an OCD event occurs. A high number of OCD events may indicate a problem with the TC Sublayer.
<p>TCSubLayerStats</p> <p>MIB entry name: tAtmTCSublayerEntry</p> <p>Entry description: An entry in the tAtmTCSublayerEntry containing additional management information about the Transmission Convergence Sublayer.</p> <p>Table description (for tAtmTCSublayerTable): The tAtmTCSublayerTable contains the Transmission Convergence Sublayer data.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: atm.Interface</p>		

Table 401 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
hecErrors [Hec Errors] (tAtmTCSublayerHecErrors)	long	The value of tAtmTCSublayerHecErrors indicates the number of cells with uncorrectable HEC Errors on this interface.
hecErrorsFixed [Hec Errors Fixed] (tAtmTCSublayerHecErrorsFixed)	long	The value of tAtmTCSublayerHecErrorsFixed indicates the number of cells with correctable HEC Errors on this interface.

Table 402 bgp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PeerAdditionalStats</p> <p>MIB entry name: bgpPeerEntry</p> <p>Entry description: Entry containing information about the connection with a BGP peer.</p> <p>Table description (for bgpPeerTable): BGP peer table. This table contains, one entry per BGP peer, information about the connections with BGP peers.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bgp.Peer</p>		
fsmEstablishedTime [Fsm Established Time] (bgpPeerFsmEstablishedTime)	long	This timer indicates how long (in seconds) this peer has been in the Established state or how long since this peer was last in the Established state. It is set to zero when a new peer is configured or the router is booted.
<p>PeerRouteTargetStats</p> <p>MIB entry name: tBgpPeerNgOperEntry</p> <p>Entry description: Defines an entry (conceptual row) in the tBgpPeerNgOperTable. Entries in tBgpPeerNgOperTable are created when entries are created in tBgpPeerNgTable.</p> <p>Table description (for tBgpPeerNgOperTable): The tBgpPeerNgOperTable is the list of configured BGP Peers and their operational status information.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bgp.Peer</p>		
rtActivePfxs [Rt Active Pfxs] (tBgpPeerNgOperRtTgtActivePfxs)	long	The value of tBgpPeerNgOperRtTgtActivePfxs indicates the number of active route target prefixes from this peer.
rtRecvPfxs [Rt Recv Pfxs] (tBgpPeerNgOperRtTgtRecvPfxs)	long	The value of tBgpPeerNgOperRtTgtRecvPfxs indicates the number of route target prefixes received from this peer.

Table 402 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rtSentPfxs [Rt Sent Pfxs] (tBgpPeerNgOperRtTgtSentPfxs)	long	The value of tBgpPeerNgOperRtTgtSentPfxs indicates the number of route target prefixes transmitted to this peer.
rtSuppPfxDamp [Rt Supp Pfx Damp] (tBgpPeerNgOperRtTgtSuppPfxDamp)	long	The value of tBgpPeerNgOperRtTgtRecvPfxs indicates the number of route target prefixes from this peer, which have been suppressed by damping.
<p>PeerStats MIB entry name: tBgpPeerNgOperEntry Entry description: Defines an entry (conceptual row) in the tBgpPeerNgOperTable. Entries in tBgpPeerNgOperTable are created when entries are created in tBgpPeerNgTable. Table description (for tBgpPeerNgOperTable): The tBgpPeerNgOperTable is the list of configured BGP Peers and their operational status information. Supports realtime plotting Supports scheduled collection Monitored class: bgp.Peer</p>		
flaps [Flaps] (tBgpPeerNgOperFlaps)	long	The value of tBgpPeerNgOperFlaps indicates the number of flaps of updates from this peer.
inputQueueMessages [Input Queue Messages] (tBgpPeerNgOperInputQueueMsgs)	long	The value of tBgpPeerNgOperInputQueueMsgs indicates the number of unprocessed messages in the queue, from this peer.
l2VpnActivePfxs [L2 Vpn Active Pfxs] (tBgpPeerNgOperl2VpnActivePfxs)	long	The value of tBgpPeerNgOperl2VpnActivePfxs indicates the number of active L2VPN prefixes from this peer.
l2VpnRecvPfxs [L2 Vpn Recv Pfxs] (tBgpPeerNgOperl2VpnRecvPfxs)	long	The value of tBgpPeerNgOperl2VpnRecvPfxs indicates the number L2VPN prefixes received from this peer.

Table 402 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
I2VpnSentPfxs [L2 Vpn Sent Pfxs] (tBgpPeerNgOperI2VpnSentPfxs)	long	The value of tBgpPeerNgOperI2VpnSentPfxs indicates the number of L2VPN prefixes transmitted to this peer.
I2VpnSuppPfxDamp [L2 Vpn Supp Pfx Damp] (tBgpPeerNgOperI2VpnSuppPfxDamp)	long	The value of tBgpPeerNgOperI2VpnSuppPfxDamp indicates the number of L2VPN prefixes from this peer, which have been suppressed by damping.
lastEvent [Last Event] (tBgpPeerNgOperLastEvent)	long	The value of tBgpPeerNgOperLastEvent indicates the last BGP event of this peer.
lastRestartTime [Last Restart Time] (tBgpPeerNgOperLastRestartTime)	long	The value of tBgpPeerNgOperLastRestartTime indicates the last time the peer attempted restart.
lastState [Last State] (tBgpPeerNgOperLastState)	long	The value of tBgpPeerNgOperLastState indicates the last BGP state of this peer.
mcastActivePrefixes [Mcast Active Prefixes] (tBgpPeerNgOperMCastV4ActivePfxs)	long	The value of tBgpPeerNgOperMCastV4ActivePfxs indicates the number of active IPv4 multicast prefixes from this peer.
mcastPrefixesSuppressedByDamping [Mcast Prefixes Suppressed By Damping] (tBgpPeerNgOperMCastV4SuppPfxDamp)	long	The value of tBgpPeerNgOperMCastV4SuppPfxDamp indicates the number of IPv4 multicast prefixes from this peer, which have been suppressed by damping.
mcastReceivedPrefixes [Mcast Received Prefixes] (tBgpPeerNgOperMCastV4RecvPfxs)	long	The value of tBgpPeerNgOperMCastV4RecvPfxs indicates the number of IPv4 multicast prefixes received from this peer.
mcastSentPrefixes [Mcast Sent Prefixes] (tBgpPeerNgOperMCastV4SentPfxs)	long	The value of tBgpPeerNgOperMCastV4SentPfxs indicates the number of IPv4 multicast prefixes transmitted to this peer.

Table 402 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mdtSafiActivePrefixes [Mdt Safi Active Prefixes] (tBgpPeerNgOperMdtSafiActivePfxs)	long	The value of tBgpPeerNgOperMdtSafiActivePfxs indicates the number of active MDT-SAFI prefixes from this peer.
mdtSafiPrefixesSuppressedByDamping [Mdt Safi Prefixes Suppressed By Damping] (tBgpPeerNgOperMdtSafiSuppPfxDamp)	long	The value of tBgpPeerNgOperMdtSafiSuppPfxDamp indicates the number of MDT-SAFI prefixes from this peer, which have been suppressed by damping.
mdtSafiReceivedPrefixes [Mdt Safi Received Prefixes] (tBgpPeerNgOperMdtSafiRecvPfxs)	long	The value of tBgpPeerNgOperMdtSafiRecvPfxs indicates the number of MDT-SAFI prefixes received from this peer.
mdtSafiSentPrefixes [Mdt Safi Sent Prefixes] (tBgpPeerNgOperMdtSafiSentPfxs)	long	The value of tBgpPeerNgOperMdtSafiSentPfxs indicates the number of MDT-SAFI prefixes transmitted to this peer.
messageOctetsReceived [Message Octets Received] (tBgpPeerNgOperMsgOctetsRcvd)	java. math. BigInteger	The value of tBgpPeerNgOperMsgOctetsRcvd indicates the number of octets received from this peer.
messageOctetsSent [Message Octets Sent] (tBgpPeerNgOperMsgOctetsSent)	java. math. BigInteger	The value of tBgpPeerNgOperMsgOctetsSent indicates the number of octets transmitted to this peer.
numberOfRestarts [Number Of Restarts] (tBgpPeerNgOperNumRestarts)	long	The value of tBgpPeerNgOperNumRestarts indicates the number of times the peer has attempted restart.
outputQueueMessages [Output Queue Messages] (tBgpPeerNgOperOutputQueueMsgs)	long	The value of tBgpPeerNgOperOutputQueueMsgs indicates the number of untransmitted messages in the queue, to this peer.

Table 402 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pathsReceived [Paths Received] (tBgpPeerNgOperReceivedPaths)	long	The value of tBgpPeerNgOperReceivedPaths indicates the number of paths received from this peer.
prefixesActive [Prefixes Active] (tBgpPeerNgOperActivePrefixes)	long	The value of tBgpPeerNgOperActivePrefixes indicates the number of active prefixes from this peer.
prefixesReceived [Prefixes Received] (tBgpPeerNgOperReceivedPrefixes)	long	The value of tBgpPeerNgOperReceivedPrefixes indicates the number of prefixes received from this peer.
prefixesSent [Prefixes Sent] (tBgpPeerNgOperSentPrefixes)	long	The value of tBgpPeerNgOperSentPrefixes indicates the number of prefixes transmitted to this peer.
prefixesSuppressedByDamping [Prefixes Suppressed By Damping] (tBgpPeerNgOperV4SuppPfxDamp)	long	The value of tBgpPeerNgOperV4SuppPfxDamp indicates the number of IPv6 prefixes from this peer, which have been suppressed by damping.
v6ActivePrefixes [V6 Active Prefixes] (tBgpPeerNgOperV6ActivePrefixes)	long	The value of tBgpPeerNgOperV6ActivePrefixes indicates the number of active IPv6 prefixes from this peer.
v6PrefixesSuppressedByDamping [V6 Prefixes Suppressed By Damping] (tBgpPeerNgOperV6SuppPfxDamp)	long	The value of tBgpPeerNgOperV6SuppPfxDamp indicates the number of IPv6 prefixes from this peer, which have been suppressed by damping.
v6ReceivedPrefixes [V6 Received Prefixes] (tBgpPeerNgOperV6ReceivedPrefixes)	long	The value of tBgpPeerNgOperV6ReceivedPrefixes indicates the number of IPv6 prefixes received from this peer.
v6SentPrefixes [V6 Sent Prefixes] (tBgpPeerNgOperV6SentPrefixes)	long	The value of tBgpPeerNgOperV6SentPrefixes indicates the number of IPv6 prefixes transmitted to this peer.

Table 402 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vpnActivePrefixes [Vpn Active Prefixes] (tBgpPeerNgOperVpnActivePrefixes)	long	The value of tBgpPeerNgOperVpnActivePrefixes indicates the number of active VPN prefixes from this BGP peer.
vpnPrefixesSuppressedByDamping [Vpn Prefixes Suppressed By Damping] (tBgpPeerNgOperVpnSuppPfxDamp)	long	The value of tBgpPeerNgOperVpnSuppPfxDamp indicates the number of VPN IPv4 prefixes from this peer, which have been suppressed by damping.
vpnReceivedPrefixes [Vpn Received Prefixes] (tBgpPeerNgOperVpnRecvPrefixes)	long	The value of tBgpPeerNgOperVpnRecvPrefixes indicates the number of received VPN prefixes.
vpnSentPrefixes [Vpn Sent Prefixes] (tBgpPeerNgOperVpnSentPrefixes)	long	The value of tBgpPeerNgOperVpnSentPrefixes indicates the number of transmitted VPN prefixes.
PeerVprnlpv6Stats MIB entry name: tBgpPeerNgOperEntry Entry description: Defines an entry (conceptual row) in the tBgpPeerNgOperTable. Entries in tBgpPeerNgOperTable are created when entries are created in tBgpPeerNgTable. Table description (for tBgpPeerNgOperTable): The tBgpPeerNgOperTable is the list of configured BGP Peers and their operational status information. Supports realtime plotting Supports scheduled collection Monitored class: bgp.Peer		
vpnIpv6ActivePfxs [Vpn Ipv 6 Active Pfxs] (tBgpPeerNgOperVpnIpv6ActivePfxs)	long	The value of tBgpPeerNgOperVpnIpv6ActivePfxs indicates the number of active VPN IPv6 prefixes from this peer.
vpnIpv6RecvPfxs [Vpn Ipv 6 Recv Pfxs] (tBgpPeerNgOperVpnIpv6RecvPfxs)	long	The value of tBgpPeerNgOperVpnIpv6RecvPfxs indicates the number of VPN IPv6 prefixes received from this peer.

Table 402 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vpnIpv6SentPfxs [Vpn Ipv 6 Sent Pfxs] (tBgpPeerNgOperVpnIpv6SentPfxs)	long	The value of tBgpPeerNgOperVpnIpv6SentPfxs indicates the number of VPN IPv6 prefixes transmitted to this peer.
vpnIpv6SuppPfxDamp [Vpn Ipv 6 Supp Pfx Damp] (tBgpPeerNgOperVpnIpv6SuppPfxDamp)	long	The value of tBgpPeerNgOperVpnIpv6SuppPfxDamp indicates the number of VPN IPv6 prefixes from this peer, which have been suppressed by damping.

Table 403 bundle statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>BundleStats</p> <p>MIB entry name: tmnxBundleEntry</p> <p>Entry description: Each row entry represents a multilink bundle on a MDA. Entries can be created and deleted via SNMP SET operations using the tmnxBundleRowStatus object. The tmnxBundleBundleID will contain the bundle number encoded in it. The bundle number is unique for a MDA. For each tmnxBundleEntry, there will be a corresponding entry in the tmnxPortTable and the ifTable.</p> <p>Table description (for tmnxBundleTable): The tmnxBundleTable has an entry for a bundle created on the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bundle.Interface</p>		
inputDiscards [Input Discards] (tmnxBundleInputDiscards)	long	tmnxBundleInputDiscards indicates the number of LCP packets that were discarded. This object is only supported for a tmnxBundleType value of mlppp.
upTime [Up Time] (tmnxBundleUpTime)	long	tmnxBundleUpTime indicates the time since the bundle is operationally 'inService'.
<p>MultiClassMlpppStats</p> <p>MIB entry name: tmnxMcMlpppStatsEntry</p> <p>Entry description: Defines an entry in tmnxMcMlpppStatsTable. Entries are created and deleted by the system depending on the number of classes being used by a given MLPPP bundle.</p> <p>Table description (for tmnxMcMlpppStatsTable): Defines the Alcatel-Lucent SROS series Multiclass MLPPP statistics table for providing the capability of retrieving the traffic statistics for the physical queues being used for a class of a multiclass MLPPP bundle to forward the traffic.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bundle.MultiClassMlpppSpecifics</p>		

Table 403 bundle statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mcMlpppStatsEgressErrPkt [Mc Mlppp Stats Egress Err Pkt] (tmnxMcMlpppStatsEgressErrPkt)	long	The value of tmnxMcMlpppStatsEgressErrPkt indicates the total number of packets discarded due to segmentation errors on the bundle for the given class on egress.
mcMlpppStatsEgressOct [Mc Mlppp Stats Egress Oct] (tmnxMcMlpppStatsEgressOct)	long	The value of tmnxMcMlpppStatsEgressOct indicates the total number of octets in all packets received on the bundle for the given class on egress before segmentation.
mcMlpppStatsEgressPkt [Mc Mlppp Stats Egress Pkt] (tmnxMcMlpppStatsEgressPkt)	long	The value of tmnxMcMlpppStatsEgressPkt indicates the total number of packets forwarded on the bundle for the given class on egress towards the line.
mcMlpppStatsIngressErrPkt [Mc Mlppp Stats Ingress Err Pkt] (tmnxMcMlpppStatsIngressErrPkt)	long	The value of tmnxMcMlpppStatsIngressErrPkt indicates the total number of packets discarded due to reassembly errors on the bundle for the given class on ingress.
mcMlpppStatsIngressOct [Mc Mlppp Stats Ingress Oct] (tmnxMcMlpppStatsIngressOct)	long	The value of tmnxMcMlpppStatsIngressOct indicates the total number of octets in all packets received on the bundle for the given class on ingress before reassembly.
mcMlpppStatsIngressPkt [Mc Mlppp Stats Ingress Pkt] (tmnxMcMlpppStatsIngressPkt)	long	The value of tmnxMcMlpppStatsIngressPkt indicates the total number of packets forwarded on the bundle for the given class on ingress towards higher layer protocols.

Table 404 cflowd statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
CflowdGeneralStats MIB entry name: tmnxCflowdGeneralObjs Supports realtime plotting Supports scheduled collection Monitored class: cflowd.NeCflowd		
activeFlows [Active Flows] (tmnxCflowdActiveFlows)	long	The value of tmnxCflowdActiveFlows is a gauge that indicates the current number of active flows being collected.
droppedFlows [Dropped Flows] (tmnxCflowdGenDroppedFlows)	long	The value of tmnxCflowdGenDroppedFlows indicates the number of times a flow was dropped. Data from dropped flows are not reported to any collector.
genAggrFlowsCreated [Gen Aggr Flows Created] (tmnxCflowdGenAggrFlowsCreated)	long	The value of tmnxCflowdGenAggrFlowsCreated indicates the number of aggregate flows created by system.
genAggrFlowsFlushed [Gen Aggr Flows Flushed] (tmnxCflowdGenAggrFlowsFlushed)	long	The value of tmnxCflowdGenAggrFlowsMatched indicates the number of aggregate flows flushed.
genAggrFlowsMatched [Gen Aggr Flows Matched] (tmnxCflowdGenAggrFlowsMatched)	long	The value of tmnxCflowdGenAggrFlowsMatched indicates the number of packets matched to an existing aggregate flow.
genRawFlowsCreated [Gen Raw Flows Created] (tmnxCflowdGenRawFlowsCreated)	long	The value of tmnxCflowdGenRawFlowsCreated indicates the number of raw flows created by system.
genRawFlowsFlushed [Gen Raw Flows Flushed] (tmnxCflowdGenRawFlowsFlushed)	long	The value of tmnxCflowdGenRawFlowsFlushed indicates the number of raw flows flushed.

Table 404 cflowd statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
genRawFlowsMatched [Gen Raw Flows Matched] (tmnxCflowdGenRawFlowsMatched)	long	The value of tmnxCflowdGenRawFlowsMatched indicates the number of raw packets matched to an existing raw flow.
overflowEvents [Overflow Events] (tmnxCflowdGenOverflowEvents)	long	The value of tmnxCflowdGenOverflowEvents indicates the number of times the flow cache has entered the overflow state.
totalPktsDropped [Total Pkts Dropped] (tmnxCflowdTotalPktsDropped)	long	The value of tmnxCflowdTotalPktsDropped indicates the total number of packets dropped for Cflowd.
totalPktsRcvd [Total Pkts Rcvd] (tmnxCflowdTotalPktsRcvd)	long	The value of tmnxCflowdTotalPktsRcvd indicates the total number of packets received for Cflowd.
<p>NeCflowdStats</p> <p>MIB entry name: tmnxCflowdVersionStatsEntry</p> <p>Entry description: The tmnxCflowdVersionStatsEntry contains the information pertaining to the system wide statistics for the specified version index.</p> <p>Table description (for tmnxCflowdVersionStatsTable): The tmnxCflowdVersionStatsTable consists of the overall statistics based on collector version.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: cflowd.NeCollector</p>		
packetErrors [Packet Errors] (tmnxCflowdVersionErrors)	long	The value of tmnxCflowdVersionErrors indicates the number of errored packets for the specified version.
packetsOpen [Packets Open] (tmnxCflowdVersionOpen)	long	The value of tmnxCflowdVersionOpen indicates the number of open packets pending for the specified version.

Table 404 cflowd statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
packetsSent [Packets Sent] (tmnxCflowdVersionSent)	long	The value of tmnxCflowdVersionSent indicates the number of packets transmitted for the specified version.
version [Version] (tmnxCflowdVersionIndex)	long	The value of tmnxCflowdVersionIndex specifies the row in the tmnxCflowdVersionStatsTable that pertains to the cflowd collector version.
versionStatus [Version Status] (tmnxCflowdVersionStatus)	int	The value of tmnxCflowdVersionStatus indicates whether or not the version is in use in the system.
<p>NeCollectorV10Stats</p> <p>MIB entry name: tmnxCFHostCollTemplStatsEntry</p> <p>Entry description: The tmnxCFHostCollTemplStatsEntry contains the information pertaining to the remote collector host statistics for the specified template index.</p> <p>Table description (for tmnxCFHostCollTemplStatsTable): The tmnxCFHostCollTemplStatsTable consists of the overall statistics based on template flows for a specified remote collector host entry. This table replaces the tmnxCflowdTemplateStatsTable as it includes support for IPv6 addresses.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: cflowd.NeCollector</p>		
templateErrors [Template Errors] (tmnxCFHostCollTemplErrorPackets)	long	The value of tmnxCFHostCollTemplErrorPackets indicates the number of errored packets for the specified Template type.
templateFlowIndex [Template Flow Index] (tmnxCFHostCollTemplFlowIndex)	int	The value of tmnxCFHostCollTemplFlowIndex specifies the row in the tmnxCflowdTemplateStatsTable that pertains to the cflowd collector Template type.
templateOpen [Template Open] (tmnxCFHostCollTemplOpenPackets)	long	The value of tmnxCFHostCollTemplOpenPackets indicates the number of open packets pending for the specified Template type.

Table 404 cflowd statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
templateSent [Template Sent] (tmnxCFHostCollTemplSentPackets)	long	The value of tmnxCFHostCollTemplSentPackets indicates the number of packets transmitted for the specified Template type.
transmitTime [Transmit Time] (tmnxCFHostCollTemplLastTxTime)	long	The value of tmnxCFHostCollTemplLastTxTime indicates the time, since system startup, when the specified template was last transmitted.
<p>NeCollectorV5Stats MIB entry name: tmnxCFHostCollV5StatsEntry Entry description: The tmnxCFHostCollV5StatsEntry contains the statistics information pertaining to the specified remote collector host. Table description (for tmnxCFHostCollV5StatsTable): The tmnxCFHostCollV5StatsTable consists of the version 5 statistics for a particular remote collector host. This table replaces tmnxCflowdV5StatsTable as it includes support for IPv6 addresses. Supports realtime plotting Supports scheduled collection Monitored class: cflowd.NeCollector</p>		
v5PacketErrors [V5 Packet Errors] (tmnxCFHostCollV5ErrorPackets)	long	The value of tmnxCFHostCollV5ErrorPackets indicates the number of errored packets for the specified remote collector host.
v5PacketOpen [V5 Packet Open] (tmnxCFHostCollV5OpenPackets)	long	The value of tmnxCFHostCollV5OpenPackets indicates the number of open packets pending for the specified remote collector host.
v5PacketSent [V5 Packet Sent] (tmnxCFHostCollV5SentPackets)	long	The value of tmnxCFHostCollV5SentPackets indicates the number of packets transmitted for the specified remote collector host.

<p>NeCollectorV8Stats</p> <p>MIB entry name: tmnxCFHostCollAggrStatsEntry</p> <p>Entry description: The tmnxCFHostCollAggrStatsEntry contains the information pertaining to the remote collector host statistics for the specified aggregation index.</p> <p>Table description (for tmnxCFHostCollAggrStatsTable): The tmnxCFHostCollAggrStatsTable consists of the overall statistics for a remote collector host based on aggregation type. This table replaces tmnxCflowdAggregationStatsTable as it includes support for IPv6 addresses.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: cflowd.NeCollector</p>		
aggPacketErrors [Agg Packet Errors] (tmnxCFHostCollAggrErrorPackets)	long	The value of tmnxCFHostCollAggrErrorPackets indicates the number of errored packets for the specified aggregation type.
aggPacketOpen [Agg Packet Open] (tmnxCFHostCollAggrOpenPackets)	long	The value of tmnxCFHostCollAggrOpenPackets indicates the number of open packets pending for the specified aggregation type.
aggPacketSent [Agg Packet Sent] (tmnxCFHostCollAggrSentPackets)	long	The value of tmnxCFHostCollAggrSentPackets indicates the number of packets transmitted for the specified aggregation type.
aggregationIndex [Aggregation Index] (tmnxCFHostCollAggrIndex)	int	The value of tmnxCFHostCollAggrIndex specifies the row in the tmnxCFHostCollAggrStatsTable that pertains to the cflowd collector aggregation type.
aggregationStatus [Aggregation Status] (tmnxCFHostCollAggrStatus)	int	The value of tmnxCFHostCollAggrStatus indicates whether or not the aggregation is in use in the remote collector host entry.

Table 404 cflowd statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>NeCollectorV9Stats</p> <p>MIB entry name: tmnxCFHostCollTemplStatsEntry</p> <p>Entry description: The tmnxCFHostCollTemplStatsEntry contains the information pertaining to the remote collector host statistics for the specified template index.</p> <p>Table description (for tmnxCFHostCollTemplStatsTable): The tmnxCFHostCollTemplStatsTable consists of the overall statistics based on template flows for a specified remote collector host entry. This table replaces the tmnxCflowdTemplateStatsTable as it includes support for IPv6 addresses.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: cflowd.NeCollector</p>		
templateErrors [Template Errors] (tmnxCFHostCollTemplErrorPackets)	long	The value of tmnxCFHostCollTemplErrorPackets indicates the number of errored packets for the specified Template type.
templateFlowIndex [Template Flow Index] (tmnxCFHostCollTemplFlowIndex)	int	The value of tmnxCFHostCollTemplFlowIndex specifies the row in the tmnxCflowdTemplateStatsTable that pertains to the cflowd collector Template type.
templateOpen [Template Open] (tmnxCFHostCollTemplOpenPackets)	long	The value of tmnxCFHostCollTemplOpenPackets indicates the number of open packets pending for the specified Template type.
templateSent [Template Sent] (tmnxCFHostCollTemplSentPackets)	long	The value of tmnxCFHostCollTemplSentPackets indicates the number of packets transmitted for the specified Template type.
transmitTime [Transmit Time] (tmnxCFHostCollTemplLastTxTime)	long	The value of tmnxCFHostCollTemplLastTxTime indicates the time, since system startup, when the specified template was last transmitted.

Table 405 dhcp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>LocalDhcpPoolFailoverStats</p> <p>MIB entry name: tmnxDhcpsPoolFoStatsEntry</p> <p>Entry description: Each row entry contains statistics about the failover facility of a specific DHCP Address Pool instance. Rows are created or removed automatically by the system.</p> <p>Table description (for tmnxDhcpsPoolFoStatsTable): The tmnxDhcpsPoolFoStatsTable contains statistics about the DHCP Address Pool failover facility.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: dhcp.LocalDhcpPoolFailover</p>		
addressConflictPkts [Address Conflict Pkts] (tmnxDhcpsPoolFoStatsAddrConflict)	long	The value of tmnxDhcpsPoolFoStatsAddrConflict indicates how many BNDUPD 'add' packets were dropped because this DHCP server instance has already leased another address to this host.
dropInvalidPkts [Drop Invalid Pkts] (tmnxDhcpsPoolFoStatsDropInvPkts)	long	The value of tmnxDhcpsPoolFoStatsDropInvPkts indicates how many BNDUPD packets were dropped because the packet was malformed.
hostConflictPkts [Host Conflict Pkts] (tmnxDhcpsPoolFoStatsHostConflict)	long	The value of tmnxDhcpsPoolFoStatsHostConflict indicates how many BNDUPD 'add' packets were dropped because this DHCP server instance has already leased this address to another host.
leaseExpiredPkts [Lease Expired Pkts] (tmnxDhcpsPoolFoStatsExpired)	long	The value of tmnxDhcpsPoolFoStatsExpired indicates how many BNDUPD 'add' packets were dropped because the corresponding lease has expired. This may indicate that the clock of the failover peer is not in sync with the clock of this system.
leaseNotFoundPkts [Lease Not Found Pkts] (tmnxDhcpsPoolFoStatsLeaseNFound)	long	The value of tmnxDhcpsPoolFoStatsLeaseNFound indicates how many Binding Database Update (BNDUPD) 'remove' packets were dropped because the corresponding lease could not be found.

Table 405 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
maxLeasePkts [Max Lease Pkts] (tmnxDhcpsPoolFoStatsMaxReached)	long	The value of tmnxDhcpsPoolFoStatsMaxReached indicates how many BNDUPD 'add' packets were dropped because the maximum number of leases was reached. The maximum number of leases is indicated by the value of the object tmnxDhcpSvrMaxLeases.
peerConflictPkts [Peer Conflict Pkts] (tmnxDhcpsPoolFoStatsPeerConflict)	long	The value of tmnxDhcpsPoolFoStatsPeerConflict indicates how many BNDUPD 'add' packets were dropped because the failover peer has leased an address within a subnet range of which the failover control is set to 'local' on this local DHCP Address Pool instance.
persistCongestPkts [Persist Congest Pkts] (tmnxDhcpsPoolFoStatsPersistCong)	long	The value of tmnxDhcpsPoolFoStatsPersistCong indicates how many BNDUPD packets were dropped because of persistence congestion on this DHCP Address Pool instance.
rangeNotFoundPkts [Range Not Found Pkts] (tmnxDhcpsPoolFoStatsRangeNFound)	long	The value of tmnxDhcpsPoolFoStatsRangeNFound indicates how many BNDUPD 'add' packets were dropped because a valid include range could not be found for the lease.
shutdownPkts [Shutdown Pkts] (tmnxDhcpsPoolFoStatsFoShutdown)	long	The value of tmnxDhcpsPoolFoStatsFoShutdown indicates how many BNDUPD packets were dropped because the failover state if the DHCP Server instance is 'shutdown'.
subnetNotFoundPkts [Subnet Not Found Pkts] (tmnxDhcpsPoolFoStatsSubnetNFound)	long	The value of tmnxDhcpsPoolFoStatsSubnetNFound indicates how many BNDUPD 'add' packets were dropped because a valid subnet could not be found for the lease.

Table 405 dhcp statistics (continued)

The tmnxDhcpsFoStatsTable has an entry for each DHCP server instance.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: dhcp.LocalDhcpServerFailover</p>		
addressConflictPkts [Address Conflict Pkts] (tmnxDhcpsFoStatsAddressConflict)	long	The value of tmnxDhcpsFoStatsAddressConflict indicates how many BNDUPD 'add' packets were dropped because this DHCP server instance has already leased another address to this host.
dropInvalidPkts [Drop Invalid Pkts] (tmnxDhcpsFoStatsDropInvalidPkts)	long	The value of tmnxDhcpsFoStatsDropInvalidPkts indicates how many BNDUPD packets were dropped because the packet was malformed.
hostConflictPkts [Host Conflict Pkts] (tmnxDhcpsFoStatsHostConflict)	long	The value of tmnxDhcpsFoStatsHostConflict indicates how many BNDUPD 'add' packets were dropped because this DHCP server instance has already leased this address to another host.
leaseExpiredPkts [Lease Expired Pkts] (tmnxDhcpsFoStatsExpired)	long	The value of tmnxDhcpsFoStatsExpired indicates how many BNDUPD 'add' packets were dropped because the corresponding lease has expired. This may indicate that the clock of the failover peer is not in sync with the clock of this system.
leaseNotFoundPkts [Lease Not Found Pkts] (tmnxDhcpsFoStatsLeaseNotFound)	long	The value of tmnxDhcpsFoStatsLeaseNotFound indicates how many Binding Database Update (BNDUPD) 'remove' packets were dropped because the corresponding lease could not be found.

Table 405 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
maxLeasePkts [Max Lease Pkts] (tmnxDhcpsFoStatsMaxReached)	long	The value of tmnxDhcpsFoStatsMaxReached indicates how many BNDUPD 'add' packets were dropped because the maximum number of leases was reached. The maximum number of leases is indicated by the value of the object tmnxDhcpSvrMaxLeases.
peerConflictPkts [Peer Conflict Pkts] (tmnxDhcpsFoStatsPeerConflict)	long	The value of tmnxDhcpsFoStatsPeerConflict indicates how many BNDUPD 'add' packets were dropped because the failover peer has leased an address within a subnet range of which the failover control is set to 'local' on this local DHCP server instance.
persistCongestPkts [Persist Congest Pkts] (tmnxDhcpsFoStatsPersistCongest)	long	The value of tmnxDhcpsFoStatsPersistCongest indicates how many BNDUPD packets were dropped because of persistence congestion on this DHCP server instance.
rangeNotFoundPkts [Range Not Found Pkts] (tmnxDhcpsFoStatsRangeNotFound)	long	The value of tmnxDhcpsFoStatsSubnetNotFound indicates how many BNDUPD 'add' packets were dropped because a valid include range could not be found for the lease.
shutdownPkts [Shutdown Pkts] (tmnxDhcpsFoStatsFoShutdown)	long	The value of tmnxDhcpsFoStatsFoShutdown indicates how many BNDUPD packets were dropped because the failover state if the DHCP Server instance is 'shutdown'.
subnetNotFoundPkts [Subnet Not Found Pkts] (tmnxDhcpsFoStatsSubnetNotFound)	long	The value of tmnxDhcpsFoStatsSubnetNotFound indicates how many BNDUPD 'add' packets were dropped because a valid subnet could not be found for the lease.

Table 405 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>LocalDhcpServerPoolStats</p> <p>MIB entry name: tmnxDhcpSvrPoolStatsEntry</p> <p>Entry description: Each row entry in the tmnxDhcpSvrPoolStatsTable represents additional columns of operational data for a pool that belongs to the specified DHCP server instance.</p> <p>Table description (for tmnxDhcpSvrPoolStatsTable): The tmnxDhcpSvrPoolStatsTable has an entry for each pool that belongs to the specified DHCP server instance.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: dhcp.AddressPool</p>		
declinedAddresses [Declined Addresses] (tmnxDhcpSvrPoolStatsDeclined)	long	The value of tmnxDhcpSvrPoolStatsDeclined indicates the number of addresses in this pool that are declined.
extendedStatisticsEnabled [Extended Statistics Enabled] (tmnxDhcpSvrPoolStatsHasExt)	boolean	The value of tmnxDhcpSvrPoolStatsHasExt indicates whether the extended statistics collection for this pool is enabled.
forceRenewPendingLeases [Force Renew Pending Leases] (tmnxDhcpSvrPoolStatsFRPending)	long	The value of tmnxDhcpSvrPoolStatsFRPending indicates the number of leases in this pool that are in state 'forceRenewPending'.
freeAddresses [Free Addresses] (tmnxDhcpSvrPoolStatsFree)	long	The value of tmnxDhcpSvrPoolStatsFree indicates the number of addresses in this pool that are free.
highestValOfferedLeases [Highest Val Offered Leases] (tmnxDhcpSvrPoolStatsOfferP)	long	The value of tmnxDhcpSvrPoolStatsOfferP indicates the highest value of tmnxDhcpSvrPoolStatsOffered since the last reset of the extended statistics.
highestValPctRemoteUsedAddresses [Highest Val Pct Remote Used Addresses] (tmnxDhcpSvrPoolStatsFoUsdPctP)	int	The value of tmnxDhcpSvrPoolStatsFoUsdPctP indicates the highest value of tmnxDhcpSvrPoolStatsFoUsdPct since the last reset of the extended statistics.

Table 405 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
highestValPctUsedAddresses [Highest Val Pct Used Addresses] (tmnxDhcpSvrPoolStatsUsedPctP)	int	The value of tmnxDhcpSvrPoolStatsUsedPctP indicates the highest value of tmnxDhcpSvrPoolStatsUsedPct since the last reset of the extended statistics.
highestValRemoteOfferedLeases [Highest Val Remote Offered Leases] (tmnxDhcpSvrPoolStatsFoOfferP)	long	The value of tmnxDhcpSvrPoolStatsFoOfferP indicates the highest value of tmnxDhcpSvrPoolStatsFoOffered since the last reset of the extended statistics.
highestValRemoteStableLeases [Highest Val Remote Stable Leases] (tmnxDhcpSvrPoolStatsFoStableP)	long	The value of tmnxDhcpSvrPoolStatsFoStableP indicates the highest value of tmnxDhcpSvrPoolStatsFoStable since the last reset of the extended statistics.
highestValStableLeases [Highest Val Stable Leases] (tmnxDhcpSvrPoolStatsStableP)	long	The value of tmnxDhcpSvrPoolStatsStableP indicates the highest value of tmnxDhcpSvrPoolStatsStable since the last reset of the extended statistics.
localProvisionedAddresses [Local Provisioned Addresses] (tmnxDhcpSvrPoolStatsProv)	long	The value of tmnxDhcpSvrPoolStatsProv indicates the total number of local addresses in this pool that are provisioned.
lowestValPctFreeAddresses [Lowest Val Pct Free Addresses] (tmnxDhcpSvrPoolStatsFreePctP)	int	The value of tmnxDhcpSvrPoolStatsFreePctP indicates the lowest value of tmnxDhcpSvrPoolStatsFreePct since the last reset of the extended statistics.
lowestValPctRemoteFreeAddresses [Lowest Val Pct Remote Free Addresses] (tmnxDhcpSvrPoolStatsFoFrePctP)	int	The value of tmnxDhcpSvrPoolStatsFoFrePctP indicates the lowest value of tmnxDhcpSvrPoolStatsFoFrePct since the last reset of the extended statistics.
lowestValRemoteUsedLeases [Lowest Val Remote Used Leases] (tmnxDhcpSvrPoolStatsFoUsedP)	long	The value of tmnxDhcpSvrPoolStatsFoUsedP indicates the lowest value of unused subnets since the last reset of the extended statistics.
lowestValUsedLeases [Lowest Val Used Leases] (tmnxDhcpSvrPoolStatsUsedP)	long	The value of tmnxDhcpSvrPoolStatsUsedP indicates the lowest value of unused subnets since the last reset of the extended statistics.

Table 405 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
offeredLeases [Offered Leases] (tmnxDhcpSvrPoolStatsOffered)	long	The value of tmnxDhcpSvrPoolStatsOffered indicates the number of leases in this pool that are in state 'offered'.
pctFreeAddresses [Pct Free Addresses] (tmnxDhcpSvrPoolStatsFreePct)	int	The value of tmnxDhcpSvrPoolStatsFreePct indicates the percentage of subnets currently unused.
pctRemoteFreeAddresses [Pct Remote Free Addresses] (tmnxDhcpSvrPoolStatsFoFrePct)	int	The value of tmnxDhcpSvrPoolStatsFoFrePct indicates the percentage of remote subnets currently unused.
pctRemoteUsedAddresses [Pct Remote Used Addresses] (tmnxDhcpSvrPoolStatsFoUsdPct)	int	The value of tmnxDhcpSvrPoolStatsFoUsdPct indicates the percentage of remote subnets currently in use.
pctUsedAddresses [Pct Used Addresses] (tmnxDhcpSvrPoolStatsUsedPct)	int	The value of tmnxDhcpSvrPoolStatsUsedPct indicates the percentage of subnets currently in use.
peakNumberFreeAddresses [Peak Number Free Addresses] (tmnxDhcpSvrPoolStatsFreeP)	long	The value of tmnxDhcpSvrPoolStatsFreeP indicates the lowest value of unused subnets since the last reset of the extended statistics.
peakNumberRemoteFreeAddresses [Peak Number Remote Free Addresses] (tmnxDhcpSvrPoolStatsFoFreeP)	long	The value of tmnxDhcpSvrPoolStatsFoFreeP indicates the lowest value of unused subnets since the last reset of the extended statistics.
remoteDeclinedAddresses [Remote Declined Addresses] (tmnxDhcpSvrPoolStatsFoDeclined)	long	The value of tmnxDhcpSvrPoolStatsFoDeclined indicates the number of remote addresses in this pool that are declined. The value of this object is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)'.

Table 405 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
remoteForceRenewPendingLeases [Remote Force Renew Pending Leases] (tmnxDhcpSvrPoolStatsFoFRPend)	long	The value of tmnxDhcpSvrPoolStatsFoFRPend indicates the number of remote leases in this pool that are in state 'forceRenewPending'. The value of this object is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)'.
remoteFreeAddresses [Remote Free Addresses] (tmnxDhcpSvrPoolStatsFoFree)	long	The value of tmnxDhcpSvrPoolStatsFoFree indicates the number of remote addresses in this pool that are free. The value of this object is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)'.
remoteOfferedLeases [Remote Offered Leases] (tmnxDhcpSvrPoolStatsFoOffered)	long	The value of tmnxDhcpSvrPoolStatsFoOffered indicates the number of remote leases in this pool that are in state 'offered'. The value of this object is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)'.
remoteProvisionedAddresses [Remote Provisioned Addresses] (tmnxDhcpSvrPoolStatsFoProv)	long	The value of tmnxDhcpSvrPoolStatsFoProv indicates the total number of remote addresses in this pool that are provisioned. The value of this object is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)' and the value of the object tmnxDhcpsFoState of this server is equal to 'partnerDown (5)'.
remoteRemovePendingLeases [Remote Remove Pending Leases] (tmnxDhcpSvrPoolStatsFoRemPend)	long	The value of tmnxDhcpSvrPoolStatsFoRemPend indicates the number of remote leases in this pool that are in state 'removePending'. The value of this object is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)'.
remoteStableLeases [Remote Stable Leases] (tmnxDhcpSvrPoolStatsFoStable)	long	The value of tmnxDhcpSvrPoolStatsFoStable indicates the number of remote leases in this pool that are in state 'stable'. The value of this object is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)'.

Table 405 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
removePendingLeases [Remove Pending Leases] (tmnxDhcpSvrPoolStatsRemPending)	long	The value of tmnxDhcpSvrPoolStatsRemPending indicates the number of leases in this pool that are in state 'removePending'.
stableLeases [Stable Leases] (tmnxDhcpSvrPoolStatsStable)	long	The value of tmnxDhcpSvrPoolStatsStable indicates the number of leases in this pool that are in state 'stable'.
timeSinceExtendedReset [Time Since Extended Reset] (tmnxDhcpSvrPoolStatsExtResetT)	long	The value of tmnxDhcpSvrPoolStatsExtResetT indicates the sysUpTime at the last reset of the extended statistics.
timeSinceLastFreeAddresses [Time Since Last Free Addresses] (tmnxDhcpSvrPoolStatsFreePT)	long	The value of tmnxDhcpSvrPoolStatsFreePT indicates the sysUpTime at the last change of tmnxDhcpSvrPoolStatsFreeP.
timeSinceLastOfferedLeases [Time Since Last Offered Leases] (tmnxDhcpSvrPoolStatsOfferPT)	long	The value of tmnxDhcpSvrPoolStatsOfferPT indicates the sysUpTime at the last change of tmnxDhcpSvrPoolStatsOfferP.
timeSinceLastPctFreeAddresses [Time Since Last Pct Free Addresses] (tmnxDhcpSvrPoolStatsFreePctPT)	long	The value of tmnxDhcpSvrPoolStatsFreePctPT indicates the sysUpTime at the last change of tmnxDhcpSvrPoolStatsFreePctP.
timeSinceLastPctRemoteFreeAddresses [Time Since Last Pct Remote Free Addresses] (tmnxDhcpSvrPoolStatsFoFrePctPT)	long	The value of tmnxDhcpSvrPoolStatsFoFrePctPT indicates the sysUpTime at the last change of tmnxDhcpSvrPoolStatsFoFrePctP.
timeSinceLastPctRemoteUsedAddresses [Time Since Last Pct Remote Used Addresses] (tmnxDhcpSvrPoolStatsFoUsdPctPT)	long	The value of tmnxDhcpSvrPoolStatsFoUsdPctPT indicates the sysUpTime at the last change of tmnxDhcpSvrPoolStatsFoUsdPctP.

Table 405 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
timeSinceLastPctUsedAddresses [Time Since Last Pct Used Addresses] (tmnxDhcpSvrPoolStatsUsedPctPT)	long	The value of tmnxDhcpSvrPoolStatsUsedPctPT indicates the sysUpTime at the last change of tmnxDhcpSvrPoolStatsUsedPctP.
timeSinceLastRemoteFreeAddresses [Time Since Last Remote Free Addresses] (tmnxDhcpSvrPoolStatsFoFreePT)	long	The value of tmnxDhcpSvrPoolStatsFoFreePT indicates the sysUpTime at the last change of tmnxDhcpSvrPoolStatsFoFreeP.
timeSinceLastRemoteOfferedLeases [Time Since Last Remote Offered Leases] (tmnxDhcpSvrPoolStatsFoOfferPT)	long	The value of tmnxDhcpSvrPoolStatsFoOfferPT indicates the sysUpTime at the last change of tmnxDhcpSvrPoolStatsFoOfferP.
timeSinceLastRemoteStableLeases [Time Since Last Remote Stable Leases] (tmnxDhcpSvrPoolStatsFoStablePT)	long	The value of tmnxDhcpSvrPoolStatsFoStablePT indicates the sysUpTime at the last change of tmnxDhcpSvrPoolStatsFoStableP.
timeSinceLastRemoteUsedLeases [Time Since Last Remote Used Leases] (tmnxDhcpSvrPoolStatsFoUsedPT)	long	The value of tmnxDhcpSvrPoolStatsFoUsedPT indicates the sysUpTime at the last change of tmnxDhcpSvrPoolStatsFoUsedP.
timeSinceLastUsedLeases [Time Since Last Used Leases] (tmnxDhcpSvrPoolStatsUsedPT)	long	The value of tmnxDhcpSvrPoolStatsUsedPT indicates the sysUpTime at the last change of tmnxDhcpSvrPoolStatsUsedP.
timeSinceStableLeases [Time Since Stable Leases] (tmnxDhcpSvrPoolStatsStablePT)	long	The value of tmnxDhcpSvrPoolStatsStablePT indicates the sysUpTime at the last change of tmnxDhcpSvrPoolStatsStableP.
usedLeases [Used Leases] (tmnxDhcpSvrPoolStatsUsed)	long	The value of tmnxDhcpSvrPoolStatsUsed indicates the number of provisioned and used subnets.
usedRemoteLeases [Used Remote Leases] (tmnxDhcpSvrPoolStatsFoUsed)	long	The value of tmnxDhcpSvrPoolStatsFoUsed indicates the number of provisioned and used remote subnets.

Table 405 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
LocalDhcpServerStats MIB entry name: tmnxDhcpServerStatsEntry Entry description: Each row entry contains basic statistics about a particular DHCP server instance. Table description (for tmnxDhcpServerStatsTable): The tmnxDhcpServerStatsTable contains basic statistics about the DHCP server instances. Supports realtime plotting Supports scheduled collection Monitored class: dhcp.LocalDhcpServer		
addressUnavailableDropped [Address Unavailable Dropped] (tmnxDhcpSvrStatsDropAddrUnavail)	long	The value of tmnxDhcpSvrStatsDropAddrUnavail indicates the number of DHCP requests dropped by the server instance because the requested address is not available.
corruptedPacketsDropped [Corrupted Packets Dropped] (tmnxDhcpSvrStatsDropBadPackets)	long	The value of tmnxDhcpSvrStatsDropBadPackets indicates the number of DHCP packets received which were corrupt.
destinedToOtherDropped [Destined To Other Dropped] (tmnxDhcpSvrStatsDropDestOther)	long	The value of tmnxDhcpSvrStatsDropDestOther indicates the number of DHCP requests dropped by the server instance because the (broadcast) request was not destined to this server.
dropAudit [Drop Audit] (tmnxDhcpSvrStatsDropAudit)	long	The value of tmnxDhcpSvrStatsDropAudit indicates the number of DHCP requests dropped by the server instance because this server instance is busy with the primary audit.
dropIntConflicts [Drop Int Conflicts] (tmnxDhcpSvrStatsDropIntConflicts)	long	The value of tmnxDhcpSvrStatsDropIntConflicts indicates a DHCP host is trying to acquire an IP address that was handed through the local address assignment infrastructure, or the local address assignment infrastructure tries to use an IP address that was handed out to a DHCP client.

Table 405 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dropMaxReached [Drop Max Reached] (tmnxDhcpSvrStatsDropMaxReached)	long	The value of tmnxDhcpSvrStatsDropMaxReached indicates the number of DHCP packets dropped by the server instance because the maximum number of leases was reached. The maximum number of leases is indicated by the value of the object tmnxDhcpSvrMaxLeases.
dropNoSubnet [Drop No Subnet] (tmnxDhcpSvrStatsDropNoSubnet)	long	The value of tmnxDhcpSvrStatsDropNoSubnet indicates the number of DHCP packets dropped by the server instance for user-db hosts with a fixed address because the subnet to which the address belongs is not configured.
dropSvrDown [Drop Svr Down] (tmnxDhcpSvrStatsDropSvrDown)	long	The value of tmnxDhcpSvrStatsDropSvrDown indicates the number of DHCP packets dropped by the server instance during server instance shutdown (while the value of the object tmnxDhcpServerCfgAdminState in the corresponding row was set equal to 'outOfService').
dropTxFailed [Drop Tx Failed] (tmnxDhcpSvrStatsDropTxFailed)	long	The value of tmnxDhcpSvrStatsDropTxFailed indicates the number of DHCP responses dropped because this server instance could not transmit it.
droppedDhcpReqDiffGatewayIP [Dropped Dhcp Req Diff Gateway IP] (tmnxDhcpSvrStatsDropDuplDiffGi)	long	The value of tmnxDhcpSvrStatsDropDuplDiffGi indicates the number of DHCP requests dropped by the server instance because they were received from a different Gateway IP address within a timeframe of 10 seconds after a previous DHCPREQUEST.
genericErrorDropped [Generic Error Dropped] (tmnxDhcpSvrStatsDropGenError)	long	The value of tmnxDhcpSvrStatsDropGenError indicates the number of DHCP packets dropped by the server instance because of a generic error.
internalCallsFailoverDropped [Internal Calls Failover Dropped] (tmnxDhcpSvrStatsDropIntWithFo)	long	The value of tmnxDhcpSvrStatsDropIntWithFo indicates the number of internal calls from the local address assignment infrastructure dropped by the DHCP server instance because failover is enabled for the server instance.

Table 405 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
internalCallsLocalUserDbDropped [Internal Calls Local User Db Dropped] (tmnxDhcpSvrStatsDropIntWithLudb)	long	The value of tmnxDhcpSvrStatsDropIntWithLudb indicates the number of internal calls from the local address assignment infrastructure dropped by the DHCP server instance because a local user database is attached to the server instance.
invalidMessageTypesDropped [Invalid Message Types Dropped] (tmnxDhcpSvrStatsDropInvalidTypes)	long	The value of tmnxDhcpSvrStatsDropInvalidTypes indicates the number of DHCP packets received which had an invalid message type (option 53).
invalidUserDropped [Invalid User Dropped] (tmnxDhcpSvrStatsDropInvalidUsr)	long	The value of tmnxDhcpSvrStatsDropInvalidUsr indicates the number of DHCP packets dropped by the server instance because the MAC address of the sender or the option 82 didn't match the host lease state.
leaseNotFoundDropped [Lease Not Found Dropped] (tmnxDhcpSvrStatsDropNoLeaseFound)	long	The value of tmnxDhcpSvrStatsDropNoLeaseFound indicates the number of DHCP packets dropped by the server instance because no (valid) lease was found.
leaseNotReadyDropped [Lease Not Ready Dropped] (tmnxDhcpSvrStatsDropLseNotReady)	long	The value of tmnxDhcpSvrStatsDropLseNotReady indicates the number of DHCP packets dropped by the server instance before the lease database was ready.
leasesExpired [Leases Expired] (tmnxDhcpSvrStatsLeasesExpired)	long	The value of tmnxDhcpSvrStatsLeasesExpired indicates the number of DHCP leases that were expired (because no release was received).
localUserDbNotFoundDropped [Local User Db Not Found Dropped] (tmnxDhcpSvrStatsDropNoUsrDbFound)	long	The value of tmnxDhcpSvrStatsDropNoUsrDbFound indicates the number of DHCP packets dropped because the value of the object tmnxDhcpServerCfgUserDatabase of this server instance is not equal to the default value and a local user database with that name could not be found.
noFreeAddressesInPoolDropped [No Free Addresses In Pool Dropped] (tmnxDhcpSvrStatsDropNotSrvngPool)	long	The value of tmnxDhcpSvrStatsDropNotSrvngPool indicates the number of DHCP packets dropped by the server instance because there were no more free addresses in the pool.

Table 405 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
offersIgnored [Offers Ignored] (tmnxDhcpSvrStatsOffersIgnore)	long	The value of tmnxDhcpSvrStatsOffersIgnore indicates the number of DHCP OFFER (option 52 with value 2) packets sent by the DHCP server instance that were ignored by the clients.
overloadDropped [Overload Dropped] (tmnxDhcpSvrStatsDropOverload)	long	The value of tmnxDhcpSvrStatsDropOverload indicates the number of DHCP packets dropped by the server instance because they were received in excess of what the server instance can handle.
persistenceOverloadDropped [Persistence Overload Dropped] (tmnxDhcpSvrStatsDropPersOverload)	long	The value of tmnxDhcpSvrStatsDropPersOverload indicates the number of DHCP packets dropped by the server instance because they were received in excess of what the DHCP persistence system can handle. If this occurs, only releases and declines are still processed.
receivedDhcpDeclines [Received Dhcp Declines] (tmnxDhcpSvrStatsRxDeclines)	java. math. BigInteger	The value of tmnxDhcpSvrStatsRxDeclines indicates the number of DHCPDECLINE (option 53 with value 4) packets received by the DHCP server instance.
receivedDhcpDiscovers [Received Dhcp Discovers] (tmnxDhcpSvrStatsRxDiscovers)	java. math. BigInteger	The value of tmnxDhcpSvrStatsRxDiscovers indicates the number of DHCPDISCOVER (option 53 with value 1) packets received by the DHCP server instance.
receivedDhcpInforms [Received Dhcp Informs] (tmnxDhcpSvrStatsRxInforms)	java. math. BigInteger	The value of tmnxDhcpSvrStatsRxInforms indicates the number of DHCPINFORM (option 53 with value 8) packets received by the DHCP server instance.
receivedDhcpInternalReleases [Received Dhcp Internal Releases] (tmnxDhcpSvrStatsRxIntReleases)	java. math. BigInteger	The value of tmnxDhcpSvrStatsRxIntReleases indicates the number of internal release calls received by the DHCP server instance from the local address assignment infrastructure.

Table 405 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedDhcpInternalRequests [Received Dhcp Internal Requests] (tmnxDhcpSvrStatsRxIntRequests)	java. math. BigInteger	The value of tmnxDhcpSvrStatsRxIntRequests indicates the number of internal request calls received by the DHCP server instance from the local address assignment infrastructure.
receivedDhcpReleases [Received Dhcp Releases] (tmnxDhcpSvrStatsRxReleases)	java. math. BigInteger	The value of tmnxDhcpSvrStatsRxReleases indicates the number of DHCPRELEASE (option 53 with value 7) packets received by the DHCP server instance.
receivedDhcpRequests [Received Dhcp Requests] (tmnxDhcpSvrStatsRxRequests)	java. math. BigInteger	The value of tmnxDhcpSvrStatsRxRequests indicates the number of DHCPREQUEST (option 53 with value 3) packets received by the DHCP server instance.
sentDhcpAcks [Sent Dhcp Acks] (tmnxDhcpSvrStatsTxAcks)	java. math. BigInteger	The value of tmnxDhcpSvrStatsTxAcks indicates the number of DHCPACK (option 53 with value 5) packets sent by the DHCP server instance.
sentDhcpForceRenews [Sent Dhcp Force Renews] (tmnxDhcpSvrStatsTxForceRenews)	java. math. BigInteger	The value of tmnxDhcpSvrStatsTxForceRenews indicates the number of DHCPFORCERENEW (option 53 with value 9) packets sent by the DHCP server instance.
sentDhcpNaks [Sent Dhcp Naks] (tmnxDhcpSvrStatsTxNaks)	java. math. BigInteger	The value of tmnxDhcpSvrStatsTxNaks indicates the number of DHCPNAK (option 53 with value 6) packets sent by the DHCP server instance.
sentDhcpOffers [Sent Dhcp Offers] (tmnxDhcpSvrStatsTxOffers)	java. math. BigInteger	The value of tmnxDhcpSvrStatsTxOffers indicates the number of DHCPOFFER (option 53 with value 2) packets sent by the DHCP server instance.
unknownHostsDropped [Unknown Hosts Dropped] (tmnxDhcpSvrStatsDropUnknownHosts)	long	The value of tmnxDhcpSvrStatsDropUnknownHosts indicates the number of DHCP packets dropped from hosts which were not found in the user database when tmnxDhcpServerCfgUse-GiAddress was disabled.

Table 405 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
userNotAllowedDropped [User Not Allowed Dropped] (tmnxDhcpSvrStatsDropUserNotAllow)	long	The value of tmnxDhcpSvrStatsDropUserNotAllow indicates the number of DHCP packets dropped from hosts which are found in the user database, but which have no address or pool specified, nor has tmnxDhcpServerCfgUseGiAddress set to 'true'.
<p>LocalDhcpServerSubnetStats</p> <p>MIB entry name: tmnxDhcpSvrSubnetStatsEntry</p> <p>Entry description: Each row entry in the tmnxDhcpSvrSubnetStatsTable represents additional columns of operational data for a subnet that belongs to the specified DHCP server instance and pool.</p> <p>Table description (for tmnxDhcpSvrSubnetStatsTable): The tmnxDhcpSvrSubnetStatsTable has an entry for each subnet that belongs to the specified DHCP server instance and pool.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: dhcp.Subnet</p>		
declinedAddresses [Declined Addresses] (tmnxDhcpSvrSubnetStatsDeclined)	long	The value of tmnxDhcpSvrSubnetStatsDeclined indicates the number of addresses in this subnet that are declined.
forceRenewPendingLeases [Force Renew Pending Leases] (tmnxDhcpSvrSubnetStatsFRPending)	long	The value of tmnxDhcpSvrSubnetStatsFRPending indicates the number of leases in this subnet that are in state 'forceRenewPending'.
freeAddresses [Free Addresses] (tmnxDhcpSvrSubnetStatsFree)	long	The value of tmnxDhcpSvrSubnetStatsFree indicates the number of addresses in this subnet that are free.
highestValOfferedLeases [Highest Val Offered Leases] (tmnxDhcpSvrSubnetStatsOfferP)	long	The value of tmnxDhcpSvrSubnetStatsOfferP indicates the highest value of tmnxDhcpSvrSubnetStatsOffered since the last reset of the extended statistics.

Table 405 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
highestValPctRemoteUsedAddresses [Highest Val Pct Remote Used Addresses] (tmnxDhcpSvrSubnetStatsFoUsdPctP)	int	The value of tmnxDhcpSvrSubnetStatsFoUsdPctP indicates the highest value of tmnxDhcpSvrSubnetStatsFoUsdPct since the last reset of the extended statistics.
highestValPctUsedAddresses [Highest Val Pct Used Addresses] (tmnxDhcpSvrSubnetStatsUsedPctP)	int	The value of tmnxDhcpSvrSubnetStatsUsedPctP indicates the highest value of tmnxDhcpSvrSubnetStatsUsedPct since the last reset of the extended statistics.
highestValRemoteOfferedLeases [Highest Val Remote Offered Leases] (tmnxDhcpSvrSubnetStatsFoOfferP)	long	The value of tmnxDhcpSvrSubnetStatsFoOfferP indicates the highest value of tmnxDhcpSvrSubnetStatsFoOffered since the last reset of the extended statistics.
highestValRemoteStableLeases [Highest Val Remote Stable Leases] (tmnxDhcpSvrSubnetStatsFoStableP)	long	The value of tmnxDhcpSvrSubnetStatsFoStableP indicates the highest value of tmnxDhcpSvrSubnetStatsFoStable since the last reset of the extended statistics.
highestValStableLeases [Highest Val Stable Leases] (tmnxDhcpSvrSubnetStatsStableP)	long	The value of tmnxDhcpSvrSubnetStatsStableP indicates the highest value of tmnxDhcpSvrSubnetStatsStable since the last reset of the extended statistics.
localProvisionedAddresses [Local Provisioned Addresses] (tmnxDhcpSvrSubnetStatsProv)	long	The value of tmnxDhcpSvrSubnetStatsProv indicates the total number of local addresses in this subnet that are provisioned.
lowestValPctFreeAddresses [Lowest Val Pct Free Addresses] (tmnxDhcpSvrSubnetStatsFreePctP)	int	The value of tmnxDhcpSvrSubnetStatsFreePctP indicates the lowest value of tmnxDhcpSvrSubnetStatsFreePct since the last reset of the extended statistics.
lowestValPctRemoteFreeAddresses [Lowest Val Pct Remote Free Addresses] (tmnxDhcpSvrSubnetStatsFoFrePctP)	int	The value of tmnxDhcpSvrSubnetStatsFoFrePctP indicates the lowest value of tmnxDhcpSvrSubnetStatsFoFrePct since the last reset of the extended statistics.
lowestValRemoteUsedLeases [Lowest Val Remote Used Leases] (tmnxDhcpSvrSubnetStatsFoUsedP)	long	The value of tmnxDhcpSvrSubnetStatsFoUsedP indicates the lowest value of tmnxDhcpSvrSubnetStatsFoUsed since the last reset of the extended statistics.

Table 405 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lowestValUsedLeases [Lowest Val Used Leases] (tmnxDhcpSvrSubnetStatsUsedP)	long	The value of tmnxDhcpSvrSubnetStatsUsedP indicates the lowest value of tmnxDhcpSvrSubnetStatsUsed since the last reset of the extended statistics.
offeredLeases [Offered Leases] (tmnxDhcpSvrSubnetStatsOffered)	long	The value of tmnxDhcpSvrSubnetStatsOffered indicates the number of leases in this subnet that are in state 'offered'.
pctFreeAddresses [Pct Free Addresses] (tmnxDhcpSvrSubnetStatsFreePct)	int	The value of tmnxDhcpSvrSubnetStatsFreePct indicates the percentage of addresses in this subnet currently unused.
pctRemoteFreeAddresses [Pct Remote Free Addresses] (tmnxDhcpSvrSubnetStatsFoFrePct)	int	The value of tmnxDhcpSvrSubnetStatsFoFrePct indicates the percentage of remote addresses in this subnet that are currently unused.
pctRemoteUsedAddresses [Pct Remote Used Addresses] (tmnxDhcpSvrSubnetStatsFoUsdPct)	int	The value of tmnxDhcpSvrSubnetStatsFoUsdPct indicates the percentage of remote addresses in this subnet that are in use.
pctUsedAddresses [Pct Used Addresses] (tmnxDhcpSvrSubnetStatsUsedPct)	int	The value of tmnxDhcpSvrSubnetStatsUsedPct indicates the percentage of addresses in this subnet in use.
peakNumberFreeAddresses [Peak Number Free Addresses] (tmnxDhcpSvrSubnetStatsFreeP)	long	The value of tmnxDhcpSvrSubnetStatsFreeP indicates the peak number of addresses in this subnet that are free since the last reset of the extended statistics.
peakNumberRemoteFreeAddresses [Peak Number Remote Free Addresses] (tmnxDhcpSvrSubnetStatsFoFreeP)	long	The value of tmnxDhcpSvrSubnetStatsFoFreeP indicates the peak number of remote addresses in this subnet that are free since the last reset of the extended statistics.

Table 405 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
remoteDeclinedAddresses [Remote Declined Addresses] (tmnxDhcpSvrSubnetStatsFoDeclined)	long	The value of tmnxDhcpSvrSubnetStatsFoDeclined indicates the number of remote addresses in this subnet that are declined. The value of this object is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)'.
remoteForceRenewPendingLeases [Remote Force Renew Pending Leases] (tmnxDhcpSvrSubnetStatsFoFRPend)	long	The value of tmnxDhcpSvrSubnetStatsFoFRPend indicates the number of remote leases in this subnet that are in state 'forceRenewPending'. The value of this object is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)'.
remoteFreeAddresses [Remote Free Addresses] (tmnxDhcpSvrSubnetStatsFoFree)	long	The value of tmnxDhcpSvrSubnetStatsFoFree indicates the number of remote addresses in this subnet that are free. The value of this object is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)'.
remoteOfferedLeases [Remote Offered Leases] (tmnxDhcpSvrSubnetStatsFoOffered)	long	The value of tmnxDhcpSvrSubnetStatsFoOffered indicates the number of remote leases in this subnet that are in state 'offered'. The value of this object is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)'.
remoteProvisionedAddresses [Remote Provisioned Addresses] (tmnxDhcpSvrSubnetStatsFoProv)	long	The value of tmnxDhcpSvrSubnetStatsFoProv indicates the total number of remote addresses in this subnet that are provisioned. The value of this object is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)' and the value of the object tmnxDhcpsFoState of this server is equal to 'partnerDown (5)'.
remoteRemovePendingLeases [Remote Remove Pending Leases] (tmnxDhcpSvrSubnetStatsFoRemPend)	long	The value of tmnxDhcpSvrSubnetStatsFoRemPend indicates the number of remote leases in this subnet that are in state 'removePending'. The value of this object is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)'.

Table 405 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
remoteStableLeases [Remote Stable Leases] (tmnxDhcpSvrSubnetStatsFoStable)	long	The value of tmnxDhcpSvrSubnetStatsFoStable indicates the number of remote leases in this subnet that are in state 'stable'. The value of this object is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)'.
removePendingLeases [Remove Pending Leases] (tmnxDhcpSvrSubnetStatsRemPending)	long	The value of tmnxDhcpSvrSubnetStatsRemPending indicates the number of leases in this subnet that are in state 'removePending'.
stableLeases [Stable Leases] (tmnxDhcpSvrSubnetStatsStable)	long	The value of tmnxDhcpSvrSubnetStatsStable indicates the number of leases in this subnet that are in state 'stable'.
timeSinceExtendedReset [Time Since Extended Reset] (tmnxDhcpSvrSubnetStatsExtResetT)	long	The value of tmnxDhcpSvrSubnetStatsExtResetT indicates the sysUpTime at the last reset of the extended statistics.
timeSinceLastFreeAddresses [Time Since Last Free Addresses] (tmnxDhcpSvrSubnetStatsFreePT)	long	The value of tmnxDhcpSvrSubnetStatsFreePT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStatsFreeP.
timeSinceLastOfferedLeases [Time Since Last Offered Leases] (tmnxDhcpSvrSubnetStatsOfferPT)	long	The value of tmnxDhcpSvrSubnetStatsOfferPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStatsOfferP.
timeSinceLastPctFreeAddresses [Time Since Last Pct Free Addresses] (tmnxDhcpSvrSubnetStatsFreePctPT)	long	The value of tmnxDhcpSvrSubnetStatsFreePctPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStatsFreePctP.
timeSinceLastPctRemoteFreeAddresses [Time Since Last Pct Remote Free Addresses] (tmnxDhcpSvrSubnetStatsFoFrePctPT)	long	The value of tmnxDhcpSvrSubnetStatsFoFrePctPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStatsFoFrePctP.

Table 405 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
timeSinceLastPctRemoteUsedAddresses [Time Since Last Pct Remote Used Addresses] (tmnxDhcpSvrSubnetStatsFoUsdPctPT)	long	The value of tmnxDhcpSvrSubnetStatsFoUsdPctPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStatsFoUsdPctP.
timeSinceLastPctUsedAddresses [Time Since Last Pct Used Addresses] (tmnxDhcpSvrSubnetStatsUsedPctPT)	long	The value of tmnxDhcpSvrSubnetStatsUsedPctPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStatsUsedPctP.
timeSinceLastRemoteFreeAddresses [Time Since Last Remote Free Addresses] (tmnxDhcpSvrSubnetStatsFoFreePT)	long	The value of tmnxDhcpSvrSubnetStatsFoFreePT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStatsFoFreeP.
timeSinceLastRemoteOfferedLeases [Time Since Last Remote Offered Leases] (tmnxDhcpSvrSubnetStatsFoOfferPT)	long	The value of tmnxDhcpSvrSubnetStatsFoOfferPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStatsFoOfferP.
timeSinceLastRemoteStableLeases [Time Since Last Remote Stable Leases] (tmnxDhcpSvrSubnetStatsFoStablePT)	long	The value of tmnxDhcpSvrSubnetStatsFoStablePT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStatsFoStableP.
timeSinceLastRemoteUsedLeases [Time Since Last Remote Used Leases] (tmnxDhcpSvrSubnetStatsFoUsedPT)	long	The value of tmnxDhcpSvrSubnetStatsFoUsedPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStatsFoUsedP.
timeSinceLastStableLeases [Time Since Last Stable Leases] (tmnxDhcpSvrSubnetStatsStablePT)	long	The value of tmnxDhcpSvrSubnetStatsStablePT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStatsStableP.
timeSinceLastUsedLeases [Time Since Last Used Leases] (tmnxDhcpSvrSubnetStatsUsedPT)	long	The value of tmnxDhcpSvrSubnetStatsUsedPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStatsUsedP.

Table 405 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
usedLeases [Used Leases] (tmnxDhcpSvrSubnetStatsUsed)	long	The value of tmnxDhcpSvrSubnetStatsUsed indicates the number of leases in this subnet that are in use.
usedRemoteLeases [Used Remote Leases] (tmnxDhcpSvrSubnetStatsFoUsed)	long	The value of tmnxDhcpSvrSubnetStatsFoUsed indicates the number of remote leases in this subnet that are in use.

Table 406 diameter statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>DiameterPeerStats</p> <p>MIB entry name: tmnxDiamPlcyPeerStatsEntry</p> <p>Entry description: Each conceptual row contains detailed statistics about a peer defined in a DIAMETER policy. Entries in this table are created and removed automatically by the system</p> <p>Table description (for tmnxDiamPlcyPeerStatsTable): The tmnxDiamPlcyPeerStatsTable contains detailed statistics about the peers defined in a DIAMETER policy.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: diameter.DiameterPeer</p>		
asaTx [Asa Tx] (tmnxDiamPeerStAsaTx)	long	The value of tmnxDiamPeerStAsaTx indicates the number of Abort-Session-Answer messages that are transmitted to the server.
asrRx [Asr Rx] (tmnxDiamPeerStAsrRx)	long	The value of tmnxDiamPeerStAsrRx indicates the number of Abort-Session-Request messages that are received from the server.
ccaInitialRx [Cca Initial Rx] (tmnxDiamPeerStCcaInitialRx)	long	The value of tmnxDiamPeerStCcaInitialRx indicates the number of Credit Control Answer messages in response to the CCR INITIAL_REQUEST that are received from the server.
ccaTerminateRx [Cca Terminate Rx] (tmnxDiamPeerStCcaTerminateRx)	long	The value of tmnxDiamPeerStCcaTerminateRx indicates the number of Credit Control Answer messages in response to the CCR TERMINATION_REQUEST that are received from the server.
ccaUpdateRx [Cca Update Rx] (tmnxDiamPeerStCcaUpdateRx)	long	The value of tmnxDiamPeerStCcaUpdateRx indicates the number of Credit Control Answer messages in response to the CCR UPDATE_REQUEST that are received from the server.

Table 406 diameter statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ccrInitialTx [Ccr Initial Tx] (tmnxDiamPeerStCcrInitialTx)	long	The value of tmnxDiamPeerStCcrInitialTx indicates the number of Credit Control Request messages with CC-Request-Type AVP equal to INITIAL_REQUEST that are transmitted to the server.
ccrTerminateTx [Ccr Terminate Tx] (tmnxDiamPeerStCcrTerminateTx)	long	The value of tmnxDiamPeerStCcrTerminateTx indicates the number of Credit Control Request messages with CC-Request-Type AVP equal to TERMINATION_REQUEST that are transmitted to the server.
ccrUpdateTx [Ccr Update Tx] (tmnxDiamPeerStCcrUpdateTx)	long	The value of tmnxDiamPeerStCcrUpdateTx indicates the number of Credit Control Request messages with CC-Request-Type AVP equal to UPDATE_REQUEST that are transmitted to the server.
ceaRx [Cea Rx] (tmnxDiamPeerStCeaRx)	long	The value of tmnxDiamPeerStCeaRx indicates the number of Capabilities-Exchange-Answer messages that are received from the server.
cerTx [Cer Tx] (tmnxDiamPeerStCerTx)	long	The value of tmnxDiamPeerStCerTx indicates the number of Capabilities-Exchange-Request messages that are transmitted to the server.
clientInitiatedPendingMsgsPMQ [Client Initiated Pending Msgs PMQ] (tmnxDiamPeerStCiPendMsgsPMQ)	long	The value of tmnxDiamPeerStCiPendMsgsPMQ indicates client initiated roundtrip DIAMETER statistics regarding the number of request messages in the Pending Message Queue waiting to be matched with corresponding response messages from the server.
clientInitiatedReqTimeoutsPMQ [Client Initiated Req Timeouts PMQ] (tmnxDiamPeerStCiReqTimeoutsPMQ)	long	The value of tmnxDiamPeerStCiReqTimeoutsPMQ indicates client initiated roundtrip DIAMETER statistics regarding the number of request messages that were removed from the Pending Message Queue due to a match timeout.
dpaRx [Dpa Rx] (tmnxDiamPeerStDpaRx)	long	The value of tmnxDiamPeerStDpaRx indicates the number of Disconnect-Peer-Answer messages that are received from the server.

Table 406 diameter statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dpaTx [Dpa Tx] (tmnxDiamPeerStDpaTx)	long	The value of tmnxDiamPeerStDpaTx indicates the number of Disconnect-Peer-Answer messages that are transmitted to the server.
dprRx [Dpr Rx] (tmnxDiamPeerStDprRx)	long	The value of tmnxDiamPeerStDprRx indicates the number of Disconnect-Peer-Request messages that are received from the server.
dprTx [Dpr Tx] (tmnxDiamPeerStDprTx)	long	The value of tmnxDiamPeerStDprTx indicates the number of Disconnect-Peer-Request messages that are transmitted to the server.
peerName [Peer Name] (tmnxDiamPlcyPeerName)	String	The value of tmnxDiamPlcyPeerName specifies the name of the peer within a DIAMETER policy.
policyName [Policy Name] (tmnxDiamPlcyName)	String	The value of tmnxDiamPlcyName specifies the name of the DIAMETER policy.
raaTx [Raa Tx] (tmnxDiamPeerStRaaTx)	long	The value of tmnxDiamPeerStRaaTx indicates the number of Re-Auth-Answer messages that are transmitted to the server.
rarRx [Rar Rx] (tmnxDiamPeerStRarRx)	long	The value of tmnxDiamPeerStRarRx indicates the number of Re-Auth-Request messages that are received from the server.
siDiameterRxDropCount [Si Diameter Rx Drop Count] (tmnxDiamPeerStSiDiamRxDropCnt)	long	The value of tmnxDiamPeerStSiDiamRxDropCnt indicates client initiated roundtrip DIAMETER statistics regarding the number of dropped request messages upon reception from server.

Table 406 diameter statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
siDiameterRxRequests [Si Diameter Rx Requests] (tmnxDiamPeerStSiDiamRxReqs)	long	The value of tmnxDiamPeerStSiDiamRxReqs indicates client initiated roundtrip DIAMETER statistics regarding the number of request messages received from server.
siDiameterTxResponses [Si Diameter Tx Responses] (tmnxDiamPeerStSiDiamTxResps)	long	The value of tmnxDiamPeerStSiDiamTxResps indicates client initiated roundtrip DIAMETER statistics regarding the number of response messages sent to server.
siTcpSendFailed [Si Tcp Send Failed] (tmnxDiamPeerStSiTcpSendFailed)	long	The value of tmnxDiamPeerStSiTcpSendFailed indicates client initiated roundtrip DIAMETER statistics regarding the number of TCP send failures.
wdaRx [Wda Rx] (tmnxDiamPeerStWdaRx)	long	The value of tmnxDiamPeerStWdaRx indicates the number of Device-Watchdog-Answer messages that are received from the server.
wdaTx [Wda Tx] (tmnxDiamPeerStWdaTx)	long	The value of tmnxDiamPeerStWdaTx indicates the number of Device-Watchdog-Answer messages that are transmitted to the server.
wdrRx [Wdr Rx] (tmnxDiamPeerStWdrRx)	long	The value of tmnxDiamPeerStWdrRx indicates the number of Device-Watchdog-Request messages that are received from the server.
wdrTx [Wdr Tx] (tmnxDiamPeerStWdrTx)	long	The value of tmnxDiamPeerStWdrTx indicates the number of Device-Watchdog-Request messages that are transmitted to the server.

Table 407 equipment statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
AllocatedMemoryStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder		
allocatedMemory [Allocated Memory] (sgiMemoryPoolAllocated)	long	The value of sgiMemoryPoolAllocated indicates the total memory currently allocated in memory-pools on the system. This memory may or may not be currently in use, but is pre-allocated should the software need to use it. If the value is greater than the maximum value reportable by this object then this object reports its maximum value (4,294,967,295) and sgiKbMemoryPoolAllocated must be used to determine the total memory allocated in memory-pools.
AvailableMemoryStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder		
availableMemory [Available Memory] (sgiMemoryAvailable)	long	The value of sgiMemoryAvailable indicates the amount of free memory in the overall system that is not allocated to memory pools, but is available in case a memory pool needs to grow.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CardResourceStats</p> <p>MIB entry name: tCardResEntry</p> <p>Entry description: The value of tCardResEntry represents card specific system resource information.</p> <p>Table description (for tCardResTable): The value of tCardResTable represents system resource information that are specific to a particular card on a given chassis.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.BaseCard</p>		
fPIngQGrpInstAlloc [FPIng QGrp Inst Alloc] (tCardResFPIngQGrpInstAlloc)	long	The value of tCardResFPIngQGrpInstAlloc represents the total number of forwarding-plane (FP) ingress queue-group instances across all FP on this card including access and network instances that are currently provisioned.
fPIngQGrpInstTotal [FPIng QGrp Inst Total] (tCardResFPIngQGrpInstTotal)	long	The value of tCardResFPIngQGrpInstTotal represents the total number of forwarding-plane (FP) ingress queue-group instances across all FP on this card including access and network instances that are allowed to be provisioned. When the value of tCardResFPIngQGrpInstTotal is zero, it indicates that this resource type is not supported on this card.
hsmdaQOvrAlloc [Hsmda QOvr Alloc] (tCardResHsmdaQOvrAlloc)	long	The value of tCardResHsmdaQOvrAlloc represents the total number of HSMDA queue overrides that are currently allocated on this card.
hsmdaQOvrTotal [Hsmda QOvr Total] (tCardResHsmdaQOvrTotal)	long	The value of tCardResHsmdaQOvrTotal represents the total number of HSMDA queue overrides that are supported on this card. When the value of tCardResHsmdaQOvrTotal is zero, it indicates that this resource type is not supported on this card.
portAccEgrQGrpInstAlloc [Port Acc Egr QGrp Inst Alloc] (tCardResPortAccEgrQGrpInstAlloc)	long	The value of tCardResPortAccEgrQGrpInstAlloc represents the total number of port access egress queue-group instances across all ports on this card that are currently provisioned.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portAccEgrQGrpInstTotal [Port Acc Egr QGrp Inst Total] (tCardResPortAccEgrQGrpInstTotal)	long	The value of tCardResPortAccEgrQGrpInstTotal represents the total number of port access egress queue-group instances across all ports on this card that are allowed to be provisioned. When the value of tCardResPortAccEgrQGrpInstTotal is zero, it indicates that this resource type is not supported on this card.
portEgrQGrpInstAlloc [Port Egr QGrp Inst Alloc] (tCardResPortEgrQGrpInstAlloc)	long	The value of tCardResPortEgrQGrpInstAlloc represents the total number of port egress queue-group instances across all ports on this card including access and network instances that are currently provisioned.
portEgrQGrpInstTotal [Port Egr QGrp Inst Total] (tCardResPortEgrQGrpInstTotal)	long	The value of tCardResPortEgrQGrpInstTotal represents the total number of port egress queue-group instances across all ports on this card including access and network instances that are allowed to be provisioned. When the value of tCardResPortEgrQGrpInstTotal is zero, it indicates that this resource type is not supported on this card.
portEgrVPortAlloc [Port Egr VPort Alloc] (tCardResPortEgrVPortAlloc)	long	The value of tCardResPortEgrVPortAlloc represents the total number of egress virtual ports across all ports on this card that are currently provisioned.
portEgrVPortTotal [Port Egr VPort Total] (tCardResPortEgrVPortTotal)	long	The value of tCardResPortEgrVPortTotal represents the total number of egress virtual ports across all ports on this card that are allowed to be provisioned. When the value of tCardResPortEgrVPortTotal is zero, it indicates that this resource type is not supported on this card.
portNetEgrQGrpInstAlloc [Port Net Egr QGrp Inst Alloc] (tCardResPortNetEgrQGrpInstAlloc)	long	The value of tCardResPortNetEgrQGrpInstAlloc represents the total number of port network egress queue-group instances across all ports on this card that are currently provisioned.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portNetEgrQGrpInstTotal [Port Net Egr QGrp Inst Total] (tCardResPortNetEgrQGrpInstTotal)	long	The value of tCardResPortNetEgrQGrpInstTotal represents the total number of port network egress queue-group instances across all ports on this card that are allowed to be provisioned. When the value of tCardResPortNetEgrQGrpInstTotal is zero, it indicates that this resource type is not supported on this card.
qosIntSchedsAlloc [Qos Int Scheds Alloc] (tCardResQosIntSchedsAlloc)	long	The value of tCardResQosIntSchedsAlloc represents the total number of QoS internal virtual schedulers that are currently allocated on this card.
qosIntSchedsTotal [Qos Int Scheds Total] (tCardResQosIntSchedsTotal)	long	The value of tCardResQosIntSchedsTotal represents the total number of QoS internal virtual schedulers that are supported on this card. When the value of tCardResQosIntSchedsTotal is zero, it indicates that this resource type is not supported on this card.
qosUserSchedsAlloc [Qos User Scheds Alloc] (tCardResQosUserSchedsAlloc)	long	The value of tCardResQosUserSchedsAlloc represents the total number of QoS user virtual schedulers that are currently allocated on this card.
qosUserSchedsTotal [Qos User Scheds Total] (tCardResQosUserSchedsTotal)	long	The value of tCardResQosUserSchedsTotal represents the total amount of QoS user virtual schedulers that are supported on this card. When the value of tCardResQosUserSchedsTotal is zero, it indicates that this resource type is not supported on this card.
subSPIQosOvrAlloc [Sub SPIQos Ovr Alloc] (tCardResSubSPIQosOvrAlloc)	long	The value of tCardResSubSPIQosOvrAlloc represents the total number of QoS subscriber sla-profile instance overrides that are currently allocated on this card.
subSPIQosOvrTotal [Sub SPIQos Ovr Total] (tCardResSubSPIQosOvrTotal)	long	The value of tCardResSubSPIQosOvrTotal represents the total number of QoS subscriber sla-profile instance overrides that are supported on this card. When the value of tCardResSubSPIQosOvrTotal is zero, it indicates that this resource type is not supported on this card.

<p>ChassisResourceStats</p> <p>MIB entry name: tChassisResEntry</p> <p>Entry description: The value of tChassisResEntry represents chassis specific system resource information.</p> <p>Table description (for tChassisResTable): The value of tChassisResTable represents system resource information that are specific to chassis.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.SystemStatsHolder</p>		
egrQGrpTplAlloc [Egr QGrp Tmpl Alloc] (tChassisResEgrQGrpTplAlloc)	long	The value of tChassisResEgrQGrpTplAlloc represents the total number of egress queue-group-templates that are currently provisioned on this chassis.
egrQGrpTplTotal [Egr QGrp Tmpl Total] (tChassisResEgrQGrpTplTotal)	long	The value of tChassisResEgrQGrpTplTotal represents the total number of egress queue-group-templates that are allowed to be provisioned on this chassis. When the value of tChassisResEgrQGrpTplTotal is zero, it indicates that this resource type is not supported on this chassis.
fPIngQGrpInstAlloc [FPIng QGrp Inst Alloc] (tChassisResFPIngQGrpInstAlloc)	long	The value of tChassisResFPIngQGrpInstAlloc represents the total number of forwarding-plane (FP) ingress queue-group instances across all the FP on this chassis including access and network instances that are allowed to be provisioned.
fPIngQGrpInstTotal [FPIng QGrp Inst Total] (tChassisResFPIngQGrpInstTotal)	long	The value of tChassisResFPIngQGrpInstTotal represents the total number of forwarding-plane (FP) ingress queue-group instances across all the FP on this chassis including access and network instances that are allowed to be provisioned. When the value of tChassisResFPIngQGrpInstTotal is zero, it indicates that this resource type is not supported on this chassis.
ingQGrpTplAlloc [Ing QGrp Tmpl Alloc] (tChassisResIngQGrpTplAlloc)	long	The value of tChassisResIngQGrpTplAlloc represents the total number of ingress queue-group-templates that are currently provisioned on this chassis.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingQGrpTmplTotal [Ing QGrp Tmpl Total] (tChassisResIngQGrpTmplTotal)	long	The value of tChassisResIngQGrpTmplTotal represents the total number of ingress queue-group-templates that are allowed to be provisioned on this chassis. When the value of tChassisResIngQGrpTmplTotal is zero, it indicates that this resource type is not supported on this chassis.
portEgrQGrpInstAlloc [Port Egr QGrp Inst Alloc] (tChassisResPortEgrQGrpInstAlloc)	long	The value of tChassisResPortEgrQGrpInstAlloc represents the total number of port egress queue-group instances across all the ports on this chassis including access and network instances that are currently provisioned.
portEgrQGrpInstTotal [Port Egr QGrp Inst Total] (tChassisResPortEgrQGrpInstTotal)	long	The value of tChassisResPortEgrQGrpInstTotal represents the total number of port egress queue-group instances across all the ports on this chassis including access and network instances that are allowed to be provisioned. When the value of tChassisResPortEgrQGrpInstTotal is zero, it indicates that this resource type is not supported on this chassis.
portEgrVPortAlloc [Port Egr VPort Alloc] (tChassisResPortEgrVPortAlloc)	long	The value of tChassisResPortEgrVPortAlloc represents the total number of port virtual ports across all the ports on this chassis that are currently provisioned.
portEgrVPortTotal [Port Egr VPort Total] (tChassisResPortEgrVPortTotal)	long	The value of tChassisResPortEgrVPortTotal represents the total number of egress virtual ports across all the ports on this chassis that are allowed to be provisioned. When the value of tChassisResPortEgrVPortTotal is zero, it indicates that this resource type is not supported on this chassis.
sapEgrQosPolAlloc [Sap Egr Qos Pol Alloc] (tChassisResSapEgrQosPolAlloc)	long	The value of tChassisResSapEgrQosPolAlloc represents the total number of sap-egress QoS policies that are currently provisioned on this chassis.
sapEgrQosPolTotal [Sap Egr Qos Pol Total] (tChassisResSapEgrQosPolTotal)	long	The value of tChassisResSapEgrQosPolTotal represents the total number of sap-egress QoS policies that are allowed to be provisioned on this chassis. When the value of tChassisResSapEgrQosPolTotal is zero, it indicates that this resource type is not supported on this chassis.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapIngQosPolAlloc [Sap Ing Qos Pol Alloc] (tChassisResSapIngQosPolAlloc)	long	The value of tChassisResSapIngQosPolAlloc represents the total number of sap-ingress QoS policies that are currently provisioned on this chassis.
sapIngQosPolTotal [Sap Ing Qos Pol Total] (tChassisResSapIngQosPolTotal)	long	The value of tChassisResSapIngQosPolTotal represents the total number of sap-ingress QoS policies that are allowed to be provisioned on this chassis. When the value of tChassisResSapIngQosPolTotal is zero, it indicates that this resource type is not supported on this chassis.

discardStatInPkts [Discard Stat In Pkts] (tmnxCiscoHDLCDiscardStatInPkts)	long	tmnxCiscoHDLCDiscardStatInPkts indicates the number of inbound Cisco HDLC packets discarded.
discardStatOutPkts [Discard Stat Out Pkts] (tmnxCiscoHDLCDiscardStatOutPkts)	long	tmnxCiscoHDLCDiscardStatOutPkts indicates the number of outbound Cisco HDLC packets discarded.
statInOctets [Stat In Octets] (tmnxCiscoHDLCStatInOctets)	long	tmnxCiscoHDLCStatInOctets indicates the number of inbound Cisco HDLC octets.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
statInPkts [Stat In Pkts] (tmnxCiscoHDLCStatInPkts)	long	tmnxCiscoHDLCStatInPkts indicates the number of inbound Cisco HDLC packets.
statOutOctets [Stat Out Octets] (tmnxCiscoHDLCStatOutOctets)	long	tmnxCiscoHDLCStatOutOctets indicates the number of outbound Cisco HDLC octets.
statOutPkts [Stat Out Pkts] (tmnxCiscoHDLCStatOutPkts)	long	tmnxCiscoHDLCStatOutPkts indicates the number of outbound Cisco HDLC packets.
<p>CpuUtilizationStats</p> <p>MIB entry name: tmnxCardCpuResMonitorEntry</p> <p>Entry description: The tmnxCardCpuResMonitorEntry contains the card level CPU monitoring statistics over a specified sample-time.</p> <p>Table description (for tmnxCardCpuResMonitorTable): The tmnxCardCpuResMonitorTable details the specified current card's CPU resources. The information described in this table is volatile and dependent on the current environmental conditions, and specified sample-time. Information is only displayed for online cards.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.CardSlot</p>		
busyCoreUtil [Busy Core Util] (tmnxCardCpuResMonBusyCoreUtil)	double	The value of tmnxCardCpuResMonBusyCoreUtil indicates the utilization percentage of the busiest processor core over the specified sample-time. On single core CPUs, this is the overall system utilization percentage over the specified sample-time.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
busyGroupName [Busy Group Name] (tmnxCardCpuResMonBusyGroupName)	String	The value of tmnxCardCpuResMonBusyGroupName indicates the name of the group that is running at the highest capacity utilization. Capacity utilization is the CPU utilization relative to the maximum CPU resources available to that group. A group is a set of related applications, services, tasks or protocol handlers that consumes some part of the system CPU resources. The capacity utilization of the busiest group is indicated by tmnxCardCpuResMonBusyGroupUtil.
busyGroupUtil [Busy Group Util] (tmnxCardCpuResMonBusyGroupUtil)	double	The value of tmnxCardCpuResMonBusyGroupUtil indicates the capacity utilization of the group that is running at the highest capacity utilization. Capacity utilization is the CPU utilization relative to the maximum CPU resources available to that group. A group is a set of related applications, services, tasks or protocol handlers that consumes some part of the system CPU resources. The name of the busiest group is indicated by tmnxCardCpuResMonBusyGroupName.
cardSlotId [Card Slot Id] (tmnxCardResourceSlotNum)	long	The value of tmnxCardResourceSlotNum specifies the slot number of the card to which the resource information is monitored.
cpuidle [Cpu Idle] (tmnxCardCpuResMonCpuIdle)	double	The value of tmnxSysCpuMonCpuIdle indicates the overall percentage of CPU idleness over the specified sample-time.
samplingTime [Sampling Time] (tmnxCardCpuResSampleTime)	int	The value of tmnxCardCpuResSampleTime specifies the sample-time used to calculate the utilization results for the row.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>DDMStats</p> <p>MIB entry name: tmnxDigitalDiagMonitorEntry</p> <p>Entry description: Each row represents a particular SFF that supports Digital Diagnostic Monitoring. Entries are created and deleted internally by the system.</p> <p>Table description (for tmnxDigitalDiagMonitorTable): The tmnxDigitalDiagMonitorTable has an entry for each SFF in the system that supports Digital Diagnostic Monitoring (DDM). The table is indexed by TmnxPortID. Each row in this table is dynamically added and removed internally by the system based on the presence or absence of DDM capable SFF components.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.DigitalDiagnosticMonitoring</p>		
aux1 [Aux 1] (tmnxDDMAux1)	float	The value of tmnxDDMAux1 indicates the Manufacturer specific Auxiliary 1 information of the XFP.
aux1Type [Aux 1 Type] (tmnxDDMAux1Type)	int	The value of tmnxDDMAux1Type indicates the measurement type of the Manufacturer specific Auxiliary 1 information of the XFP: none (0) - not specified. adp-bias-voltage (1) - LSB is 10mV. reserved-2 (2) - reserved for future use. tec-current (3) - LSB is 100uA. laser-temp (4) - degrees Celsius(C). laser-wavelength (5) - LSB is 0.05 nm. voltage-50 (6) - 5.0 supply voltage, LSB=100uV. voltage-33 (7) - 3.3 supply voltage, LSB=100uV. voltage-18 (8) - 1.8 supply voltage, LSB=100uV, voltage-52 (9) - -5.2 supply voltage, LSB=100uV. current-50 (10) - 5.0V supply current, LSB=100uA. reserved-11 (11) - reserved for future use. reserved-12 (12) - reserved for future use. current-33 (13) - 3.3V supply current, LSB=100uA. current-18 (14) - 1.8V supply current, LSB=100uA. current-52 (15) - -5.2V supply current, LSB=100uA.
aux2 [Aux 2] (tmnxDDMAux2)	float	The value of tmnxDDMAux2 indicates the Manufacturer specific Auxiliary 2 information of the SFF.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aux2Type [Aux 2 Type] (tmnxDDMAux2Type)	int	The value of tmnxDDMAux2Type indicates the measurement type of the Manufacturer specific Auxiliary 2 information of the XFP: none (0) - not specified. adp-bias-voltage (1) - LSB is 10mV. reserved-2 (2) - reserved for future use. tec-current (3) - LSB is 100uA. laser-temp (4) - degrees Celsius(C). laser-wavelength (5) - LSB is 0.05 nm. voltage-50 (6) - 5.0 supply voltage, LSB=100uV. voltage-33 (7) - 3.3 supply voltage, LSB=100uV. voltage-18 (8) - 1.8 supply voltage, LSB=100uV, voltage-52 (9) - -5.2 supply voltage, LSB=100uV. current-50 (10) - 5.0V supply current, LSB=100uA. reserved-11 (11) - reserved for future use. reserved-12 (12) - reserved for future use. current-33 (13) - 3.3V supply current, LSB=100uA. current-18 (14) - 1.8V supply current, LSB=100uA. current-52 (15) - -5.2V supply current, LSB=100uA.
rxOpticalPower [Rx Optical Power] (tmnxDDMRxOpticalPower)	float	The value of tmnxDDMRxOpticalPower indicates the current Received Optical Power of the SFF in one tenths of a microwatt (uW). If the SFF is externally calibrated, the objects tmnxDDMExtCalRxPower4, tmnxDDMExtCalRxPower3, tmnxDDMExtCalRxPower2, tmnxDDMExtCalRxPower1 and tmnxDDMExtCalRxPower0 affect the output power calculation. For example (internally calibrated SFF): Using the SNMP value of 790, and using units of tenths of microwatt, 790 becomes 79 microwatts or 0.079 milliwatts. Converting to dBm: $10 \times \log_{10}(0.079) = -11.0$ dBm
rxOpticalPowerType [Rx Optical Power Type] (tmnxDDMRxOpticalPowerType)	int	The value of tmnxDDMRxOpticalPowerType indicates whether the tmnxDDMRxOpticalPower was taken as an average, or as an Optical Modulation Amplitude (OMA).

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
supplyVoltage [Supply Voltage] (tmnxDDMSupplyVoltage)	float	The value of tmnxDDMSupplyVoltage indicates the current supply voltage of the SFF. For 100G MSA Transponder, the supply voltage is in millivolts (mV). For all other types the voltage is in deci-millivolts (1/10th of a millivolt or 100 microvolt units). If the SFF is externally calibrated, the objects tmnxDDMExtCalVoltageSlope and tmnxDDMExtCalVoltageOffset affect the voltage calculation. The formula for translating between the value of tmnxDDMSupplyVoltage and Voltage is: Internally Calibrated only: tmnxDDMSupplyVoltage * conversion_factor Externally Calibrated: (tmnxDDMSupplyVoltage * (tmnxDDMExtCalVoltageSlope / 256) + tmnxDDMExtCalVoltageOffset) * conversion_factor where conversion_factor is 1/1000 for 100G MSA transponders and 1/10000 for all the others. For example (internally calibrated SFF): 1. For 100G MSA transponders, the SNMP value 32851 is 32.851 Volts (V). 2. For all others, the SNMP value 32851 is 3.2851 Volts (V).
temperature [Temperature] (tmnxDDMTemperature)	float	The value of tmnxDDMTemperature indicates the current temperature of the SFF in 1/256th degrees Celsius. If the SFF is externally calibrated, the objects tmnxDDMExtCalTemperatureSlope and tmnxDDMExtCalTemperatureOffset affect the temperature calculation. The formula for translating between the value of tmnxDDMTemperature and degrees Celsius is: Internally Calibrated only: tmnxDDMTemperature / 256 Externally Calibrated: (tmnxDDMTemperature * (tmnxDDMExtCalTemperatureSlope / 256) + tmnxDDMExtCalTemperatureOffset) / 256 For example (internally calibrated SFF): The SNMP value 5734 is 22.4 degrees Celsius.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txBiasCurrent [Tx Bias Current] (tmnxDDMTxBiasCurrent)	float	The value of tmnxDDMTxBiasCurrent indicates the current Transmit Bias Current of the SFF in 1/500 milliamperes (mA). If the SFF is externally calibrated, the objects tmnxDDMExtCalTxLaserBiasSlope and tmnxDDMExtCalTxLaserBiasOffset affect the ampere calculation. The formula for translating between the value of tmnxDDMTxBiasCurrent and amperes is: Internally Calibrated only: tmnxDDMTxBiasCurrent / 500 Externally Calibrated: (tmnxDDMTxBiasCurrent * (tmnxDDMExtCalTxLaserBiasSlope / 256) + tmnxDDMExtCalTxLaserBiasOffset) / 500 For example (internally calibrated SFF): The SNMP value 2565 is 5.1 milliamperes (mA).
txOutputPower [Tx Output Power] (tmnxDDMTxOutputPower)	float	The value of tmnxDDMTxOutputPower indicates the current Output Power of the SFF in one tenths of a microwatt (uW). If the SFF is externally calibrated, the objects tmnxDDMExtCalTemperatureSlope and tmnxDDMExtCalTemperatureOffset affect the output power calculation. For example (internally calibrated SFF): Using the SNMP value of 790, and using units of tenths of microwatt, 790 becomes 79 microwatts or 0.079 milliwatts. Converting to dBm: $10 \times \log_{10}(0.079) = -11.0$ dBm
<p>FibNextHopStats</p> <p>MIB entry name: vRtrFibStatNextHopEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an IOM card in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrFibStatNextHopTable): The vRtrFibStatNextHopTable has an entry for each IOM in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.BaseCard</p>		

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipActive [Ip Active] (vRtrFibStatNextHopIPActive)	long	vRtrFibStatNextHopIPActive indicates current active IP next-hop counts for the FIB on the IOM.
ipAvailable [Ip Available] (vRtrFibStatNextHopIPAvailable)	long	vRtrFibStatNextHopIPAvailable indicates the available IP next-hop counts for the FIB on the IOM.
tunnelActive [Tunnel Active] (vRtrFibStatNextHopTunnelActive)	long	vRtrFibStatNextHopTunnelActive indicates current active Tunnel next-hop counts for the FIB on the IOM.
tunnelAvailable [Tunnel Available] (vRtrFibStatNextHopTunnelAvailable)	long	vRtrFibStatNextHopTunnelAvailable indicates the available Tunnel next-hop counts for the FIB on the IOM.
<p>FibStats</p> <p>MIB entry name: vRtrFibStatEntry</p> <p>Entry description: Each row entry represents a collection of summarized statistics for each virtual router on an IOM card in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrFibStatTable): The vRtrStatTable has an entry for IOM card configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.BaseCard</p>		
aggrRoutes [Aggr Routes] (vRtrFibStatAggrRoutes)	long	vRtrFibStatAggrRoutes indicates current aggregate route counts for the virtual router.
alarmCount [Alarm Count] (vRtrFibStatAlarmCount)	long	vRtrFibStatAlarmCount indicates the number of times the FIB has raised an alarm due to high FIB usage.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
bgpEvpnRoutes [Bgp Evpn Routes] (vRtrFibStatBGPEvpnRoutes)	long	The value of vRtrFibStatBGPEvpnRoutes indicates the current IPv4 BGP EVPN route counts for the virtual router.
bgpRoutes [Bgp Routes] (vRtrFibStatBGPRoutes)	long	vRtrFibStatBGPRoutes indicates current BGP route counts for the virtual router.
bgpVpnRoutes [Bgp Vpn Routes] (vRtrFibStatBGPVpnRoutes)	long	vRtrFibStatBGPVpnRoutes indicates current BGP VPN route counts for the virtual router.
directRoutes [Direct Routes] (vRtrFibStatDirectRoutes)	long	vRtrFibStatDirectRoutes indicates current direct route counts for the virtual router.
highUtilization [High Utilization] (vRtrFibStatHighUtilization)	boolean	vRtrFibStatHighUtilization indicates whether or not the FIB on the IOM is experiences persistent high occupancy.
hostRoutes [Host Routes] (vRtrFibStatHostRoutes)	long	vRtrFibStatHostRoutes indicates current host route counts for the virtual router.
isisRoutes [Isis Routes] (vRtrFibStatISISRoutes)	long	vRtrFibStatISISRoutes indicates current ISIS route counts for the virtual router.
lastAlarmTime [Last Alarm Time] (vRtrFibStatLastAlarmTime)	long	vRtrFibStatLastAlarmTime indicates the last time a high FIB usage alarm was raised.
managedRoutes [Managed Routes] (vRtrFibStatManagedRoutes)	long	vRtrFibStatManagedRoutes indicates current managed route counts for the virtual router.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
natRoutes [Nat Routes] (vRtrFibStatNatRoutes)	long	vRtrFibStatNatRoutes indicates current NAT route counts for the virtual router.
ospfRoutes [Ospf Routes] (vRtrFibStatOSPFRoutes)	long	vRtrFibStatOSPFRoutes indicates current OSPF route counts for the virtual router.
overflows [Overflows] (vRtrFibStatOverflows)	long	vRtrFibStatOverflows indicates the number of times the FIB has run out of space.
ripRoutes [Rip Routes] (vRtrFibStatRIPRoutes)	long	vRtrFibStatRIPRoutes indicates current RIP route counts for the virtual router.
staticRoutes [Static Routes] (vRtrFibStatStaticRoutes)	long	vRtrFibStatStaticRoutes indicates current static route counts for the virtual router.
subMgmtRoutes [Sub Mgmt Routes] (vRtrFibStatSubMgmtRoutes)	long	vRtrFibStatSubMgmtRoutes indicates current Sub-management route counts for the virtual router.
vpnLeakRoutes [Vpn Leak Routes] (vRtrFibStatVPNLeakRoutes)	long	vRtrFibStatVPNLeakRoutes indicates current VPN Leak route counts for the virtual router.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ForwardingPlaneResourceStats MIB entry name: tFPResEntry Entry description: The value of tFPResEntry represents forwarding plane (FP) specific system resource information. Table description (for tFPResTable): The value of tFPResTable represents system resource information that are specific to forwarding plane (FP) for a particular card on a given chassis. Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • equipment.CardSlot • equipment.ForwardingPlane 		
dynEgrClassAlloc [Dyn Egr Class Alloc] (tFPResDynEgrClassAlloc)	long	The value of tFPResDynEgrClassAlloc represents the total number of QoS dynamic egress classification resources that are currently allocated on this FP.
dynEgrClassIUBNE [Dyn Egr Class IUBNE] (tFPResDynEgrClassIUBNE)	long	The value of tFPResDynEgrClassIUBNE represents the subset of resources which are currently in use by network egress QoS classification out of currently allocated QoS dynamic egress classification resources, tFPResDynEgrClassAlloc. A network egress QoS classification resource is consumed whenever a network QoS policy has at least one egress DSCP or prec classification rule provisioned.
dynEgrClassIUBSE [Dyn Egr Class IUBSE] (tFPResDynEgrClassIUBSE)	long	The value of tFPResDynEgrClassIUBSE represents the subset of resources which are currently in use by sap-egress QoS policies out of currently allocated QoS dynamic egress classification resources, tFPResDynEgrClassAlloc.
dynEgrClassTotal [Dyn Egr Class Total] (tFPResDynEgrClassTotal)	long	The value of tFPResDynEgrClassTotal represents the total number of QoS dynamic egress classification resources that are allowed to be in use on this FP.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dynPolicerAlloc [Dyn Policer Alloc] (tFPResDynPolicerAlloc)	long	The value of tFPResDynPolicerAlloc represents the total number of dynamic policers that are currently allocated on this FP.
dynPolicerIUBE [Dyn Policer IUBE] (tFPResDynPolicerIUBE)	long	The value of tFPResDynPolicerIUBE represents the subset of resources which are currently in use by egress policer out of currently allocated dynamic policer resources, tFPResDynPolicerAlloc.
dynPolicerIUBI [Dyn Policer IUBI] (tFPResDynPolicerIUBI)	long	The value of tFPResDynPolicerIUBI represents the subset of resources which are currently in use by ingress policer out of currently allocated dynamic policer resources, tFPResDynPolicerAlloc.
dynPolicerStatAlloc [Dyn Policer Stat Alloc] (tFPResDynPolicerStatAlloc)	long	The value of tFPResDynPolicerStatAlloc represents the total number of dynamic policers stats that are currently allocated on this FP.
dynPolicerStatIUBE [Dyn Policer Stat IUBE] (tFPResDynPolicerStatIUBE)	long	The value of tFPResDynPolicerStatIUBE represents the subset of resources which are currently in use by egress policer stats out of currently allocated dynamic policer stats resources, tFPResDynPolicerStatAlloc.
dynPolicerStatIUBI [Dyn Policer Stat IUBI] (tFPResDynPolicerStatIUBI)	long	The value of tFPResDynPolicerStatIUBI represents the subset of resources which are currently in use by ingress policer stats out of currently allocated dynamic policer stats resources, tFPResDynPolicerStatAlloc.
dynPolicerStatTotal [Dyn Policer Stat Total] (tFPResDynPolicerStatTotal)	long	The value of tFPResDynPolicerStatTotal represents the total number of dynamic policer stats that are supported on this FP. When the value of tFPResDynPolicerStatTotal is zero, it indicates that this resource type is not supported on this FP.
dynPolicerTotal [Dyn Policer Total] (tFPResDynPolicerTotal)	long	The value of tFPResDynPolicerTotal represents the total number of dynamic policer that are supported on this FP. When the value of tFPResDynPolicerTotal is zero, it indicates that this resource type is not supported on this FP.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dynQ2NamedPoolAlloc [Dyn Q2 Named Pool Alloc] (tFPResDynQ2NamedPoolAlloc)	long	The value of tFPResDynQ2NamedPoolAlloc represents the total number of dynamic Q2 named pools that are currently allocated on this FP.
dynQ2NamedPoolIUBE [Dyn Q2 Named Pool IUBE] (tFPResDynQ2NamedPoolIUBE)	long	The value of tFPResDynQ2NamedPoolIUBE represents the subset of resources which are currently in use by egress Q2 named pools out of currently allocated dynamic Q2 named pools resources, tFPResDynQ2NamedPoolAlloc.
dynQ2NamedPoolIUBI [Dyn Q2 Named Pool IUBI] (tFPResDynQ2NamedPoolIUBI)	long	The value of tFPResDynQ2NamedPoolIUBI represents the subset of resources which are currently in use by ingress Q2 named pools out of currently allocated dynamic Q2 named pools resources, tFPResDynQ2NamedPoolAlloc.
dynQ2NamedPoolTotal [Dyn Q2 Named Pool Total] (tFPResDynQ2NamedPoolTotal)	long	The value of tFPResDynQ2NamedPoolTotal represents the total number of dynamic Q2 named pools that are supported on this FP. When the value of tFPResDynQ2NamedPoolTotal is zero, it indicates that this resource type is not supported on this FP.
dynQ2WredPoolAlloc [Dyn Q2 Wred Pool Alloc] (tFPResDynQ2WredPoolAlloc)	long	The value of tFPResDynQ2WredPoolAlloc represents the total number of dynamic Q2 wred pools that are currently allocated on this FP.
dynQ2WredPoolTotal [Dyn Q2 Wred Pool Total] (tFPResDynQ2WredPoolTotal)	long	The value of tFPResDynQ2WredPoolTotal represents the total number of dynamic Q2 wred pools that are supported on this FP. When the value of tFPResDynQ2WredPoolTotal is zero, it indicates that this resource type is not supported on this FP.
dynQueueAlloc [Dyn Queue Alloc] (tFPResDynQueueAlloc)	long	The value of tFPResDynQueueAlloc represents the total number of dynamic queues that are currently allocated on this FP.
dynQueueIUBE [Dyn Queue IUBE] (tFPResDynQueueIUBE)	long	The value of tFPResDynQueueIUBE represents the subset of resources which are currently in use by egress queues out of currently allocated dynamic queue resources, tFPResDynQueueAlloc.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dynQueueIUBI [Dyn Queue IUBI] (tFPResDynQueueIUBI)	long	The value of tFPResDynQueueIUBI represents the subset of resources which are currently in use by ingress queues out of currently allocated dynamic queue resources, tFPResDynQueueAlloc.
dynQueueTotal [Dyn Queue Total] (tFPResDynQueueTotal)	long	The value of tFPResDynQueueTotal represents the total number of dynamic queues that are supported on this FP. When the value of tFPResEgrRootArbiterTotal is zero, it indicates that this resource type is not supported on this FP.
dynSvcEntryAlloc [Dyn Svc Entry Alloc] (tFPResDynSvcEntryAlloc)	long	The value of tFPResDynSvcEntryAlloc represents the total number of dynamic services that are currently allocated on this FP. The value of tFPResDynSvcEntryAlloc will always equal to the sum of tFPResSubHostAlloc, tFPResEncapGrpMemberAlloc and tFPResEgrNetQGrpMapAlloc since subscriber host resources, encap-group members resources and egress network queue-group mappings resources are subsets of dynamic service entry resources.
dynSvcEntryTotal [Dyn Svc Entry Total] (tFPResDynSvcEntryTotal)	long	The value of tFPResDynSvcEntryTotal represents the total number of dynamic services that are supported on this FP. When the value of tFPResDynSvcEntryTotal is zero, it indicates that this resource type is not supported on this FP. The value of tFPResDynSvcEntryTotal will always equal to the sum of tFPResSubHostTotal, tFPResEncapGrpMemberTotal and tFPResEgrNetQGrpMapTotal since subscriber host resources, encap-group members resources and egress network queue-group mappings resources are subsets of dynamic service entry resources.
egrAclEntryAlloc [Egr Acl Entry Alloc] (tFPResEgrAclEntryAlloc)	long	The value of tFPResEgrAclEntryAlloc represents the total number of egress ACL CAM entries that are currently allocated on this FP.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrAclEntryTotal [Egr Acl Entry Total] (tFPResEgrAclEntryTotal)	long	The value of tFPResEgrAclEntryTotal represents the total number of egress ACL CAM entries that are supported on this FP. When the value of tFPResEgrAclEntryTotal is zero, it indicates that this resource type is not supported on this FP.
egrAclFilterAlloc [Egr Acl Filter Alloc] (tFPResEgrAclFilterAlloc)	long	The value of tFPResEgrAclFilterAlloc represents the total number of egress ACL filters entries that are currently allocated on this FP.
egrAclFilterTotal [Egr Acl Filter Total] (tFPResEgrAclFilterTotal)	long	The value of tFPResEgrAclFilterTotal represents the total number of egress ACL filters entries that are supported on this FP. When the value of tFPResEgrAclFilterTotal is zero, it indicates that this resource type is not supported on this FP.
egrAclQosEntryAlloc [Egr Acl Qos Entry Alloc] (tFPResEgrAclQosEntryAlloc)	long	The value of tFPResEgrAclQosEntryAlloc represents the total number of combined egress ACL and QoS CAM entries that are currently allocated on this FP.
egrAclQosEntryTotal [Egr Acl Qos Entry Total] (tFPResEgrAclQosEntryTotal)	long	The value of tFPResEgrAclQosEntryTotal represents the total number of combined egress ACL and QoS CAM entries that are supported on this FP. When the value of tFPResEgrAclQosEntryTotal is zero, it indicates that this resource type is not supported on this FP.
egrIPv6AclEntryAlloc [Egr IPv 6 Acl Entry Alloc] (tFPResEgrIPv6AclEntryAlloc)	long	The value of tFPResEgrIPv6AclEntryAlloc represents the total number of IPv6 egress ACL CAM entries that are currently allocated on this FP.
egrIPv6AclEntryTotal [Egr IPv 6 Acl Entry Total] (tFPResEgrIPv6AclEntryTotal)	long	The value of tFPResEgrIPv6AclEntryTotal represents the total number of IPv6 egress ACL CAM entries that are supported on this FP. When the value of tFPResEgrIPv6AclEntryTotal is zero, it indicates that this resource type is not supported on this FP.
egrIPv6QosEntryAlloc [Egr IPv 6 Qos Entry Alloc] (tFPResEgrIPv6QosEntryAlloc)	long	The value of tFPResEgrIPv6QosEntryAlloc represents the total number of IPv6 egress QoS CAM entries that are currently allocated on this FP.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrIPv6QosEntryTotal [Egr IPv 6 Qos Entry Total] (tFPResEgrIPv6QosEntryTotal)	long	The value of tFPResEgrIPv6QosEntryTotal represents the total number of IPv6 egress QoS CAM entries that are supported on this FP. When the value of tFPResEgrIPv6QosEntryTotal is zero, it indicates that this resource type is not supported on this FP.
egrNetQGrpMapAlloc [Egr Net QGrp Map Alloc] (tFPResEgrNetQGrpMapAlloc)	long	The value of tFPResEgrNetQGrpMapAlloc represents the total number of egress network queue-group mappings that are currently allocated on this FP. The value of tFPResEgrNetQGrpMapAlloc will always be less than or equal to tFPResDynSvcEntryAlloc since egress network queue-group mappings are subset of dynamic service entry resources.
egrNetQGrpMapTotal [Egr Net QGrp Map Total] (tFPResEgrNetQGrpMapTotal)	long	The value of tFPResEgrNetQGrpMapTotal represents the total number of egress network queue-group mappings that are supported on this FP. When the value of tFPResEgrNetQGrpMapTotal is zero, it indicates that this resource type is not supported on this FP. The value of tFPResEgrNetQGrpMapTotal will always be less than or equal to tFPResDynSvcEntryTotal since egress network queue-group mappings are subset of dynamic service entry resources.
egrPolicerAlloc [Egr Policer Alloc] (tFPResEgrPolicerAlloc)	long	The value of tFPResEgrPolicerAlloc represents the total number of egress policers that are currently allocated on this FP.
egrPolicerStatAlloc [Egr Policer Stat Alloc] (tFPResEgrPolicerStatAlloc)	long	The value of tFPResEgrPolicerStatAlloc represents the total number of egress policer stats that are currently allocated on this FP.
egrPolicerStatTotal [Egr Policer Stat Total] (tFPResEgrPolicerStatTotal)	long	The value of tFPResEgrPolicerStatTotal represents the total number of egress policer stats that are supported on this FP. When the value of tFPResEgrPolicerStatTotal is zero, it indicates that this resource type is not supported on this FP.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrPolicerTotal [Egr Policer Total] (tFPResEgrPolicerTotal)	long	The value of tFPResEgrPolicerTotal represents the total number of egress policers that are supported on this FP. When the value of tFPResEgrPolicerTotal is zero, it indicates that this resource type is not supported on this FP.
egrQ1NamedPoolAlloc [Egr Q1 Named Pool Alloc] (tFPResEgrQ1NamedPoolAlloc)	long	The value of tFPResEgrQ1NamedPoolAlloc represents the total number of egress Q1 named pools that are currently allocated on this FP.
egrQ1NamedPoolTotal [Egr Q1 Named Pool Total] (tFPResEgrQ1NamedPoolTotal)	long	The value of tFPResEgrQ1NamedPoolTotal represents the total number of egress Q1 named pools that are supported on this FP. When the value of tFPResEgrQ1NamedPoolTotal is zero, it indicates that this resource type is not supported on this FP.
egrQosEntryAlloc [Egr Qos Entry Alloc] (tFPResEgrQosEntryAlloc)	long	The value of tFPResEgrQosEntryAlloc represents the total number of egress QoS CAM entries that are currently allocated on this FP.
egrQosEntryTotal [Egr Qos Entry Total] (tFPResEgrQosEntryTotal)	long	The value of tFPResEgrQosEntryTotal represents the total number of egress QoS CAM entries that are supported on this FP. When the value of tFPResEgrQosEntryTotal is zero, it indicates that this resource type is not supported on this FP.
egrQueueAlloc [Egr Queue Alloc] (tFPResEgrQueueAlloc)	long	The value of tFPResEgrQueueAlloc represents the total number of egress queues that are currently allocated on this FP.
egrQueueTotal [Egr Queue Total] (tFPResEgrQueueTotal)	long	The value of tFPResEgrQueueTotal represents the total number of egress queues that are supported on this FP. When the value of tFPResEgrQueueTotal is zero, it indicates that this resource type is not supported on this FP.
egrRootArbiterAlloc [Egr Root Arbiter Alloc] (tFPResEgrRootArbiterAlloc)	long	The value of tFPResEgrRootArbiterAlloc represents the total number of egress root arbiters that are currently allocated on this FP.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrRootArbiterTotal [Egr Root Arbiter Total] (tFPResEgrRootArbiterTotal)	long	The value of tFPResEgrRootArbiterTotal represents the total number of egress root arbiters that are supported on this FP. When the value of tFPResEgrRootArbiterTotal is zero, it indicates that this resource type is not supported on this FP.
encapGrpMemberAlloc [Encap Grp Member Alloc] (tFPResEncapGrpMemberAlloc)	long	The value of tFPResEncapGrpMemberAlloc represents the total number of encap group members that are currently allocated on this FP. The value of tFPResEncapGrpMemberAlloc will always be less than or equal to tFPResDynSvcEntryAlloc since encap group members are subset of dynamic service entry resources.
encapGrpMemberTotal [Encap Grp Member Total] (tFPResEncapGrpMemberTotal)	long	The value of tFPResEncapGrpMemberTotal represents the total number of encap group members that are supported on this FP. When the value of tFPResEncapGrpMemberTotal is zero, it indicates that this resource type is not supported on this FP. The value of tFPResEncapGrpMemberTotal will always be less than or equal to tFPResDynSvcEntryTotal since encap group members are subset of dynamic service entry resources.
ingAclEntryAlloc [Ing Acl Entry Alloc] (tFPResIngAclEntryAlloc)	long	The value of tFPResIngAclEntryAlloc represents the total number of ingress ACL CAM entries that are currently allocated on this FP.
ingAclEntryTotal [Ing Acl Entry Total] (tFPResIngAclEntryTotal)	long	The value of tFPResIngAclEntryTotal represents the total number of ingress ACL CAM entries that are supported on this FP. When the value of tFPResIngAclEntryTotal is zero, it indicates that this resource type is not supported on this FP.
ingAclFilterAlloc [Ing Acl Filter Alloc] (tFPResIngAclFilterAlloc)	long	The value of tFPResIngAclFilterAlloc represents the total number of ingress ACL filters entries that are currently allocated on this FP.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingAclFilterTotal [Ing Acl Filter Total] (tFPResIngAclFilterTotal)	long	The value of tFPResIngAclFilterTotal represents the total number of ingress ACL filters entries that are supported on this FP. When the value of tFPResIngAclFilterTotal is zero, it indicates that this resource type is not supported on this FP.
ingAclQosEntryAlloc [Ing Acl Qos Entry Alloc] (tFPResIngAclQosEntryAlloc)	long	The value of tFPResIngAclQosEntryAlloc represents the total number of combined ingress ACL and QoS CAM entries that are currently allocated on this FP.
ingAclQosEntryTotal [Ing Acl Qos Entry Total] (tFPResIngAclQosEntryTotal)	long	The value of tFPResIngAclQosEntryTotal represents the total number of combined ingress ACL and QoS CAM entries that are supported on this FP. When the value of tFPResIngAclQosEntryTotal is zero, it indicates that this resource type is not supported on this FP.
ingIPv6AclEntryAlloc [Ing IPv 6 Acl Entry Alloc] (tFPResIngIPv6AclEntryAlloc)	long	The value of tFPResIngIPv6AclEntryAlloc represents the total number of IPv6 ingress ACL CAM entries that are currently allocated on this FP.
ingIPv6AclEntryTotal [Ing IPv 6 Acl Entry Total] (tFPResIngIPv6AclEntryTotal)	long	The value of tFPResIngIPv6AclEntryTotal represents the total number of IPv6 ingress ACL CAM entries that are supported on this FP. When the value of tFPResIngIPv6AclEntryTotal is zero, it indicates that this resource type is not supported on this FP.
ingIPv6QosEntryAlloc [Ing IPv 6 Qos Entry Alloc] (tFPResIngIPv6QosEntryAlloc)	long	The value of tFPResIngIPv6QosEntryAlloc represents the total number of IPv6 ingress QoS CAM entries that are currently allocated on this FP.
ingIPv6QosEntryTotal [Ing IPv 6 Qos Entry Total] (tFPResIngIPv6QosEntryTotal)	long	The value of tFPResIngIPv6QosEntryTotal represents the total number of IPv6 ingress QoS CAM entries that are supported on this FP. When the value of tFPResIngIPv6QosEntryTotal is zero, it indicates that this resource type is not supported on this FP.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingPolicerAlloc [Ing Policer Alloc] (tFPResIngPolicerAlloc)	long	The value of tFPResIngPolicerAlloc represents the total number of ingress policers that are currently allocated on this FP.
ingPolicerStatAlloc [Ing Policer Stat Alloc] (tFPResIngPolicerStatAlloc)	long	The value of tFPResIngPolicerStatAlloc represents the total number of ingress policer stats that are currently allocated on this FP.
ingPolicerStatTotal [Ing Policer Stat Total] (tFPResIngPolicerStatTotal)	long	The value of tFPResIngPolicerStatTotal represents the total number of ingress policer stats that are supported on this FP. When the value of tFPResIngPolicerStatTotal is zero, it indicates that this resource type is not supported on this FP.
ingPolicerTotal [Ing Policer Total] (tFPResIngPolicerTotal)	long	The value of tFPResIngPolicerTotal represents the total number of ingress policers that are supported on this FP. When the value of tFPResIngPolicerTotal is zero, it indicates that this resource type is not supported on this FP.
ingQ1NamedPoolAlloc [Ing Q1 Named Pool Alloc] (tFPResIngQ1NamedPoolAlloc)	long	The value of tFPResIngQ1NamedPoolAlloc represents the total number of ingress Q1 named pools that are currently allocated on this FP.
ingQ1NamedPoolTotal [Ing Q1 Named Pool Total] (tFPResIngQ1NamedPoolTotal)	long	The value of tFPResIngQ1NamedPoolTotal represents the total number of ingress Q1 named pools that are supported on this FP. When the value of tFPResIngQ1NamedPoolTotal is zero, it indicates that this resource type is not supported on this FP.
ingQosEntryAlloc [Ing Qos Entry Alloc] (tFPResIngQosEntryAlloc)	long	The value of tFPResIngQosEntryAlloc represents the total number of ingress QoS CAM entries that are currently allocated on this FP.
ingQosEntryTotal [Ing Qos Entry Total] (tFPResIngQosEntryTotal)	long	The value of tFPResIngQosEntryTotal represents the total number of ingress QoS CAM entries that are supported on this FP. When the value of tFPResIngQosEntryTotal is zero, it indicates that this resource type is not supported on this FP.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingQueueAlloc [Ing Queue Alloc] (tFPResIngQueueAlloc)	long	The value of tFPResIngQueueAlloc represents the total number of ingress queues that are currently allocated on this FP.
ingQueueTotal [Ing Queue Total] (tFPResIngQueueTotal)	long	The value of tFPResIngQueueTotal represents the total number of ingress queues that are supported on this FP. When the value of tFPResIngQueueTotal is zero, it indicates that this resource type is not supported on this FP.
ingRootArbiterAlloc [Ing Root Arbiter Alloc] (tFPResIngRootArbiterAlloc)	long	The value of tFPResIngRootArbiterAlloc represents the total number of ingress root arbiters that are currently allocated on this FP.
ingRootArbiterTotal [Ing Root Arbiter Total] (tFPResIngRootArbiterTotal)	long	The value of tFPResIngRootArbiterTotal represents the total number of ingress root arbiters that are supported on this FP. When the value of tFPResIngRootArbiterTotal is zero, it indicates that this resource type is not supported on this FP.
intArbiterAlloc [Int Arbiter Alloc] (tFPResIntArbiterAlloc)	long	The value of tFPResIntArbiterAlloc represents the total number of intermediate arbiters that are currently allocated on this FP.
intArbiterTotal [Int Arbiter Total] (tFPResIntArbiterTotal)	long	The value of tFPResIntArbiterTotal represents the total number of intermediate arbiters that are supported on this FP. When the value of tFPResIntArbiterTotal is zero, it indicates that this resource type is not supported on this FP.
macFdbRecAlloc [Mac Fdb Rec Alloc] (tFPResMacFdbRecAlloc)	long	The value of tFPResMacFdbRecAlloc represents the total number of MAC Forwarding Data-Base (FDB) records that are currently allocated on this FP.
macFdbRecTotal [Mac Fdb Rec Total] (tFPResMacFdbRecTotal)	long	The value of tFPResMacFdbRecTotal represents the total number of MAC Forwarding Data-Base (FDB) records that are supported on this FP. When the value of tFPResMacFdbRecTotal is zero, it indicates that this resource type is not supported on this FP.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
resRvplsFdbRecAlloc [Res Rvpls Fdb Rec Alloc] (tFPResResRvplsFdbRecAlloc)	long	The value of tFPResResRvplsFdbRecAlloc represents the total number of reserved R-VPLS Forwarding Data-Base (FDB) records that are currently allocated on this FP.
resRvplsFdbRecTotal [Res Rvpls Fdb Rec Total] (tFPResResRvplsFdbRecTotal)	long	The value of tFPResResRvplsFdbRecTotal represents the total number of reserved R-VPLS Forwarding Data-Base (FDB) records that are supported on this FP. When the value of tFPResResRvplsFdbRecTotal is zero, it indicates that this resource type is not supported on this FP.
sapIngQosPolAlloc [Sap Ing Qos Pol Alloc] (tFPResSapIngQosPolAlloc)	long	The value of tFPResSapIngQosPolAlloc represents the total number of sap-ingress QoS policies that are currently allocated on this FP.
sapIngQosPolTotal [Sap Ing Qos Pol Total] (tFPResSapIngQosPolTotal)	long	The value of tFPResSapIngQosPolTotal represents the total number of sap-ingress QoS policies that are allowed to be in use on this FP.
subHostAlloc [Sub Host Alloc] (tFPResSubHostAlloc)	long	The value of tFPResSubHostAlloc represents the total number of subscriber hosts that are currently allocated on this FP. The value of tFPResSubHostAlloc will always be less than or equal to tFPResDynSvcEntryAlloc since subscriber host resources are subset of dynamic service entry resources.
subHostTotal [Sub Host Total] (tFPResSubHostTotal)	long	The value of tFPResSubHostTotal represents the total number of subscriber hosts that are supported on this FP. When the value of tFPResSubHostTotal is zero, it indicates that this resource type is not supported on this FP. The value of tFPResSubHostTotal will always be less than or equal to tFPResDynSvcEntryTotal since subscriber host resources are subset of dynamic service entry resources.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>HardwareTemperature</p> <p>MIB entry name: tmnxHwEntry</p> <p>Entry description: Each row entry represents an Alcatel-Lucent SROS series manufactured hardware component. Entries cannot be created and deleted via SNMP SET operations. When an entry is created in one of the card tables, IOM, CPM, Fabric or MDA, a tmnxHwEntry is created for the common hardware management information for that card in that chassis. When the card is removed from the chassis, its corresponding tmnxHwEntry is deleted. The tmnxHwIndex is bitmapped: 32 25 24 17 16 9 8 1 +-----+-----+-----+-----+ TmnxHwClass 00000000 Slot number +-----+-----+-----+-----+ The Slot field is only used for components on cards in slots. It is zero for all others. The number field starts from 1 and indicates which component. E.g. Power supply 1 or 2.</p> <p>Table description (for tmnxHwTable): The tmnxHwTable has an entry for each managed hardware component in the Alcatel-Lucent SROS series system's chassis. Examples of these hardware component types are IOM, Fabric, and CPM cards, MCM and CCM, and MDA modules. Similar information for physical ports is in the tmnxPortObjs.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.BaseCard • equipment.CCM • equipment.CardSlot • equipment.ControlProcessor • equipment.DaughterCard • equipment.FanTray • equipment.MCMCard • equipment.PowerSupplyTray • equipment.SwitchFabricProcessor 		
temperature [Temperature] (tmnxHwTemperature)	int	The current temperature reading in degrees celsius from this hardware component's temperature sensor. If this component does not contain a temperature sensor, then the value -1 is returned.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedBroadcastPackets [Received Broadcast Packets] (ifHCInBroadcastPkts)	java. math. BigInteger	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were addressed to a broadcast address at this sub-layer. This object is a 64-bit version of ifInBroadcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedMulticastPackets [Received Multicast Packets] (ifHCInMulticastPkts)	java. math. BigInteger	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were addressed to a multicast address at this sub-layer. For a MAC layer protocol, this includes both Group and Functional addresses. This object is a 64-bit version of ifInMulticastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedTotalOctets [Received Total Octets] (ifHCInOctets)	java. math. BigInteger	The total number of octets received on the interface, including framing characters. This object is a 64-bit version of ifInOctets. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedUnicastPackets [Received Unicast Packets] (ifHCInUcastPkts)	java. math. BigInteger	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were not addressed to a multicast or broadcast address at this sub-layer. This object is a 64-bit version of ifInUcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transmittedBroadcastPackets [Transmitted Broadcast Packets] (ifHCOutBroadcastPkts)	java. math. BigInteger	The total number of packets that higher-level protocols requested be transmitted, and which were addressed to a broadcast address at this sub-layer, including those that were discarded or not sent. This object is a 64-bit version of ifOutBroadcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedMulticastPackets [Transmitted Multicast Packets] (ifHCOutMulticastPkts)	java. math. BigInteger	The total number of packets that higher-level protocols requested be transmitted, and which were addressed to a multicast address at this sub-layer, including those that were discarded or not sent. For a MAC layer protocol, this includes both Group and Functional addresses. This object is a 64-bit version of ifOutMulticastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedTotalOctets [Transmitted Total Octets] (ifHCOutOctets)	java. math. BigInteger	The total number of octets transmitted out of the interface, including framing characters. This object is a 64-bit version of ifOutOctets. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedUnicastPackets [Transmitted Unicast Packets] (ifHCOutUcastPkts)	java. math. BigInteger	The total number of packets that higher-level protocols requested be transmitted, and which were not addressed to a multicast or broadcast address at this sub-layer, including those that were discarded or not sent. This object is a 64-bit version of ifOutUcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 407 equipment statistics (continued)

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outboundBadPackets [Outbound Bad Packets] (ifOutErrors)	long	For packet-oriented interfaces, the number of outbound packets that could not be transmitted because of errors. For character-oriented or fixed-length interfaces, the number of outbound transmission units that could not be transmitted because of errors. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
outboundPacketsDiscarded [Outbound Packets Discarded] (ifOutDiscards)	long	The number of outbound packets which were chosen to be discarded even though no errors had been detected to prevent their being transmitted. One possible reason for discarding such a packet could be to free up buffer space. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedBadPackets [Received Bad Packets] (ifInErrors)	long	For packet-oriented interfaces, the number of inbound packets that contained errors preventing them from being deliverable to a higher-layer protocol. For character-oriented or fixed-length interfaces, the number of inbound transmission units that contained errors preventing them from being deliverable to a higher-layer protocol. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedOctets [Received Octets] (ifInOctets)	long	The total number of octets received on the interface, including framing characters. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedPacketsDiscarded [Received Packets Discarded] (ifInDiscards)	long	The number of inbound packets which were chosen to be discarded even though no errors had been detected to prevent their being deliverable to a higher-layer protocol. One possible reason for discarding such a packet could be to free up buffer space. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedUnicastPackets [Received Unicast Packets] (ifInUcastPkts)	long	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were not addressed to a multicast or broadcast address at this sub-layer. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedUnknownProtocolPackets [Received Unknown Protocol Packets] (ifInUnknownProtos)	long	For packet-oriented interfaces, the number of packets received via the interface which were discarded because of an unknown or unsupported protocol. For character-oriented or fixed-length interfaces that support protocol multiplexing the number of transmission units received via the interface which were discarded because of an unknown or unsupported protocol. For any interface that does not support protocol multiplexing, this counter will always be 0. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedOctets [Transmitted Octets] (ifOutOctets)	long	The total number of octets transmitted out of the interface, including framing characters. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transmittedUnicastPackets [Transmitted Unicast Packets] (ifOutUcastPkts)	long	The total number of packets that higher-level protocols requested be transmitted, and which were not addressed to a multicast or broadcast address at this sub-layer, including those that were discarded or not sent. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
MDAResourceStats MIB entry name: tMDAResEntry Entry description: The value of tMDAResEntry represents MDA specific system resource information. Table description (for tMDAResTable): The value of tMDAResTable represents system resource information that are specific to MDA for a particular card on a given chassis. Supports realtime plotting Supports scheduled collection Monitored class: equipment.DaughterCardSlot		
egrHsmdaQGrpAlloc [Egr Hsmda QGrp Alloc] (tMDAResEgrHsmdaQGrpAlloc)	long	The value of tMDAResEgrHsmdaQGrpAlloc represents the total number of egress HSMDA queue-groups that are currently allocated on this MDA.
egrHsmdaQGrpTotal [Egr Hsmda QGrp Total] (tMDAResEgrHsmdaQGrpTotal)	long	The value of tMDAResEgrHsmdaQGrpTotal represents the total number of egress HSMDA queue-groups that are supported on this MDA. When the value of tMDAResEgrHsmdaQGrpTotal is zero, it indicates that this resource type is not supported on this MDA.
egrHsmdaSecShaperAlloc [Egr Hsmda Sec Shaper Alloc] (tMDAResEgrHsmdaSecShaperAlloc)	long	The value of tMDAResEgrHsmdaSecShaperAlloc represents the total number of egress HSMDA secondary-shapers that are currently allocated on this MDA.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrHsmdaSecShaperTotal [Egr Hsmda Sec Shaper Total] (tMDAResEgrHsmdaSecShaperTotal)	long	The value of tMDAResEgrHsmdaSecShaperTotal represents the total number of egress HSMDA secondary-shapers that are supported on this MDA. When the value of tMDAResEgrHsmdaSecShaperTotal is zero, it indicates that this resource type is not supported on this MDA.
<p>MediaIndependentStats</p> <p>MIB entry name: mediaIndependentEntry</p> <p>Entry description: Media independent statistics for promiscuous monitoring of any media.</p> <p>Table description (for mediaIndependentTable): Media independent statistics for promiscuous monitoring of any media. The following table defines media independent statistics that provide information for full and/or half-duplex links as well as high capacity links. For half-duplex links, or full-duplex-capable links operating in half-duplex mode, the mediaIndependentIn* objects shall be used and the mediaIndependentOut* objects shall not increment. For full-duplex links, the mediaIndependentOut* objects shall be present and shall increment. Whenever possible, the probe should count packets moving away from the closest terminating equipment as output packets. Failing that, the probe should count packets moving away from the DTE as output packets.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
dropEvents [Drop Events] (mediaIndependentDropEvents)	long	The total number of events in which packets were dropped by the probe due to lack of resources. Note that this number is not necessarily the number of packets dropped; it is just the number of times this condition has been detected.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
droppedFrames [Dropped Frames] (mediaIndependentDroppedFrames)	long	The total number of frames which were received by the probe and therefore not accounted for in the mediaIndependent-DropEvents, but for which the probe chose not to count for this entry for whatever reason. Most often, this event occurs when the probe is out of some resources and decides to shed load from this collection. This count does not include packets that were not counted because they had MAC-layer errors. Note that, unlike the dropEvents counter, this number is the exact number of frames dropped.
duplex [Duplex] (mediaIndependentDuplexMode)	int	The current mode of this link. Note that if the link has full-duplex capabilities but is operating in half-duplex mode, this value will be halfduplex(1).
duplexChanges [Duplex Changes] (mediaIndependentDuplexChanges)	long	The number of times this link has changed from full-duplex mode to half-duplex mode or from half-duplex mode to full-duplex mode.
inputSpeed [Input Speed] (mediaIndependentInputSpeed)	long	The nominal maximum speed in kilobits per second of this half-duplex link or on the inbound connection of this full-duplex link. If the speed is unknown or there is no fixed maximum (e.g. a compressed link), this value shall be zero.
outputSpeed [Output Speed] (mediaIndependentOutputSpeed)	long	The nominal maximum speed in kilobits per second of this full-duplex link in the direction of the network. If the speed is unknown, the link is half-duplex, or there is no fixed maximum (e.g. a compressed link), this value shall be zero.
receivedBadPackets [Received Bad Packets] (mediaIndependentInErrors)	long	The total number of bad packets received on a half-duplex link or on the inbound connection of a full-duplex link.
receivedNonUnicastPackets [Received Non Unicast Packets] (mediaIndependentInNUCastHigh-CapacityPkts)	java. math. BigInteger	The total number of non-unicast packets (including bad packets) received on a half-duplex link or on the inbound connection of a full-duplex link.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedOctets [Received Octets] (mediaIndependentInHighCapacityOctets)	java. math. BigInteger	The total number of octets of data (including those in bad packets) received (excluding framing bits but including FCS octets) on a half-duplex link or on the inbound connection of a full-duplex link.
receivedPackets [Received Packets] (mediaIndependentInHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets, broadcast packets, and multicast packets) received on a half-duplex link or on the inbound connection of a full-duplex link.
transmittedBadPackets [Transmitted Bad Packets] (mediaIndependentOutErrors)	long	The total number of bad packets received on a full-duplex link in the direction of the network.
transmittedNonUnicastPackets [Transmitted Non Unicast Packets] (mediaIndependentOutNUC- astHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets) received on a full-duplex link in the direction of the network.
transmittedOctets [Transmitted Octets] (mediaIndependentOutHighCapacityOctets)	java. math. BigInteger	The total number of octets of data (including those in bad packets) received on a full-duplex link in the direction of the network (excluding framing bits but including FCS octets).
transmittedPackets [Transmitted Packets] (mediaIndependentOutHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets, broadcast packets, and multicast packets) received on a full-duplex link in the direction of the network.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>MemoryUtilizationStats</p> <p>MIB entry name: tmnxCardMemResMonitorEntry</p> <p>Entry description: The tmnxCardMemResMonitorEntry contains the card's memory usage statistics.</p> <p>Table description (for tmnxCardMemResMonitorTable): The tmnxCardMemResMonitorTable details the specified current card's memory resources. The information described in this table is volatile and dependent on the current environmental conditions. Information is only displayed for online cards.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.CardSlot</p>		
memoryAvailable [Memory Available] (tmnxCardMemResMemoryAvailable)	long	The value of tmnxCardMemResMemoryAvailable indicates the amount of free memory, in kilobytes, in the card that is not allocated to memory pools, but is available in case a memory pool needs to grow.
memoryUsed [Memory Used] (tmnxCardMemResMemoryUsed)	long	The value of tmnxCardMemResMemoryUsed indicates the total pre-allocated pool memory, in kilobytes, currently in use on the card.
poolsAllocated [Pools Allocated] (tmnxCardMemResPoolsAllocated)	long	The value of tmnxCardMemResPoolsAllocated indicates the total memory, in kilobytes, currently allocated in memory-pools on the card. This memory may or may not be currently in use, but is pre-allocated should the software need to use it.

bundleMemberImaErrorIcpCells [Bundle Member Ima Error Icp Cells] (tmnxBundleMemberImaErrorIcpCells)	long	tmnxBundleMemberImaErrorIcpCells indicates the number of ICP cells with HEC or CRC-10 errors.
bundleMemberImaFeRxNumFails [Bundle Member Ima Fe Rx Num Fails] (tmnxBundleMemberImaFeRxNumFails)	long	tmnxBundleMemberImaFeRxNumFails indicates the number of times that a far-end receive alarm is set on the IMA link.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
bundleMemberImaFeRxUnuseSecs [Bundle Member Ima Fe Rx Unuse Secs] (tmnxBundleMemberImaFeRxUnuseSecs)	long	tmnxBundleMemberImaFeRxUnuseSecs indicates the number of unavailable seconds at the far-end receive link state machine.
bundleMemberImaFeSevErrSecs [Bundle Member Ima Fe Sev Err Secs] (tmnxBundleMemberImaFeSevErrSecs)	long	tmnxBundleMemberImaFeSevErrSecs indicates the number of one second intervals in which the far-end contains IMA-RDI defects.
bundleMemberImaFeTxNumFails [Bundle Member Ima Fe Tx Num Fails] (tmnxBundleMemberImaFeTxNumFails)	long	tmnxBundleMemberImaFeTxNumFails indicates the number of times that a far-end transmit alarm is set on the IMA link.
bundleMemberImaFeTxUnuseSecs [Bundle Member Ima Fe Tx Unuse Secs] (tmnxBundleMemberImaFeTxUnuseSecs)	long	tmnxBundleMemberImaFeTxUnuseSecs indicates the number of unavailable seconds at the far-end transmit link state machine.
bundleMemberImaFeUnavailSecs [Bundle Member Ima Fe Unavail Secs] (tmnxBundleMemberImaFeUnavailSecs)	long	tmnxBundleMemberImaFeUnavailSecs indicates the number of unavailable seconds at the near-end.
bundleMemberImaLstRxlcpCells [Bundle Member Ima Lst Rx lcp Cells] (tmnxBundleMemberImaLstRxlcpCells)	long	tmnxBundleMemberImaLstRxlcpCells indicates the number of lost ICP cells at the expected offset.
bundleMemberImaNeRxNumFails [Bundle Member Ima Ne Rx Num Fails] (tmnxBundleMemberImaNeRxNumFails)	long	tmnxBundleMemberImaNeRxNumFails indicates the number of times that a near-end receive alarm is set on the IMA link.
bundleMemberImaNeRxUnuseSecs [Bundle Member Ima Ne Rx Unuse Secs] (tmnxBundleMemberImaNeRxUnuseSecs)	long	tmnxBundleMemberImaNeRxUnuseSecs indicates the number of unavailable seconds at the near-end receive link state machine.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
bundleMemberImaNeSevErrSecs [Bundle Member Ima Ne Sev Err Secs] (tmnxBundleMemberImaNeSevErrSecs)	long	tmnxBundleMemberImaNeSevErrSecs indicates the number of one second intervals in which thirty percent or more of the near-end ICP cells are in violation, or link defects have occurred.
bundleMemberImaNeTxNumFails [Bundle Member Ima Ne Tx Num Fails] (tmnxBundleMemberImaNeTxNumFails)	long	tmnxBundleMemberImaNeTxNumFails indicates the number of times that a near-end transmit alarm is set on the IMA link.
bundleMemberImaNeTxUnuseSecs [Bundle Member Ima Ne Tx Unuse Secs] (tmnxBundleMemberImaNeTxUnuseSecs)	long	tmnxBundleMemberImaNeTxUnuseSecs indicates the number of unavailable seconds at the near-end transmit link state machine.
bundleMemberImaNeUnavailSecs [Bundle Member Ima Ne Unavail Secs] (tmnxBundleMemberImaNeUnavailSecs)	long	tmnxBundleMemberImaNeUnavailSecs indicates the number of unavailable seconds at the near-end.
bundleMemberImaOifAnomalies [Bundle Member Ima Oif Anomalies] (tmnxBundleMemberImaOifAnomalies)	long	tmnxBundleMemberImaOifAnomalies indicates the number of OIF anomalies at the near-end.
bundleMemberImaRxlcpCells [Bundle Member Ima Rx lcp Cells] (tmnxBundleMemberImaRxlcpCells)	long	tmnxBundleMemberImaRxlcpCells indicates the number of ICP cells that have been received on the IMA link.
bundleMemberImaTxlcpCells [Bundle Member Ima Tx lcp Cells] (tmnxBundleMemberImaTxlcpCells)	long	tmnxBundleMemberImaTxlcpCells indicates the number of ICP cells that have been transmitted on the IMA link.
bundleMemberImaViolations [Bundle Member Ima Violations] (tmnxBundleMemberImaViolations)	long	tmnxBundleMemberImaViolations indicates the number of ICP violations including errored, invalid or missing ICP cells.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6PppDhcp6NaHosts [Ipv 6 Ppp Dhcp 6 Na Hosts] (tmnxSubMgmtMdaSPppDhcp6Na)	long	The value of tmnxSubMgmtMdaSPppDhcp6Na indicates the number of current PPP hosts (DHCP6 NA) on this MDA.
ipv6PppDhcp6NaHostsPeak [Ipv 6 Ppp Dhcp 6 Na Hosts Peak] (tmnxSubMgmtMdaSPppDhcp6NaPeak)	long	The value of tmnxSubMgmtMdaSPppDhcp6NaPeak indicates the peak number of PPP hosts (DHCP6 NA) on this MDA.
ipv6PppDhcp6PdHosts [Ipv 6 Ppp Dhcp 6 Pd Hosts] (tmnxSubMgmtMdaSPppDhcp6Pd)	long	The value of tmnxSubMgmtMdaSPppDhcp6Pd indicates the number of current PPP hosts (DHCP6 PD) on this MDA.
ipv6PppDhcp6PdHostsPeak [Ipv 6 Ppp Dhcp 6 Pd Hosts Peak] (tmnxSubMgmtMdaSPppDhcp6PdPeak)	long	The value of tmnxSubMgmtMdaSPppDhcp6PdPeak indicates the peak number of PPP hosts (DHCP6 PD) on this MDA.
ipv6PppSlaacHosts [Ipv 6 Ppp Slaac Hosts] (tmnxSubMgmtMdaSPppSlaac)	long	The value of tmnxSubMgmtMdaSPppSlaac indicates the number of current PPP hosts (SLAAC) on this MDA.
ipv6PppSlaacHostsPeak [Ipv 6 Ppp Slaac Hosts Peak] (tmnxSubMgmtMdaSPppSlaacPeak)	long	The value of tmnxSubMgmtMdaSPppSlaacPeak indicates the peak number of PPP hosts (SLAAC) on this MDA.
ipv6TotalHosts [Ipv 6 Total Hosts] (tmnxSubMgmtMdaSV6)	long	The value of tmnxSubMgmtMdaSV6 indicates the number of current V6 hosts on this MDA.
ipv6TotalHostsPeak [Ipv 6 Total Hosts Peak] (tmnxSubMgmtMdaSV6Peak)	long	The value of tmnxSubMgmtMdaSV6Peak indicates the peak number of V6 hosts on this MDA.
ipv6v4TotalHosts [Ipv 6 v 4 Total Hosts] (tmnxSubMgmtMdaSTotal)	long	The value of tmnxSubMgmtMdaSTotal indicates the number of current total hosts on this MDA.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6v4TotalHostsPeak [Ipv 6 v 4 Total Hosts Peak] (tmnxSubMgmtMdaSTotalPeak)	long	The value of tmnxSubMgmtMdaSTotalPeak indicates the peak number of total hosts on this MDA.
pppHostsTotal [Ppp Hosts Total] (tmnxSubMgmtMdaSPppHosts)	long	The value of tmnxSubMgmtMdaSPppHosts indicates the number of current PPP hosts on this MDA.
pppHostsTotalPeak [Ppp Hosts Total Peak] (tmnxSubMgmtMdaSPppHostsPeak)	long	The value of tmnxSubMgmtMdaSPppHostsPeak indicates the peak number of PPP hosts on this MDA.
pppLacL2tpSess [Ppp Lac L2 tp Sess] (tmnxSubMgmtMdaSPppLacL2tp)	long	The value of tmnxSubMgmtMdaSPppLacL2tp indicates the number of current PPP sessions (L2TP LTS) tunneled over L2TP on this MDA.
pppLacL2tpSessPeak [Ppp Lac L2 tp Sess Peak] (tmnxSubMgmtMdaSPppLacL2tpPeak)	long	The value of tmnxSubMgmtMdaSPppLacL2tpPeak indicates the peak number of PPP sessions (L2TP LTS) tunneled over L2TP on this MDA.
pppLacOASess [Ppp Lac OASess] (tmnxSubMgmtMdaSPppLacOA)	long	The value of tmnxSubMgmtMdaSPppLacOA indicates the number of current PPP sessions (PPPoA) tunneled over L2TP on this MDA.
pppLacOASessPeak [Ppp Lac OASess Peak] (tmnxSubMgmtMdaSPppLacOAPeak)	long	The value of tmnxSubMgmtMdaSPppLacOAPeak indicates the peak number of PPP sessions (PPPoA) tunneled over L2TP on this MDA.
pppLacOEOASess [Ppp Lac OEOASess] (tmnxSubMgmtMdaSPppLacOEOA)	long	The value of tmnxSubMgmtMdaSPppLacOEOA indicates the number of current PPP sessions (PPPoEoA) tunneled over L2TP on this MDA.
pppLacOEOASessPeak [Ppp Lac OEOASess Peak] (tmnxSubMgmtMdaSPppLacOEOAPeak)	long	The value of tmnxSubMgmtMdaSPppLacOEOAPeak indicates the peak number of PPP sessions (PPPoEoA) tunneled over L2TP on this MDA.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppLacOESess [Ppp Lac OESess] (tmnxSubMgmtMdaSPppLacOE)	long	The value of tmnxSubMgmtMdaSPppLacOE indicates the number of current PPP sessions (PPPoE) tunneled over L2TP on this MDA.
pppLacOESessPeak [Ppp Lac OESess Peak] (tmnxSubMgmtMdaSPppLacOEPeak)	long	The value of tmnxSubMgmtMdaSPppLacOEPeak indicates the peak number of PPP sessions (PPPoE) tunneled over L2TP on this MDA.
pppLclL2tpSess [Ppp Lcl L2 tp Sess] (tmnxSubMgmtMdaSPppLclL2tp)	long	The value of tmnxSubMgmtMdaSPppLclL2tp indicates the number of current locally terminated PPP sessions (L2TP LNS) on this MDA.
pppLclL2tpSessPeak [Ppp Lcl L2 tp Sess Peak] (tmnxSubMgmtMdaSPppLclL2tpPeak)	long	The value of tmnxSubMgmtMdaSPppLclL2tpPeak indicates the peak number of locally terminated PPP sessions (L2TP LNS) on this MDA.
pppLclOASess [Ppp Lcl OASess] (tmnxSubMgmtMdaSPppLclOA)	long	The value of tmnxSubMgmtMdaSPppLclOA indicates the number of current locally terminated PPP sessions (PPPoA) on this MDA.
pppLclOASessPeak [Ppp Lcl OASess Peak] (tmnxSubMgmtMdaSPppLclOAPeak)	long	The value of tmnxSubMgmtMdaSPppLclOAPeak indicates the peak number of locally terminated PPP sessions (PPPoA) on this MDA.
pppLclOEOASess [Ppp Lcl OEOASess] (tmnxSubMgmtMdaSPppLclOEOA)	long	The value of tmnxSubMgmtMdaSPppLclOEOA indicates the number of current locally terminated PPP sessions (PPPoEoA) on this MDA.
pppLclOEOASessPeak [Ppp Lcl OEOASess Peak] (tmnxSubMgmtMdaSPppLclOEOAPeak)	long	The value of tmnxSubMgmtMdaSPppLclOEOAPeak indicates the peak number of locally terminated PPP sessions (PPPoEoA) on this MDA.
pppLclOESess [Ppp Lcl OESess] (tmnxSubMgmtMdaSPppLclOE)	long	The value of tmnxSubMgmtMdaSPppLclOE indicates the number of current locally terminated PPP sessions (PPPoE) on this MDA.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppLclOESessPeak [Ppp Lcl OESess Peak] (tmnxSubMgmtMdaSPppLclOEPeak)	long	The value of tmnxSubMgmtMdaSPppLclOEPeak indicates the peak number of locally terminated PPP sessions (PPPoE) on this MDA.
pppLclTotalSess [Ppp Lcl Total Sess] (tmnxSubMgmtMdaSPppLclTotal)	long	The value of tmnxSubMgmtMdaSPppLclTotal indicates the total number of current locally terminated PPP sessions on this MDA.
pppLclTotalSessPeak [Ppp Lcl Total Sess Peak] (tmnxSubMgmtMdaSPppLclTotalPeak)	long	The value of tmnxSubMgmtMdaSPppLclTotalPeak indicates the total peak number of locally terminated PPP sessions on this MDA.
pppSessInSetup [Ppp Sess In Setup] (tmnxSubMgmtMdaSPppSessIs)	long	The value of tmnxSubMgmtMdaSPppSessIs indicates the number of current PPP sessions in setup on this MDA.
pppSessInSetupPeak [Ppp Sess In Setup Peak] (tmnxSubMgmtMdaSPppSessIsPeak)	long	The value of tmnxSubMgmtMdaSPppSessIsPeak indicates the peak number of PPP sessions in setup on this MDA.
pppSessTotal [Ppp Sess Total] (tmnxSubMgmtMdaSPppSessTotal)	long	The value of tmnxSubMgmtMdaSPppSessTotal indicates the total number of current PPP sessions established on this MDA.
pppSessTotalPeak [Ppp Sess Total Peak] (tmnxSubMgmtMdaSPppSessTotalPeak)	long	The value of tmnxSubMgmtMdaSPppSessTotalPeak indicates the total peak number of PPP sessions established on this MDA.
pppTotalLacSess [Ppp Total Lac Sess] (tmnxSubMgmtMdaSPppLacTotal)	long	The value of tmnxSubMgmtMdaSPppLacTotal indicates the total number of current PPP sessions tunneled over L2TP on this MDA.
pppTotalLacSessPeak [Ppp Total Lac Sess Peak] (tmnxSubMgmtMdaSPppLacTotalPeak)	long	The value of tmnxSubMgmtMdaSPppLacTotalPeak indicates the total peak number of PPP sessions tunneled over L2TP on this MDA.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6TotalHosts [Ipv 6 Total Hosts] (tmnxSubMgmtSlotSV6)	long	The value of tmnxSubMgmtSlotSV6 indicates the number of current V6 hosts on this Slot.
ipv6TotalHostsPeak [Ipv 6 Total Hosts Peak] (tmnxSubMgmtSlotSV6Peak)	long	The value of tmnxSubMgmtSlotSV6Peak indicates the peak number of V6 hosts on this Slot.
ipv6v4TotalHosts [Ipv 6 v 4 Total Hosts] (tmnxSubMgmtSlotSTotal)	long	The value of tmnxSubMgmtSlotSTotal indicates the number of current total hosts on this Slot.
ipv6v4TotalHostsPeak [Ipv 6 v 4 Total Hosts Peak] (tmnxSubMgmtSlotSTotalPeak)	long	The value of tmnxSubMgmtSlotSTotalPeak indicates the peak number of total hosts on this Slot.
pppHostsTotal [Ppp Hosts Total] (tmnxSubMgmtSlotSPppHosts)	long	The value of tmnxSubMgmtSlotSPppHosts indicates the number of current PPP hosts on this Slot.
pppHostsTotalPeak [Ppp Hosts Total Peak] (tmnxSubMgmtSlotSPppHostsPeak)	long	The value of tmnxSubMgmtSlotSPppHostsPeak indicates the peak number of PPP hosts on this Slot.
pppLacL2tpSess [Ppp Lac L2 tp Sess] (tmnxSubMgmtSlotSPppLacL2tp)	long	The value of tmnxSubMgmtSlotSPppLacL2tp indicates the number of current PPP sessions (L2TP LTS) tunneled over L2TP on this Slot.
pppLacL2tpSessPeak [Ppp Lac L2 tp Sess Peak] (tmnxSubMgmtSlotSPppLacL2tpPeak)	long	The value of tmnxSubMgmtSlotSPppLacL2tpPeak indicates the peak number of PPP sessions (L2TP LTS) tunneled over L2TP on this Slot.
pppLacOASess [Ppp Lac OASess] (tmnxSubMgmtSlotSPppLacOA)	long	The value of tmnxSubMgmtSlotSPppLacOA indicates the number of current PPP sessions (PPPoA) tunneled over L2TP on this Slot.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppLacOASessPeak [Ppp Lac OASess Peak] (tmnxSubMgmtSlotSPppLacOAPeak)	long	The value of tmnxSubMgmtSlotSPppLacOAPeak indicates the peak number of PPP sessions (PPPoA) tunneled over L2TP on this Slot.
pppLacOEOASess [Ppp Lac OEOASess] (tmnxSubMgmtSlotSPppLacOEOA)	long	The value of tmnxSubMgmtSlotSPppLacOEOA indicates the number of current PPP sessions (PPPoEoA) tunneled over L2TP on this Slot.
pppLacOEOASessPeak [Ppp Lac OEOASess Peak] (tmnxSubMgmtSlotSPppLacOEOAPeak)	long	The value of tmnxSubMgmtSlotSPppLacOEOAPeak indicates the peak number of PPP sessions (PPPoEoA) tunneled over L2TP on this Slot.
pppLacOESess [Ppp Lac OESess] (tmnxSubMgmtSlotSPppLacOE)	long	The value of tmnxSubMgmtSlotSPppLacOE indicates the number of current PPP sessions (PPPoE) tunneled over L2TP on this Slot.
pppLacOESessPeak [Ppp Lac OESess Peak] (tmnxSubMgmtSlotSPppLacOEPeak)	long	The value of tmnxSubMgmtSlotSPppLacOEPeak indicates the peak number of PPP sessions (PPPoE) tunneled over L2TP on this Slot.
pppLclL2tpSess [Ppp Lcl L2 tp Sess] (tmnxSubMgmtSlotSPppLclL2tp)	long	The value of tmnxSubMgmtSlotSPppLclL2tp indicates the number of current locally terminated PPP sessions (L2TP LNS) on this Slot.
pppLclL2tpSessPeak [Ppp Lcl L2 tp Sess Peak] (tmnxSubMgmtSlotSPppLclL2tpPeak)	long	The value of tmnxSubMgmtSlotSPppLclL2tpPeak indicates the peak number of locally terminated PPP sessions (L2TP LNS) on this Slot.
pppLclOASess [Ppp Lcl OASess] (tmnxSubMgmtSlotSPppLclOA)	long	The value of tmnxSubMgmtSlotSPppLclOA indicates the number of current locally terminated PPP sessions (PPPoA) on this Slot.
pppLclOASessPeak [Ppp Lcl OASess Peak] (tmnxSubMgmtSlotSPppLclOAPeak)	long	The value of tmnxSubMgmtSlotSPppLclOAPeak indicates the peak number of locally terminated PPP sessions (PPPoA) on this Slot.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppLclOEOASess [Ppp Lcl OEOASess] (tmnxSubMgmtSlotSPppLclOEOA)	long	The value of tmnxSubMgmtSlotSPppLclOEOA indicates the number of current locally terminated PPP sessions (PPPoEoA) on this Slot.
pppLclOEOASessPeak [Ppp Lcl OEOASess Peak] (tmnxSubMgmtSlotSPppLclOEOAPeak)	long	The value of tmnxSubMgmtSlotSPppLclOEOAPeak indicates the peak number of locally terminated PPP sessions (PPPoEoA) on this Slot.
pppLclOESess [Ppp Lcl OESess] (tmnxSubMgmtSlotSPppLclOE)	long	The value of tmnxSubMgmtSlotSPppLclOE indicates the number of current locally terminated PPP sessions (PPPoE) on this Slot.
pppLclOESessPeak [Ppp Lcl OESess Peak] (tmnxSubMgmtSlotSPppLclOEPeak)	long	The value of tmnxSubMgmtSlotSPppLclOEPeak indicates the peak number of locally terminated PPP sessions (PPPoE) on this Slot.
pppLclTotalSess [Ppp Lcl Total Sess] (tmnxSubMgmtSlotSPppLclTotal)	long	The value of tmnxSubMgmtSlotSPppLclTotal indicates the total number of current locally terminated PPP sessions on this Slot.
pppLclTotalSessPeak [Ppp Lcl Total Sess Peak] (tmnxSubMgmtSlotSPppLclTotalPeak)	long	The value of tmnxSubMgmtSlotSPppLclTotalPeak indicates the total peak number of locally terminated PPP sessions on this Slot.
pppSessInSetup [Ppp Sess In Setup] (tmnxSubMgmtSlotSPppSessIs)	long	The value of tmnxSubMgmtSlotSPppSessIs indicates the number of current PPP sessions in setup on this Slot.
pppSessInSetupPeak [Ppp Sess In Setup Peak] (tmnxSubMgmtSlotSPppSessIsPeak)	long	The value of tmnxSubMgmtSlotSPppSessIsPeak indicates the peak number of PPP sessions in setup on this Slot.
pppSessTotal [Ppp Sess Total] (tmnxSubMgmtSlotSPppSessTotal)	long	The value of tmnxSubMgmtSlotSPppSessTotal indicates the total number of current PPP sessions established on this Slot.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppSessTotalPeak [Ppp Sess Total Peak] (tmnxSubMgmtSlotSPppSessTotalPeak)	long	The value of tmnxSubMgmtSlotSPppSessTotalPeak indicates the total peak number of PPP sessions established on this Slot.
pppTotalLacSess [Ppp Total Lac Sess] (tmnxSubMgmtSlotSPppLacTotal)	long	The value of tmnxSubMgmtSlotSPppLacTotal indicates the total number of current PPP sessions tunneled over L2TP on this Slot.
pppTotalLacSessPeak [Ppp Total Lac Sess Peak] (tmnxSubMgmtSlotSPppLacTotalPeak)	long	The value of tmnxSubMgmtSlotSPppLacTotalPeak indicates the total peak number of PPP sessions tunneled over L2TP on this Slot.
<p>SubscrHostEquipSystStats MIB entry name: tmnxSubMgmtSystStatsEntry Entry description: Each conceptual row represents statistics for a system on which subscriber hosts are allocated. Table description (for tmnxSubMgmtSystStatsTable): The tmnxSubMgmtSystStatsTable has an entry with statistics for each system on which subscriber hosts are allocated. Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder</p>		
currentSubscribers [Current Subscribers] (tmnxSubMgmtSystSSubscribers)	long	The value of tmnxSubMgmtSystSSubscribers indicates the number of current subscribers on this system.
currentSubscribersPeak [Current Subscribers Peak] (tmnxSubMgmtSystSSubscribersPeak)	long	The value of tmnxSubMgmtSystSSubscribersPeak indicates the peak number of subscribers on this system.
ipTotalHosts [Ip Total Hosts] (tmnxSubMgmtSystSIpoeHosts)	long	The value of tmnxSubMgmtSystSIpoeHosts indicates the number of current IPOE hosts on this system.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipTotalHostsPeak [Ip Total Hosts Peak] (tmnxSubMgmtSystIpoeHostsPeak)	long	The value of tmnxSubMgmtSystIpoeHostsPeak indicates the peak number of IPOE hosts on this system.
ipTotalv4Hosts [Ip Totalv 4 Hosts] (tmnxSubMgmtSystSV4)	long	The value of tmnxSubMgmtSystSV4 indicates the number of current V4 hosts on this system.
ipTotalv4HostsPeak [Ip Totalv 4 Hosts Peak] (tmnxSubMgmtSystSV4Peak)	long	The value of tmnxSubMgmtSystSV4Peak indicates the peak number of V4 hosts on this system.
ipv4ArpHosts [Ipv 4 Arp Hosts] (tmnxSubMgmtSystSArp)	long	The value of tmnxSubMgmtSystSArp indicates the number of current IPOE hosts (ARP) on this system.
ipv4ArpHostsPeak [Ipv 4 Arp Hosts Peak] (tmnxSubMgmtSystSArpPeak)	long	The value of tmnxSubMgmtSystSArpPeak indicates the peak number of IPOE hosts (ARP) on this system.
ipv4DhcpHosts [Ipv 4 Dhcp Hosts] (tmnxSubMgmtSystSDhcp)	long	The value of tmnxSubMgmtSystSDhcp indicates the number of current IPOE hosts (DHCP) on this system.
ipv4DhcpHostsPeak [Ipv 4 Dhcp Hosts Peak] (tmnxSubMgmtSystSDhcpPeak)	long	The value of tmnxSubMgmtSystSDhcpPeak indicates the peak number of IPOE hosts (DHCP) on this system.
ipv4IpcpHosts [Ipv 4 Ipcp Hosts] (tmnxSubMgmtSystSIpcp)	long	The value of tmnxSubMgmtSystSIpcp indicates the number of current PPP hosts (IPCP) on this system.
ipv4IpcpHostsPeak [Ipv 4 Ipcp Hosts Peak] (tmnxSubMgmtSystSIpcpPeak)	long	The value of tmnxSubMgmtSystSIpcpPeak indicates the peak number of PPP hosts (IPCP) on this system.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv4L2tpHosts [Ipv 4 L2 tp Hosts] (tmnxSubMgmtSystSL2tpHost)	long	The value of tmnxSubMgmtSystSL2tpHost indicates the number of current PPP hosts (L2TP) on this system.
ipv4L2tpHostsPeak [Ipv 4 L2 tp Hosts Peak] (tmnxSubMgmtSystSL2tpHostPeak)	long	The value of tmnxSubMgmtSystSL2tpHostPeak indicates the peak number of PPP hosts (L2TP) on this system.
ipv4NonSubHosts [Ipv 4 Non Sub Hosts] (tmnxSubMgmtSystSNonSub)	long	The value of tmnxSubMgmtSystSNonSub indicates the number of current Non Sub hosts on this system.
ipv4NonSubHostsPeak [Ipv 4 Non Sub Hosts Peak] (tmnxSubMgmtSystSNonSubPeak)	long	The value of tmnxSubMgmtSystSNonSubPeak indicates the peak number of Non Sub hosts on this system.
ipv4StaticHosts [Ipv 4 Static Hosts] (tmnxSubMgmtSystSStatic)	long	The value of tmnxSubMgmtSystSStatic indicates the number of current IPOE hosts (Static) on this system.
ipv4StaticHostsPeak [Ipv 4 Static Hosts Peak] (tmnxSubMgmtSystSStaticPeak)	long	The value of tmnxSubMgmtSystSStaticPeak indicates the peak number of IPOE hosts (Static) on this system.
ipv6Ipoedhcp6NaHosts [Ipv 6 Ipoedhcp 6 Na Hosts] (tmnxSubMgmtSystSIpoedhcp6Na)	long	The value of tmnxSubMgmtSystSIpoedhcp6Na indicates the number of current IPOE hosts (DHCP6 NA) on this system.
ipv6Ipoedhcp6NaHostsPeak [Ipv 6 Ipoedhcp 6 Na Hosts Peak] (tmnxSubMgmtSystSIpoedhcp6NaPeak)	long	The value of tmnxSubMgmtSystSIpoedhcp6NaPeak indicates the peak number of IPOE hosts (DHCP6 NA) on this system.
ipv6Ipoedhcp6PdHosts [Ipv 6 Ipoedhcp 6 Pd Hosts] (tmnxSubMgmtSystSIpoedhcp6Pd)	long	The value of tmnxSubMgmtSystSIpoedhcp6Pd indicates the number of current IPOE hosts (DHCP6 PD) on this system.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6IpoE Dhcp6PdHostsPeak [Ipv 6 IpoE Dhcp 6 Pd Hosts Peak] (tmnxSubMgmtSystSIpoE Dhcp6PdPeak)	long	The value of tmnxSubMgmtSystSIpoE Dhcp6PdPeak indicates the peak number of IPOE hosts (DHCP6 PD) on this system.
ipv6IpoE SlaacHosts [Ipv 6 IpoE Slaac Hosts] (tmnxSubMgmtSystSIpoE Slaac)	long	The value of tmnxSubMgmtSystSIpoE Slaac indicates the number of current IPOE hosts (SLAAC) on this system.
ipv6IpoE SlaacHostsPeak [Ipv 6 IpoE Slaac Hosts Peak] (tmnxSubMgmtSystSIpoE SlaacPeak)	long	The value of tmnxSubMgmtSystSIpoE SlaacPeak indicates the peak number of IPOE hosts (SLAAC) on this system.
ipv6Ppp Dhcp6NaHosts [Ipv 6 Ppp Dhcp 6 Na Hosts] (tmnxSubMgmtSystSPpp Dhcp6Na)	long	The value of tmnxSubMgmtSystSPpp Dhcp6Na indicates the number of current PPP hosts (DHCP6 NA) on this system.
ipv6Ppp Dhcp6NaHostsPeak [Ipv 6 Ppp Dhcp 6 Na Hosts Peak] (tmnxSubMgmtSystSPpp Dhcp6NaPeak)	long	The value of tmnxSubMgmtSystSPpp Dhcp6NaPeak indicates the peak number of PPP hosts (DHCP6 NA) on this system.
ipv6Ppp Dhcp6PdHosts [Ipv 6 Ppp Dhcp 6 Pd Hosts] (tmnxSubMgmtSystSPpp Dhcp6Pd)	long	The value of tmnxSubMgmtSystSPpp Dhcp6Pd indicates the number of current PPP hosts (DHCP6 PD) on this system.
ipv6Ppp Dhcp6PdHostsPeak [Ipv 6 Ppp Dhcp 6 Pd Hosts Peak] (tmnxSubMgmtSystSPpp Dhcp6PdPeak)	long	The value of tmnxSubMgmtSystSPpp Dhcp6PdPeak indicates the peak number of PPP hosts (DHCP6 PD) on this system.
ipv6Ppp SlaacHosts [Ipv 6 Ppp Slaac Hosts] (tmnxSubMgmtSystSPpp Slaac)	long	The value of tmnxSubMgmtSystSPpp Slaac indicates the number of current PPP hosts (SLAAC) on this system.
ipv6Ppp SlaacHostsPeak [Ipv 6 Ppp Slaac Hosts Peak] (tmnxSubMgmtSystSPpp SlaacPeak)	long	The value of tmnxSubMgmtSystSPpp SlaacPeak indicates the peak number of PPP hosts (SLAAC) on this system.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6TotalHosts [Ipv 6 Total Hosts] (tmnxSubMgmtSystSV6)	long	The value of tmnxSubMgmtSystSV6 indicates the number of current V6 hosts on this system.
ipv6TotalHostsPeak [Ipv 6 Total Hosts Peak] (tmnxSubMgmtSystSV6Peak)	long	The value of tmnxSubMgmtSystSV6Peak indicates the peak number of V6 hosts on this system.
ipv6v4TotalHosts [Ipv 6 v 4 Total Hosts] (tmnxSubMgmtSystSTotal)	long	The value of tmnxSubMgmtSystSTotal indicates the number of current total hosts on this system.
ipv6v4TotalHostsPeak [Ipv 6 v 4 Total Hosts Peak] (tmnxSubMgmtSystSTotalPeak)	long	The value of tmnxSubMgmtSystSTotalPeak indicates the peak number of total hosts on this system.
l2tpTunOrig [L2 tp Tun Orig] (tmnxSubMgmtSystSL2tpTunOrig)	long	The value of tmnxSubMgmtSystSL2tpTunOrig indicates the number of current L2TP Tunnels (originator) on this system.
l2tpTunOrigPeak [L2 tp Tun Orig Peak] (tmnxSubMgmtSystSL2tpTunOrigPeak)	long	The value of tmnxSubMgmtSystSL2tpTunOrigPeak indicates the peak number of L2TP Tunnels (originator) on this system.
l2tpTunRecv [L2 tp Tun Recv] (tmnxSubMgmtSystSL2tpTunRecv)	long	The value of tmnxSubMgmtSystSL2tpTunRecv indicates the number of current L2TP Tunnels (receiver) on this system.
l2tpTunRecvPeak [L2 tp Tun Recv Peak] (tmnxSubMgmtSystSL2tpTunRecvPeak)	long	The value of tmnxSubMgmtSystSL2tpTunRecvPeak indicates the peak number of L2TP Tunnels (receiver) on this system.
l2tpTunTotal [L2 tp Tun Total] (tmnxSubMgmtSystSL2tpTunTotal)	long	The value of tmnxSubMgmtSystSL2tpTunTotal indicates the total number of current L2TP Tunnels on this system.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
l2tpTunTotalPeak [L2 tp Tun Total Peak] (tmnxSubMgmtSystSL2tpTunTotalPeak)	long	The value of tmnxSubMgmtSystSL2tpTunTotalPeak indicates the peak total number of L2TP Tunnels on this system.
pppHostsTotal [Ppp Hosts Total] (tmnxSubMgmtSystSPppHosts)	long	The value of tmnxSubMgmtSystSPppHosts indicates the number of current PPP hosts on this system.
pppHostsTotalPeak [Ppp Hosts Total Peak] (tmnxSubMgmtSystSPppHostsPeak)	long	The value of tmnxSubMgmtSystSPppHostsPeak indicates the peak number of PPP hosts on this system.
pppLacL2tpSess [Ppp Lac L2 tp Sess] (tmnxSubMgmtSystSPppLacL2tp)	long	The value of tmnxSubMgmtSystSPppLacL2tp indicates the number of current PPP sessions (L2TP LTS) tunneled over L2TP on this system.
pppLacL2tpSessPeak [Ppp Lac L2 tp Sess Peak] (tmnxSubMgmtSystSPppLacL2tpPeak)	long	The value of tmnxSubMgmtSystSPppLacL2tpPeak indicates the peak number of PPP sessions (L2TP LTS) tunneled over L2TP on this system.
pppLacOASess [Ppp Lac OASess] (tmnxSubMgmtSystSPppLacOA)	long	The value of tmnxSubMgmtSystSPppLacOA indicates the number of current PPP sessions (PPPoA) tunneled over L2TP on this system.
pppLacOASessPeak [Ppp Lac OASess Peak] (tmnxSubMgmtSystSPppLacOAPeak)	long	The value of tmnxSubMgmtSystSPppLacOAPeak indicates the peak number of PPP sessions (PPPoA) tunneled over L2TP on this system.
pppLacOEOASess [Ppp Lac OEOASess] (tmnxSubMgmtSystSPppLacOEoA)	long	The value of tmnxSubMgmtSystSPppLacOEoA indicates the number of current PPP sessions (PPPoEoA) tunneled over L2TP on this system.
pppLacOEOASessPeak [Ppp Lac OEOASess Peak] (tmnxSubMgmtSystSPppLacOEoAPeak)	long	The value of tmnxSubMgmtSystSPppLacOEoAPeak indicates the peak number of PPP sessions (PPPoEoA) tunneled over L2TP on this system.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppLacOESess [Ppp Lac OESess] (tmnxSubMgmtSystSPppLacOE)	long	The value of tmnxSubMgmtSystSPppLacOE indicates the number of current PPP sessions (PPPoE) tunneled over L2TP on this system.
pppLacOESessPeak [Ppp Lac OESess Peak] (tmnxSubMgmtSystSPppLacOEPeak)	long	The value of tmnxSubMgmtSystSPppLacOEPeak indicates the peak number of PPP sessions (PPPoE) tunneled over L2TP on this system.
pppLclL2tpSess [Ppp Lcl L2 tp Sess] (tmnxSubMgmtSystSPppLclL2tp)	long	The value of tmnxSubMgmtSystSPppLclL2tp indicates the number of current locally terminated PPP sessions (L2TP LNS) on this system.
pppLclL2tpSessPeak [Ppp Lcl L2 tp Sess Peak] (tmnxSubMgmtSystSPppLclL2tpPeak)	long	The value of tmnxSubMgmtSystSPppLclL2tpPeak indicates the peak number of locally terminated PPP sessions (L2TP LNS) on this system.
pppLclOASess [Ppp Lcl OASess] (tmnxSubMgmtSystSPppLclOA)	long	The value of tmnxSubMgmtSystSPppLclOA indicates the number of current locally terminated PPP sessions (PPPoA) on this system.
pppLclOASessPeak [Ppp Lcl OASess Peak] (tmnxSubMgmtSystSPppLclOAPeak)	long	The value of tmnxSubMgmtSystSPppLclOAPeak indicates the peak number of locally terminated PPP sessions (PPPoA) on this system.
pppLclOEOASess [Ppp Lcl OEOASess] (tmnxSubMgmtSystSPppLclOEOA)	long	The value of tmnxSubMgmtSystSPppLclOEOA indicates the number of current locally terminated PPP sessions (PPPoEoA) on this system.
pppLclOEOASessPeak [Ppp Lcl OEOASess Peak] (tmnxSubMgmtSystSPppLclOEOAPeak)	long	The value of tmnxSubMgmtSystSPppLclOEOAPeak indicates the peak number of locally terminated PPP sessions (PPPoEoA) on this system.
pppLclOESess [Ppp Lcl OESess] (tmnxSubMgmtSystSPppLclOE)	long	The value of tmnxSubMgmtSystSPppLclOE indicates the number of current locally terminated PPP sessions (PPPoE) on this system.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppLclOESessPeak [Ppp Lcl OESess Peak] (tmnxSubMgmtSystSPppLclOEPeak)	long	The value of tmnxSubMgmtSystSPppLclOEPeak indicates the peak number of locally terminated PPP sessions (PPPoE) on this system.
pppLclTotalSess [Ppp Lcl Total Sess] (tmnxSubMgmtSystSPppLclTotal)	long	The value of tmnxSubMgmtSystSPppLclTotal indicates the total number of current locally terminated PPP sessions on this system.
pppLclTotalSessPeak [Ppp Lcl Total Sess Peak] (tmnxSubMgmtSystSPppLclTotalPeak)	long	The value of tmnxSubMgmtSystSPppLclTotalPeak indicates the total peak number of locally terminated PPP sessions on this system.
pppSessInSetup [Ppp Sess In Setup] (tmnxSubMgmtSystSPppSessIs)	long	The value of tmnxSubMgmtSystSPppSessIs indicates the number of current PPP sessions in setup on this system.
pppSessInSetupPeak [Ppp Sess In Setup Peak] (tmnxSubMgmtSystSPppSessIsPeak)	long	The value of tmnxSubMgmtSystSPppSessIsPeak indicates the peak number of PPP sessions in setup on this system.
pppSessTotal [Ppp Sess Total] (tmnxSubMgmtSystSPppSessTotal)	long	The value of tmnxSubMgmtSystSPppSessTotal indicates the total number of current PPP sessions established on this system.
pppSessTotalPeak [Ppp Sess Total Peak] (tmnxSubMgmtSystSPppSessTotalPeak)	long	The value of tmnxSubMgmtSystSPppSessTotalPeak indicates the total peak number of PPP sessions established on this system.
pppTotalLacSess [Ppp Total Lac Sess] (tmnxSubMgmtSystSPppLacTotal)	long	The value of tmnxSubMgmtSystSPppLacTotal indicates the total number of current PPP sessions tunneled over L2TP on this system.
pppTotalLacSessPeak [Ppp Total Lac Sess Peak] (tmnxSubMgmtSystSPppLacTotalPeak)	long	The value of tmnxSubMgmtSystSPppLacTotalPeak indicates the total peak number of PPP sessions tunneled over L2TP on this system.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SystemCpuMonStats</p> <p>MIB entry name: tmnxSysCpuMonEntry</p> <p>Entry description: tmnxSysCpuMonEntry contains the system level CPU monitoring statistics over a specified sample-time.</p> <p>Table description (for tmnxSysCpuMonTable): tmnxSysCpuMonTable consists of the system level CPU monitoring statistics.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.SystemStatsHolder</p>		
tmnxSysCpuMonBusyCoreUtil [Tmnx Sys Cpu Mon Busy Core Util] (tmnxSysCpuMonBusyCoreUtil)	float	The value of tmnxSysCpuMonBusyCoreUtil indicates the utilization percentage of the busiest processor core over the specified sample-time. On single core CPUs, this is the overall system utilization percentage over the specified sample-time.
tmnxSysCpuMonBusyGroupName [Tmnx Sys Cpu Mon Busy Group Name] (tmnxSysCpuMonBusyGroupName)	String	The value of tmnxSysCpuMonBusyGroupName indicates the name of the group that is running at the highest capacity utilization. Capacity utilization is the CPU utilization relative to the maximum CPU resources available to that group. A group is a set of related applications, services, tasks or protocol handlers that consumes some part of the system CPU resources. The capacity utilization of the busiest group is indicated by tmnxSysCpuMonBusyGroupUtil.
tmnxSysCpuMonBusyGroupUtil [Tmnx Sys Cpu Mon Busy Group Util] (tmnxSysCpuMonBusyGroupUtil)	float	The value of tmnxSysCpuMonBusyGroupUtil indicates the capacity utilization of the group that is running at the highest capacity utilization. Capacity utilization is the CPU utilization relative to the maximum CPU resources available to that group. A group is a set of related applications, services, tasks or protocol handlers that consumes some part of the system CPU resources. The name of the busiest group is indicated by tmnxSysCpuMonBusyGroupName.

Table 407 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tmnxSysCpuMonCpuIdle [Tmnx Sys Cpu Mon Cpu Idle] (tmnxSysCpuMonCpuIdle)	float	The value of tmnxSysCpuMonCpuIdle indicates the overall percentage of CPU idleness over the specified sample-time.
tmnxSysCpuMonSampleTime [Tmnx Sys Cpu Mon Sample Time] (tmnxSysCpuMonSampleTime)	int	The value of tmnxSysCpuMonSampleTime specifies the sample-time used to calculate the utilization results for the row.
SystemCpuStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder		
systemCpuUsage [System Cpu Usage] (sgiCpuUsage)	long	The value of sgiCpuUsage indicates the current CPU utilization for the system.
SystemMemoryStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder		
systemMemoryUsage [System Memory Usage] (sgiMemoryUsed)	long	The value of sgiMemoryUsed indicates the total pre-allocated pool memory currently in use on the system. If the value is greater than the maximum value reportable by this object then this object reports its maximum value (4,294,967,295) and sgiKbMemoryUsed must be used to determine the total pre-allocated pool memory.

Table 408 ethernetequipment statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AdditionalEthernetStats</p> <p>MIB entry name: tmnxPortEtherEntry</p> <p>Entry description: Each row entry represents an Ethernet port on a IOM card in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. Before an IOM card entry can be deleted from the tmnxMDATable, its supported tmnxPortEntry and tmnxPortEtherEntry rows must be in the proper state for removal. The tmnxPortEtherEntry contains attributes that are unique to the Ethernet TmnxPortType.</p> <p>Table description (for tmnxPortEtherTable): The tmnxPortEtherTable has an entry for each Ethernet (faste, gige, xcme or xgige) port on each IOM card in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
highCapacityPackets1519toMaxFrameSize [High Capacity Packets 1519 to Max Frame Size] (tmnxPortEtherHCPkts1519toMax)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 1519 octets in length and the maximum frame size, usually 12287 octets inclusive (excluding framing bits but including FCS octets). The lower 32-bits of this 64-bit counter will equal the value of tmnxPortEtherHCPkts1519toMax. The high 32-bits of this counter will equal the value of tmnxPortEtherHCOverPkts1519toMax.
packets1519toMaxFrameSize [Packets 1519 to Max Frame Size] (tmnxPortEtherPkts1519toMax)	long	The total number of packets received that were longer than 1518 octets but less than the maximum frame size for the particular medium, usually 12287 octets (excluding framing bits, but including FCS octets) and were otherwise well formed.

Table 408 ethernetequipment statistics (continued)

<p>alignmentErrors [Alignment Errors] (dot3StatsAlignmentErrors)</p>	<p>long</p>	<p>A count of frames received on a particular interface that are not an integral number of octets in length and do not pass the FCS check. The count represented by an instance of this object is incremented when the alignmentError status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions pertain are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC. This counter does not increment for group encoding schemes greater than 4 bits per group. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsAlignmentErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.</p>

Table 408 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
carrierSenseErrors [Carrier Sense Errors] (dot3StatsCarrierSenseErrors)	long	The number of times that the carrier sense condition was lost or never asserted when attempting to transmit a frame on a particular interface. The count represented by an instance of this object is incremented at most once per transmission attempt, even if the carrier sense condition fluctuates during a transmission attempt. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
deferredTransmissions [Deferred Transmissions] (dot3StatsDeferredTransmissions)	long	A count of frames for which the first transmission attempt on a particular interface is delayed because the medium is busy. The count represented by an instance of this object does not include frames involved in collisions. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
duplex [Duplex] (dot3StatsDuplexStatus)	int	The current mode of operation of the MAC entity. 'unknown' indicates that the current duplex mode could not be determined. Management control of the duplex mode is accomplished through the MAU MIB. When an interface does not support autonegotiation, or when autonegotiation is not enabled, the duplex mode is controlled using ifMauDefaultType. When autonegotiation is supported and enabled, duplex mode is controlled using ifMauAutoNegAdvertisedBits. In either case, the currently operating duplex mode is reflected both in this object and in ifMauType. Note that this object provides redundant information with ifMauType. Normally, redundant objects are discouraged. However, in this instance, it allows a management application to determine the duplex status of an interface without having to know every possible value of ifMauType. This was felt to be sufficiently valuable to justify the redundancy.

Table 408 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
excessiveCollisions [Excessive Collisions] (dot3StatsExcessiveCollisions)	long	A count of frames for which transmission on a particular interface fails due to excessive collisions. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
fcsErrors [Fcs Errors] (dot3StatsFCSErrors)	long	A count of frames received on a particular interface that are an integral number of octets in length but do not pass the FCS check. This count does not include frames received with frame-too-long or frame-too-short error. The count represented by an instance of this object is incremented when the frameCheckError status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions pertain are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC. Note: Coding errors detected by the physical layer for speeds above 10 Mb/s will cause the frame to fail the FCS check. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsFCSErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 408 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
frameTooLongs [Frame Too Longs] (dot3StatsFrameTooLongs)	long	A count of frames received on a particular interface that exceed the maximum permitted frame size. The count represented by an instance of this object is incremented when the frameTooLong status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions pertain are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC. For interfaces operating at 10 Gb/s, this counter can roll over in less than 80 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsFrameTooLongs object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 408 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
internalMacReceiveErrors [Internal Mac Receive Errors] (dot3StatsInternalMacReceiveErrors)	long	A count of frames for which reception on a particular interface fails due to an internal MAC sublayer receive error. A frame is only counted by an instance of this object if it is not counted by the corresponding instance of either the dot3StatsFrameTooLongs object, the dot3StatsAlignmentErrors object, or the dot3StatsFCSErrors object. The precise meaning of the count represented by an instance of this object is implementation- specific. In particular, an instance of this object may represent a count of receive errors on a particular interface that are not otherwise counted. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsInternalMacReceiveErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 408 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
internalMacTransmitErrors [Internal Mac Transmit Errors] (dot3StatsInternalMacTransmitErrors)	long	A count of frames for which transmission on a particular interface fails due to an internal MAC sublayer transmit error. A frame is only counted by an instance of this object if it is not counted by the corresponding instance of either the dot3StatsLateCollisions object, the dot3StatsExcessiveCollisions object, or the dot3StatsCarrierSenseErrors object. The precise meaning of the count represented by an instance of this object is implementation- specific. In particular, an instance of this object may represent a count of transmission errors on a particular interface that are not otherwise counted. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsInternalMacTransmitErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
lateCollisions [Late Collisions] (dot3StatsLateCollisions)	long	The number of times that a collision is detected on a particular interface later than one slotTime into the transmission of a packet. A (late) collision included in a count represented by an instance of this object is also considered as a (generic) collision for purposes of other collision-related statistics. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 408 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
multipleCollisionFrames [Multiple Collision Frames] (dot3StatsMultipleCollisionFrames)	long	A count of frames that are involved in more than one collision and are subsequently transmitted successfully. A frame that is counted by an instance of this object is also counted by the corresponding instance of either the ifOutUcastPkts, ifOutMulticastPkts, or ifOutBroadcastPkts, and is not counted by the corresponding instance of the dot3StatsSingleCollisionFrames object. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
singleCollisionFrames [Single Collision Frames] (dot3StatsSingleCollisionFrames)	long	A count of frames that are involved in a single collision, and are subsequently transmitted successfully. A frame that is counted by an instance of this object is also counted by the corresponding instance of either the ifOutUcastPkts, ifOutMulticastPkts, or ifOutBroadcastPkts, and is not counted by the corresponding instance of the dot3StatsMultipleCollisionFrames object. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
sqeTestErrors [Sqe Test Errors] (dot3StatsSQETestErrors)	long	A count of times that the SQE TEST ERROR is received on a particular interface. The SQE TEST ERROR is set in accordance with the rules for verification of the SQE detection mechanism in the PLS Carrier Sense Function as described in IEEE Std. 802.3, 2000 Edition, section 7.2.4.6. This counter does not increment on interfaces operating at speeds greater than 10 Mb/s, or on interfaces operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 408 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
symbolErrors [Symbol Errors] (dot3StatsSymbolErrors)	long	<p>For an interface operating at 100 Mb/s, the number of times there was an invalid data symbol when a valid carrier was present. For an interface operating in half-duplex mode at 1000 Mb/s, the number of times the receiving media is non-idle (a carrier event) for a period of time equal to or greater than slotTime, and during which there was at least one occurrence of an event that causes the PHY to indicate 'Data reception error' or 'carrier extend error' on the GMII. For an interface operating in full-duplex mode at 1000 Mb/s, the number of times the receiving media is non-idle (a carrier event) for a period of time equal to or greater than minFrameSize, and during which there was at least one occurrence of an event that causes the PHY to indicate 'Data reception error' on the GMII. For an interface operating at 10 Gb/s, the number of times the receiving media is non-idle (a carrier event) for a period of time equal to or greater than minFrameSize, and during which there was at least one occurrence of an event that causes the PHY to indicate 'Receive Error' on the XGMII. The count represented by an instance of this object is incremented at most once per carrier event, even if multiple symbol errors occur during the carrier event. This count does not increment if a collision is present. This counter does not increment when the interface is operating at 10 Mb/s. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsSymbolErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.</p>

NFM-P counter names: XML [displayed] (MIB)	Type	Description
packets64Octets [Packets 64 Octets] (etherStatsHighCapacityPkts64Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were 64 octets in length (excluding framing bits but including FCS octets).
packets65to127Octets [Packets 65 to 127 Octets] (etherStatsHighCapacityPkts65to127Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 65 and 127 octets in length inclusive (excluding framing bits but including FCS octets).

Table 408 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalOctets [Total Octets] (etherStatsHighCapacityOctets)	java. math. BigInteger	The total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets). If the network is half-duplex Fast Ethernet, this object can be used as a reasonable estimate of utilization. If greater precision is desired, the etherStatsHighCapacityPkts and etherStatsHighCapacityOctets objects should be sampled before and after a common interval. The differences in the sampled values are Pkts and Octets, respectively, and the number of seconds in the interval is Interval. These values are used to calculate the Utilization as follows: $Pkts * (.96 + .64) + (Octets * .08)$ Utilization = - Interval * 10,000 The result of this equation is the value Utilization which is the percent utilization of the ethernet segment on a scale of 0 to 100 percent. This table is not appropriate for monitoring full-duplex ethernets. If the network is a full-duplex ethernet and the medialIndependentTable is monitoring that network, the utilization can be calculated as follows: 1) Determine the utilization of the inbound path by using the appropriate equation (for ethernet or fast ethernet) to determine the utilization, substituting medialIndependentInPkts for etherStatsHighCapacityPkts, and medialIndependentInOctets for etherStatsHighCapacityOctets. Call the resulting utilization inUtilization. 2) Determine the utilization of the outbound path by using the same equation to determine the utilization, substituting medialIndependentOutPkts for etherStatsHighCapacityPkts, and medialIndependentOutOctets for etherStatsHighCapacityOctets. Call the resulting utilization outUtilization. 3) The utilization is the maximum of inUtilization and outUtilization. This metric shows the amount of percentage of bandwidth that is left before congestion will be experienced on the link.
totalPackets [Total Packets] (etherStatsHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets, broadcast packets, and multicast packets) received.

Table 408 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>EthernetStats</p> <p>MIB entry name: etherStatsEntry</p> <p>Entry description: A collection of statistics kept for a particular Ethernet interface. As an example, an instance of the etherStatsPkts object might be named etherStatsPkts.1</p> <p>Table description (for etherStatsTable): A list of Ethernet statistics entries.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
broadcastPackets [Broadcast Packets] (etherStatsBroadcastPkts)	long	The total number of good packets received that were directed to the broadcast address. Note that this does not include multicast packets.

Table 408 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
collisions [Collisions] (etherStatsCollisions)	long	The best estimate of the total number of collisions on this Ethernet segment. The value returned will depend on the location of the RMON probe. Section 8.2.1.3 (10BASE-5) and section 10.3.1.3 (10BASE-2) of IEEE standard 802.3 states that a station must detect a collision, in the receive mode, if three or more stations are transmitting simultaneously. A repeater port must detect a collision when two or more stations are transmitting simultaneously. Thus a probe placed on a repeater port could record more collisions than a probe connected to a station on the same segment would. Probe location plays a much smaller role when considering 10BASE-T. 14.2.1.4 (10BASE-T) of IEEE standard 802.3 defines a collision as the simultaneous presence of signals on the DO and RD circuits (transmitting and receiving at the same time). A 10BASE-T station can only detect collisions when it is transmitting. Thus probes placed on a station and a repeater, should report the same number of collisions. Note also that an RMON probe inside a repeater should ideally report collisions between the repeater and one or more other hosts (transmit collisions as defined by IEEE 802.3k) plus receiver collisions observed on any coax segments to which the repeater is connected.
crcAlignErrors [Crc Align Errors] (etherStatsCRCAlignErrors)	long	The total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, but had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).
dropEvents [Drop Events] (etherStatsDropEvents)	long	The total number of events in which packets were dropped by the probe due to lack of resources. Note that this number is not necessarily the number of packets dropped; it is just the number of times this condition has been detected.

Table 408 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fragments [Fragments] (etherStatsFragments)	long	The total number of packets received that were less than 64 octets in length (excluding framing bits but including FCS octets) and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error). Note that it is entirely normal for etherStatsFragments to increment. This is because it counts both runts (which are normal occurrences due to collisions) and noise hits.
jabbers [Jabbers] (etherStatsJabbers)	long	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error). Note that this definition of jabber is different than the definition in IEEE-802.3 section 8.2.1.5 (10BASE5) and section 10.3.1.4 (10BASE2). These documents define jabber as the condition where any packet exceeds 20 ms. The allowed range to detect jabber is between 20 ms and 150 ms.
multicastPackets [Multicast Packets] (etherStatsMulticastPkts)	long	The total number of good packets received that were directed to a multicast address. Note that this number does not include packets directed to the broadcast address.
oversizePackets [Oversize Packets] (etherStatsOversizePkts)	long	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets) and were otherwise well formed.
packets1024to1518Octets [Packets 1024 to 1518 Octets] (etherStatsPkts1024to1518Octets)	long	The total number of packets (including bad packets) received that were between 1024 and 1518 octets in length inclusive (excluding framing bits but including FCS octets).
packets128to255Octets [Packets 128 to 255 Octets] (etherStatsPkts128to255Octets)	long	The total number of packets (including bad packets) received that were between 128 and 255 octets in length inclusive (excluding framing bits but including FCS octets).

Table 408 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
packets256to511Octets [Packets 256 to 511 Octets] (etherStatsPkts256to511Octets)	long	The total number of packets (including bad packets) received that were between 256 and 511 octets in length inclusive (excluding framing bits but including FCS octets).
packets512to1023Octets [Packets 512 to 1023 Octets] (etherStatsPkts512to1023Octets)	long	The total number of packets (including bad packets) received that were between 512 and 1023 octets in length inclusive (excluding framing bits but including FCS octets).
packets64Octets [Packets 64 Octets] (etherStatsPkts64Octets)	long	The total number of packets (including bad packets) received that were 64 octets in length (excluding framing bits but including FCS octets).
packets65to127Octets [Packets 65 to 127 Octets] (etherStatsPkts65to127Octets)	long	The total number of packets (including bad packets) received that were between 65 and 127 octets in length inclusive (excluding framing bits but including FCS octets).
totalOctets [Total Octets] (etherStatsOctets)	long	The total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets). This object can be used as a reasonable estimate of 10-Megabit ethernet utilization. If greater precision is desired, the etherStatsPkts and etherStatsOctets objects should be sampled before and after a common interval. The differences in the sampled values are Pkts and Octets, respectively, and the number of seconds in the interval is Interval. These values are used to calculate the Utilization as follows: $Pkts * (9.6 + 6.4) + (Octets * .8)$ Utilization = - Interval * 10,000 The result of this equation is the value Utilization which is the percent utilization of the ethernet segment on a scale of 0 to 100 percent.
totalPackets [Total Packets] (etherStatsPkts)	long	The total number of packets (including bad packets, broadcast packets, and multicast packets) received.

Table 408 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
undersizePackets [Undersize Packets] (etherStatsUndersizePkts)	long	The total number of packets received that were less than 64 octets long (excluding framing bits, but including FCS octets) and were otherwise well formed.
<p>OtulfStats</p> <p>MIB entry name: tmnxOtulfRawStatsEntry</p> <p>Entry description: The tmnxOtulfRawStatsEntry stores the statistics for an individual OTU interface. tmnxOtulfRawStatsEntry rows are created and destroyed by the system when rows are added or removed in the tmnxOtulfTable.</p> <p>Table description (for tmnxOtulfRawStatsTable): The tmnxOtulfRawStatsTable consists of the raw statistics associated with the OTU interfaces contained in the tmnxOtulfTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.PhysicalPort</p>		
elapsedSec [Elapsed Sec] (tmnxOtulfRawStatsElapsedSec)	long	The value of tmnxOtulfRawStatsElapsedSec indicates the number of Elapsed seconds since the last OTU raw statistics clearing.
feCes [Fe Ces] (tmnxOtulfRawStatsFECES)	long	The value of tmnxOtulfRawStatsFECES indicates the number of Forward Error Correction (FEC) Errors Seconds (ES).
fecCorrOnes [Fec Corr Ones] (tmnxOtulfRawStatsFECCorrOnes)	long	The value of tmnxOtulfRawStatsFECCorrOnes indicates the number of Forward Error Correction (FEC) corrected ones.
fecCorrZeros [Fec Corr Zeros] (tmnxOtulfRawStatsFECCorrZeros)	long	The value of tmnxOtulfRawStatsFECCorrZeros indicates the number of Forward Error Correction (FEC) corrected zeros.
fecSes [Fec Ses] (tmnxOtulfRawStatsFECSES)	long	The value of tmnxOtulfRawStatsFECSES indicates the number of Forward Error Correction (FEC) Severely Errors Seconds (SES).

Table 408 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fecUas [Fec Uas] (tmnxOtuIfRawStatsFECUAS)	long	The value of tmnxOtuIfRawStatsFECUAS indicates the number of Forward Error Correction (FEC) Unavailable Seconds (UAS).
fecUncorrSr [Fec Uncorr Sr] (tmnxOtuIfRawStatsFECUncorrSR)	long	The value of tmnxOtuIfRawStatsFECUncorrSR indicates the number of Forward Error Correction (FEC) Uncorrectable Sub-Rows.
hcFecCorrOnes [Hc Fec Corr Ones] (tmnxOtuIfRawStatsHCFECCorrOnes)	java. math. BigInteger	The value of tmnxOtuIfRawStatsFECCorrOnes indicates the High Capacity number of Forward Error Correction (FEC) corrected ones.
hcFecCorrZeros [Hc Fec Corr Zeros] (tmnxOtuIfRawStatsHCFECCorrZeros)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCFECCorrZeros indicates the High Capacity number of Forward Error Correction (FEC) corrected zeros.
hcFecUncorrSr [Hc Fec Uncorr Sr] (tmnxOtuIfRawStatsHCFECUncorrSR)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCFECUncorrSR indicates the High Capacity number of Forward Error Correction (FEC) Uncorrectable Sub-Rows.
hcPmBei [Hc Pm Bei] (tmnxOtuIfRawStatsHCPMBEI)	java. math. BigInteger	The value of tmnxOtuIfRawStatsPMBEI indicates the High Capacity number of Path Monitoring (PM) Backward Error Indication (BEI) errors.
hcPmBip8 [Hc Pm Bip 8] (tmnxOtuIfRawStatsHCPMBIP8)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCPMBIP8 indicates the High Capacity number of Path Monitoring (PM) BIP8 errors.
hcSmBei [Hc Sm Bei] (tmnxOtuIfRawStatsHCSMBEI)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCSMBEI indicates the High Capacity number of Section Monitoring (SM) Backward Error Indication (BEI) errors.

Table 408 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
hcSmBip8 [Hc Sm Bip 8] (tmnxOtuIfRawStatsHCSMBIP8)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCSMBIP8 indicates the High Capacity number of Section Monitoring (SM) BIP8 errors.
npj [Npj] (tmnxOtuIfRawStatsNPJ)	long	The value of tmnxOtuIfRawStatsNPJ indicates the number of Negative Pointer justifications that occurred during the asynchronous demapping of the received payload inside the OTU frame.
ofFecCorrOnes [Of Fec Corr Ones] (tmnxOtuIfRawStatsOFFECCorrOnes)	long	The value of tmnxOtuIfRawStatsFECCorrOnes indicates the number of times the tmnxOtuIfRawStatsFECCorrOnes overflowed.
ofFecCorrZeros [Of Fec Corr Zeros] (tmnxOtuIfRawStatsOFFECCorrZeros)	long	The value of tmnxOtuIfRawStatsOFFECCorrZeros indicates the number of times the tmnxOtuIfRawStatsFECCorrZeros overflowed.
ofFecUncorrSr [Of Fec Uncorr Sr] (tmnxOtuIfRawStatsOFFECUncorrSR)	long	The value of tmnxOtuIfRawStatsOFFECUncorrSR indicates the number of times the tmnxOtuIfRawStatsFECUncorrSR overflowed.
ofPmBei [Of Pm Bei] (tmnxOtuIfRawStatsOFPMBEI)	long	The value of tmnxOtuIfRawStatsOFPMBEI indicates the number of times tmnxOtuIfRawStatsPMBEI overflowed.
ofPmBip8 [Of Pm Bip 8] (tmnxOtuIfRawStatsOFPMBIP8)	long	The value of tmnxOtuIfRawStatsOFPMBIP8 indicates the number of times the tmnxOtuIfRawStatsPMBIP8 overflowed.
ofSmBei [Of Sm Bei] (tmnxOtuIfRawStatsOFSMBEI)	long	The value of tmnxOtuIfRawStatsOFSMBEI indicates the number of times the tmnxOtuIfRawStatsSMBEI overflowed.

Table 408 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ofSmBip8 [Of Sm Bip 8] (tmnxOtuIfRawStatsOFSMBIP8)	long	The value of tmnxOtuIfRawStatsOFSMBIP8 indicates the number of times the tmnxOtuIfRawStatsSMBIP8 overflowed.
pmBei [Pm Bei] (tmnxOtuIfRawStatsPMBEI)	long	The value of tmnxOtuIfRawStatsPMBEI indicates the number of Path Monitoring (PM) Backward Error Indication (BEI) errors.
pmBip8 [Pm Bip 8] (tmnxOtuIfRawStatsPMBIP8)	long	The value of tmnxOtuIfRawStatsPMBIP8 indicates the number of Path Monitoring (PM) BIP8 errors.
pmEs [Pm Es] (tmnxOtuIfRawStatsPMES)	long	The value of tmnxOtuIfRawStatsPMES indicates the number of Path Monitoring (PM) Errored Seconds (ES).
pmSes [Pm Ses] (tmnxOtuIfRawStatsPMSES)	long	The value of tmnxOtuIfRawStatsPMSES indicates the number of Path Monitoring (PM) Severely Errored Seconds (SES).
pmUas [Pm Uas] (tmnxOtuIfRawStatsPMUAS)	long	The value of tmnxOtuIfRawStatsPMUAS indicates the number of Path Monitoring (PM) Unavailable Seconds (UAS).
ppj [Ppj] (tmnxOtuIfRawStatsPPJ)	long	The value of tmnxOtuIfRawStatsPPJ indicates the number of Positive Pointer justifications that occurred during the asynchronous demapping of the received payload inside the OTU frame.
smBei [Sm Bei] (tmnxOtuIfRawStatsSMBEI)	long	The value of tmnxOtuIfRawStatsSMBEI indicates the number of Section Monitoring (SM) Backward Error Indication (BEI) errors.

Table 408 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
smBip8 [Sm Bip 8] (tmnxOtulfRawStatsSMBIP8)	long	The value of tmnxOtulfRawStatsSMBIP8 indicates the number of Section Monitoring (SM) BIP8 errors.
smEs [Sm Es] (tmnxOtulfRawStatsSMES)	long	The value of tmnxOtulfRawStatsSMES indicates the number of Section Monitoring (SM) Errored Seconds (ES).
smSes [Sm Ses] (tmnxOtulfRawStatsSMSES)	long	The value of tmnxOtulfRawStatsSMSES indicates the number of Section Monitoring (SM) Severely Errored Seconds (SES).
smUas [Sm Uas] (tmnxOtulfRawStatsSMUAS)	long	The value of tmnxOtulfRawStatsSMUAS indicates the number of Section Monitoring (SM) Unavailable Seconds (UAS).
<p>PortEgrQosQueueStat</p> <p>MIB entry name: tmnxPortEgrQosQStatEntry</p> <p>Entry description: Egress statistics about a specific port's QoS queue-group queue. In release 11.0, tPortAccEgrQGrpIn-stanceId is added as another index before tmnxPortEgrQosQStatQueueId for this tmnxPortEgrQosQStatTable.</p> <p>Table description (for tmnxPortEgrQosQStatTable): A table that contains egress QoS queue-group queue port statistics.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: ethernetequipment.AccessEgrQGroup</p>		
portEgrQosQStatDpdInProfOcts [Port Egr Qos QStat Dpd In Prof Octs] (tmnxPortEgrQosQStatDpdInProfOcts)	java. math. BigInteger	The value of tmnxPortEgrQosQStatDpdInProfOcts indicates the number of in-profile octets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portEgrQosQStatDpdInProfPkts [Port Egr Qos QStat Dpd In Prof Pkts] (tmnxPortEgrQosQStatDpdInProfPkts)	java. math. BigInteger	The value of tmnxPortEgrQosQStatDpdInProfPkts indicates the number of in-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.

Table 408 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portEgrQosQStatDpdOutProfOcts [Port Egr Qos QStat Dpd Out Prof Octs] (tmnxPortEgrQosQStatDpdOutProfOcts)	java. math. BigInteger	The value of tmnxPortEgrQosQStatDpdOutProfOcts indicates the number of out-of-profile octets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portEgrQosQStatDpdOutProfPkts [Port Egr Qos QStat Dpd Out Prof Pkts] (tmnxPortEgrQosQStatDpdOutProfPkts)	java. math. BigInteger	The value of tmnxPortEgrQosQStatDpdOutProfPkts indicates the number of out-of-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portEgrQosQStatFwdInProfOcts [Port Egr Qos QStat Fwd In Prof Octs] (tmnxPortEgrQosQStatFwdInProfOcts)	java. math. BigInteger	The value of tmnxPortEgrQosQStatFwdInProfOcts indicates the number of in-profile octets (rate below CIR) forwarded by the egress Qchip.
portEgrQosQStatFwdInProfPkts [Port Egr Qos QStat Fwd In Prof Pkts] (tmnxPortEgrQosQStatFwdInProfPkts)	java. math. BigInteger	The value of tmnxPortEgrQosQStatFwdInProfPkts indicates the number of in-profile packets (rate below CIR) forwarded by the egress Qchip.
portEgrQosQStatFwdOutProfOcts [Port Egr Qos QStat Fwd Out Prof Octs] (tmnxPortEgrQosQStatFwdOutProfOcts)	java. math. BigInteger	The value of tmnxPortEgrQosQStatFwdOutProfOcts indicates the number of out-of-profile octets (rate above CIR) forwarded by the egress Qchip.
portEgrQosQStatFwdOutProfPkts [Port Egr Qos QStat Fwd Out Prof Pkts] (tmnxPortEgrQosQStatFwdOutProfPkts)	java. math. BigInteger	The value of tmnxPortEgrQosQStatFwdOutProfPkts indicates the number of out-of-profile packets (rate above CIR) forwarded by the egress Qchip.
portEgrQosQStatQueueId [Port Egr Qos QStat Queue Id] (tmnxPortEgrQosQStatQueueId)	long	The value of tmnxPortEgrQosQStatQueueId specifies the queue-group queue ID which is used as the fourth index to the table entry.

Table 408 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PortIngQosQueueStat</p> <p>MIB entry name: tmnxPortIngQosQStatEntry</p> <p>Entry description: Ingress statistics about a specific port's QoS queue-group queue.</p> <p>Table description (for tmnxPortIngQosQStatTable): A table that contains ingress QoS queue-group queue port statistics.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: ethernetequipment.AccessIngrQGroup</p>		
portIngQosQStatDpdHiPrioOcts [Port Ing Qos QStat Dpd Hi Prio Octs] (tmnxPortIngQosQStatDpdHiPrioOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatDpdHiPrioOcts indicates the number of high priority octets, as determined by the port ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portIngQosQStatDpdHiPrioPkts [Port Ing Qos QStat Dpd Hi Prio Pkts] (tmnxPortIngQosQStatDpdHiPrioPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatDpdHiPrioPkts indicates the number of high priority packets, as determined by the port ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portIngQosQStatDpdLoPrioOcts [Port Ing Qos QStat Dpd Lo Prio Octs] (tmnxPortIngQosQStatDpdLoPrioOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatDpdLoPrioOcts indicates the number of low priority octets, as determined by the port ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portIngQosQStatDpdLoPrioPkts [Port Ing Qos QStat Dpd Lo Prio Pkts] (tmnxPortIngQosQStatDpdLoPrioPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatDpdLoPrioPkts indicates the number of low priority packets, as determined by the port ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portIngQosQStatFwdInProfOcts [Port Ing Qos QStat Fwd In Prof Octs] (tmnxPortIngQosQStatFwdInProfOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatFwdInProfOcts indicates the number of in-profile octets (rate below CIR) forwarded by the ingress Qchip.
portIngQosQStatFwdInProfPkts [Port Ing Qos QStat Fwd In Prof Pkts] (tmnxPortIngQosQStatFwdInProfPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatFwdInProfPkts indicates the number of in-profile packets (rate below CIR) forwarded by the ingress Qchip.

Table 408 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portIngQosQStatFwdOutProfOcts [Port Ing Qos QStat Fwd Out Prof Octs] (tmnxPortIngQosQStatFwdOutProfOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatFwdOutProfOcts indicates the number of out-of-profile octets (rate above CIR) forwarded by the ingress Qchip.
portIngQosQStatFwdOutProfPkts [Port Ing Qos QStat Fwd Out Prof Pkts] (tmnxPortIngQosQStatFwdOutProfPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatFwdOutProfPkts indicates the number of out-of-profile packets (rate above CIR) forwarded by the ingress Qchip.
portIngQosQStatOffHiPrioOcts [Port Ing Qos QStat Off Hi Prio Octs] (tmnxPortIngQosQStatOffHiPrioOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatOffHiPrioOcts indicates the number of high priority octets, as determined by the port ingress QoS policy, offered by the Pchip to the Qchip.
portIngQosQStatOffHiPrioPkts [Port Ing Qos QStat Off Hi Prio Pkts] (tmnxPortIngQosQStatOffHiPrioPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatOffHiPrioPkts indicates the number of high priority packets, as determined by the port ingress QoS policy, offered by the Pchip to the Qchip.
portIngQosQStatOffLoPrioOcts [Port Ing Qos QStat Off Lo Prio Octs] (tmnxPortIngQosQStatOffLoPrioOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatOffLoPrioOcts indicates the number of low priority octets, as determined by the port ingress QoS policy, offered by the Pchip to the Qchip.
portIngQosQStatOffLoPrioPkts [Port Ing Qos QStat Off Lo Prio Pkts] (tmnxPortIngQosQStatOffLoPrioPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatOffLoPrioPkts indicates the number of low priority packets, as determined by the port ingress QoS policy, offered by the Pchip to the Qchip.
portIngQosQStatQueueId [Port Ing Qos QStat Queue Id] (tmnxPortIngQosQStatQueueId)	long	The value of tmnxPortIngQosQStatQueueId specifies the queue-group queue ID which is used as the fourth index to the table entry.
portIngQosQStatUncolOctsOff [Port Ing Qos QStat Uncol Octs Off] (tmnxPortIngQosQStatUncolOctsOff)	java. math. BigInteger	The value of tmnxPortIngQosQStatUncolOctsOff indicates the number of uncolored octets offered to the ingress Qchip.

Table 408 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portIngQosQStatUncolPktsOff [Port Ing Qos QStat Uncol Pkts Off] (tmnxPortIngQosQStatUncolPktsOff)	java. math. BigInteger	The value of tmnxPortIngQosQStatUncolPktsOff indicates the number of uncolored packets offered to the ingress Qchip.
<p>PortNetEgrQGrpArbitStat</p> <p>MIB entry name: tPortNetEgrQGrpArbitStatEntry</p> <p>Entry description: The value of tPortNetEgrQGrpArbitStatEntry defines an entry in the tPortNetEgrQGrpArbitStatTable. It represents statistics about a specific QoS egress queue group arbiter.</p> <p>Table description (for tPortNetEgrQGrpArbitStatTable): The value of tPortNetEgrQGrpArbitStatTable contains egress QoS queue group arbiter statistics on network side.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetequipment.NetworkEgrQGroup</p>		
portNetEgrQGrpArbitStatFwdOcts [Port Net Egr QGrp Arbit Stat Fwd Octs] (tPortNetEgrQGrpArbitStatFwdOcts)	java. math. BigInteger	The value of tPortNetEgrQGrpArbitStatFwdOcts indicates the number of fowrwarded octets by the egress queue group arbiter Pchip.
portNetEgrQGrpArbitStatFwdOctsH [Port Net Egr QGrp Arbit Stat Fwd Octs H] (tPortNetEgrQGrpArbitStatFwdOctsH)	long	The value of tPortNetEgrQGrpArbitStatFwdOctsH indicates the upper 32 bits of tPortNetEgrQGrpArbitStatFwdOcts.
portNetEgrQGrpArbitStatFwdOctsL [Port Net Egr QGrp Arbit Stat Fwd Octs L] (tPortNetEgrQGrpArbitStatFwdOctsL)	long	The value of tPortNetEgrQGrpArbitStatFwdOctsL indicates the lower 32 bits of tPortNetEgrQGrpArbitStatFwdOcts.
portNetEgrQGrpArbitStatFwdPkts [Port Net Egr QGrp Arbit Stat Fwd Pkts] (tPortNetEgrQGrpArbitStatFwdPkts)	java. math. BigInteger	The value of tPortNetEgrQGrpArbitStatFwdPkts indicates the number of fowrwarded packets by the egress queue group arbiter Pchip.

Table 408 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portNetEgrQGrpArbitStatFwdPktsH [Port Net Egr QGrp Arbit Stat Fwd Pkts H] (tPortNetEgrQGrpArbitStatFwdPktsH)	long	The value of tPortNetEgrQGrpArbitStatFwdPktsH indicates the upper 32 bits of tPortNetEgrQGrpArbitStatFwdPkts.
portNetEgrQGrpArbitStatFwdPktsL [Port Net Egr QGrp Arbit Stat Fwd Pkts L] (tPortNetEgrQGrpArbitStatFwdPktsL)	long	The value of tPortNetEgrQGrpArbitStatFwdPktsL indicates the lower 32 bits of tPortNetEgrQGrpArbitStatFwdPkts.
portNetEgrQGrpArbitStatName [Port Net Egr QGrp Arbit Stat Name] (tPortNetEgrQGrpArbitStatName)	String	The value of tPortNetEgrQGrpArbitStatName specifies the name of the egress QoS arbiter of this port network queue group.
<p>PortNetEgrQGrpPStat</p> <p>MIB entry name: tPortNetEgrQGrpPStatEntry</p> <p>Entry description: The value of tPortNetEgrQGrpPStatEntry defines an entry in the tPortNetEgrQGrpPStatTable. portNetEgrQGrpPStOffOutProfPktL [Port Net Egr QGrp PSt Off Out Prof Pkt L] (tPortNetEgrQGrpPStOffOutProfPktL)	long	The value of tPortNetEgrQGrpPStOffOutProfPktL indicates the lower 32 bits of tPortNetEgrQGrpPStOffOutProfPkt.
portNetEgrQGrpPStUncolOctOff [Port Net Egr QGrp PSt Uncol Oct Off] (tPortNetEgrQGrpPStUncolOctOff)	java. math. BigInteger	The value of tPortNetEgrQGrpPStUncolOctOff indicates the number of uncolored octets forwarded by the egress Pchip.
portNetEgrQGrpPStUncolOctOffH [Port Net Egr QGrp PSt Uncol Oct Off H] (tPortNetEgrQGrpPStUncolOctOffH)	long	The value of tPortNetEgrQGrpPStUncolOctOffH indicates the upper 32 bits of tPortNetEgrQGrpPStUncolOctOff.
portNetEgrQGrpPStUncolOctOffL [Port Net Egr QGrp PSt Uncol Oct Off L] (tPortNetEgrQGrpPStUncolOctOffL)	long	The value of tPortNetEgrQGrpPStUncolOctOffL indicates the lower 32 bits of tPortNetEgrQGrpPStUncolOctOff.
portNetEgrQGrpPStUncolPktOff [Port Net Egr QGrp PSt Uncol Pkt Off] (tPortNetEgrQGrpPStUncolPktOff)	java. math. BigInteger	The value of tPortNetEgrQGrpPStUncolPktOff indicates the number of uncolored packets forwarded by the egress Pchip.
portNetEgrQGrpPStUncolPktOffH [Port Net Egr QGrp PSt Uncol Pkt Off H] (tPortNetEgrQGrpPStUncolPktOffH)	long	The value of tPortNetEgrQGrpPStUncolPktOffH indicates the upper 32 bits of tPortNetEgrQGrpPStUncolPktOff.
portNetEgrQGrpPStUncolPktOffL [Port Net Egr QGrp PSt Uncol Pkt Off L] (tPortNetEgrQGrpPStUncolPktOffL)	long	The value of tPortNetEgrQGrpPStUncolPktOffL indicates the lower 32 bits of tPortNetEgrQGrpPStUncolPktOff.
portNetEgrQGrpPStatMode [Port Net Egr QGrp PStat Mode] (tPortNetEgrQGrpPStatMode)	int	The value of tPortNetEgrQGrpPStatMode indicates the stat mode used by this policer.

Table 409 ethernetoam statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CfmComponentLimitStats</p> <p>MIB entry name: tmnxDot1agCfmComponentLimitEntry</p> <p>Entry description: The tmnxDot1agCfmComponentLimitEntry consists of the resource limits for a particular component of ETH-CFM. Rows are managed by the system and can not be created or destroyed using SNMP set requests.</p> <p>Table description (for tmnxDot1agCfmComponentLimitTable): The tmnxDot1agCfmComponentLimitTable stores the current resource counts as well as their resource limits for Ethernet Connectivity Fault Management (ETH-CFM) components in the SROS series system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetoam.CfmComponentLimit</p>		
compName [Comp Name] (tmnxDot1agCfmCompName)	String	The value of tmnxDot1agCfmCompName indicates the name of the ETH-CFM component.
compResourceLimit [Comp Resource Limit] (tmnxDot1agCfmCompResourceLimit)	long	The value of tmnxDot1agCfmCompResourceLimit indicates the maximum resource usage limit for the ETH-CFM component for the SROS series system.
compResourceUsage [Comp Resource Usage] (tmnxDot1agCfmCompResourceUsage)	long	The value of tmnxDot1agCfmCompResourceUsage indicates the current resource usage for the ETH-CFM component.
majorIndex [Major Index] (tmnxDot1agCfmCompMajorIndex)	long	The value of tmnxDot1agCfmCompMajorIndex specifies the major identifier of the ETH-CFM component.
minorIndex [Minor Index] (tmnxDot1agCfmCompMinorIndex)	long	The value of tmnxDot1agCfmCompMinorIndex specifies the minor identifier of the ETH-CFM component.

Table 409 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CfmGlobalOpcodeStats</p> <p>MIB entry name: tmnxDot1agCfmGlobalOpcodeEntry</p> <p>Entry description: A Global Opcode Stats Table entry.</p> <p>Table description (for tmnxDot1agCfmGlobalOpcodeTable): tmnxDot1agCfmGlobalOpcodeTable consists of global statistics that are kept in the receive and transmit direction on the node for each CFM PDU Opcode.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetoam.CfmGlobalOpcode</p>		
globalOpcode [Global Opcode] (tmnxDot1agCfmGlobalOpcode)	int	Integer that defines which CFM PDU Opcode the statistics refer to.
globalOpcodeRx [Global Opcode Rx] (tmnxDot1agCfmGlobalOpcodeRx)	long	The total number of PDUs received on the node with the specified Opcode.
globalOpcodeTx [Global Opcode Tx] (tmnxDot1agCfmGlobalOpcodeTx)	long	The total number of PDUs transmitted from the node with the specified Opcode.
<p>CfmMepOpcodeStats</p> <p>MIB entry name: tmnxDot1agCfmMepOpcodeEntry</p> <p>Entry description: A Mep Opcode Stats Table entry.</p> <p>Table description (for tmnxDot1agCfmMepOpcodeTable): tmnxDot1agCfmMepOpcodeTable consists of statistics that are kept in the receive and transmit direction on a MEP for each CFM PDU Opcode.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetoam.CfmMepOpcode</p>		
mepOpcode [Mep Opcode] (tmnxDot1agCfmMepOpcode)	int	The value of tmnxDot1agCfmMepOpcode specifies the CFM PDU Opcode to which the statistics refer.

Table 409 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mepOpcodeRx [Mep Opcode Rx] (tmnxDot1agCfmMepOpcodeRx)	long	The total number of PDUs received on the MEP with the specified Opcode.
mepOpcodeTx [Mep Opcode Tx] (tmnxDot1agCfmMepOpcodeTx)	long	The total number of PDUs transmitted from the MEP with the specified Opcode.
CfmPacketCountStats MIB entry name: tmnxDot1agCfmGlobalPacketStats Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement		
globalAisTxActive [Global Ais Tx Active] (tmnxDot1agCfmGlobalAisTxActive)	long	The value of tmnxDot1agCfmGlobalAisTxActive indicates the number of sessions where fault (AIS or other) is actively being transmitted.
globalAisTxFail [Global Ais Tx Fail] (tmnxDot1agCfmGlobalAisTxFail)	long	The value of tmnxDot1agCfmGlobalAisTxFail indicates the number of sessions where fault (AIS or other) can't be transmitted due to lack of resources.
globalPacketDiscard [Global Packet Discard] (tmnxDot1agCfmGlobalPacketDiscard)	long	The value of tmnxDot1agCfmGlobalPacketDiscard indicates the number of packets discarded by ETH-CFM. A packet may be discarded for several reasons including, but not limited to, malformed PDU, invalid TLVs, MEP admin down, etc.
globalPacketDropped [Global Packet Dropped] (tmnxDot1agCfmGlobalPacketDropped)	long	The value of tmnxDot1agCfmGlobalPacketDropped indicates the number of packets dropped by ETH-CFM. A packet is dropped because of resource contention.
globalPacketRxCount [Global Packet Rx Count] (tmnxDot1agCfmGlobalPacketRxCount)	long	The value of tmnxDot1agCfmGlobalPacketRxCount indicates the number of received ETH-CFM packets.

Table 409 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
globalPacketTxCount [Global Packet Tx Count] (tmnxDot1agCfmGlobalPacketTxCount)	long	The value of tmnxDot1agCfmGlobalPacketTxCount indicates the number of transmitted ETH-CFM packets.
<p>OamPerfReqTypesStats</p> <p>MIB entry name: tmnxOamSysPerfReqTypeEntry</p> <p>Entry description: Rows in tmnxOamSysPerfReqTypeTable are system-generated at CPM restart. Rows cannot be created or destroyed using SNMP.</p> <p>Table description (for tmnxOamSysPerfReqTypeTable): tmnxOamSysPerfReqTypeTable has a row for each relevant OAM echo request packet type. Each row contains packet counters.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetoam.OamPerfReqTypes</p>		
oamTypeName [Oam Type Name] (tmnxOamSysPerfReqTypeName)	String	The value of tmnxOamSysPerfReqTypeName specifies the name of an echo request packet type (e.g. 'ICMP'). The name is the index for the row.
rxPackets [Rx Packets] (tmnxOamSysPerfReqTypeRemoteTstRx)	long	The value of tmnxOamSysPerfReqTypeRemoteTstRx indicates the number of echo request packets received from remotely initiated tests (since the last clear) for the echo request packet type specified by tmnxOamSysPerfReqTypeName.
txPackets [Tx Packets] (tmnxOamSysPerfReqTypeLocalTestTx)	long	The value of tmnxOamSysPerfReqTypeLocalTestTx indicates the number of echo request packets transmitted by locally initiated tests (since the last clear) for the echo request packet type specified by tmnxOamSysPerfReqTypeName.
<p>OamSysPerfStats</p> <p>MIB entry name: tmnxOamGeneralStats</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: netw.NetworkElement</p>		

Table 409 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
currentNumberOfSAATests [Current Number Of SAATests] (tmnxOamSysSessionCount)	long	The value of tmnxOamSysSessionCount indicates the number of OAM sessions currently allocated on this node. One OAM session is allocated when a test is configured (in the case of some test types) or activated (in the remaining cases). Tests with the following test types allocate OAM sessions: 1. SDP keep-alive. 2. Static route CPE check. 3. Filter redirect policy ping test. 4. VRRP policy host unreachable ping test. 5. Any OAM or SAA test configured using TIMETRA-OAM-TEST-MIB. 6. Any test configured using TIMETRA-OAM-PM-MIB. The session is freed when the test is deactivated or deleted. tmnxOamSysSessionCount will not exceed tmnxOamSysSessionLimit. Configuration or activation of a test will fail when tmnxOamSysSessionCount equals tmnxOamSysSessionLimit.
currentTxRateForContinousTests [Current Tx Rate For Continous Tests] (tmnxOamSysPerfCfgTotalTx)	long	The value of tmnxOamSysPerfCfgTotalTx indicates this node's current total configured echo request packet transmission rate, for the set of tests listed in the tmnxOamSysPerfCfgLimitTx DESCRIPTION clause. For example, suppose: a) several SDP keep-alive sessions are enabled, totalling 1000 echo request packets per second, and b) several SAA continuous tests are enabled, totalling 2000 echo request packets per second, and c) no other relevant tests are enabled. Then, tmnxOamSysPerfCfgTotalTx will have the value 3000. The value of tmnxOamSysPerfCfgTotalTx will not exceed the value of tmnxOamSysPerfCfgLimitTx.
lastClearStatsTime [Last Clear Stats Time] (tmnxOamSysPerfLastClearedTime)	long	The value of tmnxOamSysPerfLastClearedTime indicates the sysUpTime when the following statistics were cleared: tmnxOamSysPerfLocalTestTx, tmnxOamSysPerfRemoteTestRx, and tmnxOamSysPerfReqTypeTable. If the statistics have not been cleared since the last CPM restart, zero is returned. A packet count which is time stamped by this object can be converted to an average packets per second value using, for example, pps = tmnxOamSysPerfLocalTestTx / [(sysUpTime - tmnxOamSysPerfLastClearedTime)/100].

Table 409 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
maxNumberOfSAATests [Max Number Of SAATests] (tmnxOamSysSessionLimit)	long	The value of tmnxOamSysSessionLimit indicates the maximum number of OAM sessions available on this node. OAM sessions are allocated and freed as described in the tmnxOamSysSessionCount DESCRIPTION clause.
maxTxRateForAllOamTests [Max Tx Rate For All Oam Tests] (tmnxOamSysPerfOprLimitTx)	long	The value of tmnxOamSysPerfOprLimitTx indicates this node's upper bound on the total echo request packet transmission rate. Echo reply packets are not affected by this limit. The upper bound applies to echo request packets sent by the following test types: 1. SDP keep-alive. 2. Static route CPE check. 3. Filter redirect policy ping test. 4. VRRP policy host unreachable ping test. 5. Any OAM or SAA test configured using TIMETRA-OAM-TEST-MIB. 6. Any test configured using TIMETRA-OAM-PM-MIB.
maxTxRateForContinousTests [Max Tx Rate For Continous Tests] (tmnxOamSysPerfCfgLimitTx)	long	The value of tmnxOamSysPerfCfgLimitTx indicates this node's upper bound on the total configured echo request packet transmission rate for a set of test types. The upper bound is enforced to avoid echo request packet transmit overload, i.e. to ensure each enabled test can transmit echo request packets at the test's configured rate. Echo reply packets are not affected by this limit. The upper bound applies to echo request packets sent by the following 'always on' test types: 1. SDP keep-alive. 2. Static route CPE check. 3. Filter redirect policy ping test. 4. VRRP policy host unreachable ping test. 5. SAA continuous test (see tmnxOamSaaCtlContinuous). 6. OAM-PM proactive test (see TIMETRA-OAM-PM-MIB::tmnxOamPmCfgSessType). For example, suppose: a) tmnxOamSysPerfCfgLimitTx has the value 4000 echo request packets per second, and b) several SDP keep-alive sessions are enabled, totalling 1000 echo request packets per second, and c) several SAA continuous tests are enabled, totalling 3000 echo request packets per second. Then, an attempt to enable an additional SAA continuous test would be rejected with a 'resourceUnavailable(13)' error.

Table 409 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalNumberOfEchoRequestPacketsReceived [Total Number Of Echo Request Packets Received] (tmnxOamSysPerfRemoteTestRx)	long	The value of tmnxOamSysPerfRemoteTestRx indicates this node's total number of echo request packets received from remotely initiated tests (since the last clear).
totalNumberOfEchoRequestPacketsTransmitted [Total Number Of Echo Request Packets Transmitted] (tmnxOamSysPerfLocalTestTx)	long	The value of tmnxOamSysPerfLocalTestTx indicates this node's total number of echo request packets transmitted by locally initiated tests (since the last clear). The test types are listed in the tmnxOamSysPerfOprLimitTx DESCRIPTION clause.

Table 410 fr statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceStats</p> <p>MIB entry name: tmnxFRDlcmiEntry</p> <p>Entry description: The Parameters for a particular Data Link Connection Management Interface. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxFRDlcmiTable): The tmnxFRDlcmiTable has an entry for each port in the system that is configured for Frame Relay. It contains the parameters for the Data Link Connection Management Interface (DLCMI) for the frame relay service on this port.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: fr.Interface</p>		
ImiDiscardedMessages [Lmi Discarded Messages] (tmnxFRDlcmiDiscardedMsgs)	long	tmnxFRDlcmiDiscardedMsgs indicates the number of times the LMI agent discarded a received message because it wasn't expecting it, the type of message was incorrect, or the contents of the message were invalid.
ImiInvalidRxSeqNumMessages [Lmi Invalid Rx Seq Num Messages] (tmnxFRDlcmiInvRxSeqNumMsgs)	long	tmnxFRDlcmiInvRxSeqNumMsgs indicates the number of times the LMI agent received a message with an invalid receive sequence number: i.e. a sequence number that does not match the last transmitted sequence number of the agent.
ImiRxStatusEnquiryMessages [Lmi Rx Status Enquiry Messages] (tmnxFRDlcmiRxStatusEnqMsgs)	long	tmnxFRDlcmiRxStatusEnqMsgs indicates the number of LMI Status Enquiry messages received on this Frame Relay interface.
ImiRxStatusMessages [Lmi Rx Status Messages] (tmnxFRDlcmiRxStatusMsgs)	long	tmnxFRDlcmiRxStatusMsgs indicates the number of LMI Status messages received on this Frame Relay interface.
ImiStatusEnquiryMsgTimeouts [Lmi Status Enquiry Msg Timeouts] (tmnxFRDlcmiStatusEnqMsgTimeouts)	long	tmnxFRDlcmiStatusEnqMsgTimeouts indicates the number of times the LMI agent did not receive a Status Enquiry message within the allotted time.

Table 410 fr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lmiStatusMsgTimeouts [Lmi Status Msg Timeouts] (tmnxFRDlcmiStatusMsgTimeouts)	long	tmnxFRDlcmiStatusMsgTimeouts indicates the number of times the LMI agent did not receive a Status message within the allotted time.
lmiTxStatusEnquiryMessages [Lmi Tx Status Enquiry Messages] (tmnxFRDlcmiTxStatusEnqMsgs)	long	tmnxFRDlcmiTxStatusEnqMsgs indicates the number of LMI Status Enquiry messages transmitted on this Frame Relay interface.
lmiTxStatusMessages [Lmi Tx Status Messages] (tmnxFRDlcmiTxStatusMsgs)	long	tmnxFRDlcmiTxStatusMsgs indicates the number of LMI Status messages transmitted on this Frame Relay interface.

Table 411 gsmpp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>GsmppSessionStats</p> <p>MIB entry name: tmnxAncpSessionStatsEntry</p> <p>Entry description: Each row contains statistics information about an ANCP session known to the system. Rows are created/deleted automatically by the system. The table contains read-only information only.</p> <p>Table description (for tmnxAncpSessionStatsTable): The table tmnxAncpSessionStatsTable contains statistic information for every ANCP session known to the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: gsmpp.GsmppGroupNeighborSession</p>		
ancpAckReceived [Ancp Ack Received] (tmnxAncpSesStatRxAck)	long	The value of tmnxAncpSesStatRxAck indicates the number of GSMP ACK messages received in this ANCP session.
ancpAckTransmitted [Ancp Ack Transmitted] (tmnxAncpSesStatTxAck)	long	The value of tmnxAncpSesStatTxAck indicates the number of GSMP ACK messages that were transmitted to the ANCP neighbor in this ANCP session.
ancpLoopBackReceived [Ancp Loop Back Received] (tmnxAncpSesStatRxLoopback)	long	The value of tmnxAncpSesStatRxLoopback indicates the number of GSMP Loopback messages received in this ANCP session.
ancpLoopBackTransmitted [Ancp Loop Back Transmitted] (tmnxAncpSesStatTxLoopback)	long	The value of tmnxAncpSesStatTxLoopback indicates the number of GSMP Loopback messages that were transmitted to the ANCP neighbor in this ANCP session.
ancpPortDownReceived [Ancp Port Down Received] (tmnxAncpSesStatRxPortDown)	long	The value of tmnxAncpSesStatRxPortDown indicates the number of GSMP 'PortDown' messages received in this ANCP session.
ancpPortDownTransmitted [Ancp Port Down Transmitted] (tmnxAncpSesStatTxPortDown)	long	The value of tmnxAncpSesStatTxPortDown indicates the number of GSMP 'PortDown' messages that were transmitted to the ANCP neighbor in this session.

Table 411 gsmpp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
anccPortUpReceived [Ancc Port Up Received] (tmnxAnccSesStatRxPortUp)	long	The value of tmnxAnccSesStatRxPortUp indicates the number of GSMP 'PortUp' messages received in this ANCP session.
anccPortUpTransmitted [Ancc Port Up Transmitted] (tmnxAnccSesStatTxPortUp)	long	The value of tmnxAnccSesStatTxPortUp indicates the number of GSMP 'PortUp' messages that were transmitted to the ANCP neighbor in this session.
anccRstAckReceived [Ancc Rst Ack Received] (tmnxAnccSesStatRxRstAck)	long	The value of tmnxAnccSesStatRxRstAck indicates the number of GSMP RST ACK messages received in this ANCP session.
anccRstAckTransmitted [Ancc Rst Ack Transmitted] (tmnxAnccSesStatTxRstAck)	long	The value of tmnxAnccSesStatTxRstAck indicates the number of GSMP RST ACK messages that were transmitted to the ANCP neighbor in this session.
anccSynAckReceived [Ancc Syn Ack Received] (tmnxAnccSesStatRxSynAck)	long	The value of tmnxAnccSesStatRxSynAck indicates the number of GSMP SYN ACK messages received in this ANCP session.
anccSynAckTransmitted [Ancc Syn Ack Transmitted] (tmnxAnccSesStatTxSynAck)	long	The value of tmnxAnccSesStatTxSynAck indicates the number of GSMP SYN ACK messages that were transmitted to the ANCP neighbor in this ANCP session.
anccSynReceived [Ancc Syn Received] (tmnxAnccSesStatRxSyn)	long	The value of tmnxAnccSesStatRxSyn indicates the number of GSMP SYN messages received in this ANCP session.
anccSynTransmitted [Ancc Syn Transmitted] (tmnxAnccSesStatTxSyn)	long	The value of tmnxAnccSesStatTxSyn indicates the number of GSMP SYN messages that were transmitted to the ANCP neighbor in this ANCP session.

Table 411 gsmf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ancpTransmittedDropped [Ancp Transmitted Dropped] (tmnxAncpSesStatTxDrop)	long	The value of tmnxAncpSesStatTxDrop indicates the number of GSMP protocol messages that were created by the system in order for them to be sent to the ACNP neighbor, but were never transmitted.

Table 412 igmp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceStats MIB entry name: vRtrIgmplfStatsEntry Entry description: An entry in the vRtrIgmplfStatsTable. Table description (for vRtrIgmplfStatsTable): The table listing the IGMP statistics for a particular interface. Supports realtime plotting Supports scheduled collection Monitored class: igmp.Interface</p>		
importPolicyDrops [Import Policy Drops] (vRtrIgmplfImportPolicyDrops)	long	The value of vRtrIgmplfImportPolicyDrops indicates the total number of times IGMP protocol instance matched the host IP address or group/source addresses specified in the import policy vRtrIgmplfImportPolicy.
mcacPolicyDrops [Mcac Policy Drops] (vRtrIgmplfStatsMcacPolicyDrops)	long	The value of the object vRtrIgmplfStatsMcacPolicyDrops indicates the number times an IGMP Group is dropped because of applying a multicast CAC policy on this interface.
rxBadChecksumPkts [Rx Bad Checksum Pkts] (vRtrIgmplfRxBadChecksumPkts)	long	The value of vRtrIgmplfRxBadChecksumPkts indicates the total number of IGMP packets with bad checksum received on this interface.
rxBadEncodings [Rx Bad Encodings] (vRtrIgmplfRxBadEncodings)	long	The value of vRtrIgmplfRxBadEncodings indicates the total number of IGMP packets received on this interface which were not encoded correctly.
rxBadLenPkts [Rx Bad Len Pkts] (vRtrIgmplfRxBadLenPkts)	long	The value of vRtrIgmplfRxBadLenPkts indicates the total number of IGMP packets with bad length received on this interface.
rxBadReceiveIfPkts [Rx Bad Receive If Pkts] (vRtrIgmplfRxBadReceiveIfPkts)	long	The value of vRtrIgmplfRxBadReceiveIfPkts indicates the total number of IGMP packets incorrectly received on this interface.

Table 412 igmp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxGenQueries [Rx Gen Queries] (vRtrIgmplfRxGenQueries)	long	The value of vRtrIgmplfRxGenQueries indicates the total number of IGMP General Queries received on this interface.
rxGrpQueries [Rx Grp Queries] (vRtrIgmplfRxGrpQueries)	long	The value of vRtrIgmplfRxGrpQueries indicates the number of IGMP Group Specific Queries received on this interface.
rxGrpSrcQueries [Rx Grp Src Queries] (vRtrIgmplfRxGrpSrcQueries)	long	The value of vRtrIgmplfRxGrpSrcQueries indicates the number of IGMP Group and Source Specific Queries received on this interface.
rxLeaves [Rx Leaves] (vRtrIgmplfRxLeaves)	long	The value of vRtrIgmplfRxLeaves indicates the total number of IGMP V2 Leaves received on this interface.
rxNoRtrAlertPkts [Rx No Rtr Alert Pkts] (vRtrIgmplfRxNoRtrAlertPkts)	long	The value of vRtrIgmplfRxNoRtrAlertPkts indicates the total number of IGMPv3 packets received on this interface which did not have the router alert flag set.
rxNonLocal [Rx Non Local] (vRtrIgmplfRxNonLocal)	long	The value of vRtrIgmplfRxNonLocal indicates the total number of IGMP packets received from a non-local sender.
rxPktDrops [Rx Pkt Drops] (vRtrIgmplfRxPktDrops)	long	The value of vRtrIgmplfRxPktDrops indicates the total number of IGMP packets that were received on this interface but were dropped.
rxUnknownTypePkts [Rx Unknown Type Pkts] (vRtrIgmplfRxUnknownTypePkts)	long	The value of vRtrIgmplfRxUnknownTypePkts indicates the total number of IGMP packets with unknown type received on this interface.
rxV1Reports [Rx V1 Reports] (vRtrIgmplfRxV1Reports)	long	The value of vRtrIgmplfRxV1Reports indicates the total number of IGMP V1 Reports received on this interface.

Table 412 igmp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxV2Reports [Rx V2 Reports] (vRtrIgmplfRxV2Reports)	long	The value of vRtrIgmplfRxV2Reports indicates the total number of IGMP V2 Reports received on this interface.
rxV3Reports [Rx V3 Reports] (vRtrIgmplfRxV3Reports)	long	The value of vRtrIgmplfRxV3Reports indicates the total number of IGMP V3 Reports received on this interface.
rxWrongVersions [Rx Wrong Versions] (vRtrIgmplfRxWrongVersions)	long	The value of vRtrIgmplfRxWrongVersions indicates the total number of IGMP packets with wrong versions received on this interface.
statsSGTypes [Stats SGTypes] (vRtrIgmplfStatsSGTypes)	long	The value of vRtrIgmplfStatsSGTypes indicates the number of entries on this interface for which the source type is 'sg'.
statsStarGTypes [Stats Star GTypes] (vRtrIgmplfStatsStarGTypes)	long	vRtrIgmplfStatsStarGTypes indicates the number of entries on this interface for which the source type is 'starG'.
txErrors [Tx Errors] (vRtrIgmplfTxErrors)	long	The value of vRtrIgmplfTxErrors indicates the total number of times there was an error transmitting IGMP packets on this interface..
txGenQueries [Tx Gen Queries] (vRtrIgmplfTxGenQueries)	long	The value of vRtrIgmplfTxGenQueries indicates the number of IGMP General Queries transmitted on this interface.
txGrpQueries [Tx Grp Queries] (vRtrIgmplfTxGrpQueries)	long	The value of vRtrIgmplfTxGrpQueries indicates the number of IGMP Group Specific Queries transmitted on this interface.
txGrpSrcQueries [Tx Grp Src Queries] (vRtrIgmplfTxGrpSrcQueries)	long	The value of vRtrIgmplfTxGrpSrcQueries indicates the number of IGMP Group and Source Specific Queries transmitted on this interface.

Table 412 igmp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txLeaves [Tx Leaves] (vRtrIgmplfTxLeaves)	long	The value of vRtrIgmplfTxLeaves indicates the total number of IGMP Leaves transmitted on this interface.
txV1Reports [Tx V1 Reports] (vRtrIgmplfTxV1Reports)	long	The value of vRtrIgmplfTxV1Reports indicates the total number of IGMP V1 Reports transmitted on this interface.
txV2Reports [Tx V2 Reports] (vRtrIgmplfTxV2Reports)	long	The value of vRtrIgmplfTxV2Reports indicates the total number of IGMP V2 Reports transmitted on this interface.
txV3Reports [Tx V3 Reports] (vRtrIgmplfTxV3Reports)	long	The value of vRtrIgmplfTxV3Reports indicates the total number of IGMP V3 Reports transmitted on this interface.
InterfaceStatsExtension MIB entry name: vRtrIgmplfStatsEntry Entry description: An entry in the vRtrIgmplfStatsTable. Table description (for vRtrIgmplfStatsTable): The table listing the IGMP statistics for a particular interface. Supports realtime plotting Supports scheduled collection Monitored class: igmp.Interface		
rxLocalScopePkts [Rx Local Scope Pkts] (vRtrIgmplfRxLocalScopePkts)	long	The value of the object vRtrIgmplfRxLocalScopePkts indicates the number of IGMP packets received on the link-local scope IPv4 multicast address.
rxRsvdScopePkts [Rx Rsvd Scope Pkts] (vRtrIgmplfRxRsvdScopePkts)	long	The value of the object vRtrIgmplfRxRsvdScopePkts indicates the number of IGMP packets received on the reserved scope IPv4 multicast address.

Table 413 isis statistics

unknownSent [Unknown Sent] (tmnxIisisStatsUnknownSent)	long	The value of the object tmnxIisisStatsUnknownSent indicates the count of link state PDUs sent out by this instance of the protocol is maintained by tmnxIisisStatsUnknownSent.

Table 413 isis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SiteLfaStats</p> <p>MIB entry name: tmnxIsisLfaEntry</p> <p>Entry description: Each row entry in the tmnxIsisLfaTable represents information on LFA coverage for various topologies of the system.</p> <p>Table description (for tmnxIsisLfaTable): The tmnxIsisLfaTable maintains information on loopfree-alternate (LFA) coverage for each instance of IS-IS protocol.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: isis.Site</p>		
isisLfalpv4Coverage [Isis Lfa Ipv 4 Coverage] (tmnxIsisLfalIpv4Coverage)	long	The value of the object tmnxIsisLfalIpv4Coverage indicates how much LFA coverage is being obtained for the available IPv4 routes.
isisLfalpv4NodesCovered [Isis Lfa Ipv 4 Nodes Covered] (tmnxIsisLfalIpv4NodesCovered)	long	The value of the object tmnxIsisLfalIpv4NodesCovered indicates in absolute numbers how much LFA coverage is being obtained for the available IPv4 routes.
isisLfalpv4TotalNodes [Isis Lfa Ipv 4 Total Nodes] (tmnxIsisLfalIpv4TotalNodes)	long	The value of the object tmnxIsisLfalIpv4TotalNodes indicates in absolute numbers how much LFA coverage can be obtained for the available IPv4 routes.
isisLfalpv6Coverage [Isis Lfa Ipv 6 Coverage] (tmnxIsisLfalIpv6Coverage)	long	The value of the object tmnxIsisLfalIpv6Coverage indicates how much LFA coverage is being obtained for the available IPv6 routes.
isisLfalpv6NodesCovered [Isis Lfa Ipv 6 Nodes Covered] (tmnxIsisLfalIpv6NodesCovered)	long	The value of the object tmnxIsisLfalIpv6NodesCovered indicates in absolute numbers how much LFA coverage is being obtained for available IPv6 routes.
isisLfalpv6TotalNodes [Isis Lfa Ipv 6 Total Nodes] (tmnxIsisLfalIpv6TotalNodes)	long	The value of the object tmnxIsisLfalIpv6TotalNodes indicates in absolute numbers how much LFA coverage can be obtained for the available IPv6 routes.

Table 413 isis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
isisLfaNodeCoverage [Isis Lfa Node Coverage] (tmnxIsisLfaNodeCoverage)	long	The value of the object tmnxIsisLfaNodeCoverage indicates how much LFA coverage is being obtained for the set of available nodes.
isisLfaNodesCovered [Isis Lfa Nodes Covered] (tmnxIsisLfaNodesCovered)	long	The value of the object tmnxIsisLfaNodesCovered indicates in absolute numbers how much LFA coverage is being obtained for the available routes.
isisLfaTotalNodes [Isis Lfa Total Nodes] (tmnxIsisLfaTotalNodes)	long	The value of the object tmnxIsisLfaTotalNodes indicates in absolute numbers how much LFA coverage can be obtained for the available routes.
SiteStats MIB entry name: tmnxIsisStatsEntry Entry description: Each row entry in the tmnxIsisStatsTable stores statistics for an instance of IS-IS protocol configured. Table description (for tmnxIsisStatsTable): The tmnxIsisStatsTable provides statistics for each instance of IS-IS protocol configured. There is a one-to-one dependent relationship between the tables tmnxIsisTable and tmnxIsisStatsTable. Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • isis.Site • spb.Site 		
cspfDroppedRequests [Cspf Dropped Requests] (tmnxIsisStatsCSPFDroppedRequests)	long	The value of the object tmnxIsisStatsCSPFDroppedRequests indicates the number of dropped CSPF requests by the protocol.
cspfPathsFound [Cspf Paths Found] (tmnxIsisStatsCSPFPathsFound)	long	The value of the object tmnxIsisStatsCSPFPathsFound indicates the number of responses to CSPF requests for which paths satisfying the constraints were found.

Table 413 isis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cspfPathsNotFound [Cspf Paths Not Found] (tmnxIsisStatsCSPFPathsNotFound)	long	The value of the object tmnxIsisStatsCSPFPathsFound indicates the number of responses to CSPF requests for which no paths satisfying the constraints were found.
cspfRequests [Cspf Requests] (tmnxIsisStatsCSPFRequests)	long	The value of the object tmnxIsisStatsCSPFRequests indicates the number of CSPF requests made to the protocol.
initiatedPurges [Initiated Purges] (tmnxIsisStatsInitiatedPurges)	long	The value of the object tmnxIsisStatsInitiatedPurges indicates the number of times purges have been initiated.
lfaRuns [Lfa Runs] (tmnxIsisStatsLfaRuns)	long	The value of the object tmnxIsisStatsLfaRuns indicates the number of times loopfree-alternate calculations have been made.
lspRegenerations [Lsp Regenerations] (tmnxIsisStatsLSPRegenerations)	long	The value of the object tmnxIsisStatsLSPRegenerations indicates the count of LSP regenerations.
spfRuns [Spf Runs] (tmnxIsisStatsSpfRuns)	long	The value of the object tmnxIsisStatsSpfRuns indicates the number of times shortest path first calculations have been made.

Table 414 I2fib statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>MFibGrpSrcStats</p> <p>MIB entry name: tIsMFibStatsEntry</p> <p>Entry description: An entry in the tIsMFibStatsTable.</p> <p>Table description (for tIsMFibStatsTable): tIsMFibStatsTable contains statistics for the entries in the IPv4 Multicast FIB for this TIs. These statistics are collected by the forwarding engine.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: I2fib.MFibGrpSrc</p>		
forwardedOctets [Forwarded Octets] (tIsMFibStatsForwardedOctets)	java. math. BigInteger	The value of tIsMFibStatsForwardedOctets indicates the number of octets that were forwarded to the SAPs and SDPs listed in the tIsMFibInfoTable.
forwardedPkts [Forwarded Pkts] (tIsMFibStatsForwardedPkts)	java. math. BigInteger	The value of tIsMFibStatsForwardedPkts indicates the number of multicast packets that were forwarded to the SAPs and SDPs listed in the tIsMFibInfoTable.

configPacketsReceived [Config Packets Received] (tmnxMcLagStatsPktsRxConfig)	long	The value of tmnxMcLagStatsPktsRxConfig indicates how many valid MC-Lag control packets indicating the lag configuration were received on this system.
configPacketsTransmitted [Config Packets Transmitted] (tmnxMcLagStatsPktsTxConfig)	long	The value of tmnxMcLagStatsPktsTxConfig indicates how many MC-Lag control packets were transmitted from this system of type lag config.

Table 416 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
failedMD5AuthenticationPacketsDropped [Failed MD5 Authentication Packets Dropped] (tmnxMcLagStatsDropMD5)	long	The value of tmnxMcLagStatsDropMD5 indicates how many MC-Lag control packets were dropped on this system because they failed MD5 authentication.
failedPacketsTransmitted [Failed Packets Transmitted] (tmnxMcLagStatsPktsTxFailed)	long	The value of tmnxMcLagStatsPktsTxFailed indicates how many MC-Lag control packets failed to be transmitted.
invalidLagIdPacketsDropped [Invalid Lag Id Packets Dropped] (tmnxMcLagStatsDropTlvInvlLagId)	long	The value of tmnxMcLagStatsDropTlvInvlLagId indicates how many MC-Lag control packets were dropped on this system because they refer to an invalid or non multi-chassis lag.
invalidSizePacketsDropped [Invalid Size Packets Dropped] (tmnxMcLagStatsDropTlvInvalidSize)	long	The value of tmnxMcLagStatsDropTlvInvalidSize indicates how many MC-Lag control packets were dropped on this system because of invalid size.
keepalivePacketsReceived [Keepalive Packets Received] (tmnxMcLagStatsPktsRxKeepalive)	long	The value of tmnxMcLagStatsPktsRxKeepalive indicates how many valid MC-Lag control packets of type keepalive were received on this system.
keepalivePacketsTransmitted [Keepalive Packets Transmitted] (tmnxMcLagStatsPktsTxKeepalive)	long	The value of tmnxMcLagStatsPktsTxKeepalive indicates how many MC-Lag control packets were transmitted from this system of type keepalive.
outOfSequencePacketsDropped [Out Of Sequence Packets Dropped] (tmnxMcLagStatsDropOutOfSeq)	long	The value of tmnxMcLagStatsDropOutOfSeq indicates how many MC-Lag control packets were dropped on this system because they were out of sequence.
packetsDropped [Packets Dropped] (tmnxMcLagStatsDropPktKpaliveTask)	long	The value of tmnxMcLagStatsDropPktKpaliveTask indicates how many MC-Lag control packets were dropped on this system because of invalid size, authentication or unknown peer.

Table 416 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
packetsReceived [Packets Received] (tmnxMcLagStatsPktsRx)	long	The value of tmnxMcLagStatsPktsRx indicates how many MC-Lag control packets with valid authentication were received on this system.
packetsTransmitted [Packets Transmitted] (tmnxMcLagStatsPktsTx)	long	The value of tmnxMcLagStatsPktsTx indicates how many MC-Lag control packets were transmitted from this system.
peerConfigPacketsReceived [Peer Config Packets Received] (tmnxMcLagStatsPktsRxPeerConfig)	long	The value of tmnxMcLagStatsPktsRxPeerConfig indicates how many valid MC-Lag control packets indicating the peer configuration were received on this system.
peerConfigPacketsTransmitted [Peer Config Packets Transmitted] (tmnxMcLagStatsPktsTxPeerConfig)	long	The value of tmnxMcLagStatsPktsTxPeerConfig indicates how many MC-Lag control packets were transmitted from this system of type peer config.
statePacketsReceived [State Packets Received] (tmnxMcLagStatsPktsRxState)	long	The value of tmnxMcLagStatsPktsRxState indicates how many valid MC-Lag control packets indicating the lag state were received on this system.
statePacketsTransmitted [State Packets Transmitted] (tmnxMcLagStatsPktsTxState)	long	The value of tmnxMcLagStatsPktsTxState indicates how many MC-Lag control packets were transmitted from this system of type lag state.
tooShortPacketsDropped [Too Short Packets Dropped] (tmnxMcLagStatsDropPktTooShort)	long	The value of tmnxMcLagStatsDropPktTooShort indicates how many MC-Lag control packets were dropped on this system because the packet was too small.
unknownPeerPacketsDropped [Unknown Peer Packets Dropped] (tmnxMcLagStatsDropUnknownPeer)	long	The value of tmnxMcLagStatsDropUnknownPeer indicates how many MC-Lag control packets were dropped on this system because they are coming from an unknown peer.
unknownTlvPacketsDropped [Unknown Tlv Packets Dropped] (tmnxMcLagStatsDropUnknownTlv)	long	The value of tmnxMcLagStatsDropUnknownTlv indicates how many MC-Lag control packets were dropped on this system because they contained an unknown TLV.

Table 416 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description

Table 417 Ldp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceStats</p> <p>MIB entry name: vRtrLdpIfStatsEntry</p> <p>Entry description: A row in this table contains statistical information about an LDP Interface or Targeted peer. Some counters contained in a row are for fatal errors received during a former LDP Session associated with this entry. For example, an LDP Pdu received on a TCP connection during an LDP Session contains a fatal error. That error is counted here, because the session is terminated. If the error is NOT fatal (i.e. and the Session remains), then the error is counted in the vRtrLdpSessionStatsEntry.</p> <p>Table description (for vRtrLdpIfStatsTable): vRtrLdpIfStatsTable is a read-only table. The purpose of this table is to keep statistical information about the LDP Interfaces and Targeted peers on the LSR. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vRtrLdpIfTable, and the augmenting table, vRtrLdpIfStatsTable. This in effect extends the vRtrLdpIfTable with additional columns. Creation or deletion of a row in the vRtrLdpIfTable results in the same fate for the row in the vRtrLdpIfStatsTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Idp.Interface</p>		
existingAdjacencies [Existing Adjacencies] (vRtrLdpIfExistingAdjacencies)	long	The value of vRtrLdpIfExistingAdjacencies gives a count of the total active adjacencies on this LDP interface or with this targeted peer.
<p>LdpEgressStats</p> <p>MIB entry name: vRtrLdpEgrStatisticsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrLdpEgrStatisticsTable): The vRtrLdpEgrStatisticsTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: Idp.AccountingFecPrefix</p>		

Table 417 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ldpInProfileOctetsFc0 [Ldp In Profile Octets Fc 0] (vRtrLdpInProfileOctetsFc0)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc0 indicates the number of in profile octets received for Forwarding Class 0.
ldpInProfileOctetsFc1 [Ldp In Profile Octets Fc 1] (vRtrLdpInProfileOctetsFc1)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc1 indicates the number of in profile octets received for Forwarding Class 1.
ldpInProfileOctetsFc2 [Ldp In Profile Octets Fc 2] (vRtrLdpInProfileOctetsFc2)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc2 indicates the number of in profile octets received for Forwarding Class 2.
ldpInProfileOctetsFc3 [Ldp In Profile Octets Fc 3] (vRtrLdpInProfileOctetsFc3)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc3 indicates the number of in profile octets received for Forwarding Class 3.
ldpInProfileOctetsFc4 [Ldp In Profile Octets Fc 4] (vRtrLdpInProfileOctetsFc4)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc4 indicates the number of in profile octets received for Forwarding Class 4.
ldpInProfileOctetsFc5 [Ldp In Profile Octets Fc 5] (vRtrLdpInProfileOctetsFc5)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc5 indicates the number of in profile octets received for Forwarding Class 5.
ldpInProfileOctetsFc6 [Ldp In Profile Octets Fc 6] (vRtrLdpInProfileOctetsFc6)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc6 indicates the number of in profile octets received for Forwarding Class 6.
ldpInProfileOctetsFc7 [Ldp In Profile Octets Fc 7] (vRtrLdpInProfileOctetsFc7)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc7 indicates the number of in profile octets received for Forwarding Class 7.

Table 417 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ldpInProfilePktsFc0 [Ldp In Profile Pkts Fc 0] (vRtrLdpInProfilePktsFc0)	java. math. BigInteger	The value of vRtrLdpInProfilePktsFc0 indicates the number of in profile packets received for Forwarding Class 0.
ldpInProfilePktsFc1 [Ldp In Profile Pkts Fc 1] (vRtrLdpInProfilePktsFc1)	java. math. BigInteger	The value of vRtrLdpInProfilePktsFc1 indicates the number of in profile packets received for Forwarding Class 1.
ldpInProfilePktsFc2 [Ldp In Profile Pkts Fc 2] (vRtrLdpInProfilePktsFc2)	java. math. BigInteger	The value of vRtrLdpInProfilePktsFc2 indicates the number of in profile packets received for Forwarding Class 2.
ldpInProfilePktsFc3 [Ldp In Profile Pkts Fc 3] (vRtrLdpInProfilePktsFc3)	java. math. BigInteger	The value of vRtrLdpInProfilePktsFc3 indicates the number of in profile packets received for Forwarding Class 3.
ldpInProfilePktsFc4 [Ldp In Profile Pkts Fc 4] (vRtrLdpInProfilePktsFc4)	java. math. BigInteger	The value of vRtrLdpInProfilePktsFc4 indicates the number of in profile packets received for Forwarding Class 4.
ldpInProfilePktsFc5 [Ldp In Profile Pkts Fc 5] (vRtrLdpInProfilePktsFc5)	java. math. BigInteger	The value of vRtrLdpInProfilePktsFc5 indicates the number of in profile packets received for Forwarding Class 5.
ldpInProfilePktsFc6 [Ldp In Profile Pkts Fc 6] (vRtrLdpInProfilePktsFc6)	java. math. BigInteger	The value of vRtrLdpInProfilePktsFc6 indicates the number of in profile packets received for Forwarding Class 6.
ldpInProfilePktsFc7 [Ldp In Profile Pkts Fc 7] (vRtrLdpInProfilePktsFc7)	java. math. BigInteger	The value of vRtrLdpInProfilePktsFc7 indicates the number of in profile packets received for Forwarding Class 7.

addressMessagesReceived [Address Messages Received] (vRtrLdpSessStatsAddrIn)	long	The value of vRtrLdpSessStatsAddrIn counts the number of Address Messages that have been received during this session.
addressMessagesSent [Address Messages Sent] (vRtrLdpSessStatsAddrOut)	long	The value of vRtrLdpSessStatsAddrOut counts the number of Address Messages that have been sent during this session.
addressWithdrawMessagesReceived [Address Withdraw Messages Received] (vRtrLdpSessStatsAddrWithdrawIn)	long	The value of vRtrLdpSessStatsAddrWithdrawIn counts the number of Address Withdraw Messages that have been received during this session.
addressWithdrawMessagesSent [Address Withdraw Messages Sent] (vRtrLdpSessStatsAddrWithdrawOut)	long	The value of vRtrLdpSessStatsAddrWithdrawOut counts the number of Address Withdraw Messages that have been sent during this session.
fecReceived [Fec Received] (vRtrLdpSessStatsFECRecv)	long	The value of vRtrLdpSessStatsFECRecv counts the number of FECs received for this session.

Table 417 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fecSent [Fec Sent] (vRtrLdpSessStatsFECSent)	long	The value of vRtrLdpSessStatsFECSent counts the number of FECs sent for this session.
helloMessagesReceived [Hello Messages Received] (vRtrLdpSessStatsHelloIn)	long	The value of vRtrLdpSessStatsHelloIn counts the number of Hello Messages that have been received during this session.
helloMessagesSent [Hello Messages Sent] (vRtrLdpSessStatsHelloOut)	long	The value of vRtrLdpSessStatsHelloOut counts the number of Hello Messages that have been sent during this session.
initMessagesReceived [Init Messages Received] (vRtrLdpSessStatsInitIn)	long	The value of vRtrLdpSessStatsInitIn counts the number of Init Messages that have been received during this session.
initMessagesSent [Init Messages Sent] (vRtrLdpSessStatsInitOut)	long	The value of vRtrLdpSessStatsInitOut counts the number of Init Messages that have been sent during this session.
keepAliveMessagesReceived [Keep Alive Messages Received] (vRtrLdpSessStatsKeepaliveIn)	long	The value of vRtrLdpSessStatsKeepaliveIn counts the number of Keepalive Messages that have been received during this session.
keepAliveMessagesSent [Keep Alive Messages Sent] (vRtrLdpSessStatsKeepaliveOut)	long	The value of vRtrLdpSessStatsKeepaliveOut counts the number of Keepalive Messages that have been sent during this session.
labelAbortsReceived [Label Aborts Received] (vRtrLdpSessStatsLabelAbortIn)	long	The value of vRtrLdpSessStatsLabelAbortIn counts the number of Label Abort Messages that have been received during this session.
labelAbortsSent [Label Aborts Sent] (vRtrLdpSessStatsLabelAbortOut)	long	The value of vRtrLdpSessStatsLabelAbortOut counts the number of Label Abort Messages that have been sent during this session.

Table 417 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
labelMappingsReceived [Label Mappings Received] (vRtrLdpSessStatsLabelMappingIn)	long	The value of vRtrLdpSessStatsLabelMappingIn counts the number of Label Mapping Messages that have been received during this session.
labelMappingsSent [Label Mappings Sent] (vRtrLdpSessStatsLabelMappingOut)	long	The value of vRtrLdpSessStatsLabelMappingOut counts the number of Label Mapping Messages that have been sent during this session.
labelReleasesReceived [Label Releases Received] (vRtrLdpSessStatsLabelReleaseIn)	long	The value of vRtrLdpSessStatsLabelReleaseIn counts the number of Label Release Messages that have been received during this session.
labelReleasesSent [Label Releases Sent] (vRtrLdpSessStatsLabelReleaseOut)	long	The value of vRtrLdpSessStatsLabelReleaseOut counts the number of Label Release Messages that have been sent during this session.
labelRequestsReceived [Label Requests Received] (vRtrLdpSessStatsLabelRequestIn)	long	The value of vRtrLdpSessStatsLabelRequestIn counts the number of Label Request Messages that have been received during this session.
labelRequestsSent [Label Requests Sent] (vRtrLdpSessStatsLabelRequestOut)	long	The value of vRtrLdpSessStatsLabelRequestOut counts the number of Label Request Messages that have been sent during this session.
labelWithdrawsReceived [Label Withdraws Received] (vRtrLdpSessStatsLabelWithdrawIn)	long	The value of vRtrLdpSessStatsLabelWithdrawIn counts the number of Label Withdraw Messages that have been received during this session.
labelWithdrawsSent [Label Withdraws Sent] (vRtrLdpSessStatsLabelWithdrawOut)	long	The value of vRtrLdpSessStatsLabelWithdrawOut counts the number of Label Withdraw Messages that have been sent during this session.
linkAdjacencies [Link Adjacencies] (vRtrLdpSessStatsLinkAdj)	long	The value of vRtrLdpSessStatsLinkAdj specifies the number of link adjacencies for this session.

Table 417 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
notificationMessagesReceived [Notification Messages Received] (vRtrLdpSessStatsNotificationIn)	long	The value of vRtrLdpSessStatsNotificationIn counts the number of Notification Messages that have been received during this session.
notificationMessagesSent [Notification Messages Sent] (vRtrLdpSessStatsNotificationOut)	long	The value of vRtrLdpSessStatsNotificationOut counts the number of Notification Messages that have been sent during this session.
targetedAdjacencies [Targeted Adjacencies] (vRtrLdpSessStatsTargAdj)	long	The value of vRtrLdpSessStatsTargAdj specifies the number of targeted adjacencies for this session.
<p>SiteStats</p> <p>MIB entry name: vRtrLdpStatsEntry</p> <p>Entry description: A row in this table represents statistical information about an LDP instance.</p> <p>Table description (for vRtrLdpStatsTable): vRtrLdpStatsTable is a read-only table. The purpose of this table is to keep statistical information about an LDP Instance. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vRtrLdpGeneralTable, and the augmenting table, vRtrLdpStatsTable. This in effect extends the vRtrLdpGeneralTable with additional columns. Creation or deletion of a row in the vRtrLdpGeneralTable results in the same fate for the row in the vRtrLdpStatsTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Ldp.Site</p>		
activeAdjacencies [Active Adjacencies] (vRtrLdpStatsActiveAdjacencies)	long	The value of vRtrLdpStatsActiveAdjacencies specifies the number of active adjacencies (i.e. established sessions) associated with the LDP instance.
activeInterfaces [Active Interfaces] (vRtrLdpStatsActiveInterfaces)	long	The value of vRtrLdpStatsActiveInterfaces specifies the number of active (i.e. operationally up) interfaces associated with the LDP instance.

Table 417 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
activeSessions [Active Sessions] (vRtrLdpStatsActiveSessions)	long	The value of vRtrLdpStatsActiveSessions specifies the number of active sessions (i.e. session in some form of creation) associated with the LDP instance.
activeTargetedSessions [Active Targeted Sessions] (vRtrLdpStatsActiveTargSessions)	long	The value of vRtrLdpStatsActiveTargSessions specifies the number of configured targeted peers that are administratively up in an LDP instance.
addressFECsReceived [Address FECs Received] (vRtrLdpStatsAddrFECRecv)	long	The value of vRtrLdpStatsAddrFECRecv specifies the number of Address FECs received by the LDP instance from its neighbors.
addressFECsSent [Address FECs Sent] (vRtrLdpStatsAddrFECSent)	long	The value of vRtrLdpStatsAddrFECSent specifies the number of Address FECs sent by the LDP instance to its neighbors.
attemptedSessions [Attempted Sessions] (vRtrLdpStatsAttemptedSessions)	long	The value of vRtrLdpStatsAttemptedSessions specifies the total number of attempted sessions for this LDP instance.
badLdpIdentifierErrors [Bad Ldp Identifier Errors] (vRtrLdpStatsBadLdpIdentifierErrors)	long	The value of vRtrLdpStatsBadLdpIdentifierErrors gives the number of Bad LDP Identifier Fatal Errors detected for sessions associated with this LDP instance.
badMessageLengthErrors [Bad Message Length Errors] (vRtrLdpStatsBadMessageLengthErrors)	long	The value of vRtrLdpStatsBadMessageLengthErrors gives the number of Bad Message Length Fatal Errors detected for sessions associated with this LDP instance.
badPduLengthErrors [Bad Pdu Length Errors] (vRtrLdpStatsBadPduLengthErrors)	long	The value of vRtrLdpStatsBadPduLengthErrors gives the number of Bad Pdu Length Fatal Errors detected for sessions associated with this LDP instance.
badTlvLengthErrors [Bad Tlv Length Errors] (vRtrLdpStatsBadTlvLengthErrors)	long	The value of vRtrLdpStatsBadTlvLengthErrors gives the number of Bad TLV Length Fatal Errors detected for sessions associated with this LDP instance.

Table 417 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrFecPfxCount [Egr Fec Pfx Count] (vRtrLdpStatsEgrFecPfxCount)	long	The value of vRtrLdpStatsEgrFecPfxCount indicates the number of egress FEC prefix statistics configured for this LDP instance.
inactiveInterfaces [Inactive Interfaces] (vRtrLdpStatsInactiveInterfaces)	long	The value of vRtrLdpStatsInactiveInterfaces specifies the number of inactive (i.e. operationally down) interfaces associated with the LDP instance.
inactiveTargetedSessions [Inactive Targeted Sessions] (vRtrLdpStatsInactiveTargSessions)	long	The value of vRtrLdpStatsInactiveTargSessions specifies the number of inactive (i.e. operationally down) targeted sessions associated with the LDP instance.
keepAliveExpiredErrors [Keep Alive Expired Errors] (vRtrLdpStatsKeepAliveExpiredErrors)	long	The value of vRtrLdpStatsKeepAliveExpiredErrors gives the number of Session Keep Alive Timer Expired Errors detected for sessions associated with this LDP instance.
malformedTlvValueErrors [Malformed Tlv Value Errors] (vRtrLdpStatsMalformedTlvValueErrors)	long	The value of vRtrLdpStatsMalformedTlvValueErrors gives the number of Malformed TLV Value Fatal Errors detected for sessions associated with this LDP instance.
operDownEvents [Oper Down Events] (vRtrLdpStatsOperDownEvents)	long	The value of vRtrLdpStatsOperDownEvents specifies the number of times the LDP instance has gone operationally down since the instance was created.
serviceFECsReceived [Service FECs Received] (vRtrLdpStatsSvcFECRecv)	long	The value of vRtrLdpStatsSvcFECRecv specifies the number of Service FECs received by the LDP instance from its neighbors.
serviceFECsSent [Service FECs Sent] (vRtrLdpStatsSvcFECSent)	long	The value of vRtrLdpStatsSvcFECSent specifies the number of Service FECs sent by the LDP instance to its neighbors.

Table 417 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sessionRejectedAdvertisementModeErrors [Session Rejected Advertisement Mode Errors] (vRtrLdpStatsSessRejAdvErrors)	long	The value of vRtrLdpStatsSessRejAdvErrors gives the total number of Session Rejected/Parameters Advertisement Mode Error Notification Messages sent or received by this LDP instance.
sessionRejectedLabelRangeErrors [Session Rejected Label Range Errors] (vRtrLdpStatsSessRejLabelRangeErrors)	long	The value of vRtrLdpStatsSessRejLabelRangeErrors gives the total number of Session Rejected/Parameters Label Range Error Notification Messages sent or received by this LDP instance.
sessionRejectedMaxPduLengthErrors [Session Rejected Max Pdu Length Errors] (vRtrLdpStatsSessRejMaxPduErrors)	long	The value of vRtrLdpStatsSessRejMaxPduErrors gives the total number of Session Rejected/Parameters Max Pdu Length Error Notification Messages sent or received by this LDP instance.
sessionRejectedNoHelloErrors [Session Rejected No Hello Errors] (vRtrLdpStatsSessRejNoHelloErrors)	long	The value of vRtrLdpStatsSessRejNoHelloErrors gives the total number of Session Rejected/No Hello Error Notification Messages sent or received by this LDP instance.
shutdownNotificationsReceived [Shutdown Notifications Received] (vRtrLdpStatsShutdownNotifRecv)	long	The value of vRtrLdpStatsShutdownNotifRecv gives the number of Shutdown Notifications received related to sessions associated with this LDP instance.
shutdownNotificationsSent [Shutdown Notifications Sent] (vRtrLdpStatsShutdownNotifSent)	long	The value of vRtrLdpStatsShutdownNotifSent gives the number of Shutdown Notifications sent related to sessions associated with this LDP instance.
unknownTlvErrors [Unknown Tlv Errors] (vRtrLdpStatsUnknownTlvErrors)	long	The value of vRtrLdpStatsUnknownTlvErrors indicates the number of Unknown TLV Fatal Errors detected for sessions associated with this LDP instance.

Table 417 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>TargetedPeerStats</p> <p>MIB entry name: vRtrLdpIfStatsEntry</p> <p>Entry description: A row in this table contains statistical information about an LDP Interface or Targeted peer. Some counters contained in a row are for fatal errors received during a former LDP Session associated with this entry. For example, an LDP Pdu received on a TCP connection during an LDP Session contains a fatal error. That error is counted here, because the session is terminated. If the error is NOT fatal (i.e. and the Session remains), then the error is counted in the vRtrLdpSessionStatsEntry.</p> <p>Table description (for vRtrLdpIfStatsTable): vRtrLdpIfStatsTable is a read-only table. The purpose of this table is to keep statistical information about the LDP Interfaces and Targeted peers on the LSR. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vRtrLdpIfTable, and the augmenting table, vRtrLdpIfStatsTable. This in effect extends the vRtrLdpIfTable with additional columns. Creation or deletion of a row in the vRtrLdpIfTable results in the same fate for the row in the vRtrLdpIfStatsTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ldp.TargetedPeer</p>		
existingAdjacencies [Existing Adjacencies] (vRtrLdpIfExistingAdjacencies)	long	The value of vRtrLdpIfExistingAdjacencies gives a count of the total active adjacencies on this LDP interface or with this targeted peer.

Table 418 Ildp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
LLDPRemoteSystemStats MIB entry name: IldpStatistics Supports realtime plotting Supports scheduled collection Monitored class: Ildp.LLDPConfiguration		
remTablesAgeouts [Rem Tables Ageouts] (IldpStatsRemTablesAgeouts)	long	The number of times the complete set of information advertised by a particular MSAP has been deleted from tables contained in IldpRemoteSystemsData and IldpExtensions objects because the information timeliness interval has expired. This counter should be incremented only once when the complete set of information is completely invalidated (aged out) from all related tables. Partial aging, similar to deletion case, is not allowed, and thus, should not change the value of this counter.
remTablesDeletes [Rem Tables Deletes] (IldpStatsRemTablesDeletes)	long	The number of times the complete set of information advertised by a particular MSAP has been deleted from tables contained in IldpRemoteSystemsData and IldpExtensions objects. This counter should be incremented only once when the complete set of information is completely deleted from all related tables. Partial deletions, such as deletion of rows associated with a particular MSAP from some tables, but not from all tables are not allowed, thus should not change the value of this counter.
remTablesDrops [Rem Tables Drops] (IldpStatsRemTablesDrops)	long	The number of times the complete set of information advertised by a particular MSAP could not be entered into tables contained in IldpRemoteSystemsData and IldpExtensions objects because of insufficient resources.

Table 418 Ildp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
remTablesInserts [Rem Tables Inserts] (IldpStatsRemTablesInserts)	long	The number of times the complete set of information advertised by a particular MSAP has been inserted into tables contained in IldpRemoteSystemsData and IldpExtensions objects. The complete set of information received from a particular MSAP should be inserted into related tables. If partial information cannot be inserted for a reason such as lack of resources, all of the complete set of information should be removed. This counter should be incremented only once after the complete set of information is successfully recorded in all related tables. Any failures during inserting information set which result in deletion of previously inserted information should not trigger any changes in IldpStatsRemTablesInserts since the insert is not completed yet or or in IldpStatsRemTablesDeletes, since the deletion would only be a partial deletion. If the failure was the result of lack of resources, the IldpStatsRemTablesDrops counter should be incremented once.
<p>LLDPRxPortStats</p> <p>MIB entry name: tmnxLldpStatsRxPortEntry</p> <p>Entry description: LLDP frame reception statistics for a particular port. The port must be contained in the same chassis as the LLDP agent. All counter values in a particular entry shall be maintained on a continuing basis and shall not be deleted upon expiration of rx Info TTL timing counters in the LLDP remote systems MIB of the receipt of a shutdown frame from a remote LLDP agent. All statistical counters associated with a particular port on the local LLDP agent become frozen whenever the admin status is disabled for the same port. Rows in this table can only be created for MAC addresses that can validly be used in association with the type of interface concerned, as defined by table 8-2. The contents of this table is persistent across re-initializations or re-boots.</p> <p>Table description (for tmnxLldpStatsRxPortTable): A table containing LLDP reception statistics for individual ports and destination MAC addresses. Entries are not required to exist in this table while the tmnxLldpPortCfgAdminStatus object is equal to 'disabled(4)'. Supports realtime plotting Supports scheduled collection Monitored class: Ildp.LLDPPortConfiguration</p>		

Table 418 lldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lldpStatsRxPortAgeouts [Lldp Stats Rx Port Ageouts] (tmnxLldpStatsRxPortAgeouts)	long	The counter that represents the number of age-outs that occurred on a given port. An age-out is the number of times the complete set of information advertised by a particular MSAP has been deleted from tables contained in tmnxLldpRemoteSystemsData and lldpExtensions objects because the information timeliness interval has expired. This counter is similar to lldpStatsRemTablesAgeouts, except that the counter is on a per port basis. This enables NMS to poll tables associated with the tmnxLldpRemoteSystemsData objects and all LLDP extension objects associated with remote systems on the indicated port only. This counter should be set to zero during agent initialization and its value should not be saved in non-volatile storage. When a port's admin status changes from 'disabled' to 'rxOnly', 'txOnly' or 'txAndRx', the counter associated with the same port should reset to 0. The agent should also flush all remote system information associated with the same port. This counter should be incremented only once when the complete set of information is invalidated (aged out) from all related tables on a particular port. Partial ageing is not allowed, and thus, should not change the value of this counter.
lldpStatsRxPortFrameDiscard [Lldp Stats Rx Port Frame Discard] (tmnxLldpStatsRxPortFrameDiscard)	long	The number of LLDP frames received by this LLDP agent on the indicated port, and then discarded for any reason. This counter can provide an indication that LLDP header formatting problems may exist with the local LLDP agent in the sending system or that LLDPDU validation problems may exist with the local LLDP agent in the receiving system.
lldpStatsRxPortFrameErrs [Lldp Stats Rx Port Frame Errs] (tmnxLldpStatsRxPortFrameErrs)	long	The number of invalid LLDP frames received by this LLDP agent on the indicated port, while this LLDP agent is enabled.
lldpStatsRxPortFrames [Lldp Stats Rx Port Frames] (tmnxLldpStatsRxPortFrames)	long	The number of valid LLDP frames received by this LLDP agent on the indicated port, while this LLDP agent is enabled.

Table 418 lldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lldpStatsRxPortTLVDiscard [Lldp Stats Rx Port TLVDiscard] (tmnxLldpStatsRxPortTLVDiscard)	long	The number of LLDP TLVs discarded for any reason by this LLDP agent on the indicated port.
lldpStatsRxPortTLVUnknown [Lldp Stats Rx Port TLVUnknown] (tmnxLldpStatsRxPortTLVUnknown)	long	The number of LLDP TLVs received on the given port that are not recognized by this LLDP agent on the indicated port. An unrecognized TLV is referred to as the TLV whose type value is in the range of reserved TLV types (000 1001 - 111 1110) in Table 9.1 of IEEE Std 802.1AB-2004. An unrecognized TLV may be a basic management TLV from a later LLDP version.
<p>LLDPTxPortStats</p> <p>MIB entry name: tmnxLldpStatsTxPortEntry</p> <p>Entry description: LLDP frame transmission statistics for a particular port and destination MAC address. The port must be contained in the same chassis as the LLDP agent. All counter values in a particular entry shall be maintained on a continuing basis and shall not be deleted upon expiration of rx Info TTL timing counters in the LLDP remote systems MIB of the receipt of a shutdown frame from a remote LLDP agent. All statistical counters associated with a particular port on the local LLDP agent become frozen whenever the admin status is disabled for the same port. Rows in this table can only be created for MAC addresses that can validly be used in association with the type of interface concerned, as defined by table 8-2. The contents of this table is persistent across re-initializations or re-boots.</p> <p>Table description (for tmnxLldpStatsTxPortTable): A table containing LLDP transmission statistics for individual port/destination address combinations. Entries are not required to exist in this table while the tmnxLldpPortConfigEntry object is equal to 'disabled(4)'.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: lldp.LLDPPortConfiguration</p>		
lldpStatsTxLLDPDULengthErrs [Lldp Stats Tx LLDPDULength Errs] (tmnxLldpStatsTxLLDPDULengthErrs)	long	The number of LLDPD Length Errors recorded for the Port.
lldpStatsTxPortFrames [Lldp Stats Tx Port Frames] (tmnxLldpStatsTxPortFrames)	long	The number of LLDP frames transmitted by this LLDP agent on the indicated port.

Table 419 mld statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceStats</p> <p>MIB entry name: vRtrMldIfStatsEntry</p> <p>Entry description: An entry in the vRtrMldIfStatsTable.</p> <p>Table description (for vRtrMldIfStatsTable): The vRtrMldIfStatsTable contains objects corresponding to the MLD statistics for a particular interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mld.Interface</p>		
importPolicyDrops [Import Policy Drops] (vRtrMldIfImportPolicyDrops)	long	The value of vRtrMldIfImportPolicyDrops indicates the total number of times the MLD protocol instance matched the host IP address or group or source addresses specified in the import policy vRtrMldIfImportPolicy.
rxBadChecksumPkts [Rx Bad Checksum Pkts] (vRtrMldIfRxBadChecksumPkts)	long	The value of vRtrMldIfRxBadChecksumPkts indicates the total number of MLD packets with bad checksum received on this interface.
rxBadEncodings [Rx Bad Encodings] (vRtrMldIfRxBadEncodings)	long	The value of vRtrMldIfRxBadEncodings indicates the total number of MLD packets received on this interface which were not encoded correctly.
rxBadLenPkts [Rx Bad Len Pkts] (vRtrMldIfRxBadLenPkts)	long	The value of vRtrMldIfRxBadLenPkts indicates the total number of MLD packets with bad length received on this interface.
rxBadReceiveIfPkts [Rx Bad Receive If Pkts] (vRtrMldIfRxBadReceiveIfPkts)	long	The value of vRtrMldIfRxBadReceiveIfPkts indicates the total number of MLD packets incorrectly received on this interface.
rxGenQueries [Rx Gen Queries] (vRtrMldIfRxGenQueries)	long	The value of vRtrMldIfRxGenQueries indicates the total number of MLD General Queries received on this interface.

Table 419 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxGrpQueries [Rx Grp Queries] (vRtrMldIfRxGrpQueries)	long	The value of vRtrMldIfRxGrpQueries indicates the number of MLD Group Specific Queries received on this interface.
rxGrpSrcQueries [Rx Grp Src Queries] (vRtrMldIfRxGrpSrcQueries)	long	The value of vRtrMldIfRxGrpSrcQueries indicates the number of MLD Group and Source Specific Queries received on this interface.
rxLeaves [Rx Leaves] (vRtrMldIfRxLeaves)	long	The value of vRtrMldIfRxLeaves indicates the total number of MLD V2 Leaves received on this interface.
rxLocalScopePkts [Rx Local Scope Pkts] (vRtrMldIfRxLocalScopePkts)	long	The value of the object vRtrMldIfRxLocalScopePkts indicates the number of MLD packets received on the link-local scope IPv6 multicast address.
rxNoRtrAlertPkts [Rx No Rtr Alert Pkts] (vRtrMldIfRxNoRtrAlertPkts)	long	The value of vRtrMldIfRxNoRtrAlertPkts indicates the total number of MLDv2 packets received on this interface which did not have the router alert flag set.
rxNonLocal [Rx Non Local] (vRtrMldIfRxNonLocal)	long	The value of vRtrMldIfRxNonLocal indicates the total number of MLD packets received from a non-local sender.
rxPktDrops [Rx Pkt Drops] (vRtrMldIfRxPktDrops)	long	The value of vRtrMldIfRxPktDrops indicates the total number of MLD packets that were received on this interface but were dropped.
rxRsvdScopePkts [Rx Rsvd Scope Pkts] (vRtrMldIfRxRsvdScopePkts)	long	The value of the object vRtrMldIfRxRsvdScopePkts indicates the number of MLD packets received on the reserved scope IPv6 multicast address.
rxUnknownTypePkts [Rx Unknown Type Pkts] (vRtrMldIfRxUnknownTypePkts)	long	The value of vRtrMldIfRxUnknownTypePkts indicates the total number of MLD packets with unknown type received on this interface.

Table 419 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxV1Reports [Rx V1 Reports] (vRtrMldIfRxV1Reports)	long	The value of vRtrMldIfRxV1Reports indicates the total number of MLD V1 Reports received on this interface.
rxV2Reports [Rx V2 Reports] (vRtrMldIfRxV2Reports)	long	The value of vRtrMldIfRxV2Reports indicates the total number of MLD V2 Reports received on this interface.
rxWrongVersions [Rx Wrong Versions] (vRtrMldIfRxWrongVersions)	long	The value of vRtrMldIfRxWrongVersions indicates the total number of MLD packets with wrong versions received on this interface.
statsSGTypes [Stats SGTypes] (vRtrMldIfStatsSGTypes)	long	The value of vRtrMldIfStatsSGTypes indicates the number of entries on this interface for which the source type is 'sg'.
statsStarGTypes [Stats Star GTypes] (vRtrMldIfStatsStarGTypes)	long	vRtrMldIfStatsStarGTypes indicates the number of entries on this interface for which the source type is 'starG'.
txErrors [Tx Errors] (vRtrMldIfTxErrors)	long	The value of vRtrMldIfTxErrors indicates the total number of times there was an error transmitting the MLD packets on this interface.
txGenQueries [Tx Gen Queries] (vRtrMldIfTxGenQueries)	long	The value of vRtrMldIfTxGenQueries indicates the number of MLD General Queries transmitted on this interface.
txGrpQueries [Tx Grp Queries] (vRtrMldIfTxGrpQueries)	long	The value of vRtrMldIfTxGrpQueries indicates the number of MLD Group Specific Queries transmitted on this interface.
txGrpSrcQueries [Tx Grp Src Queries] (vRtrMldIfTxGrpSrcQueries)	long	The value of vRtrMldIfTxGrpSrcQueries indicates the number of MLD Group and Source Specific Queries transmitted on this interface.

Table 419 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txLeaves [Tx Leaves] (vRtrMldIfTxLeaves)	long	The value of vRtrMldIfTxLeaves indicates the total number of MLD Leaves transmitted on this interface.
txV1Reports [Tx V1 Reports] (vRtrMldIfTxV1Reports)	long	The value of vRtrMldIfTxV1Reports indicates the total number of MLD V1 Reports transmitted on this interface.
txV2Reports [Tx V2 Reports] (vRtrMldIfTxV2Reports)	long	The value of vRtrMldIfTxV2Reports indicates the total number of MLD V2 Reports transmitted on this interface.
SiteStats MIB entry name: vRtrMldGenStatsEntry Entry description: Each row entry represents statistics for an instance of the MLD protocol running within a virtual router. Table description (for vRtrMldGenStatsTable): The vRtrMldGenStatsTable contains objects for general statistics for the MLD protocol instance within a virtual router. Supports realtime plotting Supports scheduled collection Monitored class: mld.Site		
statsSGTypes [Stats SGTypes] (vRtrMldGenStatsSGTypes)	long	The value of vRtrMldGenStatsSGTypes indicates the number of entries in vRtrMldGrpSrcTable for which the source type is 'sg'.
statsStarGTypes [Stats Star GTypes] (vRtrMldGenStatsStarGTypes)	long	The value of vRtrMldGenStatsStarGTypes indicates the number of entries in vRtrMldGrpSrcTable for which the source type is 'starG'.

Table 420 mpls statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>DynamicLspStats</p> <p>MIB entry name: vRtrMplsLspStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspStatTable): The vRtrMplsLspStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • mpls.DynamicLsp • mpls.SegmentRoutingTeLsp 		
configuredPaths [Configured Paths] (vRtrMplsLspConfiguredPaths)	long	The number of paths configured for this LSP.
operationalPaths [Operational Paths] (vRtrMplsLspOperationalPaths)	long	The number of operational paths for this LSP. This includes the path currently active, as well as operational standby paths.
pathChanges [Path Changes] (vRtrMplsLspPathChanges)	long	The number of path changes this LSP has had. For every path change (path down, path up, path change), a corresponding syslog/trap (if enabled) is generated for it.
standbyPaths [Standby Paths] (vRtrMplsLspStandbyPaths)	long	The number of standby paths configured for this LSP.
timeSinceLastPathChange [Time Since Last Path Change] (vRtrMplsLspLastPathChange)	long	The time in 10-millisecond units since the last change occurred on this LSP.

Table 420 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
timeSinceLastPrimaryUpState [Time Since Last Primary Up State] (vRtrMplsLspPrimaryTimeUp)	long	The total time in 10-millisecond units that this LSP's primary path has been operational. For example, the percentage contribution of the primary path to the operational time is given by (vRtrMplsLspPrimaryTimeUp/vRtrMplsLspTimeUp * 100) %.
<p>LspPathStats</p> <p>MIB entry name: vRtrMplsLspPathStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an association between a Labeled Switch Path (LSP) in the vRtrMplsLspTable and a path (or tunnel) entry in the mplsTunnelTable. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspPathStatTable): The vRtrMplsLspPathStatTable has an entry for an association between a Labeled Switch Path (LSP) in the vRtrMplsLspTable and a path (or tunnel) entry in the mplsTunnelTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.LspPath</p>		
cspfQueries [Cspf Queries] (vRtrMplsLspPathCspfQueries)	long	The value of vRtrMplsLspPathCspfQueries specifies the number of CSPF queries that have been made for this LSP path.
retryAttempts [Retry Attempts] (vRtrMplsLspPathRetryAttempts)	long	The number of unsuccessful attempts which have been made to signal this path. As soon as the path gets signalled, this is set to 0.
timeDown [Time Down] (vRtrMplsLspPathTimeDown)	long	The total time in 10-millisecond units that this LSP Path has not been operational.
timeUp [Time Up] (vRtrMplsLspPathTimeUp)	long	The total time in 10-millisecond units that this LSP path has been operational. For example, the percentage up time can be determined by computing (vRtrMplsLspPathTimeUp/vRtrMplsLspAge * 100 %).

Table 420 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transitionCount [Transition Count] (vRtrMplsLspPathTransitionCount)	long	The object vRtrMplsLspPathTransitionCount maintains the number of transitions that have occurred for this LSP.
<p>LspStats</p> <p>MIB entry name: vRtrMplsLspStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspStatTable): The vRtrMplsLspStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • mpls.BypassOnlyLsp • mpls.DynamicLsp • mpls.SegmentRoutingTeLsp • mpls.StaticLsp 		
age [Age] (vRtrMplsLspAge)	long	The age (i.e., time from creation till now) of this LSP in 10-millisecond periods.
timeSinceLastDownState [Time Since Last Down State] (vRtrMplsLspTimeDown)	long	The total time in 10-millisecond units that this LSP has not been operational.
timeSinceLastTransition [Time Since Last Transition] (vRtrMplsLspLastTransition)	long	The time in 10-millisecond units since the last transition occurred on this LSP.
timeSinceLastUpState [Time Since Last Up State] (vRtrMplsLspTimeUp)	long	The total time in 10-millisecond units that this LSP has been operational. For example, the percentage up time can be determined by computing (vRtrMplsLspTimeUp/ vRtrMplsLspAge * 100 %).

Table 420 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transitions [Transitions] (vRtrMplsLspTransitions)	long	The number of state transitions (up -> down and down -> up) this LSP has undergone.
<p>MplsInterfaceStats MIB entry name: vRtrMplsIfStatEntry Entry description: Each row entry represents a collection of statistics for an interface on this virtual router that participates in the MPLS protocol. Entries cannot be created and deleted via SNMP SET operations. Table description (for vRtrMplsIfStatTable): The vRtrMplsIfStatTable has an entry for each router interface configured for MPLS in the system. Supports realtime plotting Supports scheduled collection Monitored class: mpls.Interface</p>		
receiveOctets [Receive Octets] (vRtrMplsIfRxOctetCount)	java. math. BigInteger	The total number of bytes in MPLS labeled packets received on this interface.
receivePackets [Receive Packets] (vRtrMplsIfRxPktCount)	java. math. BigInteger	The total number of MPLS labeled packets received on this interface.
transmitOctets [Transmit Octets] (vRtrMplsIfTxOctetCount)	java. math. BigInteger	The total number of bytes in MPLS labeled packets transmitted on this interface.
transmitPackets [Transmit Packets] (vRtrMplsIfTxPktCount)	java. math. BigInteger	The total number of MPLS labeled packets transmitted from this interface.

<p>MplsLspEgressStats</p> <p>MIB entry name: vRtrMplsLspStatisticsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspStatisticsTable): The vRtrMplsLspStatisticsTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • mpls.DynamicLsp • mpls.P2MPDynamicLsp 		
lspType [Lsp Type] (vRtrMplsLspStatsLspType)	int	The value of vRtrMplsLspStatsLspType indicates whether the statistics apply to MPLS-TP, P2P, P2MP, Auto P2P or Auto P2MP LSP. When the value of vRtrMplsLspStatsTpOnly is 'true', the statistics apply for MPLS-TP LSP only and vRtrMplsLspStatsLspType is set to 'tpLsp'. When the value of vRtrMplsLspStatsTpOnly is 'false', the statistics apply for regular RSVP-TE signalled terminating LSP and the value of vRtrMplsLspStatsLspType can be set to either p2p, p2mp, autoP2p or autoP2mp.
mplsInProfileOctetsFc0 [Mpls In Profile Octets Fc 0] (vRtrMplsInProfileOctetsFc0)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc0 indicates the number of in profile octets received for Forwarding Class 0.
mplsInProfileOctetsFc1 [Mpls In Profile Octets Fc 1] (vRtrMplsInProfileOctetsFc1)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc1 indicates the number of in profile octets received for Forwarding Class 1.
mplsInProfileOctetsFc2 [Mpls In Profile Octets Fc 2] (vRtrMplsInProfileOctetsFc2)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc2 indicates the number of in profile octets received for Forwarding Class 2.

Table 420 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsInProfileOctetsFc3 [Mpls In Profile Octets Fc 3] (vRtrMplsInProfileOctetsFc3)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc3 indicates the number of in profile octets received for Forwarding Class 3.
mplsInProfileOctetsFc4 [Mpls In Profile Octets Fc 4] (vRtrMplsInProfileOctetsFc4)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc4 indicates the number of in profile octets received for Forwarding Class 4.
mplsInProfileOctetsFc5 [Mpls In Profile Octets Fc 5] (vRtrMplsInProfileOctetsFc5)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc5 indicates the number of in profile octets received for Forwarding Class 5.
mplsInProfileOctetsFc6 [Mpls In Profile Octets Fc 6] (vRtrMplsInProfileOctetsFc6)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc6 indicates the number of in profile octets received for Forwarding Class 6.
mplsInProfileOctetsFc7 [Mpls In Profile Octets Fc 7] (vRtrMplsInProfileOctetsFc7)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc7 indicates the number of in profile octets received for Forwarding Class 7.
mplsInProfilePktsFc0 [Mpls In Profile Pkts Fc 0] (vRtrMplsInProfilePktsFc0)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc0 indicates the number of in profile packets received for Forwarding Class 0.
mplsInProfilePktsFc1 [Mpls In Profile Pkts Fc 1] (vRtrMplsInProfilePktsFc1)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc1 indicates the number of in profile packets received for Forwarding Class 1.
mplsInProfilePktsFc2 [Mpls In Profile Pkts Fc 2] (vRtrMplsInProfilePktsFc2)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc2 indicates the number of in profile packets received for Forwarding Class 2.

Table 420 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsInProfilePktsFc3 [Mpls In Profile Pkts Fc 3] (vRtrMplsInProfilePktsFc3)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc3 indicates the number of in profile packets received for Forwarding Class 3.
mplsInProfilePktsFc4 [Mpls In Profile Pkts Fc 4] (vRtrMplsInProfilePktsFc4)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc4 indicates the number of in profile packets received for Forwarding Class 4.
mplsInProfilePktsFc5 [Mpls In Profile Pkts Fc 5] (vRtrMplsInProfilePktsFc5)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc5 indicates the number of in profile packets received for Forwarding Class 5.
mplsInProfilePktsFc6 [Mpls In Profile Pkts Fc 6] (vRtrMplsInProfilePktsFc6)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc6 indicates the number of in profile packets received for Forwarding Class 6.
mplsInProfilePktsFc7 [Mpls In Profile Pkts Fc 7] (vRtrMplsInProfilePktsFc7)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc7 indicates the number of in profile packets received for Forwarding Class 7.
mplsOutOfProfOctetsFc0 [Mpls Out Of Prof Octets Fc 0] (vRtrMplsOutOfProfOctetsFc0)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc0 indicates the number of out of profile octets received for Forwarding Class 0.
mplsOutOfProfOctetsFc1 [Mpls Out Of Prof Octets Fc 1] (vRtrMplsOutOfProfOctetsFc1)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc1 indicates the number of out of profile octets received for Forwarding Class 1.
mplsOutOfProfOctetsFc2 [Mpls Out Of Prof Octets Fc 2] (vRtrMplsOutOfProfOctetsFc2)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc2 indicates the number of out of profile octets received for Forwarding Class 2.

Table 420 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsOutOfProfOctetsFc3 [Mpls Out Of Prof Octets Fc 3] (vRtrMplsOutOfProfOctetsFc3)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc3 indicates the number of out of profile octets received for Forwarding Class 3.
mplsOutOfProfOctetsFc4 [Mpls Out Of Prof Octets Fc 4] (vRtrMplsOutOfProfOctetsFc4)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc4 indicates the number of out of profile octets received for Forwarding Class 4.
mplsOutOfProfOctetsFc5 [Mpls Out Of Prof Octets Fc 5] (vRtrMplsOutOfProfOctetsFc5)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc5 indicates the number of out of profile octets received for Forwarding Class 5.
mplsOutOfProfOctetsFc6 [Mpls Out Of Prof Octets Fc 6] (vRtrMplsOutOfProfOctetsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc6 indicates the number of out of profile octets received for Forwarding Class 6.
mplsOutOfProfOctetsFc7 [Mpls Out Of Prof Octets Fc 7] (vRtrMplsOutOfProfOctetsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc7 indicates the number of out of profile octets received for Forwarding Class 7.
mplsOutOfProfPktsFc0 [Mpls Out Of Prof Pkts Fc 0] (vRtrMplsOutOfProfPktsFc0)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc0 indicates the number of out of profile packets received for Forwarding Class 0.
mplsOutOfProfPktsFc1 [Mpls Out Of Prof Pkts Fc 1] (vRtrMplsOutOfProfPktsFc1)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc1 indicates the number of out of profile packets received for Forwarding Class 1.
mplsOutOfProfPktsFc2 [Mpls Out Of Prof Pkts Fc 2] (vRtrMplsOutOfProfPktsFc2)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc2 indicates the number of out of profile packets received for Forwarding Class 2.

Table 420 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsOutOfProfPktsFc3 [Mpls Out Of Prof Pkts Fc 3] (vRtrMplsOutOfProfPktsFc3)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc3 indicates the number of out of profile packets received for Forwarding Class 3.
mplsOutOfProfPktsFc4 [Mpls Out Of Prof Pkts Fc 4] (vRtrMplsOutOfProfPktsFc4)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc4 indicates the number of out of profile packets received for Forwarding Class 4.
mplsOutOfProfPktsFc5 [Mpls Out Of Prof Pkts Fc 5] (vRtrMplsOutOfProfPktsFc5)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc5 indicates the number of out of profile packets received for Forwarding Class 5.
mplsOutOfProfPktsFc6 [Mpls Out Of Prof Pkts Fc 6] (vRtrMplsOutOfProfPktsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc6 indicates the number of out of profile packets received for Forwarding Class 6.
mplsOutOfProfPktsFc7 [Mpls Out Of Prof Pkts Fc 7] (vRtrMplsOutOfProfPktsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc7 indicates the number of out of profile packets received for Forwarding Class 7.
psbMatch [Psb Match] (vRtrMplsLspStatsPSBMatch)	boolean	The value of vRtrMplsLspStatsPSBMatch indicates if a path state block (PSB) match was made against this LSP name.
tpOnly [Tp Only] (vRtrMplsLspStatsTpOnly)	boolean	The value of vRtrMplsLspStatsTpOnly indicates whether the statistics apply to mpls-tp lsp or for regular rsvp-te signalled terminating LSP. The value of 'true' indicates the statistics apply to mpls-tp LSP only. The value of 'false' indicates the statistics apply for regular rsvp-te signalled terminating LSP.

Table 420 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>MplsLspIngressStats</p> <p>MIB entry name: vRtrMplsLspStatisticsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspStatisticsTable): The vRtrMplsLspStatisticsTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.IngStatsPolicy</p>		
lspType [Lsp Type] (vRtrMplsLspStatsLspType)	int	The value of vRtrMplsLspStatsLspType indicates whether the statistics apply to MPLS-TP, P2P, P2MP, Auto P2P or Auto P2MP LSP. When the value of vRtrMplsLspStatsTpOnly is 'true', the statistics apply for MPLS-TP LSP only and vRtrMplsLspStatsLspType is set to 'tpLsp'. When the value of vRtrMplsLspStatsTpOnly is 'false', the statistics apply for regular RSVP-TE signalled terminating LSP and the value of vRtrMplsLspStatsLspType can be set to either p2p, p2mp, autoP2p or autoP2mp.
mplsInProfileOctetsFc0 [Mpls In Profile Octets Fc 0] (vRtrMplsInProfileOctetsFc0)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc0 indicates the number of in profile octets received for Forwarding Class 0.
mplsInProfileOctetsFc1 [Mpls In Profile Octets Fc 1] (vRtrMplsInProfileOctetsFc1)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc1 indicates the number of in profile octets received for Forwarding Class 1.
mplsInProfileOctetsFc2 [Mpls In Profile Octets Fc 2] (vRtrMplsInProfileOctetsFc2)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc2 indicates the number of in profile octets received for Forwarding Class 2.

Table 420 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsInProfileOctetsFc3 [Mpls In Profile Octets Fc 3] (vRtrMplsInProfileOctetsFc3)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc3 indicates the number of in profile octets received for Forwarding Class 3.
mplsInProfileOctetsFc4 [Mpls In Profile Octets Fc 4] (vRtrMplsInProfileOctetsFc4)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc4 indicates the number of in profile octets received for Forwarding Class 4.
mplsInProfileOctetsFc5 [Mpls In Profile Octets Fc 5] (vRtrMplsInProfileOctetsFc5)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc5 indicates the number of in profile octets received for Forwarding Class 5.
mplsInProfileOctetsFc6 [Mpls In Profile Octets Fc 6] (vRtrMplsInProfileOctetsFc6)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc6 indicates the number of in profile octets received for Forwarding Class 6.
mplsInProfileOctetsFc7 [Mpls In Profile Octets Fc 7] (vRtrMplsInProfileOctetsFc7)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc7 indicates the number of in profile octets received for Forwarding Class 7.
mplsInProfilePktsFc0 [Mpls In Profile Pkts Fc 0] (vRtrMplsInProfilePktsFc0)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc0 indicates the number of in profile packets received for Forwarding Class 0.
mplsInProfilePktsFc1 [Mpls In Profile Pkts Fc 1] (vRtrMplsInProfilePktsFc1)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc1 indicates the number of in profile packets received for Forwarding Class 1.
mplsInProfilePktsFc2 [Mpls In Profile Pkts Fc 2] (vRtrMplsInProfilePktsFc2)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc2 indicates the number of in profile packets received for Forwarding Class 2.

Table 420 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsInProfilePktsFc3 [Mpls In Profile Pkts Fc 3] (vRtrMplsInProfilePktsFc3)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc3 indicates the number of in profile packets received for Forwarding Class 3.
mplsInProfilePktsFc4 [Mpls In Profile Pkts Fc 4] (vRtrMplsInProfilePktsFc4)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc4 indicates the number of in profile packets received for Forwarding Class 4.
mplsInProfilePktsFc5 [Mpls In Profile Pkts Fc 5] (vRtrMplsInProfilePktsFc5)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc5 indicates the number of in profile packets received for Forwarding Class 5.
mplsInProfilePktsFc6 [Mpls In Profile Pkts Fc 6] (vRtrMplsInProfilePktsFc6)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc6 indicates the number of in profile packets received for Forwarding Class 6.
mplsInProfilePktsFc7 [Mpls In Profile Pkts Fc 7] (vRtrMplsInProfilePktsFc7)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc7 indicates the number of in profile packets received for Forwarding Class 7.
mplsOutOfProfOctetsFc0 [Mpls Out Of Prof Octets Fc 0] (vRtrMplsOutOfProfOctetsFc0)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc0 indicates the number of out of profile octets received for Forwarding Class 0.
mplsOutOfProfOctetsFc1 [Mpls Out Of Prof Octets Fc 1] (vRtrMplsOutOfProfOctetsFc1)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc1 indicates the number of out of profile octets received for Forwarding Class 1.
mplsOutOfProfOctetsFc2 [Mpls Out Of Prof Octets Fc 2] (vRtrMplsOutOfProfOctetsFc2)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc2 indicates the number of out of profile octets received for Forwarding Class 2.

Table 420 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsOutOfProfOctetsFc3 [Mpls Out Of Prof Octets Fc 3] (vRtrMplsOutOfProfOctetsFc3)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc3 indicates the number of out of profile octets received for Forwarding Class 3.
mplsOutOfProfOctetsFc4 [Mpls Out Of Prof Octets Fc 4] (vRtrMplsOutOfProfOctetsFc4)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc4 indicates the number of out of profile octets received for Forwarding Class 4.
mplsOutOfProfOctetsFc5 [Mpls Out Of Prof Octets Fc 5] (vRtrMplsOutOfProfOctetsFc5)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc5 indicates the number of out of profile octets received for Forwarding Class 5.
mplsOutOfProfOctetsFc6 [Mpls Out Of Prof Octets Fc 6] (vRtrMplsOutOfProfOctetsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc6 indicates the number of out of profile octets received for Forwarding Class 6.
mplsOutOfProfOctetsFc7 [Mpls Out Of Prof Octets Fc 7] (vRtrMplsOutOfProfOctetsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc7 indicates the number of out of profile octets received for Forwarding Class 7.
mplsOutOfProfPktsFc0 [Mpls Out Of Prof Pkts Fc 0] (vRtrMplsOutOfProfPktsFc0)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc0 indicates the number of out of profile packets received for Forwarding Class 0.
mplsOutOfProfPktsFc1 [Mpls Out Of Prof Pkts Fc 1] (vRtrMplsOutOfProfPktsFc1)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc1 indicates the number of out of profile packets received for Forwarding Class 1.
mplsOutOfProfPktsFc2 [Mpls Out Of Prof Pkts Fc 2] (vRtrMplsOutOfProfPktsFc2)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc2 indicates the number of out of profile packets received for Forwarding Class 2.

Table 420 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsOutOfProfPktsFc3 [Mpls Out Of Prof Pkts Fc 3] (vRtrMplsOutOfProfPktsFc3)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc3 indicates the number of out of profile packets received for Forwarding Class 3.
mplsOutOfProfPktsFc4 [Mpls Out Of Prof Pkts Fc 4] (vRtrMplsOutOfProfPktsFc4)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc4 indicates the number of out of profile packets received for Forwarding Class 4.
mplsOutOfProfPktsFc5 [Mpls Out Of Prof Pkts Fc 5] (vRtrMplsOutOfProfPktsFc5)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc5 indicates the number of out of profile packets received for Forwarding Class 5.
mplsOutOfProfPktsFc6 [Mpls Out Of Prof Pkts Fc 6] (vRtrMplsOutOfProfPktsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc6 indicates the number of out of profile packets received for Forwarding Class 6.
mplsOutOfProfPktsFc7 [Mpls Out Of Prof Pkts Fc 7] (vRtrMplsOutOfProfPktsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc7 indicates the number of out of profile packets received for Forwarding Class 7.
psbMatch [Psb Match] (vRtrMplsLspStatsPSBMatch)	boolean	The value of vRtrMplsLspStatsPSBMatch indicates if a path state block (PSB) match was made against this LSP name.
tpOnly [Tp Only] (vRtrMplsLspStatsTpOnly)	boolean	The value of vRtrMplsLspStatsTpOnly indicates whether the statistics apply to mpls-tp lsp or for regular rsvp-te signalled terminating LSP. The value of 'true' indicates the statistics apply to mpls-tp LSP only. The value of 'false' indicates the statistics apply for regular rsvp-te signalled terminating LSP.

Table 420 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>P2MPInstanceStats</p> <p>MIB entry name: vRtrMplsP2mplInstStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a P2MP Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsP2mplInstStatTable): The vRtrMplsP2mplInstStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.P2MPInstance</p>		
configuredS2Is [Configured S2 Is] (vRtrMplsP2mplInstStatConfiguredS2Is)	long	The value of vRtrMplsP2mplInstStatConfiguredS2Is indicates the number of S2Is configured for this P2MP LSP.
lastS2IChange [Last S2 I Change] (vRtrMplsP2mplInstStatLastS2IChange)	long	The value of vRtrMplsP2mplInstStatLastS2IChange indicates the time since the last change occurred on this P2MP LSP.
lastS2ITimeDown [Last S2 I Time Down] (vRtrMplsP2mplInstStatLastS2ITimeDown)	long	The value of vRtrMplsP2mplInstStatLastS2ITimeDown indicates the total time that this S2I has not been operational.
lastTrans [Last Trans] (vRtrMplsP2mplInstStatLastTrans)	long	The value of vRtrMplsP2mplInstStatLastTrans indicates the time since the last transition occurred on this P2mp instance.
operationalS2Is [Operational S2 Is] (vRtrMplsP2mplInstStatOperationalS2Is)	long	The value of vRtrMplsP2mplInstStatOperationalS2Is indicates the number of operational S2Is for this P2MP LSP. This includes the S2Is currently active.
s2IChanges [S2 I Changes] (vRtrMplsP2mplInstStatS2IChanges)	long	The value of vRtrMplsP2mplInstStatS2IChanges indicates the number of S2I changes this P2MP LSP has had. For every S2I change (S2I down, S2I up, S2I change), a corresponding syslog/trap (if enabled) is generated for it.

Table 420 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
s2lTimeUp [S2l Time Up] (vRtrMplsP2mplInstStatLastS2lTimeUp)	long	The value of vRtrMplsP2mplInstStatLastS2lTimeUp indicates the total time that this S2l has been operational.
timeDown [Time Down] (vRtrMplsP2mplInstStatTimeDown)	long	The value of vRtrMplsP2mplInstStatTimeDown indicates the total time that this P2MP instance has not been operational.
timeUp [Time Up] (vRtrMplsP2mplInstStatTimeUp)	long	The value of vRtrMplsP2mplInstStatTimeUp indicates the total time that this P2MP instance has been operational.
transitions [Transitions] (vRtrMplsP2mplInstStatTransitions)	long	The The value of vRtrMplsP2mplInstStatTransitions indicates the number of state transitions (up -> down and down -> up) this P2mp instance has undergone.
<p>S2LPathStats</p> <p>MIB entry name: vRtrMplsS2lSubLspStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a P2MP Source to Leaf (S2L) Sub Labeled Switch Path (LSP) configured for a i virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsS2lSubLspStatTable): The vRtrMplsS2lSubLspStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.S2LPath</p>		
cspfQueries [Cspf Queries] (vRtrMplsS2lSubLspCspfQueries)	long	The value of vRtrMplsS2lSubLspCspfQueries indicates the number of CSPF queries that have been made for this LSP S2l.

Table 420 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
retryAttempts [Retry Attempts] (vRtrMplsS2ISubLspRetryAttempts)	long	The value of vRtrMplsS2ISubLspRetryAttempts indicates the number of unsuccessful attempts which have been made to signal this S2I. As soon as the S2I gets signalled, this is set to 0.
timeDown [Time Down] (vRtrMplsS2ISubLspTimeDown)	long	The value of vRtrMplsS2ISubLspTimeUp indicates the total time that this LSP S2I has not been operational.
timeUp [Time Up] (vRtrMplsS2ISubLspTimeUp)	long	The value of vRtrMplsS2ISubLspTimeUp indicates the total time that this LSP S2I has been operational. For example, the percentage up time can be determined by computing $(vRtrMplsS2ISubLspTimeUp/vRtrMplsLspAge * 100 \%)$.
transitionCount [Transition Count] (vRtrMplsS2ISubLspTransitionCount)	long	The value of vRtrMplsS2ISubLspTransitionCount indicates the number of transitions that have occurred for this LSP.
<p>SiteStats</p> <p>MIB entry name: vRtrMplsGeneralStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an instance of the MPLS protocol running within a virtual router. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsGeneralStatTable): The vRtrMplsGeneralStatTable contains statistics for an MPLS protocol instance within a virtual router.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.Site</p>		
detourOriginate [Detour Originate] (vRtrMplsGeneralDetourLspOriginate)	long	The value of vRtrMplsGeneralDetourLspOriginate indicates the number of detour LSPs that originate at this virtual router.
detourTerminate [Detour Terminate] (vRtrMplsGeneralDetourLspTerminate)	long	The value of vRtrMplsGeneralDetourLspTerminate indicates the number of detour LSPs that terminate at this virtual router.

Table 420 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
detourTransit [Detour Transit] (vRtrMplsGeneralDetourLspTransit)	long	The value of vRtrMplsGeneralDetourLspTransit indicates the number of detour LSPs that transit through this virtual router.
dynamicOriginate [Dynamic Originate] (vRtrMplsGeneralDynamicLspOriginate)	long	The value of vRtrMplsGeneralDynamicLspOriginate indicates the number of dynamic LSPs that originate at this virtual router.
dynamicTerminate [Dynamic Terminate] (vRtrMplsGeneralDynamicLspTerminate)	long	The value of vRtrMplsGeneralDynamicLspTerminate indicates the number of dynamic LSPs that terminate at this virtual router.
dynamicTransit [Dynamic Transit] (vRtrMplsGeneralDynamicLspTransit)	long	The value of vRtrMplsGeneralDynamicLspTransit indicates the number of dynamic LSPs that transit through this virtual router.
staticOriginate [Static Originate] (vRtrMplsGeneralStaticLspOriginate)	long	The value of vRtrMplsGeneralStaticLspOriginate indicates the number of static LSPs that originate at this virtual router.
staticTerminate [Static Terminate] (vRtrMplsGeneralStaticLspTerminate)	long	The value of vRtrMplsGeneralStaticLspTerminate indicates the number of static LSPs that terminate at this virtual router.
staticTransit [Static Transit] (vRtrMplsGeneralStaticLspTransit)	long	The value of vRtrMplsGeneralStaticLspTransit indicates the number of static LSPs that transit through this virtual router.

Table 421 msdp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PeerStats</p> <p>MIB entry name: tmnxMsdpPeerStatsEntry</p> <p>Entry description: tmnxMsdpPeerStatsEntry is an entry (conceptual row) in the tmnxMsdpPeerStatsTable. Each entry represents a MSDP peer related statistics information.</p> <p>Table description (for tmnxMsdpPeerStatsTable): The table tmnxMsdpPeerStatsTable is the statistics information related to a MSDP peer.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • msdp.GroupPeer • msdp.Peer 		
errorMsgsReceived [Error Msgs Received] (tmnxMsdpPeerStatsErrorMsgsRcvd)	long	The value of tmnxMsdpPeerStatsErrorMsgsRcvd indicates number of error messages received.
keepAliveMsgsReceived [Keep Alive Msgs Received] (tmnxMsdpPeerStatsKAMsgsRcvd)	long	The value of tmnxMsdpPeerStatsKAMsgsRcvd indicates the number of keep-alive messages received.
keepAliveMsgsSent [Keep Alive Msgs Sent] (tmnxMsdpPeerStatsKAMsgsSent)	long	The value of tmnxMsdpPeerStatsKAMsgsSent indicates the number of keep-alive messages sent.
lastMsgPeer [Last Msg Peer] (tmnxMsdpPeerStatsLastMsgPeer)	long	The value of tmnxMsdpPeerStatsLastMsgPeer indicates how long ago the last message was received from this peer instance.
lastStateChange [Last State Change] (tmnxMsdpPeerStatsLastStChange)	long	The value of tmnxMsdpPeerStatsLastStChange indicates how long ago the peer state changed.

Table 421 msdp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
peerTimeouts [Peer Timeouts] (tmnxMsdpPeerStatsPeerTimeouts)	long	The value of tmnxMsdpPeerStatsPeerTimeouts indicates the number of peer timeouts.
remoteCloses [Remote Closes] (tmnxMsdpPeerStatsRemoteCloses)	long	The value of tmnxMsdpPeerStatsRemoteCloses indicates the number of times the remote peer closed.
reservedMsgsReceived [Reserved Msgs Received] (tmnxMsdpPeerStatsResvMsgsRcvd)	long	The value of tmnxMsdpPeerStatsResvMsgsRcvd indicates the number of MSDP messages received with type 'Reserved'.
rpfFailures [Rpf Failures] (tmnxMsdpPeerStatsRPFFailures)	long	The value of tmnxMsdpPeerStatsRPFFailures indicates number of reverse path forwarding (RPF) failures.
saLearned [Sa Learned] (tmnxMsdpPeerStatsSALearnt)	long	The value of tmnxMsdpPeerStatsSALearnt indicates the number of unique source active entries in the cache learned from the peer.
saLimitExceeded [Sa Limit Exceeded] (tmnxMsdpPeerStatsActSrcLimExcd)	long	The value of tmnxMsdpPeerStatsActSrcLimExcd indicates the number of times the global active source limit has been exceeded by this peer instance.
saMsgsReceived [Sa Msgs Received] (tmnxMsdpPeerStatsSAMsgsRcvd)	long	The value of tmnxMsdpPeerStatsSAMsgsRcvd indicates the number of source-active messages received.
saMsgsSent [Sa Msgs Sent] (tmnxMsdpPeerStatsSAMsgsSent)	long	The value of tmnxMsdpPeerStatsSAMsgsSent indicates the number of source-active messages sent.
saRejectExportPolicy [Sa Reject Export Policy] (tmnxMsdpPeerStatsSARejImpPolicy)	long	The value of tmnxMsdpPeerStatsSARejImpPolicy indicates the number of source active messages from the peer that were rejected due to import policy.

Table 421 msdp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
saRejectImportPolicy [Sa Reject Import Policy] (tmnxMsdpPeerStatsSARejExpPolicy)	long	The value of tmnxMsdpPeerStatsSARejExpPolicy indicates the number of source active messages from the peer that were not sent due to export policy.
saRequestMsgsReceived [Sa Request Msgs Received] (tmnxMsdpPeerStatsSAReqMsgsRecvd)	long	The value of tmnxMsdpPeerStatsSAReqMsgsRecvd indicates the number of source-active request messages received.
saRequestMsgsSent [Sa Request Msgs Sent] (tmnxMsdpPeerStatsSAReqMsgsSent)	long	The value of tmnxMsdpPeerStatsSAReqMsgsSent indicates the number of source-active request messages sent.
saResponseMsgsReceived [Sa Response Msgs Received] (tmnxMsdpPeerStatsSAResMsgsRecvd)	long	The value of tmnxMsdpPeerStatsSAResMsgsRecvd indicates the number of source-active response messages received.
saResponseMsgsSent [Sa Response Msgs Sent] (tmnxMsdpPeerStatsSAResMsgsSent)	long	The value of tmnxMsdpPeerStatsSAResMsgsSent indicates the number of source-active response messages sent.
unknownMsgsReceived [Unknown Msgs Received] (tmnxMsdpPeerStatsUnknMsgsRecvd)	long	The value of tmnxMsdpPeerStatsUnknMsgsRecvd indicates the number of unknown messages received.

Table 422 multicast statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>McastCacChannelServiceStats</p> <p>MIB entry name: tmnxMcacServStatsEntry</p> <p>Entry description: An entry in the tmnxMcacServStatsTable</p> <p>Table description (for tmnxMcacServStatsTable): The tmnxMcacServStatsTable has an entry for each service protocol (igmp-snooping on sap/sdp) channel that was either accepted/discarded by the applied multicast cac policy.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: multicast.McastCacPolicy</p>		
action [Action] (tmnxMcacServStatsAction)	int	The value of tmnxMcacServStatsAction indicates the action specified by the mcac policy for the service application to act upon.
algorithmReapply [Algorithm Reapply] (tmnxMcacServStatsAlgoReapply)	boolean	The value of tmnxMcacServStatsAlgoReapply indicates if the mcac policy was reapplied on the already accepted channel due lag constraints or if this was the first request for this channel from the service application.
bundleAvailBw [Bundle Avail Bw] (tmnxMcacServStatsBundleAvailBW)	long	The value of tmnxMcacServStatsBundleAvailBW indicates the available bundle bandwidth after the requested channel was either accepted or discarded by the mcac policy.
channelBw [Channel Bw] (tmnxMcacServStatsChannelBW)	long	The value of tmnxMcacServStatsChannelBW indicates the channel bandwidth configured at the mcac policy at the time of request from the service application.
channelRequestCount [Channel Request Count] (tmnxMcacServStatsApplyAttempts)	long	The value of tmnxMcacServStatsApplyAttempts indicates the number of times the mcac policy was applied for a particular channel entry by the service application.
channelType [Channel Type] (tmnxMcacServStatsChannelType)	int	The value of tmnxMcacServStatsChannelType indicates the channel type configured at the mcac policy at the time of request from the service application.

Table 422 multicast statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
encapValueOrVcId [Encap Value Or VcId] (tmnxMcacServStatsEncapValue)	String	The value of tmnxMcacServStatsEncapValue indicates the SAP/SDP Encap value of which the mcac policy is applied.
interfaceAvailBw [Interface Avail Bw] (tmnxMcacServStatsIntfAvailBW)	long	The value of tmnxMcacServStatsIntfAvailBW indicates the available interface bandwidth after the requested channel was either accepted or discarded by the mcac policy.
portIdOrTunnelId [Port Id Or Tunnel Id] (tmnxMcacServStatsPortId)	String	The value of tmnxMcacServStatsPortId indicates the port Id of the SAP/SDP on which the mcac policy is applied.
reason [Reason] (tmnxMcacServStatsReason)	int	The value of tmnxMcacServStatsReason indicates the reason for the action specified by the mcac policy for the service application to act upon.
timeStamp [Time Stamp] (tmnxMcacServStatsTimeStamp)	long	The value of tmnxMcacServStatsTimeStamp indicates the timestamp of the last time the mcac policy was applied for this channel entry.
<p>McastCacChannelStats MIB entry name: tmnxMcacStatsEntry Entry description: An entry in the tmnxMcacStatsTable Table description (for tmnxMcacStatsTable): The tmnxMcacStatsTable has an entry for each protocol interface channel that was either accepted/discarded by the applied multicast cac policy. This table is deprecated and replaced by tmnxMcacStatsNgTable. Supports realtime plotting Supports scheduled collection Monitored class: multicast.McastCacPolicy</p>		
action [Action] (tmnxMcacStatsAction)	int	The value of tmnxMcacStatsAction indicates the action specified by the mcac policy for the application interface to act upon.

Table 422 multicast statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
algorithmReapply [Algorithm Reapply] (tmnxMcacStatsAlgoReapply)	boolean	The value of tmnxMcacStatsAlgoReapply indicates if the mcac policy was reapplied on the already accepted channel due lag constraints or if this was the first request for this channel from the application.
bundleAvailBw [Bundle Avail Bw] (tmnxMcacStatsBundleAvailBW)	long	The value of tmnxMcacStatsBundleAvailBW indicates the available bundle bandwidth after the requested channel was either accepted or discarded by the mcac policy.
bundleName [Bundle Name] (tmnxMcacStatsBundleName)	String	The value of tmnxMcacStatsBundleName indicates the name of the multicast CAC policy bundle. The value of tmnxMcacStatsBundleName could be an empty string, meaning that this particular statistics entry's channel did not belong to any bundle in the policy.
channelAddress [Channel Address] (tmnxMcacStatsChlAddr)	String	The value of tmnxMcacStatsChlAddr indicates the address of the multicast channel that mcac policy was applied upon when requested by the application interface. Address type is indicated by tmnxMcacStatsChlAddrType.
channelAddressType [Channel Address Type] (tmnxMcacStatsChlAddrType)	int	The value of tmnxMcacStatsChlAddrType indicates the address type of tmnxMcacStatsChlAddr.
channelBw [Channel Bw] (tmnxMcacStatsChannelBW)	long	The value of tmnxMcacStatsChannelBW indicates the channel bandwidth configured at the mcac policy at the time of request from the application interface.
channelRequestCount [Channel Request Count] (tmnxMcacStatsApplyAttempts)	long	The value of tmnxMcacStatsApplyAttempts indicates the number of times the mcac policy was applied for a particular channel entry by the application.
channelType [Channel Type] (tmnxMcacStatsChannelType)	int	The value of tmnxMcacStatsChannelType indicates the channel type configured at the mcac policy at the time of request from the application interface.

Table 422 multicast statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
interfaceAvailBw [Interface Avail Bw] (tmnxMcacStatsIntfAvailBW)	long	The value of tmnxMcacStatsIntfAvailBW indicates the available interface bandwidth after the requested channel was either accepted or discarded by the mcac policy.
interfaceId [Interface Id] (tmnxMcacStatsIfIndex)	long	The value of tmnxMcacStatsIfIndex indicates the application interface index that has applied mcac policy.
protocolName [Protocol Name] (tmnxMcacStatsProtocolIndex)	int	The value of tmnxMcacStatsProtocolIndex indicates the application that has applied mcac policy.
reason [Reason] (tmnxMcacStatsReason)	int	The value of tmnxMcacStatsReason indicates the reason for the action specified by the mcac policy for the application interface to act upon.
timeStamp [Time Stamp] (tmnxMcacStatsTimeStamp)	long	The value of tmnxMcacStatsTimeStamp indicates the timestamp of the last time the mcac policy was applied for this channel entry.
<p>McastCacOper MIB entry name: tmnxMcacOperEntry Entry description: An entry in the tmnxMcacOperTable Table description (for tmnxMcacOperTable): The tmnxMcacOperTable has an entry for each protocol interface that has active channels on a bundle that were accepted by the mcac policy. Supports realtime plotting Supports scheduled collection Monitored class: multicast.McastCacPolicy</p>		
activeChannels [Active Channels] (tmnxMcacOperActiveChannels)	long	The value of tmnxMcacOperActiveChannels indicates the number of active channels for this entry.

Table 422 multicast statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
availMandBw [Avail Mand Bw] (tmnxMcacOperAvailMandBw)	long	The value of tmnxMcacOperAvailMandBw indicates the operational pre-reserved bandwidth in kilo-bits per second(kbps) for the mandatory channels on the bundle for this protocol interface instance.
availOptionalBw [Avail Optional Bw] (tmnxMcacOperAvailOptnlBw)	long	The value of tmnxMcacOperAvailOptnlBw indicates the operational available bandwidth in kilo-bits per second(kbps) on the bundle for this protocol interface instance.
currConstrtlvl [Curr Constrt Lvl] (tmnxMcacOperCurrConstrtlvl)	long	The value of tmnxMcacOperCurrConstrtlvl indicates the current lag constraints bundle level id for the number of ports down (tmnxMcacOperPortsDown). This value is used to index the table tmnxMcacLevelTable to get the bundle level bandwidth.
inUseMandBw [In Use Mand Bw] (tmnxMcacOperInUseMandBw)	long	The value of tmnxMcacOperInUseMandBw indicates the operational in-use bandwidth in kilo-bits per second(kbps) for the mandatory channels on the bundle for this protocol interface instance.
inUseOptionalBw [In Use Optional Bw] (tmnxMcacOperInUseOptnlBw)	long	The value of tmnxMcacOperInUseOptnlBw indicates the operational in-use bandwidth in kilo-bits per second(kbps) for the optional channels on the bundle for this protocol interface instance.
maxBw [Max Bw] (tmnxMcacOperMaxBw)	long	The value of tmnxMcacOperMaxBw indicates the operational maximum bandwidth in kilo-bits per second(kbps) on the bundle for this protocol interface instance.
portsDown [Ports Down] (tmnxMcacOperPortsDown)	long	The value of tmnxMcacOperPortsDown indicates the the number of ports down on the application interface. This value is used to index the table tmnxMcacLagTable to get the bundle level id.

Table 422 multicast statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
valuesInTransit [Values In Transit] (tmnxMcacOperValuesInTransit)	boolean	The value of tmnxMcacOperValuesInTransit indicates that the operational (available and in-use mandatory/optional) value for the following objects are in transition due to configuration change: tmnxMcacOperAvailOptnlBw tmnxMcacOperAvailMandBw tmnxMcacOperInUseMandBw tmnxMcacOperInUseOptnlBw When Multicast CAC Policy is applied on the interface for the join of the next channel, the operational values will be recalculated and applied to the above objects and the value for tmnxMcacOperValuesInTransit will be set to 'false'. If the value of tmnxMcacOperValuesInTransit is 'true' then the values are in transition.
McastCacServOperStats MIB entry name: tmnxMcacServOperEntry Entry description: An entry in the tmnxMcacServOperTable Table description (for tmnxMcacServOperTable): The tmnxMcacServOperTable has an entry for each service application (igmp-snooping on sap/sdp) that has active channels on a bundle that were accepted by the mcac policy. Supports realtime plotting Supports scheduled collection Monitored class: multicast.McastCacPolicy		
activeChannels [Active Channels] (tmnxMcacServOperActiveChannels)	long	The value of tmnxMcacServOperActiveChannels indicates the number of active channels for this entry.
availMandBw [Avail Mand Bw] (tmnxMcacServOperAvailMandBw)	long	The value of tmnxMcacServOperAvailMandBw indicates the operational pre-reserved bandwidth in kilo-bits per second(kbps) for the mandatory channels on the bundle for this service application on sap/sdp instance.
availOptionalBw [Avail Optional Bw] (tmnxMcacServOperAvailOptnlBw)	long	The value of tmnxMcacServOperAvailOptnlBw indicates the operational available bandwidth in kilo-bits per second(kbps) on the bundle for this service application on sap/sdp instance.

Table 422 multicast statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
currConstrLvl [Curr Constrt Lvl] (tmnxMcacServOperCurrConstrLvl)	long	The value of tmnxMcacServOperCurrConstrLvl indicates the current lag constraints bundle level id for the number of ports down (tmnxMcacServOperPortsDown). This value is used to index the table tmnxMcacLevelTable to get the bundle level bandwidth.
inUseMandBw [In Use Mand Bw] (tmnxMcacServOperInUseMandBw)	long	The value of tmnxMcacServOperInUseMandBw indicates the operational in-use bandwidth in kilo-bits per second(kbps) for the mandatory channels on the bundle for this service application on sap/sdp instance.
inUseOptionalBw [In Use Optional Bw] (tmnxMcacServOperInUseOptnlBw)	long	The value of tmnxMcacServOperInUseOptnlBw indicates the operational in-use bandwidth in kilo-bits per second(kbps) for the optional channels on the bundle for this service application on sap/sdp instance.
maxBw [Max Bw] (tmnxMcacServOperMaxBw)	long	The value of tmnxMcacServOperMaxBw indicates the operational maximum bandwidth in kilo-bits per second(kbps) on the bundle for this service application on sap/sdp instance.
portsDown [Ports Down] (tmnxMcacServOperPortsDown)	long	The value of tmnxMcacServOperPortsDown indicates the the number of ports down on the service application on sap/sdp. This value is used to index the table tmnxMcacLagTable to get the bundle level id.
valuesInTransit [Values In Transit] (tmnxMcacServOperValuesInTransit)	boolean	The value of tmnxMcacServOperValuesInTransit indicates that the operational (available and in-use mandatory/optional) value for the following objects are in transition due to configuration change: tmnxMcacServOperAvailOptnlBw tmnxMcacServOperAvailMandBw tmnxMcacServOperInUseMandBw tmnxMcacServOperInUseOptnlBw When Multicast CAC Policy is applied on the sap/sdp for the join of the next channel, the operational values will be recalculated and applied to the above objects and the value for tmnxMcacServOperValuesInTransit will be set to 'false'. If the value of tmnxMcacServOperValuesInTransit is 'true' then the values are in transition.

Table 423 multichassis statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>McEPPeerStats</p> <p>MIB entry name: tmnxMcEPPeerStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a multi-chassis peer. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxMcEPPeerStatsTable): The tmnxMcEPPeerStatsTable has an entry for each multi-chassis peer configured on this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: multichassis.MultiChassisEndpoint</p>		
configPacketsReceived [Config Packets Received] (tmnxMcEPPeerStatsPktsRxConfig)	long	The value of tmnxMcEPPeerStatsPktsRxConfig indicates how many valid MC-Endpoint control packets of type end-point config were received on this system from the peer.
failedMD5AuthenticationPacketsDropped [Failed MD5 Authentication Packets Dropped] (tmnxMcEPPeerStatsDropMD5)	long	The value of tmnxMcEPPeerStatsDropMD5 indicates how many MC-Endpoint control packets were dropped on this system from the peer because the packet failed MD5 authentication.
failedPacketsTransmitted [Failed Packets Transmitted] (tmnxMcEPPeerStatsPktsTxFailed)	long	The value of tmnxMcEPPeerStatsPktsTxFailed indicates how many MC-Endpoint control packets failed to be transmitted from this system to the peer.
invalidLagIdPacketsDropped [Invalid Lag Id Packets Dropped] (tmnxMcEPPeerStatsDropTlvInvlId)	long	The value of tmnxMcEPPeerStatsDropTlvInvlId indicates how many MC-Endpoint control packets were dropped on this system from the peer because the packet referred to an invalid or non multi-chassis end-point.
invalidSizePacketsDropped [Invalid Size Packets Dropped] (tmnxMcEPPeerStatsDropTlvInvlSz)	long	The value of tmnxMcEPPeerStatsDropTlvInvlSz indicates how many MC-Endpoint control packets were dropped on this system from the peer because the packet size was invalid.

Table 423 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
keepAlivePacketsReceived [Keep Alive Packets Received] (tmnxMcEPPeerStatsPktsRxKpalive)	long	The value of tmnxMcEPPeerStatsPktsRxKpalive indicates how many valid MC-Endpoint control packets of type keepalive were received on this system from the peer.
keepalivePacketsTransmitted [Keepalive Packets Transmitted] (tmnxMcEPPeerStatsPktsTxKpalive)	long	The value of tmnxMcEPPeerStatsPktsTxKpalive indicates how many MC-Endpoint control packets of type keepalive were transmitted from this system to the peer.
noEpPeerPacketsDropped [No Ep Peer Packets Dropped] (tmnxMcEPPeerStatsDropEpNoPeer)	long	The value of tmnxMcEPPeerStatsDropEpNoPeer indicates how many pkts were dropped because MC-Endpoint does not have a MC-peer assigned yet or MC-Endpoint is attached to a different peer.
outOfSequencePacketsDropped [Out Of Sequence Packets Dropped] (tmnxMcEPPeerStatsDropOutOfSeq)	long	The value of tmnxMcEPPeerStatsDropOutOfSeq indicates how many MC-Endpoint control packets were dropped on this system from the peer because the packet was out of sequence.
packetsReceived [Packets Received] (tmnxMcEPPeerStatsPktsRx)	long	The value of tmnxMcEPPeerStatsPktsRx indicates how many valid MC-Endpoint control packets were received on this system from the peer.
packetsTransmitted [Packets Transmitted] (tmnxMcEPPeerStatsPktsTx)	long	The value of tmnxMcEPPeerStatsPktsTx indicates how many MC-Endpoint control packets were transmitted from this system to the peer.
peerConfigPacketsReceived [Peer Config Packets Received] (tmnxMcEPPeerStatsPktsRxPeerCfg)	long	The value of tmnxMcEPPeerStatsPktsRxPeerCfg indicates how many valid MC-Endpoint control packets of type peer config were received on this system from the peer.
peerConfigPacketsTransmitted [Peer Config Packets Transmitted] (tmnxMcEPPeerStatsPktsTxPeerCfg)	long	The value of tmnxMcEPPeerStatsPktsTxPeerCfg indicates how many MC-Endpoint control packets of type peer config were transmitted from this system to the peer.

Table 423 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
stateDisabledPacketsDropped [State Disabled Packets Dropped] (tmnxMcEPPeerStatsDropStateDsblld)	long	The value of tmnxMcEPPeerStatsDropStateDsblld indicates how many MC-Endpoint control packets were dropped on this system from the peer because the peer was administratively disabled.
statePacketsReceived [State Packets Received] (tmnxMcEPPeerStatsPktsRxState)	long	The value of tmnxMcEPPeerStatsPktsRxState indicates how many valid MC-Endpoint control packets of type end-point state were received on this system from the peer.
tooShortPacketsDropped [Too Short Packets Dropped] (tmnxMcEPPeerStatsDropPktTooShrt)	long	The value of tmnxMcEPPeerStatsDropPktTooShrt indicates how many MC-Endpoint control packets were dropped on this system from the peer because the packet was too short.
unknownTlvPacketsDropped [Unknown Tlv Packets Dropped] (tmnxMcEPPeerStatsDropUnknownTlv)	long	The value of tmnxMcEPPeerStatsDropUnknownTlv indicates how many MC-Endpoint control packets were dropped on this system from the peer because the packet contained an unknown TLV.
<p>McWppPeerStats</p> <p>MIB entry name: tmnxMcWppPeerStatsEntry</p> <p>Entry description: Each conceptual row represents multi-chassis WPP peer statistics of a specific instance. Entries in this table are created and destroyed by the system. Rows are only created where the statistics value is nonzero; this allows faster walking through this table; hence, it is recommended to perform only get-next-request operations to retrieve information from this table.</p> <p>Table description (for tmnxMcWppPeerStatsTable): The tmnxMcWppPeerStatsTable shows multi-chassis WPP peer statistics.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: multichassis.Peer</p>		
noResources [No Resources] (tmnxMcWppPeerStatsVal)	long	The value of the object tmnxMcWppPeerStatsVal indicates the value of the statistics contained in this conceptual row.

Table 423 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
statsInstance [Stats Instance] (tmnxMcWppPeerStatsInstance)	long	The value of the object tmnxMcWppPeerStatsInstance indicates the instance identifier of the statistics contained in this conceptual row.
<p>MultiChassisPeerRingStats MIB entry name: tmnxMcrPeerStatsEntry Entry description: Each row entry in the tmnxMcrPeerStatsTable represents additional columns of operational data for a multi-chassis peer. Table description (for tmnxMcrPeerStatsTable): The tmnxMcrPeerStatsTable has an entry for each multi-chassis peer. Supports realtime plotting Supports scheduled collection Monitored class: multichassis.Peer</p>		
keepAlivePacketsTransmitted [Keep Alive Packets Transmitted] (tmnxMcrPeerStatsTxKeepAlive)	long	The value of tmnxMcrPeerStatsTxKeepAlive indicates how many valid MC-Ring control packets of type 'keepalive' were transmitted to the peer.
mcsIdRequestPacketsReceived [Mcs Id Request Packets Received] (tmnxMcrPeerStatsRxMcsIdReq)	long	The value of tmnxMcrPeerStatsRxMcsIdReq indicates how many valid MCS ID requests were received from the peer.
mcsIdRequestPacketsTransmitted [Mcs Id Request Packets Transmitted] (tmnxMcrPeerStatsTxMcsIdReq)	long	The value of tmnxMcrPeerStatsTxMcsIdReq indicates how many valid MCS ID requests were transmitted to the peer.
mcsIdResponsePacketsReceived [Mcs Id Response Packets Received] (tmnxMcrPeerStatsRxMcsIdRsp)	long	The value of tmnxMcrPeerStatsRxMcsIdRsp indicates how many valid MCS ID responses were received from the peer.
mcsIdResponsePacketsTransmitted [Mcs Id Response Packets Transmitted] (tmnxMcrPeerStatsTxMcsIdRsp)	long	The value of tmnxMcrPeerStatsTxMcsIdRsp indicates how many valid MCS ID responses were transmitted to the peer.

Table 423 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ringExistsRequestPacketsReceived [Ring Exists Request Packets Received] (tmnxMcrPeerStatsRxRingExistsReq)	long	The value of tmnxMcrPeerStatsRxRingExistsReq indicates how many valid 'ring exists' requests were received from the peer.
ringExistsRequestPacketsTransmitted [Ring Exists Request Packets Transmitted] (tmnxMcrPeerStatsTxRingExistsReq)	long	The value of tmnxMcrPeerStatsTxRingExistsReq indicates how many valid 'ring exists' requests were transmitted to the peer.
ringExistsResponsePacketsReceived [Ring Exists Response Packets Received] (tmnxMcrPeerStatsRxRingExistsRsp)	long	The value of tmnxMcrPeerStatsRxRingExistsRsp indicates how many valid 'ring exists' responses were received from the peer.
ringExistsResponsePacketsTransmitted [Ring Exists Response Packets Transmitted] (tmnxMcrPeerStatsTxRingExistsRsp)	long	The value of tmnxMcrPeerStatsTxRingExistsRsp indicates how many valid 'ring exists' responses were transmitted to the peer.
ringKeepAlivePacketsReceived [Ring Keep Alive Packets Received] (tmnxMcrPeerStatsRxKeepAlive)	long	The value of tmnxMcrPeerStatsRxKeepAlive indicates how many valid MC-Ring control packets of type 'keepalive' were received from the peer.
ringSignallingPacketsReceived [Ring Signalling Packets Received] (tmnxMcrPeerStatsRx)	long	The value of tmnxMcrPeerStatsRx indicates how many valid MC-Ring signalling messages were received from the peer.
ringSignallingPacketsTransmitted [Ring Signalling Packets Transmitted] (tmnxMcrPeerStatsTx)	long	The value of tmnxMcrPeerStatsTx indicates how many valid MC-Ring signalling messages were transmitted to the peer.
MultiChassisRingGlobalStats MIB entry name: tmnxMcRedundancyStatsObjs Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement		

Table 423 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
deliveredToPeerPacketsReceived [Delivered To Peer Packets Received] (tmnxMcrStatsRxDelivrdToPeer)	long	The value of tmnxMcrStatsRxDelivrdToPeer indicates how many MC-Ring signalling packets were received by this system that were correctly delivered to their peer.
deliveredToRingNodePacketsReceived [Delivered To Ring Node Packets Received] (tmnxMcrStatsRxDelivrdToRingNode)	long	The value of tmnxMcrStatsRxDelivrdToRingNode indicates how many MC-R signalling packets were received by this system that were correctly delivered to their ring node.
deliveredToRingPacketsReceived [Delivered To Ring Packets Received] (tmnxMcrStatsRxDelivrdToRing)	long	The value of tmnxMcrStatsRxDelivrdToRing indicates how many MC-Ring signalling packets were received by this system that were correctly delivered to their ring.
incompletePacketsReceived [Incomplete Packets Received] (tmnxMcrStatsRxIncomplete)	long	The value of tmnxMcrStatsRxIncomplete indicates how many MC-Ring signalling packets were received by this system that were incomplete.
invalidTlvPacketsReceived [Invalid Tlv Packets Received] (tmnxMcrStatsRxInvalidTlv)	long	The value of tmnxMcrStatsRxInvalidTlv indicates how many MC-Ring signalling packets were received by this system with invalid TLV.
missedBfdEvents [Missed Bfd Events] (tmnxMcrStatsMissedBfdEvent)	long	The value of tmnxMcrStatsMissedBfdEvent indicates the number of missed BFD events on this system.
missedConfigEvents [Missed Config Events] (tmnxMcrStatsMissedConfigEvent)	long	The value of tmnxMcrStatsMissedConfigEvent indicates the number of missed configuration events on this system.
noBufferPacketsNotTransmitted [No Buffer Packets Not Transmitted] (tmnxMcrStatsTxNoBuffer)	long	The value of tmnxMcrStatsTxNoBuffer indicates how many MC-Ring signalling packets could not be transmitted by this system due to a lack of packet buffers.
signallingPacketsNotTransmitted [Signalling Packets Not Transmitted] (tmnxMcrStatsTxTransmitFailed)	long	The value of tmnxMcrStatsTxTransmitFailed indicates how many MC-Ring signalling packets could not be transmitted by this system due to a transmission failure.

Table 423 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
signallingPacketsReceived [Signalling Packets Received] (tmnxMcrStatsRx)	long	The value of tmnxMcrStatsRx indicates how many MC-Ring signalling packets were received by this system.
signallingPacketsTransmitted [Signalling Packets Transmitted] (tmnxMcrStatsTx)	long	The value of tmnxMcrStatsTx indicates how many MC-Ring signalling packets were transmitted by this system.
tooShortPacketsReceived [Too Short Packets Received] (tmnxMcrStatsRxTooShort)	long	The value of tmnxMcrStatsRxTooShort indicates how many MC-Ring signalling packets were received by this system that were too short.
unknownDestinationPacketsDropped [Unknown Destination Packets Dropped] (tmnxMcrStatsTxUnknownDest)	long	The value of tmnxMcrStatsTxUnknownDest indicates how many MC-R signalling packets were dropped because the destination was unknown.
unknownPeerPacketsReceived [Unknown Peer Packets Received] (tmnxMcrStatsRxUnknownPeer)	long	The value of tmnxMcrStatsRxUnknownPeer indicates how many MC-Ring signalling packets were received by this system that were related to an unknown peer.
unknownRingNodePacketsReceived [Unknown Ring Node Packets Received] (tmnxMcrStatsRxUnknownRingNode)	long	The value of tmnxMcrStatsRxUnknownRingNode indicates how many MC-Ring signalling packets were received by this system that were related to an unknown ring node.
unknownRingPacketsReceived [Unknown Ring Packets Received] (tmnxMcrStatsRxUnknownRing)	long	The value of tmnxMcrStatsRxUnknownRing indicates how many MC-Ring signalling packets were received by this system that were related to an unknown ring.
unknownTypePacketsReceived [Unknown Type Packets Received] (tmnxMcrStatsRxUnknownType)	long	The value of tmnxMcrStatsRxUnknownType indicates how many MC-Ring signalling packets were received by this system that were of unknown type.
wrongAuthenticationPacketsReceived [Wrong Authentication Packets Received] (tmnxMcrStatsRxWrongAuth)	long	The value of tmnxMcrStatsRxWrongAuth indicates how many MC-Ring signalling packets were received by this system with invalid authentication.

Table 423 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>MultiChassisRingNodeStats</p> <p>MIB entry name: tmnxMcrRingNodeStatsEntry</p> <p>Entry description: Each row entry represents statistics related to an access node that participates in a multi-chassis ring configuration with a given peer. Rows are created or removed automatically by the system.</p> <p>Table description (for tmnxMcrRingNodeStatsTable): The tmnxMcrRingNodeStatsTable has an entry for each access node that participates in a multi-chassis ring configuration for the indicated peer.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: multichassis.MultiChassisRingNode</p>		
detectedPacketsAcknowledged [Detected Packets Acknowledged] (tmnxMcrRingNodeStatsTxDetectAck)	long	The value of tmnxMcrRingNodeStatsTxDetectAck indicates how many valid 'detected ring node' signalling messages were acknowledged to the peer for this multi-chassis ring node.
detectedPacketsPeerAcknowledged [Detected Packets Peer Acknowledged] (tmnxMcrRingNodeStatsRxDetectAck)	long	The value of tmnxMcrRingNodeStatsRxDetectAck indicates how many valid 'detected ring node' signalling messages were acknowledged by the peer for this multi-chassis ring node.
detectedPacketsReceived [Detected Packets Received] (tmnxMcrRingNodeStatsRxDetect)	long	The value of tmnxMcrRingNodeStatsRxDetect indicates how many valid 'detected ring node' signalling messages were received from the peer for this multi-chassis ring node.
detectedPacketsTransmitted [Detected Packets Transmitted] (tmnxMcrRingNodeStatsTxDetect)	long	The value of tmnxMcrRingNodeStatsTxDetect indicates how many valid 'detected ring node' signalling messages were transmitted to the peer for this multi-chassis ring node.
rncvPacketsReceived [Rncv Packets Received] (tmnxMcrRingNodeStatsRncvRxResp)	long	The value of tmnxMcrRingNodeStatsRncvRxResp indicates how many valid connectivity verification messages were received from this multi-chassis ring node.

Table 423 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rcvPacketsRoundTripTime [Rcv Packets Round Trip Time] (tmnxMcrRingNodeStatsRncvRtTime)	long	The value of tmnxMcrRingNodeStatsRncvRtTime indicates the round-trip-time of the last successful connectivity verification for this multi-chassis ring node. If there has not been a successful connectivity verification, the value of tmnxMcrRingNodeStatsRncvRtTime is zero.
rcvPacketsTransmitted [Rcv Packets Transmitted] (tmnxMcrRingNodeStatsRncvTxReq)	long	The value of tmnxMcrRingNodeStatsRncvTxReq indicates how many valid connectivity verification messages were transmitted to this multi-chassis ring node.
<p>MultiChassisRingStats MIB entry name: tmnxMcrRingStatsEntry Entry description: Each row entry in the tmnxMcrRingStatsTable represents additional columns of operational data for a ring that participates in a multi-chassis operation with a given peer. Supports realtime plotting Supports scheduled collection Monitored class: multichassis.MultiChassisRing</p>		
opaquePacketsReceivedDelivered [Opaque Packets Received Delivered] (tmnxMcrRingStatsRxOpaqueDelivrd)	long	The value of tmnxMcrRingStatsRxOpaqueDelivrd indicates how many valid opaque signalling messages were received from the peer and delivered for this multi-chassis ring.
opaquePacketsReceivedNoDestination [Opaque Packets Received No Destination] (tmnxMcrRingStatsRxOpaqueNoDest)	long	The value of tmnxMcrRingStatsRxOpaqueNoDest indicates how many valid opaque signalling messages were received from the peer and for which no destination could be found.
opaquePacketsTransmitted [Opaque Packets Transmitted] (tmnxMcrRingStatsTxOpaque)	long	The value of tmnxMcrRingStatsTxOpaque indicates how many valid opaque signalling messages were transmitted to the peer for this multi-chassis ring.

Table 423 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapsChangedPacketsReceived [Saps Changed Packets Received] (tmnxMcRingStatsRxSapsChanged)	long	The value of tmnxMcRingStatsRxSapsChanged indicates how many valid 'SAPs changed info' signalling messages were received from the peer for this multi-chassis ring.
sapsChangedPacketsTransmitted [Saps Changed Packets Transmitted] (tmnxMcRingStatsTxSapsChanged)	long	The value of tmnxMcRingStatsTxSapsChanged indicates how many valid 'SAPs changed info' signalling messages were transmitted to the peer for this multi-chassis ring.
<p>PeerStats</p> <p>MIB entry name: tmnxMcLagPeerStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a multi-chassis peer. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxMcLagPeerStatsTable): The tmnxMcLagPeerStatsTable has an entry for each multi-chassis peer configured on this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • multichassis.PSSPeer • multichassis.Peer 		
configPacketsReceived [Config Packets Received] (tmnxMcLagPeerStatsPktsRxConfig)	long	The value of tmnxMcLagPeerStatsPktsRxConfig indicates how many valid MC-Lag control packets of type lag config were received on this system from the peer.
failedMD5AuthenticationPacketsDropped [Failed MD5 Authentication Packets Dropped] (tmnxMcLagPeerStatsDropMD5)	long	The value of tmnxMcLagPeerStatsDropMD5 indicates how many MC-Lag control packets were dropped on this system from the peer because the packet failed MD5 authentication.
failedPacketsTransmitted [Failed Packets Transmitted] (tmnxMcLagPeerStatsPktsTxFailed)	long	The value of tmnxMcLagPeerStatsPktsTxFailed indicates how many MC-Lag control packets failed to be transmitted from this system to the peer.

Table 423 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
invalidLagIdPacketsDropped [Invalid Lag Id Packets Dropped] (tmnxMcLagPeerStatsDropTlvInvlId)	long	The value of tmnxMcLagPeerStatsDropTlvInvlId indicates how many MC-Lag control packets were dropped on this system from the peer because the packet referred to an invalid or non multi-chassis lag.
invalidSizePacketsDropped [Invalid Size Packets Dropped] (tmnxMcLagPeerStatsDropTlvInvlSz)	long	The value of tmnxMcLagPeerStatsDropTlvInvlSz indicates how many MC-Lag control packets were dropped on this system from the peer because the packet size was invalid.
keepAlivePacketsReceived [Keep Alive Packets Received] (tmnxMcLagPeerStatsPktsRxKpalive)	long	The value of tmnxMcLagPeerStatsPktsRxKpalive indicates how many valid MC-Lag control packets of type keepalive were received on this system from the peer.
keepalivePacketsTransmitted [Keepalive Packets Transmitted] (tmnxMcLagPeerStatsPktsTxKpalive)	long	The value of tmnxMcLagPeerStatsPktsTxKpalive indicates how many MC-Lag control packets of type keepalive were transmitted from this system to the peer.
outOfSequencePacketsDropped [Out Of Sequence Packets Dropped] (tmnxMcLagPeerStatsDropOutOfSeq)	long	The value of tmnxMcLagPeerStatsDropOutOfSeq indicates how many MC-Lag control packets were dropped on this system from the peer because the packet was out of sequence.
packetsReceived [Packets Received] (tmnxMcLagPeerStatsPktsRx)	long	The value of tmnxMcLagPeerStatsPktsRx indicates how many valid MC-Lag control packets were received on this system from the peer.
packetsTransmitted [Packets Transmitted] (tmnxMcLagPeerStatsPktsTx)	long	The value of tmnxMcLagPeerStatsPktsTx indicates how many MC-Lag control packets were transmitted from this system to the peer.
peerConfigPacketsReceived [Peer Config Packets Received] (tmnxMcLagPeerStatsPktsRxPeerCfg)	long	The value of tmnxMcLagPeerStatsPktsRxPeerCfg indicates how many valid MC-Lag control packets of type peer config were received on this system from the peer.

Table 423 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
peerConfigPacketsTransmitted [Peer Config Packets Transmitted] (tmnxMcLagPeerStatsPktsTxPeerCfg)	long	The value of tmnxMcLagPeerStatsPktsTxPeerCfg indicates how many MC-Lag control packets of type peer config were transmitted from this system to the peer.
stateDisabledPacketsDropped [State Disabled Packets Dropped] (tmnxMcLagPeerStatsDropStateDsblD)	long	The value of tmnxMcLagPeerStatsDropStateDsblD indicates how many MC-Lag control packets were dropped on this system from the peer because the peer was administratively disabled.
statePacketsReceived [State Packets Received] (tmnxMcLagPeerStatsPktsRxState)	long	The value of tmnxMcLagPeerStatsPktsRxState indicates how many valid MC-Lag control packets of type lag state were received on this system from the peer.
tooShortPacketsDropped [Too Short Packets Dropped] (tmnxMcLagPeerStatsDropPktTooShrt)	long	The value of tmnxMcLagPeerStatsDropPktTooShrt indicates how many MC-Lag control packets were dropped on this system from the peer because the packet was too short.
unknownTlvPacketsDropped [Unknown Tlv Packets Dropped] (tmnxMcLagPeerStatsDropUnknownTlv)	long	The value of tmnxMcLagPeerStatsDropUnknownTlv indicates how many MC-Lag control packets were dropped on this system from the peer because the packet contained an unknown TLV.
<p>PeerSynchronizationProtocolStats MIB entry name: tmnxMcPeerSyncStatsEntry Entry description: Each row entry represents a collection of statistics for a multi-chassis synchronization protocol entry. Entries cannot be created and deleted via SNMP SET operations. Table description (for tmnxMcPeerSyncStatsTable): The tmnxMcPeerSyncStatsTable has an entry for each multi-chassis peer synchronization protocol entry. Supports realtime plotting Supports scheduled collection Monitored class: multichassis.PeerSynchronizationProtocol</p>		
bodyDecodeErrorPacketsReceived [Body Decode Error Packets Received] (tmnxMcPeerSyncPktsRxErrBody)	long	The value of tmnxMcPeerSyncPktsRxErrBody indicates the number of packets with body decode errors received from the multi-chassis peer.

Table 423 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dataPacketsReceived [Data Packets Received] (tmnxMcPeerSyncPktsRxData)	long	The value of tmnxMcPeerSyncPktsRxData indicates the number of hello packets received from the multi-chassis peer.
dataPacketsTransmitted [Data Packets Transmitted] (tmnxMcPeerSyncPktsTxData)	long	The value of tmnxMcPeerSyncPktsTxData indicates the number of data packets transmitted to the multi-chassis peer.
erroneousPacketsReceived [Erroneous Packets Received] (tmnxMcPeerSyncPktsRxErr)	long	The value of tmnxMcPeerSyncPktsRxErr indicates the number of erroneous packets received from the multi-chassis peer.
headerDecodeErrorPacketsReceived [Header Decode Error Packets Received] (tmnxMcPeerSyncPktsRxErrHeader)	long	The value of tmnxMcPeerSyncPktsRxErrHeader indicates the number of packets with header decode errors received from the multi-chassis peer.
helloPacketsReceived [Hello Packets Received] (tmnxMcPeerSyncPktsRxHello)	long	The value of tmnxMcPeerSyncPktsRxHello indicates the number of hello packets received from the multi-chassis peer.
helloPacketsTransmitted [Hello Packets Transmitted] (tmnxMcPeerSyncPktsTxHello)	long	The value of tmnxMcPeerSyncPktsTxHello indicates the number of hello packets transmitted to the multi-chassis peer.
otherPacketsReceived [Other Packets Received] (tmnxMcPeerSyncPktsRxOther)	long	The value of tmnxMcPeerSyncPktsRxOther indicates the number of all other packet types received from the multi-chassis peer.
otherPacketsTransmitted [Other Packets Transmitted] (tmnxMcPeerSyncPktsTxOther)	long	The value of tmnxMcPeerSyncPktsTxOther indicates the number of all other packet types transmitted to the multi-chassis peer.
packetTransmissionErrors [Packet Transmission Errors] (tmnxMcPeerSyncPktsTxErr)	long	The value of tmnxMcPeerSyncPktsTxErr indicates the number of packet transmission errors.

Table 423 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sequenceNumberErrorPacketsReceived [Sequence Number Error Packets Received] (tmnxMcPeerSyncPktsRxErrSeqNum)	long	The value of tmnxMcPeerSyncPktsRxErrSeqNum indicates the number of packets with sequence number errors received from the multi-chassis peer.
totalPacketsReceived [Total Packets Received] (tmnxMcPeerSyncPktsRxAll)	long	The value of tmnxMcPeerSyncPktsRxAll indicates the total number of packets received from the multi-chassis peer.
totalPacketsTransmitted [Total Packets Transmitted] (tmnxMcPeerSyncPktsTxAll)	long	The value of tmnxMcPeerSyncPktsTxAll indicates the total number of packets transmitted to the multi-chassis peer.

Table 424 netw statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
SnmpAgentStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement		
sgiSnmplnGetBulks [Sgi Snmp In Get Bulks] (sgiSnmplnGetBulks)	long	The value of sgiSnmplnGetBulks indicates the total number of SNMP Get-Next PDUs which have been accepted and processed by the SNMP protocol entity.
snmplnASNParseErrs [Snmp In ASNParse Errs] (snmplnASNParseErrs)	long	The total number of ASN.1 or BER errors encountered by the SNMP entity when decoding received SNMP messages.
snmplnBadCommunityNames [Snmp In Bad Community Names] (snmplnBadCommunityNames)	long	The total number of community-based SNMP messages (for example, SNMPv1) delivered to the SNMP entity which used an SNMP community name not known to said entity. Also, implementations which authenticate community-based SNMP messages using check(s) in addition to matching the community name (for example, by also checking whether the message originated from a transport address allowed to use a specified community name) MAY include in this value the number of messages which failed the additional check(s). It is strongly RECOMMENDED that the documentation for any security model which is used to authenticate community-based SNMP messages specify the precise conditions that contribute to this value.

Table 424 netw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
snmpInBadCommunityUses [Snmp In Bad Community Uses] (snmpInBadCommunityUses)	long	The total number of community-based SNMP messages (for example, SNMPv1) delivered to the SNMP entity which represented an SNMP operation that was not allowed for the SNMP community named in the message. The precise conditions under which this counter is incremented (if at all) depend on how the SNMP entity implements its access control mechanism and how its applications interact with that access control mechanism. It is strongly RECOMMENDED that the documentation for any access control mechanism which is used to control access to and visibility of MIB instrumentation specify the precise conditions that contribute to this value.
snmpInBadVersions [Snmp In Bad Versions] (snmpInBadVersions)	long	The total number of SNMP messages which were delivered to the SNMP entity and were for an unsupported SNMP version.
snmpInPkts [Snmp In Pkts] (snmpInPkts)	long	The total number of messages delivered to the SNMP entity from the transport service.
snmpProxyDrops [Snmp Proxy Drops] (snmpProxyDrops)	long	The total number of Confirmed Class PDUs (such as GetRequest-PDUs, GetNextRequest-PDUs, GetBulkRequest-PDUs, SetRequest-PDUs, and InformRequest-PDUs) delivered to the SNMP entity which were silently dropped because the transmission of the (possibly translated) message to a proxy target failed in a manner (other than a time-out) such that no Response Class PDU (such as a Response-PDU) could be returned.

Table 424 netw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
snmpSilentDrops [Snmp Silent Drops] (snmpSilentDrops)	long	The total number of Confirmed Class PDUs (such as GetRequest-PDUs, GetNextRequest-PDUs, GetBulkRequest-PDUs, SetRequest-PDUs, and InformRequest-PDUs) delivered to the SNMP entity which were silently dropped because the size of a reply containing an alternate Response Class PDU (such as a Response-PDU) with an empty variable-bindings field was greater than either a local constraint or the maximum message size associated with the originator of the request.

Table 425 ospf statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AreaBasicStats</p> <p>MIB entry name: tmnxOspfAreaEntry</p> <p>Entry description: The tmnxOspfAreaEntry contains information describing the configured parameters and cumulative statistics of one of the router's attached areas.</p> <p>Table description (for tmnxOspfAreaTable): The tmnxOspfAreaTable contains information describing the configured parameters and cumulative statistics of the router's attached areas.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.AreaSite</p>		
nssaTranslatorEvents [Nssa Translator Events] (tmnxOspfAreaNssaTranslatorEvents)	long	The value of tmnxOspfAreaNssaTranslatorEvents indicates the number of Translator State changes that have occurred since the last boot-up.
totalLSACount [Total LSACount] (tmnxOspfAreaScopeLsaCount)	long	The value of tmnxOspfAreaScopeLsaCount indicates the total number of Area-Scope link state advertisements in this area's link-state database.
totalSpfRuns [Total Spf Runs] (tmnxOspfAreaSpfRuns)	long	The value of tmnxOspfAreaSpfRuns indicates the number of times that the intra-area route table has been calculated using this area's link-state database. This is typically done using Dijkstra's algorithm.
totalUnknownLSACount [Total Unknown LSACount] (tmnxOspfAreaScopeUnkLsaCount)	long	The value of tmnxOspfAreaScopeUnkLsaCount indicates the total number of unknown Area-Scope link-state advertisements in this area's link-state database.

Table 425 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AreaSiteLfaStats</p> <p>MIB entry name: tmnxOspfLfaStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfLfaStatsTable represents information on LFA coverage for a given OSPF area</p> <p>Table description (for tmnxOspfLfaStatsTable): The tmnxOspfLfaStatsTable maintains information on loopfree-alternate (LFA) coverage for each instance of OSPF protocol.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.AreaSite</p>		
ospfLfaCoverage [Ospf Lfa Coverage] (tmnxOspfLfaCoverage)	long	The value of tmnxOspfLfaCoverage indicates how much LFA coverage is being obtained for the set of available LFA eligible nodes.
ospfLfaNodesCovered [Ospf Lfa Nodes Covered] (tmnxOspfLfaNodesCovered)	long	The value of tmnxOspfLfaNodesCovered indicates in absolute numbers the number of nodes for which an LFA is found.
ospfLfaPrefixCoverage [Ospf Lfa Prefix Coverage] (tmnxOspfLfaPfxCoverage)	long	The value of tmnxOspfLfaPfxCoverage indicates how much LFA prefix coverage is being obtained for the set of available LFA eligible prefixes.
ospfLfaPrefixCovered [Ospf Lfa Prefix Covered] (tmnxOspfLfaPfxCovered)	long	The value of tmnxOspfLfaPfxCovered indicates in absolute numbers the number of prefixes for which an LFA is found.
ospfLfaTotalNodes [Ospf Lfa Total Nodes] (tmnxOspfLfaTotalNodes)	long	The value of tmnxOspfLfaTotalNodes indicates in absolute numbers the number of nodes eligible for LFA calculation.
ospfLfaTotalPrefix [Ospf Lfa Total Prefix] (tmnxOspfLfaTotalPfx)	long	The value of tmnxOspfLfaTotalPfx indicates in absolute numbers the number of prefixes eligible for LFA calculation.

Table 425 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceGeneralStats</p> <p>MIB entry name: tmnxOspfNgIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgIfStatsTable represents additional columns for statistics for an OSPF interface.</p> <p>Table description (for tmnxOspfNgIfStatsTable): The tmnxOspfNgIfStatsTable provides an extension of the tmnxOspfNgIfTable for statistics for an OSPF interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Interface</p>		
events [Events] (tmnxOspfNgIfEvents)	long	The value of tmnxOspfNgIfEvents indicates the number of times this OSPF interface has changed its state, or an error has occurred.
<p>InterfaceReceiveStats</p> <p>MIB entry name: tmnxOspfNgIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgIfStatsTable represents additional columns for statistics for an OSPF interface.</p> <p>Table description (for tmnxOspfNgIfStatsTable): The tmnxOspfNgIfStatsTable provides an extension of the tmnxOspfNgIfTable for statistics for an OSPF interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Interface</p>		
databaseDescriptionPackets [Database Description Packets] (tmnxOspfNgIfRxDBDs)	long	The value of tmnxOspfNgIfRxDBDs indicates the total number of OSPF Database Description packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.
helloPackets [Hello Packets] (tmnxOspfNgIfRxHellos)	long	The value of tmnxOspfNgIfRxHellos indicates the total number of OSPF Hello packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.

Table 425 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfNgIfRxLSAcks)	long	The value of tmnxOspfNgIfRxLSAcks indicates the total number of Link State Acknowledgements received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateRequests [Link State Requests] (tmnxOspfNgIfRxLSRs)	long	The value of tmnxOspfNgIfRxLSRs indicates the total number of Link State Requests (LSRs) received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateUpdates [Link State Updates] (tmnxOspfNgIfRxLSUs)	long	The value of tmnxOspfNgIfRxLSUs indicates the total number of Link State Updates (LSUs) received on this interface since tmnxOspfAdminState was last set to 'enabled'.
lsasWithBadChecksums [Lsas With Bad Checksums] (tmnxOspfNgIfRxBadChecksums)	long	The value of tmnxOspfNgIfRxBadChecksums indicates the count of LSAs received with bad checksums.
totalPackets [Total Packets] (tmnxOspfNgIfRxPackets)	long	The value of tmnxOspfNgIfRxPackets indicates the total number of OSPF packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.
<p>InterfaceStatusStats</p> <p>MIB entry name: tmnxOspfNgIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgIfStatsTable represents additional columns for statistics for an OSPF interface.</p> <p>Table description (for tmnxOspfNgIfStatsTable): The tmnxOspfNgIfStatsTable provides an extension of the tmnxOspfNgIfTable for statistics for an OSPF interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Interface</p>		
authorizationFailures [Authorization Failures] (tmnxOspfNgIfAuthFailures)	long	The value of tmnxOspfNgIfAuthFailures indicates the total number of OSPF packets received with an invalid authorization key since tmnxOspfAdminState was last set to 'enabled'.

Table 425 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badAreas [Bad Areas] (tmnxOspfNglfBadAreas)	long	The value of tmnxOspfNglfBadAreas indicates the total number of OSPF packets received with an area mismatch since tmnxOspfAdminState was last set to 'enabled'.
badAuthorizationTypes [Bad Authorization Types] (tmnxOspfNglfBadAuthTypes)	long	The value of tmnxOspfNglfBadAuthTypes indicates the total number of OSPF packets received with an invalid authorization type since tmnxOspfAdminState was last set to 'enabled'.
badDeadIntervals [Bad Dead Intervals] (tmnxOspfNglfBadDeadIntervals)	long	The value of tmnxOspfNglfBadDeadIntervals indicates the total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this interface since tmnxOspfAdminState was last set to 'enabled'.
badDestinationAddresses [Bad Destination Addresses] (tmnxOspfNglfBadDstAddrs)	long	The value of tmnxOspfNglfBadDstAddrs indicates the total number of OSPF packets received with the incorrect IP destination address since tmnxOspfAdminState was last set to 'enabled'.
badHelloIntervals [Bad Hello Intervals] (tmnxOspfNglfBadHelloIntervals)	long	The value of tmnxOspfNglfBadHelloIntervals indicates the total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this interface since tmnxOspfAdminState was last set to 'enabled'.
badLengths [Bad Lengths] (tmnxOspfNglfBadLengths)	long	The value of tmnxOspfNglfBadLengths indicates the total number of OSPF packets received on this interface with a total length not equal to the length given in the packet itself since tmnxOspfAdminState was last set to 'enabled'.
badNeighbors [Bad Neighbors] (tmnxOspfNglfBadNeighbors)	long	The value of tmnxOspfNglfBadNeighbors indicates the total number of OSPF packets received where the neighbor information does not match the information this router has for the neighbor since tmnxOspfAdminState was last set to 'enabled'.

Table 425 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badNetworks [Bad Networks] (tmnxOspfNglfBadNetworks)	long	The value of tmnxOspfNglfBadNetworks indicates the total number of OSPF packets received with invalid network or mask since tmnxOspfAdminState was last set to 'enabled'.
badOptions [Bad Options] (tmnxOspfNglfBadOptions)	long	The value of tmnxOspfNglfBadOptions indicates the total number of OSPF packets received with an option that does not match those configured for this interface or area since tmnxOspfAdminState was last set to 'enabled'.
badPacketTypes [Bad Packet Types] (tmnxOspfNglfBadPacketTypes)	long	The value of tmnxOspfNglfBadPacketTypes indicates the total number of OSPF packets received with an invalid OSPF packet type since tmnxOspfAdminState was last set to 'enabled'.
badVersions [Bad Versions] (tmnxOspfNglfBadVersions)	long	The value of tmnxOspfNglfBadVersions indicates the total number of OSPF packets received with bad OSPF version numbers since tmnxOspfAdminState was last set to 'enabled'.
badVirtualLinks [Bad Virtual Links] (tmnxOspfNglfBadVirtualLinks)	long	The value of tmnxOspfNglfBadVirtualLinks indicates the total number of OSPF packets received on this interface that are destined to a virtual link that does not exist since tmnxOspfAdminState was last set to 'enabled'.
discardPackets [Discard Packets] (tmnxOspfNglfDiscardPackets)	long	The value of tmnxOspfNglfDiscardPackets indicates the total number of OSPF packets discarded on this interface since tmnxOspfAdminState was last set to 'enabled'.
retransmitOuts [Retransmit Outs] (tmnxOspfNglfRetransmitOuts)	long	The value of tmnxOspfNglfRetransmitOuts indicates the total number of OSPF Retransmits sent on this interface since tmnxOspfAdminState was last set to 'enabled'.

Table 425 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceTransmitStats</p> <p>MIB entry name: tmnxOspfNgIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgIfStatsTable represents additional columns for statistics for an OSPF interface.</p> <p>Table description (for tmnxOspfNgIfStatsTable): The tmnxOspfNgIfStatsTable provides an extension of the tmnxOspfNgIfTable for statistics for an OSPF interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Interface</p>		
databaseDescriptionPackets [Database Description Packets] (tmnxOspfNgIfRxDBDs)	long	The value of tmnxOspfNgIfRxDBDs indicates the total number of OSPF Database Description packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.
helloPackets [Hello Packets] (tmnxOspfNgIfRxHellos)	long	The value of tmnxOspfNgIfRxHellos indicates the total number of OSPF Hello packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfNgIfRxLSAcks)	long	The value of tmnxOspfNgIfRxLSAcks indicates the total number of Link State Acknowledgements received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateRequests [Link State Requests] (tmnxOspfNgIfRxLSRs)	long	The value of tmnxOspfNgIfRxLSRs indicates the total number of Link State Requests (LSRs) received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateUpdates [Link State Updates] (tmnxOspfNgIfRxLSUs)	long	The value of tmnxOspfNgIfRxLSUs indicates the total number of Link State Updates (LSUs) received on this interface since tmnxOspfAdminState was last set to 'enabled'.
totalPackets [Total Packets] (tmnxOspfNgIfRxPackets)	long	The value of tmnxOspfNgIfRxPackets indicates the total number of OSPF packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.

events [Events] (tmnxOspfNgNbrEvents)	long	The value of tmnxOspfNgNbrEvents indicates the number of times this neighbor relationship has changed state, or an error has occurred.
retransmissionQueueLength [Retransmission Queue Length] (tmnxOspfNgNbrLsRetransQLen)	long	The value of tmnxOspfNgNbrLsRetransQLen indicates the current length of the retransmission queue.
<p>NeighborStatusStats</p> <p>MIB entry name: tmnxOspfNgNbrStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgNbrStatsTable represents additional columns for statistics for an OSPF neighbor.</p> <p>Table description (for tmnxOspfNgNbrStatsTable): The tmnxOspfNgNbrStatsTable provides an extension of the tmnxOspfNgNbrTable for statistics for an OSPF neighbor.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Neighbor</p>		

Table 425 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badMtus [Bad Mtus] (tmnxOspfNgNbrBadMTUs)	long	The value of tmnxOspfNgNbrBadMTUs indicates the total number of times when the MTU in a received database description packet was larger than the MTU of the receiving interface since tmnxOspfAdminState was last set to 'enabled'.
badNeighborStates [Bad Neighbor States] (tmnxOspfNgNbrBadNbrStates)	long	The value of tmnxOspfNgNbrBadNbrStates indicates the total number of OSPF packets received when the neighbor state was not expecting to receive this packet type since tmnxOspfAdminState was last set to 'enabled'.
badPackets [Bad Packets] (tmnxOspfNgNbrBadPackets)	long	The value of tmnxOspfNgNbrBadPackets indicates the total number of times when an LS update was received with an illegal LS type or an option mismatch since tmnxOspfAdminState was last set to 'enabled'.
badSequenceNumbers [Bad Sequence Numbers] (tmnxOspfNgNbrBadSeqNums)	long	The value of tmnxOspfNgNbrBadSeqNums indicates the total number of times when a database description packet was received with a sequence number mismatch since tmnxOspfAdminState was last set to 'enabled'.
duplicates [Duplicates] (tmnxOspfNgNbrDuplicates)	long	The value of tmnxOspfNgNbrDuplicates indicates the total number of times when a duplicate database description packet was received during the Exchange state since tmnxOspfAdminState was last set to 'enabled'.
lsaInstallFailed [Lsa Install Failed] (tmnxOspfNgNbrLsaInstallFailed)	long	The value of tmnxOspfNgNbrLsaInstallFailed indicates the total number of times an LSA could not be installed into the LSDB due to a resource allocation issue since tmnxOspfAdminState was last set to 'enabled'.
lsaNotInLSDB [Lsa Not In LSDB] (tmnxOspfNgNbrLsaNotInLsdb)	long	The value of tmnxOspfNgNbrLsaNotInLsdb indicates the total number of times when an LS request was received for an LSA not installed in the LSDB of this router since tmnxOspfAdminState was last set to 'enabled'.
numberOfRestarts [Number Of Restarts] (tmnxOspfNgNbrNumRestarts)	long	The value of tmnxOspfNgNbrNumRestarts indicates the number of times the neighbor has attempted restart.

Table 425 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
optionMismatches [Option Mismatches] (tmnxOspfNgNbrOptionMismatches)	long	The value of tmnxOspfNgNbrOptionMismatches indicates the total number of times when a LS update was received with an option mismatch since tmnxOspfAdminState was last set to 'enabled'.
ShamLinkGeneralStats MIB entry name: tmnxOspfShamIfStatsEntry Entry description: Each row entry in the tmnxOspfShamIfStatsTable represents additional columns for statistics for an OSPF sham link. Table description (for tmnxOspfShamIfStatsTable): The tmnxOspfShamIfStatsTable provides an extension of the tmnxOspfShamIfTable for statistics for an OSPF sham link. Supports realtime plotting Supports scheduled collection Monitored class: ospf.ShamLink		
events [Events] (tmnxOspfShamIfEvents)	long	The value of tmnxOspfShamIfEvents indicates the number of state changes or error events on this sham link.
ShamLinkNeighborGeneralStats MIB entry name: tmnxOspfShamNbrStatsEntry Entry description: Each row entry in the tmnxOspfShamNbrStatsTable represents additional columns for statistics for an OSPF sham link neighbor. Table description (for tmnxOspfShamNbrStatsTable): The tmnxOspfShamNbrStatsTable provides an extension of the tmnxOspfShamNbrTable for statistics for an OSPF sham link neighbor. Supports realtime plotting Supports scheduled collection Monitored class: ospf.ShamLinkNeighbor		
events [Events] (tmnxOspfShamNbrEvents)	long	The value of tmnxOspfShamNbrEvents indicates the number of times this sham link has changed its state, or an error has occurred.

Table 425 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
retransmissionQueueLength [Retransmission Queue Length] (tmnxOspfShamNbrLsRetransQLen)	long	The value of tmnxOspfShamNbrLsRetransQLen indicates the current length of the retransmission queue.
<p>ShamLinkNeighborStatusStats MIB entry name: tmnxOspfShamNbrStatsEntry Entry description: Each row entry in the tmnxOspfShamNbrStatsTable represents additional columns for statistics for an OSPF sham link neighbor. Supports realtime plotting Supports scheduled collection Monitored class: ospf.ShamLinkNeighbor</p>		
badMtus [Bad Mtus] (tmnxOspfShamNbrBadMTUs)	long	The value of tmnxOspfShamNbrBadMTUs indicates the total number of times when the MTU in a received database description packet was larger than the MTU of the receiving interface since tmnxOspfAdminState was last set to 'enabled'.
badPackets [Bad Packets] (tmnxOspfShamNbrBadPackets)	long	The value of tmnxOspfShamNbrBadPackets indicates the total number of times when an LS update was received with an illegal LS type or an option mismatch since tmnxOspfAdminState was last set to 'enabled'.
badSequenceNumbers [Bad Sequence Numbers] (tmnxOspfShamNbrBadSeqNums)	long	The value of tmnxOspfShamNbrBadSeqNums indicates the total number of times when a database description packet was received with a sequence number mismatch since tmnxOspfAdminState was last set to 'enabled'.
badVirtualNeighborStates [Bad Virtual Neighbor States] (tmnxOspfShamNbrBadNbrStates)	long	The value of tmnxOspfShamNbrBadNbrStates indicates the total number of OSPF packets received when the sham link neighbor state was not expecting to receive this packet type since tmnxOspfAdminState was last set to 'enabled'.

Table 425 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
duplicates [Duplicates] (tmnxOspfShamNbrDuplicates)	long	The value of tmnxOspfShamNbrDuplicates indicates the total number of times when a duplicate database description packet was received during the Exchange state since tmnxOspfAdminState was last set to 'enabled'.
lsaInstallFailed [Lsa Install Failed] (tmnxOspfShamNbrLsaInstallFail)	long	The value of tmnxOspfShamNbrLsaInstallFail indicates the total number of times when an LSA could not be installed into the LSDB due to a resource allocation issue since tmnxOspfAdminState was last set to 'enabled'.
lsaNotInLSDB [Lsa Not In LSDB] (tmnxOspfShamNbrLsaNotInLsdb)	long	The value of tmnxOspfShamNbrLsaNotInLsdb indicates the total number of times when an LS request was received for an LSA not installed in the LSDB of this router since tmnxOspfAdminState was last set to 'enabled'.
numberOfRestarts [Number Of Restarts] (tmnxOspfShamNbrNumRestarts)	long	The value of tmnxOspfShamNbrNumRestarts indicates the number of times the sham link neighbor has attempted restart since tmnxOspfAdminState was last set to 'enabled'.
optionMismatches [Option Mismatches] (tmnxOspfShamNbrOptionMismatch)	long	The value of tmnxOspfShamNbrOptionMismatch indicates the total number of times when a LS update was received with an option mismatch since tmnxOspfAdminState was last set to 'enabled'.
<p>ShamLinkReceiveStats</p> <p>MIB entry name: tmnxOspfShamLfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfShamLfStatsTable represents additional columns for statistics for an OSPF sham link.</p> <p>Table description (for tmnxOspfShamLfStatsTable): The tmnxOspfShamLfStatsTable provides an extension of the tmnxOspfShamLfTable for statistics for an OSPF sham link.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.ShamLink</p>		

Table 425 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
databaseDescriptionPackets [Database Description Packets] (tmnxOspfShamIfRxDBDs)	long	The value of tmnxOspfShamIfRxDBDs indicates the total number of OSPF Database Description packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
helloPackets [Hello Packets] (tmnxOspfShamIfRxHellos)	long	The value of tmnxOspfShamIfRxHellos indicates the total number of OSPF Hello packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfShamIfRxLSAcks)	long	The value of tmnxOspfShamIfRxLSAcks indicates the total number of Link State Acknowledgements received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateRequests [Link State Requests] (tmnxOspfShamIfRxLSRs)	long	The value of tmnxOspfShamIfRxLSRs indicates the total number of Link State Requests (LSRs) received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateUpdates [Link State Updates] (tmnxOspfShamIfRxLSUs)	long	The value of tmnxOspfShamIfRxLSUs indicates the total number of Link State Updates (LSUs) received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
lsasWithBadChecksums [Lsas With Bad Checksums] (tmnxOspfShamIfRxBadChecksums)	long	The value of tmnxOspfShamIfRxBadChecksums indicates the count of LSAs received with bad checksums.
totalPackets [Total Packets] (tmnxOspfShamIfRxPackets)	long	The value of tmnxOspfShamIfRxPackets indicates the total number of OSPF packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.

Table 425 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>ShamLinkStatusStats</p> <p>MIB entry name: tmnxOspfShamIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfShamIfStatsTable represents additional columns for statistics for an OSPF sham link.</p> <p>Table description (for tmnxOspfShamIfStatsTable): The tmnxOspfShamIfStatsTable provides an extension of the tmnxOspfShamIfTable for statistics for an OSPF sham link.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.ShamLink</p>		
authorizationFailures [Authorization Failures] (tmnxOspfShamIfAuthFailures)	long	The value of tmnxOspfShamIfAuthFailures indicates the total number of OSPF packets received with an invalid authorization key since tmnxOspfAdminState was last set to 'enabled'.
badAreas [Bad Areas] (tmnxOspfShamIfBadAreas)	long	The value of tmnxOspfShamIfBadAreas indicates the total number of OSPF packets received with an area mismatch since tmnxOspfAdminState was last set to 'enabled'.
badAuthorizationTypes [Bad Authorization Types] (tmnxOspfShamIfBadAuthTypes)	long	The value of tmnxOspfShamIfBadAuthTypes indicates the total number of OSPF packets received with an invalid authorization type since tmnxOspfAdminState was last set to 'enabled'.
badDeadIntervals [Bad Dead Intervals] (tmnxOspfShamIfBadDeadIntervals)	long	The value of tmnxOspfShamIfBadDeadIntervals indicates the total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this sham link since tmnxOspfAdminState was last set to 'enabled'.
badDestinationAddresses [Bad Destination Addresses] (tmnxOspfShamIfBadDstAddrs)	long	The value of tmnxOspfShamIfBadDstAddrs indicates the total number of OSPF packets received with the incorrect IP destination address since tmnxOspfAdminState was last set to 'enabled'.

Table 425 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badHelloIntervals [Bad Hello Intervals] (tmnxOspfShamIfBadHelloIntervals)	long	The value of tmnxOspfShamIfBadHelloIntervals indicates the total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this sham link since tmnxOspfAdminState was last set to 'enabled'.
badLengths [Bad Lengths] (tmnxOspfShamIfBadLengths)	long	The value of tmnxOspfShamIfBadLengths indicates the total number of OSPF packets received on this sham link with a total length not equal to the length given in the packet itself since tmnxOspfAdminState was last set to 'enabled'.
badNeighbors [Bad Neighbors] (tmnxOspfShamIfBadNeighbors)	long	The value of tmnxOspfShamIfBadNeighbors indicates the total number of OSPF packets received where the neighbor information does not match the information this router has for the neighbor since tmnxOspfAdminState was last set to 'enabled'.
badNetworks [Bad Networks] (tmnxOspfShamIfBadNetworks)	long	The value of tmnxOspfShamIfBadNetworks indicates the total number of OSPF packets received with invalid network or mask since tmnxOspfAdminState was last set to 'enabled'.
badOptions [Bad Options] (tmnxOspfShamIfBadOptions)	long	The value of tmnxOspfShamIfBadOptions indicates the total number of OSPF packets received with an option that does not match those configured for this sham link or area since tmnxOspfAdminState was last set to 'enabled'.
badPacketTypes [Bad Packet Types] (tmnxOspfShamIfBadPacketTypes)	long	The value of tmnxOspfShamIfBadPacketTypes indicates the total number of OSPF packets received with an invalid OSPF packet type since tmnxOspfAdminState was last set to 'enabled'.
badVersions [Bad Versions] (tmnxOspfShamIfBadVersions)	long	The value of tmnxOspfShamIfBadVersions indicates the total number of OSPF packets received with bad OSPF version numbers since tmnxOspfAdminState was last set to 'enabled'.

Table 425 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
discardPackets [Discard Packets] (tmnxOspfShamIfDiscardPackets)	long	The value of tmnxOspfShamIfDiscardPackets indicates the total number of OSPF packets discarded on this sham link since tmnxOspfAdminState was last set to 'enabled'.
retransmitOuts [Retransmit Outs] (tmnxOspfShamIfRetransmitOuts)	long	The value of tmnxOspfShamIfRetransmitOuts indicates the total number of OSPF Retransmits sent on this sham link since tmnxOspfAdminState was last set to 'enabled'.
<p>ShamLinkTransmitStats MIB entry name: tmnxOspfShamIfStatsEntry Entry description: Each row entry in the tmnxOspfShamIfStatsTable represents additional columns for statistics for an OSPF sham link. Table description (for tmnxOspfShamIfStatsTable): The tmnxOspfShamIfStatsTable provides an extension of the tmnxOspfShamIfTable for statistics for an OSPF sham link. Supports realtime plotting Supports scheduled collection Monitored class: ospf.ShamLink</p>		
databaseDescriptionPackets [Database Description Packets] (tmnxOspfShamIfRxDBDs)	long	The value of tmnxOspfShamIfRxDBDs indicates the total number of OSPF Database Description packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
helloPackets [Hello Packets] (tmnxOspfShamIfRxHellos)	long	The value of tmnxOspfShamIfRxHellos indicates the total number of OSPF Hello packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfShamIfRxLSAcks)	long	The value of tmnxOspfShamIfRxLSAcks indicates the total number of Link State Acknowledgements received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateRequests [Link State Requests] (tmnxOspfShamIfRxLSRs)	long	The value of tmnxOspfShamIfRxLSRs indicates the total number of Link State Requests (LSRs) received on this sham link since tmnxOspfAdminState was last set to 'enabled'.

Table 425 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
linkStateUpdates [Link State Updates] (tmnxOspfShamIfRxLSUs)	long	The value of tmnxOspfShamIfRxLSUs indicates the total number of Link State Updates (LSUs) received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
totalPackets [Total Packets] (tmnxOspfShamIfRxPackets)	long	The value of tmnxOspfShamIfRxPackets indicates the total number of OSPF packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
<p>SiteStats</p> <p>MIB entry name: tmnxOspfStatisticsEntry</p> <p>Entry description: Each row entry in the tmnxOspfStatisticsTable represents additional columns for statistics for an OSPF instance.</p> <p>Table description (for tmnxOspfStatisticsTable): The tmnxOspfStatisticsTable provides an extension of the tmnxOspfGeneralTable for statistics for an OSPF instance.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Site</p>		
addRouteFailed [Add Route Failed] (tmnxOspfRoutesAddsFailed)	long	The value of tmnxOspfRoutesAddsFailed indicates the number of times an attempt to add a route to the Route Table Manager (RTM) failed for this OSPF instance.
cspfDroppedRequests [Cspf Dropped Requests] (tmnxOspfCSPFDroppedRequests)	long	The value of tmnxOspfCSPFDroppedRequests indicates the number of dropped CSPF requests made by the OSPF protocol.
cspfPathsFound [Cspf Paths Found] (tmnxOspfCSPFPathsFound)	long	The value of tmnxOspfCSPFPathsFound indicates the number of of paths found for the requests made to OSPF protocol.
cspfPathsNotFound [Cspf Paths Not Found] (tmnxOspfCSPFPathsNotFound)	long	The value of tmnxOspfCSPFPathsNotFound indicates the number of of paths not found for the requests made to OSPF protocol.

Table 425 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cspfRequests [Cspf Requests] (tmnxOspfCSPFRequests)	long	The value of tmnxOspfCSPFRequests indicates the number of CSPF requests made to the OSPF protocol.
deleteRouteFailed [Delete Route Failed] (tmnxOspfRoutesDelsFailed)	long	The value of tmnxOspfRoutesDelsFailed indicates the number of times an attempt to delete a route from the Route Table Manager (RTM) failed for this instance of OSPF.
inOverflowCount [In Overflow Count] (tmnxOspfNumTimesInOverflow)	long	The value of tmnxOspfNumTimesInOverflow indicates the count of the number of times the system was in the overflow state.
inOverloadCount [In Overload Count] (tmnxOspfNumTimesInOverload)	long	The value of tmnxOspfNumTimesInOverload indicates the count of the number of times the system was overloaded.
modifyRouteFailed [Modify Route Failed] (tmnxOspfRoutesModsFailed)	long	The value of tmnxOspfRoutesModsFailed indicates the number of times an attempt to modify a route in the Route Table Manager (RTM) failed for this instance of OSPF.
newLsasOriginated [New Lsas Originated] (tmnxOspfOriginateNewLsas)	long	The value of tmnxOspfOriginateNewLsas indicates the number of new link-state advertisements that have been originated. This number is incremented each time the router originates a new LSA.
newLsasReceived [New Lsas Received] (tmnxOspfRxNewLsas)	long	The value of tmnxOspfRxNewLsas indicates the number of link-state advertisements received determined to be new instantiations. This number does not include newer instantiations of self-originated link-state advertisements.
spfAttemptsFailed [Spf Attempts Failed] (tmnxOspfSpfAttemptsFailed)	long	The value of tmnxOspfSpfAttemptsFailed indicates the number of times an attempt to run SPF has failed because SPF runs have been stopped as a result of insufficient memory resources.

events [Events] (tmnxOspfVirtIfEvents)	long	The value of tmnxOspfVirtIfEvents indicates the number of state changes or error events on this Virtual Link
<p>VirtualLinkReceiveStats</p> <p>MIB entry name: tmnxOspfVirtIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfVirtIfStatsTable represents additional columns for statistics for an OSPF virtual interface.</p> <p>Table description (for tmnxOspfVirtIfStatsTable): The tmnxOspfVirtIfStatsTable provides an extension of the tmnxOspfVirtIfTable for statistics for an OSPF virtual interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.VirtualLink</p>		
databaseDescriptionPackets [Database Description Packets] (tmnxOspfVirtIfRxDBDs)	long	The value of tmnxOspfVirtIfRxDBDs indicates the total number of OSPF Database Description packets received on this virtual interface.
helloPackets [Hello Packets] (tmnxOspfVirtIfRxHellos)	long	The value of tmnxOspfVirtIfRxHellos indicates the total number of OSPF Hello packets received on this virtual interface.

Table 425 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfVirtIfRxLSAcks)	long	The value of tmnxOspfVirtIfRxLSAcks indicates the total number of Link State Acknowledgements received on this virtual interface.
linkStateRequests [Link State Requests] (tmnxOspfVirtIfRxLSRs)	long	The value of tmnxOspfVirtIfRxLSRs indicates the total number of OSPF Link State Requests (LSRs) received on this virtual interface.
linkStateUpdates [Link State Updates] (tmnxOspfVirtIfRxLSUs)	long	The value of tmnxOspfVirtIfRxLSUs indicates the total number of OSPF Link State Updates (LSUs) received on this virtual interface.
lsasWithBadChecksums [Lsas With Bad Checksums] (tmnxOspfVirtIfRxBadChecksums)	long	The value of tmnxOspfVirtIfRxBadChecksums indicates the count of LSAs received with bad checksums.
totalPackets [Total Packets] (tmnxOspfVirtIfRxPackets)	long	The value of tmnxOspfVirtIfRxPackets indicates the total number of OSPF packets received on this virtual interface since it was created.
<p>VirtualLinkStatusStats</p> <p>MIB entry name: tmnxOspfVirtIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfVirtIfStatsTable represents additional columns for statistics for an OSPF virtual interface.</p> <p>Table description (for tmnxOspfVirtIfStatsTable): The tmnxOspfVirtIfStatsTable provides an extension of the tmnxOspfVirtIfTable for statistics for an OSPF virtual interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.VirtualLink</p>		
authorizationFailures [Authorization Failures] (tmnxOspfVirtIfAuthFailures)	long	The value of tmnxOspfVirtIfAuthFailures indicates the total number of OSPF packets received on this virtual interface with invalid authentication keys.

Table 425 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badAreas [Bad Areas] (tmnxOspfVirtIfBadAreas)	long	The value of tmnxOspfVirtIfBadAreas indicates the total number of OSPF packets received on this virtual interface with area mismatches.
badAuthorizationTypes [Bad Authorization Types] (tmnxOspfVirtIfBadAuthTypes)	long	The value of tmnxOspfVirtIfBadAuthTypes indicates the total number of OSPF packets received on this virtual interface with invalid authentication types.
badDeadIntervals [Bad Dead Intervals] (tmnxOspfVirtIfBadDeadIntervals)	long	The value of tmnxOspfVirtIfBadDeadIntervals indicates the total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this virtual interface since tmnxOspfAdminState was last set to 'enabled'.
badDestinationAddresses [Bad Destination Addresses] (tmnxOspfVirtIfBadDstAddrs)	long	The value of tmnxOspfVirtIfBadDstAddrs indicates the total number of OSPF packets received on this virtual interface with invalid destination IP address.
badHelloIntervals [Bad Hello Intervals] (tmnxOspfVirtIfBadHelloIntervals)	long	The value of tmnxOspfVirtIfBadHelloIntervals indicates the total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this virtual interface since tmnxOspfAdminState was last set to 'enabled'.
badLengths [Bad Lengths] (tmnxOspfVirtIfBadLengths)	long	The value of tmnxOspfVirtIfBadLengths indicates the total number of OSPF packets received on this virtual interface with a total length not equal to the length given in the packet itself since tmnxOspfAdminState was last set to 'enabled'.
badNeighbors [Bad Neighbors] (tmnxOspfVirtIfBadNeighbors)	long	The value of tmnxOspfVirtIfBadNeighbors indicates the total number of OSPF packets received where the neighbor information does not match the configuration this router has for the neighbor.
badNetworks [Bad Networks] (tmnxOspfVirtIfBadNetworks)	long	The value of tmnxOspfVirtIfBadNetworks indicates the total number of OSPF packets received on this virtual interface with invalid network or mask fields.

Table 425 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badOptions [Bad Options] (tmnxOspfVirtIfBadOptions)	long	The value of tmnxOspfVirtIfBadOptions indicates the total number of OSPF packets received with an option that does not match those configured for this virtual interface or transit-area since tmnxOspfAdminState was last set to 'enabled'.
badPacketTypes [Bad Packet Types] (tmnxOspfVirtIfBadPacketTypes)	long	The value of tmnxOspfVirtIfBadPacketTypes indicates the total number of OSPF packets received on this virtual interface with invalid OSPF packet types.
badVersions [Bad Versions] (tmnxOspfVirtIfBadVersions)	long	The value of tmnxOspfVirtIfBadVersions indicates the total number of OSPF packets received on this virtual interface with invalid OSPF version numbers.
discardPackets [Discard Packets] (tmnxOspfVirtIfDiscardPackets)	long	The value of tmnxOspfVirtIfDiscardPackets indicates the total number of OSPF packets discarded on this virtual interface.
retransmitOuts [Retransmit Outs] (tmnxOspfVirtIfRetransmitOuts)	long	The value of tmnxOspfVirtIfRetransmitOuts indicates the total number of OSPF packets retransmitted on this virtual interface.
<p>VirtualLinkTransmitStats</p> <p>MIB entry name: tmnxOspfVirtIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfVirtIfStatsTable represents additional columns for statistics for an OSPF virtual interface.</p> <p>Table description (for tmnxOspfVirtIfStatsTable): The tmnxOspfVirtIfStatsTable provides an extension of the tmnxOspfVirtIfTable for statistics for an OSPF virtual interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.VirtualLink</p>		

Table 425 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
databaseDescriptionPackets [Database Description Packets] (tmnxOspfVirtIfRxDBDs)	long	The value of tmnxOspfVirtIfRxDBDs indicates the total number of OSPF Database Description packets received on this virtual interface.
helloPackets [Hello Packets] (tmnxOspfVirtIfRxHellos)	long	The value of tmnxOspfVirtIfRxHellos indicates the total number of OSPF Hello packets received on this virtual interface.
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfVirtIfRxLSAcks)	long	The value of tmnxOspfVirtIfRxLSAcks indicates the total number of Link State Acknowledgements received on this virtual interface.
linkStateRequests [Link State Requests] (tmnxOspfVirtIfRxLSRs)	long	The value of tmnxOspfVirtIfRxLSRs indicates the total number of OSPF Link State Requests (LSRs) received on this virtual interface.
linkStateUpdates [Link State Updates] (tmnxOspfVirtIfRxLSUs)	long	The value of tmnxOspfVirtIfRxLSUs indicates the total number of OSPF Link State Updates (LSUs) received on this virtual interface.
totalPackets [Total Packets] (tmnxOspfVirtIfRxPackets)	long	The value of tmnxOspfVirtIfRxPackets indicates the total number of OSPF packets received on this virtual interface since it was created.
VirtualNeighborGeneralStats MIB entry name: tmnxOspfVirtNbrStatsEntry Entry description: Each row entry in the tmnxOspfVirtNbrStatsTable represents additional columns for statistics for an OSPF virtual neighbor. Table description (for tmnxOspfVirtNbrStatsTable): The tmnxOspfVirtNbrStatsTable provides an extension of the tmnxOspfVirtNbrTable for statistics for an OSPF virtual neighbor. Supports realtime plotting Supports scheduled collection Monitored class: ospf.VirtualNeighbor		

Table 425 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
events [Events] (tmnxOspfVirtNbrEvents)	long	The value of tmnxOspfVirtNbrEvents indicates the number of times this virtual link has changed its state, or an error has occurred.
retransmissionQueueLength [Retransmission Queue Length] (tmnxOspfVirtNbrLsRetransQLen)	long	The value of tmnxOspfVirtNbrLsRetransQLen indicates the current length of the retransmission queue.
<p>VirtualNeighborStatusStats MIB entry name: tmnxOspfVirtNbrStatsEntry Entry description: Each row entry in the tmnxOspfVirtNbrStatsTable represents additional columns for statistics for an OSPF virtual neighbor. Table description (for tmnxOspfVirtNbrStatsTable): The tmnxOspfVirtNbrStatsTable provides an extension of the tmnxOspfVirtNbrTable for statistics for an OSPF virtual neighbor. Supports realtime plotting Supports scheduled collection Monitored class: ospf.VirtualNeighbor</p>		
badMtus [Bad Mtus] (tmnxOspfVirtNbrBadMTUs)	long	The value of tmnxOspfVirtNbrBadMTUs indicates the total number of times when the MTU in a received database description packet was larger than the MTU of the receiving interface since tmnxOspfAdminState was last set to 'enabled'.
badPackets [Bad Packets] (tmnxOspfVirtNbrBadPackets)	long	The value of tmnxOspfVirtNbrBadPackets indicates the total number of times when an LS update was received with an illegal LS type or an option mismatch since tmnxOspfAdminState was last set to 'enabled'.
badSequenceNumbers [Bad Sequence Numbers] (tmnxOspfVirtNbrBadSeqNums)	long	The value of tmnxOspfVirtNbrBadSeqNums indicates the total number of times when a database description packet was received with a sequence number mismatch since tmnxOspfAdminState was last set to 'enabled'.

Table 425 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badVirtualNeighborStates [Bad Virtual Neighbor States] (tmnxOspfVirtNbrBadNbrStates)	long	The value of tmnxOspfVirtNbrBadNbrStates indicates the total number of OSPF packets received when the virtual neighbor state was not expecting to receive this packet type since tmnxOspfAdminState was last set to 'enabled'.
duplicates [Duplicates] (tmnxOspfVirtNbrDuplicates)	long	The value of tmnxOspfVirtNbrDuplicates indicates the total number of times when a duplicate database description packet was received during the Exchange state since tmnxOspfAdminState was last set to 'enabled'.
lsaInstallFailed [Lsa Install Failed] (tmnxOspfVirtNbrLsaInstallFail)	long	The value of tmnxOspfVirtNbrLsaInstallFail indicates the total number of times when an LSA could not be installed into the LSDB due to a resource allocation issue since tmnxOspfAdminState was last set to 'enabled'.
lsaNotInLSDB [Lsa Not In LSDB] (tmnxOspfVirtNbrLsaNotInLsdb)	long	The value of tmnxOspfVirtNbrLsaNotInLsdb indicates the total number of times when an LS request was received for an LSA not installed in the LSDB of this router since tmnxOspfAdminState was last set to 'enabled'.
numberOfRestarts [Number Of Restarts] (tmnxOspfVirtNbrNumRestarts)	long	The value of tmnxOspfVirtNbrNumRestarts indicates the number of times the virtual neighbor has attempted restart since tmnxOspfAdminState was last set to 'enabled'.
optionMismatches [Option Mismatches] (tmnxOspfVirtNbrOptionMismatch)	long	The value of tmnxOspfVirtNbrOptionMismatch indicates the total number of times when a LS update was received with an option mismatch since tmnxOspfAdminState was last set to 'enabled'.

Table 426 pae802_1x statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PaePortAuthenticatorDiagStats</p> <p>MIB entry name: dot1xAuthDiagEntry</p> <p>Entry description: The diagnostics information for an Authenticator PAE.</p> <p>Table description (for dot1xAuthDiagTable): A table that contains the diagnostics objects for the Authenticator PAE associated with each Port. An entry appears in this table for each port that may authenticate access to itself.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort 		
dot1xAuthAuthEapLogoffWhileAuthenticated [Dot 1 x Auth Auth Eap Logoff While Authenticated] (dot1xAuthAuthEapLogoffWhileAuthenticated)	long	Counts the number of times that the state machine transitions from AUTHENTICATED to DISCONNECTED, as a result of an EAPOL-Logoff message being received from the Supplicant.
dot1xAuthAuthEapLogoffWhileAuthenticating [Dot 1 x Auth Auth Eap Logoff While Authenticating] (dot1xAuthAuthEapLogoffWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of an EAPOL-Logoff message being received from the Supplicant.
dot1xAuthAuthEapStartsWhileAuthenticated [Dot 1 x Auth Auth Eap Starts While Authenticated] (dot1xAuthAuthEapStartsWhileAuthenticated)	long	Counts the number of times that the state machine transitions from AUTHENTICATED to CONNECTING, as a result of an EAPOL-Start message being received from the Supplicant.
dot1xAuthAuthEapStartsWhileAuthenticating [Dot 1 x Auth Auth Eap Starts While Authenticating] (dot1xAuthAuthEapStartsWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of an EAPOL-Start message being received from the Supplicant.

Table 426 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthAuthFailWhileAuthenticating [Dot 1 x Auth Auth Fail While Authenticating] (dot1xAuthAuthFailWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to HELD, as a result of the Backend Authentication state machine indicating authentication failure (authFail = TRUE).
dot1xAuthAuthReauthsWhileAuthenticated [Dot 1 x Auth Auth Reauths While Authenticated] (dot1xAuthAuthReauthsWhileAuthenticated)	long	Counts the number of times that the state machine transitions from AUTHENTICATED to CONNECTING, as a result of a reauthentication request (reAuthenticate = TRUE).
dot1xAuthAuthReauthsWhileAuthenticating [Dot 1 x Auth Auth Reauths While Authenticating] (dot1xAuthAuthReauthsWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of a reauthentication request (reAuthenticate = TRUE).
dot1xAuthAuthSuccessWhileAuthenticating [Dot 1 x Auth Auth Success While Authenticating] (dot1xAuthAuthSuccessWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to AUTHENTICATED, as a result of the Backend Authentication state machine indicating successful authentication of the Supplicant (authSuccess = TRUE).
dot1xAuthAuthTimeoutsWhileAuthenticating [Dot 1 x Auth Auth Timeouts While Authenticating] (dot1xAuthAuthTimeoutsWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of the Backend Authentication state machine indicating authentication timeout (authTimeout = TRUE).
dot1xAuthBackendAccessChallenges [Dot 1 x Auth Backend Access Challenges] (dot1xAuthBackendAccessChallenges)	long	Counts the number of times that the state machine receives an initial Access-Challenge packet from the Authentication server (i.e., aReq becomes TRUE, causing exit from the RESPONSE state). Indicates that the Authentication Server has communication with the Authenticator.
dot1xAuthBackendAuthFails [Dot 1 x Auth Backend Auth Fails] (dot1xAuthBackendAuthFails)	long	Counts the number of times that the state machine receives an EAP-Failure message from the Authentication Server (i.e., aFail becomes TRUE, causing a transition from RESPONSE to FAIL). Indicates that the Supplicant has not authenticated to the Authentication Server.

Table 426 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthBackendAuthSuccesses [Dot 1 x Auth Backend Auth Successes] (dot1xAuthBackendAuthSuccesses)	long	Counts the number of times that the state machine receives an EAP-Success message from the Authentication Server (i.e., aSuccess becomes TRUE, causing a transition from RESPONSE to SUCCESS). Indicates that the Supplicant has successfully authenticated to the Authentication Server.
dot1xAuthBackendNonNakResponsesFromSupplicant [Dot 1 x Auth Backend Non Nak Responses From Supplicant] (dot1xAuthBackendNonNakResponsesFromSupplicant)	long	Counts the number of times that the state machine receives a response from the Supplicant to an initial EAP-Request, and the response is something other than EAP-NAK (i.e., rxResp becomes TRUE, causing the state machine to transition from REQUEST to RESPONSE, and the response is not an EAP-NAK). Indicates that the Supplicant can respond to the Authenticator's chosen EAP-method.
dot1xAuthBackendOtherRequestsToSupplicant [Dot 1 x Auth Backend Other Requests To Supplicant] (dot1xAuthBackendOtherRequestsToSupplicant)	long	Counts the number of times that the state machine sends an EAP-Request packet (other than an Identity, Notification, Failure or Success message) to the Supplicant (i.e., executes txReq on entry to the REQUEST state). Indicates that the Authenticator chose an EAP-method.
dot1xAuthBackendResponses [Dot 1 x Auth Backend Responses] (dot1xAuthBackendResponses)	long	Counts the number of times that the state machine sends an initial Access-Request packet to the Authentication server (i.e., executes sendRespToServer on entry to the RESPONSE state). Indicates that the Authenticator attempted communication with the Authentication Server.
dot1xAuthEapLogoffsWhileConnecting [Dot 1 x Auth Eap Logoffs While Connecting] (dot1xAuthEapLogoffsWhileConnecting)	long	Counts the number of times that the state machine transitions from CONNECTING to DISCONNECTED as a result of receiving an EAPOL-Logoff message.
dot1xAuthEntersAuthenticating [Dot 1 x Auth Enters Authenticating] (dot1xAuthEntersAuthenticating)	long	Counts the number of times that the state machine transitions from CONNECTING to AUTHENTICATING, as a result of an EAP-Response/Identity message being received from the Supplicant.

Table 426 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthEntersConnecting [Dot 1 x Auth Enters Connecting] (dot1xAuthEntersConnecting)	long	Counts the number of times that the state machine transitions to the CONNECTING state from any other state.
<p>PaePortAuthenticatorSessionStats MIB entry name: dot1xAuthSessionStatsEntry Entry description: The session statistics information for an Authenticator PAE. This shows the current values being collected for each session that is still in progress, or the final values for the last valid session on each port where there is no session currently active. Table description (for dot1xAuthSessionStatsTable): A table that contains the session statistics objects for the Authenticator PAE associated with each Port. An entry appears in this table for each port that may authenticate access to itself. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort 		
dot1xAuthSessionAuthenticMethod [Dot 1 x Auth Session Authentic Method] (dot1xAuthSessionAuthenticMethod)	int	The authentication method used to establish the session.
dot1xAuthSessionFramesRx [Dot 1 x Auth Session Frames Rx] (dot1xAuthSessionFramesRx)	long	The number of user data frames received on this Port during the session.
dot1xAuthSessionFramesTx [Dot 1 x Auth Session Frames Tx] (dot1xAuthSessionFramesTx)	long	The number of user data frames transmitted on this Port during the session.
dot1xAuthSessionOctetsRx [Dot 1 x Auth Session Octets Rx] (dot1xAuthSessionOctetsRx)	java. math. BigInte- ger	The number of octets received in user data frames on this Port during the session.

Table 426 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthSessionOctetsTx [Dot 1 x Auth Session Octets Tx] (dot1xAuthSessionOctetsTx)	java. math. BigInteger	The number of octets transmitted in user data frames on this Port during the session.
dot1xAuthSessionTerminateCause [Dot 1 x Auth Session Terminate Cause] (dot1xAuthSessionTerminateCause)	int	The reason for the session termination.
dot1xAuthSessionTime [Dot 1 x Auth Session Time] (dot1xAuthSessionTime)	long	The duration of the session in seconds.
<p>PaePortAuthenticatorStats MIB entry name: dot1xAuthStatsEntry Entry description: The statistics information for an Authenticator PAE. Table description (for dot1xAuthStatsTable): A table that contains the statistics objects for the Authenticator PAE associated with each Port. An entry appears in this table for each port that may authenticate access to itself. Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort </p>		
dot1xAuthEapLengthErrorFramesRx [Dot 1 x Auth Eap Length Error Frames Rx] (dot1xAuthEapLengthErrorFramesRx)	long	The number of EAPOL frames that have been received by this Authenticator in which the Packet Body Length field is invalid.
dot1xAuthEapolFramesRx [Dot 1 x Auth Eapol Frames Rx] (dot1xAuthEapolFramesRx)	long	The number of valid EAPOL frames of any type that have been received by this Authenticator.

Table 426 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthEapolFramesTx [Dot 1 x Auth Eapol Frames Tx] (dot1xAuthEapolFramesTx)	long	The number of EAPOL frames of any type that have been transmitted by this Authenticator.
dot1xAuthEapolLogoffFramesRx [Dot 1 x Auth Eapol Logoff Frames Rx] (dot1xAuthEapolLogoffFramesRx)	long	The number of EAPOL Logoff frames that have been received by this Authenticator.
dot1xAuthEapolReqFramesTx [Dot 1 x Auth Eapol Req Frames Tx] (dot1xAuthEapolReqFramesTx)	long	The number of EAP Request frames (other than Rq/Id frames) that have been transmitted by this Authenticator.
dot1xAuthEapolReqIdFramesTx [Dot 1 x Auth Eapol Req Id Frames Tx] (dot1xAuthEapolReqIdFramesTx)	long	The number of EAP Req/Id frames that have been transmitted by this Authenticator.
dot1xAuthEapolRespFramesRx [Dot 1 x Auth Eapol Resp Frames Rx] (dot1xAuthEapolRespFramesRx)	long	The number of valid EAP Response frames (other than Resp/Id frames) that have been received by this Authenticator.
dot1xAuthEapolRespIdFramesRx [Dot 1 x Auth Eapol Resp Id Frames Rx] (dot1xAuthEapolRespIdFramesRx)	long	The number of EAP Resp/Id frames that have been received by this Authenticator.
dot1xAuthEapolStartFramesRx [Dot 1 x Auth Eapol Start Frames Rx] (dot1xAuthEapolStartFramesRx)	long	The number of EAPOL Start frames that have been received by this Authenticator.
dot1xAuthInvalidEapolFramesRx [Dot 1 x Auth Invalid Eapol Frames Rx] (dot1xAuthInvalidEapolFramesRx)	long	The number of EAPOL frames that have been received by this Authenticator in which the frame type is not recognized.
dot1xAuthLastEapolFrameVersion [Dot 1 x Auth Last Eapol Frame Version] (dot1xAuthLastEapolFrameVersion)	long	The protocol version number carried in the most recently received EAPOL frame.

Table 427 pim statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceAdditionalStats MIB entry name: vRtrPimNgIfStatsEntry Entry description: An entry in the vRtrPimNgIfStatsTable. Table description (for vRtrPimNgIfStatsTable): The table listing the PIM statistics for a particular interface. Supports realtime plotting Supports scheduled collection Monitored class: pim.Interface</p>		
bootstrapExpPolicyDrops [Bootstrap Exp Policy Drops] (vRtrPimNgIfBtrExpPolicyDrops)	long	The value of vRtrPimNgIfBtrExpPolicyDrops indicates the number of Bootstrap Messages that were not transmitted on this interface because of Bootstrap export policy. PIM Bootstrap export policies are configured using bootstrap export policy objects in vRtrPimNgGenPolicyTable.
bootstrapImpPolicyDrops [Bootstrap Imp Policy Drops] (vRtrPimNgIfBtrImpPolicyDrops)	long	The value of vRtrPimNgIfBtrImpPolicyDrops indicates the number of Bootstrap Messages received on this interface but were dropped because of Bootstrap import policy. PIM Bootstrap import policies are configured using bootstrap import policy objects in vRtrPimNgGenPolicyTable.
joinPolicyDrops [Join Policy Drops] (vRtrPimNgIfJoinPolicyDrops)	long	The value of vRtrPimNgIfJoinPolicyDrops indicates the number of times the join policy match resulted in dropping PIM Join-Prune Message or one of the source group contained in the message. PIM Join policies are configured using join policy objects in vRtrPimNgGenPolicyTable.
registerPolicyDrops [Register Policy Drops] (vRtrPimNgIfRegisterPolicyDrops)	long	The value of vRtrPimNgIfRegisterPolicyDrops indicates the number of times the register policy match resulted in dropping PIM Register Message. PIM Register policies are configured using the register policy objects in vRtrPimNgGenPolicyTable.
rxBSMNoRouterAlertDrops [Rx BSMNo Router Alert Drops] (vRtrPimNgIfRxBSMNoRouterAlertDrops)	long	The value of vRtrPimNgIfRxBSMNoRouterAlertDrops indicates the number of BSM messages that were dropped because router alert option was not present.

Table 427 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxBSMWrongIfDrops [Rx BSMWrong If Drops] (vRtrPimNgIfRxBSMWrongIfDrops)	long	The value of vRtrPimNgIfRxBSMWrongIfDrops indicates the number of BSM messages that were dropped either because they were not sent by the correct RPF neighbor or because they arrived on the wrong interface.
rxInvalidJoinPrunes [Rx Invalid Join Prunes] (vRtrPimNgIfRxInvalidJoinPrunes)	long	The value of vRtrPimNgIfRxInvalidJoinPrunes indicates the number of invalid PIM Join Prune messages received on this interface. A Join Prune message is invalid when the RP address in the message is not the RP for the group specified in the message. If such a message arrives, a vRtrPimNgInvalidJoinPrune notification is sent.
rxInvalidRegisters [Rx Invalid Registers] (vRtrPimNgIfRxInvalidRegisters)	long	The value of vRtrPimNgIfRxInvalidRegisters indicates the number of invalid PIM Register messages received on this interface. A Register message is invalid when the RP address in the message is not the RP for the group specified in the message. If such a message arrives, a vRtrPimNgInvalidRegister notification is sent.
rxJoinPruneErrs [Rx Join Prune Errs] (vRtrPimNgIfRxJoinPruneErrs)	long	The value of vRtrPimNgIfRxJoinPruneErrs indicates the number of errors while processing Join-Prune messages received on this interface.
rxJoinPrunes [Rx Join Prunes] (vRtrPimNgIfRxJoinPrunes)	long	The value of vRtrPimNgIfRxJoinPrunes indicates the number of PIM Join Prune messages received on this interface.
txJoinPrunes [Tx Join Prunes] (vRtrPimNgIfTxJoinPrunes)	long	The value of vRtrPimNgIfTxJoinPrunes indicates the number of PIM Join Prune messages transmitted on this interface.

Table 427 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceStats MIB entry name: vRtrPimNgIfStatsEntry Entry description: An entry in the vRtrPimNgIfStatsTable. Table description (for vRtrPimNgIfStatsTable): The table listing the PIM statistics for a particular interface. Supports realtime plotting Supports scheduled collection Monitored class: pim.Interface</p>		
bsmErrs [Bsm Errs] (vRtrPimNgIfTxBsmErrs)	long	The value of vRtrPimNgIfTxBsmErrs indicates the number of errors while transmitting PIM Bootstrap Messages (BSM) on this interface.
bsmPdus [Bsm Pdus] (vRtrPimNgIfTxBsmPdus)	long	The value of vRtrPimNgIfTxBsmPdus indicates the number of PIM Bootstrap Messages (BSM) transmitted on this interface.
mcacPolicyDrops [Mcac Policy Drops] (vRtrPimNgIfMcacPolicyDrops)	long	The value of the object vRtrPimNgIfMcacPolicyDrops indicates the number times a PIM Group is dropped because of applying a multicast CAC policy on this interface.
registerStopErrs [Register Stop Errs] (vRtrPimNgIfTxRegisterStopErrs)	long	The value of vRtrPimNgIfTxRegisterStopErrs indicates the number of PIM errors while trasmitting PIM Register Stop messages on this interface.
registerStops [Register Stops] (vRtrPimNgIfTxRegisterStops)	long	The value of vRtrPimNgIfTxRegisterStops indicates the number of PIM Register Stop messages transmitted on this interface.
rxAssertErrs [Rx Assert Errs] (vRtrPimNgIfRxAssertErrs)	long	The value of vRtrPimNgIfRxAssertErrs indicates the number of errors while processing Assert messages received on this interface.

Table 427 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxAsserts [Rx Asserts] (vRtrPimNgIfRxAsserts)	long	The value of vRtrPimNgIfRxAsserts indicates the number of PIM Assert messages received on this interface.
rxAutoRpAnnounce [Rx Auto Rp Announce] (vRtrPimNgIfRxAutoRpAnnounce)	long	The value of the object vRtrPimNgIfRxAutoRpAnnounce indicates the number Auto-RP announcements received on this interface.
rxAutoRpAnnounceErrs [Rx Auto Rp Announce Errs] (vRtrPimNgIfRxAutoRpAnnounceErrs)	long	The value of the object vRtrPimNgIfRxAutoRpAnnounceErrs indicates the number of errors while processing Auto-RP announcements received on this interface.
rxAutoRpGenErrs [Rx Auto Rp Gen Errs] (vRtrPimNgIfRxAutoRpGenErrs)	long	The value of the object vRtrPimNgIfRxAutoRpGenErrs indicates the number of errors while processing Auto-RP messages received on this interface.
rxAutoRpMapping [Rx Auto Rp Mapping] (vRtrPimNgIfRxAutoRpMapping)	long	The value of the object vRtrPimNgIfRxAutoRpMapping indicates the number of Auto-RP mappings received on this interface.
rxAutoRpMappingErrs [Rx Auto Rp Mapping Errs] (vRtrPimNgIfRxAutoRpMappingErrs)	long	The value of the object vRtrPimNgIfRxAutoRpMappingErrs indicates the number of errors while processing Auto-RP mappings received on this interface.
rxBadChecksumDiscards [Rx Bad Checksum Discards] (vRtrPimNgIfRxBadChecksumDiscard)	long	The value of vRtrPimNgIfRxBadChecksumDiscard indicates the number of PIM messages received on this interface which were discarded because of bad checksum.
rxBadEncodings [Rx Bad Encodings] (vRtrPimNgIfRxBadEncodings)	long	The value of vRtrPimNgIfRxBadEncodings indicates the number of PIM messages with bad encodings received on this interface.
rxBadVersionDiscards [Rx Bad Version Discards] (vRtrPimNgIfRxBadVersionDiscard)	long	The value of vRtrPimNgIfRxBadVersionDiscard indicates the number of PIM messages with bad versions received on this interface.

Table 427 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxBsmPduDrops [Rx Bsm Pdu Drops] (vRtrPimNgIfRxBsmPduDrops)	long	The value of vRtrPimNgIfRxBsmPduDrops indicates the number of Bootstrap Messages received on this interface but were dropped.
rxBsmPdus [Rx Bsm Pdus] (vRtrPimNgIfRxBsmPdus)	long	The value of vRtrPimNgIfRxBsmPdus indicates the number of Bootstrap Messages received on this interface.
rxCRPAdvNoRouterAlert [Rx CRPAdv No Router Alert] (vRtrPimNgIfRxCRPAdvNoRtrAlert)	long	The value of vRtrPimNgIfRxCRPAdvNoRtrAlert indicates the number of Candidate-RP Advertizements(C-RP-Adv) received on this interface which had no router alert option set.
rxHellos [Rx Hellos] (vRtrPimNgIfRxHellos)	long	The value of vRtrPimNgIfRxHellos indicates the number of PIM hello messages received on this interface.
rxHellosDropped [Rx Hellos Dropped] (vRtrPimNgIfRxHellosDropped)	long	The value of vRtrPimNgIfRxHellosDropped indicates the number of PIM Hello messages which were received on this interface but were dropped.
rxNbrUnknown [Rx Nbr Unknown] (vRtrPimNgIfRxNbrUnknown)	long	The value of vRtrPimNgIfRxNbrUnknown indicates the number of PIM messages (other than Hello messages) which were received on this interface and were rejected because the adjacency with the neighbor router was not already established.
rxNullRegisters [Rx Null Registers] (vRtrPimNgIfRxNullRegisters)	long	The value of vRtrPimNgIfRxNullRegisters indicates the number of PIM Null Register messages received on this interface.
rxPkts [Rx Pkts] (vRtrPimNgIfRxPkts)	long	The value of vRtrPimNgIfRxPkts indicates the number of multicast data packets received on this interface.

Table 427 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxRegisterErrs [Rx Register Errs] (vRtrPimNgIfRxRegisterErrs)	long	The value of vRtrPimNgIfRxRegisterErrs indicates the number of errors while processing Register messages received on this interface.
rxRegisterStopErrs [Rx Register Stop Errs] (vRtrPimNgIfRxRegisterStopErrs)	long	The value of vRtrPimNgIfRxRegisterStopErrs indicates the number of errors while processing Register Stop messages received on this interface.
rxRegisterStops [Rx Register Stops] (vRtrPimNgIfRxRegisterStops)	long	The value of vRtrPimNgIfRxRegisterStops indicates the number of PIM Register Stop messages received on this interface.
rxRegisters [Rx Registers] (vRtrPimNgIfRxRegisters)	long	The value of vRtrPimNgIfRxRegisters indicates the number of PIM Register messages received on this interface.
rxUnknownPdus [Rx Unknown Pdus] (vRtrPimNgIfRxUnknownPdus)	long	The value of vRtrPimNgIfRxUnknownPdus indicates the number of packets received with an unsupported PIM type.
sgTypes [Sg Types] (vRtrPimNgIfSGTypes)	long	The value of vRtrPimNgIfSGTypes indicates the number of entries in vRtrPimNgIfGrpSrcTable for which vRtrPimNgIf-GrpSrcType is 'sg'.
starGTypes [Star GTypes] (vRtrPimNgIfStarGTypes)	long	The value of vRtrPimNgIfStarGTypes indicates the number of entries in vRtrPimNgIfGrpSrcTable for which vRtrPimNgIf-GrpSrcType is 'starG'.
starStarRPTypes [Star Star RPTypes] (vRtrPimNgIfStarStarRPTypes)	long	The value of vRtrPimNgIfStarStarRPTypes indicates the number of entries in vRtrPimNgIfGrpSrcTable for which vRtrPimNgIfGrpSrcType is 'starStarRP'.
txAsserts [Tx Asserts] (vRtrPimNgIfTxAsserts)	long	The value of vRtrPimNgIfTxAsserts indicates the number of PIM Assert messages transmitted on this interface.

Table 427 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txAutoRpAnnounce [Tx Auto Rp Announce] (vRtrPimNgIfTxAutoRpAnnounce)	long	The value of the object vRtrPimNgIfTxAutoRpAnnounce indicates the number of Auto-RP announcements transmitted on this interface.
txAutoRpAnnounceErrs [Tx Auto Rp Announce Errs] (vRtrPimNgIfTxAutoRpAnnounceErrs)	long	The value of the object vRtrPimNgIfTxAutoRpAnnounceErrs indicates the number of errors while transmitting Auto-RP announcements on this interface.
txAutoRpMapping [Tx Auto Rp Mapping] (vRtrPimNgIfTxAutoRpMapping)	long	The value of the object vRtrPimNgIfTxAutoRpMapping indicates the number of Auto-RP mappings transmitted on this interface.
txAutoRpMappingErrs [Tx Auto Rp Mapping Errs] (vRtrPimNgIfTxAutoRpMappingErrs)	long	The value of the object vRtrPimNgIfTxAutoRpMappingErrs indicates the number of errors while transmitting Auto-RP mappings on this interface.
txHellos [Tx Hellos] (vRtrPimNgIfTxHellos)	long	The value of vRtrPimNgIfTxHellos indicates the number of PIM Hello messages transmitted on this interface.
txPkts [Tx Pkts] (vRtrPimNgIfTxPkts)	long	The value of vRtrPimNgIfTxPkts indicates the number of multicast data packets transmitted on this interface.
<p>PimGenSiteStats MIB entry name: vRtrPimNgGenStatEntry Entry description: An entry in the vRtrPimNgGenStatTable. Table description (for vRtrPimNgGenStatTable): vRtrPimNgGenStatTable lists PIM statistics for a particular PIM instance. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • pim.Site • pim.SiteExtension 		

Table 427 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
forwardCrpaDrops [Forward Crpa Drops] (vRtrPimNgGenStatFwdCrpaDrops)	long	The value of vRtrPimNgGenStatFwdCrpaDrops indicates the number of times the Candidate-RP Advertisements(C-RP-Adv) could not be forwarded by the router.
forwardCrpaPdus [Forward Crpa Pdu] (vRtrPimNgGenStatForwardCrpaPdus)	long	The value of vRtrPimNgGenStatForwardCrpaPdus indicates the number of Candidate-RP Advertisements(C-RP-Adv) that were forwarded by the router. C-RP-Adv's are forwarded when the received advertisement has a router alert set and the destination address is not the router's local address.
rxActiveMdts [Rx Active Mdts] (vRtrPimNgGenStatRxActiveMdts)	long	The value of vRtrPimNgGenStatRxActiveMdts indicates number of active Mdts on which the PE is receiving packets. This object is applicable to VPRNs only.
rxCrpaPduDrops [Rx Crpa Pdu Drops] (vRtrPimNgGenStatRxCrpaPduDrops)	long	The value of vRtrPimNgGenStatRxCrpaPduDrops indicates the number of PIM Candidate-RP Advertisements (C-RP-Adv) received by this instance, but were dropped.
rxCrpaPdus [Rx Crpa Pdu] (vRtrPimNgGenStatRxCrpaPdus)	long	The value of vRtrPimNgGenStatRxCrpaPdus indicates the number of PIM Candidate-RP Advertisements (C-RP-Adv) received by this instance.
rxMdtJoinTlvErrs [Rx Mdt Join Tlv Errs] (vRtrPimNgGenStatRxMdtJnTlvErrs)	long	The value of vRtrPimNgGenStatRxMdtJnTlvErrs indicates indicates number of times MDT Join TLVs were dropped due to errors in the received TLV.
rxMdtJoinTlvs [Rx Mdt Join Tlvs] (vRtrPimNgGenStatRxMdtJoinTlvs)	long	The value of vRtrPimNgGenStatRxMdtJoinTlvs indicates the number of times MDT Join TLV were received.
sgTypes [Sg Types] (vRtrPimNgGenStatSGTypes)	long	The value of vRtrPimNgGenStatSGTypes indicates the number of entries in vRtrPimNgGrpSrcTable for which vRtrPimNgGrpSrcType is 'sg'.

Table 427 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
starGTypes [Star GTypes] (vRtrPimNgGenStatStarGTypes)	long	The value of vRtrPimNgGenStatStarGTypes indicates the number of entries in vRtrPimNgGrpSrcTable for which vRtrPimNgGrpSrcType is 'starG'.
starStarRPTypes [Star Star RPTypes] (vRtrPimNgGenStatStarStarRPTypes)	long	The value of vRtrPimNgGenStatStarStarRPTypes indicates the number of entries in vRtrPimNgGrpSrcTable for which vRtrPimNgGrpSrcType is 'starStarRP'.
txActiveMdts [Tx Active Mdts] (vRtrPimNgGenStatTxActiveMdts)	long	The value of vRtrPimNgGenStatTxActiveMdts indicates the number of active MDTs on which the PE is forwarding packets. This object is applicable to VPRNs only.
txCrpaPduErrs [Tx Crpa Pdu Errs] (vRtrPimNgGenStatTxCrpaPduErrs)	long	The value of vRtrPimNgGenStatTxCrpaPduErrs indicates the number of errors while transmitting PIM Candidate-RP Advertisements (C-RP-Adv).
txCrpaPdus [Tx Crpa Pdus] (vRtrPimNgGenStatTxCrpaPdus)	long	The value of vRtrPimNgGenStatTxCrpaPdus indicates the number of PIM Candidate-RP Advertisements (C-RP-Adv) transmitted by this router instance.
txMdtJoinTlvErrs [Tx Mdt Join Tlv Errs] (vRtrPimNgGenStatTxMdtJnTlvErrs)	long	The value of vRtrPimNgGenStatTxMdtJnTlvErrs indicates the number of times MDT Join TLV could not be transmitted.
txMdtJoinTlvs [Tx Mdt Join Tlvs] (vRtrPimNgGenStatTxMdtJoinTlvs)	long	The value of vRtrPimNgGenStatTxMdtJoinTlvs indicates the number of times MDT Join TLV were transmitted.
txNullRegisters [Tx Null Registers] (vRtrPimNgGenStatTxNullRegisters)	long	The value of vRtrPimNgGenStatTxNullRegisters indicates the number of PIM Null Register messages transmitted by this instance.
txRegisterErrs [Tx Register Errs] (vRtrPimNgGenStatTxRegisterErrs)	long	The value of vRtrPimNgGenStatTxRegisterErrs indicates the number the times there was an error while transmitting PIM Register messages by this instance.

Table 427 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txRegisterTTL Drops [Tx Register TTL Drops] (vRtrPimNgGenStatTxRegTTL Drops)	long	The value of vRtrPimNgGenStatTxRegTTL Drops indicates the number of multicast data packets which could not be encapsulated in Register messages because the Time To Live (TTL) was zero.
txRegisters [Tx Registers] (vRtrPimNgGenStatTxRegisters)	long	The value of vRtrPimNgGenStatTxRegisters indicates the number of PIM Register messages transmitted by this instance.
PimGroupStats MIB entry name: vRtrPimNgGrpSrcStatEntry Entry description: An entry in the vRtrPimNgGrpSrcStatTable. Table description (for vRtrPimNgGrpSrcStatTable): vRtrPimNgGrpSrcStatTable contains statistics for the entries in the vRtrPimNgGrpSrcTable. These statistics are collected by the forwarding engine. Supports realtime plotting Supports scheduled collection Monitored class: pim.Groups		
discardedPkts [Discarded Pkts] (vRtrPimNgGrpSrcStatDscrdPkts)	java. math. BigInteger	The value of vRtrPimNgGrpSrcStatDscrdPkts indicates the number of multicast packets that matched this source group entry but were discarded. For (S,G) entries, if the traffic is getting forwarded on the SPT, the packets arriving from the RPT will be discarded.
forwardedOctets [Forwarded Octets] (vRtrPimNgGrpSrcStatFrddedOct)	java. math. BigInteger	The value of vRtrPimNgGrpSrcStatFrddedOct indicates the number of multicast octets that were forwarded to the interfaces in the outgoing interface list. vRtrPimNgGrpSrcIfTable lists all the interfaces in the outgoing interface list.
forwardedPkts [Forwarded Pkts] (vRtrPimNgGrpSrcStatFrwdedPkts)	java. math. BigInteger	The value of vRtrPimNgGrpSrcStatFrwdedPkts indicates the number of multicast packets that were forwarded to the interfaces in the outgoing interface list. vRtrPimNgGrpSrcIfTable lists all the interfaces in the outgoing interface list. This packet count is calculated before ingress QoS policing or shaping is applied.

Table 427 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rpfMismatches [Rpf Mismatches] (vRtrPimNgGrpSrcStatRPFMsmatch)	java. math. BigInteger	The value of vRtrPimNgGrpSrcStatRPFMsmatch indicates the number of multicast packets that matched this source group entry but they did not arrive on the the interface indicated by vRtrPimNgGrpSrcRpfIndex.

Table 428 ppp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PppStats</p> <p>MIB entry name: tmnxPppEntry</p> <p>Entry description: Each row entry represents a port from the tmnxPortTable that is configured for PPP. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxPppTable): The tmnxPppTable has an entry for each port in the system that is configured for PPP.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ppp.Interface</p>		
keepaliveEchoReplyPacketsReceived [Keepalive Echo Reply Packets Received] (tmnxPppKaInPktCount)	long	The number of echo-reply packets received.
keepaliveEchoRequestPacketsSent [Keepalive Echo Request Packets Sent] (tmnxPppKaOutPktCount)	long	The number of echo-request packets sent.
keepaliveThresholdExceedsCount [Keepalive Threshold Exceeds Count] (tmnxPppKaThresholdExceedsCount)	long	The number of times that tmnxPppKaDropCount was reached.
lqmInRate [Lqm In Rate] (tmnxPppLqmInRate)	long	The average of 'SaveInPackets'/'PeerOutPackets' in the last five consecutive LQRs received.
lqmLqrPacketsReceived [Lqm Lqr Packets Received] (tmnxPppLqmInPktCount)	long	The number of LQR packets received.
lqmLqrPacketsSent [Lqm Lqr Packets Sent] (tmnxPppLqmOutPktCount)	long	The number of LQR packets sent.

Table 428 ppp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lqmOutRate [Lqm Out Rate] (tmnxPppLqmOutRate)	long	The average of 'PeerInPackets'/'LastOutPackets' in the last five consecutive LQRs received.
lqmThresholdExceedsCount [Lqm Threshold Exceeds Count] (tmnxPppLqmThresholdExceedsCount)	long	The number of times that either tmnxPppLqmInRate or tmnxPppLqmOutRate falls below the specified quality percentage when PPP quality or LQM is enforced.

Table 429 radiusaccounting statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PolicyStats</p> <p>MIB entry name: tmnxSubAcctPlcyStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a subscriber RADIUS accounting policy in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxSubAcctPlcyStatsTable): The tmnxSubAcctPlcyStatsTable has an entry for each subscriber RADIUS accounting policy configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: radiusaccounting.Policy</p>		
receiveResponses [Receive Responses] (tmnxSubAcctPlcyRxResponses)	long	The value of tmnxSubAcctPlcyRxResponses indicates the number of accounting responses received for this policy.
requestRetries [Request Retries] (tmnxSubAcctPlcySendRetries)	long	The value of tmnxSubAcctPlcySendRetries indicates the number of retries to a different server for a single accounting request for this policy.
requestTimeOut [Request Time Out] (tmnxSubAcctPlcyReqTimeouts)	long	The value of tmnxSubAcctPlcyReqTimeouts indicates the number of accounting requests which have timed out for this policy.
requestsFail [Requests Fail] (tmnxSubAcctPlcySendFail)	long	The value of tmnxSubAcctPlcySendFail indicates how many accounting requests failed because the packet could not be sent out.
transferRequests [Transfer Requests] (tmnxSubAcctPlcyTxRequests)	long	The value of tmnxSubAcctPlcyTxRequests indicates the number of accounting requests transmitted for this policy.

<p>RadiusEntryStats</p> <p>MIB entry name: tmnxSubAcctPlyRadStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a specific RADIUS server in a subscriber accounting policy in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxSubAcctPlyRadStatsTable): The tmnxSubAcctPlyRadStatsTable has an entry for each RADIUS accounting server configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: radiusaccounting.RadiusEntry</p>		
receiveResponses [Receive Responses] (tmnxSubAcctPlyRadRxResponses)	long	The value of tmnxSubAcctPlyRadRxResponses indicates the number of accounting responses received for this server.
requestTimeOut [Request Time Out] (tmnxSubAcctPlyRadReqTimeouts)	long	The value of tmnxSubAcctPlyRadReqTimeouts indicates the number of accounting requests which have timed out for this server.
requestsFail [Requests Fail] (tmnxSubAcctPlyRadReqSendFail)	long	The value of tmnxSubAcctPlyRadReqSendFail indicates the number of accounting requests failed because the packet could not be sent out.
transferRequests [Transfer Requests] (tmnxSubAcctPlyRadTxRequests)	long	The value of tmnxSubAcctPlyRadTxRequests indicates the number of accounting requests transmitted for this server.

Table 430 ressubscr statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
HostTrackStats MIB entry name: sapBaseInfoEntry Entry description: Information about a specific SAP. Table description (for sapBaseInfoTable): A table that contains basic SAP information. Supports realtime plotting Does not support scheduled collection Monitored class: ressubscr.ResidentialSubscriberInstance		
sapInnerEncapValue [Sap Inner Encap Value] (sapEncapValue)	long	The value of the label used to identify this SAP on the access port specified by sapPortId.
sapPortId [Sap Port Id] (sapPortId)	String	The ID of the access port where this SAP is defined.
servicId [Service Id] (svclId)	long	The value of the object svclId specifies the Service identifier. This value should be unique within the service domain.
statsType [Stats Type] (tmnxSubHostTrkStatsType)	int	The value of tmnxSubHostTrkStatsType indicates the type of host tracking statistics contained in tmnxSubHostTrkStatsVal.
statsValue [Stats Value] (tmnxSubHostTrkStatsVal)	long	The value of tmnxSubHostTrkStatsType indicates the value of the host tracking statistics of the type indicated by tmnxSubHostTrkStatsType, for this subscriber host.
subscrIdent [Subscr Ident] (tmnxSubInfoSubIdent)	String	The value of tmnxSubInfoSubIdent specifies the subscriber identification of this subscriber.

Table 430 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subscriberHostAddress [Subscriber Host Address] (tmnxSubHostInfoV2IpAddress)	String	The value of tmnxSubHostInfoV2IpAddress specifies the IP address of this subscriber host.
subscriberHostAddressType [Subscriber Host Address Type] (tmnxSubHostInfoV2IpAddressType)	int	The value of tmnxSubHostInfoV2IpAddressType specifies the type of address stored in tmnxSubHostInfoV2IpAddress.
<p>HostTrackStatsOnSap</p> <p>MIB entry name: tmnxSubHostSapTrkStatsEntry</p> <p>Entry description: Each row entry represents host tracking status and statistics information about a particular host. Rows are created or removed automatically by the system. Rows are only created where the statistics value is nonzero; this allows faster walking through this table; hence, it is recommended to perform only get-next-request operations to retrieve information from this table.</p> <p>Table description (for tmnxSubHostSapTrkStatsTable): The tmnxSubHostSapTrkStatsTable shows statistics information about the video viewership of hosts, ordered by SAP.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • ies.ServiceAccessPoint • vpls.AbstractL2AccessInterface • vprn.ServiceAccessPoint 		
statsType [Stats Type] (tmnxSubHostSapTrkStatsType)	int	The value of tmnxSubHostSapTrkStatsType indicates the type of host tracking statistics contained in tmnxSubHostSapTrkStatsVal.
statsValue [Stats Value] (tmnxSubHostSapTrkStatsVal)	long	The value of tmnxSubHostSapTrkStatsType indicates the value of the host tracking statistics of the type indicated by tmnxSubHostSapTrkStatsType, for this host.

Table 430 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subscriberHostAddress [Subscriber Host Address] (tmnxSubHostSapTrkHostAddr)	String	The value of tmnxSubHostSapTrkHostAddr indicates the address of the host.
subscriberHostAddressType [Subscriber Host Address Type] (tmnxSubHostSapTrkHostAddrType)	int	The value of tmnxSubHostSapTrkHostAddrType indicates the address type of tmnxSubHostSapTrkHostAddr.
<p>PPPSubscrSessionStats</p> <p>MIB entry name: tmnxSubPppSvcTypeEntry</p> <p>Entry description: Each conceptual row represents information about a specific type of subscriber PPP in a specific service. Entries in this table are created and destroyed by the system.</p> <p>Table description (for tmnxSubPppSvcTypeTable): The tmnxSubPppSvcTypeTable has information for each each type of subscriber PPP Session, ordered per service.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • ies.Site • vprn.Site 		
pPPType [PPPTType] (tmnxSubPppSvcTypeIndex)	int	The value of the object tmnxSubPppSvcTypeIndex indicates the type of subscriber PPP.
pPPoL2tp [PPPo L2 tp] (tmnxSubPppSvcTypeSessions)	long	The value of the object tmnxSubPppSvcTypeSessions indicates the actual number of PPP session of this type.

subIngQosArbitStatsFwdPkts [Sub Ing Qos Arbit Stats Fwd Pkts] (tmnxSubIngQosArbitStatsFwdPkts)	java. math. BigInteger	The value of tmnxSubIngQosArbitStatsFwdPkts indicates the number of forwarded packets, as determined by the subscriber ingress policer control policy, offered by the Pchip to the Qchip.
<p>SubIngQosSchedStats</p> <p>MIB entry name: tmnxSubIngQosSchedStatsEntry</p> <p>Entry description: Each row entry contains ingress statistics about a particular subscriber QoS scheduler.</p> <p>Table description (for tmnxSubIngQosSchedStatsTable): The tmnxSubIngQosSchedStatsTable contains ingress QoS scheduler statistics about subscribers. In the descriptions below 'Pchip' refers to the Alcatel-Lucent SROS series Packet Processing chip, while 'Qchip' refers to the Alcatel-Lucent SROS series QoS Queueing Engine chip.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ressubscr.ResidentialSubscriberInstance</p>		
forwardedOctets [Forwarded Octets] (tmnxSubIngQosSchedStatsFwdOctets)	java. math. BigInteger	The value of tmnxSubIngQosSchedStatsFwdOctets indicates the number of forwarded octets, as determined by the subscriber ingress scheduler policy, offered by the Pchip to the Qchip.
forwardedPackets [Forwarded Packets] (tmnxSubIngQosSchedStatsFwdPkts)	java. math. BigInteger	The value of tmnxSubIngQosSchedStatsFwdPkts indicates the number of forwarded packets, as determined by the subscriber ingress scheduler policy, offered by the Pchip to the Qchip.
ingQosSchedName [Ing Qos Sched Name] (tmnxSubIngQosSchedStatsName)	String	The value of tmnxSubIngQosSchedStatsName specifies the ingress QoS scheduler of this subscriber.

Table 430 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>TotalPppSubscrSessionStats</p> <p>MIB entry name: tmnxSubPppTypeEntry</p> <p>Entry description: Each conceptual row represents information about a specific type of subscriber PPP. Entries in this table are created and destroyed by the system.</p> <p>Table description (for tmnxSubPppTypeTable): The tmnxSubPppTypeTable has an entry for each each type of subscriber PPP Session.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: netw.NetworkElement</p>		
pPPType [PPPTYPE] (tmnxSubPppTypeIndex)	int	The value of the object tmnxSubPppTypeIndex indicates the type of subscriber PPP.
pPPoL2tp [PPPo L2 tp] (tmnxSubPppTypeSessions)	long	The value of the object tmnxSubPppTypeSessions indicates the actual number of PPP session of this type.

Table 431 rip statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceReceiveStats</p> <p>MIB entry name: vRtrRipIfStatEntry</p> <p>Entry description: vRtrRipIfStatEntry is an entry (conceptual row) in the vRtrRipIfStatTable. Each entry represents statistical information for a RIP interface.</p> <p>Table description (for vRtrRipIfStatTable): vRtrRipIfStatTable is a read-only table which keeps statistical information about the interfaces monitoring RIP.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: rip.Interface</p>		
badPackets [Bad Packets] (vRtrRipIfStatAllRcvBadPackets)	long	vRtrRipIfStatAllRcvBadPackets is the number of RIP updates received on this interface that were discarded as invalid.
v1BadRoutes [V1 Bad Routes] (vRtrRipIfStatV1BadRoutes)	long	vRtrRipIfStatV1BadRoutes is the number of routes, in valid RIPv1 packets, which were ignored for any reason (e.g. unknown address family, or invalid metric).
v1Requests [V1 Requests] (vRtrRipIfStatV1RcvRequests)	long	vRtrRipIfStatV1RcvRequests is the number of RIPv1 request packets received by the RIP process.
v1RequestsIgnored [V1 Requests Ignored] (vRtrRipIfStatV1BadRequests)	long	vRtrRipIfStatV1BadRequests is the number of RIPv1 request packets received by the RIP process that were subsequently discarded for any reason.
v1Updates [V1 Updates] (vRtrRipIfStatV1RcvUpdates)	long	vRtrRipIfStatV1RcvUpdates is the number of RIPv1 response packets received by the RIP process.
v1UpdatesIgnored [V1 Updates Ignored] (vRtrRipIfStatV1BadUpdates)	long	vRtrRipIfStatV1BadUpdates is the number of RIPv1 response packets received by the RIP process which were subsequently discarded for any reason.

Table 431 rip statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v2AuthenticationErrors [V2 Authentication Errors] (vRtrRipIfStatAuthErrors)	long	vRtrRipIfStatAuthErrors is the number of RIPv2 packets received by the RIP process which were subsequently discarded because of an error authenticating the packet.
v2BadRoutes [V2 Bad Routes] (vRtrRipIfStatV2BadRoutes)	long	vRtrRipIfStatV2BadRoutes is the number of routes, in valid RIPv2 packets, which were ignored for any reason (e.g. unknown address family, or invalid metric).
v2Requests [V2 Requests] (vRtrRipIfStatV2RcvRequests)	long	vRtrRipIfStatV2RcvRequests is the number of RIPv2 request packets received by the RIP process.
v2RequestsIgnored [V2 Requests Ignored] (vRtrRipIfStatV2BadRequests)	long	vRtrRipIfStatV2BadRequests is the number of RIPv2 request packets received by the RIP process that were subsequently discarded for any reason.
v2Updates [V2 Updates] (vRtrRipIfStatV2RcvUpdates)	long	vRtrRipIfStatV2RcvUpdates is the number of RIPv2 response packets received by the RIP process.
v2UpdatesIgnored [V2 Updates Ignored] (vRtrRipIfStatV2BadUpdates)	long	vRtrRipIfStatV2BadUpdates is the number of RIPv2 response packets received by the RIP process which were subsequently discarded for any reason.
InterfaceTransmitStats MIB entry name: vRtrRipIfStatEntry Entry description: vRtrRipIfStatEntry is an entry (conceptual row) in the vRtrRipIfStatTable. Each entry represents statistical information for a RIP interface. Table description (for vRtrRipIfStatTable): vRtrRipIfStatTable is a read-only table which keeps statistical information about the interfaces monitoring RIP. Supports realtime plotting Supports scheduled collection Monitored class: rip.Interface		

Table 431 rip statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalUpdates [Total Updates] (vRtrRipIfStatAllSentUpdates)	long	vRtrRipIfStatAllSentUpdates is the number of all RIP updates actually sent on this interface. This explicitly does include full updates sent containing new information.
triggeredUpdates [Triggered Updates] (vRtrRipIfStatAllTriggeredUpdates)	long	vRtrRipIfStatAllTriggeredUpdates is the number of triggered RIP updates actually sent on this interface. This explicitly does include full updates sent containing new information.

Table 432 rsvp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AuthenticationKeyStats</p> <p>MIB entry name: vRtrRsvplfStatEntry</p> <p>Entry description: Each row entry represents an interface running the RSVP protocol within a virtual router. Table 432 rsvp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
acks [Acks] (vRtrRsvplfStatRxAcks)	java. math. BigInteger	The total number of RSVP ACK messages received when refresh reduction is enabled on this RSVP interface.
bundles [Bundles] (vRtrRsvplfStatRxBundles)	java. math. BigInteger	The total number of RSVP bundled packets received on this RSVP interface. Bundled packets are sent when refresh reduction is enabled.
errorPackets [Error Packets] (vRtrRsvplfStatRxErrorPkts)	java. math. BigInteger	The total number of RSVP packets with errors received on this RSVP interface.
helloTimeout [Hello Timeout] (vRtrRsvplfStatHelloTimeout)	long	The total number of hello messages that timed out on this RSVP interface.
hellos [Hellos] (vRtrRsvplfStatRxHelloReqs)	java. math. BigInteger	The total number of RSVP HELLO REQ messages received on this RSVP interface.
packets [Packets] (vRtrRsvplfStatRxPkts)	java. math. BigInteger	The total number of error free RSVP packets received on this RSVP interface.
pathErrors [Path Errors] (vRtrRsvplfStatRxPathErrors)	java. math. BigInteger	The total number of RSVP PATH ERROR messages that have been transmitted on this RSVP interface.
pathTears [Path Tears] (vRtrRsvplfStatRxPathTears)	java. math. BigInteger	The total number of RSVP PATH TEAR messages that have been received on this RSVP interface.

Table 432 rsvp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
paths [Paths] (vRtrRsvplfStatRxPaths)	java. math. BigInteger	The total number of RSVP PATH messages that have been received on this RSVP interface.
refreshes [Refreshes] (vRtrRsvplfStatRxSRefreshes)	java. math. BigInteger	The total number of RSVP summary refresh, SREFRESH, messages received on this RSVP interface.
reserveConfirms [Reserve Confirms] (vRtrRsvplfStatRxResvConfirms)	java. math. BigInteger	The total number of RSVP RESV CONFIRM messages that have been received on this RSVP interface.
reserveErrors [Reserve Errors] (vRtrRsvplfStatRxResvErrors)	java. math. BigInteger	The total number of RSVP RESV ERROR messages that have been received on this RSVP interface.
reserveTears [Reserve Tears] (vRtrRsvplfStatRxResvTears)	java. math. BigInteger	The total number of RSVP RESV TEAR messages that have been received on this RSVP interface.
reserves [Reserves] (vRtrRsvplfStatRxResvs)	java. math. BigInteger	The total number of RSVP RESV messages that have been received on this RSVP interface.
totalPackets [Total Packets] (vRtrRsvplfStatRxTotalPkts)	java. math. BigInteger	The total number of RSVP packets, including errors, received on this RSVP interface.

Table 432 rsvp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>RsvpInterfaceStats</p> <p>MIB entry name: vRtrRsvplfEntry</p> <p>Entry description: Each row entry in the vRtrRsvplfTable represents additional columns for attributes specific to the Alcatel-Lucent 7x50 SR RSVP implementation.</p> <p>Table description (for vRtrRsvplfTable): The vRtrRsvplfTable provides an extension of the rsvplfTable in the RSVP-MIB.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: rsvp.Interface</p>		
activeReservations [Active Reservations] (vRtrRsvplfActiveReservationCount)	long	The total number of active RSVP sessions that have reserved bandwidth.
activeSessions [Active Sessions] (vRtrRsvplfActiveSessionCount)	long	The total number of active RSVP sessions on this interface. This count includes sessions that have requested bandwidth as well as sessions that have not requested any bandwidth.
bandwidth [Bandwidth] (vRtrRsvplfBandwidth)	long	The value of vRtrRsvplfBandwidth indicates the interface bandwidth in mega-bits per second (Mbps) for the RSVP protocol on this interface. This is typically the port Speed.
reservedBandwidth [Reserved Bandwidth] (vRtrRsvplfReservedBandwidth)	long	The value of vRtrRsvplfReservedBandwidth specifies the amount of bandwidth in mega-bits per second (Mbps) to reserved by the RSVP sessions on this interface. A value of zero (0) indicates that no bandwidth is reserved.
totalSessions [Total Sessions] (vRtrRsvplfTotalSessionCount)	long	The total number of RSVP sessions on this interface. This count includes sessions that are active as well as sessions that have been signalled but a response has not yet been received.

reserveTears [Reserve Tears] (vRtrRsvplfStatRxResvTears)	java. math. BigInteger	The total number of RSVP RESV TEAR messages that have been received on this RSVP interface.
reserves [Reserves] (vRtrRsvplfStatRxResvs)	java. math. BigInteger	The total number of RSVP RESV messages that have been received on this RSVP interface.

Table 432 rsvp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalPackets [Total Packets] (vRtrRsvpIpfStatRxTotalPkts)	java. math. BigInteger	The total number of RSVP packets, including errors, received on this RSVP interface.
<p>RsvpSessionStats</p> <p>MIB entry name: vRtrRsvpSessionStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an RSVP session. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrRsvpSessionStatTable): The vRtrRsvpSessionStatTable contains statistics for an RSVP session.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: rsvp.Session</p>		
detourAge [Detour Age] (vRtrRsvpSessionDetourAge)	long	vRtrRsvpSessionDetourAge is the age (i.e., time from creation till now) of this detour LSP in 10-millisecond periods.
detourTimeUp [Detour Time Up] (vRtrRsvpSessionDetourTimeUp)	long	vRtrRsvpSessionDetourTimeUp is the total time in 10-millisecond units that the detour LSP has been operational.
pathsReceived [Paths Received] (vRtrRsvpSessionRxPaths)	java. math. BigInteger	The total number of RSVP PATH messages received for this RSVP session.
pathsTransmitted [Paths Transmitted] (vRtrRsvpSessionTxPaths)	java. math. BigInteger	The total number of RSVP PATH messages transmitted for this RSVP session.

Table 432 rsvp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
reservesReceived [Reserves Received] (vRtrRsvpSessionRxResvs)	java. math. BigInteger	The total number of RSVP RESV messages received for this RSVP session.
reservesTransmitted [Reserves Transmitted] (vRtrRsvpSessionTxResvs)	java. math. BigInteger	The total number of RSVP RESV messages transmitted for this RSVP session.

Table 433 rtr statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CpeCheckStats</p> <p>MIB entry name: vRtrInetStatRteCpeChkStatsEntry</p> <p>Entry description: Each row entry represents a collection of Customer-Provided Equipment (CPE) availability statistics for a virtual router static route in the system with non-default values set for the vRtrInetStaticRouteCpeAddrType and vRtrInetStaticRouteCpeAddr objects. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrInetStatRteCpeChkStatsTable): The vRtrInetStatRteCpeChkStatsTable has an entry for each entry in the vRtrInetStaticRouteTable that has a non-default values set for the vRtrInetStaticRouteCpeAddrType and vRtrInetStaticRouteCpeAddr objects.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: rtr.StaticRoute</p>		
downTransitions [Down Transitions] (vRtrInetStatRteCpeChkDownTrans)	long	The value of vRtrInetStatRteCpeChkDownTrans indicates the number of times the CPE has transitioned to the unavailable state.
echoReplyPacketsReceived [Echo Reply Packets Received] (vRtrInetStatRteCpeChkInPktCnt)	long	The value of vRtrInetStatRteCpeChkInPktCnt indicates the number of echo-reply packets received.
echoRequestPacketsSent [Echo Request Packets Sent] (vRtrInetStatRteCpeChkOutPktCnt)	long	The value of vRtrInetStatRteCpeChkOutPktCnt indicates the number of echo-request packets sent.
hostUpDownTime [Host Up Down Time] (vRtrInetStatRteCpeChkUpTime)	long	The value of vRtrInetStatRteCpeChkUpTime indicates how long (in hundredths of a second) that the CPE has been available.
tTl [Ttl] (vRtrInetStatRteCpeChkTTL)	long	The value of vRtrInetStatRteCpeChkTTL indicates the time, in seconds, before the CPE will be declared down. Upon receipt of an echo reply, it has the value of vRtrInetStaticRouteCpeInterval * vRtrInetStaticRouteCpeDropCnt and is decremented by 1 every second.

Table 433 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
upTransitions [Up Transitions] (vRtrInetStatRteCpeChkUpTrans)	long	The value of vRtrInetStatRteCpeChkUpTrans indicates the number of times the CPE has transitioned to the available state.
<p>DhcpRelayStats</p> <p>MIB entry name: vRtrIfDHCPRelayStatsEntry</p> <p>Entry description: Each row entry represents information related to DHCP Relay statistics for a virtual router interface in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrIfDHCPRelayStatsTable): The vRtrIfDHCPRelayStatsTable contains the statistics for the DHCP Relay agent.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • rtr.DhcpRelayConfiguration • rtr.GrplfDhcpRelayCfg • rtr.SublIfDhcpRelayCfg 		
authPktsDiscarded [Auth Pkts Discarded] (vRtrIfDHCPRelayAuthPktsDiscarded)	long	vRtrIfDHCPRelayAuthPktsDiscarded indicates the total number of packets discarded because authentication was not successful.
authPktsSuccess [Auth Pkts Success] (vRtrIfDHCPRelayAuthPktsSuccess)	long	vRtrIfDHCPRelayAuthPktsSuccess indicates the total number of packets for which authentication was successful.
clientPacketsDiscarded [Client Packets Discarded] (vRtrIfDHCPRelayClientPktsDiscarded)	long	vRtrIfDHCPRelayClientPktsDiscarded indicates the total number of client packets discarded by the DHCP relay agent.
clientPacketsRelayed [Client Packets Relayed] (vRtrIfDHCPRelayClientPktsRelayed)	long	vRtrIfDHCPRelayClientPktsRelayed indicates the total number of client packets relayed by the DHCP relay agent.

Table 433 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
clientPktsProxLS [Client Pkts Prox LS] (vRtrIfDHCPRelayClientPktsProxLS)	long	vRtrIfDHCPRelayClientPktsProxLS indicates the total number of client packets proxied by the DHCP relay agent based on a lease state. The lease itself can have been obtained from a DHCP or RADIUS server. This is the so called lease split functionality.
clientPktsProxRad [Client Pkts Prox Rad] (vRtrIfDHCPRelayClientPktsProxRad)	long	vRtrIfDHCPRelayClientPktsProxRad indicates the total number of client packets proxied by the DHCP relay agent based on data received from a RADIUS server.
clientPktsProxUDB [Client Pkts Prox UDB] (vRtrIfDHCPRelayClientPktsProxUDB)	long	vRtrIfDHCPRelayClientPktsProxUDB indicates the total number of client packets proxied by the DHCP relay agent based on the local user database.
pktsGenForceRenew [Pkts Gen Force Renew] (vRtrIfDHCPRelayPktsGenForceRenew)	long	vRtrIfDHCPRelayPktsGenForceRenew indicates the total number of DHCP FORCERENEW messages spoofed by the DHCP relay agent to the DHCP clients.
pktsGenRelease [Pkts Gen Release] (vRtrIfDHCPRelayPktsGenRelease)	long	vRtrIfDHCPRelayPktsGenRelease indicates the total number of DHCP RELEASE messages spoofed by the DHCP relay agent to the DHCP server.
receivedMalformedPackets [Received Malformed Packets] (vRtrIfDHCPRelayRxMalformedPkts)	long	vRtrIfDHCPRelayRxMalformedPkts indicates the total number of malformed packets received by the DHCP relay agent.
receivedPackets [Received Packets] (vRtrIfDHCPRelayRxPkts)	long	vRtrIfDHCPRelayRxPkts indicates the total number of packets received by the DHCP relay agent.
receivedUntrustedPackets [Received Untrusted Packets] (vRtrIfDHCPRelayRxUntrustedPkts)	long	vRtrIfDHCPRelayRxUntrustedPkts indicates the total number of untrusted packets received by the DHCP relay agent.

Table 433 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
serverPacketsDiscarded [Server Packets Discarded] (vRtrIfDHCPRelayServerPktsDiscarded)	long	vRtrIfDHCPRelayServerPktsDiscarded indicates the total number of server packets discarded by the DHCP relay agent.
serverPacketsRelayed [Server Packets Relayed] (vRtrIfDHCPRelayServerPktsRelayed)	long	vRtrIfDHCPRelayServerPktsRelayed indicates the total number of server packets relayed by the DHCP relay agent.
serverPktsSnooped [Server Pkts Snooped] (vRtrIfDHCPRelayServerPktsSnooped)	long	vRtrIfDHCPRelayServerPktsSnooped indicates the total number of server packets snooped by the DHCP relay agent.
transmittedPackets [Transmitted Packets] (vRtrIfDHCPRelayTxPkts)	long	vRtrIfDHCPRelayTxPkts indicates the total number of packets transmitted by the DHCP relay agent.
<p>DhcpRelayV6Stats</p> <p>MIB entry name: svclfDHCP6MsgStatEntry</p> <p>Entry description: Each row entry represents a collection of counters for each DHCP6 message type for an interface in a service. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for svclfDHCP6MsgStatTable): The vRtrDHCP6MsgStatTable has an entry for each interface defined in a service for which DHCP6 can be enabled.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • rtr.DhcpRelayV6Configuration • rtr.DhcpRelayV6ProxyServer 		
droppedPackets [Dropped Packets] (svclfDHCP6MsgStatsDropped)	long	The value of svclfDHCP6MsgStatsDropped indicates the number of DHCP6 packets were dropped on this service interface.

Table 433 rtr statistics (continued)

Table 433 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
forwardPackets [Forward Packets] (vRtrPlcyAcctRxFwdPkts)	java. math. BigInteger	The value of the object vRtrPlcyAcctRxFwdPkts indicates the total number of packets received for this vRtrPlcyAcctIndex associated with the interface.
incompleteCount [Incomplete Count] (vRtrPlcyAcctRxIncompleteCnt)	boolean	The value of the object vRtrPlcyAcctRxIncompleteCnt indicates whether the count of vRtrPlcyAcctRxFwdBytes and vRtrPlcyAcctRxFwdPkts is incomplete or not. When the value of vRtrPlcyAcctRxIncompleteCnt is 'true', both vRtrPlcyAcctRxFwdBytes and vRtrPlcyAcctRxFwdPkts will be incomplete.
<p>RouteStats</p> <p>MIB entry name: vRtrStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrStatTable): The vRtrStatTable has an entry for each virtual router configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • rtr.VirtualRouter • vprn.DVRSSite • vprn.RoutingInstanceSite • vprn.Site 		
activeARPEntries [Active ARPEntries] (vRtrStatActiveARPEntries)	long	vRtrStatActiveARPEntries indicates the number of active ARP entries for the specified virtual router in the system.
activeBgpTunnels [Active Bgp Tunnels] (vRtrStatActiveBgpTunnels)	long	vRtrStatActiveBgpTunnels indicates the current number of rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'bgp'.

Table 433 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
activeMplsTpTunnels [Active Mpls Tp Tunnels] (vRtrStatActiveMplsTpTunnels)	long	vRtrStatActiveMplsTpTunnels indicates the current number of active MPLS-TP tunnels.
activeRsvpTunnels [Active Rsvp Tunnels] (vRtrStatActiveRsvpTunnels)	long	The value of vRtrStatActiveRsvpTunnels indicates the current number of rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'rsvp'.
aggregateActiveRoutes [Aggregate Active Routes] (vRtrAggregateActiveRoutes)	long	vRtrAggregateActiveRoutes indicates the current number of active aggregate routes for this instance of the route table.
aggregateRoutes [Aggregate Routes] (vRtrAggregateRoutes)	long	vRtrAggregateRoutes indicates the current number of aggregate routes for this instance of the route table.
bgpActiveRoutes [Bgp Active Routes] (vRtrBGPAciveRoutes)	long	vRtrBGPAciveRoutes indicates the current number of active bgp routes for this instance of the route table.
bgpRoutes [Bgp Routes] (vRtrBGPRoutes)	long	vRtrBGPRoutes indicates the current number of bgp routes for this instance of the route table.
bgpVpnActiveRoutes [Bgp Vpn Active Routes] (vRtrStatBGPVpnActiveRoutes)	long	vRtrStatBGPVpnActiveRoutes indicates the current number of active VPN-IPV4 routes learned by MP-BGP for this virtual router.
bgpVpnRoutes [Bgp Vpn Routes] (vRtrStatBGPVpnRoutes)	long	vRtrStatBGPVpnRoutes indicates the current number of VPN-IPV4 routes learned by MP-BGP for this virtual router.
directActiveRoutes [Direct Active Routes] (vRtrDirectActiveRoutes)	long	vRtrDirectActiveRoutes indicates the current number of active direct routes for this instance of the route table.

Table 433 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
directRoutes [Direct Routes] (vRtrDirectRoutes)	long	vRtrDirectRoutes indicates the current number of direct routes for this instance of the route table.
dynamicArpEntries [Dynamic Arp Entries] (vRtrStatDynamicARPEntries)	long	The value of vRtrStatDynamicARPEntries indicates the total number of active and inactive dynamic ARP entries for the specified virtual router in the system.
hostActiveRoutes [Host Active Routes] (vRtrHostActiveRoutes)	long	The value of vRtrHostActiveRoutes indicates the current number of active direct routes with prefix value 32 for this instance of the route table.
hostRoutes [Host Routes] (vRtrHostRoutes)	long	The value of vRtrHostRoutes indicates the current number of direct routes with prefix value 32 for this instance of the route table.
iPsecActiveRoutes [IPsec Active Routes] (vRtrIPsecActiveRoutes)	long	The value of the object vRtrIPsecActiveRoutes indicates the current number of active IPsec routes for this instance of the route table.
iPsecRoutes [IPsec Routes] (vRtrIPsecRoutes)	long	The value of the object vRtrIPsecRoutes indicates the current number of IPsec routes for this instance of the route table.
illegalLabelsReceived [Illegal Labels Received] (vRtrStatIllegalLabels)	long	vRtrStatIllegalLabels indicates the number of illegally received labels on this virtual router.
internalArpEntries [Internal Arp Entries] (vRtrStatInternalARPEntries)	long	The value of vRtrStatInternalARPEntries indicates the total number of active and inactive internal ARP entries for the specified virtual router in the system.
isisActiveRoutes [Isis Active Routes] (vRtrISISActiveRoutes)	long	vRtrISISActiveRoutes indicates the current number of active isis routes for this instance of the route table.

Table 433 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
isisRoutes [Isis Routes] (vRtrISISRoutes)	long	vRtrISISRoutes indicates the current number of isis routes for this instance of the route table.
ldpActiveRoutes [Ldp Active Routes] (vRtrLDPActiveRoutes)	long	vRtrLDPActiveRoutes indicates the current number of active ldp routes for this instance of the route table.
ldpActiveTunnels [Ldp Active Tunnels] (vRtrStatActiveLdpTunnels)	long	vRtrStatActiveLdpTunnels indicates the current number of rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'ldp'.
ldpRoutes [Ldp Routes] (vRtrLDPRoutes)	long	vRtrLDPRoutes indicates the current number of ldp routes for this instance of the route table.
ldpTunnels [Ldp Tunnels] (vRtrStatTotalLdpTunnels)	long	vRtrStatTotalLdpTunnels indicates the current number of both active and inactive LDP tunnels.
localArpEntries [Local Arp Entries] (vRtrStatLocalARPEntries)	long	The value of vRtrStatLocalARPEntries indicates the total number of active and inactive local ARP entries for the specified virtual router in the system.
managedActiveRoutes [Managed Active Routes] (vRtrManagedActiveRoutes)	long	The value of vRtrManagedActiveRoutes indicates the total number of active managed routes for the specified virtual router in the system.
managedArpEntries [Managed Arp Entries] (vRtrStatManagedARPEntries)	long	The value of vRtrStatManagedARPEntries indicates the total number of active and inactive managed ARP entries for the specified virtual router in the system.
managedRoutes [Managed Routes] (vRtrManagedRoutes)	long	The value of vRtrManagedRoutes indicates the total number of active and inactive managed routes for the specified virtual router in the system.

Table 433 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mcastIpv4StatBGPEvpnActvRts [Mcast Ipv 4 Stat BGPEvpn Actv Rts] (vRtrMcastIpv4StatBGPEvpnActvRts)	long	The value of vRtrMcastIpv4StatBGPEvpnActvRts indicates the total number of active IPv4 Multicast BGP EVPN route entries for the specified virtual router in the system.
mcastIpv4StatBGPEvpnRoutes [Mcast Ipv 4 Stat BGPEvpn Routes] (vRtrMcastIpv4StatBGPEvpnRoutes)	long	The value of vRtrMcastIpv4StatBGPEvpnRoutes indicates the total number of IPv4 Multicast BGP EVPN route entries for the specified virtual router in the system.
multicastRoutes [Multicast Routes] (vRtrMulticastRoutes)	long	vRtrMulticastRoutes indicates the current number of rows in the vRtrPimNgGrpSrcTable.
ospfActiveRoutes [Ospf Active Routes] (vRtrOSPFActiveRoutes)	long	vRtrOSPFActiveRoutes indicates the current number of active ospf routes for this instance of the route table.
ospfRoutes [Ospf Routes] (vRtrOSPFRoutes)	long	vRtrOSPFRoutes indicates the current number of ospf routes for this instance of the route table.
perActiveRoutes [Per Active Routes] (vRtrPeriodicActiveRoutes)	long	The value of vRtrPeriodicActiveRoutes indicates the current number of active periodic routes for this instance of the route table.
perRoutes [Per Routes] (vRtrPeriodicRoutes)	long	The value of vRtrPeriodicRoutes indicates the current number of periodic routes for this instance of the route table.
ripActiveRoutes [Rip Active Routes] (vRtrRIPActiveRoutes)	long	vRtrRIPActiveRoutes indicates the current number of active rip routes for this instance of the route table.
ripRoutes [Rip Routes] (vRtrRIPRoutes)	long	vRtrRIPRoutes indicates the current number of rip routes for this instance of the route table.

Table 433 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
routerInterfacesActive [Router Interfaces Active] (vRtrStatActiveIfs)	long	vRtrStatActiveIfs indicates the current number of router interfaces with vRtrIfAdminState equal 'inService' on this virtual router.
routerInterfacesConfigured [Router Interfaces Configured] (vRtrStatConfiguredIfs)	long	vRtrStatConfiguredIfs indicates the current number of router interfaces configured on this virtual router.
routesInVrf [Routes In Vrf] (vRtrStatCurrNumRoutes)	long	vRtrStatCurrNumRoutes indicates the current number of routes in the VRF for this virtual router.
sdpActiveTunnels [Sdp Active Tunnels] (vRtrStatActiveSdpTunnels)	long	vRtrStatActiveSdpTunnels indicates the current number of rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'sdp'.
sdpTunnels [Sdp Tunnels] (vRtrStatTotalSdpTunnels)	long	vRtrStatTotalSdpTunnels indicates the current number of both active and inactive SDP tunnels.
statBGPEVPNARPEntries [Stat BGPEVPNARPEntries] (vRtrStatBGPEVPNARPEntries)	long	The value of vRtrStatBGPEVPNARPEntries indicates the total number of BGP EVPN ARP entries for the specified virtual router in the system.
statBGPEvpnActiveRoutes [Stat BGPEvpn Active Routes] (vRtrStatBGPEvpnActiveRoutes)	long	The value of vRtrStatBGPEvpnActiveRoutes indicates the total number of active IPv4 BGP EVPN route entries for the specified virtual router in the system.
statBGPEvpnRoutes [Stat BGPEvpn Routes] (vRtrStatBGPEvpnRoutes)	long	The value of vRtrStatBGPEvpnRoutes indicates the total number of IPv4 BGP EVPN route entries for the specified virtual router in the system.
staticActiveRoutes [Static Active Routes] (vRtrStaticActiveRoutes)	long	vRtrStaticActiveRoutes indicates the current number of active static routes for this instance of the route table.

Table 433 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
staticArpEntries [Static Arp Entries] (vRtrStatStaticARPEntries)	long	The value of vRtrStatStaticARPEntries indicates the total number of active and inactive static ARP entries for the specified virtual router in the system.
staticRoutes [Static Routes] (vRtrStaticRoutes)	long	vRtrStaticRoutes indicates the current number of static routes for this instance of the route table.
subMgmtActiveRoutes [Sub Mgmt Active Routes] (vRtrSubMgmtActiveRoutes)	long	The value of vRtrSubMgmtActiveRoutes indicates the number of active subscriber management routes.
subMgmtRoutes [Sub Mgmt Routes] (vRtrSubMgmtRoutes)	long	The value of vRtrSubMgmtRoutes indicates the total number of subscriber management routes in the route Table.
totalARPEntries [Total ARPEntries] (vRtrStatTotalARPEntries)	long	vRtrStatTotalARPEntries indicates the total number of active and inactive ARP entries for the specified virtual router in the system.
totalBgpTunnels [Total Bgp Tunnels] (vRtrStatTotalBgpTunnels)	long	vRtrStatTotalBgpTunnels indicates the current number of both active and inactive BGP tunnels.
totalMplsTpTunnels [Total Mpls Tp Tunnels] (vRtrStatTotalMplsTpTunnels)	long	vRtrStatTotalMplsTpTunnels indicates the current number of both active and inactive MPLS-TP tunnels.
totalRsvpTunnels [Total Rsvp Tunnels] (vRtrStatTotalRsvpTunnels)	long	The value of vRtrStatTotalRsvpTunnels indicates the current number of both active and inactive RSVP tunnels.
vpnLeakActiveRoutes [Vpn Leak Active Routes] (vRtrVPNLeakActiveRoutes)	long	vRtrVPNLeakActiveRoutes indicates the current number of active VPN Leak routes for this instance of the route table.

Table 433 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vpnLeakRoutes [Vpn Leak Routes] (vRtrVPNLeakRoutes)	long	vRtrVPNLeakRoutes indicates the current number of VPN Leak routes for this instance of the route table.
<p>VirtualInterfaceIcmp6InStats MIB entry name: vRtrIcmp6Entry Entry description: Each row entry represents the ICMP statistics of a virtual router interface. Entries are created and deleted when entries in the vRtrIfTable are created and deleted. Table description (for vRtrIcmp6Table): The vRtrIcmp6Table table contains statistics of ICMPv6 messages that are received and sourced by a router interface. Supports realtime plotting Supports scheduled collection Monitored class: rtr.VirtualInterfaceIcmp6Configuration</p>		
inDestinationUnreachable [In Destination Unreachable] (vRtrIcmp6InDestUnreachs)	long	The value of vRtrIcmp6InDestUnreachs indicates the number of ICMP Destination Unreachable messages received by this interface.
inEchoReplies [In Echo Replies] (vRtrIcmp6InEchoReplies)	long	The value of vRtrIcmp6InEchoReplies indicates the number of ICMP Echo Reply messages received by this interface.
inEchoRequests [In Echo Requests] (vRtrIcmp6InEchos)	long	The value of vRtrIcmp6InEchos indicates the number of ICMP Echo (request) messages received by this interface.
inErrors [In Errors] (vRtrIcmp6InErrors)	long	The value of vRtrIcmp6InErrors indicates the number of ICMP messages which this interface received but determined as having ICMP-specific errors (bad ICMP checksums, bad length , etc.).
inNeighborAdvertisements [In Neighbor Advertisements] (vRtrIcmp6InNbrAdvertisements)	long	The value of vRtrIcmp6InNbrAdvertisements indicates the number of ICMP Neighbor Advertisement messages received by this interface.

Table 433 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
inNeighborSolicits [In Neighbor Solicits] (vRtrIflcmp6InNbrSolicits)	long	The value of vRtrIflcmp6InNbrSolicits indicates the number of ICMP Neighbor Solicit messages received by this interface.
inPacketTooBig [In Packet Too Big] (vRtrIflcmp6InPktTooBigs)	long	The value of vRtrIflcmp6InPktTooBigs indicates the number of ICMP Packet Too Big messages received by this interface.
inRedirects [In Redirects] (vRtrIflcmp6InRedirects)	long	The value of vRtrIflcmp6InRedirects indicates number of ICMP Redirect messages received by this interface.
inRouterAdvertisements [In Router Advertisements] (vRtrIflcmp6InRtrAdvertisements)	long	The value of vRtrIflcmp6InRtrAdvertisements indicates the number of ICMP Router Advertisement messages received by this interface.
inRouterSolicits [In Router Solicits] (vRtrIflcmp6InRtrSolicits)	long	The value of vRtrIflcmp6InRtrSolicits indicates the number of ICMP Router Solicit messages received by this interface.
inTimeExceeded [In Time Exceeded] (vRtrIflcmp6InTimeExcds)	long	The value of vRtrIflcmp6InTimeExcds indicates the number of ICMP Time Exceeded messages received by this interface.
inTotalMessages [In Total Messages] (vRtrIflcmp6InMsgs)	long	The value of vRtrIflcmp6InMsgs indicates the total number of ICMP messages received by this interface which includes all those counted by vRtrIflcmp6InErrors. Note that this interface is the interface to which the ICMP messages were addressed which may not be necessarily the input interface for the messages.

Table 433 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>VirtualInterfaceIcmp6OutStats MIB entry name: vRtrIflcmp6Entry Entry description: Each row entry represents the ICMP statistics of a virtual router interface. Entries are created and deleted when entries in the vRtrIflTable are created and deleted. Table description (for vRtrIflcmp6Table): The vRtrIflcmp6Table table contains statistics of ICMPv6 messages that are received and sourced by a router interface. Supports realtime plotting Supports scheduled collection Monitored class: rtr.VirtualInterfaceIcmp6Configuration</p>		
outDestinationUnreachable [Out Destination Unreachable] (vRtrIflcmp6OutDestUnreachs)	long	The value of vRtrIflcmp6OutDestUnreachs indicates the number of ICMP Destination Unreachable messages sent by this interface.
outEchoReplies [Out Echo Replies] (vRtrIflcmp6OutEchoReplies)	long	The value of vRtrIflcmp6OutEchoReplies indicates the number of ICMP Echo Reply messages sent by this interface.
outEchoRequests [Out Echo Requests] (vRtrIflcmp6OutEchos)	long	The value of vRtrIflcmp6OutEchos indicates the number of ICMP Echo Request messages sent by this interface.
outErrors [Out Errors] (vRtrIflcmp6OutErrors)	long	The value of vRtrIflcmp6OutErrors indicates the number of ICMP messages which this interface did not send due to problems discovered within ICMP such as a lack of buffers. This value should not include errors discovered outside the ICMP layer such as the inability of VRtr IPv6 to route the resultant datagram. In some implementations there may be no types of error which contribute to this counter's value.
outGrpMembQueries [Out Grp Memb Queries] (vRtrIflcmp6OutGrpMembQueries)	long	The value of vRtrIflcmp6OutGrpMembQueries indicates the number of ICMP Group Membership Query messages sent by this interface.

Table 433 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outGrpMembReductions [Out Grp Memb Reductions] (vRtrIflcmp6OutGrpMembReductions)	long	The value of vRtrIflcmp6OutGrpMembReductions indicates the number of ICMP Group Membership Reduction messages sent by this interface.
outGrpMembResponses [Out Grp Memb Responses] (vRtrIflcmp6OutGrpMembResponses)	long	The value of vRtrIflcmp6OutGrpMembResponses indicates the number of ICMP Group Membership Response messages sent by this interface.
outNeighborAdvertisements [Out Neighbor Advertisements] (vRtrIflcmp6OutNbrAdvertisements)	long	The value of vRtrIflcmp6OutNbrAdvertisements indicates the number of ICMP Neighbor Advertisement messages sent by this interface.
outNeighborSolicits [Out Neighbor Solicits] (vRtrIflcmp6OutNbrSolicits)	long	The value of vRtrIflcmp6OutNbrSolicits indicates the number of ICMP Neighbor Solicitation messages sent by this interface.
outPacketTooBig [Out Packet Too Big] (vRtrIflcmp6OutPktTooBigs)	long	The value of vRtrIflcmp6OutPktTooBigs indicates the number of ICMP Packet Too Big messages sent by this interface.
outRedirects [Out Redirects] (vRtrIflcmp6OutRedirects)	long	The value of vRtrIflcmp6OutRedirects indicates the number of ICMP Redirect messages sent by this interface.
outRouterAdvertisements [Out Router Advertisements] (vRtrIflcmp6OutRtrAdvertisements)	long	The value of vRtrIflcmp6OutRtrAdvertisements indicates the number of ICMP Router Advertisement messages sent by this interface.
outRouterSolicits [Out Router Solicits] (vRtrIflcmp6OutRtrSolicits)	long	The value of vRtrIflcmp6OutRtrSolicits indicates the number of ICMP Router Solicitation messages sent by this interface.
outTimeExceeded [Out Time Exceeded] (vRtrIflcmp6OutTimeExcds)	long	The value of vRtrIflcmp6OutTimeExcds indicates the number of ICMP Time Exceeded messages sent by this interface.

Table 433 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outTotalMessages [Out Total Messages] (vRtrIcmp6OutMsgs)	long	The value of vRtrIcmp6OutMsgs indicates the total number of ICMP messages which this interface attempted to send. Note that this counter includes all those counted by icmpOutErrors.
<p>VirtualRouterIcmp6InStats</p> <p>MIB entry name: vRtrIcmp6Entry</p> <p>Entry description: Each row entry represents the ICMP statistics of a virtual router instance. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • rtr.VirtualRouter • vprn.DVRSSite • vprn.RoutingInstanceSite • vprn.Site 		
outDestinationUnreachable [Out Destination Unreachable] (vRtrIcmp6OutDestUnreachs)	long	The value of vRtrIcmp6OutDestUnreachs indicates the number of ICMP Destination Unreachable messages sent by this router instance.
outEchoReplies [Out Echo Replies] (vRtrIcmp6OutEchoReplies)	long	The value of vRtrIcmp6OutEchoReplies indicates the number of ICMP Echo Reply messages sent by this router instance.
outEchoRequests [Out Echo Requests] (vRtrIcmp6OutEchos)	long	The value of vRtrIcmp6OutEchos indicates the number of ICMP Echo Request messages sent by this router instance.

Table 433 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outErrors [Out Errors] (vRtrIcmp6OutErrors)	long	The value of vRtrIcmp6OutErrors indicates the number of ICMP messages which this router instance did not send due to problems discovered within ICMP such as a lack of buffers. This value should not include errors discovered outside the ICMP layer such as the inability of VRtr IPv6 to route the resultant datagram. In some implementations there may be no types of error which contribute to this counter's value.
outGrpMembQueries [Out Grp Memb Queries] (vRtrIcmp6OutGrpMembQueries)	long	The value of vRtrIcmp6OutGrpMembQueries indicates the number of ICMP Group Membership Query messages sent by this router instance.
outGrpMembReductions [Out Grp Memb Reductions] (vRtrIcmp6OutGrpMembReductions)	long	The value of vRtrIcmp6OutGrpMembReductions indicates the number of ICMP Group Membership Reduction messages sent by this router instance.
outGrpMembResponses [Out Grp Memb Responses] (vRtrIcmp6OutGrpMembResponses)	long	The value of vRtrIcmp6OutGrpMembResponses indicates the number of ICMP Group Membership Response messages sent by this router instance.
outNeighborAdvertisements [Out Neighbor Advertisements] (vRtrIcmp6OutNbrAdvertisements)	long	The value of vRtrIcmp6OutNbrAdvertisements indicates the number of ICMP Neighbor Advertisement messages sent by this router instance.
outNeighborSolicits [Out Neighbor Solicits] (vRtrIcmp6OutNbrSolicits)	long	The value of vRtrIcmp6OutNbrSolicits indicates the number of ICMP Neighbor Solicitation messages sent by this router instance.
outPacketTooBig [Out Packet Too Big] (vRtrIcmp6OutPktTooBigs)	long	The value of vRtrIcmp6OutPktTooBigs indicates the number of ICMP Packet Too Big messages sent by this router instance.
outRedirects [Out Redirects] (vRtrIcmp6OutRedirects)	long	The value of vRtrIcmp6OutRedirects indicates the number of ICMP Redirect messages sent by this router instance.

Table 433 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outRouterAdvertisements [Out Router Advertisements] (vRtrIcmp6OutRtrAdvertisements)	long	The value of vRtrIcmp6OutRtrAdvertisements indicates the number of ICMP Router Advertisement messages sent by this router instance.
outRouterSolicits [Out Router Solicits] (vRtrIcmp6OutRtrSolicits)	long	The value of vRtrIcmp6OutRtrSolicits indicates the number of ICMP Router Solicitation messages sent by this router instance.
outTimeExceeded [Out Time Exceeded] (vRtrIcmp6OutTimeExcds)	long	The value of vRtrIcmp6OutTimeExcds indicates the number of ICMP Time Exceeded messages sent by this router instance.
outTotalMessages [Out Total Messages] (vRtrIcmp6OutMsgs)	long	The value of vRtrIcmp6OutMsgs indicates the total number of ICMP messages which this router instance attempted to send. Note that this counter includes all those counted by icmpOutErrors.

Table 434 sas statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PrefixSrvStats</p> <p>MIB entry name: tmnxTwampSrvPrefixEntry</p> <p>Entry description: tmnxTwampSrvPrefixEntry contains the TWAMP server configuration information for the IP prefix specified by the index values. Rows in this table are created and destroyed using the tmnxTwampSrvPrefixRowStatus object.</p> <p>Table description (for tmnxTwampSrvPrefixTable): tmnxTwampSrvPrefixTable contains per-prefix TWAMP server configuration information.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sas.PrefixSrv</p>		
prefixAddr [Prefix Addr] (tmnxTwampSrvPrefixAddr)	String	The value of tmnxTwampSrvPrefixAddr specifies, in conjunction with tmnxTwampSrvPrefixAddrType and tmnxTwampSrvPrefixLen, a prefix to be matched against a TWAMP client address. This is the second index for tmnxTwampSrvPrefixTable.
prefixAddrType [Prefix Addr Type] (tmnxTwampSrvPrefixAddrType)	int	The value of tmnxTwampSrvPrefixAddrType specifies the type of tmnxTwampSrvPrefixAddr. This is the first index for tmnxTwampSrvPrefixTable.
prefixLen [Prefix Len] (tmnxTwampSrvPrefixLen)	int	The value of tmnxTwampSrvPrefixLen specifies the number of bits to match when comparing a TWAMP client address in an incoming message to tmnxTwampSrvPrefixAddr. This is the third index for tmnxTwampSrvPrefixTable. Best-fit is used when matching a TWAMP client's IP address against the set of configured prefixes. For example, suppose the first row of this table has the prefix 138.120.0.0/16, and the second row has the prefix 138.120.214.0/24. The TWAMP client address 138.120.214.52 matches the second row.
srvPfxConnCount [Srv Pfx Conn Count] (tmnxTwampSrvPfxConnCount)	long	The value of tmnxTwampSrvPfxConnCount indicates, for the prefix specified by the index values, the number of control connections currently managed by the TWAMP server.

Table 434 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
srvPfxConnsRejected [Srv Pfx Conns Rejected] (tmnxTwampSrvPfxConnsRejected)	long	The value of tmnxTwampSrvPfxConnsRejected indicates, for the prefix specified by the index values, the number of control connection requests which have been rejected by the TWAMP server. An example reject reason: the prefix's limit on the number of active connections has been reached.
srvPfxSessionCount [Srv Pfx Session Count] (tmnxTwampSrvPfxSessionCount)	long	The value of tmnxTwampSrvPfxSessionCount indicates, for the prefix specified by the index values, the number of currently in-progress TWAMP test sessions.
srvPfxTestPacketsRx [Srv Pfx Test Packets Rx] (tmnxTwampSrvPfxTestPacketsRx)	long	The value of tmnxTwampSrvPfxTestPacketsRx indicates, for the prefix specified by the index values, the number of TWAMP test packets received by the TWAMP server.
srvPfxTestPacketsTx [Srv Pfx Test Packets Tx] (tmnxTwampSrvPfxTestPacketsTx)	long	The value of tmnxTwampSrvPfxTestPacketsTx indicates, for the prefix specified by the index values, the number of TWAMP test packets sent by the TWAMP server.
srvPfxTestSessAbort [Srv Pfx Test Sess Abort] (tmnxTwampSrvPfxTestSessAbort)	long	The value of tmnxTwampSrvPfxTestSessAbort indicates, for the prefix specified by the index values, the number of test sessions aborted by the TWAMP server.
srvPfxTestSessCompleted [Srv Pfx Test Sess Completed] (tmnxTwampSrvPfxTestSessCompleted)	long	The value of tmnxTwampSrvPfxTestSessCompleted indicates, for the prefix specified by the index values, the number of test sessions completed by the TWAMP server.
srvPfxTestSessRejected [Srv Pfx Test Sess Rejected] (tmnxTwampSrvPfxTestSessRejected)	long	The value of tmnxTwampSrvPfxTestSessRejected indicates, for the prefix specified by the index values, the number of test sessions rejected by the TWAMP server.

Table 434 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SrvConnsStats</p> <p>MIB entry name: tmnxTwampSrvConnStatsEntry</p> <p>Entry description: tmnxTwampSrvConnStatsEntry contains the statistics for the TWAMP control connection specified by the index values. A row is created by the system when a TWAMP control connection is established.</p> <p>Table description (for tmnxTwampSrvConnStatsTable): tmnxTwampSrvConnStatsTable contains the statistics for each active control connection managed by the TWAMP server.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sas.PrefixSrv</p>		
clientAddr [Client Addr] (tmnxTwampSrvConnClientAddr)	String	The value of tmnxTwampSrvConnClientAddr specifies the TWAMP client's address. This is the fifth index for tmnxTwampSrvConnStatsTable.
clientAddrType [Client Addr Type] (tmnxTwampSrvConnClientAddrType)	int	The value of tmnxTwampSrvConnClientAddrType specifies the type of tmnxTwampSrvConnClientAddr. This is the fourth index for tmnxTwampSrvConnStatsTable.
connIdleTime [Conn Idle Time] (tmnxTwampSrvConnIdleTime)	long	The value of tmnxTwampSrvConnIdleTime specifies the elapsed time, in seconds, since a TWAMP message was received on this control connection. When this value exceeds tmnxTwampSrvInactTimeout, the connection will be torn down.
connSessionCount [Conn Session Count] (tmnxTwampSrvConnSessionCount)	long	The value of tmnxTwampSrvConnSessionCount indicates, for the connection specified by the index values, the number of currently in-progress TWAMP test sessions.
connState [Conn State] (tmnxTwampSrvConnState)	int	The value of tmnxTwampSrvConnState indicates the operational state of a control connection managed by the TWAMP server. Code points: setUp(1) - the connection is being established ready(2) - the connection is ready to accept test sessions running(3) - the connection is running a test.

Table 434 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
connTestPacketsRx [Conn Test Packets Rx] (tmnxTwampSrvConnTestPacketsRx)	long	The value of tmnxTwampSrvConnTestPacketsRx indicates, for the connection specified by the index values, the number of TWAMP test packets received by the TWAMP server.
connTestPacketsTx [Conn Test Packets Tx] (tmnxTwampSrvConnTestPacketsTx)	long	The value of tmnxTwampSrvConnTestPacketsTx indicates, for the connection specified by the index values, the number of TWAMP test packets sent by the TWAMP server.
connTestSessComplete [Conn Test Sess Complete] (tmnxTwampSrvConnTestSessComplete)	long	The value of tmnxTwampSrvConnTestSessComplete indicates, for the connection specified by the index values, the number of test sessions completed by the TWAMP server.
connTestSessRejected [Conn Test Sess Rejected] (tmnxTwampSrvConnTestSessRejected)	long	The value of tmnxTwampSrvConnTestSessRejected indicates, for the connection specified by the index values, the number of test sessions rejected by the TWAMP server.
prefixAddr [Prefix Addr] (tmnxTwampSrvPrefixAddr)	String	The value of tmnxTwampSrvPrefixAddr specifies, in conjunction with tmnxTwampSrvPrefixAddrType and tmnxTwampSrvPrefixLen, a prefix to be matched against a TWAMP client address. This is the second index for tmnxTwampSrvPrefixTable.
prefixAddrType [Prefix Addr Type] (tmnxTwampSrvPrefixAddrType)	int	The value of tmnxTwampSrvPrefixAddrType specifies the type of tmnxTwampSrvPrefixAddr. This is the first index for tmnxTwampSrvPrefixTable.
prefixLen [Prefix Len] (tmnxTwampSrvPrefixLen)	int	The value of tmnxTwampSrvPrefixLen specifies the number of bits to match when comparing a TWAMP client address in an incoming message to tmnxTwampSrvPrefixAddr. This is the third index for tmnxTwampSrvPrefixTable. Best-fit is used when matching a TWAMP client's IP address against the set of configured prefixes. For example, suppose the first row of this table has the prefix 138.120.0.0/16, and the second row has the prefix 138.120.214.0/24. The TWAMP client address 138.120.214.52 matches the second row.

Table 434 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
seqNum [Seq Num] (tmnxTwampSrvConnSeqNum)	int	The value of tmnxTwampSrvConnSeqNum specifies this control connection's sequence number. This is the sixth index for tmnxTwampSrvConnStatsTable - it allows n>1 rows (i.e. n>1 connections) for one client.
TwampSrvStats MIB entry name: tmnxTwampStatisticsScalarObjs Supports realtime plotting Supports scheduled collection Monitored class: sas.TwampSrv		
twampSrvConnectionCount [Twamp Srv Connection Count] (tmnxTwampSrvConnectionCount)	long	The value of tmnxTwampSrvConnectionCount indicates the number of control connections currently managed by the TWAMP server.
twampSrvConnectionsRejected [Twamp Srv Connections Rejected] (tmnxTwampSrvConnectionsRejected)	long	The value of tmnxTwampSrvConnectionsRejected indicates the total number of control connection requests which have been rejected by the TWAMP server. Example reject reasons: the server's limit on the number of active connections has been reached; the client's IP address does not match any of the prefixes configured on the TWAMP server.
twampSrvOperStat [Twamp Srv Oper Stat] (tmnxTwampSrvOperState)	long	The value of tmnxTwampSrvOperState indicates if the TWAMP server is operationally 'inService(2)', or 'outOfService(3)'.
twampSrvSessionCount [Twamp Srv Session Count] (tmnxTwampSrvSessionCount)	long	The value of tmnxTwampSrvSessionCount indicates the number of currently in-progress TWAMP test sessions.
twampSrvTestPacketsRx [Twamp Srv Test Packets Rx] (tmnxTwampSrvTestPacketsRx)	long	The value of tmnxTwampSrvTestPacketsRx indicates the total number of TWAMP test packets received by the TWAMP server.

Table 434 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
twampSrvTestPacketsTx [Twamp Srv Test Packets Tx] (tmnxTwampSrvTestPacketsTx)	long	The value of tmnxTwampSrvTestPacketsTx indicates the total number of TWAMP test packets sent by the TWAMP server.
twampSrvTestSessAborted [Twamp Srv Test Sess Aborted] (tmnxTwampSrvTestSessAborted)	long	The value of tmnxTwampSrvTestSessAborted indicates the total number of test sessions aborted by the TWAMP server.
twampSrvTestSessCompleted [Twamp Srv Test Sess Completed] (tmnxTwampSrvTestSessCompleted)	long	The value of tmnxTwampSrvTestSessCompleted indicates the total number of test sessions completed by the TWAMP server.
twampSrvTestSessRejected [Twamp Srv Test Sess Rejected] (tmnxTwampSrvTestSessRejected)	long	The value of tmnxTwampSrvTestSessRejected indicates the total number of test sessions rejected by the TWAMP server.
twampSrvUpTime [Twamp Srv Up Time] (tmnxTwampSrvUpTime)	long	The value of tmnxTwampSrvUpTime indicates the time elapsed, in seconds, since the most recent transition of tmnxTwampSrvOperState to 'inService(2)'. If tmnxTwampSrvOperState is not 'inService(2)', zero is returned.

Table 435 service statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CemSapStats MIB entry name: sapCemStatsEntry Entry description: Statistics for a specific CEM SAP. Table description (for sapCemStatsTable): A table that contains CEM SAP statistics. Supports realtime plotting Supports scheduled collection Monitored class: service.L2AccessInterface</p>		
cemStatsEgressDroppedPkts [Cem Stats Egress Dropped Pkts] (sapCemStatsEgressDroppedPkts)	long	The value of sapCemStatsEgressDroppedPkts indicates the total number of packets that were dropped due to errors.
cemStatsEgressESs [Cem Stats Egress ESs] (sapCemStatsEgressESs)	long	The value of sapCemStatsEgressESs indicates the number of Error Seconds (ESs) encountered. Any malformed packet, seq. error, LOPS and similar are considered as error seconds.
cemStatsEgressFailureCounts [Cem Stats Egress Failure Counts] (sapCemStatsEgressFailureCounts)	long	The value of sapCemStatsEgressFailureCounts indicates the number failure events. A failure event begins when the LOPS failure is declared, and ends when the failure is cleared.
cemStatsEgressForwardedPkts [Cem Stats Egress Forwarded Pkts] (sapCemStatsEgressForwardedPkts)	long	The value of sapCemStatsEgressForwardedPkts indicates the number of packets that were successfully forwarded.
cemStatsEgressJtrBfrDepth [Cem Stats Egress Jtr Bfr Depth] (sapCemStatsEgressJtrBfrDepth)	long	The value of sapCemStatsEgressJtrBfrDepth indicates the current packet depth of the jitter buffer.
cemStatsEgressJtrBfrOverruns [Cem Stats Egress Jtr Bfr Overruns] (sapCemStatsEgressJtrBfrOverruns)	long	The value of sapCemStatsEgressJtrBfrOverruns indicates the number of times a packet was dropped because it could not fit in the jitter buffer.

Table 435 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cemStatsEgressJtrBfrUnderruns [Cem Stats Egress Jtr Bfr Underruns] (sapCemStatsEgressJtrBfrUnderruns)	long	The value of sapCemStatsEgressJtrBfrUnderruns indicates the number of times a packet needed to be played out and the jitter buffer was empty.
cemStatsEgressLBitDropped [Cem Stats Egress LBit Dropped] (sapCemStatsEgressLBitDropped)	long	The value of sapCemStatsEgressLBitDropped indicates the number of packets dropped due to the L bit set by the far end.
cemStatsEgressMalformedPkts [Cem Stats Egress Malformed Pkts] (sapCemStatsEgressMalformedPkts)	long	The value of sapCemStatsEgressMalformedPkts indicates the number of packets detected with unexpected size, or bad headers' stack.
cemStatsEgressMisOrderDropped [Cem Stats Egress Mis Order Dropped] (sapCemStatsEgressMisOrderDropped)	long	The value of sapCemStatsEgressMisOrderDropped indicates the number of packets detected out of order (via control word sequence numbers), and could not be re-ordered, or could not be placed in the jitter buffer because it was out of the current window.
cemStatsEgressMissingPkts [Cem Stats Egress Missing Pkts] (sapCemStatsEgressMissingPkts)	long	The value of sapCemStatsEgressMissingPkts indicates the number of missing packets (as detected via control word sequence number gaps).
cemStatsEgressMultipleDropped [Cem Stats Egress Multiple Dropped] (sapCemStatsEgressMultipleDropped)	long	The value of sapCemStatsEgressMultipleDropped indicates the number of packets dropped due to multiple sequence numbers.
cemStatsEgressOverrunCounts [Cem Stats Egress Overrun Counts] (sapCemStatsEgressOverrunCounts)	long	The value of sapCemStatsEgressOverrunCounts indicates the number of times the jitter buffer went into an overrun state.
cemStatsEgressPktsReOrder [Cem Stats Egress Pkts Re Order] (sapCemStatsEgressPktsReOrder)	long	The value of sapCemStatsEgressPktsReOrder indicates the number of packets detected out of sequence (via control word sequence number), but successfully re-ordered.

Table 435 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cemStatsEgressSESSs [Cem Stats Egress SESSs] (sapCemStatsEgressSESSs)	long	The value of sapCemStatsEgressSESSs indicates the number of Severely Error Seconds (SESSs) encountered. This is when more than 30 percent of the packets within a one second window are missing.
cemStatsEgressUASs [Cem Stats Egress UASs] (sapCemStatsEgressUASs)	long	The value of sapCemStatsEgressUASs indicates the number of Unavailable Seconds (UASs) encountered. Any consecutive ten seconds of SESSs are counted as one UAS.
cemStatsEgressUnderrunCounts [Cem Stats Egress Underrun Counts] (sapCemStatsEgressUnderrunCounts)	long	The value of sapCemStatsEgressUnderrunCounts indicates the number of times the jitter buffer went into an underrun state.
cemStatsIngressDroppedPkts [Cem Stats Ingress Dropped Pkts] (sapCemStatsIngressDroppedPkts)	long	The value of sapCemStatsIngressDroppedPkts indicates the total number of packets that were dropped due to errors.
cemStatsIngressForwardedPkts [Cem Stats Ingress Forwarded Pkts] (sapCemStatsIngressForwardedPkts)	long	The value of sapCemStatsIngressForwardedPkts indicates the number of packets that were successfully forwarded.
<p>L3AccessInterfaceURPFStats</p> <p>MIB entry name: vRtrIfStatsEntry</p> <p>Entry description: Each row entry represents the statistics per virtual router interface. Entries are created and deleted when entries in the vRtrIfEntry are created and deleted.</p> <p>Table description (for vRtrIfStatsTable): The vRtrIfStatsTable table contains statistics per virtual router interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: service.L3AccessInterface</p>		
uRPFCheckFailPkts [URPFCheck Fail Pkts] (vRtrIfuRPFCheckFailPkts)	java. math. BigInteger	The value of vRtrIfuRPFCheckFailPkts indicates the number of packets that fail uRPF check on this interface.

Table 435 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
uRPFCheckFailPktsHigh32 [URPFCheck Fail Pkts High 32] (vRtrIfuRPFCheckFailPktsHigh32)	long	The value of vRtrIfuRPFCheckFailPktsHigh32 indicates the high 32 bits of the value of vRtrIfuRPFCheckFailPkts.
uRPFCheckFailPktsLow32 [URPFCheck Fail Pkts Low 32] (vRtrIfuRPFCheckFailPktsLow32)	long	The value of vRtrIfuRPFCheckFailPktsLow32 indicates the lower 32 bits of the value of vRtrIfuRPFCheckFailPkts.
vRtrIfuRPFCheckFailBytes [VRtr Ifu RPFCheck Fail Bytes] (vRtrIfuRPFCheckFailBytes)	java. math. BigInteger	The value of vRtrIfuRPFCheckFailBytes indicates the number of bytes in the packets that fail uRPF check.
vRtrIfuRPFCheckFailBytesHigh32 [VRtr Ifu RPFCheck Fail Bytes High 32] (vRtrIfuRPFCheckFailBytesHigh32)	long	The value of vRtrIfuRPFCheckFailBytesHigh32 indicates the high 32 bits of the value of vRtrIfuRPFCheckFailBytes.
vRtrIfuRPFCheckFailBytesLow32 [VRtr Ifu RPFCheck Fail Bytes Low 32] (vRtrIfuRPFCheckFailBytesLow32)	long	The value of vRtrIfuRPFCheckFailBytesLow32 indicates the lower 32 bits of the value of vRtrIfuRPFCheckFailBytes.
<p>PppoeSapStats MIB entry name: tmnxPppoeSapStatsEntry Entry description: PPPoE statistics about a SAP. Table 435 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppoeSapReceivedDropped [Pppoe Sap Received Dropped] (tmnxPppoeSapRxDropped)	long	The value of tmnxPppoeSapRxDropped indicates the number of dropped PPPoE packets.
pppoeSapReceivedInvalidAcCookie [Pppoe Sap Received Invalid Ac Cookie] (tmnxPppoeSapRxInvalidAcCookie)	long	The value of tmnxPppoeSapRxInvalidAcCookie indicates the number of PPPoE Active Discovery packets received with an invalid AC-Cookie tag.
pppoeSapReceivedInvalidCode [Pppoe Sap Received Invalid Code] (tmnxPppoeSapRxInvalidCode)	long	The value of tmnxPppoeSapRxInvalidCode indicates the number of PPPoE packets received with an invalid code field.
pppoeSapReceivedInvalidLen [Pppoe Sap Received Invalid Len] (tmnxPppoeSapRxInvalidLen)	long	The value of tmnxPppoeSapRxInvalidLen indicates the number of PPPoE packets received with an invalid length field.
pppoeSapReceivedInvalidMac [Pppoe Sap Received Invalid Mac] (tmnxPppoeSapRxInvalidMac)	long	The value of tmnxPppoeSapRxInvalidMac indicates the number of PPPoE packets received with an invalid MAC address.
pppoeSapReceivedInvalidSession [Pppoe Sap Received Invalid Session] (tmnxPppoeSapRxInvalidSession)	long	The value of tmnxPppoeSapRxInvalidSession indicates the number of PPPoE packets received with an invalid session-id field.
pppoeSapReceivedInvalidTags [Pppoe Sap Received Invalid Tags] (tmnxPppoeSapRxInvalidTags)	long	The value of tmnxPppoeSapRxInvalidTags indicates the number of PPPoE Active Discovery packets received with invalid tags.
pppoeSapReceivedInvalidType [Pppoe Sap Received Invalid Type] (tmnxPppoeSapRxInvalidType)	long	The value of tmnxPppoeSapRxInvalidType indicates the number of PPPoE packets received with an invalid type field.
pppoeSapReceivedInvalidVersion [Pppoe Sap Received Invalid Version] (tmnxPppoeSapRxInvalidVersion)	long	The value of tmnxPppoeSapRxInvalidVersion indicates the number of PPPoE packets received with an invalid version field.

Table 435 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppoeSapReceivedPADI [Pppoe Sap Received PADI] (tmnxPppoeSapRxPadi)	long	The value of tmnxPppoeSapRxPadi indicates the number of PADI (PPPoE Active Discovery Initiation) packets received on this SAP.
pppoeSapReceivedPADR [Pppoe Sap Received PADR] (tmnxPppoeSapRxPadr)	long	The value of tmnxPppoeSapRxPadr indicates the number of PADR (PPPoE Active Discovery Request) packets received on this SAP.
pppoeSapReceivedPADT [Pppoe Sap Received PADT] (tmnxPppoeSapRxPadt)	long	The value of tmnxPppoeSapRxPadt indicates the number of PADT (PPPoE Active Discovery Terminate) packets received on this SAP.
pppoeSapReceivedSession [Pppoe Sap Received Session] (tmnxPppoeSapRxSession)	long	The value of tmnxPppoeSapRxSession indicates the number packets received during the PPP session stage on this SAP.
pppoeSapTransmittedPADO [Pppoe Sap Transmitted PADO] (tmnxPppoeSapTxPado)	long	The value of tmnxPppoeSapTxPado indicates the number of PADO (PPPoE Active Discovery Offer) packets transmitted on this SAP.
pppoeSapTransmittedPADS [Pppoe Sap Transmitted PADS] (tmnxPppoeSapTxPads)	long	The value of tmnxPppoeSapTxPads indicates the number of PADS (PPPoE Active Discovery Session) packets transmitted on this SAP.
pppoeSapTransmittedPADT [Pppoe Sap Transmitted PADT] (tmnxPppoeSapTxPadt)	long	The value of tmnxPppoeSapTxPadt indicates the number of PADT (PPPoE Active Discovery Terminate) packets transmitted on this SAP.
pppoeSapTransmittedSession [Pppoe Sap Transmitted Session] (tmnxPppoeSapTxSession)	long	The value of tmnxPppoeSapTxSession indicates the number packets transmitted during the PPP session stage on this SAP.

Table 435 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SapBaseStats</p> <p>MIB entry name: sapBaseStatsEntry</p> <p>Entry description: Basic statistics about a specific SAP.</p> <p>Table description (for sapBaseStatsTable): A table that contains basic SAP statistics. In the descriptions below 'Pchip' refers to the Alcatel-Lucent SROS series Packet Processing chip, while 'Qchip' refers to the Alcatel-Lucent SROS series QoS Queueing Engine chip.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • service.IPsecInterface • service.L2AccessInterface • service.L3AccessInterface • service.ServiceAccessPoint 		
authenticationPacketsDiscarded [Authentication Packets Discarded] (sapBaseStatsAuthenticationPktsDiscarded)	long	The number of DHCP packets discarded as result of authentication.
authenticationPacketsSuccessful [Authentication Packets Successful] (sapBaseStatsAuthenticationPktsSuccess)	long	The number of DHCP packets successfully authenticated.
customerId [Customer Id] (sapBaseStatsCustId)	long	The Customer ID for the associated service.
egressQChipDroppedInProfOctets [Egress QChip Dropped In Prof Octets] (sapBaseStatsEgressQchipDroppedInProfOctets)	java. math. BigInteger	The number of in-profile octets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.

Table 435 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egressQChipDroppedInProfPackets [Egress QChip Dropped In Prof Packets] (sapBaseStatsEgressQchipDroppedInProfPackets)	java. math. BigInteger	The number of in-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
egressQChipDroppedOutProfOctets [Egress QChip Dropped Out Prof Octets] (sapBaseStatsEgressQchipDroppedOutProfOctets)	java. math. BigInteger	The number of out-of-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
egressQChipDroppedOutProfPackets [Egress QChip Dropped Out Prof Packets] (sapBaseStatsEgressQchipDroppedOutProfPackets)	java. math. BigInteger	The number of out-of-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
egressQChipForwardedInProfOctets [Egress QChip Forwarded In Prof Octets] (sapBaseStatsEgressQchipForwardedInProfOctets)	java. math. BigInteger	The number of in-profile octets (rate below CIR) forwarded by the egress Qchip.
egressQChipForwardedInProfPackets [Egress QChip Forwarded In Prof Packets] (sapBaseStatsEgressQchipForwardedInProfPackets)	java. math. BigInteger	The number of in-profile packets (rate below CIR) forwarded by the egress Qchip.
egressQChipForwardedOutProfOctets [Egress QChip Forwarded Out Prof Octets] (sapBaseStatsEgressQchipForwardedOutProfOctets)	java. math. BigInteger	The number of out-of-profile octets (rate above CIR) forwarded by the egress Qchip.
egressQChipForwardedOutProfPackets [Egress QChip Forwarded Out Prof Packets] (sapBaseStatsEgressQchipForwardedOutProfPackets)	java. math. BigInteger	The number of out-of-profile packets (rate above CIR) forwarded by the egress Qchip.

Table 435 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingressPChipDroppedOctets [Ingress PChip Dropped Octets] (sapBaseStatsIngressPchipDroppedOctets)	java. math. BigInteger	The number of octets dropped by the ingress Pchip due to: SAP state, ingress MAC, IP or IPv6 filter, same segment discard, bad checksum, etc.
ingressPChipDroppedPackets [Ingress PChip Dropped Packets] (sapBaseStatsIngressPchipDroppedPackets)	java. math. BigInteger	The number of packets dropped by the ingress Pchip due to: SAP state, ingress MAC, IP or IPv6 filter, same segment discard, bad checksum, etc.
ingressPChipOfferedHiPrioOctets [Ingress PChip Offered Hi Prio Octets] (sapBaseStatsIngressPchipOfferedHiPrioOctets)	java. math. BigInteger	The number of high priority octets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressPChipOfferedHiPrioPackets [Ingress PChip Offered Hi Prio Packets] (sapBaseStatsIngressPchipOfferedHiPrioPackets)	java. math. BigInteger	The number of high priority packets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressPChipOfferedLoPrioOctets [Ingress PChip Offered Lo Prio Octets] (sapBaseStatsIngressPchipOfferedLoPrioOctets)	java. math. BigInteger	The number of low priority octets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressPChipOfferedLoPrioPackets [Ingress PChip Offered Lo Prio Packets] (sapBaseStatsIngressPchipOfferedLoPrioPackets)	java. math. BigInteger	The number of low priority packets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressPChipOfferedUncoloredOctets [Ingress PChip Offered Uncolored Octets] (sapBaseStatsIngressPchipOfferedUncoloredOctets)	java. math. BigInteger	The number of uncolored octets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.

Table 435 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingressPChipOfferedUncoloredPackets [Ingress PChip Offered Uncolored Packets] (sapBaseStatsIngressPchipOf- feredUncoloredPackets)	java. math. BigInteger	The number of uncolored packets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressQChipDroppedHiPrioOctets [Ingress QChip Dropped Hi Prio Octets] (sapBaseStatsIngressQchip- DroppedHiPrioOctets)	java. math. BigInteger	The number of high priority octets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipDroppedHiPrioPackets [Ingress QChip Dropped Hi Prio Packets] (sapBaseStatsIngressQchip- DroppedHiPrioPackets)	java. math. BigInteger	The number of high priority packets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipDroppedLoPrioOctets [Ingress QChip Dropped Lo Prio Octets] (sapBaseStatsIngressQchip- DroppedLoPrioOctets)	java. math. BigInteger	The number of low priority octets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipDroppedLoPrioPackets [Ingress QChip Dropped Lo Prio Packets] (sapBaseStatsIngressQchip- DroppedLoPrioPackets)	java. math. BigInteger	The number of low priority packets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipForwardedInProfOctets [Ingress QChip Forwarded In Prof Octets] (sapBaseStatsIngressQchipFor- wardedInProfOctets)	java. math. BigInteger	The number of in-profile octets (rate below CIR) forwarded by the ingress Qchip.
ingressQChipForwardedInProfPackets [Ingress QChip Forwarded In Prof Packets] (sapBaseStatsIngressQchipFor- wardedInProfPackets)	java. math. BigInteger	The number of in-profile packets (rate below CIR) forwarded by the ingress Qchip.

Table 435 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingressQChipForwardedOutProfOctets [Ingress QChip Forwarded Out Prof Octets] (sapBaseStatsIngressQchipFor- wardedOutProfOctets)	java. math. BigInte- ger	The number of out-of-profile octets (rate above CIR) forwarded by the ingress Qchip.
ingressQChipForwardedOutProfPackets [Ingress QChip Forwarded Out Prof Packets] (sapBaseStatsIngressQchipFor- wardedOutProfPackets)	java. math. BigInte- ger	The number of out-of-profile packets (rate above CIR) forwarded by the ingress Qchip.
<p>SapEgrQosArbiterStats</p> <p>MIB entry name: sapEgrQosArbitStatsEntry</p> <p>Entry description: Each row entry contains egress statistics about a particular SAP QoS arbiter.</p> <p>Table description (for sapEgrQosArbitStatsTable): The sapEgrQosArbitStatsTable contains egress QoS arbiter statistics about SAPs. In the descriptions below 'Pchip' refers to the Alcatel-Lucent SROS series Packet Processing chip, while 'Qchip' refers to the Alcatel-Lucent SROS series QoS Queueing Engine chip.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • service.IPsecInterface • service.L2AccessInterface • service.L3AccessInterface 		
arbiterName [Arbiter Name] (sapEgrQosArbitStatsName)	String	The value of sapEgrQosArbitStatsName specifies the egress QoS arbiter of this SAP.
sapEgrQosArbitStatsFwdOcts [Sap Egr Qos Arbit Stats Fwd Octs] (sapEgrQosArbitStatsFwdOcts)	java. math. BigInte- ger	The value of sapEgrQosArbitStatsFwdOcts indicates the number of forwarded octets, as determined by the SAP egress policer control policy, offered by the Pchip to the Qchip.

Table 435 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapEgrQosArbitStatsFwdPkts [Sap Egr Qos Arbit Stats Fwd Pkts] (sapEgrQosArbitStatsFwdPkts)	java. math. BigInteger	The value of sapEgrQosArbitStatsFwdPkts indicates the number of forwarded packets, as determined by the SAP egress policer control policy, offered by the Pchip to the Qchip.
<p>SapEgrQosPlcyQueueStats</p> <p>MIB entry name: sapEgrQosPlcyQueueStatsEntry</p> <p>Entry description: Egress statistics about a specific SAP's QoS queue for a given Qos policy.</p> <p>Table description (for sapEgrQosPlcyQueueStatsTable): A table that contains egress QoS queue SAP statistics per Egress QoS Policy the queue was used by. Conceptual rows in this table are automatically created by the system. No row will be created for a SAP if the value of the object sapTodSuite is equal to the empty string.</p> <p>Does not support realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • service.IPsecInterface • service.L2AccessInterface • service.L3AccessInterface 		
droppedInProfOctets [Dropped In Prof Octets] (sapEgQosPlcyQueueStatsDroppedInProfOctets)	java. math. BigInteger	The value of sapEgQosPlcyQueueStatsDroppedInProfOctets indicates the number in-profile octets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
droppedInProfPackets [Dropped In Prof Packets] (sapEgQosPlcyQueueStatsDroppedInProfPackets)	java. math. BigInteger	The value of sapEgQosPlcyQueueStatsDroppedInProfPackets indicates the number of in-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
droppedOutProfOctets [Dropped Out Prof Octets] (sapEgQosPlcyQueueStatsDroppedOutProfOctets)	java. math. BigInteger	The value of sapEgQosPlcyQueueStatsDroppedOutProfOctets indicates the number out-of-profile octets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.

Table 435 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
droppedOutProfPackets [Dropped Out Prof Packets] (sapEgQosPlcyQueueStatsDroppedOutProfPackets)	java. math. BigInteger	The value of sapEgQosPlcyQueueStatsDroppedOutProfPackets indicates the number out-of-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
forwardedInProfOctets [Forwarded In Prof Octets] (sapEgQosPlcyQueueStatsForwardedInProfOctets)	java. math. BigInteger	The value of sapEgQosPlcyQueueStatsForwardedInProfOctets indicates the number of in-profile octets (rate below CIR) forwarded by the egress Qchip.
forwardedInProfPackets [Forwarded In Prof Packets] (sapEgQosPlcyQueueStatsForwardedInProfPackets)	java. math. BigInteger	The value of sapEgQosPlcyQueueStatsForwardedInProfPackets indicates the number of in-profile packets (rate below CIR) forwarded by the egress Qchip.
forwardedOutProfOctets [Forwarded Out Prof Octets] (sapEgQosPlcyQueueStatsForwardedOutProfOctets)	java. math. BigInteger	The value of sapEgQosPlcyQueueStatsForwardedOutProfOctets indicates the number of out-of-profile octets (rate above CIR) forwarded by the egress Qchip.
forwardedOutProfPackets [Forwarded Out Prof Packets] (sapEgQosPlcyQueueStatsForwardedOutProfPackets)	java. math. BigInteger	The value of sapEgQosPlcyQueueStatsForwardedOutProfPackets indicates the number of out-of-profile packets (rate above CIR) forwarded by the egress Qchip.
policyId [Policy Id] (sapEgQosPlcyQueuePolicyId)	long	The row index in the tSapEgressTable corresponding to this egress QoS policy.
queueId [Queue Id] (sapEgQosPlcyQueueId)	long	The value of sapEgQosPlcyQueueId indicates index of the egress QoS queue of this SAP.

codingViolations [Coding Violations] (sonetLineIntervalCVs)	long	The counter associated with the number of Coding Violations encountered by a SONET/SDH Line in a particular 15-minute interval in the past 24 hours.
erroredSeconds [Errored Seconds] (sonetLineIntervalESs)	long	The counter associated with the number of Errored Seconds encountered by a SONET/SDH Line in a particular 15-minute interval in the past 24 hours.
intervalNumber [Interval Number] (sonetLineIntervalNumber)	int	A number between 1 and 96, which identifies the interval for which the set of statistics is available. The interval identified by 1 is the most recently completed 15 minute interval, and the interval identified by N is the interval immediately preceding the one identified by N-1.
severelyErroredSeconds [Severely Errored Seconds] (sonetLineIntervalSESs)	long	The counter associated with the number of Severely Errored Seconds encountered by a SONET/SDH Line in a particular 15-minute interval in the past 24 hours.
unavailableSeconds [Unavailable Seconds] (sonetLineIntervalUASs)	long	The counter associated with the number of Unavailable Seconds encountered by a SONET/SDH Line in a particular 15-minute interval in the past 24 hours.

Table 437 sonetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SonetPathCurrentStats MIB entry name: sonetPathCurrentEntry Entry description: An entry in the SONET/SDH Path Current table. Table description (for sonetPathCurrentTable): The SONET/SDH Path Current table. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • sonetequipment.Sts12Channel • sonetequipment.Sts192Channel • sonetequipment.Sts1Channel • sonetequipment.Sts3Channel • sonetequipment.Sts48Channel • sonetequipment.Tu3Channel 		
codingViolations [Coding Violations] (sonetPathCurrentCVs)	long	The counter associated with the number of Coding Violations encountered by a SONET/SDH Path in the current 15 minute interval.
currentStatus [Current Status] (sonetPathCurrentStatus)	long	This variable indicates the status of the interface. The sonetPathCurrentStatus is a bit map represented as a sum, therefore, it can represent multiple defects simultaneously. The sonetPathNoDefect should be set if and only if no other flag is set. The various bit positions are: 1 sonetPathNoDefect 2 sonetPathSTSLOP 4 sonetPathSTSAIS 8 sonetPathSTSRDI 16 sonetPathUnequipped 32 sonetPathSignalLabelMismatch
currentWidth [Current Width] (sonetPathCurrentWidth)	int	A value that indicates the type of the SONET/SDH Path. For SONET, the assigned types are the STS-Nc SPEs, where N = 1, 3, 12, 24, 48, 192 and 768. STS-1 is equal to 51.84 Mbps. For SDH, the assigned types are the STM-Nc VCs, where N = 1, 4, 16, 64 and 256.

unavailableSeconds [Unavailable Seconds] (sonetVTIntervalUASs)	long	The counter associated with the number of Unavailable Seconds encountered by a VT in a particular 15-minute interval in the past 24 hours.

Table 438 srrp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InstanceStats</p> <p>MIB entry name: tmnxSrrpStatsEntry</p> <p>Entry description: Each row entry represents the statistics for a particular SRRP instance tied to a service group interface. Entries are created/deleted in conjunction with entries in the tmnxSrrpOperTable</p> <p>Table description (for tmnxSrrpStatsTable): The tmnxSrrpStatsTable has an entry for each Subscriber Router Redundancy Protocol instance configured on this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: srrp.Instance</p>		
advertiseIntervalDiscards [Advertise Interval Discards] (tmnxSrrpStatsAdvIntDiscards)	long	The value for tmnxSrrpStatsAdvIntDiscards indicates the total number of SRRP advertisement packets discarded because the advertisement interval in the received packet was different than the one configured for the local virtual router.
advertiseIntervalErrors [Advertise Interval Errors] (tmnxSrrpStatsAdvIntErrors)	long	The value for tmnxSrrpStatsAdvIntErrors indicates the total number of SRRP advertisement packets received for which the advertisement interval is different than the one configured for the local virtual router.
advertiseRcvd [Advertise Rcvd] (tmnxSrrpStatsAdvRcvd)	long	The value for tmnxSrrpStatsAdvRcvd indicates the total number of SRRP advertisements received by this virtual router.
advertiseSent [Advertise Sent] (tmnxSrrpStatsAdvSent)	long	The value for tmnxSrrpStatsAdvSent indicates the total number of SRRP advertisements sent by this virtual router.
becomeBackupRouting [Become Backup Routing] (tmnxSrrpStatsBecomeBackupRouting)	long	The value for tmnxSrrpStatsBecomeBackupRouting indicates the total number of times that the virtual router's state has transitioned to backup routing state.

Table 438 srrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
becomeBackupShunt [Become Backup Shunt] (tmnxSrrpStatsBecomeBackupShunt)	long	The value for tmnxSrrpStatsBecomeBackupShunt indicates the total number of times that the virtual router's state has transitioned to backup shunt.
becomeMaster [Become Master] (tmnxSrrpStatsBecomeMaster)	long	The value for tmnxSrrpStatsBecomeMaster indicates the total number of times that the virtual router's state has transitioned to master.
becomeNonMaster [Become Non Master] (tmnxSrrpStatsBecomeNonMaster)	long	The value for tmnxSrrpStatsBecomeNonMaster indicates the total number times that the virtual router's state has transitioned from master to a non-master state.
masterChanges [Master Changes] (tmnxSrrpStatsMasterChanges)	long	The value for tmnxSrrpStatsMasterChanges indicates the total number of times the virtual router has seen the master virtual router change.
preemptEvents [Preempt Events] (tmnxSrrpStatsPreemptEvents)	long	The value for tmnxSrrpStatsPreemptEvents indicates the total number of times the virtual router has preempted another non-owner master with lower priority.
preemptedEvents [Preempted Events] (tmnxSrrpStatsPreemptedEvents)	long	The value for tmnxSrrpStatsPreemptedEvents indicates the total number of times the virtual router has been preempted by another non-owner master with higher priority.
priorityZeroPktsRcvd [Priority Zero Pkts Rcvd] (tmnxSrrpStatsPriZeroPktsSent)	long	The value for tmnxSrrpStatsPriZeroPktsSent indicates the total number of SRRP packets sent by the virtual router with a priority of '0'.
priorityZeroPktsSent [Priority Zero Pkts Sent] (tmnxSrrpStatsPriZeroPktsRcvd)	long	The value for tmnxSrrpStatsPriZeroPktsRcvd indicates the total number of SRRP packets received by the virtual router with a priority of '0'.

Table 439 subscrauth statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PolicyStats</p> <p>MIB entry name: tmnxSubAuthPlcyStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a subscriber authentication policy in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxSubAuthPlcyStatsTable): The tmnxSubAuthPlcyStatsTable has an entry for each subscriber authentication policy configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: subscrauth.Policy</p>		
rejectedAuthentications [Rejected Authentications] (tmnxSubAuthPlcyReject)	long	The value of tmnxSubAuthPlcyReject indicates how many subscriber messages (e.g. DHCP, PPPoE, ...) were rejected by the authentication. Note that not all requests are therefore forwarded to radius. If several requests are sent in a short timeframe, only the first one is sent to radius.
rejectedRadiusFallbackAuthentications [Rejected Radius Fallback Authentications] (tmnxSubAuthPlcyFallbackReject)	long	The value of tmnxSubAuthPlcyReject indicates how many subscriber messages (e.g. DHCP, PPPoE, ...) were rejected by the fallback mechanism.
successfulAuthentications [Successful Authentications] (tmnxSubAuthPlcySuccess)	long	The value of tmnxSubAuthPlcySuccess indicates how many subscriber messages (e.g. DHCP, PPPoE, ...) were authenticated successfully. Note that not all requests are therefore forwarded to radius. If several requests are sent in a short timeframe, only the first one is sent to radius.
successfulRadiusFallbackAuthentications [Successful Radius Fallback Authentications] (tmnxSubAuthPlcyFallbackSuccess)	long	The value of tmnxSubAuthPlcySuccess indicates how many subscriber messages (e.g. DHCP, PPPoE, ...) were authenticated successfully by the fallback mechanism.

Table 439 subscrauth statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>RadiusEntryStats</p> <p>MIB entry name: tmnxSubAuthPlcyRadStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a specific radius server in a subscriber authentication policy in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxSubAuthPlcyRadStatsTable): The tmnxSubAuthPlcyStatsTable has an entry for each subscriber authentication policy configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: subscrauth.RadiusEntry</p>		
failedAuthenticationOverloadRequests [Failed Authentication Overload Requests] (tmnxSubAuthPlcyRadOvrldSendFail)	long	The value of tmnxSubAuthPlcyRadOvrldSendFail indicates how many authentication requests failed because the packet could not be sent out while the RADIUS server was in overload.
failedAuthenticationRequests [Failed Authentication Requests] (tmnxSubAuthPlcyRadSendFail)	long	The value of tmnxSubAuthPlcyRadSendFail indicates how many authentication requests failed because the packet could not be sent out.
md5VerificationFailedRequests [Md 5 Verification Failed Requests] (tmnxSubAuthPlcyRadMd5Fail)	long	The value of tmnxSubAuthPlcyRadMd5Fail indicates how many times the MD5 verification failed on a msg from this radius server.
pendingAuthenticationRequest [Pending Authentication Request] (tmnxSubAuthPlcyRadPending)	long	The value of tmnxSubAuthPlcyRadPending indicates how many authentication requests are currently pending.
rejectedAuthenticationRequests [Rejected Authentication Requests] (tmnxSubAuthPlcyRadReject)	long	The value of tmnxSubAuthPlcyRadReject indicates how many authentication requests were rejected by this radius server.
successfulAuthenticationRequests [Successful Authentication Requests] (tmnxSubAuthPlcyRadSuccess)	long	The value of tmnxSubAuthPlcyRadSuccess indicates how many authentication requests were accepted by this radius server.

Table 439 subscrauth statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
timedOutAuthenticationRequests [Timed Out Authentication Requests] (tmnxSubAuthPlcyRadTimeout)	long	The value of tmnxSubAuthPlcyRadTimeout indicates how many times this radius did not reply to an authentication request within the timeout.

Table 440 svq statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description

NFM-P counter names: XML [displayed] (MIB)	Type	Description
arbiterName [Arbiter Name] (custMssIngQosArbitName)	String	The value of custMssIngQosArbitName is used as an index of the ingress QoS arbiter of this customer multi service site.
custMssIngQosArbitStatsFwdOcts [Cust Mss Ing Qos Arbit Stats Fwd Octs] (custMssIngQosArbitStatsFwdOcts)	java. math. BigInteger	The value of custMssIngQosArbitStatsFwdOcts indicates the number of forwarded octets, as determined by the customer multi service site ingress arbiter policy.
custMssIngQosArbitStatsFwdPkts [Cust Mss Ing Qos Arbit Stats Fwd Pkts] (custMssIngQosArbitStatsFwdPkts)	java. math. BigInteger	The value of custMssIngQosArbitStatsFwdPkts indicates the number of forwarded packets, as determined by the customer multi service site ingress arbiter policy.
<p>CustMultiSvcSiteIngSchedPlcyPortStats</p> <p>MIB entry name: custMultiSvcSiteIngSchedPlcyPortStatsEntry</p> <p>Entry description: Each entry represents the ingress statistics about a specific customer multi service site ingress scheduler. Entries are created when a scheduler policy of a MSS is replaced with another one due to Time-Of-Day policies.</p> <p>Table description (for custMultiSvcSiteIngSchedPlcyPortStatsTable): The custMultiSvcSiteIngSchedPlcyPortStatsTable contains ingress QoS scheduler statistics for the customer multi service site, organized by scheduler policy.</p> <p>Does not support realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: svq.AggregationScheduler</p>		
forwardedOctets [Forwarded Octets] (custIngSchedPlcyPortStatsFwdOct)	java. math. BigInteger	The value of custIngSchedPlcyPortStatsFwdOct indicates the number of forwarded octets, as determined by the customer multi service site ingress scheduler policy.
forwardedPackets [Forwarded Packets] (custIngSchedPlcyPortStatsFwdPkt)	java. math. BigInteger	The value of custIngSchedPlcyPortStatsFwdPkt indicates the number of forwarded packets, as determined by the customer multi service site ingress scheduler policy.

Table 440 svq statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portID [Port ID] (custIngSchedPlcyPortStatsPort)	long	The value of custIngSchedPlcyPortStatsPort is used as an index of the ingress QoS scheduler of this customer multi service site. When an MSS assignment is an aps/ccag/lag in 'link' mode, each member-port of the aps/ccag/lag has its own scheduler. This object refers to the TmnxPortID of these member-ports.
<p>CustMultiSvcSiteIngSchedPlcyStats</p> <p>MIB entry name: custMultiSvcSiteIngSchedPlcyStatsEntry</p> <p>Entry description: Ingress statistics about a specific customer multi service site egress scheduler. Entries are created when a scheduler policy of a MSS is replaced with another one due to Time-Of-Day policies.</p> <p>Table description (for custMultiSvcSiteIngSchedPlcyStatsTable): A table that contains ingress QoS scheduler statistics for the customer multi service site, organized by scheduler policy.</p> <p>Does not support realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: svq.AggregationScheduler</p>		
forwardedOctets [Forwarded Octets] (custIngSchedPlcyStatsFwdOct)	java. math. BigInteger	The value of the object custIngSchedPlcyStatsFwdOct indicates the number of forwarded octets, as determined by the customer multi service site ingress scheduler policy.
forwardedPackets [Forwarded Packets] (custIngSchedPlcyStatsFwdPkt)	java. math. BigInteger	The value of the object custIngSchedPlcyStatsFwdPkt indicates the number of forwarded packets, as determined by the customer multi service site ingress scheduler policy.

sdpBndIgmPsnpgFwdGenQueries [Sdp Bnd IgmP Snpg Fwd Gen Queries] (sdpBndIgmPsnpgFwdGenQueries)	long	The value of the object sdpBndIgmPsnpgFwdGenQueries indicates the number of IGMP General Queries forwarded on this SDP Bind.

Table 441 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpBndIgmPsnpgFwdGrpSpecQueries [Sdp Bnd IgmP Snpg Fwd Grp Spec Queries] (sdpBndIgmPsnpgFwdGrpSpecQueries)	long	The value of the object sdpBndIgmPsnpgFwdGrpSpecQueries indicates the number of IGMP Group-Specific Queries forwarded on this SDP Bind.
sdpBndIgmPsnpgFwdSrcSpecQueries [Sdp Bnd IgmP Snpg Fwd Src Spec Queries] (sdpBndIgmPsnpgFwdSrcSpecQueries)	long	The value of the object sdpBndIgmPsnpgFwdSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries forwarded on this SDP Bind.
sdpBndIgmPsnpgFwdUnknownType [Sdp Bnd IgmP Snpg Fwd Unknown Type] (sdpBndIgmPsnpgFwdUnknownType)	long	The value of the object sdpBndIgmPsnpgFwdUnknownType indicates the number of IGMP unknown type packets forwarded on this SDP Bind.
sdpBndIgmPsnpgFwdV1Reports [Sdp Bnd IgmP Snpg Fwd V1 Reports] (sdpBndIgmPsnpgFwdV1Reports)	long	The value of the object sdpBndIgmPsnpgFwdV1Reports indicates the number of IGMPv1 Reports forwarded on this SDP Bind.
sdpBndIgmPsnpgFwdV2Leaves [Sdp Bnd IgmP Snpg Fwd V2 Leaves] (sdpBndIgmPsnpgFwdV2Leaves)	long	The value of the object sdpBndIgmPsnpgFwdV2Leaves indicates the number of IGMPv2 Leaves forwarded on this SDP Bind.
sdpBndIgmPsnpgFwdV2Reports [Sdp Bnd IgmP Snpg Fwd V2 Reports] (sdpBndIgmPsnpgFwdV2Reports)	long	The value of the object sdpBndIgmPsnpgFwdV2Reports indicates the number of IGMPv2 Reports forwarded on this SDP Bind.
sdpBndIgmPsnpgFwdV3Reports [Sdp Bnd IgmP Snpg Fwd V3 Reports] (sdpBndIgmPsnpgFwdV3Reports)	long	The value of the object sdpBndIgmPsnpgFwdV3Reports indicates the number of IGMPv3 Reports forwarded on this SDP Bind.
sdpBndIgmPsnpgRxGenQueries [Sdp Bnd IgmP Snpg Rx Gen Queries] (sdpBndIgmPsnpgRxGenQueries)	long	The value of the object sdpBndIgmPsnpgRxGenQueries indicates the number of IGMP General Queries received on this SDP Bind.

Table 441 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpBndIgmPsnpgRxGrpSpecQueries [Sdp Bnd IgmP Snpg Rx Grp Spec Queries] (sdpBndIgmPsnpgRxGrpSpecQueries)	long	The value of the object sdpBndIgmPsnpgRxGrpSpecQueries indicates the number of IGMP Group-Specific Queries received on this SDP Bind.
sdpBndIgmPsnpgRxSrcSpecQueries [Sdp Bnd IgmP Snpg Rx Src Spec Queries] (sdpBndIgmPsnpgRxSrcSpecQueries)	long	The value of the object sdpBndIgmPsnpgRxSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries received on this SDP Bind.
sdpBndIgmPsnpgRxUnknownType [Sdp Bnd IgmP Snpg Rx Unknown Type] (sdpBndIgmPsnpgRxUnknownType)	long	The value of the object sdpBndIgmPsnpgRxUnknownType indicates the number of IGMP unknown type packets received on this SDP Bind.
sdpBndIgmPsnpgRxV1Reports [Sdp Bnd IgmP Snpg Rx V1 Reports] (sdpBndIgmPsnpgRxV1Reports)	long	The value of the object sdpBndIgmPsnpgRxV1Reports indicates the number of IGMPv1 Reports received on this SDP Bind.
sdpBndIgmPsnpgRxV2Leaves [Sdp Bnd IgmP Snpg Rx V2 Leaves] (sdpBndIgmPsnpgRxV2Leaves)	long	The value of the object sdpBndIgmPsnpgRxV2Leaves indicates the number of IGMPv2 Leaves received on this SDP Bind.
sdpBndIgmPsnpgRxV2Reports [Sdp Bnd IgmP Snpg Rx V2 Reports] (sdpBndIgmPsnpgRxV2Reports)	long	The value of the object sdpBndIgmPsnpgRxV2Reports indicates the number of IGMPv2 Reports received on this SDP Bind.
sdpBndIgmPsnpgRxV3Reports [Sdp Bnd IgmP Snpg Rx V3 Reports] (sdpBndIgmPsnpgRxV3Reports)	long	The value of the object sdpBndIgmPsnpgRxV3Reports indicates the number of IGMPv3 Reports received on this SDP Bind.
sdpBndIgmPsnpgTxGenQueries [Sdp Bnd IgmP Snpg Tx Gen Queries] (sdpBndIgmPsnpgTxGenQueries)	long	The value of the object sdpBndIgmPsnpgTxGenQueries indicates the number of IGMP General Queries transmitted on this SDP Bind.
sdpBndIgmPsnpgTxGrpSpecQueries [Sdp Bnd IgmP Snpg Tx Grp Spec Queries] (sdpBndIgmPsnpgTxGrpSpecQueries)	long	The value of the object sdpBndIgmPsnpgTxGrpSpecQueries indicates the number of IGMP Group-Specific Queries transmitted on this SDP Bind.

Table 441 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpBndIgmPsnpgTxSrcSpecQueries [Sdp Bnd IgmP Snpg Tx Src Spec Queries] (sdpBndIgmPsnpgTxSrcSpecQueries)	long	The value of the object sdpBndIgmPsnpgTxSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries transmitted on this SDP Bind.
sdpBndIgmPsnpgTxV1Reports [Sdp Bnd IgmP Snpg Tx V1 Reports] (sdpBndIgmPsnpgTxV1Reports)	long	The value of the object sdpBndIgmPsnpgTxV1Reports indicates the number of IGMPv1 Reports transmitted on this SDP Bind.
sdpBndIgmPsnpgTxV2Leaves [Sdp Bnd IgmP Snpg Tx V2 Leaves] (sdpBndIgmPsnpgTxV2Leaves)	long	The value of the object sdpBndIgmPsnpgTxV2Leaves indicates the number of IGMPv2 Leaves transmitted on this SDP Bind.
sdpBndIgmPsnpgTxV2Reports [Sdp Bnd IgmP Snpg Tx V2 Reports] (sdpBndIgmPsnpgTxV2Reports)	long	The value of the object sdpBndIgmPsnpgTxV2Reports indicates the number of IGMPv2 Reports transmitted on this SDP Bind.
sdpBndIgmPsnpgTxV3Reports [Sdp Bnd IgmP Snpg Tx V3 Reports] (sdpBndIgmPsnpgTxV3Reports)	long	The value of the object sdpBndIgmPsnpgTxV3Reports indicates the number of IGMPv3 Reports transmitted on this SDP Bind.
TunnelKeepAliveStats MIB entry name: sdpInfoEntry Entry description: Information about a specific SDP. Table description (for sdpInfoTable): A table that contains SDP information. Supports realtime plotting Supports scheduled collection Monitored class: svt.Tunnel		
lateHelloResponses [Late Hello Responses] (sdpKeepAliveNumLateHelloR- esponseMessages)	long	The number of SDP Echo Response messages received after the corresponding Request timeout timer expired.

Table 441 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedHelloMessages [Received Hello Messages] (sdpKeepAliveNumHelloResponseMessages)	long	The number of SDP Echo Response messages received since the keep-alive was administratively enabled or the counter was cleared.
transmittedHelloMessages [Transmitted Hello Messages] (sdpKeepAliveNumHelloRequestMessages)	long	The number of SDP Echo Request messages transmitted since the keep-alive was administratively enabled or the counter was cleared.

Table 442 tdmequipment statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
DS1CurrentStats MIB entry name: dsx1CurrentEntry Entry description: An entry in the DS1 Current table. Table description (for dsx1CurrentTable): The DS1 current table contains various statistics being collected for the current 15 minute interval. Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS1E1Channel		
burstyErroredSeconds [Bursty Errored Seconds] (dsx1CurrentBESs)	long	The number of Bursty Errored Seconds.
controlledSlipSeconds [Controlled Slip Seconds] (dsx1CurrentCSSs)	long	The number of Controlled Slip Seconds.
degradedMinutes [Degraded Minutes] (dsx1CurrentDMs)	long	The number of Degraded Minutes.
erroredSeconds [Errored Seconds] (dsx1CurrentESs)	long	The number of Errored Seconds.
lineCodingViolations [Line Coding Violations] (dsx1CurrentLCVs)	long	The number of Line Code Violations (LCVs).
lineErroredSeconds [Line Errored Seconds] (dsx1CurrentLESs)	long	The number of Line Errored Seconds.

Table 442 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pBitCodingViolations [PBit Coding Violations] (dsx1CurrentPCVs)	long	The number of Path Coding Violations.
severelyErroredFramingSeconds [Severely Errored Framing Seconds] (dsx1CurrentSEFSs)	long	The number of Severely Errored Framing Seconds.
severelyErroredSeconds [Severely Errored Seconds] (dsx1CurrentSESSs)	long	The number of Severely Errored Seconds.
unavailableSeconds [Unavailable Seconds] (dsx1CurrentUASs)	long	The number of Unavailable Seconds.
DS1FarEndCurrentStats MIB entry name: dsx1FarEndCurrentEntry Entry description: An entry in the DS1 Far End Current table. Table description (for dsx1FarEndCurrentTable): The DS1 Far End Current table contains various statistics being collected for the current 15 minute interval. The statistics are collected from the far end messages on the Facilities Data Link. The definitions are the same as described for the near-end information. Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS1E1Channel		
burstyErroredSeconds [Bursty Errored Seconds] (dsx1FarEndCurrentBESs)	long	The number of Far End Bursty Errored Seconds.
controlledSlipSeconds [Controlled Slip Seconds] (dsx1FarEndCurrentCSSs)	long	The number of Far End Controlled Slip Seconds.

Table 442 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
degradedMinutes [Degraded Minutes] (dsx1FarEndCurrentDMs)	long	The number of Far End Degraded Minutes.
erroredSeconds [Errored Seconds] (dsx1FarEndCurrentESs)	long	The number of Far End Errored Seconds.
invalidIntervals [Invalid Intervals] (dsx1FarEndInvalidIntervals)	int	The number of intervals in the range from 0 to dsx1FarEndValidIntervals for which no data is available. This object will typically be zero except in cases where the data for some intervals are not available (e.g., in proxy situations).
lineErroredSeconds [Line Errored Seconds] (dsx1FarEndCurrentLEsSs)	long	The number of Far End Line Errored Seconds.
pathCodingViolations [Path Coding Violations] (dsx1FarEndCurrentPCVs)	long	The number of Far End Path Coding Violations.
severelyErroredFramingSeconds [Severely Errored Framing Seconds] (dsx1FarEndCurrentSEFSs)	long	The number of Far End Severely Errored Framing Seconds.
severelyErroredSeconds [Severely Errored Seconds] (dsx1FarEndCurrentSEsSs)	long	The number of Far End Severely Errored Seconds.
timeElapsed [Time Elapsed] (dsx1FarEndTimeElapsed)	int	The number of seconds that have elapsed since the beginning of the far end current error-measurement period. If, for some reason, such as an adjustment in the system's time-of-day clock, the current interval exceeds the maximum value, the agent will return the maximum value.

Table 442 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
unavailableSeconds [Unavailable Seconds] (dsx1FarEndCurrentUASs)	long	The number of Unavailable Seconds.
validIntervals [Valid Intervals] (dsx1FarEndValidIntervals)	int	The number of previous far end intervals for which data was collected. The value will be 96 unless the interface was brought online within the last 24 hours, in which case the value will be the number of complete 15 minute far end intervals since the interface has been online. In the case where the agent is a proxy, it is possible that some intervals are unavailable. In this case, this interval is the maximum interval number for which data is available.
<p>DS1FarEndIntervalStats MIB entry name: dsx1FarEndIntervalEntry Entry description: An entry in the DS1 Far End Interval table. Table description (for dsx1FarEndIntervalTable): The DS1 Far End Interval Table contains various statistics collected by each DS1 interface over the previous 24 hours of operation. The past 24 hours are broken into 96 completed 15 minute intervals. Each row in this table represents one such interval (identified by dsx1FarEndIntervalNumber) for one specific instance (identified by dsx1FarEndIntervalIndex). Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS1E1Channel</p>		
burstyErroredSeconds [Bursty Errored Seconds] (dsx1FarEndIntervalBESs)	long	The number of Far End Bursty Errored Seconds.
controlledSlipSeconds [Controlled Slip Seconds] (dsx1FarEndIntervalCSSs)	long	The number of Far End Controlled Slip Seconds.

Table 442 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
degradedMinutes [Degraded Minutes] (dsx1FarEndIntervalDMs)	long	The number of Far End Degraded Minutes.
erroredSeconds [Errored Seconds] (dsx1FarEndIntervalESS)	long	The number of Far End Errored Seconds.
intervalNumber [Interval Number] (dsx1FarEndIntervalNumber)	int	A number between 1 and 96, where 1 is the most recently completed 15 minute interval and 96 is the 15 minutes interval completed 23 hours and 45 minutes prior to interval 1.
lineErroredSeconds [Line Errored Seconds] (dsx1FarEndIntervalLESS)	long	The number of Far End Line Errored Seconds.
pathCodingViolations [Path Coding Violations] (dsx1FarEndIntervalPCVs)	long	The number of Far End Path Coding Violations.
severelyErroredFramingSeconds [Severely Errored Framing Seconds] (dsx1FarEndIntervalSEFSS)	long	The number of Far End Severely Errored Framing Seconds.
severelyErroredSeconds [Severely Errored Seconds] (dsx1FarEndIntervalSESS)	long	The number of Far End Severely Errored Seconds.
unavailableSeconds [Unavailable Seconds] (dsx1FarEndIntervalUASs)	long	The number of Unavailable Seconds.

Each row in this table represents one such interval (identified by dsx1IntervalNumber) for one specific instance (identified by dsx1IntervalIndex). Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS1E1Channel</p>		
burstyErroredSeconds [Bursty Errored Seconds] (dsx1IntervalBESs)	long	The number of Bursty Errored Seconds.
controlledSlipSeconds [Controlled Slip Seconds] (dsx1IntervalCSSs)	long	The number of Controlled Slip Seconds.
degradedMinutes [Degraded Minutes] (dsx1IntervalDMs)	long	The number of Degraded Minutes.

Table 442 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
erroredSeconds [Errored Seconds] (dsx1IntervalESs)	long	The number of Errored Seconds.
intervalNumber [Interval Number] (dsx1IntervalNumber)	int	A number between 1 and 96, where 1 is the most recently completed 15 minute interval and 96 is the 15 minutes interval completed 23 hours and 45 minutes prior to interval 1.
lineCodingViolations [Line Coding Violations] (dsx1IntervalLCVs)	long	The number of Line Code Violations.
lineErroredSeconds [Line Errored Seconds] (dsx1IntervalLESSs)	long	The number of Line Errored Seconds.
pBitCodingViolations [PBit Coding Violations] (dsx1IntervalPCVs)	long	The number of Path Coding Violations.
severelyErroredFramingSeconds [Severely Errored Framing Seconds] (dsx1IntervalSEFSs)	long	The number of Severely Errored Framing Seconds.
severelyErroredSeconds [Severely Errored Seconds] (dsx1IntervalSESSs)	long	The number of Severely Errored Seconds.
unavailableSeconds [Unavailable Seconds] (dsx1IntervalUASs)	long	The number of Unavailable Seconds. This object may decrease if the occurrence of unavailable seconds occurs across an interval boundary.

<p>DS1TotalStats</p> <p>MIB entry name: dsx1TotalEntry</p> <p>Entry description: An entry in the DS1 Total table.</p> <p>Table description (for dsx1TotalTable): The DS1 Total Table contains the cumulative sum of the various statistics for the 24 hour period preceding the current interval.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: tdmequipment.DS1E1Channel</p>		
burstyErroredSeconds [Bursty Errored Seconds] (dsx1TotalBESs)	long	The number of Bursty Errored Seconds (BESs) encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
controlledSlipSeconds [Controlled Slip Seconds] (dsx1TotalCSSs)	long	The number of Controlled Slip Seconds encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
degradedMinutes [Degraded Minutes] (dsx1TotalDMs)	long	The number of Degraded Minutes (DMs) encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
erroredSeconds [Errored Seconds] (dsx1TotalESs)	long	The sum of Errored Seconds encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
lineCodingViolations [Line Coding Violations] (dsx1TotalLCVs)	long	The number of Line Code Violations (LCVs) encountered by a DS1 interface in the current 15 minute interval. Invalid 15 minute intervals count as 0.
lineErroredSeconds [Line Errored Seconds] (dsx1TotalLEsS)	long	The number of Line Errored Seconds encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.

Table 442 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pBitCodingViolations [PBit Coding Violations] (dsx1TotalPCVs)	long	The number of Path Coding Violations encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
severelyErroredFramingSeconds [Severely Errored Framing Seconds] (dsx1TotalSEFSs)	long	The number of Severely Errored Framing Seconds encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
severelyErroredSeconds [Severely Errored Seconds] (dsx1TotalSESSs)	long	The number of Severely Errored Seconds encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
unavailableSeconds [Unavailable Seconds] (dsx1TotalUASs)	long	The number of Unavailable Seconds encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
DS3CurrentStats MIB entry name: dsx3CurrentEntry Entry description: An entry in the DS3/E3 Current table. Table description (for dsx3CurrentTable): The DS3/E3 current table contains various statistics being collected for the current 15 minute interval. Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS3E3Channel		
cBitCodingViolations [CBit Coding Violations] (dsx3CurrentCCVs)	long	The number of C-bit Coding Violations.
cBitErroredSeconds [CBit Errored Seconds] (dsx3CurrentCESSs)	long	The number of C-bit Errored Seconds.

Table 442 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cBitSeverelyErroredSeconds [CBit Severely Errored Seconds] (dsx3CurrentCSEs)	long	The number of C-bit Severely Errored Seconds.
lineCodingViolations [Line Coding Violations] (dsx3CurrentLCVs)	long	The counter associated with the number of Line Coding Violations.
lineErroredSeconds [Line Errored Seconds] (dsx3CurrentLESs)	long	The number of Line Errored Seconds.
pBitCodingViolations [PBit Coding Violations] (dsx3CurrentPCVs)	long	The counter associated with the number of P-bit Coding Violations.
pBitErroredSeconds [PBit Errored Seconds] (dsx3CurrentPESs)	long	The counter associated with the number of P-bit Errored Seconds.
pBitSeverelyErroredSeconds [PBit Severely Errored Seconds] (dsx3CurrentPSESs)	long	The counter associated with the number of P-bit Severely Errored Seconds.
severelyErroredFramingSeconds [Severely Errored Framing Seconds] (dsx3CurrentSEFSs)	long	The counter associated with the number of Severely Errored Framing Seconds.
unavailableSeconds [Unavailable Seconds] (dsx3CurrentUASs)	long	The counter associated with the number of Unavailable Seconds.

Table 442 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
DS3FarEndCurrentStats MIB entry name: dsx3FarEndCurrentEntry Entry description: An entry in the DS3 Far End Current table. Table description (for dsx3FarEndCurrentTable): The DS3 Far End Current table contains various statistics being collected for the current 15 minute interval. The statistics are collected from the far end block error code within the C-bits. Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS3E3Channel		
cBitCodingViolations [CBit Coding Violations] (dsx3FarEndCurrentCCVs)	long	The counter associated with the number of Far End C-bit Coding Violations reported via the far end block error count.
cBitErroredSeconds [CBit Errored Seconds] (dsx3FarEndCurrentCESs)	long	The counter associated with the number of Far End C-bit Errored Seconds.
cBitSeverelyErroredSeconds [CBit Severely Errored Seconds] (dsx3FarEndCurrentCSESs)	long	The counter associated with the number of Far End C-bit Severely Errored Seconds.
invalidIntervals [Invalid Intervals] (dsx3FarEndInvalidIntervals)	int	The number of intervals in the range from 0 to dsx3FarEndValidIntervals for which no data is available. This object will typically be zero except in cases where the data for some intervals are not available (e.g., in proxy situations).
timeElapsed [Time Elapsed] (dsx3FarEndTimeElapsed)	int	The number of seconds that have elapsed since the beginning of the far end current error-measurement period. If, for some reason, such as an adjustment in the system's time-of-day clock, the current interval exceeds the maximum value, the agent will return the maximum value.

Table 442 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
unavailableSeconds [Unavailable Seconds] (dsx3FarEndCurrentUASs)	long	The counter associated with the number of Far End unavailable seconds.
validIntervals [Valid Intervals] (dsx3FarEndValidIntervals)	int	The number of previous far end intervals for which data was collected. The value will be 96 unless the interface was brought online within the last 24 hours, in which case the value will be the number of complete 15 minute far end intervals since the interface has been online. In the case where the agent is a proxy, it is possible that some intervals are unavailable. In this case, this interval is the maximum interval number for which data is available.
<p>DS3FarEndIntervalStats</p> <p>MIB entry name: dsx3FarEndIntervalEntry</p> <p>Entry description: An entry in the DS3 Far End Interval table.</p> <p>Table description (for dsx3FarEndIntervalTable): The DS3 Far End Interval Table contains various statistics collected by each DS3 interface over the previous 24 hours of operation. The past 24 hours are broken into 96 completed 15 minute intervals.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: tdmequipment.DS3E3Channel</p>		
cBitCodingViolations [CBit Coding Violations] (dsx3FarEndIntervalCCVs)	long	The counter associated with the number of Far End C-bit Coding Violations reported via the far end block error count.
cBitErroredSeconds [CBit Errored Seconds] (dsx3FarEndIntervalCESs)	long	The counter associated with the number of Far End C-bit Errored Seconds encountered by a DS3 interface in one of the previous 96, individual 15 minute, intervals. In the case where the agent is a proxy and data is not available, return noSuchInstance.

Table 442 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cBitSeverelyErroredSeconds [CBit Severely Errored Seconds] (dsx3FarEndIntervalCSESSs)	long	The counter associated with the number of Far End C-bit Severely Errored Seconds.
intervalNumber [Interval Number] (dsx3FarEndIntervalNumber)	int	A number between 1 and 96, where 1 is the most recently completed 15 minute interval and 96 is the 15 minutes interval completed 23 hours and 45 minutes prior to interval 1.
unavailableSeconds [Unavailable Seconds] (dsx3FarEndIntervalUASs)	long	The counter associated with the number of Far End unavailable seconds.
DS3FarEndTotalStats MIB entry name: dsx3FarEndTotalEntry Entry description: An entry in the DS3 Far End Total table. Table description (for dsx3FarEndTotalTable): The DS3 Far End Total Table contains the cumulative sum of the various statistics for the 24 hour period preceding the current interval. Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS3E3Channel		
cBitCodingViolations [CBit Coding Violations] (dsx3FarEndTotalCCVs)	long	The counter associated with the number of Far End C-bit Coding Violations reported via the far end block error count encountered by a DS3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
cBitErroredSeconds [CBit Errored Seconds] (dsx3FarEndTotalCESs)	long	The counter associated with the number of Far End C-bit Errored Seconds encountered by a DS3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
cBitSeverelyErroredSeconds [CBit Severely Errored Seconds] (dsx3FarEndTotalCSESSs)	long	The counter associated with the number of Far End C-bit Severely Errored Seconds encountered by a DS3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.

Table 442 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
unavailableSeconds [Unavailable Seconds] (dsx3FarEndTotalUASs)	long	The counter associated with the number of Far End unavailable seconds encountered by a DS3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
DS3IntervalStats MIB entry name: dsx3IntervalEntry Entry description: An entry in the DS3/E3 Interval table. Table description (for dsx3IntervalTable): The DS3/E3 Interval Table contains various statistics collected by each DS3/E3 Interface over the previous 24 hours of operation. The past 24 hours are broken into 96 completed 15 minute intervals. Each row in this table represents one such interval (identified by dsx3IntervalNumber) and for one specific interface (identified by dsx3IntervalIndex). Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS3E3Channel		
cBitCodingViolations [CBit Coding Violations] (dsx3IntervalCCVs)	long	The number of C-bit Coding Violations.
cBitErroredSeconds [CBit Errored Seconds] (dsx3IntervalCESs)	long	The number of C-bit Errored Seconds.
cBitSeverelyErroredSeconds [CBit Severely Errored Seconds] (dsx3IntervalCSEs)	long	The number of C-bit Severely Errored Seconds.
intervalNumber [Interval Number] (dsx3IntervalNumber)	int	A number between 1 and 96, where 1 is the most recently completed 15 minute interval and 96 is the 15 minutes interval completed 23 hours and 45 minutes prior to interval 1.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CircuitDhcpRelayCfgStats</p> <p>MIB entry name: sdpBindDhcpStatsEntry</p> <p>Entry description: DHCP statistics for a TLS spoke SDP or mesh SDP.</p> <p>Table description (for sdpBindDhcpStatsTable): sdpBindDhcpStatsTable contains DHCP statistics related to a TLS SDP Bind. A row will exist in this table for each spoke or mesh SDP in a TIs Service. Rows are created and deleted automatically by the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: svt.SdpBinding</p>		
sdpBindDhcpStatsClntDropdPckts [Sdp Bind Dhcp Stats Clnt Dropd Pckts] (sdpBindDhcpStatsClntDropdPckts)	long	The value of the object sdpBindDhcpStatsClntDropdPckts indicates the number of DHCP client packets that have been dropped on this SDP bind.
sdpBindDhcpStatsClntForwdPckts [Sdp Bind Dhcp Stats Clnt Forwd Pckts] (sdpBindDhcpStatsClntForwdPckts)	long	The value of the object sdpBindDhcpStatsClntForwdPckts indicates the number of DHCP client packets that have been forwarded on this SDP bind.
sdpBindDhcpStatsClntProxLSPckts [Sdp Bind Dhcp Stats Clnt Prox LSPckts] (sdpBindDhcpStatsClntProxLSPckts)	long	The value of the object sdpBindDhcpStatsClntProxLSPckts indicates the number of DHCP client packets that have been proxied on this SDP bind based on a lease state. The lease itself can have been obtained from a DHCP or RADIUS server. This is the so called lease split functionality.
sdpBindDhcpStatsClntProxRadPckts [Sdp Bind Dhcp Stats Clnt Prox Rad Pckts] (sdpBindDhcpStatsClntProxRadPckts)	long	The value of the object sdpBindDhcpStatsClntProxRadPckts indicates the number of DHCP client packets that have been proxied on this SDP bind based on data received from a RADIUS server.
sdpBindDhcpStatsClntSnoopdPckts [Sdp Bind Dhcp Stats Clnt Snoopd Pckts] (sdpBindDhcpStatsClntSnoopdPckts)	long	The value of the object sdpBindDhcpStatsClntSnoopdPckts indicates the number of DHCP client packets that have been snooped on this SDP bind.

Table 443 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpBindDhcpStatsGenForceRenPckts [Sdp Bind Dhcp Stats Gen Force Ren Pckts] (sdpBindDhcpStatsGenForceRenPckts)	long	The value of the object sdpBindDhcpStatsGenForceRenPckts indicates the number of DHCP FORCERENEW messages spoofed on this SDP bind to the DHCP clients.
sdpBindDhcpStatsGenReleasePckts [Sdp Bind Dhcp Stats Gen Release Pckts] (sdpBindDhcpStatsGenReleasePckts)	long	The value of the object sdpBindDhcpStatsGenReleasePckts indicates the number of DHCP RELEASE messages spoofed on this SDP bind to the DHCP server.
sdpBindDhcpStatsSvrDropdPckts [Sdp Bind Dhcp Stats Svr Dropd Pckts] (sdpBindDhcpStatsSvrDropdPckts)	long	The value of the object sdpBindDhcpStatsSvrDropdPckts indicates the number of DHCP server packets that have been dropped on this SDP bind.
sdpBindDhcpStatsSvrForwdPckts [Sdp Bind Dhcp Stats Svr Forwd Pckts] (sdpBindDhcpStatsSvrForwdPckts)	long	The value of the object sdpBindDhcpStatsSvrForwdPckts indicates the number of DHCP server packets that have been forwarded on this SDP bind.
sdpBindDhcpStatsSvrSnoopdPckts [Sdp Bind Dhcp Stats Svr Snoopd Pckts] (sdpBindDhcpStatsSvrSnoopdPckts)	long	The value of the object sdpBindDhcpStatsSvrSnoopdPckts indicates the number of DHCP server packets that have been snooped on this SDP bind.
<p>InterfacePimSnoopingStats MIB entry name: tmnxPimSnpgIfStatsEntry Entry description: An entry in the tmnxPimSnpgIfStatsTable. Table description (for tmnxPimSnpgIfStatsTable): The table listing the PIM statistics for a particular interface. Supports realtime plotting Supports scheduled collection Monitored class: vpls.InterfacePimSnooping</p>		
tmnxPimSnpgIfJoinPolicyDrops [Tmnx Pim Snpg If Join Policy Drops] (tmnxPimSnpgIfJoinPolicyDrops)	long	The value of tmnxPimSnpgIfJoinPolicyDrops indicates the number of times the join policy match resulted in dropping PIM Join-Prune Message or one of the source group contained in the message.

Table 443 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tmnxPimSnpgIfRxBadChecksumDscrd [Tmnx Pim Snpg If Rx Bad Checksum Dscrd] (tmnxPimSnpgIfRxBadChecksumDscrd)	long	The value of tmnxPimSnpgIfRxBadChecksumDscrd indicates the number of PIM messages received on this interface which were discarded because of bad checksum.
tmnxPimSnpgIfRxBadEncodings [Tmnx Pim Snpg If Rx Bad Encodings] (tmnxPimSnpgIfRxBadEncodings)	long	The value of tmnxPimSnpgIfRxBadEncodings indicates the number of PIM messages with bad encodings received on this interface.
tmnxPimSnpgIfRxBadVersionDscrd [Tmnx Pim Snpg If Rx Bad Version Dscrd] (tmnxPimSnpgIfRxBadVersionDscrd)	long	The value of tmnxPimSnpgIfRxBadVersionDscrd indicates the number of PIM messages with bad versions received on this interface.
tmnxPimSnpgIfRxHellos [Tmnx Pim Snpg If Rx Hellos] (tmnxPimSnpgIfRxHellos)	long	The value of tmnxPimSnpgIfRxHellos indicates the number of PIM hello messages received on this interface.
tmnxPimSnpgIfRxHellosDropped [Tmnx Pim Snpg If Rx Hellos Dropped] (tmnxPimSnpgIfRxHellosDropped)	long	The value of tmnxPimSnpgIfRxHellosDropped indicates the number of PIM Hello messages which were received on this interface but were dropped.
tmnxPimSnpgIfRxJoinPruneErrs [Tmnx Pim Snpg If Rx Join Prune Errs] (tmnxPimSnpgIfRxJoinPruneErrs)	long	The value of tmnxPimSnpgIfRxJoinPruneErrs indicates the number of errors while processing Join-Prune messages received on this interface.
tmnxPimSnpgIfRxJoinPrunes [Tmnx Pim Snpg If Rx Join Prunes] (tmnxPimSnpgIfRxJoinPrunes)	long	The value of tmnxPimSnpgIfRxJoinPrunes indicates the number of PIM Join Prune messages received on this interface.
tmnxPimSnpgIfRxNbrUnknown [Tmnx Pim Snpg If Rx Nbr Unknown] (tmnxPimSnpgIfRxNbrUnknown)	long	The value of tmnxPimSnpgIfRxNbrUnknown indicates the number of PIM messages (other than Hello messages) which were received on this interface and were rejected because the adjacency with the neighbor router was not already established.

Table 443 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tmnxPimSnpglfRxPkts [Tmnx Pim SnpG If Rx Pkts] (tmnxPimSnpglfRxPkts)	long	The value of tmnxPimSnpglfRxPkts indicates the number of multicast data packets received on this interface.
tmnxPimSnpglfSGTypes [Tmnx Pim SnpG If SGTypes] (tmnxPimSnpglfSGTypes)	long	The value of tmnxPimSnpglfSGTypes indicates the number of (S,G) entries in tmnxPimSnpglfGrpSrcTable.
tmnxPimSnpglfStarGTypes [Tmnx Pim SnpG If Star GTypes] (tmnxPimSnpglfStarGTypes)	long	The value of tmnxPimSnpglfStarGTypes indicates the number of (*,G) entries in tmnxPimSnpglfGrpSrcTable.
tmnxPimSnpglfTxJoinPrunes [Tmnx Pim SnpG If Tx Join Prunes] (tmnxPimSnpglfTxJoinPrunes)	long	The value of tmnxPimSnpglfTxJoinPrunes indicates the number of PIM Join Prune messages transmitted on this interface.
tmnxPimSnpglfTxPkts [Tmnx Pim SnpG If Tx Pkts] (tmnxPimSnpglfTxPkts)	long	The value of tmnxPimSnpglfTxPkts indicates the number of multicast data packets transmitted on this interface.
<p>L2AccessInterfaceIcmpSnpGErrorStats</p> <p>MIB entry name: sapIcmpSnpGStatsEntry</p> <p>Entry description: sapIcmpSnpGStatsEntry is an entry in the sapIcmpSnpGStatsTable. Table 443 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
saplgmpSnpGImportPolicyDrops [Sap Igmp SnpG Import Policy Drops] (saplgmpSnpGImportPolicyDrops)	long	The value of the object saplgmpSnpGImportPolicyDrops indicates the number of times an IGMP Group or Source is dropped because of applying an import policy on this SAP.
saplgmpSnpGMaxNumGroupsDrops [Sap Igmp SnpG Max Num Groups Drops] (saplgmpSnpGMaxNumGroupsDrops)	long	The value of the object saplgmpSnpGMaxNumGroupsDrops indicates the number of times an IGMP Group is dropped because of exceeding the configured maximum number of groups on this SAP.
saplgmpSnpGMaxNumGrpSrcsDrops [Sap Igmp SnpG Max Num Grp Sources Drops] (saplgmpSnpGMaxNumGrpSrcsDrops)	long	The value of the object saplgmpSnpGMaxNumGrpSrcsDrops indicates the number of times an IGMP Group Source is dropped because of exceeding the configured maximum number of group sources per group on this SAP.
saplgmpSnpGMaxNumSourcesDrops [Sap Igmp SnpG Max Num Sources Drops] (saplgmpSnpGMaxNumSourcesDrops)	long	The value of the object saplgmpSnpGMaxNumSourcesDrops indicates the number of times an IGMP Source is dropped because of exceeding the configured maximum number of sources per group on this SAP.
saplgmpSnpGMcacPolicyDrops [Sap Igmp SnpG Mcac Policy Drops] (saplgmpSnpGMcacPolicyDrops)	long	The value of the object saplgmpSnpGMcacPolicyDrops indicates the number of times an IGMP Group is dropped because of applying a multicast CAC policy on this SAP.
saplgmpSnpGMcsFailures [Sap Igmp SnpG Mcs Failures] (saplgmpSnpGMcsFailures)	long	The value of the object saplgmpSnpGMcsFailures indicates the number of times an IGMP Group on this SAP could not be synced to the MCS (multi-chassis synchronization) database.
saplgmpSnpGRxBadEncodedPkts [Sap Igmp SnpG Rx Bad Encoded Pkts] (saplgmpSnpGRxBadEncodedPkts)	long	The value of the object saplgmpSnpGRxBadEncodedPkts indicates the number of IGMP packets dropped on this SAP because of a bad encoding.
saplgmpSnpGRxBadIgmpChksmPkts [Sap Igmp SnpG Rx Bad Igmp Chksm Pkts] (saplgmpSnpGRxBadIgmpChksmPkts)	long	The value of the object saplgmpSnpGRxBadIgmpChksmPkts indicates the number of dropped IGMP packets on this SAP because of a bad IGMP header checksum.

Table 443 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
saplgmpSnpgrxBadIpChksmPkts [Sap Igmp SnpgrxBadIpChksmPkts] (saplgmpSnpgrxBadIpChksmPkts)	long	The value of the object saplgmpSnpgrxBadIpChksmPkts indicates the number of dropped IGMP packets on this SAP because of a bad IPv4 header checksum.
saplgmpSnpgrxBadLenPkts [Sap Igmp SnpgrxBadLenPkts] (saplgmpSnpgrxBadLenPkts)	long	The value of the object saplgmpSnpgrxBadLenPkts indicates the number of IGMP packets dropped on this SAP because of a bad length.
saplgmpSnpgrxNoRtrAlertPkts [Sap Igmp SnpgrxNoRtrAlertPkts] (saplgmpSnpgrxNoRtrAlertPkts)	long	The value of the object saplgmpSnpgrxNoRtrAlertPkts indicates the number of IGMP packets dropped on this SAP because the Router Alert Option in the IP packet is not set.
saplgmpSnpgrxWrongVersionPkts [Sap Igmp SnpgrxWrongVersionPkts] (saplgmpSnpgrxWrongVersionPkts)	long	The value of the object saplgmpSnpgrxWrongVersionPkts indicates the total number of IGMP packets with a wrong version received on this SAP.
saplgmpSnpgrxZeroSrcAdrPkts [Sap Igmp SnpgrxZeroSrcAdrPkts] (saplgmpSnpgrxZeroSrcAdrPkts)	long	The value of the object saplgmpSnpgrxZeroSrcAdrPkts indicates the number of IGMP packets dropped on this SAP because they contain a zero source IPv4 address.
saplgmpSnpgrSendQueryCfgDrops [Sap Igmp SnpgrSendQueryCfgDrops] (saplgmpSnpgrSendQueryCfgDrops)	long	The value of the object saplgmpSnpgrSendQueryCfgDrops indicates the number of times an IGMP Query is dropped because the object saplgmpSnpgrCfgSendQueries for this SAP is set to 'enabled(1)'.

Table 443 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
L2AccessInterfacelgmpSnpgStats MIB entry name: saplgmpSnpgStatsEntry Entry description: saplgmpSnpgStatsEntry is an entry in the saplgmpSnpgStatsTable. Each entry contains IGMP snooping statics for a SAP in a TIs. Table description (for saplgmpSnpgStatsTable): saplgmpSnpgStatsTable contains statistics on IGMP snooping per SAP. Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • mvpls.IL2AccessInterface • vpls.AbstractL2AccessInterface • vpls.IL2AccessInterface 		
saplgmpSnpgFwdGenQueries [Sap Igmp Snpg Fwd Gen Queries] (saplgmpSnpgFwdGenQueries)	long	The value of the object saplgmpSnpgFwdGenQueries indicates the number of IGMP General Queries forwarded on this SAP.
saplgmpSnpgFwdGrpSpecQueries [Sap Igmp Snpg Fwd Grp Spec Queries] (saplgmpSnpgFwdGrpSpecQueries)	long	The value of the object saplgmpSnpgFwdGrpSpecQueries indicates the number of IGMP Group-Specific Queries forwarded on this SAP.
saplgmpSnpgFwdSrcSpecQueries [Sap Igmp Snpg Fwd Src Spec Queries] (saplgmpSnpgFwdSrcSpecQueries)	long	The value of the object saplgmpSnpgFwdSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries forwarded on this SAP.
saplgmpSnpgFwdUnknownType [Sap Igmp Snpg Fwd Unknown Type] (saplgmpSnpgFwdUnknownType)	long	The value of the object saplgmpSnpgFwdUnknownType indicates the number of IGMP unknown type packets forwarded on this SAP.
saplgmpSnpgFwdV1Reports [Sap Igmp Snpg Fwd V1 Reports] (saplgmpSnpgFwdV1Reports)	long	The value of the object saplgmpSnpgFwdV1Reports indicates the number of IGMPv1 Reports forwarded on this SAP.

Table 443 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
saplgmpSnpGfwdV2Leaves [Sap Igmp SnpG Fwd V2 Leaves] (saplgmpSnpGfwdV2Leaves)	long	The value of the object saplgmpSnpGfwdV2Leaves indicates the number of IGMPv2 Leaves forwarded on this SAP.
saplgmpSnpGfwdV2Reports [Sap Igmp SnpG Fwd V2 Reports] (saplgmpSnpGfwdV2Reports)	long	The value of the object saplgmpSnpGfwdV2Reports indicates the number of IGMPv2 Reports forwarded on this SAP.
saplgmpSnpGfwdV3Reports [Sap Igmp SnpG Fwd V3 Reports] (saplgmpSnpGfwdV3Reports)	long	The value of the object saplgmpSnpGfwdV3Reports indicates the number of IGMPv3 Reports forwarded on this SAP.
saplgmpSnpGRxGenQueries [Sap Igmp SnpG Rx Gen Queries] (saplgmpSnpGRxGenQueries)	long	The value of the object saplgmpSnpGRxGenQueries indicates the number of IGMP General Queries received on this SAP.
saplgmpSnpGRxGrpSpecQueries [Sap Igmp SnpG Rx Grp Spec Queries] (saplgmpSnpGRxGrpSpecQueries)	long	The value of the object saplgmpSnpGRxGrpSpecQueries indicates the number of IGMP Group-Specific Queries received on this SAP.
saplgmpSnpGRxSrcSpecQueries [Sap Igmp SnpG Rx Src Spec Queries] (saplgmpSnpGRxSrcSpecQueries)	long	The value of the object saplgmpSnpGRxSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries received on this SAP.
saplgmpSnpGRxUnknownType [Sap Igmp SnpG Rx Unknown Type] (saplgmpSnpGRxUnknownType)	long	The value of the object saplgmpSnpGRxUnknownType indicates the number of IGMP unknown type packets received on this SAP.
saplgmpSnpGRxV1Reports [Sap Igmp SnpG Rx V1 Reports] (saplgmpSnpGRxV1Reports)	long	The value of the object saplgmpSnpGRxV1Reports indicates the number of IGMPv1 Reports received on this SAP.
saplgmpSnpGRxV2Leaves [Sap Igmp SnpG Rx V2 Leaves] (saplgmpSnpGRxV2Leaves)	long	The value of the object saplgmpSnpGRxV2Leaves indicates the number of IGMPv2 Leaves received on this SAP.

Table 443 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
saplgmpSnpgrxV2Reports [Sap Igmp Snpgrx V2 Reports] (saplgmpSnpgrxV2Reports)	long	The value of the object saplgmpSnpgrxV2Reports indicates the number of IGMPv2 Reports received on this SAP.
saplgmpSnpgrxV3Reports [Sap Igmp Snpgrx V3 Reports] (saplgmpSnpgrxV3Reports)	long	The value of the object saplgmpSnpgrxV3Reports indicates the number of IGMPv3 Reports received on this SAP.
saplgmpSnpgrxTxGenQueries [Sap Igmp Snpgrx Tx Gen Queries] (saplgmpSnpgrxTxGenQueries)	long	The value of the object saplgmpSnpgrxTxGenQueries indicates the number of IGMP General Queries transmitted on this SAP.
saplgmpSnpgrxTxGrpSpecQueries [Sap Igmp Snpgrx Tx Grp Spec Queries] (saplgmpSnpgrxTxGrpSpecQueries)	long	The value of the object saplgmpSnpgrxTxGrpSpecQueries indicates the number of IGMP Group-Specific Queries transmitted on this SAP.
saplgmpSnpgrxTxSrcSpecQueries [Sap Igmp Snpgrx Tx Src Spec Queries] (saplgmpSnpgrxTxSrcSpecQueries)	long	The value of the object saplgmpSnpgrxTxSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries transmitted on this SAP.
saplgmpSnpgrxTxV1Reports [Sap Igmp Snpgrx Tx V1 Reports] (saplgmpSnpgrxTxV1Reports)	long	The value of the object saplgmpSnpgrxTxV1Reports indicates the number of IGMPv1 Reports transmitted on this SAP.
saplgmpSnpgrxTxV2Leaves [Sap Igmp Snpgrx Tx V2 Leaves] (saplgmpSnpgrxTxV2Leaves)	long	The value of the object saplgmpSnpgrxTxV2Leaves indicates the number of IGMPv2 Leaves transmitted on this SAP.
saplgmpSnpgrxTxV2Reports [Sap Igmp Snpgrx Tx V2 Reports] (saplgmpSnpgrxTxV2Reports)	long	The value of the object saplgmpSnpgrxTxV2Reports indicates the number of IGMPv2 Reports transmitted on this SAP.
saplgmpSnpgrxTxV3Reports [Sap Igmp Snpgrx Tx V3 Reports] (saplgmpSnpgrxTxV3Reports)	long	The value of the object saplgmpSnpgrxTxV3Reports indicates the number of IGMPv3 Reports transmitted on this SAP.

Table 443 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>L2AccessInterfaceMldMvrStats</p> <p>MIB entry name: sapMldSnpgStatsEntry</p> <p>Entry description: sapMldSnpgStatsEntry is an entry in the sapMldSnpgStatsTable. sapMldSnpgImportPolicyDrops [Sap Mld Snpg Import Policy Drops] (sapMldSnpgImportPolicyDrops)	long	The value of the object sapMldSnpgImportPolicyDrops indicates the number of times an MLD group or source is dropped because of applying an import policy on this SAP.

Table 443 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapMldSnpgMaxNumGroupsDrops [Sap Mld Snpg Max Num Groups Drops] (sapMldSnpgMaxNumGroupsDrops)	long	The value of the object sapMldSnpgMaxNumGroupsDrops indicates the number of times an MLD group is dropped because of exceeding the configured maximum number of groups on this SAP.
sapMldSnpgMcsFailures [Sap Mld Snpg Mcs Failures] (sapMldSnpgMcsFailures)	long	The value of the object sapMldSnpgMcsFailures indicates the number of times an MLD group on this SAP could not be synced to the MCS (multi-chassis synchronization) database.
sapMldSnpgRxBadEncodedPkts [Sap Mld Snpg Rx Bad Encoded Pkts] (sapMldSnpgRxBadEncodedPkts)	long	The value of the object sapMldSnpgRxBadEncodedPkts indicates the number of MLD packets dropped on this SAP because of a bad encoding.
sapMldSnpgRxBadLenPkts [Sap Mld Snpg Rx Bad Len Pkts] (sapMldSnpgRxBadLenPkts)	long	The value of the object sapMldSnpgRxBadLenPkts indicates the number of MLD packets dropped on this SAP because of a bad length.
sapMldSnpgRxBadMldChksmPkts [Sap Mld Snpg Rx Bad Mld Chksm Pkts] (sapMldSnpgRxBadMldChksmPkts)	long	The value of the object sapMldSnpgRxBadMldChksmPkts indicates the number of dropped MLD packets on this SAP because of a bad MLD header checksum.
sapMldSnpgRxNoRtrAlertPkts [Sap Mld Snpg Rx No Rtr Alert Pkts] (sapMldSnpgRxNoRtrAlertPkts)	long	The value of the object sapMldSnpgRxNoRtrAlertPkts indicates the number of MLD packets dropped on this SAP because the Router Alert Option in the IP packet is not set.
sapMldSnpgRxWrongVersionPkts [Sap Mld Snpg Rx Wrong Version Pkts] (sapMldSnpgRxWrongVersionPkts)	long	The value of the object sapMldSnpgRxWrongVersionPkts indicates the total number of MLD packets with a wrong version received on this SAP.
sapMldSnpgRxZeroSrcAdrPkts [Sap Mld Snpg Rx Zero Src Adr Pkts] (sapMldSnpgRxZeroSrcAdrPkts)	long	The value of the object sapMldSnpgRxZeroSrcAdrPkts indicates the number of MLD packets dropped on this SAP because they contain a zero source IPv6 address.

Table 443 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapMldSnpgSendQueryCfgDrops [Sap Mld Snpg Send Query Cfg Drops] (sapMldSnpgSendQueryCfgDrops)	long	The value of the object sapMldSnpgSendQueryCfgDrops indicates the number of times an MLD Query is dropped because the object sapMldSnpgCfgSendQueries for this SAP is set to 'inService(2)'.
<p>L2AccessInterfaceMldSnpgStats</p> <p>MIB entry name: sapMldSnpgStatsEntry</p> <p>Entry description: sapMldSnpgStatsEntry is an entry in the sapMldSnpgStatsTable. Each entry contains MLD snooping statics for a SAP in a TIs.</p> <p>Table description (for sapMldSnpgStatsTable): sapMldSnpgStatsTable contains statistics on MLD snooping per SAP.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: vpls.AbstractL2AccessInterface</p>		
sapMldSnpgFwdGenQueries [Sap Mld Snpg Fwd Gen Queries] (sapMldSnpgFwdGenQueries)	long	The value of the object sapMldSnpgFwdGenQueries indicates the number of MLD General Queries forwarded on this SAP.
sapMldSnpgFwdGrpSpecQueries [Sap Mld Snpg Fwd Grp Spec Queries] (sapMldSnpgFwdGrpSpecQueries)	long	The value of the object sapMldSnpgFwdGrpSpecQueries indicates the number of MLD Group-Specific Queries forwarded on this SAP.
sapMldSnpgFwdSrcSpecQueries [Sap Mld Snpg Fwd Src Spec Queries] (sapMldSnpgFwdSrcSpecQueries)	long	The value of the object sapMldSnpgFwdSrcSpecQueries indicates the number of MLD Group-And-Source-Specific Queries forwarded on this SAP.
sapMldSnpgFwdUnknownType [Sap Mld Snpg Fwd Unknown Type] (sapMldSnpgFwdUnknownType)	long	The value of the object sapMldSnpgFwdUnknownType indicates the number of MLD unknown type packets forwarded on this SAP.
sapMldSnpgFwdV1Leaves [Sap Mld Snpg Fwd V1 Leaves] (sapMldSnpgFwdV1Leaves)	long	The value of the object sapMldSnpgFwdV1Leaves indicates the number of MLDv1 Leaves forwarded on this SAP.

Table 443 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapMldSnpgFwdV1Reports [Sap Mld Snpg Fwd V1 Reports] (sapMldSnpgFwdV1Reports)	long	The value of the object sapMldSnpgFwdV1Reports indicates the number of MLDv1 Reports forwarded on this SAP.
sapMldSnpgFwdV2Reports [Sap Mld Snpg Fwd V2 Reports] (sapMldSnpgFwdV2Reports)	long	The value of the object sapMldSnpgFwdV2Reports indicates the number of MLDv2 Reports forwarded on this SAP.
sapMldSnpgRxGenQueries [Sap Mld Snpg Rx Gen Queries] (sapMldSnpgRxGenQueries)	long	The value of the object sapMldSnpgRxGenQueries indicates the number of MLD General Queries received on this SAP.
sapMldSnpgRxGrpSpecQueries [Sap Mld Snpg Rx Grp Spec Queries] (sapMldSnpgRxGrpSpecQueries)	long	The value of the object sapMldSnpgRxGrpSpecQueries indicates the number of MLD Group-Specific Queries received on this SAP.
sapMldSnpgRxLocalScopePkts [Sap Mld Snpg Rx Local Scope Pkts] (sapMldSnpgRxLocalScopePkts)	long	The value of the object sapMldSnpgRxLocalScopePkts indicates the number of MLD packets received on the link-local scope IPv6 multicast address.
sapMldSnpgRxRsvdScopePkts [Sap Mld Snpg Rx Rsvd Scope Pkts] (sapMldSnpgRxRsvdScopePkts)	long	The value of the object sapMldSnpgRxRsvdScopePkts indicates the number of MLD packets received on the reserved scope IPv6 multicast address.
sapMldSnpgRxSrcSpecQueries [Sap Mld Snpg Rx Src Spec Queries] (sapMldSnpgRxSrcSpecQueries)	long	The value of the object sapMldSnpgRxSrcSpecQueries indicates the number of MLD Group-And-Source-Specific Queries received on this SAP.
sapMldSnpgRxUnknownType [Sap Mld Snpg Rx Unknown Type] (sapMldSnpgRxUnknownType)	long	The value of the object sapMldSnpgRxUnknownType indicates the number of MLD unknown type packets received on this SAP.
sapMldSnpgRxV1Leaves [Sap Mld Snpg Rx V1 Leaves] (sapMldSnpgRxV1Leaves)	long	The value of the object sapMldSnpgRxV1Leaves indicates the number of MLDv1 Leaves received on this SAP.

Table 443 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapMldSnpgRxV1Reports [Sap Mld Snpg Rx V1 Reports] (sapMldSnpgRxV1Reports)	long	The value of the object sapMldSnpgRxV1Reports indicates the number of MLDv1 Reports received on this SAP.
sapMldSnpgRxV2Reports [Sap Mld Snpg Rx V2 Reports] (sapMldSnpgRxV2Reports)	long	The value of the object sapMldSnpgRxV2Reports indicates the number of MLDv2 Reports received on this SAP.
sapMldSnpgTxGenQueries [Sap Mld Snpg Tx Gen Queries] (sapMldSnpgTxGenQueries)	long	The value of the object sapMldSnpgTxGenQueries indicates the number of MLD General Queries transmitted on this SAP.
sapMldSnpgTxGrpSpecQueries [Sap Mld Snpg Tx Grp Spec Queries] (sapMldSnpgTxGrpSpecQueries)	long	The value of the object sapMldSnpgTxGrpSpecQueries indicates the number of MLD Group-Specific Queries transmitted on this SAP.
sapMldSnpgTxSrcSpecQueries [Sap Mld Snpg Tx Src Spec Queries] (sapMldSnpgTxSrcSpecQueries)	long	The value of the object sapMldSnpgTxSrcSpecQueries indicates the number of MLD Group-And-Source-Specific Queries transmitted on this SAP.
sapMldSnpgTxV1Leaves [Sap Mld Snpg Tx V1 Leaves] (sapMldSnpgTxV1Leaves)	long	The value of the object sapMldSnpgTxV1Leaves indicates the number of MLDv1 Leaves transmitted on this SAP.
sapMldSnpgTxV1Reports [Sap Mld Snpg Tx V1 Reports] (sapMldSnpgTxV1Reports)	long	The value of the object sapMldSnpgTxV1Reports indicates the number of MLDv1 Reports transmitted on this SAP.
sapMldSnpgTxV2Reports [Sap Mld Snpg Tx V2 Reports] (sapMldSnpgTxV2Reports)	long	The value of the object sapMldSnpgTxV2Reports indicates the number of MLDv2 Reports transmitted on this SAP.

Table 443 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>L2AccessInterfaceMvrStats</p> <p>MIB entry name: sapIgmPsnpgStatsEntry</p> <p>Entry description: sapIgmPsnpgStatsEntry is an entry in the sapIgmPsnpgStatsTable. Each entry contains IGMP snooping statics for a SAP in a TIs.</p> <p>Table description (for sapIgmPsnpgStatsTable): sapIgmPsnpgStatsTable contains statistics on IGMP snooping per SAP.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: vpls.AbstractL2AccessInterface</p>		
sapIgmPsnpgMvrFromVplsCfgDrops [Sap Igm Psnpg Mvr From Vpls Cfg Drops] (sapIgmPsnpgMvrFromVplsCfgDrops)	long	The value of the object sapIgmPsnpgMvrFromVplsCfgDrops indicates the number of times an IGMP Group or Query is dropped because of applying the sapIgmPsnpgCfgMvrFromVplsId configuration on this SAP.
sapIgmPsnpgMvrToSapCfgDrops [Sap Igm Psnpg Mvr To Sap Cfg Drops] (sapIgmPsnpgMvrToSapCfgDrops)	long	The value of the object sapIgmPsnpgMvrToSapCfgDrops indicates the number times an IGMP Report or Query is dropped because of applying the sapIgmPsnpgCfgMvrToSapPortId and sapIgmPsnpgCfgMvrToSapEncapVal configuration on this SAP.
<p>L2AccessIfDhcpRelayCfgStats</p> <p>MIB entry name: sapTIsDhcpStatsEntry</p> <p>Entry description: DHCP statistics for a TLS SAP.</p> <p>Table description (for sapTIsDhcpStatsTable): sapTIsDhcpStatsTable contains DHCP statistics related to a TLS SAP. This table complements sapTIsInfoTable, and contains an entry for each TIs SAP. Rows in this table are created and deleted automatically by the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: vpls.AbstractL2AccessInterface</p>		
sapTIsDhcpStatsClntDropdPkts [Sap TIs Dhcp Stats Clnt Dropd Pkts] (sapTIsDhcpStatsClntDropdPkts)	long	The value of the object sapTIsDhcpStatsClntDropdPkts indicates the number of DHCP client packets that have been dropped on this SAP.

Table 443 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapTlsDhcpStatsClntForwdPckts [Sap Tls Dhcp Stats Clnt Forwd Pckts] (sapTlsDhcpStatsClntForwdPckts)	long	The value of the object sapTlsDhcpStatsClntForwdPckts indicates the number of DHCP client packets that have been forwarded on this SAP.
sapTlsDhcpStatsClntProxLSPckts [Sap Tls Dhcp Stats Clnt Prox LSPckts] (sapTlsDhcpStatsClntProxLSPckts)	long	The value of the object sapTlsDhcpStatsClntProxLSPckts indicates the number of DHCP client packets that have been proxied on this SAP based on a lease state. The lease itself can have been obtained from a DHCP or RADIUS server. This is the so called lease split functionality.
sapTlsDhcpStatsClntProxRadPckts [Sap Tls Dhcp Stats Clnt Prox Rad Pckts] (sapTlsDhcpStatsClntProxRadPckts)	long	The value of the object sapTlsDhcpStatsClntProxRadPckts indicates the number of DHCP client packets that have been proxied on this SAP based on data received from a RADIUS server.
sapTlsDhcpStatsClntSnoopdPckts [Sap Tls Dhcp Stats Clnt Snoopd Pckts] (sapTlsDhcpStatsClntSnoopdPckts)	long	The value of the object sapTlsDhcpStatsClntSnoopdPckts indicates the number of DHCP client packets that have been snooped on this SAP.
sapTlsDhcpStatsGenForceRenPckts [Sap Tls Dhcp Stats Gen Force Ren Pckts] (sapTlsDhcpStatsGenForceRenPckts)	long	The value of the object sapTlsDhcpStatsGenForceRenPckts indicates the number of DHCP FORCERENEW messages spoofed on this SAP to the DHCP clients.
sapTlsDhcpStatsGenReleasePckts [Sap Tls Dhcp Stats Gen Release Pckts] (sapTlsDhcpStatsGenReleasePckts)	long	The value of the object sapTlsDhcpStatsGenReleasePckts indicates the number of DHCP RELEASE messages spoofed on this SAP to the DHCP server.
sapTlsDhcpStatsSrvrDropdPckts [Sap Tls Dhcp Stats Srvr Dropd Pckts] (sapTlsDhcpStatsSrvrDropdPckts)	long	The value of the object sapTlsDhcpStatsSrvrDropdPckts indicates the number of DHCP server packets that have been dropped on this SAP.
sapTlsDhcpStatsSrvrForwdPckts [Sap Tls Dhcp Stats Srvr Forwd Pckts] (sapTlsDhcpStatsSrvrForwdPckts)	long	The value of the object sapTlsDhcpStatsSrvrForwdPckts indicates the number of DHCP server packets that have been forwarded on this SAP.

Table 443 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapTlsDhcpStatsSrvrSnoopdPkts [Sap Tls Dhcp Stats Srvr Snoopd Pkts] (sapTlsDhcpStatsSrvrSnoopdPkts)	long	The value of the object sapTlsDhcpStatsSrvrSnoopdPkts indicates the number of DHCP server packets that have been snooped on this SAP.
<p>SdpBindingMldSnpgErrorStats</p> <p>MIB entry name: sdpBindMldSnpgStatsEntry</p> <p>Entry description: sdpBindMldSnpgStatsEntry is an entry in the sdpBindMldSnpgStatsTable. Each entry contains MLD snooping statics for a SDP Bind in a Tls.</p> <p>Table description (for sdpBindMldSnpgStatsTable): sdpBindMldSnpgStatsTable contains statistics on MLD snooping per SDP Bind.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: vpls.SdpBindingMldSnpgCfg</p>		
sdpBndMldSnpgImportPolicyDrops [Sdp Bnd Mld Snpg Import Policy Drops] (sdpBndMldSnpgImportPolicyDrops)	long	The value of the object sdpBndMldSnpgImportPolicyDrops indicates the number of times an MLD group or source is dropped because of applying an import policy on this SDP Bind.
sdpBndMldSnpgMaxNumGroupsDrops [Sdp Bnd Mld Snpg Max Num Groups Drops] (sdpBndMldSnpgMaxNumGroupsDrops)	long	The value of the object sdpBndMldSnpgMaxNumGroupsDrops indicates the number of times an MLD group is dropped because of exceeding the configured maximum number of groups on this SDP Bind.
sdpBndMldSnpgRxBadEncodedPkts [Sdp Bnd Mld Snpg Rx Bad Encoded Pkts] (sdpBndMldSnpgRxBadEncodedPkts)	long	The value of the object sdpBndMldSnpgRxBadEncodedPkts indicates the number of MLD packets dropped on this SDP Bind because of a bad encoding.
sdpBndMldSnpgRxBadLenPkts [Sdp Bnd Mld Snpg Rx Bad Len Pkts] (sdpBndMldSnpgRxBadLenPkts)	long	The value of the object sdpBndMldSnpgRxBadLenPkts indicates the number of MLD packets dropped on this SDP Bind because of a bad length.

Table 443 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpBndMldSnpgRxBadMldChksmPkts [Sdp Bnd Mld Snpg Rx Bad Mld Chksm Pkts] (sdpBndMldSnpgRxBadMldChksmPkts)	long	The value of the object sdpBndMldSnpgRxBadMldChksmPkts indicates the number of dropped MLD packets on this SDP Bind because of a bad MLD header checksum.
sdpBndMldSnpgRxLocalScopePkts [Sdp Bnd Mld Snpg Rx Local Scope Pkts] (sdpBndMldSnpgRxLocalScopePkts)	long	The value of the object sdpBndMldSnpgRxLocalScopePkts indicates the number of MLD packets received on the link-local scope IPv6 multicast address.
sdpBndMldSnpgRxNoRtrAlertPkts [Sdp Bnd Mld Snpg Rx No Rtr Alert Pkts] (sdpBndMldSnpgRxNoRtrAlertPkts)	long	The value of the object sdpBndMldSnpgRxNoRtrAlertPkts indicates the number of MLD packets dropped on this SDP Bind because the Router Alert Option in the IP packet is not set.
sdpBndMldSnpgRxRsvdScopePkts [Sdp Bnd Mld Snpg Rx Rsvd Scope Pkts] (sdpBndMldSnpgRxRsvdScopePkts)	long	The value of the object sdpBndMldSnpgRxRsvdScopePkts indicates the number of MLD packets received on the reserved scope IPv6 multicast address.
sdpBndMldSnpgRxWrongVersionPkts [Sdp Bnd Mld Snpg Rx Wrong Version Pkts] (sdpBndMldSnpgRxWrongVersionPkts)	long	The value of the object sdpBndMldSnpgRxWrongVersionPkts indicates the total number of MLD packets with a wrong version received on this SDP Bind.
sdpBndMldSnpgRxZeroSrcAdrPkts [Sdp Bnd Mld Snpg Rx Zero Src Adr Pkts] (sdpBndMldSnpgRxZeroSrcAdrPkts)	long	The value of the object sdpBndMldSnpgRxZeroSrcAdrPkts indicates the number of MLD packets dropped on this SDP Bind because they contain a zero source IPv6 address.
sdpBndMldSnpgSendQueryCfgDrops [Sdp Bnd Mld Snpg Send Query Cfg Drops] (sdpBndMldSnpgSendQueryCfgDrops)	long	The value of the object sdpBndMldSnpgSendQueryCfgDrops indicates the number of times an MLD Query is dropped because the object sdpBndMldSnpgCfgSendQueries for this SDP Bind is set to 'inService(2)'.

Table 443 vpls statistics (continued)

<p>SdpBindingMldSnpgStats</p> <p>MIB entry name: sdpBindMldSnpgStatsEntry</p> <p>Entry description: sdpBindMldSnpgStatsEntry is an entry in the sdpBindMldSnpgStatsTable. Each entry contains MLD snooping statics for a SDP Bind in a TIs.</p> <p>Table description (for sdpBindMldSnpgStatsTable): sdpBindMldSnpgStatsTable contains statistics on MLD snooping per SDP Bind.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: vpls.SdpBindingMldSnpgCfg</p>		
sdpBndMldSnpgFwdGenQueries [Sdp Bnd Mld Snpg Fwd Gen Queries] (sdpBndMldSnpgFwdGenQueries)	long	The value of the object sdpBndMldSnpgFwdGenQueries indicates the number of MLD General Queries forwarded on this SDP Bind.
sdpBndMldSnpgFwdGrpSpecQueries [Sdp Bnd Mld Snpg Fwd Grp Spec Queries] (sdpBndMldSnpgFwdGrpSpecQueries)	long	The value of the object sdpBndMldSnpgFwdGrpSpecQueries indicates the number of MLD Group-Specific Queries forwarded on this SDP Bind.
sdpBndMldSnpgFwdSrcSpecQueries [Sdp Bnd Mld Snpg Fwd Src Spec Queries] (sdpBndMldSnpgFwdSrcSpecQueries)	long	The value of the object sdpBndMldSnpgFwdSrcSpecQueries indicates the number of MLD Group-And-Source-Specific Queries forwarded on this SDP Bind.
sdpBndMldSnpgFwdUnknownType [Sdp Bnd Mld Snpg Fwd Unknown Type] (sdpBndMldSnpgFwdUnknownType)	long	The value of the object sdpBndMldSnpgFwdUnknownType indicates the number of MLD unknown type packets forwarded on this SDP Bind.
sdpBndMldSnpgFwdV1Leaves [Sdp Bnd Mld Snpg Fwd V1 Leaves] (sdpBndMldSnpgFwdV1Leaves)	long	The value of the object sdpBndMldSnpgFwdV1Leaves indicates the number of MLDv1 Leaves forwarded on this SDP Bind.
sdpBndMldSnpgFwdV1Reports [Sdp Bnd Mld Snpg Fwd V1 Reports] (sdpBndMldSnpgFwdV1Reports)	long	The value of the object sdpBndMldSnpgFwdV1Reports indicates the number of MLDv1 Reports forwarded on this SDP Bind.

Table 443 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpBndMldSnpgFwdV2Reports [Sdp Bnd Mld Snpg Fwd V2 Reports] (sdpBndMldSnpgFwdV2Reports)	long	The value of the object sdpBndMldSnpgFwdV2Reports indicates the number of MLDv2 Reports forwarded on this SDP Bind.
sdpBndMldSnpgRxGenQueries [Sdp Bnd Mld Snpg Rx Gen Queries] (sdpBndMldSnpgRxGenQueries)	long	The value of the object sdpBndMldSnpgRxGenQueries indicates the number of MLD General Queries received on this SDP Bind.
sdpBndMldSnpgRxGrpSpecQueries [Sdp Bnd Mld Snpg Rx Grp Spec Queries] (sdpBndMldSnpgRxGrpSpecQueries)	long	The value of the object sdpBndMldSnpgRxGrpSpecQueries indicates the number of MLD Group-Specific Queries received on this SDP Bind.
sdpBndMldSnpgRxSrcSpecQueries [Sdp Bnd Mld Snpg Rx Src Spec Queries] (sdpBndMldSnpgRxSrcSpecQueries)	long	The value of the object sdpBndMldSnpgRxSrcSpecQueries indicates the number of MLD Group-And-Source-Specific Queries received on this SDP Bind.
sdpBndMldSnpgRxUnknownType [Sdp Bnd Mld Snpg Rx Unknown Type] (sdpBndMldSnpgRxUnknownType)	long	The value of the object sdpBndMldSnpgRxUnknownType indicates the number of MLD unknown type packets received on this SDP Bind.
sdpBndMldSnpgRxV1Leaves [Sdp Bnd Mld Snpg Rx V1 Leaves] (sdpBndMldSnpgRxV1Leaves)	long	The value of the object sdpBndMldSnpgRxV1Leaves indicates the number of MLDv1 Leaves received on this SDP Bind.
sdpBndMldSnpgRxV1Reports [Sdp Bnd Mld Snpg Rx V1 Reports] (sdpBndMldSnpgRxV1Reports)	long	The value of the object sdpBndMldSnpgRxV1Reports indicates the number of MLDv1 Reports received on this SDP Bind.
sdpBndMldSnpgRxV2Reports [Sdp Bnd Mld Snpg Rx V2 Reports] (sdpBndMldSnpgRxV2Reports)	long	The value of the object sdpBndMldSnpgRxV2Reports indicates the number of MLDv2 Reports received on this SDP Bind.
sdpBndMldSnpgTxGenQueries [Sdp Bnd Mld Snpg Tx Gen Queries] (sdpBndMldSnpgTxGenQueries)	long	The value of the object sdpBndMldSnpgTxGenQueries indicates the number of MLD General Queries transmitted on this SDP Bind.

Table 443 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpBndMldSnpgTxGrpSpecQueries [Sdp Bnd Mld Snpg Tx Grp Spec Queries] (sdpBndMldSnpgTxGrpSpecQueries)	long	The value of the object sdpBndMldSnpgTxGrpSpecQueries indicates the number of MLD Group-Specific Queries transmitted on this SDP Bind.
sdpBndMldSnpgTxSrcSpecQueries [Sdp Bnd Mld Snpg Tx Src Spec Queries] (sdpBndMldSnpgTxSrcSpecQueries)	long	The value of the object sdpBndMldSnpgTxSrcSpecQueries indicates the number of MLD Group-And-Source-Specific Queries transmitted on this SDP Bind.
sdpBndMldSnpgTxV1Leaves [Sdp Bnd Mld Snpg Tx V1 Leaves] (sdpBndMldSnpgTxV1Leaves)	long	The value of the object sdpBndMldSnpgTxV1Leaves indicates the number of MLDv1 Leaves transmitted on this SDP Bind.
sdpBndMldSnpgTxV1Reports [Sdp Bnd Mld Snpg Tx V1 Reports] (sdpBndMldSnpgTxV1Reports)	long	The value of the object sdpBndMldSnpgTxV1Reports indicates the number of MLDv1 Reports transmitted on this SDP Bind.
sdpBndMldSnpgTxV2Reports [Sdp Bnd Mld Snpg Tx V2 Reports] (sdpBndMldSnpgTxV2Reports)	long	The value of the object sdpBndMldSnpgTxV2Reports indicates the number of MLDv2 Reports transmitted on this SDP Bind.
SitePimSnoopingStats MIB entry name: tmnxPimSnpgGenStatsEntry Entry description: An entry in the tmnxPimSnpgGenStatsTable. Table description (for tmnxPimSnpgGenStatsTable): tmnxPimSnpgGenStatsTable lists PIM snooping statistics for a particular PIM snooping instance. Supports realtime plotting Supports scheduled collection Monitored class: vpls.SitePimSnooping		
numSGTypes [Num SGTypes] (tmnxPimSnpgGenStatsSGTypes)	long	The value of tmnxPimSnpgGenStatsSGTypes indicates the number of entries in tmnxPimSnpgGrpSrcTable for which the source type is 'sg'.

Table 443 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numStarGTypes [Num Star GTypes] (tmnxPimSnpGGenStatsStarGTypes)	long	The value of tmnxPimSnpGGenStatsStarGTypes indicates the number of entries in tmnxPimSnpGGrpSrcTable for which the source type is 'starG'.
<p>SiteSourceGroupRecordPimSnoopingStats</p> <p>MIB entry name: tmnxPimSnpGGrpSrcStatsEntry</p> <p>Entry description: An entry in the tmnxPimSnpGGrpSrcStatsTable.</p> <p>Table description (for tmnxPimSnpGGrpSrcStatsTable): tmnxPimSnpGGrpSrcStatsTable contains statistics for the entries in the tmnxPimSnpGGrpSrcTable. These statistics are collected by the forwarding engine.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • vpls.SitePimSnooping • vpls.SiteSourceGroupRecord 		
tmnxPimSnpGGrpSrcStatsFwdedOct [Tmnx Pim SnpG Grp Src Stats Fwded Oct] (tmnxPimSnpGGrpSrcStatsFwdedOct)	long	The value of tmnxPimSnpGGrpSrcStatsFwdedOct indicates the number of multicast octets that were forwarded to the interfaces in the outgoing interface list. tmnxPimSnpGGrpSrcClfTable lists all the interfaces in the outgoing interface list.
tmnxPimSnpGGrpSrcStatsFwdedPkts [Tmnx Pim SnpG Grp Src Stats Fwded Pkts] (tmnxPimSnpGGrpSrcStatsFwdedPkts)	long	The value of tmnxPimSnpGGrpSrcStatsFwdedPkts indicates the number of multicast packets that were forwarded to the interfaces in the outgoing interface list. tmnxPimSnpGGrpSrcClfTable lists all the interfaces in the outgoing interface list.

Table 444 vrrp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InstanceAdditionalStats</p> <p>MIB entry name: tmnxVrrpRouterStatsEntry</p> <p>Entry description: Each row entry in the tmnxVrrpRouterStatsTable represents additional columns in the vrrpRouterStatsTable for statistics specific to the Alcatel-Lucent SROS series VRRP implementation.</p> <p>Table description (for tmnxVrrpRouterStatsTable): The tmnxVrrpRouterStatsTable provides an extension of the vrrpRouterStatsTable in the VRRP-MIB. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vrrpRouterStatsTable, and the augmenting table, tmnxVrrpRouterStatsTable. This in effect extends the vrrpRouterStatsTable with additional columns.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: vrrp.Instance</p>		
addressListDiscards [Address List Discards] (tmnxVrrpStatsAddressListDiscards)	long	The total number of VRRP advertisement packets discarded because the address list did not match the locally configured list for the virtual router.
advertiseIntervalDiscards [Advertise Interval Discards] (tmnxVrrpStatsAdvertiseIntervalDiscards)	long	The total number of VRRP advertisement packets discarded because the advertisement interval in the received packet was different than the one configured for the local virtual router.
advertiseSent [Advertise Sent] (tmnxVrrpStatsAdvertiseSent)	long	The total number of VRRP advertisements sent by this virtual router.
masterChanges [Master Changes] (tmnxVrrpStatsMasterChanges)	long	The value for tmnxVrrpStatsMasterChanges specifies the total number of times the virtual router has seen the master virtual router change.
preemptEvents [Preempt Events] (tmnxVrrpStatsPreemptEvents)	long	The value for tmnxVrrpStatsPreemptEvents specifies the total number of times the virtual router has preempted another non-owner master with lower priority.

Table 444 vrrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
preemptedEvents [Preempted Events] (tmnxVrrpStatsPreemptedEvents)	long	The value for tmnxVrrpStatsPreemptedEvents specifies the total number of times the virtual router has been preempted by another non-owner master with higher priority.
totalDiscards [Total Discards] (tmnxVrrpStatsTotalDiscards)	long	The total number of VRRP advertisement packets discarded for any reason. This includes the packets discarded due to advertise interval mismatch and address list mismatch.
InstanceStats MIB entry name: vrrpRouterStatsEntry Entry description: An entry in the table, containing statistics information about a given virtual router. Table description (for vrrpRouterStatsTable): Table of virtual router statistics. Supports realtime plotting Supports scheduled collection Monitored class: vrrp.Instance		
addressListErrors [Address List Errors] (vrrpStatsAddressListErrors)	long	The total number of packets received for which the address list does not match the locally configured list for the virtual router.
advertiseIntervalErrors [Advertise Interval Errors] (vrrpStatsAdvertiseIntervalErrors)	long	The total number of VRRP advertisement packets received for which the advertisement interval is different than the one configured for the local virtual router.
advertiseRcvd [Advertise Rcvd] (vrrpStatsAdvertiseRcvd)	long	The total number of VRRP advertisements received by this virtual router.
authFailures [Auth Failures] (vrrpStatsAuthFailures)	long	The total number of VRRP packets received that do not pass the authentication check.

Table 444 vrrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
authTypeMismatch [Auth Type Mismatch] (vrrpStatsAuthTypeMismatch)	long	The total number of packets received with 'Auth Type' not equal to the locally configured authentication method ('vrrpOperAuthType').
becomeMaster [Become Master] (vrrpStatsBecomeMaster)	long	The total number of times that this virtual router's state has transitioned to MASTER.
invalidAuthType [Invalid Auth Type] (vrrpStatsInvalidAuthType)	long	The total number of packets received with an unknown authentication type.
invalidTypePktsRcvd [Invalid Type Pkts Rcvd] (vrrpStatsInvalidTypePktsRcvd)	long	The number of VRRP packets received by the virtual router with an invalid value in the 'type' field.
ipTtlErrors [Ip Ttl Errors] (vrrpStatsIpTtlErrors)	long	The total number of VRRP packets received by the virtual router with IP TTL (Time-To-Live) not equal to 255.
packetLengthErrors [Packet Length Errors] (vrrpStatsPacketLengthErrors)	long	The total number of packets received with a packet length less than the length of the VRRP header.
priorityZeroPktsRcvd [Priority Zero Pkts Rcvd] (vrrpStatsPriorityZeroPktsRcvd)	long	The total number of VRRP packets received by the virtual router with a priority of '0'.
priorityZeroPktsSent [Priority Zero Pkts Sent] (vrrpStatsPriorityZeroPktsSent)	long	The total number of VRRP packets sent by the virtual router with a priority of '0'.

Table 444 vrrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InstanceV6AdditionalStats</p> <p>MIB entry name: tVrrpRtrStatisticsEntry</p> <p>Entry description: Each row entry in the tVrrpRtrStatisticsTable represents additional columns in the vrrpRouterStatisticsTable for statistics specific to the Alcatel-Lucent SROS series VRRP implementation.</p> <p>Table description (for tVrrpRtrStatisticsTable): The tVrrpRtrStatisticsTable provides an extension of the vrrpRouterStatisticsTable in the TIMETRA-VRRP-V3-MIB. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vrrpRouterStatisticsTable, and the augmenting table, tVrrpRtrStatisticsTable. This in effect extends the vrrpRouterStatisticsTable with additional columns.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: vrrp.InstanceV6</p>		
advertiseIntervalDiscards [Advertise Interval Discards] (tVrrpStatAdvIntvlDiscards)	long	The value of tVrrpStatAdvIntvlDiscards indicates the total number of VRRP advertisement packets discarded because the advertisement interval in the received packet was different than the one configured for the local virtual router.
advertiseSent [Advertise Sent] (tVrrpStatAdvertiseSent)	long	The value of tVrrpStatAdvertiseSent indicates the total number of VRRP advertisements sent by this virtual router.
masterChanges [Master Changes] (tVrrpStatMasterChanges)	long	The value for tVrrpStatMasterChanges indicates the total number of times the virtual router has seen the master virtual router change.
preemptEvents [Preempt Events] (tVrrpStatPreemptEvents)	long	The value for tVrrpStatPreemptEvents indicates the total number of times the virtual router has preempted another non-owner master with lower priority.
preemptedEvents [Preempted Events] (tVrrpStatPreemptedEvents)	long	The value for tVrrpStatPreemptedEvents indicates the total number of times the virtual router has been preempted by another non-owner master with higher priority.

Table 444 vrrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalDiscards [Total Discards] (tVrrpStatTotalDiscards)	long	The value of tVrrpStatTotalDiscards indicates the total number of VRRP advertisement packets discarded for any reason. This includes the packets discarded due to advertise interval mismatch and address list mismatch.
InstanceV6Stats MIB entry name: vrrpRouterStatisticsEntry Entry description: An entry in the table, containing statistics information about a given virtual router. Table description (for vrrpRouterStatisticsTable): Table of virtual router statistics. Supports realtime plotting Supports scheduled collection Monitored class: vrrp.InstanceV6		
addressListErrors [Address List Errors] (vrrpStatisticsAddressListErrors)	long	The total number of packets received for which the address list does not match the locally configured list for the virtual router. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.
advertiseIntervalErrors [Advertise Interval Errors] (vrrpStatisticsAdvIntervalErrors)	long	The total number of VRRP advertisement packets received for which the advertisement interval is different than the one configured for the local virtual router. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.
advertiseRcvd [Advertise Rcvd] (vrrpStatisticsRcvdAdvertisements)	long	The total number of VRRP advertisements received by this virtual router. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.

Table 444 vrrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
becomeMaster [Become Master] (vrrpStatisticsMasterTransitions)	long	The total number of times that this virtual router's state has transitioned to MASTER. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.
invalidAuthType [Invalid Auth Type] (vrrpStatisticsRcvdInvalidAuthentications)	long	The total number of packets received with an unknown authentication type.
invalidTypePktsRcvd [Invalid Type Pkts Rcvd] (vrrpStatisticsRcvdInvalidTypePkts)	long	The number of VRRP packets received by the virtual router with an invalid value in the 'type' field. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.
ipTtlErrors [Ip Ttl Errors] (vrrpStatisticsIpTtlErrors)	long	The total number of VRRP packets received by the Virtual router with IPv4 TTL (for VRRP over IPv4) or IPv6 Hop Limit (for VRRP over IPv6) not equal to 255. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.
packetLengthErrors [Packet Length Errors] (vrrpStatisticsPacketLengthErrors)	long	The total number of packets received with a packet length less than the length of the VRRP header. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.
priorityZeroPktsRcvd [Priority Zero Pkts Rcvd] (vrrpStatisticsRcvdPriZeroPackets)	long	The total number of VRRP packets received by the virtual router with a priority of '0'. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.

Table 444 vrrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
priorityZeroPktsSent [Priority Zero Pkts Sent] (vrrpStatisticsSentPriZeroPackets)	long	The total number of VRRP packets sent by the virtual router with a priority of '0'. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.

Table 445 wpp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>WppPortalStats</p> <p>MIB entry name: tmnxWppPortalEntry</p> <p>Entry description: Each conceptual row represents information about a particular WPP portal. Entries in this table can be created or deleted via SNMP operations. In order to create a conceptual row in this table, a row in the tmnxWppTable with the same value of the object vRtrID must exist.</p> <p>Table description (for tmnxWppPortalTable): The tmnxWppPortalTable contains objects to configure the WPP portals of this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: wpp.Portal</p>		
portalName [Portal Name] (tmnxWppPortalName)	String	The value of tmnxWppPortalName specifies the name of this WPP portal.
routerId [Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
wppPortalStatsInstance [Wpp Portal Stats Instance] (tmnxWppPortalStatsInstance)	long	The value of the object tmnxWppPortalStatsInstance indicates the instance identifier of the statistics contained in this conceptual row. Together with the value of tmnxWppPortalStatsType it indicates unambiguously what the value of tmnxWppPortalStatsVal means. For example: if the value of the object tmnxWppPortalStatsType is equal to 'event', the value of tmnxWppPortalStatsInstance indicates the identifier of the type of event that this conceptual row refers to, for example 'noResources', and the value of tmnxWppPortalStatsVal indicates the number of times a 'no resources' event occurred for this WPP portal.

Table 445 wpp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
wppPortalStatsName [Wpp Portal Stats Name] (tmnxWppPortalStatsName)	String	The value of the object tmnxWppPortalStatsType indicates the human-readable identifier of the statistics contained in this conceptual row. In the same example, the value of tmnxWppPortalStatsName is '(SCCRP) Start-Control-Connection-Reply'.
wppPortalStatsType [Wpp Portal Stats Type] (tmnxWppPortalStatsType)	int	The value of the object tmnxWppPortalStatsType indicates the type of WPP statistics contained in this conceptual row.
wppPortalStatsVal [Wpp Portal Stats Val] (tmnxWppPortalStatsVal)	long	The value of the object tmnxWppPortalStatsType indicates the value of the statistics contained in this conceptual row.
<p>WppStats MIB entry name: vRtrConfEntry Entry description: Each row entry represents a virtual router in the system. Entries can be created and deleted via SNMP SET operations. Creation requires a SET request containing vRtrRowStatus, vRtrName and vRtrType. Note that rows in this table are usually created by the agent itself as a side affect of some other configuration; for example, when a service vprn is created by setting the appropriate objects in the TIMETRA-SERV-MIB. There will always be at least two row entries in this table, one of these entries represents the base or transport router and the other represents the management router. These entries are created when the system is initialized and can never be deleted. Table description (for vRtrConfTable): The vRtrConfTable has an entry for each virtual router configured in the system. Supports realtime plotting Supports scheduled collection Monitored class: wpp.Site</p>		
routerId [Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.

Table 445 wpp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
wppStatsInstance [Wpp Stats Instance] (tmnxWppStatsInstance)	long	The value of the object tmnxWppStatsInstance indicates the instance identifier of the statistics contained in this conceptual row. Together with the value of tmnxWppStatsType it indicates unambiguously what the value of tmnxWppStatsVal means. For example: if the value of the object tmnxWppStatsType is equal to 'event', the value of tmnxWppStatsInstance indicates the identifier of the type of event that this conceptual row refers to, for example 'noResources', and the value of tmnxWppStatsVal indicates the number of times a 'no resources' event occurred for this WPP portal.
wppStatsName [Wpp Stats Name] (tmnxWppStatsName)	String	The value of the object tmnxWppStatsType indicates the human-readable identifier of the statistics contained in this conceptual row. In the same example, the value of tmnxWppStatsName is '(SCCRP) Start-Control-Connection-Reply'.
wppStatsType [Wpp Stats Type] (tmnxWppStatsType)	int	The value of the object tmnxWppStatsType indicates the type of WPP statistics contained in this conceptual row.
wppStatsVal [Wpp Stats Val] (tmnxWppStatsVal)	long	The value of the object tmnxWppStatsType indicates the value of the statistics contained in this conceptual row.

Table 446 aaa statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>IsaRadiusServerStats</p> <p>MIB entry name: tmnxRadIsaSrvStatsEntry</p> <p>Entry description: Each conceptual row represents a type of statistics of a connection with a particular RADIUS server. Rows in this table are automatically created and destroyed by the system.</p> <p>Table description (for tmnxRadIsaSrvStatsTable): The tmnxRadIsaSrvStatsTable contains statistics information about the connections with ISA RADIUS servers.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: aaa.IsaRadiusServerConnection</p>		
statsName [Stats Name] (tmnxRadIsaSrvStatsName)	String	The value of the object tmnxRadIsaSrvStatsName indicates the human-readable identifier of the statistics contained in this conceptual row.
statsType [Stats Type] (tmnxRadIsaSrvStatsType)	long	The value of tmnxRadIsaSrvStatsType indicates the type of ISA RADIUS server statistics contained in this conceptual row.
statsVal [Stats Val] (tmnxRadIsaSrvStatsValue)	long	The value of the object tmnxRadIsaSrvStatsValue indicates the value of the statistics contained in this conceptual row.
<p>L2tpRadiusEntryStats</p> <p>MIB entry name: tmnxL2tpApServStatsEntry</p> <p>Entry description: Each row represents statistics about a specific server of a specify L2TP accounting policy. Rows in this table are created automatically by the system.</p> <p>Table description (for tmnxL2tpApServStatsTable): The tmnxL2tpApServStatsTable presents statistics of l2tp-accounting-policies' RADIUS servers.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: aaa.L2tpRadiusEntry</p>		

Table 446 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
failedRequestsPackets [Failed Requests Packets] (tmnxL2tpApServStatsReqSendFail)	long	The value of tmnxL2tpApServStatsReqSendFail indicates the number of RADIUS request packets that could not be transmitted for this server.
invAuthReponsesPackets [Inv Auth Reponses Packets] (tmnxL2tpApServStatsResplnvAuth)	long	The value of tmnxL2tpApServStatsResplnvAuth indicates the number of RADIUS response packets with an invalid Authenticator received from this server.
pendingRequestsPackets [Pending Requests Packets] (tmnxL2tpApServStatsReqPending)	long	The value of tmnxL2tpApServStatsReqPending indicates the number of RADIUS requests that are currently pending for this server.
reponsesPackets [Reponses Packets] (tmnxL2tpApServStatsRxResponses)	long	The value of tmnxL2tpApServStatsRxResponses indicates the number of RADIUS response packets received from this server.
requestsPackets [Requests Packets] (tmnxL2tpApServStatsTxRequests)	long	The value of tmnxL2tpApServStatsTxRequests indicates the number of RADIUS request packets transmitted for this server.
statRetries [Stat Retries] (tmnxL2tpApServStatsSendRetries)	long	The value of tmnxL2tpApServStatsSendRetries indicates the number of retries to a different server for a single accounting request for this connection with this RADIUS server.
timeOut [Time Out] (tmnxL2tpApServStatsReqTimeout)	long	The value of tmnxL2tpApServStatsReqTimeout indicates the number of RADIUS requests that have timed out for this server.

Table 446 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>RadIsaPSStats</p> <p>MIB entry name: tmnxRadProxSrvEntry</p> <p>Entry description: Each conceptual row represents information about a particular RADIUS Proxy Server. Entries in this table can be created or deleted via SNMP operations.</p> <p>Table description (for tmnxRadProxSrvTable): The tmnxRadProxSrvTable contains objects to configure the RADIUS Proxy Servers of this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: aaa.RadiusProxyServer</p>		
proxSrvName [Prox Srv Name] (tmnxRadProxSrvName)	String	The value of tmnxRadProxSrvName specifies the name of this RADIUS Proxy server.
radIsaPSStatsRxAcctRequest [Rad Isa PSStats Rx Acct Request] (tmnxRadIsaPSStatsRxAcctRequest)	long	The value of tmnxRadIsaPSStatsRxAcctRequest indicates the number of Accounting-Request packets received by this RADIUS Proxy Server.
radIsaPSStatsRxAuthRequest [Rad Isa PSStats Rx Auth Request] (tmnxRadIsaPSStatsRxAuthRequest)	long	The value of tmnxRadIsaPSStatsRxAuthRequest indicates the number of Access-Request packets received by this RADIUS Proxy Server.
radIsaPSStatsRxClientCtxtLim [Rad Isa PSStats Rx Client Ctxt Lim] (tmnxRadIsaPSStatsRxClientCtxtLim)	long	The value of tmnxRadIsaPSStatsRxClientCtxtLim indicates the number of packets received by this RADIUS Proxy Server that were rejected because the limit of client contexts was reached. For each RADIUS transaction a client context is created, and will be deleted once the transaction is finished.
radIsaPSStatsRxDropped [Rad Isa PSStats Rx Dropped] (tmnxRadIsaPSStatsRxDropped)	long	The value of tmnxRadIsaPSStatsRxDropped indicates the number of packets received by this RADIUS Proxy Server but dropped.

Table 446 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
radIsaPSStatsRxInvAcctAuth [Rad Isa PSStats Rx Inv Acct Auth] (tmnxRadIsaPSStatsRxInvAcctAuth)	long	The value of tmnxRadIsaPSStatsRxInvAcctAuth indicates the number of accounting packets received by this RADIUS Proxy Server that were rejected because they contained an invalid Authenticator field.
radIsaPSStatsRxInvAcctStatus [Rad Isa PSStats Rx Inv Acct Status] (tmnxRadIsaPSStatsRxInvAcctStatus)	long	The value of tmnxRadIsaPSStatsRxInvAcctStatus indicates the number of accounting packets received by this RADIUS Proxy Server that were rejected because they contained an invalid Acct-Status-Type attribute.
radIsaPSStatsRxInvAttr [Rad Isa PSStats Rx Inv Attr] (tmnxRadIsaPSStatsRxInvAttr)	long	The value of tmnxRadIsaPSStatsRxInvAttr indicates the number of packets received by this RADIUS Proxy Server that were rejected because one of the attributes was incorrectly encoded.
radIsaPSStatsRxInvMsgAuth [Rad Isa PSStats Rx Inv Msg Auth] (tmnxRadIsaPSStatsRxInvMsgAuth)	long	The value of tmnxRadIsaPSStatsRxInvMsgAuth indicates the number of packets received by this RADIUS Proxy Server that were rejected because they contained an invalid Message-Authenticator attribute.
radIsaPSStatsRxInvPassword [Rad Isa PSStats Rx Inv Password] (tmnxRadIsaPSStatsRxInvPassword)	long	The value of tmnxRadIsaPSStatsRxInvPassword indicates the number of packets received by this RADIUS Proxy Server that were rejected because the User-Password attribute could not be decoded.
radIsaPSStatsRxMgmtOverload [Rad Isa PSStats Rx Mgmt Overload] (tmnxRadIsaPSStatsRxMgmtOverload)	long	The value of tmnxRadIsaPSStatsRxMgmtOverload indicates the number of packets that were rejected by this RADIUS server because the ISA management core is not able to process any new RADIUS requests because of overload.
radIsaPSStatsRxNoAaaPol [Rad Isa PSStats Rx No Aaa Pol] (tmnxRadIsaPSStatsRxNoAaaPol)	long	The value of tmnxRadIsaPSStatsRxNoAaaPol indicates the number of packets received by this RADIUS Proxy Server that were rejected because it has no ISA RADIUS server policy configured for that type of packet.
radIsaPSStatsRxNoAcctStatus [Rad Isa PSStats Rx No Acct Status] (tmnxRadIsaPSStatsRxNoAcctStatus)	long	The value of tmnxRadIsaPSStatsRxNoAcctStatus indicates the number of accounting packets received by this RADIUS Proxy Server that were rejected because they contained no Acct-Status-Type attribute.

Table 446 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
radlsaPSStatsRxPacket [Rad Isa PSStats Rx Packet] (tmnxRadlsaPSStatsRxPacket)	long	The value of tmnxRadlsaPSStatsRxPacket indicates the number of packets received by this RADIUS Proxy Server.
radlsaPSStatsRxRetransmit [Rad Isa PSStats Rx Retransmit] (tmnxRadlsaPSStatsRxRetransmit)	long	The value of tmnxRadlsaPSStatsRxRetransmit indicates the number of packets received by this RADIUS Proxy Server that were rejected because they are retransmitted.
radlsaPSStatsRxWrongPurpose [Rad Isa PSStats Rx Wrong Purpose] (tmnxRadlsaPSStatsRxWrongPurpose)	long	The value of tmnxRadlsaPSStatsRxWrongPurpose indicates the number of packets received by this RADIUS Proxy Server that were rejected because the value of tmnxRadProxSrvPurpose is set to a value not matching the type of packet.
radlsaPSStatsTxAcctResponse [Rad Isa PSStats Tx Acct Response] (tmnxRadlsaPSStatsTxAcctResponse)	long	The value of tmnxRadlsaPSStatsTxAcctResponse indicates the number of Accounting-Response packets transmitted by this RADIUS Proxy Server.
radlsaPSStatsTxAuthAck [Rad Isa PSStats Tx Auth Ack] (tmnxRadlsaPSStatsTxAuthAck)	long	The value of tmnxRadlsaPSStatsTxAuthAck indicates the number of Access-Accept packets transmitted by this RADIUS Proxy Server.
radlsaPSStatsTxAuthChallenge [Rad Isa PSStats Tx Auth Challenge] (tmnxRadlsaPSStatsTxAuthChallenge)	long	The value of tmnxRadlsaPSStatsTxAuthChallenge indicates the number of Access-Challenge packets transmitted by this RADIUS Proxy Server.
radlsaPSStatsTxAuthReject [Rad Isa PSStats Tx Auth Reject] (tmnxRadlsaPSStatsTxAuthReject)	long	The value of tmnxRadlsaPSStatsTxAuthReject indicates the number of Access-Reject packets transmitted by this RADIUS Proxy Server.
radlsaPSStatsTxDropped [Rad Isa PSStats Tx Dropped] (tmnxRadlsaPSStatsTxDropped)	long	The value of tmnxRadlsaPSStatsTxDropped indicates the number of packets dropped by this RADIUS Proxy Server before transmission.

Table 446 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
radIsaPSStatsTxSendFailure [Rad Isa PSStats Tx Send Failure] (tmnxRadIsaPSStatsTxSendFailure)	long	The value of tmnxRadIsaPSStatsTxSendFailure indicates the number of packets that were dropped by this RADIUS server because the packet could not get transmitted to one of the servers in the ISA RADIUS server policy.
radIsaPSStatsTxSrvInvAttr [Rad Isa PSStats Tx Srv Inv Attr] (tmnxRadIsaPSStatsTxSrvInvAttr)	long	The value of tmnxRadIsaPSStatsTxSrvInvAttr indicates the number of packets that were dropped because the RADIUS server replied with a packet with an invalid attribute.
radIsaPSStatsTxSrvInvAuth [Rad Isa PSStats Tx Srv Inv Auth] (tmnxRadIsaPSStatsTxSrvInvAuth)	long	The value of tmnxRadIsaPSStatsTxSrvInvAuth indicates the number of packets that were dropped because the RADIUS server replied with a packet with an invalid response Authenticator.
radIsaPSStatsTxSrvInvMsgAuth [Rad Isa PSStats Tx Srv Inv Msg Auth] (tmnxRadIsaPSStatsTxSrvInvMsgAuth)	long	The value of tmnxRadIsaPSStatsTxSrvInvMsgAuth indicates the number of packets that were dropped because the RADIUS server replied with a packet with an invalid Message-Authenticator attribute.
radIsaPSStatsTxSrvTimeout [Rad Isa PSStats Tx Srv Timeout] (tmnxRadIsaPSStatsTxSrvTimeout)	long	The value of tmnxRadIsaPSStatsTxSrvTimeout indicates the number of packets that were dropped because the RADIUS servers have timed out.
radIsaSrvStatGrpId [Rad Isa Srv Stat Grp Id] (tmnxRadIsaSrvStatGrpId)	int	The value of the object tmnxRadIsaSrvStatGrpId specifies the identifier of the Integrated Service Adaptor group.
radIsaSrvStatMemberId [Rad Isa Srv Stat Member Id] (tmnxRadIsaSrvStatMemberId)	int	The value of the object tmnxRadIsaSrvStatMemberId indicates the identifier of this ISA Group member.
routerId [Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.

Table 446 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>RadPSStats</p> <p>MIB entry name: tmnxRadProxSrvEntry</p> <p>Entry description: Each conceptual row represents information about a particular RADIUS Proxy Server. Entries in this table can be created or deleted via SNMP operations.</p> <p>Table description (for tmnxRadProxSrvTable): The tmnxRadProxSrvTable contains objects to configure the RADIUS Proxy Servers of this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: aaa.RadiusProxyServer</p>		
proxSrvName [Prox Srv Name] (tmnxRadProxSrvName)	String	The value of tmnxRadProxSrvName specifies the name of this RADIUS Proxy server.
radPSStatsRxAcctRequest [Rad PSSStats Rx Acct Request] (tmnxRadPSStatsRxAcctRequest)	long	The value of tmnxRadPSStatsRxAcctRequest indicates the number of Accounting-Request packets received by this RADIUS Proxy Server.
radPSStatsRxAdminDown [Rad PSSStats Rx Admin Down] (tmnxRadPSStatsRxAdminDown)	long	The value of tmnxRadPSStatsRxAdminDown indicates the number of packets received by this RADIUS Proxy Server that were rejected because it is administratively shut down.
radPSStatsRxAuthRequest [Rad PSSStats Rx Auth Request] (tmnxRadPSStatsRxAuthRequest)	long	The value of tmnxRadPSStatsRxAuthRequest indicates the number of Access-Request packets received by this RADIUS Proxy Server.
radPSStatsRxDropped [Rad PSSStats Rx Dropped] (tmnxRadPSStatsRxDropped)	long	The value of tmnxRadPSStatsRxDropped indicates the number of packets received by this RADIUS Proxy Server but dropped.
radPSStatsRxDroppedByPython [Rad PSSStats Rx Dropped By Python] (tmnxRadPSStatsRxDroppedByPython)	long	The value of tmnxRadPSStatsRxDroppedByPython indicates the number of packets received by this RADIUS Proxy Server but dropped by Python.

Table 446 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
radPSStatsRxInvAcctAuth [Rad PSSStats Rx Inv Acct Auth] (tmnxRadPSStatsRxInvAcctAuth)	long	The value of tmnxRadPSStatsRxInvAcctAuth indicates the number of accounting packets received by this RADIUS Proxy Server that were rejected because they contained an invalid Authenticator field.
radPSStatsRxInvAcctStatusTyp [Rad PSSStats Rx Inv Acct Status Typ] (tmnxRadPSStatsRxInvAcctStatusTyp)	long	The value of tmnxRadPSStatsRxInvAcctStatusTyp indicates the number of accounting packets received by this RADIUS Proxy Server that were rejected because they contained an invalid Acct-Status-Type attribute.
radPSStatsRxInvAttr [Rad PSSStats Rx Inv Attr] (tmnxRadPSStatsRxInvAttr)	long	The value of tmnxRadPSStatsRxInvAttr indicates the number of packets received by this RADIUS Proxy Server that were rejected because one of the attributes was incorrectly encoded.
radPSStatsRxInvCode [Rad PSSStats Rx Inv Code] (tmnxRadPSStatsRxInvCode)	long	The value of tmnxRadPSStatsRxInvCode indicates the number of packets received by this RADIUS Proxy Server that were rejected because they had an invalid Code field.
radPSStatsRxInvLen [Rad PSSStats Rx Inv Len] (tmnxRadPSStatsRxInvLen)	long	The value of tmnxRadPSStatsRxInvLen indicates the number of packets received by this RADIUS Proxy Server that were rejected because their length was invalid.
radPSStatsRxInvMsgAuth [Rad PSSStats Rx Inv Msg Auth] (tmnxRadPSStatsRxInvMsgAuth)	long	The value of tmnxRadPSStatsRxInvMsgAuth indicates the number of packets received by this RADIUS Proxy Server that were rejected because they contained an invalid Message-Authenticator attribute.
radPSStatsRxInvPassword [Rad PSSStats Rx Inv Password] (tmnxRadPSStatsRxInvPassword)	long	The value of tmnxRadPSStatsRxInvPassword indicates the number of packets received by this RADIUS Proxy Server that were rejected because the User-Password attribute could not be decoded.
radPSStatsRxInvUserName [Rad PSSStats Rx Inv User Name] (tmnxRadPSStatsRxInvUserName)	long	The value of tmnxRadPSStatsRxInvUserName indicates the number of packets received by this RADIUS Proxy Server that were rejected because they contained an invalid User-Name attribute.

Table 446 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
radPSStatsRxNoAaaPol [Rad PSSStats Rx No Aaa Pol] (tmnxRadPSStatsRxNoAaaPol)	long	The value of tmnxRadPSStatsRxNoAaaPol indicates the number of packets received by this RADIUS Proxy Server that were rejected because it has no RADIUS server policy configured for that type of packet.
radPSStatsRxNoAcctStatusTyp [Rad PSSStats Rx No Acct Status Typ] (tmnxRadPSStatsRxNoAcctStatusTyp)	long	The value of tmnxRadPSStatsRxNoAcctStatusTyp indicates the number of accounting packets received by this RADIUS Proxy Server that were rejected because they contained no Acct-Status-Type attribute.
radPSStatsRxNoLoadBKey [Rad PSSStats Rx No Load BKey] (tmnxRadPSStatsRxNoLoadBKey)	long	The value of tmnxRadPSStatsRxNoLoadBKey indicates the number of packets received by this RADIUS Proxy Server that were rejected because the selected RADIUS server policy's algorithm (tmnxRadSrvPlcyAlgorithm) is set to 'hashBased' and no load balance key (tmnxRadProxSrvLoadBalanceKey) is configured.
radPSStatsRxNoMemory [Rad PSSStats Rx No Memory] (tmnxRadPSStatsRxNoMemory)	long	The value of tmnxRadPSStatsRxNoMemory indicates the number of packets that were rejected by this RADIUS server because there was not enough memory to store them.
radPSStatsRxPacket [Rad PSSStats Rx Packet] (tmnxRadPSStatsRxPacket)	long	The value of tmnxRadPSStatsRxPacket indicates the number of packets received by this RADIUS Proxy Server.
radPSStatsRxRetransmit [Rad PSSStats Rx Retransmit] (tmnxRadPSStatsRxRetransmit)	long	The value of tmnxRadPSStatsRxRetransmit indicates the number of packets received by this RADIUS Proxy Server that were rejected because they are retransmitted.
radPSStatsRxUserOverload [Rad PSSStats Rx User Overload] (tmnxRadPSStatsRxUserOverload)	long	The value of tmnxRadPSStatsRxUserOverload indicates the number of packets that were rejected by this RADIUS server because the registered user indicated to be in overload.
radPSStatsTxAcctResponse [Rad PSSStats Tx Acct Response] (tmnxRadPSStatsTxAcctResponse)	long	The value of tmnxRadPSStatsTxAcctResponse indicates the number of Accounting-Response packets transmitted by this RADIUS Proxy Server.

Table 446 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
radPSStatsTxAuthAck [Rad PSSStats Tx Auth Ack] (tmnxRadPSStatsTxAuthAck)	long	The value of tmnxRadPSStatsTxAuthAck indicates the number of Access-Accept packets transmitted by this RADIUS Proxy Server.
radPSStatsTxAuthChallenge [Rad PSSStats Tx Auth Challenge] (tmnxRadPSStatsTxAuthChallenge)	long	The value of tmnxRadPSStatsTxAuthChallenge indicates the number of Access-Challenge packets transmitted by this RADIUS Proxy Server.
radPSStatsTxAuthReject [Rad PSSStats Tx Auth Reject] (tmnxRadPSStatsTxAuthReject)	long	The value of tmnxRadPSStatsTxAuthReject indicates the number of Access-Reject packets transmitted by this RADIUS Proxy Server.
radPSStatsTxCacheAttrTooLong [Rad PSSStats Tx Cache Attr Too Long] (tmnxRadPSStatsTxCacheAttrTooLong)	long	The value of tmnxRadPSStatsTxCacheAttrTooLong indicates the number of packets that could not be cached by this RADIUS Proxy Server because the total length of the attributes is too long.
radPSStatsTxCacheKeyTooLong [Rad PSSStats Tx Cache Key Too Long] (tmnxRadPSStatsTxCacheKeyTooLong)	long	The value of tmnxRadPSStatsTxCacheKeyTooLong indicates the number of packets that could not be cached by this RADIUS Proxy Server because the key information present in the packet was too long.
radPSStatsTxCacheMaxEntries [Rad PSSStats Tx Cache Max Entries] (tmnxRadPSStatsTxCacheMaxEntries)	long	The value of tmnxRadPSStatsTxCacheMaxEntries indicates the number of packets that could not be cached by this RADIUS Proxy Server because the limit has been reached.
radPSStatsTxCacheNoKey [Rad PSSStats Tx Cache No Key] (tmnxRadPSStatsTxCacheNoKey)	long	The value of tmnxRadPSStatsTxCacheNoKey indicates the number of packets that could not be cached by this RADIUS Proxy Server because the key information was not present in the packet.
radPSStatsTxDropped [Rad PSSStats Tx Dropped] (tmnxRadPSStatsTxDropped)	long	The value of tmnxRadPSStatsTxDropped indicates the number of packets dropped by this RADIUS Proxy Server before transmission.

Table 446 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
radPSStatsTxDroppedByPython [Rad PSSStats Tx Dropped By Python] (tmnxRadPSStatsTxDroppedByPython)	long	The value of tmnxRadPSStatsTxDroppedByPython indicates the number of packets that were dropped by this RADIUS server because the packet was dropped by the Python script.
radPSStatsTxNoMemory [Rad PSSStats Tx No Memory] (tmnxRadPSStatsTxNoMemory)	long	The value of tmnxRadPSStatsTxNoMemory indicates the number of packets that could not be transmitted by this RADIUS Proxy Server because there was not enough memory.
radPSStatsTxNoRadiusServer [Rad PSSStats Tx No Radius Server] (tmnxRadPSStatsTxNoRadiusServer)	long	The value of tmnxRadPSStatsTxNoRadiusServer indicates the number of packets that were dropped by this RADIUS server because the RADIUS server policy has no servers configured.
radPSStatsTxSendFailure [Rad PSSStats Tx Send Failure] (tmnxRadPSStatsTxSendFailure)	long	The value of tmnxRadPSStatsTxSendFailure indicates the number of packets that were dropped by this RADIUS server because the packet could not get transmitted to one of the servers in the RADIUS server policy.
radPSStatsTxServerAuthFail [Rad PSSStats Tx Server Auth Fail] (tmnxRadPSStatsTxServerAuthFail)	long	The value of tmnxRadPSStatsTxServerAuthFail indicates the number of packets that were dropped because the RADIUS server replied with a packet which failed authentication (invalid response Authenticator or Message-Authenticator attribute).
radPSStatsTxServerInvAttr [Rad PSSStats Tx Server Inv Attr] (tmnxRadPSStatsTxServerInvAttr)	long	The value of tmnxRadPSStatsTxServerInvAttr indicates the number of packets that were dropped because the RADIUS server replied with a packet with an invalid attribute.
radPSStatsTxServerInvCode [Rad PSSStats Tx Server Inv Code] (tmnxRadPSStatsTxServerInvCode)	long	The value of tmnxRadPSStatsTxServerInvCode indicates the number of packets that were dropped because the RADIUS server replied with a packet with an invalid Code field.
radPSStatsTxServerTimeout [Rad PSSStats Tx Server Timeout] (tmnxRadPSStatsTxServerTimeout)	long	The value of tmnxRadPSStatsTxServerTimeout indicates the number of packets that were dropped because the RADIUS servers have timed out.

Table 446 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
radPSStatsTxUserOverload [Rad PSSStats Tx User Overload] (tmnxRadPSStatsTxUserOverload)	long	The value of tmnxRadPSStatsTxUserOverload indicates the number of packets that were dropped because the registered user indicated to be in overload.
routerId [Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
<p>RadPSStatus</p> <p>MIB entry name: tmnxRadProxSrvEntry</p> <p>Entry description: Each conceptual row represents information about a particular RADIUS Proxy Server. Entries in this table can be created or deleted via SNMP operations.</p> <p>Table description (for tmnxRadProxSrvTable): The tmnxRadProxSrvTable contains objects to configure the RADIUS Proxy Servers of this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: aaa.RadiusProxyServer</p>		
proxSrvName [Prox Srv Name] (tmnxRadProxSrvName)	String	The value of tmnxRadProxSrvName specifies the name of this RADIUS Proxy server.
radPSStatusCacheEntries [Rad PSSStatus Cache Entries] (tmnxRadPSStatusCacheEntries)	long	The value of tmnxRadPSStatusCacheEntries indicates the number of entries in the cache of this RADIUS Proxy Server.
radPSStatusCacheEntriesReg [Rad PSSStatus Cache Entries Reg] (tmnxRadPSStatusCacheEntriesReg)	long	The value of tmnxRadPSStatusCacheEntriesReg indicates the number of entries in the cache of this RADIUS Proxy Server. Pending entries have a registered application. An example of an application that could register to a cache entry is Subscriber Management of DHCP clients.

Table 446 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
routerId [Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
<p>RadRouteDownloadStats MIB entry name: tmnxRadRDStatsEntry Entry description: Each conceptual row represents statistics about a particular Route Downloader. Rows are created and destroyed automatically by the system. Table description (for tmnxRadRDStatsTable): The tmnxRadRDStatsTable contains statistics about the RADIUS Route Downloaders of this system. Supports realtime plotting Supports scheduled collection Monitored class: aaa.RouteDownloadPolicy</p>		
accessAcceptedPkts [Access Accepted Pkts] (tmnxRadRDStatsRxAccessAccept)	long	The value of tmnxRadRDStatsRxAccessAccept indicates the number of Access-Accept packets received by this Route Downloader.
accessDroppedPkts [Access Dropped Pkts] (tmnxRadRDStatsRxAccessAcceptDrop)	long	The value of tmnxRadRDStatsRxAccessAcceptDrop indicates the number of Access-Accept packets received but dropped by this Route Downloader.
accessRejectedPkts [Access Rejected Pkts] (tmnxRadRDStatsRxAccessReject)	long	The value of tmnxRadRDStatsRxAccessReject indicates the number of Access-Reject packets received by this Route Downloader.
accessRequests [Access Requests] (tmnxRadRDStatsTxAccessRequest)	long	The value of tmnxRadRDStatsTxAccessRequest indicates the number of Access-Requests sent by this Route Downloader.

Table 446 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
accessRetries [Access Retries] (tmnxRadRDStatsTxAccessReqRetry)	long	The value of tmnxRadRDStatsTxAccessReqRetry indicates the number of Access-Requests retries for this Route Downloader.
installingFailures [Installing Failures] (tmnxRadRDStatsRtmFailures)	long	The value of tmnxRadRDStatsRtmFailures indicates the number of times installing received routes failed for this Route Downloader.
lastAccessAccept [Last Access Accept] (tmnxRadRDStatsRxLastAccessAccept)	long	The value of tmnxRadRDStatsRxLastAccessAccept indicates when this Route Downloader last received an Access-Accept packet.
lastAccessReject [Last Access Reject] (tmnxRadRDStatsRxLastAccessReject)	long	The value of tmnxRadRDStatsRxLastAccessReject indicates when this Route Downloader last received an Access-Reject packet.
lastAccessRequest [Last Access Request] (tmnxRadRDStatsTxLastAccessReq)	long	The value of tmnxRadRDStatsTxLastAccessReq indicates when this Route Downloader last sent an Access-Request packet.
lastAccessRetry [Last Access Retry] (tmnxRadRDStatsTxLastAccReqRetry)	long	The value of tmnxRadRDStatsTxLastAccReqRetry indicates the time of the last Access-Request retry.
numOfDownloads [Num Of Downloads] (tmnxRadRDStatsDownloads)	long	The value of tmnxRadRDStatsDownloads indicates the number of downloads started by this Route Downloader.
remainingTime [Remaining Time] (tmnxRadRDStatsRemainingDownlTime)	long	The value of tmnxRadRDStatsRemainingDownlTime indicates the remaining time before the next download attempt.
retryTime [Retry Time] (tmnxRadRDStatsRemainingRetryTime)	long	The value of tmnxRadRDStatsRemainingRetryTime indicates the remaining time before the next download retry.

Table 446 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
routesReceived [Routes Received] (tmnxRadRDStatsRoutesReceived)	long	The value of tmnxRadRDStatsRoutesReceived indicates the number of routes received in the last completed route download process.
<p>RadSrvPlcyMsgBufStats</p> <p>MIB entry name: tmnxRadSrvPlcyEntry</p> <p>Entry description: Each entry represents the configuration for a specific RADIUS servers policy. Entries in this table can be created and deleted via SNMP SET operations to tmnxRadSrvPlcyRowStatus.</p> <p>Table description (for tmnxRadSrvPlcyTable): The tmnxRadSrvPlcyTable allows configuration of how to access a group of RADIUS servers.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: aaa.RadiusServerPolicy</p>		
bufMsgPlcyName [Buf Msg Plcy Name] (tmnxRadSrvPlcyName)	String	The value of tmnxRadSrvPlcyName specifies a specific RADIUS servers policy.
lastBufClean [Last Buf Clean] (tmnxRadSrvPlcyLastBufClean)	long	The value of tmnxRadSrvPlcyLastBufClean indicates the sysUpTime at the time of the most recent reset (empty) of the message buffer.
lastBufStatsClean [Last Buf Stats Clean] (tmnxRadSrvPlcyLastBufStatsClean)	long	The value of tmnxRadSrvPlcyLastBufStatsClean indicates the sysUpTime at the time of the most recent reset of the message buffer statistics.
nbrAcctInterimBuf [Nbr Acct Interim Buf] (tmnxRadSrvPlcyNbrAcctInterimBuf)	long	The value of tmnxRadSrvPlcyNbrAcctInterimBuf indicates the number of RADIUS accounting interim update messages that are currently buffered for this radius server policy.
nbrAcctInterimDrop [Nbr Acct Interim Drop] (tmnxRadSrvPlcyNbrAcctInterimDrop)	long	The value of tmnxRadSrvPlcyNbrAcctInterimDrop indicates the number of RADIUS accounting interim update messages that were dropped from the buffer because their lifetime expired.

Table 446 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
nbrAcctStopBuf [Nbr Acct Stop Buf] (tmnxRadSrvPlcyNbrAcctStopBuf)	long	The value of tmnxRadSrvPlcyNbrAcctStopBuf indicates the number of RADIUS accounting stop messages that are currently buffered for this radius server policy.
nbrAcctStopDrop [Nbr Acct Stop Drop] (tmnxRadSrvPlcyNbrAcctStopDrop)	long	The value of tmnxRadSrvPlcyNbrAcctStopDrop indicates the number of RADIUS accounting stop messages that were dropped from the buffer because their lifetime expired.
<p>RadSrvPlcyStats MIB entry name: tmnxRadSrvPlcyEntry Entry description: Each entry represents the configuration for a specific RADIUS servers policy. Entries in this table can be created and deleted via SNMP SET operations to tmnxRadSrvPlcyRowStatus. Table description (for tmnxRadSrvPlcyTable): The tmnxRadSrvPlcyTable allows configuration of how to access a group of RADIUS servers. Supports realtime plotting Supports scheduled collection Monitored class: aaa.RadiusServerPolicy</p>		
plcyName [Plcy Name] (tmnxRadSrvPlcyName)	String	The value of tmnxRadSrvPlcyName specifies a specific RADIUS servers policy.
radSrvPlcyStatsAcctFailed [Rad Srv Plcy Stats Acct Failed] (tmnxRadSrvPlcyStatsAcctFailed)	long	The value of tmnxRadSrvPlcyStatsAcctFailed indicates the number of accounting failures for this policy.
radSrvPlcyStatsAuthFailed [Rad Srv Plcy Stats Auth Failed] (tmnxRadSrvPlcyStatsAuthFailed)	long	The value of tmnxRadSrvPlcyStatsAuthFailed indicates the number of authentication failures for this policy.
radSrvPlcyStatsRatioFailure [Rad Srv Plcy Stats Ratio Failure] (tmnxRadSrvPlcyStatsFailureRatio)	int	The value of tmnxRadSrvPlcyStatsFailureRatio indicates the transaction failure ratio for this policy.

Table 446 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
radSrvPlcyStatsRatioReject [Rad Srv Plcy Stats Ratio Reject] (tmnxRadSrvPlcyStatsRejectRatio)	int	The value of tmnxRadSrvPlcyStatsRejectRatio indicates the ratio of access-rejects in the auth responses for this policy.
radSrvPlcyStatsRatioSuccess [Rad Srv Plcy Stats Ratio Success] (tmnxRadSrvPlcyStatsSuccessRatio)	int	The value of tmnxRadSrvPlcyStatsSuccessRatio indicates the transaction success ratio for this policy.
radSrvPlcyStatsReqRejected [Rad Srv Plcy Stats Req Rejected] (tmnxRadSrvPlcyStatsReqRejected)	long	The value of tmnxRadSrvPlcyStatsReqRejected indicates the number of RADIUS transaction requests that were not transmitted due to unacceptable configuration.
radSrvPlcyStatsReqSendFail [Rad Srv Plcy Stats Req Send Fail] (tmnxRadSrvPlcyStatsReqSendFail)	long	The value of tmnxRadSrvPlcyStatsReqSendFail indicates the number of RADIUS transaction requests that could not be transmitted.
radSrvPlcyStatsReqSendRetry [Rad Srv Plcy Stats Req Send Retry] (tmnxRadSrvPlcyStatsReqSendRetry)	long	The value of tmnxRadSrvPlcyStatsReqSendRetry indicates the number of times a RADIUS request packet was retransmitted to a server.
radSrvPlcyStatsReqTimeout [Rad Srv Plcy Stats Req Timeout] (tmnxRadSrvPlcyStatsReqTimeout)	long	The value of tmnxRadSrvPlcyStatsReqTimeout indicates the number of RADIUS transaction requests that have timed out.
radSrvPlcyStatsRxResponses [Rad Srv Plcy Stats Rx Responses] (tmnxRadSrvPlcyStatsRxResponses)	long	The value of tmnxRadSrvPlcyStatsRxResponses indicates the number of RADIUS transaction responses received.
radSrvPlcyStatsTxRequests [Rad Srv Plcy Stats Tx Requests] (tmnxRadSrvPlcyStatsTxRequests)	long	The value of tmnxRadSrvPlcyStatsTxRequests indicates the number of RADIUS transaction requests transmitted.

Table 446 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>RadSrvStats</p> <p>MIB entry name: tmnxRadSrvPlcyEntry</p> <p>Entry description: Each entry represents the configuration for a specific RADIUS servers policy. Entries in this table can be created and deleted via SNMP SET operations to tmnxRadSrvPlcyRowStatus.</p> <p>Table description (for tmnxRadSrvPlcyTable): The tmnxRadSrvPlcyTable allows configuration of how to access a group of RADIUS servers.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: aaa.ServerEntry</p>		
plcyName [Plcy Name] (tmnxRadSrvPlcyName)	String	The value of tmnxRadSrvPlcyName specifies a specific RADIUS servers policy.
radSrvStatsAcctAvgDelay10 [Rad Srv Stats Acct Avg Delay 10] (tmnxRadSrvStatsAcctAvgDelay10)	long	The value of tmnxRadSrvStatsAcctAvgDelay10 indicates in microseconds, the average response delay for the last 10 accounting packets.
radSrvStatsAcctAvgDelay100 [Rad Srv Stats Acct Avg Delay 100] (tmnxRadSrvStatsAcctAvgDelay100)	long	The value of tmnxRadSrvStatsAcctAvgDelay100 indicates in microseconds, the average response delay for the last 100 accounting packets.
radSrvStatsAcctAvgDelay1000 [Rad Srv Stats Acct Avg Delay 1000] (tmnxRadSrvStatsAcctAvgDelay1000)	long	The value of tmnxRadSrvStatsAcctAvgDelay1000 indicates in microseconds, the average response delay for the last 1000 accounting packets.
radSrvStatsAcctAvgDelay10000 [Rad Srv Stats Acct Avg Delay 10000] (tmnxRadSrvStatsAcctAvgDelay10000)	long	The value of tmnxRadSrvStatsAcctAvgDelay10000 indicates in microseconds, the average response delay for the last 10000 accounting packets.
radSrvStatsAuthAvgDelay10 [Rad Srv Stats Auth Avg Delay 10] (tmnxRadSrvStatsAuthAvgDelay10)	long	The value of tmnxRadSrvStatsAuthAvgDelay10 indicates in microseconds, the average response delay for the last 10 authentication packets.

Table 446 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
radSrvStatsAuthAvgDelay100 [Rad Srv Stats Auth Avg Delay 100] (tmnxRadSrvStatsAuthAvgDelay100)	long	The value of tmnxRadSrvStatsAuthAvgDelay100 indicates in microseconds, the average response delay for the last 100 authentication packets.
radSrvStatsAuthAvgDelay1000 [Rad Srv Stats Auth Avg Delay 1000] (tmnxRadSrvStatsAuthAvgDelay1000)	long	The value of tmnxRadSrvStatsAuthAvgDelay1000 indicates in microseconds, the average response delay for the last 1000 authentication packets.
radSrvStatsAuthAvgDelay10000 [Rad Srv Stats Auth Avg Delay 10000] (tmnxRadSrvStatsAuthAvgDelay10000)	long	The value of tmnxRadSrvStatsAuthAvgDelay10000 indicates in microseconds, the average response delay for the last 10000 authentication packets.
radSrvStatsFailedAcct [Rad Srv Stats Failed Acct] (tmnxRadSrvStatsAcctFailed)	long	The value of tmnxRadSrvStatsAcctFailed indicates the number of accounting failures for this server.
radSrvStatsFailedAuth [Rad Srv Stats Failed Auth] (tmnxRadSrvStatsAuthFailed)	long	The value of tmnxRadSrvStatsAuthFailed indicates the number of authentication failures for this server.
radSrvStatsReqOvrlSendFail [Rad Srv Stats Req Ovr Id Send Fail] (tmnxRadSrvStatsReqOvrlSendFail)	long	The value of tmnxRadSrvStatsReqOvrlSendFail indicates the number of RADIUS request packets that could not be transmitted while the RADIUS server was in overload.
radSrvStatsReqPending [Rad Srv Stats Req Pending] (tmnxRadSrvStatsReqPending)	long	The value of tmnxRadSrvStatsReqPending indicates the number of RADIUS request packets that are currently waiting for reply from this server.
radSrvStatsReqSendFailure [Rad Srv Stats Req Send Failure] (tmnxRadSrvStatsReqSendFailure)	long	The value of tmnxRadSrvStatsReqSendFailure indicates the number of RADIUS request packets that could not be transmitted for this server.
radSrvStatsReqTimeout [Rad Srv Stats Req Timeout] (tmnxRadSrvStatsReqTimeout)	long	The value of tmnxRadSrvStatsReqTimeout indicates the number of RADIUS request packets that have timed out for this server.

Table 446 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
radSrvStatsRespInvAuth [Rad Srv Stats Resp Inv Auth] (tmnxRadSrvStatsRespInvAuth)	long	The value of tmnxRadSrvStatsRespInvAuth indicates the number of RADIUS response packets with an invalid Authenticator received from this server.
radSrvStatsRespInvMsgAuth [Rad Srv Stats Resp Inv Msg Auth] (tmnxRadSrvStatsRespInvMsgAuth)	long	The value of tmnxRadSrvStatsRespInvMsgAuth indicates the number of RADIUS response packets with an invalid Message-Authenticator attribute received from this server.
