eMplsIgmPsnpgImportPolicyDrops [EMpls IgmPsnpg Import Policy Drops] (eMplsIgmPsnpgImportPolicyDrops)	long	The value of the object eMplsIgmPsnpgImportPolicyDrops indicates the number of times an IGMP Group or Source is dropped because of applying an import policy on this evpn-mpls.
eMplsIgmPsnpgMaxNumGroupsDrops [EMpls IgmPsnpg Max Num Groups Drops] (eMplsIgmPsnpgMaxNumGroupsDrops)	long	The value of the object eMplsIgmPsnpgMaxNumGroupsDrops indicates the number of times an IGMP Group is dropped because of exceeding the configured maximum number of groups on this evpn-mpls.
eMplsIgmPsnpgMaxNumGrpSrcsDrops [EMpls IgmPsnpg Max Num Grp Srcs Drops] (eMplsIgmPsnpgMaxNumGrpSrcsDrops)	long	The value of the object eMplsIgmPsnpgMaxNumGrpSrcsDrops indicates the number of times an IGMP Group Source is dropped because of exceeding the configured maximum number of group sources per group on this evpn-mpls.
eMplsIgmPsnpgMaxNumSourcesDrops [EMpls IgmPsnpg Max Num Sources Drops] (eMplsIgmPsnpgMaxNumSourcesDrops)	long	The value of the object eMplsIgmPsnpgMaxNumSourcesDrops indicates the number of times an IGMP Source is dropped because of exceeding the configured maximum number of sources per group on this evpn-mpls.

Table 510 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
eMplsIgmPsnpgMcacPolicyDrops [EMpls Igmp SnpG Mcac Policy Drops] (eMplsIgmPsnpgMcacPolicyDrops)	long	The value of the object eMplsIgmPsnpgMcacPolicyDrops indicates the number of times an IGMP Group is dropped because of applying a multicast CAC policy on this evpn-mpls.
eMplsIgmPsnpgMcsFailures [EMpls Igmp SnpG Mcs Failures] (eMplsIgmPsnpgMcsFailures)	long	The value of the object eMplsIgmPsnpgMcsFailures indicates the number of times an IGMP Group on this evpn-mpls could not be synced to the MCS (multi-chassis synchronization) database.
eMplsIgmPsnpgRxBadEncodedPkts [EMpls Igmp SnpG Rx Bad Encoded Pkts] (eMplsIgmPsnpgRxBadEncodedPkts)	long	The value of the object eMplsIgmPsnpgRxBadEncodedPkts indicates the number of IGMP packets dropped on this evpn-mpls because of a bad encoding.
eMplsIgmPsnpgRxBadIgmPChkSmPkts [EMpls Igmp SnpG Rx Bad Igmp ChkSm Pkts] (eMplsIgmPsnpgRxBadIgmPChkSmPkts)	long	The value of the object eMplsIgmPsnpgRxBadIgmPChkSmPkts indicates the number of dropped IGMP packets on this evpn-mpls because of a bad IGMP header checksum.
eMplsIgmPsnpgRxBadIpChkSmPkts [EMpls Igmp SnpG Rx Bad Ip ChkSm Pkts] (eMplsIgmPsnpgRxBadIpChkSmPkts)	long	The value of the object eMplsIgmPsnpgRxBadIpChkSmPkts indicates the number of dropped IGMP packets on this evpn-mpls because of a bad IPv4 header checksum.
eMplsIgmPsnpgRxBadLenPkts [EMpls Igmp SnpG Rx Bad Len Pkts] (eMplsIgmPsnpgRxBadLenPkts)	long	The value of the object eMplsIgmPsnpgRxBadLenPkts indicates the number of IGMP packets dropped on this evpn-mpls because of a bad length.
eMplsIgmPsnpgRxLocalScopePkts [EMpls Igmp SnpG Rx Local Scope Pkts] (eMplsIgmPsnpgRxLocalScopePkts)	long	The value of the object eMplsIgmPsnpgRxLocalScopePkts indicates the number of IGMP packets received on the link-local scope IPv6 multicast address.
eMplsIgmPsnpgRxNoRtrAlertPkts [EMpls Igmp SnpG Rx No Rtr Alert Pkts] (eMplsIgmPsnpgRxNoRtrAlertPkts)	long	The value of the object eMplsIgmPsnpgRxNoRtrAlertPkts indicates the number of IGMP packets dropped on this evpn-mpls because the Router Alert Option in the IP packet is not set.

Table 510 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
eMplsIgmPsnpgRxRsvdScopePkts [EMpls Igmp Snpg Rx Rsvd Scope Pkts] (eMplsIgmPsnpgRxRsvdScopePkts)	long	The value of the object eMplsIgmPsnpgRxRsvdScopePkts indicates the number of IGMP packets received on the reserved scope IPv6 multicast address.
eMplsIgmPsnpgRxWrongVersionPkts [EMpls Igmp Snpg Rx Wrong Version Pkts] (eMplsIgmPsnpgRxWrongVersionPkts)	long	The value of the object eMplsIgmPsnpgRxWrongVersionPkts indicates the total number of IGMP packets with a wrong version received on this evpn-mpls.
eMplsIgmPsnpgRxZeroSrcAdrPkts [EMpls Igmp Snpg Rx Zero Src Adr Pkts] (eMplsIgmPsnpgRxZeroSrcAdrPkts)	long	The value of the object eMplsIgmPsnpgRxZeroSrcAdrPkts indicates the number of IGMP packets dropped on this evpn-mpls because they contain a zero source IPv4 address.
eMplsIgmPsnpgSendQueryCfgDrops [EMpls Igmp Snpg Send Query Cfg Drops] (eMplsIgmPsnpgSendQueryCfgDrops)	long	The value of the object eMplsIgmPsnpgSendQueryCfgDrops indicates the number of times an IGMP Query is dropped because the object sapIgmPsnpgCfgSendQueries for this evpn-mpls is set to 'enabled(1)'.
<p>EvpnMplsIgmPsnpgStats MIB entry name: eMplsIgmPsnpgStatsEntry Entry description: eMplsIgmPsnpgStatsEntry is an entry in the eMplsIgmPsnpgStatsTable. eMplsIgmPsnpgFwdGenQueries [EMpls Igmp Snpg Fwd Gen Queries] (eMplsIgmPsnpgFwdGenQueries)	long	The value of the object eMplsIgmPsnpgFwdGenQueries indicates the number of IGMP General Queries forwarded on this evpn-mpls.

Table 510 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
eMplsIgmpSnpGfwdGrpSpecQueries [EMpls Igmp SnpG Fwd Grp Spec Queries] (eMplsIgmpSnpGfwdGrpSpecQueries)	long	The value of the object eMplsIgmpSnpGfwdGrpSpecQueries indicates the number of IGMP Group-Specific Queries forwarded on this evpn-mpls.
eMplsIgmpSnpGfwdSrcSpecQueries [EMpls Igmp SnpG Fwd Src Spec Queries] (eMplsIgmpSnpGfwdSrcSpecQueries)	long	The value of the object eMplsIgmpSnpGfwdSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries forwarded on this evpn-mpls.
eMplsIgmpSnpGfwdUnknownType [EMpls Igmp SnpG Fwd Unknown Type] (eMplsIgmpSnpGfwdUnknownType)	long	The value of the object eMplsIgmpSnpGfwdUnknownType indicates the number of IGMP unknown type packets forwarded on this evpn-mpls.
eMplsIgmpSnpGfwdV1Reports [EMpls Igmp SnpG Fwd V1 Reports] (eMplsIgmpSnpGfwdV1Reports)	long	The value of the object eMplsIgmpSnpGfwdV1Reports indicates the number of IGMPv1 Reports forwarded on this evpn-mpls.
eMplsIgmpSnpGfwdV2Leaves [EMpls Igmp SnpG Fwd V2 Leaves] (eMplsIgmpSnpGfwdV2Leaves)	long	The value of the object eMplsIgmpSnpGfwdV2Leaves indicates the number of IGMPv2 Leaves forwarded on this evpn-mpls.
eMplsIgmpSnpGfwdV2Reports [EMpls Igmp SnpG Fwd V2 Reports] (eMplsIgmpSnpGfwdV2Reports)	long	The value of the object eMplsIgmpSnpGfwdV2Reports indicates the number of IGMPv2 Reports forwarded on this evpn-mpls.
eMplsIgmpSnpGfwdV3Reports [EMpls Igmp SnpG Fwd V3 Reports] (eMplsIgmpSnpGfwdV3Reports)	long	The value of the object eMplsIgmpSnpGfwdV3Reports indicates the number of IGMPv3 Reports forwarded on this evpn-mpls.
eMplsIgmpSnpGRxGenQueries [EMpls Igmp SnpG Rx Gen Queries] (eMplsIgmpSnpGRxGenQueries)	long	The value of the object eMplsIgmpSnpGRxGenQueries indicates the number of IGMP General Queries received on this evpn-mpls.
eMplsIgmpSnpGRxGrpSpecQueries [EMpls Igmp SnpG Rx Grp Spec Queries] (eMplsIgmpSnpGRxGrpSpecQueries)	long	The value of the object eMplsIgmpSnpGRxGrpSpecQueries indicates the number of IGMP Group-Specific Queries received on this evpn-mpls.

Table 510 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
eMplsIgmPsnpgRxSrcSpecQueries [EMpls IgmP SnpG Rx Src Spec Queries] (eMplsIgmPsnpgRxSrcSpecQueries)	long	The value of the object eMplsIgmPsnpgRxSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries received on this evpn-mpls.
eMplsIgmPsnpgRxUnknownType [EMpls IgmP SnpG Rx Unknown Type] (eMplsIgmPsnpgRxUnknownType)	long	The value of the object eMplsIgmPsnpgRxUnknownType indicates the number of IGMP unknown type packets received on this evpn-mpls.
eMplsIgmPsnpgRxV1Reports [EMpls IgmP SnpG Rx V1 Reports] (eMplsIgmPsnpgRxV1Reports)	long	The value of the object eMplsIgmPsnpgRxV1Reports indicates the number of IGMPv1 Reports received on this evpn-mpls.
eMplsIgmPsnpgRxV2Leaves [EMpls IgmP SnpG Rx V2 Leaves] (eMplsIgmPsnpgRxV2Leaves)	long	The value of the object eMplsIgmPsnpgRxV2Leaves indicates the number of IGMPv2 Leaves received on this evpn-mpls.
eMplsIgmPsnpgRxV2Reports [EMpls IgmP SnpG Rx V2 Reports] (eMplsIgmPsnpgRxV2Reports)	long	The value of the object eMplsIgmPsnpgRxV2Reports indicates the number of IGMPv2 Reports received on this evpn-mpls.
eMplsIgmPsnpgRxV3Reports [EMpls IgmP SnpG Rx V3 Reports] (eMplsIgmPsnpgRxV3Reports)	long	The value of the object eMplsIgmPsnpgRxV3Reports indicates the number of IGMPv3 Reports received on this evpn-mpls.
eMplsIgmPsnpgTxGenQueries [EMpls IgmP SnpG Tx Gen Queries] (eMplsIgmPsnpgTxGenQueries)	long	The value of the object eMplsIgmPsnpgTxGenQueries indicates the number of IGMP General Queries transmitted on this evpn-mpls.
eMplsIgmPsnpgTxGrpSpecQueries [EMpls IgmP SnpG Tx Grp Spec Queries] (eMplsIgmPsnpgTxGrpSpecQueries)	long	The value of the object eMplsIgmPsnpgTxGrpSpecQueries indicates the number of IGMP Group-Specific Queries transmitted on this evpn-mpls.
eMplsIgmPsnpgTxSrcSpecQueries [EMpls IgmP SnpG Tx Src Spec Queries] (eMplsIgmPsnpgTxSrcSpecQueries)	long	The value of the object eMplsIgmPsnpgTxSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries transmitted on this evpn-mpls.

Table 510 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
eMplsIgmPsnpgTxV1Reports [EMpls Igmp Snpg Tx V1 Reports] (eMplsIgmPsnpgTxV1Reports)	long	The value of the object eMplsIgmPsnpgTxV1Reports indicates the number of IGMPv1 Reports transmitted on this evpn-mpls.
eMplsIgmPsnpgTxV2Leaves [EMpls Igmp Snpg Tx V2 Leaves] (eMplsIgmPsnpgTxV2Leaves)	long	The value of the object eMplsIgmPsnpgTxV2Leaves indicates the number of IGMPv2 Leaves transmitted on this evpn-mpls.
eMplsIgmPsnpgTxV2Reports [EMpls Igmp Snpg Tx V2 Reports] (eMplsIgmPsnpgTxV2Reports)	long	The value of the object eMplsIgmPsnpgTxV2Reports indicates the number of IGMPv2 Reports transmitted on this evpn-mpls.
eMplsIgmPsnpgTxV3Reports [EMpls Igmp Snpg Tx V3 Reports] (eMplsIgmPsnpgTxV3Reports)	long	The value of the object eMplsIgmPsnpgTxV3Reports indicates the number of IGMPv3 Reports transmitted on this evpn-mpls.
InterfacePimSnoopingStats MIB entry name: tmnxPimSnpgIfStatsEntry Entry description: An entry in the tmnxPimSnpgIfStatsTable. Table description (for tmnxPimSnpgIfStatsTable): The table listing the PIM statistics for a particular interface. Supports realtime plotting Supports scheduled collection Monitored class: vpls.InterfacePimSnooping		
tmnxPimSnpgIfJoinPolicyDrops [Tmnx Pim Snpg If Join Policy Drops] (tmnxPimSnpgIfJoinPolicyDrops)	long	The value of tmnxPimSnpgIfJoinPolicyDrops indicates the number of times the join policy match resulted in dropping PIM Join-Prune Message or one of the source group contained in the message.
tmnxPimSnpgIfRxBadChecksumDscrd [Tmnx Pim Snpg If Rx Bad Checksum Dscrd] (tmnxPimSnpgIfRxBadChecksumDscrd)	long	The value of tmnxPimSnpgIfRxBadChecksumDscrd indicates the number of PIM messages received on this interface which were discarded because of bad checksum.

Table 510 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tmnxPimSnpgIfRxBadEncodings [Tmnx Pim Snpg If Rx Bad Encodings] (tmnxPimSnpgIfRxBadEncodings)	long	The value of tmnxPimSnpgIfRxBadEncodings indicates the number of PIM messages with bad encodings received on this interface.
tmnxPimSnpgIfRxBadVersionDscrd [Tmnx Pim Snpg If Rx Bad Version Dscrd] (tmnxPimSnpgIfRxBadVersionDscrd)	long	The value of tmnxPimSnpgIfRxBadVersionDscrd indicates the number of PIM messages with bad versions received on this interface.
tmnxPimSnpgIfRxHellos [Tmnx Pim Snpg If Rx Hellos] (tmnxPimSnpgIfRxHellos)	long	The value of tmnxPimSnpgIfRxHellos indicates the number of PIM hello messages received on this interface.
tmnxPimSnpgIfRxHellosDropped [Tmnx Pim Snpg If Rx Hellos Dropped] (tmnxPimSnpgIfRxHellosDropped)	long	The value of tmnxPimSnpgIfRxHellosDropped indicates the number of PIM Hello messages which were received on this interface but were dropped.
tmnxPimSnpgIfRxJoinPruneErrs [Tmnx Pim Snpg If Rx Join Prune Errs] (tmnxPimSnpgIfRxJoinPruneErrs)	long	The value of tmnxPimSnpgIfRxJoinPruneErrs indicates the number of errors while processing Join-Prune messages received on this interface.
tmnxPimSnpgIfRxJoinPrunes [Tmnx Pim Snpg If Rx Join Prunes] (tmnxPimSnpgIfRxJoinPrunes)	long	The value of tmnxPimSnpgIfRxJoinPrunes indicates the number of PIM Join Prune messages received on this interface.
tmnxPimSnpgIfRxBadVersionDscrd [Tmnx Pim Snpg If Rx Nbr Unknown] (tmnxPimSnpgIfRxBadVersionDscrd)	long	The value of tmnxPimSnpgIfRxBadVersionDscrd indicates the number of PIM messages (other than Hello messages) which were received on this interface and were rejected because the adjacency with the neighbor router was not already established.
tmnxPimSnpgIfRxPkts [Tmnx Pim Snpg If Rx Pkts] (tmnxPimSnpgIfRxPkts)	long	The value of tmnxPimSnpgIfRxPkts indicates the number of multicast data packets received on this interface.

saplgmpSnpgrxV3Reports [Sap Igmp Snpgrx V3 Reports] (saplgmpSnpgrxV3Reports)	long	The value of the object saplgmpSnpgrxV3Reports indicates the number of IGMPv3 Reports received on this SAP.
saplgmpSnpgrxTxGenQueries [Sap Igmp Snpgrx Tx Gen Queries] (saplgmpSnpgrxTxGenQueries)	long	The value of the object saplgmpSnpgrxTxGenQueries indicates the number of IGMP General Queries transmitted on this SAP.
saplgmpSnpgrxTxGrpSpecQueries [Sap Igmp Snpgrx Tx Grp Spec Queries] (saplgmpSnpgrxTxGrpSpecQueries)	long	The value of the object saplgmpSnpgrxTxGrpSpecQueries indicates the number of IGMP Group-Specific Queries transmitted on this SAP.

Table 510 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapIgmPsnPgTxSrcSpecQueries [Sap Igmp SnpG Tx Src Spec Queries] (sapIgmPsnPgTxSrcSpecQueries)	long	The value of the object sapIgmPsnPgTxSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries transmitted on this SAP.
sapIgmPsnPgTxV1Reports [Sap Igmp SnpG Tx V1 Reports] (sapIgmPsnPgTxV1Reports)	long	The value of the object sapIgmPsnPgTxV1Reports indicates the number of IGMPv1 Reports transmitted on this SAP.
sapIgmPsnPgTxV2Leaves [Sap Igmp SnpG Tx V2 Leaves] (sapIgmPsnPgTxV2Leaves)	long	The value of the object sapIgmPsnPgTxV2Leaves indicates the number of IGMPv2 Leaves transmitted on this SAP.
sapIgmPsnPgTxV2Reports [Sap Igmp SnpG Tx V2 Reports] (sapIgmPsnPgTxV2Reports)	long	The value of the object sapIgmPsnPgTxV2Reports indicates the number of IGMPv2 Reports transmitted on this SAP.
sapIgmPsnPgTxV3Reports [Sap Igmp SnpG Tx V3 Reports] (sapIgmPsnPgTxV3Reports)	long	The value of the object sapIgmPsnPgTxV3Reports indicates the number of IGMPv3 Reports transmitted on this SAP.
L2AccessInterfaceMldMvrStats MIB entry name: sapMldSnpGStatsEntry Entry description: sapMldSnpGStatsEntry is an entry in the sapMldSnpGStatsTable. Each entry contains MLD snooping statistics for a SAP in a TIs. Table description (for sapMldSnpGStatsTable): sapMldSnpGStatsTable contains statistics on MLD snooping per SAP. Supports realtime plotting Supports scheduled collection Monitored class: vpls.AbstractL2AccessInterface		
sapMldSnpGMvrFromVplsCfgDrops [Sap Mld SnpG Mvr From Vpls Cfg Drops] (sapMldSnpGMvrFromVplsCfgDrops)	long	The value of the object sapMldSnpGMvrFromVplsCfgDrops indicates the number of times an MLD group or Query is dropped because of applying the sapMldSnpGCfgMvrFromVplsId configuration on this SAP.

Table 510 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapMldSnpgMvrToSapCfgDrops [Sap Mld Snpg Mvr To Sap Cfg Drops] (sapMldSnpgMvrToSapCfgDrops)	long	The value of the object sapMldSnpgMvrToSapCfgDrops indicates the number times an MLD Report or Query is dropped because of applying the sapMldSnpgCfgMvrToSapPortId and sapMldSnpgCfgMvrToSapEncapVal configuration on this SAP.
L2AccessInterfaceMldSnpgErrorStats MIB entry name: sapMldSnpgStatsEntry Entry description: sapMldSnpgStatsEntry is an entry in the sapMldSnpgStatsTable. Each entry contains MLD snooping statics for a SAP in a TIs. Table description (for sapMldSnpgStatsTable): sapMldSnpgStatsTable contains statistics on MLD snooping per SAP. Supports realtime plotting Supports scheduled collection Monitored class: vpls.AbstractL2AccessInterface		
sapMldSnpgImportPolicyDrops [Sap Mld Snpg Import Policy Drops] (sapMldSnpgImportPolicyDrops)	long	The value of the object sapMldSnpgImportPolicyDrops indicates the number of times an MLD group or source is dropped because of applying an import policy on this SAP.
sapMldSnpgMaxNumGroupsDrops [Sap Mld Snpg Max Num Groups Drops] (sapMldSnpgMaxNumGroupsDrops)	long	The value of the object sapMldSnpgMaxNumGroupsDrops indicates the number of times an MLD group is dropped because of exceeding the configured maximum number of groups on this SAP.
sapMldSnpgMcsFailures [Sap Mld Snpg Mcs Failures] (sapMldSnpgMcsFailures)	long	The value of the object sapMldSnpgMcsFailures indicates the number of times an MLD group on this SAP could not be synced to the MCS (multi-chassis synchronization) database.
sapMldSnpgRxBadEncodedPkts [Sap Mld Snpg Rx Bad Encoded Pkts] (sapMldSnpgRxBadEncodedPkts)	long	The value of the object sapMldSnpgRxBadEncodedPkts indicates the number of MLD packets dropped on this SAP because of a bad encoding.
sapMldSnpgRxBadLenPkts [Sap Mld Snpg Rx Bad Len Pkts] (sapMldSnpgRxBadLenPkts)	long	The value of the object sapMldSnpgRxBadLenPkts indicates the number of MLD packets dropped on this SAP because of a bad length.

Table 510 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapMldSnpgRxBadMldChksmPkts [Sap Mld Snpg Rx Bad Mld Chksm Pkts] (sapMldSnpgRxBadMldChksmPkts)	long	The value of the object sapMldSnpgRxBadMldChksmPkts indicates the number of dropped MLD packets on this SAP because of a bad MLD header checksum.
sapMldSnpgRxNoRtrAlertPkts [Sap Mld Snpg Rx No Rtr Alert Pkts] (sapMldSnpgRxNoRtrAlertPkts)	long	The value of the object sapMldSnpgRxNoRtrAlertPkts indicates the number of MLD packets dropped on this SAP because the Router Alert Option in the IP packet is not set.
sapMldSnpgRxWrongVersionPkts [Sap Mld Snpg Rx Wrong Version Pkts] (sapMldSnpgRxWrongVersionPkts)	long	The value of the object sapMldSnpgRxWrongVersionPkts indicates the total number of MLD packets with a wrong version received on this SAP.
sapMldSnpgRxZeroSrcAdrPkts [Sap Mld Snpg Rx Zero Src Adr Pkts] (sapMldSnpgRxZeroSrcAdrPkts)	long	The value of the object sapMldSnpgRxZeroSrcAdrPkts indicates the number of MLD packets dropped on this SAP because they contain a zero source IPv6 address.
sapMldSnpgSendQueryCfgDrops [Sap Mld Snpg Send Query Cfg Drops] (sapMldSnpgSendQueryCfgDrops)	long	The value of the object sapMldSnpgSendQueryCfgDrops indicates the number of times an MLD Query is dropped because the object sapMldSnpgCfgSendQueries for this SAP is set to 'inService(2)'. L2AccessInterfaceMldSnpgStats MIB entry name: sapMldSnpgStatsEntry Entry description: sapMldSnpgStatsEntry is an entry in the sapMldSnpgStatsTable. Each entry contains MLD snooping statistics for a SAP in a TIs. Table description (for sapMldSnpgStatsTable): sapMldSnpgStatsTable contains statistics on MLD snooping per SAP. Supports realtime plotting Supports scheduled collection Monitored class: vpls.AbstractL2AccessInterface
sapMldSnpgFwdGenQueries [Sap Mld Snpg Fwd Gen Queries] (sapMldSnpgFwdGenQueries)	long	The value of the object sapMldSnpgFwdGenQueries indicates the number of MLD General Queries forwarded on this SAP.

Table 510 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapMldSnpgFwdGrpSpecQueries [Sap Mld Snpg Fwd Grp Spec Queries] (sapMldSnpgFwdGrpSpecQueries)	long	The value of the object sapMldSnpgFwdGrpSpecQueries indicates the number of MLD Group-Specific Queries forwarded on this SAP.
sapMldSnpgFwdSrcSpecQueries [Sap Mld Snpg Fwd Src Spec Queries] (sapMldSnpgFwdSrcSpecQueries)	long	The value of the object sapMldSnpgFwdSrcSpecQueries indicates the number of MLD Group-And-Source-Specific Queries forwarded on this SAP.
sapMldSnpgFwdUnknownType [Sap Mld Snpg Fwd Unknown Type] (sapMldSnpgFwdUnknownType)	long	The value of the object sapMldSnpgFwdUnknownType indicates the number of MLD unknown type packets forwarded on this SAP.
sapMldSnpgFwdV1Leaves [Sap Mld Snpg Fwd V1 Leaves] (sapMldSnpgFwdV1Leaves)	long	The value of the object sapMldSnpgFwdV1Leaves indicates the number of MLDv1 Leaves forwarded on this SAP.
sapMldSnpgFwdV1Reports [Sap Mld Snpg Fwd V1 Reports] (sapMldSnpgFwdV1Reports)	long	The value of the object sapMldSnpgFwdV1Reports indicates the number of MLDv1 Reports forwarded on this SAP.
sapMldSnpgFwdV2Reports [Sap Mld Snpg Fwd V2 Reports] (sapMldSnpgFwdV2Reports)	long	The value of the object sapMldSnpgFwdV2Reports indicates the number of MLDv2 Reports forwarded on this SAP.
sapMldSnpgRxGenQueries [Sap Mld Snpg Rx Gen Queries] (sapMldSnpgRxGenQueries)	long	The value of the object sapMldSnpgRxGenQueries indicates the number of MLD General Queries received on this SAP.
sapMldSnpgRxGrpSpecQueries [Sap Mld Snpg Rx Grp Spec Queries] (sapMldSnpgRxGrpSpecQueries)	long	The value of the object sapMldSnpgRxGrpSpecQueries indicates the number of MLD Group-Specific Queries received on this SAP.
sapMldSnpgRxLocalScopePkts [Sap Mld Snpg Rx Local Scope Pkts] (sapMldSnpgRxLocalScopePkts)	long	The value of the object sapMldSnpgRxLocalScopePkts indicates the number of MLD packets received on the link-local scope IPv6 multicast address.

Table 510 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapMldSnpgRxRsvdScopePkts [Sap Mld Snpg Rx Rsvd Scope Pkts] (sapMldSnpgRxRsvdScopePkts)	long	The value of the object sapMldSnpgRxRsvdScopePkts indicates the number of MLD packets received on the reserved scope IPv6 multicast address.
sapMldSnpgRxSrcSpecQueries [Sap Mld Snpg Rx Src Spec Queries] (sapMldSnpgRxSrcSpecQueries)	long	The value of the object sapMldSnpgRxSrcSpecQueries indicates the number of MLD Group-And-Source-Specific Queries received on this SAP.
sapMldSnpgRxUnknownType [Sap Mld Snpg Rx Unknown Type] (sapMldSnpgRxUnknownType)	long	The value of the object sapMldSnpgRxUnknownType indicates the number of MLD unknown type packets received on this SAP.
sapMldSnpgRxV1Leaves [Sap Mld Snpg Rx V1 Leaves] (sapMldSnpgRxV1Leaves)	long	The value of the object sapMldSnpgRxV1Leaves indicates the number of MLDv1 Leaves received on this SAP.
sapMldSnpgRxV1Reports [Sap Mld Snpg Rx V1 Reports] (sapMldSnpgRxV1Reports)	long	The value of the object sapMldSnpgRxV1Reports indicates the number of MLDv1 Reports received on this SAP.
sapMldSnpgRxV2Reports [Sap Mld Snpg Rx V2 Reports] (sapMldSnpgRxV2Reports)	long	The value of the object sapMldSnpgRxV2Reports indicates the number of MLDv2 Reports received on this SAP.
sapMldSnpgTxGenQueries [Sap Mld Snpg Tx Gen Queries] (sapMldSnpgTxGenQueries)	long	The value of the object sapMldSnpgTxGenQueries indicates the number of MLD General Queries transmitted on this SAP.
sapMldSnpgTxGrpSpecQueries [Sap Mld Snpg Tx Grp Spec Queries] (sapMldSnpgTxGrpSpecQueries)	long	The value of the object sapMldSnpgTxGrpSpecQueries indicates the number of MLD Group-Specific Queries transmitted on this SAP.
sapMldSnpgTxSrcSpecQueries [Sap Mld Snpg Tx Src Spec Queries] (sapMldSnpgTxSrcSpecQueries)	long	The value of the object sapMldSnpgTxSrcSpecQueries indicates the number of MLD Group-And-Source-Specific Queries transmitted on this SAP.

Table 510 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapMldSnpgTxV1Leaves [Sap Mld Snpg Tx V1 Leaves] (sapMldSnpgTxV1Leaves)	long	The value of the object sapMldSnpgTxV1Leaves indicates the number of MLDv1 Leaves transmitted on this SAP.
sapMldSnpgTxV1Reports [Sap Mld Snpg Tx V1 Reports] (sapMldSnpgTxV1Reports)	long	The value of the object sapMldSnpgTxV1Reports indicates the number of MLDv1 Reports transmitted on this SAP.
sapMldSnpgTxV2Reports [Sap Mld Snpg Tx V2 Reports] (sapMldSnpgTxV2Reports)	long	The value of the object sapMldSnpgTxV2Reports indicates the number of MLDv2 Reports transmitted on this SAP.
<p>L2AccessInterfaceMvrStats MIB entry name: saplgmpSnpgStatsEntry Entry description: saplgmpSnpgStatsEntry is an entry in the saplgmpSnpgStatsTable. Each entry contains IGMP snooping statics for a SAP in a TIs. Table description (for saplgmpSnpgStatsTable): saplgmpSnpgStatsTable contains statistics on IGMP snooping per SAP. Supports realtime plotting Supports scheduled collection Monitored class: vpls.AbstractL2AccessInterface</p>		
saplgmpSnpgMvrFromVplsCfgDrops [Sap Igmp Snpg Mvr From Vpls Cfg Drops] (saplgmpSnpgMvrFromVplsCfgDrops)	long	The value of the object saplgmpSnpgMvrFromVplsCfgDrops indicates the number of times an IGMP Group or Query is dropped because of applying the saplgmpSnpgCfgMvrFromVplsId configuration on this SAP.
saplgmpSnpgMvrToSapCfgDrops [Sap Igmp Snpg Mvr To Sap Cfg Drops] (saplgmpSnpgMvrToSapCfgDrops)	long	The value of the object saplgmpSnpgMvrToSapCfgDrops indicates the number times an IGMP Report or Query is dropped because of applying the saplgmpSnpgCfgMvrToSapPortId and saplgmpSnpgCfgMvrToSapEncapVal configuration on this SAP.

Table 510 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>L2AccessIfDhcpRelayCfgStats</p> <p>MIB entry name: sapTlsDhcpStatsEntry</p> <p>Entry description: DHCP statistics for a TLS SAP.</p> <p>Table description (for sapTlsDhcpStatsTable): sapTlsDhcpStatsTable contains DHCP statistics related to a TLS SAP. This table complements sapTlsInfoTable, and contains an entry for each Tls SAP. Rows in this table are created and deleted automatically by the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: vpls.AbstractL2AccessInterface</p>		
sapTlsDhcpStatsCIntDropdPckts [Sap Tls Dhcp Stats CInt Dropd Pckts] (sapTlsDhcpStatsCIntDropdPckts)	long	The value of the object sapTlsDhcpStatsCIntDropdPckts indicates the number of DHCP client packets that have been dropped on this SAP.
sapTlsDhcpStatsCIntForwdPckts [Sap Tls Dhcp Stats CInt Forwd Pckts] (sapTlsDhcpStatsCIntForwdPckts)	long	The value of the object sapTlsDhcpStatsCIntForwdPckts indicates the number of DHCP client packets that have been forwarded on this SAP.
sapTlsDhcpStatsCIntProxLSPckts [Sap Tls Dhcp Stats CInt Prox LSPckts] (sapTlsDhcpStatsCIntProxLSPckts)	long	The value of the object sapTlsDhcpStatsCIntProxLSPckts indicates the number of DHCP client packets that have been proxied on this SAP based on a lease state. The lease itself can have been obtained from a DHCP or RADIUS server. This is the so called lease split functionality.
sapTlsDhcpStatsCIntProxLUDBPckts [Sap Tls Dhcp Stats CInt Prox LUDBPckts] (sapTlsDhcpStatsCIntProxLUDBPckts)	long	The value of the object sapTlsDhcpStatsCIntProxLUDBPckts indicates the number of DHCP client packets that have been proxied on this SAP based on the local user database.
sapTlsDhcpStatsCIntProxNqPckts [Sap Tls Dhcp Stats CInt Prox Nq Pckts] (sapTlsDhcpStatsCIntProxNqPckts)	long	The value of the object sapTlsDhcpStatsCIntProxNqPckts indicates the number of DHCP client packets that have been proxied on this SAP based on data received from a Diameter NASREQ server.

Table 510 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapTlsDhcpStatsClntProxRadPckts [Sap Tls Dhcp Stats Clnt Prox Rad Pckts] (sapTlsDhcpStatsClntProxRadPckts)	long	The value of the object sapTlsDhcpStatsClntProxRadPckts indicates the number of DHCP client packets that have been proxied on this SAP based on data received from a RADIUS server.
sapTlsDhcpStatsClntSnoopdPckts [Sap Tls Dhcp Stats Clnt Snoopd Pckts] (sapTlsDhcpStatsClntSnoopdPckts)	long	The value of the object sapTlsDhcpStatsClntSnoopdPckts indicates the number of DHCP client packets that have been snooped on this SAP.
sapTlsDhcpStatsGenForceRenPckts [Sap Tls Dhcp Stats Gen Force Ren Pckts] (sapTlsDhcpStatsGenForceRenPckts)	long	The value of the object sapTlsDhcpStatsGenForceRenPckts indicates the number of DHCP FORCERENEW messages spoofed on this SAP to the DHCP clients.
sapTlsDhcpStatsGenReleasePckts [Sap Tls Dhcp Stats Gen Release Pckts] (sapTlsDhcpStatsGenReleasePckts)	long	The value of the object sapTlsDhcpStatsGenReleasePckts indicates the number of DHCP RELEASE messages spoofed on this SAP to the DHCP server.
sapTlsDhcpStatsSrvrDropdPckts [Sap Tls Dhcp Stats Srvr Dropd Pckts] (sapTlsDhcpStatsSrvrDropdPckts)	long	The value of the object sapTlsDhcpStatsSrvrDropdPckts indicates the number of DHCP server packets that have been dropped on this SAP.
sapTlsDhcpStatsSrvrForwdPckts [Sap Tls Dhcp Stats Srvr Forwd Pckts] (sapTlsDhcpStatsSrvrForwdPckts)	long	The value of the object sapTlsDhcpStatsSrvrForwdPckts indicates the number of DHCP server packets that have been forwarded on this SAP.
sapTlsDhcpStatsSrvrSnoopdPckts [Sap Tls Dhcp Stats Srvr Snoopd Pckts] (sapTlsDhcpStatsSrvrSnoopdPckts)	long	The value of the object sapTlsDhcpStatsSrvrSnoopdPckts indicates the number of DHCP server packets that have been snooped on this SAP.

Table description (for tmnxPimSnpgGenStatsTable): tmnxPimSnpgGenStatsTable lists PIM snooping statistics for a particular PIM snooping instance. Supports realtime plotting Supports scheduled collection Monitored class: vpls.SitePimSnooping		
numSGTypes [Num SGTypes] (tmnxPimSnpgGenStatsSGTypes)	long	The value of tmnxPimSnpgGenStatsSGTypes indicates the number of entries in tmnxPimSnpgGrpSrcTable for which the source type is 'sg'.
numStarGTypes [Num Star GTypes] (tmnxPimSnpgGenStatsStarGTypes)	long	The value of tmnxPimSnpgGenStatsStarGTypes indicates the number of entries in tmnxPimSnpgGrpSrcTable for which the source type is 'starG'.

Table 510 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SiteSourceGroupRecordPimSnoopingStats</p> <p>MIB entry name: tmnxPimSnpGrpSrcStatsEntry</p> <p>Entry description: An entry in the tmnxPimSnpGrpSrcStatsTable.</p> <p>Table description (for tmnxPimSnpGrpSrcStatsTable): tmnxPimSnpGrpSrcStatsTable contains statistics for the entries in the tmnxPimSnpGrpSrcTable. These statistics are collected by the forwarding engine.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • vpls.SitePimSnooping • vpls.SiteSourceGroupRecord 		
tmnxPimSnpGrpSrcStatsFwdedOct [Tmnx Pim Snp Grp Src Stats Fwded Oct] (tmnxPimSnpGrpSrcStatsFwdedOct)	long	The value of tmnxPimSnpGrpSrcStatsFwdedOct indicates the number of multicast octets that were forwarded to the interfaces in the outgoing interface list. tmnxPimSnpGrpSrcClfTable lists all the interfaces in the outgoing interface list.
tmnxPimSnpGrpSrcStatsFwdedPkts [Tmnx Pim Snp Grp Src Stats Fwded Pkts] (tmnxPimSnpGrpSrcStatsFwdedPkts)	long	The value of tmnxPimSnpGrpSrcStatsFwdedPkts indicates the number of multicast packets that were forwarded to the interfaces in the outgoing interface list. tmnxPimSnpGrpSrcClfTable lists all the interfaces in the outgoing interface list.
<p>VxlanIcmpSnpErrorStats</p> <p>MIB entry name: vxlanIcmpSnpStatsEntry</p> <p>Entry description: vxlanIcmpSnpStatsEntry is an entry in the vxlanIcmpSnpStatsTable. Each entry contains IGMP snooping statics for a VXLAN in a TIs.</p> <p>Table description (for vxlanIcmpSnpStatsTable): vxlanIcmpSnpStatsTable contains statistics on IGMP snooping per VXLAN.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: vpls.Site</p>		
vxlanIcmpSnpImportPolicyDrops [Vxlan Icmp Snp Import Policy Drops] (vxlanIcmpSnpImportPolicyDrops)	long	The value of the object vxlanIcmpSnpImportPolicyDrops indicates the number of times an IGMP Group or Source is dropped because of applying an import policy on this VXLAN.

Table 510 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vxlanIcmpSnpgMaxNumGroupsDrops [Vxlan Icmp Snpg Max Num Groups Drops] (vxlanIcmpSnpgMaxNumGroupsDrops)	long	The value of the object vxlanIcmpSnpgMaxNumGroupsDrops indicates the number of times an IGMP Group is dropped because of exceeding the configured maximum number of groups on this VXLAN.
vxlanIcmpSnpgMaxNumGrpSrcsDrops [Vxlan Icmp Snpg Max Num Grp Srcs Drops] (vxlanIcmpSnpgMaxNumGrpSrcsDrops)	long	The value of the object vxlanIcmpSnpgMaxNumGrpSrcsDrops indicates the number of times an IGMP Group Source is dropped because of exceeding the configured maximum number of group sources per group on this VXLAN.
vxlanIcmpSnpgMaxNumSourcesDrops [Vxlan Icmp Snpg Max Num Sources Drops] (vxlanIcmpSnpgMaxNumSourcesDrops)	long	The value of the object vxlanIcmpSnpgMaxNumSourcesDrops indicates the number of times an IGMP Source is dropped because of exceeding the configured maximum number of sources per group on this VXLAN.
vxlanIcmpSnpgMcacPolicyDrops [Vxlan Icmp Snpg Mcac Policy Drops] (vxlanIcmpSnpgMcacPolicyDrops)	long	The value of the object vxlanIcmpSnpgMcacPolicyDrops indicates the number of times an IGMP Group is dropped because of applying a multicast CAC policy on this VXLAN.
vxlanIcmpSnpgMcsFailures [Vxlan Icmp Snpg Mcs Failures] (vxlanIcmpSnpgMcsFailures)	long	The value of the object vxlanIcmpSnpgMcsFailures indicates the number of times an IGMP Group on this VXLAN could not be synced to the MCS (multi-chassis synchronization) database.
vxlanIcmpSnpgRxBadEncodedPkts [Vxlan Icmp Snpg Rx Bad Encoded Pkts] (vxlanIcmpSnpgRxBadEncodedPkts)	long	The value of the object vxlanIcmpSnpgRxBadEncodedPkts indicates the number of IGMP packets dropped on this VXLAN because of a bad encoding.
vxlanIcmpSnpgRxBadIcmpChksumPkts [Vxlan Icmp Snpg Rx Bad Icmp Chksum Pkts] (vxlanIcmpSnpgRxBadIcmpChksumPkts)	long	The value of the object vxlanIcmpSnpgRxBadIcmpChksumPkts indicates the number of dropped IGMP packets on this VXLAN because of a bad IGMP header checksum.
vxlanIcmpSnpgRxBadIpChksumPkts [Vxlan Icmp Snpg Rx Bad Ip Chksum Pkts] (vxlanIcmpSnpgRxBadIpChksumPkts)	long	The value of the object vxlanIcmpSnpgRxBadIpChksumPkts indicates the number of dropped IGMP packets on this VXLAN because of a bad IPv4 header checksum.

Table 510 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vxlanIcmpSnpgRxBadLenPkts [Vxlan Icmp Snpg Rx Bad Len Pkts] (vxlanIcmpSnpgRxBadLenPkts)	long	The value of the object vxlanIcmpSnpgRxBadLenPkts indicates the number of IGMP packets dropped on this VXLAN because of a bad length.
vxlanIcmpSnpgRxLocalScopePkts [Vxlan Icmp Snpg Rx Local Scope Pkts] (vxlanIcmpSnpgRxLocalScopePkts)	long	The value of the object vxlanIcmpSnpgRxLocalScopePkts indicates the number of IGMP packets received on the link-local scope IPv6 multicast address.
vxlanIcmpSnpgRxNoRtrAlertPkts [Vxlan Icmp Snpg Rx No Rtr Alert Pkts] (vxlanIcmpSnpgRxNoRtrAlertPkts)	long	The value of the object vxlanIcmpSnpgRxNoRtrAlertPkts indicates the number of IGMP packets dropped on this VXLAN because the Router Alert Option in the IP packet is not set.
vxlanIcmpSnpgRxRsvdScopePkts [Vxlan Icmp Snpg Rx Rsvd Scope Pkts] (vxlanIcmpSnpgRxRsvdScopePkts)	long	The value of the object vxlanIcmpSnpgRxRsvdScopePkts indicates the number of IGMP packets received on the reserved scope IPv6 multicast address.
vxlanIcmpSnpgRxWrongVersionPkts [Vxlan Icmp Snpg Rx Wrong Version Pkts] (vxlanIcmpSnpgRxWrongVersionPkts)	long	The value of the object vxlanIcmpSnpgRxWrongVersionPkts indicates the total number of IGMP packets with a wrong version received on this VXLAN.
vxlanIcmpSnpgRxZeroSrcAdrPkts [Vxlan Icmp Snpg Rx Zero Src Adr Pkts] (vxlanIcmpSnpgRxZeroSrcAdrPkts)	long	The value of the object vxlanIcmpSnpgRxZeroSrcAdrPkts indicates the number of IGMP packets dropped on this VXLAN because they contain a zero source IPv4 address.
vxlanIcmpSnpgSendQueryCfgDrops [Vxlan Icmp Snpg Send Query Cfg Drops] (vxlanIcmpSnpgSendQueryCfgDrops)	long	The value of the object vxlanIcmpSnpgSendQueryCfgDrops indicates the number of times an IGMP Query is dropped because the object sapIcmpSnpgCfgSendQueries for this VXLAN is set to 'enabled(1)'.

Table 510 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>VxlanIcmpSnpgStats</p> <p>MIB entry name: vxlanIcmpSnpgStatsEntry</p> <p>Entry description: vxlanIcmpSnpgStatsEntry is an entry in the vxlanIcmpSnpgStatsTable. vxlanIcmpSnpgFwdGenQueries [Vxlan Icmp Snpg Fwd Gen Queries] (vxlanIcmpSnpgFwdGenQueries)	long	The value of the object vxlanIcmpSnpgFwdGenQueries indicates the number of IGMP General Queries forwarded on this VXLAN.
vxlanIcmpSnpgFwdGrpSpecQueries [Vxlan Icmp Snpg Fwd Grp Spec Queries] (vxlanIcmpSnpgFwdGrpSpecQueries)	long	The value of the object vxlanIcmpSnpgFwdGrpSpecQueries indicates the number of IGMP Group-Specific Queries forwarded on this VXLAN.
vxlanIcmpSnpgFwdSrcSpecQueries [Vxlan Icmp Snpg Fwd Src Spec Queries] (vxlanIcmpSnpgFwdSrcSpecQueries)	long	The value of the object vxlanIcmpSnpgFwdSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries forwarded on this VXLAN.
vxlanIcmpSnpgFwdUnknownType [Vxlan Icmp Snpg Fwd Unknown Type] (vxlanIcmpSnpgFwdUnknownType)	long	The value of the object vxlanIcmpSnpgFwdUnknownType indicates the number of IGMP unknown type packets forwarded on this VXLAN.
vxlanIcmpSnpgFwdV1Reports [Vxlan Icmp Snpg Fwd V1 Reports] (vxlanIcmpSnpgFwdV1Reports)	long	The value of the object vxlanIcmpSnpgFwdV1Reports indicates the number of IGMPv1 Reports forwarded on this VXLAN.
vxlanIcmpSnpgFwdV2Leaves [Vxlan Icmp Snpg Fwd V2 Leaves] (vxlanIcmpSnpgFwdV2Leaves)	long	The value of the object vxlanIcmpSnpgFwdV2Leaves indicates the number of IGMPv2 Leaves forwarded on this VXLAN.

Table 510 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vxlanIcmpSnpgFwdV2Reports [Vxlan Icmp Snpg Fwd V2 Reports] (vxlanIcmpSnpgFwdV2Reports)	long	The value of the object vxlanIcmpSnpgFwdV2Reports indicates the number of IGMPv2 Reports forwarded on this VXLAN.
vxlanIcmpSnpgFwdV3Reports [Vxlan Icmp Snpg Fwd V3 Reports] (vxlanIcmpSnpgFwdV3Reports)	long	The value of the object vxlanIcmpSnpgFwdV3Reports indicates the number of IGMPv3 Reports forwarded on this VXLAN.
vxlanIcmpSnpgRxGenQueries [Vxlan Icmp Snpg Rx Gen Queries] (vxlanIcmpSnpgRxGenQueries)	long	The value of the object vxlanIcmpSnpgRxGenQueries indicates the number of IGMP General Queries received on this VXLAN.
vxlanIcmpSnpgRxGrpSpecQueries [Vxlan Icmp Snpg Rx Grp Spec Queries] (vxlanIcmpSnpgRxGrpSpecQueries)	long	The value of the object vxlanIcmpSnpgRxGrpSpecQueries indicates the number of IGMP Group-Specific Queries received on this VXLAN.
vxlanIcmpSnpgRxSrcSpecQueries [Vxlan Icmp Snpg Rx Src Spec Queries] (vxlanIcmpSnpgRxSrcSpecQueries)	long	The value of the object vxlanIcmpSnpgRxSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries received on this VXLAN.
vxlanIcmpSnpgRxUnknownType [Vxlan Icmp Snpg Rx Unknown Type] (vxlanIcmpSnpgRxUnknownType)	long	The value of the object vxlanIcmpSnpgRxUnknownType indicates the number of IGMP unknown type packets received on this VXLAN.
vxlanIcmpSnpgRxV1Reports [Vxlan Icmp Snpg Rx V1 Reports] (vxlanIcmpSnpgRxV1Reports)	long	The value of the object vxlanIcmpSnpgRxV1Reports indicates the number of IGMPv1 Reports received on this SAP.
vxlanIcmpSnpgRxV2Leaves [Vxlan Icmp Snpg Rx V2 Leaves] (vxlanIcmpSnpgRxV2Leaves)	long	The value of the object vxlanIcmpSnpgRxV2Leaves indicates the number of IGMPv2 Leaves received on this VXLAN.
vxlanIcmpSnpgRxV2Reports [Vxlan Icmp Snpg Rx V2 Reports] (vxlanIcmpSnpgRxV2Reports)	long	The value of the object vxlanIcmpSnpgRxV2Reports indicates the number of IGMPv2 Reports received on this VXLAN.

Table 510 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vxlanIgmpSnpG Rx V3 Reports [Vxlan Igmp SnpG Rx V3 Reports] (vxlanIgmpSnpG Rx V3 Reports)	long	The value of the object vxlanIgmpSnpG Rx V3 Reports indicates the number of IGMPv3 Reports received on this SAP.
vxlanIgmpSnpG Tx Gen Queries [Vxlan Igmp SnpG Tx Gen Queries] (vxlanIgmpSnpG Tx Gen Queries)	long	The value of the object vxlanIgmpSnpG Tx Gen Queries indicates the number of IGMP General Queries transmitted on this VXLAN.
vxlanIgmpSnpG Tx Grp Spec Queries [Vxlan Igmp SnpG Tx Grp Spec Queries] (vxlanIgmpSnpG Tx Grp Spec Queries)	long	The value of the object vxlanIgmpSnpG Tx Grp Spec Queries indicates the number of IGMP Group-Specific Queries transmitted on this VXLAN.
vxlanIgmpSnpG Tx Src Spec Queries [Vxlan Igmp SnpG Tx Src Spec Queries] (vxlanIgmpSnpG Tx Src Spec Queries)	long	The value of the object vxlanIgmpSnpG Tx Src Spec Queries indicates the number of IGMP Group-And-Source-Specific Queries transmitted on this VXLAN.
vxlanIgmpSnpG Tx V1 Reports [Vxlan Igmp SnpG Tx V1 Reports] (vxlanIgmpSnpG Tx V1 Reports)	long	The value of the object vxlanIgmpSnpG Tx V1 Reports indicates the number of IGMPv1 Reports transmitted on this VXLAN.
vxlanIgmpSnpG Tx V2 Leaves [Vxlan Igmp SnpG Tx V2 Leaves] (vxlanIgmpSnpG Tx V2 Leaves)	long	The value of the object vxlanIgmpSnpG Tx V2 Leaves indicates the number of IGMPv2 Leaves transmitted on this VXLAN.
vxlanIgmpSnpG Tx V2 Reports [Vxlan Igmp SnpG Tx V2 Reports] (vxlanIgmpSnpG Tx V2 Reports)	long	The value of the object vxlanIgmpSnpG Tx V2 Reports indicates the number of IGMPv2 Reports transmitted on this VXLAN.
vxlanIgmpSnpG Tx V3 Reports [Vxlan Igmp SnpG Tx V3 Reports] (vxlanIgmpSnpG Tx V3 Reports)	long	The value of the object vxlanIgmpSnpG Tx V3 Reports indicates the number of IGMPv3 Reports transmitted on this VXLAN.

Table 511 vprn statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SapDataTrigStats</p> <p>MIB entry name: tmnxSapDataTrigStatsEntry</p> <p>Entry description: Each conceptual row contains detailed data trigger statistics information about a SAP. Entries in this table are created and removed automatically by the system. The system creates conceptual rows in this table only for SAP's where the value of sapStatHostMacLearnOptions is equal to 'dataTriggered'. The system does not create rows unless there is at least one non-zero counter.</p> <p>Table description (for tmnxSapDataTrigStatsTable): The tmnxSapDataTrigStatsTable contains detailed statistics information about the data triggers involved in creating data-triggered subscriber hosts. The typical usage of this table is to fill in the part of the index that identifies a SAP, and perform a partial walk to get all the statistics applicable to that SAP.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: vprn.ServiceAccessPoint</p>		
dropUnsupportedProtocol [Drop Unsupported Protocol] (tmnxSapDataTrigStatsVal)	java. math. BigInteger	The value of the object tmnxSapDataTrigStatsVal indicates the value of the statistics contained in this conceptual row.
encapValue [Encap Value] (sapEncapValue)	long	The value of the label used to identify this SAP on the access port specified by sapPortId.
portId [Port Id] (sapPortId)	long	The ID of the access port where this SAP is defined.
servicId [Service Id] (svclId)	long	The value of the object svclId specifies the Service identifier. This value should be unique within the service domain.

Table 511 vprn statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
statsId [Stats Id] (tmnxSapDataTrigStatsId)	long	The value of tmnxSapDataTrigStatsId indicates the identifier of the SAP data trigger statistics contained in this conceptual row. It is a meaningless number generated by this system.

Table 512 vrrp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InstanceAdditionalStats</p> <p>MIB entry name: tmnxVrrpRouterStatsEntry</p> <p>Entry description: Each row entry in the tmnxVrrpRouterStatsTable represents additional columns in the vrrpRouterStatsTable for statistics specific to the Nokia SROS series VRRP implementation.</p> <p>Table description (for tmnxVrrpRouterStatsTable): The tmnxVrrpRouterStatsTable provides an extension of the vrrpRouterStatsTable in the VRRP-MIB. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vrrpRouterStatsTable, and the augmenting table, tmnxVrrpRouterStatsTable. This in effect extends the vrrpRouterStatsTable with additional columns.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: vrrp.Instance</p>		
addressListDiscards [Address List Discards] (tmnxVrrpStatsAddressListDiscards)	long	The total number of VRRP advertisement packets discarded because the address list did not match the locally configured list for the virtual router.
advertiseIntervalDiscards [Advertise Interval Discards] (tmnxVrrpStatsAdvertiseIntervalDiscards)	long	The total number of VRRP advertisement packets discarded because the advertisement interval in the received packet was different than the one configured for the local virtual router.
advertiseSent [Advertise Sent] (tmnxVrrpStatsAdvertiseSent)	long	The total number of VRRP advertisements sent by this virtual router.
masterChanges [Master Changes] (tmnxVrrpStatsMasterChanges)	long	The value for tmnxVrrpStatsMasterChanges indicates the total number of times the virtual router has seen the master virtual router change.
preemptEvents [Preempt Events] (tmnxVrrpStatsPreemptEvents)	long	The value for tmnxVrrpStatsPreemptEvents indicates the total number of times the virtual router has preempted another non-owner master with lower priority.

Table 512 vrrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
preemptedEvents [Preempted Events] (tmnxVrrpStatsPreemptedEvents)	long	The value for tmnxVrrpStatsPreemptedEvents indicates the total number of times the virtual router has been preempted by another non-owner master with higher priority.
totalDiscards [Total Discards] (tmnxVrrpStatsTotalDiscards)	long	The total number of VRRP advertisement packets discarded for any reason. This includes the packets discarded due to advertise interval mismatch and address list mismatch.
InstanceStats MIB entry name: vrrpRouterStatsEntry Entry description: An entry in the table, containing statistics information about a given virtual router. Table description (for vrrpRouterStatsTable): Table of virtual router statistics. Supports realtime plotting Supports scheduled collection Monitored class: vrrp.Instance		
addressListErrors [Address List Errors] (vrrpStatsAddressListErrors)	long	The total number of packets received for which the address list does not match the locally configured list for the virtual router.
advertiseIntervalErrors [Advertise Interval Errors] (vrrpStatsAdvertiseIntervalErrors)	long	The total number of VRRP advertisement packets received for which the advertisement interval is different than the one configured for the local virtual router.
advertiseRcvd [Advertise Rcvd] (vrrpStatsAdvertiseRcvd)	long	The total number of VRRP advertisements received by this virtual router.
authFailures [Auth Failures] (vrrpStatsAuthFailures)	long	The total number of VRRP packets received that do not pass the authentication check.

Table 512 vrrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
authTypeMismatch [Auth Type Mismatch] (vrrpStatsAuthTypeMismatch)	long	The total number of packets received with 'Auth Type' not equal to the locally configured authentication method ('vrrpOperAuthType').
becomeMaster [Become Master] (vrrpStatsBecomeMaster)	long	The total number of times that this virtual router's state has transitioned to MASTER.
invalidAuthType [Invalid Auth Type] (vrrpStatsInvalidAuthType)	long	The total number of packets received with an unknown authentication type.
invalidTypePktsRcvd [Invalid Type Pkts Rcvd] (vrrpStatsInvalidTypePktsRcvd)	long	The number of VRRP packets received by the virtual router with an invalid value in the 'type' field.
ipTtlErrors [Ip Ttl Errors] (vrrpStatsIpTtlErrors)	long	The total number of VRRP packets received by the virtual router with IP TTL (Time-To-Live) not equal to 255.
packetLengthErrors [Packet Length Errors] (vrrpStatsPacketLengthErrors)	long	The total number of packets received with a packet length less than the length of the VRRP header.
priorityZeroPktsRcvd [Priority Zero Pkts Rcvd] (vrrpStatsPriorityZeroPktsRcvd)	long	The total number of VRRP packets received by the virtual router with a priority of '0'.
priorityZeroPktsSent [Priority Zero Pkts Sent] (vrrpStatsPriorityZeroPktsSent)	long	The total number of VRRP packets sent by the virtual router with a priority of '0'.

Table 512 vrrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InstanceV6AdditionalStats</p> <p>MIB entry name: tVrrpRtrStatisticsEntry</p> <p>Entry description: Each row entry in the tVrrpRtrStatisticsTable represents additional columns in the vrrpRouterStatisticsTable for statistics specific to the Nokia SROS series VRRP implementation.</p> <p>Table description (for tVrrpRtrStatisticsTable): The tVrrpRtrStatisticsTable provides an extension of the vrrpRouterStatisticsTable in the TIMETRA-VRRP-V3-MIB. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vrrpRouterStatisticsTable, and the augmenting table, tVrrpRtrStatisticsTable. This in effect extends the vrrpRouterStatisticsTable with additional columns.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: vrrp.InstanceV6</p>		
advertiseIntervalDiscards [Advertise Interval Discards] (tVrrpStatAdvIntvlDiscards)	long	The value of tVrrpStatAdvIntvlDiscards indicates the total number of VRRP advertisement packets discarded because the advertisement interval in the received packet was different than the one configured for the local virtual router.
advertiseSent [Advertise Sent] (tVrrpStatAdvertiseSent)	long	The value of tVrrpStatAdvertiseSent indicates the total number of VRRP advertisements sent by this virtual router.
masterChanges [Master Changes] (tVrrpStatMasterChanges)	long	The value for tVrrpStatMasterChanges indicates the total number of times the virtual router has seen the master virtual router change.
preemptEvents [Preempt Events] (tVrrpStatPreemptEvents)	long	The value for tVrrpStatPreemptEvents indicates the total number of times the virtual router has preempted another non-owner master with lower priority.
preemptedEvents [Preempted Events] (tVrrpStatPreemptedEvents)	long	The value for tVrrpStatPreemptedEvents indicates the total number of times the virtual router has been preempted by another non-owner master with higher priority.

Table 512 vrrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalDiscards [Total Discards] (tVrrpStatTotalDiscards)	long	The value of tVrrpStatTotalDiscards indicates the total number of VRRP advertisement packets discarded for any reason. This includes the packets discarded due to advertise interval mismatch and address list mismatch.
InstanceV6Stats MIB entry name: vrrpRouterStatisticsEntry Entry description: An entry in the table, containing statistics information about a given virtual router. Table description (for vrrpRouterStatisticsTable): Table of virtual router statistics. Supports realtime plotting Supports scheduled collection Monitored class: vrrp.InstanceV6		
addressListErrors [Address List Errors] (vrrpStatisticsAddressListErrors)	long	The total number of packets received for which the address list does not match the locally configured list for the virtual router. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.
advertiseIntervalErrors [Advertise Interval Errors] (vrrpStatisticsAdvIntervalErrors)	long	The total number of VRRP advertisement packets received for which the advertisement interval is different than the one configured for the local virtual router. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.
advertiseRcvd [Advertise Rcvd] (vrrpStatisticsRcvdAdvertisements)	long	The total number of VRRP advertisements received by this virtual router. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.

Table 512 vrrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
becomeMaster [Become Master] (vrrpStatisticsMasterTransitions)	long	The total number of times that this virtual router's state has transitioned to MASTER. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.
invalidAuthType [Invalid Auth Type] (vrrpStatisticsRcvdInvalidAuthentications)	long	The total number of packets received with an unknown authentication type.
invalidTypePktsRcvd [Invalid Type Pkts Rcvd] (vrrpStatisticsRcvdInvalidTypePkts)	long	The number of VRRP packets received by the virtual router with an invalid value in the 'type' field. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.
ipTtlErrors [Ip Ttl Errors] (vrrpStatisticsIpTtlErrors)	long	The total number of VRRP packets received by the Virtual router with IPv4 TTL (for VRRP over IPv4) or IPv6 Hop Limit (for VRRP over IPv6) not equal to 255. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.
packetLengthErrors [Packet Length Errors] (vrrpStatisticsPacketLengthErrors)	long	The total number of packets received with a packet length less than the length of the VRRP header. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.
priorityZeroPktsRcvd [Priority Zero Pkts Rcvd] (vrrpStatisticsRcvdPriZeroPackets)	long	The total number of VRRP packets received by the virtual router with a priority of '0'. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.

Table 512 vrrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
priorityZeroPktsSent [Priority Zero Pkts Sent] (vrrpStatisticsSentPriZeroPackets)	long	The total number of VRRP packets sent by the virtual router with a priority of '0'. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.

Table 513 wlanw statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>IsaMemberUsageStats</p> <p>MIB entry name: tmnxWlanGwIsaMemberEntry</p> <p>Entry description: Each conceptual row contains WLAN Gateway-specific status and basic statistics information about a member of a WLAN Gateway ISA Group. Entries in this table are created and removed automatically by the system.</p> <p>Table description (for tmnxWlanGwIsaMemberTable): The tmnxWlanGwIsaMemberTable contains status and statistics information about the members of a WLAN Gateway ISA Group. A member of a WLAN Gateway ISA Group can be mapped to a physical ISA MDA.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: wlanw.IsaMember</p>		
activatedEgrEncapGrpMembers [Activated Egr Encap Grp Members] (tmnxWlanGwIsaMemberEegMemberAct)	long	The value of tmnxWlanGwIsaMemberEegMemberAct indicates the number of activated Egress Encapsulation Group members associated with this ISA group member.
numOfUEs [Num Of UEs] (tmnxWlanGwIsaMemberNumUe)	long	The value of tmnxWlanGwIsaMemberNumUe indicates the number of UE processed by the MDA associated with this member.
pendingEgrEncapGrpMembers [Pending Egr Encap Grp Members] (tmnxWlanGwIsaMemberEegMemberPend)	long	The value of tmnxWlanGwIsaMemberEegMemberPend indicates the number of pending Egress Encapsulation Group members associated with this ISA group member.
softGRETunnels [Soft GRE Tunnels] (tmnxWlanGwIsaMemberNumSoftGreTu)	long	The value of tmnxWlanGwIsaMemberNumSoftGreTu indicates the number of tunnels processed by the MDA associated with this member.
tunnelQoSProblems [Tunnel QoS Problems] (tmnxWlanGwIsaMemberTuQoSProblem)	long	The value of tmnxWlanGwIsaMemberTuQoSProblem indicates the number of tunnel QoS infrastructure configuration instances on the MDA associated with this ISA group member that have a resource issue.

Table 513 wlanw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>MgwPeerStats</p> <p>MIB entry name: tmnxWlanGwMgwEntry</p> <p>Entry description: Each conceptual row represents information about a particular Mobile Gateway connected to this system. Rows are created or removed automatically by the system.</p> <p>Table description (for tmnxWlanGwMgwTable): The tmnxWlanGwMgwTable contains information about Mobile Gateways connected to this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: wlanw.MgwPeer</p>		
peerIpAddress [Peer Ip Address] (tmnxWlanGwMgwRemoteAddr)	String	The value of the object tmnxWlanGwMgwRemoteAddr indicates the IP address of the Mobile Gateway, that is the source IP address in the tunnel header of received packets.
peerIpAddressType [Peer Ip Address Type] (tmnxWlanGwMgwRemoteAddrType)	int	The value of tmnxWlanGwMgwRemoteAddrType indicates the address type of tmnxWlanGwMgwRemoteAddr. The only values allowed are 'ipv4' and 'ipv6'.
peerTcpPort [Peer Tcp Port] (tmnxWlanGwMgwRemotePort)	long	The value of tmnxWlanGwMgwRemotePort indicates the remote port.
statsId [Stats Id] (tmnxWlanMgwStatsId)	long	The value of tmnxWlanMgwStatsId indicates the identifier of the WLAN Gateway statistics contained in this conceptual row. It is a meaningless number generated by this system.
statsName [Stats Name] (tmnxWlanMgwStatsName)	String	The value of the object tmnxWlanMgwStatsName indicates the human-readable identifier of the statistics contained in this conceptual row.
statsValue [Stats Value] (tmnxWlanMgwStatsVal)	java. math. BigInteger	The value of the object tmnxWlanMgwStatsVal indicates the value of the statistics contained in this conceptual row.

Table 513 wlanGw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
virtualRouterId [Virtual Router Id] (vRtrID)	long	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
<p>WlanGwGtpStats MIB entry name: tmnxWlanGwGtpStatsEntry Entry description: Each conceptual row contains detailed information about a GTP statistic. Entries in this table are created and removed automatically by the system. Table description (for tmnxWlanGwGtpStatsTable): The tmnxWlanGwGtpStatsTable contains detailed statistics information about the GTP protocol in this system. The typical usage of this table is to perform a walk to get all the statistics. Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement</p>		
statsId [Stats Id] (tmnxWlanGwGtpStatsId)	long	The value of tmnxWlanGwGtpStatsId indicates the identifier of the GTP statistics contained in this conceptual row. It is a meaningless number generated by this system.
wlanGwGtpStatsName [Wlan Gw Gtp Stats Name] (tmnxWlanGwGtpStatsName)	String	The value of the object tmnxWlanGwGtpStatsName indicates the human-readable identifier of the statistics contained in this conceptual row.
wlanGwGtpStatsVal [Wlan Gw Gtp Stats Val] (tmnxWlanGwGtpStatsVal)	java. math. BigInteger	The value of the object tmnxWlanGwGtpStatsVal indicates the value of the statistics contained in this conceptual row.

Table 513 wlanw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>WlanGwIsaMemberStats</p> <p>MIB entry name: tmnxWlanGwGrpEntry</p> <p>Entry description: Each conceptual row represents a WLAN Gateway Integrated Service Adaptor Group. Entries in this table can be created or deleted via SNMP operations.</p> <p>Table description (for tmnxWlanGwGrpTable): The tmnxWlanGwGrpTable contains objects to configure WLAN Gateway Integrated Service Adaptor (ISA) Groups. A WLAN Gateway ISA group is used to represent multiple hardware adaptors as a single entity, allowing for warm redundancy between multiple WLAN Gateway ISA's.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: wlanw.IsaMember</p>		
grpId [Grp Id] (tmnxWlanGwGrpId)	long	The value of the object tmnxWlanGwGrpId specifies the identifier of the WLAN Gateway Integrated Service Adaptor group.
isaMemberId [Isa Member Id] (tmnxWlanGwIsaMemberId)	long	The value of the object tmnxWlanGwIsaMemberId indicates the identifier of this WLAN Gateway ISA Group member.
wlanGwIsaMemberStatsName [Wlan Gw Isa Member Stats Name] (tmnxWlanGwIsaMemberStatsName)	String	The value of the object tmnxWlanGwIsaMemberStatsName indicates the human-readable identifier of the statistics contained in this conceptual row.
wlanGwIsaMemberStatsType [Wlan Gw Isa Member Stats Type] (tmnxWlanGwIsaMemberStatsType)	long	The value of tmnxWlanGwIsaMemberStatsType indicates the type of WLAN Gateway statistics contained in this conceptual row.
wlanGwIsaMemberStatsVal [Wlan Gw Isa Member Stats Val] (tmnxWlanGwIsaMemberStatsVal)	long	The value of the object tmnxWlanGwIsaMemberStatsVal indicates the lower 32-bits word of the statistics contained in this conceptual row.

Table 513 wlan gw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
WlanGwStats MIB entry name: tmnxWlanGwObjs Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement		
gtpSessionNumber [Gtp Session Number] (tmnxWlanGwMgwNumHeldSe)	long	The value of the object tmnxWlanGwMgwNumHeldSe indicates the actual number of GTP session contexts held by this system while their associated UE are disconnected.
mgwNumber [Mgw Number] (tmnxWlanGwNumMgw)	long	The value of the object tmnxWlanGwNumMgw indicates the actual number of Mobile Gateways connected to this system. It is equal to the number of rows in the tmnxWlanGwMgwTable.
resourceProblem [Resource Problem] (tmnxWlanGwResrcProblem)	boolean	The value of the object tmnxWlanGwResrcProblem indicates if there is a resource problem detected while attempting to activate some part of the WLAN Gateway configuration of this system.
softGreTunnelNumber [Soft Gre Tunnel Number] (tmnxWlanGwNumSoftGreTu)	long	The value of the object tmnxWlanGwNumSoftGreTu indicates the actual number of tunnels terminated by this system.
softGreTunnelPeakNumber [Soft Gre Tunnel Peak Number] (tmnxWlanGwPeakNumSoftGreTu)	long	The value of the object tmnxWlanGwPeakNumSoftGreTu indicates the peak number of tunnels terminated by this system at any time, since the system was last initialized or the value of this object was last reset.
ueNumber [Ue Number] (tmnxWlanGwNumUe)	long	The value of the object tmnxWlanGwNumUe indicates the actual number of UE processed by this system.

Table 513 wlanw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
uePeakNumber [Ue Peak Number] (tmnxWlanGwPeakNumUe)	long	The value of the object tmnxWlanGwPeakNumUe indicates the peak number of UE processed by this system at any time, since the system was last initialized or the value of this object was last reset.

Table 514 wpp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>WppPortalStats</p> <p>MIB entry name: tmnxWppPortalEntry</p> <p>Entry description: Each conceptual row represents information about a particular WPP portal. Entries in this table can be created or deleted via SNMP operations. In order to create a conceptual row in this table, a row in the tmnxWppTable with the same value of the object vRtrID must exist.</p> <p>Table description (for tmnxWppPortalTable): The tmnxWppPortalTable contains objects to configure the WPP portals of this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: wpp.Portal</p>		
portalName [Portal Name] (tmnxWppPortalName)	String	The value of tmnxWppPortalName specifies the name of this WPP portal.
routerId [Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
wppPortalStatsInstance [Wpp Portal Stats Instance] (tmnxWppPortalStatsInstance)	long	The value of the object tmnxWppPortalStatsInstance indicates the instance identifier of the statistics contained in this conceptual row. Together with the value of tmnxWppPortalStatsType it indicates unambiguously what the value of tmnxWppPortalStatsVal means. For example: if the value of the object tmnxWppPortalStatsType is equal to 'event', the value of tmnxWppPortalStatsInstance indicates the identifier of the type of event that this conceptual row refers to, for example 'noResources', and the value of tmnxWppPortalStatsVal indicates the number of times a 'no resources' event occurred for this WPP portal.

Table 514 wpp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
wppPortalStatsName [Wpp Portal Stats Name] (tmnxWppPortalStatsName)	String	The value of the object tmnxWppPortalStatsName indicates the human-readable identifier of the statistics contained in this conceptual row. In the same example, the value of tmnxWppPortalStatsName is '(SCCRP) Start-Control-Connection-Reply'.
wppPortalStatsType [Wpp Portal Stats Type] (tmnxWppPortalStatsType)	int	The value of the object tmnxWppPortalStatsType indicates the type of WPP statistics contained in this conceptual row.
wppPortalStatsVal [Wpp Portal Stats Val] (tmnxWppPortalStatsVal)	long	The value of the object tmnxWppPortalStatsVal indicates the value of the statistics contained in this conceptual row.
<p>WppStats MIB entry name: vRtrConfEntry Entry description: Each row entry represents a virtual router in the system. Entries can be created and deleted via SNMP SET operations. Creation requires a SET request containing vRtrRowStatus, vRtrName and vRtrType. Note that rows in this table are usually created by the agent itself as a side affect of some other configuration; for example, when a service vprn is created by setting the appropriate objects in the TIMETRA-SERV-MIB. There will always be at least two row entries in this table, one of these entries represents the base or transport router and the other represents the management router. These entries are created when the system is initialized and can never be deleted. Table description (for vRtrConfTable): The vRtrConfTable has an entry for each virtual router configured in the system. Supports realtime plotting Supports scheduled collection Monitored class: wpp.Site</p>		
routerId [Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.

Table 514 wpp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
wppStatsInstance [Wpp Stats Instance] (tmnxWppStatsInstance)	long	The value of the object tmnxWppStatsInstance indicates the instance identifier of the statistics contained in this conceptual row. Together with the value of tmnxWppStatsType it indicates unambiguously what the value of tmnxWppStatsVal means. For example: if the value of the object tmnxWppStatsType is equal to 'event', the value of tmnxWppStatsInstance indicates the identifier of the type of event that this conceptual row refers to, for example 'noResources', and the value of tmnxWppStatsVal indicates the number of times a 'no resources' event occurred for this WPP portal.
wppStatsName [Wpp Stats Name] (tmnxWppStatsName)	String	The value of the object tmnxWppStatsName indicates the human-readable identifier of the statistics contained in this conceptual row. In the same example, the value of tmnxWppStatsName is '(SCCRP) Start-Control-Connection-Reply'.
wppStatsType [Wpp Stats Type] (tmnxWppStatsType)	int	The value of the object tmnxWppStatsType indicates the type of WPP statistics contained in this conceptual row.
wppStatsVal [Wpp Stats Val] (tmnxWppStatsVal)	long	The value of the object tmnxWppStatsVal indicates the value of the statistics contained in this conceptual row.

Table 515 aaa statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>IsaRadiusServerStats</p> <p>MIB entry name: tmnxRadIsaSrvStatsEntry</p> <p>Entry description: Each conceptual row represents a type of statistics of a connection with a particular RADIUS server. Rows in this table are automatically created and destroyed by the system.</p> <p>Table description (for tmnxRadIsaSrvStatsTable): The tmnxRadIsaSrvStatsTable contains statistics information about the connections with ISA RADIUS servers.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: aaa.IsaRadiusServerConnection</p>		
statsName [Stats Name] (tmnxRadIsaSrvStatsName)	String	The value of the object tmnxRadIsaSrvStatsName indicates the human-readable identifier of the statistics contained in this conceptual row.
statsType [Stats Type] (tmnxRadIsaSrvStatsType)	long	The value of tmnxRadIsaSrvStatsType indicates the type of ISA RADIUS server statistics contained in this conceptual row.
statsVal [Stats Val] (tmnxRadIsaSrvStatsValue)	long	The value of the object tmnxRadIsaSrvStatsValue indicates the value of the statistics contained in this conceptual row.
<p>L2tpRadiusEntryStats</p> <p>MIB entry name: tmnxL2tpApServStatsEntry</p> <p>Entry description: Each row represents statistics about a specific server of a specify L2TP accounting policy. Rows in this table are created automatically by the system.</p> <p>Table description (for tmnxL2tpApServStatsTable): The tmnxL2tpApServStatsTable presents statistics of l2tp-accounting-policies' RADIUS servers.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: aaa.L2tpRadiusEntry</p>		

Table 515 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
failedRequestsPackets [Failed Requests Packets] (tmnxL2tpApServStatsReqSendFail)	long	The value of tmnxL2tpApServStatsReqSendFail indicates the number of RADIUS request packets that could not be transmitted for this server.
invAuthReponsesPackets [Inv Auth Reponses Packets] (tmnxL2tpApServStatsRespInvAuth)	long	The value of tmnxL2tpApServStatsRespInvAuth indicates the number of RADIUS response packets with an invalid Authenticator received from this server.
pendingRequestsPackets [Pending Requests Packets] (tmnxL2tpApServStatsReqPending)	long	The value of tmnxL2tpApServStatsReqPending indicates the number of RADIUS requests that are currently pending for this server.
reponsesPackets [Reponses Packets] (tmnxL2tpApServStatsRxResponses)	long	The value of tmnxL2tpApServStatsRxResponses indicates the number of RADIUS response packets received from this server.
requestsPackets [Requests Packets] (tmnxL2tpApServStatsTxRequests)	long	The value of tmnxL2tpApServStatsTxRequests indicates the number of RADIUS request packets transmitted for this server.
statRetries [Stat Retries] (tmnxL2tpApServStatsSendRetries)	long	The value of tmnxL2tpApServStatsSendRetries indicates the number of retries to a different server for a single accounting request for this connection with this RADIUS server.
timeOut [Time Out] (tmnxL2tpApServStatsReqTimeout)	long	The value of tmnxL2tpApServStatsReqTimeout indicates the number of RADIUS requests that have timed out for this server.

Table 515 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>RadPSStats</p> <p>MIB entry name: tmnxRadProxSrvEntry</p> <p>Entry description: Each conceptual row represents information about a particular RADIUS Proxy Server. Entries in this table can be created or deleted via SNMP operations.</p> <p>Table description (for tmnxRadProxSrvTable): The tmnxRadProxSrvTable contains objects to configure the RADIUS Proxy Servers of this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: aaa.RadiusProxyServer</p>		
proxSrvName [Prox Srv Name] (tmnxRadProxSrvName)	String	The value of tmnxRadProxSrvName specifies the name of this RADIUS Proxy server.
radPSStatsRxAcctRequest [Rad PSSStats Rx Acct Request] (tmnxRadPSStatsRxAcctRequest)	long	The value of tmnxRadPSStatsRxAcctRequest indicates the number of Accounting-Request packets received by this RADIUS Proxy Server.
radPSStatsRxAdminDown [Rad PSSStats Rx Admin Down] (tmnxRadPSStatsRxAdminDown)	long	The value of tmnxRadPSStatsRxAdminDown indicates the number of packets received by this RADIUS Proxy Server that were rejected because it is administratively shut down.
radPSStatsRxAuthRequest [Rad PSSStats Rx Auth Request] (tmnxRadPSStatsRxAuthRequest)	long	The value of tmnxRadPSStatsRxAuthRequest indicates the number of Access-Request packets received by this RADIUS Proxy Server.
radPSStatsRxDropped [Rad PSSStats Rx Dropped] (tmnxRadPSStatsRxDropped)	long	The value of tmnxRadPSStatsRxDropped indicates the number of packets received by this RADIUS Proxy Server but dropped.
radPSStatsRxDroppedByPython [Rad PSSStats Rx Dropped By Python] (tmnxRadPSStatsRxDroppedByPython)	long	The value of tmnxRadPSStatsRxDroppedByPython indicates the number of packets received by this RADIUS Proxy Server but dropped by Python.

Table 515 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
radPSStatsRxInvAcctAuth [Rad PSSStats Rx Inv Acct Auth] (tmnxRadPSStatsRxInvAcctAuth)	long	The value of tmnxRadPSStatsRxInvAcctAuth indicates the number of accounting packets received by this RADIUS Proxy Server that were rejected because they contained an invalid Authenticator field.
radPSStatsRxInvAcctStatusTyp [Rad PSSStats Rx Inv Acct Status Typ] (tmnxRadPSStatsRxInvAcctStatusTyp)	long	The value of tmnxRadPSStatsRxInvAcctStatusTyp indicates the number of accounting packets received by this RADIUS Proxy Server that were rejected because they contained an invalid Acct-Status-Type attribute.
radPSStatsRxInvAttr [Rad PSSStats Rx Inv Attr] (tmnxRadPSStatsRxInvAttr)	long	The value of tmnxRadPSStatsRxInvAttr indicates the number of packets received by this RADIUS Proxy Server that were rejected because one of the attributes was incorrectly encoded.
radPSStatsRxInvCode [Rad PSSStats Rx Inv Code] (tmnxRadPSStatsRxInvCode)	long	The value of tmnxRadPSStatsRxInvCode indicates the number of packets received by this RADIUS Proxy Server that were rejected because they had an invalid Code field.
radPSStatsRxInvLen [Rad PSSStats Rx Inv Len] (tmnxRadPSStatsRxInvLen)	long	The value of tmnxRadPSStatsRxInvLen indicates the number of packets received by this RADIUS Proxy Server that were rejected because their length was invalid.
radPSStatsRxInvMsgAuth [Rad PSSStats Rx Inv Msg Auth] (tmnxRadPSStatsRxInvMsgAuth)	long	The value of tmnxRadPSStatsRxInvMsgAuth indicates the number of packets received by this RADIUS Proxy Server that were rejected because they contained an invalid Message-Authenticator attribute.
radPSStatsRxInvPassword [Rad PSSStats Rx Inv Password] (tmnxRadPSStatsRxInvPassword)	long	The value of tmnxRadPSStatsRxInvPassword indicates the number of packets received by this RADIUS Proxy Server that were rejected because the User-Password attribute could not be decoded.
radPSStatsRxInvUserName [Rad PSSStats Rx Inv User Name] (tmnxRadPSStatsRxInvUserName)	long	The value of tmnxRadPSStatsRxInvUserName indicates the number of packets received by this RADIUS Proxy Server that were rejected because they contained an invalid User-Name attribute.

Table 515 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
radPSStatsRxNoAaaPol [Rad PSSStats Rx No Aaa Pol] (tmnxRadPSStatsRxNoAaaPol)	long	The value of tmnxRadPSStatsRxNoAaaPol indicates the number of packets received by this RADIUS Proxy Server that were rejected because it has no RADIUS server policy configured for that type of packet.
radPSStatsRxNoAcctStatusTyp [Rad PSSStats Rx No Acct Status Typ] (tmnxRadPSStatsRxNoAcctStatusTyp)	long	The value of tmnxRadPSStatsRxNoAcctStatusTyp indicates the number of accounting packets received by this RADIUS Proxy Server that were rejected because they contained no Acct-Status-Type attribute.
radPSStatsRxNoLoadBKey [Rad PSSStats Rx No Load BKey] (tmnxRadPSStatsRxNoLoadBKey)	long	The value of tmnxRadPSStatsRxNoLoadBKey indicates the number of packets received by this RADIUS Proxy Server that were rejected because the selected RADIUS server policy's algorithm (tmnxRadSrvPlcyAlgorithm) is set to 'hashBased' and no load balance key (tmnxRadProxSrvLoadBalanceKey) is configured.
radPSStatsRxNoMemory [Rad PSSStats Rx No Memory] (tmnxRadPSStatsRxNoMemory)	long	The value of tmnxRadPSStatsRxNoMemory indicates the number of packets that were rejected by this RADIUS server because there was not enough memory to store them.
radPSStatsRxPacket [Rad PSSStats Rx Packet] (tmnxRadPSStatsRxPacket)	long	The value of tmnxRadPSStatsRxPacket indicates the number of packets received by this RADIUS Proxy Server.
radPSStatsRxRetransmit [Rad PSSStats Rx Retransmit] (tmnxRadPSStatsRxRetransmit)	long	The value of tmnxRadPSStatsRxRetransmit indicates the number of packets received by this RADIUS Proxy Server that were rejected because they are retransmitted.
radPSStatsRxUserOverload [Rad PSSStats Rx User Overload] (tmnxRadPSStatsRxUserOverload)	long	The value of tmnxRadPSStatsRxUserOverload indicates the number of packets that were rejected by this RADIUS server because the registered user indicated to be in overload.
radPSStatsTxAcctResponse [Rad PSSStats Tx Acct Response] (tmnxRadPSStatsTxAcctResponse)	long	The value of tmnxRadPSStatsTxAcctResponse indicates the number of Accounting-Response packets transmitted by this RADIUS Proxy Server.

Table 515 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
radPSStatsTxAuthAck [Rad PSSStats Tx Auth Ack] (tmnxRadPSStatsTxAuthAck)	long	The value of tmnxRadPSStatsTxAuthAck indicates the number of Access-Accept packets transmitted by this RADIUS Proxy Server.
radPSStatsTxAuthChallenge [Rad PSSStats Tx Auth Challenge] (tmnxRadPSStatsTxAuthChallenge)	long	The value of tmnxRadPSStatsTxAuthChallenge indicates the number of Access-Challenge packets transmitted by this RADIUS Proxy Server.
radPSStatsTxAuthReject [Rad PSSStats Tx Auth Reject] (tmnxRadPSStatsTxAuthReject)	long	The value of tmnxRadPSStatsTxAuthReject indicates the number of Access-Reject packets transmitted by this RADIUS Proxy Server.
radPSStatsTxCacheAttrTooLong [Rad PSSStats Tx Cache Attr Too Long] (tmnxRadPSStatsTxCacheAttrTooLong)	long	The value of tmnxRadPSStatsTxCacheAttrTooLong indicates the number of packets that could not be cached by this RADIUS Proxy Server because the total length of the attributes is too long.
radPSStatsTxCacheKeyTooLong [Rad PSSStats Tx Cache Key Too Long] (tmnxRadPSStatsTxCacheKeyTooLong)	long	The value of tmnxRadPSStatsTxCacheKeyTooLong indicates the number of packets that could not be cached by this RADIUS Proxy Server because the key information present in the packet was too long.
radPSStatsTxCacheMaxEntries [Rad PSSStats Tx Cache Max Entries] (tmnxRadPSStatsTxCacheMaxEntries)	long	The value of tmnxRadPSStatsTxCacheMaxEntries indicates the number of packets that could not be cached by this RADIUS Proxy Server because the limit has been reached.
radPSStatsTxCacheNoKey [Rad PSSStats Tx Cache No Key] (tmnxRadPSStatsTxCacheNoKey)	long	The value of tmnxRadPSStatsTxCacheNoKey indicates the number of packets that could not be cached by this RADIUS Proxy Server because the key information was not present in the packet.
radPSStatsTxDropped [Rad PSSStats Tx Dropped] (tmnxRadPSStatsTxDropped)	long	The value of tmnxRadPSStatsTxDropped indicates the number of packets dropped by this RADIUS Proxy Server before transmission.

Table 515 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
radPSStatsTxDroppedByPython [Rad PSSStats Tx Dropped By Python] (tmnxRadPSStatsTxDroppedByPython)	long	The value of tmnxRadPSStatsTxDroppedByPython indicates the number of packets that were dropped by this RADIUS server because the packet was dropped by the Python script.
radPSStatsTxNoMemory [Rad PSSStats Tx No Memory] (tmnxRadPSStatsTxNoMemory)	long	The value of tmnxRadPSStatsTxNoMemory indicates the number of packets that could not be transmitted by this RADIUS Proxy Server because there was not enough memory.
radPSStatsTxNoRadiusServer [Rad PSSStats Tx No Radius Server] (tmnxRadPSStatsTxNoRadiusServer)	long	The value of tmnxRadPSStatsTxNoRadiusServer indicates the number of packets that were dropped by this RADIUS server because the RADIUS server policy has no servers configured.
radPSStatsTxSendFailure [Rad PSSStats Tx Send Failure] (tmnxRadPSStatsTxSendFailure)	long	The value of tmnxRadPSStatsTxSendFailure indicates the number of packets that were dropped by this RADIUS server because the packet could not get transmitted to one of the servers in the RADIUS server policy.
radPSStatsTxServerAuthFail [Rad PSSStats Tx Server Auth Fail] (tmnxRadPSStatsTxServerAuthFail)	long	The value of tmnxRadPSStatsTxServerAuthFail indicates the number of packets that were dropped because the RADIUS server replied with a packet which failed authentication (invalid response Authenticator or Message-Authenticator attribute).
radPSStatsTxServerInvAttr [Rad PSSStats Tx Server Inv Attr] (tmnxRadPSStatsTxServerInvAttr)	long	The value of tmnxRadPSStatsTxServerInvAttr indicates the number of packets that were dropped because the RADIUS server replied with a packet with an invalid attribute.
radPSStatsTxServerInvCode [Rad PSSStats Tx Server Inv Code] (tmnxRadPSStatsTxServerInvCode)	long	The value of tmnxRadPSStatsTxServerInvCode indicates the number of packets that were dropped because the RADIUS server replied with a packet with an invalid Code field.
radPSStatsTxServerTimeout [Rad PSSStats Tx Server Timeout] (tmnxRadPSStatsTxServerTimeout)	long	The value of tmnxRadPSStatsTxServerTimeout indicates the number of packets that were dropped because the RADIUS servers have timed out.

Table 515 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
radPSStatsTxUserOverload [Rad PSSStats Tx User Overload] (tmnxRadPSStatsTxUserOverload)	long	The value of tmnxRadPSStatsTxUserOverload indicates the number of packets that were dropped because the registered user indicated to be in overload.
routerId [Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
<p>RadPSStatus</p> <p>MIB entry name: tmnxRadProxSrvEntry</p> <p>Entry description: Each conceptual row represents information about a particular RADIUS Proxy Server. Entries in this table can be created or deleted via SNMP operations.</p> <p>Table description (for tmnxRadProxSrvTable): The tmnxRadProxSrvTable contains objects to configure the RADIUS Proxy Servers of this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: aaa.RadiusProxyServer</p>		
proxSrvName [Prox Srv Name] (tmnxRadProxSrvName)	String	The value of tmnxRadProxSrvName specifies the name of this RADIUS Proxy server.
radPSStatusCacheEntries [Rad PSSStatus Cache Entries] (tmnxRadPSStatusCacheEntries)	long	The value of tmnxRadPSStatusCacheEntries indicates the number of entries in the cache of this RADIUS Proxy Server.
radPSStatusCacheEntriesReg [Rad PSSStatus Cache Entries Reg] (tmnxRadPSStatusCacheEntriesReg)	long	The value of tmnxRadPSStatusCacheEntriesReg indicates the number of entries in the cache of this RADIUS Proxy Server. Pending entries have a registered application. An example of an application that could register to a cache entry is Subscriber Management of DHCP clients.

Table 515 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
routerId [Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
<p>RadRouteDownloadStats</p> <p>MIB entry name: tmnxRadRDStatsEntry</p> <p>Entry description: Each conceptual row represents statistics about a particular Route Downloader. Rows are created and destroyed automatically by the system.</p> <p>Table description (for tmnxRadRDStatsTable): The tmnxRadRDStatsTable contains statistics about the RADIUS Route Downloaders of this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: aaa.RouteDownloadPolicy</p>		
accessAcceptedPkts [Access Accepted Pkts] (tmnxRadRDStatsRxAccessAccept)	long	The value of tmnxRadRDStatsRxAccessReject indicates the number of Access-Accept packets received by this Route Downloader.
accessDroppedPkts [Access Dropped Pkts] (tmnxRadRDStatsRxAccessAcceptDrop)	long	The value of tmnxRadRDStatsRxAccessAcceptDrop indicates the number of Access-Accept packets received but dropped by this Route Downloader.
accessRejectedPkts [Access Rejected Pkts] (tmnxRadRDStatsRxAccessReject)	long	The value of tmnxRadRDStatsRxAccessReject indicates the number of Access-Reject packets received by this Route Downloader.
accessRequests [Access Requests] (tmnxRadRDStatsTxAccessRequest)	long	The value of tmnxRadRDStatsTxAccessRequest indicates the number of Access-Requests sent by this Route Downloader.

Table 515 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
accessRetries [Access Retries] (tmnxRadRDStatsTxAccessReqRetry)	long	The value of tmnxRadRDStatsTxAccessReqRetry indicates the number of Access-Requests retries for this Route Downloader.
installingFailures [Installing Failures] (tmnxRadRDStatsRtmFailures)	long	The value of tmnxRadRDStatsRtmFailures indicates the number of times installing received routes failed for this Route Downloader.
lastAccessAccept [Last Access Accept] (tmnxRadRDStatsRxLastAccessAccept)	long	The value of tmnxRadRDStatsRxLastAccessAccept indicates when this Route Downloader last received an Access-Accept packet.
lastAccessReject [Last Access Reject] (tmnxRadRDStatsRxLastAccessReject)	long	The value of tmnxRadRDStatsRxLastAccessReject indicates when this Route Downloader last received an Access-Reject packet.
lastAccessRequest [Last Access Request] (tmnxRadRDStatsTxLastAccessReq)	long	The value of tmnxRadRDStatsTxLastAccessReq indicates when this Route Downloader last sent an Access-Request packet.
lastAccessRetry [Last Access Retry] (tmnxRadRDStatsTxLastAccReqRetry)	long	The value of tmnxRadRDStatsTxLastAccReqRetry indicates the time of the last Access-Request retry.
numOfDownloads [Num Of Downloads] (tmnxRadRDStatsDownloads)	long	The value of tmnxRadRDStatsDownloads indicates the number of downloads started by this Route Downloader.
remainingTime [Remaining Time] (tmnxRadRDStatsRemainingDownlTime)	long	The value of tmnxRadRDStatsRemainingDownlTime indicates the remaining time before the next download attempt.
retryTime [Retry Time] (tmnxRadRDStatsRemainingRetryTime)	long	The value of tmnxRadRDStatsRemainingRetryTime indicates the remaining time before the next download retry.

Table 515 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
routesReceived [Routes Received] (tmnxRadRDStatsRoutesReceived)	long	The value of tmnxRadRDStatsRoutesReceived indicates the number of routes received in the last completed route download process.
<p>RadSrvPlcyMsgBufStats</p> <p>MIB entry name: tmnxRadSrvPlcyEntry</p> <p>Entry description: Each entry represents the configuration for a specific RADIUS servers policy. Entries in this table can be created and deleted via SNMP SET operations to tmnxRadSrvPlcyRowStatus.</p> <p>Table description (for tmnxRadSrvPlcyTable): The tmnxRadSrvPlcyTable allows configuration of how to access a group of RADIUS servers.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: aaa.RadiusServerPolicy</p>		
bufMsgPlcyName [Buf Msg Plcy Name] (tmnxRadSrvPlcyName)	String	The value of tmnxRadSrvPlcyName specifies a specific RADIUS servers policy.
lastBufClean [Last Buf Clean] (tmnxRadSrvPlcyLastBufClean)	long	The value of tmnxRadSrvPlcyLastBufClean indicates the sysUpTime at the time of the most recent reset (empty) of the message buffer.
lastBufStatsClean [Last Buf Stats Clean] (tmnxRadSrvPlcyLastBufStatsClean)	long	The value of tmnxRadSrvPlcyLastBufStatsClean indicates the sysUpTime at the time of the most recent reset of the message buffer statistics.
nbrAcctInterimBuf [Nbr Acct Interim Buf] (tmnxRadSrvPlcyNbrAcctInterimBuf)	long	The value of tmnxRadSrvPlcyNbrAcctInterimBuf indicates the number of RADIUS accounting interim update messages that are currently buffered for this radius server policy.
nbrAcctInterimDrop [Nbr Acct Interim Drop] (tmnxRadSrvPlcyNbrAcctInterimDrop)	long	The value of tmnxRadSrvPlcyNbrAcctInterimDrop indicates the number of RADIUS accounting interim update messages that were dropped from the buffer because their lifetime expired.

Table 515 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
nbrAcctStopBuf [Nbr Acct Stop Buf] (tmnxRadSrvPlcyNbrAcctStopBuf)	long	The value of tmnxRadSrvPlcyNbrAcctStopBuf indicates the number of RADIUS accounting stop messages that are currently buffered for this radius server policy.
nbrAcctStopDrop [Nbr Acct Stop Drop] (tmnxRadSrvPlcyNbrAcctStopDrop)	long	The value of tmnxRadSrvPlcyNbrAcctStopDrop indicates the number of RADIUS accounting stop messages that were dropped from the buffer because their lifetime expired.
<p>RadSrvPlcyStats MIB entry name: tmnxRadSrvPlcyEntry Entry description: Each entry represents the configuration for a specific RADIUS servers policy. Entries in this table can be created and deleted via SNMP SET operations to tmnxRadSrvPlcyRowStatus. Table description (for tmnxRadSrvPlcyTable): The tmnxRadSrvPlcyTable allows configuration of how to access a group of RADIUS servers. Supports realtime plotting Supports scheduled collection Monitored class: aaa.RadiusServerPolicy</p>		
plcyName [Plcy Name] (tmnxRadSrvPlcyName)	String	The value of tmnxRadSrvPlcyName specifies a specific RADIUS servers policy.
radSrvPlcyStatsAcctFailed [Rad Srv Plcy Stats Acct Failed] (tmnxRadSrvPlcyStatsAcctFailed)	long	The value of tmnxRadSrvPlcyStatsAcctFailed indicates the number of accounting failures for this policy.
radSrvPlcyStatsAuthFailed [Rad Srv Plcy Stats Auth Failed] (tmnxRadSrvPlcyStatsAuthFailed)	long	The value of tmnxRadSrvPlcyStatsAuthFailed indicates the number of authentication failures for this policy.
radSrvPlcyStatsRatioFailure [Rad Srv Plcy Stats Ratio Failure] (tmnxRadSrvPlcyStatsFailureRatio)	int	The value of tmnxRadSrvPlcyStatsFailureRatio indicates the transaction failure ratio for this policy.

Table 515 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
radSrvPlcyStatsRatioReject [Rad Srv Plcy Stats Ratio Reject] (tmnxRadSrvPlcyStatsRejectRatio)	int	The value of tmnxRadSrvPlcyStatsRejectRatio indicates the ratio of access-rejects in the auth responses for this policy.
radSrvPlcyStatsRatioSuccess [Rad Srv Plcy Stats Ratio Success] (tmnxRadSrvPlcyStatsSuccessRatio)	int	The value of tmnxRadSrvPlcyStatsSuccessRatio indicates the transaction success ratio for this policy.
radSrvPlcyStatsReqRejected [Rad Srv Plcy Stats Req Rejected] (tmnxRadSrvPlcyStatsReqRejected)	long	The value of tmnxRadSrvPlcyStatsReqRejected indicates the number of RADIUS transaction requests that were not transmitted due to unacceptable configuration.
radSrvPlcyStatsReqSendFail [Rad Srv Plcy Stats Req Send Fail] (tmnxRadSrvPlcyStatsReqSendFail)	long	The value of tmnxRadSrvPlcyStatsReqSendFail indicates the number of RADIUS transaction requests that could not be transmitted.
radSrvPlcyStatsReqSendRetry [Rad Srv Plcy Stats Req Send Retry] (tmnxRadSrvPlcyStatsReqSendRetry)	long	The value of tmnxRadSrvPlcyStatsReqSendRetry indicates the number of times a RADIUS request packet was retransmitted to a server.
radSrvPlcyStatsReqTimeout [Rad Srv Plcy Stats Req Timeout] (tmnxRadSrvPlcyStatsReqTimeout)	long	The value of tmnxRadSrvPlcyStatsReqTimeout indicates the number of RADIUS transaction requests that have timed out.
radSrvPlcyStatsRxResponses [Rad Srv Plcy Stats Rx Responses] (tmnxRadSrvPlcyStatsRxResponses)	long	The value of tmnxRadSrvPlcyStatsRxResponses indicates the number of RADIUS transaction responses received.
radSrvPlcyStatsTxRequests [Rad Srv Plcy Stats Tx Requests] (tmnxRadSrvPlcyStatsTxRequests)	long	The value of tmnxRadSrvPlcyStatsTxRequests indicates the number of RADIUS transaction requests transmitted.

plcyName [Plcy Name] (tmnxRadSrvPlcyName)	String	The value of tmnxRadSrvPlcyName specifies a specific RADIUS servers policy.
radSrvStatsAcctAvgDelay10 [Rad Srv Stats Acct Avg Delay 10] (tmnxRadSrvStatsAcctAvgDelay10)	long	The value of tmnxRadSrvStatsAcctAvgDelay10 indicates in microseconds, the average response delay for the last 10 accounting packets.
radSrvStatsAcctAvgDelay100 [Rad Srv Stats Acct Avg Delay 100] (tmnxRadSrvStatsAcctAvgDelay100)	long	The value of tmnxRadSrvStatsAcctAvgDelay100 indicates in microseconds, the average response delay for the last 100 accounting packets.
radSrvStatsAcctAvgDelay1000 [Rad Srv Stats Acct Avg Delay 1000] (tmnxRadSrvStatsAcctAvgDelay1000)	long	The value of tmnxRadSrvStatsAcctAvgDelay1000 indicates in microseconds, the average response delay for the last 1000 accounting packets.
radSrvStatsAcctAvgDelay10000 [Rad Srv Stats Acct Avg Delay 10000] (tmnxRadSrvStatsAcctAvgDelay10000)	long	The value of tmnxRadSrvStatsAcctAvgDelay10000 indicates in microseconds, the average response delay for the last 10000 accounting packets.
radSrvStatsAuthAvgDelay10 [Rad Srv Stats Auth Avg Delay 10] (tmnxRadSrvStatsAuthAvgDelay10)	long	The value of tmnxRadSrvStatsAuthAvgDelay10 indicates in microseconds, the average response delay for the last 10 authentication packets.

Table 515 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
radSrvStatsAuthAvgDelay100 [Rad Srv Stats Auth Avg Delay 100] (tmnxRadSrvStatsAuthAvgDelay100)	long	The value of tmnxRadSrvStatsAuthAvgDelay100 indicates in microseconds, the average response delay for the last 100 authentication packets.
radSrvStatsAuthAvgDelay1000 [Rad Srv Stats Auth Avg Delay 1000] (tmnxRadSrvStatsAuthAvgDelay1000)	long	The value of tmnxRadSrvStatsAuthAvgDelay1000 indicates in microseconds, the average response delay for the last 1000 authentication packets.
radSrvStatsAuthAvgDelay10000 [Rad Srv Stats Auth Avg Delay 10000] (tmnxRadSrvStatsAuthAvgDelay10000)	long	The value of tmnxRadSrvStatsAuthAvgDelay10000 indicates in microseconds, the average response delay for the last 10000 authentication packets.
radSrvStatsFailedAcct [Rad Srv Stats Failed Acct] (tmnxRadSrvStatsAcctFailed)	long	The value of tmnxRadSrvStatsAcctFailed indicates the number of accounting failures for this server.
radSrvStatsFailedAuth [Rad Srv Stats Failed Auth] (tmnxRadSrvStatsAuthFailed)	long	The value of tmnxRadSrvStatsAuthFailed indicates the number of authentication failures for this server.
radSrvStatsReqOvrlSendFail [Rad Srv Stats Req Ovr Id Send Fail] (tmnxRadSrvStatsReqOvrlSendFail)	long	The value of tmnxRadSrvStatsReqOvrlSendFail indicates the number of RADIUS request packets that could not be transmitted while the RADIUS server was in overload.
radSrvStatsReqPending [Rad Srv Stats Req Pending] (tmnxRadSrvStatsReqPending)	long	The value of tmnxRadSrvStatsReqPending indicates the number of RADIUS request packets that are currently waiting for reply from this server.
radSrvStatsReqSendFailure [Rad Srv Stats Req Send Failure] (tmnxRadSrvStatsReqSendFailure)	long	The value of tmnxRadSrvStatsReqSendFailure indicates the number of RADIUS request packets that could not be transmitted for this server.
radSrvStatsReqTimeout [Rad Srv Stats Req Timeout] (tmnxRadSrvStatsReqTimeout)	long	The value of tmnxRadSrvStatsReqTimeout indicates the number of RADIUS request packets that have timed out for this server.

Table 515 aaa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
radSrvStatsRespInvAuth [Rad Srv Stats Resp Inv Auth] (tmnxRadSrvStatsRespInvAuth)	long	The value of tmnxRadSrvStatsRespInvAuth indicate the number of RADIUS response packets with an invalid Authenticator received from this server.
radSrvStatsRespInvMsgAuth [Rad Srv Stats Resp Inv Msg Auth] (tmnxRadSrvStatsRespInvMsgAuth)	long	The value of tmnxRadSrvStatsRespInvMsgAuth indicate the number of RADIUS response packets with an invalid Message-Authenticator attribute received from this server.
radSrvStatsRxResponses [Rad Srv Stats Rx Responses] (tmnxRadSrvStatsRxResponses)	long	The value of tmnxRadSrvStatsRxResponses indicates the number of RADIUS response packets received from this server.
radSrvStatsTxRequests [Rad Srv Stats Tx Requests] (tmnxRadSrvStatsTxRequests)	long	The value of tmnxRadSrvStatsTxRequests indicates the number of RADIUS request packets transmitted for this server.

Table 516 aapolicy statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AAIcapServerStats</p> <p>MIB entry name: tmnxBsxIcapServerStatsEntry</p> <p>Entry description: Each entry represents the statistics for a particular AA URL filter and ICAP server. An index with a valid ICAP server (an existing row in tmnxBsxIcapServerTable) and tmnxChassisIndex set to one with a zero value for each of tmnxBsxCardSlotNum and tmnxMDASlotNum will return the following per group, URL Filter and ICAP server: * the summarized statistics, and * the worst case values for tmnxBsxIcapServerStatsRoundTrip and tmnxBsxIcapServerStatsConnUtil Entries will appears in this table only for equipped ISA-AA MDAs associated with an AA group, URL filter and ICAP server.</p> <p>Table description (for tmnxBsxIcapServerStatsTable): The tmnxBsxIcapServerStatsTable contains operational information related to a particular ICAP server associated with a particular URL filter. Each row contains the status and performance-oriented statistics information per group, URL filter and ICAP server for an ISA-AA uniquely identified by the tmnxChassisIndex, tmnxCardSlotNum, and the tmnxMDASlotNum.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: aapolicy.AAIcapServer</p>		
connEstCount [Conn Est Count] (tmnxBsxIcapServerStatsConnEst)	long	The value of tmnxBsxIcapServerStatsConnEst indicates the current number of TCP connections which are established with the ICAP server.
connTotalCount [Conn Total Count] (tmnxBsxIcapServerStatsConnTotal)	long	The value of tmnxBsxIcapServerStatsConnTotal indicates the number of TCP connections which can be established with the ICAP server.
connUtilCount [Conn Util Count] (tmnxBsxIcapServerStatsConnUtil)	long	The value of tmnxBsxIcapServerStatsConnUtil indicates the percentage of TCP connections utilized over the last 10 second period.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
daughterCardSlotId [Daughter Card Slot Id] (tmnxMDASlotNum)	int	The unique value which identifies this MDA slot within a specific IOM card in the system. Rows with a tmnxMDASlotNum value of zero (0) represent the special case of an IOM card without MDA slots but that instead has its ports directly on the IOM card itself. In that case, there should be only that one row entry in the tmnxMDATable for that IOM card.
reqErrorsCount [Req Errors Count] (tmnxBsxlcapServerStatsReqErrors)	java. math. BigInteger	The value of tmnxBsxlcapServerStatsReqErrors indicates the number of ICAP requests that were unable to be sent to the ICAP server.
reqRateCount [Req Rate Count] (tmnxBsxlcapServerStatsReqRate)	long	The value of tmnxBsxlcapServerStatsReqRate indicates the average number of ICAP requests sent per second over the last 10 second period.
requestsCount [Requests Count] (tmnxBsxlcapServerStatsRequests)	java. math. BigInteger	The value of tmnxBsxlcapServerStatsRequests indicates the number of ICAP requests which have been sent to this ICAP server.
respAllowCount [Resp Allow Count] (tmnxBsxlcapServerStatsRespAllow)	java. math. BigInteger	The value of tmnxBsxlcapServerStatsRespAllow indicates the number of ICAP allow responses which have been received from the ICAP server.
respBlockCount [Resp Block Count] (tmnxBsxlcapServerStatsRespBlock)	java. math. BigInteger	The value of tmnxBsxlcapServerStatsRespBlock indicates the number of ICAP block responses which have been received from the ICAP server.
respRedirCount [Resp Redir Count] (tmnxBsxlcapServerStatsRespRedir)	java. math. BigInteger	The value of tmnxBsxlcapServerStatsRespRedir indicates the number of ICAP redirect responses which have been received from the ICAP server.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
roundTripCount [Round Trip Count] (tmnxBsxIcapServerStatsRoundTrip)	long	The value of tmnxBsxIcapServerStatsRoundTrip indicates the average amount of time it took to receive ICAP Responses over the last 10 second period.
slotId [Slot Id] (tmnxBsxCardSlotNum)	int	The value of tmnxBsxCardSlotNum indicates the slot number of this ISA-AA MDA.
<p>AAUrlFilterStats</p> <p>MIB entry name: tmnxMDAEntry</p> <p>Entry description: Each row entry represents a MDA slot in an IOM card in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. When a tmnxCardEntry has tmnxCardAssignedType or tmnxCardEquippedType equal to an IOM card type that supports MDA slots, a tmnxMDAEntry is created by the agent for each MDA slot on that IOM card. Before a tmnxCardEntry can be deleted, each tmnxMDAEntry for that card must be in the proper state for removal.</p> <p>Table description (for tmnxMDATable): The tmnxMDATable has an entry for each MDA slot in each IOM card in this chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: aapolicy.AAUrlFilter</p>		
daughterCardSlotId [Daughter Card Slot Id] (tmnxMDASlotNum)	int	The unique value which identifies this MDA slot within a specific IOM card in the system. Rows with a tmnxMDASlotNum value of zero (0) represent the special case of an IOM card without MDA slots but that instead has its ports directly on the IOM card itself. In that case, there should be only that one row entry in the tmnxMDATable for that IOM card.
httpReqErrorsCount [Http Req Errors Count] (tmnxBsxUrIFltrStatsHttpReqErrors)	java. math. BigInteger	The value of tmnxBsxUrIFltrStatsHttpReqErrors indicates the number of times the HTTP request that were unable to be sent to the ICAP server.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
httpRequestsCount [Http Requests Count] (tmnxBsxUriFiltrStatsHttpRequests)	java. math. BigInteger	The value of tmnxBsxUriFiltrStatsHttpRequests indicates the number of HTTP requests received.
httpRespAllowCount [Http Resp Allow Count] (tmnxBsxUriFiltrStatsHttpRespAllow)	java. math. BigInteger	The value of tmnxBsxUriFiltrStatsHttpRespAllow indicates the number of times the HTTP response has been allowed.
httpRespBlockCount [Http Resp Block Count] (tmnxBsxUriFiltrStatsHttpRespBlock)	java. math. BigInteger	The value of tmnxBsxUriFiltrStatsHttpRespBlock indicates the number of times the HTTP response has been blocked.
httpRespDefCount [Http Resp Def Count] (tmnxBsxUriFiltrStatsHttpRespDef)	java. math. BigInteger	The value of tmnxBsxUriFiltrStatsHttpRespDef indicates the number of times the tmnxBsxUriFilterDefaultAction has been taken on the HTTP response.
httpRespRedirCount [Http Resp Redir Count] (tmnxBsxUriFiltrStatsHttpRespRedir)	java. math. BigInteger	The value of tmnxBsxUriFiltrStatsHttpRespRedir indicates the number of times the HTTP response has been redirected.
icapLateRespCount [Icap Late Resp Count] (tmnxBsxUriFiltrStatsIcapLateResp)	java. math. BigInteger	The value of tmnxBsxUriFiltrStatsIcapLateResp indicates the number of times the HTTP response was received prior to the ICAP response.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>BsxAARadiusAccountingPolicyStats</p> <p>MIB entry name: tmnxBsxRadApStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an AA RADIUS accounting policy. Rows in this table are created automatically by the system.</p> <p>Table description (for tmnxBsxRadApStatTable): The tmnxBsxRadApStatTable presents statistics of AA RADIUS accounting policies.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: aapolicy.AARadiusAccountingPolicy</p>		
reqSendFail [Req Send Fail] (tmnxBsxRadApSendFail)	long	The value of tmnxBsxRadApSendFail indicates how many RADIUS accounting requests failed because the packet could not be sent.
reqTimeouts [Req Timeouts] (tmnxBsxRadApReqTimeouts)	long	The value of tmnxBsxRadApReqTimeouts indicates the number of RADIUS accounting requests which have timed out for this policy.
rxResponses [Rx Responses] (tmnxBsxRadApRxResponses)	long	The value of tmnxBsxRadApRxResponses indicates the number of RADIUS accounting responses received for this policy.
sendRetries [Send Retries] (tmnxBsxRadApSendRetries)	long	The value of tmnxBsxRadApSendRetries indicates the number of retries to a different server for a single RADIUS accounting request for this policy.
txRequests [Tx Requests] (tmnxBsxRadApTxRequests)	long	The value of tmnxBsxRadApTxRequests indicates the number of RADIUS accounting requests transmitted for this policy.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>BsxAaAccountingStats</p> <p>MIB entry name: tmnxBsxStatAaEntry</p> <p>Entry description: Each tmnxBsxStatAaEntry contains the statistics for a particular group, partition, statistics type and statistics name. A value of 'chargingGroup (4)' is not supported for the tmnxBsxStatAaType.</p> <p>Table description (for tmnxBsxStatAaTable): The tmnxBsxStatAaTable contains an entry for each system wide statistics type and statistics name per group and partition.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • aapolicy.Application • aapolicy.ApplicationGroup • isa.AaGroup • isa.AaPartition 		
activeFlowsFromSub [Active Flows From Sub] (tmnxBsxStatAaActFlwsFmSb)	long	The value of tmnxBsxStatAaActFlwsFmSb indicates the number of allowed flows in the subscriber to network direction that are active.
activeFlowsToSub [Active Flows To Sub] (tmnxBsxStatAaActFlwsToSb)	long	The value of tmnxBsxStatAaActFlwsToSb indicates the number of allowed flows in the network to subscriber direction that are active.
durationFlowsLong [Duration Flows Long] (tmnxBsxStatAaHCLngDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaHCLngDurFlws indicates the total number of flows with a duration greater than 180 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaLngDurFlws.
durationFlowsMedium [Duration Flows Medium] (tmnxBsxStatAaHCMedDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaHCMedDurFlws indicates the total number of flows with a duration less than or equal to 180 seconds, but greater than 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaMedDurFlws.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
durationFlowsShort [Duration Flows Short] (tmnxBsxStatAaHCShrtDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaHCShrtDurFlws indicates the total number of flows with a duration less than or equal to 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaShrtDurFlws.
flowsAdmitFromSub [Flows Admit From Sub] (tmnxBsxStatAaHCFIwsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCFIwsAdmFmSb indicates the total number of flows permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaFlwsAdmFmSb.
flowsAdmitToSub [Flows Admit To Sub] (tmnxBsxStatAaHCFIwsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCFIwsAdmToSb indicates the total number of flows permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaFlwsAdmToSb.
flowsDenyFromSub [Flows Deny From Sub] (tmnxBsxStatAaHCFIwsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCFIwsDnyFmSb indicates the total number of flows the dropped subsequent packets in the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaFlwsDnyFmSb.
flowsDenyToSub [Flows Deny To Sub] (tmnxBsxStatAaHCFIwsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCFIwsDnyToSb indicates the total number of flows that dropped subsequent packets in the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaFlwsDnyToSb.
numOfSubscribers [Num Of Subscribers] (tmnxBsxStatAaNumSubscribers)	long	The value of tmnxBsxStatAaNumSubscribers indicates the number of subscribers at the most recent 5-minute snapshot of statistics.
octsAdmitFromSub [Octs Admit From Sub] (tmnxBsxStatAaHCOctsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCOctsAdmFmSb indicates the total number of bytes permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaOctsAdmFmSb.
octsAdmitToSub [Octs Admit To Sub] (tmnxBsxStatAaHCOctsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCOctsAdmToSb indicates the total number of bytes permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaOctsAdmToSb.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
octsDenyFromSub [Octs Deny From Sub] (tmnxBsxStatAaHCOctsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCOctsDnyFmSb indicates the total number of bytes dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaOctsDnyFmSb.
octsDenyToSub [Octs Deny To Sub] (tmnxBsxStatAaHCOctsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCOctsDnyToSb indicates the total number of bytes dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaOctsDnyToSb.
pktsAdmitFromSub [Pkts Admit From Sub] (tmnxBsxStatAaHCPktsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCPktsAdmFmSb indicates the total number of packets permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaPktsAdmFmSb.
pktsAdmitToSub [Pkts Admit To Sub] (tmnxBsxStatAaHCPktsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCPktsAdmToSb indicates the total number of packets permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaPktsAdmToSb.
pktsDenyFromSub [Pkts Deny From Sub] (tmnxBsxStatAaHCPktsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCPktsDnyFmSb indicates the total number of packets dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaPktsDnyFmSb.
pktsDenyToSub [Pkts Deny To Sub] (tmnxBsxStatAaHCPktsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCPktsDnyToSb indicates the total number of packets dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaPktsDnyToSb.
termFlowDuration [Term Flow Duration] (tmnxBsxStatAaHCTermFlwDur)	java. math. BigInteger	The value of tmnxBsxStatAaHCTermFlwDur indicates the sum of all flow durations from first packet seen to last packet seen for flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaTermFlwDur.
termFlows [Term Flows] (tmnxBsxStatAaHCTermFlws)	java. math. BigInteger	The value of tmnxBsxStatAaHCTermFlws indicates the total number of allowed flows in both directions that have terminated. This object is a 64-bit version of tmnxBsxStatAaTermFlws.

A subscriber is uniquely identified by a tmnxBsxAaSubscriberType and tmnxBsxAaSubscriber.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • ressubscr.ResidentialSubscriberInstance • service.AccessInterface 		

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
activeFlowsFromSub [Active Flows From Sub] (tmnxBsxStatAaSubSdyActFlwsFmSb)	long	The value of tmnxBsxStatAaSubSdyActFlwsFmSb indicates the number of allowed flows in the subscriber to network direction that are active.
activeFlowsToSub [Active Flows To Sub] (tmnxBsxStatAaSubSdyActFlwsToSb)	long	The value of tmnxBsxStatAaSubSdyActFlwsToSb indicates the number of allowed flows in the network to subscriber direction that are active.
durationFlowsLong [Duration Flows Long] (tmnxBsxStatAaSubSdyHCLngDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCLngDurFlws indicates the total number of flows with a duration greater than 180 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubSdyLngDurFlws.
durationFlowsMedium [Duration Flows Medium] (tmnxBsxStatAaSubSdyHCMedDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCMedDurFlws indicates the total number of flows with a duration less than or equal to 180 seconds, but greater than 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubSdyMedDurFlws.
durationFlowsShort [Duration Flows Short] (tmnxBsxStatAaSubSdyHCShrtDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCShrtDurFlws indicates the total number of flows with a duration less than or equal to 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubSdyShrtDurFlws.
flowsAdmitFromSub [Flows Admit From Sub] (tmnxBsxStatAaSubSdyHCFIwsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFIwsAdmFmSb indicates the total number of flows permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsAdmFmSb.
flowsAdmitToSub [Flows Admit To Sub] (tmnxBsxStatAaSubSdyHCFIwsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFIwsAdmToSb indicates the total number of flows permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsAdmToSb.
flowsDenyFromSub [Flows Deny From Sub] (tmnxBsxStatAaSubSdyHCFIwsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFIwsDnyFmSb indicates the total number of flows that dropped subsequent packets in the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsDnyFmSb.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
flowsDenyToSub [Flows Deny To Sub] (tmnxBsxStatAaSubSdyHCFIwsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFIwsDnyToSb indicates the total number of flows that dropped subsequent packets in the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsDnyToSb.
octsAdmitFromSub [Octs Admit From Sub] (tmnxBsxStatAaSubSdyHCOctsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsAdmFmSb indicates the total number of bytes permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsAdmFmSb.
octsAdmitToSub [Octs Admit To Sub] (tmnxBsxStatAaSubSdyHCOctsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsAdmToSb indicates the total number of bytes permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsAdmToSb.
octsDenyFromSub [Octs Deny From Sub] (tmnxBsxStatAaSubSdyHCOctsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsDnyFmSb indicates the total number of bytes dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsDnyFmSb.
octsDenyToSub [Octs Deny To Sub] (tmnxBsxStatAaSubSdyHCOctsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsDnyToSb indicates the total number of bytes dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsDnyToSb.
pktsAdmitFromSub [Pkts Admit From Sub] (tmnxBsxStatAaSubSdyHCPktsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsAdmFmSb indicates the total number of packets permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsAdmFmSb.
pktsAdmitToSub [Pkts Admit To Sub] (tmnxBsxStatAaSubSdyHCPktsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsAdmToSb indicates the total number of packets permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsAdmToSb.
pktsDenyFromSub [Pkts Deny From Sub] (tmnxBsxStatAaSubSdyHCPktsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsDnyFmSb indicates the total number of packets dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsDnyFmSb.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pktsDenyToSub [Pkts Deny To Sub] (tmnxBsxStatAaSubSdyHCPktsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsDnyToSb indicates the total number of packets dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsDnyToSb.
termFlowDuration [Term Flow Duration] (tmnxBsxStatAaSubSdyHCTermFlwDur)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCTermFlwDur indicates the sum of all flow durations from first packet seen to last packet seen for flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubSdyTermFlwDur.
termFlows [Term Flows] (tmnxBsxStatAaSubSdyHCTermFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCTermFlws indicates the total number of allowed flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubSdyTermFlws.
<p>BsxAppGrpStats</p> <p>MIB entry name: tmnxBsxStatAaSubEntry</p> <p>Entry description: Each tmnxBsxStatAaSubEntry contains the application assurance per-subscriber statistics for a combination of group, partition, statistics interval, subscriber, statistics type, and statistics name.</p> <p>Table description (for tmnxBsxStatAaSubTable): The tmnxBsxStatAaSubTable contains an entry for each application-assurance subscriber for each statistics type within a group, partition and statistics interval. Each row contains the application assurance per-subscriber statistics collected for the subscriber. A subscriber is uniquely identified by a tmnxBsxAaSubscriberType and tmnxBsxAaSubscriber.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: aapolicy.ApplicationGroup</p>		
aaName [Aa Name] (tmnxBsxStatAaName)	String	The value of tmnxBsxStatAaName specifies either the ISA-AA protocol, application or app-group name for which statistics are requested. The tmnxBsxStatAaType is used to determine the statistics type.
activeFlowsFromSub [Active Flows From Sub] (tmnxBsxStatAaActFlwsFmSb)	long	The value of tmnxBsxStatAaActFlwsFmSb indicates the number of allowed flows in the subscriber to network direction that are active.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
activeFlowsToSub [Active Flows To Sub] (tmnxBsxStatAaActFlwsToSb)	long	The value of tmnxBsxStatAaActFlwsToSb indicates the number of allowed flows in the network to subscriber direction that are active.
durationFlowsLong [Duration Flows Long] (tmnxBsxStatAaHCLngDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaHCLngDurFlws indicates the total number of flows with a duration greater than 180 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaLngDurFlws.
durationFlowsMedium [Duration Flows Medium] (tmnxBsxStatAaHCMedDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaHCMedDurFlws indicates the total number of flows with a duration less than or equal to 180 seconds, but greater than 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaMedDurFlws.
durationFlowsShort [Duration Flows Short] (tmnxBsxStatAaHCShrtDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaHCShrtDurFlws indicates the total number of flows with a duration less than or equal to 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaShrtDurFlws.
flowsAdmitFromSub [Flows Admit From Sub] (tmnxBsxStatAaHCFIwsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCFIwsAdmFmSb indicates the total number of flows permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaFlwsAdmFmSb.
flowsAdmitToSub [Flows Admit To Sub] (tmnxBsxStatAaHCFIwsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCFIwsAdmToSb indicates the total number of flows permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaFlwsAdmToSb.
flowsDenyFromSub [Flows Deny From Sub] (tmnxBsxStatAaHCFIwsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCFIwsDnyFmSb indicates the total number of flows the dropped subsequent packets in the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaFlwsDnyFmSb.
flowsDenyToSub [Flows Deny To Sub] (tmnxBsxStatAaHCFIwsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCFIwsDnyToSb indicates the total number of flows that dropped subsequent packets in the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaFlwsDnyToSb.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numOfSubscribers [Num Of Subscribers] (tmnxBsxStatAaNumSubscribers)	long	The value of tmnxBsxStatAaNumSubscribers indicates the number of subscribers at the most recent 5-minute snapshot of statistics.
octsAdmitFromSub [Octs Admit From Sub] (tmnxBsxStatAaHCOctsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCOctsAdmFmSb indicates the total number of bytes permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaOctsAdmFmSb.
octsAdmitToSub [Octs Admit To Sub] (tmnxBsxStatAaHCOctsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCOctsAdmToSb indicates the total number of bytes permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaOctsAdmToSb.
octsDenyFromSub [Octs Deny From Sub] (tmnxBsxStatAaHCOctsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCOctsDnyFmSb indicates the total number of bytes dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaOctsDnyFmSb.
octsDenyToSub [Octs Deny To Sub] (tmnxBsxStatAaHCOctsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCOctsDnyToSb indicates the total number of bytes dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaOctsDnyToSb.
pktsAdmitFromSub [Pkts Admit From Sub] (tmnxBsxStatAaHCPktsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCPktsAdmFmSb indicates the total number of packets permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaPktsAdmFmSb.
pktsAdmitToSub [Pkts Admit To Sub] (tmnxBsxStatAaHCPktsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCPktsAdmToSb indicates the total number of packets permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaPktsAdmToSb.
pktsDenyFromSub [Pkts Deny From Sub] (tmnxBsxStatAaHCPktsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCPktsDnyFmSb indicates the total number of packets dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaPktsDnyFmSb.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pktsDenyToSub [Pkts Deny To Sub] (tmnxBsxStatAaHCPktsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCPktsDnyToSb indicates the total number of packets dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaPktsDnyToSb.
termFlowDuration [Term Flow Duration] (tmnxBsxStatAaHCTermFlwDur)	java. math. BigInteger	The value of tmnxBsxStatAaHCTermFlwDur indicates the sum of all flow durations from first packet seen to last packet seen for flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaTermFlwDur.
termFlows [Term Flows] (tmnxBsxStatAaHCTermFlws)	java. math. BigInteger	The value of tmnxBsxStatAaHCTermFlws indicates the total number of allowed flows in both directions that have terminated. This object is a 64-bit version of tmnxBsxStatAaTermFlws.
<p>BsxAppQosPolicyStats MIB entry name: tmnxBsxAqpStatsEntry Entry description: Each tmnxBsxAqpStatsEntry indicates statistics available to collect for each application QoS policy entry. Table description (for tmnxBsxAqpStatsTable): The tmnxBsxAqpStatsTable contains the application qos policy statistics. Supports realtime plotting Supports scheduled collection Monitored class: aapolicy.AppQosPolicy</p>		
hcConflicts [Hc Conflicts] (tmnxBsxAqpStatsHCConflicts)	java. math. BigInteger	The value of tmnxBsxAqpStatsHCConflicts indicates the number of flows that have hit this AQP entry, but resulted in a conflict with the match criteria.
hcFlows [Hc Flows] (tmnxBsxAqpStatsHCFlows)	java. math. BigInteger	The value of tmnxBsxAqpStatsHCFlows indicates the number of flows that have hit this entry. In certain cases, a flow may change its attributes thus undergoing a second policy evaluation. In these cases, the flow may be counted against two different AQP entries.

numOfSubscribers [Num Of Subscribers] (tmnxBsxStatAaNumSubscribers)	long	The value of tmnxBsxStatAaNumSubscribers indicates the number of subscribers at the most recent 5-minute snapshot of statistics.
octsAdmitFromSub [Octs Admit From Sub] (tmnxBsxStatAaHCOctsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCOctsAdmFmSb indicates the total number of bytes permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaOctsAdmFmSb.
octsAdmitToSub [Octs Admit To Sub] (tmnxBsxStatAaHCOctsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCOctsAdmToSb indicates the total number of bytes permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaOctsAdmToSb.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
octsDenyFromSub [Octs Deny From Sub] (tmnxBsxStatAaHCOctsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCOctsDnyFmSb indicates the total number of bytes dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaOctsDnyFmSb.
octsDenyToSub [Octs Deny To Sub] (tmnxBsxStatAaHCOctsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCOctsDnyToSb indicates the total number of bytes dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaOctsDnyToSb.
pktsAdmitFromSub [Pkts Admit From Sub] (tmnxBsxStatAaHCPktsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCPktsAdmFmSb indicates the total number of packets permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaPktsAdmFmSb.
pktsAdmitToSub [Pkts Admit To Sub] (tmnxBsxStatAaHCPktsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCPktsAdmToSb indicates the total number of packets permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaPktsAdmToSb.
pktsDenyFromSub [Pkts Deny From Sub] (tmnxBsxStatAaHCPktsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCPktsDnyFmSb indicates the total number of packets dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaPktsDnyFmSb.
pktsDenyToSub [Pkts Deny To Sub] (tmnxBsxStatAaHCPktsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaHCPktsDnyToSb indicates the total number of packets dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaPktsDnyToSb.
termFlowDuration [Term Flow Duration] (tmnxBsxStatAaHCTermFlwDur)	java. math. BigInteger	The value of tmnxBsxStatAaHCTermFlwDur indicates the sum of all flow durations from first packet seen to last packet seen for flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaTermFlwDur.
termFlows [Term Flows] (tmnxBsxStatAaHCTermFlws)	java. math. BigInteger	The value of tmnxBsxStatAaHCTermFlws indicates the total number of allowed flows in both directions that have terminated. This object is a 64-bit version of tmnxBsxStatAaTermFlws.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>BsxDnsIpCacheStats</p> <p>MIB entry name: tmnxBsxDnsIpCacheStatEntry</p> <p>Entry description: Each tmnxBsxDnsIpCacheStatEntry specifies Application Assurance DNS IP Cache statistics. An index with a valid DNS IP Cache (an existing row in tmnxBsxDnsIpCacheTable) and tmnxChassisIndex set to one with a zero value for each of tmnxBsxCardSlotNum and tmnxMDASlotNum will return the summarized statistics per group and DNS IP Cache.</p> <p>Table description (for tmnxBsxDnsIpCacheStatTable): The tmnxBsxDnsIpCacheStatTable contains an entry for each configured Application Assurance DNS IP Cache. Rows in this table are automatically created and destroyed when DNS IP Caches are created or destroyed using the tmnxBsxDnsIpCacheTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: aapolicy.DnsIpCache</p>		
alarmClear [Alarm Clear] (tmnxBsxDnsIpCacheStatAlarmClear)	boolean	The value of tmnxBsxDnsIpCacheStatAlarmClear indicates the state of the threshold alarm for this cache. A value of 'true (1)' indicates the alarm is clear, and a value of 'false (2)' indicates the alarm is set.
disconnectTime [Disconnect Time] (tmnxBsxDnsIpCacheStatDiscntTime)	long	The value of tmnxBsxDnsIpCacheStatDiscntTime indicates the SNMPv2-MIB::sysUpTime (hundredths of a second) when the ISA-AA MDA within the group has last changed status.
domainsMatch [Domains Match] (tmnxBsxDnsIpCacheStatDomMtch)	java.math.BigInteger	The value of tmnxBsxDnsIpCacheStatDomMtch indicates the number of DNS response domains that have matched an entry in the tmnxBsxDnsIpCacheDomainTable associated with this cache.
entriesAdd [Entries Add] (tmnxBsxDnsIpCacheStatEntrAdd)	java.math.BigInteger	The value of tmnxBsxDnsIpCacheStatEntrAdd indicates the total number of entries that have been added to this cache.
entriesRemove [Entries Remove] (tmnxBsxDnsIpCacheStatEntrRmvd)	java.math.BigInteger	The value of tmnxBsxDnsIpCacheStatEntrRmvd indicates the total number of entries that have been removed from this cache.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fullCount [Full Count] (tmnxBsxDnsIpCacheStatFullCnt)	java. math. BigInteger	The value of tmnxBsxDnsIpCacheStatFullCnt indicates the number of times an entry could not be added because the cache was full.
hitCount [Hit Count] (tmnxBsxDnsIpCacheStatHitCnt)	java. math. BigInteger	The value of tmnxBsxDnsIpCacheStatHitCnt indicates the number of times an IP address lookup in this cache was successful.
missCount [Miss Count] (tmnxBsxDnsIpCacheStatMissCnt)	java. math. BigInteger	The value of tmnxBsxDnsIpCacheStatMissCnt indicates the number of times an IP address lookup in this cache was unsuccessful.
responsesCount [Responses Count] (tmnxBsxDnsIpCacheStatDnsResp)	java. math. BigInteger	The value of tmnxBsxDnsIpCacheStatDnsResp indicates the number of DNS responses that have been compared to the entries in the tmnxBsxDnsIpCacheDomainTable and the tmnxBsxDnsIpCacheServerTable associated with this cache.
serversMatch [Servers Match] (tmnxBsxDnsIpCacheStatDomSerMtch)	java. math. BigInteger	The value of tmnxBsxDnsIpCacheStatDomSerMtch indicates the number of DNS responses whose domain matched an entry in the tmnxBsxDnsIpCacheDomainTable and server IP address matched an entry in the tmnxBsxDnsIpCacheServerTable associated with this cache.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>BsxHttpEnrichStats</p> <p>MIB entry name: tmnxBsxHttpEnrichStatEntry</p> <p>Entry description: Each tmnxBsxHttpEnrichStatEntry contains statistics for HTTP enrichment. An index with a valid tmnxBsxAaGrpPartIndex/tmnxBsxHttpEnrichName (an existing row in tmnxBsxHttpEnrichTable), tmnxChassisIndex set to one, and a zero value for each of tmnxBsxCardSlotNum and tmnxMDASlotNum will return the summarized per group and HTTP enrichment template statistics. Entries will appear in this table only for equipped ISA-AA MDAs associated with an AA group and an HTTP enrichment template.</p> <p>Table description (for tmnxBsxHttpEnrichStatTable): The tmnxBsxHttpEnrichStatTable contains statistics for HTTP enrichment. Each row contains the performance-oriented statistics information per group and HTTP enrichment template for an ISA-AA uniquely identified by the tmnxChassisIndex, tmnxCardSlotNum, and the tmnxMDASlotNum.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: aapolicy.AppQosPolicy</p>		
antiSpoofMod [Anti Spoof Mod] (tmnxBsxHttpEnrichAntiSpoofMod)	java. math. BigInteger	The value of tmnxBsxHttpEnrichAntiSpoofMod indicates the number of HTTP header modifications that have been made for anti-spoofing. A value of 0 is returned if the value of tmnxBsxHttpEnrichFieldAntiSpoof is disabled.
antiSpoofShort [Anti Spoof Short] (tmnxBsxHttpEnrichNoAntiSpfShort)	java. math. BigInteger	The value of tmnxBsxHttpEnrichNoAntiSpfShort indicates the number of HTTP header modifications that were not made for anti-spoofing due to an HTTP header field value being short enough to result in a packet size increase if anti-spoofing were applied. A value of 0 is returned if the value of tmnxBsxHttpEnrichFieldAntiSpoof is disabled.
cardSlotNum [Card Slot Num] (tmnxBsxCardSlotNum)	long	The value of tmnxBsxCardSlotNum indicates the slot number of this ISA-AA MDA.
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
disconnectTime [Disconnect Time] (tmnxBsxHttpEnrichStatDiscontTime)	long	The value of tmnxBsxHttpEnrichStatDiscontTime indicates the SNMPv2-MIB::sysUpTime (hundredths of a second) when the ISA-AA MDA within the group has last changed status.
grpPartIndex [Grp Part Index] (tmnxBsxAaGrpPartIndex)	long	The value of tmnxBsxAaGrpPartIndex specifies the partition index within an AA group. The corresponding row for the AA group must have already been created in the tmnxBsxIsaAaGrpTable. Partition index '0' indicates group wide AA policy information, and is automatically created when the AA group is created in the tmnxBsxIsaAaGrpTable.
httpEnrichName [Http Enrich Name] (tmnxBsxHttpEnrichName)	String	The value of tmnxBsxHttpEnrichName specifies the name of the HTTP header enrichment template.
maxPacket [Max Packet] (tmnxBsxHttpEnrichHCExceedMaxPkt)	java. math. BigInteger	The value of tmnxBsxHttpEnrichHCExceedMaxPkt indicates the number of HTTP requests not enriched due to the packet size being greater than the maximum HTTP enrichment packet size specified in tmnxBsxIsaAaGrpHttpEnrichMaxPkt.
mdaSlotNum [Mda Slot Num] (tmnxMDASlotNum)	long	The unique value which identifies this MDA slot within a specific IOM card in the system. Rows with a tmnxMDASlotNum value of zero (0) represent the special case of an IOM card without MDA slots but that instead has its ports directly on the IOM card itself. In that case, there should be only that one row entry in the tmnxMDATable for that IOM card.
msgCount [Msg Count] (tmnxBsxHttpEnrichHCNumEnriched)	java. math. BigInteger	The value of tmnxBsxHttpEnrichHCNumEnriched indicates the number of enriched requests.
noSubData [No Sub Data] (tmnxBsxHttpEnrichHCMissngSubData)	java. math. BigInteger	The value of tmnxBsxHttpEnrichHCMissngSubData indicates the number of HTTP requests not enriched due to missing subscriber data.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outOfResourceCount [Out Of Resource Count] (tmnxBsxHttpEnrichHCNumNoResource)	java. math. BigInteger	The value of tmnxBsxHttpEnrichHCNumNoResource indicates the number of HTTP requests not enriched due to resource issues.
templateDisabled [Template Disabled] (tmnxBsxHttpEnrichHCTpiNotEnabled)	java. math. BigInteger	The value of tmnxBsxHttpEnrichHCTpiNotEnabled indicates the number of HTTP requests not enriched due to the template not being enabled.
trafficChar [Traffic Char] (tmnxBsxHttpEnrichHCTrafficChar)	java. math. BigInteger	The value of tmnxBsxHttpEnrichHCTrafficChar indicates the number of HTTP requests not enriched due to traffic characteristics.
<p>BsxHttpErrorRedirectStats MIB entry name: tmnxBsxGrpMdaEntry Entry description: Each tmnxBsxGrpMdaEntry indicates a ISA-AA MDA is associated to a tmnxBsxIsaAaGrpEntry. Table description (for tmnxBsxGrpMdaTable): The tmnxBsxGrpMdaTable contains an entry for each ISA-AA MDA configured within a group. This table is populated when an MDA is configured with an MDA type of ISA-AA, and associated with an ISA-AA group. Supports realtime plotting Supports scheduled collection Monitored class: aapolicy.AppQosPolicy</p>		
cardSlotNum [Card Slot Num] (tmnxBsxCardSlotNum)	long	The value of tmnxBsxCardSlotNum indicates the slot number of this ISA-AA MDA.
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
disconnectTime [Disconnect Time] (tmnxBsxHttpRdStatDiscontTime)	long	The value of tmnxBsxHttpRdStatDiscontTime indicates the SNMPv2-MIB::sysUpTime (hundredths of a second) when the ISA-AA MDA within the group has last changed status.
errorCode [Error Code] (tmnxBsxHttpRedirErrCode)	long	The value of tmnxBsxHttpRedirErrCode specifies the error code for a HTTP Error Redirect. Error codes are defined in the tmnxBsxTListAttribTable in rows where the index tmnxBsxTListName has a value of 'http-error-redirect-error-code' and the index tmnxBsxTListAttribName has a value of 'code'.
errorCount [Error Count] (tmnxBsxHttpRdStatHCNotRedir)	java. math. BigInteger	The value of tmnxBsxHttpRdStatHCNotRedir indicates the number of message redirects that did not occur due to errors.
fileTypeCount [File Type Count] (tmnxBsxHttpRdStatHCNotRedirFType)	java. math. BigInteger	The value of tmnxBsxHttpRdStatHCNotRedirFType indicates the number of message redirects that did not occur due to the file type.
grpPartIndex [Grp Part Index] (tmnxBsxAaGrpPartIndex)	long	The value of tmnxBsxAaGrpPartIndex specifies the partition index within an AA group. The corresponding row for the AA group must have already been created in the tmnxBsxIsaAaGrpTable. Partition index '0' indicates group wide AA policy information, and is automatically created when the AA group is created in the tmnxBsxIsaAaGrpTable.
httpErrRedirName [Http Err Redir Name] (tmnxBsxHttpRedirErrName)	String	The value of tmnxBsxHttpRedirErrName specifies the name of the HTTP Error Redirect.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mdaSlotNum [Mda Slot Num] (tmnxMDASlotNum)	long	The unique value which identifies this MDA slot within a specific IOM card in the system. Rows with a tmnxMDASlotNum value of zero (0) represent the special case of an IOM card without MDA slots but that instead has its ports directly on the IOM card itself. In that case, there should be only that one row entry in the tmnxMDATable for that IOM card.
msgCount [Msg Count] (tmnxBsxHttpRdStatHCRedir)	java. math. BigInteger	The value of tmnxBsxHttpRdStatHCRedir indicates the number of redirected messages.
outOfResourceCount [Out Of Resource Count] (tmnxBsxHttpRdStatHCOutOfResource)	java. math. BigInteger	The value of tmnxBsxHttpRdStatHCOutOfResource indicates the number of message redirects that did not occur due to lack of resources.
sizeExceededCount [Size Exceeded Count] (tmnxBsxHttpRdStatHCSizeExceeded)	java. math. BigInteger	The value of tmnxBsxHttpRdStatHCSizeExceeded indicates the number of messages that have exceeded the custom message size associated with the error code.
<p>BsxHttpRedirectStats</p> <p>MIB entry name: tmnxChassisEntry</p> <p>Entry description: tmnxChassisEntry consists of the system level information pertaining to the hardware present in the system. Only one entry is created and maintained by the system, which is assigned the tmnxChassisIndex value '1'. Once this entry is created, it cannot be destroyed. Additional entries cannot be manually created or destroyed. Support of multiple chassis' are managed through the use of tmnxPhysChassisTable.</p> <p>Table description (for tmnxChassisTable): tmnxChassisTable contains Nokia 7x50 system level information.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: aapolicy.AppQosPolicy</p>

BigInteger	The value of tmnxBsxStatAaSubHCMedDurFlws indicates the total number of flows with a duration less than or equal to 180 seconds, but greater than 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubMedDurFlws.
durationFlowsShort [Duration Flows Short] (tmnxBsxStatAaSubHCSHrtDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCSHrtDurFlws indicates the total number of flows with a duration less than or equal to 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubShrtDurFlws.
flowsAdmitFromSub [Flows Admit From Sub] (tmnxBsxStatAaSubHCFIwsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCFIwsAdmFmSb indicates the total number of flows permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubFlwsAdmFmSb.
flowsAdmitToSub [Flows Admit To Sub] (tmnxBsxStatAaSubHCFIwsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCFIwsAdmToSb indicates the total number of flows permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubFlwsAdmToSb.
flowsDenyFromSub [Flows Deny From Sub] (tmnxBsxStatAaSubHCFIwsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCFIwsDnyFmSb indicates the total number of flows that dropped subsequent packets in the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubFlwsDnyFmSb.
flowsDenyToSub [Flows Deny To Sub] (tmnxBsxStatAaSubHCFIwsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCFIwsDnyToSb indicates the total number of flows that dropped subsequent packets in the network to subscriber direction. This object is the 64-bit version of tmnxBsxStatAaSubFlwsDnyToSb.
octsAdmitFromSub [Octs Admit From Sub] (tmnxBsxStatAaSubHCOctsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCOctsAdmFmSb indicates the total number of bytes permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubOctsAdmFmSb.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
octsAdmitToSub [Octs Admit To Sub] (tmnxBsxStatAaSubHCOctsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCOctsAdmToSb indicates the total number of bytes permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubOctsAdmToSb.
octsDenyFromSub [Octs Deny From Sub] (tmnxBsxStatAaSubHCOctsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCOctsDnyFmSb indicates the total number of bytes dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubOctsDnyFmSb.
octsDenyToSub [Octs Deny To Sub] (tmnxBsxStatAaSubHCOctsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCOctsDnyToSb indicates the total number of bytes dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubOctsDnyToSb.
pktsAdmitFromSub [Pkts Admit From Sub] (tmnxBsxStatAaSubHCPktsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsAdmFmSb indicates the total number of packets permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsAdmFmSb.
pktsAdmitToSub [Pkts Admit To Sub] (tmnxBsxStatAaSubHCPktsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsAdmToSb indicates the total number of packets permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsAdmToSb.
pktsDenyFromSub [Pkts Deny From Sub] (tmnxBsxStatAaSubHCPktsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsDnyFmSb indicates the total number of packets dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsDnyFmSb.
pktsDenyToSub [Pkts Deny To Sub] (tmnxBsxStatAaSubHCPktsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsDnyToSb indicates the total number of packets dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsDnyToSb.
statsInterval [Stats Interval] (tmnxBsxAaSubStatsInterval)	int	The tmnxBsxAaSubStatsInterval specifies the interval for the retrieval of application assurance subscriber statistics.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
termFlowDuration [Term Flow Duration] (tmnxBsxStatAaSubHCTermFlwDur)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCTermFlwDur indicates the sum of all flow durations from first packet seen to last packet seen for flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubTermFlwDur.
termFlows [Term Flows] (tmnxBsxStatAaSubHCTermFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCTermFlws indicates the total number of allowed flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubTermFlws.
<p>BsxSapCustRecAppStats</p> <p>MIB entry name: tmnxBsxStatAaSubEntry</p> <p>Entry description: Each tmnxBsxStatAaSubEntry contains the application assurance per-subscriber statistics for a combination of group, partition, statistics interval, subscriber, statistics type, and statistics name.</p> <p>Table description (for tmnxBsxStatAaSubTable): The tmnxBsxStatAaSubTable contains an entry for each application-assurance subscriber for each statistics type within a group, partition and statistics interval. durationFlowsMedium [Duration Flows Medium] (tmnxBsxStatAaSubSdyHCMedDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCMedDurFlws indicates the total number of flows with a duration less than or equal to 180 seconds, but greater than 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubSdyMedDurFlws.
durationFlowsShort [Duration Flows Short] (tmnxBsxStatAaSubSdyHCSHrtDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCSHrtDurFlws indicates the total number of flows with a duration less than or equal to 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubSdyShrtDurFlws.
flowsAdmitFromSub [Flows Admit From Sub] (tmnxBsxStatAaSubSdyHCFIwsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFIwsAdmFmSb indicates the total number of flows permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsAdmFmSb.
flowsAdmitToSub [Flows Admit To Sub] (tmnxBsxStatAaSubSdyHCFIwsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFIwsAdmToSb indicates the total number of flows permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsAdmToSb.
flowsDenyFromSub [Flows Deny From Sub] (tmnxBsxStatAaSubSdyHCFIwsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFIwsDnyFmSb indicates the total number of flows that dropped subsequent packets in the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsDnyFmSb.
flowsDenyToSub [Flows Deny To Sub] (tmnxBsxStatAaSubSdyHCFIwsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFIwsDnyToSb indicates the total number of flows that dropped subsequent packets in the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsDnyToSb.
octsAdmitFromSub [Octs Admit From Sub] (tmnxBsxStatAaSubSdyHCOctsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsAdmFmSb indicates the total number of bytes permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsAdmFmSb.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
octsAdmitToSub [Octs Admit To Sub] (tmnxBsxStatAaSubSdyHCOctsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsAdmToSb indicates the total number of bytes permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsAdmToSb.
octsDenyFromSub [Octs Deny From Sub] (tmnxBsxStatAaSubSdyHCOctsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsDnyFmSb indicates the total number of bytes dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsDnyFmSb.
octsDenyToSub [Octs Deny To Sub] (tmnxBsxStatAaSubSdyHCOctsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsDnyToSb indicates the total number of bytes dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsDnyToSb.
pktsAdmitFromSub [Pkts Admit From Sub] (tmnxBsxStatAaSubSdyHCPktsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsAdmFmSb indicates the total number of packets permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsAdmFmSb.
pktsAdmitToSub [Pkts Admit To Sub] (tmnxBsxStatAaSubSdyHCPktsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsAdmToSb indicates the total number of packets permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsAdmToSb.
pktsDenyFromSub [Pkts Deny From Sub] (tmnxBsxStatAaSubSdyHCPktsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsDnyFmSb indicates the total number of packets dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsDnyFmSb.
pktsDenyToSub [Pkts Deny To Sub] (tmnxBsxStatAaSubSdyHCPktsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsDnyToSb indicates the total number of packets dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsDnyToSb.
protName [Prot Name] (tmnxBsxStatAaName)	String	The value of tmnxBsxStatAaName specifies either the ISA-AA protocol, application or app-group name for which statistics are requested. The tmnxBsxStatAaType is used to determine the statistics type.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
termFlowDuration [Term Flow Duration] (tmnxBsxStatAaSubSdyHCTermFlwDur)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCTermFlwDur indicates the sum of all flow durations from first packet seen to last packet seen for flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubSdyTermFlwDur.
termFlows [Term Flows] (tmnxBsxStatAaSubSdyHCTermFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCTermFlws indicates the total number of allowed flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubSdyTermFlws.
<p>BsxSessionFilterStats</p> <p>MIB entry name: tmnxBsxSessFltrStatsEntry</p> <p>Entry description: Each tmnxBsxSessFltrStatsEntry indicates statistics available for each application assurance session filter match entry.</p> <p>Table description (for tmnxBsxSessFltrStatsTable): The tmnxBsxSessFltrStatsTable contains the application assurance session filter statistics.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: aapolicy.AASessionFilterParams</p>		
flowsCount [Flows Count] (tmnxBsxSessFltrStatsFlows)	java. math. BigInteger	The value of tmnxBsxSessFltrStatsFlows indicates the number of flows that have hit this entry.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>BsxTcaFtrEnStats</p> <p>MIB entry name: tmnxBsxTcaFtrEnStatsEntry</p> <p>Entry description: Each tmnxBsxTcaFtrEnStatsEntry specifies Application Assurance filter entry TCA statistics per group/partition and TCA. Rows in this table are automatically created and destroyed when TCAs are created or destroyed in the tmnxBsxStatTcaFtrEnCfgTable.</p> <p>Table description (for tmnxBsxTcaFtrEnStatsTable): The tmnxBsxTcaFtrEnStatsTable contains an entry for each configured Application Assurance filter entry TCA, as configured in tmnxBsxStatTcaFtrEnCfgTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: aapolicy.AaStatTcaFtrEntryCfg</p>		
lastCleared [Last Cleared] (tmnxBsxTcaFtrEnStatsTmLastCleared)	long	The value of tmnxBsxTcaFtrEnStatsTmLastCleared indicates the last time, since system startup, when the tmnxBsxTcaFtrEnStatsTcaState changed from 'raised (1)' to 'cleared (0)'.
lastRaised [Last Raised] (tmnxBsxTcaFtrEnStatsTmLastRaised)	long	The value of tmnxBsxTcaFtrEnStatsTmLastRaised indicates the last time, since system startup, when the tmnxBsxTcaFtrEnStatsTcaState changed from 'cleared (0)' to 'raised (1)'.
tcaState [Tca State] (tmnxBsxTcaFtrEnStatsTcaState)	int	The value of tmnxBsxTcaFtrEnStatsTcaState indicates the state of the filter entry TCA.
triggerType [Trigger Type] (tmnxBsxTcaFtrEnStatsTcaTrigType)	int	The value of tmnxBsxTcaFtrEnStatsTcaTrigType indicates the trigger type used.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>BsxTcaFtrStats</p> <p>MIB entry name: tmnxBsxTcaFtrStatsEntry</p> <p>Entry description: Each tmnxBsxTcaFtrStatsEntry specifies Application Assurance filter TCA statistics per group/partition and TCA. lastCleared [Last Cleared] (tmnxBsxTcaStatsTimeLastCleared)	long	The value of tmnxBsxTcaStatsTimeLastCleared indicates the last time, since system startup, when the tmnxBsxTcaStatsTcaState changed from 'raised (1)' to 'cleared (0)'.
lastRaised [Last Raised] (tmnxBsxTcaStatsTimeLastRaised)	long	The value of tmnxBsxTcaStatsTimeLastRaised indicates the last time, since system startup, when the tmnxBsxTcaStatsTcaState changed from 'cleared (0)' to 'raised (1)'.
tcaState [Tca State] (tmnxBsxTcaStatsTcaState)	int	The value of tmnxBsxTcaStatsTcaState indicates the state of the TCA.
triggerType [Trigger Type] (tmnxBsxTcaStatsTcaTrigType)	int	The value of tmnxBsxTcaStatsTcaTrigType indicates the trigger type used.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>BsxTcpOptStats</p> <p>MIB entry name: tmnxBsxTcpOptStatEntry</p> <p>Entry description: Each tmnxBsxTcpOptStatEntry specifies Application Assurance TCP optimizer statistics. Entries are automatically created and destroyed when TCP optimizers are created or destroyed using the tmnxBsxTcpOptTable. An index with a valid TCP optimizer (an existing row in tmnxBsxTcpOptTable) and tmnxChassisIndex set to one with a zero value for each of tmnxBsxCardSlotNum and tmnxMDASlotNum will return the summarized statistics per group and TCP optimizer.</p> <p>Table description (for tmnxBsxTcpOptStatTable): The tmnxBsxTcpOptStatTable contains an entry for each configured Application Assurance TCP optimizer.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: aapolicy.AaTcpOpt</p>		
buffersInUse [Buffers In Use] (tmnxBsxTcpOptStatBuffersInUse)	java. math. BigInteger	The value of tmnxBsxTcpOptStatBuffersInUse indicates the number of buffers in use by the TCP optimizer.
discntTime [Discnt Time] (tmnxBsxTcpOptStatDiscntTime)	long	The value of tmnxBsxTcpOptStatDiscntTime indicates the SNMPv2-MIB::sysUpTime (hundredths of a second) when an ISA-AA MDA within the group last changed status.
maxAvailBuffers [Max Avail Buffers] (tmnxBsxTcpOptStatMaxAvailBuffers)	java. math. BigInteger	The value of tmnxBsxTcpOptStatMaxAvailBuffers indicates the maximum number of buffers available to the TCP optimizer.
octsRetranFmSub [Octs Retran Fm Sub] (tmnxBsxTcpOptStatOctsRetranFmSub)	java. math. BigInteger	The value of tmnxBsxTcpOptStatOctsRetranFmSub indicates the number of octets retransmitted by the TCP optimizer in the subscriber to network direction.
octsRetranToSub [Octs Retran To Sub] (tmnxBsxTcpOptStatOctsRetranToSub)	java. math. BigInteger	The value of tmnxBsxTcpOptStatOctsRetranToSub indicates the number of octets retransmitted by the TCP optimizer in the network to subscriber direction.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
octsRxFmSub [Octs Rx Fm Sub] (tmnxBsxTcpOptStatOctsRxFmSub)	java. math. BigInteger	The value of tmnxBsxTcpOptStatOctsRxFmSub indicates the number of octets received by the TCP optimizer in the subscriber to network direction.
octsRxToSub [Octs Rx To Sub] (tmnxBsxTcpOptStatOctsRxToSub)	java. math. BigInteger	The value of tmnxBsxTcpOptStatOctsRxToSub indicates the number of octets received by the TCP optimizer in the network to subscriber direction.
octsTxFmSub [Octs Tx Fm Sub] (tmnxBsxTcpOptStatOctsTxFmSub)	java. math. BigInteger	The value of tmnxBsxTcpOptStatOctsTxFmSub indicates the number of octets transmitted by the TCP optimizer in the subscriber to network direction.
octsTxToSub [Octs Tx To Sub] (tmnxBsxTcpOptStatOctsTxToSub)	java. math. BigInteger	The value of tmnxBsxTcpOptStatOctsTxToSub indicates the number of octets transmitted by the TCP optimizer in the network to subscriber direction.
pktsRetranFmSub [Pkts Retran Fm Sub] (tmnxBsxTcpOptStatPktsRetranFmSub)	java. math. BigInteger	The value of tmnxBsxTcpOptStatPktsRetranFmSub indicates the number of packets retransmitted by the TCP optimizer in the subscriber to network direction.
pktsRetranToSub [Pkts Retran To Sub] (tmnxBsxTcpOptStatPktsRetranToSub)	java. math. BigInteger	The value of tmnxBsxTcpOptStatPktsRetranToSub indicates the number of packets retransmitted by the TCP optimizer in the network to subscriber direction.
pktsRxFmSub [Pkts Rx Fm Sub] (tmnxBsxTcpOptStatPktsRxFmSub)	java. math. BigInteger	The value of tmnxBsxTcpOptStatPktsRxFmSub indicates the number of packets received by the TCP optimizer in the subscriber to network direction.
pktsRxToSub [Pkts Rx To Sub] (tmnxBsxTcpOptStatPktsRxToSub)	java. math. BigInteger	The value of tmnxBsxTcpOptStatPktsRxToSub indicates the number of packets received by the TCP optimizer in the network to subscriber direction.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pktsTxFmSub [Pkts Tx Fm Sub] (tmnxBsxTcpOptStatPktsTxFmSub)	java. math. BigInteger	The value of tmnxBsxTcpOptStatPktsTxFmSub indicates the number of packets transmitted by the TCP optimizer in the subscriber to network direction.
pktsTxToSub [Pkts Tx To Sub] (tmnxBsxTcpOptStatPktsTxToSub)	java. math. BigInteger	The value of tmnxBsxTcpOptStatPktsTxToSub indicates the number of packets transmitted by the TCP optimizer in the network to subscriber direction.
sessAbInact [Sess Ab Inact] (tmnxBsxTcpOptStatSessAbInact)	java. math. BigInteger	The value of tmnxBsxTcpOptStatSessAbInact indicates the number of sessions whose optimization was abandoned by the TCP optimizer due to inactivity.
sessAbOther [Sess Ab Other] (tmnxBsxTcpOptStatSessAbOther)	java. math. BigInteger	The value of tmnxBsxTcpOptStatSessAbOther indicates the number of sessions whose optimization was abandoned by the TCP optimizer due to other reasons.
sessAbPktErr [Sess Ab Pkt Err] (tmnxBsxTcpOptStatSessAbPktErr)	java. math. BigInteger	The value of tmnxBsxTcpOptStatSessAbPktErr indicates the number of sessions whose optimization was abandoned by the TCP optimizer due to a packet error.
sessAbUnsupPkt [Sess Ab Unsup Pkt] (tmnxBsxTcpOptStatSessAbUnsupPkt)	java. math. BigInteger	The value of tmnxBsxTcpOptStatSessAbUnsupPkt indicates the number of sessions whose optimization was abandoned by the TCP optimizer due to an unsupported packet format.
sessActive [Sess Active] (tmnxBsxTcpOptStatSessActive)	java. math. BigInteger	The value of tmnxBsxTcpOptStatSessActive indicates the number of sessions being optimized by the TCP optimizer.
sessOptimized [Sess Optimized] (tmnxBsxTcpOptStatSessOptimized)	java. math. BigInteger	The value of tmnxBsxTcpOptStatSessOptimized indicates the number of sessions that have been optimized by the TCP optimizer.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sessUnExistSess [Sess Un Exist Sess] (tmnxBsxTcpOptStatSessUnExistSess)	java. math. BigInteger	The value of tmnxBsxTcpOptStatSessUnExistSess indicates the number of sessions that have not been optimized by the TCP optimizer due to an existing session.
sessUnInact [Sess Un Inact] (tmnxBsxTcpOptStatSessUnInact)	java. math. BigInteger	The value of tmnxBsxTcpOptStatSessUnInact indicates the number of sessions that have not been optimized by the TCP optimizer due to inactivity.
sessUnNoBuffers [Sess Un No Buffers] (tmnxBsxTcpOptStatSessUnNoBuffers)	java. math. BigInteger	The value of tmnxBsxTcpOptStatSessUnNoBuffers indicates the number of sessions that have not been optimized by the TCP optimizer due to no available buffers.
sessUnOther [Sess Un Other] (tmnxBsxTcpOptStatSessUnOther)	java. math. BigInteger	The value of tmnxBsxTcpOptStatSessUnOther indicates the number of sessions that have not been optimized by the TCP optimizer due to other reasons.
sessUnPktErr [Sess Un Pkt Err] (tmnxBsxTcpOptStatSessUnPktErr)	java. math. BigInteger	The value of tmnxBsxTcpOptStatSessUnPktErr indicates the number of sessions that have not been optimized by the TCP optimizer due to a packet error.
sessUnUnsupPkt [Sess Un Unsup Pkt] (tmnxBsxTcpOptStatSessUnUnsupPkt)	java. math. BigInteger	The value of tmnxBsxTcpOptStatSessUnUnsupPkt indicates the number of sessions that have not been optimized by the TCP optimizer due to an unsupported packet format.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>BsxTcpValStats</p> <p>MIB entry name: tmnxBsxTcpValStatsEntry</p> <p>Entry description: Each tmnxBsxTcpValStatsEntry specifies Application Assurance TCP validation template statistics per group/partition. Rows in this table are automatically created and destroyed when validation templates are created or destroyed in the tmnxBsxTcpValTable. An index with a valid TCP validation template (an existing row in tmnxBsxTcpValTable) and tmnxChassisIndex set to one with a zero value for each of tmnxBsxCardSlotNum and tmnxMDASlotNum will return the summarized statistics per group and TCP validation template.</p> <p>Table description (for tmnxBsxTcpValStatsTable): The tmnxBsxTcpValTcaStatsTable contains an entry for each configured Application Assurance TCP validation template, as configured in tmnxBsxTcpValTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: aapolicy.AaTcpValidation</p>		
allowed [Allowed] (tmnxBsxTcpValStatsAllowed)	java. math. BigInteger	The value of tmnxBsxTcpValStatsAllowed indicates the number allowed by the TCP validation template.
daughterCardSlotId [Daughter Card Slot Id] (tmnxMDASlotNum)	int	The unique value which identifies this MDA slot within a specific IOM card in the system. Rows with a tmnxMDASlotNum value of zero (0) represent the special case of an IOM card without MDA slots but that instead has its ports directly on the IOM card itself. In that case, there should be only that one row entry in the tmnxMDATable for that IOM card.
direction [Direction] (tmnxBsxTcpValStatsDirection)	int	The value of tmnxBsxTcpValStatsDirection indicates the direction of the TCP validation template statistics.
discntTime [Discnt Time] (tmnxBsxTcpValStatsDiscntTime)	long	The compliance statement for management of BSX features for SROS release 15.0 in the TIMETRA-BSX-NG-MIB.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dropAfterRST [Drop After RST] (tmnxBsxTcpValStatsDropAfterRST)	java. math. BigInteger	The value of tmnxBsxTcpValStatsDropAfterRST indicates the number dropped by the TCP validation template due to use after a reset (RST).
dropAlreadyEst [Drop Already Est] (tmnxBsxTcpValStatsDropAlreadyEst)	java. math. BigInteger	The value of tmnxBsxTcpValStatsDropAlreadyEst indicates the number dropped by the TCP validation template due to being already established.
dropAsymmetric [Drop Asymmetric] (tmnxBsxTcpValStatsDropAsymmetric)	java. math. BigInteger	The value of tmnxBsxTcpValStatsDropAsymmetric indicates the number dropped by the TCP validation template due to asymmetric routing.
dropBadACK [Drop Bad ACK] (tmnxBsxTcpValStatsDropBadACK)	java. math. BigInteger	The value of tmnxBsxTcpValStatsDropBadACK indicates the number dropped by the TCP validation template due to an invalid acknowledgement number (ACK).
dropBadFlag [Drop Bad Flag] (tmnxBsxTcpValStatsDropBadFlag)	java. math. BigInteger	The value of tmnxBsxTcpValStatsDropBadFlag indicates the number dropped by the TCP validation template due to an invalid flag.
dropBadOption [Drop Bad Option] (tmnxBsxTcpValStatsDropBadOption)	java. math. BigInteger	The value of tmnxBsxTcpValStatsDropBadOption indicates the number dropped by the TCP validation template due to an invalid Option.
dropBadSEQ [Drop Bad SEQ] (tmnxBsxTcpValStatsDropBadSEQ)	java. math. BigInteger	The value of tmnxBsxTcpValStatsDropBadSEQ indicates the number dropped by the TCP validation template due to an invalid sequence number (SEQ).
dropFragmented [Drop Fragmented] (tmnxBsxTcpValStatsDropFragmented)	java. math. BigInteger	The value of tmnxBsxTcpValStatsDropFragmented indicates the number dropped by the TCP validation template due to fragmentation.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dropNoEstmen [Drop No Estmen] (tmnxBsxTcpValStatsDropNoEstment)	java. math. BigInteger	The value of tmnxBsxTcpValStatsDropNoEstment indicates the number dropped by the TCP validation template due to no establishment.
units [Units] (tmnxBsxTcpValStatsUnits)	int	The value of tmnxBsxTcpValStatsUnits indicates the units of the TCP validation template statistics.
<p>BsxTcpValTcaStats</p> <p>MIB entry name: tmnxBsxTcpValTcaStatsEntry</p> <p>Entry description: Each tmnxBsxTcpValTcaStatsEntry specifies Application Assurance TCP validate TCA statistics per group/partition and TCA. Rows in this table are automatically created and destroyed when TCAs are created or destroyed in the tmnxBsxTcpValTcaTable.</p> <p>Table description (for tmnxBsxTcpValTcaStatsTable): The tmnxBsxTcpValTcaStatsTable contains an entry for each configured Application Assurance TCP validate TCA, as configured in tmnxBsxTcpValTcaTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: aapolicy.AaTcpValidationTca</p>		
lastCleared [Last Cleared] (tmnxBsxTcpValTcaStatsLastCleared)	long	The value of tmnxBsxTcpValTcaStatsLastCleared indicates the last time, since system startup, when the tmnxBsxTcpValTcaStatsTcaState changed from 'raised (1)' to 'cleared (0)'.
lastRaised [Last Raised] (tmnxBsxTcpValTcaStatsLastRaised)	long	The value of tmnxBsxTcpValTcaStatsLastRaised indicates the last time, since system startup, when the tmnxBsxTcpValTcaStatsTcaState changed from 'cleared (0)' to 'raised (1)'.
tcaState [Tca State] (tmnxBsxTcpValTcaStatsTcaState)	int	The value of tmnxBsxTcpValTcaStatsTcaState indicates the state of the policer TCA.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
triggerType [Trigger Type] (tmnxBsxTcpValTcaStatsTcaTrigType)	int	The value of tmnxBsxTcpValTcaStatsTcaTrigType indicates the trigger type used.
<p>BsxTrafStats</p> <p>MIB entry name: tmnxBsxTrafStatEntry</p> <p>Entry description: Each tmnxBsxTrafStatEntry contains the traffic statistics for a particular group, partition, IP Protocol and IP Family.</p> <p>Table description (for tmnxBsxTrafStatTable): The tmnxBsxTrafStatTable contains an entry for each system wide IP Protocol and IP Family pairing per group and partition.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • isa.AaGroup • isa.AaPartition 		
activeFlowsFromSub [Active Flows From Sub] (tmnxBsxTrafStatActFlwsFmSb)	long	The value of tmnxBsxTrafStatActFlwsFmSb indicates the number of allowed flows in the subscriber to network direction that are active.
activeFlowsToSub [Active Flows To Sub] (tmnxBsxTrafStatActFlwsToSb)	long	The value of tmnxBsxTrafStatActFlwsToSb indicates the number of allowed flows in the network to subscriber direction that are active.
durationFlowsLong [Duration Flows Long] (tmnxBsxTrafStatLngDurFlws)	java. math. BigInteger	The value of tmnxBsxTrafStatLngDurFlws indicates the total number of flows with a duration greater than 180 seconds, that have completed.
durationFlowsMedium [Duration Flows Medium] (tmnxBsxTrafStatMedDurFlws)	java. math. BigInteger	The value of tmnxBsxTrafStatMedDurFlws indicates the total number of flows with a duration less than or equal to 180 seconds, but greater than 30 seconds, that have completed.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
durationFlowsShort [Duration Flows Short] (tmnxBsxTrafStatShrtDurFlws)	java. math. BigInteger	The value of tmnxBsxTrafStatShrtDurFlws indicates the total number of flows with a duration less than or equal to 30 seconds, that have completed.
flowsAdmitFromSub [Flows Admit From Sub] (tmnxBsxTrafStatFlwsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxTrafStatFlwsAdmFmSb indicates the total number of flows permitted for the subscriber to network direction.
flowsAdmitToSub [Flows Admit To Sub] (tmnxBsxTrafStatFlwsAdmToSb)	java. math. BigInteger	The value of tmnxBsxTrafStatFlwsAdmToSb indicates the total number of flows permitted for the network to subscriber direction.
flowsDenyFromSub [Flows Deny From Sub] (tmnxBsxTrafStatFlwsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxTrafStatFlwsDnyFmSb indicates the total number of flows that dropped subsequent packets in the subscriber to network direction.
flowsDenyToSub [Flows Deny To Sub] (tmnxBsxTrafStatFlwsDnyToSb)	java. math. BigInteger	The value of tmnxBsxTrafStatFlwsDnyToSb indicates the total number of flows that dropped subsequent packets in the network to subscriber direction.
ipFamily [Ip Family] (tmnxBsxTrafStatIpFamily)	int	The value of tmnxBsxTrafStatIpFamily specifies the IP Family for the traffic statistics. IP Family values may be one of: ipv4 (1) - IPv4 ipv6 (2) - IPv6 dsLite (3) - IPv4 tunneled inside IPv6 sixRd (4) - IPv6 tunneled inside IPv4, includes 6rd, 6to4 teredo (5) - IPv6 tunneled inside UDP, tunneled inside IPv4
ipProtocol [Ip Protocol] (tmnxBsxTrafStatIpProtocol)	int	The value of tmnxBsxTrafStatIpProtocol specifies the IP Protocol for the traffic statistics. IP Protocol values may be one of: other (1) - all IP protocols not listed below tcp (2) - TCP traffic udp (3) - UDP traffic

NFM-P counter names: XML [displayed] (MIB)	Type	Description
octsAdmitFromSub [Octs Admit From Sub] (tmnxBsxTrafStatOctsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxTrafStatOctsAdmFmSb indicates the total number of bytes permitted for the subscriber to network direction.
octsAdmitToSub [Octs Admit To Sub] (tmnxBsxTrafStatOctsAdmToSb)	java. math. BigInteger	The value of tmnxBsxTrafStatOctsAdmToSb indicates the total number of bytes permitted for the network to subscriber direction.
octsDenyFromSub [Octs Deny From Sub] (tmnxBsxTrafStatOctsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxTrafStatOctsDnyFmSb indicates the total number of bytes dropped for the subscriber to network direction.
octsDenyToSub [Octs Deny To Sub] (tmnxBsxTrafStatOctsDnyToSb)	java. math. BigInteger	The value of tmnxBsxTrafStatOctsDnyToSb indicates the total number of bytes dropped for the network to subscriber direction.
pktsAdmitFromSub [Pkts Admit From Sub] (tmnxBsxTrafStatPktsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxTrafStatPktsAdmFmSb indicates the total number of packets permitted for the subscriber to network direction.
pktsAdmitToSub [Pkts Admit To Sub] (tmnxBsxTrafStatPktsAdmToSb)	java. math. BigInteger	The value of tmnxBsxTrafStatPktsAdmToSb indicates the total number of packets permitted for the network to subscriber direction.
pktsDenyFromSub [Pkts Deny From Sub] (tmnxBsxTrafStatPktsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxTrafStatPktsDnyFmSb indicates the total number of packets dropped for the subscriber to network direction.
pktsDenyToSub [Pkts Deny To Sub] (tmnxBsxTrafStatPktsDnyToSb)	java. math. BigInteger	The value of tmnxBsxTrafStatPktsDnyToSb indicates the total number of packets dropped for the network to subscriber direction.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
termFlowDuration [Term Flow Duration] (tmnxBsxTrafStatTermFlwDur)	java. math. BigInteger	The value of tmnxBsxTrafStatTermFlwDur indicates the sum of all flow durations from first packet seen to last packet seen for flows that have terminated.
termFlows [Term Flows] (tmnxBsxTrafStatTermFlws)	java. math. BigInteger	The value of tmnxBsxTrafStatTermFlws indicates the total number of allowed flows in both directions that have terminated.
<p>BsxTransitSubCustRecAppGrpStats</p> <p>MIB entry name: tmnxBsxStatAaSubEntry</p> <p>Entry description: Each tmnxBsxStatAaSubEntry contains the application assurance per-subscriber statistics for a combination of group, partition, statistics interval, subscriber, statistics type, and statistics name.</p> <p>Table description (for tmnxBsxStatAaSubTable): The tmnxBsxStatAaSubTable contains an entry for each application-assurance subscriber for each statistics type within a group, partition and statistics interval. Each row contains the application assurance per-subscriber statistics collected for the subscriber. A subscriber is uniquely identified by a tmnxBsxAaSubscriberType and tmnxBsxAaSubscriber.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: aapolicy.DbInfoTransitSubscriber</p>		
activeFlowsFromSub [Active Flows From Sub] (tmnxBsxStatAaSubActFlwsFmSb)	long	The value of tmnxBsxStatAaSubActFlwsFmSb indicates the number of allowed flows in the subscriber to network direction that are active.
activeFlowsToSub [Active Flows To Sub] (tmnxBsxStatAaSubActFlwsToSb)	long	The value of tmnxBsxStatAaSubActFlwsToSb indicates the number of allowed flows in the network to subscriber direction that are active.
durationFlowsLong [Duration Flows Long] (tmnxBsxStatAaSubHCLngDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCLngDurFlws indicates the total number of flows with a duration greater than 180 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubLngDurFlws.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
durationFlowsMedium [Duration Flows Medium] (tmnxBsxStatAaSubHCMedDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCMedDurFlws indicates the total number of flows with a duration less than or equal to 180 seconds, but greater than 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubMedDurFlws.
durationFlowsShort [Duration Flows Short] (tmnxBsxStatAaSubHCSHrtDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCSHrtDurFlws indicates the total number of flows with a duration less than or equal to 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubShrtDurFlws.
flowsAdmitFromSub [Flows Admit From Sub] (tmnxBsxStatAaSubHCFIwsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCFIwsAdmFmSb indicates the total number of flows permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubFlwsAdmFmSb.
flowsAdmitToSub [Flows Admit To Sub] (tmnxBsxStatAaSubHCFIwsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCFIwsAdmToSb indicates the total number of flows permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubFlwsAdmToSb.
flowsDenyFromSub [Flows Deny From Sub] (tmnxBsxStatAaSubHCFIwsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCFIwsDnyFmSb indicates the total number of flows that dropped subsequent packets in the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubFlwsDnyFmSb.
flowsDenyToSub [Flows Deny To Sub] (tmnxBsxStatAaSubHCFIwsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCFIwsDnyToSb indicates the total number of flows that dropped subsequent packets in the network to subscriber direction. This object is the 64-bit version of tmnxBsxStatAaSubFlwsDnyToSb.
octsAdmitFromSub [Octs Admit From Sub] (tmnxBsxStatAaSubHCOctsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCOctsAdmFmSb indicates the total number of bytes permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubOctsAdmFmSb.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
octsAdmitToSub [Octs Admit To Sub] (tmnxBsxStatAaSubHCOctsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCOctsAdmToSb indicates the total number of bytes permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubOctsAdmToSb.
octsDenyFromSub [Octs Deny From Sub] (tmnxBsxStatAaSubHCOctsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCOctsDnyFmSb indicates the total number of bytes dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubOctsDnyFmSb.
octsDenyToSub [Octs Deny To Sub] (tmnxBsxStatAaSubHCOctsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCOctsDnyToSb indicates the total number of bytes dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubOctsDnyToSb.
pktsAdmitFromSub [Pkts Admit From Sub] (tmnxBsxStatAaSubHCPktsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsAdmFmSb indicates the total number of packets permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsAdmFmSb.
pktsAdmitToSub [Pkts Admit To Sub] (tmnxBsxStatAaSubHCPktsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsAdmToSb indicates the total number of packets permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsAdmToSb.
pktsDenyFromSub [Pkts Deny From Sub] (tmnxBsxStatAaSubHCPktsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsDnyFmSb indicates the total number of packets dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsDnyFmSb.
pktsDenyToSub [Pkts Deny To Sub] (tmnxBsxStatAaSubHCPktsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsDnyToSb indicates the total number of packets dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsDnyToSb.
statsInterval [Stats Interval] (tmnxBsxAaSubStatsInterval)	int	The tmnxBsxAaSubStatsInterval specifies the interval for the retrieval of application assurance subscriber statistics.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
termFlowDuration [Term Flow Duration] (tmnxBsxStatAaSubHCTermFlwDur)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCLngDurFlws indicates the total number of flows with a duration greater than 180 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubSdyLngDurFlws.
durationFlowsMedium [Duration Flows Medium] (tmnxBsxStatAaSubSdyHCMedDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCMedDurFlws indicates the total number of flows with a duration less than or equal to 180 seconds, but greater than 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubSdyMedDurFlws.
durationFlowsShort [Duration Flows Short] (tmnxBsxStatAaSubSdyHCShrtDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCShrtDurFlws indicates the total number of flows with a duration less than or equal to 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubSdyShrtDurFlws.
flowsAdmitFromSub [Flows Admit From Sub] (tmnxBsxStatAaSubSdyHCFIwsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFIwsAdmFmSb indicates the total number of flows permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsAdmFmSb.
flowsAdmitToSub [Flows Admit To Sub] (tmnxBsxStatAaSubSdyHCFIwsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFIwsAdmToSb indicates the total number of flows permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsAdmToSb.
flowsDenyFromSub [Flows Deny From Sub] (tmnxBsxStatAaSubSdyHCFIwsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFIwsDnyFmSb indicates the total number of flows that dropped subsequent packets in the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsDnyFmSb.
flowsDenyToSub [Flows Deny To Sub] (tmnxBsxStatAaSubSdyHCFIwsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFIwsDnyToSb indicates the total number of flows that dropped subsequent packets in the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsDnyToSb.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
octsAdmitFromSub [Octs Admit From Sub] (tmnxBsxStatAaSubSdyHCOctsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsAdmFmSb indicates the total number of bytes permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsAdmFmSb.
octsAdmitToSub [Octs Admit To Sub] (tmnxBsxStatAaSubSdyHCOctsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsAdmToSb indicates the total number of bytes permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsAdmToSb.
octsDenyFromSub [Octs Deny From Sub] (tmnxBsxStatAaSubSdyHCOctsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsDnyFmSb indicates the total number of bytes dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsDnyFmSb.
octsDenyToSub [Octs Deny To Sub] (tmnxBsxStatAaSubSdyHCOctsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsDnyToSb indicates the total number of bytes dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsDnyToSb.
pktsAdmitFromSub [Pkts Admit From Sub] (tmnxBsxStatAaSubSdyHCPktsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsAdmFmSb indicates the total number of packets permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsAdmFmSb.
pktsAdmitToSub [Pkts Admit To Sub] (tmnxBsxStatAaSubSdyHCPktsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsAdmToSb indicates the total number of packets permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsAdmToSb.
pktsDenyFromSub [Pkts Deny From Sub] (tmnxBsxStatAaSubSdyHCPktsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsDnyFmSb indicates the total number of packets dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsDnyFmSb.
pktsDenyToSub [Pkts Deny To Sub] (tmnxBsxStatAaSubSdyHCPktsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsDnyToSb indicates the total number of packets dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsDnyToSb.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
termFlowDuration [Term Flow Duration] (tmnxBsxStatAaSubSdyHCTermFlwDur)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCTermFlwDur indicates the sum of all flow durations from first packet seen to last packet seen for flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubSdyTermFlwDur.
termFlows [Term Flows] (tmnxBsxStatAaSubSdyHCTermFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCTermFlws indicates the total number of allowed flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubSdyTermFlws.
<p>BsxTransitSubStudyProtStats</p> <p>MIB entry name: tmnxBsxStatAaSubSdyEntry</p> <p>Entry description: Each tmnxBsxStatAaSubSdyEntry contains the application assurance per-special study subscriber statistics for a combination of group, partition, statistics interval, statistics type, subscriber, and statistics name. A value of 'chargingGroup (4)' is not supported for the tmnxBsxStatAaType.</p> <p>Table description (for tmnxBsxStatAaSubSdyTable): The tmnxBsxStatAaSubSdyTable contains an entry for each application-assurance special study subscriber for each statistics type within a group, partition and statistics interval. Each row contains the application assurance per-subscriber statistics collected for the special study subscriber. A subscriber is uniquely identified by a tmnxBsxAaSubscriberType and tmnxBsxAaSubscriber.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: aapolicy.DbInfoTransitSubscriber</p>		
activeFlowsFromSub [Active Flows From Sub] (tmnxBsxStatAaSubSdyActFlwsFmSb)	long	The value of tmnxBsxStatAaSubSdyActFlwsFmSb indicates the number of allowed flows in the subscriber to network direction that are active.
activeFlowsToSub [Active Flows To Sub] (tmnxBsxStatAaSubSdyActFlwsToSb)	long	The value of tmnxBsxStatAaSubSdyActFlwsToSb indicates the number of allowed flows in the network to subscriber direction that are active.
durationFlowsLong [Duration Flows Long] (tmnxBsxStatAaSubSdyHCLngDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCLngDurFlws indicates the total number of flows with a duration greater than 180 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubSdyLngDurFlws.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
durationFlowsMedium [Duration Flows Medium] (tmnxBsxStatAaSubSdyHCMedDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCMedDurFlws indicates the total number of flows with a duration less than or equal to 180 seconds, but greater than 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubSdyMedDurFlws.
durationFlowsShort [Duration Flows Short] (tmnxBsxStatAaSubSdyHCSHrtDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCSHrtDurFlws indicates the total number of flows with a duration less than or equal to 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubSdyShrtDurFlws.
flowsAdmitFromSub [Flows Admit From Sub] (tmnxBsxStatAaSubSdyHCFIwsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFIwsAdmFmSb indicates the total number of flows permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsAdmFmSb.
flowsAdmitToSub [Flows Admit To Sub] (tmnxBsxStatAaSubSdyHCFIwsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFIwsAdmToSb indicates the total number of flows permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsAdmToSb.
flowsDenyFromSub [Flows Deny From Sub] (tmnxBsxStatAaSubSdyHCFIwsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFIwsDnyFmSb indicates the total number of flows that dropped subsequent packets in the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsDnyFmSb.
flowsDenyToSub [Flows Deny To Sub] (tmnxBsxStatAaSubSdyHCFIwsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFIwsDnyToSb indicates the total number of flows that dropped subsequent packets in the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsDnyToSb.
octsAdmitFromSub [Octs Admit From Sub] (tmnxBsxStatAaSubSdyHCOctsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsAdmFmSb indicates the total number of bytes permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsAdmFmSb.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
octsAdmitToSub [Octs Admit To Sub] (tmnxBsxStatAaSubSdyHCOctsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsAdmToSb indicates the total number of bytes permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsAdmToSb.
octsDenyFromSub [Octs Deny From Sub] (tmnxBsxStatAaSubSdyHCOctsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsDnyFmSb indicates the total number of bytes dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsDnyFmSb.
octsDenyToSub [Octs Deny To Sub] (tmnxBsxStatAaSubSdyHCOctsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsDnyToSb indicates the total number of bytes dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsDnyToSb.
pktsAdmitFromSub [Pkts Admit From Sub] (tmnxBsxStatAaSubSdyHCPktsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsAdmFmSb indicates the total number of packets permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsAdmFmSb.
pktsAdmitToSub [Pkts Admit To Sub] (tmnxBsxStatAaSubSdyHCPktsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsAdmToSb indicates the total number of packets permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsAdmToSb.
pktsDenyFromSub [Pkts Deny From Sub] (tmnxBsxStatAaSubSdyHCPktsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsDnyFmSb indicates the total number of packets dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsDnyFmSb.
pktsDenyToSub [Pkts Deny To Sub] (tmnxBsxStatAaSubSdyHCPktsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsDnyToSb indicates the total number of packets dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsDnyToSb.
protName [Prot Name] (tmnxBsxStatAaName)	String	The value of tmnxBsxStatAaName specifies either the ISA-AA protocol, application or app-group name for which statistics are requested. The tmnxBsxStatAaType is used to determine the statistics type.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
termFlowDuration [Term Flow Duration] (tmnxBsxStatAaSubSdyHCTermFlwDur)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCTermFlwDur indicates the sum of all flow durations from first packet seen to last packet seen for flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubSdyTermFlwDur.
termFlows [Term Flows] (tmnxBsxStatAaSubSdyHCTermFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCTermFlws indicates the total number of allowed flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubSdyTermFlws.
<p>DbInfoTransitSubscriberSumStats</p> <p>MIB entry name: tmnxBsxAaSubSumEntry</p> <p>Entry description: Each tmnxBsxAaSubSumEntry contains the ISA-AA subscriber summary information within a group partition and statistics interval.</p> <p>Table description (for tmnxBsxAaSubSumTable): The tmnxBsxAaSubSumTable contains an entry for each ISA-AA subscriber in the system. Each row contains the subscriber summary information for a given ISA-AA group, partition and statistics interval.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: aapolicy.DbInfoTransitSubscriber</p>		
activeFlowsFromSub [Active Flows From Sub] (tmnxBsxAaSubSumActFlwsFmSb)	long	The value of tmnxBsxAaSubSumActFlwsFmSb indicates the number of allowed flows in the subscriber to network direction that are active.
activeFlowsToSub [Active Flows To Sub] (tmnxBsxAaSubSumActFlwsToSb)	long	The value of tmnxBsxAaSubSumActFlwsToSb indicates the number of allowed flows in the network to subscriber direction that are active.
durationFlowsLong [Duration Flows Long] (tmnxBsxAaSubSumHCLngDurFlws)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCLngDurFlws indicates the total number of flows with a duration greater than 180 seconds, that have completed. This object is a 64-bit version of tmnxBsxAaSubSumLngDurFlws.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
durationFlowsMedium [Duration Flows Medium] (tmnxBsxAaSubSumHcMedDurFlws)	java. math. BigInteger	The value of tmnxBsxAaSubSumHcMedDurFlws indicates the total number of flows with a duration less than or equal to 180 seconds, but greater than 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxAaSubSumMedDurFlws.
durationFlowsShort [Duration Flows Short] (tmnxBsxAaSubSumHcShrtDurFlws)	java. math. BigInteger	The value of tmnxBsxAaSubSumHcShrtDurFlws indicates the total number of flows with a duration less than or equal to 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxAaSubSumShrtDurFlws.
flowsAdmitFromSub [Flows Admit From Sub] (tmnxBsxAaSubSumHcFlwsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHcFlwsAdmFmSb indicates the total number of flows permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxAaSubSumFlwsAdmFmSb.
flowsAdmitToSub [Flows Admit To Sub] (tmnxBsxAaSubSumHcFlwsAdmToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHcFlwsAdmToSb indicates the total number of flows permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxAaSubSumFlwsAdmToSb.
flowsDenyFromSub [Flows Deny From Sub] (tmnxBsxAaSubSumHcFlwsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHcFlwsDnyFmSb indicates the total number of flows that dropped subsequent packets in the subscriber to network direction. This object is a 64-bit version of tmnxBsxAaSubSumFlwsDnyFmSb.
flowsDenyToSub [Flows Deny To Sub] (tmnxBsxAaSubSumHcFlwsDnyToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHcFlwsDnyToSb indicates the total number of flows that dropped subsequent packets in the network to subscriber direction. This object is the 64-bit version of tmnxBsxAaSubSumFlwsDnyToSb.
mdaMdaNum [Mda Mda Num] (tmnxBsxAaSubSumMdaMdaNum)	int	The value of tmnxBsxAaSubSumMdaMdaNum indicates the MDA number of the ISA-AA MDA servicing the subscriber.
mdaSlotNum [Mda Slot Num] (tmnxBsxAaSubSumMdaSlotNum)	int	The value of tmnxBsxAaSubSumMdaSlotNum indicates the slot number of the ISA-AA MDA servicing the subscriber.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
octsAdmitFromSub [Octs Admit From Sub] (tmnxBsxAaSubSumHCOctsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCOctsAdmFmSb indicates the total number of bytes permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxAaSubSumOctsAdmFmSb.
octsAdmitToSub [Octs Admit To Sub] (tmnxBsxAaSubSumHCOctsAdmToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCOctsAdmToSb indicates the total number of bytes permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxAaSubSumOctsAdmToSb.
octsDenyFromSub [Octs Deny From Sub] (tmnxBsxAaSubSumHCOctsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCOctsDnyFmSb indicates the total number of bytes dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxAaSubSumOctsDnyFmSb.
octsDenyToSub [Octs Deny To Sub] (tmnxBsxAaSubSumHCOctsDnyToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCOctsDnyToSb indicates the total number of bytes dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxAaSubSumOctsDnyToSb.
pktsAdmitFromSub [Pkts Admit From Sub] (tmnxBsxAaSubSumHCPktsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCPktsAdmFmSb indicates the total number of packets permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxAaSubSumPktsAdmFmSb.
pktsAdmitToSub [Pkts Admit To Sub] (tmnxBsxAaSubSumHCPktsAdmToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCPktsAdmToSb indicates the total number of packets permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxAaSubSumPktsAdmToSb.
pktsDenyFromSub [Pkts Deny From Sub] (tmnxBsxAaSubSumHCPktsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCPktsDnyFmSb indicates the total number of packets dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxAaSubSumPktsDnyFmSb.
pktsDenyToSub [Pkts Deny To Sub] (tmnxBsxAaSubSumHCPktsDnyToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCPktsDnyToSb indicates the total number of packets dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxAaSubSumPktsDnyToSb.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
statsInterval [Stats Interval] (tmnxBsxAaSubStatsInterval)	int	The tmnxBsxAaSubStatsInterval specifies the interval for the retrieval of application assurance subscriber statistics.
termFlowDuration [Term Flow Duration] (tmnxBsxAaSubSumHCTermFlwDur)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCTermFlwDur indicates the sum of all flow durations from first packet seen to last packet seen for flows that have terminated. This object is a 64-bit version of tmnxBsxAaSubSumTermFlwDur.
termFlows [Term Flows] (tmnxBsxAaSubSumHCTermFlws)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCTermFlws indicates the total number of allowed flows that have terminated. This object is a 64-bit version of tmnxBsxAaSubSumTermFlws.
<p>HttpNotifStats</p> <p>MIB entry name: tmnxChassisEntry</p> <p>Entry description: tmnxChassisEntry consists of the system level information pertaining to the hardware present in the system. Only one entry is created and maintained by the system, which is assigned the tmnxChassisIndex value '1'. Once this entry is created, it cannot be destroyed. Additional entries cannot be manually created or destroyed. Support of multiple chassis' are managed through the use of tmnxPhysChassisTable.</p> <p>Table description (for tmnxChassisTable): tmnxChassisTable contains Nokia 7x50 system level information.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: aapolicy.AppQosPolicy</p>		
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
criteriaNoMatchCount [Criteria No Match Count] (tmnxBsxHttpNotifStatCritNoMtch)	java. math. BigInteger	The value of tmnxBsxHttpNotifStatCritNoMtch indicates the number of messages which did not match the selection criteria for insertion of the script URL.

Table 516 aapolicy statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
failedCount [Failed Count] (tmnxBsxHttpNotifStatFailed)	java. math. BigInteger	The value of tmnxBsxHttpNotifStatFailed indicates the number of times a HTTP notification is known to have failed.
grpPartIndex [Grp Part Index] (tmnxBsxAaGrpPartIndex)	long	The value of tmnxBsxAaGrpPartIndex specifies the partition index within an AA group. The corresponding row for the AA group must have already been created in the tmnxBsxIsaAaGrpTable. Partition index '0' indicates group wide AA policy information, and is automatically created when the AA group is created in the tmnxBsxIsaAaGrpTable.
insertedCount [Inserted Count] (tmnxBsxHttpNotifStatInserted)	java. math. BigInteger	The value of tmnxBsxHttpNotifStatInserted indicates the number of times the script URL was inserted into a message.
mdaSlotNum [Mda Slot Num] (tmnxMDASlotNum)	long	The unique value which identifies this MDA slot within a specific IOM card in the system. Rows with a tmnxMDASlotNum value of zero (0) represent the special case of an IOM card without MDA slots but that instead has its ports directly on the IOM card itself. In that case, there should be only that one row entry in the tmnxMDATable for that IOM card.
statusLastChangedTime [Status Last Changed Time] (tmnxBsxHttpNotifStatDiscntTime)	long	The value of tmnxBsxHttpNotifStatDiscntTime indicates the SNMPv2-MIB::sysUpTime (hundredths of a second) when the ISA-AA MDA within the group has last changed status.
successCount [Success Count] (tmnxBsxHttpNotifStatSuccess)	java. math. BigInteger	The value of tmnxBsxHttpNotifStatSuccess indicates the number of times a HTTP notification success report was received.

Table 517 acfilter statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>HitCountStats</p> <p>MIB entry name: tIPFilterParamsEntry</p> <p>Entry description: Information about a particular IP Filter entry. Every IP Filter can have zero or more IP Filter match entries. a filter entry with no match criteria set will match every packet, and the entry action will be taken. Entries are created/deleted by user. Additional parameters can be found in tIPFilterParamsExtTable. There is no StorageType object, entries have a presumed StorageType of nonVolatile.</p> <p>Table description (for tIPFilterParamsTable): A table of all IP filter match entries for all IP filters.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: acfilter.IpFilterEntry</p>		
egressHitByteCount [Egress Hit Byte Count] (tIPFilterParamsEgrHitByteCount)	java. math. BigInteger	The value of tIPFilterParamsEgrHitByteCount indicates the number of bytes of all egress packets that matched this entry.
egressHitCount [Egress Hit Count] (tIPFilterParamsEgressHitCount)	java. math. BigInteger	This object indicates the number of times an egress packet matched this entry.
ingressHitByteCount [Ingress Hit Byte Count] (tIPFilterParamsIngrHitByteCount)	java. math. BigInteger	The value of tIPFilterParamsIngrHitByteCount indicates the number of bytes of all ingress packets that matched this entry.
ingressHitCount [Ingress Hit Count] (tIPFilterParamsIngressHitCount)	java. math. BigInteger	This object indicates the number of times an ingress packet matched this entry.

Table 517 acfilter statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>Ipv6HitCountStats</p> <p>MIB entry name: tIPv6FilterParamsEntry</p> <p>Entry description: Information about a particular IPv6 Filter entry. Every IPv6 Filter can have zero or more IPv6 Filter match entries. A filter entry with no match criteria set will match every packet, and the entry action will be taken. Entries are created/deleted by user. Additional match criteria can be found in tIPv6FilterParamsExtTable. There is no StorageType object, entries have a presumed StorageType of nonVolatile.</p> <p>Table description (for tIPv6FilterParamsTable): A table of all IPv6 filter match entries for all IPv6 filters</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: acfilter.Ipv6FilterEntry</p>		
egressHitByteCount [Egress Hit Byte Count] (tIPv6FilterParamsEgrHitByteCount)	java. math. BigInteger	This tIPv6FilterParamsEgrHitByteCount indicates the number of bytes of all egress packets that matched this entry.
egressHitCount [Egress Hit Count] (tIPv6FilterParamsEgressHitCount)	java. math. BigInteger	This object indicates the number of times an egress packet matched this entry.
ingressHitByteCount [Ingress Hit Byte Count] (tIPv6FilterParamsIngrHitByteCount)	java. math. BigInteger	The value of tIPv6FilterParamsIngrHitByteCount indicates the number of bytes of all ingress packets that matched this entry.
ingressHitCount [Ingress Hit Count] (tIPv6FilterParamsIngressHitCount)	java. math. BigInteger	This object indicates the number of times an ingress packet matched this entry.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>LiMacFilterEntryStats</p> <p>MIB entry name: tLiMacFilterParamsEntry</p> <p>Entry description: An LI MAC filter match entry.</p> <p>Table description (for tLiMacFilterParamsTable): The table tLiMacFilterParamsTable contains all LI MAC filter match entries for all LI MAC filters.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: acfilterli.LiMacFilterEntry</p>		
egressHitBytes [Egress Hit Bytes] (tLiMacFilterParamsEgrHitBytes)	java. math. BigInteger	The value of tLiMacFilterParamsEgrHitBytes indicates the number of bytes of all egress packets that matched this entry.
egressHitCount [Egress Hit Count] (tLiMacFilterParamsEgrHitCount)	java. math. BigInteger	This object tLiMacFilterParamsEgrHitCount indicates the number of times an egress packet matched this entry.
ingressHitBytes [Ingress Hit Bytes] (tLiMacFilterParamsIngrHitBytes)	java. math. BigInteger	The value of tLiMacFilterParamsIngrHitBytes indicates the number of bytes of all ingress packets that matched this entry.
ingressHitCount [Ingress Hit Count] (tLiMacFilterParamsIngrHitCount)	java. math. BigInteger	The object tLiMacFilterParamsIngrHitCount indicates the number of times an ingress packet matched this entry.

Table 519 aps statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>ApsChannelStats MIB entry name: apsChanStatusEntry Entry description: A conceptual row in the apsChanStatusTable. Table description (for apsChanStatusTable): This table contains status information for all SONET LTE interfaces that are included in APS groups. Supports realtime plotting Supports scheduled collection Monitored class: aps.ApsChannel</p>		
discontinuityTime [Discontinuity Time] (apsChanStatusDiscontinuityTime)	long	The value of sysUpTime on the most recent occasion at which any one or more of this channel's counters suffered a discontinuity. The relevant counters are the specific instances associated with this channel of any Counter32 object contained in apsChanStatusTable. If no such discontinuities have occurred since the last re-initialization of the local management subsystem, then this object contains a zero value.
lastSwitchover [Last Switchover] (apsChanStatusLastSwitchover)	long	When queried with index value apsChanConfigNumber other than 0, this object will return the value of sysUpTime when this channel last completed a switch to the protection line. If this channel has never switched to the protection line, the value 0 will be returned. When queried with index value apsChanConfigNumber set to 0, which is the protection line, this object will return the value of sysUpTime the last time that a working channel was switched back to the working line from this protection line. If no working channel has ever switched back to the working line from this protection line, the value 0 will be returned.

Table 519 aps statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
signalDegrades [Signal Degrades] (apsChanStatusSignalDegrades)	long	A count of Signal Degrade conditions. This condition occurs when the line Bit Error Rate exceeds the currently configured value of the relevant instance of apsConfigSdBerThreshold. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsChanStatusDiscontinuityTime.
signalFailures [Signal Failures] (apsChanStatusSignalFailures)	long	A count of Signal Failure conditions that have been detected on the incoming signal. This condition occurs when a loss of signal, loss of frame, AIS-L or a Line bit error rate exceeding the currently configured value of the relevant instance of apsConfigSfBerThreshold. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsChanStatusDiscontinuityTime.
switchoverSeconds [Switchover Seconds] (apsChanStatusSwitchoverSeconds)	long	The cumulative Protection Switching Duration (PSD) time in seconds. For a working channel, this is the cumulative number of seconds that service was carried on the protection line. For the protection line, this is the cumulative number of seconds that the protection line has been used to carry any working channel traffic. This information is only valid if revertive switching is enabled. The value 0 will be returned otherwise. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsChanStatusDiscontinuityTime. For example, if the value of an instance of apsChanStatusSwitchoverSeconds changes from a non-zero value to zero due to revertive switching being disabled, it is expected that the corresponding value of apsChanStatusDiscontinuityTime will be updated to reflect the time of the configuration change.

Table 519 aps statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
switchovers [Switchovers] (apsChanStatusSwitchovers)	long	When queried with index value apsChanConfigNumber other than 0, this object will return the number of times this channel has switched to the protection line. When queried with index value apsChanConfigNumber set to 0, which is the protection line, this object will return the number of times that any working channel has been switched back to the working line from this protection line. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsChanStatusDiscontinuityTime.
<p>ApsGroupStats MIB entry name: apsStatusEntry Entry description: A conceptual row in the apsStatusTable. Table description (for apsStatusTable): This table provides status information about APS groups that have been configured on the system. Supports realtime plotting Supports scheduled collection Monitored class: aps.ApsGroup</p>		
channelMismatches [Channel Mismatches] (apsStatusChannelMismatches)	long	A count of Channel Mismatch conditions. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsStatusDiscontinuityTime.
discontinuityTime [Discontinuity Time] (apsStatusDiscontinuityTime)	long	The value of sysUpTime on the most recent occasion at which any one or more of this APS group's counters suffered a discontinuity. The relevant counters are the specific instances associated with this APS group of any Counter32 object contained in apsStatusTable. If no such discontinuities have occurred since the last re-initialization of the local management subsystem, then this object contains a zero value.

Table 519 aps statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fEPLFs [fEPLFs] (apsStatusfEPLFs)	long	A count of Far-End Protection-Line Failure conditions. This condition is declared based on receiving SF on the protection line in the K1 byte. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsStatusDiscontinuityTime.
modeMismatches [Mode Mismatches] (apsStatusModeMismatches)	long	A count of Mode Mismatch conditions. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsStatusDiscontinuityTime.
pSBFs [PSBFs] (apsStatusPSBFs)	long	A count of Protection Switch Byte Failure conditions. This condition occurs when either an inconsistent APS byte or an invalid code is detected. An inconsistent APS byte occurs when no three consecutive K1 bytes of the last 12 successive frames are identical, starting with the last frame containing a previously consistent byte. An invalid code occurs when the incoming K1 byte contains an unused code or a code irrelevant for the specific switching operation (e.g., Reverse Request while no switching request is outstanding) in three consecutive frames. An invalid code also occurs when the incoming K1 byte contains an invalid channel number in three consecutive frames. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsStatusDiscontinuityTime.

Table 520 arp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SapArpHostStats</p> <p>MIB entry name: sapArpHostStatEntry</p> <p>Entry description: ARP host specific status and statistics information about a SAP.</p> <p>Table description (for sapArpHostStatTable): A table that contains ARP host status and statistics information about SAP's.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • ies.ServiceAccessPoint • vpls.AbstractL2AccessInterface • vprn.ServiceAccessPoint 		
numAuthReq [Num Auth Req] (sapArpHostStatNumAuthReq)	long	The value of sapArpHostStatNumAuthReq indicates the number of times that the system initiated an authentication request for an ARP host on this SAP since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.
numCreated [Num Created] (sapArpHostStatNumCreated)	long	The value of sapArpHostStatNumCreated indicates the number of times that an ARP host was created on this SAP since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.
numDeleted [Num Deleted] (sapArpHostStatNumDeleted)	long	The value of sapArpHostStatNumDeleted indicates the number of times that an ARP host was deleted on this SAP since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.
numForcedVerif [Num Forced Verif] (sapArpHostStatNumForcedVerif)	long	The value of sapArpHostStatNumForcedVerif indicates the number of times that the system started a forced subscriber host connectivity verification for an ARP host on this SAP since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.

Table 520 arp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numHosts [Num Hosts] (sapArpHostStatNumHosts)	long	The value of sapArpHostStatNumHosts indicates the actual number of ARP hosts on this SAP.
numUpdated [Num Updated] (sapArpHostStatNumUpdated)	long	The value of sapArpHostStatNumUpdated indicates the number of times that an ARP host was updated on this SAP since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.
trigIgnQFull [Trig Ign QFull] (sapArpHostStatTrigIgnQFull)	long	The value of sapArpHostStatTrigIgnQFull indicates the number of ARP triggers received on this SAP that did not result in the creation of a new ARP host because the internal ARP trigger event queue of the system was full, since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.
triggersIgnored [Triggers Ignored] (sapArpHostStatTriggersIgnored)	long	The value of sapArpHostStatTriggersIgnored indicates the number of ARP triggers received on this SAP that did not result in the creation of a new ARP host since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared. This number does not include the number indicated by sapArpHostStatTrigIgnQFull.
triggersRx [Triggers Rx] (sapArpHostStatTriggersRx)	long	The value of sapArpHostStatTriggersRx indicates the number of ARP triggers received on this SAP since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.

Table 521 atm statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>ATMCpStats</p> <p>MIB entry name: tAtmCpStatisticsEntry</p> <p>Entry description: An entry in the tAtmCpStatisticsTable contains statistics information applicable to a particular connection profile assigned to a particular interface.</p> <p>Table description (for tAtmCpStatisticsTable): The tAtmCpStatisticsTable is used to gather statistics on connection profiles assigned to interfaces.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: atm.Interface</p>		
tAtmCpStatsClp0CellsRxd [TAtm Cp Stats Clp 0 Cells Rxd] (tAtmCpStatsClp0CellsRxd)	java. math. BigInteger	The value of tAtmCpStatsClp0CellsRxd indicates the number of valid ATM CLP=0 cells received by the connection profile.
tAtmCpStatsClp0CellsTxd [TAtm Cp Stats Clp 0 Cells Txd] (tAtmCpStatsClp0CellsTxd)	java. math. BigInteger	The value of tAtmCpStatsClp0CellsTxd indicates the number of valid ATM CLP=0 cells transmitted by the connection profile.
tAtmCpStatsDrpCellsRxd [TAtm Cp Stats Drp Cells Rxd] (tAtmCpStatsDrpCellsRxd)	long	The value of tAtmCpStatsDrpCellsRxd indicates the number of all policer cells discards (CLP=0+1) of the connection profile. This excludes any buffer management discards (if applicable).
tAtmCpStatsDrpClp0CellsRxd [TAtm Cp Stats Drp Clp 0 Cells Rxd] (tAtmCpStatsDrpClp0CellsRxd)	long	The value of tAtmCpStatsDrpClp0CellsRxd indicates the number of all policer CLP=0 cells discards of the connection profile. This excludes any buffer management discards (if applicable).
tAtmCpStatsDrpClp0CellsTxd [TAtm Cp Stats Drp Clp 0 Cells Txd] (tAtmCpStatsDrpClp0CellsTxd)	long	The value of tAtmCpStatsDrpClp0CellsTxd indicates the number of all CLP=0 cells discards of this connection profile. This includes both discards due to buffer management and policer.

Table 521 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tAtmCpStatsTagCells [TAtm Cp Stats Tag Cells] (tAtmCpStatsTagCells)	long	The tAtmIImiLinkStatusChange notification is sent whenever a status change occurs on an ILMI link. This includes changes to the ILMI link's administrative status and the ILMI link's operational status.
tAtmCpStatsTotalCellsRxd [TAtm Cp Stats Total Cells Rxd] (tAtmCpStatsTotalCellsRxd)	java. math. BigInteger	The value of tAtmCpStatsTotalCellsRxd indicates the number of valid ATM cells received by the connection profile. If traffic policing is implemented, then cells are counted prior to the application of traffic policing. To obtain the byte count multiply tAtmCpStatsTotalCellsRxd by 53.
tAtmCpStatsTotalCellsTxd [TAtm Cp Stats Total Cells Txd] (tAtmCpStatsTotalCellsTxd)	java. math. BigInteger	The value of tAtmCpStatsTotalCellsTxd indicates the number of valid ATM cells transmitted by the connection profile. If traffic policing is implemented, then cells are counted prior to the application of traffic policing. To obtain the byte count multiply tAtmCpStatsTotalCellsTxd by 53.
<p>AtmCellVclStatistics</p> <p>MIB entry name: tAtmCellVclStatisticsEntry</p> <p>Entry description: An entry in the tAtmCellVclStatisticsTable containing statistics information applicable to a particular VCL entry in the AToM MIB.</p> <p>Table description (for tAtmCellVclStatisticsTable): tAtmCellVclStatisticsTable is used to gather cell-level statistics on a particular VCC entry in the RFC 2515 AToM MIB.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: atm.PvcConnection</p>		
tAtmCellVclStatsClp0CellsRxd [TAtm Cell Vcl Stats Clp 0 Cells Rxd] (tAtmCellVclStatsClp0CellsRxd)	java. math. BigInteger	The value of tAtmCellVclStatsClp0CellsRxd indicates the number of valid ATM CLP=0 cells received by the VCL.
tAtmCellVclStatsClp0CellsTxd [TAtm Cell Vcl Stats Clp 0 Cells Txd] (tAtmCellVclStatsClp0CellsTxd)	java. math. BigInteger	The value of tAtmCellVclStatsClp0CellsTxd indicates the number of valid ATM CLP=0 cells transmitted by the VCL.

Table 521 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tAtmCellVclStatsDrpCellsRxd [TAtm Cell Vcl Stats Drp Cells Rxd] (tAtmCellVclStatsDrpCellsRxd)	long	The value of tAtmCellVclStatsDrpCellsRxd indicates the number of all policer cells discards (CLP=0+1) of the VCL. This excludes any buffer management discards (if applicable).
tAtmCellVclStatsDrpClp0CellsRxd [TAtm Cell Vcl Stats Drp Clp 0 Cells Rxd] (tAtmCellVclStatsDrpClp0CellsRxd)	long	The value of tAtmCellVclStatsDrpClp0CellsRxd indicates the number of all policer CLP=0 cells discards of the VCL. This excludes any buffer management discards (if applicable).
tAtmCellVclStatsDrpClp0CellsTxd [TAtm Cell Vcl Stats Drp Clp 0 Cells Txd] (tAtmCellVclStatsDrpClp0CellsTxd)	long	The value of tAtmCellVclStatsDrpClp0CellsTxd indicates the number of all CLP=0 cells discards of this VCL. This includes both discards due to buffer management and policer.
tAtmCellVclStatsTagCells [TAtm Cell Vcl Stats Tag Cells] (tAtmCellVclStatsTagCells)	long	The value of tAtmCellVclStatsTagCells indicates the number of tagged CLP=0 cells of the VCL. The egress may or may not discard these cells.
<p>AtmIfcStatistics</p> <p>MIB entry name: tAtmIfcStatisticsEntry</p> <p>Entry description: An entry in the tAtmIfcStatisticsTable containing statistics information applicable to a particular IFC entry.</p> <p>Table description (for tAtmIfcStatisticsTable): The tAtmIfcStatisticsTable is used to gather cell-level statistics on a particular IFC entry.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: atm.IfConnection</p>		
tAtmIfcStatsDrpCellsRxd [TAtm Ifc Stats Drp Cells Rxd] (tAtmIfcStatsDrpCellsRxd)	long	The value of tAtmIfcStatsDrpCellsRxd indicates the number of all policer cells discards (CLP=0+1) of the IFC. This excludes any buffer management discards (if applicable).
tAtmIfcStatsDrpClp0CellsRxd [TAtm Ifc Stats Drp Clp 0 Cells Rxd] (tAtmIfcStatsDrpClp0CellsRxd)	long	The value of tAtmIfcStatsDrpClp0CellsRxd indicates the number of all policer CLP=0 cells discards of the IFC. This excludes any buffer management discards (if applicable).

Table 521 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tAtmIfcStatsDrpClp0CellsTxd [TAtm Ifc Stats Drp Clp 0 Cells Txd] (tAtmIfcStatsDrpClp0CellsTxd)	long	The value of tAtmIfcStatsDrpClp0CellsTxd indicates the number of all CLP=0 cells discards of this IFC. This includes both discards due to buffer management and policer.
tAtmIfcStatsTagCells [TAtm Ifc Stats Tag Cells] (tAtmIfcStatsTagCells)	long	The value of tAtmIfcStatsTagCells indicates the number of tagged CLP=0 cells of the IFC. The egress may or may not discard these cells.
tAtmIfcStatsTotalBytesRxd [TAtm Ifc Stats Total Bytes Rxd] (tAtmIfcStatsTotalBytesTxd)	java. math. BigInteger	The value of tAtmIfcStatsTotalBytesTxd indicates the number of bytes transmitted by this IFC. This is the number of tAtmIfcStatsTotalCellsTxd multiplied by 53.
tAtmIfcStatsTotalBytesTxd [TAtm Ifc Stats Total Bytes Txd] (tAtmIfcStatsTotalBytesRxd)	java. math. BigInteger	The value of tAtmIfcStatsTotalBytesRxd indicates the number of bytes received by this IFC. This is the number of tAtmIfcStatsTotalCellsRxd multiplied by 53.
tAtmIfcStatsTotalCellsRxd [TAtm Ifc Stats Total Cells Rxd] (tAtmIfcStatsTotalCellsRxd)	java. math. BigInteger	The value of tAtmIfcStatsTotalCellsRxd indicates the number of valid ATM cells received by the IFC including both CLP=0 and CLP=1 cells. If traffic policing is implemented, then cells are counted prior to the application of traffic policing.
tAtmIfcStatsTotalCellsTxd [TAtm Ifc Stats Total Cells Txd] (tAtmIfcStatsTotalCellsTxd)	java. math. BigInteger	The value of tAtmIfcStatsTotalCellsTxd indicates the number of valid ATM cells transmitted by the IFC including both CLP=0 and CLP=1 cells. If traffic policing is implemented, then cells are counted prior to the application of traffic policing.
tAtmIfcStatsTotalClp0CellsRxd [TAtm Ifc Stats Total Clp 0 Cells Rxd] (tAtmIfcStatsTotalClp0CellsRxd)	java. math. BigInteger	The value of tAtmIfcStatsTotalClp0CellsRxd indicates the number of valid ATM CLP=0 cells received by the IFC. If traffic policing is implemented, then cells are counted prior to the application of traffic policing.
tAtmIfcStatsTotalClp0CellsTxd [TAtm Ifc Stats Total Clp 0 Cells Txd] (tAtmIfcStatsTotalClp0CellsTxd)	java. math. BigInteger	The value of tAtmIfcStatsTotalClp0CellsTxd indicates the number of valid ATM CLP=0 cells transmitted by the IFC. If traffic policing is implemented, then cells are counted prior to the application of traffic policing.

Table 521 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AtmOamVplStatistics</p> <p>MIB entry name: tAtmOamVplStatisticsEntry</p> <p>Entry description: An entry in the tAtmVplStatisticsTable containing statistics information applicable to a particular VPL entry in the AToM MIB.</p> <p>Table description (for tAtmOamVplStatisticsTable): The tAtmOamVplStatisticsTable is used to gather oam statistics on a particular VPL entry in the RFC 2515 AToM MIB.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: atm.VPConnection</p>		
tAtmOamVplStatsAISCellsRxd [TAtm Oam Vpl Stats AISCells Rxd] (tAtmOamVplStatsAISCellsRxd)	long	The value of tAtmOamVplStatsAISCellsRxd indicates the number of AIS cells received on this VPL for both end to end and segment.
tAtmOamVplStatsAISCellsTxd [TAtm Oam Vpl Stats AISCells Txd] (tAtmOamVplStatsAISCellsTxd)	long	The value of tAtmOamVplStatsAISCellsTxd indicates the number of AIS cells transmitted on this VPL for both end to end and segment.
tAtmOamVplStatsCrc10Errors [TAtm Oam Vpl Stats Crc 10 Errors] (tAtmOamVplStatsCrc10Errors)	long	The value of tAtmOamVplStatsCrc10Errors indicates the number of OAM cells discarded on this VPL with CRC 10 errors.
tAtmOamVplStatsLoopbackCellsRxd [TAtm Oam Vpl Stats Loopback Cells Rxd] (tAtmOamVplStatsLoopbackCellsRxd)	long	The value of tAtmOamVplStatsLoopbackCellsRxd indicates the number of loopback requests and responses received on this VPL for both end to end and segment.
tAtmOamVplStatsLoopbackCellsTxd [TAtm Oam Vpl Stats Loopback Cells Txd] (tAtmOamVplStatsLoopbackCellsTxd)	long	The value of tAtmOamVplStatsLoopbackCellsTxd indicates the number of loopback requests and responses transmitted on this VPL for both end to end and segment.
tAtmOamVplStatsOtherCellsRxd [TAtm Oam Vpl Stats Other Cells Rxd] (tAtmOamVplStatsOtherCellsRxd)	long	This value of tAtmOamVplStatsOtherCellsRxd indicates the number of OAM cells that are received on this VPL but not identified.

Table 521 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tAtmOamVplStatsRDICellsRxd [TAtm Oam Vpl Stats RDICells Rxd] (tAtmOamVplStatsRDICellsRxd)	long	The value of tAtmOamVplStatsRDICellsRxd indicates the number of RDI cells received on this VPL for both end to end and segment.
tAtmOamVplStatsRDICellsTxd [TAtm Oam Vpl Stats RDICells Txd] (tAtmOamVplStatsRDICellsTxd)	long	The value of tAtmOamVplStatsRDICellsTxd indicates the number of RDI cells transmitted on this VPL for both end to end and segment.
<p>AtmVplStatistics MIB entry name: tAtmVplStatisticsEntry Entry description: An entry in the tAtmVplStatisticsTable containing statistics information applicable to a particular VPL entry in the AToM MIB. tAtmVtlStatsDrpClp0CellsRxd [TAtm Vtl Stats Drp Clp 0 Cells Rxd] (tAtmVtlStatsDrpClp0CellsRxd)	long	The value of tAtmVtlStatsDrpClp0CellsRxd indicates the number of all policer CLP=0 cells discards of the VTL. This excludes any buffer management discards (if applicable).
tAtmVtlStatsDrpClp0CellsTxd [TAtm Vtl Stats Drp Clp 0 Cells Txd] (tAtmVtlStatsDrpClp0CellsTxd)	long	The value of tAtmVtlStatsDrpClp0CellsTxd indicates the number of all CLP=0 cells discards of this VTL. This includes both discards due to buffer management and policer.
tAtmVtlStatsTagCells [TAtm Vtl Stats Tag Cells] (tAtmVtlStatsTagCells)	long	The value of tAtmVtlStatsTagCells indicates the number of tagged CLP=0 cells of the VTL. The egress may or may not discard these cells.
tAtmVtlStatsTotalBytesRxd [TAtm Vtl Stats Total Bytes Rxd] (tAtmVtlStatsTotalBytesTxd)	java. math. BigInteger	The value of tAtmVtlStatsTotalBytesTxd indicates the number of bytes transmitted by this VTL. This is the number of tAtmVtlStatsTotalCellsTxd multiplied by 53.
tAtmVtlStatsTotalBytesTxd [TAtm Vtl Stats Total Bytes Txd] (tAtmVtlStatsTotalBytesRxd)	java. math. BigInteger	The value of tAtmVtlStatsTotalBytesRxd indicates the number of bytes received by this VTL. This is the number of tAtmVtlStatsTotalCellsRxd multiplied by 53.

Table 521 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tAtmVtlStatsTotalCellsRxd [TAtm Vtl Stats Total Cells Rxd] (tAtmVtlStatsTotalCellsRxd)	java. math. BigInteger	The value of tAtmVtlStatsTotalCellsRxd indicates the number of valid ATM cells received by the VTL including both CLP=0 and CLP=1 cells. If traffic policing is implemented, then cells are counted prior to the application of traffic policing.
tAtmVtlStatsTotalCellsTxd [TAtm Vtl Stats Total Cells Txd] (tAtmVtlStatsTotalCellsTxd)	java. math. BigInteger	The value of tAtmVtlStatsTotalCellsTxd indicates the number of valid ATM cells transmitted by the VTL including both CLP=0 and CLP=1 cells. If traffic policing is implemented, then cells are counted prior to the application of traffic policing.
tAtmVtlStatsTotalClp0CellsRxd [TAtm Vtl Stats Total Clp 0 Cells Rxd] (tAtmVtlStatsTotalClp0CellsRxd)	java. math. BigInteger	The value of tAtmVtlStatsTotalClp0CellsRxd indicates the number of valid ATM CLP=0 cells received by the VTL. If traffic policing is implemented, then cells are counted prior to the application of traffic policing.
tAtmVtlStatsTotalClp0CellsTxd [TAtm Vtl Stats Total Clp 0 Cells Txd] (tAtmVtlStatsTotalClp0CellsTxd)	java. math. BigInteger	The value of tAtmVtlStatsTotalClp0CellsTxd indicates the number of valid ATM CLP=0 cells transmitted by the VTL. If traffic policing is implemented, then cells are counted prior to the application of traffic policing.
<p>IlmiStatistics</p> <p>MIB entry name: tAtmIlmiLinkStatisticsEntry</p> <p>Entry description: An entry in the tAtmIlmiLinkStatisticsTable containing statistics information applicable to a particular ILMI link on an ATM interface.</p> <p>Table description (for tAtmIlmiLinkStatisticsTable): The tAtmIlmiLinkStatisticsTable is used to gather statistics on a particular ILMI Link.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: atm.IlmiLink</p>		
inBadValueErrors [In Bad Value Errors] (tAtmIlmiLinkInBadValueErrors)	long	The value of tAtmIlmiLinkInBadValueErrors indicates the total number SNMP 'BadValue' error messages received on this ILMI link.

Table 521 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
inGeneralErrors [In General Errors] (tAtmIImiLinkInGeneralErrors)	long	The value of tAtmIImiLinkInGeneralErrors indicates the total number SNMP 'General' error messages received on this ILMI link.
inGetNextRequest [In Get Next Request] (tAtmIImiLinkInGetNextRequestPdus)	long	The value of tAtmIImiLinkInGetNextRequestPdus indicates the total number 'GetNextRequest' SNMP PDUs received on this ILMI link.
inGetRequest [In Get Request] (tAtmIImiLinkInGetRequestPdus)	long	The value of tAtmIImiLinkInGetRequestPdus indicates the total number GetRequest SNMP PDUs received on this ILMI link.
inGetResponse [In Get Response] (tAtmIImiLinkInGetResponsePdus)	long	The value of tAtmIImiLinkInGetResponsePdus indicates the total number 'GetResponse' SNMP PDUs received on this ILMI link in response to 'GetRequest', 'GetNextRequest' and 'SetRequests' sent.
inNoSuchNameErrors [In No Such Name Errors] (tAtmIImiLinkInNoSuchNameErrors)	long	The value of tAtmIImiLinkInNoSuchNameErrors indicates the total number SNMP 'NoSuchName' error messages received on this ILMI link.
inPdu [In Pdu] (tAtmIImiLinkInPdus)	long	The value of tAtmIImiLinkInPdus indicates the total number SNMP PDUs received on this ILMI link.
inReadOnlyErrors [In Read Only Errors] (tAtmIImiLinkInReadOnlyErrors)	long	The value of tAtmIImiLinkInReadOnlyErrors indicates the total number SNMP 'ReadOnly' error messages received on this ILMI link.
inSetRequestPackets [In Set Request Packets] (tAtmIImiLinkInSetRequestPdus)	long	The value of tAtmIImiLinkInSetRequestPdus indicates the total number 'SetRequest' SNMP PDUs received on this ILMI link.

Table 521 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
inTooBigErrors [In Too Big Errors] (tAtmIImiLinkInTooBigErrors)	long	The value of tAtmIImiLinkInTooBigErrors indicates the total number SNMP `TooBig' error messages received on this ILMI link.
inTraps [In Traps] (tAtmIImiLinkInTrapPdus)	long	The value of tAtmIImiLinkInTrapPdus indicates the total number Trap SNMP PDUs received on this ILMI link.
outBadValueErrors [Out Bad Value Errors] (tAtmIImiLinkOutBadValueErrors)	long	The value of tAtmIImiLinkOutBadValueErrors indicates the total number SNMP `BadValue' error messages sent on this ILMI link.
outGeneralErrors [Out General Errors] (tAtmIImiLinkOutGeneralErrors)	long	The value of tAtmIImiLinkOutGeneralErrors indicates the total number SNMP `General' error messages sent on this ILMI link.
outGetNextRequest [Out Get Next Request] (tAtmIImiLinkOutGetNextRequestPdus)	long	The value of tAtmIImiLinkOutGetNextRequestPdus indicates the total number GetNextRequest SNMP PDUs sent on this ILMI link.
outGetRequest [Out Get Request] (tAtmIImiLinkOutGetRequestPdus)	long	The value of tAtmIImiLinkOutGetRequestPdus indicates the total number GetRequest SNMP PDUs sent on this ILMI link.
outGetResponse [Out Get Response] (tAtmIImiLinkOutGetResponsePdus)	long	The value of tAtmIImiLinkOutGetResponsePdus indicates the total number GetResponse SNMP PDUs sent on this ILMI link in response to GetRequest, GetNextRequest and 'SetRequests' received.
outNoSuchNameErrors [Out No Such Name Errors] (tAtmIImiLinkOutNoSuchNameErrors)	long	The value of tAtmIImiLinkOutNoSuchNameErrors indicates the total number SNMP `NoSuchName' error messages sent on this ILMI link.

Table 521 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outPdu [Out Pdu] (tAtmIImiLinkOutPdus)	long	The value of tAtmIImiLinkOutPdus indicates the total number SNMP PDUs sent on this ILMI link.
outReadOnlyErrors [Out Read Only Errors] (tAtmIImiLinkOutReadOnlyErrors)	long	The value of tAtmIImiLinkOutReadOnlyErrors indicates the total number SNMP 'ReadOnly' error messages sent on this ILMI link.
outSetRequestPackets [Out Set Request Packets] (tAtmIImiLinkOutSetRequestPdus)	long	The value of tAtmIImiLinkOutSetRequestPdus indicates the total number 'SetRequest' SNMP PDUs sent on this ILMI link.
outTooBigErrors [Out Too Big Errors] (tAtmIImiLinkOutTooBigErrors)	long	The value of tAtmIImiLinkOutTooBigErrors indicates the total number SNMP 'TooBig' error messages sent on this ILMI link.
outTraps [Out Traps] (tAtmIImiLinkOutTrapPdus)	long	The value of tAtmIImiLinkOutTrapPdus indicates the total number Trap SNMP PDUs sent on this ILMI link.
snmpCommStringErrors [Snmp Comm String Errors] (tAtmIImiLinkInInvalidSnmpCommunityStringPdus)	long	The value of tAtmIImiLinkInInvalidSnmpCommunityStringPdus indicates the total number SNMP PDUs received with invalid community string on this ILMI link.
snmpFormatErrors [Snmp Format Errors] (tAtmIImiLinkInInvalidSnmpFormatPdus)	long	The value of tAtmIImiLinkInInvalidSnmpFormatPdus indicates the total number SNMP PDUs received with invalid ASN.1 format on this ILMI link.
snmpVersionErrors [Snmp Version Errors] (tAtmIImiLinkInInvalidSnmpVersionPdus)	long	The value of tAtmIImiLinkInInvalidSnmpVersionPdus indicates the total number SNMP PDUs received with invalid version on this ILMI link.

Table 521 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceAal5Stats</p> <p>MIB entry name: tAtmIntfAal5StatsEntry</p> <p>Entry description: An entry in the tAtmIntfAal5StatsEntry containing statistics information applicable to an ATM interface at the AAL5 Layer.</p> <p>Table description (for tAtmIntfAal5StatsTable): The tAtmIntfAal5StatsTable contains ATM interface stats at the AAL5 Layer.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: atm.Interface</p>		
tAtmInterfaceAal5StatsTotalCrc32Errors [TAtm Interface Aal5 Stats Total Crc 32 Errors] (tAtmIntfAal5StatsTotalCrc32Err)	java. math. BigInteger	The value of tAtmIntfAal5StatsTotalCrc32Err indicates the number of Errors detected by the 32 bit cyclic redundancy check.
tAtmInterfaceAal5StatsTotalPktsDroppedRxd [TAtm Interface Aal5 Stats Total Pkts Dropped Rxd] (tAtmIntfAal5StatsTotalPktsDrpRxd)	java. math. BigInteger	The value of tAtmIntfAal5StatsTotalPktsDrpRxd indicates the number of AAL5 PDUs dropped by the ATM interface in the receive direction. This count does not include crc32 Errors or oversized SDU discards
tAtmInterfaceAal5StatsTotalPktsDroppedTxd [TAtm Interface Aal5 Stats Total Pkts Dropped Txd] (tAtmIntfAal5StatsTotalPktsDrpTxd)	java. math. BigInteger	The value of tAtmIntfAal5StatsTotalPktsDrpTxd indicates the number of AAL5 PDUs dropped in the transmit direction. This count does not include crc32 Errors or oversized SDU discards.
tAtmInterfaceAal5StatsTotalPktsRxd [TAtm Interface Aal5 Stats Total Pkts Rxd] (tAtmIntfAal5StatsTotalPktsRxd)	java. math. BigInteger	The value of tAtmIntfAal5StatsTotalPktsRxd indicates the number of AAL5 PDUs that are received by the ATM interface.
tAtmInterfaceAal5StatsTotalPktsTxd [TAtm Interface Aal5 Stats Total Pkts Txd] (tAtmIntfAal5StatsTotalPktsTxd)	java. math. BigInteger	The value of tAtmIntfAal5StatsTotalPktsTxd indicates the number of AAL5 PDUs that are transmitted by the ATM interface.

Table 521 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
InterfaceStats MIB entry name: tAtmIntfStatsEntry Entry description: An entry in the tAtmIntfStatsEntry containing statistics information applicable to an ATM interface. Table description (for tAtmIntfStatsTable): The tAtmIntfStatsTable contains ATM interface stats at the ATM Layer. Supports realtime plotting Supports scheduled collection Monitored class: atm.Interface		
tAtmInterfaceStatsTotalBytesRxd [TAtm Interface Stats Total Bytes Rxd] (tAtmIntfStatsTotalBytesRxd)	java. math. BigInteger	The value of tAtmIntfStatsTotalBytesRxd indicates the number of bytes received on this interface. This is the number of tAtmIntfStatsTotalCellsRxd multiplied by 53.
tAtmInterfaceStatsTotalBytesTxd [TAtm Interface Stats Total Bytes Txd] (tAtmIntfStatsTotalBytesTxd)	java. math. BigInteger	The value of tAtmIntfStatsTotalBytesTxd indicates the number of bytes transmitted on this interface. This is the number of tAtmIntfStatsTotalCellsTxd multiplied by 53.
tAtmInterfaceStatsTotalCellsRxd [TAtm Interface Stats Total Cells Rxd] (tAtmIntfStatsTotalCellsRxd)	java. math. BigInteger	The value of tAtmIntfStatsTotalCellsRxd indicates the number of valid ATM cells received by the ATM interface including both CLP=0 and CLP=1 cells. If traffic policing is implemented, then cells are counted prior to the application of traffic policing.
tAtmInterfaceStatsTotalCellsTxd [TAtm Interface Stats Total Cells Txd] (tAtmIntfStatsTotalCellsTxd)	java. math. BigInteger	The value of tAtmIntfStatsTotalCellsTxd indicates the number of valid ATM cells transmitted by the ATM interface including both CLP=0 and CLP=1 cells.
tAtmInterfaceStatsTotalUnknownCellsDropped [TAtm Interface Stats Total Unknown Cells Dropped] (tAtmIntfStatsTotalUnknCellsDrp)	long	The value of tAtmIntfStatsTotalUnknCellsDrp indicates the number of cells dropped due to an unknown VPI/VCI.

Table 521 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PvcConnectionAal5PerformanceStats</p> <p>MIB entry name: aal5VccEntry</p> <p>Entry description: This list contains the AAL5 VCC performance parameters and is indexed by ifIndex values of AAL5 interfaces and the associated VPI/VCI values.</p> <p>Table description (for aal5VccTable): This table contains AAL5 VCC performance parameters.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: atm.PvcConnection</p>		
aal5CrcErrors [Aal5 Crc Errors] (aal5VccCrcErrors)	long	The number of AAL5 CPCS PDUs received with CRC-32 errors on this AAL5 VCC at the interface associated with an AAL5 entity.
aal5OverSizedSDUs [Aal5 Over Sized SDUs] (aal5VccOverSizedSDUs)	long	The number of AAL5 CPCS PDUs discarded on this AAL5 VCC at the interface associated with an AAL5 entity because the AAL5 SDUs were too large.
aal5SarTimeOuts [Aal5 Sar Time Outs] (aal5VccSarTimeOuts)	long	The number of partially re-assembled AAL5 CPCS PDUs which were discarded on this AAL5 VCC at the interface associated with an AAL5 entity because they were not fully re-assembled within the required time period. If the re-assembly timer is not supported, then this object contains a zero value.
<p>PvcConnectionAal5Stats</p> <p>MIB entry name: tAal5VccStatisticsEntry</p> <p>Entry description: An entry in the tAal5VccStatisticsTable containing statistics information applicable to a particular AAL5 VCC entry in the AToM MIB.</p> <p>Table description (for tAal5VccStatisticsTable): tAal5VccStatisticsTable is used to gather AAL5-level statistics on a particular AAL5 VCC entry in the RFC 2515 AToM MIB.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: atm.PvcConnection</p>		

Table 521 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aal5DroppedPacketsRxd [Aal5 Dropped Packets Rxd] (tAal5VccStatsDrpPacketsRxd)	java. math. BigInteger	The value of tAal5VccStatsDrpPacketsRxd indicates the number of dropped AAL-5 SDUs that have been received on the AAL-5 VCC.
aal5DroppedPacketsTxd [Aal5 Dropped Packets Txd] (tAal5VccStatsDrpPacketsTxd)	java. math. BigInteger	The value of tAal5VccStatsDrpPacketsTxd indicates the number of dropped AAL-5 SDUs that would have been transmitted on the AAL-5 VCC.
aal5PacketsRxd [Aal5 Packets Rxd] (tAal5VccStatsPacketsRxd)	java. math. BigInteger	The value of tAal5VccStatsPacketsRxd indicates the number of valid AAL-5 SDUs and AAL-5 SDUs with CRC-32 errors received by the AAL-5 VCC.
aal5PacketsTxd [Aal5 Packets Txd] (tAal5VccStatsPacketsTxd)	java. math. BigInteger	The value of tAal5VccStatsPacketsTxd indicates the number of AAL-5 SDUs transmitted by the AAL-5 VCC.
PvcConnectionOamStats MIB entry name: tAtmOamVclStatisticsEntry Entry description: An entry in the tAtmVclStatisticsTable containing statistics information applicable to a particular VCL entry in the AToM MIB. Table description (for tAtmOamVclStatisticsTable): The tAtmOamVclStatisticsTable is used to gather oam statistics on a particular VCL entry in the RFC 2515 AToM MIB. Supports realtime plotting Supports scheduled collection Monitored class: atm.PvcConnection		
oamAISCellsRxd [Oam AISCells Rxd] (tAtmOamVclStatsAISCellsRxd)	long	The value of tAtmOamVclStatsAISCellsRxd indicates the number of AIS cells received on this VC for both end to end and segment.

Table 521 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
oamAISCellsTxd [Oam AISCells Txd] (tAtmOamVclStatsAISCellsTxd)	long	The value of tAtmOamVclStatsAISCellsTxd indicates the number of AIS cells transmitted on this VC for both end to end and segment.
oamCrc10Errors [Oam Crc 10 Errors] (tAtmOamVclStatsCrc10Err)	long	The value of tAtmOamVclStatsCrc10Err indicates the number of oam cells discarded with CRC 10 Errors.
oamLoopbackCellsRxd [Oam Loopback Cells Rxd] (tAtmOamVclStatsLoopbackCellsRxd)	long	The value of tAtmOamVclStatsLoopbackCellsRxd indicates the number of loopback requests and responses received on this VC for both end to end and segment.
oamLoopbackCellsTxd [Oam Loopback Cells Txd] (tAtmOamVclStatsLoopbackCellsTxd)	long	The value of tAtmOamVclStatsLoopbackCellsTxd indicates the number of loopback requests and responses transmitted on this VC for both end to end and segment.
oamOtherCellsRxd [Oam Other Cells Rxd] (tAtmOamVclStatsOtherCellsRxd)	long	This value of tAtmOamVclStatsOtherCellsRxd indicates the number of oam cells that are received but not identified.
oamRDICellsRxd [Oam RDICells Rxd] (tAtmOamVclStatsRDICellsRxd)	long	The value of tAtmOamVclStatsRDICellsRxd indicates the number of RDI cells received on this VC for both end to end and segment.
oamRDICellsTxd [Oam RDICells Txd] (tAtmOamVclStatsRDICellsTxd)	long	The value of tAtmOamVclStatsRDICellsTxd indicates the number of RDI cells transmitted on this VC for both end to end and segment.

fsmEstablishedTime [Fsm Established Time] (bgpPeerFsmEstablishedTime)	long	This timer indicates how long (in seconds) this peer has been in the Established state or how long since this peer was last in the Established state. It is set to zero when a new peer is configured or the router is booted.
<p>PeerRouteTargetStats</p> <p>MIB entry name: tBgpPeerNgOperEntry</p> <p>Entry description: Defines an entry (conceptual row) in the tBgpPeerNgOperTable. Entries in tBgpPeerNgOperTable are created when entries are created in tBgpPeerNgTable.</p> <p>Table description (for tBgpPeerNgOperTable): The tBgpPeerNgOperTable is the list of configured BGP Peers and their operational status information.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bgp.Peer</p>		
rtActivePfxs [Rt Active Pfxs] (tBgpPeerNgOperRtTgtActivePfxs)	long	The value of tBgpPeerNgOperRtTgtActivePfxs indicates the number of active route target prefixes from this peer.
rtRecvPfxs [Rt Recv Pfxs] (tBgpPeerNgOperRtTgtRecvPfxs)	long	The value of tBgpPeerNgOperRtTgtRecvPfxs indicates the number of route target prefixes received from this peer.

Table 522 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rtSentPfxs [Rt Sent Pfxs] (tBgpPeerNgOperRtTgtSentPfxs)	long	The value of tBgpPeerNgOperRtTgtSentPfxs indicates the number of route target prefixes transmitted to this peer.
rtSuppPfxDamp [Rt Supp Pfx Damp] (tBgpPeerNgOperRtTgtSuppPfxDamp)	long	The value of tBgpPeerNgOperRtTgtRecvPfxs indicates the number of route target prefixes from this peer, which have been suppressed by damping.
<p>PeerStats</p> <p>MIB entry name: tBgpPeerNgOperEntry</p> <p>Entry description: Defines an entry (conceptual row) in the tBgpPeerNgOperTable. Entries in tBgpPeerNgOperTable are created when entries are created in tBgpPeerNgTable.</p> <p>Table description (for tBgpPeerNgOperTable): The tBgpPeerNgOperTable is the list of configured BGP Peers and their operational status information.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bgp.Peer</p>		
flaps [Flaps] (tBgpPeerNgOperFlaps)	long	The value of tBgpPeerNgOperFlaps indicates the number of flaps of updates from this peer.
inputQueueMessages [Input Queue Messages] (tBgpPeerNgOperInputQueueMsgs)	long	The value of tBgpPeerNgOperInputQueueMsgs indicates the number of unprocessed messages in the queue, from this peer.
l2VpnActivePfxs [L2 Vpn Active Pfxs] (tBgpPeerNgOperl2VpnActivePfxs)	long	The value of tBgpPeerNgOperl2VpnActivePfxs indicates the number of active L2VPN prefixes from this peer.
l2VpnRecvPfxs [L2 Vpn Recv Pfxs] (tBgpPeerNgOperl2VpnRecvPfxs)	long	The value of tBgpPeerNgOperl2VpnRecvPfxs indicates the number L2VPN prefixes received from this peer.

Table 522 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
I2VpnSentPfxs [L2 Vpn Sent Pfxs] (tBgpPeerNgOperI2VpnSentPfxs)	long	The value of tBgpPeerNgOperI2VpnSentPfxs indicates the number of L2VPN prefixes transmitted to this peer.
I2VpnSuppPfxDamp [L2 Vpn Supp Pfx Damp] (tBgpPeerNgOperI2VpnSuppPfxDamp)	long	The value of tBgpPeerNgOperI2VpnSuppPfxDamp indicates the number of L2VPN prefixes from this peer, which have been suppressed by damping.
lastEvent [Last Event] (tBgpPeerNgOperLastEvent)	long	The value of tBgpPeerNgOperLastEvent indicates the last BGP event of this peer.
lastRestartTime [Last Restart Time] (tBgpPeerNgOperLastRestartTime)	long	The value of tBgpPeerNgOperLastRestartTime indicates the last time the peer attempted restart.
lastState [Last State] (tBgpPeerNgOperLastState)	long	The value of tBgpPeerNgOperLastState indicates the last BGP state of this peer.
mcastActivePrefixes [Mcast Active Prefixes] (tBgpPeerNgOperMCastV4ActivePfxs)	long	The value of tBgpPeerNgOperMCastV4ActivePfxs indicates the number of active IPv4 multicast prefixes from this peer.
mcastPrefixesSuppressedByDamping [Mcast Prefixes Suppressed By Damping] (tBgpPeerNgOperMCastV4SuppPfxDamp)	long	The value of tBgpPeerNgOperMCastV4SuppPfxDamp indicates the number of IPv4 multicast prefixes from this peer, which have been suppressed by damping.
mcastReceivedPrefixes [Mcast Received Prefixes] (tBgpPeerNgOperMCastV4RecvPfxs)	long	The value of tBgpPeerNgOperMCastV4RecvPfxs indicates the number of IPv4 multicast prefixes received from this peer.
mcastSentPrefixes [Mcast Sent Prefixes] (tBgpPeerNgOperMCastV4SentPfxs)	long	The value of tBgpPeerNgOperMCastV4SentPfxs indicates the number of IPv4 multicast prefixes transmitted to this peer.

Table 522 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mdtSafiActivePrefixes [Mdt Safi Active Prefixes] (tBgpPeerNgOperMdtSafiActivePfxs)	long	The value of tBgpPeerNgOperMdtSafiActivePfxs indicates the number of active MDT-SAFI prefixes from this peer.
mdtSafiPrefixesSuppressedByDamping [Mdt Safi Prefixes Suppressed By Damping] (tBgpPeerNgOperMdtSafiSuppPfxDamp)	long	The value of tBgpPeerNgOperMdtSafiSuppPfxDamp indicates the number of MDT-SAFI prefixes from this peer, which have been suppressed by damping.
mdtSafiReceivedPrefixes [Mdt Safi Received Prefixes] (tBgpPeerNgOperMdtSafiRecvPfxs)	long	The value of tBgpPeerNgOperMdtSafiRecvPfxs indicates the number of MDT-SAFI prefixes received from this peer.
mdtSafiSentPrefixes [Mdt Safi Sent Prefixes] (tBgpPeerNgOperMdtSafiSentPfxs)	long	The value of tBgpPeerNgOperMdtSafiSentPfxs indicates the number of MDT-SAFI prefixes transmitted to this peer.
messageOctetsReceived [Message Octets Received] (tBgpPeerNgOperMsgOctetsRcvd)	java. math. BigInteger	The value of tBgpPeerNgOperMsgOctetsRcvd indicates the number of octets received from this peer.
messageOctetsSent [Message Octets Sent] (tBgpPeerNgOperMsgOctetsSent)	java. math. BigInteger	The value of tBgpPeerNgOperMsgOctetsSent indicates the number of octets transmitted to this peer.
numberOfRestarts [Number Of Restarts] (tBgpPeerNgOperNumRestarts)	long	The value of tBgpPeerNgOperNumRestarts indicates the number of times the peer has attempted restart.
outputQueueMessages [Output Queue Messages] (tBgpPeerNgOperOutputQueueMsgs)	long	The value of tBgpPeerNgOperOutputQueueMsgs indicates the number of untransmitted messages in the queue, to this peer.

Table 522 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pathsReceived [Paths Received] (tBgpPeerNgOperReceivedPaths)	long	The value of tBgpPeerNgOperReceivedPaths indicates the number of paths received from this peer.
prefixesActive [Prefixes Active] (tBgpPeerNgOperActivePrefixes)	long	The value of tBgpPeerNgOperActivePrefixes indicates the number of active prefixes from this peer.
prefixesReceived [Prefixes Received] (tBgpPeerNgOperReceivedPrefixes)	long	The value of tBgpPeerNgOperReceivedPrefixes indicates the number of prefixes received from this peer.
prefixesSent [Prefixes Sent] (tBgpPeerNgOperSentPrefixes)	long	The value of tBgpPeerNgOperSentPrefixes indicates the number of prefixes transmitted to this peer.
prefixesSuppressedByDamping [Prefixes Suppressed By Damping] (tBgpPeerNgOperV4SuppPfxDamp)	long	The value of tBgpPeerNgOperV4SuppPfxDamp indicates the number of IPv6 prefixes from this peer, which have been suppressed by damping.
v6ActivePrefixes [V6 Active Prefixes] (tBgpPeerNgOperV6ActivePrefixes)	long	The value of tBgpPeerNgOperV6ActivePrefixes indicates the number of active IPv6 prefixes from this peer.
v6PrefixesSuppressedByDamping [V6 Prefixes Suppressed By Damping] (tBgpPeerNgOperV6SuppPfxDamp)	long	The value of tBgpPeerNgOperV6SuppPfxDamp indicates the number of IPv6 prefixes from this peer, which have been suppressed by damping.
v6ReceivedPrefixes [V6 Received Prefixes] (tBgpPeerNgOperV6ReceivedPrefixes)	long	The value of tBgpPeerNgOperV6ReceivedPrefixes indicates the number of IPv6 prefixes received from this peer.
v6SentPrefixes [V6 Sent Prefixes] (tBgpPeerNgOperV6SentPrefixes)	long	The value of tBgpPeerNgOperV6SentPrefixes indicates the number of IPv6 prefixes transmitted to this peer.

Table 522 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vpnActivePrefixes [Vpn Active Prefixes] (tBgpPeerNgOperVpnActivePrefixes)	long	The value of tBgpPeerNgOperVpnActivePrefixes indicates the number of active VPN prefixes from this BGP peer.
vpnPrefixesSuppressedByDamping [Vpn Prefixes Suppressed By Damping] (tBgpPeerNgOperVpnSuppPfxDamp)	long	The value of tBgpPeerNgOperVpnSuppPfxDamp indicates the number of VPN IPv4 prefixes from this peer, which have been suppressed by damping.
vpnReceivedPrefixes [Vpn Received Prefixes] (tBgpPeerNgOperVpnRecvPrefixes)	long	The value of tBgpPeerNgOperVpnRecvPrefixes indicates the number of received VPN prefixes.
vpnSentPrefixes [Vpn Sent Prefixes] (tBgpPeerNgOperVpnSentPrefixes)	long	The value of tBgpPeerNgOperVpnSentPrefixes indicates the number of transmitted VPN prefixes.
<p>PeerVprnlpv6Stats</p> <p>MIB entry name: tBgpPeerNgOperEntry</p> <p>Entry description: Defines an entry (conceptual row) in the tBgpPeerNgOperTable. Entries in tBgpPeerNgOperTable are created when entries are created in tBgpPeerNgTable.</p> <p>Table description (for tBgpPeerNgOperTable): The tBgpPeerNgOperTable is the list of configured BGP Peers and their operational status information.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bgp.Peer</p>		
vpnIpv6ActivePfxs [Vpn Ipv 6 Active Pfxs] (tBgpPeerNgOperVpnIpv6ActivePfxs)	long	The value of tBgpPeerNgOperVpnIpv6ActivePfxs indicates the number of active VPN IPv6 prefixes from this peer.
vpnIpv6RecvPfxs [Vpn Ipv 6 Recv Pfxs] (tBgpPeerNgOperVpnIpv6RecvPfxs)	long	The value of tBgpPeerNgOperVpnIpv6RecvPfxs indicates the number of VPN IPv6 prefixes received from this peer.

Table 522 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vpnIpv6SentPfxs [Vpn Ipv 6 Sent Pfxs] (tBgpPeerNgOperVpnIpv6SentPfxs)	long	The value of tBgpPeerNgOperVpnIpv6SentPfxs indicates the number of VPN IPv6 prefixes transmitted to this peer.
vpnIpv6SuppPfxDamp [Vpn Ipv 6 Supp Pfx Damp] (tBgpPeerNgOperVpnIpv6SuppPfxDamp)	long	The value of tBgpPeerNgOperVpnIpv6SuppPfxDamp indicates the number of VPN IPv6 prefixes from this peer, which have been suppressed by damping.

Table 523 bundle statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>BundleStats</p> <p>MIB entry name: tmnxBundleEntry</p> <p>Entry description: Each row entry represents a multilink bundle on a MDA. Entries can be created and deleted via SNMP SET operations using the tmnxBundleRowStatus object. The tmnxBundleBundleID will contain the bundle number encoded in it. The bundle number is unique for a MDA. For each tmnxBundleEntry, there will be a corresponding entry in the tmnxPortTable and the ifTable.</p> <p>Table description (for tmnxBundleTable): The tmnxBundleTable has an entry for a bundle created on the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bundle.Interface</p>		
inputDiscards [Input Discards] (tmnxBundleInputDiscards)	long	tmnxBundleInputDiscards indicates the number of LCP packets that were discarded. This object is only supported for a tmnxBundleType value of mlppp.
upTime [Up Time] (tmnxBundleUpTime)	long	tmnxBundleUpTime indicates the time since the bundle is operationally 'inService'.
<p>MultiClassMlpppStats</p> <p>MIB entry name: tmnxMcMlpppStatsEntry</p> <p>Entry description: Defines an entry in tmnxMcMlpppStatsTable. Entries are created and deleted by the system depending on the number of classes being used by a given MLPPP bundle.</p> <p>Table description (for tmnxMcMlpppStatsTable): Defines the Nokia SROS series Multiclass MLPPP statistics table for providing the capability of retrieving the traffic statistics for the physical queues being used for a class of a multiclass MLPPP bundle to forward the traffic.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bundle.MultiClassMlpppSpecifics</p>		

Table 523 bundle statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mcMlpppStatsEgressErrPkt [Mc Mlppp Stats Egress Err Pkt] (tmnxMcMlpppStatsEgressErrPkt)	long	The value of tmnxMcMlpppStatsEgressErrPkt indicates the total number of packets discarded due to segmentation errors on the bundle for the given class on egress.
mcMlpppStatsEgressOct [Mc Mlppp Stats Egress Oct] (tmnxMcMlpppStatsEgressOct)	long	The value of tmnxMcMlpppStatsEgressOct indicates the total number of octets in all packets received on the bundle for the given class on egress before segmentation.
mcMlpppStatsEgressPkt [Mc Mlppp Stats Egress Pkt] (tmnxMcMlpppStatsEgressPkt)	long	The value of tmnxMcMlpppStatsEgressPkt indicates the total number of packets forwarded on the bundle for the given class on egress towards the line.
mcMlpppStatsIngressErrPkt [Mc Mlppp Stats Ingress Err Pkt] (tmnxMcMlpppStatsIngressErrPkt)	long	The value of tmnxMcMlpppStatsIngressErrPkt indicates the total number of packets discarded due to reassembly errors on the bundle for the given class on ingress.
mcMlpppStatsIngressOct [Mc Mlppp Stats Ingress Oct] (tmnxMcMlpppStatsIngressOct)	long	The value of tmnxMcMlpppStatsIngressOct indicates the total number of octets in all packets received on the bundle for the given class on ingress before reassembly.
mcMlpppStatsIngressPkt [Mc Mlppp Stats Ingress Pkt] (tmnxMcMlpppStatsIngressPkt)	long	The value of tmnxMcMlpppStatsIngressPkt indicates the total number of packets forwarded on the bundle for the given class on ingress towards higher layer protocols.

Table 524 cflowd statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AAGroupCflowdDirExpAddrStats</p> <p>MIB entry name: tmnxBsxCflowdDirExpStatEntry</p> <p>Entry description: Each tmnxBsxCflowdDirExpStatEntry contains the statistics for an Application Assurance Cflowd direct export collector within an Application Assurance group.</p> <p>Table description (for tmnxBsxCflowdDirExpStatTable): The tmnxBsxCflowdDirExpStatTable contains statistics on the Application Assurance Cflowd direct export collectors within an Application Assurance group. Rows in this table are automatically created and destroyed when collectors are created or destroyed in the tmnxBsxCflowdDirExpAddrTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: cflowd.AAGroupCflowdDirExpAddr</p>		
discontinueTime [Discontinue Time] (tmnxBsxCflowdDirExpStatDscntTime)	long	The value of tmnxBsxCflowdDirExpStatDscntTime indicates discontinuity time. This is the SNMPv2-MIB::sysUpTime (hundredths of a second) when the direct export collector last changed status.
recordSent [Record Sent] (tmnxBsxCflowdDirExpStatRecSent)	java.math.BigInteger	The value of tmnxBsxCflowdDirExpStatRecSent indicates the total number of flow records sent to the remote Cflowd direct export collector.
<p>AAGroupCflowdStats</p> <p>MIB entry name: tmnxBsxCflowdStatusEntry</p> <p>Entry description: Each tmnxBsxCflowdStatusEntry contains the Cflowd status information for a particular group, Cflowd export type and ISA-AA MDA. An index with a valid tmnxBsxIsaAaGroupIndex and a valid tmnxBsxCflowdExpType, tmnxChassisIndex set to one, and a zero value for each of the tmnxBsxCardSlotNum/tmnxMDASlotNum indices will return the summarized per group status.</p> <p>Table description (for tmnxBsxCflowdStatusTable): The tmnxBsxCflowdStatusTable contains an entry for each ISA-AA MDA and Group in the system. Each row contains the Cflowd status information per group and Cflowd export type for an ISA-AA MDA uniquely identified by the tmnxChassisIndex, tmnxBsxCardSlotNum, and the tmnxMDASlotNum.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: cflowd.AAGroupCflowd</p>		

Table 524 cflowd statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
activeFlowCurrent [Active Flow Current] (tmnxBsxCflowdStatusActFlowsCurr)	long	The value of tmnxBsxCflowdStatusActFlowsCurr indicates the number of active flows currently marked for export using Cflowd in the ISA-AA MDA(s).
activeRateCurrent [Active Rate Current] (tmnxBsxCflowdStatusRecRateCurr)	long	The value of tmnxBsxCflowdStatusRecRateCurr indicates the number of flow records per second being exported using Cflowd from the ISA-AA MDA(s). The calculation is based on the number of flow records inserted into Cflowd packets within the last 10 seconds.
discontinueTime [Discontinue Time] (tmnxBsxCflowdStatusDiscontTime)	long	The value of tmnxBsxCflowdStatusDiscontTime indicates the SNMPv2-MIB::sysUpTime (hundredths of a second) when the ISA-AA MDA within the group has last changed status.
expType [Exp Type] (tmnxBsxCflowdExpType)	int	The value of tmnxBsxCflowdExpType specifies the type of the Application Assurance statistic exported using Cflowd.
flowExported [Flow Exported] (tmnxBsxCflowdStatusFlowsNoRes)	long	The value of tmnxBsxCflowdStatusFlowsNoRes indicates the total number of flows that were selected for export but failed to obtain Cflows resources in the ISA-AA MDA(s).
hcFlowExported [Hc Flow Exported] (tmnxBsxCflowdStatusHCFlowsNoRes)	java. math. BigInteger	The value of tmnxBsxCflowdStatusHCFlowsNoRes indicates the total number of flows that were selected for export but failed to obtain Cflows resources in the ISA-AA MDA(s). This object is the 64-bit version of tmnxBsxCflowdStatusFlowsNoRes.
hcPacketsSent [Hc Packets Sent] (tmnxBsxCflowdStatusHCPktsSent)	java. math. BigInteger	The value of tmnxBsxCflowdStatusHCPktsSent indicates the total number of Cflowd packets sent from the ISA-AA MDA(s). This object is the 64-bit version of tmnxBsxCflowdStatusPktsSent.
hcRecDropped [Hc Rec Dropped] (tmnxBsxCflowdStatusHCRecDropped)	java. math. BigInteger	The value of tmnxBsxCflowdStatusHCRecDropped indicates the total number of flow records dropped in the ISA-AA MDA(s). This object is the 64-bit version of tmnxBsxCflowdStatusRecDropped.

Table 524 cflowd statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
hcRecReported [Hc Rec Reported] (tmnxBsxCflowdStatusHCRecReported)	java. math. BigInteger	The value of tmnxBsxCflowdStatusHCRecReported indicates the total number of flow records reported from the ISA-AA MDA(s). This object is the 64-bit version of tmnxBsxCflowdStatusRecReported.
packetRateCurrent [Packet Rate Current] (tmnxBsxCflowdStatusPktRateCurr)	long	The value of tmnxBsxCflowdStatusPktRateCurr indicates the number of Cflowd packets per second being exported from the ISA-AA MDA(s). The calculation is based on the number of Cflowd packets generated within the last 10 seconds.
packetsSent [Packets Sent] (tmnxBsxCflowdStatusPktsSent)	long	The value of tmnxBsxCflowdStatusPktsSent indicates the total number of Cflowd packets sent from the ISA-AA MDA(s).
recDropped [Rec Dropped] (tmnxBsxCflowdStatusRecDropped)	long	The value of tmnxBsxCflowdStatusRecDropped indicates the total number of flow records dropped in the ISA-AA MDA(s).
recReported [Rec Reported] (tmnxBsxCflowdStatusRecReported)	long	The value of tmnxBsxCflowdStatusRecReported indicates the total number of flow records reported from the ISA-AA MDA(s).
AAGroupCollectorStats MIB entry name: tmnxBsxCflowdCollStatEntry Entry description: Each tmnxBsxCflowdCollStatEntry contains the statistics for an Application Assurance Cflowd collector within an Application Assurance group. Table description (for tmnxBsxCflowdCollStatTable): The tmnxBsxCflowdCollStatTable contains statistics on the Application Assurance Cflowd collectors within an Application Assurance group. Supports realtime plotting Supports scheduled collection Monitored class: cflowd.AAGroupCollector		
discontinueTime [Discontinue Time] (tmnxBsxCflowdCollStatDiscontTime)	long	The value of tmnxBsxCflowdCollStatDiscontTime indicates the SNMPv2-MIB::sysUpTime (hundredths of a second) when the Cflowd collector has last changed status.

Table 524 cflowd statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
hcRecordSent [Hc Record Sent] (tmnxBsxCflowdCollStatHCRecSent)	java. math. BigInteger	The value of tmnxBsxCflowdCollStatHCRecSent indicates the total number of flow records sent to the remote Cflowd collector. This object is the 64-bit version of tmnxBsxCflowdCollStatRecSent.
recordSent [Record Sent] (tmnxBsxCflowdCollStatRecSent)	long	The value of tmnxBsxCflowdCollStatRecSent indicates the total number of flow records sent to the remote Cflowd collector.
CflowdGeneralStats MIB entry name: tmnxCflowdGeneralObjs Supports realtime plotting Supports scheduled collection Monitored class: cflowd.NeCflowd		
activeFlows [Active Flows] (tmnxCflowdActiveFlows)	long	The value of tmnxCflowdActiveFlows is a gauge that indicates the current number of active flows being collected.
droppedFlows [Dropped Flows] (tmnxCflowdGenDroppedFlows)	long	The value of tmnxCflowdGenDroppedFlows indicates the number of times a flow was dropped. Data from dropped flows are not reported to any collector.
genAggrFlowsCreated [Gen Aggr Flows Created] (tmnxCflowdGenAggrFlowsCreated)	long	The value of tmnxCflowdGenAggrFlowsCreated indicates the number of aggregate flows created by system.
genAggrFlowsFlushed [Gen Aggr Flows Flushed] (tmnxCflowdGenAggrFlowsFlushed)	long	The value of tmnxCflowdGenAggrFlowsMatched indicates the number of aggregate flows flushed.
genAggrFlowsMatched [Gen Aggr Flows Matched] (tmnxCflowdGenAggrFlowsMatched)	long	The value of tmnxCflowdGenAggrFlowsMatched indicates the number of packets matched to an existing aggregate flow.

Table 524 cflowd statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
genRawFlowsCreated [Gen Raw Flows Created] (tmnxCflowdGenRawFlowsCreated)	long	The value of tmnxCflowdGenRawFlowsCreated indicates the number of raw flows created by system.
genRawFlowsFlushed [Gen Raw Flows Flushed] (tmnxCflowdGenRawFlowsFlushed)	long	The value of tmnxCflowdGenRawFlowsFlushed indicates the number of raw flows flushed.
genRawFlowsMatched [Gen Raw Flows Matched] (tmnxCflowdGenRawFlowsMatched)	long	The value of tmnxCflowdGenRawFlowsMatched indicates the number of raw packets matched to an existing raw flow.
overflowEvents [Overflow Events] (tmnxCflowdGenOverflowEvents)	long	The value of tmnxCflowdGenOverflowEvents indicates the number of times the flow cache has entered the overflow state.
totalPktsDropped [Total Pkts Dropped] (tmnxCflowdTotalPktsDropped)	long	The value of tmnxCflowdTotalPktsDropped indicates the total number of packets dropped for Cflowd.
totalPktsRcvd [Total Pkts Rcvd] (tmnxCflowdTotalPktsRcvd)	long	The value of tmnxCflowdTotalPktsRcvd indicates the total number of packets received for Cflowd.
CflowdPerfExpStats MIB entry name: tmnxBsxCflowdExpStatEntry Entry description: Each tmnxBsxCflowdExpStatEntry contains the statistics on the Cflowd export of Application Assurance per-flow volume, performance, or comprehensive records for an Application Assurance group and partition. Table description (for tmnxBsxCflowdExpStatTable): The tmnxBsxCflowdExpStatTable contains statistics on the Cflowd export of Application Assurance per-flow volume, performance, or comprehensive records within an Application Assurance group and partition. Supports realtime plotting Supports scheduled collection Monitored class: cflowd.CflowdPerfExp		

Table 524 cflowd statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
discontinueTime [Discontinue Time] (tmnxBsxCflowdExpStatDiscontTime)	long	The value of tmnxBsxCflowdExpStatDiscontTime indicates the SNMPv2-MIB::sysUpTime (hundredths of a second) when the export of cflowd records has last changed status.
expType [Exp Type] (tmnxBsxCflowdExpType)	int	The value of tmnxBsxCflowdExpType specifies the type of the Application Assurance statistic exported using Cflowd.
flowExported [Flow Exported] (tmnxBsxCflowdExpStatFlowsNoRes)	long	The value of tmnxBsxCflowdExpStatFlowsNoRes indicates the total number of flows that were selected for export but failed to obtain Cflowd resources.
hcFlowExported [Hc Flow Exported] (tmnxBsxCflowdExpStatHCFlowsNoRes)	java. math. BigInteger	The value of tmnxBsxCflowdExpStatHCFlowsNoRes indicates the total number of flows that were selected for export but failed to obtain Cflowd resources. This object is the 64-bit version of tmnxBsxCflowdExpStatFlowsNoRes.
hcRecDropped [Hc Rec Dropped] (tmnxBsxCflowdExpStatHCRecDropped)	java. math. BigInteger	The value of tmnxBsxCflowdExpStatHCRecDropped indicates the total number of Cflowd flow records dropped. This object is the 64-bit version of tmnxBsxCflowdExpStatRecDropped.
hcRecReport [Hc Rec Report] (tmnxBsxCflowdExpStatHCRecReport)	java. math. BigInteger	The value of tmnxBsxCflowdExpStatHCRecReport indicates the total number of flow records reported. This object is the 64-bit version of tmnxBsxCflowdExpStatRecReport.
recDropped [Rec Dropped] (tmnxBsxCflowdExpStatRecDropped)	long	The value of tmnxBsxCflowdExpStatRecDropped indicates the total number of flow records dropped.
recReport [Rec Report] (tmnxBsxCflowdExpStatRecReport)	long	The value of tmnxBsxCflowdExpStatRecReport indicates the total number of flow records reported.

Table 524 cflowd statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
templateFlowIndex [Template Flow Index] (tmnxCFHostCollTemplFlowIndex)	int	The value of tmnxCFHostCollTemplFlowIndex specifies the row in the tmnxCflowdTemplateStatsTable that pertains to the cflowd collector Template type.
templateOpen [Template Open] (tmnxCFHostCollTemplOpenPackets)	long	The value of tmnxCFHostCollTemplOpenPackets indicates the number of open packets pending for the specified Template type.
templateSent [Template Sent] (tmnxCFHostCollTemplSentPackets)	long	The value of tmnxCFHostCollTemplSentPackets indicates the number of packets transmitted for the specified Template type.
transmitTime [Transmit Time] (tmnxCFHostCollTemplLastTxTime)	long	The value of tmnxCFHostCollTemplLastTxTime indicates the time, since system startup, when the specified template was last transmitted.

Table 525 dhcp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>LocalDhcp6ServerPoolStats</p> <p>MIB entry name: tmnxDhcpsPoolStats6Entry</p> <p>Entry description: Each row entry in the tmnxDhcpsPoolStats6Table represents additional columns of operational data for a pool that belongs to the specified DHCPv6 server instance. The value of these columns is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)'.</p> <p>Table description (for tmnxDhcpsPoolStats6Table): The tmnxDhcpsPoolStats6Table has an entry for each pool that belongs to the specified DHCPv6 server instance.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: dhcp.Address6Pool</p>		
advertisedLeases [Advertised Leases] (tmnxDhcpsPoolStats6Advertise)	long	The value of tmnxDhcpsPoolStats6Advertise indicates the number of local leases in this pool that are in state 'advertised'.
extendedStatisticsEnabled [Extended Statistics Enabled] (tmnxDhcpsPoolStats6HasExt)	boolean	The value of tmnxDhcpsPoolStats6HasExt indicates whether the extended statistics collection for this prefix is enabled. These extended statistics are only collected when the length of the configured subnet is between /32 en /64.
freeBlocks [Free Blocks] (tmnxDhcpsPoolStats6FreeBlk)	java.math.BigInteger	The value of tmnxDhcpsPoolStats6FreeBlk indicates the number of provisioned but unused /64 blocks.
highestValAdvertisedLeases [Highest Val Advertised Leases] (tmnxDhcpsPoolStats6AdvertP)	long	The value of tmnxDhcpsPoolStats6AdvertP indicates the highest value of tmnxDhcpsPoolStats6Advertise since the last reset of the extended statistics.
highestValPctBlocksInUse [Highest Val Pct Blocks In Use] (tmnxDhcpsPoolStats6UsedPctP)	int	The value of tmnxDhcpsPoolStats6UsedPctP indicates the highest value of tmnxDhcpsPoolStats6UsedPct since the last reset of the extended statistics.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
highestValRemoteAdvertisedLeases [Highest Val Remote Advertised Leases] (tmnxDhcpsPoolStats6FoAdvertP)	long	The value of tmnxDhcpsPoolStats6FoAdvertP indicates the highest value of tmnxDhcpsPoolStats6FoAdvertise since the last reset of the extended statistics.
highestValRemotePctBlocksInUse [Highest Val Remote Pct Blocks In Use] (tmnxDhcpsPoolStats6FoUsedPctP)	int	The value of tmnxDhcpsPoolStats6FoUsedPctP indicates the highest value of tmnxDhcpsPoolStats6FoUsedPct since the last reset of the extended statistics.
highestValRemoteStableLeases [Highest Val Remote Stable Leases] (tmnxDhcpsPoolStats6FoStableP)	long	The value of tmnxDhcpsPoolStats6FoStableP indicates the highest value of tmnxDhcpsPoolStats6FoStable since the last reset of the extended statistics.
highestValStableLeases [Highest Val Stable Leases] (tmnxDhcpsPoolStats6StableP)	long	The value of tmnxDhcpsPoolStats6StableP indicates the highest value of tmnxDhcpsPoolStats6Stable since the last reset of the extended statistics.
lowestValOfFreeBlocks [Lowest Val Of Free Blocks] (tmnxDhcpsPoolStats6FreeBlkP)	java. math. BigInteger	The value of tmnxDhcpsPoolStats6FreeBlkP indicates the lowest value of tmnxDhcpsPoolStats6FreeBlk since the last reset of the extended statistics.
lowestValOfUnusedBlocks [Lowest Val Of Unused Blocks] (tmnxDhcpsPoolStats6UsedBlkP)	java. math. BigInteger	The value of tmnxDhcpsPoolStats6UsedBlkP indicates the lowest value of tmnxDhcpsPoolStats6UsedBlk since the last reset of the extended statistics.
lowestValPctBlocksUnused [Lowest Val Pct Blocks Unused] (tmnxDhcpsPoolStats6FreePctP)	int	The value of tmnxDhcpsPoolStats6FreePctP indicates the lowest value of tmnxDhcpsPoolStats6FreePct since the last reset of the extended statistics.
lowestValRemoteFreeBlocks [Lowest Val Remote Free Blocks] (tmnxDhcpsPoolStats6FoFreeBlkP)	java. math. BigInteger	The value of tmnxDhcpsPoolStats6FoFreeBlkP indicates the lowest value of tmnxDhcpsPoolStats6FoFreeBlk since the last reset of the extended statistics.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lowestValRemotePctBlocksUnused [Lowest Val Remote Pct Blocks Unused] (tmnxDhcpsPoolStats6FoFreePctP)	int	The value of tmnxDhcpsPoolStats6FoFreePctP indicates the lowest value of tmnxDhcpsPoolStats6FoFreePct since the last reset of the extended statistics.
lowestValRemoteUnusedBlocks [Lowest Val Remote Unused Blocks] (tmnxDhcpsPoolStats6FoUsedBlkP)	java. math. BigInteger	The value of tmnxDhcpsPoolStats6FoUsedBlkP indicates the lowest value of tmnxDhcpsPoolStats6FoUsedBlk since the last reset of the extended statistics.
pctBlocksInUse [Pct Blocks In Use] (tmnxDhcpsPoolStats6UsedPct)	int	The value of tmnxDhcpsPoolStats6UsedPct indicates the percentage of /64 blocks currently in use.
pctBlocksUnused [Pct Blocks Unused] (tmnxDhcpsPoolStats6FreePct)	int	The value of tmnxDhcpsPoolStats6FreePct indicates the percentage of /64 blocks currently unused.
provisionedBlocks [Provisioned Blocks] (tmnxDhcpsPoolStats6ProvBlk)	java. math. BigInteger	The value of tmnxDhcpsPoolStats6ProvBlk indicates the number of provisioned /64 blocks.
remoteAdvertisedLeases [Remote Advertised Leases] (tmnxDhcpsPoolStats6FoAdvertise)	long	The value of tmnxDhcpsPoolStats6FoAdvertise indicates the number of remote leases in this pool that are in state 'advertised'.
remoteFreeBlocks [Remote Free Blocks] (tmnxDhcpsPoolStats6FoFreeBlk)	java. math. BigInteger	The value of tmnxDhcpsPoolStats6FoFreeBlk indicates the remote number of provisioned but unused /64 blocks.
remotePctBlocksInUse [Remote Pct Blocks In Use] (tmnxDhcpsPoolStats6FoUsedPct)	int	The value of tmnxDhcpsPoolStats6FoUsedPct indicates the percentage of remote /64 blocks currently in use.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
remotePctBlocksUnused [Remote Pct Blocks Unused] (tmnxDhcpsPoolStats6FoFreePct)	int	The value of tmnxDhcpsPoolStats6FoFreePct indicates the percentage of remote /64 blocks currently unused.
remoteProvisionedBlocks [Remote Provisioned Blocks] (tmnxDhcpsPoolStats6FoProvBlk)	java. math. BigInteger	The value of tmnxDhcpsPoolStats6FoProvBlk indicates the remote number of provisioned /64 blocks.
remoteStableLeases [Remote Stable Leases] (tmnxDhcpsPoolStats6FoStable)	long	The value of tmnxDhcpsPoolStats6FoStable indicates the number of remote leases in this pool that are in state 'stable'.
remoteUnusedBlocks [Remote Unused Blocks] (tmnxDhcpsPoolStats6FoUsedBlk)	java. math. BigInteger	The value of tmnxDhcpsPoolStats6FoUsedBlk indicates the remote number of provisioned but unused /64 blocks.
slaacPrefixInternalRequests [Slaac Prefix Internal Requests] (tmnxDhcpsPoolStats6IntNoPfxSlaa)	long	The value of tmnxDhcpsPoolStats6IntNoPfxSlaa indicates the number of times the following event occurred: an internal request for a SLAAC prefix (IA_PD (Identity Association for Prefix Delegation)) fails because the pool does not have a subnet available where the value of tmnxDhcpSvrSubnetPrefixType is equal to 'wan-host'. An internal request is triggered by some packet received by this system and translated into an internal API (Application Program Interface) request to the local DHCP server.
stableLeases [Stable Leases] (tmnxDhcpsPoolStats6Stable)	long	The value of tmnxDhcpsPoolStats6Stable indicates the number of leases in this pool that are in state 'stable'.
timeSinceExtendedReset [Time Since Extended Reset] (tmnxDhcpsPoolStats6ExtResetT)	long	The value of tmnxDhcpsPoolStats6ExtResetT indicates the sysUpTime at the last reset of the extended statistics.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
timeSinceLastAdvertisedLeases [Time Since Last Advertised Leases] (tmnxDhcpsPoolStats6AdvertPT)	long	The value of tmnxDhcpsPoolStats6AdvertPT indicates the sysUpTime at the last change of tmnxDhcpsPoolStats6AdvertPT.
timeSinceLastFreeBlocks [Time Since Last Free Blocks] (tmnxDhcpsPoolStats6FreeBlkPT)	long	The value of tmnxDhcpsPoolStats6FreeBlkPT indicates the sysUpTime at the last change of tmnxDhcpsPoolStats6FreeBlkP.
timeSinceLastRemoteAdvertisedLeases [Time Since Last Remote Advertised Leases] (tmnxDhcpsPoolStats6FoAdvertPT)	long	The value of tmnxDhcpsPoolStats6FoAdvertPT indicates the sysUpTime at the last change of tmnxDhcpsPoolStats6FoAdvertP.
timeSinceLastRemoteFreeBlocks [Time Since Last Remote Free Blocks] (tmnxDhcpsPoolStats6FoFreeBlkPT)	long	The value of tmnxDhcpsPoolStats6FoFreeBlkPT indicates the sysUpTime at the last change of tmnxDhcpsPoolStats6FoFreeBlkP.
timeSinceLastRemoteStableLeases [Time Since Last Remote Stable Leases] (tmnxDhcpsPoolStats6FoStablePT)	long	The value of tmnxDhcpsPoolStats6FoStablePT indicates the sysUpTime at the last change of tmnxDhcpsPoolStats6FoStableP.
timeSinceLastStableLeases [Time Since Last Stable Leases] (tmnxDhcpsPoolStats6StablePT)	long	The value of tmnxDhcpsPoolStats6StablePT indicates the sysUpTime at the last change of tmnxDhcpsPoolStats6StableP.
unusedBlocks [Unused Blocks] (tmnxDhcpsPoolStats6UsedBlk)	java. math. BigInteger	The value of tmnxDhcpsPoolStats6UsedBlk indicates the number of provisioned but unused /64 blocks.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
wanAddressInternalRequests [Wan Address Internal Requests] (tmnxDhcpSvrSubnetStats6IntNoPfxWan)	long	The value of tmnxDhcpSvrSubnetStats6IntNoPfxWan indicates the number of times the following event occurred: an internal request for a WAN address (IA_NA (Identity association for non-temporary addresses)) fails because the pool does not have a subnet available where the value of tmnxDhcpSvrSubnetPrefixType is equal to 'wan-host'. An internal request is triggered by some packet received by this system and translated into an internal API (Application Program Interface) request to the local DHCP server.
<p>LocalDhcp6ServerPrefixStats</p> <p>MIB entry name: tmnxDhcpSvrSubnetStats6Entry</p> <p>Entry description: Each row entry in the tmnxDhcpSvrSubnetStats6Table represents additional columns of operational data for a subnet that belongs to the specified DHCPv6 server instance and pool.</p> <p>Table description (for tmnxDhcpSvrSubnetStats6Table): The tmnxDhcpSvrSubnetStats6Table has an entry for each subnet that belongs to the specified DHCPv6 server instance and pool.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: dhcp.Dhcp6AddressPrefix</p>		
advertisedLeases [Advertised Leases] (tmnxDhcpSvrSubnetStats6Advertise)	long	The value of tmnxDhcpSvrSubnetStats6Advertise indicates the number of leases in this subnet that are in state 'advertised'.
declinedAddresses [Declined Addresses] (tmnxDhcpSvrSubnetStats6Declined)	long	The value of tmnxDhcpSvrSubnetStats6Declined indicates the number of addresses in this subnet that are declined.
extendedStatisticsEnabled [Extended Statistics Enabled] (tmnxDhcpSvrSubnetStats6HasExt)	boolean	The value of tmnxDhcpSvrSubnetStats6HasExt indicates whether the extended statistics collection for this prefix is enabled. These extended statistics are only collected when the length of the configured subnet is between /32 en /64.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
freeBlocks [Free Blocks] (tmnxDhcpSvrSubnetStats6FreeBlk)	java. math. BigInteger	The value of tmnxDhcpSvrSubnetStats6FreeBlk indicates the number of provisioned but unused /64 blocks.
highestValAdvertisedLeases [Highest Val Advertised Leases] (tmnxDhcpSvrSubnetStats6AdvertP)	long	The value of tmnxDhcpSvrSubnetStats6AdvertP indicates the highest value of tmnxDhcpSvrSubnetStats6Advertise since the last reset of the extended statistics.
highestValPctBlocksInUse [Highest Val Pct Blocks In Use] (tmnxDhcpSvrSubnetStats6UsedPctP)	int	The value of tmnxDhcpSvrSubnetStats6UsedPctP indicates the highest value of tmnxDhcpSvrSubnetStats6UsedPct since the last reset of the extended statistics.
highestValStableLeases [Highest Val Stable Leases] (tmnxDhcpSvrSubnetStats6StableP)	long	The value of tmnxDhcpSvrSubnetStats6StableP indicates the highest value of tmnxDhcpSvrSubnetStats6Stable since the last reset of the extended statistics.
lowestValOfFreeBlocks [Lowest Val Of Free Blocks] (tmnxDhcpSvrSubnetStats6FreeBlkP)	java. math. BigInteger	The value of tmnxDhcpSvrSubnetStats6FreeBlkP indicates the lowest value of unused /64 blocks since the last reset of the extended statistics.
lowestValOfUnusedBlocks [Lowest Val Of Unused Blocks] (tmnxDhcpSvrSubnetStats6UsedBlkP)	java. math. BigInteger	The value of tmnxDhcpSvrSubnetStats6UsedBlkP indicates the lowest value of unused /64 blocks since the last reset of the extended statistics.
lowestValPctBlocksUnused [Lowest Val Pct Blocks Unused] (tmnxDhcpSvrSubnetStats6FreePctP)	int	The value of tmnxDhcpSvrSubnetStats6FreePctP indicates the lowest value of tmnxDhcpSvrSubnetStats6FreePct since the last reset of the extended statistics.
pctBlocksInUse [Pct Blocks In Use] (tmnxDhcpSvrSubnetStats6UsedPct)	int	The value of tmnxDhcpSvrSubnetStats6UsedPct indicates the percentage of /64 blocks currently in use.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pctBlocksUnused [Pct Blocks Unused] (tmnxDhcpSvrSubnetStats6FreePct)	int	The value of tmnxDhcpSvrSubnetStats6FreePct indicates the percentage of /64 blocks currently unused.
provisionedBlocks [Provisioned Blocks] (tmnxDhcpSvrSubnetStats6ProvBlk)	java. math. BigInteger	The value of tmnxDhcpSvrSubnetStats6ProvBlk indicates the number of provisioned /64 blocks.
reconfigurePendingLeases [Reconfigure Pending Leases] (tmnxDhcpSvrSubnetStats6RCPending)	long	The value of tmnxDhcpSvrSubnetStats6RCPending indicates the number of leases in this subnet that are in state 'reconfigurePending'.
removePendingLeases [Remove Pending Leases] (tmnxDhcpSvrSubnetStats6RmPending)	long	The value of tmnxDhcpSvrSubnetStats6RmPending indicates the number of leases in this subnet that are in state 'removePending'.
stableLeases [Stable Leases] (tmnxDhcpSvrSubnetStats6Stable)	long	The value of tmnxDhcpSvrSubnetStats6Stable indicates the number of leases in this subnet that are in state 'stable'.
timeSinceExtendedReset [Time Since Extended Reset] (tmnxDhcpSvrSubnetStats6ExtResetT)	long	The value of tmnxDhcpSvrSubnetStats6ExtResetT indicates the sysUpTime at the last reset of the extended statistics.
timeSinceLastAdvertisedLeases [Time Since Last Advertised Leases] (tmnxDhcpSvrSubnetStats6AdvertPT)	long	The value of tmnxDhcpSvrSubnetStats6AdvertPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStats6AdvertP.
timeSinceLastFreeBlocks [Time Since Last Free Blocks] (tmnxDhcpSvrSubnetStats6FreeBlkPT)	long	The value of tmnxDhcpSvrSubnetStats6FreeBlkPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStats6FreeBlkP.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
timeSinceLastPctBlocksInUse [Time Since Last Pct Blocks In Use] (tmnxDhcpSvrSubnetStats6UsedPctPT)	long	The value of tmnxDhcpSvrSubnetStats6UsedPctPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStats6UsedPctP.
timeSinceLastPctBlocksUnused [Time Since Last Pct Blocks Unused] (tmnxDhcpSvrSubnetStats6FreePctPT)	long	The value of tmnxDhcpSvrSubnetStats6FreePctPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStats6FreePctP.
timeSinceLastStableLeases [Time Since Last Stable Leases] (tmnxDhcpSvrSubnetStats6StablePT)	long	The value of tmnxDhcpSvrSubnetStats6StablePT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStats6StableP.
timeSinceLastUnusedBlocks [Time Since Last Unused Blocks] (tmnxDhcpSvrSubnetStats6UsedBlkPT)	long	The value of tmnxDhcpSvrSubnetStats6UsedBlkPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStats6UsedBlkP.
unusedBlocks [Unused Blocks] (tmnxDhcpSvrSubnetStats6UsedBlk)	java. math. BigInteger	The value of tmnxDhcpSvrSubnetStats6UsedBlk indicates the number of provisioned but unused /64 blocks.
<p>LocalDhcp6ServerStats MIB entry name: tmnxDhcpServerStats6Entry Entry description: Each row entry contains basic statistics about a particular DHCP server instance. Table description (for tmnxDhcpServerStats6Table): The tmnxDhcpServerStats6Table contains basic statistics about the DHCPv6 server instances. Supports realtime plotting Supports scheduled collection Monitored class: dhcp.LocalDhcp6Server</p>		
clientIgnoredOffers [Client Ignored Offers] (tmnxDhcpSvrStats6OffersIgnore)	long	The value of tmnxDhcpSvrStats6OffersIgnore indicates the number of DHCP OFFER (option 52 with value 2) packets sent by the DHCP server instance that were ignored by the clients.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dhcpSvrStats6DropAudit [Dhcp Svr Stats 6 Drop Audit] (tmnxDhcpSvrStats6DropAudit)	java. math. BigInteger	The value of tmnxDhcpSvrStats6DropAudit indicates the number of DHCP requests dropped by the server instance because this server instance is busy with the primary audit.
droppedBadPacket [Dropped Bad Packet] (tmnxDhcpSvrStats6DropBadPackets)	long	The value of tmnxDhcpSvrStats6DropBadPackets indicates the number of DHCP packets received which were corrupt.
droppedDestinedToOther [Dropped Destined To Other] (tmnxDhcpSvrStats6DropDestOther)	long	The value of tmnxDhcpSvrStats6DropDestOther indicates the number of DHCP requests dropped by the server instance because the (broadcast) request was not destined to this server.
droppedGenericError [Dropped Generic Error] (tmnxDhcpSvrStats6DropGenError)	long	The value of tmnxDhcpSvrStats6DropGenError indicates the number of DHCP packets dropped by the server instance because of a generic error.
droppedInternalConflicts [Dropped Internal Conflicts] (tmnxDhcpSvrStats6DropIntWConflict)	long	The value of tmnxDhcpSvrStats6DropIntWConflict indicates a DHCP host is trying to acquire an IP address that was handed through the local address assignment infrastructure, or the local address assignment infrastructure tries to use an IP address that was handed out to a DHCP client.
droppedInternalFailover [Dropped Internal Failover] (tmnxDhcpSvrStats6DropIntWFO)	long	The value of tmnxDhcpSvrStats6DropIntWFO indicates the number of internal calls from the local address assignment infrastructure dropped by the DHCP server instance because failover is enabled for the server instance.
droppedInternalIntIdMap [Dropped Internal Int Id Map] (tmnxDhcpSvrStats6DropIntWIfldMap)	long	The value of tmnxDhcpSvrStats6DropIntWFO indicates the number of internal calls from the local address assignment infrastructure dropped by the DHCP server instance because interface ID mapping is enabled for the server instance.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
droppedInternalUserIdent [Dropped Internal User Ident] (tmnxDhcpSvrStats6DropIntWUserId)	long	The value of tmnxDhcpSvrStats6DropIntWfo indicates the number of internal calls from the local address assignment infrastructure dropped by the DHCP server instance because tmnxDhcpServerCfgUserIdent is not set to duid (2) for the server instance.
droppedInvalidType [Dropped Invalid Type] (tmnxDhcpSvrStats6DropInvlTypes)	long	The value of tmnxDhcpSvrStats6DropInvlTypes indicates the number of DHCP packets received which had an invalid message type.
droppedLeaseNotReady [Dropped Lease Not Ready] (tmnxDhcpSvrStats6DropLseNotReady)	long	The value of tmnxDhcpSvrStats6DropLseNotReady indicates the number of DHCP packets dropped by the server instance before the lease database was ready.
droppedMaxLeasesReached [Dropped Max Leases Reached] (tmnxDhcpSvrStats6DropMaxReached)	long	The value of tmnxDhcpSvrStats6DropMaxReached indicates the number of DHCP packets dropped by the server instance because the maximum number of leases was reached. The maximum number of leases is indicated by the value of the object tmnxDhcpSvrMaxLeases.
droppedNotServingPool [Dropped Not Serving Pool] (tmnxDhcpSvrStats6DropNoSrvngPool)	long	The value of tmnxDhcpSvrStats6DropNoSrvngPool indicates the number of DHCP packets dropped by the server instance because there were no more free addresses in the pool.
droppedOverload [Dropped Overload] (tmnxDhcpSvrStats6DropOverload)	long	The value of tmnxDhcpSvrStats6DropOverload indicates the number of DHCP packets dropped by the server instance because they were received in excess of what the server instance can handle.
droppedPersistenceOverload [Dropped Persistence Overload] (tmnxDhcpSvrStats6DropPerOverload)	long	The value of tmnxDhcpSvrStats6DropPerOverload indicates the number of DHCP packets dropped by the server instance because they were received in excess of what the DHCP persistence system can handle. If this occurs, only releases and declines are still processed.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
droppedServerShutdown [Dropped Server Shutdown] (tmnxDhcpSvrStats6DropSvrDown)	long	The value of tmnxDhcpSvrStats6DropSvrDown indicates the number of DHCP packets dropped by the server instance during server instance shutdown (while the value of the object tmnxDhcpServerCfgAdminState in the corresponding row was set equal to 'outOfService').
duplicateRequestDropped [Duplicate Request Dropped] (tmnxDhcpSvrStats6DropDuplDiffRly)	long	The value of tmnxDhcpSvrStats6DropDuplDiffRly indicates the number of DHCP requests dropped by the server instance because they were received from a different Relay IP address within a timeframe of 10 seconds after a previous DHCPREQUEST.
leasesTimedOut [Leases Timed Out] (tmnxDhcpSvrStats6LeasesExpired)	long	The value of tmnxDhcpSvrStats6LeasesExpired indicates the number of DHCP leases that were expired (because no release was received).
receivedConfirmPackets [Received Confirm Packets] (tmnxDhcpSvrStats6RxConfirms)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxConfirms indicates the number of confirm messages received by the DHCP server instance.
receivedDeclinePackets [Received Decline Packets] (tmnxDhcpSvrStats6RxDeclines)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxDeclines indicates the number of decline messages received by the DHCP server instance.
receivedInformationRequestPackets [Received Information Request Packets] (tmnxDhcpSvrStats6RxInfRequests)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxInfRequests indicates the number of information-request messages received by the DHCP server instance.
receivedIntIpoeWanRequests [Received Int Ipoe Wan Requests] (tmnxDhcpSvrStats6RxIntReqIpoeWan)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxIntReqIpoeWan indicates the number of internal request calls received by the DHCP server instance from the local address assignment infrastructure for IPoE.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedIntPppSlaacRequests [Received Int Ppp Slaac Requests] (tmnxDhcpSvrStats6RxIntPppSlaac)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxIntPppSlaac indicates the number of internal request calls received by the DHCP server instance from the local address assignment infrastructure for PPP SLAAC (stateless autoconfiguration).
receivedInternalReleases [Received Internal Releases] (tmnxDhcpSvrStats6RxIntReleases)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxIntReleases indicates the number of internal release calls received by the DHCP server instance from the local address assignment infrastructure.
receivedIpoEslaacRequests [Received IpoE Slaac Requests] (tmnxDhcpSvrStats6RxIntIpoEslaac)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxIntIpoEslaac indicates the number of internal request calls received by the DHCP server instance from the local address assignment infrastructure for IPoE SLAAC (stateless autoconfiguration).
receivedRebindPackets [Received Rebind Packets] (tmnxDhcpSvrStats6RxRebinds)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxRebinds indicates the number of rebind messages received by the DHCP server instance.
receivedReleasePackets [Received Release Packets] (tmnxDhcpSvrStats6RxReleases)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxReleases indicates the number of release messages received by the DHCP server instance.
receivedRenewPackets [Received Renew Packets] (tmnxDhcpSvrStats6RxRenews)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxRenews indicates the number of renew messages received by the DHCP server instance.
receivedRequestPackets [Received Request Packets] (tmnxDhcpSvrStats6RxRequests)	java. math. BigInteger	The value of tmnxDhcpSvrStats6TxAdvertises indicates the number of request messages received by the DHCP server instance.
receivedSolicitPackets [Received Solicit Packets] (tmnxDhcpSvrStats6RxSolicits)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxSolicits indicates the number of solicit messages received by the DHCP server instance.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sentAdvertisePackets [Sent Advertise Packets] (tmnxDhcpSvrStats6TxAdvertises)	java. math. BigInteger	The value of tmnxDhcpSvrStats6TxAdvertises indicates the number of advertise messages sent by the DHCP server instance.
sentReconfigurePackets [Sent Reconfigure Packets] (tmnxDhcpSvrStats6TxReconfigures)	java. math. BigInteger	The value of tmnxDhcpSvrStats6TxReconfigures indicates the number of reconfigure messages sent by the DHCP server instance.
sentReplyPackets [Sent Reply Packets] (tmnxDhcpSvrStats6TxReplies)	java. math. BigInteger	The value of tmnxDhcpSvrStats6TxReplies indicates the number of reply messages sent by the DHCP server instance.
<p>LocalDhcpPoolFailoverStats</p> <p>MIB entry name: tmnxDhcpsPoolFoStatsEntry</p> <p>Entry description: Each row entry contains statistics about the failover facility of a specific DHCP Address Pool instance. Rows are created or removed automatically by the system.</p> <p>Table description (for tmnxDhcpsPoolFoStatsTable): The tmnxDhcpsPoolFoStatsTable contains statistics about the DHCP Address Pool failover facility.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: dhcp.LocalDhcpPoolFailover</p>		
addressConflictPkts [Address Conflict Pkts] (tmnxDhcpsPoolFoStatsAddrConflict)	long	The value of tmnxDhcpsPoolFoStatsAddrConflict indicates how many BNDUPD 'add' packets were dropped because this DHCP server instance has already leased another address to this host.
dropInvalidPkts [Drop Invalid Pkts] (tmnxDhcpsPoolFoStatsDropInvPkts)	long	The value of tmnxDhcpsPoolFoStatsDropInvPkts indicates how many BNDUPD packets were dropped because the packet was malformed.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
hostConflictPkts [Host Conflict Pkts] (tmnxDhcpsPoolFoStatsHostConflict)	long	The value of tmnxDhcpsPoolFoStatsHostConflict indicates how many BNDUPD 'add' packets were dropped because this DHCP server instance has already leased this address to another host.
leaseExpiredPkts [Lease Expired Pkts] (tmnxDhcpsPoolFoStatsExpired)	long	The value of tmnxDhcpsPoolFoStatsExpired indicates how many BNDUPD 'add' packets were dropped because the corresponding lease has expired. This may indicate that the clock of the failover peer is not in sync with the clock of this system.
leaseNotFoundPkts [Lease Not Found Pkts] (tmnxDhcpsPoolFoStatsLeaseNFound)	long	The value of tmnxDhcpsPoolFoStatsLeaseNFound indicates how many Binding Database Update (BNDUPD) 'remove' packets were dropped because the corresponding lease could not be found.
maxLeasePkts [Max Lease Pkts] (tmnxDhcpsPoolFoStatsMaxReached)	long	The value of tmnxDhcpsPoolFoStatsMaxReached indicates how many BNDUPD 'add' packets were dropped because the maximum number of leases was reached. The maximum number of leases is indicated by the value of the object tmnxDhcpSvrMaxLeases.
peerConflictPkts [Peer Conflict Pkts] (tmnxDhcpsPoolFoStatsPeerConflict)	long	The value of tmnxDhcpsPoolFoStatsPeerConflict indicates how many BNDUPD 'add' packets were dropped because the failover peer has leased an address within a subnet range of which the failover control is set to 'local' on this local DHCP Address Pool instance.
persistCongestPkts [Persist Congest Pkts] (tmnxDhcpsPoolFoStatsPersistCong)	long	The value of tmnxDhcpsPoolFoStatsPersistCong indicates how many BNDUPD packets were dropped because of persistence congestion on this DHCP Address Pool instance.
rangeNotFoundPkts [Range Not Found Pkts] (tmnxDhcpsPoolFoStatsRangeNFound)	long	The value of tmnxDhcpsPoolFoStatsRangeNFound indicates how many BNDUPD 'add' packets were dropped because a valid include range could not be found for the lease.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
shutdownPkts [Shutdown Pkts] (tmnxDhcpsPoolFoStatsFoShutdown)	long	The value of tmnxDhcpsPoolFoStatsFoShutdown indicates how many BNDUPD packets were dropped because the failover state if the DHCP Server instance is 'shutdown'.
subnetNotFoundPkts [Subnet Not Found Pkts] (tmnxDhcpsPoolFoStatsSubnetNFound)	long	The value of tmnxDhcpsPoolFoStatsSubnetNFound indicates how many BNDUPD 'add' packets were dropped because a valid subnet could not be found for the lease.
<p>LocalDhcpServerFailoverStats MIB entry name: tmnxDhcpsFoStatsEntry Entry description: Each row entry contains statistics about the failover facility of a specific DHCP Server instance. Rows are created or removed automatically by the system. Table description (for tmnxDhcpsFoStatsTable): The tmnxDhcpsFoStatsTable contains statistics about the DHCP failover facility. The tmnxDhcpsFoStatsTable has an entry for each DHCP server instance. Supports realtime plotting Supports scheduled collection Monitored class: dhcp.LocalDhcpServerFailover</p>		
addressConflictPkts [Address Conflict Pkts] (tmnxDhcpsFoStatsAddressConflict)	long	The value of tmnxDhcpsFoStatsAddressConflict indicates how many BNDUPD 'add' packets were dropped because this DHCP server instance has already leased another address to this host.
dropInvalidPkts [Drop Invalid Pkts] (tmnxDhcpsFoStatsDropInvalidPkts)	long	The value of tmnxDhcpsFoStatsDropInvalidPkts indicates how many BNDUPD packets were dropped because the packet was malformed.
hostConflictPkts [Host Conflict Pkts] (tmnxDhcpsFoStatsHostConflict)	long	The value of tmnxDhcpsFoStatsHostConflict indicates how many BNDUPD 'add' packets were dropped because this DHCP server instance has already leased this address to another host.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
leaseExpiredPkts [Lease Expired Pkts] (tmnxDhcpsFoStatsExpired)	long	The value of tmnxDhcpsFoStatsExpired indicates how many BNDUPD 'add' packets were dropped because the corresponding lease has expired. This may indicate that the clock of the failover peer is not in sync with the clock of this system.
leaseNotFoundPkts [Lease Not Found Pkts] (tmnxDhcpsFoStatsLeaseNotFound)	long	The value of tmnxDhcpsFoStatsLeaseNotFound indicates how many Binding Database Update (BNDUPD) 'remove' packets were dropped because the corresponding lease could not be found.
maxLeasePkts [Max Lease Pkts] (tmnxDhcpsFoStatsMaxReached)	long	The value of tmnxDhcpsFoStatsMaxReached indicates how many BNDUPD 'add' packets were dropped because the maximum number of leases was reached. The maximum number of leases is indicated by the value of the object tmnxDhcpSvrMaxLeases.
peerConflictPkts [Peer Conflict Pkts] (tmnxDhcpsFoStatsPeerConflict)	long	The value of tmnxDhcpsFoStatsPeerConflict indicates how many BNDUPD 'add' packets were dropped because the failover peer has leased an address within a subnet range of which the failover control is set to 'local' on this local DHCP server instance.
persistCongestPkts [Persist Congest Pkts] (tmnxDhcpsFoStatsPersistCongest)	long	The value of tmnxDhcpsFoStatsPersistCongest indicates how many BNDUPD packets were dropped because of persistence congestion on this DHCP server instance.
rangeNotFoundPkts [Range Not Found Pkts] (tmnxDhcpsFoStatsRangeNotFound)	long	The value of tmnxDhcpsFoStatsSubnetNotFound indicates how many BNDUPD 'add' packets were dropped because a valid include range could not be found for the lease.
shutdownPkts [Shutdown Pkts] (tmnxDhcpsFoStatsFoShutdown)	long	The value of tmnxDhcpsFoStatsFoShutdown indicates how many BNDUPD packets were dropped because the failover state if the DHCP Server instance is 'shutdown'.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subnetNotFoundPkts [Subnet Not Found Pkts] (tmnxDhcpSfoStatsSubnetNotFound)	long	The value of tmnxDhcpSfoStatsSubnetNotFound indicates how many BNDUPD 'add' packets were dropped because a valid subnet could not be found for the lease.
<p>LocalDhcpServerPoolStats</p> <p>MIB entry name: tmnxDhcpSvrPoolStatsEntry</p> <p>Entry description: Each row entry in the tmnxDhcpSvrPoolStatsTable represents additional columns of operational data for a pool that belongs to the specified DHCP server instance.</p> <p>Table description (for tmnxDhcpSvrPoolStatsTable): The tmnxDhcpSvrPoolStatsTable has an entry for each pool that belongs to the specified DHCP server instance.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: dhcp.AddressPool</p>		
declinedAddresses [Declined Addresses] (tmnxDhcpSvrPoolStatsDeclined)	long	The value of tmnxDhcpSvrPoolStatsDeclined indicates the number of addresses in this pool that are declined.
extendedStatisticsEnabled [Extended Statistics Enabled] (tmnxDhcpSvrPoolStatsHasExt)	boolean	The value of tmnxDhcpSvrPoolStatsHasExt indicates whether the extended statistics collection for this pool is enabled.
forceRenewPendingLeases [Force Renew Pending Leases] (tmnxDhcpSvrPoolStatsFRPending)	long	The value of tmnxDhcpSvrPoolStatsFRPending indicates the number of leases in this pool that are in state 'forceRenewPending'.
freeAddresses [Free Addresses] (tmnxDhcpSvrPoolStatsFree)	long	The value of tmnxDhcpSvrPoolStatsFree indicates the number of addresses in this pool that are free.
highestValOfferedLeases [Highest Val Offered Leases] (tmnxDhcpSvrPoolStatsOfferP)	long	The value of tmnxDhcpSvrPoolStatsOfferP indicates the highest value of tmnxDhcpSvrPoolStatsOffered since the last reset of the extended statistics.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
highestValPctRemoteUsedAddresses [Highest Val Pct Remote Used Addresses] (tmnxDhcpSvrPoolStatsFoUsdPctP)	int	The value of tmnxDhcpSvrPoolStatsFoUsdPctP indicates the highest value of tmnxDhcpSvrPoolStatsFoUsdPct since the last reset of the extended statistics.
highestValPctUsedAddresses [Highest Val Pct Used Addresses] (tmnxDhcpSvrPoolStatsUsedPctP)	int	The value of tmnxDhcpSvrPoolStatsUsedPctP indicates the highest value of tmnxDhcpSvrPoolStatsUsedPct since the last reset of the extended statistics.
highestValRemoteOfferedLeases [Highest Val Remote Offered Leases] (tmnxDhcpSvrPoolStatsFoOfferP)	long	The value of tmnxDhcpSvrPoolStatsFoOfferP indicates the highest value of tmnxDhcpSvrPoolStatsFoOffered since the last reset of the extended statistics.
highestValRemoteStableLeases [Highest Val Remote Stable Leases] (tmnxDhcpSvrPoolStatsFoStableP)	long	The value of tmnxDhcpSvrPoolStatsFoStableP indicates the highest value of tmnxDhcpSvrPoolStatsFoStable since the last reset of the extended statistics.
highestValStableLeases [Highest Val Stable Leases] (tmnxDhcpSvrPoolStatsStableP)	long	The value of tmnxDhcpSvrPoolStatsStableP indicates the highest value of tmnxDhcpSvrPoolStatsStable since the last reset of the extended statistics.
localProvisionedAddresses [Local Provisioned Addresses] (tmnxDhcpSvrPoolStatsProv)	long	The value of tmnxDhcpSvrPoolStatsProv indicates the total number of local addresses in this pool that are provisioned.
lowestValPctFreeAddresses [Lowest Val Pct Free Addresses] (tmnxDhcpSvrPoolStatsFreePctP)	int	The value of tmnxDhcpSvrPoolStatsFreePctP indicates the lowest value of tmnxDhcpSvrPoolStatsFreePct since the last reset of the extended statistics.
lowestValPctRemoteFreeAddresses [Lowest Val Pct Remote Free Addresses] (tmnxDhcpSvrPoolStatsFoFrePctP)	int	The value of tmnxDhcpSvrPoolStatsFoFrePctP indicates the lowest value of tmnxDhcpSvrPoolStatsFoFrePct since the last reset of the extended statistics.
lowestValRemoteUsedLeases [Lowest Val Remote Used Leases] (tmnxDhcpSvrPoolStatsFoUsedP)	long	The value of tmnxDhcpSvrPoolStatsFoUsedP indicates the lowest value of unused subnets since the last reset of the extended statistics.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lowestValUsedLeases [Lowest Val Used Leases] (tmnxDhcpSvrPoolStatsUsedP)	long	The value of tmnxDhcpSvrPoolStatsUsedP indicates the lowest value of unused subnets since the last reset of the extended statistics.
offeredLeases [Offered Leases] (tmnxDhcpSvrPoolStatsOffered)	long	The value of tmnxDhcpSvrPoolStatsOffered indicates the number of leases in this pool that are in state 'offered'.
pctFreeAddresses [Pct Free Addresses] (tmnxDhcpSvrPoolStatsFreePct)	int	The value of tmnxDhcpSvrPoolStatsFreePct indicates the percentage of subnets currently unused.
pctRemoteFreeAddresses [Pct Remote Free Addresses] (tmnxDhcpSvrPoolStatsFoFrePct)	int	The value of tmnxDhcpSvrPoolStatsFoFrePct indicates the percentage of remote subnets currently unused.
pctRemoteUsedAddresses [Pct Remote Used Addresses] (tmnxDhcpSvrPoolStatsFoUsdPct)	int	The value of tmnxDhcpSvrPoolStatsFoUsdPct indicates the percentage of remote subnets currently in use.
pctUsedAddresses [Pct Used Addresses] (tmnxDhcpSvrPoolStatsUsedPct)	int	The value of tmnxDhcpSvrPoolStatsUsedPct indicates the percentage of subnets currently in use.
peakNumberFreeAddresses [Peak Number Free Addresses] (tmnxDhcpSvrPoolStatsFreeP)	long	The value of tmnxDhcpSvrPoolStatsFreeP indicates the lowest value of unused subnets since the last reset of the extended statistics.
peakNumberRemoteFreeAddresses [Peak Number Remote Free Addresses] (tmnxDhcpSvrPoolStatsFoFreeP)	long	The value of tmnxDhcpSvrPoolStatsFoFreeP indicates the lowest value of unused subnets since the last reset of the extended statistics.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
remoteDeclinedAddresses [Remote Declined Addresses] (tmnxDhcpSvrPoolStatsFoDeclined)	long	The value of tmnxDhcpSvrPoolStatsFoDeclined indicates the number of remote addresses in this pool that are declined. The value of this object is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)'.
remoteForceRenewPendingLeases [Remote Force Renew Pending Leases] (tmnxDhcpSvrPoolStatsFoFRPend)	long	The value of tmnxDhcpSvrPoolStatsFoFRPend indicates the number of remote leases in this pool that are in state 'forceRenewPending'. The value of this object is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)'.
remoteFreeAddresses [Remote Free Addresses] (tmnxDhcpSvrPoolStatsFoFree)	long	The value of tmnxDhcpSvrPoolStatsFoFree indicates the number of remote addresses in this pool that are free. The value of this object is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)'.
remoteOfferedLeases [Remote Offered Leases] (tmnxDhcpSvrPoolStatsFoOffered)	long	The value of tmnxDhcpSvrPoolStatsFoOffered indicates the number of remote leases in this pool that are in state 'offered'. The value of this object is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)'.
remoteProvisionedAddresses [Remote Provisioned Addresses] (tmnxDhcpSvrPoolStatsFoProv)	long	The value of tmnxDhcpSvrPoolStatsFoProv indicates the total number of remote addresses in this pool that are provisioned. The value of this object is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)' and the value of the object tmnxDhcpsFoState of this server is equal to 'partnerDown (5)'.
remoteRemovePendingLeases [Remote Remove Pending Leases] (tmnxDhcpSvrPoolStatsFoRemPend)	long	The value of tmnxDhcpSvrPoolStatsFoRemPend indicates the number of remote leases in this pool that are in state 'removePending'. The value of this object is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)'.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
remoteStableLeases [Remote Stable Leases] (tmnxDhcpSvrPoolStatsFoStable)	long	The value of tmnxDhcpSvrPoolStatsFoStable indicates the number of remote leases in this pool that are in state 'stable'. The value of this object is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)'.
removePendingLeases [Remove Pending Leases] (tmnxDhcpSvrPoolStatsRemPending)	long	The value of tmnxDhcpSvrPoolStatsRemPending indicates the number of leases in this pool that are in state 'removePending'.
stableLeases [Stable Leases] (tmnxDhcpSvrPoolStatsStable)	long	The value of tmnxDhcpSvrPoolStatsStable indicates the number of leases in this pool that are in state 'stable'.
timeSinceExtendedReset [Time Since Extended Reset] (tmnxDhcpSvrPoolStatsExtResetT)	long	The value of tmnxDhcpSvrPoolStatsExtResetT indicates the sysUpTime at the last reset of the extended statistics.
timeSinceLastFreeAddresses [Time Since Last Free Addresses] (tmnxDhcpSvrPoolStatsFreePT)	long	The value of tmnxDhcpSvrPoolStatsFreePT indicates the sysUpTime at the last change of tmnxDhcpSvrPoolStatsFreeP.
timeSinceLastOfferedLeases [Time Since Last Offered Leases] (tmnxDhcpSvrPoolStatsOfferPT)	long	The value of tmnxDhcpSvrPoolStatsOfferPT indicates the sysUpTime at the last change of tmnxDhcpSvrPoolStatsOfferP.
timeSinceLastPctFreeAddresses [Time Since Last Pct Free Addresses] (tmnxDhcpSvrPoolStatsFreePctPT)	long	The value of tmnxDhcpSvrPoolStatsFreePctPT indicates the sysUpTime at the last change of tmnxDhcpSvrPoolStatsFreePctP.
timeSinceLastPctRemoteFreeAddresses [Time Since Last Pct Remote Free Addresses] (tmnxDhcpSvrPoolStatsFoFrePctPT)	long	The value of tmnxDhcpSvrPoolStatsFoFrePctPT indicates the sysUpTime at the last change of tmnxDhcpSvrPoolStatsFoFrePctP.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
timeSinceLastPctRemoteUsedAddresses [Time Since Last Pct Remote Used Addresses] (tmnxDhcpSvrPoolStatsFoUsdPctPT)	long	The value of tmnxDhcpSvrPoolStatsFoUsdPctPT indicates the sysUpTime at the last change of tmnxDhcpSvrPoolStatsFoUsdPctP.
timeSinceLastPctUsedAddresses [Time Since Last Pct Used Addresses] (tmnxDhcpSvrPoolStatsUsedPctPT)	long	The value of tmnxDhcpSvrPoolStatsUsedPctPT indicates the sysUpTime at the last change of tmnxDhcpSvrPoolStatsUsedPctP.
timeSinceLastRemoteFreeAddresses [Time Since Last Remote Free Addresses] (tmnxDhcpSvrPoolStatsFoFreePT)	long	The value of tmnxDhcpSvrPoolStatsFoFreePT indicates the sysUpTime at the last change of tmnxDhcpSvrPoolStatsFoFreeP.
timeSinceLastRemoteOfferedLeases [Time Since Last Remote Offered Leases] (tmnxDhcpSvrPoolStatsFoOfferPT)	long	The value of tmnxDhcpSvrPoolStatsFoOfferPT indicates the sysUpTime at the last change of tmnxDhcpSvrPoolStatsFoOfferP.
timeSinceLastRemoteStableLeases [Time Since Last Remote Stable Leases] (tmnxDhcpSvrPoolStatsFoStablePT)	long	The value of tmnxDhcpSvrPoolStatsFoStablePT indicates the sysUpTime at the last change of tmnxDhcpSvrPoolStatsFoStableP.
timeSinceLastRemoteUsedLeases [Time Since Last Remote Used Leases] (tmnxDhcpSvrPoolStatsFoUsedPT)	long	The value of tmnxDhcpSvrPoolStatsFoUsedPT indicates the sysUpTime at the last change of tmnxDhcpSvrPoolStatsFoUsedP.
timeSinceLastUsedLeases [Time Since Last Used Leases] (tmnxDhcpSvrPoolStatsUsedPT)	long	The value of tmnxDhcpSvrPoolStatsUsedPT indicates the sysUpTime at the last change of tmnxDhcpSvrPoolStatsUsedP.
timeSinceStableLeases [Time Since Stable Leases] (tmnxDhcpSvrPoolStatsStablePT)	long	The value of tmnxDhcpSvrPoolStatsStablePT indicates the sysUpTime at the last change of tmnxDhcpSvrPoolStatsStableP.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
usedLeases [Used Leases] (tmnxDhcpSvrPoolStatsUsed)	long	The value of tmnxDhcpSvrPoolStatsUsed indicates the number of provisioned and used subnets.
usedRemoteLeases [Used Remote Leases] (tmnxDhcpSvrPoolStatsFoUsed)	long	The value of tmnxDhcpSvrPoolStatsFoUsed indicates the number of provisioned and used remote subnets.
<p>LocalDhcpServerStats MIB entry name: tmnxDhcpServerStatsEntry Entry description: Each row entry contains basic statistics about a particular DHCP server instance. Table description (for tmnxDhcpServerStatsTable): The tmnxDhcpServerStatsTable contains basic statistics about the DHCP server instances. Supports realtime plotting Supports scheduled collection Monitored class: dhcp.LocalDhcpServer</p>		
addressUnavailableDropped [Address Unavailable Dropped] (tmnxDhcpSvrStatsDropAddrUnavail)	long	The value of tmnxDhcpSvrStatsDropAddrUnavail indicates the number of DHCP requests dropped by the server instance because the requested address is not available.
corruptedPacketsDropped [Corrupted Packets Dropped] (tmnxDhcpSvrStatsDropBadPackets)	long	The value of tmnxDhcpSvrStatsDropBadPackets indicates the number of DHCP packets received which were corrupt.
destinedToOtherDropped [Destined To Other Dropped] (tmnxDhcpSvrStatsDropDestOther)	long	The value of tmnxDhcpSvrStatsDropDestOther indicates the number of DHCP requests dropped by the server instance because the (broadcast) request was not destined to this server.
dropAudit [Drop Audit] (tmnxDhcpSvrStatsDropAudit)	long	The value of tmnxDhcpSvrStatsDropAudit indicates the number of DHCP requests dropped by the server instance because this server instance is busy with the primary audit.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dropIntConflicts [Drop Int Conflicts] (tmnxDhcpSvrStatsDropIntConflicts)	long	The value of tmnxDhcpSvrStatsDropIntConflicts indicates a DHCP host is trying to acquire an IP address that was handed through the local address assignment infrastructure, or the local address assignment infrastructure tries to use an IP address that was handed out to a DHCP client.
dropMaxReached [Drop Max Reached] (tmnxDhcpSvrStatsDropMaxReached)	long	The value of tmnxDhcpSvrStatsDropMaxReached indicates the number of DHCP packets dropped by the server instance because the maximum number of leases was reached. The maximum number of leases is indicated by the value of the object tmnxDhcpSvrMaxLeases.
dropNoSubnet [Drop No Subnet] (tmnxDhcpSvrStatsDropNoSubnet)	long	The value of tmnxDhcpSvrStatsDropNoSubnet indicates the number of DHCP packets dropped by the server instance for user-db hosts with a fixed address because the subnet to which the address belongs is not configured.
dropSvrDown [Drop Svr Down] (tmnxDhcpSvrStatsDropSvrDown)	long	The value of tmnxDhcpSvrStatsDropSvrDown indicates the number of DHCP packets dropped by the server instance during server instance shutdown (while the value of the object tmnxDhcpServerCfgAdminState in the corresponding row was set equal to 'outOfService').
droppedDhcpReqDiffGatewayIP [Dropped Dhcp Req Diff Gateway IP] (tmnxDhcpSvrStatsDropDuplDiffGi)	long	The value of tmnxDhcpSvrStatsDropDuplDiffGi indicates the number of DHCP requests dropped by the server instance because they were received from a different Gateway IP address within a timeframe of 10 seconds after a previous DHCPREQUEST.
genericErrorDropped [Generic Error Dropped] (tmnxDhcpSvrStatsDropGenError)	long	The value of tmnxDhcpSvrStatsDropGenError indicates the number of DHCP packets dropped by the server instance because of a generic error.
internalCallsFailoverDropped [Internal Calls Failover Dropped] (tmnxDhcpSvrStatsDropIntWithFo)	long	The value of tmnxDhcpSvrStatsDropIntWithFo indicates the number of internal calls from the local address assignment infrastructure dropped by the DHCP server instance because failover is enabled for the server instance.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
internalCallsLocalUserDbDropped [Internal Calls Local User Db Dropped] (tmnxDhcpSvrStatsDropIntWithLudb)	long	The value of tmnxDhcpSvrStatsDropIntWithLudb indicates the number of internal calls from the local address assignment infrastructure dropped by the DHCP server instance because a local user database is attached to the server instance.
invalidMessageTypesDropped [Invalid Message Types Dropped] (tmnxDhcpSvrStatsDropInvalidTypes)	long	The value of tmnxDhcpSvrStatsDropInvalidTypes indicates the number of DHCP packets received which had an invalid message type (option 53).
invalidUserDropped [Invalid User Dropped] (tmnxDhcpSvrStatsDropInvalidUsr)	long	The value of tmnxDhcpSvrStatsDropInvalidUsr indicates the number of DHCP packets dropped by the server instance because the MAC address of the sender or the option 82 didn't match the host lease state.
leaseNotFoundDropped [Lease Not Found Dropped] (tmnxDhcpSvrStatsDropNoLeaseFound)	long	The value of tmnxDhcpSvrStatsDropNoLeaseFound indicates the number of DHCP packets dropped by the server instance because no (valid) lease was found.
leaseNotReadyDropped [Lease Not Ready Dropped] (tmnxDhcpSvrStatsDropLseNotReady)	long	The value of tmnxDhcpSvrStatsDropLseNotReady indicates the number of DHCP packets dropped by the server instance before the lease database was ready.
leasesExpired [Leases Expired] (tmnxDhcpSvrStatsLeasesExpired)	long	The value of tmnxDhcpSvrStatsLeasesExpired indicates the number of DHCP leases that were expired (because no release was received).
localUserDbNotFoundDropped [Local User Db Not Found Dropped] (tmnxDhcpSvrStatsDropNoUsrDbFound)	long	The value of tmnxDhcpSvrStatsDropNoUsrDbFound indicates the number of DHCP packets dropped because the value of the object tmnxDhcpServerCfgUserDatabase of this server instance is not equal to the default value and a local user database with that name could not be found.
noFreeAddressesInPoolDropped [No Free Addresses In Pool Dropped] (tmnxDhcpSvrStatsDropNotSrvngPool)	long	The value of tmnxDhcpSvrStatsDropNotSrvngPool indicates the number of DHCP packets dropped by the server instance because there were no more free addresses in the pool.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
offersIgnored [Offers Ignored] (tmnxDhcpSvrStatsOffersIgnore)	long	The value of tmnxDhcpSvrStatsOffersIgnore indicates the number of DHCP OFFER (option 52 with value 2) packets sent by the DHCP server instance that were ignored by the clients.
overloadDropped [Overload Dropped] (tmnxDhcpSvrStatsDropOverload)	long	The value of tmnxDhcpSvrStatsDropOverload indicates the number of DHCP packets dropped by the server instance because they were received in excess of what the server instance can handle.
persistenceOverloadDropped [Persistence Overload Dropped] (tmnxDhcpSvrStatsDropPersOverload)	long	The value of tmnxDhcpSvrStatsDropPersOverload indicates the number of DHCP packets dropped by the server instance because they were received in excess of what the DHCP persistence system can handle. If this occurs, only releases and declines are still processed.
receivedDhcpDeclines [Received Dhcp Declines] (tmnxDhcpSvrStatsRxDeclines)	java. math. BigInteger	The value of tmnxDhcpSvrStatsRxDeclines indicates the number of DHCPDECLINE (option 53 with value 4) packets received by the DHCP server instance.
receivedDhcpDiscovers [Received Dhcp Discovers] (tmnxDhcpSvrStatsRxDiscovers)	java. math. BigInteger	The value of tmnxDhcpSvrStatsRxDiscovers indicates the number of DHCPDISCOVER (option 53 with value 1) packets received by the DHCP server instance.
receivedDhcpInforms [Received Dhcp Informs] (tmnxDhcpSvrStatsRxInforms)	java. math. BigInteger	The value of tmnxDhcpSvrStatsRxInforms indicates the number of DHCPINFORM (option 53 with value 8) packets received by the DHCP server instance.
receivedDhcpInternalReleases [Received Dhcp Internal Releases] (tmnxDhcpSvrStatsRxIntReleases)	java. math. BigInteger	The value of tmnxDhcpSvrStatsRxIntReleases indicates the number of internal release calls received by the DHCP server instance from the local address assignment infrastructure.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedDhcpInternalRequests [Received Dhcp Internal Requests] (tmnxDhcpSvrStatsRxIntRequests)	java. math. BigInteger	The value of tmnxDhcpSvrStatsRxIntRequests indicates the number of internal request calls received by the DHCP server instance from the local address assignment infrastructure.
receivedDhcpReleases [Received Dhcp Releases] (tmnxDhcpSvrStatsRxReleases)	java. math. BigInteger	The value of tmnxDhcpSvrStatsRxReleases indicates the number of DHCPRELEASE (option 53 with value 7) packets received by the DHCP server instance.
receivedDhcpRequests [Received Dhcp Requests] (tmnxDhcpSvrStatsRxRequests)	java. math. BigInteger	The value of tmnxDhcpSvrStatsRxRequests indicates the number of DHCPREQUEST (option 53 with value 3) packets received by the DHCP server instance.
sentDhcpAcks [Sent Dhcp Acks] (tmnxDhcpSvrStatsTxAcks)	java. math. BigInteger	The value of tmnxDhcpSvrStatsTxAcks indicates the number of DHCPACK (option 53 with value 5) packets sent by the DHCP server instance.
sentDhcpForceRenews [Sent Dhcp Force Renews] (tmnxDhcpSvrStatsTxForceRenews)	java. math. BigInteger	The value of tmnxDhcpSvrStatsTxForceRenews indicates the number of DHCPFORCERENEW (option 53 with value 9) packets sent by the DHCP server instance.
sentDhcpNaks [Sent Dhcp Naks] (tmnxDhcpSvrStatsTxNaks)	java. math. BigInteger	The value of tmnxDhcpSvrStatsTxNaks indicates the number of DHCPNAK (option 53 with value 6) packets sent by the DHCP server instance.
sentDhcpOffers [Sent Dhcp Offers] (tmnxDhcpSvrStatsTxOffers)	java. math. BigInteger	The value of tmnxDhcpSvrStatsTxOffers indicates the number of DHCPOFFER (option 53 with value 2) packets sent by the DHCP server instance.
unknownHostsDropped [Unknown Hosts Dropped] (tmnxDhcpSvrStatsDropUnknownHosts)	long	The value of tmnxDhcpSvrStatsDropUnknownHosts indicates the number of DHCP packets dropped from hosts which were not found in the user database when tmnxDhcpServerCfgUse-GiAddress was disabled.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
userNotAllowedDropped [User Not Allowed Dropped] (tmnxDhcpSvrStatsDropUserNotAllowed)	long	The value of tmnxDhcpSvrStatsDropUserNotAllowed indicates the number of DHCP packets dropped from hosts which are found in the user database, but which have no address or pool specified, nor has tmnxDhcpServerCfgUseGiAddress set to 'true'.
<p>LocalDhcpServerSubnetStats</p> <p>MIB entry name: tmnxDhcpSvrSubnetStatsEntry</p> <p>Entry description: Each row entry in the tmnxDhcpSvrSubnetStatsTable represents additional columns of operational data for a subnet that belongs to the specified DHCP server instance and pool.</p> <p>Table description (for tmnxDhcpSvrSubnetStatsTable): The tmnxDhcpSvrSubnetStatsTable has an entry for each subnet that belongs to the specified DHCP server instance and pool.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: dhcp.Subnet</p>		
declinedAddresses [Declined Addresses] (tmnxDhcpSvrSubnetStatsDeclined)	long	The value of tmnxDhcpSvrSubnetStatsDeclined indicates the number of addresses in this subnet that are declined.
forceRenewPendingLeases [Force Renew Pending Leases] (tmnxDhcpSvrSubnetStatsFRPending)	long	The value of tmnxDhcpSvrSubnetStatsFRPending indicates the number of leases in this subnet that are in state 'forceRenewPending'.
freeAddresses [Free Addresses] (tmnxDhcpSvrSubnetStatsFree)	long	The value of tmnxDhcpSvrSubnetStatsFree indicates the number of addresses in this subnet that are free.
highestValOfferedLeases [Highest Val Offered Leases] (tmnxDhcpSvrSubnetStatsOfferP)	long	The value of tmnxDhcpSvrSubnetStatsOfferP indicates the highest value of tmnxDhcpSvrSubnetStatsOffered since the last reset of the extended statistics.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
highestValPctRemoteUsedAddresses [Highest Val Pct Remote Used Addresses] (tmnxDhcpSvrSubnetStatsFoUsdPctP)	int	The value of tmnxDhcpSvrSubnetStatsFoUsdPctP indicates the highest value of tmnxDhcpSvrSubnetStatsFoUsdPct since the last reset of the extended statistics.
highestValPctUsedAddresses [Highest Val Pct Used Addresses] (tmnxDhcpSvrSubnetStatsUsedPctP)	int	The value of tmnxDhcpSvrSubnetStatsUsedPctP indicates the highest value of tmnxDhcpSvrSubnetStatsUsedPct since the last reset of the extended statistics.
highestValRemoteOfferedLeases [Highest Val Remote Offered Leases] (tmnxDhcpSvrSubnetStatsFoOfferP)	long	The value of tmnxDhcpSvrSubnetStatsFoOfferP indicates the highest value of tmnxDhcpSvrSubnetStatsFoOffered since the last reset of the extended statistics.
highestValRemoteStableLeases [Highest Val Remote Stable Leases] (tmnxDhcpSvrSubnetStatsFoStableP)	long	The value of tmnxDhcpSvrSubnetStatsFoStableP indicates the highest value of tmnxDhcpSvrSubnetStatsFoStable since the last reset of the extended statistics.
highestValStableLeases [Highest Val Stable Leases] (tmnxDhcpSvrSubnetStatsStableP)	long	The value of tmnxDhcpSvrSubnetStatsStableP indicates the highest value of tmnxDhcpSvrSubnetStatsStable since the last reset of the extended statistics.
localProvisionedAddresses [Local Provisioned Addresses] (tmnxDhcpSvrSubnetStatsProv)	long	The value of tmnxDhcpSvrSubnetStatsProv indicates the total number of local addresses in this subnet that are provisioned.
lowestValPctFreeAddresses [Lowest Val Pct Free Addresses] (tmnxDhcpSvrSubnetStatsFreePctP)	int	The value of tmnxDhcpSvrSubnetStatsFreePctP indicates the lowest value of tmnxDhcpSvrSubnetStatsFreePct since the last reset of the extended statistics.
lowestValPctRemoteFreeAddresses [Lowest Val Pct Remote Free Addresses] (tmnxDhcpSvrSubnetStatsFoFrePctP)	int	The value of tmnxDhcpSvrSubnetStatsFoFrePctP indicates the lowest value of tmnxDhcpSvrSubnetStatsFoFrePct since the last reset of the extended statistics.
lowestValRemoteUsedLeases [Lowest Val Remote Used Leases] (tmnxDhcpSvrSubnetStatsFoUsedP)	long	The value of tmnxDhcpSvrSubnetStatsFoUsedP indicates the lowest value of tmnxDhcpSvrSubnetStatsFoUsed since the last reset of the extended statistics.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lowestValUsedLeases [Lowest Val Used Leases] (tmnxDhcpSvrSubnetStatsUsedP)	long	The value of tmnxDhcpSvrSubnetStatsUsedP indicates the lowest value of tmnxDhcpSvrSubnetStatsUsed since the last reset of the extended statistics.
offeredLeases [Offered Leases] (tmnxDhcpSvrSubnetStatsOffered)	long	The value of tmnxDhcpSvrSubnetStatsOffered indicates the number of leases in this subnet that are in state 'offered'.
pctFreeAddresses [Pct Free Addresses] (tmnxDhcpSvrSubnetStatsFreePct)	int	The value of tmnxDhcpSvrSubnetStatsFreePct indicates the percentage of addresses in this subnet currently unused.
pctRemoteFreeAddresses [Pct Remote Free Addresses] (tmnxDhcpSvrSubnetStatsFoFrePct)	int	The value of tmnxDhcpSvrSubnetStatsFoFrePct indicates the percentage of remote addresses in this subnet that are currently unused.
pctRemoteUsedAddresses [Pct Remote Used Addresses] (tmnxDhcpSvrSubnetStatsFoUsdPct)	int	The value of tmnxDhcpSvrSubnetStatsFoUsdPct indicates the percentage of remote addresses in this subnet that are in use.
pctUsedAddresses [Pct Used Addresses] (tmnxDhcpSvrSubnetStatsUsedPct)	int	The value of tmnxDhcpSvrSubnetStatsUsedPct indicates the percentage of addresses in this subnet in use.
peakNumberFreeAddresses [Peak Number Free Addresses] (tmnxDhcpSvrSubnetStatsFreeP)	long	The value of tmnxDhcpSvrSubnetStatsFreeP indicates the peak number of addresses in this subnet that are free since the last reset of the extended statistics.
peakNumberRemoteFreeAddresses [Peak Number Remote Free Addresses] (tmnxDhcpSvrSubnetStatsFoFreeP)	long	The value of tmnxDhcpSvrSubnetStatsFoFreeP indicates the peak number of remote addresses in this subnet that are free since the last reset of the extended statistics.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
remoteDeclinedAddresses [Remote Declined Addresses] (tmnxDhcpSvrSubnetStatsFoDeclined)	long	The value of tmnxDhcpSvrSubnetStatsFoDeclined indicates the number of remote addresses in this subnet that are declined. The value of this object is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)'.
remoteForceRenewPendingLeases [Remote Force Renew Pending Leases] (tmnxDhcpSvrSubnetStatsFoFRPend)	long	The value of tmnxDhcpSvrSubnetStatsFoFRPend indicates the number of remote leases in this subnet that are in state 'forceRenewPending'. The value of this object is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)'.
remoteFreeAddresses [Remote Free Addresses] (tmnxDhcpSvrSubnetStatsFoFree)	long	The value of tmnxDhcpSvrSubnetStatsFoFree indicates the number of remote addresses in this subnet that are free. The value of this object is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)'.
remoteOfferedLeases [Remote Offered Leases] (tmnxDhcpSvrSubnetStatsFoOffered)	long	The value of tmnxDhcpSvrSubnetStatsFoOffered indicates the number of remote leases in this subnet that are in state 'offered'. The value of this object is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)'.
remoteProvisionedAddresses [Remote Provisioned Addresses] (tmnxDhcpSvrSubnetStatsFoProv)	long	The value of tmnxDhcpSvrSubnetStatsFoProv indicates the total number of remote addresses in this subnet that are provisioned. The value of this object is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)' and the value of the object tmnxDhcpsFoState of this server is equal to 'partnerDown (5)'.
remoteRemovePendingLeases [Remote Remove Pending Leases] (tmnxDhcpSvrSubnetStatsFoRemPend)	long	The value of tmnxDhcpSvrSubnetStatsFoRemPend indicates the number of remote leases in this subnet that are in state 'removePending'. The value of this object is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)'.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
remoteStableLeases [Remote Stable Leases] (tmnxDhcpSvrSubnetStatsFoStable)	long	The value of tmnxDhcpSvrSubnetStatsFoStable indicates the number of remote leases in this subnet that are in state 'stable'. The value of this object is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)'.
removePendingLeases [Remove Pending Leases] (tmnxDhcpSvrSubnetStatsRemPending)	long	The value of tmnxDhcpSvrSubnetStatsRemPending indicates the number of leases in this subnet that are in state 'removePending'.
stableLeases [Stable Leases] (tmnxDhcpSvrSubnetStatsStable)	long	The value of tmnxDhcpSvrSubnetStatsStable indicates the number of leases in this subnet that are in state 'stable'.
timeSinceExtendedReset [Time Since Extended Reset] (tmnxDhcpSvrSubnetStatsExtResetT)	long	The value of tmnxDhcpSvrSubnetStatsExtResetT indicates the sysUpTime at the last reset of the extended statistics.
timeSinceLastFreeAddresses [Time Since Last Free Addresses] (tmnxDhcpSvrSubnetStatsFreePT)	long	The value of tmnxDhcpSvrSubnetStatsFreePT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStatsFreeP.
timeSinceLastOfferedLeases [Time Since Last Offered Leases] (tmnxDhcpSvrSubnetStatsOfferPT)	long	The value of tmnxDhcpSvrSubnetStatsOfferPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStatsOfferP.
timeSinceLastPctFreeAddresses [Time Since Last Pct Free Addresses] (tmnxDhcpSvrSubnetStatsFreePctPT)	long	The value of tmnxDhcpSvrSubnetStatsFreePctPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStatsFreePctP.
timeSinceLastPctRemoteFreeAddresses [Time Since Last Pct Remote Free Addresses] (tmnxDhcpSvrSubnetStatsFoFrePctPT)	long	The value of tmnxDhcpSvrSubnetStatsFoFrePctPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStatsFoFrePctP.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
timeSinceLastPctRemoteUsedAddresses [Time Since Last Pct Remote Used Addresses] (tmnxDhcpSvrSubnetStatsFoUsdPctPT)	long	The value of tmnxDhcpSvrSubnetStatsFoUsdPctPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStatsFoUsdPctP.
timeSinceLastPctUsedAddresses [Time Since Last Pct Used Addresses] (tmnxDhcpSvrSubnetStatsUsedPctPT)	long	The value of tmnxDhcpSvrSubnetStatsUsedPctPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStatsUsedPctP.
timeSinceLastRemoteFreeAddresses [Time Since Last Remote Free Addresses] (tmnxDhcpSvrSubnetStatsFoFreePT)	long	The value of tmnxDhcpSvrSubnetStatsFoFreePT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStatsFoFreeP.
timeSinceLastRemoteOfferedLeases [Time Since Last Remote Offered Leases] (tmnxDhcpSvrSubnetStatsFoOfferPT)	long	The value of tmnxDhcpSvrSubnetStatsFoOfferPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStatsFoOfferP.
timeSinceLastRemoteStableLeases [Time Since Last Remote Stable Leases] (tmnxDhcpSvrSubnetStatsFoStablePT)	long	The value of tmnxDhcpSvrSubnetStatsFoStablePT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStatsFoStableP.
timeSinceLastRemoteUsedLeases [Time Since Last Remote Used Leases] (tmnxDhcpSvrSubnetStatsFoUsedPT)	long	The value of tmnxDhcpSvrSubnetStatsFoUsedPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStatsFoUsedP.
timeSinceLastStableLeases [Time Since Last Stable Leases] (tmnxDhcpSvrSubnetStatsStablePT)	long	The value of tmnxDhcpSvrSubnetStatsStablePT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStatsStableP.
timeSinceLastUsedLeases [Time Since Last Used Leases] (tmnxDhcpSvrSubnetStatsUsedPT)	long	The value of tmnxDhcpSvrSubnetStatsUsedPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStatsUsedP.

Table 525 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
usedLeases [Used Leases] (tmnxDhcpSvrSubnetStatsUsed)	long	The value of tmnxDhcpSvrSubnetStatsUsed indicates the number of leases in this subnet that are in use.
usedRemoteLeases [Used Remote Leases] (tmnxDhcpSvrSubnetStatsFoUsed)	long	The value of tmnxDhcpSvrSubnetStatsFoUsed indicates the number of remote leases in this subnet that are in use.

Table 526 diameter statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>DiameterPeerStats</p> <p>MIB entry name: tmnxDiamPlcyPeerStatsEntry</p> <p>Entry description: Each conceptual row contains detailed statistics about a peer defined in a DIAMETER policy. Entries in this table are created and removed automatically by the system</p> <p>Table description (for tmnxDiamPlcyPeerStatsTable): The tmnxDiamPlcyPeerStatsTable contains detailed statistics about the peers defined in a DIAMETER policy.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: diameter.DiameterPeer</p>		
asaTx [Asa Tx] (tmnxDiamPeerStAsaTx)	long	The value of tmnxDiamPeerStAsaTx indicates the number of Abort-Session-Answer messages that are transmitted to the server.
asrRx [Asr Rx] (tmnxDiamPeerStAsrRx)	long	The value of tmnxDiamPeerStAsrRx indicates the number of Abort-Session-Request messages that are received from the server.
ccaInitialRx [Cca Initial Rx] (tmnxDiamPeerStCcaInitialRx)	long	The value of tmnxDiamPeerStCcaInitialRx indicates the number of Credit Control Answer messages in response to the CCR INITIAL_REQUEST that are received from the server.
ccaTerminateRx [Cca Terminate Rx] (tmnxDiamPeerStCcaTerminateRx)	long	The value of tmnxDiamPeerStCcaTerminateRx indicates the number of Credit Control Answer messages in response to the CCR TERMINATION_REQUEST that are received from the server.
ccaUpdateRx [Cca Update Rx] (tmnxDiamPeerStCcaUpdateRx)	long	The value of tmnxDiamPeerStCcaUpdateRx indicates the number of Credit Control Answer messages in response to the CCR UPDATE_REQUEST that are received from the server.

Table 526 diameter statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ccrInitialTx [Ccr Initial Tx] (tmnxDiamPeerStCcrInitialTx)	long	The value of tmnxDiamPeerStCcrInitialTx indicates the number of Credit Control Request messages with CC-Request-Type AVP equal to INITIAL_REQUEST that are transmitted to the server.
ccrTerminateTx [Ccr Terminate Tx] (tmnxDiamPeerStCcrTerminateTx)	long	The value of tmnxDiamPeerStCcrTerminateTx indicates the number of Credit Control Request messages with CC-Request-Type AVP equal to TERMINATION_REQUEST that are transmitted to the server.
ccrUpdateTx [Ccr Update Tx] (tmnxDiamPeerStCcrUpdateTx)	long	The value of tmnxDiamPeerStCcrUpdateTx indicates the number of Credit Control Request messages with CC-Request-Type AVP equal to UPDATE_REQUEST that are transmitted to the server.
ceaRx [Cea Rx] (tmnxDiamPeerStCeaRx)	long	The value of tmnxDiamPeerStCeaRx indicates the number of Capabilities-Exchange-Answer messages that are received from the server.
cerTx [Cer Tx] (tmnxDiamPeerStCerTx)	long	The value of tmnxDiamPeerStCerTx indicates the number of Capabilities-Exchange-Request messages that are transmitted to the server.
clientInitiatedPendingMsgsPMQ [Client Initiated Pending Msgs PMQ] (tmnxDiamPeerStCiPendMsgsPMQ)	long	The value of tmnxDiamPeerStCiPendMsgsPMQ indicates client initiated roundtrip DIAMETER statistics regarding the number of request messages in the Pending Message Queue waiting to be matched with corresponding response messages from the server.
clientInitiatedReqTimeoutsPMQ [Client Initiated Req Timeouts PMQ] (tmnxDiamPeerStCiReqTimeoutsPMQ)	long	The value of tmnxDiamPeerStCiReqTimeoutsPMQ indicates client initiated roundtrip DIAMETER statistics regarding the number of request messages that were removed from the Pending Message Queue due to a match timeout.
dpaRx [Dpa Rx] (tmnxDiamPeerStDpaRx)	long	The value of tmnxDiamPeerStDpaRx indicates the number of Disconnect-Peer-Answer messages that are received from the server.

Table 526 diameter statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dpaTx [Dpa Tx] (tmnxDiamPeerStDpaTx)	long	The value of tmnxDiamPeerStDpaTx indicates the number of Disconnect-Peer-Answer messages that are transmitted to the server.
dprRx [Dpr Rx] (tmnxDiamPeerStDprRx)	long	The value of tmnxDiamPeerStDprRx indicates the number of Disconnect-Peer-Request messages that are received from the server.
dprTx [Dpr Tx] (tmnxDiamPeerStDprTx)	long	The value of tmnxDiamPeerStDprTx indicates the number of Disconnect-Peer-Request messages that are transmitted to the server.
peerName [Peer Name] (tmnxDiamPlcyPeerName)	String	The value of tmnxDiamPlcyPeerName specifies the name of the peer within a DIAMETER policy.
policyName [Policy Name] (tmnxDiamPlcyName)	String	The value of tmnxDiamPlcyName specifies the name of the DIAMETER policy.
raaTx [Raa Tx] (tmnxDiamPeerStRaaTx)	long	The value of tmnxDiamPeerStRaaTx indicates the number of Re-Auth-Answer messages that are transmitted to the server.
rarRx [Rar Rx] (tmnxDiamPeerStRarRx)	long	The value of tmnxDiamPeerStRarRx indicates the number of Re-Auth-Request messages that are received from the server.
siDiameterRxDropCount [Si Diameter Rx Drop Count] (tmnxDiamPeerStSiDiamRxDropCnt)	long	The value of tmnxDiamPeerStSiDiamRxDropCnt indicates client initiated roundtrip DIAMETER statistics regarding the number of dropped request messages upon reception from server.

Table 526 diameter statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
siDiameterRxRequests [Si Diameter Rx Requests] (tmnxDiamPeerStSiDiamRxReqs)	long	The value of tmnxDiamPeerStSiDiamRxReqs indicates client initiated roundtrip DIAMETER statistics regarding the number of request messages received from server.
siDiameterTxResponses [Si Diameter Tx Responses] (tmnxDiamPeerStSiDiamTxResps)	long	The value of tmnxDiamPeerStSiDiamTxResps indicates client initiated roundtrip DIAMETER statistics regarding the number of response messages sent to server.
siTcpSendFailed [Si Tcp Send Failed] (tmnxDiamPeerStSiTcpSendFailed)	long	The value of tmnxDiamPeerStSiTcpSendFailed indicates client initiated roundtrip DIAMETER statistics regarding the number of TCP send failures.
wdaRx [Wda Rx] (tmnxDiamPeerStWdaRx)	long	The value of tmnxDiamPeerStWdaRx indicates the number of Device-Watchdog-Answer messages that are received from the server.
wdaTx [Wda Tx] (tmnxDiamPeerStWdaTx)	long	The value of tmnxDiamPeerStWdaTx indicates the number of Device-Watchdog-Answer messages that are transmitted to the server.
wdrRx [Wdr Rx] (tmnxDiamPeerStWdrRx)	long	The value of tmnxDiamPeerStWdrRx indicates the number of Device-Watchdog-Request messages that are received from the server.
wdrTx [Wdr Tx] (tmnxDiamPeerStWdrTx)	long	The value of tmnxDiamPeerStWdrTx indicates the number of Device-Watchdog-Request messages that are transmitted to the server.

Table 527 dynsvc statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>DynSvcStats</p> <p>MIB entry name: tmnxDynSvcStatsEntry</p> <p>Entry description: Each conceptual row represents a statistic counter. Entries in this table are created and destroyed by the system. Rows are only created where the statistics value is nonzero; this allows faster walking through this table; hence, it is recommended to perform only get-next-request operations to retrieve information from this table.</p> <p>Table description (for tmnxDynSvcStatsTable): The tmnxDynSvcStatsTable shows statistics information of the Dynamic Services.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: dynsvc.DynSvcNeConfig</p>		
statsDescription [Stats Description] (tmnxDynSvcStatsDescr)	String	The value of the object tmnxDynSvcStatsDescr specifies the description of the statistic counter contained in this conceptual row.
statsId [Stats Id] (tmnxDynSvcStatsId)	long	The value of tmnxDynSvcStatsId specifies the number that identifies this conceptual row within the scope of a Dynamic Services.
statsValue [Stats Value] (tmnxDynSvcStatsVal)	long	The value of the object tmnxDynSvcStatsVal indicates the value of the statistics contained in this conceptual row.

Table 528 equipment statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
AllocatedMemoryStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder		
allocatedMemory [Allocated Memory] (sgiMemoryPoolAllocated)	long	The value of sgiMemoryPoolAllocated indicates the total memory currently allocated in memory-pools on the system. This memory may or may not be currently in use, but is pre-allocated should the software need to use it. If the value is greater than the maximum value reportable by this object then this object reports its maximum value (4,294,967,295) and sgiKbMemoryPoolAllocated must be used to determine the total memory allocated in memory-pools.
AvailableMemoryStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder		
availableMemory [Available Memory] (sgiMemoryAvailable)	long	The value of sgiMemoryAvailable indicates the amount of free memory in the overall system that is not allocated to memory pools, but is available in case a memory pool needs to grow.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CardResourceStats</p> <p>MIB entry name: tCardResEntry</p> <p>Entry description: The value of tCardResEntry represents card specific system resource information.</p> <p>Table description (for tCardResTable): The value of tCardResTable represents system resource information that are specific to a particular card on a given chassis.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.BaseCard</p>		
fPIngQGrpInstAlloc [FPIng QGrp Inst Alloc] (tCardResFPIngQGrpInstAlloc)	long	The value of tCardResFPIngQGrpInstAlloc represents the total number of forwarding-plane (FP) ingress queue-group instances across all FP on this card including access and network instances that are currently provisioned.
fPIngQGrpInstTotal [FPIng QGrp Inst Total] (tCardResFPIngQGrpInstTotal)	long	The value of tCardResFPIngQGrpInstTotal represents the total number of forwarding-plane (FP) ingress queue-group instances across all FP on this card including access and network instances that are allowed to be provisioned. When the value of tCardResFPIngQGrpInstTotal is zero, it indicates that this resource type is not supported on this card.
hsmdaQOvrAlloc [Hsmda QOvr Alloc] (tCardResHsmdaQOvrAlloc)	long	The value of tCardResHsmdaQOvrAlloc represents the total number of HSMDA queue overrides that are currently allocated on this card.
hsmdaQOvrTotal [Hsmda QOvr Total] (tCardResHsmdaQOvrTotal)	long	The value of tCardResHsmdaQOvrTotal represents the total number of HSMDA queue overrides that are supported on this card. When the value of tCardResHsmdaQOvrTotal is zero, it indicates that this resource type is not supported on this card.
portAccEgrQGrpInstAlloc [Port Acc Egr QGrp Inst Alloc] (tCardResPortAccEgrQGrpInstAlloc)	long	The value of tCardResPortAccEgrQGrpInstAlloc represents the total number of port access egress queue-group instances across all ports on this card that are currently provisioned.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portAccEgrQGrpInstTotal [Port Acc Egr QGrp Inst Total] (tCardResPortAccEgrQGrpInstTotal)	long	The value of tCardResPortAccEgrQGrpInstTotal represents the total number of port access egress queue-group instances across all ports on this card that are allowed to be provisioned. When the value of tCardResPortAccEgrQGrpInstTotal is zero, it indicates that this resource type is not supported on this card.
portEgrQGrpInstAlloc [Port Egr QGrp Inst Alloc] (tCardResPortEgrQGrpInstAlloc)	long	The value of tCardResPortEgrQGrpInstAlloc represents the total number of port egress queue-group instances across all ports on this card including access and network instances that are currently provisioned.
portEgrQGrpInstTotal [Port Egr QGrp Inst Total] (tCardResPortEgrQGrpInstTotal)	long	The value of tCardResPortEgrQGrpInstTotal represents the total number of port egress queue-group instances across all ports on this card including access and network instances that are allowed to be provisioned. When the value of tCardResPortEgrQGrpInstTotal is zero, it indicates that this resource type is not supported on this card.
portEgrVPortAlloc [Port Egr VPort Alloc] (tCardResPortEgrVPortAlloc)	long	The value of tCardResPortEgrVPortAlloc represents the total number of egress virtual ports across all ports on this card that are currently provisioned.
portEgrVPortTotal [Port Egr VPort Total] (tCardResPortEgrVPortTotal)	long	The value of tCardResPortEgrVPortTotal represents the total number of egress virtual ports across all ports on this card that are allowed to be provisioned. When the value of tCardResPortEgrVPortTotal is zero, it indicates that this resource type is not supported on this card.
portNetEgrQGrpInstAlloc [Port Net Egr QGrp Inst Alloc] (tCardResPortNetEgrQGrpInstAlloc)	long	The value of tCardResPortNetEgrQGrpInstAlloc represents the total number of port network egress queue-group instances across all ports on this card that are currently provisioned.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portNetEgrQGrpInstTotal [Port Net Egr QGrp Inst Total] (tCardResPortNetEgrQGrpInstTotal)	long	The value of tCardResPortNetEgrQGrpInstTotal represents the total number of port network egress queue-group instances across all ports on this card that are allowed to be provisioned. When the value of tCardResPortNetEgrQGrpInstTotal is zero, it indicates that this resource type is not supported on this card.
qosIntSchedsAlloc [Qos Int Scheds Alloc] (tCardResQosIntSchedsAlloc)	long	The value of tCardResQosIntSchedsAlloc represents the total number of QoS internal virtual schedulers that are currently allocated on this card.
qosIntSchedsTotal [Qos Int Scheds Total] (tCardResQosIntSchedsTotal)	long	The value of tCardResQosIntSchedsTotal represents the total number of QoS internal virtual schedulers that are supported on this card. When the value of tCardResQosIntSchedsTotal is zero, it indicates that this resource type is not supported on this card.
qosUserSchedsAlloc [Qos User Scheds Alloc] (tCardResQosUserSchedsAlloc)	long	The value of tCardResQosUserSchedsAlloc represents the total number of QoS user virtual schedulers that are currently allocated on this card.
qosUserSchedsTotal [Qos User Scheds Total] (tCardResQosUserSchedsTotal)	long	The value of tCardResQosUserSchedsTotal represents the total amount of QoS user virtual schedulers that are supported on this card. When the value of tCardResQosUserSchedsTotal is zero, it indicates that this resource type is not supported on this card.
subSPIQosOvrAlloc [Sub SPIQos Ovr Alloc] (tCardResSubSPIQosOvrAlloc)	long	The value of tCardResSubSPIQosOvrAlloc represents the total number of QoS subscriber sla-profile instance overrides that are currently allocated on this card.
subSPIQosOvrTotal [Sub SPIQos Ovr Total] (tCardResSubSPIQosOvrTotal)	long	The value of tCardResSubSPIQosOvrTotal represents the total number of QoS subscriber sla-profile instance overrides that are supported on this card. When the value of tCardResSubSPIQosOvrTotal is zero, it indicates that this resource type is not supported on this card.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ChassisResourceStats MIB entry name: tChassisResEntry Entry description: The value of tChassisResEntry represents chassis specific system resource information. Table description (for tChassisResTable): The value of tChassisResTable represents system resource information that are specific to chassis. Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder		
egrQGrpTmplAlloc [Egr QGrp Tmpl Alloc] (tChassisResEgrQGrpTmplAlloc)	long	The value of tChassisResEgrQGrpTmplAlloc represents the total number of egress queue-group-templates that are currently provisioned on this chassis.
egrQGrpTmplTotal [Egr QGrp Tmpl Total] (tChassisResEgrQGrpTmplTotal)	long	The value of tChassisResEgrQGrpTmplTotal represents the total number of egress queue-group-templates that are allowed to be provisioned on this chassis. When the value of tChassisResEgrQGrpTmplTotal is zero, it indicates that this resource type is not supported on this chassis.
fPIngQGrpInstAlloc [FPIng QGrp Inst Alloc] (tChassisResFPIngQGrpInstAlloc)	long	The value of tChassisResFPIngQGrpInstAlloc represents the total number of forwarding-plane (FP) ingress queue-group instances across all the FP on this chassis including access and network instances that are allowed to be provisioned.
fPIngQGrpInstTotal [FPIng QGrp Inst Total] (tChassisResFPIngQGrpInstTotal)	long	The value of tChassisResFPIngQGrpInstTotal represents the total number of forwarding-plane (FP) ingress queue-group instances across all the FP on this chassis including access and network instances that are allowed to be provisioned. When the value of tChassisResFPIngQGrpInstTotal is zero, it indicates that this resource type is not supported on this chassis.
ingQGrpTmplAlloc [Ing QGrp Tmpl Alloc] (tChassisResIngQGrpTmplAlloc)	long	The value of tChassisResIngQGrpTmplAlloc represents the total number of ingress queue-group-templates that are currently provisioned on this chassis.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingQGrpTmplTotal [Ing QGrp Tmpl Total] (tChassisResIngQGrpTmplTotal)	long	The value of tChassisResIngQGrpTmplTotal represents the total number of ingress queue-group-templates that are allowed to be provisioned on this chassis. When the value of tChassisResIngQGrpTmplTotal is zero, it indicates that this resource type is not supported on this chassis.
portEgrQGrpInstAlloc [Port Egr QGrp Inst Alloc] (tChassisResPortEgrQGrpInstAlloc)	long	The value of tChassisResPortEgrQGrpInstAlloc represents the total number of port egress queue-group instances across all the ports on this chassis including access and network instances that are currently provisioned.
portEgrQGrpInstTotal [Port Egr QGrp Inst Total] (tChassisResPortEgrQGrpInstTotal)	long	The value of tChassisResPortEgrQGrpInstTotal represents the total number of port egress queue-group instances across all the ports on this chassis including access and network instances that are allowed to be provisioned. When the value of tChassisResPortEgrQGrpInstTotal is zero, it indicates that this resource type is not supported on this chassis.
portEgrVPortAlloc [Port Egr VPort Alloc] (tChassisResPortEgrVPortAlloc)	long	The value of tChassisResPortEgrVPortAlloc represents the total number of port virtual ports across all the ports on this chassis that are currently provisioned.
portEgrVPortTotal [Port Egr VPort Total] (tChassisResPortEgrVPortTotal)	long	The value of tChassisResPortEgrVPortTotal represents the total number of egress virtual ports across all the ports on this chassis that are allowed to be provisioned. When the value of tChassisResPortEgrVPortTotal is zero, it indicates that this resource type is not supported on this chassis.
sapEgrQosPolAlloc [Sap Egr Qos Pol Alloc] (tChassisResSapEgrQosPolAlloc)	long	The value of tChassisResSapEgrQosPolAlloc represents the total number of sap-egress QoS policies that are currently provisioned on this chassis.
sapEgrQosPolTotal [Sap Egr Qos Pol Total] (tChassisResSapEgrQosPolTotal)	long	The value of tChassisResSapEgrQosPolTotal represents the total number of sap-egress QoS policies that are allowed to be provisioned on this chassis. When the value of tChassisResSapEgrQosPolTotal is zero, it indicates that this resource type is not supported on this chassis.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapIngQosPolAlloc [Sap Ing Qos Pol Alloc] (tChassisResSapIngQosPolAlloc)	long	The value of tChassisResSapIngQosPolAlloc represents the total number of sap-ingress QoS policies that are currently provisioned on this chassis.
sapIngQosPolTotal [Sap Ing Qos Pol Total] (tChassisResSapIngQosPolTotal)	long	The value of tChassisResSapIngQosPolTotal represents the total number of sap-ingress QoS policies that are allowed to be provisioned on this chassis. When the value of tChassisResSapIngQosPolTotal is zero, it indicates that this resource type is not supported on this chassis.
<p>CiscoHDLCStats</p> <p>MIB entry name: tmnxCiscoHDLCStatsEntry</p> <p>Entry description: An entry in the tmnxCiscoHDLCStatsTable.</p> <p>Table description (for tmnxCiscoHDLCStatsTable): The tmnxCiscoHDLCStatsTable has an entry for each port in the system that is configured for Cisco HDLC encapsulation. It contains Cisco HDLC protocol statistics for the particular port.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • tdmequipment.DS0ChannelGroup • tdmequipment.DS3E3Channel 		
discardStatInPkts [Discard Stat In Pkts] (tmnxCiscoHDLCDiscardStatInPkts)	long	tmnxCiscoHDLCDiscardStatInPkts indicates the number of inbound Cisco HDLC packets discarded.
discardStatOutPkts [Discard Stat Out Pkts] (tmnxCiscoHDLCDiscardStatOutPkts)	long	tmnxCiscoHDLCDiscardStatOutPkts indicates the number of outbound Cisco HDLC packets discarded.
statInOctets [Stat In Octets] (tmnxCiscoHDLCStatInOctets)	long	tmnxCiscoHDLCStatInOctets indicates the number of inbound Cisco HDLC octets.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
statInPkts [Stat In Pkts] (tmnxCiscoHDLCStatInPkts)	long	tmnxCiscoHDLCStatInPkts indicates the number of inbound Cisco HDLC packets.
statOutOctets [Stat Out Octets] (tmnxCiscoHDLCStatOutOctets)	long	tmnxCiscoHDLCStatOutOctets indicates the number of outbound Cisco HDLC octets.
statOutPkts [Stat Out Pkts] (tmnxCiscoHDLCStatOutPkts)	long	tmnxCiscoHDLCStatOutPkts indicates the number of outbound Cisco HDLC packets.
<p>CpuUtilizationStats</p> <p>MIB entry name: tmnxCardCpuResMonitorEntry</p> <p>Entry description: The tmnxCardCpuResMonitorEntry contains the card level CPU monitoring statistics over a specified sample-time.</p> <p>Table description (for tmnxCardCpuResMonitorTable): The tmnxCardCpuResMonitorTable details the specified current card's CPU resources. The information described in this table is volatile and dependent on the current environmental conditions, and specified sample-time. Information is only displayed for online cards.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.CardSlot</p>		
busyCoreUtil [Busy Core Util] (tmnxCardCpuResMonBusyCoreUtil)	double	The value of tmnxCardCpuResMonBusyCoreUtil indicates the utilization percentage of the busiest processor core over the specified sample-time. On single core CPUs, this is the overall system utilization percentage over the specified sample-time.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
busyGroupName [Busy Group Name] (tmnxCardCpuResMonBusyGroupName)	String	The value of tmnxCardCpuResMonBusyGroupName indicates the name of the group that is running at the highest capacity utilization. Capacity utilization is the CPU utilization relative to the maximum CPU resources available to that group. A group is a set of related applications, services, tasks or protocol handlers that consumes some part of the system CPU resources. The capacity utilization of the busiest group is indicated by tmnxCardCpuResMonBusyGroupUtil.
busyGroupUtil [Busy Group Util] (tmnxCardCpuResMonBusyGroupUtil)	double	The value of tmnxCardCpuResMonBusyGroupUtil indicates the capacity utilization of the group that is running at the highest capacity utilization. Capacity utilization is the CPU utilization relative to the maximum CPU resources available to that group. A group is a set of related applications, services, tasks or protocol handlers that consumes some part of the system CPU resources. The name of the busiest group is indicated by tmnxCardCpuResMonBusyGroupName.
cardSlotId [Card Slot Id] (tmnxCardResourceSlotNum)	long	The value of tmnxCardResourceSlotNum specifies the slot number of the card to which the resource information is monitored.
cpuidle [Cpu Idle] (tmnxCardCpuResMonCpuIdle)	double	The value of tmnxSysCpuMonCpuIdle indicates the overall percentage of CPU idleness over the specified sample-time.
samplingTime [Sampling Time] (tmnxCardCpuResSampleTime)	int	The value of tmnxCardCpuResSampleTime specifies the sample-time used to calculate the utilization results for the row.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>DDMStats</p> <p>MIB entry name: tmnxDigitalDiagMonitorEntry</p> <p>Entry description: Each row represents a particular SFF that supports Digital Diagnostic Monitoring. Entries are created and deleted internally by the system.</p> <p>Table description (for tmnxDigitalDiagMonitorTable): The tmnxDigitalDiagMonitorTable has an entry for each SFF in the system that supports Digital Diagnostic Monitoring (DDM). The table is indexed by TmnxPortID. Each row in this table is dynamically added and removed internally by the system based on the presence or absence of DDM capable SFF components.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.DigitalDiagnosticMonitoring</p>		
aux1 [Aux 1] (tmnxDDMAux1)	float	The value of tmnxDDMAux1 indicates the Manufacturer specific Auxiliary 1 information of the XFP.
aux1Type [Aux 1 Type] (tmnxDDMAux1Type)	int	The value of tmnxDDMAux1Type indicates the measurement type of the Manufacturer specific Auxiliary 1 information of the XFP: none (0) - not specified. adp-bias-voltage (1) - LSB is 10mV. reserved-2 (2) - reserved for future use. tec-current (3) - LSB is 100uA. laser-temp (4) - degrees Celsius(C). laser-wavelength (5) - LSB is 0.05 nm. voltage-50 (6) - 5.0 supply voltage, LSB=100uV. voltage-33 (7) - 3.3 supply voltage, LSB=100uV. voltage-18 (8) - 1.8 supply voltage, LSB=100uV, voltage-52 (9) - -5.2 supply voltage, LSB=100uV. current-50 (10) - 5.0V supply current, LSB=100uA. reserved-11 (11) - reserved for future use. reserved-12 (12) - reserved for future use. current-33 (13) - 3.3V supply current, LSB=100uA. current-18 (14) - 1.8V supply current, LSB=100uA. current-52 (15) - -5.2V supply current, LSB=100uA.
aux2 [Aux 2] (tmnxDDMAux2)	float	The value of tmnxDDMAux2 indicates the Manufacturer specific Auxiliary 2 information of the SFF.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aux2Type [Aux 2 Type] (tmnxDDMAux2Type)	int	The value of tmnxDDMAux2Type indicates the measurement type of the Manufacturer specific Auxiliary 2 information of the XFP: none (0) - not specified. adp-bias-voltage (1) - LSB is 10mV. reserved-2 (2) - reserved for future use. tec-current (3) - LSB is 100uA. laser-temp (4) - degrees Celsius(C). laser-wavelength (5) - LSB is 0.05 nm. voltage-50 (6) - 5.0 supply voltage, LSB=100uV. voltage-33 (7) - 3.3 supply voltage, LSB=100uV. voltage-18 (8) - 1.8 supply voltage, LSB=100uV, voltage-52 (9) - -5.2 supply voltage, LSB=100uV. current-50 (10) - 5.0V supply current, LSB=100uA. reserved-11 (11) - reserved for future use. reserved-12 (12) - reserved for future use. current-33 (13) - 3.3V supply current, LSB=100uA. current-18 (14) - 1.8V supply current, LSB=100uA. current-52 (15) - -5.2V supply current, LSB=100uA.
rxOpticalPower [Rx Optical Power] (tmnxDDMRxOpticalPower)	float	The value of tmnxDDMRxOpticalPower indicates the current Received Optical Power of the SFF in one tenths of a microwatt (uW). If the SFF is externally calibrated, the objects tmnxDDMExtCalRxPower4, tmnxDDMExtCalRxPower3, tmnxDDMExtCalRxPower2, tmnxDDMExtCalRxPower1 and tmnxDDMExtCalRxPower0 affect the output power calculation. For example (internally calibrated SFF): Using the SNMP value of 790, and using units of tenths of microwatt, 790 becomes 79 microwatts or 0.079 milliwatts. Converting to dBm: $10 \times \log_{10}(0.079) = -11.0$ dBm
rxOpticalPowerType [Rx Optical Power Type] (tmnxDDMRxOpticalPowerType)	int	The value of tmnxDDMRxOpticalPowerType indicates whether the tmnxDDMRxOpticalPower was taken as an average, or as an Optical Modulation Amplitude (OMA).

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
supplyVoltage [Supply Voltage] (tmnxDDMSupplyVoltage)	float	The value of tmnxDDMSupplyVoltage indicates the current supply voltage of the SFF in 1/10000 of a Volt(V). If the SFF is externally calibrated, the objects tmnxDDMExtCalVoltageSlope and tmnxDDMExtCalVoltageOffset affect the voltage calculation. The formula for translating between the value of tmnxDDMSupplyVoltage and Voltage is: Internally Calibrated only: $\text{tmnxDDMSupplyVoltage} / 10000$ Externally Calibrated: $(\text{tmnxDDMSupplyVoltage} * (\text{tmnxDDMExtCalVoltageSlope} / 256) + \text{tmnxDDMExtCalVoltageOffset}) / 10000$ For example (internally calibrated SFF): The SNMP value 32851 is 3.2851 Volts (V).
temperature [Temperature] (tmnxDDMTemperature)	float	The value of tmnxDDMTemperature indicates the current temperature of the SFF in 1/256th degrees Celsius. If the SFF is externally calibrated, the objects tmnxDDMExtCalTemperatureSlope and tmnxDDMExtCalTemperatureOffset affect the temperature calculation. The formula for translating between the value of tmnxDDMTemperature and degrees Celsius is: Internally Calibrated only: $\text{tmnxDDMTemperature} / 256$ Externally Calibrated: $(\text{tmnxDDMTemperature} * (\text{tmnxDDMExtCalTemperatureSlope} / 256) + \text{tmnxDDMExtCalTemperatureOffset}) / 256$ For example (internally calibrated SFF): The SNMP value 5734 is 22.4 degrees Celsius.
txBiasCurrent [Tx Bias Current] (tmnxDDMTxBiasCurrent)	float	The value of tmnxDDMTxBiasCurrent indicates the current Transmit Bias Current of the SFF in 1/500 milliamperes (mA). If the SFF is externally calibrated, the objects tmnxDDMExtCalTxLaserBiasSlope and tmnxDDMExtCalTxLaserBiasOffset affect the ampere calculation. The formula for translating between the value of tmnxDDMTxBiasCurrent and amperes is: Internally Calibrated only: $\text{tmnxDDMTxBiasCurrent} / 500$ Externally Calibrated: $(\text{tmnxDDMTxBiasCurrent} * (\text{tmnxDDMExtCalTxLaserBiasSlope} / 256) + \text{tmnxDDMExtCalTxLaserBiasOffset}) / 500$ For example (internally calibrated SFF): The SNMP value 2565 is 5.1 milliamperes (mA).

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txOutputPower [Tx Output Power] (tmnxDDMTxOutputPower)	float	The value of tmnxDDMTxOutputPower indicates the current Output Power of the SFF in one tenths of a microwatt (uW). If the SFF is externally calibrated, the objects tmnxDDMExtCalTemperatureSlope and tmnxDDMExtCalTemperatureOffset affect the output power calculation. For example (internally calibrated SFF): Using the SNMP value of 790, and using units of tenths of microwatt, 790 becomes 79 microwatts or 0.079 milliwatts. Converting to dBm: $10 \times \log_{10}(0.079) = -11.0$ dBm
<p>EgrSchVPortStats</p> <p>MIB entry name: tPortEgrVPortSchedStatEntry</p> <p>Entry description: Each conceptual row contains detailed statistics information about an egress port scheduler at a vport. Entries in this table are created and removed automatically by the system.</p> <p>Table description (for tPortEgrVPortSchedStatTable): The tPortEgrVPortSchedStatTable contains statistics information about the egress port schedulers at a vport.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.EgrSchVirtualPort</p>		
egrSchVPortStatsFwdOcts [Egr Sch VPort Stats Fwd Octs] (tPortEgrVPSchedStatFwdOcts)	java. math. BigInteger	The value of tPortEgrVPSchedStatFwdOcts indicates the number of forwarded octets.
egrSchVPortStatsFwdPkts [Egr Sch VPort Stats Fwd Pkts] (tPortEgrVPSchedStatFwdPkts)	java. math. BigInteger	The value of tPortEgrVPSchedStatFwdPkts indicates the number of forwarded packets.
egrSchVPortStatsName [Egr Sch VPort Stats Name] (tPortEgrVPSchedStatName)	String	The value of tPortEgrVPSchedStatName specifies the name of the port scheduler.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portId [Port Id] (tmnxPortPortID)	long	tmnxPortPortID is an index into this table. It maps this port to its entry in the mib-2 interfaces table.
shelfId [Shelf Id] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassis-Index are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
virtualPortName [Virtual Port Name] (tPortEgrVPortName)	String	The value of tPortEgrVPortName is the name of the virtual port on this port.
<p>EgrVPortAggStats</p> <p>MIB entry name: tPortEgrVPortAggStatsEntry</p> <p>Entry description: Each row in tPortEgrVPortAggStatsEntry represents a particular virtual port at the port egress level specified by tPortEgrVPortName and tPortEgrVPStLvl.</p> <p>Table description (for tPortEgrVPortAggStatsTable): The tPortEgrVPortAggStatsTable contains the statistics of each virtual port at the port egress level configured on this system. Most objects are represented in 64 bit. 32-bit version of the objects are available in tPortEgrVPortAggStatsHLTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.EgrSchVirtualPort</p>		
egrVportAggStatsCIRLevelDpdOct [Egr Vport Agg Stats CIRLevel Dpd Oct] (tPortEgrVPStLvlDpdOct)	java. math. BigInte- ger	The value of tPortEgrVPStLvlDpdOct indicates the number of octets dropped by the virtual port for the priority level specified by tPortEgrVPStLvl.
egrVportAggStatsCIRLevelDpdPkt [Egr Vport Agg Stats CIRLevel Dpd Pkt] (tPortEgrVPStLvlDpdPkt)	java. math. BigInte- ger	The value of tPortEgrVPStLvlDpdPkt indicates the number of packets dropped by the virtual port for the priority level specified by tPortEgrVPStLvl.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrVportAggStatsCIRLevelFwdOct [Egr Vport Agg Stats CIRLevel Fwd Oct] (tPortEgrVPStLvIFwdOct)	java. math. BigInteger	The value of tPortEgrVPStLvIFwdOct indicates the number of octets forwarded by the virtual port for the priority level specified by tPortEgrVPStLvl.
egrVportAggStatsCIRLevelFwdPkt [Egr Vport Agg Stats CIRLevel Fwd Pkt] (tPortEgrVPStLvIFwdPkt)	java. math. BigInteger	The value of tPortEgrVPStLvIFwdPkt indicates the number of packets forwarded by the virtual port for the priority level specified by tPortEgrVPStLvl.
egrVportAggStatsCIRLlevel [Egr Vport Agg Stats CIRLlevel] (tPortEgrVPStLvl)	int	The value of tPortEgrVPStLvl indicates the priority level for the port scheduler to which a subscriber host queue can be port-parented. When the value of tPortEgrVPStLvl is specified as '0xffffffff H', snmp GET on this table returns aggregate statistics.
egrVportAggStatsLastClearTime [Egr Vport Agg Stats Last Clear Time] (tPortEgrVPStLstClrdTime)	long	The value of tPortEgrVPStLstClrdTime indicates the sysUpTime when the counters in this table were last cleared.
<p>FPAcclngQGrpArbiterStats</p> <p>MIB entry name: tFPAcclngQGrpArbitStatEntry</p> <p>Entry description: The value of tFPAcclngQGrpArbitStatEntry defines an entry in the tFPAcclngQGrpArbitStatTable. It represents statistics about a specific QoS ingress queue group policer.</p> <p>Table description (for tFPAcclngQGrpArbitStatTable): The value of tFPAcclngQGrpArbitStatTable contains forwarding-plane ingress QoS queue group policer statistics on access side.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.FPAcclngQGrpEntry</p>		
fpAcclngQGrpArbitStatFwdOcts [Fp Acc Ing QGrp Arbit Stat Fwd Octs] (tFPAcclngQGrpArbitStatFwdOcts)	java. math. BigInteger	The value of tFPAcclngQGrpArbitStatFwdOcts indicates the number of forwarded octets by the ingress queue group arbiter Pchip.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fpAcclngQGrpArbitStatFwdOctsH [Fp Acc Ing QGrp Arbit Stat Fwd Octs H] (tFPAcclngQGrpArbitStatFwdOctsH)	long	The value of tFPAcclngQGrpArbitStatFwdOctsH indicates the upper 32 bits of tFPAcclngQGrpArbitStatFwdOcts.
fpAcclngQGrpArbitStatFwdOctsL [Fp Acc Ing QGrp Arbit Stat Fwd Octs L] (tFPAcclngQGrpArbitStatFwdOctsL)	long	The value of tFPAcclngQGrpArbitStatFwdOctsL indicates the lower 32 bits of tFPAcclngQGrpArbitStatFwdOcts.
fpAcclngQGrpArbitStatFwdPkts [Fp Acc Ing QGrp Arbit Stat Fwd Pkts] (tFPAcclngQGrpArbitStatFwdPkts)	java. math. BigInteger	The value of tFPAcclngQGrpArbitStatFwdPkts indicates the number of forwarded packets by the ingress queue group arbiter Pchip.
fpAcclngQGrpArbitStatFwdPktsH [Fp Acc Ing QGrp Arbit Stat Fwd Pkts H] (tFPAcclngQGrpArbitStatFwdPktsH)	long	The value of tFPAcclngQGrpArbitStatFwdPktsH indicates the upper 32 bits of tFPAcclngQGrpArbitStatFwdPkts.
fpAcclngQGrpArbitStatFwdPktsL [Fp Acc Ing QGrp Arbit Stat Fwd Pkts L] (tFPAcclngQGrpArbitStatFwdPktsL)	long	The value of tFPAcclngQGrpArbitStatFwdPktsL indicates the lower 32 bits of tFPAcclngQGrpArbitStatFwdPkts.
fpAcclngQGrpArbitStatName [Fp Acc Ing QGrp Arbit Stat Name] (tFPAcclngQGrpArbitStatName)	String	The value of tFPAcclngQGrpArbitStatName specifies the name of the ingress QoS arbiter of this forwarding-plane queue group on access.
<p>FPAcclngQGrpPolicerStats</p> <p>MIB entry name: tmnxFPAcclngQGrpPStatEntry</p> <p>Entry description: The value of tmnxFPAcclngQGrpPStatEntry defines an entry in the tmnxFPAcclngQGrpPStatTable. Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fpAcclngQGrpPStatMode [Fp Acc Ing QGrp PStat Mode] (tmnxFPAcclngQGrpPStatMode)	int	The value of tmnxFPAcclngQGrpPStatMode indicates the stat mode used by this policer.
fpAcclngQGrpPStatPolicerId [Fp Acc Ing QGrp PStat Policer Id] (tmnxFPAcclngQGrpPStatPolicerId)	long	The value of tmnxFPAcclngQGrpPStatPolicerId specifies the index of the ingress QoS policer of this forwarding-plane queue group on access.
fpAcclngQgPStDrpHPrioOcts [Fp Acc Ing Qg PSt Drp HPrio Octs] (tmnxFPAcclngQgPStDrpHPrioOcts)	java. math. BigInteger	The value of tmnxFPAcclngQgPStDrpHPrioOcts indicates the number of high priority octets, as determined by the ingress queue group policer, dropped by the Pchip due to: MBS exceeded, buffer pool limit exceeded, etc.
fpAcclngQgPStDrpHPrioOctsH [Fp Acc Ing Qg PSt Drp HPrio Octs H] (tmnxFPAcclngQgPStDrpHPrioOctsH)	long	The value of tmnxFPAcclngQgPStDrpHPrioOctsH indicates the upper 32 bits of tmnxFPAcclngQgPStDrpHPrioOcts.
fpAcclngQgPStDrpHPrioOctsL [Fp Acc Ing Qg PSt Drp HPrio Octs L] (tmnxFPAcclngQgPStDrpHPrioOctsL)	long	The value of tmnxFPAcclngQgPStDrpHPrioOctsL indicates the lower 32 bits of tmnxFPAcclngQgPStDrpHPrioOcts.
fpAcclngQgPStDrpHPrioPkts [Fp Acc Ing Qg PSt Drp HPrio Pkts] (tmnxFPAcclngQgPStDrpHPrioPkts)	java. math. BigInteger	The value of tmnxFPAcclngQgPStDrpHPrioPkts indicates the number of high priority packets, as determined by the ingress queue group policer, dropped by the Pchip due to: MBS exceeded, buffer pool limit exceeded, etc.
fpAcclngQgPStDrpHPrioPktsH [Fp Acc Ing Qg PSt Drp HPrio Pkts H] (tmnxFPAcclngQgPStDrpHPrioPktsH)	long	The value of tmnxFPAcclngQgPStDrpHPrioPktsH indicates the upper 32 bits of tmnxFPAcclngQgPStDrpHPrioPkts.
fpAcclngQgPStDrpHPrioPktsL [Fp Acc Ing Qg PSt Drp HPrio Pkts L] (tmnxFPAcclngQgPStDrpHPrioPktsL)	long	The value of tmnxFPAcclngQgPStDrpHPrioPktsL indicates the lower 32 bits of tmnxFPAcclngQgPStDrpHPrioPkts.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fpAcclngQgPStDrpLPrioOcts [Fp Acc Ing Qg PSt Drp LPrio Octs] (tmnxFPAcclngQgPStDrpLPrioOcts)	java. math. BigInteger	The value of tmnxFPAcclngQgPStDrpLPrioOcts indicates the number of low priority octets, as determined by the ingress queue group policer, dropped by the Pchip due to: MBS exceeded, buffer pool limit exceeded, etc.
fpAcclngQgPStDrpLPrioOctsH [Fp Acc Ing Qg PSt Drp LPrio Octs H] (tmnxFPAcclngQgPStDrpLPrioOctsH)	long	The value of tmnxFPAcclngQgPStDrpLPrioOctsH indicates the upper 32 bits of tmnxFPAcclngQgPStDrpLPrioOcts.
fpAcclngQgPStDrpLPrioOctsL [Fp Acc Ing Qg PSt Drp LPrio Octs L] (tmnxFPAcclngQgPStDrpLPrioOctsL)	long	The value of tmnxFPAcclngQgPStDrpLPrioOctsL indicates the lower 32 bits of tmnxFPAcclngQgPStDrpLPrioOcts.
fpAcclngQgPStDrpLPrioPkts [Fp Acc Ing Qg PSt Drp LPrio Pkts] (tmnxFPAcclngQgPStDrpLPrioPkts)	java. math. BigInteger	The value of tmnxFPAcclngQgPStDrpLPrioPkts indicates the number of low priority packets, as determined by the ingress queue group policer, dropped by the Pchip due to: MBS exceeded, buffer pool limit exceeded, etc.
fpAcclngQgPStDrpLPrioPktsH [Fp Acc Ing Qg PSt Drp LPrio Pkts H] (tmnxFPAcclngQgPStDrpLPrioPktsH)	long	The value of tmnxFPAcclngQgPStDrpLPrioPktsH indicates the upper 32 bits of tmnxFPAcclngQgPStDrpLPrioPkts.
fpAcclngQgPStDrpLPrioPktsL [Fp Acc Ing Qg PSt Drp LPrio Pkts L] (tmnxFPAcclngQgPStDrpLPrioPktsL)	long	The value of tmnxFPAcclngQgPStDrpLPrioPktsL indicates the lower 32 bits of tmnxFPAcclngQgPStDrpLPrioPkts.
fpAcclngQgPStFwdInProfOcts [Fp Acc Ing Qg PSt Fwd In Prof Octs] (tmnxFPAcclngQgPStFwdInProfOcts)	java. math. BigInteger	The value of tmnxFPAcclngQgPStFwdInProfOcts indicates the number of in-profile octets (rate below CIR) forwarded by the ingress Pchip.
fpAcclngQgPStFwdInProfOctsH [Fp Acc Ing Qg PSt Fwd In Prof Octs H] (tmnxFPAcclngQgPStFwdInProfOctsH)	long	The value of tmnxFPAcclngQgPStFwdInProfOctsH indicates the upper 32 bits of tmnxFPAcclngQgPStFwdInProfOcts.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fpAcclngQgPStFwdInProfOctsL [Fp Acc Ing Qg PSt Fwd In Prof Octs L] (tmnxFPAcclngQgPStFwdInProfOctsL)	long	The value of tmnxFPAcclngQgPStFwdInProfOctsL indicates the lower 32 bits of tmnxFPAcclngQgPStFwdInProfOcts.
fpAcclngQgPStFwdInProfPkts [Fp Acc Ing Qg PSt Fwd In Prof Pkts] (tmnxFPAcclngQgPStFwdInProfPkts)	java. math. BigInteger	The value of tmnxFPAcclngQgPStFwdInProfPkts indicates the number of in-profile packets (rate below CIR) forwarded by the ingress Pchip.
fpAcclngQgPStFwdInProfPktsH [Fp Acc Ing Qg PSt Fwd In Prof Pkts H] (tmnxFPAcclngQgPStFwdInProfPktsH)	long	The value of tmnxFPAcclngQgPStFwdInProfPktsH indicates the upper 32 bits of tmnxFPAcclngQgPStFwdInProfPkts.
fpAcclngQgPStFwdInProfPktsL [Fp Acc Ing Qg PSt Fwd In Prof Pkts L] (tmnxFPAcclngQgPStFwdInProfPktsL)	long	The value of tmnxFPAcclngQgPStFwdInProfPktsL indicates the lower 32 bits of tmnxFPAcclngQgPStFwdInProfPkts.
fpAcclngQgPStFwdOutProfOcts [Fp Acc Ing Qg PSt Fwd Out Prof Octs] (tmnxFPAcclngQgPStFwdOutProfOcts)	java. math. BigInteger	The value of tmnxFPAcclngQgPStFwdOutProfOcts indicates the number of out-of-profile octets (rate above CIR) forwarded by the ingress Pchip.
fpAcclngQgPStFwdOutProfOctsH [Fp Acc Ing Qg PSt Fwd Out Prof Octs H] (tmnxFPAcclngQgPStFwdOutProfOctsH)	long	The value of tmnxFPAcclngQgPStFwdOutProfOctsH indicates the upper 32 bits of tmnxFPAcclngQgPStFwdOutProfOcts.
fpAcclngQgPStFwdOutProfOctsL [Fp Acc Ing Qg PSt Fwd Out Prof Octs L] (tmnxFPAcclngQgPStFwdOutProfOctsL)	long	The value of tmnxFPAcclngQgPStFwdOutProfOctsL indicates the lower 32 bits of tmnxFPAcclngQgPStFwdOutProfOcts.
fpAcclngQgPStFwdOutProfPkts [Fp Acc Ing Qg PSt Fwd Out Prof Pkts] (tmnxFPAcclngQgPStFwdOutProfPkts)	java. math. BigInteger	The value of tmnxFPAcclngQgPStFwdOutProfPkts indicates the number of out-of-profile packets (rate above CIR) forwarded by the ingress Pchip.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fpAcclngQgPStFwdOutProfPktsH [Fp Acc Ing Qg PSt Fwd Out Prof Pkts H] (tmnxFPAcclngQgPStFwdOutProfPktsH)	long	The value of tmnxFPAcclngQgPStFwdOutProfPktsH indicates the upper 32 bits of tmnxFPAcclngQgPStFwdOutProfPkts.
fpAcclngQgPStFwdOutProfPktsL [Fp Acc Ing Qg PSt Fwd Out Prof Pkts L] (tmnxFPAcclngQgPStFwdOutProfPktsL)	long	The value of tmnxFPAcclngQgPStFwdOutProfPktsL indicates the lower 32 bits of tmnxFPAcclngQgPStFwdOutProfPkts.
fpAcclngQgPStOffHPrioOcts [Fp Acc Ing Qg PSt Off HPrio Octets] (tmnxFPAcclngQgPStOffHPrioOcts)	java. math. BigInteger	The value of tmnxFPAcclngQgPStOffHPrioOcts indicates the number of high priority octets, as determined by the ingress queue group policer, offered by the Pchip to the Qchip.
fpAcclngQgPStOffHPrioOctsH [Fp Acc Ing Qg PSt Off HPrio Octets H] (tmnxFPAcclngQgPStOffHPrioOctsH)	long	The value of tmnxFPAcclngQgPStOffHPrioOctsH indicates the upper 32 bits of tmnxFPAcclngQgPStOffHPrioOcts.
fpAcclngQgPStOffHPrioOctsL [Fp Acc Ing Qg PSt Off HPrio Octets L] (tmnxFPAcclngQgPStOffHPrioOctsL)	long	The value of tmnxFPAcclngQgPStOffHPrioOctsL indicates the lower 32 bits of tmnxFPAcclngQgPStOffHPrioOcts.
fpAcclngQgPStOffHPrioPkts [Fp Acc Ing Qg PSt Off HPrio Pkts] (tmnxFPAcclngQgPStOffHPrioPkts)	java. math. BigInteger	The value of tmnxFPAcclngQgPStOffHPrioPkts indicates the number of high priority packets, as determined by the ingress queue group policer, offered by the Pchip to the Qchip.
fpAcclngQgPStOffHPrioPktsH [Fp Acc Ing Qg PSt Off HPrio Pkts H] (tmnxFPAcclngQgPStOffHPrioPktsH)	long	The value of tmnxFPAcclngQgPStOffHPrioPktsH indicates the upper 32 bits of tmnxFPAcclngQgPStOffHPrioPkts.
fpAcclngQgPStOffHPrioPktsL [Fp Acc Ing Qg PSt Off HPrio Pkts L] (tmnxFPAcclngQgPStOffHPrioPktsL)	long	The value of tmnxFPAcclngQgPStOffHPrioPktsL indicates the lower 32 bits of tmnxFPAcclngQgPStOffHPrioPkts.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fpAcclngQgPStOffLPrioOcts [Fp Acc Ing Qg PSt Off LPrio Octs] (tmnxFPAcclngQgPStOffLPrioOcts)	java. math. BigInteger	The value of tmnxFPAcclngQgPStOffLPrioOcts indicates the number of low priority octets, as determined by the ingress queue group policer, offered by the Pchip to the Pchip.
fpAcclngQgPStOffLPrioOctsH [Fp Acc Ing Qg PSt Off LPrio Octs H] (tmnxFPAcclngQgPStOffLPrioOctsH)	long	The value of tmnxFPAcclngQgPStOffLPrioOctsH indicates the upper 32 bits of tmnxFPAcclngQgPStOffLPrioOcts.
fpAcclngQgPStOffLPrioOctsL [Fp Acc Ing Qg PSt Off LPrio Octs L] (tmnxFPAcclngQgPStOffLPrioOctsL)	long	The value of tmnxFPAcclngQgPStOffLPrioOctsL indicates the lower 32 bits of tmnxFPAcclngQgPStOffLPrioOcts.
fpAcclngQgPStOffLPrioPkts [Fp Acc Ing Qg PSt Off LPrio Pkts] (tmnxFPAcclngQgPStOffLPrioPkts)	java. math. BigInteger	The value of tmnxFPAcclngQgPStOffLPrioPkts indicates the number of low priority packets, as determined by the ingress queue group policer, offered by the Pchip to the Qchip.
fpAcclngQgPStOffLPrioPktsH [Fp Acc Ing Qg PSt Off LPrio Pkts H] (tmnxFPAcclngQgPStOffLPrioPktsH)	long	The value of tmnxFPAcclngQgPStOffLPrioPktsH indicates the upper 32 bits of tmnxFPAcclngQgPStOffLPrioPkts.
fpAcclngQgPStOffLPrioPktsL [Fp Acc Ing Qg PSt Off LPrio Pkts L] (tmnxFPAcclngQgPStOffLPrioPktsL)	long	The value of tmnxFPAcclngQgPStOffLPrioPktsL indicates the lower 32 bits of tmnxFPAcclngQgPStOffLPrioPkts.
fpAcclngQgPStUncolOctsOff [Fp Acc Ing Qg PSt Uncol Octs Off] (tmnxFPAcclngQgPStUncolOctsOff)	java. math. BigInteger	The value of tmnxFPAcclngQgPStUncolOctsOff indicates the number of uncolored octets offered to the ingress Pchip.
fpAcclngQgPStUncolOctsOffH [Fp Acc Ing Qg PSt Uncol Octs Off H] (tmnxFPAcclngQgPStUncolOctsOffH)	long	The value of tmnxFPAcclngQgPStUncolOctsOffH indicates the higher 32 bits of the value of tmnxFPAcclngQgPStUncolOctsOff.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fpAcclngQgPStUncolOctsOffL [Fp Acc Ing Qg PSt Uncol Octs Off L] (tmnxFPAcclngQgPStUncolOctsOffL)	long	The value of tmnxFPAcclngQgPStUncolOctsOffL indicates the lower 32 bits of tmnxFPAcclngQgPStUncolOctsOff.
fpAcclngQgPStUncolPktsOff [Fp Acc Ing Qg PSt Uncol Pkts Off] (tmnxFPAcclngQgPStUncolPktsOff)	java. math. BigInteger	The value of tmnxFPAcclngQgPStUncolPktsOff indicates the number of uncolored packets offered to the ingress Pchip.
fpAcclngQgPStUncolPktsOffH [Fp Acc Ing Qg PSt Uncol Pkts Off H] (tmnxFPAcclngQgPStUncolPktsOffH)	long	The value of tmnxFPAcclngQgPStUncolPktsOffH indicates the upper 32 bits of tmnxFPAcclngQgPStUncolPktsOff.
fpAcclngQgPStUncolPktsOffL [Fp Acc Ing Qg PSt Uncol Pkts Off L] (tmnxFPAcclngQgPStUncolPktsOffL)	long	The value of tmnxFPAcclngQgPStUncolPktsOffL indicates the lower 32 bits of tmnxFPAcclngQgPStUncolPktsOff.
<p>FPNwIngQGrpArbiterStats</p> <p>MIB entry name: tFPNetIngQGrpArbitStatEntry</p> <p>Entry description: The value of tFPNetIngQGrpArbitStatEntry defines an entry in the tFPNetIngQGrpArbitStatTable. It represents statistics about a specific QoS ingress queue group arbiter.</p> <p>Table description (for tFPNetIngQGrpArbitStatTable): The value of tFPNetIngQGrpArbitStatTable contains forwarding-plane ingress QoS queue group arbiter statistics on network side.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.FPNwIngQGrpEntry</p>		
fpNetIngQGrpArbitStatFwdOcts [Fp Net Ing QGrp Arbit Stat Fwd Octs] (tFPNetIngQGrpArbitStatFwdOcts)	java. math. BigInteger	The value of tFPNetIngQGrpArbitStatFwdOcts indicates the number of forwarded octets by the ingress queue group arbiter Pchip.
fpNetIngQGrpArbitStatFwdOctsH [Fp Net Ing QGrp Arbit Stat Fwd Octs H] (tFPNetIngQGrpArbitStatFwdOctsH)	long	The value of tFPNetIngQGrpArbitStatFwdOctsH indicates the upper 32 bits of tFPNetIngQGrpArbitStatFwdOcts.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fpNetIngQGrpArbitStatFwdOctsL [Fp Net Ing QGrp Arbit Stat Fwd Octs L] (tFPNetIngQGrpArbitStatFwdOctsL)	long	The value of tFPNetIngQGrpArbitStatFwdOctsL indicates the lower 32 bits of tFPNetIngQGrpArbitStatFwdOcts.
fpNetIngQGrpArbitStatFwdPkts [Fp Net Ing QGrp Arbit Stat Fwd Pkts] (tFPNetIngQGrpArbitStatFwdPkts)	java. math. BigInteger	The value of tFPNetIngQGrpArbitStatFwdPkts indicates the number of forwarded packets by the ingress queue group arbiter Pchip.
fpNetIngQGrpArbitStatFwdPktsH [Fp Net Ing QGrp Arbit Stat Fwd Pkts H] (tFPNetIngQGrpArbitStatFwdPktsH)	long	The value of tFPNetIngQGrpArbitStatFwdPktsH indicates the upper 32 bits of tFPNetIngQGrpArbitStatFwdPkts.
fpNetIngQGrpArbitStatFwdPktsL [Fp Net Ing QGrp Arbit Stat Fwd Pkts L] (tFPNetIngQGrpArbitStatFwdPktsL)	long	The value of tFPNetIngQGrpArbitStatFwdPktsL indicates the lower 32 bits of tFPNetIngQGrpArbitStatFwdPkts.
fpNetIngQGrpArbitStatName [Fp Net Ing QGrp Arbit Stat Name] (tFPNetIngQGrpArbitStatName)	String	The value of tFPNetIngQGrpArbitStatName specifies the name of the ingress QoS arbiter of this forwarding-plane queue group on network.
<p>FPNwIngQGrpPolicerStats</p> <p>MIB entry name: tmnxFPNetIngQGrpPStatEntry</p> <p>Entry description: The value of tmnxFPNetIngQGrpPStatEntry defines an entry in the tmnxFPNetIngQGrpPStatTable. It represents statistics about a specific QoS ingress queue group policer.</p> <p>Table description (for tmnxFPNetIngQGrpPStatTable): The value of tmnxFPNetIngQGrpTable contains forwarding-plane ingress QoS queue group policer statistics on network side.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: equipment.FPNwIngQGrpEntry</p>		
fpNetIngQGrpPStatMode [Fp Net Ing QGrp PStat Mode] (tmnxFPNetIngQGrpPStatMode)	int	The value of tmnxFPNetIngQGrpPStatMode indicates the stat mode used by this policer.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fpNetIngQGrpPStatPolicerId [Fp Net Ing QGrp PStat Policer Id] (tmnxFPNetIngQGrpPStatPolicerId)	long	The value of tmnxFPNetIngQGrpPStatPolicerId specifies the index of the ingress QoS policer of this forwarding-plane queue group on network.
fpNetIngQgPStDrpHPrioOcts [Fp Net Ing Qg PSt Drp HPrio Octs] (tmnxFPNetIngQgPStDrpHPrioOcts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStDrpHPrioOcts indicates the number of high priority octets, as determined by the ingress queue group policer, dropped by the Pchip due to: MBS exceeded, buffer pool limit exceeded, etc.
fpNetIngQgPStDrpHPrioOctsH [Fp Net Ing Qg PSt Drp HPrio Octs H] (tmnxFPNetIngQgPStDrpHPrioOctsH)	long	The value of tmnxFPNetIngQgPStDrpHPrioOctsH indicates the upper 32 bits of tmnxFPNetIngQgPStDrpHPrioOcts.
fpNetIngQgPStDrpHPrioOctsL [Fp Net Ing Qg PSt Drp HPrio Octs L] (tmnxFPNetIngQgPStDrpHPrioOctsL)	long	The value of tmnxFPNetIngQgPStDrpHPrioOctsL indicates the lower 32 bits of tmnxFPNetIngQgPStDrpHPrioOcts.
fpNetIngQgPStDrpHPrioPkts [Fp Net Ing Qg PSt Drp HPrio Pkts] (tmnxFPNetIngQgPStDrpHPrioPkts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStDrpHPrioPkts indicates the number of high priority packets, as determined by the ingress queue group policer, dropped by the Pchip due to: MBS exceeded, buffer pool limit exceeded, etc.
fpNetIngQgPStDrpHPrioPktsH [Fp Net Ing Qg PSt Drp HPrio Pkts H] (tmnxFPNetIngQgPStDrpHPrioPktsH)	long	The value of tmnxFPNetIngQgPStDrpHPrioPktsH indicates the upper 32 bits of tmnxFPNetIngQgPStDrpHPrioPkts.
fpNetIngQgPStDrpHPrioPktsL [Fp Net Ing Qg PSt Drp HPrio Pkts L] (tmnxFPNetIngQgPStDrpHPrioPktsL)	long	The value of tmnxFPNetIngQgPStDrpHPrioPktsL indicates the lower 32 bits of tmnxFPNetIngQgPStDrpHPrioPkts.
fpNetIngQgPStDrpLPrioOcts [Fp Net Ing Qg PSt Drp LPrio Octs] (tmnxFPNetIngQgPStDrpLPrioOcts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStDrpLPrioOcts indicates the number of low priority octets, as determined by the ingress queue group policer, dropped by the Pchip due to: MBS exceeded, buffer pool limit exceeded, etc.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fpNetIngQgPStDrpLPrioOctsH [Fp Net Ing Qg PSt Drp LPrio Octs H] (tmnxFPNetIngQgPStDrpLPrioOctsH)	long	The value of tmnxFPNetIngQgPStDrpLPrioOctsH indicates the upper 32 bits of tmnxFPNetIngQgPStDrpLPrioOcts.
fpNetIngQgPStDrpLPrioOctsL [Fp Net Ing Qg PSt Drp LPrio Octs L] (tmnxFPNetIngQgPStDrpLPrioOctsL)	long	The value of tmnxFPNetIngQgPStDrpLPrioOctsL indicates the lower 32 bits of tmnxFPNetIngQgPStDrpLPrioOcts.
fpNetIngQgPStDrpLPrioPkts [Fp Net Ing Qg PSt Drp LPrio Pkts] (tmnxFPNetIngQgPStDrpLPrioPkts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStDrpLPrioPkts indicates the number of low priority packets, as determined by the ingress queue group policer, dropped by the Pchip due to: MBS exceeded, buffer pool limit exceeded, etc.
fpNetIngQgPStDrpLPrioPktsH [Fp Net Ing Qg PSt Drp LPrio Pkts H] (tmnxFPNetIngQgPStDrpLPrioPktsH)	long	The value of tmnxFPNetIngQgPStDrpLPrioPktsH indicates the upper 32 bits of tmnxFPNetIngQgPStDrpLPrioPkts.
fpNetIngQgPStDrpLPrioPktsL [Fp Net Ing Qg PSt Drp LPrio Pkts L] (tmnxFPNetIngQgPStDrpLPrioPktsL)	long	The value of tmnxFPNetIngQgPStDrpLPrioPktsL indicates the lower 32 bits of tmnxFPNetIngQgPStDrpLPrioPkts.
fpNetIngQgPStFwdInProfOcts [Fp Net Ing Qg PSt Fwd In Prof Octs] (tmnxFPNetIngQgPStFwdInProfOcts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStFwdInProfOcts indicates the number of in-profile octets (rate below CIR) forwarded by the ingress Pchip.
fpNetIngQgPStFwdInProfOctsH [Fp Net Ing Qg PSt Fwd In Prof Octs H] (tmnxFPNetIngQgPStFwdInProfOctsH)	long	The value of tmnxFPNetIngQgPStFwdInProfOctsH indicates the upper 32 bits of tmnxFPNetIngQgPStFwdInProfOcts.
fpNetIngQgPStFwdInProfOctsL [Fp Net Ing Qg PSt Fwd In Prof Octs L] (tmnxFPNetIngQgPStFwdInProfOctsL)	long	The value of tmnxFPNetIngQgPStFwdInProfOctsL indicates the lower 32 bits of tmnxFPNetIngQgPStFwdInProfOcts.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fpNetIngQgPStFwdInProfPkts [Fp Net Ing Qg PSt Fwd In Prof Pkts] (tmnxFPNetIngQgPStFwdInProfPkts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStFwdInProfPkts indicates the number of in-profile packets (rate below CIR) forwarded by the ingress Pchip.
fpNetIngQgPStFwdInProfPktsH [Fp Net Ing Qg PSt Fwd In Prof Pkts H] (tmnxFPNetIngQgPStFwdInProfPktsH)	long	The value of tmnxFPNetIngQgPStFwdInProfPktsH indicates the upper 32 bits of tmnxFPNetIngQgPStFwdInProfPkts.
fpNetIngQgPStFwdInProfPktsL [Fp Net Ing Qg PSt Fwd In Prof Pkts L] (tmnxFPNetIngQgPStFwdInProfPktsL)	long	The value of tmnxFPNetIngQgPStFwdInProfPktsL indicates the lower 32 bits of tmnxFPNetIngQgPStFwdInProfPkts.
fpNetIngQgPStFwdOutProfOcts [Fp Net Ing Qg PSt Fwd Out Prof Octs] (tmnxFPNetIngQgPStFwdOutProfOcts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStFwdOutProfOcts indicates the number of out-of-profile octets (rate above CIR) forwarded by the ingress Pchip.
fpNetIngQgPStFwdOutProfOctsH [Fp Net Ing Qg PSt Fwd Out Prof Octs H] (tmnxFPNetIngQgPStFwdOutProfOctsH)	long	The value of tmnxFPNetIngQgPStFwdOutProfOctsH indicates the upper 32 bits of tmnxFPNetIngQgPStFwdOutProfOcts.
fpNetIngQgPStFwdOutProfOctsL [Fp Net Ing Qg PSt Fwd Out Prof Octs L] (tmnxFPNetIngQgPStFwdOutProfOctsL)	long	The value of tmnxFPNetIngQgPStFwdOutProfOctsL indicates the lower 32 bits of tmnxFPNetIngQgPStFwdOutProfOcts.
fpNetIngQgPStFwdOutProfPkts [Fp Net Ing Qg PSt Fwd Out Prof Pkts] (tmnxFPNetIngQgPStFwdOutProfPkts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStFwdOutProfPkts indicates the number of out-of-profile packets (rate above CIR) forwarded by the ingress Pchip.
fpNetIngQgPStFwdOutProfPktsH [Fp Net Ing Qg PSt Fwd Out Prof Pkts H] (tmnxFPNetIngQgPStFwdOutProfPktsH)	long	The value of tmnxFPNetIngQgPStFwdOutProfPktsH indicates the upper 32 bits of tmnxFPNetIngQgPStFwdOutProfPkts.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fpNetIngQgPStFwdOutProfPktsL [Fp Net Ing Qg PSt Fwd Out Prof Pkts L] (tmnxFPNetIngQgPStFwdOutProfPktsL)	long	The value of tmnxFPNetIngQgPStFwdOutProfPktsL indicates the lower 32 bits of tmnxFPNetIngQgPStFwdOutProfPkts.
fpNetIngQgPStOffHPrioOcts [Fp Net Ing Qg PSt Off HPrio Octs] (tmnxFPNetIngQgPStOffHPrioOcts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStOffHPrioOcts indicates the number of high priority octets, as determined by the ingress queue group policer, offered by the Pchip to the Qchip.
fpNetIngQgPStOffHPrioOctsH [Fp Net Ing Qg PSt Off HPrio Octs H] (tmnxFPNetIngQgPStOffHPrioOctsH)	long	The value of tmnxFPNetIngQgPStOffHPrioOctsH indicates the upper 32 bits of tmnxFPNetIngQgPStOffHPrioOcts.
fpNetIngQgPStOffHPrioOctsL [Fp Net Ing Qg PSt Off HPrio Octs L] (tmnxFPNetIngQgPStOffHPrioOctsL)	long	The value of tmnxFPNetIngQgPStOffHPrioOctsL indicates the lower 32 bits of tmnxFPNetIngQgPStOffHPrioOcts.
fpNetIngQgPStOffHPrioPkts [Fp Net Ing Qg PSt Off HPrio Pkts] (tmnxFPNetIngQgPStOffHPrioPkts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStOffHPrioPkts indicates the number of high priority packets, as determined by the ingress queue group policer, offered by the Pchip to the Qchip.
fpNetIngQgPStOffHPrioPktsH [Fp Net Ing Qg PSt Off HPrio Pkts H] (tmnxFPNetIngQgPStOffHPrioPktsH)	long	The value of tmnxFPNetIngQgPStOffHPrioPktsH indicates the upper 32 bits of tmnxFPNetIngQgPStOffHPrioPkts.
fpNetIngQgPStOffHPrioPktsL [Fp Net Ing Qg PSt Off HPrio Pkts L] (tmnxFPNetIngQgPStOffHPrioPktsL)	long	The value of tmnxFPNetIngQgPStOffHPrioPktsL indicates the lower 32 bits of tmnxFPNetIngQgPStOffHPrioPkts.
fpNetIngQgPStOffLPrioOcts [Fp Net Ing Qg PSt Off LPrio Octs] (tmnxFPNetIngQgPStOffLPrioOcts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStOffLPrioOcts indicates the number of low priority octets, as determined by the ingress queue group policer, offered by the Pchip to the Pchip.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fpNetIngQgPStOffLPrioOctsH [Fp Net Ing Qg PSt Off LPrio Octs H] (tmnxFPNetIngQgPStOffLPrioOctsH)	long	The value of tmnxFPNetIngQgPStOffLPrioOctsH indicates the upper 32 bits of tmnxFPNetIngQgPStOffLPrioOcts.
fpNetIngQgPStOffLPrioOctsL [Fp Net Ing Qg PSt Off LPrio Octs L] (tmnxFPNetIngQgPStOffLPrioOctsL)	long	The value of tmnxFPNetIngQgPStOffLPrioOctsL indicates the lower 32 bits of tmnxFPNetIngQgPStOffLPrioOcts.
fpNetIngQgPStOffLPrioPkts [Fp Net Ing Qg PSt Off LPrio Pkts] (tmnxFPNetIngQgPStOffLPrioPkts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStOffLPrioPkts indicates the number of low priority packets, as determined by the ingress queue group policer, offered by the Pchip to the Qchip.
fpNetIngQgPStOffLPrioPktsH [Fp Net Ing Qg PSt Off LPrio Pkts H] (tmnxFPNetIngQgPStOffLPrioPktsH)	long	The value of tmnxFPNetIngQgPStOffLPrioPktsH indicates the upper 32 bits of tmnxFPNetIngQgPStOffLPrioPkts.
fpNetIngQgPStOffLPrioPktsL [Fp Net Ing Qg PSt Off LPrio Pkts L] (tmnxFPNetIngQgPStOffLPrioPktsL)	long	The value of tmnxFPNetIngQgPStOffLPrioPktsL indicates the lower 32 bits of tmnxFPNetIngQgPStOffLPrioPkts.
fpNetIngQgPStUncolOctsOff [Fp Net Ing Qg PSt Uncol Octs Off] (tmnxFPNetIngQgPStUncolOctsOff)	java. math. BigInteger	The value of tmnxFPNetIngQgPStUncolOctsOff indicates the number of uncolored octets offered to the ingress Pchip.
fpNetIngQgPStUncolOctsOffH [Fp Net Ing Qg PSt Uncol Octs Off H] (tmnxFPNetIngQgPStUncolOctsOffH)	long	The value of tmnxFPNetIngQgPStUncolOctsOffH indicates the higher 32 bits of the value of tmnxFPNetIngQgPStUncolOctsOff.
fpNetIngQgPStUncolOctsOffL [Fp Net Ing Qg PSt Uncol Octs Off L] (tmnxFPNetIngQgPStUncolOctsOffL)	long	The value of tmnxFPNetIngQgPStUncolOctsOffL indicates the lower 32 bits of tmnxFPNetIngQgPStUncolOctsOff.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fpNetIngQgPStUncolPktsOff [Fp Net Ing Qg PSt Uncol Pkts Off] (tmnxFPNetIngQgPStUncolPktsOff)	java. math. BigInteger	The value of tmnxFPNetIngQgPStUncolPktsOff indicates the number of uncolored packets offered to the ingress Pchip.
fpNetIngQgPStUncolPktsOffH [Fp Net Ing Qg PSt Uncol Pkts Off H] (tmnxFPNetIngQgPStUncolPktsOffH)	long	The value of tmnxFPNetIngQgPStUncolPktsOffH indicates the upper 32 bits of tmnxFPNetIngQgPStUncolPktsOff.
fpNetIngQgPStUncolPktsOffL [Fp Net Ing Qg PSt Uncol Pkts Off L] (tmnxFPNetIngQgPStUncolPktsOffL)	long	The value of tmnxFPNetIngQgPStUncolPktsOffL indicates the lower 32 bits of tmnxFPNetIngQgPStUncolPktsOff.
<p>FibNextHopStats</p> <p>MIB entry name: vRtrFibStatNextHopEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an IOM card in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrFibStatNextHopTable): The vRtrFibStatNextHopTable has an entry for each IOM in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.BaseCard</p>		
ipActive [Ip Active] (vRtrFibStatNextHopIPActive)	long	vRtrFibStatNextHopIPActive indicates current active IP next-hop counts for the FIB on the IOM.
ipAvailable [Ip Available] (vRtrFibStatNextHopIPAvailable)	long	vRtrFibStatNextHopIPAvailable indicates the available IP next-hop counts for the FIB on the IOM.
tunnelActive [Tunnel Active] (vRtrFibStatNextHopTunnelActive)	long	vRtrFibStatNextHopTunnelActive indicates current active Tunnel next-hop counts for the FIB on the IOM.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tunnelAvailable [Tunnel Available] (vRtrFibStatNextHopTunnelAvailable)	long	vRtrFibStatNextHopTunnelAvailable indicates the available Tunnel next-hop counts for the FIB on the IOM.
<p>FibStats</p> <p>MIB entry name: vRtrFibStatEntry</p> <p>Entry description: Each row entry represents a collection of summarized statistics for each virtual router on an IOM card in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrFibStatTable): The vRtrStatTable has an entry for IOM card configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.BaseCard</p>		
aggrRoutes [Aggr Routes] (vRtrFibStatAggrRoutes)	long	vRtrFibStatAggrRoutes indicates current aggregate route counts for the virtual router.
alarmCount [Alarm Count] (vRtrFibStatAlarmCount)	long	vRtrFibStatAlarmCount indicates the number of times the FIB has raised an alarm due to high FIB usage.
bgpEvpnRoutes [Bgp Evpn Routes] (vRtrFibStatBGPEvpnRoutes)	long	The value of vRtrFibStatBGPEvpnRoutes indicates the current IPv4 BGP EVPN route counts for the virtual router.
bgpRoutes [Bgp Routes] (vRtrFibStatBGPRoutes)	long	vRtrFibStatBGPRoutes indicates current BGP route counts for the virtual router.
bgpVpnRoutes [Bgp Vpn Routes] (vRtrFibStatBGPVpnRoutes)	long	vRtrFibStatBGPVpnRoutes indicates current BGP VPN route counts for the virtual router.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
directRoutes [Direct Routes] (vRtrFibStatDirectRoutes)	long	vRtrFibStatDirectRoutes indicates current direct route counts for the virtual router.
highUtilization [High Utilization] (vRtrFibStatHighUtilization)	boolean	vRtrFibStatHighUtilization indicates whether or not the FIB on the IOM is experiences persistent high occupancy.
hostRoutes [Host Routes] (vRtrFibStatHostRoutes)	long	vRtrFibStatHostRoutes indicates current host route counts for the virtual router.
isisRoutes [Isis Routes] (vRtrFibStatISISRoutes)	long	vRtrFibStatISISRoutes indicates current ISIS route counts for the virtual router.
lastAlarmTime [Last Alarm Time] (vRtrFibStatLastAlarmTime)	long	vRtrFibStatLastAlarmTime indicates the last time a high FIB usage alarm was raised.
managedRoutes [Managed Routes] (vRtrFibStatManagedRoutes)	long	vRtrFibStatManagedRoutes indicates current managed route counts for the virtual router.
natRoutes [Nat Routes] (vRtrFibStatNatRoutes)	long	vRtrFibStatNatRoutes indicates current NAT route counts for the virtual router.
ospfRoutes [Ospf Routes] (vRtrFibStatOSPFRoutes)	long	vRtrFibStatOSPFRoutes indicates current OSPF route counts for the virtual router.
overflows [Overflows] (vRtrFibStatOverflows)	long	vRtrFibStatOverflows indicates the number of times the FIB has run out of space.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ripRoutes [Rip Routes] (vRtrFibStatRIPRoutes)	long	vRtrFibStatRIPRoutes indicates current RIP route counts for the virtual router.
staticRoutes [Static Routes] (vRtrFibStatStaticRoutes)	long	vRtrFibStatStaticRoutes indicates current static route counts for the virtual router.
subMgmtRoutes [Sub Mgmt Routes] (vRtrFibStatSubMgmtRoutes)	long	vRtrFibStatSubMgmtRoutes indicates current Sub-management route counts for the virtual router.
v6AggrRoutes [V6 Aggr Routes] (vRtrFibStatV6AggrRoutes)	long	vRtrFibStatV6AggrRoutes indicates current aggregate route counts for the virtual router.
v6BGPRoutes [V6 BGPRoutes] (vRtrFibStatV6BGPRoutes)	long	vRtrFibStatV6BGPRoutes indicates current BGP route counts for the virtual router.
v6BGPVpnRoutes [V6 BGPVpn Routes] (vRtrFibStatV6BGPVpnRoutes)	long	vRtrFibStatV6BGPVpnRoutes indicates current BGP VPN route counts for the virtual router.
v6DirectRoutes [V6 Direct Routes] (vRtrFibStatV6DirectRoutes)	long	vRtrFibStatV6DirectRoutes indicates current direct route counts for the virtual router.
v6HostRoutes [V6 Host Routes] (vRtrFibStatV6HostRoutes)	long	vRtrFibStatV6HostRoutes indicates current host route counts for the virtual router.
v6ISISRoutes [V6 ISISRoutes] (vRtrFibStatV6ISISRoutes)	long	vRtrFibStatV6ISISRoutes indicates current ISIS route counts for the virtual router.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v6ManagedRoutes [V6 Managed Routes] (vRtrFibStatV6ManagedRoutes)	long	vRtrFibStatV6ManagedRoutes indicates current managed route counts for the virtual router.
v6NatRoutes [V6 Nat Routes] (vRtrFibStatV6NatRoutes)	long	vRtrFibStatV6NatRoutes indicates current NAT IPv6 route counts for the virtual router.
v6OSPFRoutes [V6 OSPFRoutes] (vRtrFibStatV6OSPFRoutes)	long	vRtrFibStatV6OSPFRoutes indicates current OSPF route counts for the virtual router.
v6RIPRoutes [V6 RIPRoutes] (vRtrFibStatV6RIPRoutes)	long	vRtrFibStatV6RIPRoutes indicates current RIP route counts for the virtual router.
v6StaticRoutes [V6 Static Routes] (vRtrFibStatV6StaticRoutes)	long	vRtrFibStatV6StaticRoutes indicates current static route counts for the virtual router.
v6SubMgmtRoutes [V6 Sub Mgmt Routes] (vRtrFibStatV6SubMgmtRoutes)	long	vRtrFibStatV6SubMgmtRoutes indicates current Sub-management route counts for the virtual router.
v6VpnLeakRoutes [V6 Vpn Leak Routes] (vRtrFibStatV6VPNLeakRoutes)	long	vRtrFibStatV6VPNLeakRoutes indicates current IPv6 VPN Leak route counts for the virtual router.
v6bgpEvpnRoutes [V6 bgp Evpn Routes] (vRtrFibStatV6BGPEvpnRoutes)	long	The value of vRtrFibStatV6BGPEvpnRoutes indicates the current IPv6 BGP EVPN route counts for the virtual router.
vpnLeakRoutes [Vpn Leak Routes] (vRtrFibStatVPNLeakRoutes)	long	vRtrFibStatVPNLeakRoutes indicates current VPN Leak route counts for the virtual router.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>ForwardingPlaneResourceStats</p> <p>MIB entry name: tFResEntry</p> <p>Entry description: The value of tFResEntry represents forwarding plane (FP) specific system resource information.</p> <p>Table description (for tFResTable): The value of tFResTable represents system resource information that are specific to forwarding plane (FP) for a particular card on a given chassis.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.CardSlot • equipment.ForwardingPlane 		
dynEgrClassAlloc [Dyn Egr Class Alloc] (tFResDynEgrClassAlloc)	long	The value of tFResDynEgrClassAlloc represents the total number of QoS dynamic egress classification resources that are currently allocated on this FP.
dynEgrClassIUBNE [Dyn Egr Class IUBNE] (tFResDynEgrClassIUBNE)	long	The value of tFResDynEgrClassIUBNE represents the subset of resources which are currently in use by network egress QoS classification out of currently allocated QoS dynamic egress classification resources, tFResDynEgrClassAlloc. A network egress QoS classification resource is consumed whenever a network QoS policy has at least one egress DSCP or prec classification rule provisioned.
dynEgrClassIUBSE [Dyn Egr Class IUBSE] (tFResDynEgrClassIUBSE)	long	The value of tFResDynEgrClassIUBSE represents the subset of resources which are currently in use by sap-egress QoS policies out of currently allocated QoS dynamic egress classification resources, tFResDynEgrClassAlloc.
dynEgrClassTotal [Dyn Egr Class Total] (tFResDynEgrClassTotal)	long	The value of tFResDynEgrClassTotal represents the total number of QoS dynamic egress classification resources that are allowed to be in use on this FP.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dynPolicerAlloc [Dyn Policer Alloc] (tFPResDynPolicerAlloc)	long	The value of tFPResDynPolicerAlloc represents the total number of dynamic policers that are currently allocated on this FP.
dynPolicerIUBE [Dyn Policer IUBE] (tFPResDynPolicerIUBE)	long	The value of tFPResDynPolicerIUBE represents the subset of resources which are currently in use by egress policer out of currently allocated dynamic policer resources, tFPResDynPolicerAlloc.
dynPolicerIUBI [Dyn Policer IUBI] (tFPResDynPolicerIUBI)	long	The value of tFPResDynPolicerIUBI represents the subset of resources which are currently in use by ingress policer out of currently allocated dynamic policer resources, tFPResDynPolicerAlloc.
dynPolicerStatAlloc [Dyn Policer Stat Alloc] (tFPResDynPolicerStatAlloc)	long	The value of tFPResDynPolicerStatAlloc represents the total number of dynamic policers stats that are currently allocated on this FP.
dynPolicerStatIUBE [Dyn Policer Stat IUBE] (tFPResDynPolicerStatIUBE)	long	The value of tFPResDynPolicerStatIUBE represents the subset of resources which are currently in use by egress policer stats out of currently allocated dynamic policer stats resources, tFPResDynPolicerStatAlloc.
dynPolicerStatIUBI [Dyn Policer Stat IUBI] (tFPResDynPolicerStatIUBI)	long	The value of tFPResDynPolicerStatIUBI represents the subset of resources which are currently in use by ingress policer stats out of currently allocated dynamic policer stats resources, tFPResDynPolicerStatAlloc.
dynPolicerStatTotal [Dyn Policer Stat Total] (tFPResDynPolicerStatTotal)	long	The value of tFPResDynPolicerStatTotal represents the total number of dynamic policer stats that are supported on this FP. When the value of tFPResDynPolicerStatTotal is zero, it indicates that this resource type is not supported on this FP.
dynPolicerTotal [Dyn Policer Total] (tFPResDynPolicerTotal)	long	The value of tFPResDynPolicerTotal represents the total number of dynamic policer that are supported on this FP. When the value of tFPResDynPolicerTotal is zero, it indicates that this resource type is not supported on this FP.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dynQ2NamedPoolAlloc [Dyn Q2 Named Pool Alloc] (tFPResDynQ2NamedPoolAlloc)	long	The value of tFPResDynQ2NamedPoolAlloc represents the total number of dynamic Q2 named pools that are currently allocated on this FP.
dynQ2NamedPoolIUBE [Dyn Q2 Named Pool IUBE] (tFPResDynQ2NamedPoolIUBE)	long	The value of tFPResDynQ2NamedPoolIUBE represents the subset of resources which are currently in use by egress Q2 named pools out of currently allocated dynamic Q2 named pools resources, tFPResDynQ2NamedPoolAlloc.
dynQ2NamedPoolIUBI [Dyn Q2 Named Pool IUBI] (tFPResDynQ2NamedPoolIUBI)	long	The value of tFPResDynQ2NamedPoolIUBI represents the subset of resources which are currently in use by ingress Q2 named pools out of currently allocated dynamic Q2 named pools resources, tFPResDynQ2NamedPoolAlloc.
dynQ2NamedPoolTotal [Dyn Q2 Named Pool Total] (tFPResDynQ2NamedPoolTotal)	long	The value of tFPResDynQ2NamedPoolTotal represents the total number of dynamic Q2 named pools that are supported on this FP. When the value of tFPResDynQ2NamedPoolTotal is zero, it indicates that this resource type is not supported on this FP.
dynQ2WredPoolAlloc [Dyn Q2 Wred Pool Alloc] (tFPResDynQ2WredPoolAlloc)	long	The value of tFPResDynQ2WredPoolAlloc represents the total number of dynamic Q2 wred pools that are currently allocated on this FP.
dynQ2WredPoolTotal [Dyn Q2 Wred Pool Total] (tFPResDynQ2WredPoolTotal)	long	The value of tFPResDynQ2WredPoolTotal represents the total number of dynamic Q2 wred pools that are supported on this FP. When the value of tFPResDynQ2WredPoolTotal is zero, it indicates that this resource type is not supported on this FP.
dynQueueAlloc [Dyn Queue Alloc] (tFPResDynQueueAlloc)	long	The value of tFPResDynQueueAlloc represents the total number of dynamic queues that are currently allocated on this FP.
dynQueueIUBE [Dyn Queue IUBE] (tFPResDynQueueIUBE)	long	The value of tFPResDynQueueIUBE represents the subset of resources which are currently in use by egress queues out of currently allocated dynamic queue resources, tFPResDynQueueAlloc.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dynQueueIUBI [Dyn Queue IUBI] (tFPResDynQueueIUBI)	long	The value of tFPResDynQueueIUBI represents the subset of resources which are currently in use by ingress queues out of currently allocated dynamic queue resources, tFPResDynQueueAlloc.
dynQueueTotal [Dyn Queue Total] (tFPResDynQueueTotal)	long	The value of tFPResDynQueueTotal represents the total number of dynamic queues that are supported on this FP. When the value of tFPResEgrRootArbiterTotal is zero, it indicates that this resource type is not supported on this FP.
dynSvcEntryAlloc [Dyn Svc Entry Alloc] (tFPResDynSvcEntryAlloc)	long	The value of tFPResDynSvcEntryAlloc represents the total number of dynamic services that are currently allocated on this FP. The value of tFPResDynSvcEntryAlloc will always equal to the sum of tFPResSubHostAlloc, tFPResEncapGrpMemberAlloc and tFPResEgrNetQGrpMapAlloc since subscriber host resources, encap-group members resources and egress network queue-group mappings resources are subsets of dynamic service entry resources.
dynSvcEntryTotal [Dyn Svc Entry Total] (tFPResDynSvcEntryTotal)	long	The value of tFPResDynSvcEntryTotal represents the total number of dynamic services that are supported on this FP. When the value of tFPResDynSvcEntryTotal is zero, it indicates that this resource type is not supported on this FP. The value of tFPResDynSvcEntryTotal will always equal to the sum of tFPResSubHostTotal, tFPResEncapGrpMemberTotal and tFPResEgrNetQGrpMapTotal since subscriber host resources, encap-group members resources and egress network queue-group mappings resources are subsets of dynamic service entry resources.
egrAclEntryAlloc [Egr Acl Entry Alloc] (tFPResEgrAclEntryAlloc)	long	The value of tFPResEgrAclEntryAlloc represents the total number of egress ACL CAM entries that are currently allocated on this FP.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrAclEntryTotal [Egr Acl Entry Total] (tFPResEgrAclEntryTotal)	long	The value of tFPResEgrAclEntryTotal represents the total number of egress ACL CAM entries that are supported on this FP. When the value of tFPResEgrAclEntryTotal is zero, it indicates that this resource type is not supported on this FP.
egrAclFilterAlloc [Egr Acl Filter Alloc] (tFPResEgrAclFilterAlloc)	long	The value of tFPResEgrAclFilterAlloc represents the total number of egress ACL filters entries that are currently allocated on this FP.
egrAclFilterTotal [Egr Acl Filter Total] (tFPResEgrAclFilterTotal)	long	The value of tFPResEgrAclFilterTotal represents the total number of egress ACL filters entries that are supported on this FP. When the value of tFPResEgrAclFilterTotal is zero, it indicates that this resource type is not supported on this FP.
egrAclQosEntryAlloc [Egr Acl Qos Entry Alloc] (tFPResEgrAclQosEntryAlloc)	long	The value of tFPResEgrAclQosEntryAlloc represents the total number of combined egress ACL and QoS CAM entries that are currently allocated on this FP.
egrAclQosEntryTotal [Egr Acl Qos Entry Total] (tFPResEgrAclQosEntryTotal)	long	The value of tFPResEgrAclQosEntryTotal represents the total number of combined egress ACL and QoS CAM entries that are supported on this FP. When the value of tFPResEgrAclQosEntryTotal is zero, it indicates that this resource type is not supported on this FP.
egrIPv6AclEntryAlloc [Egr IPv 6 Acl Entry Alloc] (tFPResEgrIPv6AclEntryAlloc)	long	The value of tFPResEgrIPv6AclEntryAlloc represents the total number of IPv6 egress ACL CAM entries that are currently allocated on this FP.
egrIPv6AclEntryTotal [Egr IPv 6 Acl Entry Total] (tFPResEgrIPv6AclEntryTotal)	long	The value of tFPResEgrIPv6AclEntryTotal represents the total number of IPv6 egress ACL CAM entries that are supported on this FP. When the value of tFPResEgrIPv6AclEntryTotal is zero, it indicates that this resource type is not supported on this FP.
egrIPv6QosEntryAlloc [Egr IPv 6 Qos Entry Alloc] (tFPResEgrIPv6QosEntryAlloc)	long	The value of tFPResEgrIPv6QosEntryAlloc represents the total number of IPv6 egress QoS CAM entries that are currently allocated on this FP.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrIPv6QosEntryTotal [Egr IPv 6 Qos Entry Total] (tFPResEgrIPv6QosEntryTotal)	long	The value of tFPResEgrIPv6QosEntryTotal represents the total number of IPv6 egress QoS CAM entries that are supported on this FP. When the value of tFPResEgrIPv6QosEntryTotal is zero, it indicates that this resource type is not supported on this FP.
egrNetQGrpMapAlloc [Egr Net QGrp Map Alloc] (tFPResEgrNetQGrpMapAlloc)	long	The value of tFPResEgrNetQGrpMapAlloc represents the total number of egress network queue-group mappings that are currently allocated on this FP. The value of tFPResEgrNetQGrpMapAlloc will always be less than or equal to tFPResDynSvcEntryAlloc since egress network queue-group mappings are subset of dynamic service entry resources.
egrNetQGrpMapTotal [Egr Net QGrp Map Total] (tFPResEgrNetQGrpMapTotal)	long	The value of tFPResEgrNetQGrpMapTotal represents the total number of egress network queue-group mappings that are supported on this FP. When the value of tFPResEgrNetQGrpMapTotal is zero, it indicates that this resource type is not supported on this FP. The value of tFPResEgrNetQGrpMapTotal will always be less than or equal to tFPResDynSvcEntryTotal since egress network queue-group mappings are subset of dynamic service entry resources.
egrPolicerAlloc [Egr Policer Alloc] (tFPResEgrPolicerAlloc)	long	The value of tFPResEgrPolicerAlloc represents the total number of egress policers that are currently allocated on this FP.
egrPolicerStatAlloc [Egr Policer Stat Alloc] (tFPResEgrPolicerStatAlloc)	long	The value of tFPResEgrPolicerStatAlloc represents the total number of egress policer stats that are currently allocated on this FP.
egrPolicerStatTotal [Egr Policer Stat Total] (tFPResEgrPolicerStatTotal)	long	The value of tFPResEgrPolicerStatTotal represents the total number of egress policer stats that are supported on this FP. When the value of tFPResEgrPolicerStatTotal is zero, it indicates that this resource type is not supported on this FP.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrPolicerTotal [Egr Policer Total] (tFPResEgrPolicerTotal)	long	The value of tFPResEgrPolicerTotal represents the total number of egress policers that are supported on this FP. When the value of tFPResEgrPolicerTotal is zero, it indicates that this resource type is not supported on this FP.
egrQ1NamedPoolAlloc [Egr Q1 Named Pool Alloc] (tFPResEgrQ1NamedPoolAlloc)	long	The value of tFPResEgrQ1NamedPoolAlloc represents the total number of egress Q1 named pools that are currently allocated on this FP.
egrQ1NamedPoolTotal [Egr Q1 Named Pool Total] (tFPResEgrQ1NamedPoolTotal)	long	The value of tFPResEgrQ1NamedPoolTotal represents the total number of egress Q1 named pools that are supported on this FP. When the value of tFPResEgrQ1NamedPoolTotal is zero, it indicates that this resource type is not supported on this FP.
egrQosEntryAlloc [Egr Qos Entry Alloc] (tFPResEgrQosEntryAlloc)	long	The value of tFPResEgrQosEntryAlloc represents the total number of egress QoS CAM entries that are currently allocated on this FP.
egrQosEntryTotal [Egr Qos Entry Total] (tFPResEgrQosEntryTotal)	long	The value of tFPResEgrQosEntryTotal represents the total number of egress QoS CAM entries that are supported on this FP. When the value of tFPResEgrQosEntryTotal is zero, it indicates that this resource type is not supported on this FP.
egrQueueAlloc [Egr Queue Alloc] (tFPResEgrQueueAlloc)	long	The value of tFPResEgrQueueAlloc represents the total number of egress queues that are currently allocated on this FP.
egrQueueTotal [Egr Queue Total] (tFPResEgrQueueTotal)	long	The value of tFPResEgrQueueTotal represents the total number of egress queues that are supported on this FP. When the value of tFPResEgrQueueTotal is zero, it indicates that this resource type is not supported on this FP.
egrRootArbiterAlloc [Egr Root Arbiter Alloc] (tFPResEgrRootArbiterAlloc)	long	The value of tFPResEgrRootArbiterAlloc represents the total number of egress root arbiters that are currently allocated on this FP.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrRootArbiterTotal [Egr Root Arbiter Total] (tFPResEgrRootArbiterTotal)	long	The value of tFPResEgrRootArbiterTotal represents the total number of egress root arbiters that are supported on this FP. When the value of tFPResEgrRootArbiterTotal is zero, it indicates that this resource type is not supported on this FP.
encapGrpMemberAlloc [Encap Grp Member Alloc] (tFPResEncapGrpMemberAlloc)	long	The value of tFPResEncapGrpMemberAlloc represents the total number of encap group members that are currently allocated on this FP. The value of tFPResEncapGrpMemberAlloc will always be less than or equal to tFPResDynSvcEntryAlloc since encap group members are subset of dynamic service entry resources.
encapGrpMemberTotal [Encap Grp Member Total] (tFPResEncapGrpMemberTotal)	long	The value of tFPResEncapGrpMemberTotal represents the total number of encap group members that are supported on this FP. When the value of tFPResEncapGrpMemberTotal is zero, it indicates that this resource type is not supported on this FP. The value of tFPResEncapGrpMemberTotal will always be less than or equal to tFPResDynSvcEntryTotal since encap group members are subset of dynamic service entry resources.
ingAclEntryAlloc [Ing Acl Entry Alloc] (tFPResIngAclEntryAlloc)	long	The value of tFPResIngAclEntryAlloc represents the total number of ingress ACL CAM entries that are currently allocated on this FP.
ingAclEntryTotal [Ing Acl Entry Total] (tFPResIngAclEntryTotal)	long	The value of tFPResIngAclEntryTotal represents the total number of ingress ACL CAM entries that are supported on this FP. When the value of tFPResIngAclEntryTotal is zero, it indicates that this resource type is not supported on this FP.
ingAclFilterAlloc [Ing Acl Filter Alloc] (tFPResIngAclFilterAlloc)	long	The value of tFPResIngAclFilterAlloc represents the total number of ingress ACL filters entries that are currently allocated on this FP.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingAclFilterTotal [Ing Acl Filter Total] (tFPResIngAclFilterTotal)	long	The value of tFPResIngAclFilterTotal represents the total number of ingress ACL filters entries that are supported on this FP. When the value of tFPResIngAclFilterTotal is zero, it indicates that this resource type is not supported on this FP.
ingAclQosEntryAlloc [Ing Acl Qos Entry Alloc] (tFPResIngAclQosEntryAlloc)	long	The value of tFPResIngAclQosEntryAlloc represents the total number of combined ingress ACL and QoS CAM entries that are currently allocated on this FP.
ingAclQosEntryTotal [Ing Acl Qos Entry Total] (tFPResIngAclQosEntryTotal)	long	The value of tFPResIngAclQosEntryTotal represents the total number of combined ingress ACL and QoS CAM entries that are supported on this FP. When the value of tFPResIngAclQosEntryTotal is zero, it indicates that this resource type is not supported on this FP.
ingIPv6AclEntryAlloc [Ing IPv 6 Acl Entry Alloc] (tFPResIngIPv6AclEntryAlloc)	long	The value of tFPResIngIPv6AclEntryAlloc represents the total number of IPv6 ingress ACL CAM entries that are currently allocated on this FP.
ingIPv6AclEntryTotal [Ing IPv 6 Acl Entry Total] (tFPResIngIPv6AclEntryTotal)	long	The value of tFPResIngIPv6AclEntryTotal represents the total number of IPv6 ingress ACL CAM entries that are supported on this FP. When the value of tFPResIngIPv6AclEntryTotal is zero, it indicates that this resource type is not supported on this FP.
ingIPv6QosEntryAlloc [Ing IPv 6 Qos Entry Alloc] (tFPResIngIPv6QosEntryAlloc)	long	The value of tFPResIngIPv6QosEntryAlloc represents the total number of IPv6 ingress QoS CAM entries that are currently allocated on this FP.
ingIPv6QosEntryTotal [Ing IPv 6 Qos Entry Total] (tFPResIngIPv6QosEntryTotal)	long	The value of tFPResIngIPv6QosEntryTotal represents the total number of IPv6 ingress QoS CAM entries that are supported on this FP. When the value of tFPResIngIPv6QosEntryTotal is zero, it indicates that this resource type is not supported on this FP.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingPolicerAlloc [Ing Policer Alloc] (tFPResIngPolicerAlloc)	long	The value of tFPResIngPolicerAlloc represents the total number of ingress policers that are currently allocated on this FP.
ingPolicerStatAlloc [Ing Policer Stat Alloc] (tFPResIngPolicerStatAlloc)	long	The value of tFPResIngPolicerStatAlloc represents the total number of ingress policer stats that are currently allocated on this FP.
ingPolicerStatTotal [Ing Policer Stat Total] (tFPResIngPolicerStatTotal)	long	The value of tFPResIngPolicerStatTotal represents the total number of ingress policer stats that are supported on this FP. When the value of tFPResIngPolicerStatTotal is zero, it indicates that this resource type is not supported on this FP.
ingPolicerTotal [Ing Policer Total] (tFPResIngPolicerTotal)	long	The value of tFPResIngPolicerTotal represents the total number of ingress policers that are supported on this FP. When the value of tFPResIngPolicerTotal is zero, it indicates that this resource type is not supported on this FP.
ingQ1NamedPoolAlloc [Ing Q1 Named Pool Alloc] (tFPResIngQ1NamedPoolAlloc)	long	The value of tFPResIngQ1NamedPoolAlloc represents the total number of ingress Q1 named pools that are currently allocated on this FP.
ingQ1NamedPoolTotal [Ing Q1 Named Pool Total] (tFPResIngQ1NamedPoolTotal)	long	The value of tFPResIngQ1NamedPoolTotal represents the total number of ingress Q1 named pools that are supported on this FP. When the value of tFPResIngQ1NamedPoolTotal is zero, it indicates that this resource type is not supported on this FP.
ingQosEntryAlloc [Ing Qos Entry Alloc] (tFPResIngQosEntryAlloc)	long	The value of tFPResIngQosEntryAlloc represents the total number of ingress QoS CAM entries that are currently allocated on this FP.
ingQosEntryTotal [Ing Qos Entry Total] (tFPResIngQosEntryTotal)	long	The value of tFPResIngQosEntryTotal represents the total number of ingress QoS CAM entries that are supported on this FP. When the value of tFPResIngQosEntryTotal is zero, it indicates that this resource type is not supported on this FP.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingQueueAlloc [Ing Queue Alloc] (tFPResIngQueueAlloc)	long	The value of tFPResIngQueueAlloc represents the total number of ingress queues that are currently allocated on this FP.
ingQueueTotal [Ing Queue Total] (tFPResIngQueueTotal)	long	The value of tFPResIngQueueTotal represents the total number of ingress queues that are supported on this FP. When the value of tFPResIngQueueTotal is zero, it indicates that this resource type is not supported on this FP.
ingRootArbiterAlloc [Ing Root Arbiter Alloc] (tFPResIngRootArbiterAlloc)	long	The value of tFPResIngRootArbiterAlloc represents the total number of ingress root arbiters that are currently allocated on this FP.
ingRootArbiterTotal [Ing Root Arbiter Total] (tFPResIngRootArbiterTotal)	long	The value of tFPResIngRootArbiterTotal represents the total number of ingress root arbiters that are supported on this FP. When the value of tFPResIngRootArbiterTotal is zero, it indicates that this resource type is not supported on this FP.
intArbiterAlloc [Int Arbiter Alloc] (tFPResIntArbiterAlloc)	long	The value of tFPResIntArbiterAlloc represents the total number of intermediate arbiters that are currently allocated on this FP.
intArbiterTotal [Int Arbiter Total] (tFPResIntArbiterTotal)	long	The value of tFPResIntArbiterTotal represents the total number of intermediate arbiters that are supported on this FP. When the value of tFPResIntArbiterTotal is zero, it indicates that this resource type is not supported on this FP.
macFdbRecAlloc [Mac Fdb Rec Alloc] (tFPResMacFdbRecAlloc)	long	The value of tFPResMacFdbRecAlloc represents the total number of MAC Forwarding Data-Base (FDB) records that are currently allocated on this FP.
macFdbRecTotal [Mac Fdb Rec Total] (tFPResMacFdbRecTotal)	long	The value of tFPResMacFdbRecTotal represents the total number of MAC Forwarding Data-Base (FDB) records that are supported on this FP. When the value of tFPResMacFdbRecTotal is zero, it indicates that this resource type is not supported on this FP.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
resRvplsFdbRecAlloc [Res Rvpls Fdb Rec Alloc] (tFPResResRvplsFdbRecAlloc)	long	The value of tFPResResRvplsFdbRecAlloc represents the total number of reserved R-VPLS Forwarding Data-Base (FDB) records that are currently allocated on this FP.
resRvplsFdbRecTotal [Res Rvpls Fdb Rec Total] (tFPResResRvplsFdbRecTotal)	long	The value of tFPResResRvplsFdbRecTotal represents the total number of reserved R-VPLS Forwarding Data-Base (FDB) records that are supported on this FP. When the value of tFPResResRvplsFdbRecTotal is zero, it indicates that this resource type is not supported on this FP.
sapIngQosPolAlloc [Sap Ing Qos Pol Alloc] (tFPResSapIngQosPolAlloc)	long	The value of tFPResSapIngQosPolAlloc represents the total number of sap-ingress QoS policies that are currently allocated on this FP.
sapIngQosPolTotal [Sap Ing Qos Pol Total] (tFPResSapIngQosPolTotal)	long	The value of tFPResSapIngQosPolTotal represents the total number of sap-ingress QoS policies that are allowed to be in use on this FP.
subHostAlloc [Sub Host Alloc] (tFPResSubHostAlloc)	long	The value of tFPResSubHostAlloc represents the total number of subscriber hosts that are currently allocated on this FP. The value of tFPResSubHostAlloc will always be less than or equal to tFPResDynSvcEntryAlloc since subscriber host resources are subset of dynamic service entry resources.
subHostTotal [Sub Host Total] (tFPResSubHostTotal)	long	The value of tFPResSubHostTotal represents the total number of subscriber hosts that are supported on this FP. When the value of tFPResSubHostTotal is zero, it indicates that this resource type is not supported on this FP. The value of tFPResSubHostTotal will always be less than or equal to tFPResDynSvcEntryTotal since subscriber host resources are subset of dynamic service entry resources.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>FpDynamicEnforcementPlcrStat</p> <p>MIB entry name: tmnxFpDcpDynEnfrcPlcrStatEntry</p> <p>Entry description: The value of tmnxFpDcpDynEnfrcPlcrStatEntry represents statistics information per forwarding plane for the dynamic enforcement policer.</p> <p>Table description (for tmnxFpDcpDynEnfrcPlcrStatTable): The tmnxFpDcpDynEnfrcPlcrStatTable has the statistics information of the dynamic enforcement policer per forwarding plane.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.ForwardingPlane</p>		
allocFailCount [Alloc Fail Count] (tmnxFpDcpDynPlcrAllocFailCount)	long	The value of tmnxFpDcpDynPlcrAllocFailCount indicated the number of times the system failed to allocate dynamic enforcement policers.
cardSlotNum [Card Slot Num] (tmnxCardSlotNum)	int	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	int	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
fpId [Fp Id] (tmnxFPNum)	int	The value of tmnxFPNum identifies the Forwarding Plane.
hiWtrMrkHitCnt [Hi Wtr Mrk Hit Cnt] (tmnxFpDcpDynPlcrHiWtrMrkHitCnt)	long	The value of tmnxFpDcpDynPlcrHiWtrMrkHitCnt indicates the maximum number of dynamic enforcement policers in use at any point of time.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
hiWtrMrkTime [Hi Wtr Mrk Time] (tmnxFpDcpDynPlcrHiWtrMrkTime)	long	The value of tmnxFpDcpDynPlcrHiWtrMrkTime indicates the time at which maximum number of dynamic enforcement policers was hit.
inUse [In Use] (tmnxFpDcpDynPlcrInUse)	long	The value of tmnxFpDcpDynPlcrInUse indicated the number of dynamic enforcement policers currently in use by the system.
<p>HardwareTemperature</p> <p>MIB entry name: tmnxHwEntry</p> <p>Entry description: Each row entry represents an Nokia SROS series manufactured hardware component. Entries cannot be created and deleted via SNMP SET operations. When an entry is created in one of the card tables, IOM, CPM, Fabric or MDA, a tmnxHwEntry is created for the common hardware management information for that card in that chassis. When the card is removed from the chassis, its corresponding tmnxHwEntry is deleted. The tmnxHwIndex is bitmapped: 32 25 24 17 16 9 8 1 +-----+-----+-----+-----+ TmnxHwClass 00000000 Slot number +-----+-----+-----+-----+ The Slot field is only used for components on cards in slots. It is zero for all others. The number field starts from 1 and indicates which component. E.g. Power supply 1 or 2.</p> <p>Table description (for tmnxHwTable): The tmnxHwTable has an entry for each managed hardware component in the Nokia SROS series system's chassis. Examples of these hardware component types are IOM, Fabric, and CPM cards, MCM and CCM, and MDA modules. Similar information for physical ports is in the tmnxPortObjs.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.BaseCard • equipment.CCM • equipment.CardSlot • equipment.ControlProcessor • equipment.DaughterCard • equipment.FanTray • equipment.MCMCard • equipment.PowerSupplyTray • equipment.SwitchFabricProcessor 		

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
temperature [Temperature] (tmnxHwTemperature)	int	The current temperature reading in degrees celsius from this hardware component's temperature sensor. If this component does not contain a temperature sensor, then the value -1 is returned.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedBroadcastPackets [Received Broadcast Packets] (ifHCInBroadcastPkts)	java. math. BigInteger	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were addressed to a broadcast address at this sub-layer. This object is a 64-bit version of ifInBroadcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedMulticastPackets [Received Multicast Packets] (ifHCInMulticastPkts)	java. math. BigInteger	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were addressed to a multicast address at this sub-layer. For a MAC layer protocol, this includes both Group and Functional addresses. This object is a 64-bit version of ifInMulticastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedTotalOctets [Received Total Octets] (ifHCInOctets)	java. math. BigInteger	The total number of octets received on the interface, including framing characters. This object is a 64-bit version of ifInOctets. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedUnicastPackets [Received Unicast Packets] (ifHCInUcastPkts)	java. math. BigInteger	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were not addressed to a multicast or broadcast address at this sub-layer. This object is a 64-bit version of ifInUcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transmittedBroadcastPackets [Transmitted Broadcast Packets] (ifHCOutBroadcastPkts)	java. math. BigInteger	The total number of packets that higher-level protocols requested be transmitted, and which were addressed to a broadcast address at this sub-layer, including those that were discarded or not sent. This object is a 64-bit version of ifOutBroadcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedMulticastPackets [Transmitted Multicast Packets] (ifHCOutMulticastPkts)	java. math. BigInteger	The total number of packets that higher-level protocols requested be transmitted, and which were addressed to a multicast address at this sub-layer, including those that were discarded or not sent. For a MAC layer protocol, this includes both Group and Functional addresses. This object is a 64-bit version of ifOutMulticastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedTotalOctets [Transmitted Total Octets] (ifHCOutOctets)	java. math. BigInteger	The total number of octets transmitted out of the interface, including framing characters. This object is a 64-bit version of ifOutOctets. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedUnicastPackets [Transmitted Unicast Packets] (ifHCOutUcastPkts)	java. math. BigInteger	The total number of packets that higher-level protocols requested be transmitted, and which were not addressed to a multicast or broadcast address at this sub-layer, including those that were discarded or not sent. This object is a 64-bit version of ifOutUcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outboundBadPackets [Outbound Bad Packets] (ifOutErrors)	long	For packet-oriented interfaces, the number of outbound packets that could not be transmitted because of errors. For character-oriented or fixed-length interfaces, the number of outbound transmission units that could not be transmitted because of errors. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
outboundPacketsDiscarded [Outbound Packets Discarded] (ifOutDiscards)	long	The number of outbound packets which were chosen to be discarded even though no errors had been detected to prevent their being transmitted. One possible reason for discarding such a packet could be to free up buffer space. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedBadPackets [Received Bad Packets] (ifInErrors)	long	For packet-oriented interfaces, the number of inbound packets that contained errors preventing them from being deliverable to a higher-layer protocol. For character-oriented or fixed-length interfaces, the number of inbound transmission units that contained errors preventing them from being deliverable to a higher-layer protocol. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedOctets [Received Octets] (ifInOctets)	long	The total number of octets received on the interface, including framing characters. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedPacketsDiscarded [Received Packets Discarded] (ifInDiscards)	long	The number of inbound packets which were chosen to be discarded even though no errors had been detected to prevent their being deliverable to a higher-layer protocol. One possible reason for discarding such a packet could be to free up buffer space. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedUnicastPackets [Received Unicast Packets] (ifInUcastPkts)	long	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were not addressed to a multicast or broadcast address at this sub-layer. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedUnknownProtocolPackets [Received Unknown Protocol Packets] (ifInUnknownProtos)	long	For packet-oriented interfaces, the number of packets received via the interface which were discarded because of an unknown or unsupported protocol. For character-oriented or fixed-length interfaces that support protocol multiplexing the number of transmission units received via the interface which were discarded because of an unknown or unsupported protocol. For any interface that does not support protocol multiplexing, this counter will always be 0. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedOctets [Transmitted Octets] (ifOutOctets)	long	The total number of octets transmitted out of the interface, including framing characters. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transmittedUnicastPackets [Transmitted Unicast Packets] (ifOutUcastPkts)	long	The total number of packets that higher-level protocols requested be transmitted, and which were not addressed to a multicast or broadcast address at this sub-layer, including those that were discarded or not sent. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
IpSecMDAStats MIB entry name: tmnxIPsecMdaDpStatsEntry Entry description: Information about a single IPsec Mda Data Path Statistics entry. Table description (for tmnxIPsecMdaDpStatsTable): Table to retrieve the IPsec Mda Data Path Statistics entries. Supports realtime plotting Supports scheduled collection Monitored class: equipment.DaughterCardSlot		
decryptBytes [Decrypt Bytes] (tmnxIPsecMdaDpStatsDecryptBytes)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsDecryptBytes indicates the number of bytes encrypted by the IPsec data path.
decryptPackets [Decrypt Packets] (tmnxIPsecMdaDpStatsDecryptPkts)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsDecryptPkts indicates the number of packets encrypted by the IPsec data path.
dynamicIPsecTunnels [Dynamic IPsec Tunnels] (tmnxIPsecMdaDpDynIPsecTnls)	long	The value of tmnxIPsecMdaDpDynIPsecTnls indicates number of dynamic IPsec tunnels in use on the MDA.
encryptBytes [Encrypt Bytes] (tmnxIPsecMdaDpStatsEncryptBytes)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsEncryptBytes indicates the number of bytes encrypted by the IPsec data path.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
encryptPackets [Encrypt Packets] (tmnxIPsecMdaDpStatsEncryptPkts)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsEncryptPkts indicates the number of packets encrypted by the IPsec data path.
inboundIPDropPackets [Inbound IPDrop Packets] (tmnxIPsecMdaDpStatsInBDropPkts)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsInBDropPkts indicates the number of packets dropped before and during inbound (decryption) processing by the IPsec data path.
inboundIPDstSrcMismatches [Inbound IPDst Src Mismatches] (tmnxIPsecMdaDpStatsInBIP-DstSrcMismatches)	long	The value of tmnxIPsecMdaDpStatsInBIPDstSrcMismatches indicates the number of packets dropped before inbound (decryption) processing by the IPsec data path due to the received packet's outer IP destination or source address does not match the Tunnel's local or peer gateway address.
inboundSaMisses [Inbound Sa Misses] (tmnxIPsecMdaDpStatsInBSAMisses)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsInBSAMisses indicates the number of packets dropped before inbound (decryption) processing by the IPsec data path due to no SA (security association) present.
outboundIPDropPackets [Outbound IPDrop Packets] (tmnxIPsecMdaDpStatsOutBDropPkts)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsOutBDropPkts indicates the number of packets dropped before and during outbound (encryption) processing by the IPsec data path.
outboundPolicyEntryMisses [Outbound Policy Entry Misses] (tmnxIPsecMdaDpStatsOutBPoli- cyEntryMisses)	long	The value of tmnxIPsecMdaDpStatsOutBPolicyEntryMisses indicates the number of packets dropped before outbound (encryption) processing by the IPsec data path due to no matching Policy Entry.
outboundSaMisses [Outbound Sa Misses] (tmnxIPsecMdaDpStatsOutBSAMisses)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsOutBSAMisses indicates the number of packets dropped before outbound (encryption) processing by the IPsec data path due to no SA (security association) present.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
staticIPsecTunnels [Static IPsec Tunnels] (tmnxIPsecMdaDpStaticIPsecTnls)	long	The value of tmnxIPsecMdaDpStaticIPsecTnls indicates number of configured static IPsec tunnels on the MDA.
transmitPacketErrors [Transmit Packet Errors] (tmnxIPsecMdaDpStatsTxPktErrs)	long	The value of tmnxIPsecMdaDpStatsTxPktErrs indicates the number of packets transmit failures by the IPsec data path.
<p>LaneDDMStats MIB entry name: tmnxDDMLaneEntry Entry description: Each row represents a particular CFP/CFP2/QSFP that supports Digital Diagnostic Monitoring Lanes. Entries are created and deleted internally by the system. Table description (for tmnxDDMLaneTable): The tmnxDDMLaneTable has an entry for each CFP/CFP2/QSFP in the system that supports Lane Digital Diagnostic Monitoring (DDM). The table is indexed by tmnxPortPortID and tmnxDDMLaneId. Each row in this table is dynamically added and removed internally by the system based on the presence or absence of DDM capable CFP/CFP2/QSFP components. Supports realtime plotting Supports scheduled collection Monitored class: equipment.LaneDDM</p>		
rxOpticalPower [Rx Optical Power] (tmnxDDMLaneRxOpticalPower)	float	The value of tmnxDDMLaneRxOpticalPower indicates the current Received Optical Power of the CFP/CFP2/QSFP in one tenths of a microwatt (uW). For example: Using the SNMP value of 790, and using units of tenths of microwatt, 790 becomes 79 microwatts or 0.079 milliwatts. Converting to dBm: $10 \times \log_{10}(0.079) = -11.0$ dBm
rxOpticalPowerType [Rx Optical Power Type] (tmnxDDMLaneRxOpticalPowerType)	int	The value of tmnxDDMLaneRxOpticalPowerType indicates whether the tmnxDDMLaneRxOpticalPower was taken as an average, or as an Optical Modulation Amplitude (OMA).

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
temperature [Temperature] (tmnxDDMLaneTemperature)	float	The value of tmnxDDMLaneTemperature indicates the current temperature of the CFP/CFP2/QSFP in 1/256th degrees Celsius. The formula for translating between the value of tmnxDDMLaneTemperature and degrees Celsius is: $\text{tmnxDDMLaneTemperature} / 256$ For example: The SNMP value 5734 is 22.4 degrees Celsius.
txBiasCurrent [Tx Bias Current] (tmnxDDMLaneTxBiasCurrent)	float	The value of tmnxDDMLaneTxBiasCurrent indicates the current Transmit Bias Current of the CFP/CFP2/QSFP in 1/500 milliamperes (mA). The formula for translating between the value of tmnxDDMLaneTxBiasCurrent and amperes is: $\text{tmnxDDMLaneTxBiasCurrent} / 500$ For example: The SNMP value 2565 is 5.1 milliamperes (mA).
txOutputPower [Tx Output Power] (tmnxDDMLaneTxOutputPower)	float	The value of tmnxDDMLaneTxOutputPower indicates the current Output Power of the CFP/CFP2/QSFP in one tenths of a microwatt (uW). For example: Using the SNMP value of 790, and using units of tenths of microwatt, 790 becomes 79 microwatts or 0.079 milliwatts. Converting to dBm: $10 \times \log_{10}(0.079) = -11.0$ dBm
MDAResourceStats MIB entry name: tMDAResEntry Entry description: The value of tMDAResEntry represents MDA specific system resource information. Table description (for tMDAResTable): The value of tMDAResTable represents system resource information that are specific to MDA for a particular card on a given chassis. Supports realtime plotting Supports scheduled collection Monitored class: equipment.DaughterCardSlot		
egrHsmdaQGrpAlloc [Egr Hsmda QGrp Alloc] (tMDAResEgrHsmdaQGrpAlloc)	long	The value of tMDAResEgrHsmdaQGrpAlloc represents the total number of egress HSMDA queue-groups that are currently allocated on this MDA.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrHsmdaQGrpTotal [Egr Hsmda QGrp Total] (tMDAResEgrHsmdaQGrpTotal)	long	The value of tMDAResEgrHsmdaQGrpTotal represents the total number of egress HSMDA queue-groups that are supported on this MDA. When the value of tMDAResEgrHsmdaQGrpTotal is zero, it indicates that this resource type is not supported on this MDA.
egrHsmdaSecShaperAlloc [Egr Hsmda Sec Shaper Alloc] (tMDAResEgrHsmdaSecShaperAlloc)	long	The value of tMDAResEgrHsmdaSecShaperAlloc represents the total number of egress HSMDA secondary-shapers that are currently allocated on this MDA.
egrHsmdaSecShaperTotal [Egr Hsmda Sec Shaper Total] (tMDAResEgrHsmdaSecShaperTotal)	long	The value of tMDAResEgrHsmdaSecShaperTotal represents the total number of egress HSMDA secondary-shapers that are supported on this MDA. When the value of tMDAResEgrHsmdaSecShaperTotal is zero, it indicates that this resource type is not supported on this MDA.
<p>MediaIndependentStats</p> <p>MIB entry name: mediaIndependentEntry</p> <p>Entry description: Media independent statistics for promiscuous monitoring of any media.</p> <p>Table description (for mediaIndependentTable): Media independent statistics for promiscuous monitoring of any media. The following table defines media independent statistics that provide information for full and/or half-duplex links as well as high capacity links. For half-duplex links, or full-duplex-capable links operating in half-duplex mode, the mediaIndependentIn* objects shall be used and the mediaIndependentOut* objects shall not increment. For full-duplex links, the mediaIndependentOut* objects shall be present and shall increment. Whenever possible, the probe should count packets moving away from the closest terminating equipment as output packets. Failing that, the probe should count packets moving away from the DTE as output packets.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dropEvents [Drop Events] (mediaIndependentDropEvents)	long	The total number of events in which packets were dropped by the probe due to lack of resources. Note that this number is not necessarily the number of packets dropped; it is just the number of times this condition has been detected.
droppedFrames [Dropped Frames] (mediaIndependentDroppedFrames)	long	The total number of frames which were received by the probe and therefore not accounted for in the mediaIndependentDropEvents, but for which the probe chose not to count for this entry for whatever reason. Most often, this event occurs when the probe is out of some resources and decides to shed load from this collection. This count does not include packets that were not counted because they had MAC-layer errors. Note that, unlike the dropEvents counter, this number is the exact number of frames dropped.
duplex [Duplex] (mediaIndependentDuplexMode)	int	The current mode of this link. Note that if the link has full-duplex capabilities but is operating in half-duplex mode, this value will be halfduplex(1).
duplexChanges [Duplex Changes] (mediaIndependentDuplexChanges)	long	The number of times this link has changed from full-duplex mode to half-duplex mode or from half-duplex mode to full-duplex mode.
inputSpeed [Input Speed] (mediaIndependentInputSpeed)	long	The nominal maximum speed in kilobits per second of this half-duplex link or on the inbound connection of this full-duplex link. If the speed is unknown or there is no fixed maximum (e.g. a compressed link), this value shall be zero.
outputSpeed [Output Speed] (mediaIndependentOutputSpeed)	long	The nominal maximum speed in kilobits per second of this full-duplex link in the direction of the network. If the speed is unknown, the link is half-duplex, or there is no fixed maximum (e.g. a compressed link), this value shall be zero.
receivedBadPackets [Received Bad Packets] (mediaIndependentInErrors)	long	The total number of bad packets received on a half-duplex link or on the inbound connection of a full-duplex link.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedNonUnicastPackets [Received Non Unicast Packets] (mediaIndependentInNUCastHighCapacityPkts)	java. math. BigInteger	The total number of non-unicast packets (including bad packets) received on a half-duplex link or on the inbound connection of a full-duplex link.
receivedOctets [Received Octets] (mediaIndependentInHighCapacityOctets)	java. math. BigInteger	The total number of octets of data (including those in bad packets) received (excluding framing bits but including FCS octets) on a half-duplex link or on the inbound connection of a full-duplex link.
receivedPackets [Received Packets] (mediaIndependentInHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets, broadcast packets, and multicast packets) received on a half-duplex link or on the inbound connection of a full-duplex link.
transmittedBadPackets [Transmitted Bad Packets] (mediaIndependentOutErrors)	long	The total number of bad packets received on a full-duplex link in the direction of the network.
transmittedNonUnicastPackets [Transmitted Non Unicast Packets] (mediaIndependentOutNUCastHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets) received on a full-duplex link in the direction of the network.
transmittedOctets [Transmitted Octets] (mediaIndependentOutHighCapacityOctets)	java. math. BigInteger	The total number of octets of data (including those in bad packets) received on a full-duplex link in the direction of the network (excluding framing bits but including FCS octets).
transmittedPackets [Transmitted Packets] (mediaIndependentOutHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets, broadcast packets, and multicast packets) received on a full-duplex link in the direction of the network.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>MemoryUtilizationStats</p> <p>MIB entry name: tmnxCardMemResMonitorEntry</p> <p>Entry description: The tmnxCardMemResMonitorEntry contains the card's memory usage statistics.</p> <p>Table description (for tmnxCardMemResMonitorTable): The tmnxCardMemResMonitorTable details the specified current card's memory resources. The information described in this table is volatile and dependent on the current environmental conditions. Information is only displayed for online cards.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.CardSlot</p>		
memoryAvailable [Memory Available] (tmnxCardMemResMemoryAvailable)	long	The value of tmnxCardMemResMemoryAvailable indicates the amount of free memory, in kilobytes, in the card that is not allocated to memory pools, but is available in case a memory pool needs to grow.
memoryUsed [Memory Used] (tmnxCardMemResMemoryUsed)	long	The value of tmnxCardMemResMemoryUsed indicates the total pre-allocated pool memory, in kilobytes, currently in use on the card.
poolsAllocated [Pools Allocated] (tmnxCardMemResPoolsAllocated)	long	The value of tmnxCardMemResPoolsAllocated indicates the total memory, in kilobytes, currently allocated in memory-pools on the card. This memory may or may not be currently in use, but is pre-allocated should the software need to use it.

bundleMemberImaErrorIcpCells [Bundle Member Ima Error Icp Cells] (tmnxBundleMemberImaErrorIcpCells)	long	tmnxBundleMemberImaErrorIcpCells indicates the number of ICP cells with HEC or CRC-10 errors.
bundleMemberImaFeRxNumFails [Bundle Member Ima Fe Rx Num Fails] (tmnxBundleMemberImaFeRxNumFails)	long	tmnxBundleMemberImaFeRxNumFails indicates the number of times that a far-end receive alarm is set on the IMA link.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
bundleMemberImaFeRxUnuseSecs [Bundle Member Ima Fe Rx Unuse Secs] (tmnxBundleMemberImaFeRxUnuseSecs)	long	tmnxBundleMemberImaFeRxUnuseSecs indicates the number of unavailable seconds at the far-end receive link state machine.
bundleMemberImaFeSevErrSecs [Bundle Member Ima Fe Sev Err Secs] (tmnxBundleMemberImaFeSevErrSecs)	long	tmnxBundleMemberImaFeSevErrSecs indicates the number of one second intervals in which the far-end contains IMA-RDI defects.
bundleMemberImaFeTxNumFails [Bundle Member Ima Fe Tx Num Fails] (tmnxBundleMemberImaFeTxNumFails)	long	tmnxBundleMemberImaFeTxNumFails indicates the number of times that a far-end transmit alarm is set on the IMA link.
bundleMemberImaFeTxUnuseSecs [Bundle Member Ima Fe Tx Unuse Secs] (tmnxBundleMemberImaFeTxUnuseSecs)	long	tmnxBundleMemberImaFeTxUnuseSecs indicates the number of unavailable seconds at the far-end transmit link state machine.
bundleMemberImaFeUnavailSecs [Bundle Member Ima Fe Unavail Secs] (tmnxBundleMemberImaFeUnavailSecs)	long	tmnxBundleMemberImaFeUnavailSecs indicates the number of unavailable seconds at the near-end.
bundleMemberImaLstRxlcpCells [Bundle Member Ima Lst Rx lcp Cells] (tmnxBundleMemberImaLstRxlcpCells)	long	tmnxBundleMemberImaLstRxlcpCells indicates the number of lost ICP cells at the expected offset.
bundleMemberImaNeRxNumFails [Bundle Member Ima Ne Rx Num Fails] (tmnxBundleMemberImaNeRxNumFails)	long	tmnxBundleMemberImaNeRxNumFails indicates the number of times that a near-end receive alarm is set on the IMA link.
bundleMemberImaNeRxUnuseSecs [Bundle Member Ima Ne Rx Unuse Secs] (tmnxBundleMemberImaNeRxUnuseSecs)	long	tmnxBundleMemberImaNeRxUnuseSecs indicates the number of unavailable seconds at the near-end receive link state machine.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
bundleMemberImaNeSevErrSecs [Bundle Member Ima Ne Sev Err Secs] (tmnxBundleMemberImaNeSevErrSecs)	long	tmnxBundleMemberImaNeSevErrSecs indicates the number of one second intervals in which thirty percent or more of the near-end ICP cells are in violation, or link defects have occurred.
bundleMemberImaNeTxNumFails [Bundle Member Ima Ne Tx Num Fails] (tmnxBundleMemberImaNeTxNumFails)	long	tmnxBundleMemberImaNeTxNumFails indicates the number of times that a near-end transmit alarm is set on the IMA link.
bundleMemberImaNeTxUnuseSecs [Bundle Member Ima Ne Tx Unuse Secs] (tmnxBundleMemberImaNeTxUnuseSecs)	long	tmnxBundleMemberImaNeTxUnuseSecs indicates the number of unavailable seconds at the near-end transmit link state machine.
bundleMemberImaNeUnavailSecs [Bundle Member Ima Ne Unavail Secs] (tmnxBundleMemberImaNeUnavailSecs)	long	tmnxBundleMemberImaNeUnavailSecs indicates the number of unavailable seconds at the near-end.
bundleMemberImaOifAnomalies [Bundle Member Ima Oif Anomalies] (tmnxBundleMemberImaOifAnomalies)	long	tmnxBundleMemberImaOifAnomalies indicates the number of OIF anomalies at the near-end.
bundleMemberImaRxlcpCells [Bundle Member Ima Rx lcp Cells] (tmnxBundleMemberImaRxlcpCells)	long	tmnxBundleMemberImaRxlcpCells indicates the number of ICP cells that have been received on the IMA link.
bundleMemberImaTxlcpCells [Bundle Member Ima Tx lcp Cells] (tmnxBundleMemberImaTxlcpCells)	long	tmnxBundleMemberImaTxlcpCells indicates the number of ICP cells that have been transmitted on the IMA link.
bundleMemberImaViolations [Bundle Member Ima Violations] (tmnxBundleMemberImaViolations)	long	tmnxBundleMemberImaViolations indicates the number of ICP violations including errored, invalid or missing ICP cells.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SubscrHostEquipMdaStats</p> <p>MIB entry name: tmnxSubMgmtMdaStatsEntry</p> <p>Entry description: Each conceptual row represents statistics for a MDA on which subscriber hosts are allocated.</p> <p>Table description (for tmnxSubMgmtMdaStatsTable): The tmnxSubMgmtMdaStatsTable has an entry with statistics for each MDA on which subscriber hosts are allocated.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.DaughterCard</p>		
currentSubscribers [Current Subscribers] (tmnxSubMgmtMdaSSubscribers)	long	The value of tmnxSubMgmtMdaSSubscribers indicates the number of current subscribers on this system.
currentSubscribersPeak [Current Subscribers Peak] (tmnxSubMgmtMdaSSubscribersPeak)	long	The value of tmnxSubMgmtMdaSSubscribersPeak indicates the peak number of subscribers on this system.
ipTotalHosts [Ip Total Hosts] (tmnxSubMgmtMdaSIpoeHosts)	long	The value of tmnxSubMgmtMdaSIpoeHosts indicates the number of current IPOE hosts on this MDA.
ipTotalHostsPeak [Ip Total Hosts Peak] (tmnxSubMgmtMdaSIpoeHostsPeak)	long	The value of tmnxSubMgmtMdaSIpoeHostsPeak indicates the peak number of IPOE hosts on this MDA.
ipTotalv4Hosts [Ip Totalv 4 Hosts] (tmnxSubMgmtMdaSV4)	long	The value of tmnxSubMgmtMdaSV4 indicates the number of current V4 hosts on this MDA.
ipTotalv4HostsPeak [Ip Totalv 4 Hosts Peak] (tmnxSubMgmtMdaSV4Peak)	long	The value of tmnxSubMgmtMdaSV4Peak indicates the peak number of V4 hosts on this MDA.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv4ArpHosts [Ipv 4 Arp Hosts] (tmnxSubMgmtMdaSArp)	long	The value of tmnxSubMgmtMdaSArp indicates the number of current IPOE hosts (ARP) on this MDA.
ipv4ArpHostsPeak [Ipv 4 Arp Hosts Peak] (tmnxSubMgmtMdaSArpPeak)	long	The value of tmnxSubMgmtMdaSArpPeak indicates the peak number of IPOE hosts (ARP) on this MDA.
ipv4DhcpHosts [Ipv 4 Dhcp Hosts] (tmnxSubMgmtMdaSDhcp)	long	The value of tmnxSubMgmtMdaSDhcp indicates the number of current IPOE hosts (DHCP) on this MDA.
ipv4DhcpHostsPeak [Ipv 4 Dhcp Hosts Peak] (tmnxSubMgmtMdaSDhcpPeak)	long	The value of tmnxSubMgmtMdaSDhcpPeak indicates the peak number of IPOE hosts (DHCP) on this MDA.
ipv4IpcpHosts [Ipv 4 Ipcp Hosts] (tmnxSubMgmtMdaSIpcp)	long	The value of tmnxSubMgmtMdaSIpcp indicates the number of current PPP hosts (IPCP) on this MDA.
ipv4IpcpHostsPeak [Ipv 4 Ipcp Hosts Peak] (tmnxSubMgmtMdaSIpcpPeak)	long	The value of tmnxSubMgmtMdaSIpcpPeak indicates the peak number of PPP hosts (IPCP) on this MDA.
ipv4L2tpHosts [Ipv 4 L2 tp Hosts] (tmnxSubMgmtMdaSL2tpHost)	long	The value of tmnxSubMgmtMdaSL2tpHost indicates the number of current PPP hosts (L2TP) on this MDA.
ipv4L2tpHostsPeak [Ipv 4 L2 tp Hosts Peak] (tmnxSubMgmtMdaSL2tpHostPeak)	long	The value of tmnxSubMgmtMdaSL2tpHostPeak indicates the peak number of PPP hosts (L2TP) on this MDA.
ipv4NonSubHosts [Ipv 4 Non Sub Hosts] (tmnxSubMgmtMdaSNonSub)	long	The value of tmnxSubMgmtMdaSNonSub indicates the number of current Non Sub hosts on this MDA.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv4NonSubHostsPeak [Ipv 4 Non Sub Hosts Peak] (tmnxSubMgmtMdaSNonSubPeak)	long	The value of tmnxSubMgmtMdaSNonSubPeak indicates the peak number of Non Sub hosts on this MDA.
ipv4StaticHosts [Ipv 4 Static Hosts] (tmnxSubMgmtMdaSStatic)	long	The value of tmnxSubMgmtMdaSStatic indicates the number of current IPOE hosts (Static) on this MDA.
ipv4StaticHostsPeak [Ipv 4 Static Hosts Peak] (tmnxSubMgmtMdaSStaticPeak)	long	The value of tmnxSubMgmtMdaSStaticPeak indicates the peak number of IPOE hosts (Static) on this MDA.
ipv6IpoE Dhcp 6 Na Hosts [Ipv 6 IpoE Dhcp 6 Na Hosts] (tmnxSubMgmtMdaSIpoE Dhcp 6 Na)	long	The value of tmnxSubMgmtMdaSIpoE Dhcp 6 Na indicates the number of current IPOE hosts (DHCP6 NA) on this MDA.
ipv6IpoE Dhcp 6 Na Hosts Peak [Ipv 6 IpoE Dhcp 6 Na Hosts Peak] (tmnxSubMgmtMdaSIpoE Dhcp 6 Na Peak)	long	The value of tmnxSubMgmtMdaSIpoE Dhcp 6 Na Peak indicates the peak number of IPOE hosts (DHCP6 NA) on this MDA.
ipv6IpoE Dhcp 6 Pd Hosts [Ipv 6 IpoE Dhcp 6 Pd Hosts] (tmnxSubMgmtMdaSIpoE Dhcp 6 Pd)	long	The value of tmnxSubMgmtMdaSIpoE Dhcp 6 Pd indicates the number of current IPOE hosts (DHCP6 PD) on this MDA.
ipv6IpoE Dhcp 6 Pd Hosts Peak [Ipv 6 IpoE Dhcp 6 Pd Hosts Peak] (tmnxSubMgmtMdaSIpoE Dhcp 6 Pd Peak)	long	The value of tmnxSubMgmtMdaSIpoE Dhcp 6 Pd Peak indicates the peak number of IPOE hosts (DHCP6 PD) on this MDA.
ipv6IpoE Slaac Hosts [Ipv 6 IpoE Slaac Hosts] (tmnxSubMgmtMdaSIpoE Slaac)	long	The value of tmnxSubMgmtMdaSIpoE Slaac indicates the number of current IPOE hosts (SLAAC) on this MDA.
ipv6IpoE Slaac Hosts Peak [Ipv 6 IpoE Slaac Hosts Peak] (tmnxSubMgmtMdaSIpoE Slaac Peak)	long	The value of tmnxSubMgmtMdaSIpoE Slaac Peak indicates the peak number of IPOE hosts (SLAAC) on this MDA.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6PppDhcp6NaHosts [Ipv 6 Ppp Dhcp 6 Na Hosts] (tmnxSubMgmtMdaSPppDhcp6Na)	long	The value of tmnxSubMgmtMdaSPppDhcp6Na indicates the number of current PPP hosts (DHCP6 NA) on this MDA.
ipv6PppDhcp6NaHostsPeak [Ipv 6 Ppp Dhcp 6 Na Hosts Peak] (tmnxSubMgmtMdaSPppDhcp6NaPeak)	long	The value of tmnxSubMgmtMdaSPppDhcp6NaPeak indicates the peak number of PPP hosts (DHCP6 NA) on this MDA.
ipv6PppDhcp6PdHosts [Ipv 6 Ppp Dhcp 6 Pd Hosts] (tmnxSubMgmtMdaSPppDhcp6Pd)	long	The value of tmnxSubMgmtMdaSPppDhcp6Pd indicates the number of current PPP hosts (DHCP6 PD) on this MDA.
ipv6PppDhcp6PdHostsPeak [Ipv 6 Ppp Dhcp 6 Pd Hosts Peak] (tmnxSubMgmtMdaSPppDhcp6PdPeak)	long	The value of tmnxSubMgmtMdaSPppDhcp6PdPeak indicates the peak number of PPP hosts (DHCP6 PD) on this MDA.
ipv6PppSlaacHosts [Ipv 6 Ppp Slaac Hosts] (tmnxSubMgmtMdaSPppSlaac)	long	The value of tmnxSubMgmtMdaSPppSlaac indicates the number of current PPP hosts (SLAAC) on this MDA.
ipv6PppSlaacHostsPeak [Ipv 6 Ppp Slaac Hosts Peak] (tmnxSubMgmtMdaSPppSlaacPeak)	long	The value of tmnxSubMgmtMdaSPppSlaacPeak indicates the peak number of PPP hosts (SLAAC) on this MDA.
ipv6TotalHosts [Ipv 6 Total Hosts] (tmnxSubMgmtMdaSV6)	long	The value of tmnxSubMgmtMdaSV6 indicates the number of current V6 hosts on this MDA.
ipv6TotalHostsPeak [Ipv 6 Total Hosts Peak] (tmnxSubMgmtMdaSV6Peak)	long	The value of tmnxSubMgmtMdaSV6Peak indicates the peak number of V6 hosts on this MDA.
ipv6v4TotalHosts [Ipv 6 v 4 Total Hosts] (tmnxSubMgmtMdaSTotal)	long	The value of tmnxSubMgmtMdaSTotal indicates the number of current total hosts on this MDA.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6v4TotalHostsPeak [Ipv 6 v 4 Total Hosts Peak] (tmnxSubMgmtMdaSTotalPeak)	long	The value of tmnxSubMgmtMdaSTotalPeak indicates the peak number of total hosts on this MDA.
pppHostsTotal [Ppp Hosts Total] (tmnxSubMgmtMdaSPppHosts)	long	The value of tmnxSubMgmtMdaSPppHosts indicates the number of current PPP hosts on this MDA.
pppHostsTotalPeak [Ppp Hosts Total Peak] (tmnxSubMgmtMdaSPppHostsPeak)	long	The value of tmnxSubMgmtMdaSPppHostsPeak indicates the peak number of PPP hosts on this MDA.
pppLacL2tpSess [Ppp Lac L2 tp Sess] (tmnxSubMgmtMdaSPppLacL2tp)	long	The value of tmnxSubMgmtMdaSPppLacL2tp indicates the number of current PPP sessions (L2TP LTS) tunneled over L2TP on this MDA.
pppLacL2tpSessPeak [Ppp Lac L2 tp Sess Peak] (tmnxSubMgmtMdaSPppLacL2tpPeak)	long	The value of tmnxSubMgmtMdaSPppLacL2tpPeak indicates the peak number of PPP sessions (L2TP LTS) tunneled over L2TP on this MDA.
pppLacOASess [Ppp Lac OASess] (tmnxSubMgmtMdaSPppLacOA)	long	The value of tmnxSubMgmtMdaSPppLacOA indicates the number of current PPP sessions (PPPoA) tunneled over L2TP on this MDA.
pppLacOASessPeak [Ppp Lac OASess Peak] (tmnxSubMgmtMdaSPppLacOAPeak)	long	The value of tmnxSubMgmtMdaSPppLacOAPeak indicates the peak number of PPP sessions (PPPoA) tunneled over L2TP on this MDA.
pppLacOEOASess [Ppp Lac OEOASess] (tmnxSubMgmtMdaSPppLacOEOA)	long	The value of tmnxSubMgmtMdaSPppLacOEOA indicates the number of current PPP sessions (PPPoEoA) tunneled over L2TP on this MDA.
pppLacOEOASessPeak [Ppp Lac OEOASess Peak] (tmnxSubMgmtMdaSPppLacOEOAPeak)	long	The value of tmnxSubMgmtMdaSPppLacOEOAPeak indicates the peak number of PPP sessions (PPPoEoA) tunneled over L2TP on this MDA.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppLacOESess [Ppp Lac OESess] (tmnxSubMgmtMdaSPppLacOE)	long	The value of tmnxSubMgmtMdaSPppLacOE indicates the number of current PPP sessions (PPPoE) tunneled over L2TP on this MDA.
pppLacOESessPeak [Ppp Lac OESess Peak] (tmnxSubMgmtMdaSPppLacOEPeak)	long	The value of tmnxSubMgmtMdaSPppLacOEPeak indicates the peak number of PPP sessions (PPPoE) tunneled over L2TP on this MDA.
pppLclL2tpSess [Ppp Lcl L2 tp Sess] (tmnxSubMgmtMdaSPppLclL2tp)	long	The value of tmnxSubMgmtMdaSPppLclL2tp indicates the number of current locally terminated PPP sessions (L2TP LNS) on this MDA.
pppLclL2tpSessPeak [Ppp Lcl L2 tp Sess Peak] (tmnxSubMgmtMdaSPppLclL2tpPeak)	long	The value of tmnxSubMgmtMdaSPppLclL2tpPeak indicates the peak number of locally terminated PPP sessions (L2TP LNS) on this MDA.
pppLclOASess [Ppp Lcl OASess] (tmnxSubMgmtMdaSPppLclOA)	long	The value of tmnxSubMgmtMdaSPppLclOA indicates the number of current locally terminated PPP sessions (PPPoA) on this MDA.
pppLclOASessPeak [Ppp Lcl OASess Peak] (tmnxSubMgmtMdaSPppLclOAPeak)	long	The value of tmnxSubMgmtMdaSPppLclOAPeak indicates the peak number of locally terminated PPP sessions (PPPoA) on this MDA.
pppLclOEOASess [Ppp Lcl OEOASess] (tmnxSubMgmtMdaSPppLclOEOA)	long	The value of tmnxSubMgmtMdaSPppLclOEOA indicates the number of current locally terminated PPP sessions (PPPoEoA) on this MDA.
pppLclOEOASessPeak [Ppp Lcl OEOASess Peak] (tmnxSubMgmtMdaSPppLclOEOAPeak)	long	The value of tmnxSubMgmtMdaSPppLclOEOAPeak indicates the peak number of locally terminated PPP sessions (PPPoEoA) on this MDA.
pppLclOESess [Ppp Lcl OESess] (tmnxSubMgmtMdaSPppLclOE)	long	The value of tmnxSubMgmtMdaSPppLclOE indicates the number of current locally terminated PPP sessions (PPPoE) on this MDA.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppLclOESessPeak [Ppp Lcl OESess Peak] (tmnxSubMgmtMdaSPppLclOEPeak)	long	The value of tmnxSubMgmtMdaSPppLclOEPeak indicates the peak number of locally terminated PPP sessions (PPPoE) on this MDA.
pppLclTotalSess [Ppp Lcl Total Sess] (tmnxSubMgmtMdaSPppLclTotal)	long	The value of tmnxSubMgmtMdaSPppLclTotal indicates the total number of current locally terminated PPP sessions on this MDA.
pppLclTotalSessPeak [Ppp Lcl Total Sess Peak] (tmnxSubMgmtMdaSPppLclTotalPeak)	long	The value of tmnxSubMgmtMdaSPppLclTotalPeak indicates the total peak number of locally terminated PPP sessions on this MDA.
pppSessInSetup [Ppp Sess In Setup] (tmnxSubMgmtMdaSPppSessIs)	long	The value of tmnxSubMgmtMdaSPppSessIs indicates the number of current PPP sessions in setup on this MDA.
pppSessInSetupPeak [Ppp Sess In Setup Peak] (tmnxSubMgmtMdaSPppSessIsPeak)	long	The value of tmnxSubMgmtMdaSPppSessIsPeak indicates the peak number of PPP sessions in setup on this MDA.
pppSessTotal [Ppp Sess Total] (tmnxSubMgmtMdaSPppSessTotal)	long	The value of tmnxSubMgmtMdaSPppSessTotal indicates the total number of current PPP sessions established on this MDA.
pppSessTotalPeak [Ppp Sess Total Peak] (tmnxSubMgmtMdaSPppSessTotalPeak)	long	The value of tmnxSubMgmtMdaSPppSessTotalPeak indicates the total peak number of PPP sessions established on this MDA.
pppTotalLacSess [Ppp Total Lac Sess] (tmnxSubMgmtMdaSPppLacTotal)	long	The value of tmnxSubMgmtMdaSPppLacTotal indicates the total number of current PPP sessions tunneled over L2TP on this MDA.
pppTotalLacSessPeak [Ppp Total Lac Sess Peak] (tmnxSubMgmtMdaSPppLacTotalPeak)	long	The value of tmnxSubMgmtMdaSPppLacTotalPeak indicates the total peak number of PPP sessions tunneled over L2TP on this MDA.

ipTotalv4Hosts [Ip Totalv 4 Hosts] (tmnxSubMgmtPortSV4)	long	The value of tmnxSubMgmtPortSV4 indicates the number of current V4 hosts on this port.
ipTotalv4HostsPeak [Ip Totalv 4 Hosts Peak] (tmnxSubMgmtPortSV4Peak)	long	The value of tmnxSubMgmtPortSV4Peak indicates the peak number of V4 hosts on this port.
ipv4ArpHosts [Ipv 4 Arp Hosts] (tmnxSubMgmtPortSArp)	long	The value of tmnxSubMgmtPortSArp indicates the number of current IPOE hosts (ARP) on this port.
ipv4ArpHostsPeak [Ipv 4 Arp Hosts Peak] (tmnxSubMgmtPortSArpPeak)	long	The value of tmnxSubMgmtPortSArpPeak indicates the peak number of IPOE hosts (ARP) on this port.
ipv4DhcpHosts [Ipv 4 Dhcp Hosts] (tmnxSubMgmtPortSDhcp)	long	The value of tmnxSubMgmtPortSDhcp indicates the number of current IPOE hosts (DHCP) on this port.
ipv4DhcpHostsPeak [Ipv 4 Dhcp Hosts Peak] (tmnxSubMgmtPortSDhcpPeak)	long	The value of tmnxSubMgmtPortSDhcpPeak indicates the peak number of IPOE hosts (DHCP) on this port.
ipv4IpcpHosts [Ipv 4 Ipcp Hosts] (tmnxSubMgmtPortSIpcp)	long	The value of tmnxSubMgmtPortSIpcp indicates the number of current PPP hosts (IPCP) on this port.
ipv4IpcpHostsPeak [Ipv 4 Ipcp Hosts Peak] (tmnxSubMgmtPortSIpcpPeak)	long	The value of tmnxSubMgmtPortSIpcpPeak indicates the peak number of PPP hosts (IPCP) on this port.
ipv4L2tpHosts [Ipv 4 L2 tp Hosts] (tmnxSubMgmtPortSL2tpHost)	long	The value of tmnxSubMgmtPortSL2tpHost indicates the number of current PPP hosts (L2TP) on this port.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv4L2tpHostsPeak [Ipv 4 L2 tp Hosts Peak] (tmnxSubMgmtPortSL2tpHostPeak)	long	The value of tmnxSubMgmtPortSL2tpHostPeak indicates the peak number of PPP hosts (L2TP) on this port.
ipv4NonSubHosts [Ipv 4 Non Sub Hosts] (tmnxSubMgmtPortSNonSub)	long	The value of tmnxSubMgmtPortSNonSub indicates the number of current Non Sub hosts on this port.
ipv4NonSubHostsPeak [Ipv 4 Non Sub Hosts Peak] (tmnxSubMgmtPortSNonSubPeak)	long	The value of tmnxSubMgmtPortSNonSubPeak indicates the peak number of Non Sub hosts on this port.
ipv4StaticHosts [Ipv 4 Static Hosts] (tmnxSubMgmtPortSStatic)	long	The value of tmnxSubMgmtPortSStatic indicates the number of current IPOE hosts (Static) on this port.
ipv4StaticHostsPeak [Ipv 4 Static Hosts Peak] (tmnxSubMgmtPortSStaticPeak)	long	The value of tmnxSubMgmtPortSStaticPeak indicates the peak number of IPOE hosts (Static) on this port.
ipv6Ipoedhcp6NaHosts [Ipv 6 Ipoedhcp 6 Na Hosts] (tmnxSubMgmtPortSIpoedhcp6Na)	long	The value of tmnxSubMgmtPortSIpoedhcp6Na indicates the number of current IPOE hosts (DHCP6 NA) on this port.
ipv6Ipoedhcp6NaHostsPeak [Ipv 6 Ipoedhcp 6 Na Hosts Peak] (tmnxSubMgmtPortSIpoedhcp6NaPeak)	long	The value of tmnxSubMgmtPortSIpoedhcp6NaPeak indicates the peak number of IPOE hosts (DHCP6 NA) on this port.
ipv6Ipoedhcp6PdHosts [Ipv 6 Ipoedhcp 6 Pd Hosts] (tmnxSubMgmtPortSIpoedhcp6Pd)	long	The value of tmnxSubMgmtPortSIpoedhcp6Pd indicates the number of current IPOE hosts (DHCP6 PD) on this port.
ipv6Ipoedhcp6PdHostsPeak [Ipv 6 Ipoedhcp 6 Pd Hosts Peak] (tmnxSubMgmtPortSIpoedhcp6PdPeak)	long	The value of tmnxSubMgmtPortSIpoedhcp6PdPeak indicates the peak number of IPOE hosts (DHCP6 PD) on this port.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6IpoEslaacHosts [Ipv 6 IpoE Slaac Hosts] (tmnxSubMgmtPortSIpoEslaac)	long	The value of tmnxSubMgmtPortSIpoEslaac indicates the number of current IPOE hosts (SLAAC) on this port.
ipv6IpoEslaacHostsPeak [Ipv 6 IpoE Slaac Hosts Peak] (tmnxSubMgmtPortSIpoEslaacPeak)	long	The value of tmnxSubMgmtPortSIpoEslaacPeak indicates the peak number of IPOE hosts (SLAAC) on this port.
ipv6PppDhcp6NaHosts [Ipv 6 Ppp Dhcp 6 Na Hosts] (tmnxSubMgmtPortSPppDhcp6Na)	long	The value of tmnxSubMgmtPortSPppDhcp6Na indicates the number of current PPP hosts (DHCP6 NA) on this port.
ipv6PppDhcp6NaHostsPeak [Ipv 6 Ppp Dhcp 6 Na Hosts Peak] (tmnxSubMgmtPortSPppDhcp6NaPeak)	long	The value of tmnxSubMgmtPortSPppDhcp6NaPeak indicates the peak number of PPP hosts (DHCP6 NA) on this port.
ipv6PppDhcp6PdHosts [Ipv 6 Ppp Dhcp 6 Pd Hosts] (tmnxSubMgmtPortSPppDhcp6Pd)	long	The value of tmnxSubMgmtPortSPppDhcp6Pd indicates the number of current PPP hosts (DHCP6 PD) on this port.
ipv6PppDhcp6PdHostsPeak [Ipv 6 Ppp Dhcp 6 Pd Hosts Peak] (tmnxSubMgmtPortSPppDhcp6PdPeak)	long	The value of tmnxSubMgmtPortSPppDhcp6PdPeak indicates the peak number of PPP hosts (DHCP6 PD) on this port.
ipv6PppSlaacHosts [Ipv 6 Ppp Slaac Hosts] (tmnxSubMgmtPortSPppSlaac)	long	The value of tmnxSubMgmtPortSPppSlaac indicates the number of current PPP hosts (SLAAC) on this port.
ipv6PppSlaacHostsPeak [Ipv 6 Ppp Slaac Hosts Peak] (tmnxSubMgmtPortSPppSlaacPeak)	long	The value of tmnxSubMgmtPortSPppSlaacPeak indicates the peak number of PPP hosts (SLAAC) on this port.
ipv6TotalHosts [Ipv 6 Total Hosts] (tmnxSubMgmtPortSV6)	long	The value of tmnxSubMgmtPortSV6 indicates the number of current V6 hosts on this port.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6TotalHostsPeak [Ipv 6 Total Hosts Peak] (tmnxSubMgmtPortSV6Peak)	long	The value of tmnxSubMgmtPortSV6Peak indicates the peak number of V6 hosts on this port.
ipv6v4TotalHosts [Ipv 6 v 4 Total Hosts] (tmnxSubMgmtPortSTotal)	long	The value of tmnxSubMgmtPortSTotal indicates the number of current total hosts on this port.
ipv6v4TotalHostsPeak [Ipv 6 v 4 Total Hosts Peak] (tmnxSubMgmtPortSTotalPeak)	long	The value of tmnxSubMgmtPortSTotalPeak indicates the peak number of total hosts on this port.
pppHostsTotal [Ppp Hosts Total] (tmnxSubMgmtPortSPppHosts)	long	The value of tmnxSubMgmtPortSPppHosts indicates the number of current PPP hosts on this port.
pppHostsTotalPeak [Ppp Hosts Total Peak] (tmnxSubMgmtPortSPppHostsPeak)	long	The value of tmnxSubMgmtPortSPppHostsPeak indicates the peak number of PPP hosts on this port.
pppLacL2tpSess [Ppp Lac L2 tp Sess] (tmnxSubMgmtPortSPppLacL2tp)	long	The value of tmnxSubMgmtPortSPppLacL2tp indicates the number of current PPP sessions (L2TP LTS) tunneled over L2TP on this port.
pppLacL2tpSessPeak [Ppp Lac L2 tp Sess Peak] (tmnxSubMgmtPortSPppLacL2tpPeak)	long	The value of tmnxSubMgmtPortSPppLacL2tpPeak indicates the peak number of PPP sessions (L2TP LTS) tunneled over L2TP on this port.
pppLacOASess [Ppp Lac OASess] (tmnxSubMgmtPortSPppLacOA)	long	The value of tmnxSubMgmtPortSPppLacOA indicates the number of current PPP sessions (PPPoA) tunneled over L2TP on this port.
pppLacOASessPeak [Ppp Lac OASess Peak] (tmnxSubMgmtPortSPppLacOAPeak)	long	The value of tmnxSubMgmtPortSPppLacOAPeak indicates the peak number of PPP sessions (PPPoA) tunneled over L2TP on this port.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppLacOEOASess [Ppp Lac OEOASess] (tmnxSubMgmtPortSPppLacOEOA)	long	The value of tmnxSubMgmtPortSPppLacOEOA indicates the number of current PPP sessions (PPPoEoA) tunneled over L2TP on this port.
pppLacOEOASessPeak [Ppp Lac OEOASess Peak] (tmnxSubMgmtPortSPppLacOEOAPeak)	long	The value of tmnxSubMgmtPortSPppLacOEOAPeak indicates the peak number of PPP sessions (PPPoEoA) tunneled over L2TP on this port.
pppLacOESess [Ppp Lac OESess] (tmnxSubMgmtPortSPppLacOE)	long	The value of tmnxSubMgmtPortSPppLacOE indicates the number of current PPP sessions (PPPoE) tunneled over L2TP on this port.
pppLacOESessPeak [Ppp Lac OESess Peak] (tmnxSubMgmtPortSPppLacOEPeak)	long	The value of tmnxSubMgmtPortSPppLacOEPeak indicates the peak number of PPP sessions (PPPoE) tunneled over L2TP on this port.
pppLclL2tpSess [Ppp Lcl L2 tp Sess] (tmnxSubMgmtPortSPppLclL2tp)	long	The value of tmnxSubMgmtPortSPppLclL2tp indicates the number of current locally terminated PPP sessions (L2TP LNS) on this port.
pppLclL2tpSessPeak [Ppp Lcl L2 tp Sess Peak] (tmnxSubMgmtPortSPppLclL2tpPeak)	long	The value of tmnxSubMgmtPortSPppLclL2tpPeak indicates the peak number of locally terminated PPP sessions (L2TP LNS) on this port.
pppLclOASess [Ppp Lcl OASess] (tmnxSubMgmtPortSPppLclOA)	long	The value of tmnxSubMgmtPortSPppLclOA indicates the number of current locally terminated PPP sessions (PPPoA) on this port.
pppLclOASessPeak [Ppp Lcl OASess Peak] (tmnxSubMgmtPortSPppLclOAPeak)	long	The value of tmnxSubMgmtPortSPppLclOAPeak indicates the peak number of locally terminated PPP sessions (PPPoA) on this port.
pppLclOEOASess [Ppp Lcl OEOASess] (tmnxSubMgmtPortSPppLclOEOA)	long	The value of tmnxSubMgmtPortSPppLclOEOA indicates the number of current locally terminated PPP sessions (PPPoEoA) on this port.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppLclOEOASessPeak [Ppp Lcl OEOASess Peak] (tmnxSubMgmtPortSPppLclOEOAPeak)	long	The value of tmnxSubMgmtPortSPppLclOEOAPeak indicates the peak number of locally terminated PPP sessions (PPPoEoA) on this port.
pppLclOESess [Ppp Lcl OESess] (tmnxSubMgmtPortSPppLclOE)	long	The value of tmnxSubMgmtPortSPppLclOE indicates the number of current locally terminated PPP sessions (PPPoE) on this port.
pppLclOESessPeak [Ppp Lcl OESess Peak] (tmnxSubMgmtPortSPppLclOEPeak)	long	The value of tmnxSubMgmtPortSPppLclOEPeak indicates the peak number of locally terminated PPP sessions (PPPoE) on this port.
pppLclTotalSess [Ppp Lcl Total Sess] (tmnxSubMgmtPortSPppLclTotal)	long	The value of tmnxSubMgmtPortSPppLclTotal indicates the total number of current locally terminated PPP sessions on this port.
pppLclTotalSessPeak [Ppp Lcl Total Sess Peak] (tmnxSubMgmtPortSPppLclTotalPeak)	long	The value of tmnxSubMgmtPortSPppLclTotalPeak indicates the total peak number of locally terminated PPP sessions on this port.
pppSessInSetup [Ppp Sess In Setup] (tmnxSubMgmtPortSPppSessIs)	long	The value of tmnxSubMgmtPortSPppSessIs indicates the number of current PPP sessions in setup on this port.
pppSessInSetupPeak [Ppp Sess In Setup Peak] (tmnxSubMgmtPortSPppSessIsPeak)	long	The value of tmnxSubMgmtPortSPppSessIsPeak indicates the peak number of PPP sessions in setup on this port.
pppSessTotal [Ppp Sess Total] (tmnxSubMgmtPortSPppSessTotal)	long	The value of tmnxSubMgmtPortSPppSessTotal indicates the total number of current PPP sessions established on this port.
pppSessTotalPeak [Ppp Sess Total Peak] (tmnxSubMgmtPortSPppSessTotalPeak)	long	The value of tmnxSubMgmtPortSPppSessTotalPeak indicates the total peak number of PPP sessions established on this port.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppTotalLacSess [Ppp Total Lac Sess] (tmnxSubMgmtPortSPppLacTotal)	long	The value of tmnxSubMgmtPortSPppLacTotal indicates the total number of current PPP sessions tunneled over L2TP on this port.
pppTotalLacSessPeak [Ppp Total Lac Sess Peak] (tmnxSubMgmtPortSPppLacTotalPeak)	long	The value of tmnxSubMgmtPortSPppLacTotalPeak indicates the total peak number of PPP sessions tunneled over L2TP on this port.
<p>SubscrHostEquipPwPortStats MIB entry name: tmnxSubMgmtPwPortStatsEntry Entry description: Each conceptual row represents statistics for a PW-port on which subscriber hosts are allocated. Supports realtime plotting Supports scheduled collection Monitored class: equipment.PwPort</p>		
currentSubscribers [Current Subscribers] (tmnxSubMgmtPwPortSSubscribers)	long	The value of tmnxSubMgmtPwPortSSubscribers indicates the number of current subscribers on this system.
currentSubscribersPeak [Current Subscribers Peak] (tmnxSubMgmtPwPortSSubscribersPk)	long	The value of tmnxSubMgmtPwPortSSubscribersPk indicates the peak number of subscribers on this system.
ipTotalHosts [Ip Total Hosts] (tmnxSubMgmtPwPortSIpoeHosts)	long	The value of tmnxSubMgmtPwPortSIpoeHosts indicates the number of current IPOE hosts on this PW-port.
ipTotalHostsPeak [Ip Total Hosts Peak] (tmnxSubMgmtPwPortSIpoeHostsPk)	long	The value of tmnxSubMgmtPwPortSIpoeHostsPk indicates the Pk number of IPOE hosts on this PW-port.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipTotalv4Hosts [Ip Totalv 4 Hosts] (tmnxSubMgmtPwPortSV4)	long	The value of tmnxSubMgmtPwPortSV4 indicates the number of current V4 hosts on this PW-port.
ipTotalv4HostsPeak [Ip Totalv 4 Hosts Peak] (tmnxSubMgmtPwPortSV4Pk)	long	The value of tmnxSubMgmtPwPortSV4Pk indicates the peak number of V4 hosts on this PW-port.
ipv4ArpHosts [Ipv 4 Arp Hosts] (tmnxSubMgmtPwPortSArp)	long	The value of tmnxSubMgmtPwPortSArp indicates the number of current IPOE hosts (ARP) on this PW-port.
ipv4ArpHostsPeak [Ipv 4 Arp Hosts Peak] (tmnxSubMgmtPwPortSArpPk)	long	The value of tmnxSubMgmtPwPortSArpPk indicates the peak number of IPOE hosts (ARP) on this PW-port.
ipv4DhcpHosts [Ipv 4 Dhcp Hosts] (tmnxSubMgmtPwPortSDhcp)	long	The value of tmnxSubMgmtPwPortSDhcp indicates the number of current IPOE hosts (DHCP) on this PW-port.
ipv4DhcpHostsPeak [Ipv 4 Dhcp Hosts Peak] (tmnxSubMgmtPwPortSDhcpPk)	long	The value of tmnxSubMgmtPwPortSDhcpPk indicates the peak number of IPOE hosts (DHCP) on this PW-port.
ipv4IpcpHosts [Ipv 4 Ipcp Hosts] (tmnxSubMgmtPwPortSIpcp)	long	The value of tmnxSubMgmtPwPortSIpcp indicates the number of current PPP hosts (IPCP) on this PW-port.
ipv4IpcpHostsPeak [Ipv 4 Ipcp Hosts Peak] (tmnxSubMgmtPwPortSIpcpPk)	long	The value of tmnxSubMgmtPwPortSIpcpPk indicates the peak number of PPP hosts (IPCP) on this PW-port.
ipv4L2tpHosts [Ipv 4 L2 tp Hosts] (tmnxSubMgmtPwPortSL2tpHost)	long	The value of tmnxSubMgmtPwPortSL2tpHost indicates the number of current PPP hosts (L2TP) on this PW-port.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv4L2tpHostsPeak [Ipv 4 L2 tp Hosts Peak] (tmnxSubMgmtPwPortSL2tpHostPk)	long	The value of tmnxSubMgmtPwPortSL2tpHostPk indicates the peak number of PPP hosts (L2TP) on this PW-port.
ipv4NonSubHosts [Ipv 4 Non Sub Hosts] (tmnxSubMgmtPwPortSNonSub)	long	The value of tmnxSubMgmtPwPortSNonSub indicates the number of current Non Sub hosts on this PW-port.
ipv4NonSubHostsPeak [Ipv 4 Non Sub Hosts Peak] (tmnxSubMgmtPwPortSNonSubPk)	long	The value of tmnxSubMgmtPwPortSNonSubPk indicates the peak number of Non Sub hosts on this PW-port.
ipv4StaticHosts [Ipv 4 Static Hosts] (tmnxSubMgmtPwPortSStatic)	long	The value of tmnxSubMgmtPwPortSStatic indicates the number of current IPOE hosts (Static) on this PW-port.
ipv4StaticHostsPeak [Ipv 4 Static Hosts Peak] (tmnxSubMgmtPwPortSStaticPk)	long	The value of tmnxSubMgmtPwPortSStaticPk indicates the peak number of IPOE hosts (Static) on this PW-port.
ipv6Ipoedhcp6NaHosts [Ipv 6 Ipoedhcp 6 Na Hosts] (tmnxSubMgmtPwPortSIpoedhcp6Na)	long	The value of tmnxSubMgmtPwPortSIpoedhcp6Na indicates the number of current IPOE hosts (DHCP6 NA) on this PW-port.
ipv6Ipoedhcp6NaHostsPeak [Ipv 6 Ipoedhcp 6 Na Hosts Peak] (tmnxSubMgmtPwPortSIpoedhcp6NaPk)	long	The value of tmnxSubMgmtPwPortSIpoedhcp6NaPk indicates the Pk number of IPOE hosts (DHCP6 NA) on this PW-port.
ipv6Ipoedhcp6PdHosts [Ipv 6 Ipoedhcp 6 Pd Hosts] (tmnxSubMgmtPwPortSIpoedhcp6Pd)	long	The value of tmnxSubMgmtPwPortSIpoedhcp6Pd indicates the number of current IPOE hosts (DHCP6 PD) on this PW-port.
ipv6Ipoedhcp6PdHostsPeak [Ipv 6 Ipoedhcp 6 Pd Hosts Peak] (tmnxSubMgmtPwPortSIpoedhcp6PdPk)	long	The value of tmnxSubMgmtPwPortSIpoedhcp6PdPk indicates the Pk number of IPOE hosts (DHCP6 PD) on this PW-port.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6IpoEslaacHosts [Ipv 6 IpoE Slaac Hosts] (tmnxSubMgmtPwPortSIpoEslaac)	long	The value of tmnxSubMgmtPwPortSIpoEslaac indicates the number of current IPOE hosts (SLAAC) on this PW-port.
ipv6IpoEslaacHostsPeak [Ipv 6 IpoE Slaac Hosts Peak] (tmnxSubMgmtPwPortSIpoEslaacPk)	long	The value of tmnxSubMgmtPwPortSIpoEslaacPk indicates the Pk number of IPOE hosts (SLAAC) on this PW-port.
ipv6PppDhcp6NaHosts [Ipv 6 Ppp Dhcp 6 Na Hosts] (tmnxSubMgmtPwPortSPppDhcp6Na)	long	The value of tmnxSubMgmtPwPortSPppDhcp6Na indicates the number of current PPP hosts (DHCP6 NA) on this PW-port.
ipv6PppDhcp6NaHostsPeak [Ipv 6 Ppp Dhcp 6 Na Hosts Peak] (tmnxSubMgmtPwPortSPppDhcp6NaPk)	long	The value of tmnxSubMgmtPwPortSPppDhcp6NaPk indicates the Pk number of PPP hosts (DHCP6 NA) on this PW-port.
ipv6PppDhcp6PdHosts [Ipv 6 Ppp Dhcp 6 Pd Hosts] (tmnxSubMgmtPwPortSPppDhcp6Pd)	long	The value of tmnxSubMgmtPwPortSPppDhcp6Pd indicates the number of current PPP hosts (DHCP6 PD) on this PW-port.
ipv6PppDhcp6PdHostsPeak [Ipv 6 Ppp Dhcp 6 Pd Hosts Peak] (tmnxSubMgmtPwPortSPppDhcp6PdPk)	long	The value of tmnxSubMgmtPwPortSPppDhcp6PdPk indicates the Pk number of PPP hosts (DHCP6 PD) on this PW-port.
ipv6PppSlaacHosts [Ipv 6 Ppp Slaac Hosts] (tmnxSubMgmtPwPortSPppSlaac)	long	The value of tmnxSubMgmtPwPortSPppSlaac indicates the number of current PPP hosts (SLAAC) on this PW-port.
ipv6PppSlaacHostsPeak [Ipv 6 Ppp Slaac Hosts Peak] (tmnxSubMgmtPwPortSPppSlaacPk)	long	The value of tmnxSubMgmtPwPortSPppSlaacPk indicates the Pk number of PPP hosts (SLAAC) on this PW-port.
ipv6TotalHosts [Ipv 6 Total Hosts] (tmnxSubMgmtPwPortSV6)	long	The value of tmnxSubMgmtPwPortSV6 indicates the number of current V6 hosts on this PW-port.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6TotalHostsPeak [Ipv 6 Total Hosts Peak] (tmnxSubMgmtPwPortSV6Pk)	long	The value of tmnxSubMgmtPwPortSV6Pk indicates the peak number of V6 hosts on this PW-port.
ipv6v4TotalHosts [Ipv 6 v 4 Total Hosts] (tmnxSubMgmtPwPortSTotal)	long	The value of tmnxSubMgmtPwPortSTotal indicates the number of current total hosts on this PW-port.
ipv6v4TotalHostsPeak [Ipv 6 v 4 Total Hosts Peak] (tmnxSubMgmtPwPortSTotalPk)	long	The value of tmnxSubMgmtPwPortSTotalPk indicates the peak number of total hosts on this PW-port.
pppHostsTotal [Ppp Hosts Total] (tmnxSubMgmtPwPortSPppHosts)	long	The value of tmnxSubMgmtPwPortSPppHosts indicates the number of current PPP hosts on this PW-port.
pppHostsTotalPeak [Ppp Hosts Total Peak] (tmnxSubMgmtPwPortSPppHostsPk)	long	The value of tmnxSubMgmtPwPortSPppHostsPk indicates the Pk number of PPP hosts on this PW-port.
pppLacL2tpSess [Ppp Lac L2 tp Sess] (tmnxSubMgmtPwPortSPppLacL2tp)	long	The value of tmnxSubMgmtPwPortSPppLacL2tp indicates the number of current PPP sessions (L2TP LTS) tunneled over L2TP on this PW-port.
pppLacL2tpSessPeak [Ppp Lac L2 tp Sess Peak] (tmnxSubMgmtPwPortSPppLacL2tpPk)	long	The value of tmnxSubMgmtPwPortSPppLacL2tpPk indicates the Pk number of PPP sessions (L2TP LTS) tunneled over L2TP on this PW-port.
pppLacOASess [Ppp Lac OASess] (tmnxSubMgmtPwPortSPppLacOA)	long	The value of tmnxSubMgmtPwPortSPppLacOA indicates the number of current PPP sessions (PPPoA) tunneled over L2TP on this PW-port.
pppLacOASessPeak [Ppp Lac OASess Peak] (tmnxSubMgmtPwPortSPppLacOAPk)	long	The value of tmnxSubMgmtPwPortSPppLacOAPk indicates the Pk number of PPP sessions (PPPoA) tunneled over L2TP on this PW-port.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppLacOEOASess [Ppp Lac OEOASess] (tmnxSubMgmtPwPortSPppLacOEOA)	long	The value of tmnxSubMgmtPwPortSPppLacOEOA indicates the number of current PPP sessions (PPPoEoA) tunneled over L2TP on this PW-port.
pppLacOEOASessPeak [Ppp Lac OEOASess Peak] (tmnxSubMgmtPwPortSPppLacOEOAPk)	long	The value of tmnxSubMgmtPwPortSPppLacOEOAPk indicates the Pk number of PPP sessions (PPPoEoA) tunneled over L2TP on this PW-port.
pppLacOESess [Ppp Lac OESess] (tmnxSubMgmtPwPortSPppLacOE)	long	The value of tmnxSubMgmtPwPortSPppLacOE indicates the number of current PPP sessions (PPPoE) tunneled over L2TP on this PW-port.
pppLacOESessPeak [Ppp Lac OESess Peak] (tmnxSubMgmtPwPortSPppLacOEPk)	long	The value of tmnxSubMgmtPwPortSPppLacOEPk indicates the Pk number of PPP sessions (PPPoE) tunneled over L2TP on this PW-port.
pppLclL2tpSess [Ppp Lcl L2 tp Sess] (tmnxSubMgmtPwPortSPppLclL2tp)	long	The value of tmnxSubMgmtPwPortSPppLclL2tp indicates the number of current locally terminated PPP sessions (L2TP LNS) on this PW-port.
pppLclL2tpSessPeak [Ppp Lcl L2 tp Sess Peak] (tmnxSubMgmtPwPortSPppLclL2tpPk)	long	The value of tmnxSubMgmtPwPortSPppLclL2tpPk indicates the Pk number of locally terminated PPP sessions (L2TP LNS) on this PW-port.
pppLclOASess [Ppp Lcl OASess] (tmnxSubMgmtPwPortSPppLclOA)	long	The value of tmnxSubMgmtPwPortSPppLclOA indicates the number of current locally terminated PPP sessions (PPPoA) on this PW-port.
pppLclOASessPeak [Ppp Lcl OASess Peak] (tmnxSubMgmtPwPortSPppLclOAPk)	long	The value of tmnxSubMgmtPwPortSPppLclOAPk indicates the Pk number of locally terminated PPP sessions (PPPoA) on this PW-port.
pppLclOEOASess [Ppp Lcl OEOASess] (tmnxSubMgmtPwPortSPppLclOEOA)	long	The value of tmnxSubMgmtPwPortSPppLclOEOA indicates the number of current locally terminated PPP sessions (PPPoEoA) on this PW-port.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppLclOEOASessPeak [Ppp Lcl OEOASess Peak] (tmnxSubMgmtPwPortSPppLclOEOAPk)	long	The value of tmnxSubMgmtPwPortSPppLclOEOAPk indicates the Pk number of locally terminated PPP sessions (PPPoEoA) on this PW-port.
pppLclOESess [Ppp Lcl OESess] (tmnxSubMgmtPwPortSPppLclOE)	long	The value of tmnxSubMgmtPwPortSPppLclOE indicates the number of current locally terminated PPP sessions (PPPoE) on this PW-port.
pppLclOESessPeak [Ppp Lcl OESess Peak] (tmnxSubMgmtPwPortSPppLclOEPk)	long	The value of tmnxSubMgmtPwPortSPppLclOEPk indicates the Pk number of locally terminated PPP sessions (PPPoE) on this PW-port.
pppLclTotalSess [Ppp Lcl Total Sess] (tmnxSubMgmtPwPortSPppLclTotal)	long	The value of tmnxSubMgmtPwPortSPppLclTotal indicates the total number of current locally terminated PPP sessions on this PW-port.
pppLclTotalSessPeak [Ppp Lcl Total Sess Peak] (tmnxSubMgmtPwPortSPppLclTotalPk)	long	The value of tmnxSubMgmtPwPortSPppLclTotalPk indicates the total Pk number of locally terminated PPP sessions on this PW-port.
pppSessInSetup [Ppp Sess In Setup] (tmnxSubMgmtPwPortSPppSessIs)	long	The value of tmnxSubMgmtPwPortSPppSessIs indicates the number of current PPP sessions in setup on this PW-port.
pppSessInSetupPeak [Ppp Sess In Setup Peak] (tmnxSubMgmtPwPortSPppSessIsPk)	long	The value of tmnxSubMgmtPwPortSPppSessIsPk indicates the Pk number of PPP sessions in setup on this PW-port.
pppSessTotal [Ppp Sess Total] (tmnxSubMgmtPwPortSPppSessTotal)	long	The value of tmnxSubMgmtPwPortSPppSessTotal indicates the total number of current PPP sessions established on this PW-port.
pppSessTotalPeak [Ppp Sess Total Peak] (tmnxSubMgmtPwPortSPppSessTotalPk)	long	The value of tmnxSubMgmtPwPortSPppSessTotalPk indicates the total Pk number of PPP sessions established on this PW-port.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppTotalLacSess [Ppp Total Lac Sess] (tmnxSubMgmtPwPortSPppLacTotal)	long	The value of tmnxSubMgmtPwPortSPppLacTotal indicates the total number of current PPP sessions tunneled over L2TP on this PW-port.
pppTotalLacSessPeak [Ppp Total Lac Sess Peak] (tmnxSubMgmtPwPortSPppLacTotalPk)	long	The value of tmnxSubMgmtPwPortSPppLacTotalPk indicates the total Pk number of PPP sessions tunneled over L2TP on this PW-port.
<p>SubscrHostEquipSlotStats MIB entry name: tmnxSubMgmtSlotStatsEntry Entry description: Each conceptual row represents statistics for a Slot on which subscriber hosts are allocated. Table description (for tmnxSubMgmtSlotStatsTable): The tmnxSubMgmtSlotStatsTable has an entry with statistics for each Slot on which subscriber hosts are allocated. cardSlotId [Card Slot Id] (tmnxSubMgmtSlotID)	long	tmnxSubMgmtSlotID is an index into this table. It maps this Slot to its entry in the mib-2 interfaces table.
currentSubscribers [Current Subscribers] (tmnxSubMgmtSlotSSubscribers)	long	The value of tmnxSubMgmtSlotSSubscribers indicates the number of current subscribers on this system.
currentSubscribersPeak [Current Subscribers Peak] (tmnxSubMgmtSlotSSubscribersPeak)	long	The value of tmnxSubMgmtSlotSSubscribersPeak indicates the peak number of subscribers on this system.
ipTotalHosts [Ip Total Hosts] (tmnxSubMgmtSlotSlpoeHosts)	long	The value of tmnxSubMgmtSlotSlpoeHosts indicates the number of current IPOE hosts on this Slot.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipTotalHostsPeak [Ip Total Hosts Peak] (tmnxSubMgmtSlotSpoeHostsPeak)	long	The value of tmnxSubMgmtSlotSpoeHostsPeak indicates the peak number of IPOE hosts on this Slot.
ipTotalv4Hosts [Ip Totalv 4 Hosts] (tmnxSubMgmtSlotSV4)	long	The value of tmnxSubMgmtSlotSV4 indicates the number of current V4 hosts on this Slot.
ipTotalv4HostsPeak [Ip Totalv 4 Hosts Peak] (tmnxSubMgmtSlotSV4Peak)	long	The value of tmnxSubMgmtSlotSV4Peak indicates the peak number of V4 hosts on this Slot.
ipv4ArpHosts [Ipv 4 Arp Hosts] (tmnxSubMgmtSlotSArp)	long	The value of tmnxSubMgmtSlotSArp indicates the number of current IPOE hosts (ARP) on this Slot.
ipv4ArpHostsPeak [Ipv 4 Arp Hosts Peak] (tmnxSubMgmtSlotSArpPeak)	long	The value of tmnxSubMgmtSlotSArpPeak indicates the peak number of IPOE hosts (ARP) on this Slot.
ipv4DhcpHosts [Ipv 4 Dhcp Hosts] (tmnxSubMgmtSlotSDhcp)	long	The value of tmnxSubMgmtSlotSDhcp indicates the number of current IPOE hosts (DHCP) on this Slot.
ipv4DhcpHostsPeak [Ipv 4 Dhcp Hosts Peak] (tmnxSubMgmtSlotSDhcpPeak)	long	The value of tmnxSubMgmtSlotSDhcpPeak indicates the peak number of IPOE hosts (DHCP) on this Slot.
ipv4IpcpHosts [Ipv 4 Ipcp Hosts] (tmnxSubMgmtSlotSIpcp)	long	The value of tmnxSubMgmtSlotSIpcp indicates the number of current PPP hosts (IPCP) on this Slot.
ipv4IpcpHostsPeak [Ipv 4 Ipcp Hosts Peak] (tmnxSubMgmtSlotSIpcpPeak)	long	The value of tmnxSubMgmtSlotSIpcpPeak indicates the peak number of PPP hosts (IPCP) on this Slot.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv4L2tpHosts [Ipv 4 L2 tp Hosts] (tmnxSubMgmtSlotSL2tpHost)	long	The value of tmnxSubMgmtSlotSL2tpHost indicates the number of current PPP hosts (L2TP) on this Slot.
ipv4L2tpHostsPeak [Ipv 4 L2 tp Hosts Peak] (tmnxSubMgmtSlotSL2tpHostPeak)	long	The value of tmnxSubMgmtSlotSL2tpHostPeak indicates the peak number of PPP hosts (L2TP) on this Slot.
ipv4NonSubHosts [Ipv 4 Non Sub Hosts] (tmnxSubMgmtSlotSNonSub)	long	The value of tmnxSubMgmtSlotSNonSub indicates the number of current Non Sub hosts on this Slot.
ipv4NonSubHostsPeak [Ipv 4 Non Sub Hosts Peak] (tmnxSubMgmtSlotSNonSubPeak)	long	The value of tmnxSubMgmtSlotSNonSubPeak indicates the peak number of Non Sub hosts on this Slot.
ipv4StaticHosts [Ipv 4 Static Hosts] (tmnxSubMgmtSlotSStatic)	long	The value of tmnxSubMgmtSlotSStatic indicates the number of current IPOE hosts (Static) on this Slot.
ipv4StaticHostsPeak [Ipv 4 Static Hosts Peak] (tmnxSubMgmtSlotSStaticPeak)	long	The value of tmnxSubMgmtSlotSStaticPeak indicates the peak number of IPOE hosts (Static) on this Slot.
ipv6Ipoedhcp6NaHosts [Ipv 6 Ipoedhcp 6 Na Hosts] (tmnxSubMgmtSlotSIpoedhcp6Na)	long	The value of tmnxSubMgmtSlotSIpoedhcp6Na indicates the number of current IPOE hosts (DHCP6 NA) on this Slot.
ipv6Ipoedhcp6NaHostsPeak [Ipv 6 Ipoedhcp 6 Na Hosts Peak] (tmnxSubMgmtSlotSIpoedhcp6NaPeak)	long	The value of tmnxSubMgmtSlotSIpoedhcp6NaPeak indicates the peak number of IPOE hosts (DHCP6 NA) on this Slot.
ipv6Ipoedhcp6PdHosts [Ipv 6 Ipoedhcp 6 Pd Hosts] (tmnxSubMgmtSlotSIpoedhcp6Pd)	long	The value of tmnxSubMgmtSlotSIpoedhcp6Pd indicates the number of current IPOE hosts (DHCP6 PD) on this Slot.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6IpoE Dhcp6PdHostsPeak [Ipv 6 IpoE Dhcp 6 Pd Hosts Peak] (tmnxSubMgmtSlotSIpoE Dhcp6PdPeak)	long	The value of tmnxSubMgmtSlotSIpoE Dhcp6PdPeak indicates the peak number of IPOE hosts (DHCP6 PD) on this Slot.
ipv6IpoE SlaacHosts [Ipv 6 IpoE Slaac Hosts] (tmnxSubMgmtSlotSIpoE Slaac)	long	The value of tmnxSubMgmtSlotSIpoE Slaac indicates the number of current IPOE hosts (SLAAC) on this Slot.
ipv6IpoE SlaacHostsPeak [Ipv 6 IpoE Slaac Hosts Peak] (tmnxSubMgmtSlotSIpoE SlaacPeak)	long	The value of tmnxSubMgmtSlotSIpoE SlaacPeak indicates the peak number of IPOE hosts (SLAAC) on this Slot.
ipv6Ppp Dhcp6NaHosts [Ipv 6 Ppp Dhcp 6 Na Hosts] (tmnxSubMgmtSlotSPpp Dhcp6Na)	long	The value of tmnxSubMgmtSlotSPpp Dhcp6Na indicates the number of current PPP hosts (DHCP6 NA) on this Slot.
ipv6Ppp Dhcp6NaHostsPeak [Ipv 6 Ppp Dhcp 6 Na Hosts Peak] (tmnxSubMgmtSlotSPpp Dhcp6NaPeak)	long	The value of tmnxSubMgmtSlotSPpp Dhcp6NaPeak indicates the peak number of PPP hosts (DHCP6 NA) on this Slot.
ipv6Ppp Dhcp6PdHosts [Ipv 6 Ppp Dhcp 6 Pd Hosts] (tmnxSubMgmtSlotSPpp Dhcp6Pd)	long	The value of tmnxSubMgmtSlotSPpp Dhcp6Pd indicates the number of current PPP hosts (DHCP6 PD) on this Slot.
ipv6Ppp Dhcp6PdHostsPeak [Ipv 6 Ppp Dhcp 6 Pd Hosts Peak] (tmnxSubMgmtSlotSPpp Dhcp6PdPeak)	long	The value of tmnxSubMgmtSlotSPpp Dhcp6PdPeak indicates the peak number of PPP hosts (DHCP6 PD) on this Slot.
ipv6Ppp SlaacHosts [Ipv 6 Ppp Slaac Hosts] (tmnxSubMgmtSlotSPpp Slaac)	long	The value of tmnxSubMgmtSlotSPpp Slaac indicates the number of current PPP hosts (SLAAC) on this Slot.
ipv6Ppp SlaacHostsPeak [Ipv 6 Ppp Slaac Hosts Peak] (tmnxSubMgmtSlotSPpp SlaacPeak)	long	The value of tmnxSubMgmtSlotSPpp SlaacPeak indicates the peak number of PPP hosts (SLAAC) on this Slot.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6TotalHosts [Ipv 6 Total Hosts] (tmnxSubMgmtSlotSV6)	long	The value of tmnxSubMgmtSlotSV6 indicates the number of current V6 hosts on this Slot.
ipv6TotalHostsPeak [Ipv 6 Total Hosts Peak] (tmnxSubMgmtSlotSV6Peak)	long	The value of tmnxSubMgmtSlotSV6Peak indicates the peak number of V6 hosts on this Slot.
ipv6v4TotalHosts [Ipv 6 v 4 Total Hosts] (tmnxSubMgmtSlotSTotal)	long	The value of tmnxSubMgmtSlotSTotal indicates the number of current total hosts on this Slot.
ipv6v4TotalHostsPeak [Ipv 6 v 4 Total Hosts Peak] (tmnxSubMgmtSlotSTotalPeak)	long	The value of tmnxSubMgmtSlotSTotalPeak indicates the peak number of total hosts on this Slot.
pppHostsTotal [Ppp Hosts Total] (tmnxSubMgmtSlotSPppHosts)	long	The value of tmnxSubMgmtSlotSPppHosts indicates the number of current PPP hosts on this Slot.
pppHostsTotalPeak [Ppp Hosts Total Peak] (tmnxSubMgmtSlotSPppHostsPeak)	long	The value of tmnxSubMgmtSlotSPppHostsPeak indicates the peak number of PPP hosts on this Slot.
pppLacL2tpSess [Ppp Lac L2 tp Sess] (tmnxSubMgmtSlotSPppLacL2tp)	long	The value of tmnxSubMgmtSlotSPppLacL2tp indicates the number of current PPP sessions (L2TP LTS) tunneled over L2TP on this Slot.
pppLacL2tpSessPeak [Ppp Lac L2 tp Sess Peak] (tmnxSubMgmtSlotSPppLacL2tpPeak)	long	The value of tmnxSubMgmtSlotSPppLacL2tpPeak indicates the peak number of PPP sessions (L2TP LTS) tunneled over L2TP on this Slot.
pppLacOASess [Ppp Lac OASess] (tmnxSubMgmtSlotSPppLacOA)	long	The value of tmnxSubMgmtSlotSPppLacOA indicates the number of current PPP sessions (PPPoA) tunneled over L2TP on this Slot.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppLacOASessPeak [Ppp Lac OASess Peak] (tmnxSubMgmtSlotSPppLacOAPeak)	long	The value of tmnxSubMgmtSlotSPppLacOAPeak indicates the peak number of PPP sessions (PPPoA) tunneled over L2TP on this Slot.
pppLacOEOASess [Ppp Lac OEOASess] (tmnxSubMgmtSlotSPppLacOEOA)	long	The value of tmnxSubMgmtSlotSPppLacOEOA indicates the number of current PPP sessions (PPPoEoA) tunneled over L2TP on this Slot.
pppLacOEOASessPeak [Ppp Lac OEOASess Peak] (tmnxSubMgmtSlotSPppLacOEOAPeak)	long	The value of tmnxSubMgmtSlotSPppLacOEOAPeak indicates the peak number of PPP sessions (PPPoEoA) tunneled over L2TP on this Slot.
pppLacOESess [Ppp Lac OESess] (tmnxSubMgmtSlotSPppLacOE)	long	The value of tmnxSubMgmtSlotSPppLacOE indicates the number of current PPP sessions (PPPoE) tunneled over L2TP on this Slot.
pppLacOESessPeak [Ppp Lac OESess Peak] (tmnxSubMgmtSlotSPppLacOEPeak)	long	The value of tmnxSubMgmtSlotSPppLacOEPeak indicates the peak number of PPP sessions (PPPoE) tunneled over L2TP on this Slot.
pppLclL2tpSess [Ppp Lcl L2 tp Sess] (tmnxSubMgmtSlotSPppLclL2tp)	long	The value of tmnxSubMgmtSlotSPppLclL2tp indicates the number of current locally terminated PPP sessions (L2TP LNS) on this Slot.
pppLclL2tpSessPeak [Ppp Lcl L2 tp Sess Peak] (tmnxSubMgmtSlotSPppLclL2tpPeak)	long	The value of tmnxSubMgmtSlotSPppLclL2tpPeak indicates the peak number of locally terminated PPP sessions (L2TP LNS) on this Slot.
pppLclOASess [Ppp Lcl OASess] (tmnxSubMgmtSlotSPppLclOA)	long	The value of tmnxSubMgmtSlotSPppLclOA indicates the number of current locally terminated PPP sessions (PPPoA) on this Slot.
pppLclOASessPeak [Ppp Lcl OASess Peak] (tmnxSubMgmtSlotSPppLclOAPeak)	long	The value of tmnxSubMgmtSlotSPppLclOAPeak indicates the peak number of locally terminated PPP sessions (PPPoA) on this Slot.

pppLacOESessPeak [Ppp Lac OESess Peak] (tmnxSubMgmtSystSPppLacOEPeak)	long	The value of tmnxSubMgmtSystSPppLacOEPeak indicates the peak number of PPP sessions (PPPoE) tunneled over L2TP on this system.
pppLclL2tpSess [Ppp Lcl L2 tp Sess] (tmnxSubMgmtSystSPppLclL2tp)	long	The value of tmnxSubMgmtSystSPppLclL2tp indicates the number of current locally terminated PPP sessions (L2TP LNS) on this system.
pppLclL2tpSessPeak [Ppp Lcl L2 tp Sess Peak] (tmnxSubMgmtSystSPppLclL2tpPeak)	long	The value of tmnxSubMgmtSystSPppLclL2tpPeak indicates the peak number of locally terminated PPP sessions (L2TP LNS) on this system.
pppLclOASess [Ppp Lcl OASess] (tmnxSubMgmtSystSPppLclOA)	long	The value of tmnxSubMgmtSystSPppLclOA indicates the number of current locally terminated PPP sessions (PPPoA) on this system.
pppLclOASessPeak [Ppp Lcl OASess Peak] (tmnxSubMgmtSystSPppLclOAPeak)	long	The value of tmnxSubMgmtSystSPppLclOAPeak indicates the peak number of locally terminated PPP sessions (PPPoA) on this system.
pppLclOEOASess [Ppp Lcl OEOASess] (tmnxSubMgmtSystSPppLclOEOA)	long	The value of tmnxSubMgmtSystSPppLclOEOA indicates the number of current locally terminated PPP sessions (PPPoEoA) on this system.
pppLclOEOASessPeak [Ppp Lcl OEOASess Peak] (tmnxSubMgmtSystSPppLclOEOAPeak)	long	The value of tmnxSubMgmtSystSPppLclOEOAPeak indicates the peak number of locally terminated PPP sessions (PPPoEoA) on this system.
pppLclOESess [Ppp Lcl OESess] (tmnxSubMgmtSystSPppLclOE)	long	The value of tmnxSubMgmtSystSPppLclOE indicates the number of current locally terminated PPP sessions (PPPoE) on this system.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppLclOESessPeak [Ppp Lcl OESess Peak] (tmnxSubMgmtSystSPppLclOEPeak)	long	The value of tmnxSubMgmtSystSPppLclOEPeak indicates the peak number of locally terminated PPP sessions (PPPoE) on this system.
pppLclTotalSess [Ppp Lcl Total Sess] (tmnxSubMgmtSystSPppLclTotal)	long	The value of tmnxSubMgmtSystSPppLclTotal indicates the total number of current locally terminated PPP sessions on this system.
pppLclTotalSessPeak [Ppp Lcl Total Sess Peak] (tmnxSubMgmtSystSPppLclTotalPeak)	long	The value of tmnxSubMgmtSystSPppLclTotalPeak indicates the total peak number of locally terminated PPP sessions on this system.
pppSessInSetup [Ppp Sess In Setup] (tmnxSubMgmtSystSPppSessIs)	long	The value of tmnxSubMgmtSystSPppSessIs indicates the number of current PPP sessions in setup on this system.
pppSessInSetupPeak [Ppp Sess In Setup Peak] (tmnxSubMgmtSystSPppSessIsPeak)	long	The value of tmnxSubMgmtSystSPppSessIsPeak indicates the peak number of PPP sessions in setup on this system.
pppSessTotal [Ppp Sess Total] (tmnxSubMgmtSystSPppSessTotal)	long	The value of tmnxSubMgmtSystSPppSessTotal indicates the total number of current PPP sessions established on this system.
pppSessTotalPeak [Ppp Sess Total Peak] (tmnxSubMgmtSystSPppSessTotalPeak)	long	The value of tmnxSubMgmtSystSPppSessTotalPeak indicates the total peak number of PPP sessions established on this system.
pppTotalLacSess [Ppp Total Lac Sess] (tmnxSubMgmtSystSPppLacTotal)	long	The value of tmnxSubMgmtSystSPppLacTotal indicates the total number of current PPP sessions tunneled over L2TP on this system.
pppTotalLacSessPeak [Ppp Total Lac Sess Peak] (tmnxSubMgmtSystSPppLacTotalPeak)	long	The value of tmnxSubMgmtSystSPppLacTotalPeak indicates the total peak number of PPP sessions tunneled over L2TP on this system.

Table 528 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SystemCpuMonStats</p> <p>MIB entry name: tmnxSysCpuMonEntry</p> <p>Entry description: tmnxSysCpuMonEntry contains the system level CPU monitoring statistics over a specified sample-time.</p> <p>Table description (for tmnxSysCpuMonTable): tmnxSysCpuMonTable consists of the system level CPU monitoring statistics.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.SystemStatsHolder</p>		
tmnxSysCpuMonBusyCoreUtil [Tmnx Sys Cpu Mon Busy Core Util] (tmnxSysCpuMonBusyCoreUtil)	float	The value of tmnxSysCpuMonBusyCoreUtil indicates the utilization percentage of the busiest processor core over the specified sample-time. On single core CPUs, this is the overall system utilization percentage over the specified sample-time.
tmnxSysCpuMonBusyGroupName [Tmnx Sys Cpu Mon Busy Group Name] (tmnxSysCpuMonBusyGroupName)	String	The value of tmnxSysCpuMonBusyGroupName indicates the name of the group that is running at the highest capacity utilization. Capacity utilization is the CPU utilization relative to the maximum CPU resources available to that group. A group is a set of related applications, services, tasks or protocol handlers that consumes some part of the system CPU resources. The capacity utilization of the busiest group is indicated by tmnxSysCpuMonBusyGroupUtil.
tmnxSysCpuMonBusyGroupUtil [Tmnx Sys Cpu Mon Busy Group Util] (tmnxSysCpuMonBusyGroupUtil)	float	The value of tmnxSysCpuMonBusyGroupUtil indicates the capacity utilization of the group that is running at the highest capacity utilization. Capacity utilization is the CPU utilization relative to the maximum CPU resources available to that group. A group is a set of related applications, services, tasks or protocol handlers that consumes some part of the system CPU resources. The name of the busiest group is indicated by tmnxSysCpuMonBusyGroupName.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tmnxSysCpuMonCpuIdle [Tmnx Sys Cpu Mon Cpu Idle] (tmnxSysCpuMonCpuIdle)	float	The value of tmnxSysCpuMonCpuIdle indicates the overall percentage of CPU idleness over the specified sample-time.
tmnxSysCpuMonSampleTime [Tmnx Sys Cpu Mon Sample Time] (tmnxSysCpuMonSampleTime)	int	The value of tmnxSysCpuMonSampleTime specifies the sample-time used to calculate the utilization results for the row.
SystemCpuStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder		
systemCpuUsage [System Cpu Usage] (sgiCpuUsage)	long	The value of sgiCpuUsage indicates the current CPU utilization for the system.
SystemMemoryStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder		
systemMemoryUsage [System Memory Usage] (sgiMemoryUsed)	long	The value of sgiMemoryUsed indicates the total pre-allocated pool memory currently in use on the system. If the value is greater than the maximum value reportable by this object then this object reports its maximum value (4,294,967,295) and sgiKbMemoryUsed must be used to determine the total pre-allocated pool memory.

<p>CohOptPortStats</p> <p>MIB entry name: tmnxCohOptPortStatsEntry</p> <p>Entry description: Each row entry includes statistics for a DWDM coherent optical port in the system. Entries cannot be created or deleted via SNMP SET operations.</p> <p>Table description (for tmnxCohOptPortStatsTable): The tmnxCohOptPortStatsTable contains statistics information for DWDM coherent optical ports in the Nokia SROS system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.PhysicalPort</p>		
cohOptPortRxBER [Coh Opt Port Rx BER] (tmnxCohOptPortRxBER)	long	The value of tmnxCohOptPortRxBER indicates the RX Bit Error Rate (BER) since the last port statistics clear, represented as an IEEE 754 32-bit floating point number.
cohOptPortRxBERAvg [Coh Opt Port Rx BERAvg] (tmnxCohOptPortRxBERAvg)	long	The value of tmnxCohOptPortRxBERAvg indicates the RX average BER since the last port statistics clear, represented as an IEEE 754 32-bit floating point number.
cohOptPortRxBERMax [Coh Opt Port Rx BERMax] (tmnxCohOptPortRxBERMax)	long	The value of tmnxCohOptPortRxBERMax indicates the RX maximum BER since the last port statistics clear, represented as an IEEE 754 32-bit floating point number.
cohOptPortRxBERMin [Coh Opt Port Rx BERMin] (tmnxCohOptPortRxBERMin)	long	The value of tmnxCohOptPortRxBERMin indicates the RX minimum BER since the last port statistics clear, represented as an IEEE 754 32-bit floating point number.
cohOptPortRxChromaticDisp [Coh Opt Port Rx Chromatic Disp] (tmnxCohOptPortRxChromaticDisp)	long	The value of tmnxCohOptPortRxChromaticDisp indicates the RX chromatic dispersion since the last port statistics clear.
cohOptPortRxChromaticDispAvg [Coh Opt Port Rx Chromatic Disp Avg] (tmnxCohOptPortRxChromaticDispAvg)	long	The value of tmnxCohOptPortRxChromaticDispAvg indicates the RX average chromatic dispersion since the last port statistics clear.

Table 529 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cohOptPortRxChromaticDispMax [Coh Opt Port Rx Chromatic Disp Max] (tmnxCohOptPortRxChromaticDispMax)	long	The value of tmnxCohOptPortRxChromaticDispMax indicates the RX maximum chromatic dispersion since the last port statistics clear.
cohOptPortRxChromaticDispMin [Coh Opt Port Rx Chromatic Disp Min] (tmnxCohOptPortRxChromaticDispMin)	long	The value of tmnxCohOptPortRxChromaticDispMin indicates the RX minimum chromatic dispersion since the last port statistics clear.
cohOptPortRxDiffGrpDly [Coh Opt Port Rx Diff Grp Dly] (tmnxCohOptPortRxDiffGrpDly)	long	The value of tmnxCohOptPortRxDiffGrpDly indicates the RX differential group delay since the last port statistics clear.
cohOptPortRxDiffGrpDlyAvg [Coh Opt Port Rx Diff Grp Dly Avg] (tmnxCohOptPortRxDiffGrpDlyAvg)	long	The value of tmnxCohOptPortRxDiffGrpDlyAvg indicates the RX average differential group delay since the last port statistics clear.
cohOptPortRxDiffGrpDlyMax [Coh Opt Port Rx Diff Grp Dly Max] (tmnxCohOptPortRxDiffGrpDlyMax)	long	The value of tmnxCohOptPortRxDiffGrpDlyMax indicates the RX maximum differential group delay since the last port statistics clear.
cohOptPortRxDiffGrpDlyMin [Coh Opt Port Rx Diff Grp Dly Min] (tmnxCohOptPortRxDiffGrpDlyMin)	long	The value of tmnxCohOptPortRxDiffGrpDlyMin indicates the RX minimum differential group delay since the last port statistics clear.
cohOptPortRxFreqOffset [Coh Opt Port Rx Freq Offset] (tmnxCohOptPortRxFreqOffset)	long	The value of tmnxCohOptPortRxFreqOffset indicates the RX frequency offset since the last port statistics clear.
cohOptPortRxFreqOffsetAvg [Coh Opt Port Rx Freq Offset Avg] (tmnxCohOptPortRxFreqOffsetAvg)	long	The value of tmnxCohOptPortRxFreqOffsetAvg indicates the RX average frequency offset since the last port statistics clear.
cohOptPortRxFreqOffsetMax [Coh Opt Port Rx Freq Offset Max] (tmnxCohOptPortRxFreqOffsetMax)	long	The value of tmnxCohOptPortRxFreqOffsetMax indicates the RX maximum frequency offset since the last port statistics clear.

Table 529 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cohOptPortRxFreqOffsetMin [Coh Opt Port Rx Freq Offset Min] (tmnxCohOptPortRxFreqOffsetMin)	long	The value of tmnxCohOptPortRxFreqOffsetMin indicates the RX minimum frequency offset since the last port statistics clear.
cohOptPortRxPower [Coh Opt Port Rx Power] (tmnxCohOptPortRxPower)	float	The value of tmnxCohOptPortRxPower indicates the RX optical power since the last port statistics clear.
cohOptPortRxPowerAvg [Coh Opt Port Rx Power Avg] (tmnxCohOptPortRxPowerAvg)	float	The value of tmnxCohOptPortRxPowerAvg indicates the RX average optical power since the last port statistics clear.
cohOptPortRxPowerMax [Coh Opt Port Rx Power Max] (tmnxCohOptPortRxPowerMax)	float	The value of tmnxCohOptPortRxPowerMax indicates the RX maximum optical power since the last port statistics clear.
cohOptPortRxPowerMin [Coh Opt Port Rx Power Min] (tmnxCohOptPortRxPowerMin)	float	The value of tmnxCohOptPortRxPowerMin indicates the RX minimum optical power since the last port statistics clear.
cohOptPortRxQ [Coh Opt Port Rx Q] (tmnxCohOptPortRxQ)	long	The value of tmnxCohOptPortRxQ indicates the RX Q since the last port statistics clear, represented in tenths of a dB.
cohOptPortRxQAvg [Coh Opt Port Rx QAvg] (tmnxCohOptPortRxQAvg)	long	The value of tmnxCohOptPortRxQAvg indicates the RX average Q since the last port statistics clear, represented in tenths of a dB.
cohOptPortRxQMax [Coh Opt Port Rx QMax] (tmnxCohOptPortRxQMax)	long	The value of tmnxCohOptPortRxQMax indicates the RX maximum Q since the last port statistics clear, represented in tenths of a dB.
cohOptPortRxQMin [Coh Opt Port Rx QMin] (tmnxCohOptPortRxQMin)	long	The value of tmnxCohOptPortRxQMin indicates the RX minimum Q since the last port statistics clear, represented in tenths of a dB.

Table 529 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cohOptPortRxSNR [Coh Opt Port Rx SNR] (tmnxCohOptPortRxSNR)	long	The value of tmnxCohOptPortRxSNR indicates the RX Signal-to-Noise Ratio (SNR) since the last port statistics clear, represented in tenths of a dB.
cohOptPortRxSNRAvg [Coh Opt Port Rx SNRAvg] (tmnxCohOptPortRxSNRAvg)	long	The value of tmnxCohOptPortRxSNRAvg indicates the RX average SNR since the last port statistics clear, represented in tenths of a dB.
cohOptPortRxSNRMax [Coh Opt Port Rx SNRMax] (tmnxCohOptPortRxSNRMax)	long	The value of tmnxCohOptPortRxSNRMax indicates the RX maximum SNR since the last port statistics clear, represented in tenths of a dB.
cohOptPortRxSNRMin [Coh Opt Port Rx SNRMin] (tmnxCohOptPortRxSNRMin)	long	The value of tmnxCohOptPortRxSNRMin indicates the RX minimum SNR since the last port statistics clear, represented in tenths of a dB.
cohOptPortStatsElapsedSec [Coh Opt Port Stats Elapsed Sec] (tmnxCohOptPortStatsElapsedSec)	long	The value of tmnxCohOptPortStatsElapsedSec indicates the number of elapsed seconds since the start of coherent optical stats collection after the last port statistics clear.
cohOptPortTxPower [Coh Opt Port Tx Power] (tmnxCohOptPortTxPower)	float	The value of tmnxCohOptPortTxPower indicates the TX optical power since the last port statistics clear.
cohOptPortTxPowerAvg [Coh Opt Port Tx Power Avg] (tmnxCohOptPortTxPowerAvg)	float	The value of tmnxCohOptPortTxPowerAvg indicates the TX average optical power since the last port statistics clear.
cohOptPortTxPowerMax [Coh Opt Port Tx Power Max] (tmnxCohOptPortTxPowerMax)	float	The value of tmnxCohOptPortTxPowerMax indicates the TX maximum optical power since the last port statistics clear.
cohOptPortTxPowerMin [Coh Opt Port Tx Power Min] (tmnxCohOptPortTxPowerMin)	float	The value of tmnxCohOptPortTxPowerMin indicates the TX minimum optical power since the last port statistics clear.

Table 529 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>Dot3Stats</p> <p>MIB entry name: dot3StatsEntry</p> <p>Entry description: Statistics for a particular interface to an ethernet-like medium.</p> <p>Table description (for dot3StatsTable): Statistics for a collection of ethernet-like interfaces attached to a particular system. There will be one row in this table for each ethernet-like interface in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
<p>alignmentErrors [Alignment Errors] (dot3StatsAlignmentErrors)</p>	<p>long</p>	<p>A count of frames received on a particular interface that are not an integral number of octets in length and do not pass the FCS check. The count represented by an instance of this object is incremented when the alignmentError status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions pertain are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC. This counter does not increment for group encoding schemes greater than 4 bits per group. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsAlignmentErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.</p>

Table 529 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
carrierSenseErrors [Carrier Sense Errors] (dot3StatsCarrierSenseErrors)	long	The number of times that the carrier sense condition was lost or never asserted when attempting to transmit a frame on a particular interface. The count represented by an instance of this object is incremented at most once per transmission attempt, even if the carrier sense condition fluctuates during a transmission attempt. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
deferredTransmissions [Deferred Transmissions] (dot3StatsDeferredTransmissions)	long	A count of frames for which the first transmission attempt on a particular interface is delayed because the medium is busy. The count represented by an instance of this object does not include frames involved in collisions. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
duplex [Duplex] (dot3StatsDuplexStatus)	int	The current mode of operation of the MAC entity. 'unknown' indicates that the current duplex mode could not be determined. Management control of the duplex mode is accomplished through the MAU MIB. When an interface does not support autonegotiation, or when autonegotiation is not enabled, the duplex mode is controlled using ifMauDefaultType. When autonegotiation is supported and enabled, duplex mode is controlled using ifMauAutoNegAdvertisedBits. In either case, the currently operating duplex mode is reflected both in this object and in ifMauType. Note that this object provides redundant information with ifMauType. Normally, redundant objects are discouraged. However, in this instance, it allows a management application to determine the duplex status of an interface without having to know every possible value of ifMauType. This was felt to be sufficiently valuable to justify the redundancy.

Table 529 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
excessiveCollisions [Excessive Collisions] (dot3StatsExcessiveCollisions)	long	A count of frames for which transmission on a particular interface fails due to excessive collisions. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
fcsErrors [Fcs Errors] (dot3StatsFCSErrors)	long	A count of frames received on a particular interface that are an integral number of octets in length but do not pass the FCS check. This count does not include frames received with frame-too-long or frame-too-short error. The count represented by an instance of this object is incremented when the frameCheckError status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions pertain are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC. Note: Coding errors detected by the physical layer for speeds above 10 Mb/s will cause the frame to fail the FCS check. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsFCSErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 529 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
frameTooLongs [Frame Too Longs] (dot3StatsFrameTooLongs)	long	A count of frames received on a particular interface that exceed the maximum permitted frame size. The count represented by an instance of this object is incremented when the frameTooLong status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions pertain are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC. For interfaces operating at 10 Gb/s, this counter can roll over in less than 80 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsFrameTooLongs object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 529 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
internalMacReceiveErrors [Internal Mac Receive Errors] (dot3StatsInternalMacReceiveErrors)	long	A count of frames for which reception on a particular interface fails due to an internal MAC sublayer receive error. A frame is only counted by an instance of this object if it is not counted by the corresponding instance of either the dot3StatsFrameTooLongs object, the dot3StatsAlignmentErrors object, or the dot3StatsFCSErrors object. The precise meaning of the count represented by an instance of this object is implementation- specific. In particular, an instance of this object may represent a count of receive errors on a particular interface that are not otherwise counted. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsInternalMacReceiveErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 529 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
internalMacTransmitErrors [Internal Mac Transmit Errors] (dot3StatsInternalMacTransmitErrors)	long	A count of frames for which transmission on a particular interface fails due to an internal MAC sublayer transmit error. A frame is only counted by an instance of this object if it is not counted by the corresponding instance of either the dot3StatsLateCollisions object, the dot3StatsExcessiveCollisions object, or the dot3StatsCarrierSenseErrors object. The precise meaning of the count represented by an instance of this object is implementation- specific. In particular, an instance of this object may represent a count of transmission errors on a particular interface that are not otherwise counted. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsInternalMacTransmitErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
lateCollisions [Late Collisions] (dot3StatsLateCollisions)	long	The number of times that a collision is detected on a particular interface later than one slotTime into the transmission of a packet. A (late) collision included in a count represented by an instance of this object is also considered as a (generic) collision for purposes of other collision-related statistics. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 529 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
multipleCollisionFrames [Multiple Collision Frames] (dot3StatsMultipleCollisionFrames)	long	A count of frames that are involved in more than one collision and are subsequently transmitted successfully. A frame that is counted by an instance of this object is also counted by the corresponding instance of either the ifOutUcastPkts, ifOutMulticastPkts, or ifOutBroadcastPkts, and is not counted by the corresponding instance of the dot3StatsSingleCollisionFrames object. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
singleCollisionFrames [Single Collision Frames] (dot3StatsSingleCollisionFrames)	long	A count of frames that are involved in a single collision, and are subsequently transmitted successfully. A frame that is counted by an instance of this object is also counted by the corresponding instance of either the ifOutUcastPkts, ifOutMulticastPkts, or ifOutBroadcastPkts, and is not counted by the corresponding instance of the dot3StatsMultipleCollisionFrames object. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
sqeTestErrors [Sqe Test Errors] (dot3StatsSQETestErrors)	long	A count of times that the SQE TEST ERROR is received on a particular interface. The SQE TEST ERROR is set in accordance with the rules for verification of the SQE detection mechanism in the PLS Carrier Sense Function as described in IEEE Std. 802.3, 2000 Edition, section 7.2.4.6. This counter does not increment on interfaces operating at speeds greater than 10 Mb/s, or on interfaces operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 529 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
symbolErrors [Symbol Errors] (dot3StatsSymbolErrors)	long	<p>For an interface operating at 100 Mb/s, the number of times there was an invalid data symbol when a valid carrier was present. For an interface operating in half-duplex mode at 1000 Mb/s, the number of times the receiving media is non-idle (a carrier event) for a period of time equal to or greater than slotTime, and during which there was at least one occurrence of an event that causes the PHY to indicate 'Data reception error' or 'carrier extend error' on the GMII. For an interface operating in full-duplex mode at 1000 Mb/s, the number of times the receiving media is non-idle (a carrier event) for a period of time equal to or greater than minFrameSize, and during which there was at least one occurrence of an event that causes the PHY to indicate 'Data reception error' on the GMII. For an interface operating at 10 Gb/s, the number of times the receiving media is non-idle (a carrier event) for a period of time equal to or greater than minFrameSize, and during which there was at least one occurrence of an event that causes the PHY to indicate 'Receive Error' on the XGMII. The count represented by an instance of this object is incremented at most once per carrier event, even if multiple symbol errors occur during the carrier event. This count does not increment if a collision is present. This counter does not increment when the interface is operating at 10 Mb/s. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsSymbolErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.</p>

packets1024to1518Octets [Packets 1024 to 1518 Octets] (etherStatsHighCapacityPkts1024to1518Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 1024 and 1518 octets in length inclusive (excluding framing bits but including FCS octets).
packets128to255Octets [Packets 128 to 255 Octets] (etherStatsHighCapacityPkts128to255Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 128 and 255 octets in length inclusive (excluding framing bits but including FCS octets).
packets256to511Octets [Packets 256 to 511 Octets] (etherStatsHighCapacityPkts256to511Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 256 and 511 octets in length inclusive (excluding framing bits but including FCS octets).
packets512to1023Octets [Packets 512 to 1023 Octets] (etherStatsHighCapacityPkts512to1023Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 512 and 1023 octets in length inclusive (excluding framing bits but including FCS octets).

Table 529 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
packets64Octets [Packets 64 Octets] (etherStatsHighCapacityPkts64Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were 64 octets in length (excluding framing bits but including FCS octets).
packets65to127Octets [Packets 65 to 127 Octets] (etherStatsHighCapacityPkts65to127Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 65 and 127 octets in length inclusive (excluding framing bits but including FCS octets).

Table 529 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalOctets [Total Octets] (etherStatsHighCapacityOctets)	java. math. BigInteger	The total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets). If the network is half-duplex Fast Ethernet, this object can be used as a reasonable estimate of utilization. If greater precision is desired, the etherStatsHighCapacityPkts and etherStatsHighCapacityOctets objects should be sampled before and after a common interval. The differences in the sampled values are Pkts and Octets, respectively, and the number of seconds in the interval is Interval. These values are used to calculate the Utilization as follows: $Pkts * (.96 + .64) + (Octets * .08)$ Utilization = - Interval * 10,000 The result of this equation is the value Utilization which is the percent utilization of the ethernet segment on a scale of 0 to 100 percent. This table is not appropriate for monitoring full-duplex ethernet. If the network is a full-duplex ethernet and the mediaIndependentTable is monitoring that network, the utilization can be calculated as follows: 1) Determine the utilization of the inbound path by using the appropriate equation (for ethernet or fast ethernet) to determine the utilization, substituting mediaIndependentInPkts for etherStatsHighCapacityPkts, and mediaIndependentInOctets for etherStatsHighCapacityOctets. Call the resulting utilization inUtilization. 2) Determine the utilization of the outbound path by using the same equation to determine the utilization, substituting mediaIndependentOutPkts for etherStatsHighCapacityPkts, and mediaIndependentOutOctets for etherStatsHighCapacityOctets. Call the resulting utilization outUtilization. 3) The utilization is the maximum of inUtilization and outUtilization. This metric shows the amount of percentage of bandwidth that is left before congestion will be experienced on the link.
totalPackets [Total Packets] (etherStatsHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets, broadcast packets, and multicast packets) received.

Table 529 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>EthernetStats</p> <p>MIB entry name: etherStatsEntry</p> <p>Entry description: A collection of statistics kept for a particular Ethernet interface. As an example, an instance of the etherStatsPkts object might be named etherStatsPkts.1</p> <p>Table description (for etherStatsTable): A list of Ethernet statistics entries.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
broadcastPackets [Broadcast Packets] (etherStatsBroadcastPkts)	long	The total number of good packets received that were directed to the broadcast address. Note that this does not include multicast packets.

Table 529 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
collisions [Collisions] (etherStatsCollisions)	long	The best estimate of the total number of collisions on this Ethernet segment. The value returned will depend on the location of the RMON probe. Section 8.2.1.3 (10BASE-5) and section 10.3.1.3 (10BASE-2) of IEEE standard 802.3 states that a station must detect a collision, in the receive mode, if three or more stations are transmitting simultaneously. A repeater port must detect a collision when two or more stations are transmitting simultaneously. Thus a probe placed on a repeater port could record more collisions than a probe connected to a station on the same segment would. Probe location plays a much smaller role when considering 10BASE-T. 14.2.1.4 (10BASE-T) of IEEE standard 802.3 defines a collision as the simultaneous presence of signals on the DO and RD circuits (transmitting and receiving at the same time). A 10BASE-T station can only detect collisions when it is transmitting. Thus probes placed on a station and a repeater, should report the same number of collisions. Note also that an RMON probe inside a repeater should ideally report collisions between the repeater and one or more other hosts (transmit collisions as defined by IEEE 802.3k) plus receiver collisions observed on any coax segments to which the repeater is connected.
crcAlignErrors [Crc Align Errors] (etherStatsCRCAAlignErrors)	long	The total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, but had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).
dropEvents [Drop Events] (etherStatsDropEvents)	long	The total number of events in which packets were dropped by the probe due to lack of resources. Note that this number is not necessarily the number of packets dropped; it is just the number of times this condition has been detected.

Table 529 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fragments [Fragments] (etherStatsFragments)	long	The total number of packets received that were less than 64 octets in length (excluding framing bits but including FCS octets) and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error). Note that it is entirely normal for etherStatsFragments to increment. This is because it counts both runts (which are normal occurrences due to collisions) and noise hits.
jabbers [Jabbers] (etherStatsJabbers)	long	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error). Note that this definition of jabber is different than the definition in IEEE-802.3 section 8.2.1.5 (10BASE5) and section 10.3.1.4 (10BASE2). These documents define jabber as the condition where any packet exceeds 20 ms. The allowed range to detect jabber is between 20 ms and 150 ms.
multicastPackets [Multicast Packets] (etherStatsMulticastPkts)	long	The total number of good packets received that were directed to a multicast address. Note that this number does not include packets directed to the broadcast address.
oversizePackets [Oversize Packets] (etherStatsOversizePkts)	long	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets) and were otherwise well formed.
packets1024to1518Octets [Packets 1024 to 1518 Octets] (etherStatsPkts1024to1518Octets)	long	The total number of packets (including bad packets) received that were between 1024 and 1518 octets in length inclusive (excluding framing bits but including FCS octets).
packets128to255Octets [Packets 128 to 255 Octets] (etherStatsPkts128to255Octets)	long	The total number of packets (including bad packets) received that were between 128 and 255 octets in length inclusive (excluding framing bits but including FCS octets).

Table 529 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
packets256to511Octets [Packets 256 to 511 Octets] (etherStatsPkts256to511Octets)	long	The total number of packets (including bad packets) received that were between 256 and 511 octets in length inclusive (excluding framing bits but including FCS octets).
packets512to1023Octets [Packets 512 to 1023 Octets] (etherStatsPkts512to1023Octets)	long	The total number of packets (including bad packets) received that were between 512 and 1023 octets in length inclusive (excluding framing bits but including FCS octets).
packets64Octets [Packets 64 Octets] (etherStatsPkts64Octets)	long	The total number of packets (including bad packets) received that were 64 octets in length (excluding framing bits but including FCS octets).
packets65to127Octets [Packets 65 to 127 Octets] (etherStatsPkts65to127Octets)	long	The total number of packets (including bad packets) received that were between 65 and 127 octets in length inclusive (excluding framing bits but including FCS octets).
totalOctets [Total Octets] (etherStatsOctets)	long	The total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets). This object can be used as a reasonable estimate of 10-Megabit ethernet utilization. If greater precision is desired, the etherStatsPkts and etherStatsOctets objects should be sampled before and after a common interval. The differences in the sampled values are Pkts and Octets, respectively, and the number of seconds in the interval is Interval. These values are used to calculate the Utilization as follows: $Pkts * (9.6 + 6.4) + (Octets * .8)$ Utilization = - Interval * 10,000 The result of this equation is the value Utilization which is the percent utilization of the ethernet segment on a scale of 0 to 100 percent.
totalPackets [Total Packets] (etherStatsPkts)	long	The total number of packets (including bad packets, broadcast packets, and multicast packets) received.

Table 529 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
undersizePackets [Undersize Packets] (etherStatsUndersizePkts)	long	The total number of packets received that were less than 64 octets long (excluding framing bits, but including FCS octets) and were otherwise well formed.
<p>OtulfStats MIB entry name: tmnxOtulfRawStatsEntry Entry description: The tmnxOtulfRawStatsEntry stores the statistics for an individual OTU interface. tmnxOtulfRawStatsEntry rows are created and destroyed by the system when rows are added or removed in the tmnxOtulfTable. Table description (for tmnxOtulfRawStatsTable): The tmnxOtulfRawStatsTable consists of the raw statistics associated with the OTU interfaces contained in the tmnxOtulfTable. Supports realtime plotting Supports scheduled collection Monitored class: equipment.PhysicalPort</p>		
elapsedSec [Elapsed Sec] (tmnxOtulfRawStatsElapsedSec)	long	The value of tmnxOtulfRawStatsElapsedSec indicates the number of Elapsed seconds since the last OTU raw statistics clearing.
feCes [Fe Ces] (tmnxOtulfRawStatsFECES)	long	The value of tmnxOtulfRawStatsFECES indicates the number of Forward Error Correction (FEC) Errors Seconds (ES).
fecCorrOnes [Fec Corr Ones] (tmnxOtulfRawStatsFECCorrOnes)	long	The value of tmnxOtulfRawStatsFECCorrOnes indicates the number of Forward Error Correction (FEC) corrected ones.
fecCorrZeros [Fec Corr Zeros] (tmnxOtulfRawStatsFECCorrZeros)	long	The value of tmnxOtulfRawStatsFECCorrZeros indicates the number of Forward Error Correction (FEC) corrected zeros.
fecSes [Fec Ses] (tmnxOtulfRawStatsFECSES)	long	The value of tmnxOtulfRawStatsFECSES indicates the number of Forward Error Correction (FEC) Severely Errors Seconds (SES).

Table 529 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fecUas [Fec Uas] (tmnxOtuIfRawStatsFECUAS)	long	The value of tmnxOtuIfRawStatsFECUAS indicates the number of Forward Error Correction (FEC) Unavailable Seconds (UAS).
fecUncorrSr [Fec Uncorr Sr] (tmnxOtuIfRawStatsFECUncorrSR)	long	The value of tmnxOtuIfRawStatsFECUncorrSR indicates the number of Forward Error Correction (FEC) Uncorrectable Sub-Rows.
hcFecCorrOnes [Hc Fec Corr Ones] (tmnxOtuIfRawStatsHCFECCorrOnes)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCFECCorrOnes indicates the High Capacity number of Forward Error Correction (FEC) corrected ones.
hcFecCorrZeros [Hc Fec Corr Zeros] (tmnxOtuIfRawStatsHCFECCorrZeros)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCFECCorrZeros indicates the High Capacity number of Forward Error Correction (FEC) corrected zeros.
hcFecUncorrSr [Hc Fec Uncorr Sr] (tmnxOtuIfRawStatsHCFECUncorrSR)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCFECUncorrSR indicates the High Capacity number of Forward Error Correction (FEC) Uncorrectable Sub-Rows.
hcPmBei [Hc Pm Bei] (tmnxOtuIfRawStatsHCPMBEI)	java. math. BigInteger	The value of tmnxOtuIfRawStatsPMBEI indicates the High Capacity number of Path Monitoring (PM) Backward Error Indication (BEI) errors.
hcPmBip8 [Hc Pm Bip 8] (tmnxOtuIfRawStatsHCPMBIP8)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCPMBIP8 indicates the High Capacity number of Path Monitoring (PM) BIP8 errors.
hcSmBei [Hc Sm Bei] (tmnxOtuIfRawStatsHCSMBEI)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCSMBEI indicates the High Capacity number of Section Monitoring (SM) Backward Error Indication (BEI) errors.

Table 529 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
hcSmBip8 [Hc Sm Bip 8] (tmnxOtuIfRawStatsHCSMBIP8)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCSMBIP8 indicates the High Capacity number of Section Monitoring (SM) BIP8 errors.
npj [Npj] (tmnxOtuIfRawStatsNPJ)	long	The value of tmnxOtuIfRawStatsNPJ indicates the number of Negative Pointer justifications that occurred during the asynchronous demapping of the received payload inside the OTU frame.
ofFecCorrOnes [Of Fec Corr Ones] (tmnxOtuIfRawStatsOFFECCorrOnes)	long	The value of tmnxOtuIfRawStatsFECCorrOnes indicates the number of times the tmnxOtuIfRawStatsFECCorrOnes overflowed.
ofFecCorrZeros [Of Fec Corr Zeros] (tmnxOtuIfRawStatsOFFECCorrZeros)	long	The value of tmnxOtuIfRawStatsOFFECCorrZeros indicates the number of times the tmnxOtuIfRawStatsFECCorrZeros overflowed.
ofFecUncorrSr [Of Fec Uncorr Sr] (tmnxOtuIfRawStatsOFFECUncorrSR)	long	The value of tmnxOtuIfRawStatsOFFECUncorrSR indicates the number of times the tmnxOtuIfRawStatsFECUncorrSR overflowed.
ofPmBei [Of Pm Bei] (tmnxOtuIfRawStatsOFPMBEI)	long	The value of tmnxOtuIfRawStatsOFPMBEI indicates the number of times tmnxOtuIfRawStatsPMBEI overflowed.
ofPmBip8 [Of Pm Bip 8] (tmnxOtuIfRawStatsOFPMBIP8)	long	The value of tmnxOtuIfRawStatsOFPMBIP8 indicates the number of times the tmnxOtuIfRawStatsPMBIP8 overflowed.
ofSmBei [Of Sm Bei] (tmnxOtuIfRawStatsOFSMBEI)	long	The value of tmnxOtuIfRawStatsOFSMBEI indicates the number of times the tmnxOtuIfRawStatsSMBEI overflowed.

portEgrExpShaperAggStFwdOcts [Port Egr Exp Shaper Agg St Fwd Octs] (tPortEgrExpShaperAggStFwdOcts)	java. math. BigInteger	The value of tPortEgrExpShaperAggStFwdOcts indicates the aggregate number of octets forwarded by all of the classes of this egress expanded shaper.
portEgrExpShaperAggStFwdPkts [Port Egr Exp Shaper Agg St Fwd Pkts] (tPortEgrExpShaperAggStFwdPkts)	java. math. BigInteger	The value of tPortEgrExpShaperAggStFwdPkts indicates the aggregate number of packets forwarded by all of the classes of this egress expanded shaper.

Table 529 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portEgrExpShaperCls1StFwdOcts [Port Egr Exp Shaper Cls 1 St Fwd Octs] (tPortEgrExpShaperCls1StFwdOcts)	java. math. BigInteger	The value of tPortEgrExpShaperCls1StFwdOcts indicates the number of octets forwarded by the class '1' egress expanded shaper.
portEgrExpShaperCls1StFwdPkts [Port Egr Exp Shaper Cls 1 St Fwd Pkts] (tPortEgrExpShaperCls1StFwdPkts)	java. math. BigInteger	The value of tPortEgrExpShaperCls1StFwdPkts indicates the number of packets forwarded by the class '1' egress expanded shaper.
portEgrExpShaperCls1StMonOvrOct [Port Egr Exp Shaper Cls 1 St Mon Ovr Oct] (tPortEgrExpShaperCls1StMonOvrOct)	java. math. BigInteger	The value of tPortEgrExpShaperCls1StMonOvrOct indicates the number of octets above the configured monitor-threshold (since last read) by the class '1' egress expanded shaper.
portEgrExpShaperCls2StFwdOcts [Port Egr Exp Shaper Cls 2 St Fwd Octs] (tPortEgrExpShaperCls2StFwdOcts)	java. math. BigInteger	The value of tPortEgrExpShaperCls2StFwdOcts indicates the number of octets forwarded by the class '2' egress expanded shaper.
portEgrExpShaperCls2StFwdPkts [Port Egr Exp Shaper Cls 2 St Fwd Pkts] (tPortEgrExpShaperCls2StFwdPkts)	java. math. BigInteger	The value of tPortEgrExpShaperCls2StFwdPkts indicates the number of packets forwarded by the class '2' egress expanded shaper.
portEgrExpShaperCls2StMonOvrOct [Port Egr Exp Shaper Cls 2 St Mon Ovr Oct] (tPortEgrExpShaperCls2StMonOvrOct)	java. math. BigInteger	The value of tPortEgrExpShaperCls2StMonOvrOct indicates the number of octets above the configured monitor-threshold (since last read) by the class '2' egress expanded shaper.
portEgrExpShaperCls3StFwdOcts [Port Egr Exp Shaper Cls 3 St Fwd Octs] (tPortEgrExpShaperCls3StFwdOcts)	java. math. BigInteger	The value of tPortEgrExpShaperCls3StFwdOcts indicates the number of octets forwarded by the class '3' egress expanded shaper.
portEgrExpShaperCls3StFwdPkts [Port Egr Exp Shaper Cls 3 St Fwd Pkts] (tPortEgrExpShaperCls3StFwdPkts)	java. math. BigInteger	The value of tPortEgrExpShaperCls3StFwdPkts indicates the number of packets forwarded by the class '3' egress expanded shaper.

Table 529 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portEgrExpShaperCls3StMonOvrOct [Port Egr Exp Shaper Cls 3 St Mon Ovr Oct] (tPortEgrExpShaperCls3StMonOvrOct)	java. math. BigInteger	The value of tPortEgrExpShaperCls3StMonOvrOct indicates the number of octets above the configured monitor-threshold (since last read) by the class '3' egress expanded shaper.
portEgrExpShaperCls4StFwdOcts [Port Egr Exp Shaper Cls 4 St Fwd Octs] (tPortEgrExpShaperCls4StFwdOcts)	java. math. BigInteger	The value of tPortEgrExpShaperCls4StFwdOcts indicates the number of octets forwarded by the class '4' egress expanded shaper.
portEgrExpShaperCls4StFwdPkts [Port Egr Exp Shaper Cls 4 St Fwd Pkts] (tPortEgrExpShaperCls4StFwdPkts)	java. math. BigInteger	The value of tPortEgrExpShaperCls4StFwdPkts indicates the number of packets forwarded by the class '4' egress expanded shaper.
portEgrExpShaperCls4StMonOvrOct [Port Egr Exp Shaper Cls 4 St Mon Ovr Oct] (tPortEgrExpShaperCls4StMonOvrOct)	java. math. BigInteger	The value of tPortEgrExpShaperCls4StMonOvrOct indicates the number of octets above the configured monitor-threshold (since last read) by the class '4' egress expanded shaper.
portEgrExpShaperCls5StFwdOcts [Port Egr Exp Shaper Cls 5 St Fwd Octs] (tPortEgrExpShaperCls5StFwdOcts)	java. math. BigInteger	The value of tPortEgrExpShaperCls5StFwdOcts indicates the number of octets forwarded by the class '5' egress expanded shaper.
portEgrExpShaperCls5StFwdPkts [Port Egr Exp Shaper Cls 5 St Fwd Pkts] (tPortEgrExpShaperCls5StFwdPkts)	java. math. BigInteger	The value of tPortEgrExpShaperCls5StFwdPkts indicates the number of packets forwarded by the class '5' egress expanded shaper.
portEgrExpShaperCls5StMonOvrOct [Port Egr Exp Shaper Cls 5 St Mon Ovr Oct] (tPortEgrExpShaperCls5StMonOvrOct)	java. math. BigInteger	The value of tPortEgrExpShaperCls5StMonOvrOct indicates the number of octets above the configured monitor-threshold (since last read) by the class '5' egress expanded shaper.
portEgrExpShaperCls6StFwdOcts [Port Egr Exp Shaper Cls 6 St Fwd Octs] (tPortEgrExpShaperCls6StFwdOcts)	java. math. BigInteger	The value of tPortEgrExpShaperCls6StFwdOcts indicates the number of octets forwarded by the class '6' egress expanded shaper.

Table 529 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portEgrExpShaperCls6StFwdPkts [Port Egr Exp Shaper Cls 6 St Fwd Pkts] (tPortEgrExpShaperCls6StFwdPkts)	java. math. BigInteger	The value of tPortEgrExpShaperCls6StFwdPkts indicates the number of packets forwarded by the class '6' egress expanded shaper.
portEgrExpShaperCls6StMonOvrOct [Port Egr Exp Shaper Cls 6 St Mon Ovr Oct] (tPortEgrExpShaperCls6StMonOvrOct)	java. math. BigInteger	The value of tPortEgrExpShaperCls6StMonOvrOct indicates the number of octets above the configured monitor-threshold (since last read) by the class '6' egress expanded shaper.
portEgrExpShaperCls7StFwdOcts [Port Egr Exp Shaper Cls 7 St Fwd Octs] (tPortEgrExpShaperCls7StFwdOcts)	java. math. BigInteger	The value of tPortEgrExpShaperCls7StFwdOcts indicates the number of octets forwarded by the class '7' egress expanded shaper.
portEgrExpShaperCls7StFwdPkts [Port Egr Exp Shaper Cls 7 St Fwd Pkts] (tPortEgrExpShaperCls7StFwdPkts)	java. math. BigInteger	The value of tPortEgrExpShaperCls7StFwdPkts indicates the number of packets forwarded by the class '7' egress expanded shaper.
portEgrExpShaperCls7StMonOvrOct [Port Egr Exp Shaper Cls 7 St Mon Ovr Oct] (tPortEgrExpShaperCls7StMonOvrOct)	java. math. BigInteger	The value of tPortEgrExpShaperCls7StMonOvrOct indicates the number of octets above the configured monitor-threshold (since last read) by the class '7' egress expanded shaper.
portEgrExpShaperCls8StFwdOcts [Port Egr Exp Shaper Cls 8 St Fwd Octs] (tPortEgrExpShaperCls8StFwdOcts)	java. math. BigInteger	The value of tPortEgrExpShaperCls8StFwdOcts indicates the number of octets forwarded by the class '8' egress expanded shaper.
portEgrExpShaperCls8StFwdPkts [Port Egr Exp Shaper Cls 8 St Fwd Pkts] (tPortEgrExpShaperCls8StFwdPkts)	java. math. BigInteger	The value of tPortEgrExpShaperCls8StFwdPkts indicates the number of packets forwarded by the class '8' egress expanded shaper.
portEgrExpShaperCls8StMonOvrOct [Port Egr Exp Shaper Cls 8 St Mon Ovr Oct] (tPortEgrExpShaperCls8StMonOvrOct)	java. math. BigInteger	The value of tPortEgrExpShaperCls8StMonOvrOct indicates the number of octets above the configured monitor-threshold (since last read) by the class '8' egress expanded shaper.

Table 529 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PortIngQosQueueStat MIB entry name: tmnxPortIngQosQStatEntry Entry description: Ingress statistics about a specific port's QoS queue-group queue. Table description (for tmnxPortIngQosQStatTable): A table that contains ingress QoS queue-group queue port statistics. Supports realtime plotting Does not support scheduled collection Monitored class: ethernetequipment.AccessIngrQGroup</p>		
portIngQosQStatDpdHiPrioOcts [Port Ing Qos QStat Dpd Hi Prio Octs] (tmnxPortIngQosQStatDpdHiPrioOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatDpdHiPrioOcts indicates the number of high priority octets, as determined by the port ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portIngQosQStatDpdHiPrioPkts [Port Ing Qos QStat Dpd Hi Prio Pkts] (tmnxPortIngQosQStatDpdHiPrioPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatDpdHiPrioPkts indicates the number of high priority packets, as determined by the port ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portIngQosQStatDpdLoPrioOcts [Port Ing Qos QStat Dpd Lo Prio Octs] (tmnxPortIngQosQStatDpdLoPrioOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatDpdLoPrioOcts indicates the number of low priority octets, as determined by the port ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portIngQosQStatDpdLoPrioPkts [Port Ing Qos QStat Dpd Lo Prio Pkts] (tmnxPortIngQosQStatDpdLoPrioPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatDpdLoPrioPkts indicates the number of low priority packets, as determined by the port ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portIngQosQStatFwdInProfOcts [Port Ing Qos QStat Fwd In Prof Octs] (tmnxPortIngQosQStatFwdInProfOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatFwdInProfOcts indicates the number of in-profile octets (rate below CIR) forwarded by the ingress Qchip.
portIngQosQStatFwdInProfPkts [Port Ing Qos QStat Fwd In Prof Pkts] (tmnxPortIngQosQStatFwdInProfPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatFwdInProfPkts indicates the number of in-profile packets (rate below CIR) forwarded by the ingress Qchip.

Table 529 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portIngQosQStatFwdOutProfOcts [Port Ing Qos QStat Fwd Out Prof Octs] (tmnxPortIngQosQStatFwdOutProfOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatFwdOutProfOcts indicates the number of out-of-profile octets (rate above CIR) forwarded by the ingress Qchip.
portIngQosQStatFwdOutProfPkts [Port Ing Qos QStat Fwd Out Prof Pkts] (tmnxPortIngQosQStatFwdOutProfPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatFwdOutProfPkts indicates the number of out-of-profile packets (rate above CIR) forwarded by the ingress Qchip.
portIngQosQStatOffHiPrioOcts [Port Ing Qos QStat Off Hi Prio Octs] (tmnxPortIngQosQStatOffHiPrioOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatOffHiPrioOcts indicates the number of high priority octets, as determined by the port ingress QoS policy, offered by the Pchip to the Qchip.
portIngQosQStatOffHiPrioPkts [Port Ing Qos QStat Off Hi Prio Pkts] (tmnxPortIngQosQStatOffHiPrioPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatOffHiPrioPkts indicates the number of high priority packets, as determined by the port ingress QoS policy, offered by the Pchip to the Qchip.
portIngQosQStatOffLoPrioOcts [Port Ing Qos QStat Off Lo Prio Octs] (tmnxPortIngQosQStatOffLoPrioOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatOffLoPrioOcts indicates the number of low priority octets, as determined by the port ingress QoS policy, offered by the Pchip to the Qchip.
portIngQosQStatOffLoPrioPkts [Port Ing Qos QStat Off Lo Prio Pkts] (tmnxPortIngQosQStatOffLoPrioPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatOffLoPrioPkts indicates the number of low priority packets, as determined by the port ingress QoS policy, offered by the Pchip to the Qchip.
portIngQosQStatQueueId [Port Ing Qos QStat Queue Id] (tmnxPortIngQosQStatQueueId)	long	The value of tmnxPortIngQosQStatQueueId specifies the queue-group queue ID which is used as the fourth index to the table entry.
portIngQosQStatUncolOctsOff [Port Ing Qos QStat Uncol Octs Off] (tmnxPortIngQosQStatUncolOctsOff)	java. math. BigInteger	The value of tmnxPortIngQosQStatUncolOctsOff indicates the number of uncolored octets offered to the ingress Qchip.

Table 529 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portIngQosQStatUncolPktsOff [Port Ing Qos QStat Uncol Pkts Off] (tmnxPortIngQosQStatUncolPktsOff)	java. math. BigInteger	The value of tmnxPortIngQosQStatUncolPktsOff indicates the number of uncolored packets offered to the ingress Qchip.
<p>PortNetEgrQGrpArbitStat</p> <p>MIB entry name: tPortNetEgrQGrpArbitStatEntry</p> <p>Entry description: The value of tPortNetEgrQGrpArbitStatEntry defines an entry in the tPortNetEgrQGrpArbitStatTable. It represents statistics about a specific QoS egress queue group arbiter.</p> <p>Table description (for tPortNetEgrQGrpArbitStatTable): The value of tPortNetEgrQGrpArbitStatTable contains egress QoS queue group arbiter statistics on network side.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetequipment.NetworkEgrQGroup</p>		
portNetEgrQGrpArbitStatFwdOcts [Port Net Egr QGrp Arbit Stat Fwd Octs] (tPortNetEgrQGrpArbitStatFwdOcts)	java. math. BigInteger	The value of tPortNetEgrQGrpArbitStatFwdOcts indicates the number of fowrwarded octets by the egress queue group arbiter Pchip.
portNetEgrQGrpArbitStatFwdOctsH [Port Net Egr QGrp Arbit Stat Fwd Octs H] (tPortNetEgrQGrpArbitStatFwdOctsH)	long	The value of tPortNetEgrQGrpArbitStatFwdOctsH indicates the upper 32 bits of tPortNetEgrQGrpArbitStatFwdOcts.
portNetEgrQGrpArbitStatFwdOctsL [Port Net Egr QGrp Arbit Stat Fwd Octs L] (tPortNetEgrQGrpArbitStatFwdOctsL)	long	The value of tPortNetEgrQGrpArbitStatFwdOctsL indicates the lower 32 bits of tPortNetEgrQGrpArbitStatFwdOcts.
portNetEgrQGrpArbitStatFwdPkts [Port Net Egr QGrp Arbit Stat Fwd Pkts] (tPortNetEgrQGrpArbitStatFwdPkts)	java. math. BigInteger	The value of tPortNetEgrQGrpArbitStatFwdPkts indicates the number of fowrwarded packets by the egress queue group arbiter Pchip.

Table 529 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portNetEgrQGrpArbitStatFwdPktsH [Port Net Egr QGrp Arbit Stat Fwd Pkts H] (tPortNetEgrQGrpArbitStatFwdPktsH)	long	The value of tPortNetEgrQGrpArbitStatFwdPktsH indicates the upper 32 bits of tPortNetEgrQGrpArbitStatFwdPkts.
portNetEgrQGrpArbitStatFwdPktsL [Port Net Egr QGrp Arbit Stat Fwd Pkts L] (tPortNetEgrQGrpArbitStatFwdPktsL)	long	The value of tPortNetEgrQGrpArbitStatFwdPktsL indicates the lower 32 bits of tPortNetEgrQGrpArbitStatFwdPkts.
portNetEgrQGrpArbitStatName [Port Net Egr QGrp Arbit Stat Name] (tPortNetEgrQGrpArbitStatName)	String	The value of tPortNetEgrQGrpArbitStatName specifies the name of the egress QoS arbiter of this port network queue group.
<p>PortNetEgrQGrpPStat</p> <p>MIB entry name: tPortNetEgrQGrpPStatEntry</p> <p>Entry description: The value of tPortNetEgrQGrpPStatEntry defines an entry in the tPortNetEgrQGrpPStatTable. NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>WaveLengthTrackerOpticalStats</p> <p>MIB entry name: tmnxOpticalPortOperEntry</p> <p>Entry description: Each row entry represents an Optical port on a IOM card in a chassis in the system. The tmnxOpticalPortOperEntry contains attributes that are unique to the Optical ports.</p> <p>Table description (for tmnxOpticalPortOperTable): The tmnxOpticalPortOperTable has an entry for each DWDM Optical port on each IOM card in each chassis in the Nokia SROS system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetequipment.WaveLengthTracker</p>		
opticalAmpPowerIn [Optical Amp Power In] (tmnxOpticalPortAmpPowerIn)	float	The value of tmnxOpticalPortAmpPowerIn indicates the received average optical power at the input of the optical amplifier. The UNITS millibels (mBm) are units of 0.01 decibel relative to one milliwatt (0 dBm) or dBm multiplied by 100. The mBm is used when integers are required instead of floating point. For example: -5.21 dBm is equivalent to -521 mBm.
<p>WaveLengthTrackerStats</p> <p>MIB entry name: tmnxWaveTrackerEntry</p> <p>Entry description: Each row entry represents a Wave Tracker capable port on a IOM card in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. The tmnxWaveTrackerEntry contains attributes that are unique to the Wave Tracker capable ports.</p> <p>Table description (for tmnxWaveTrackerTable): The tmnxWaveTrackerTable has an entry for each Wavelength Tracker port on each IOM card in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetequipment.WaveLengthTracker</p>		

Table 529 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
targetPower [Target Power] (tmnxWaveTrackerTargetPower)	float	The value of tmnxWaveTrackerTargetPower specifies the desired average output power of the interface's transmitted optical signal when tmnxWaveTrackerPowerCtrlEnable is set to 'true (1)'. The UNITS millibels (mBm) are units of 0.01 decibel relative to one milliwatt (0 dBm) or dBm multiplied by 100. The mBm is used when integers are required instead of floating point. For example: -5.21 dBm is equivalent to -521 mBm.
waveTrackerLowerPowerMargin [Wave Tracker Lower Power Margin] (tmnxWaveTrackerLowerPowerMargin)	float	tmnxWaveTrackerLowerPowerMargin indicates how much the average output power of the interface's transmitted optical signal can be decreased. The UNITS mBm are units of 0.01 dB or dB multiplied by 100. The mB is used when integers are required instead of floating point. For example: 5.21 dB is equivalent to 521 mB.
waveTrackerMeasuredPower [Wave Tracker Measured Power] (tmnxWaveTrackerMeasuredPower)	float	tmnxWaveTrackerMeasuredPower indicates the current average output power of the interface's transmitted optical signal. The UNITS mBm are units of 0.01 dBm or dBm multiplied by 100. The mBm is used when integers are required instead of floating point. For example: -5.21 dBm is equivalent to -521 mBm.
waveTrackerUpperPowerMargin [Wave Tracker Upper Power Margin] (tmnxWaveTrackerUpperPowerMargin)	float	tmnxWaveTrackerUpperPowerMargin indicates how much the average output power of the interface's transmitted optical signal can be increased. The UNITS millibels (mB) are units of 0.01 dB or dB multiplied by 100. The mB is used when integers are required instead of floating point. For example: 5.21 dB is equivalent to 521 mB.

<p>CfmDmmBinStats</p> <p>MIB entry name: tmnxOamPmStsDelayDmmBinEntry</p> <p>Entry description: tmnxOamPmStsDelayDmmBinEntry contains the per-bin DMM (Delay Measurement Message) statistics for one OAM Performance Monitoring Measurement Interval Data Set. Rows are created in this table when a corresponding row is created in tmnxOamPmStsDelayDmmTable. If the tmnxOamPmStsDelayDmmTable row is created with the index value tmnxOamPmCfgBinType = 'fd(1)', then the the number of rows created in this table is tmnxOamPmCfgBinGroupFdBinCount. Similarly, 'fdr(2)' and 'ifdv(3)'. Rows are destroyed in this table when the corresponding tmnxOamPmStsDelayDmmTable row is destroyed. When a test is running, the DMM statistics for a test's raw (i.e. 'miRaw(1)') measurement interval duration can be cleared using TIMETRA-CLEAR-MIB::tmnxClearAction. A successful clear operation zeros all the statistics in the specified rows.</p> <p>Table description (for tmnxOamPmStsDelayDmmBinTable): tmnxOamPmStsDelayDmmBinTable contains the per-bin DMM (Delay Measurement Message) statistics for OAM Performance Monitoring Measurement Interval Data Sets.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetoam.CfmDmmBin</p>		
delayDmmBinBwdCount [Delay Dmm Bin Bwd Count] (tmnxOamPmStsDelayDmmBinBwdCount)	long	The value of tmnxOamPmStsDelayDmmBinBwdCount indicates the number of measurements in the backward direction that fall within the configured range (in microseconds) of the specified bin. For example, suppose the index values for this object are as follows (where the index names are abbreviated, and index columns are underlined with octothorpes). <u>_SessName</u> <u>_IntvlDuration</u> <u>_IntvlNum</u> <u>_BinType</u> <u>_BinNum</u> ##### ##### 'dmmSess1' 'mi15Minutes(2)' 1 'fd(1)' 0 Then, the value of this object indicates the number of DMM measurements (in microseconds) in the backward direction in the first interval of 'dmmSess1' that fit in the lowest configured delay range (as configured using tmnxOamPmCfgBinLowerBound).

Table 530 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
delayDmmBinFwdCount [Delay Dmm Bin Fwd Count] (tmnxOamPmStsDelayDmmBinFwdCount)	long	The value of tmnxOamPmStsDelayDmmBinFwdCount indicates the number of measurements in the forward direction that fall within the configured range (in microseconds) of the specified bin. For example, suppose the index values for this object are as follows (where the index names are abbreviated, and index columns are underlined with octothorpes). <u>_SessName</u> <u>_IntvlDuration</u> <u>_IntvlNum</u> <u>_BinType</u> <u>_BinNum</u> ##### ##### 'dmmSess1' 'mi15Minutes(2)' 1 'fd(1)' 9 Then, the value of this object indicates the number of DMM measurements (in microseconds) in the forward direction in the first interval of 'dmmSess1' that fit in the highest configured delay range (as configured using tmnxOamPmCfgBinLowerBound).
delayDmmBinNum [Delay Dmm Bin Num] (tmnxOamPmStsDelayDmmBinNum)	long	The value of tmnxOamPmStsDelayDmmBinNum specifies the bin number of the statistics to be read.
delayDmmBintwoyCount [Delay Dmm Bintwoy Count] (tmnxOamPmStsDelayDmmBin2wyCount)	long	The value of tmnxOamPmStsDelayDmmBin2wyCount indicates the number of two-way measurements that fall within the configured range (in microseconds) of the specified bin. For example, suppose the index values for this object are as follows (where the index names are abbreviated, and index columns are underlined with octothorpes). <u>_SessName</u> <u>_IntvlDuration</u> <u>_IntvlNum</u> <u>_BinType</u> <u>_BinNum</u> ##### ##### 'dmmSess1' 'mi15Minutes(2)' 1 'fd(1)' 0 Then, the value of this object indicates the number of two-way DMM measurements (in microseconds) in the first interval of 'dmmSess1' that fit in the lowest configured delay range (as configured using tmnxOamPmCfgBinLowerBound).
intervalDuration [Interval Duration] (tmnxOamPmStsMeasIntvlDuration)	int	The value of tmnxOamPmStsMeasIntvlDuration specifies the duration of the interval of the statistics to be read (e.g. 'mi15Minutes(2)').

Table 530 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmBinType [Pm Bin Type] (tmnxOamPmCfgBinType)	int	The value of tmnxOamPmCfgBinType specifies the type of the bin to be configured or read.
pmStatsIntervalNum [Pm Stats Interval Num] (tmnxOamPmStsIntvlNum)	long	The value of tmnxOamPmStsIntvlNum specifies the interval number of the statistics to be read. The system's creation and destruction of interval numbers is described in the tmnxOamPmStsBaseEntry DESCRIPTION clause.
sessionName [Session Name] (tmnxOamPmCfgSessName)	String	The value of tmnxOamPmCfgSessName specifies the name of the session to be configured or read.
<p>CfmDmmSessionStats</p> <p>MIB entry name: tmnxOamPmStsDelayDmmEntry</p> <p>Entry description: tmnxOamPmStsDelayDmmEntry contains the summarized DMM (Delay Measurement Message) statistics for one OAM Performance Monitoring Measurement Interval Data Set. When a row is created in tmnxOamPmStsBaseTable with tmnxOamPmStsBaseTestType = 'dmm(1)', three rows are created in this table. The three rows have the following values in the tmnxOamPmCfgBinType index column: 'fd(1)', 'fdr(2)', and 'ifdv(3)'. Rows are destroyed in this table when the corresponding tmnxOamPmStsBaseTable row is destroyed. When a test is running, the DMM statistics for a test's raw (i.e. 'miRaw(1)') measurement interval duration can be cleared using TIMETRA-CLEAR-MIB::tmnxClearAction. A successful clear operation zeros all the statistics in the specified rows.</p> <p>Table description (for tmnxOamPmStsDelayDmmTable): tmnxOamPmStsDelayDmmTable contains the summarized DMM (Delay Measurement Message) statistics for OAM Performance Monitoring Measurement Interval Data Sets.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetoam.CfmDmmSession</p>		
delayDmm2wyAvg [Delay Dmm 2 wy Avg] (tmnxOamPmStsDelayDmm2wyAvg)	long	The value of tmnxOamPmStsDelayDmm2wyAvg indicates the average two-way delay for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').

Table 530 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
delayDmm2wyMax [Delay Dmm 2 wy Max] (tmnxOamPmStsDelayDmm2wyMax)	long	The value of tmnxOamPmStsDelayDmm2wyMax indicates the maximum two-way delay for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayDmm2wyMin [Delay Dmm 2 wy Min] (tmnxOamPmStsDelayDmm2wyMin)	long	The value of tmnxOamPmStsDelayDmm2wyMin indicates the minimum two-way delay for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayDmmBwdAvg [Delay Dmm Bwd Avg] (tmnxOamPmStsDelayDmmBwdAvg)	long	The value of tmnxOamPmStsDelayDmmBwdAvg indicates the average delay in the backward direction for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayDmmBwdMax [Delay Dmm Bwd Max] (tmnxOamPmStsDelayDmmBwdMax)	long	The value of tmnxOamPmStsDelayDmmBwdMax indicates the maximum delay in the backward direction for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayDmmBwdMin [Delay Dmm Bwd Min] (tmnxOamPmStsDelayDmmBwdMin)	long	The value of tmnxOamPmStsDelayDmmBwdMin indicates the minimum delay in the backward direction for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayDmmFwdAvg [Delay Dmm Fwd Avg] (tmnxOamPmStsDelayDmmFwdAvg)	long	The value of tmnxOamPmStsDelayDmmFwdAvg indicates the average delay in the forward direction for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayDmmFwdMax [Delay Dmm Fwd Max] (tmnxOamPmStsDelayDmmFwdMax)	long	The value of tmnxOamPmStsDelayDmmFwdMax indicates the maximum delay in the forward direction for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayDmmFwdMin [Delay Dmm Fwd Min] (tmnxOamPmStsDelayDmmFwdMin)	long	The value of tmnxOamPmStsDelayDmmFwdMin indicates the minimum delay in the forward direction for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').

Table 530 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
intervalDuration [Interval Duration] (tmnxOamPmStsMeasIntvlDuration)	int	The value of tmnxOamPmStsMeasIntvlDuration specifies the duration of the interval of the statistics to be read (e.g. 'mi15Minutes(2)').
pmBinType [Pm Bin Type] (tmnxOamPmCfgBinType)	int	The value of tmnxOamPmCfgBinType specifies the type of the bin to be configured or read.
pmStatsIntervalNum [Pm Stats Interval Num] (tmnxOamPmStsIntvlNum)	long	The value of tmnxOamPmStsIntvlNum specifies the interval number of the statistics to be read. The system's creation and destruction of interval numbers is described in the tmnxOamPmStsBaseEntry DESCRIPTION clause.
sessionName [Session Name] (tmnxOamPmCfgSessName)	String	The value of tmnxOamPmCfgSessName specifies the name of the session to be configured or read.
<p>CfmGlobalOpcodeStats</p> <p>MIB entry name: tmnxDot1agCfmGlobalOpcodeEntry</p> <p>Entry description: A Global Opcode Stats Table entry.</p> <p>Table description (for tmnxDot1agCfmGlobalOpcodeTable): tmnxDot1agCfmGlobalOpcodeTable consists of global statistics that are kept in the receive and transmit direction on the node for each CFM PDU Opcode.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetoam.CfmGlobalOpcode</p>		
globalOpcode [Global Opcode] (tmnxDot1agCfmGlobalOpcode)	int	Integer that defines which CFM PDU Opcode the statistics refer to.
globalOpcodeRx [Global Opcode Rx] (tmnxDot1agCfmGlobalOpcodeRx)	long	The total number of PDUs received on the node with the specified Opcode.

Table 530 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
globalOpcodeTx [Global Opcode Tx] (tmnxDot1agCfmGlobalOpcodeTx)	long	The total number of PDUs transmitted from the node with the specified Opcode.

Table 530 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CfmLmmSessionStats</p> <p>MIB entry name: tmnxOamPmStsBaseEntry</p> <p>Entry description: tmnxOamPmStsBaseEntry contains the base statistics for one OAM Performance Monitoring Measurement Interval Data Set. Rows are created in this table when a test is started (e.g. using tmnxOamPmCfgDelayDmmAdminStatus and tmnxOamPmCfgDelayDmmOnDmndStatus). At that time, a row for the current interval (with the index value tmnxOamPmStsIntvlNum=1) is created for each row with a matching session name in tmnxOamPmCfgMeasIntvlTable. In addition, a row is created in this table for the test's 'miRaw(1)' interval. After that, the timed creation and destruction of rows in this table is explained using the following example. Suppose the configured number of intervals to be retained is as follows (where index columns are underlined with octothorpes, and 'tmnxOamPm' is abbreviated as '_'): <code>_CfgSessName _CfgMeasIntvlDuration _CfgMeasIntvlsStored ##### ##### 'mySess1' 'mi15Minutes(2)' 3</code> Suppose statistics collection started at t = 0 (minutes). Suppose the following rows exist in tmnxOamPmStsBaseTable at t = 59 (minutes): <code>_CfgSessName _StsBaseTestType _StsIntvlDuration _StsIntvlNum ##### ##### 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 1 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 2 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 3 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 4</code> The interval numbers are assigned as follows: 1 - the historical interval ended at t = 15 minutes 2 - the historical interval ended at t = 30 minutes 3 - the historical interval ended at t = 45 minutes 4 - the current interval Then, after the next 15 minute interval ends (e.g. at t = 61 minutes), the following rows will exist: <code>_CfgSessName _StsBaseTestType _StsIntvlDuration _StsIntvlNum ##### ##### 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 2 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 3 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 4 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 5</code> The interval numbers are assigned as follows: 2 - the historical interval ended at t = 30 minutes 3 - the historical interval ended at t = 45 minutes 4 - the historical interval ended at t = 60 minutes 5 - the current interval The row with interval number 1 was destroyed, because tmnxOamPmCfgMeasIntvlsStored=3 specifies that at most three historical intervals be retained. Rows are also destroyed in this table when the corresponding tmnxOamPmCfgMeasIntvlTable row is destroyed. When the index value tmnxOamPmStsMeasIntvlDuration is 'miRaw(1)', only one interval is available (i.e. tmnxOamPmStsIntvlNum = 1). When a test is running, the measurement interval data set for a test's 'miRaw(1)' measurement interval duration can be cleared using TIMETRA-CLEAR-MIB::tmnxClearAction. The change to the objects in the specified row is as follows. Object Change on Clear Operation tmnxOamPmStsBaseOperStatus No change tmnxOamPmStsBaseSuspect Set to 'true(1)' tmnxOamPmStsBaseStartTime Set to UTC time of the clear operation tmnxOamPmStsBaseElapsedTime Set to zero tmnxOamPmStsBaseTestFramesTx Set to zero tmnxOamPmStsBaseTestFramesRx Set to zero Measurement interval data sets for measurement interval durations other than 'miRaw(1)' cannot be cleared.</p> <p>Table description (for tmnxOamPmStsBaseTable): tmnxOamPmStsBaseTable contains the base statistics for OAM Performance Monitoring Measurement Interval Data Sets. The statistics in this table are common to all test types (e.g. Delay Measurement and Synthetic Loss Measurement tests).</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetoam.CfmLmmSession</p>		

Table 530 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
intervalDuration [Interval Duration] (tmnxOamPmStsMeasIntvlDuration)	int	The value of tmnxOamPmStsMeasIntvlDuration specifies the duration of the interval of the statistics to be read (e.g. 'mi15Minutes(2)').
pmLmmAvgFlrBwd [Pm Lmm Avg Flr Bwd] (tmnxOamPmStsLossLmmAvgFlrBwd)	long	The compliance statement for management of OAM Performance Management on Nokia SROS series systems, release 12.0.
pmLmmAvgFlrFwd [Pm Lmm Avg Flr Fwd] (tmnxOamPmStsLossLmmAvgFlrFwd)	long	The value of tmnxOamPmStsLossLmmAvgFlrFwd indicates the average FLR (Frame Loss Ratio) in the forward direction for the specified measurement interval data set. This value is computed using the procedures in Y.1731 Section 8.1.
pmLmmMaxFlrBwd [Pm Lmm Max Flr Bwd] (tmnxOamPmStsLossLmmMaxFlrBwd)	long	The value of tmnxOamPmStsLossLmmMaxFlrBwd indicates the maximum FLR (Frame Loss Ratio) in the backward direction for the specified measurement interval data set. This value is computed using the procedures in Y.1731 Section 8.1.
pmLmmMaxFlrFwd [Pm Lmm Max Flr Fwd] (tmnxOamPmStsLossLmmMaxFlrFwd)	long	The value of tmnxOamPmStsLossLmmMaxFlrFwd indicates the maximum FLR (Frame Loss Ratio) in the forward direction for the specified measurement interval data set. This value is computed using the procedures in Y.1731 Section 8.1.
pmLmmMinFlrBwd [Pm Lmm Min Flr Bwd] (tmnxOamPmStsLossLmmMinFlrBwd)	long	The value of tmnxOamPmStsLossLmmMinFlrBwd indicates the minimum FLR (Frame Loss Ratio) in the backward direction for the specified measurement interval data set. This value is computed using the procedures in Y.1731 Section 8.1.
pmLmmMinFlrFwd [Pm Lmm Min Flr Fwd] (tmnxOamPmStsLossLmmMinFlrFwd)	long	The value of tmnxOamPmStsLossLmmMinFlrFwd indicates the minimum FLR (Frame Loss Ratio) in the forward direction for the specified measurement interval data set. This value is computed using the procedures in Y.1731 Section 8.1.

Table 530 ethernetOam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmLmmRxBwd [Pm Lmm Rx Bwd] (tmnxOamPmStsLossLmmRxBwd)	java. math. BigInteger	The value of tmnxOamPmStsLossLmmRxBwd indicates the number of service frames received in the backward direction for the specified measurement interval data set. This counter is computed using the procedures in Y.1731 Section 8.1.
pmLmmRxFwd [Pm Lmm Rx Fwd] (tmnxOamPmStsLossLmmRxFwd)	java. math. BigInteger	The value of tmnxOamPmStsLossLmmRxFwd indicates the number of service frames received in the forward direction for the specified measurement interval data set. This counter is computed using the procedures in Y.1731 Section 8.1.
pmLmmTxBwd [Pm Lmm Tx Bwd] (tmnxOamPmStsLossLmmTxBwd)	java. math. BigInteger	The value of tmnxOamPmStsLossLmmTxBwd indicates the number of service frames transmitted in the backward direction for the specified measurement interval data set. This counter is computed using the procedures in Y.1731 Section 8.1.
pmLmmTxFwd [Pm Lmm Tx Fwd] (tmnxOamPmStsLossLmmTxFwd)	java. math. BigInteger	The value of tmnxOamPmStsLossLmmTxFwd indicates the number of service frames transmitted in the forward direction for the specified measurement interval data set. This counter is computed using the procedures in Y.1731 Section 8.1.
pmStatsIntervalNum [Pm Stats Interval Num] (tmnxOamPmStsIntvlNum)	long	The value of tmnxOamPmStsIntvlNum specifies the interval number of the statistics to be read. The system's creation and destruction of interval numbers is described in the tmnxOamPmStsBaseEntry DESCRIPTION clause.
sessionName [Session Name] (tmnxOamPmCfgSessName)	String	The value of tmnxOamPmCfgSessName specifies the name of the session to be configured or read.

Table 530 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
CfmMepOpcodeStats MIB entry name: tmnxDot1agCfmMepOpcodeEntry Entry description: A Mep Opcode Stats Table entry. Table description (for tmnxDot1agCfmMepOpcodeTable): tmnxDot1agCfmMepOpcodeTable consists of statistics that are kept in the receive and transmit direction on a MEP for each CFM PDU Opcode. Supports realtime plotting Supports scheduled collection Monitored class: ethernetoam.CfmMepOpcode		
mepOpcode [Mep Opcode] (tmnxDot1agCfmMepOpcode)	int	The value of tmnxDot1agCfmMepOpcode specifies the CFM PDU Opcode to which the statistics refer.
mepOpcodeRx [Mep Opcode Rx] (tmnxDot1agCfmMepOpcodeRx)	long	The total number of PDUs received on the MEP with the specified Opcode.
mepOpcodeTx [Mep Opcode Tx] (tmnxDot1agCfmMepOpcodeTx)	long	The total number of PDUs transmitted from the MEP with the specified Opcode.
CfmPacketCountStats MIB entry name: tmnxDot1agCfmGlobalPacketStats Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement		
globalAisTxActive [Global Ais Tx Active] (tmnxDot1agCfmGlobalAisTxActive)	long	The value of tmnxDot1agCfmGlobalAisTxActive indicates the number of sessions where fault (AIS or other) is actively being transmitted.

Table 530 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
globalAisTxFail [Global Ais Tx Fail] (tmnxDot1agCfmGlobalAisTxFail)	long	The value of tmnxDot1agCfmGlobalAisTxFail indicates the number of sessions where fault (AIS or other) can't be transmitted due to lack of resources.
globalPacketDiscard [Global Packet Discard] (tmnxDot1agCfmGlobalPacketDiscard)	long	The value of tmnxDot1agCfmGlobalPacketDiscard indicates the number of packets discarded by ETH-CFM. A packet may be discarded for several reasons including, but not limited to, malformed PDU, invalid TLVs, MEP admin down, etc.
globalPacketDropped [Global Packet Dropped] (tmnxDot1agCfmGlobalPacketDropped)	long	The value of tmnxDot1agCfmGlobalPacketDropped indicates the number of packets dropped by ETH-CFM. A packet is dropped because of resource contention.
globalPacketRxCount [Global Packet Rx Count] (tmnxDot1agCfmGlobalPacketRxCount)	long	The value of tmnxDot1agCfmGlobalPacketRxCount indicates the number of received ETH-CFM packets.
globalPacketTxCount [Global Packet Tx Count] (tmnxDot1agCfmGlobalPacketTxCount)	long	The value of tmnxDot1agCfmGlobalPacketTxCount indicates the number of transmitted ETH-CFM packets.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CfmSImSessionStats</p> <p>MIB entry name: tmnxOamPmStsBaseEntry</p> <p>Entry description: tmnxOamPmStsBaseEntry contains the base statistics for one OAM Performance Monitoring Measurement Interval Data Set. Rows are created in this table when a test is started (e.g. using tmnxOamPmCfgDelayDmmAdminStatus and tmnxOamPmCfgDelayDmmOnDmndStatus). At that time, a row for the current interval (with the index value tmnxOamPmStsIntvlNum=1) is created for each row with a matching session name in tmnxOamPmCfgMeasIntvlTable. In addition, a row is created in this table for the test's 'miRaw(1)' interval. After that, the timed creation and destruction of rows in this table is explained using the following example. Suppose the configured number of intervals to be retained is as follows (where index columns are underlined with octothorpes, and 'tmnxOamPm' is abbreviated as '_'): <u>_CfgSessName</u> <u>_CfgMeasIntvlDuration</u> <u>_CfgMeasIntvlsStored</u> ##### ##### 'mySess1' 'mi15Minutes(2)' 3 Suppose statistics collection started at t = 0 (minutes). Suppose the following rows exist in tmnxOamPmStsBaseTable at t = 59 (minutes): <u>_CfgSessName</u> <u>_StsBaseTestType</u> <u>_StsIntvlDuration</u> <u>_StsIntvlNum</u> ##### ##### 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 1 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 2 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 3 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 4 The interval numbers are assigned as follows: 1 - the historical interval ended at t = 15 minutes 2 - the historical interval ended at t = 30 minutes 3 - the historical interval ended at t = 45 minutes 4 - the current interval Then, after the next 15 minute interval ends (e.g. at t = 61 minutes), the following rows will exist: <u>_CfgSessName</u> <u>_StsBaseTestType</u> <u>_StsIntvlDuration</u> <u>_StsIntvlNum</u> ##### ##### 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 2 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 3 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 4 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 5 The interval numbers are assigned as follows: 2 - the historical interval ended at t = 30 minutes 3 - the historical interval ended at t = 45 minutes 4 - the historical interval ended at t = 60 minutes 5 - the current interval The row with interval number 1 was destroyed, because tmnxOamPmCfgMeasIntvlsStored=3 specifies that at most three historical intervals be retained. Rows are also destroyed in this table when the corresponding tmnxOamPmCfgMeasIntvlTable row is destroyed. When the index value tmnxOamPmStsMeasIntvlDuration is 'miRaw(1)', only one interval is available (i.e. tmnxOamPmStsIntvlNum = 1). When a test is running, the measurement interval data set for a test's 'miRaw(1)' measurement interval duration can be cleared using TIMETRA-CLEAR-MIB::tmnxClearAction. The change to the objects in the specified row is as follows. Object Change on Clear Operation tmnxOamPmStsBaseOperStatus No change tmnxOamPmStsBaseSuspect Set to 'true(1)' tmnxOamPmStsBaseStartTime Set to UTC time of the clear operation tmnxOamPmStsBaseElapsedTime Set to zero tmnxOamPmStsBaseTestFramesTx Set to zero tmnxOamPmStsBaseTestFramesRx Set to zero Measurement interval data sets for measurement interval durations other than 'miRaw(1)' cannot be cleared.</p> <p>Table description (for tmnxOamPmStsBaseTable): tmnxOamPmStsBaseTable contains the base statistics for OAM Performance Monitoring Measurement Interval Data Sets. The statistics in this table are common to all test types (e.g. Delay Measurement and Synthetic Loss Measurement tests).</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetoam.CfmSImSession</p>		

Table 530 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
intervalDuration [Interval Duration] (tmnxOamPmStsMeasIntvlDuration)	int	The value of tmnxOamPmStsMeasIntvlDuration specifies the duration of the interval of the statistics to be read (e.g. 'mi15Minutes(2)').
pmSlmAvailIndBwd [Pm Slm Avail Ind Bwd] (tmnxOamPmStsLossSlmAvailIndBwd)	long	The value of tmnxOamPmStsLossSlmAvailIndBwd indicates the number of availability indicators evaluated as Available in the backward direction for the specified measurement interval data set.
pmSlmAvailIndFwd [Pm Slm Avail Ind Fwd] (tmnxOamPmStsLossSlmAvailIndFwd)	long	The value of tmnxOamPmStsLossSlmAvailIndFwd indicates the number of availability indicators evaluated as Available in the forward direction for the specified measurement interval data set.
pmSlmAvgFlrBwd [Pm Slm Avg Flr Bwd] (tmnxOamPmStsLossSlmAvgFlrBwd)	float	The value of tmnxOamPmStsLossSlmAvgFlrBwd indicates the average FLR (Frame Loss Ratio) in the backward direction for the specified measurement interval data set.
pmSlmAvgFlrFwd [Pm Slm Avg Flr Fwd] (tmnxOamPmStsLossSlmAvgFlrFwd)	float	The value of tmnxOamPmStsLossSlmAvgFlrFwd indicates the average FLR (Frame Loss Ratio) in the forward direction for the specified measurement interval data set.
pmSlmChliBwd [Pm Slm Chli Bwd] (tmnxOamPmStsLossSlmChliBwd)	long	The value of tmnxOamPmStsLossSlmChliBwd indicates the number of CHLIs (Consecutive High Loss Intervals) in the backward direction for the specified measurement interval data set.
pmSlmChliFwd [Pm Slm Chli Fwd] (tmnxOamPmStsLossSlmChliFwd)	long	The value of tmnxOamPmStsLossSlmChliFwd indicates the number of CHLIs (Consecutive High Loss Intervals) in the forward direction for the specified measurement interval data set.
pmSlmHliBwd [Pm Slm Hli Bwd] (tmnxOamPmStsLossSlmHliBwd)	long	The value of tmnxOamPmStsLossSlmHliBwd indicates the number of HLIs (High Loss Intervals) in the backward direction for the specified measurement interval data set.

Table 530 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmSlmHliFwd [Pm Slm Hli Fwd] (tmnxOamPmStsLossSlmHliFwd)	long	The value of tmnxOamPmStsLossSlmHliFwd indicates the number of HLIs (High Loss Intervals) in the forward direction for the specified measurement interval data set.
pmSlmMaxFlrBwd [Pm Slm Max Flr Bwd] (tmnxOamPmStsLossSlmMaxFlrBwd)	float	The value of tmnxOamPmStsLossSlmMaxFlrBwd indicates the maximum FLR (Frame Loss Ratio) in the backward direction for the specified measurement interval data set.
pmSlmMaxFlrFwd [Pm Slm Max Flr Fwd] (tmnxOamPmStsLossSlmMaxFlrFwd)	float	The value of tmnxOamPmStsLossSlmMaxFlrFwd indicates the maximum FLR (Frame Loss Ratio) in the forward direction for the specified measurement interval data set.
pmSlmMinFlrBwd [Pm Slm Min Flr Bwd] (tmnxOamPmStsLossSlmMinFlrBwd)	float	The value of tmnxOamPmStsLossSlmMinFlrBwd indicates the minimum FLR (Frame Loss Ratio) in the backward direction for the specified measurement interval data set.
pmSlmMinFlrFwd [Pm Slm Min Flr Fwd] (tmnxOamPmStsLossSlmMinFlrFwd)	float	The value of tmnxOamPmStsLossSlmMinFlrFwd indicates the minimum FLR (Frame Loss Ratio) in the forward direction for the specified measurement interval data set.
pmSlmRxBwd [Pm Slm Rx Bwd] (tmnxOamPmStsLossSlmRxBwd)	long	The value of tmnxOamPmStsLossSlmRxBwd indicates the number of SLR reply frames received in the backward direction for the specified measurement interval data set. A frame is counted as received if the SLM Availability state is Available at receive time (as specified in MEF-35 Section 6.3). Otherwise, the frame is not counted. A simple count of the frames received for the test is available in tmnxOamPmStsBaseTestFramesRx.

Table 530 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmSlmRxFwd [Pm Slm Rx Fwd] (tmnxOamPmStsLossSlmRxFwd)	long	The value of tmnxOamPmStsLossSlmRxFwd indicates the number of SLM request frames received in the forward direction for the specified measurement interval data set. A frame is counted as received if the SLM Availability state is Available at receive time (as specified in MEF-35 Section 9.2.5). Otherwise, the frame is not counted. A simple count of the frames received for the test is available in tmnxOamPmStsBaseTestFramesRx.
pmSlmTxBwd [Pm Slm Tx Bwd] (tmnxOamPmStsLossSlmTxBwd)	long	The value of tmnxOamPmStsLossSlmTxBwd indicates the number of SLR reply frames transmitted in the backward direction for the specified measurement interval data set. A frame is counted as transmitted if the SLM Availability state is Available at transmit time (as specified in MEF-35 Section 9.2.5). Otherwise, the frame is not counted. A simple count of the frames transmitted for the test is available in tmnxOamPmStsBaseTestFramesTx.
pmSlmTxFwd [Pm Slm Tx Fwd] (tmnxOamPmStsLossSlmTxFwd)	long	The value of tmnxOamPmStsLossSlmTxFwd indicates the number of SLM request frames transmitted in the forward direction for the specified measurement interval data set. A frame is counted as transmitted if the SLM Availability state is Available at transmit time (as specified in MEF-35 Section 9.2.5). Otherwise, the frame is not counted. A simple count of the frames transmitted for the test is available in tmnxOamPmStsBaseTestFramesTx.
pmSlmUnavailIndBwd [Pm Slm Unavail Ind Bwd] (tmnxOamPmStsLossSlmUnavailIndBwd)	long	The value of tmnxOamPmStsLossSlmUnavailIndBwd indicates the number of availability indicators evaluated as Unavailable in the backward direction for the specified measurement interval data set.
pmSlmUnavailIndFwd [Pm Slm Unavail Ind Fwd] (tmnxOamPmStsLossSlmUnavailIndFwd)	long	The value of tmnxOamPmStsLossSlmUnavailIndFwd indicates the number of availability indicators evaluated as Unavailable in the forward direction for the specified measurement interval data set.

Table 530 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmSlmUndtAvlBwd [Pm Slm Undt Avl Bwd] (tmnxOamPmStsLossSlmUndtAvlBwd)	long	The value of tmnxOamPmStsLossSlmUndtAvlBwd indicates the number of availability indicators evaluated as Available in the backward direction based on extrapolation from the previous state. For example, this counter will be incremented when: 1. It is time to calculate an availability indicator, and 2. All the probe requests used to calculate the availability indicator have timed out, and 3. The most recently declared availability indicator in the backward direction was Available. In that case, the result is considered undetermined because no information is available to indicate if the problem is in the forward direction or the backward direction.
pmSlmUndtAvlFwd [Pm Slm Undt Avl Fwd] (tmnxOamPmStsLossSlmUndtAvlFwd)	long	The value of tmnxOamPmStsLossSlmUndtAvlFwd indicates the number of availability indicators evaluated as Available in the forward direction based on extrapolation from the previous state. For example, this counter will be incremented when: 1. It is time to calculate an availability indicator, and 2. All the probe requests used to calculate the availability indicator have timed out, and 3. The most recently declared availability indicator in the forward direction was Available. In that case, the result is considered undetermined because no information is available to indicate if the problem is in the forward direction or the backward direction.
pmSlmUndtUnavlBwd [Pm Slm Undt Unavl Bwd] (tmnxOamPmStsLossSlmUndtUnavlBwd)	long	The value of tmnxOamPmStsLossSlmUndtUnavlBwd indicates the number of availability indicators evaluated as Unavailable in the backward direction based on extrapolation from the previous state. For example, this counter will be incremented when: 1. It is time to calculate an availability indicator, and 2. All the probe requests used to calculate the availability indicator have timed out, and 3. The most recently declared availability indicator in the backward direction was Unavailable. In that case, the result is considered undetermined because no information is available to indicate if the problem is in the forward direction or the backward direction.

Table 530 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmSlmUndtUnavlFwd [Pm Slm Undt Unavl Fwd] (tmnxOamPmStsLossSlmUndtUnavlFwd)	long	The value of tmnxOamPmStsLossSlmUndtUnavlFwd indicates the number of availability indicators evaluated as Unavailable in the forward direction based on extrapolation from the previous state. For example, this counter will be incremented when: 1. It is time to calculate an availability indicator, and 2. All the probe requests used to calculate the availability indicator have timed out, and 3. The most recently declared availability indicator in the forward direction was Unavailable. In that case, the result is considered undetermined because no information is available to indicate if the problem is in the forward direction or the backward direction.
pmStatsIntervalNum [Pm Stats Interval Num] (tmnxOamPmStsIntvlNum)	long	The value of tmnxOamPmStsIntvlNum specifies the interval number of the statistics to be read. The system's creation and destruction of interval numbers is described in the tmnxOamPmStsBaseEntry DESCRIPTION clause.
sessionName [Session Name] (tmnxOamPmCfgSessName)	String	The value of tmnxOamPmCfgSessName specifies the name of the session to be configured or read.
<p>OamPerfReqTypesStats</p> <p>MIB entry name: tmnxOamSysPerfReqTypeEntry</p> <p>Entry description: Rows in tmnxOamSysPerfReqTypeTable are system-generated at CPM restart. Rows cannot be created or destroyed using SNMP.</p> <p>Table description (for tmnxOamSysPerfReqTypeTable): tmnxOamSysPerfReqTypeTable has a row for each relevant OAM echo request packet type. Each row contains packet counters.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetoam.OamPerfReqTypes</p>		
oamTypeName [Oam Type Name] (tmnxOamSysPerfReqTypeName)	String	The value of tmnxOamSysPerfReqTypeName specifies the name of an echo request packet type (e.g. 'ICMP'). The name is the index for the row.

Table 530 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxPackets [Rx Packets] (tmnxOamSysPerfReqTypeRemoteTstRx)	long	The value of tmnxOamSysPerfReqTypeRemoteTstRx indicates the number of echo request packets received from remotely initiated tests (since the last clear) for the echo request packet type specified by tmnxOamSysPerfReqTypeName.
txPackets [Tx Packets] (tmnxOamSysPerfReqTypeLocalTestTx)	long	The value of tmnxOamSysPerfReqTypeLocalTestTx indicates the number of echo request packets transmitted by locally initiated tests (since the last clear) for the echo request packet type specified by tmnxOamSysPerfReqTypeName.
OamSysPerfStats MIB entry name: tmnxOamGeneralStats Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement		
currentNumberOfSAATests [Current Number Of SAATests] (tmnxOamSysSessionCount)	long	The value of tmnxOamSysSessionCount indicates the number of OAM sessions currently allocated on this node. One OAM session is allocated when a test is configured (in the case of some test types) or activated (in the remaining cases). Tests with the following test types allocate OAM sessions: 1. SDP keep-alive. 2. Static route CPE check. 3. Filter redirect policy ping test. 4. VRRP policy host unreachable ping test. 5. Any OAM or SAA test configured using TIMETRA-OAM-TEST-MIB. 6. Any test configured using TIMETRA-OAM-PM-MIB. The session is freed when the test is deactivated or deleted. tmnxOamSysSessionCount will not exceed tmnxOamSysSessionLimit. Configuration or activation of a test will fail when tmnxOamSysSessionCount equals tmnxOamSysSessionLimit.

Table 530 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
currentTxRateForContinuousTests [Current Tx Rate For Continuous Tests] (tmnxOamSysPerfCfgTotalTx)	long	The value of tmnxOamSysPerfCfgTotalTx indicates this node's current total configured echo request packet transmission rate, for the set of tests listed in the tmnxOamSysPerfCfgLimitTx DESCRIPTION clause. For example, suppose: a) several SDP keep-alive sessions are enabled, totalling 1000 echo request packets per second, and b) several SAA continuous tests are enabled, totalling 2000 echo request packets per second, and c) no other relevant tests are enabled. Then, tmnxOamSysPerfCfgTotalTx will have the value 3000. The value of tmnxOamSysPerfCfgTotalTx will not exceed the value of tmnxOamSysPerfCfgLimitTx.
lastClearStatsTime [Last Clear Stats Time] (tmnxOamSysPerfLastClearedTime)	long	The value of tmnxOamSysPerfLastClearedTime indicates the sysUpTime when the following statistics were cleared: tmnxOamSysPerfLocalTestTx, tmnxOamSysPerfRemoteTestRx, and tmnxOamSysPerfReqTypeTable. If the statistics have not been cleared since the last CPM restart, zero is returned. A packet count which is time stamped by this object can be converted to an average packets per second value using, for example, pps = tmnxOamSysPerfLocalTestTx / [(sysUpTime - tmnxOamSysPerfLastClearedTime)/100].
maxNumberOfSAATests [Max Number Of SAATests] (tmnxOamSysSessionLimit)	long	The value of tmnxOamSysSessionLimit indicates the maximum number of OAM sessions available on this node. OAM sessions are allocated and freed as described in the tmnxOamSysSessionCount DESCRIPTION clause.
maxTxRateForAllOamTests [Max Tx Rate For All Oam Tests] (tmnxOamSysPerfOprLimitTx)	long	The value of tmnxOamSysPerfOprLimitTx indicates this node's upper bound on the total echo request packet transmission rate. Echo reply packets are not affected by this limit. The upper bound applies to echo request packets sent by the following test types: 1. SDP keep-alive. 2. Static route CPE check. 3. Filter redirect policy ping test. 4. VRRP policy host unreachable ping test. 5. Any OAM or SAA test configured using TIMETRA-OAM-TEST-MIB. 6. Any test configured using TIMETRA-OAM-PM-MIB.

Table 530 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
maxTxRateForContinousTests [Max Tx Rate For Continous Tests] (tmnxOamSysPerfCfgLimitTx)	long	The value of tmnxOamSysPerfCfgLimitTx indicates this node's upper bound on the total configured echo request packet transmission rate for a set of test types. The upper bound is enforced to avoid echo request packet transmit overload, i.e. to ensure each enabled test can transmit echo request packets at the test's configured rate. Echo reply packets are not affected by this limit. The upper bound applies to echo request packets sent by the following 'always on' test types: 1. SDP keep-alive. 2. Static route CPE check. 3. Filter redirect policy ping test. 4. VRRP policy host unreachable ping test. 5. SAA continuous test (see tmnxOamSaaCtlContinuous). 6. OAM-PM proactive test (see TIMETRA-OAM-PM-MIB::tmnxOamPmCfgSessType). For example, suppose: a) tmnxOamSysPerfCfgLimitTx has the value 4000 echo request packets per second, and b) several SDP keep-alive sessions are enabled, totalling 1000 echo request packets per second, and c) several SAA continuous tests are enabled, totalling 3000 echo request packets per second. Then, an attempt to enable an additional SAA continuous test would be rejected with a 'resourceUnavailable(13)' error.
totalNumberOfEchoRequestPacketsReceived [Total Number Of Echo Request Packets Received] (tmnxOamSysPerfRemoteTestRx)	long	The value of tmnxOamSysPerfRemoteTestRx indicates this node's total number of echo request packets received from remotely initiated tests (since the last clear).
totalNumberOfEchoRequestPacketsTransmitted [Total Number Of Echo Request Packets Transmitted] (tmnxOamSysPerfLocalTestTx)	long	The value of tmnxOamSysPerfLocalTestTx indicates this node's total number of echo request packets transmitted by locally initiated tests (since the last clear). The test types are listed in the tmnxOamSysPerfOprLimitTx DESCRIPTION clause.

Table 531 fr statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceStats</p> <p>MIB entry name: tmnxFRDlcmiEntry</p> <p>Entry description: The Parameters for a particular Data Link Connection Management Interface. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxFRDlcmiTable): The tmnxFRDlcmiTable has an entry for each port in the system that is configured for Frame Relay. It contains the parameters for the Data Link Connection Management Interface (DLCMI) for the frame relay service on this port.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: fr.Interface</p>		
lmiDiscardedMessages [Lmi Discarded Messages] (tmnxFRDlcmiDiscardedMsgs)	long	tmnxFRDlcmiDiscardedMsgs indicates the number of times the LMI agent discarded a received message because it wasn't expecting it, the type of message was incorrect, or the contents of the message were invalid.
lmiInvalidRxSeqNumMessages [Lmi Invalid Rx Seq Num Messages] (tmnxFRDlcmiInvRxSeqNumMsgs)	long	tmnxFRDlcmiInvRxSeqNumMsgs indicates the number of times the LMI agent received a message with an invalid receive sequence number: i.e. a sequence number that does not match the last transmitted sequence number of the agent.
lmiRxStatusEnquiryMessages [Lmi Rx Status Enquiry Messages] (tmnxFRDlcmiRxStatusEnqMsgs)	long	tmnxFRDlcmiRxStatusEnqMsgs indicates the number of LMI Status Enquiry messages received on this Frame Relay interface.
lmiRxStatusMessages [Lmi Rx Status Messages] (tmnxFRDlcmiRxStatusMsgs)	long	tmnxFRDlcmiRxStatusMsgs indicates the number of LMI Status messages received on this Frame Relay interface.
lmiStatusEnquiryMsgTimeouts [Lmi Status Enquiry Msg Timeouts] (tmnxFRDlcmiStatusEnqMsgTimeouts)	long	tmnxFRDlcmiStatusEnqMsgTimeouts indicates the number of times the LMI agent did not receive a Status Enquiry message within the allotted time.

Table 531 fr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lmiStatusMsgTimeouts [Lmi Status Msg Timeouts] (tmnxFRDlcmiStatusMsgTimeouts)	long	tmnxFRDlcmiStatusMsgTimeouts indicates the number of times the LMI agent did not receive a Status message within the allotted time.
lmiTxStatusEnquiryMessages [Lmi Tx Status Enquiry Messages] (tmnxFRDlcmiTxStatusEnqMsgs)	long	tmnxFRDlcmiTxStatusEnqMsgs indicates the number of LMI Status Enquiry messages transmitted on this Frame Relay interface.
lmiTxStatusMessages [Lmi Tx Status Messages] (tmnxFRDlcmiTxStatusMsgs)	long	tmnxFRDlcmiTxStatusMsgs indicates the number of LMI Status messages transmitted on this Frame Relay interface.

Table 532 gsmpp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>GsmppSessionStats</p> <p>MIB entry name: tmnxAncpSessionStatsEntry</p> <p>Entry description: Each row contains statistics information about an ANCP session known to the system. Rows are created/deleted automatically by the system. The table contains read-only information only.</p> <p>Table description (for tmnxAncpSessionStatsTable): The table tmnxAncpSessionStatsTable contains statistic information for every ANCP session known to the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: gsmpp.GsmppGroupNeighborSession</p>		
ancpAckReceived [Ancp Ack Received] (tmnxAncpSesStatRxAck)	long	The value of tmnxAncpSesStatRxAck indicates the number of GSMP ACK messages received in this ANCP session.
ancpAckTransmitted [Ancp Ack Transmitted] (tmnxAncpSesStatTxAck)	long	The value of tmnxAncpSesStatTxAck indicates the number of GSMP ACK messages that were transmitted to the ANCP neighbor in this ANCP session.
ancpLoopBackReceived [Ancp Loop Back Received] (tmnxAncpSesStatRxLoopback)	long	The value of tmnxAncpSesStatRxLoopback indicates the number of GSMP Loopback messages received in this ANCP session.
ancpLoopBackTransmitted [Ancp Loop Back Transmitted] (tmnxAncpSesStatTxLoopback)	long	The value of tmnxAncpSesStatTxLoopback indicates the number of GSMP Loopback messages that were transmitted to the ANCP neighbor in this ANCP session.
ancpPortDownReceived [Ancp Port Down Received] (tmnxAncpSesStatRxPortDown)	long	The value of tmnxAncpSesStatRxPortDown indicates the number of GSMP 'PortDown' messages received in this ANCP session.
ancpPortDownTransmitted [Ancp Port Down Transmitted] (tmnxAncpSesStatTxPortDown)	long	The value of tmnxAncpSesStatTxPortDown indicates the number of GSMP 'PortDown' messages that were transmitted to the ANCP neighbor in this session.

Table 532 gsmp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ancpPortUpReceived [Ancp Port Up Received] (tmnxAncpSesStatRxPortUp)	long	The value of tmnxAncpSesStatRxPortUp indicates the number of GSMP 'PortUp' messages received in this ANCP session.
ancpPortUpTransmitted [Ancp Port Up Transmitted] (tmnxAncpSesStatTxPortUp)	long	The value of tmnxAncpSesStatTxPortUp indicates the number of GSMP 'PortUp' messages that were transmitted to the ANCP neighbor in this session.
ancpRstAckReceived [Ancp Rst Ack Received] (tmnxAncpSesStatRxRstAck)	long	The value of tmnxAncpSesStatRxRstAck indicates the number of GSMP RST ACK messages received in this ANCP session.
ancpRstAckTransmitted [Ancp Rst Ack Transmitted] (tmnxAncpSesStatTxRstAck)	long	The value of tmnxAncpSesStatTxRstAck indicates the number of GSMP RST ACK messages that were transmitted to the ANCP neighbor in this session.
ancpSynAckReceived [Ancp Syn Ack Received] (tmnxAncpSesStatRxSynAck)	long	The value of tmnxAncpSesStatRxSynAck indicates the number of GSMP SYN ACK messages received in this ANCP session.
ancpSynAckTransmitted [Ancp Syn Ack Transmitted] (tmnxAncpSesStatTxSynAck)	long	The value of tmnxAncpSesStatTxSynAck indicates the number of GSMP SYN ACK messages that were transmitted to the ANCP neighbor in this ANCP session.
ancpSynReceived [Ancp Syn Received] (tmnxAncpSesStatRxSyn)	long	The value of tmnxAncpSesStatRxSyn indicates the number of GSMP SYN messages received in this ANCP session.
ancpSynTransmitted [Ancp Syn Transmitted] (tmnxAncpSesStatTxSyn)	long	The value of tmnxAncpSesStatTxSyn indicates the number of GSMP SYN messages that were transmitted to the ANCP neighbor in this ANCP session.

Table 532 gsmp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ancpTransmittedDropped [Ancp Transmitted Dropped] (tmnxAncpSesStatTxDrop)	long	The value of tmnxAncpSesStatTxDrop indicates the number of GSMP protocol messages that were created by the system in order for them to be sent to the ACNP neighbor, but were never transmitted.

Table 533 igmp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
GroupInterfaceSapStats MIB entry name: vRtrIgmPGrpIfSapStatsEntry Entry description: An entry in the vRtrIgmPGrpIfSapStatsTable. Table description (for vRtrIgmPGrpIfSapStatsTable): The table listing the IGMP statistics for a particular SAP on a group-interface. Supports realtime plotting Supports scheduled collection Monitored class: igmp.GroupInterfaceSap		
importPlyDrops [Import Ply Drops] (vRtrIgmPGrpIfSapImportPlyDrops)	long	The value of vRtrIgmPGrpIfSapImportPlyDrops indicates the total number of times IGMP protocol instance matched the host IP address or group/source addresses specified in the import policy tmnxSubIgmPlyImportPolicy.
rxBadChksumPkts [Rx Bad Chksum Pkts] (vRtrIgmPGrpIfSapRxBadChksumPkts)	long	The value of vRtrIgmPGrpIfSapRxBadChksumPkts indicates the total number of IGMP packets with bad checksum received for this SAP.
rxBadEncodings [Rx Bad Encodings] (vRtrIgmPGrpIfSapRxBadEncodings)	long	The value of vRtrIgmPGrpIfSapRxBadEncodings indicates the total number of IGMP packets received for this SAP which were not encoded correctly.
rxBadLenPkts [Rx Bad Len Pkts] (vRtrIgmPGrpIfSapRxBadLenPkts)	long	The value of vRtrIgmPGrpIfSapRxBadLenPkts indicates the total number of IGMP packets with bad length received for this SAP.
rxBadRecvIfPkts [Rx Bad Recv If Pkts] (vRtrIgmPGrpIfSapRxBadRecvIfPkts)	long	The value of vRtrIgmPGrpIfSapRxBadRecvIfPkts indicates the total number of IGMP packets incorrectly received for this SAP.
rxGenQueries [Rx Gen Queries] (vRtrIgmPGrpIfSapRxGenQueries)	long	The value of vRtrIgmPGrpIfSapRxGenQueries indicates the total number of IGMP General Queries received for this SAP.

Table 533 igmp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxGrpQueries [Rx Grp Queries] (vRtrIgmPGrpIfSapRxGrpQueries)	long	The value of vRtrIgmPGrpIfSapRxGrpQueries indicates the number of IGMP Group Specific Queries received for this SAP.
rxGrpSrcQueries [Rx Grp Src Queries] (vRtrIgmPGrpIfSapRxGrpSrcQueries)	long	The value of vRtrIgmPGrpIfSapRxGrpSrcQueries indicates the number of IGMP Group and Source Specific Queries received for this SAP.
rxLeaves [Rx Leaves] (vRtrIgmPGrpIfSapRxLeaves)	long	The value of vRtrIgmPGrpIfSapRxLeaves indicates the total number of IGMP V2 Leaves received for this SAP.
rxLocalScopePkts [Rx Local Scope Pkts] (vRtrIgmPGrpIfSapRxLocalScopePkts)	long	The value of the object vRtrIgmPGrpIfSapRxLocalScopePkts indicates the number of IGMP packets received on the link-local scope IPv4 multicast address.
rxNoRtrAlertPkts [Rx No Rtr Alert Pkts] (vRtrIgmPGrpIfSapRxNoRtrAlertPkts)	long	The value of vRtrIgmPGrpIfSapRxNoRtrAlertPkts indicates the total number of IGMPv3 packets received for this SAP which did not have the router alert flag set.
rxNonLocal [Rx Non Local] (vRtrIgmPGrpIfSapRxNonLocal)	long	The value of vRtrIgmPGrpIfSapRxNonLocal indicates the total number of IGMP packets received from a non-local sender.
rxPktDrops [Rx Pkt Drops] (vRtrIgmPGrpIfSapRxPktDrops)	long	The value of vRtrIgmPGrpIfSapRxPktDrops indicates the total number of IGMP packets that were received for this SAP but were dropped.
rxRsvdScopePkts [Rx Rsvd Scope Pkts] (vRtrIgmPGrpIfSapRxRsvdScopePkts)	long	The value of the object vRtrIgmPGrpIfSapRxRsvdScopePkts indicates the number of IGMP packets received on the reserved scope IPv4 multicast address.
rxUnknTypePkts [Rx Unkn Type Pkts] (vRtrIgmPGrpIfSapRxUnknTypePkts)	long	The value of vRtrIgmPGrpIfSapRxUnknTypePkts indicates the total number of IGMP packets with unknown type received for this SAP.

Table 533 igmp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxV1Reports [Rx V1 Reports] (vRtrIgmPGrpIfSapRxV1Reports)	long	The value of vRtrIgmPGrpIfSapRxV1Reports indicates the total number of IGMP V1 Reports received for this SAP.
rxV2Reports [Rx V2 Reports] (vRtrIgmPGrpIfSapRxV2Reports)	long	The value of vRtrIgmPGrpIfSapRxV2Reports indicates the total number of IGMP V2 Reports received for this SAP.
rxV3Reports [Rx V3 Reports] (vRtrIgmPGrpIfSapRxV3Reports)	long	The value of vRtrIgmPGrpIfSapRxV3Reports indicates the total number of IGMP V3 Reports received for this SAP.
rxWrongVersions [Rx Wrong Versions] (vRtrIgmPGrpIfSapRxWrongVersions)	long	The value of vRtrIgmPGrpIfSapRxWrongVersions indicates the total number of IGMP packets with wrong versions received for this SAP.
statsMcacPlcyDrp [Stats Mcac Plcy Drp] (vRtrIgmPGrpIfSapStatsMcacPlcyDrp)	long	The value of the object vRtrIgmPGrpIfSapStatsMcacPlcyDrp indicates the number times an IGMP Group is dropped because of applying a multicast CAC policy for this SAP.
statsSGTypes [Stats SGTypes] (vRtrIgmPGrpIfSapStatsSGTypes)	long	The value of vRtrIgmPGrpIfSapStatsSGTypes indicates the number of entries for this SAP for which the source type is 'sg'.
statsStarGTypes [Stats Star GTypes] (vRtrIgmPGrpIfSapStatsStarGTypes)	long	vRtrIgmPGrpIfSapStatsStarGTypes indicates the number of entries for this SAP for which the source type is 'starG'.
txErrors [Tx Errors] (vRtrIgmPGrpIfSapTxErrors)	long	The value of vRtrIgmPGrpIfSapTxErrors indicates the total number of times there was an error transmitting IGMP packets for this SAP.
txGenQueries [Tx Gen Queries] (vRtrIgmPGrpIfSapTxGenQueries)	long	The value of vRtrIgmPGrpIfSapTxGenQueries indicates the number of IGMP General Queries transmitted for this SAP.

Table 533 igmp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txGrpQueries [Tx Grp Queries] (vRtrIgmPGrplfSapTxGrpQueries)	long	The value of vRtrIgmPGrplfSapTxGrpQueries indicates the number of IGMP Group Specific Queries transmitted for this SAP.
txGrpSrcQueries [Tx Grp Src Queries] (vRtrIgmPGrplfSapTxGrpSrcQueries)	long	The value of vRtrIgmPGrplfSapTxGrpSrcQueries indicates the number of IGMP Group and Source Specific Queries transmitted for this SAP.
txLeaves [Tx Leaves] (vRtrIgmPGrplfSapTxLeaves)	long	The value of vRtrIgmPGrplfSapTxLeaves indicates the total number of IGMP Leaves transmitted for this SAP.
txV1Reports [Tx V1 Reports] (vRtrIgmPGrplfSapTxV1Reports)	long	The value of vRtrIgmPGrplfSapTxV1Reports indicates the total number of IGMP V1 Reports transmitted for this SAP.
txV2Reports [Tx V2 Reports] (vRtrIgmPGrplfSapTxV2Reports)	long	The value of vRtrIgmPGrplfSapTxV2Reports indicates the total number of IGMP V2 Reports transmitted for this SAP.
txV3Reports [Tx V3 Reports] (vRtrIgmPGrplfSapTxV3Reports)	long	The value of vRtrIgmPGrplfSapTxV3Reports indicates the total number of IGMP V3 Reports transmitted for this SAP.
InterfaceStats MIB entry name: vRtrIgmPlfStatsEntry Entry description: An entry in the vRtrIgmPlfStatsTable. Table 533 igmp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
importPolicyDrops [Import Policy Drops] (vRtrIgmplfImportPolicyDrops)	long	The value of vRtrIgmplfImportPolicyDrops indicates the total number of times IGMP protocol instance matched the host IP address or group/source addresses specified in the import policy vRtrIgmplfImportPolicy.
mcacPolicyDrops [Mcac Policy Drops] (vRtrIgmplfStatsMcacPolicyDrops)	long	The value of the object vRtrIgmplfStatsMcacPolicyDrops indicates the number times an IGMP Group is dropped because of applying a multicast CAC policy on this interface.
rxBadChecksumPkts [Rx Bad Checksum Pkts] (vRtrIgmplfRxBadChecksumPkts)	long	The value of vRtrIgmplfRxBadChecksumPkts indicates the total number of IGMP packets with bad checksum received on this interface.
rxBadEncodings [Rx Bad Encodings] (vRtrIgmplfRxBadEncodings)	long	The value of vRtrIgmplfRxBadEncodings indicates the total number of IGMP packets received on this interface which were not encoded correctly.
rxBadLenPkts [Rx Bad Len Pkts] (vRtrIgmplfRxBadLenPkts)	long	The value of vRtrIgmplfRxBadLenPkts indicates the total number of IGMP packets with bad length received on this interface.
rxBadReceiveIfPkts [Rx Bad Receive If Pkts] (vRtrIgmplfRxBadReceiveIfPkts)	long	The value of vRtrIgmplfRxBadReceiveIfPkts indicates the total number of IGMP packets incorrectly received on this interface.
rxGenQueries [Rx Gen Queries] (vRtrIgmplfRxGenQueries)	long	The value of vRtrIgmplfRxGenQueries indicates the total number of IGMP General Queries received on this interface.
rxGrpQueries [Rx Grp Queries] (vRtrIgmplfRxGrpQueries)	long	The value of vRtrIgmplfRxGrpQueries indicates the number of IGMP Group Specific Queries received on this interface.

Table 533 igmp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxGrpSrcQueries [Rx Grp Src Queries] (vRtrIgmplfRxGrpSrcQueries)	long	The value of vRtrIgmplfRxGrpSrcQueries indicates the number of IGMP Group and Source Specific Queries received on this interface.
rxLeaves [Rx Leaves] (vRtrIgmplfRxLeaves)	long	The value of vRtrIgmplfRxLeaves indicates the total number of IGMP V2 Leaves received on this interface.
rxNoRtrAlertPkts [Rx No Rtr Alert Pkts] (vRtrIgmplfRxNoRtrAlertPkts)	long	The value of vRtrIgmplfRxNoRtrAlertPkts indicates the total number of IGMPv3 packets received on this interface which did not have the router alert flag set.
rxNonLocal [Rx Non Local] (vRtrIgmplfRxNonLocal)	long	The value of vRtrIgmplfRxNonLocal indicates the total number of IGMP packets received from a non-local sender.
rxPktDrops [Rx Pkt Drops] (vRtrIgmplfRxPktDrops)	long	The value of vRtrIgmplfRxPktDrops indicates the total number of IGMP packets that were received on this interface but were dropped.
rxUnknownTypePkts [Rx Unknown Type Pkts] (vRtrIgmplfRxUnknownTypePkts)	long	The value of vRtrIgmplfRxUnknownTypePkts indicates the total number of IGMP packets with unknown type received on this interface.
rxV1Reports [Rx V1 Reports] (vRtrIgmplfRxV1Reports)	long	The value of vRtrIgmplfRxV1Reports indicates the total number of IGMP V1 Reports received on this interface.
rxV2Reports [Rx V2 Reports] (vRtrIgmplfRxV2Reports)	long	The value of vRtrIgmplfRxV2Reports indicates the total number of IGMP V2 Reports received on this interface.
rxV3Reports [Rx V3 Reports] (vRtrIgmplfRxV3Reports)	long	The value of vRtrIgmplfRxV3Reports indicates the total number of IGMP V3 Reports received on this interface.

Table 533 igmp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxWrongVersions [Rx Wrong Versions] (vRtrIgmplfRxWrongVersions)	long	The value of vRtrIgmplfRxWrongVersions indicates the total number of IGMP packets with wrong versions received on this interface.
statsSGTypes [Stats SGTypes] (vRtrIgmplfStatsSGTypes)	long	The value of vRtrIgmplfStatsSGTypes indicates the number of entries on this interface for which the source type is 'sg'.
statsStarGTypes [Stats Star GTypes] (vRtrIgmplfStatsStarGTypes)	long	vRtrIgmplfStatsStarGTypes indicates the number of entries on this interface for which the source type is 'starG'.
txErrors [Tx Errors] (vRtrIgmplfTxErrors)	long	The value of vRtrIgmplfTxErrors indicates the total number of times there was an error transmitting IGMP packets on this interface..
txGenQueries [Tx Gen Queries] (vRtrIgmplfTxGenQueries)	long	The value of vRtrIgmplfTxGenQueries indicates the number of IGMP General Queries transmitted on this interface.
txGrpQueries [Tx Grp Queries] (vRtrIgmplfTxGrpQueries)	long	The value of vRtrIgmplfTxGrpQueries indicates the number of IGMP Group Specific Queries transmitted on this interface.
txGrpSrcQueries [Tx Grp Src Queries] (vRtrIgmplfTxGrpSrcQueries)	long	The value of vRtrIgmplfTxGrpSrcQueries indicates the number of IGMP Group and Source Specific Queries transmitted on this interface.
txLeaves [Tx Leaves] (vRtrIgmplfTxLeaves)	long	The value of vRtrIgmplfTxLeaves indicates the total number of IGMP Leaves transmitted on this interface.
txV1Reports [Tx V1 Reports] (vRtrIgmplfTxV1Reports)	long	The value of vRtrIgmplfTxV1Reports indicates the total number of IGMP V1 Reports transmitted on this interface.

hCFwdInProfOcts [HCFwd In Prof Octs] (tmnxBsxGrpStatusEgrQHCFwdInPOcts)	java. math. BigInteger	The value of tmnxBsxGrpStatusEgrQHCFwdInPOcts indicates the number of in profile bytes diverted from ingress IOMs towards the ISA-AA MDA within this group for the particular queue.
hCFwdInProfPkts [HCFwd In Prof Pkts] (tmnxBsxGrpStatusEgrQHCFwdInPPkts)	java. math. BigInteger	The value of tmnxBsxGrpStatusEgrQHCFwdInPPkts indicates the number of in profile packets diverted from ingress IOMs towards the ISA-AA MDA within this group for the particular queue.
hCFwdOutProfOcts [HCFwd Out Prof Octs] (tmnxBsxGrpStatusEgrQHCFwdOutPOcts)	java. math. BigInteger	The value of tmnxBsxGrpStatusEgrQHCFwdOutPOcts indicates the number of out of profile bytes diverted from ingress IOMs towards the ISA-AA MDA within this group for the particular queue.
hCFwdOutProfPkts [HCFwd Out Prof Pkts] (tmnxBsxGrpStatusEgrQHCFwdOutPPkts)	java. math. BigInteger	The value of tmnxBsxGrpStatusEgrQHCFwdOutPPkts indicates the number of out of profile packets diverted from ingress IOMs towards the ISA-AA MDA within this group for the particular queue.
<p>AaGroupIngQStats</p> <p>MIB entry name: tmnxBsxGrpStatusIngQEntry</p> <p>Entry description: Each tmnxBsxGrpStatusIngQEntry contains the Qos status information for traffic exiting a particular ISA-AA MDA within a group, given a tmnxBsxGrpStatusInQDirection and tmnxBsxGrpStatusInQIndex.</p> <p>Table description (for tmnxBsxGrpStatusIngQTable): The tmnxBsxGrpStatusIngQTable contains an entry for each ISA-AA MDA and Group in the system. Each row contains the Qos status information for traffic exiting an ISA-AA MDA given the tmnxBsxGrpStatusInQDirection and tmnxBsxGrpStatusInQIndex. An ISA-AA MDA is uniquely identified by the tmnxChassisIndex, tmnxBsxCardSlotNum, and the tmnxMDASlotNum.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: isa.AaIngQueue</p>		
drolnProfOcts [Dro In Prof Octs] (tmnxBsxGrpStatusIngQDroInPOcts)	long	The value of tmnxBsxGrpStatusIngQDroInPOcts indicates the number of in profile bytes discarded towards egress IOMs from the ISA-AA MDA within this group for the particular queue.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
droInProfPkts [Dro In Prof Pkts] (tmnxBsxGrpStatusIngQDroInPPkts)	long	The value of tmnxBsxGrpStatusIngQDroInPPkts indicates the number of in profile packets discarded towards egress IOMs from the ISA-AA MDA within this group for the particular queue.
droOutProfOcts [Dro Out Prof Octs] (tmnxBsxGrpStatusIngQDroOutPOcts)	long	The value of tmnxBsxGrpStatusIngQDroOutPOcts indicates the number of out of profile bytes discarded towards egress IOMs from the ISA-AA MDA within this group for the particular queue.
droOutProfPkts [Dro Out Prof Pkts] (tmnxBsxGrpStatusIngQDroOutPPkts)	long	The value of tmnxBsxGrpStatusIngQDroOutPPkts indicates the number of out of profile packets discarded towards egress IOMs from the ISA-AA MDA within this group for the particular queue.
fwdInProfOcts [Fwd In Prof Octs] (tmnxBsxGrpStatusIngQFwdInPOcts)	long	The value of tmnxBsxGrpStatusIngQFwdInPOcts indicates the number of in profile bytes diverted towards egress IOMs from the ISA-AA MDA within this group for the particular queue.
fwdInProfPkts [Fwd In Prof Pkts] (tmnxBsxGrpStatusIngQFwdInPPkts)	long	The value of tmnxBsxGrpStatusIngQFwdInPPkts indicates the number of in profile packets diverted towards egress IOMs from the ISA-AA MDA within this group for the particular queue.
fwdOutProfOcts [Fwd Out Prof Octs] (tmnxBsxGrpStatusIngQFwdOutPOcts)	long	The value of tmnxBsxGrpStatusIngQFwdOutPOcts indicates the number of out of profile bytes diverted towards egress IOMs from the ISA-AA MDA within this group for the particular queue.
fwdOutProfPkts [Fwd Out Prof Pkts] (tmnxBsxGrpStatusIngQFwdOutPPkts)	long	The value of tmnxBsxGrpStatusIngQFwdOutPPkts indicates the number of out of profile packets diverted towards egress IOMs from the ISA-AA MDA within this group for the particular queue.
hCDroInProfOcts [HCDro In Prof Octs] (tmnxBsxGrpStatusIngQHCDroInPOcts)	java. math. BigInteger	The value of tmnxBsxGrpStatusIngQHCDroInPOcts indicates the number of in profile bytes discarded towards egress IOMs from the ISA-AA MDA within this group for the particular queue.

activeFlowsFromSub [Active Flows From Sub] (tmnxBsxAaSubSumActFlwsFmSb)	long	The value of tmnxBsxAaSubSumActFlwsFmSb indicates the number of allowed flows in the subscriber to network direction that are active.
activeFlowsToSub [Active Flows To Sub] (tmnxBsxAaSubSumActFlwsToSb)	long	The value of tmnxBsxAaSubSumActFlwsToSb indicates the number of allowed flows in the network to subscriber direction that are active.
durationFlowsLong [Duration Flows Long] (tmnxBsxAaSubSumHCLngDurFlws)	java.math.BigInteger	The value of tmnxBsxAaSubSumHCLngDurFlws indicates the total number of flows with a duration greater than 180 seconds, that have completed. This object is a 64-bit version of tmnxBsxAaSubSumLngDurFlws.
durationFlowsMedium [Duration Flows Medium] (tmnxBsxAaSubSumHCMedDurFlws)	java.math.BigInteger	The value of tmnxBsxAaSubSumHCMedDurFlws indicates the total number of flows with a duration less than or equal to 180 seconds, but greater than 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxAaSubSumMedDurFlws.
durationFlowsShort [Duration Flows Short] (tmnxBsxAaSubSumHCShrtDurFlws)	java.math.BigInteger	The value of tmnxBsxAaSubSumHCShrtDurFlws indicates the total number of flows with a duration less than or equal to 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxAaSubSumShrtDurFlws.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
flowsAdmitFromSub [Flows Admit From Sub] (tmnxBsxAaSubSumHCFlwsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCFlwsAdmFmSb indicates the total number of flows permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxAaSubSumFlwsAdmFmSb.
flowsAdmitToSub [Flows Admit To Sub] (tmnxBsxAaSubSumHCFlwsAdmToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCFlwsAdmToSb indicates the total number of flows permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxAaSubSumFlwsAdmToSb.
flowsDenyFromSub [Flows Deny From Sub] (tmnxBsxAaSubSumHCFlwsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCFlwsDnyFmSb indicates the total number of flows that dropped subsequent packets in the subscriber to network direction. This object is a 64-bit version of tmnxBsxAaSubSumFlwsDnyFmSb.
flowsDenyToSub [Flows Deny To Sub] (tmnxBsxAaSubSumHCFlwsDnyToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCFlwsDnyToSb indicates the total number of flows that dropped subsequent packets in the network to subscriber direction. This object is the 64-bit version of tmnxBsxAaSubSumFlwsDnyToSb.
mdaMdaNum [Mda Mda Num] (tmnxBsxAaSubSumMdaMdaNum)	int	The value of tmnxBsxAaSubSumMdaMdaNum indicates the MDA number of the ISA-AA MDA servicing the subscriber.
mdaSlotNum [Mda Slot Num] (tmnxBsxAaSubSumMdaSlotNum)	int	The value of tmnxBsxAaSubSumMdaSlotNum indicates the slot number of the ISA-AA MDA servicing the subscriber.
octsAdmitFromSub [Octs Admit From Sub] (tmnxBsxAaSubSumHCOctsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCOctsAdmFmSb indicates the total number of bytes permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxAaSubSumOctsAdmFmSb.
octsAdmitToSub [Octs Admit To Sub] (tmnxBsxAaSubSumHCOctsAdmToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCOctsAdmToSb indicates the total number of bytes permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxAaSubSumOctsAdmToSb.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
octsDenyFromSub [Octs Deny From Sub] (tmnxBsxAaSubSumHCOctsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCOctsDnyFmSb indicates the total number of bytes dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxAaSubSumOctsDnyFmSb.
octsDenyToSub [Octs Deny To Sub] (tmnxBsxAaSubSumHCOctsDnyToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCOctsDnyToSb indicates the total number of bytes dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxAaSubSumOctsDnyToSb.
pktsAdmitFromSub [Pkts Admit From Sub] (tmnxBsxAaSubSumHCPktsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCPktsAdmFmSb indicates the total number of packets permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxAaSubSumPktsAdmFmSb.
pktsAdmitToSub [Pkts Admit To Sub] (tmnxBsxAaSubSumHCPktsAdmToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCPktsAdmToSb indicates the total number of packets permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxAaSubSumPktsAdmToSb.
pktsDenyFromSub [Pkts Deny From Sub] (tmnxBsxAaSubSumHCPktsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCPktsDnyFmSb indicates the total number of packets dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxAaSubSumPktsDnyFmSb.
pktsDenyToSub [Pkts Deny To Sub] (tmnxBsxAaSubSumHCPktsDnyToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCPktsDnyToSb indicates the total number of packets dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxAaSubSumPktsDnyToSb.
statsInterval [Stats Interval] (tmnxBsxAaSubStatsInterval)	int	The tmnxBsxAaSubStatsInterval specifies the interval for the retrieval of application assurance subscriber statistics.
termFlowDuration [Term Flow Duration] (tmnxBsxAaSubSumHCTermFlwDur)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCTermFlwDur indicates the sum of all flow durations from first packet seen to last packet seen for flows that have terminated. This object is a 64-bit version of tmnxBsxAaSubSumTermFlwDur.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
termFlows [Term Flows] (tmnxBsxAaSubSumHCTermFlws)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCTermFlws indicates the total number of allowed flows that have terminated. This object is a 64-bit version of tmnxBsxAaSubSumTermFlws.
<p>AaSpokeSdpBindingSumStats</p> <p>MIB entry name: tmnxBsxAaSubSumEntry</p> <p>Entry description: Each tmnxBsxAaSubSumEntry contains the ISA-AA subscriber summary information within a group partition and statistics interval.</p> <p>Table description (for tmnxBsxAaSubSumTable): The tmnxBsxAaSubSumTable contains an entry for each ISA-AA subscriber in the system. pktsDenyToSub [Pkts Deny To Sub] (tmnxBsxAaSubSumHCPktsDnyToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCPktsDnyToSb indicates the total number of packets dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxAaSubSumPktsDnyToSb.
statsInterval [Stats Interval] (tmnxBsxAaSubStatsInterval)	int	The tmnxBsxAaSubStatsInterval specifies the interval for the retrieval of application assurance subscriber statistics.
termFlowDuration [Term Flow Duration] (tmnxBsxAaSubSumHCTermFlwDur)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCTermFlwDur indicates the sum of all flow durations from first packet seen to last packet seen for flows that have terminated. This object is a 64-bit version of tmnxBsxAaSubSumTermFlwDur.
termFlows [Term Flows] (tmnxBsxAaSubSumHCTermFlws)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCTermFlws indicates the total number of allowed flows that have terminated. This object is a 64-bit version of tmnxBsxAaSubSumTermFlws.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>BsxMdaStats</p> <p>MIB entry name: tmnxBsxGrpStatusEntry</p> <p>Entry description: Each tmnxBsxGrpStatusEntry contains the performance-oriented status information for a particular group and ISA-AA MDA. An index with a valid tmnxBsxIsaAaGroupIndex, tmnxChassisIndex set to one, and a zero value for each of the tmnxBsxCardSlotNum/tmnxMDASlotNum indices will return the summarized per group status. Rows in this table are created by the agent at initialization and cannot be created or destroyed by SNMP Set requests.</p> <p>Table description (for tmnxBsxGrpStatusTable): The tmnxBsxGrpStatusTable contains an entry for each ISA-AA MDA and Group in the system. Each row contains the performance-oriented status information per group for an ISA-AA MDA uniquely identified by the tmnxChassisIndex, tmnxBsxCardSlotNum, and the tmnxMDASlotNum.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • isa.AaGroup • isa.AaGroupMember 		
bitRateRsdCount [Bit Rate Rsd Count] (tmnxBsxGrpStatusBitRateRsdCount)	java. math. BigInteger	The value of tmnxBsxGrpStatusBitRateRsdCount indicates the number of times the bit rate TCA (tmnxBsxIsaAaGrpBitRate) was raised since system startup.
bitRateRsdTime [Bit Rate Rsd Time] (tmnxBsxGrpStatusBitRateRsdTime)	java. math. BigInteger	The value of tmnxBsxGrpStatusBitRateRsdTime indicates the amount of time the bit rate TCA (tmnxBsxIsaAaGrpBitRate) was in the raised state since system startup.
bitRateState [Bit Rate State] (tmnxBsxGrpStatusBitRateState)	int	The value of tmnxBsxGrpStatusBitRateState indicates the state of the bit rate TCA (tmnxBsxIsaAaGrpBitRate).
datapathCpu [Datapath Cpu] (tmnxBsxGrpStatusDatapathCpu)	float	The value of tmnxBsxGrpStatusDatapathCpu indicates the percent utilization of the datapath CPU on the ISA-AA MDA(s).

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
datapathCpuAvg [Datapath Cpu Avg] (tmnxBsxGrpStatusDatapathCpuAvg)	float	The value of tmnxBsxGrpStatusDatapathCpuAvg indicates the average percent utilization of the datapath CPU on the ISA-AA MDA(s) within the last 60 minutes.
datapathCpuPeak [Datapath Cpu Peak] (tmnxBsxGrpStatusDatapathCpuPeak)	float	The value of tmnxBsxGrpStatusDatapathCpuPeak indicates the peak percent utilization of the datapath CPU on the ISA-AA MDA(s) since system startup.
datapathCpuRsdCt [Datapath Cpu Rsd Ct] (tmnxBsxGrpStatusDatapathCpuRsdCt)	java. math. BigInteger	The value of tmnxBsxGrpStatusDatapathCpuRsdCt indicates the number of times the datapath CPU TCA (tmnxBsxDatapathCpuUsage) was raised since system startup.
datapathCpuRsdTm [Datapath Cpu Rsd Tm] (tmnxBsxGrpStatusDatapathCpuRsdTm)	java. math. BigInteger	The value of tmnxBsxGrpStatusDatapathCpuRsdTm indicates the amount of time the datapath CPU TCA (tmnxBsxDatapathCpuUsage) was in the raised state since system startup.
datapathCpuState [Datapath Cpu State] (tmnxBsxGrpStatusDatapathCpuState)	int	The value of tmnxBsxGrpStatusDatapathCpuState indicates the state of the datapath CPU TCA (tmnxBsxDatapathCpuUsage).
flowResAvg [Flow Res Avg] (tmnxBsxGrpStatusFlowResAvg)	long	The value of tmnxBsxGrpStatusFlowResAvg indicates the average number of flow resources in-use on the ISA-AA MDA(s) within the last 60 minutes.
flowResMax [Flow Res Max] (tmnxBsxGrpStatusFlowResMax)	long	The value of tmnxBsxGrpStatusFlowResMax indicates the maximum number of flow resources available on the ISA-AA MDA(s).
flowResPeak [Flow Res Peak] (tmnxBsxGrpStatusFlowResPeak)	long	The value of tmnxBsxGrpStatusFlowResPeak indicates the peak number of flow resources in-use on the ISA-AA MDA(s) since system startup.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
flowResRaisdTime [Flow Res Raisd Time] (tmnxBsxGrpStatusFlowResRaisdTime)	java. math. BigInteger	The value of tmnxBsxGrpStatusFlowResRaisdTime indicates the amount of time the flow resource TCA (tmnxBsxIsaAaGrpFlowFull) was in the raised state since system startup.
flowResRsdCount [Flow Res Rsd Count] (tmnxBsxGrpStatusFlowResRsdCount)	java. math. BigInteger	The value of tmnxBsxGrpStatusFlowResRsdCount indicates the number of times the flow resource TCA (tmnxBsxIsaAaGrpFlowFull) was raised since system startup.
flowResState [Flow Res State] (tmnxBsxGrpStatusFlowResState)	int	The value of tmnxBsxGrpStatusFlowResState indicates the state of the flow resource TCA (tmnxBsxIsaAaGrpFlowFull).
flowResourcesInUse [Flow Resources In Use] (tmnxBsxGrpStatusFlowResInUse)	long	The value of tmnxBsxGrpStatusFlowResInUse indicates the number of flow resources currently in-use on the ISA-AA MDA.
flowSetupRate [Flow Setup Rate] (tmnxBsxGrpStatusFlowSetupRate)	long	The value of tmnxBsxGrpStatusFlowSetupRate indicates the number of flow setups per second over the most recent 10 second period.
flowSetupRsdCnt [Flow Setup Rsd Cnt] (tmnxBsxGrpStatusFlowSetupRsdCnt)	java. math. BigInteger	The value of tmnxBsxGrpStatusFlowSetupRsdCnt indicates the number of times the flow setup rate TCA (tmnxBsxIsaAaGrpFlowSetup) was raised since system startup.
flowSetupRsdTime [Flow Setup Rsd Time] (tmnxBsxGrpStatusFlowSetupRsdTime)	java. math. BigInteger	The value of tmnxBsxGrpStatusFlowSetupRsdTime indicates the amount of time the flow setup rate TCA (tmnxBsxIsaAaGrpFlowSetup) was in the raised state since system startup.
flowSetupState [Flow Setup State] (tmnxBsxGrpStatusFlowSetupState)	int	The value of tmnxBsxGrpStatusFlowSetupState indicates the state of the flow setup rate TCA (tmnxBsxIsaAaGrpFlowSetup).

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
flows [Flows] (tmnxBsxGrpStatusFlows)	long	The value of tmnxBsxGrpStatusFlows indicates the total number of flows created on the ISA-AA MDA(s).
flowsCurrent [Flows Current] (tmnxBsxGrpStatusFlowsCurrent)	long	The value of tmnxBsxGrpStatusFlowsCurrent indicates the number of active flows currently being tracked by the ISA-AA MDA(s).
flwResCtThruOcts [Flw Res Ct Thru Octs] (tmnxBsxGrpStatusFlwResCtThruOcts)	java. math. BigInteger	The value of tmnxBsxGrpStatusFlwResCtThruOcts indicates the number of octets that the ISA-AA MDA(s) have cut-through due to flow resource exhaustion.
flwResCtThruPkts [Flw Res Ct Thru Pkts] (tmnxBsxGrpStatusFlwResCtThruPkts)	java. math. BigInteger	The value of tmnxBsxGrpStatusFlwResCtThruPkts indicates the number of packets that the ISA-AA MDA(s) have cut-through due to flow resource exhaustion.
hCFlows [HCFlows] (tmnxBsxGrpStatusHCFlows)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCFlows indicates the number of active flows seen by the ISA-AA MDA(s). Note that if the same 5-tuple is seen for a different flow within the flow timeout, it will still be considered one flow.
hCOctsDiscCongIn [HCOcts Disc Cong In] (tmnxBsxGrpStatusHCOctsDiscCongIn)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCOctsDiscCongIn indicates the number of bytes discarded by the IOMs prior to the ISA-AA MDA(s) due to egress IOM congestion.
hCOctsDiscCongMda [HCOcts Disc Cong Mda] (tmnxBsxGrpStatusHCOctsDisCongMda)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCOctsDisCongMda indicates the number of bytes discarded by the ISA-AA MDA(s) due to congestion.
hCOctsDiscCongOut [HCOcts Disc Cong Out] (tmnxBsxGrpStatusHCOctsDisCongOut)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCOctsDisCongOut indicates the number of bytes discarded by the IOMs after the ISA-AA MDA(s) due to ingress IOM congestion.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
hCOctsDiscErrors [HCOcts Disc Errors] (tmnxBsxGrpStatusHCOctsDiscErrors)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCOctsDiscErrors indicates the number of bytes discarded due to unrecoverable errors.
hCOctsDiscPolicy [HCOcts Disc Policy] (tmnxBsxGrpStatusHCOctsDiscPolicy)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCOctsDiscPolicy indicates the number of bytes discarded by the ISA-AA MDA(s) due to policy policers or discard actions.
hCOctsFromMda [HCOcts From Mda] (tmnxBsxGrpStatusHCOctsFromMda)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCOctsFromMda indicates the number of bytes which exit the ISA-AA MDA(s) and are sent to the local IOM.
hCOctsIn [HCOcts In] (tmnxBsxGrpStatusHCOctsIn)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCOctsIn indicates the number of bytes diverted from ingress IOMs towards the ISA-AA MDA(s).
hCOctsInMda [HCOcts In Mda] (tmnxBsxGrpStatusHCOctsInMda)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCOctsInMda indicates the number of bytes buffered by the ISA-AA MDA(s).
hCOctsInspected [HCOcts Inspected] (tmnxBsxGrpStatusHCOctsInspected)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCOctsInspected indicates the number of bytes sent for protocol determination by the ISA-AA MDA(s).
hCOctsOut [HCOcts Out] (tmnxBsxGrpStatusHCOctsOut)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCOctsOut indicates the number of bytes returned to the normal forwarding path that are sent to egress IOMs from the ISA-AA MDA(s).
hCOctsPolicyByPass [HCOcts Policy By Pass] (tmnxBsxGrpStatusHCOctsPolicyByPass)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCOctsPolicyByPass indicates the number of bytes which passed untouched that did not have statistics or policy applied. These bytes are counted as policy bypass errors.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
hCOctsToMda [HCOcts To Mda] (tmnxBsxGrpStatusHCOctsToMda)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCOctsToMda indicates the number of bytes sent from an IOM which enter the ISA-AA MDA(s).
hCPktsDiscCongIn [HCPkts Disc Cong In] (tmnxBsxGrpStatusHCPktsDiscCongIn)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCPktsDiscCongIn indicates the number of packets discarded by the IOMs prior to the ISA-AA MDA(s) due to egress IOM congestion.
hCPktsDiscCongMda [HCPkts Disc Cong Mda] (tmnxBsxGrpStatusHCPktsDisCongMda)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCPktsDisCongMda indicates the number of packets discarded by the ISA-AA MDA(s) due to congestion.
hCPktsDiscCongOut [HCPkts Disc Cong Out] (tmnxBsxGrpStatusHCPktsDisCongOut)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCPktsDisCongOut indicates the number of packets discarded by the IOMs after the ISA-AA MDA(s) due to ingress IOM congestion.
hCPktsDiscErrors [HCPkts Disc Errors] (tmnxBsxGrpStatusHCPktsDiscErrors)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCPktsDiscErrors indicates the number of packets discarded due to unrecoverable errors.
hCPktsDiscPolicy [HCPkts Disc Policy] (tmnxBsxGrpStatusHCPktsDiscPolicy)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCPktsDiscPolicy indicates the number of packets discarded by the ISA-AA MDA(s) due to policy policers or discard actions.
hCPktsFromMda [HCPkts From Mda] (tmnxBsxGrpStatusHCPktsFromMda)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCPktsFromMda indicates the number of packets which exit the ISA-AA MDA(s) and are sent to the local IOM.
hCPktsIn [HCPkts In] (tmnxBsxGrpStatusHCPktsIn)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCPktsIn indicates the number of packets diverted from ingress IOMs towards the ISA-AA MDA(s).

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
hCPktsInMda [HCPkts In Mda] (tmnxBsxGrpStatusHCPktsInMda)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCPktsInMda indicates the number of packets buffered by the ISA-AA MDA(s).
hCPktsInPchipErrors [HCPkts In Pchip Errors] (tmnxBsxGrpStatusHCPktsInPChipErs)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCPktsInPChipErs indicates the number of packets discarded by the egress P-chip due to errors in the packets.
hCPktsInspected [HCPkts Inspected] (tmnxBsxGrpStatusHCPktsInspected)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCPktsInspected indicates the number of packets sent for protocol determination by the ISA-AA MDA(s).
hCPktsOut [HCPkts Out] (tmnxBsxGrpStatusHCPktsOut)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCPktsOut indicates the number of packets returned to the normal forwarding path that are sent to egress IOMs from the ISA-AA MDA(s).
hCPktsOutPchipErrors [HCPkts Out Pchip Errors] (tmnxBsxGrpStatusHCPktsOutPChipEr)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCPktsOutPChipEr indicates the number of packets discarded by the ingress P-chip due to errors in the packets which return to the normal forwarding path.
hCPktsPolicyByPass [HCPkts Policy By Pass] (tmnxBsxGrpStatusHCPktsPolicyByps)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCPktsPolicyByps indicates the number of packets which passed untouched that did not have statistics or policy applied. These packets are counted as policy bypass errors.
hCPktsToMda [HCPkts To Mda] (tmnxBsxGrpStatusHCPktsToMda)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCPktsToMda indicates the number of packets sent from an IOM which enter the ISA-AA MDA(s).
mgmtCpu [Mgmt Cpu] (tmnxBsxGrpStatusMgmtCpu)	float	The value of tmnxBsxGrpStatusMgmtCpu indicates the percent utilization of the management CPU on the ISA-AA MDA(s).

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mgmtCpuAvg [Mgmt Cpu Avg] (tmnxBsxGrpStatusMgmtCpuAvg)	float	The value of tmnxBsxGrpStatusMgmtCpuAvg indicates the average percent utilization of the management CPU on the ISA-AA MDA(s) within the last 60 minutes.
mgmtCpuPeak [Mgmt Cpu Peak] (tmnxBsxGrpStatusMgmtCpuPeak)	float	The value of tmnxBsxGrpStatusMgmtCpuPeak indicates the peak percent utilization of the management CPU on the ISA-AA MDA(s) since system startup.
octsDiscCongIn [Octs Disc Cong In] (tmnxBsxGrpStatusOctsDiscCongIn)	long	The value of tmnxBsxGrpStatusOctsDiscCongIn indicates the number of bytes discarded by the IOMs prior to the ISA-AA MDA(s) due to egress IOM congestion.
octsDiscCongMda [Octs Disc Cong Mda] (tmnxBsxGrpStatusOctsDisCongMda)	long	The value of tmnxBsxGrpStatusOctsDisCongMda indicates the number of bytes discarded by the ISA-AA MDA(s) due to congestion.
octsDiscCongOut [Octs Disc Cong Out] (tmnxBsxGrpStatusOctsDisCongOut)	long	The value of tmnxBsxGrpStatusOctsDisCongOut indicates the number of bytes discarded by the IOMs after the ISA-AA MDA(s) due to ingress IOM congestion.
octsDiscErrors [Octs Disc Errors] (tmnxBsxGrpStatusOctsDiscErrors)	long	The value of tmnxBsxGrpStatusOctsDiscErrors indicates the number of bytes discarded due to unrecoverable errors.
octsDiscPolicy [Octs Disc Policy] (tmnxBsxGrpStatusOctsDiscPolicy)	long	The value of tmnxBsxGrpStatusOctsDiscPolicy indicates the number of bytes discarded by the ISA-AA MDA(s) due to policy.
octsDiscTcpOpt [Octs Disc Tcp Opt] (tmnxBsxGrpStatusOctsDiscTcpOpt)	java. math. BigInteger	The value of tmnxBsxGrpStatusOctsDiscTcpOpt indicates the number of octets that the ISA-AA MDA has discarded due to the TCP optimization configuration in tmnxBsxTcpOptTable.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
octsFromMda [Octs From Mda] (tmnxBsxGrpStatusOctsFromMda)	long	The value of tmnxBsxGrpStatusOctsFromMda indicates the number of bytes which exit the ISA-AA MDA(s) and are sent to the local IOM.
octsGenTcpOpt [Octs Gen Tcp Opt] (tmnxBsxGrpStatusOctsGenTcpOpt)	java. math. BigInteger	The value of tmnxBsxGrpStatusOctsGenTcpOpt indicates the number of octets that the ISA-AA MDA has created due to the TCP optimization configuration in tmnxBsxTcpOptTable.
octsIn [Octs In] (tmnxBsxGrpStatusOctsIn)	long	The value of tmnxBsxGrpStatusOctsIn indicates the number of bytes diverted from ingress IOMs towards the ISA-AA MDA(s).
octsInMda [Octs In Mda] (tmnxBsxGrpStatusOctsInMda)	long	The value of tmnxBsxGrpStatusOctsInMda indicates the number of bytes buffered by the ISA-AA MDA(s).
octsInspected [Octs Inspected] (tmnxBsxGrpStatusOctsInspected)	long	The value of tmnxBsxGrpStatusOctsInspected indicates the number of bytes sent for protocol determination by the ISA-AA MDA(s).
octsOut [Octs Out] (tmnxBsxGrpStatusOctsOut)	long	The value of tmnxBsxGrpStatusOctsOut indicates the number of bytes returned to the normal forwarding path that are sent to egress IOMs from the ISA-AA MDA(s).
octsPolicyByPass [Octs Policy By Pass] (tmnxBsxGrpStatusOctsPolicyByPass)	long	The value of tmnxBsxGrpStatusOctsPolicyByPass indicates the number of bytes which pass untouched that did not have statistics or policy applied. These bytes are counted as policy bypass errors.
octsToMda [Octs To Mda] (tmnxBsxGrpStatusOctsToMda)	long	The value of tmnxBsxGrpStatusOctsToMda indicates the number of bytes sent from an IOM which enter the ISA-AA MDA(s).

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ovrldCtThruOcts [OvrlD Ct Thru Octs] (tmnxBsxGrpStatusOvrlDcTThruOcts)	java. math. BigInteger	The value of tmnxBsxGrpStatusOvrlDcTThruOcts indicates the number of octets that the ISA-AA MDA(s) have cut-through due to overload. This counter is enabled using the configuration object tmnxBsxIsaAaGrpOverloadCutThru.
ovrldCtThruPkts [OvrlD Ct Thru Pkts] (tmnxBsxGrpStatusOvrlDcTThruPkts)	java. math. BigInteger	The value of tmnxBsxGrpStatusOvrlDcTThruPkts indicates the number of packets that the ISA-AA MDA(s) have cut-through due to overload. This counter is enabled using the configuration object tmnxBsxIsaAaGrpOverloadCutThru.
ovrldCtThruRsdCt [OvrlD Ct Thru Rsd Ct] (tmnxBsxGrpStatusOvrlDcTThruRsdCt)	java. math. BigInteger	The value of tmnxBsxGrpStatusOvrlDcTThruRsdCt indicates the number of times the overload cut-through TCA (tmnxBsxIsaAaGrpOvrlDcutthru) was raised since system startup.
ovrldCtThruRsdTm [OvrlD Ct Thru Rsd Tm] (tmnxBsxGrpStatusOvrlDcTThruRsdTm)	java. math. BigInteger	The value of tmnxBsxGrpStatusOvrlDcTThruRsdTm indicates the amount of time the overload cut-through TCA (tmnxBsxIsaAaGrpOvrlDcutthru) was in the raised state since system startup.
ovrldCtThruState [OvrlD Ct Thru State] (tmnxBsxGrpStatusOvrlDcTThruState)	int	The value of tmnxBsxGrpStatusOvrlDcTThruState indicates the state of the overload cut-through TCA (tmnxBsxIsaAaGrpOvrlDcutthru).
packetRate [Packet Rate] (tmnxBsxGrpStatusPacketRate)	long	The value of tmnxBsxGrpStatusPacketRate indicates the current number of packets per second incoming to the ISA-AA MDA(s).
pktRateRaisdTime [Pkt Rate Raisd Time] (tmnxBsxGrpStatusPktRateRaisdTime)	java. math. BigInteger	The value of tmnxBsxGrpStatusPktRateRaisdTime indicates the amount of time the packet rate TCA (tmnxBsxIsaAaGrp-PacketRate) was in the raised state since system startup.
pktRateRsdCount [Pkt Rate Rsd Count] (tmnxBsxGrpStatusPktRateRsdCount)	java. math. BigInteger	The value of tmnxBsxGrpStatusPktRateRsdCount indicates the number of times the packet rate TCA (tmnxBsxIsaAaGrp-PacketRate) was raised since system startup.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pktRateState [Pkt Rate State] (tmnxBsxGrpStatusPktRateState)	int	The value of tmnxBsxGrpStatusPktRateState indicates the state of the packet rate TCA (tmnxBsxIsaAaGrpPacketRate).
pktsDiscCongIn [Pkts Disc Cong In] (tmnxBsxGrpStatusPktsDiscCongIn)	long	The value of tmnxBsxGrpStatusPktsDiscCongIn indicates the number of packets discarded by the IOMs prior to the ISA-AA MDA(s) due to egress IOM congestion.
pktsDiscCongMda [Pkts Disc Cong Mda] (tmnxBsxGrpStatusPktsDisCongMda)	long	The value of tmnxBsxGrpStatusPktsDisCongMda indicates the number of packets discarded by the ISA-AA MDA(s) due to congestion.
pktsDiscCongOut [Pkts Disc Cong Out] (tmnxBsxGrpStatusPktsDisCongOut)	long	The value of tmnxBsxGrpStatusPktsDisCongOut indicates the number of packets discarded by the IOMs after the ISA-AA MDA(s) due to ingress IOM congestion.
pktsDiscErrors [Pkts Disc Errors] (tmnxBsxGrpStatusPktsDiscErrors)	long	The value of tmnxBsxGrpStatusPktsDiscErrors indicates the number of packets discarded due to unrecoverable errors.
pktsDiscPolicy [Pkts Disc Policy] (tmnxBsxGrpStatusPktsDiscPolicy)	long	The value of tmnxBsxGrpStatusPktsDiscPolicy indicates the number of packets discarded by the ISA-AA MDA(s) due to policy.
pktsDiscTcpOpt [Pkts Disc Tcp Opt] (tmnxBsxGrpStatusPktsDiscTcpOpt)	java. math. BigInteger	The value of tmnxBsxGrpStatusPktsDiscTcpOpt indicates the number of packets that the ISA-AA MDA has discarded due to the TCP optimization configuration in tmnxBsxTcpOptTable.
pktsFromMda [Pkts From Mda] (tmnxBsxGrpStatusPktsFromMda)	long	The value of tmnxBsxGrpStatusPktsFromMda indicates the number of packets which exit the ISA-AA MDA(s) and are sent to the local IOM.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pktsGenTcpOpt [Pkts Gen Tcp Opt] (tmnxBsxGrpStatusPktsGenTcpOpt)	java. math. BigInteger	The value of tmnxBsxGrpStatusPktsGenTcpOpt indicates the number of packets that the ISA-AA MDA has created due to the TCP optimization configuration in tmnxBsxTcpOptTable.
pktsIn [Pkts In] (tmnxBsxGrpStatusPktsIn)	long	The value of tmnxBsxGrpStatusPktsIn indicates the number of packets diverted from ingress IOMs towards the ISA-AA MDA(s).
pktsInMda [Pkts In Mda] (tmnxBsxGrpStatusPktsInMda)	long	The value of tmnxBsxGrpStatusPktsInMda indicates the number of packets buffered by the ISA-AA MDA(s).
pktsInPChipErrors [Pkts In PChip Errors] (tmnxBsxGrpStatusPktsInPChipErs)	long	The value of tmnxBsxGrpStatusPktsInPChipErs indicates the number of packets discarded by the egress P-chip due to errors in the packets.
pktsInspected [Pkts Inspected] (tmnxBsxGrpStatusPktsInspected)	long	The value of tmnxBsxGrpStatusPktsInspected indicates the number of packets sent for protocol determination by the ISA-AA MDA(s).
pktsOut [Pkts Out] (tmnxBsxGrpStatusPktsOut)	long	The value of tmnxBsxGrpStatusPktsOut indicates the number of packets returned to the normal forwarding path that are sent to egress IOMs from the ISA-AA MDA(s).
pktsOutPChipErrors [Pkts Out PChip Errors] (tmnxBsxGrpStatusPktsOutPChipEr)	long	The value of tmnxBsxGrpStatusPktsOutPChipEr indicates the number of packets discarded due to an error detected by the P-chip while attempting to return the packet to the normal forwarding path.
pktsPolicyByPass [Pkts Policy By Pass] (tmnxBsxGrpStatusPktsPolicyByps)	long	The value of tmnxBsxGrpStatusPktsPolicyByps indicates the number of packets which passed untouched that did not have statistics or policy applied. These packets are counted as policy bypass errors.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pktsToMda [Pkts To Mda] (tmnxBsxGrpStatusPktsToMda)	long	The value of tmnxBsxGrpStatusPktsToMda indicates the number of packets sent from an IOM which enter the ISA-AA MDA(s).
subsCurrent [Subs Current] (tmnxBsxGrpStatusSubsCurrent)	long	The value of tmnxBsxGrpStatusSubsCurrent indicates the number of subscribers currently with flow records in the ISA-AA MDA(s).
subsDiverted [Subs Diverted] (tmnxBsxGrpStatusSubsDiverted)	long	The value of tmnxBsxGrpStatusSubsDiverted indicates the number of subscribers defined in TIMETRA-SUBSCRIBER-MGMT-MIB::tmnxSubInfoAppProfile in the tmnxSubscriberInfoTable with tmnxBsxAppProfDivert set to 'true'.
trafficRate [Traffic Rate] (tmnxBsxGrpStatusTrafficRate)	long	The value of tmnxBsxGrpStatusTrafficRate indicates the traffic rate in kilo-bits per second (kbps) incoming to the ISA-AA MDA(s).
waSBfFmSub [Wa SBf Fm Sub] (tmnxBsxGrpStatusWaSBfFmSub)	float	The value of tmnxBsxGrpStatusWaSBfFmSub indicates the percent utilization of the subscriber to network weighted average shared buffer on the ISA-AA MDA(s).
waSBfFmSubRsdCnt [Wa SBf Fm Sub Rsd Cnt] (tmnxBsxGrpStatusWaSBfFmSubRsdCnt)	java. math. BigInteger	The value of tmnxBsxGrpStatusWaSBfFmSubRsdCnt indicates the number of times the subscriber to network weighted average shared buffer TCA (tmnxBsxIsaAaGrpFmSbWaSBufOvld) was raised since system startup.
waSBfFmSubRsdTm [Wa SBf Fm Sub Rsd Tm] (tmnxBsxGrpStatusWaSBfFmSubRsdTm)	java. math. BigInteger	The value of tmnxBsxGrpStatusWaSBfFmSubRsdTm indicates the amount of time the subscriber to network weighted average shared buffer TCA (tmnxBsxIsaAaGrpFmSbWaSBufOvld) was in the raised state since system startup.
waSBfFmSubState [Wa SBf Fm Sub State] (tmnxBsxGrpStatusWaSBfFmSubState)	int	The value of tmnxBsxGrpStatusWaSBfFmSubState indicates the state of the subscriber to network weighted average shared buffer TCA (tmnxBsxIsaAaGrpFmSbWaSBufOvld).

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
waSBfToSub [Wa SBf To Sub] (tmnxBsxGrpStatusWaSBfToSub)	float	The value of tmnxBsxGrpStatusWaSBfToSub indicates the percent utilization of the network to subscriber weighted average shared buffer on the ISA-AA MDA(s).
waSBfToSubRsdCnt [Wa SBf To Sub Rsd Cnt] (tmnxBsxGrpStatusWaSBfToSubRsdCnt)	java. math. BigInteger	The value of tmnxBsxGrpStatusWaSBfToSubRsdCnt indicates the number of times the network to subscriber weighted average shared buffer TCA (tmnxBsxIsaAaGrpToSbWaSBufOvld) was raised since system startup.
waSBfToSubRsdTm [Wa SBf To Sub Rsd Tm] (tmnxBsxGrpStatusWaSBfToSubRsdTm)	java. math. BigInteger	The value of tmnxBsxGrpStatusWaSBfToSubRsdTm indicates the amount of time the network to subscriber weighted average shared buffer TCA (tmnxBsxIsaAaGrpToSbWaSBufOvld) was in the raised state since system startup.
waSBfToSubState [Wa SBf To Sub State] (tmnxBsxGrpStatusWaSBfToSubState)	int	The value of tmnxBsxGrpStatusWaSBfToSubState indicates the state of the network to subscriber weighted average shared buffer TCA (tmnxBsxIsaAaGrpToSbWaSBufOvld).
<p>IsaLnsGroupMemberStats</p> <p>MIB entry name: tmnxL2tpIsaMdaStatisticsEntry</p> <p>Entry description: Each conceptual row contains statistics information about a Media Dependent Adapter (MDA) of an L2TP ISA Group. Entries in this table are created and removed automatically by the system. Rows are only created where the statistics value is nonzero; this allows faster walking through this table; hence, it is recommended to perform only get-next-request operations to retrieve information from this table.</p> <p>Table description (for tmnxL2tpIsaMdaStatisticsTable): The tmnxL2tpIsaMdaStatisticsTable contains statistics information about the Media Dependent Adapters (MDA) of an L2TP ISA Group.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: isa.LnsGroupMember</p>		
InsL2tpMlpppSequenceNumberReset [Lns L2 tp Mlppp Sequence Number Reset] (tmnxL2tpIsaMdaStatsValue)	java. math. BigInteger	The value of the object tmnxL2tpIsaMdaStatsValue indicates the value of the statistics contained in this conceptual row.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>LnsGroupMemberStats</p> <p>MIB entry name: tmnxL2tplsaMdaStatEntry</p> <p>Entry description: Each conceptual row contains status and statistics information about a Media Dependent Adapter (MDA) of an L2TP ISA Group. Entries in this table are created and removed automatically by the system.</p> <p>Table description (for tmnxL2tplsaMdaStatTable): The tmnxL2tplsaMdaStatTable contains status and statistics information about the Media Dependent Adapters (MDA) of an L2TP ISA Group.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: isa.LnsGroupMember</p>		
operState [Oper State] (tmnxL2tplsaMdaStatOperState)	int	The value of tmnxL2tplsaMdaStatOperState indicates the operational state of this L2TP ISA MDA.
sessions [Sessions] (tmnxL2tplsaMdaStatSessions)	long	The value of tmnxL2tplsaMdaStatOperState indicates the actual number of PPP sessions on this L2TP ISA MDA.
<p>MgCardStats</p> <p>MIB entry name: tmnxMobGwEntry</p> <p>Entry description: Each row entry represents a mobile gateway. Entries can be created and deleted by the user. The values of tmnxMobGwRowStatus and tmnxMobGwType must be set in the same SNMP SET PDU for the row creation to succeed.</p> <p>Table description (for tmnxMobGwTable): The tmnxMobGwTable has an entry for each mobile gateway configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.BaseCard • lte.PDNGateway • lte.ServingGateway 		

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
epcId [Epc Id] (tmnxMobGwId)	long	The value of tmnxMobGwId uniquely identifies a mobile gateway configured in the system.
mmeUsingS11u [Mme Using S11 u] (tmnxMobServStatMmeUsingS11u)	long	The value of tmnxMobServStatMmeUsingS11u indicates the number of Mobility Management Entities (MMEs) using S11-U.
noOfEmergencyPDNSess [No Of Emergency PDNSess] (tmnxMobServStatEmergencyPdnSess)	long	The value of tmnxMobServStatEmergencyPdnSess indicates the number of Emergency PDN sessions on this card.
noOfSuspendedUE [No Of Suspended UE] (tmnxMobServStatNumSuspendedUE)	long	The value of tmnxMobServStatNumSuspendedUE indicates the number of User Equipments (UE) in the suspended state.
pagingDrops [Paging Drops] (tmnxMobServStatPagingDrops)	long	The value of tmnxMobServStatPagingDrops indicates the number of packets that are dropped while the User Equipment (UE) is in paging mode.
servStatABSDrpdReq [Serv Stat ABSDrpd Req] (tmnxMobServStatABSDrpdReq)	long	The value of tmnxMobServStatABSDrpdReq indicates the number of dropped requests due to overload on this card.
servStatActiveBearers [Serv Stat Active Bearers] (tmnxMobServStatActiveBearers)	long	The value of tmnxMobServStatActiveBearers indicates the number of active bearers being served by this card.
servStatApn [Serv Stat Apn] (tmnxMobServStatApn)	long	The value of tmnxMobServStatApn indicates the number of Access Point Names (APNs) being served by this card.
servStatBearers [Serv Stat Bearers] (tmnxMobServStatBearers)	long	The value of tmnxMobServStatBearers indicates the number of bearers being served by this card.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
servStatBuffersAllocErr [Serv Stat Buffers Alloc Err] (tmnxMobServStatBuffersAllocErr)	long	The value of tmnxMobServStatBuffersAllocErr indicates the number of paging buffers not available errors on this card.
servStatBuffersAllocated [Serv Stat Buffers Allocated] (tmnxMobServStatBuffersAllocated)	long	The value of tmnxMobServStatBuffersAllocated indicates the number of allocated paging buffers on this card.
servStatBuffersAvailable [Serv Stat Buffers Available] (tmnxMobServStatBuffersAvailable)	long	The value of tmnxMobServStatBuffersAvailable indicates the number of available paging buffers on this card.
servStatDedicatedBearers [Serv Stat Dedicated Bearers] (tmnxMobServStatDedicatedBearers)	long	The value of tmnxMobServStatDedicatedBearers indicates the number of dedicated bearers being served by this card.
servStatDefaultBearers [Serv Stat Default Bearers] (tmnxMobServStatDefaultBearers)	long	The value of tmnxMobServStatDefaultBearers indicates the number of default bearers being served by this card.
servStatGaCdrBuffered [Serv Stat Ga Cdr Buffered] (tmnxMobServStatGaCdrBuffered)	long	The value of tmnxMobServStatGaCdrBuffered indicates the number of Ga Charging Data Records (CDRs) sent to the CPM and stored on compact flash because of a Charging Gateway Function (CGF) outage or no CGF peers configured by the gateway on this card.
servStatGaDrtReqMaxQueued [Serv Stat Ga Drt Req Max Queued] (tmnxMobServStatGaDrtReqMaxQueued)	long	The value of tmnxMobServStatGaDrtReqMaxQueued indicates the number of Ga GPRS Tunneling Protocol (GTP) Data Record Transfer (DRT) Request messages queued by the gateway on this card at a given time. This is the high water mark for the DRT message queue served by the gateway on this card.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
servStatGaDrtReqQueue [Serv Stat Ga Drt Req Queue] (tmnxMobServStatGaDrtReqQueue)	long	The value of tmnxMobServStatGaDrtReqQueue indicates the current number of Ga GPRS Tunneling Protocol (GTP) Data Record Transfer (DRT) Request messages queued or in the process of being sent to the Charging Gateway Function (CGF) by the gateway on this card.
servStatIdleBearers [Serv Stat Idle Bearers] (tmnxMobServStatIdleBearers)	long	The value of tmnxMobServStatIpv4v6Bearers indicates the number of idle bearers being served by this card.
servStatIdleUes [Serv Stat Idle Ues] (tmnxMobServStatIdleUes)	long	The value of tmnxMobServStatIdleUes indicates the number of idle User Equipments (UE) being served by this card.
servStatIpv4Bearers [Serv Stat Ipv 4 Bearers] (tmnxMobServStatIpv4Bearers)	long	The value of tmnxMobServStatIpv4Bearers indicates the number of IPv4 bearers being served by this card.
servStatIpv4Sdf [Serv Stat Ipv 4 Sdf] (tmnxMobServStatIpv4Sdf)	long	The value of tmnxMobServStatIpv4Sdf indicates the number of IPv4 Service Data Flows (SDFs) on this card.
servStatIpv4v6Bearers [Serv Stat Ipv 4 v 6 Bearers] (tmnxMobServStatIpv4v6Bearers)	long	The value of tmnxMobServStatIpv4v6Bearers indicates the number of IPv4v6 bearers being served by this card.
servStatIpv6Bearers [Serv Stat Ipv 6 Bearers] (tmnxMobServStatIpv6Bearers)	long	The value of tmnxMobServStatIpv6Bearers indicates the number of IPv6 bearers being served by this card.
servStatIpv6Sdf [Serv Stat Ipv 6 Sdf] (tmnxMobServStatIpv6Sdf)	long	The value of tmnxMobServStatIpv6Sdf indicates the number of IPv6 Service Data Flows (SDFs) on this card.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
servStatLowPriSess [Serv Stat Low Pri Sess] (tmnxMobServStatLowPriSess)	long	The value of tmnxMobServStatLowPriSess indicates the number of low priority Serving Gateway (SGW) sessions.
servStatPagingInProgress [Serv Stat Paging In Progress] (tmnxMobServStatPagingInProgress)	long	The value of tmnxMobServStatPagingInProgress indicates the number of paging processes in progress on this card.
servStatRfAcctIntBuf [Serv Stat Rf Acct Int Buf] (tmnxMobServStatRfAcctIntBuf)	long	The value of tmnxMobServStatRfAcctIntBuf indicates the number of Accounting Request (ACR) Interim messages buffered by this card.
servStatRfAcctStartBuf [Serv Stat Rf Acct Start Buf] (tmnxMobServStatRfAcctStartBuf)	long	The value of tmnxMobServStatRfAcctStartBuf indicates the number of Accounting Request (ACR) Start messages buffered by this card.
servStatRfAcctStopBuf [Serv Stat Rf Acct Stop Buf] (tmnxMobServStatRfAcctStopBuf)	long	The value of tmnxMobServStatRfAcctStopBuf indicates the number of Accounting Request (ACR) Stop messages buffered by this card.
servStatRfPeer [Serv Stat Rf Peer] (tmnxMobServStatRfPeer)	long	The value of tmnxMobServStatRfPeer indicates the number of peers on the Rf reference point being served by this card.
servStatRncs [Serv Stat Rncs] (tmnxMobServStatRncs)	long	The value of tmnxMobServStatRncs indicates the number of Radio Network Controllers (RNCs) being served by this card.
servStatRoamers [Serv Stat Roamers] (tmnxMobServStatRoamers)	long	The value of tmnxMobServStatRoamers indicates the number of roamers being served by this card.
servStatSgsns [Serv Stat Sgsns] (tmnxMobServStatSgsns)	long	The value of tmnxMobServStatSgsns indicates the number of Serving General Packet Radio Service (GPRS) Support Node (SGSNs) being served by this card.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
servStatUes [Serv Stat Ues] (tmnxMobServStatUes)	long	The value of tmnxMobServStatUes indicates the number of User Equipments (UE) being served by this card.
servStatVisitors [Serv Stat Visitors] (tmnxMobServStatVisitors)	long	The value of tmnxMobServStatVisitors indicates the number of visitors being served by this card.
slotId [Slot Id] (tmnxMobServCardSlotNum)	long	The value of tmnxMobServCardSlotNum indicates the slot number of this card.
<p>MglsaSdfStats MIB entry name: tmnxMobGwlsMgSdfEntry Entry description: Each row entry represents Service Data Flow (SDF) entries allocated and used in a mobile system group configured in the system. Table description (for tmnxMobGwlsMgSdfTable): The tmnxMobGwlsMgSdfTable has an entry for each mobile system group configured in the system. Supports realtime plotting Supports scheduled collection Monitored class: isa.MglsaGroup</p>		
groupNumber [Group Number] (tmnxMobGwlsMgGrpNum)	long	The value of tmnxMobGwlsMgGrpNum uniquely identifies a mobile system group.
sdfAssigned [Sdf Assigned] (tmnxMobGwlsMgSdfAssigned)	long	The value of tmnxMobGwlsMgSdfAssigned specifies the number of Service Data Flow (SDF) entries provisioned in Line Card Processor (LCP).
sdfFpTotal [Sdf Fp Total] (tmnxMobGwlsMgSdfFpTotal)	long	The value of tmnxMobGwlsMgSdfFpTotal specifies the total number of Service Data Flow (SDF) entries available in Fast Path (FP).

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdfInUse [Sdf In Use] (tmnxMobGwIsmMgSdfInUse)	long	The value of tmnxMobGwIsmMgSdfInUse specifies the actual Service Data Flow (SDF) entries programmed in Fast Path (FP).
sdfLcpTotal [Sdf Lcp Total] (tmnxMobGwIsmMgSdfLcpTotal)	long	The value of tmnxMobGwIsmMgSdfLcpTotal specifies the total number of Service Data Flow (SDF) entries available in Line Card Processor (LCP).
<p>PdnAttachFailureStats MIB entry name: tmnxCardEntry Entry description: Each row entry represents an IOM card slot in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. When a tmnxChassisEntry is created, a tmnxCardEntry is created for each IOM card slot in that chassis. Before a tmnxChassisEntry can be deleted, each tmnxCardEntry for that chassis must be in the proper state for removal. Table description (for tmnxCardTable): The tmnxCardTable has an entry for each IOM card slot in each chassis in the TMNX system. Supports realtime plotting Supports scheduled collection Monitored class: lte.PDNGateway</p>		
cardSlotNum [Card Slot Num] (tmnxCardSlotNum)	long	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassis-Index are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
createPktIssue [Create Pkt Issue] (tmnxMobPdnStatAfCreatePktIssue)	java. math. BigInteger	The value of tmnxMobPdnStatAfCreatePktIssue indicates the number of session attach failures due to create packet has some issue.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
epcId [Epc Id] (tmnxMobGwId)	long	The value of tmnxMobGwId uniquely identifies a mobile gateway configured in the system.
gtpNoResource [Gtp No Resource] (tmnxMobPdnStatAfGtpNoResource)	java. math. BigInteger	The value of tmnxMobPdnStatAfGtpNoResource indicates the number of session attach failures due to GPRS Tunneling Protocol (GTP) module has no resources.
internalError [Internal Error] (tmnxMobPdnStatAfInternalError)	java. math. BigInteger	The value of tmnxMobPdnStatAfInternalError indicates the number of session attach failures due to internal error.
invalidPeer [Invalid Peer] (tmnxMobPdnStatAfInvalidPeer)	java. math. BigInteger	The value of tmnxMobPdnStatAfInvalidPeer indicates the number of session attach failures due to invalid peer.
ipAddrNotAvail [Ip Addr Not Avail] (tmnxMobPdnStatAfIpAddrNotAvail)	java. math. BigInteger	The value of tmnxMobPdnStatAfIpAddrNotAvail indicates the number of session attach failures due to IP address is not available in the request.
missingInvalidIe [Missing Invalid Ie] (tmnxMobPdnStatAfMissingInvalidIe)	java. math. BigInteger	The value of tmnxMobPdnStatAfMissingInvalidIe indicates the number of session attach failures due to missing invalid IE.
packetDrop [Packet Drop] (tmnxMobPdnStatAfPacketDrop)	java. math. BigInteger	The value of tmnxMobPdnStatAfPacketDrop indicates the number of session attach failures due to packet drop.
peerAdminDown [Peer Admin Down] (tmnxMobPdnStatAfPeerAdminDown)	java. math. BigInteger	The value of tmnxMobPdnStatAfPeerAdminDown indicates the number of session attach failures due to peer down operation using peer list from the administrator.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
peerDown [Peer Down] (tmnxMobPdnStatAfPeerDown)	java. math. BigInteger	The value of tmnxMobPdnStatAfPeerDown indicates the number of session attach failures due to peer is going down.
peerRecovCount [Peer Recov Count] (tmnxMobPdnStatAfPeerRecovCount)	java. math. BigInteger	The value of tmnxMobPdnStatAfPeerRecovCount indicates the number of session attach failures due to peer recovery count has changed.
pgwOverload [Pgw Overload] (tmnxMobPdnStatAfPgwOverload)	java. math. BigInteger	The value of tmnxMobPdnStatAfPgwOverload indicates the number of session attach failures due to PGW overload.
<p>PdnGwCardAdditionalStats</p> <p>MIB entry name: tmnxMobPdnStatExtEntry</p> <p>Entry description: Each row entry represents a Mobility Service Module (MSM) and contains statistics for this card. When the value of tmnxCardSlotNum is equal to '0', then each row entry contains aggregated statistics for a given gateway.</p> <p>Table description (for tmnxMobPdnStatExtTable): The tmnxMobPdnStatTable has an entry for each each Mobility Service Module (MSM) configured in the mobility system group defined for a Packet Data Network Gateway (PGW). comboLowPriSess [Combo Low Pri Sess] (tmnxMobPdnStatComboLowPriSess)	long	The value of tmnxMobPdnStatComboLowPriSess indicates the number of low priority combo sessions.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
comboNonIpPdnSessions [Combo Non Ip Pdn Sessions] (tmnxMobPdnStatComboNonIpSessions)	long	The value of tmnxMobPdnStatComboNonIpSessions indicates the number of combined gateway non-IP PDN Sessions being served by this card.
emerCallReq [Emer Call Req] (tmnxMobPdnStatEmerCallReq)	long	The value of tmnxMobPdnStatEmerCallReq indicates the number of Active Emergency Call Requests served by ePDG.
epcld [Epc Id] (tmnxMobGwld)	long	The value of tmnxMobGwld uniquely identifies a mobile gateway configured in the system.
gyCcrBuffered [Gy Ccr Buffered] (tmnxMobPdnStatGyCcrBuffered)	long	The value of tmnxMobPdnStatGyCcrBuffered indicates the number of Gy Credit Control Requests (CCRs) sent to the PCRF and stored on compact flash because of a PCRF outage.
nonIpPdnSessions [Non Ip Pdn Sessions] (tmnxMobPdnStatNonIpPdnSessions)	long	The value of tmnxMobPdnStatNonIpPdnSessions indicates the number of non-IP PDN Sessions being served by this card.
numWlanAp [Num Wlan Ap] (tmnxMobPdnStatNumWlanAp)	long	The value of tmnxMobPdnStatNumWlanAp indicates the number of Wireless Local Area Network (WLAN) Access Points (AP) per PDN.
pgwLowPriSess [Pgw Low Pri Sess] (tmnxMobPdnStatPgwLowPriSess)	long	The value of tmnxMobPdnStatComboLowPriSess indicates the number of low priority Packet Data Network (PDN) sessions.
slotId [Slot Id] (tmnxMobPdnCardSlotNum)	long	The value of tmnxMobPdnCardSlotNum indicates the slot number of this card.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
steeringDefSess [Steering Def Sess] (tmnxMobPdnStatSteeringDefSess)	long	The value of tmnxMobPdnStatSteeringDefSess indicates number of steering default sessions.
twagNswoSess [Twag NswoSess] (tmnxMobPdnStatTwagNswoSess)	long	The value of tmnxMobPdnStatTwagNswoSess indicates the number of Trusted WLAN Access Gateway (TWAG) NWSO sessions per Packet Data Network (PDN).
twagOpenSsidSess [Twag Open Ssid Sess] (tmnxMobPdnStatTwagOpenSsidSess)	long	The value of tmnxMobPdnStatTwagOpenSsidSess indicates the number of Trusted WLAN Access Gateway (TWAG) Open Service Set Identifier (SSID) portal sessions per Packet Data Network (PDN).
twagSamogSess [Twag Samog Sess] (tmnxMobPdnStatTwagSamogSess)	long	The value of tmnxMobPdnStatTwagSamogSess indicates the number of Trusted WLAN Access Gateway (TWAG) SAMOG sessions per Packet Data Network (PDN).
<p>PdnGwCardFlowAdditionalStats MIB entry name: tmnxMobPdnProcExtEntry Entry description: Each row entry represents additional columns for a Mobility Service Module (MSM) and contains statistics for call flow procedures on this card. Table description (for tmnxMobPdnProcExtTable): The tmnxMobPdnProcExtTable provides an extension of the tmnxMobPdnProcTable for each Mobility Service Module (MSM) configured in the mobility system group defined for a PDN Gateway (PGW). Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • equipment.BaseCard • equipment.ProcessorCard • lte.PDNGateway </p>		
attachPiggyFail [Attach Piggy Fail] (tmnxMobPdnProcAttachPiggyFail)	long	The value of tmnxMobPdnProcAttachPiggyFail indicates the number of attach procedure failures with piggybacking.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ehrpdLteHo [Ehrpd Lte Ho] (tmnxMobPdnProcEhrpdLteHo)	long	The value of tmnxMobPdnProcEhrpdLteHo indicates the number of evolved High Rate Packet Data (eHRPD) to Long Term Evolution (LTE) handovers served successfully by this card.
ehrpdLteHoFails [Ehrpd Lte Ho Fails] (tmnxMobPdnProcEhrpdLteHoFails)	long	The value of tmnxMobPdnProcEhrpdLteHoFails indicates the number of evolved High Rate Packet Data (eHRPD) to Long Term Evolution (LTE) handover failures served by this card.
epcld [Epc Id] (tmnxMobGwld)	long	The value of tmnxMobGwld uniquely identifies a mobile gateway configured in the system.
epdgAttachFail [Epdg Attach Fail] (tmnxMobPdnEpdgAttachFail)	long	The value of tmnxMobPdnEpdgAttachFail indicates the number of failed Evolved Packet Data Gateway (ePDG) attaches.
epdgAttachSuccess [Epdg Attach Success] (tmnxMobPdnEpdgAttachSuccess)	long	The value of tmnxMobPdnEpdgAttachSuccess indicates the number of successful Evolved Packet Data Gateway (ePDG) attaches.
epdgDetachFail [Epdg Detach Fail] (tmnxMobPdnEpdgDetachFail)	long	The value of tmnxMobPdnEpdgDetachFail indicates the number of failed Evolved Packet Data Gateway (ePDG) detaches.
epdgDetachSuccess [Epdg Detach Success] (tmnxMobPdnEpdgDetachSuccess)	long	The value of tmnxMobPdnEpdgDetachSuccess indicates the number of successful Evolved Packet Data Gateway (ePDG) detaches.
epdgHssQosModify [Epdg Hss Qos Modify] (tmnxMobPdnEpdgHssQosModify)	long	The value of tmnxMobPdnEpdgHssQosModify indicates the number of Home Subscriber Server (HSS) initiated Quality of Service (QoS) modification procedures for Evolved Packet Data Gateway (ePDG).

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
epdgHssQosModifyFail [Epdg Hss Qos Modify Fail] (tmnxMobPdnEpdgHssQosModifyFail)	long	The value of tmnxMobPdnEpdgHssQosModifyFail indicates the number of Home Subscriber Server (HSS) initiated Quality of Service (QoS) modification procedures failure for Evolved Packet Data Gateway (ePDG).
epdgInitPdnSessDel [Epdg Init Pdn Sess Del] (tmnxMobPdnEpdgInitPdnSessDel)	long	The value of tmnxMobPdnEpdgInitPdnSessDel indicates the number of successful PDN session-deletion initiated by Evolved Packet Data Gateway (ePDG).
epdgInitPdnSessDelFail [Epdg Init Pdn Sess Del Fail] (tmnxMobPdnEpdgInitPdnSessDelFail)	long	The value of tmnxMobPdnEpdgInitPdnSessDelFail indicates the number of failed PDN session-deletion initiated by Evolved Packet Data Gateway (ePDG).
epdgNwDedBrActv [Epdg Nw Ded Br Actv] (tmnxMobPdnEpdgNwDedBrActv)	long	The value of tmnxMobPdnEpdgNwDedBrActv indicates the number of Evolved Packet Data Gateway (ePDG) network initiated dedicated bearer activation procedures.
epdgNwDedBrActvFail [Epdg Nw Ded Br Actv Fail] (tmnxMobPdnEpdgNwDedBrActvFail)	long	The value of tmnxMobPdnEpdgNwDedBrActvFail indicates the number of Evolved Packet Data Gateway (ePDG) network initiated dedicated bearer activation procedures failure.
epdgNwDedBrDeactv [Epdg Nw Ded Br Deactv] (tmnxMobPdnEpdgNwDedBrDeactv)	long	The value of tmnxMobPdnEpdgNwDedBrDeactv indicates the number of Evolved Packet Data Gateway (ePDG) network initiated dedicated bearer deactivation procedures.
epdgNwDedBrDeactvFail [Epdg Nw Ded Br Deactv Fail] (tmnxMobPdnEpdgNwDedBrDeactvFail)	long	The value of tmnxMobPdnEpdgNwDedBrDeactvFail indicates the number of Evolved Packet Data Gateway (ePDG) network initiated dedicated bearer activation procedures failure.
epdgPcrfQosModify [Epdg Pcrf Qos Modify] (tmnxMobPdnEpdgPcrfQosModify)	long	The value of tmnxMobPdnEpdgPcrfQosModify indicates the number of Policy and Charging Rules Function (PCRF) initiated QoS modification procedures for Evolved Packet Data Gateway (ePDG).

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
epdgPcrfQosModifyFail [Epdg Pcrf Qos Modify Fail] (tmnxMobPdnEpdgPcrfQosModifyFail)	long	The value of tmnxMobPdnEpdgPcrfQosModifyFail indicates the number of Policy and Charging Rules Function (PCRF) initiated QoS modification procedure failures for Evolved Packet Data Gateway (ePDG).
epdgReattachFail [Epdg Reattach Fail] (tmnxMobPdnEpdgReattachFail)	long	The value of tmnxMobPdnEpdgReattachFail indicates the number of failed Evolved Packet Data Gateway (ePDG) reattaches.
epdgReattachSucc [Epdg Reattach Succ] (tmnxMobPdnEpdgReattachSucc)	long	The value of tmnxMobPdnEpdgReattachSucc indicates the number of successful Evolved Packet Data Gateway (ePDG) reattaches.
epdgToLteHandOverFail [Epdg To Lte Hand Over Fail] (tmnxMobPdnEpdgToLteHandOverFail)	long	The value of tmnxMobPdnEpdgToLteHandOverSucc indicates the number of failed Evolved Packet Data Gateway (ePDG) network to Long Term Evolution (LTE) network hand over.
epdgToLteHandOverSucc [Epdg To Lte Hand Over Succ] (tmnxMobPdnEpdgToLteHandOverSucc)	long	The value of tmnxMobPdnEpdgToLteHandOverSucc indicates the number of successful Evolved Packet Data Gateway (ePDG) network to Long Term Evolution (LTE) network hand over.
gwType [Gw Type] (tmnxMobPdnGwType)	int	The value of tmnxMobGwType specifies the type of mobile gateway.
interIdleTau [Inter Idle Tau] (tmnxMobPdnProInterIdleTau)	long	The value of tmnxMobPdnProInterIdleTau indicates the number of incoming inter Serving Gateway (SGW) idle mode Tracking Area Updates (TAU) served successfully by this card.
interIdleTauFails [Inter Idle Tau Fails] (tmnxMobPdnProInterIdleTauFails)	long	The value of tmnxMobPdnProInterIdleTauFails indicates the number of incoming inter Serving Gateway (SGW) idle mode Tracking Area Update (TAU) failures.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
interMmeIdlTauFls [Inter Mme Idl Tau Fls] (tmnxMobPdnProclnterMmeIdlTauFls)	long	The value of tmnxMobPdnProclnterMmeIdlTauFls indicates the number of incoming intra Serving Gateway (SGW) inter Mobility Management Entity (MME) / S4-Serving GPRS Support Node (SGSN) Idle mode Tracking Area Updates (TAU) served unsuccessfully by this card.
interMmeIdleTau [Inter Mme Idle Tau] (tmnxMobPdnProclnterMmeIdleTau)	long	The value of tmnxMobPdnProclnterMmeIdleTau indicates the number of incoming intra Serving Gateway (SGW) inter Mobility Management Entity (MME) / S4-Serving GPRS Support Node (SGSN) Idle mode Tracking Area Updates (TAU) served successfully by this card.
interMmeRelocs [Inter Mme Relocs] (tmnxMobPdnProclnterMmeRelocs)	long	The value of tmnxMobPdnProclnterMmeRelocs indicates the number of incoming intra Serving Gateway (SGW) inter Mobility Management Entity (MME) / S4-Serving GPRS Support Node (SGSN) detected by this card.
interMmeS1RITnFls [Inter Mme S1 RI Tn Fls] (tmnxMobPdnProclnterMmeS1RITnFls)	long	The value of tmnxMobPdnProclnterMmeS1RITnFls indicates the number of intra Serving Gateway (SGW) inter Mobility Management Entity (MME) / S4-Serving GPRS Support Node (SGSN) S1-based relocation failures with indirect tunnels served by this card.
interMmeS1RITnSuc [Inter Mme S1 RI Tn Suc] (tmnxMobPdnProclnterMmeS1RITnSuc)	long	The value of tmnxMobPdnProclnterMmeS1RITnSuc indicates the number of intra Serving Gateway (SGW) inter Mobility Management Entity (MME) / S4-Serving GPRS Support Node (SGSN) S1-based relocation with indirect tunnels served successfully by this card.
interMmeS1X2RIFls [Inter Mme S1 X2 RI Fls] (tmnxMobPdnProclnterMmeS1X2RIFls)	long	The value of tmnxMobPdnProclnterMmeS1X2RIFls indicates the number of intra Serving Gateway (SGW) inter Mobility Management Entity (MME) / S4-Serving GPRS Support Node (SGSN) X2-based and S1-based relocation failures served by this card.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
interMmeS1X2RISuc [Inter Mme S1 X2 RI Suc] (tmnxMobPdnProInterMmeS1X2RISuc)	long	The value of tmnxMobPdnProInterMmeS1X2RISuc indicates the number of intra Serving Gateway (SGW) inter Mobility Management Entity (MME) / S4-Serving GPRS Support Node (SGSN) X2-based and S1-based relocation served successfully by this card.
interSgwHoOut [Inter Sgw Ho Out] (tmnxMobPdnProInterSgwHoOut)	long	The value of tmnxMobPdnProInterSgwHoOut indicates the number of outgoing inter Serving Gateway (SGW) handovers served successfully by this card.
interX2Hndor [Inter X2 Hndor] (tmnxMobPdnProInterX2Hndor)	long	The value of tmnxMobPdnProInterX2Hndor indicates the number of incoming inter Serving Gateway (SGW) X2-based handovers served successfully by this card.
interX2HndorFails [Inter X2 Hndor Fails] (tmnxMobPdnProInterX2HndorFails)	long	The value of tmnxMobPdnProInterX2HndorFails indicates the number of incoming inter Serving Gateway (SGW) X2-based handover failures.
intraIdleModeTau [Intra Idle Mode Tau] (tmnxMobPdnProIntraIdleModeTau)	long	The value of tmnxMobPdnProIntraIdleModeTau indicates the number of intra Serving Gateway (SGW) idle mode Tracking Area Updates (TAU) served successfully by this card.
intraIdleTauFails [Intra Idle Tau Fails] (tmnxMobPdnProIntraIdleTauFails)	long	The value of tmnxMobPdnProIntraIdleTauFails indicates the number of intra Serving Gateway (SGW) idle mode Tracking Area Updates (TAU) failures served by this card.
intraS1IndTnlFail [Intra S1 Ind Tnl Fail] (tmnxMobPdnProIntraS1IndTnlFail)	long	The value of tmnxMobPdnProIntraS1IndTnlFail indicates the number of incoming intra Serving Gateway (SGW) S1-based handover failures with indirect tunnels served by this card.
intraSgwHndvr [Intra Sgw Hndvr] (tmnxMobPdnProIntraSgwHndvr)	long	The value of tmnxMobPdnProIntraSgwHndvr indicates the number of incoming intra Serving Gateway (SGW) X2-based and S1-based handovers with and without indirect tunnels served successfully by this card.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
intraSgwHndvrFail [Intra Sgw Hndvr Fail] (tmnxMobPdnProclntraSgwHndvrFail)	long	The value of tmnxMobPdnProclntraSgwHndvrFail indicates the number of incoming intra Serving Gateway (SGW) X2-based and S1-based handover failures with and without indirect tunnels served by this card.
intraSgwS1IndTnl [Intra Sgw S1 Ind Tnl] (tmnxMobPdnProclntraSgwS1IndTnl)	long	The value of tmnxMobPdnProclntraSgwS1IndTnl indicates the number of incoming intra Serving Gateway (SGW) S1-based handovers with indirect tunnels served successfully by this card.
lteToEpdgHandOverFail [Lte To Epdg Hand Over Fail] (tmnxMobPdnLteToEpdgHandOverFail)	long	The value of tmnxMobPdnLteToEpdgHandOverSucc indicates the number of failed Long Term Evolution (LTE) network to Evolved Packet Data Gateway (ePDG) network hand over.
lteToEpdgHandOverSucc [Lte To Epdg Hand Over Succ] (tmnxMobPdnLteToEpdgHandOverSucc)	long	The value of tmnxMobPdnLteToEpdgHandOverSucc indicates the number of successful Long Term Evolution (LTE) network to Evolved Packet Data Gateway (ePDG) network hand over.
numDelBearerByErrInd [Num Del Bearer By Err Ind] (tmnxMobPdnDelBearerByErrInd)	long	The value of tmnxMobPdnDelBearerByErrInd indicates the number of bearers that were deleted due to error indication (Ded Bearer deactivations).
numDelSessionByErrInd [Num Del Session By Err Ind] (tmnxMobPdnDelSessionByErrInd)	long	The value of tmnxMobPdnDelSessionByErrInd indicates the number of sessions that were deleted due to error indication (PDN session deactivations).
numEpdgMoblkeFailure [Num Epdg Mob Ike Failure] (tmnxMobPdnEpdgMoblkeFailure)	long	The value of tmnxMobPdnEpdgMoblkeFailure indicates the number of failed Evolved Packet Data Gateway (ePDG) IKEv2 Mobility and Multihoming protocol (MOBIKE) procedures.
numEpdgMoblkeSuccess [Num Epdg Mob Ike Success] (tmnxMobPdnEpdgMoblkeSuccess)	long	The value of tmnxMobPdnEpdgMoblkeSuccess indicates the number of successful Evolved Packet Data Gateway (ePDG) IKEv2 Mobility and Multihoming protocol (MOBIKE) procedures.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numOpenSsidCoaAccessConn [Num Open Ssid Coa Access Conn] (tmnxMobPdnOpenSsidCoaAccessConn)	long	The value of tmnxMobPdnOpenSsidCoaAccessConn indicates the number of Change of Authorization (CoA) access connect on TWAG Open SSID.
numOpenSsidCoaAccessDisc [Num Open Ssid Coa Access Disc] (tmnxMobPdnOpenSsidCoaAccessDisc)	long	The value of tmnxMobPdnOpenSsidCoaAccessDisc indicates the number of Change of Authorization (CoA) access disconnect on TWAG Open SSID.
numOpenSsidDhcpHldTimeOut [Num Open Ssid Dhcp Hld Time Out] (tmnxMobPdnOpenSsidDhcpHldTimeOut)	long	The value of tmnxMobPdnOpenSsidDhcpHldTimeOut indicates the number of DHCP hold time time out on TWAG Open SSID.
numOpenSsidDhcpLeaseExp [Num Open Ssid Dhcp Lease Exp] (tmnxMobPdnOpenSsidDhcpLeaseExp)	long	The value of tmnxMobPdnOpenSsidDhcpLeaseExp indicates the number of Dynamic Host Configuration Protocol (DHCP) lease time expirations on TWAG Open SSID.
numOpenSsidDhcpReattach [Num Open Ssid Dhcp Reattach] (tmnxMobPdnOpenSsidDhcpReattach)	long	The value of tmnxMobPdnOpenSsidDhcpReattach indicates the number of successful DHCP reattaches on TWAG Open SSID.
numOpenSsidDhcpRelease [Num Open Ssid Dhcp Release] (tmnxMobPdnOpenSsidDhcpRelease)	long	The value of tmnxMobPdnOpenSsidDhcpRelease indicates the number of DHCP releases on TWAG Open SSID.
numOpenSsidDoraAttach [Num Open Ssid Dora Attach] (tmnxMobPdnOpenSsidDoraAttach)	long	The value of tmnxMobPdnOpenSsidDoraAttach indicates the number of successful DORA attaches on Trusted WLAN Access Gateway (TWAG) Open Service Set Identity (SSID).
numOpenSsidDoraAttachFail [Num Open Ssid Dora Attach Fail] (tmnxMobPdnOpenSsidDoraAttachFail)	long	The value of tmnxMobPdnOpenSsidDoraAttachFail indicates the number of failed DORA attaches on TWAG Open SSID.
numOpenSsidIntApHoDataTrg [Num Open Ssid Int Ap Ho Data Trg] (tmnxMobPdnOpenSsidIntApHoDataTrg)	long	The value of tmnxMobPdnOpenSsidIntApHoDataTrg indicates the number of Inter Access Points (AP) handover data trigger on TWAG Open SSID.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numOpenSsidIntApHoDhcp [Num Open Ssid Int Ap Ho Dhcp] (tmnxMobPdnOpenSsidIntApHoDhcp)	long	The value of tmnxMobPdnOpenSsidIntApHoDhcp indicates the number of Inter Access Points (AP) handover DHCP on TWAG Open SSID.
numOpenSsidNwInitDetach [Num Open Ssid Nw Init Detach] (tmnxMobPdnOpenSsidNwInitDetach)	long	The value of tmnxMobPdnOpenSsidNwInitDetach indicates the number of successful network initiated detaches on TWAG Open SSID.
numOpenSsidRcAttach [Num Open Ssid Rc Attach] (tmnxMobPdnOpenSsidRcAttach)	long	The value of tmnxMobPdnOpenSsidRcAttach indicates the number of successful Rapid Commit attaches on TWAG Open SSID.
numOpenSsidRcAttachFail [Num Open Ssid Rc Attach Fail] (tmnxMobPdnOpenSsidRcAttachFail)	long	The value of tmnxMobPdnOpenSsidRcAttachFail indicates the number of failed Rapid Commit attaches on TWAG Open SSID.
numS2bNwDedBrActv [Num S2 b Nw Ded Br Actv] (tmnxMobPdnS2bNwDedBrActv)	long	The value of tmnxMobPdnS2bNwDedBrActv indicates the number S2b network initiated dedicated bearer activation procedures.
numS2bNwDedBrActvFail [Num S2 b Nw Ded Br Actv Fail] (tmnxMobPdnS2bNwDedBrActvFail)	long	The value of tmnxMobPdnS2bNwDedBrActvFail indicates the number of S2b network initiated dedicated bearer activation procedures failure.
numS2bNwDedBrDeactv [Num S2 b Nw Ded Br Deactv] (tmnxMobPdnS2bNwDedBrDeactv)	long	The value of tmnxMobPdnS2bNwDedBrDeactv indicates the number of S2b network initiated dedicated bearer deactivation procedures.
numS2bNwDedBrDeactvFail [Num S2 b Nw Ded Br Deactv Fail] (tmnxMobPdnS2bNwDedBrDeactvFail)	long	The value of tmnxMobPdnS2bNwDedBrDeactvFail indicates the number of S2b network initiated dedicated bearer activation procedures failure.
numS2bPcrfQosModify [Num S2 b Pcrf Qos Modify] (tmnxMobPdnS2bPcrfQosModify)	long	The value of tmnxMobPdnS2bPcrfQosModify indicates the number of Policy and Charging Rules Function (PCRF) initiated QoS modification procedures for S2b reference point.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numS2bPcrfQosModifyFail [Num S2 b Pcrf Qos Modify Fail] (tmnxMobPdnS2bPcrfQosModifyFail)	long	The value of tmnxMobPdnS2bPcrfQosModifyFail indicates the number of Policy and Charging Rules Function (PCRF) initiated QoS modification procedure failures for S2b reference point.
numS2bQosModify [Num S2 b Qos Modify] (tmnxMobPdnS2bQosModify)	long	The value of tmnxMobPdnS2bQosModify indicates the number of Quality of Service (QoS) modification procedures for S2b reference point.
numS2bQosModifyFail [Num S2 b Qos Modify Fail] (tmnxMobPdnS2bQosModifyFail)	long	The value of tmnxMobPdnS2bQosModifyFail indicates the number of Quality of Service (QoS) modification procedures failure for S2b reference point.
numS2bSessDeactIdleTimeOut [Num S2 b Sess Deact Idle Time Out] (tmnxMobPdnS2bSessDeactDueToIt)	long	The value of tmnxMobPdnS2bSessDeactDueToIt indicates the number of S2b sessions deactivated due to the idle timeout.
numS2bSessDeactSessTimeOut [Num S2 b Sess Deact Sess Time Out] (tmnxMobPdnS2bSessDeactDueToSt)	long	The value of tmnxMobPdnS2bSessDeactDueToSt indicates the number of S2b sessions deactivated due to the session time-out.
numUeIdleByErrInd [Num Ue Idle By Err Ind] (tmnxMobPdnUeIdleByErrInd)	long	The value of tmnxMobPdnUeIdleByErrInd indicates the number of User Equipments (UE) that went to idle due to error indication (S1 release procedure).
nwBrModify [Nw Br Modify] (tmnxMobPdnProcNwBrModify)	long	The value of tmnxMobPdnProcNwBrModify indicates the number of network initiated bearer modification procedures served by this card.
nwBrModifyFail [Nw Br Modify Fail] (tmnxMobPdnProcNwBrModifyFail)	long	The value of tmnxMobPdnProcNwBrModifyFail indicates the number of network initiated bearer modification procedure failures in this card.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
nwPdnSesDeActFail [Nw Pdn Ses De Act Fail] (tmnxMobPdnProcNwPdnSesDeActFail)	long	The value of tmnxMobPdnProcNwPdnSesDeActFail indicates the number of network initiated Packet Data Network (PDN) session de-activation procedure failures served by this card.
nwPdnSessDeActiv [Nw Pdn Sess De Activ] (tmnxMobPdnProcNwPdnSessDeActiv)	long	The value of tmnxMobPdnProcNwPdnSessDeActiv indicates the number of network initiated Packet Data Network (PDN) session de-activation procedures served by this card.
pagingAttempts [Paging Attempts] (tmnxMobPdnProcPagingAttempts)	long	The value of tmnxMobPdnProcPagingAttempts indicates the number of paging attempts served by this card.
pagingFails [Paging Fails] (tmnxMobPdnProcPagingFails)	long	The value of tmnxMobPdnProcPagingFails indicates the number of paging failures served by this card.
pagingTimeoutExp [Paging Timeout Exp] (tmnxMobPdnProcPagingTimeoutExp)	long	The value of tmnxMobPdnProcPagingTimeoutExp indicates the number of paging timeout expiration.
s1Release [S1 Release] (tmnxMobPdnProcS1Release)	long	The value of tmnxMobPdnProcS1Release indicates the number of successful Evolved NodeB (eNodeB) and Mobility Management Entity (MME) initiated S1 release procedures served by this card.
s1ReleaseFailures [S1 Release Failures] (tmnxMobPdnProcS1ReleaseFailures)	long	The value of tmnxMobPdnProcS1ReleaseFailures indicates the number of Evolved NodeB (eNodeB) and Mobility Management Entity (MME) initiated S1 release procedure failures.
s1WithIndTnl [S1 With Ind Tnl] (tmnxMobPdnProcS1WithIndTnl)	long	The value of tmnxMobPdnProcS1WithIndTnl indicates the number of incoming inter Serving Gateway (SGW) handovers with indirect tunnels served successfully by this card.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
s1WithIndTnlFails [S1 With Ind Tnl Fails] (tmnxMobPdnProcS1WithIndTnlFails)	long	The value of tmnxMobPdnProcS1WithIndTnlFails indicates the number of incoming inter Serving Gateway (SGW) handover failures with indirect tunnels.
s1WoIndTnl [S1 Wo Ind Tnl] (tmnxMobPdnProcS1WoIndTnl)	long	The value of tmnxMobPdnProcS1WoIndTnl indicates the number of incoming inter Serving Gateway (SGW) handovers without indirect tunnels served successfully by this card.
s1WoIndTnlFails [S1 Wo Ind Tnl Fails] (tmnxMobPdnProcS1WoIndTnlFails)	long	The value of tmnxMobPdnProcS1WoIndTnlFails indicates the number of incoming inter Serving Gateway (SGW) handover failures without indirect tunnels.
s2bPgwPdnSessDel [S2 b Pgw Pdn Sess Del] (tmnxMobPdnProcS2bPgwPdnSessDel)	long	The value of tmnxMobPdnProcS2bPgwPdnSessDel indicates the number of successful PDN session-deletion initiated by PDN Gateway (PGW) on S2b interface.
s2bPgwPdnSessDelFI [S2 b Pgw Pdn Sess Del FI] (tmnxMobPdnProcS2bPgwPdnSessDelFI)	long	The value of tmnxMobPdnProcS2bPgwPdnSessDelFI indicates the number of failed PDN session-deletion initiated by PDN Gateway (PGW) on S2b interface.
slotId [Slot Id] (tmnxMobPdnCardSlotNum)	long	The value of tmnxMobPdnCardSlotNum indicates the slot number of this card.
ueServiceReq [Ue Service Req] (tmnxMobPdnProcUeServiceReq)	long	The value of tmnxMobPdnProcUeServiceReq indicates the number of successful User Equipment (UE) initiated service request procedures served by this card.
ueServiceReqFails [Ue Service Req Fails] (tmnxMobPdnProcUeServiceReqFails)	long	The value of tmnxMobPdnProcUeServiceReqFails indicates the number of User Equipment (UE) initiated service request procedure failures.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PdnGwCardFlowExtAdditionalStats</p> <p>MIB entry name: tmnxMobPdnProcExt1Entry</p> <p>Entry description: Each row entry represents additional columns for a Mobility Service Module (MSM) and contains statistics for call flow procedures on this card.</p> <p>Table description (for tmnxMobPdnProcExt1Table): The tmnxMobPdnProcExt1Table provides an extension of the tmnxMobPdnProcTable for each Mobility Service Module (MSM) configured in the mobility system group defined for a PDN Gateway (PGW).</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.BaseCard • equipment.ProcessorCard • lte.PDNGateway 		
delSessBySetupGuardTmr [Del Sess By Setup Guard Tmr] (tmnxMobPdnDelSessBySetupGuardTmr)	long	The value of tmnxMobPdnDelSessBySetupGuardTmr indicates the number of sessions that were cleaned due to expiration of session setup guard-timer.
epcId [Epc Id] (tmnxMobGwId)	long	The value of tmnxMobGwId uniquely identifies a mobile gateway configured in the system.
numClsdSsidAccessAttach [Num Clsd Ssid Access Attach] (tmnxMobPdnClsdSsidAccessAttach)	long	The value of tmnxMobPdnClsdSsidAccessAttach indicates the number of the successful access attaches on TWAG Closed SSID.
numClsdSsidAccessAtthFail [Num Clsd Ssid Access Atth Fail] (tmnxMobPdnClsdSsidAccessAtthFail)	long	The value of tmnxMobPdnClsdSsidAccessAtthFail indicates the number of the failed access attaches on TWAG Closed SSID.
numClsdSsidDhcpHldTimeOut [Num Clsd Ssid Dhcp Hld Time Out] (tmnxMobPdnClsdSsidDhcpHldTimeOut)	long	The value of tmnxMobPdnClsdSsidDhcpHldTimeOut indicates the number of DHCP hold time time out on TWAG Closed SSID.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numClsdSsidDhcpLeaseExp [Num Clsd Ssid Dhcp Lease Exp] (tmnxMobPdnClsdSsidDhcpLeaseExp)	long	The value of tmnxMobPdnClsdSsidDhcpLeaseExp indicates the number of Dynamic Host Configuration Protocol (DHCP) lease time expirations on TWAG Closed SSID.
numClsdSsidDhcpReattach [Num Clsd Ssid Dhcp Reattach] (tmnxMobPdnClsdSsidDhcpReattach)	long	The value of tmnxMobPdnClsdSsidDhcpReattach indicates the number of successful DHCP reattaches on TWAG Closed SSID.
numClsdSsidDhcpRelease [Num Clsd Ssid Dhcp Release] (tmnxMobPdnClsdSsidDhcpRelease)	long	The value of tmnxMobPdnClsdSsidDhcpRelease indicates the number of DHCP releases on TWAG Closed SSID.
numClsdSsidDoraAttach [Num Clsd Ssid Dora Attach] (tmnxMobPdnClsdSsidDoraAttach)	long	The value of tmnxMobPdnClsdSsidDoraAttach indicates the number of successful DORA attaches on Trusted WLAN Access Gateway (TWAG) Closed Service Set Identity (SSID).
numClsdSsidDoraAttachFail [Num Clsd Ssid Dora Attach Fail] (tmnxMobPdnClsdSsidDoraAttachFail)	long	The value of tmnxMobPdnClsdSsidDoraAttachFail indicates the number of failed DORA attaches on TWAG Closed SSID.
numClsdSsidIntApHoDataTrg [Num Clsd Ssid Int Ap Ho Data Trg] (tmnxMobPdnClsdSsidIntApHoDataTrg)	long	The value of tmnxMobPdnClsdSsidIntApHoDataTrg indicates the number of Inter Access Points (AP) handover data trigger on TWAG Closed SSID.
numClsdSsidIntApHoDhcp [Num Clsd Ssid Int Ap Ho Dhcp] (tmnxMobPdnClsdSsidIntApHoDhcp)	long	The value of tmnxMobPdnClsdSsidIntApHoDhcp indicates the number of Inter Access Points (AP) handover DHCP on TWAG Closed SSID.
numClsdSsidIntApHoReauth [Num Clsd Ssid Int Ap Ho Reauth] (tmnxMobPdnClsdSsidIntApHoReauth)	long	The value of tmnxMobPdnClsdSsidIntApHoReauth indicates the number of Inter Access Points (AP) handover reauthorization on TWAG Closed SSID.
numClsdSsidNwInitDetach [Num Clsd Ssid Nw Init Detach] (tmnxMobPdnClsdSsidNwInitDetach)	long	The value of tmnxMobPdnClsdSsidNwInitDetach indicates the number of successful network initiated detaches on TWAG Closed SSID.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numClsdSsidRcAttach [Num Clsd Ssid Rc Attach] (tmnxMobPdnClsdSsidRcAttach)	long	The value of tmnxMobPdnClsdSsidRcAttach indicates the number of successful Rapid Commit attaches on TWAG Closed SSID.
numClsdSsidRcAttachFail [Num Clsd Ssid Rc Attach Fail] (tmnxMobPdnClsdSsidRcAttachFail)	long	The value of tmnxMobPdnClsdSsidRcAttachFail indicates the number of failed Rapid Commit attaches on TWAG Closed SSID.
numClsdSsidSlaacAttach [Num Clsd Ssid Slaac Attach] (tmnxMobPdnClsdSsidSlaacAttach)	long	The value of tmnxMobPdnClsdSsidSlaacAttach indicates the number of successful SLAAC attaches on Trusted WLAN Access Gateway (TWAG) Closed Service Set Identity (SSID).
numClsdSsidSlaacAttchFail [Num Clsd Ssid Slaac Attch Fail] (tmnxMobPdnClsdSsidSlaacAttchFail)	long	The value of tmnxMobPdnClsdSsidSlaacAttchFail indicates the number of failed SLAAC attaches on TWAG Closed SSID.
numEHRPDToS2bHandOverFail [Num EHRPDToS2 b Hand Over Fail] (tmnxMobPdneHRPDToS2bHandOverFail)	long	The value of tmnxMobPdneHRPDToS2bHandOverFail indicates the number of failed enhanced High Rate Packet Data (eHRPD) network to wifi network hand over.
numEHRPDToS2bHandOverSuccess [Num EHRPDToS2 b Hand Over Success] (tmnxMobPdneHRPDToS2bHandOverSucc)	long	The value of tmnxMobPdneHRPDToS2bHandOverSucc indicates the number of successful enhanced High Rate Packet Data (eHRPD) network to wifi network hand over.
numEmpslmsSessionAct [Num Emps lms Session Act] (tmnxMobPdnEmpslmsSessionAct)	long	The value of tmnxMobPdnEmpslmsSessionAct indicates the number of UE initiated Enhanced Multimedia Priority Service (eMPS) IMS session activations.
numEmpslmsSessionDeact [Num Emps lms Session Deact] (tmnxMobPdnEmpslmsSessionDeact)	long	The value of tmnxMobPdnEmpslmsSessionDeact indicates the number of UE initiated Enhanced Multimedia Priority Service (eMPS) IMS session deactivations.
numLTEToS2aHandOverFail [Num LTEToS2 a Hand Over Fail] (tmnxMobPdnLTEToS2aHandOverFail)	long	The value of tmnxMobPdnLTEToS2aHandOverFail indicates the number of failed Long Term Evolution (LTE) network to S2a network hand over.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numLTEToS2aHandOverSucc [Num LTE To S2 a Hand Over Succ] (tmnxMobPdnLTEToS2aHandOverSucc)	long	The value of tmnxMobPdnLTEToS2aHandOverSucc indicates the number of successful Long Term Evolution (LTE) network to S2a network hand over.
numOpenSsidSlaacAttach [Num Open Ssid Slaac Attach] (tmnxMobPdnOpenSsidSlaacAttach)	long	The value of tmnxMobPdnOpenSsidSlaacAttach indicates the number of successful SLAAC attaches on Trusted WLAN Access Gateway (TWAG) Open Service Set Identity (SSID).
numOpenSsidSlaacAttchFail [Num Open Ssid Slaac Attch Fail] (tmnxMobPdnOpenSsidSlaacAttchFail)	long	The value of tmnxMobPdnOpenSsidSlaacAttchFail indicates the number of failed SLAAC attaches on TWAG Open SSID.
numPdnConnDeleted [Num Pdn Conn Deleted] (tmnxMobPdnConnDeletedSgwRest)	long	The value of tmnxMobPdnConnDeletedSgwRest indicates the number of Packet Data Network (PDN) connections deleted because no Serving Gateway (SGW) restored it.
numPdnConnRestored [Num Pdn Conn Restored] (tmnxMobPdnConnRestoredSgwRestMme)	long	The value of tmnxMobPdnConnRestoredSgwRestMme indicates the number of Packet Data Network (PDN) connections restored because of MME Initiated Serving Gateway (SGW) Restoration.
numS11uErrDefBrDeact [Num S11 u Err Def Br Deact] (tmnxMobPdnS11uErrDefBrDeact)	long	The value of tmnxMobPdnS11uErrDefBrDeact indicates the number of default bearer deactivations due to Error Indication received on S11-U.
numS11uToS1uTransition [Num S11 u To S1 u Transition] (tmnxMobPdnS11uToS1uTransition)	long	The value of tmnxMobPdnS11uToS1uTransition indicates the number of S11-U to S1-U transitions done directly with Modify Bearer Request.
numS11uTunnelAct [Num S11 u Tunnel Act] (tmnxMobPdnS11uTunnelAct)	long	The value of tmnxMobPdnS11uTunnelAct indicates the number of S11-U tunnel activations.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numS11uTunnelDeact [Num S11 u Tunnel Deact] (tmnxMobPdnS11uTunnelDeact)	long	The value of tmnxMobPdnS11uTunnelDeact indicates the number of S11-U tunnel deactivations.
numS2aAttachFailure [Num S2 a Attach Failure] (tmnxMobPdnS2aAttachFailure)	long	The value of tmnxMobPdnS2aAttachFailure indicates the number of failed S2a attaches.
numS2aAttachSuccess [Num S2 a Attach Success] (tmnxMobPdnS2aAttachSuccess)	long	The value of tmnxMobPdnS2aAttachSuccess indicates the number of successful S2a attaches.
numS2aDetachFailure [Num S2 a Detach Failure] (tmnxMobPdnS2aDetachFailure)	long	The value of tmnxMobPdnS2aDetachFailure indicates the number of failed S2a detaches.
numS2aDetachSuccess [Num S2 a Detach Success] (tmnxMobPdnS2aDetachSuccess)	long	The value of tmnxMobPdnS2aDetachSuccess indicates the number of successful S2a detaches.
numS2aNwDedBrActv [Num S2 a Nw Ded Br Actv] (tmnxMobPdnS2aNwDedBrActv)	long	The value of tmnxMobPdnS2aNwDedBrActv indicates the number S2a network initiated dedicated bearer activation procedures.
numS2aNwDedBrActvFail [Num S2 a Nw Ded Br Actv Fail] (tmnxMobPdnS2aNwDedBrActvFail)	long	The value of tmnxMobPdnS2aNwDedBrActvFail indicates the number of S2a network initiated dedicated bearer activation procedures failure.
numS2aNwDedBrDeactv [Num S2 a Nw Ded Br Deactv] (tmnxMobPdnS2aNwDedBrDeactv)	long	The value of tmnxMobPdnS2aNwDedBrDeactv indicates the number of S2a network initiated dedicated bearer deactivation procedures.
numS2aNwDedBrDeactvFail [Num S2 a Nw Ded Br Deactv Fail] (tmnxMobPdnS2aNwDedBrDeactvFail)	long	The value of tmnxMobPdnS2aNwDedBrDeactvFail indicates the number of S2a network initiated dedicated bearer activation procedures failure.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numS2aPcrfQosModify [Num S2 a Pcrf Qos Modify] (tmnxMobPdnS2aPcrfQosModify)	long	The value of tmnxMobPdnS2aPcrfQosModify indicates the number of Policy and Charging Rules Function (PCRF) initiated QoS modification procedures for S2a reference point.
numS2aPcrfQosModifyFail [Num S2 a Pcrf Qos Modify Fail] (tmnxMobPdnS2aPcrfQosModifyFail)	long	The value of tmnxMobPdnS2aPcrfQosModifyFail indicates the number of Policy and Charging Rules Function (PCRF) initiated QoS modification procedure failures for S2a reference point.
numS2aPgwPdnSessDel [Num S2 a Pgw Pdn Sess Del] (tmnxMobPdnS2aPgwPdnSessDel)	long	The value of tmnxMobPdnS2aPgwPdnSessDel indicates the number of successful PDN session-deletion initiated by PDN Gateway (PGW) on S2a interface.
numS2aPgwPdnSessDelFail [Num S2 a Pgw Pdn Sess Del Fail] (tmnxMobPdnS2aPgwPdnSessDelFail)	long	The value of tmnxMobPdnS2aPgwPdnSessDelFail indicates the number of failed PDN session-deletion initiated by PDN Gateway (PGW) on S2a interface.
numS2aQosModify [Num S2 a Qos Modify] (tmnxMobPdnS2aQosModify)	long	The value of tmnxMobPdnS2aQosModify indicates the number of Quality of Service (QoS) modification procedures for S2a reference point.
numS2aQosModifyFail [Num S2 a Qos Modify Fail] (tmnxMobPdnS2aQosModifyFail)	long	The value of tmnxMobPdnS2aQosModifyFail indicates the number of Quality of Service (QoS) modification procedures failure for S2a reference point.
numS2aToLTEHandOverFail [Num S2 a To LTEHand Over Fail] (tmnxMobPdnS2aToLTEHandOverFail)	long	The value of tmnxMobPdnS2aToLTEHandOverFail indicates the number of failed S2a network to Long Term Evolution (LTE) network hand over.
numS2aToLTEHandOverSucc [Num S2 a To LTEHand Over Succ] (tmnxMobPdnS2aToLTEHandOverSucc)	long	The value of tmnxMobPdnS2aToLTEHandOverSucc indicates the number of successful S2a network to Long Term Evolution (LTE) network hand over.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numS2aToS2aHandOverFail [Num S2 a To S2 a Hand Over Fail] (tmnxMobPdnS2aToS2aHandOverFail)	long	The value of tmnxMobPdnS2aToS2aHandOverFail indicates the number of failed handovers from S2a to S2a for the PGW.
numS2aToS2aHandOverSucc [Num S2 a To S2 a Hand Over Succ] (tmnxMobPdnS2aToS2aHandOverSucc)	long	The value of tmnxMobPdnS2aToS2aHandOverSucc indicates the number of successful handovers from S2a to S2a for the PGW.
numS2aToUmtsHandOverFail [Num S2 a To Umts Hand Over Fail] (tmnxMobPdnS2aToUmtsHandOverFail)	long	The value of tmnxMobPdnS2aToUmtsHandOverFail indicates the number of failed S2a network to Universal Mobile Telecommunications System (UMTS) network hand over.
numS2aToUmtsHandOverSucc [Num S2 a To Umts Hand Over Succ] (tmnxMobPdnS2aToUmtsHandOverSucc)	long	The value of tmnxMobPdnS2aToUmtsHandOverSucc indicates the number of successful S2a network to Universal Mobile Telecommunications System (UMTS) network hand over.
numS2bToEHRPDHandOverFail [Num S2 b To EHRPDHand Over Fail] (tmnxMobPdnS2bToeHRPDHandOverFail)	long	The value of tmnxMobPdnS2bToeHRPDHandOverFail indicates the number of failed wifi network to enhanced High Rate Packet Data (eHRPD) network hand over.
numS2bToEHRPDHandOverSuccess [Num S2 b To EHRPDHand Over Success] (tmnxMobPdnS2bToeHRPDHandOverSucc)	long	The value of tmnxMobPdnS2bToeHRPDHandOverSucc indicates the number of successful wifi network to enhanced High Rate Packet Data (eHRPD) network hand over.
numTdfAttachFail [Num Tdf Attach Fail] (tmnxMobPdnTdfAttachFail)	long	The value of tmnxMobPdnTdfAttachFail indicates the number of failed Traffic Detection Function (TDF) attaches.
numTdfAttachSuccess [Num Tdf Attach Success] (tmnxMobPdnTdfAttachSuccess)	long	The value of tmnxMobPdnTdfAttachSuccess indicates the number of successful Traffic Detection Function (TDF) attaches.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numTdfDetachFail [Num Tdf Detach Fail] (tmnxMobPdnTdfDetachFail)	long	The value of tmnxMobPdnTdfDetachFail indicates the number of failed Traffic Detection Function (TDF) detaches.
numTdfDetachSuccess [Num Tdf Detach Success] (tmnxMobPdnTdfDetachSuccess)	long	The value of tmnxMobPdnTdfDetachSuccess indicates the number of successful Traffic Detection Function (TDF) detaches.
numTdfReattachFail [Num Tdf Reattach Fail] (tmnxMobPdnTdfReattachFail)	long	The value of tmnxMobPdnTdfReattachFail indicates the number of failed Traffic Detection Function (TDF) reattaches.
numTdfReattachSucc [Num Tdf Reattach Succ] (tmnxMobPdnTdfReattachSucc)	long	The value of tmnxMobPdnTdfReattachSucc indicates the number of successful Traffic Detection Function (TDF) reattaches.
numTdfSessDeactIdleTimeOut [Num Tdf Sess Deact Idle Time Out] (tmnxMobPdnTdfSessDeactDueToIt)	long	The value of tmnxMobPdnTdfSessDeactDueToIt indicates the number of TDF sessions deactivated due to the idle timeout.
numTdfSessDeactSessTimeOut [Num Tdf Sess Deact Sess Time Out] (tmnxMobPdnTdfSessDeactDueToSt)	long	The value of tmnxMobPdnTdfSessDeactDueToSt indicates the number of TDF sessions deactivated due to the session time-out.
numUmtsToS2aHandOverFail [Num Umts To S2 a Hand Over Fail] (tmnxMobPdnUmtsToS2aHandOverFail)	long	The value of tmnxMobPdnUmtsToS2aHandOverSucc indicates the number of failed Universal Mobile Telecommunications System (UMTS) network to S2a network hand over.
numUmtsToS2aHandOverSucc [Num Umts To S2 a Hand Over Succ] (tmnxMobPdnUmtsToS2aHandOverSucc)	long	The value of tmnxMobPdnUmtsToS2aHandOverSucc indicates the number of successful Universal Mobile Telecommunications System (UMTS) network to S2a network hand over.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
s1uToS11uTransition [S1 u To S11 u Transition] (tmnxMobPdnS1uToS11uTransition)	long	The value of tmnxMobPdnS1uToS11uTransition indicates the number of S1-U to S11-U transitions done directly with Modify Bearer Request.
slotId [Slot Id] (tmnxMobPdnCardSlotNum)	long	The value of tmnxMobPdnCardSlotNum indicates the slot number of this card.
successEmergCalls [Success Emerg Calls] (tmnxMobPdnSuccessEmergCalls)	long	The value of tmnxMobPdnSuccessEmergCalls indicates the total number of successful emergency calls established.
unsuccEmerCallAuthRej [Unsucc Emer Call Auth Rej] (tmnxMobPdnUnsuccEmerCallAuthRej)	long	The value of tmnxMobPdnUnsuccEmerCallAuthRej indicates the number of unsuccessful emergency calls due to user authentication and authorization rejection.
unsuccEmerCallDnsRej [Unsucc Emer Call Dns Rej] (tmnxMobPdnUnsuccEmerCallDnsRej)	long	The value of tmnxMobPdnUnsuccEmerCallAuthRej indicates the number of unsuccessful emergency calls due to issues on DNS resolution of emergency APN data.
unsuccEmerCallMissCfg [Unsucc Emer Call Miss Cfg] (tmnxMobPdnUnsuccEmerCallMissCfg)	long	The value of tmnxMobPdnUnsuccEmerCallMissCfg indicates the number of unsuccessful emergency calls due to missing configuration of emergency call data.
unsuccEmerCalls2bInt [Unsucc Emer Call S2 b Int] (tmnxMobPdnUnsuccEmerCalls2bInt)	long	The value of tmnxMobPdnUnsuccEmerCalls2bInt indicates the number of unsuccessful emergency calls due to issues on S2b (GTPv2) interface.
unsuccessEmergCalls [Unsuccess Emerg Calls] (tmnxMobPdnUnsuccessEmergCalls)	long	The value of tmnxMobPdnUnsuccessEmergCalls indicates the total number of unsuccessful emergency calls established.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PdnGwCardFlowStats</p> <p>MIB entry name: tmnxMobPdnProcEntry</p> <p>Entry description: Each row entry represents a Mobility Service Module (MSM) and contains statistics for call flow procedures on this card.</p> <p>Table description (for tmnxMobPdnProcTable): The tmnxMobPdnProcTable has an entry for each each Mobility Service Module (MSM) configured in the mobility system group defined for a PDN Gateway (PGW).</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.BaseCard • equipment.ProcessorCard • lte.PDNGateway 		
attach [Attach] (tmnxMobPdnProcAttach)	long	The value of tmnxMobPdnProcAttach indicates the number of successful default attach-procedures executed on this card.
attachFail [Attach Fail] (tmnxMobPdnProcAttachFail)	long	The value of tmnxMobPdnProcAttachFail indicates the number of failed default attach-procedures executed on this card.
attachPiggyBack [Attach Piggy Back] (tmnxMobPdnProcAttachPiggyBack)	long	The value of tmnxMobPdnProcAttachPiggyBack indicates the number of successful default attach-procedures executed on this card with piggybacking.
detach [Detach] (tmnxMobPdnProcDetach)	long	The value of tmnxMobPdnProcDetach indicates the number of detach-procedures executed successfully on this card.
detachFail [Detach Fail] (tmnxMobPdnProcDetachFail)	long	The value of tmnxMobPdnProcDetachFail indicates the number of detach-procedure failures.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
eHRPDAttachFailure [EHRPDAttach Failure] (tmnxMobPdneHRPDAttachFailure)	long	The value of tmnxMobPdneHRPDAttachFailure indicates the number of failed enhanced High Rate Packet Data (eHRPD) attaches.
eHRPDAttachSuccess [EHRPDAttach Success] (tmnxMobPdneHRPDAttachSuccess)	long	The value of tmnxMobPdneHRPDAttachSuccess indicates the number of successful enhanced High Rate Packet Data (eHRPD) attaches.
eHRPDDetachFailure [EHRPDDetach Failure] (tmnxMobPdneHRPDDetachFailure)	long	The value of tmnxMobPdneHRPDDetachFailure indicates the number of failed enhanced High Rate Packet Data (eHRPD) detaches.
eHRPDDetachSuccess [EHRPDDetach Success] (tmnxMobPdneHRPDDetachSuccess)	long	The value of tmnxMobPdneHRPDDetachSuccess indicates the number of successful enhanced High Rate Packet Data (eHRPD) detaches.
eHRPDSessDeactIdleTO [EHRPDSess Deact Idle TO] (tmnxMobPdneHRPDSessDeactIdleTO)	long	The value of tmnxMobPdneHRPDSessDeactIdleTO indicates the number of evolved High Rate Packet Data (eHRPD) sessions deactivated due to the idle time-out.
eHRPDSessDeactSessTO [EHRPDSess Deact Sess TO] (tmnxMobPdneHRPDSessDeactSessTO)	long	The value of tmnxMobPdneHRPDSessDeactSessTO indicates the number of evolved High Rate Packet Data (eHRPD) sessions deactivated due to the session time-out.
eHRPDToLTEHandOverFail [EHRPDTo LTEHand Over Fail] (tmnxMobPdneHRPDToLTEHandOverFail)	long	The value of tmnxMobPdneHRPDToLTEHandOverFail indicates the number of failed enhanced High Rate Packet Data (eHRPD) network to Long Term Evolution (LTE) network hand over.
eHRPDToLTEHandOverSucc [EHRPDTo LTEHand Over Succ] (tmnxMobPdneHRPDToLTEHandOverSucc)	long	The value of tmnxMobPdneHRPDToLTEHandOverSucc indicates the number of successful enhanced High Rate Packet Data (eHRPD) network to Long Term Evolution (LTE) network hand over.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
epcId [Epc Id] (tmnxMobGwId)	long	The value of tmnxMobGwId uniquely identifies a mobile gateway configured in the system.
fail3gToS2bHandOver [Fail 3 g To S2 b Hand Over] (tmnxMobPdn3gToS2bHandOverFail)	long	The value of tmnxMobPdn3gToS2bHandOverFail indicates the number of failed handovers from 3G to S2b for the PGW.
gwType [Gw Type] (tmnxMobPdnGwType)	int	The value of tmnxMobGwType specifies the type of mobile gateway.
hrpDAttachFailure [HRPDAAttach Failure] (tmnxMobPdnHRPDAAttachFailure)	long	The value of tmnxMobPdnHRPDAAttachFailure indicates the number of failed High Rate Packet Data (HRPD) attaches.
hrpDAttachSuccess [HRPDAAttach Success] (tmnxMobPdnHRPDAAttachSuccess)	long	The value of tmnxMobPdnHRPDAAttachSuccess indicates the number of successful High Rate Packet Data (HRPD) attaches.
hrpDDetachFailure [HRPDDetach Failure] (tmnxMobPdnHRPDDetachFailure)	long	The value of tmnxMobPdnHRPDDetachFailure indicates the number of failed High Rate Packet Data (HRPD) detaches.
hrpDDetachSuccess [HRPDDetach Success] (tmnxMobPdnHRPDDetachSuccess)	long	The value of tmnxMobPdnHRPDDetachSuccess indicates the number of successful High Rate Packet Data (HRPD) detaches.
hssQosModify [Hss Qos Modify] (tmnxMobPdnProcHssQosModify)	long	The value of tmnxMobPdnProcHssQosModify indicates the number of HSS initiated QoS modification procedures served by this card.
hssQosModifyFail [Hss Qos Modify Fail] (tmnxMobPdnProcHssQosModifyFail)	long	The value of tmnxMobPdnProcHssQosModifyFail indicates the number of HSS initiated QoS modification procedure failures.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
interHSGWHandOvrFail [Inter HSGWHand Ovr Fail] (tmnxMobPdnInterHSGWHandOvrFail)	long	The value of tmnxMobPdnInterHSGWHandOvrFail indicates the number of failed inter High Rate Packet Data (HRPD) Serving Gateway (HSGW) hand over.
interHSGWHandOvrSucc [Inter HSGWHand Ovr Succ] (tmnxMobPdnInterHSGWHandOvrSucc)	long	The value of tmnxMobPdnInterHSGWHandOvrSucc indicates the number of successful inter High Rate Packet Data (HRPD) Serving Gateway (HSGW) hand over.
interPdsnHandOvrFail [Inter Pdsn Hand Ovr Fail] (tmnxMobPdnInterPdsnHandOvrFail)	long	The value of tmnxMobPdnInterPdsnHandOvrFail indicates the number of failed inter Packet Data Serving Node (PDSN) hand over.
interPdsnHandOvrSucc [Inter Pdsn Hand Ovr Succ] (tmnxMobPdnInterPdsnHandOvrSucc)	long	The value of tmnxMobPdnInterPdsnHandOvrSucc indicates the number of successful inter Packet Data Serving Node (PDSN) hand over.
interRat3gToEutranFail [Inter Rat 3 g To Eutran Fail] (tmnxMobPdnInterRat3gToEutranFail)	long	The value of tmnxMobPdnInterRat3gToEutranFail indicates the number of failed inter RAT handovers from 3G to e-UTRAN.
interRat3gToEutranSucc [Inter Rat 3 g To Eutran Succ] (tmnxMobPdnInterRat3gToEutranSucc)	long	The value of tmnxMobPdnInterRat3gToEutranSucc indicates the number of successful inter Radio Access Type (RAT) handovers from 3G to evolved UMTS Terrestrial Radio Access Network (e-UTRAN).
interRatEutranTo3gFail [Inter Rat Eutran To 3 g Fail] (tmnxMobPdnInterRatEutranTo3gFail)	long	The value of tmnxMobPdnInterRatEutranTo3gFail indicates the number of failed inter RAT handovers from 3G to e-UTRAN.
interRatEutranTo3gSucc [Inter Rat Eutran To 3 g Succ] (tmnxMobPdnInterRatEutranTo3gSucc)	long	The value of tmnxMobPdnInterRatEutranTo3gSucc indicates the number of successful inter RAT handovers from 3G to e-UTRAN.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ITEToeHRPDHandOverFail [LTeToe HRPDHand Over Fail] (tmnxMobPdnLTeToeHRPDHandOverFail)	long	The value of tmnxMobPdnLTeToeHRPDHandOverFail indicates the number of failed Long Term Evolution (LTE) network to enhanced High Rate Packet Data (eHRPD) network hand over.
ITEToeHRPDHandOverSucc [LTeToe HRPDHand Over Succ] (tmnxMobPdnLTeToeHRPDHandOverSucc)	long	The value of tmnxMobPdnLTeToeHRPDHandOverSucc indicates the number of successful Long Term Evolution (LTE) network to enhanced High Rate Packet Data (eHRPD) network hand over.
noOfFailLTeToS2bHandover [No Of Fail LTeTo S2 b Handover] (tmnxMobPdnLTeToS2bHandOverFail)	long	The value of tmnxMobPdnLTeToS2bHandOverFail indicates the number of failed Long Term Evolution (LTE) network to S2b network hand over.
noOfFailS2bAttaches [No Of Fail S2 b Attaches] (tmnxMobPdnS2bAttachFailure)	long	The value of tmnxMobPdnS2bAttachFailure indicates the number of failed S2b attaches.
noOfFailS2bDetaches [No Of Fail S2 b Detaches] (tmnxMobPdnS2bDetachFailure)	long	The value of tmnxMobPdnS2bDetachFailure indicates the number of failed S2b detaches.
noOfFailS2bReqBearerDeAcvt [No Of Fail S2 b Req Bearer De Acvt] (tmnxMobPdnProcS2bNwBrDeactFail)	long	The value of tmnxMobPdnProcS2bNwBrDeactFail indicates the number of failed S2b network requested bearer deactivation procedure.
noOfFailS2bToLTeHandover [No Of Fail S2 b To LTeHandover] (tmnxMobPdnS2bToLTeHandOverFail)	long	The value of tmnxMobPdnS2bToLTeHandOverFail indicates the number of failed S2b network to Long Term Evolution (LTE) network hand over.
noOfReattachFail [No Of Reattach Fail] (tmnxMobPdnProcReattachFail)	long	The value of tmnxMobPdnProcReattachFail indicates the number of User Equipment (UE) reattach requests failed at the Packet Data Network Gateway (PGW).

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
noOfReattachSuccess [No Of Reattach Success] (tmnxMobPdnProcReattachSuccess)	long	The value of tmnxMobPdnProcReattachSuccess indicates the number of successful User Equipment (UE) reattach requests served at the Packet Data Network Gateway (PGW).
noOfSuccLTEtoS2bHandover [No Of Succ LTEto S2 b Handover] (tmnxMobPdnLTEToS2bHandOverSucc)	long	The value of tmnxMobPdnLTEToS2bHandOverSucc indicates the number of successful Long Term Evolution (LTE) network to S2b network hand over.
noOfSuccS2bAttaches [No Of Succ S2 b Attaches] (tmnxMobPdnS2bAttachSuccess)	long	The value of tmnxMobPdnS2bAttachSuccess indicates the number of successful S2b attaches.
noOfSuccS2bDetaches [No Of Succ S2 b Detaches] (tmnxMobPdnS2bDetachSuccess)	long	The value of tmnxMobPdnS2bDetachSuccess indicates the number of successful S2b detaches.
noOfSuccS2bReqBearerDeAcvt [No Of Succ S2 b Req Bearer De Acvt] (tmnxMobPdnProcS2bNwBrDeactSucc)	long	The value of tmnxMobPdnProcS2bNwBrDeactSucc indicates the number of successful S2b network requested bearer deactivation procedures.
noOfSuccS2bToLTEHandover [No Of Succ S2 b To LTEHandover] (tmnxMobPdnS2bToLTEHandOverSucc)	long	The value of tmnxMobPdnS2bToLTEHandOverSucc indicates the number of successful S2b network to Long Term Evolution (LTE) network hand over.
noOfeHRPDRattachFail [No Ofe HRPDRattach Fail] (tmnxMobPdnProceHRPDRattachFail)	long	The value of tmnxMobPdnProceHRPDRattachFail indicates the number of reattach requests received from enhanced High Rate Packet Data (eHRPD) network failed to be served at the Packet Data Network Gateway (PGW).
noOfeHRPDRattachSucc [No Ofe HRPDRattach Succ] (tmnxMobPdnProceHRPDRattachSucc)	long	The value of tmnxMobPdnProceHRPDRattachSucc indicates the number of successful User Equipment (UE) reattach requests received from enhanced High Rate Packet Data (eHRPD) network served at the Packet Data Network Gateway (PGW).

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
nwDedBrActv [Nw Ded Br Actv] (tmnxMobPdnProcNwDedBrActv)	long	The value of tmnxMobPdnProcNwDedBrActv indicates the number of network initiated dedicated bearer activation procedures served by this card.
nwDedBrActvFail [Nw Ded Br Actv Fail] (tmnxMobPdnProcNwDedBrActvFail)	long	The value of tmnxMobPdnProcNwDedBrActvFail indicates the number of network initiated dedicated bearer activation procedure failures.
nwDedBrDeActv [Nw Ded Br De Actv] (tmnxMobPdnProcNwDedBrDeActv)	long	The value of tmnxMobPdnProcNwDedBrDeActv indicates the number of network initiated dedicated bearer activation procedures served by this card.
nwDedBrDeActvFail [Nw Ded Br De Actv Fail] (tmnxMobPdnProcNwDedBrDeActvFail)	long	The value of tmnxMobPdnProcNwDedBrDeActvFail indicates the number of network initiated dedicated bearer activation procedure failures.
pcrfQosModify [Pcrf Qos Modify] (tmnxMobPdnProcPcrfQosModify)	long	The value of tmnxMobPdnProcPcrfQosModify indicates the number of Policy and Charging Rules Function (PCRF) initiated QoS modification procedures served by this card.
pcrfQosModifyFail [Pcrf Qos Modify Fail] (tmnxMobPdnProcPcrfQosModifyFail)	long	The value of tmnxMobPdnProcPcrfQosModifyFail indicates the number of Policy and Charging Rules Function (PCRF) initiated QoS modification procedure failures.
pgwPdnSessDel [Pgw Pdn Sess Del] (tmnxMobPdnProcPgwPdnSessDel)	long	The value of tmnxMobPdnProcPgwPdnSessDel indicates the number of successful PDN session-deletion initiated by PDN Gateway (PGW).
procEmergencyAttachSuc [Proc Emergency Attach Suc] (tmnxMobPdnProcEmergencyAttachSuc)	long	The value of tmnxMobPdnProcEmergencyAttachSuc indicates the number of successful Emergency Attach messages served at the Packet Data Network (PDN) Gateway (PGW).
procMmeDedBrDeAcFails [Proc Mme Ded Br De Ac Fails] (tmnxMobPdnProcMmeDedBrDeAcFails)	long	The value of tmnxMobPdnProcMmeDedBrDeAcFails indicates the number of Mobility Management Entity (MME) initiated dedicated bearer de-activation procedure failures.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
procMmeDedBrDeActiv [Proc Mme Ded Br De Activ] (tmnxMobPdnProcMmeDedBrDeActiv)	long	The value of tmnxMobPdnProcMmeDedBrDeActiv indicates the number of successful Mobility Management Entity (MME) initiated dedicated bearer de-activation procedures served by this card.
procMsBrModify [Proc Ms Br Modify] (tmnxMobPdnProcMsBrModify)	long	The value of tmnxMobPdnProcMsBrModify indicates the number of Mobile-Station (MS) initiated PDP context modification procedures served by this card.
procMsBrModifyFail [Proc Ms Br Modify Fail] (tmnxMobPdnProcMsBrModifyFail)	long	The value of tmnxMobPdnProcMsBrModifyFail indicates the number of Mobile-Station (MS) initiated PDP context modification procedure failures.
procPDNIRSRP [Proc PDNIRSRP] (tmnxMobPdnProcPDNIRSRP)	long	The value of tmnxMobPdnProcPDNIRSRP indicates the number of Implicit Resume Service Requests (IRSR) received at the Packet Data Network (PDN) Gateway (PGW).
procPDNResumeNotice [Proc PDNResume Notice] (tmnxMobPdnProcPDNResumeNotice)	long	The value of tmnxMobPdnProcPDNResumeNotice indicates the number of Packet Data Network (PDN) resume notifications received at the Packet Data Network (PDN) Gateway (PGW).
procPDNSuspendNotice [Proc PDNSuspend Notice] (tmnxMobPdnProcPDNSuspendNotice)	long	The value of tmnxMobPdnProcPDNSuspendNotice indicates the number of Packet Data Network (PDN) suspend notifications received at the Packet Data Network (PDN) Gateway (PGW).
procSessDeactDueToIt [Proc Sess Deact Due To It] (tmnxMobPdnProcSessDeactDueToIt)	long	The value of tmnxMobPdnProcSessDeactDueToIt indicates the number of PDN sessions deactivated due to the idle timeout.
procSessDeactDueToSt [Proc Sess Deact Due To St] (tmnxMobPdnProcSessDeactDueToSt)	long	The value of tmnxMobPdnProcSessDeactDueToSt indicates the number of PDN sessions deactivated due to the session time-out.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
s2bTo3gHandOverFail [S2 b To 3 g Hand Over Fail] (tmnxMobPdnS2bTo3gHandOverFail)	long	The value of tmnxMobPdnS2bTo3gHandOverFail indicates the number of failed handovers from S2b to 3G for the PGW.
s2bTo3gHandOverSucc [S2 b To 3 g Hand Over Succ] (tmnxMobPdnS2bTo3gHandOverSucc)	long	The value of tmnxMobPdnS2bTo3gHandOverSucc indicates the number of successful handovers from S2b to 3G for the PGW.
s2bToS2bHandOverFail [S2 b To S2 b Hand Over Fail] (tmnxMobPdnS2bToS2bHandOverFail)	long	The value of tmnxMobPdnS2bToS2bHandOverFail indicates the number of failed handovers from S2b to S2b for the PGW.
s2bToS2bHandOverSucc [S2 b To S2 b Hand Over Succ] (tmnxMobPdnS2bToS2bHandOverSucc)	long	The value of tmnxMobPdnS2bToS2bHandOverSucc indicates the number of successful handovers from S2b to S2b for the PGW.
sessDelFail [Sess Del Fail] (tmnxMobPdnProcPgwPdnSessDelFail)	long	The value of tmnxMobPdnProcPgwPdnSessDelFail indicates the number of failed PDN session-deletion initiated by PDN Gateway (PGW).
sgwReloc [Sgw Reloc] (tmnxMobPdnProcSgwReloc)	long	The value of tmnxMobPdnProcSgwReloc indicates the number of successful Serving Gateway (SGW) relocations.
sgwRelocFail [Sgw Reloc Fail] (tmnxMobPdnProcSgwRelocFail)	long	The value of tmnxMobPdnProcSgwRelocFail indicates the number of failed Serving Gateway (SGW) relocations.
slotId [Slot Id] (tmnxMobPdnCardSlotNum)	long	The value of tmnxMobPdnCardSlotNum indicates the slot number of this card.
succ3gToS2bHandOver [Succ 3 g To S2 b Hand Over] (tmnxMobPdn3gToS2bHandOverSucc)	long	The value of tmnxMobPdn3gToS2bHandOverSucc indicates the number of successful handovers from 3G to S2b for the PGW.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ueDedBrActv [Ue Ded Br Actv] (tmnxMobPdnProcUeDedBrActv)	long	The value of tmnxMobPdnProcUeDedBrActv indicates the number of User-Equipment (UE) initiated dedicated bearer activation procedures served by this card.
ueDedBrActvFail [Ue Ded Br Actv Fail] (tmnxMobPdnProcUeDedBrActvFail)	long	The value of tmnxMobPdnProcUeDedBrActvFail indicates the number of User-Equipment (UE) initiated dedicated bearer activation procedure failures.
ueDedBrDeActv [Ue Ded Br De Actv] (tmnxMobPdnProcUeDedBrDeActv)	long	The value of tmnxMobPdnProcUeDedBrDeActv indicates the number of User-Equipment (UE) initiated dedicated bearer activation procedures served by this card.
ueDedBrDeActvFail [Ue Ded Br De Actv Fail] (tmnxMobPdnProcUeDedBrDeActvFail)	long	The value of tmnxMobPdnProcUeDedBrDeActvFail indicates the number of User-Equipment (UE) initiated dedicated bearer activation procedure failures.
ueDedBrModify [Ue Ded Br Modify] (tmnxMobPdnProcUeDedBrModify)	long	The value of tmnxMobPdnProcUeDedBrModify indicates the number of User-Equipment (UE) initiated dedicated bearer activation procedures served by this card.
ueDedBrModifyFail [Ue Ded Br Modify Fail] (tmnxMobPdnProcUeDedBrModifyFail)	long	The value of tmnxMobPdnProcUeDedBrModifyFail indicates the number of User-Equipment (UE) initiated dedicated bearer activation procedure failures.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PdnGwCardStats</p> <p>MIB entry name: tmnxMobPdnStatEntry</p> <p>Entry description: Each row entry represents a Mobility Service Module (MSM) and contains statistics for this card. When the value of tmnxCardSlotNum is equal to '0', then each row entry contains aggregated statistics for a given gateway.</p> <p>Table description (for tmnxMobPdnStatTable): The tmnxMobPdnStatTable has an entry for each each Mobility Service Module (MSM) configured in the mobility system group defined for a Packet Data Network Gateway (PGW).</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.BaseCard • lte.PDNGateway • netw.NetworkElement 		
bearers [Bearers] (tmnxMobPdnStatBearers)	long	The value of tmnxMobPdnStatBearers indicates the number of bearers and Packet Data Protocol (PDP) contexts being served by this card.
bigDRTBuffered [Big DRTBuffered] (tmnxMobPdnStatGaBigDrtBuffered)	long	The value of tmnxMobPdnStatGaBigDrtBuffered indicates the number of big Ga Data Record Transfer (DRT) requests sent to the CPM and stored on compact flash
buffersAllocError [Buffers Alloc Error] (tmnxMobPdnStatBuffersAllocErr)	long	The value of tmnxMobPdnStatBuffersAllocErr indicates the number of paging buffers not available errors on this card.
buffersAllocated [Buffers Allocated] (tmnxMobPdnStatBuffersAllocated)	long	The value of tmnxMobPdnStatBuffersAllocated indicates the number of allocated paging buffers on this card.
buffersAvailable [Buffers Available] (tmnxMobPdnStatBuffersAvailable)	long	The value of tmnxMobPdnStatBuffersAvailable indicates the number of available paging buffers on this card.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
combinedActiveBearers [Combined Active Bearers] (tmnxMobPdnStatCmbActiveBearers)	long	The value of tmnxMobPdnStatCmbActiveBearers indicates the number of combined gateway active bearers and Packet Data Protocol (PDP) contexts being served by this card.
combinedBearers [Combined Bearers] (tmnxMobPdnStatCmbBearers)	long	The value of tmnxMobPdnStatCmbBearers indicates the number of combined gateway bearers and Packet Data Protocol (PDP) contexts being served by this card.
combinedDedicatedBearers [Combined Dedicated Bearers] (tmnxMobPdnStatCmbDedBearers)	long	The value of tmnxMobPdnStatCmbDedBearers indicates the number of combined gateway dedicated bearers and Packet Data Protocol (PDP) contexts being served by this card.
combinedDefaultBearers [Combined Default Bearers] (tmnxMobPdnStatCmbDefaultBearers)	long	The value of tmnxMobPdnStatCmbDefaultBearers indicates the number of combined gateway default bearers and Packet Data Protocol (PDP) contexts being served by this card.
combinedIdleBearers [Combined Idle Bearers] (tmnxMobPdnStatCmbIdleBearers)	long	The value of tmnxMobPdnStatCmbIdleBearers indicates the number of combined gateway idle bearers and Packet Data Protocol (PDP) contexts being served by this card.
combinedIpv4Bearers [Combined Ipv 4 Bearers] (tmnxMobPdnStatCmbIpv4Bearers)	long	The value of tmnxMobPdnStatCmbIpv4Bearers indicates the number of combined gateway IPv4 bearers being served by this card.
combinedIpv4PdnSessions [Combined Ipv 4 Pdn Sessions] (tmnxMobPdnStatCmbIpv4PdnSessions)	long	The value of tmnxMobPdnStatCmbIpv4PdnSessions indicates the number of combined gateway IPv4 PDN Sessions being served by this card.
combinedIpv4v6Bearers [Combined Ipv 4 v 6 Bearers] (tmnxMobPdnStatCmbIpv4v6Bearers)	long	The value of tmnxMobPdnStatCmbIpv4v6Bearers indicates the number of combined gateway IPv4v6 bearers being served by this card.
combinedIpv4v6PdnSess [Combined Ipv 4 v 6 Pdn Sess] (tmnxMobPdnStatCmbIpv4v6PdnSess)	long	The value of tmnxMobPdnStatCmbIpv4v6PdnSess indicates the number of combined gateway IPv4v6 PDN Sessions being served by this card.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
combinedIpv6Bearers [Combined Ipv 6 Bearers] (tmnxMobPdnStatCmbIpv6Bearers)	long	The value of tmnxMobPdnStatCmbIpv6Bearers indicates the number of combined gateway IPv6 bearers being served by this card.
combinedIpv6PdnSessions [Combined Ipv 6 Pdn Sessions] (tmnxMobPdnStatCmbIpv6PdnSessions)	long	The value of tmnxMobPdnStatCmbIpv6PdnSessions indicates the number of combined gateway IPv6 PDN Sessions being served by this card.
combinedPdnSessions [Combined Pdn Sessions] (tmnxMobPdnStatCmbPdnSessions)	long	The value of tmnxMobPdnStatCmbPdnSessions indicates the number of combined gateway PDN sessions being served by this card.
dedicatedBearers [Dedicated Bearers] (tmnxMobPdnStatDedicatedBearers)	long	The value of tmnxMobPdnStatDedicatedBearers indicates the number of dedicated bearers being served by this card.
defaultBearers [Default Bearers] (tmnxMobPdnStatDefaultBearers)	long	The value of tmnxMobPdnStatDefaultBearers indicates the number of default bearers being served by this card.
enbs [Enbs] (tmnxMobPdnStatENBs)	long	The value of tmnxMobPdnStatENBs indicates the number of Evolved NodeBs (eNodeBs) being served by this card.
epcId [Epc Id] (tmnxMobGwld)	long	The value of tmnxMobGwld uniquely identifies a mobile gateway configured in the system.
epdgSessions [Epdg Sessions] (tmnxMobPdnStatEpdgSess)	long	The value of tmnxMobPdnStatEpdgSess indicates the number of Evolved Packet Data Gateway (EPDG) sessions.
hrpdPDNSess [Hrpd PDNSess] (tmnxMobPdnStatHRPDPDNSess)	long	The value of tmnxMobPdnStatHRPDPDNSess indicates the number of High Rate Packet Data (HRPD) Packet Data Network (PDN) sessions.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
idleUes [Idle Ues] (tmnxMobPdnStatIdleUes)	long	The value of tmnxMobPdnStatIdleUes indicates the number of idle User Equipments (UE) being served by this card.
ipLocalPools [Ip Local Pools] (tmnxMobPdnStatIpLocalPools)	long	The value of tmnxMobPdnStatIpLocalPools indicates the number of IP local pools being served by this card.
ipv4Bearers [Ipv 4 Bearers] (tmnxMobPdnStatIpv4Bearers)	long	The value of tmnxMobPdnStatIpv4Bearers indicates the number of IPv4 bearers being served by this card.
ipv4HaSessions [Ipv 4 Ha Sessions] (tmnxMobPdnStatIpv4HaSessions)	long	The value of tmnxMobPdnStatIpv4HaSessions indicates the number of IPv4 Home Agent Sessions being served by this card.
ipv4PdnSessions [Ipv 4 Pdn Sessions] (tmnxMobPdnStatIpv4PdnSessions)	long	The value of tmnxMobPdnStatIpv4PdnSessions indicates the number of IPv4 PDN Sessions being served by this card.
ipv4PrimaryPdpContext [Ipv 4 Primary Pdp Context] (tmnxMobPdnStatIpv4PriPdpCtx)	long	The value of tmnxMobPdnStatIpv4PriPdpCtx indicates the number of IPv4 primary Packet Data Protocol (PDP) contexts being served.
ipv4Sdf [Ipv 4 Sdf] (tmnxMobPdnStatIpv4Sdf)	long	The value of tmnxMobPdnStatIpv4Sdf indicates the number of IPv4 Service Data Flows (SDFs) on this card.
ipv4v6Bearers [Ipv 4 v 6 Bearers] (tmnxMobPdnStatIpv4v6Bearers)	long	The value of tmnxMobPdnStatIpv4v6Bearers indicates the number of IPv4v6 bearers being served by this card.
ipv4v6PdnSessions [Ipv 4 v 6 Pdn Sessions] (tmnxMobPdnStatIpv4v6PdnSessions)	long	The value of tmnxMobPdnStatIpv4v6PdnSessions indicates the number of IPv4v6 PDN Sessions being served by this card.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv4v6PrimaryPdpContext [Ipv 4 v 6 Primary Pdp Context] (tmnxMobPdnStatIpv4v6PriPdpCtx)	long	The value of tmnxMobPdnStatIpv4v6PriPdpCtx indicates the number of IPv4 and IPv6 primary Packet Data Protocol (PDP) contexts being served.
ipv6Bearers [Ipv 6 Bearers] (tmnxMobPdnStatIpv6Bearers)	long	The value of tmnxMobPdnStatIpv6Bearers indicates the number of IPv6 bearers being served by this card.
ipv6PdnSessions [Ipv 6 Pdn Sessions] (tmnxMobPdnStatIpv6PdnSessions)	long	The value of tmnxMobPdnStatIpv6PdnSessions indicates the number of IPv6 PDN Sessions being served by this card.
ipv6PrimaryPdpContext [Ipv 6 Primary Pdp Context] (tmnxMobPdnStatIpv6PriPdpCtx)	long	The value of tmnxMobPdnStatIpv6PriPdpCtx indicates the number of IPv6 primary Packet Data Protocol (PDP) contexts being served.
ipv6Sdf [Ipv 6 Sdf] (tmnxMobPdnStatIpv6Sdf)	long	The value of tmnxMobPdnStatIpv6Sdf indicates the number of IPv6 Service Data Flows (SDFs) on this card.
mmes [Mmes] (tmnxMobPdnStatMmes)	long	The value of tmnxMobPdnStatMmes indicates the number of Mobility Management Entities (MMEs) being served by this card.
nemoEhrpdSess [Nemo Ehrpd Sess] (tmnxMobPdnStatNemoEhrpdSess)	long	The value of tmnxMobPdnStatNemoEhrpdSess indicates the number of Network Mobility (NEMO) sessions over Enhanced High Rate Packet Data (eHRPD).
nemoHaSess [Nemo Ha Sess] (tmnxMobPdnStatNemoHaSess)	long	The value of tmnxMobPdnStatNemoHaSess indicates the the number of Network Mobility (NEMO) sessions over Home Agent.
nemoIpv4Subnets [Nemo Ipv 4 Subnets] (tmnxMobPdnStatNemoIpv4Subnets)	long	The value of tmnxMobPdnStatNemoIpv4Subnets indicates the Network Mobility (NEMO) IPv4 Subnets.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
nemoLteSess [Nemo Lte Sess] (tmnxMobPdnStatNemoLteSess)	long	The value of tmnxMobPdnStatNemoLteSess indicates the number of Network Mobility (NEMO) sessions over LTE.
noOfABSDrpdReq [No Of ABSDrpd Req] (tmnxMobPdnStatABSDrpdReq)	long	The value of tmnxMobPdnStatABSDrpdReq indicates the total number of dropped requests due to overload per PDN.
noOfEmerpdnSessions [No Of Emerpdn Sessions] (tmnxMobPdnStatEmergencyPdnSess)	long	The value of tmnxMobPdnStatEmergencyPdnSess indicates the number of Emergency PDN sessions on this card.
noOfGaChrgDataRecordsBuf [No Of Ga Chrg Data Records Buf] (tmnxMobPdnStatGaCdrBuffered)	long	The value of tmnxMobPdnStatGaCdrBuffered indicates the number of Ga Charging Data Records (CDRs) sent to the CPM and stored on compact flash because of a Charging Gateway Function (CGF) outage or no CGF peers configured by the gateway on this card.
noOfGaDataRecordTransferRe- questMaxMsgsqueued [No Of Ga Data Record Transfer Request Max Msgsqueued] (tmnxMobPdnStatGaDrtReqMaxQueued)	long	The value of tmnxMobPdnStatGaDrtReqMaxQueued indicates the number of Ga GPRS Tunneling Protocol (GTP) Data Record Transfer (DRT) Request messages queued by the gateway on this card at a given time. This is the high water mark for the DRT message queue served by the gateway on this card.
noOfGaDataRecordTransferRe- questMsgsqueued [No Of Ga Data Record Transfer Request Msgsqueued] (tmnxMobPdnStatGaDrtReqQueue)	long	The value of tmnxMobPdnStatGaDrtReqQueue indicates the current number of Ga GPRS Tunneling Protocol (GTP) Data Record Transfer (DRT) Request messages queued or in the process of being sent to the Charging Gateway Function (CGF) by the gateway on this card.
noOfIPv4Sess [No Of IPv 4 Sess] (tmnxMobPdnStatHSSStaticIpv4Sess)	long	The value of tmnxMobPdnStatHSSStaticIpv4Sess indicates the number of static IPv4 Packet Data Network (PDN) sessions.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
noOfIPv4v6Sess [No Of IPv 4 v 6 Sess] (tmnxMobPdnStatHSSStlIpv4v6Sess)	long	The value of tmnxMobPdnStatHSSStlIpv4v6Sess indicates the number of static IPv4v6 Packet Data Network (PDN) sessions.
noOfIPv6Sess [No Of IPv 6 Sess] (tmnxMobPdnStatHSSStaticIpv6Sess)	long	The value of tmnxMobPdnStatHSSStaticIpv6Sess indicates the number of static IPv6 Packet Data Network (PDN) sessions.
noOfLTEPDNSess [No Of LTEPDNSess] (tmnxMobPdnStatLTEPDNSess)	long	The value of tmnxMobPdnStatLTEPDNSess indicates the number of Long Term Evolution (LTE) Packet Data Network (PDN) sessions.
noOfPdnSessOverS2b [No Of Pdn Sess Over S2 b] (tmnxMobPdnStatS2bPdnSess)	long	The value of tmnxMobPdnStatS2bPdnSess indicates the number of Packet Data Network (PDN) sessions connected over S2b interface.
noOfRfAcctIntMsgBuf [No Of Rf Acct Int Msg Buf] (tmnxMobPdnStatRfAcctIntBuf)	long	The value of tmnxMobPdnStatRfAcctIntBuf indicates the number of Accounting Request (ACR) Interim messages buffered by this card.
noOfRfAcctStartMsgBuf [No Of Rf Acct Start Msg Buf] (tmnxMobPdnStatRfAcctStartBuf)	long	The value of tmnxMobPdnStatRfAcctStartBuf indicates the number of Accounting Request (ACR) Start messages buffered by this card.
noOfRfAcctStopMsgBuf [No Of Rf Acct Stop Msg Buf] (tmnxMobPdnStatRfAcctStopBuf)	long	The value of tmnxMobPdnStatRfAcctStopBuf indicates the number of Accounting Request (ACR) Stop messages buffered by this card.
noOfRfRefPointPeersServ [No Of Rf Ref Point Peers Serv] (tmnxMobPdnStatRfPeer)	long	The value of tmnxMobPdnStatRfPeer indicates the number of peers on the Rf reference point being served by this card.
noOfSuspendedPDNSess [No Of Suspended PDNSess] (tmnxMobPdnStatNumSuspendedPDN)	long	The value of tmnxMobPdnStatNumSuspendedPDN indicates the number of Packet Data Network (PDN) sessions in suspended state.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
noOfSuspendedUE [No Of Suspended UE] (tmnxMobPdnStatNumSuspendedUE)	long	The value of tmnxMobPdnStatNumSuspendedUE indicates the number of User Equipments (UE) in the suspended state.
noOfeHRPDPDNsSess [No Ofe HRPDPDNsSess] (tmnxMobPdnStateHRPDPDNsSess)	long	The value of tmnxMobPdnStateHRPDPDNsSess indicates the number of enhanced High Rate Packet Data (eHRPD) Packet Data Network (PDN) sessions.
noOfpdnSessions [No Ofpdn Sessions] (tmnxMobPdnStat2G3GPDNsSess)	long	The value of tmnxMobPdnStat2G3GPDNsSess indicates the number of 2G/3G Packet Data Network (PDN) sessions.
pagingDrops [Paging Drops] (tmnxMobPdnStatPagingDrops)	long	The value of tmnxMobPdnStatPagingDrops indicates the number of packets that are dropped while the User Equipment (UE) is in paging mode.
pagingInProgress [Paging Inprogress] (tmnxMobPdnStatPagingInProgress)	long	The value of tmnxMobPdnStatPagingInProgress indicates the number of paging processes in progress on this card.
pauseChrgHldTmStp [Pause Chrg Hld Tm Stp] (tmnxMobPdnStatPauseChrgHldTmStp)	long	The value of tmnxMobPdnStatPauseChrgHldTmStp indicates number of times pause charging hold timer was started but stopped before pause charging message is triggered.
pauseChrgHldTmStrt [Pause Chrg Hld Tm Strt] (tmnxMobPdnStatPauseChrgHldTmStrt)	long	The value of tmnxMobPdnStatPauseChrgHldTmStrt indicates number of times pause charging hold timer starts because of full paging buffer on Mobile Gateway (MG) card.
pdnStatHomers [Pdn Stat Homers] (tmnxMobPdnStatHomers)	long	The value of tmnxMobPdnStatHomers indicates the number of homers being served by this card.
pdnStatVisitors [Pdn Stat Visitors] (tmnxMobPdnStatVisitors)	long	The value of tmnxMobPdnStatVisitors indicates the number of visitors being served by this card.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pgws [Pgws] (tmnxMobPdnStatPdnSessions)	long	The value of tmnxMobPdnStatPdnSessions indicates the number of PDN sessions being served by this card.
primaryPdpContext [Primary Pdp Context] (tmnxMobPdnStatPriPdpContext)	long	The value of tmnxMobPdnStatPriPdpContext indicates the total number of primary Packet Data Protocol (PDP) contexts being served.
realApn [Real Apn] (tmnxMobPdnStatRealApn)	long	The value of tmnxMobPdnStatRealApn indicates the number of real Access Point Names (APNs) being served by this card.
redirSessions [Redir Sessions] (tmnxMobPdnStatRedirSessions)	long	The value of tmnxMobPdnStatRedirSessions indicates the total number of redirected sessions per PDN.
rncs [Rncs] (tmnxMobPdnStatRncs)	long	The value of tmnxMobPdnStatRncs indicates the number of Pdning General Packet Radio Pdnice (GPRS) Support Node (SGSNs) being served by this card.
roamers [Roamers] (tmnxMobPdnStatRoamers)	long	The value of tmnxMobPdnStatRoamers indicates the number of roamers being served by this card.
s2aPdnSess [S2 a Pdn Sess] (tmnxMobPdnStatS2aPdnSess)	long	The value of tmnxMobPdnStatS2aPdnSess indicates the number of Packet Data Network (PDN) sessions connected over S2a interface.
secondaryPdpContext [Secondary Pdp Context] (tmnxMobPdnStatSecPdpContext)	long	The value of tmnxMobPdnStatSecPdpContext indicates the total number of secondary Packet Data Protocol (PDP) contexts being served.
sgsns [Sgsns] (tmnxMobPdnStatSgsns)	long	The value of tmnxMobPdnStatSgsns indicates the number of Pdning General Packet Radio Pdnice (GPRS) Support Node (SGSNs) being served by this card.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
slotId [Slot Id] (tmnxMobPdnCardSlotNum)	long	The value of tmnxMobPdnCardSlotNum indicates the slot number of this card.
steeringSessions [Steering Sessions] (tmnxMobPdnStatSteeringSessions)	long	The value of tmnxMobPdnStatSteeringSessions indicates number of steering sessions.
tetherSessions [Tether Sessions] (tmnxMobPdnStatTetherSessions)	long	The value of tmnxMobPdnStatTetherSessions indicates the total number of tethered sessions per PDN.
ues [Ues] (tmnxMobPdnStatUes)	long	The value of tmnxMobPdnStatUes indicates the number of User Equipments (UE) being served by this card.
vPRNs [VPRNs] (tmnxMobPdnStatVPRNs)	long	The value of tmnxMobPdnStatVPRNs indicates the number of VPRNs being served by this card.
<p>VideoGroupMemberStats</p> <p>MIB entry name: tmnxVdoGrpMDAEntry</p> <p>Entry description: Each row entry represents an MDA configured for a Video ISA Group in the system. Entries are created and deleted by the user.</p> <p>Table description (for tmnxVdoGrpMDATable): The tmnxVdoGrpMDATable has an entry for each MDA configured for the Video ISP Group in the system. A specific MDA is configured for only a tmnxVdoGrpId.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: isa.VideoGroupMember</p>		
vdoGrpMdaActiveRtcpSessions [Vdo Grp Mda Active Rtcp Sessions] (tmnxVdoGrpMdaActiveRtcpSessions)	long	The value of tmnxVdoGrpMdaActiveRtcpSessions indicates the number of active Real Time Transport Control Protocol (RTCP) sessions on this MDA.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoGrpMdaAdStreamAborts [Vdo Grp Mda Ad Stream Aborts] (tmnxVdoGrpMdaAdStreamAborts)	long	The value of tmnxVdoGrpMdaAdStreamAborts indicates the number of ad stream aborts on this MDA. An ad stream abort could happen when an egress reset happens.
vdoGrpMdaAdStreamResets [Vdo Grp Mda Ad Stream Resets] (tmnxVdoGrpMdaAdStreamResets)	long	The value of tmnxVdoGrpMdaAdStreamResets indicates the number of ad stream resets on this MDA. An ad stream reset occurs when the ingress ad stream stops.
vdoGrpMdaAvailableMemory [Vdo Grp Mda Available Memory] (tmnxVdoGrpMdaAvailableMemory)	long	The value of tmnxVdoGrpMdaAvailableMemory indicates the amount of cache available on the MDA for storing the video stream.
vdoGrpMdaBwInUse [Vdo Grp Mda Bw In Use] (tmnxVdoGrpMdaBwInUse)	long	The value of tmnxVdoGrpMdaBwInUse indicates the total aggregate bandwidth of the currently running egress streams.
vdoGrpMdaChannelAllocFails [Vdo Grp Mda Channel Alloc Fails] (tmnxVdoGrpMdaChannelAllocFails)	long	The value of tmnxVdoGrpMdaChannelAllocFails indicates the number of failed channel allocations on this MDA.
vdoGrpMdaChannels [Vdo Grp Mda Channels] (tmnxVdoGrpMdaChannels)	long	The value of tmnxVdoGrpMdaChannels indicates the number of channels being served on this MDA.
vdoGrpMdaEgressStreamResets [Vdo Grp Mda Egress Stream Resets] (tmnxVdoGrpMdaEgressStreamResets)	long	The value of tmnxVdoGrpMdaEgressStreamResets indicates the number of egress stream resets on this MDA. An egress stream reset occurs when there are no packets to transmit on the MDA.
vdoGrpMdaHighPktPoolLimitHit [Vdo Grp Mda High Pkt Pool Limit Hit] (tmnxVdoGrpMdaHighPktPoolLimitHit)	long	The value of tmnxVdoGrpMdaHighPktPoolLimitHit indicates the number of times the high packet pool limit has been hit. A high value of this object indicates potential failure in ingress packet storage.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoGrpMdaIngressStreamResets [Vdo Grp Mda Ingress Stream Resets] (tmnxVdoGrpMdaIngressStreamResets)	long	The value of tmnxVdoGrpMdaIngressStreamResets indicates the number of ingress stream resets on this MDA. An ingress stream reset occurs when the ingress stream stopped coming in for more than one second.
vdoGrpMdaMaxBwExceeded [Vdo Grp Mda Max Bw Exceeded] (tmnxVdoGrpMdaMaxBwExceeded)	long	The value of tmnxVdoGrpMdaMaxBwExceeded indicates the number of times maximum allowed bandwidth has been exceeded for each egress stream.
vdoGrpMdaRequestedRtpPkts [Vdo Grp Mda Requested Rtp Pkts] (tmnxVdoGrpMdaRequestedRtpPkts)	long	The value of tmnxVdoGrpMdaRequestedRtpPkts indicates the number of Real-time Transport Protocol (RTP) packets requested in the Real-time Transport Control Protocol (RTCP) feedback (FB) messages received on this MDA.
vdoGrpMdaRtcpConfigErrors [Vdo Grp Mda Rtcp Config Errors] (tmnxVdoGrpMdaRtcpConfigErrors)	long	The value of tmnxVdoGrpMdaRtcpConfigErrors indicates the number of Real-time Transport Control Protocol (RTCP) config errors on this MDA. These errors occur when there is inconsistency between the RTCP values and the configured values.
vdoGrpMdaRtcpIntErrors [Vdo Grp Mda Rtcp Int Errors] (tmnxVdoGrpMdaRtcpIntErrors)	long	The value of tmnxVdoGrpMdaRtcpIntErrors indicates the number of Real-time Transport Control Protocol (RTCP) interface related errors on this MDA.
vdoGrpMdaRtcpIpcErrors [Vdo Grp Mda Rtcp Ipc Errors] (tmnxVdoGrpMdaRtcpIpcErrors)	long	The value of tmnxVdoGrpMdaRtcpIpcErrors indicates the number of Real-time Transport Control Protocol (RTCP) inter-process communication message processing errors on this MDA.
vdoGrpMdaRtcpParseErrors [Vdo Grp Mda Rtcp Parse Errors] (tmnxVdoGrpMdaRtcpParseErrors)	long	The value of tmnxVdoGrpMdaRtcpParseErrors indicates the number of Real-time Transport Control Protocol (RTCP) packet parsing errors on this MDA.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoGrpMdaRtcpSgErrors [Vdo Grp Mda Rtcp Sg Errors] (tmnxVdoGrpMdaRtcpSgErrors)	long	The value of tmnxVdoGrpMdaRtcpSgErrors indicates the number of Real-time Transport Control Protocol (RTCP) channel errors on this MDA. These errors occur when a channel is not found for a given interface to process RTCP packets.
vdoGrpMdaRtcpSubErrors [Vdo Grp Mda Rtcp Sub Errors] (tmnxVdoGrpMdaRtcpSubErrors)	long	The value of tmnxVdoGrpMdaRtcpSubErrors indicates the number of Real-time Transport Control Protocol (RTCP) subscriber parameter errors on this MDA. These errors occur when the subscriber calculations exceed the maximum allowed bandwidth.
vdoGrpMdaRxDataOctets [Vdo Grp Mda Rx Data Octets] (tmnxVdoGrpMdaRxDataOctets)	java. math. BigInteger	The value of tmnxVdoGrpMdaRxDataOctets indicates the number of data octets received on this MDA.
vdoGrpMdaRxDataOctetsHigh32 [Vdo Grp Mda Rx Data Octets High 32] (tmnxVdoGrpMdaRxDataOctetsHigh32)	long	The value of tmnxVdoGrpMdaRxDataOctetsHigh32 indicates the higher 32 bits of the value of tmnxVdoGrpMdaRxDataOctets.
vdoGrpMdaRxDataOctetsLow32 [Vdo Grp Mda Rx Data Octets Low 32] (tmnxVdoGrpMdaRxDataOctetsLow32)	long	The value of tmnxVdoGrpMdaRxDataOctetsLow32 indicates the lower 32 bits of the value of tmnxVdoGrpMdaRxDataOctets.
vdoGrpMdaRxDataPacketErrors [Vdo Grp Mda Rx Data Packet Errors] (tmnxVdoGrpMdaRxDataPacketErrors)	java. math. BigInteger	The value of tmnxVdoGrpMdaRxDataPacketErrors indicates the number of malformed or non-RTP (Real Time Transport Protocol) packets received on this MDA.
vdoGrpMdaRxDataPackets [Vdo Grp Mda Rx Data Packets] (tmnxVdoGrpMdaRxDataPackets)	java. math. BigInteger	The value of tmnxVdoGrpMdaRxDataPackets indicates the number of data packets received on this MDA.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoGrpMdaRxDataPacketsHigh32 [Vdo Grp Mda Rx Data Packets High 32] (tmnxVdoGrpMdaRxDataPacketsHigh32)	long	The value of tmnxVdoGrpMdaRxDataPacketsHigh32 indicates the higher 32 bits of the value of tmnxVdoGrpMdaRxDataPackets.
vdoGrpMdaRxDataPacketsLow32 [Vdo Grp Mda Rx Data Packets Low 32] (tmnxVdoGrpMdaRxDataPacketsLow32)	long	The value of tmnxVdoGrpMdaRxDataPacketsLow32 indicates the lower 32 bits of the value of tmnxVdoGrpMdaRxDataPackets.
vdoGrpMdaRxDataPktErrsHigh32 [Vdo Grp Mda Rx Data Pkt Errs High 32] (tmnxVdoGrpMdaRxDataPktErrsHigh32)	long	The value of tmnxVdoGrpMdaRxDataPktErrsHigh32 indicates the higher 32 bits of the value of tmnxVdoGrpMdaRxDataPacketErrors.
vdoGrpMdaRxDataPktErrsLow32 [Vdo Grp Mda Rx Data Pkt Errs Low 32] (tmnxVdoGrpMdaRxDataPktErrsLow32)	long	The value of tmnxVdoGrpMdaRxDataPktErrsLow32 indicates the lower 32 bits of the value of tmnxVdoGrpMdaRxDataPacketErrors.
vdoGrpMdaSrcCollisions [Vdo Grp Mda Src Collisions] (tmnxVdoGrpMdaSrcCollisions)	long	The value of tmnxVdoGrpMdaSrcCollisions indicates the number of synchronization source (SSRC) id collisions on this MDA.
vdoGrpMdaTxDataOctets [Vdo Grp Mda Tx Data Octets] (tmnxVdoGrpMdaTxDataOctets)	java. math. BigInteger	The value of tmnxVdoGrpMdaTxDataOctets indicates the number of data octets transmitted on this MDA.
vdoGrpMdaTxDataOctetsHigh32 [Vdo Grp Mda Tx Data Octets High 32] (tmnxVdoGrpMdaTxDataOctetsHigh32)	long	The value of tmnxVdoGrpMdaTxDataOctetsHigh32 indicates the higher 32 bits of the value of tmnxVdoGrpMdaTxDataOctets.
vdoGrpMdaTxDataOctetsLow32 [Vdo Grp Mda Tx Data Octets Low 32] (tmnxVdoGrpMdaTxDataOctetsLow32)	long	The value of tmnxVdoGrpMdaTxDataOctetsLow32 indicates the lower 32 bits of the value of tmnxVdoGrpMdaTxDataOctets.

Table 535 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoGrpMdaTxDataPacketErrors [Vdo Grp Mda Tx Data Packet Errors] (tmnxVdoGrpMdaTxDataPacketErrors)	java. math. BigInteger	The value of tmnxVdoGrpMdaTxDataPacketErrors indicates the number of failed data packets due to lack of resources to be transmitted on this MDA.
vdoGrpMdaTxDataPackets [Vdo Grp Mda Tx Data Packets] (tmnxVdoGrpMdaTxDataPackets)	java. math. BigInteger	The value of tmnxVdoGrpMdaTxDataPackets indicates the number of data packets transmitted on this MDA.
vdoGrpMdaTxDataPacketsHigh32 [Vdo Grp Mda Tx Data Packets High 32] (tmnxVdoGrpMdaTxDataPacketsHigh32)	long	The value of tmnxVdoGrpMdaTxDataPacketsHigh32 indicates the higher 32 bits of the value of tmnxVdoGrpMdaTxDataPackets.
vdoGrpMdaTxDataPacketsLow32 [Vdo Grp Mda Tx Data Packets Low 32] (tmnxVdoGrpMdaTxDataPacketsLow32)	long	The value of tmnxVdoGrpMdaTxDataPacketsLow32 indicates the lower 32 bits of the value of tmnxVdoGrpMdaTxDataPackets.
vdoGrpMdaTxDataPktErrsHigh32 [Vdo Grp Mda Tx Data Pkt Errs High 32] (tmnxVdoGrpMdaTxDataPktErrsHigh32)	long	The value of tmnxVdoGrpMdaTxDataPktErrsHigh32 indicates the higher 32 bits of the value of tmnxVdoGrpMdaTxDataPacketErrors.
vdoGrpMdaTxDataPktErrsLow32 [Vdo Grp Mda Tx Data Pkt Errs Low 32] (tmnxVdoGrpMdaTxDataPktErrsLow32)	long	The value of tmnxVdoGrpMdaTxDataPktErrsLow32 indicates the lower 32 bits of the value of tmnxVdoGrpMdaTxDataPacketErrors.
vdoGrpMdaTxLostPackets [Vdo Grp Mda Tx Lost Packets] (tmnxVdoGrpMdaTxLostPackets)	long	The value of tmnxVdoGrpMdaTxLostPackets indicates the number of packets not found in the video MDA buffer for retransmission. When a retransmission request arrives, packets are checked in the buffer and if they are not found, the value of this object is incremented.
vdoGrpMdaUsedMemory [Vdo Grp Mda Used Memory] (tmnxVdoGrpMdaUsedMemory)	long	The value of tmnxVdoGrpMdaUsedMemory indicates the amount of cache being used by the video group for storing the video stream.

mrpDroppedPdus [Mrp Dropped Pdus] (sapTlsMrpDroppedPdus)	long	The value of sapTlsMrpDroppedPdus indicates the number of dropped MRP packets on this SAP.
mrpRxEmptyEvent [Mrp Rx Empty Event] (sapTlsMrpRxEmptyEvent)	long	The value of sapTlsMrpRxEmptyEvent indicates the number of 'Empty' MRP events received on this SAP.
mrpRxInEvent [Mrp Rx In Event] (sapTlsMrpRxInEvent)	long	The value of sapTlsMrpRxInEvent indicates the number of 'In' MRP events received on this SAP.
mrpRxJoinEmptyEvent [Mrp Rx Join Empty Event] (sapTlsMrpRxJoinEmptyEvent)	long	The value of sapTlsMrpRxJoinEmptyEvent indicates the number of 'Join Empty' MRP events received on this SAP.
mrpRxJoinInEvent [Mrp Rx Join In Event] (sapTlsMrpRxJoinInEvent)	long	The value of sapTlsMrpRxJoinInEvent indicates the number of 'Join-In' MRP events received on this SAP.
mrpRxLeaveEvent [Mrp Rx Leave Event] (sapTlsMrpRxLeaveEvent)	long	The value of sapTlsMrpRxLeaveEvent indicates the number of 'Leave' MRP events received on this SAP.

Table 538 I2fwd statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mrpRxNewEvent [Mrp Rx New Event] (sapTlsMrpRxNewEvent)	long	The value of sapTlsMrpRxNewEvent indicates the number of 'New' MRP events received on this SAP.
mrpRxPdus [Mrp Rx Pdus] (sapTlsMrpRxPdus)	long	The value of sapTlsMrpRxPdus indicates the number of MRP packets received on this SAP.
mrpTxEmptyEvent [Mrp Tx Empty Event] (sapTlsMrpTxEmptyEvent)	long	The value of sapTlsMrpTxEmptyEvent indicates the number of 'Empty' MRP events transmitted on this SAP.
mrpTxInEvent [Mrp Tx In Event] (sapTlsMrpTxInEvent)	long	The value of sapTlsMrpTxInEvent indicates the number of 'In' MRP events transmitted on this SAP.
mrpTxJoinEmptyEvent [Mrp Tx Join Empty Event] (sapTlsMrpTxJoinEmptyEvent)	long	The value of sapTlsMrpTxJoinEmptyEvent indicates the number of 'Join Empty' MRP events transmitted on this SAP.
mrpTxJoinInEvent [Mrp Tx Join In Event] (sapTlsMrpTxJoinInEvent)	long	The value of sapTlsMrpTxJoinInEvent indicates the number of 'Join-In' MRP events transmitted on this SAP.
mrpTxLeaveEvent [Mrp Tx Leave Event] (sapTlsMrpTxLeaveEvent)	long	The value of sapTlsMrpTxLeaveEvent indicates the number of 'Leave' MRP events transmitted on this SAP.
mrpTxNewEvent [Mrp Tx New Event] (sapTlsMrpTxNewEvent)	long	The value of sapTlsMrpTxNewEvent indicates the number of 'New' MRP events transmitted on this SAP.
mrpTxPdus [Mrp Tx Pdus] (sapTlsMrpTxPdus)	long	The value of sapTlsMrpTxPdus indicates the number of MRP packets transmitted on this SAP.

Table 538 I2fwd statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PipStpInfoStats</p> <p>MIB entry name: tlsPipInfoEntry</p> <p>Entry description: TLS specific information about PIP uplink.</p> <p>Table description (for tlsPipInfoTable): A table that contains TLS PIP (Provider Internal Port) uplink information. PIP is the virtual link between I and B components of PBB (Provider Backbone Bridging) model. I component refers to a service with svcVplsType set to 'iVpls (3)' and B component refers to a service with svcVplsType set to 'bVpls (2)'. When any form of STP is enabled in the iVpls domain, the PIP uplink is modeled as a regular STP port.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: I2fwd.PipStpInfo</p>		
pipInTcBitBpdus [Pip In Tc Bit Bpdus] (tlsPipInTcBitBpdus)	long	The value of the object tlsPipInTcBitBpdus indicates the number of BPDUs received on this PIP uplink with the Topology Change bit set.
pipOutTcBitBpdus [Pip Out Tc Bit Bpdus] (tlsPipOutTcBitBpdus)	long	This object specifies the number of BPDUs sent out this PIP uplink with the Topology Change bit set.
pipStpForwardTransitions [Pip Stp Forward Transitions] (tlsPipStpForwardTransitions)	long	The value of the object tlsPipStpForwardTransitions indicates the number of times this port has transitioned from the Learning state to the Forwarding state.
pipStpInBadBpdus [Pip Stp In Bad Bpdus] (tlsPipStpInBadBpdus)	long	This object specifies the number of bad BPDUs received on this PIP uplink.
pipStpInConfigBpdus [Pip Stp In Config Bpdus] (tlsPipStpInConfigBpdus)	long	The value of the object tlsPipStpInConfigBpdus indicates the number of Configuration BPDUs received on this PIP uplink.
pipStpInMstBpdus [Pip Stp In Mst Bpdus] (tlsPipStpInMstBpdus)	long	The value of the object tlsPipStpInMstBpdus indicates the number of Multiple Spanning Tree (MST) BPDUs received on this PIP uplink.

Table 538 I2fwd statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pipStpInRstBpdus [Pip Stp In Rst Bpdus] (tlsPipStpInRstBpdus)	long	The value of the object tlsPipStpInRstBpdus indicates the number of Rapid Spanning Tree (RST) BPDUs received on this PIP uplink.
pipStpInTcnBpdus [Pip Stp In Tcn Bpdus] (tlsPipStpInTcnBpdus)	long	The value of the object tlsPipStpInTcnBpdus indicates the number of Topology Change Notification BPDUs received on this PIP uplink.
pipStpOutConfigBpdus [Pip Stp Out Config Bpdus] (tlsPipStpOutConfigBpdus)	long	The value of the object tlsPipStpOutConfigBpdus indicates the number of Configuration BPDUs sent out this PIP uplink.
pipStpOutMstBpdus [Pip Stp Out Mst Bpdus] (tlsPipStpOutMstBpdus)	long	The value of the object tlsPipStpOutMstBpdus indicates the number of Multiple Spanning Tree (MST) BPDUs sent out on this PIP uplink.
pipStpOutRstBpdus [Pip Stp Out Rst Bpdus] (tlsPipStpOutRstBpdus)	long	The value of the object tlsPipStpOutRstBpdus indicates the number of Rapid Spanning Tree (RST) BPDUs sent out on this PIP uplink.
pipStpOutTcnBpdus [Pip Stp Out Tcn Bpdus] (tlsPipStpOutTcnBpdus)	long	This object specifies the number of Topology Change Notification BPDUs sent out this PIP uplink.
SiteFibStats MIB entry name: svcTlsInfoEntry Entry description: TLS specific information about a service. Table description (for svcTlsInfoTable): A table that contains TLS service information. Supports realtime plotting Supports scheduled collection Monitored class: I2fwd.SiteFib		

Table 538 I2fwd statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
entries [Entries] (svcTlsFdbNumEntries)	long	The value of the object svcTlsFdbNumEntries indicates the current number of entries in the FDB of this service.
provisionedSize [Provisioned Size] (svcTlsFdbTableSize)	long	The value of the object svcTlsFdbTableSize specifies the maximum number of learned and static entries allowed in the FDB of this service. The maximum value of svcTlsFdbTableSize is '511999', when the the value of TIMETRA-CHASSIS-MIB::tmnxChassisOperMode is 'd'. The maximum value of svcTlsFdbTableSize is '196607', when the the value of TIMETRA-CHASSIS-MIB::tmnxChassisOperMode is 'c'. In other cases, the maximum value of svcTlsFdbTableSize is '131071'.
staticEntries [Static Entries] (svcTlsFdbNumStaticEntries)	long	The value of the object svcTlsFdbNumStaticEntries indicates the current number of static entries in the FDB of this service.
SiteStpStats MIB entry name: svcTlsInfoEntry Entry description: TLS specific information about a service. Table description (for svcTlsInfoTable): A table that contains TLS service information. Supports realtime plotting Supports scheduled collection Monitored class: I2fwd.SiteStp		
timeSinceTopologyChange [Time Since Topology Change] (svcTlsStpTimeSinceTopologyChange)	long	The value of the object svcTlsStpTimeSinceTopologyChange indicates the time (in hundredths of a second) since the last time a topology change was detected by the Spanning Tree Protocol instance associated with this service.
topologyChanges [Topology Changes] (svcTlsStpTopologyChanges)	long	The value of the object svcTlsStpTopologyChanges indicates the total number of topology changes detected by the Spanning Tree Protocol instance associated with this service since the management entity was last reset or initialized.

Table 539 l2tp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>GroupProfileStats</p> <p>MIB entry name: tmnxL2tpTgStatEntry</p> <p>Entry description: Each row entry contains status and statistics about an L2TP tunnel group. Rows are created or removed automatically by the system.</p> <p>Table description (for tmnxL2tpTgStatTable): The tmnxL2tpTgStatTable contains status and statistics information about Layer Two Tunneling Protocol Tunnel Groups. The tmnxL2tpTgStatTable has an entry for each L2TP Tunnel Group.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: l2tp.GroupProfile</p>		
activeSessions [Active Sessions] (tmnxL2tpTgStatActiveSessions)	long	The value of tmnxL2tpTgStatActiveSessions indicates the number of sessions currently established in this tunnel group.
activeTunnels [Active Tunnels] (tmnxL2tpTgStatActiveTunnels)	long	The value of tmnxL2tpTgStatActiveTunnels indicates the number of tunnels currently established in this tunnel group.
attemptedSessions [Attempted Sessions] (tmnxL2tpTgStatTotalSessions)	long	The value of tmnxL2tpTgStatTotalSessions indicates the number of session creation attempts in this tunnel group since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.
attemptedTunnels [Attempted Tunnels] (tmnxL2tpTgStatTotalTunnels)	long	The value of tmnxL2tpTgStatTotalTunnels indicates the total number of tunnel set up attempts in this tunnel group since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.
cleared [Cleared] (tmnxL2tpTgStatCleared)	long	The value of the object tmnxL2tpTgStatCleared indicates the value of sysUpTime when the tunnel group statistics were cleared. The value zero indicates that the statistics have not been cleared since the last re-initialization of the local network management subsystem.

Table 539 I2tp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
controlRxOctets [Control Rx Octets] (tmnxL2tpTgStatControlRxOctets)	java. math. BigInteger	The value of tmnxL2tpTgStatControlRxOctets indicates the number of control channel octets received by the current tunnels in this tunnel group.
controlRxOctetsHw [Control Rx Octets Hw] (tmnxL2tpTgStatControlRxOctetsHw)	long	The value of tmnxL2tpTgStatControlRxOctetsHw indicates the higher 32-bits word of the value of tmnxL2tpTgStatControlRxOctets.
controlRxOctetsLw [Control Rx Octets Lw] (tmnxL2tpTgStatControlRxOctetsLw)	long	The value of tmnxL2tpTgStatControlRxOctetsLw indicates the lower 32-bits word of the value of tmnxL2tpTgStatControlRxOctets.
controlRxPkts [Control Rx Pkts] (tmnxL2tpTgStatControlRxPkts)	long	The value of tmnxL2tpTgStatControlRxPkts indicates the accumulated number of control packets received by the current tunnels in this tunnel group.
controlTxOctets [Control Tx Octets] (tmnxL2tpTgStatControlTxOctets)	java. math. BigInteger	The value of tmnxL2tpTgStatControlTxOctets indicates the accumulated number of control channel octets that were transmitted to the current tunnel endpoints in this tunnel group.
controlTxOctetsHw [Control Tx Octets Hw] (tmnxL2tpTgStatControlTxOctetsHw)	long	The value of tmnxL2tpTgStatControlTxOctetsHw indicates the higher 32-bits word of the value of tmnxL2tpTgStatControlTxOctets.
controlTxOctetsLw [Control Tx Octets Lw] (tmnxL2tpTgStatControlTxOctetsLw)	long	The value of tmnxL2tpTgStatControlTxOctetsLw indicates the lower 32-bits word of the value of tmnxL2tpTgStatControlTxOctets.
controlTxPkts [Control Tx Pkts] (tmnxL2tpTgStatControlTxPkts)	long	The value of tmnxL2tpTgStatControlTxPkts indicates the accumulated number of control packets that were transmitted to the current tunnel endpoints in this tunnel group.

Table 539 I2tp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
errorRxPkts [Error Rx Pkts] (tmnxL2tpTgStatErrorRxPkts)	long	The value of tmnxL2tpTgStatErrorRxPkts indicates the accumulated number of errored packets that were received on the current tunnels in this tunnel group.
errorTxPkts [Error Tx Pkts] (tmnxL2tpTgStatErrorTxPkts)	long	The value of tmnxL2tpTgStatErrorTxPkts indicates the accumulated number of packet transmission errors on the current tunnels in this tunnel group.
failedSessions [Failed Sessions] (tmnxL2tpTgStatFailedSessions)	long	The value of tmnxL2tpTgStatFailedSessions indicates the number of sessions in this tunnel group that failed to reach the established state since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.
failedTuAuth [Failed Tu Auth] (tmnxL2tpTgStatFailedTuAuth)	long	The value of tmnxL2tpTgStatFailedTuAuth indicates the number of tunnels in this tunnel group that failed authentication since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.
failedTunnels [Failed Tunnels] (tmnxL2tpTgStatFailedTunnels)	long	The value of tmnxL2tpTgStatFailedTunnels indicates the number of tunnels in this tunnel group that failed to reach the established state since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.
sessionAssignMethod [Session Assign Method] (tmnxL2tpTgStatSeAssignMethod)	int	The value of the object tmnxL2tpTgStatSeAssignMethod indicates the latest actual method used for the authentication of the tunnels in this Layer Two Tunneling Protocol Tunnel Group. Note that the next tunnel that will be set up in this L2TP tunnel group may or may not use the same method, since the configuration of the RADIUS server may have changed in the meantime.
sessionLimit [Session Limit] (tmnxL2tpTgStatSessionLimit)	long	The value of tmnxL2tpTgStatSessionLimit indicates the actual session limit of this tunnel group.

Table 539 I2tp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
state [State] (tmnxL2tpTgStatState)	int	The value of tmnxL2tpTgStatState indicates the operational state of this Layer Two Tunneling Protocol Tunnel Group.
totalSessions [Total Sessions] (tmnxL2tpTgStatSessions)	long	The value of tmnxL2tpTgStatSessions indicates the actual number of sessions in this tunnel group.
totalTunnels [Total Tunnels] (tmnxL2tpTgStatTunnels)	long	The value of tmnxL2tpTgStatTunnels indicates the actual number of tunnels in this tunnel group.
<p>PeerProtStats MIB entry name: tmnxL2tpPeerProtStatsEntry Entry description: Each conceptual row represents protocol statistics of a specific type for a specific L2TP peer. Entries in this table are created and destroyed by the system. Rows are only created where the statistics value is nonzero; this allows faster walking through this table; hence, it is recommended to perform only get-next-request operations to retrieve information from this table. Table description (for tmnxL2tpPeerProtStatsTable): The tmnxL2tpPeerProtStatsTable contains protocol statistics information about L2TP peers. Supports realtime plotting Supports scheduled collection Monitored class: I2tp.Peer</p>		
protInstance [Prot Instance] (tmnxL2tpPeerProtStatsInstance)	long	The value of the object tmnxL2tpPeerProtStatsInstance indicates the instance identifier of the statistics contained in this conceptual row. For example: if the value of the object tmnxL2tpPeerProtStatsType is equal to 'outgoingMsgType', the value of tmnxL2tpPeerProtStatsInstance is a message identifier, e.g. instance '2' refers to '(SCCRP) Start-Control-Connection-Reply', and the value of tmnxL2tpPeerProtStatsVal indicates the number of SCCRP messages transmitted for this tunnel. Unknown protocol messages are counted with instance zero.

Table 539 I2tp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
protName [Prot Name] (tmnxL2tpPeerProtStatsName)	String	The value of the object tmnxL2tpPeerProtStatsName indicates the human-readable identifier of the statistics contained in this conceptual row. In the same example, the value of tmnxL2tpPeerProtStatsName is '(SCCRP) Start-Control-Connection-Reply'.
protType [Prot Type] (tmnxL2tpPeerProtStatsType)	int	The value of the object tmnxL2tpPeerProtStatsType indicates the type of L2TP protocol statistics contained in this conceptual row.
protVal [Prot Val] (tmnxL2tpPeerProtStatsVal)	long	The value of the object tmnxL2tpPeerProtStatsVal indicates the value of the statistics contained in this conceptual row.
<p>PeerStats</p> <p>MIB entry name: tmnxL2tpPeerStatEntry</p> <p>Entry description: Each row entry represents status and statistics information about a particular L2TP peer. Rows are created or removed automatically by the system.</p> <p>Table description (for tmnxL2tpPeerStatTable): The tmnxL2tpPeerStatTable contains status and statistics information about L2TP peers.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: I2tp.Peer</p>		
activeSessions [Active Sessions] (tmnxL2tpPeerStatActiveSessions)	long	The value of tmnxL2tpPeerStatActiveSessions indicates the number of sessions associated with this peer that are currently established.
activeTunnels [Active Tunnels] (tmnxL2tpPeerStatActiveTunnels)	long	The value of tmnxL2tpPeerStatActiveTunnels indicates the number of tunnels associated with this peer that are currently established.

Table 539 I2tp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
controlRxOct [Control Rx Oct] (tmnxL2tpPeerStatControlRxOct)	java. math. BigInteger	The value of tmnxL2tpPeerStatControlRxOct indicates the number of control channel octets received in this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
controlRxOctHw [Control Rx Oct Hw] (tmnxL2tpPeerStatControlRxOctHw)	long	The value of tmnxL2tpPeerStatControlRxOctHw indicates the higher 32-bits word of the value of tmnxL2tpPeerStatControlRxOct.
controlRxOctLw [Control Rx Oct Lw] (tmnxL2tpPeerStatControlRxOctLw)	long	The value of tmnxL2tpPeerStatControlRxOctLw indicates the lower 32-bits word of the value of tmnxL2tpPeerStatControlRxOct.
controlRxPkts [Control Rx Pkts] (tmnxL2tpPeerStatControlRxPkts)	long	The value of tmnxL2tpPeerStatControlRxPkts indicates the number of control packets received by this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
controlTxOct [Control Tx Oct] (tmnxL2tpPeerStatControlTxOct)	java. math. BigInteger	The value of tmnxL2tpPeerStatControlTxOct indicates the number of control channel octets that were transmitted to the current tunnel endpoints in this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
controlTxOctHw [Control Tx Oct Hw] (tmnxL2tpPeerStatControlTxOctHw)	long	The value of tmnxL2tpPeerStatControlTxOctHw indicates the higher 32-bits word of the value of tmnxL2tpPeerStatControlTxOct.
controlTxOctLw [Control Tx Oct Lw] (tmnxL2tpPeerStatControlTxOctLw)	long	The value of tmnxL2tpPeerStatControlTxOctLw indicates the lower 32-bits word of the value of tmnxL2tpPeerStatControlTxOct.
controlTxPkts [Control Tx Pkts] (tmnxL2tpPeerStatControlTxPkts)	long	The value of tmnxL2tpPeerStatControlTxOct indicates the number of control packets that were transmitted to the current tunnel endpoints in this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.

Table 539 I2tp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
draining [Draining] (tmnxL2tpPeerStatDraining)	int	The value of tmnxL2tpPeerStatDraining indicates if this peer is being drained.
errorRxPkts [Error Rx Pkts] (tmnxL2tpPeerStatErrorRxPkts)	long	The value of tmnxL2tpPeerStatErrorRxPkts indicates the number of errored packets that were received on this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
errorTxPkts [Error Tx Pkts] (tmnxL2tpPeerStatErrorTxPkts)	long	The value of tmnxL2tpPeerStatErrorTxPkts indicates the number of packet transmission errors on this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
lastCleared [Last Cleared] (tmnxL2tpPeerStatLastCleared)	long	The value of the object tmnxL2tpPeerStatLastCleared indicates the value of sysUpTime when the contents of this conceptual row were cleared for the last time. The value zero means that the contents of this conceptual row have not yet been cleared.
msgAccepted [Msg Accepted] (tmnxL2tpPeerStatMsgAccepted)	long	The value of tmnxL2tpPeerStatMsgAccepted indicates the number of Finite State Machine (FSM) messages that were accepted from this peer since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
msgDuplicateRx [Msg Duplicate Rx] (tmnxL2tpPeerStatMsgDuplicateRx)	long	The value of tmnxL2tpPeerStatMsgDuplicateRx indicates the number of Finite State Machine (FSM) duplicate messages that were received from this peer since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
msgOutOfWndwRx [Msg Out Of Wndw Rx] (tmnxL2tpPeerStatMsgOutOfWndwRx)	long	The value of tmnxL2tpPeerStatMsgOutOfWndwRx indicates the number of Finite State Machine (FSM) messages that were received out of the receive window from this peer since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.

Table 539 l2tp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sessions [Sessions] (tmnxL2tpPeerStatSessions)	long	The value of tmnxL2tpPeerStatSessions indicates the actual number of sessions associated with this peer.
tunnels [Tunnels] (tmnxL2tpPeerStatTunnels)	long	The value of tmnxL2tpPeerStatTunnels indicates the actual number of tunnels associated with this peer.
unreachableTime [Unreachable Time] (tmnxL2tpPeerStatUnreachableTime)	long	The value of the object tmnxL2tpPeerStatUnreachableTime indicates the value of sysUpTime when the this peer was deemed unreachable for the last time. The value zero means that this peer has not been deemed unreachable yet.
SiteStats MIB entry name: tmnxL2tpStatEntry Entry description: L2TP specific information about a virtual router. Each entry represents a L2TP protocol instance. Table description (for tmnxL2tpStatTable): A table that contains L2TP configuration information about virtual routers. The system automatically creates an entry in this table for each virtual router where L2TP is supported. Only the Base router supports L2TP. Supports realtime plotting Supports scheduled collection Monitored class: l2tp.Site		
activeSessions [Active Sessions] (tmnxL2tpStatActiveSessions)	long	The value of tmnxL2tpStatActiveSessions indicates the number of sessions currently established.
activeTunnels [Active Tunnels] (tmnxL2tpStatActiveTunnels)	long	The value of tmnxL2tpStatActiveTunnels indicates the number of tunnels currently established.
attemptedSessions [Attempted Sessions] (tmnxL2tpStatTotalSessions)	long	The value of tmnxL2tpStatTotalSessions indicates the number of session creation attempts since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.

Table 539 I2tp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
attemptedTunnels [Attempted Tunnels] (tmnxL2tpStatTotalTunnels)	long	The value of tmnxL2tpStatTotalTunnels indicates the total number of tunnel set up attempts since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.
cleared [Cleared] (tmnxL2tpStatCleared)	long	The value of the object tmnxL2tpStatCleared indicates the value of sysUpTime when the system statistics were cleared. The value zero indicates that the system statistics have not been cleared since the last re-initialization of the local network management subsystem.
currentBlackListLength [Current Black List Length] (tmnxL2tpStatCurrSelBlacklstLen)	long	The value of tmnxL2tpStatCurrSelBlacklstLen indicates the actual number of tunnels and peers in the tunnel-selection-blacklist.
failedSessions [Failed Sessions] (tmnxL2tpStatFailedSessions)	long	The value of tmnxL2tpStatFailedSessions indicates the number of sessions that failed to reach the established state since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.
failedTuAuth [Failed Tu Auth] (tmnxL2tpStatFailedTuAuth)	long	The value of tmnxL2tpStatFailedTuAuth indicates the number of tunnels that failed authentication since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.
failedTunnels [Failed Tunnels] (tmnxL2tpStatFailedTunnels)	long	The value of tmnxL2tpStatFailedTunnels indicates the number of tunnels that failed to reach the established state since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.
totalSessions [Total Sessions] (tmnxL2tpStatCurrentSessions)	long	The value of tmnxL2tpStatCurrentSessions indicates the actual number of sessions.
totalTunnels [Total Tunnels] (tmnxL2tpStatCurrentTunnels)	long	The value of tmnxL2tpStatCurrentTunnels indicates the actual number of tunnels.

Table 539 I2tp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
unavailableTunnelIds [Unavailable Tunnel Ids] (tmnxL2tpStatUnavailTunnelIds)	long	The value of tmnxL2tpStatUnavailTunnelIds indicates the number of tunnel identifiers that is unavailable for the L2TP protocol because they are used by some other application. An example of such an application is NAT.
<p>TunnelStatusProtStats</p> <p>MIB entry name: tmnxL2tpTuProtStatsEntry</p> <p>Entry description: Each conceptual row represents protocol statistics of a specific type. protInstance [Prot Instance] (tmnxL2tpTuProtStatsInstance)	long	The value of the object tmnxL2tpTuProtStatsType indicates the instance identifier of the statistics contained in this conceptual row. For example: if the value of the object tmnxL2tpTuProtStatsType is equal to 'outgoingMsgType', the value of tmnxL2tpTuProtStatsInstance is a message identifier, e.g. instance '2' refers to '(SCCRP) Start-Control-Connection-Reply', and the value of tmnxL2tpTuProtStatsVal indicates the number of SCCRP messages transmitted for this tunnel. Unknown protocol messages are counted with instance zero.
protName [Prot Name] (tmnxL2tpTuProtStatsName)	String	The value of the object tmnxL2tpTuProtStatsType indicates the human-readable identifier of the statistics contained in this conceptual row. In the same example, the value of tmnxL2tpTuProtStatsName is '(SCCRP) Start-Control-Connection-Reply'.

Table 539 I2tp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
protType [Prot Type] (tmnxL2tpTuProtStatsType)	int	The value of the object tmnxL2tpTuProtStatsType indicates the type of L2TP protocol statistics contained in this conceptual row.
protVal [Prot Val] (tmnxL2tpTuProtStatsVal)	long	The value of the object tmnxL2tpTuProtStatsType indicates the value of the statistics contained in this conceptual row.
TunnelStatusStats MIB entry name: tmnxL2tpTuStatsEntry Entry description: Each conceptual row represents statistics information of a Layer Two Tunneling Protocol Tunnel. Entries in this table are created and destroyed by the system. Table description (for tmnxL2tpTuStatsTable): The tmnxL2tpTuStatsTable has an entry for each Layer Two Tunneling Protocol Tunnel. Supports realtime plotting Supports scheduled collection Monitored class: I2tp.TunnelStatus		
activeSessions [Active Sessions] (tmnxL2tpTuStatsActiveSessions)	long	The value of tmnxL2tpTuStatsActiveSessions indicates the number of sessions currently established in this tunnel.
attemptedSessions [Attempted Sessions] (tmnxL2tpTuStatsTotalSessions)	long	The value of tmnxL2tpTuStatsTotalSessions indicates the number of session creation attempts in this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
controlRxOctets [Control Rx Octets] (tmnxL2tpTuStatsControlRxOctets)	java. math. BigInteger	The value of tmnxL2tpTuStatsControlRxOctets indicates the number of control channel octets received in this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
controlRxOctetsHw [Control Rx Octets Hw] (tmnxL2tpTuStatsControlRxOctetsHw)	long	The value of tmnxL2tpTuStatsControlRxOctetsHw indicates the higher 32-bits word of the value of tmnxL2tpTuStatsControlRxOctets.

Table 539 I2tp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
controlRxOctetsLw [Control Rx Octets Lw] (tmnxL2tpTuStatsControlRxOctetsLw)	long	The value of tmnxL2tpTuStatsControlRxOctetsLw indicates the lower 32-bits word of the value of tmnxL2tpTuStatsControlRxOctets.
controlRxPkts [Control Rx Pkts] (tmnxL2tpTuStatsControlRxPkts)	long	The value of tmnxL2tpTuStatsControlRxPkts indicates the number of control packets received by this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
controlTxOctets [Control Tx Octets] (tmnxL2tpTuStatsControlTxOctets)	java. math. BigInteger	The value of tmnxL2tpTuStatsControlTxOctets indicates the number of control channel octets that were transmitted to the current tunnel endpoints in this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
controlTxOctetsHw [Control Tx Octets Hw] (tmnxL2tpTuStatsControlTxOctetsHw)	long	The value of tmnxL2tpTuStatsControlTxOctetsHw indicates the higher 32-bits word of the value of tmnxL2tpTuStatsControlTxOctets.
controlTxOctetsLw [Control Tx Octets Lw] (tmnxL2tpTuStatsControlTxOctetsLw)	long	The value of tmnxL2tpTuStatsControlTxOctetsLw indicates the lower 32-bits word of the value of tmnxL2tpTuStatsControlTxOctets.
controlTxPkts [Control Tx Pkts] (tmnxL2tpTuStatsControlTxPkts)	long	The value of tmnxL2tpTuStatsControlTxPkts indicates the number of control packets that were transmitted to the current tunnel endpoints in this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
errorRxPkts [Error Rx Pkts] (tmnxL2tpTuStatsErrorRxPkts)	long	The value of tmnxL2tpTuStatsErrorRxPkts indicates the number of errored packets that were received on this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.

Table 539 I2tp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
errorTxPkts [Error Tx Pkts] (tmnxL2tpTuStatsErrorTxPkts)	long	The value of tmnxL2tpTuStatsErrorTxPkts indicates the number of packet transmission errors on this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
failedSessions [Failed Sessions] (tmnxL2tpTuStatsFailedSessions)	long	The value of tmnxL2tpTuStatsFailedSessions indicates the number of sessions in this tunnel that failed to reach the established state since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
fsmMsgAccepted [Fsm Msg Accepted] (tmnxL2tpTuStatsFsmMsgAccepted)	long	The value of tmnxL2tpTuStatsFsmMsgAccepted indicates the number of Finite State Machine (FSM) messages that were accepted on this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
fsmMsgDuplicateRx [Fsm Msg Duplicate Rx] (tmnxL2tpTuStatsFsmMsgDuplicateRx)	long	The value of tmnxL2tpTuStatsFsmMsgDuplicateRx indicates the number of Finite State Machine (FSM) duplicate messages that were received on this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
fsmMsgOutOfWdwRx [Fsm Msg Out Of Wdw Rx] (tmnxL2tpTuStatsFsmMsgOutOfWdwRx)	long	The value of tmnxL2tpTuStatsFsmMsgOutOfWdwRx indicates the number of Finite State Machine (FSM) messages that were received out of the receive window on this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
lastCleared [Last Cleared] (tmnxL2tpTuStatsLastCleared)	long	The value of the object tmnxL2tpTuStatsLastCleared indicates the value of sysUpTime when the contents of this conceptual row were cleared for the last time. The value zero means that the contents of this conceptual row have not yet been cleared.
qLengthAckCur [QLength Ack Cur] (tmnxL2tpTuStatsQLengthAckCur)	long	The value of tmnxL2tpTuStatsErrorRxPkts indicates the the current length of the acknowledged message queue on this tunnel.

Table 539 I2tp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
qLengthAckMax [QLength Ack Max] (tmnxL2tpTuStatsQLengthAckMax)	long	The value of tmnxL2tpTuStatsErrorRxPkts indicates the the maximum length of the acknowledged message queue on this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
qLengthUnsentCur [QLength Unsent Cur] (tmnxL2tpTuStatsQLengthUnsentCur)	long	The value of tmnxL2tpTuStatsErrorRxPkts indicates the the current length of the unsent message queue on this tunnel.
qLengthUnsentMax [QLength Unsent Max] (tmnxL2tpTuStatsQLengthUnsentMax)	long	The value of tmnxL2tpTuStatsQLengthUnsentMax indicates the the maximum length of the unsent message queue on this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
totalSessions [Total Sessions] (tmnxL2tpTuStatsSessions)	long	The value of tmnxL2tpTuStatsSessions indicates the actual number of sessions in this tunnel.
windowSizeCur [Window Size Cur] (tmnxL2tpTuStatsWindowSizeCur)	long	The value of tmnxL2tpTuStatsErrorRxPkts indicates the the current size of the receive window on this tunnel.

Table 540 lag statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>LagStats</p> <p>MIB entry name: tLagOperationEntry</p> <p>Entry description: An entry (conceptual row) in the tLagOperationTable. Each entry represents an active Link Aggregation Group.</p> <p>Table description (for tLagOperationTable): Operational information about each Link Aggregation Group.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: lag.Interface</p>		
portThresholdFalling [Port Threshold Falling] (tLagPortThresholdFalling)	long	counts the number of linkDown or dynamicCost events for the Link Aggregation Group caused by the number of physical ports being less than or equal to tLagPortThreshold value.
portThresholdRising [Port Threshold Rising] (tLagPortThresholdRising)	long	counts the number of linkUp or dynamicCost events for the Link Aggregation Group caused by the number of physical ports being greater than tLagPortThreshold value.
<p>MultiChassisLagMemberStats</p> <p>MIB entry name: tmnxMcLagLagStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a lag that participates in a multi-chassis configuration with a given peer. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxMcLagLagStatsTable): The tmnxMcLagLagStatsTable has an entry for each lag that participates in a multi-chassis configuration for the indicated peer.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • lag.MultiChassisLagMember • multichassis.MultiChassisLagMember 		
configPacketsReceived [Config Packets Received] (tmnxMcLagLagStatsPktsRxConfig)	long	The value of tmnxMcLagLagStatsPktsRxConfig indicates how many MC-Lag control packets of type lag config were received on this system from the peer for this lag.

Table 540 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
configPacketsTransmitted [Config Packets Transmitted] (tmnxMcLagLagStatsPktsTxConfig)	long	The value of tmnxMcLagLagStatsPktsTxConfig indicates how many MC-Lag control packets of type lag config were sent on this system to the peer for this lag.
failedPacketsTransmitted [Failed Packets Transmitted] (tmnxMcLagLagStatsPktsTxFailed)	long	The value of tmnxMcLagLagStatsPktsTxFailed indicates how many MC-Lag control packets failed to be transmitted on this system to the peer for this lag.
statePacketsReceived [State Packets Received] (tmnxMcLagLagStatsPktsRxState)	long	The value of tmnxMcLagLagStatsPktsRxState indicates how many MC-Lag control packets of type lag state were received on this system from the peer for this lag.
statePacketsTransmitted [State Packets Transmitted] (tmnxMcLagLagStatsPktsTxState)	long	The value of tmnxMcLagLagStatsPktsTxState indicates how many MC-Lag control packets of type lag state were sent on this system to the peer for this lag.
MultiChassisLagStats MIB entry name: tmnxMcRedundancyStatsObjs Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • equipment.CardSlot • netw.NetworkElement 		
configPacketsReceived [Config Packets Received] (tmnxMcLagStatsPktsRxConfig)	long	The value of tmnxMcLagStatsPktsRxConfig indicates how many valid MC-Lag control packets indicating the lag configuration were received on this system.
configPacketsTransmitted [Config Packets Transmitted] (tmnxMcLagStatsPktsTxConfig)	long	The value of tmnxMcLagStatsPktsTxConfig indicates how many MC-Lag control packets were transmitted from this system of type lag config.

Table 540 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
failedMD5AuthenticationPacketsDropped [Failed MD5 Authentication Packets Dropped] (tmnxMcLagStatsDropMD5)	long	The value of tmnxMcLagStatsDropMD5 indicates how many MC-Lag control packets were dropped on this system because they failed MD5 authentication.
failedPacketsTransmitted [Failed Packets Transmitted] (tmnxMcLagStatsPktsTxFailed)	long	The value of tmnxMcLagStatsPktsTxFailed indicates how many MC-Lag control packets failed to be transmitted.
invalidLagIdPacketsDropped [Invalid Lag Id Packets Dropped] (tmnxMcLagStatsDropTlvInvlLagId)	long	The value of tmnxMcLagStatsDropTlvInvlLagId indicates how many MC-Lag control packets were dropped on this system because they refer to an invalid or non multi-chassis lag.
invalidSizePacketsDropped [Invalid Size Packets Dropped] (tmnxMcLagStatsDropTlvInvalidSize)	long	The value of tmnxMcLagStatsDropTlvInvalidSize indicates how many MC-Lag control packets were dropped on this system because of invalid size.
keepalivePacketsReceived [Keepalive Packets Received] (tmnxMcLagStatsPktsRxKeepalive)	long	The value of tmnxMcLagStatsPktsRxKeepalive indicates how many valid MC-Lag control packets of type keepalive were received on this system.
keepalivePacketsTransmitted [Keepalive Packets Transmitted] (tmnxMcLagStatsPktsTxKeepalive)	long	The value of tmnxMcLagStatsPktsTxKeepalive indicates how many MC-Lag control packets were transmitted from this system of type keepalive.
outOfSequencePacketsDropped [Out Of Sequence Packets Dropped] (tmnxMcLagStatsDropOutOfSeq)	long	The value of tmnxMcLagStatsDropOutOfSeq indicates how many MC-Lag control packets were dropped on this system because they were out of sequence.
packetsDropped [Packets Dropped] (tmnxMcLagStatsDropPktKpaliveTask)	long	The value of tmnxMcLagStatsDropPktKpaliveTask indicates how many MC-Lag control packets were dropped on this system because of invalid size, authentication or unknown peer.

Table 540 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
packetsReceived [Packets Received] (tmnxMcLagStatsPktsRx)	long	The value of tmnxMcLagStatsPktsRx indicates how many MC-Lag control packets with valid authentication were received on this system.
packetsTransmitted [Packets Transmitted] (tmnxMcLagStatsPktsTx)	long	The value of tmnxMcLagStatsPktsTx indicates how many MC-Lag control packets were transmitted from this system.
peerConfigPacketsReceived [Peer Config Packets Received] (tmnxMcLagStatsPktsRxPeerConfig)	long	The value of tmnxMcLagStatsPktsRxPeerConfig indicates how many valid MC-Lag control packets indicating the peer configuration were received on this system.
peerConfigPacketsTransmitted [Peer Config Packets Transmitted] (tmnxMcLagStatsPktsTxPeerConfig)	long	The value of tmnxMcLagStatsPktsTxPeerConfig indicates how many MC-Lag control packets were transmitted from this system of type peer config.
statePacketsReceived [State Packets Received] (tmnxMcLagStatsPktsRxState)	long	The value of tmnxMcLagStatsPktsRxState indicates how many valid MC-Lag control packets indicating the lag state were received on this system.
statePacketsTransmitted [State Packets Transmitted] (tmnxMcLagStatsPktsTxState)	long	The value of tmnxMcLagStatsPktsTxState indicates how many MC-Lag control packets were transmitted from this system of type lag state.
tooShortPacketsDropped [Too Short Packets Dropped] (tmnxMcLagStatsDropPktTooShort)	long	The value of tmnxMcLagStatsDropPktTooShort indicates how many MC-Lag control packets were dropped on this system because the packet was too small.
unknownPeerPacketsDropped [Unknown Peer Packets Dropped] (tmnxMcLagStatsDropUnknownPeer)	long	The value of tmnxMcLagStatsDropUnknownPeer indicates how many MC-Lag control packets were dropped on this system because they are coming from an unknown peer.
unknownTlvPacketsDropped [Unknown Tlv Packets Dropped] (tmnxMcLagStatsDropUnknownTlv)	long	The value of tmnxMcLagStatsDropUnknownTlv indicates how many MC-Lag control packets were dropped on this system because they contained an unknown TLV.

Table 540 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
verifyFailedPacketsDropped [Verify Failed Packets Dropped] (tmnxMcLagStatsDropPktVerifyFaild)	long	The value of tmnxMcLagStatsDropPktVerifyFaild indicates how many MC-Lag control packets were dropped on this system because of invalid formatting.

Table 541 Ldp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceStats</p> <p>MIB entry name: vRtrLdpIfStatsEntry</p> <p>Entry description: A row in this table contains statistical information about an LDP Interface or Targeted peer. Some counters contained in a row are for fatal errors received during a former LDP Session associated with this entry. For example, an LDP Pdu received on a TCP connection during an LDP Session contains a fatal error. That error is counted here, because the session is terminated. If the error is NOT fatal (i.e. and the Session remains), then the error is counted in the vRtrLdpSessionStatsEntry.</p> <p>Table description (for vRtrLdpIfStatsTable): vRtrLdpIfStatsTable is a read-only table. The purpose of this table is to keep statistical information about the LDP Interfaces and Targeted peers on the LSR. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vRtrLdpIfTable, and the augmenting table, vRtrLdpIfStatsTable. This in effect extends the vRtrLdpIfTable with additional columns. Creation or deletion of a row in the vRtrLdpIfTable results in the same fate for the row in the vRtrLdpIfStatsTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ldp.Interface</p>		
existingAdjacencies [Existing Adjacencies] (vRtrLdpIfExistingAdjacencies)	long	The value of vRtrLdpIfExistingAdjacencies gives a count of the total active adjacencies on this LDP interface or with this targeted peer.
<p>LdpEgressStats</p> <p>MIB entry name: vRtrLdpEgrStatisticsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrLdpEgrStatisticsTable): The vRtrLdpEgrStatisticsTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: ldp.AccountingFecPrefix</p>		

Table 541 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ldpInProfileOctetsFc0 [Ldp In Profile Octets Fc 0] (vRtrLdpInProfileOctetsFc0)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc0 indicates the number of in profile octets received for Forwarding Class 0.
ldpInProfileOctetsFc1 [Ldp In Profile Octets Fc 1] (vRtrLdpInProfileOctetsFc1)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc1 indicates the number of in profile octets received for Forwarding Class 1.
ldpInProfileOctetsFc2 [Ldp In Profile Octets Fc 2] (vRtrLdpInProfileOctetsFc2)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc2 indicates the number of in profile octets received for Forwarding Class 2.
ldpInProfileOctetsFc3 [Ldp In Profile Octets Fc 3] (vRtrLdpInProfileOctetsFc3)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc3 indicates the number of in profile octets received for Forwarding Class 3.
ldpInProfileOctetsFc4 [Ldp In Profile Octets Fc 4] (vRtrLdpInProfileOctetsFc4)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc4 indicates the number of in profile octets received for Forwarding Class 4.
ldpInProfileOctetsFc5 [Ldp In Profile Octets Fc 5] (vRtrLdpInProfileOctetsFc5)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc5 indicates the number of in profile octets received for Forwarding Class 5.
ldpInProfileOctetsFc6 [Ldp In Profile Octets Fc 6] (vRtrLdpInProfileOctetsFc6)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc6 indicates the number of in profile octets received for Forwarding Class 6.
ldpInProfileOctetsFc7 [Ldp In Profile Octets Fc 7] (vRtrLdpInProfileOctetsFc7)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc7 indicates the number of in profile octets received for Forwarding Class 7.

addressWithdrawMessagesSent [Address Withdraw Messages Sent] (vRtrLdpSessStatsAddrWithdrawOut)	long	The value of vRtrLdpSessStatsAddrWithdrawOut counts the number of Address Withdraw Messages that have been sent during this session.
fecReceived [Fec Received] (vRtrLdpSessStatsFECRecv)	long	The value of vRtrLdpSessStatsFECRecv counts the number of FECs received for this session.

Table 541 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fecSent [Fec Sent] (vRtrLdpSessStatsFECSent)	long	The value of vRtrLdpSessStatsFECSent counts the number of FECs sent for this session.
helloMessagesReceived [Hello Messages Received] (vRtrLdpSessStatsHelloIn)	long	The value of vRtrLdpSessStatsHelloIn counts the number of Hello Messages that have been received during this session.
helloMessagesSent [Hello Messages Sent] (vRtrLdpSessStatsHelloOut)	long	The value of vRtrLdpSessStatsHelloOut counts the number of Hello Messages that have been sent during this session.
initMessagesReceived [Init Messages Received] (vRtrLdpSessStatsInitIn)	long	The value of vRtrLdpSessStatsInitIn counts the number of Init Messages that have been received during this session.
initMessagesSent [Init Messages Sent] (vRtrLdpSessStatsInitOut)	long	The value of vRtrLdpSessStatsInitOut counts the number of Init Messages that have been sent during this session.
keepAliveMessagesReceived [Keep Alive Messages Received] (vRtrLdpSessStatsKeepaliveIn)	long	The value of vRtrLdpSessStatsKeepaliveIn counts the number of Keepalive Messages that have been received during this session.
keepAliveMessagesSent [Keep Alive Messages Sent] (vRtrLdpSessStatsKeepaliveOut)	long	The value of vRtrLdpSessStatsKeepaliveOut counts the number of Keepalive Messages that have been sent during this session.
labelAbortsReceived [Label Aborts Received] (vRtrLdpSessStatsLabelAbortIn)	long	The value of vRtrLdpSessStatsLabelAbortIn counts the number of Label Abort Messages that have been received during this session.
labelAbortsSent [Label Aborts Sent] (vRtrLdpSessStatsLabelAbortOut)	long	The value of vRtrLdpSessStatsLabelAbortOut counts the number of Label Abort Messages that have been sent during this session.

Table 541 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
labelMappingsReceived [Label Mappings Received] (vRtrLdpSessStatsLabelMappingIn)	long	The value of vRtrLdpSessStatsLabelMappingIn counts the number of Label Mapping Messages that have been received during this session.
labelMappingsSent [Label Mappings Sent] (vRtrLdpSessStatsLabelMappingOut)	long	The value of vRtrLdpSessStatsLabelMappingOut counts the number of Label Mapping Messages that have been sent during this session.
labelReleasesReceived [Label Releases Received] (vRtrLdpSessStatsLabelReleaseIn)	long	The value of vRtrLdpSessStatsLabelReleaseIn counts the number of Label Release Messages that have been received during this session.
labelReleasesSent [Label Releases Sent] (vRtrLdpSessStatsLabelReleaseOut)	long	The value of vRtrLdpSessStatsLabelReleaseOut counts the number of Label Release Messages that have been sent during this session.
labelRequestsReceived [Label Requests Received] (vRtrLdpSessStatsLabelRequestIn)	long	The value of vRtrLdpSessStatsLabelRequestIn counts the number of Label Request Messages that have been received during this session.
labelRequestsSent [Label Requests Sent] (vRtrLdpSessStatsLabelRequestOut)	long	The value of vRtrLdpSessStatsLabelRequestOut counts the number of Label Request Messages that have been sent during this session.
labelWithdrawsReceived [Label Withdraws Received] (vRtrLdpSessStatsLabelWithdrawIn)	long	The value of vRtrLdpSessStatsLabelWithdrawIn counts the number of Label Withdraw Messages that have been received during this session.
labelWithdrawsSent [Label Withdraws Sent] (vRtrLdpSessStatsLabelWithdrawOut)	long	The value of vRtrLdpSessStatsLabelWithdrawOut counts the number of Label Withdraw Messages that have been sent during this session.
linkAdjacencies [Link Adjacencies] (vRtrLdpSessStatsLinkAdj)	long	The value of vRtrLdpSessStatsLinkAdj specifies the number of link adjacencies for this session.

Table 541 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
notificationMessagesReceived [Notification Messages Received] (vRtrLdpSessStatsNotificationIn)	long	The value of vRtrLdpSessStatsNotificationIn counts the number of Notification Messages that have been received during this session.
notificationMessagesSent [Notification Messages Sent] (vRtrLdpSessStatsNotificationOut)	long	The value of vRtrLdpSessStatsNotificationOut counts the number of Notification Messages that have been sent during this session.
targetedAdjacencies [Targeted Adjacencies] (vRtrLdpSessStatsTargAdj)	long	The value of vRtrLdpSessStatsTargAdj specifies the number of targeted adjacencies for this session.
<p>SiteStats</p> <p>MIB entry name: vRtrLdpStatsEntry</p> <p>Entry description: A row in this table represents statistical information about an LDP instance.</p> <p>Table description (for vRtrLdpStatsTable): vRtrLdpStatsTable is a read-only table. The purpose of this table is to keep statistical information about an LDP Instance. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vRtrLdpGeneralTable, and the augmenting table, vRtrLdpStatsTable. This in effect extends the vRtrLdpGeneralTable with additional columns. Creation or deletion of a row in the vRtrLdpGeneralTable results in the same fate for the row in the vRtrLdpStatsTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ldp.Site</p>		
activeAdjacencies [Active Adjacencies] (vRtrLdpStatsActiveAdjacencies)	long	The value of vRtrLdpStatsActiveAdjacencies specifies the number of active adjacencies (i.e. established sessions) associated with the LDP instance.
activeInterfaces [Active Interfaces] (vRtrLdpStatsActiveInterfaces)	long	The value of vRtrLdpStatsActiveInterfaces specifies the number of active (i.e. operationally up) interfaces associated with the LDP instance.

Table 541 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
activeSessions [Active Sessions] (vRtrLdpStatsActiveSessions)	long	The value of vRtrLdpStatsActiveSessions specifies the number of active sessions (i.e. session in some form of creation) associated with the LDP instance.
activeTargetedSessions [Active Targeted Sessions] (vRtrLdpStatsActiveTargSessions)	long	The value of vRtrLdpStatsActiveTargSessions specifies the number of configured targeted peers that are administratively up in an LDP instance.
addressFECsReceived [Address FECs Received] (vRtrLdpStatsAddrFECRecv)	long	The value of vRtrLdpStatsAddrFECRecv specifies the number of Address FECs received by the LDP instance from its neighbors.
addressFECsSent [Address FECs Sent] (vRtrLdpStatsAddrFECSent)	long	The value of vRtrLdpStatsAddrFECSent specifies the number of Address FECs sent by the LDP instance to its neighbors.
attemptedSessions [Attempted Sessions] (vRtrLdpStatsAttemptedSessions)	long	The value of vRtrLdpStatsAttemptedSessions specifies the total number of attempted sessions for this LDP instance.
badLdpIdentifierErrors [Bad Ldp Identifier Errors] (vRtrLdpStatsBadLdpIdentifierErrors)	long	The value of vRtrLdpStatsBadLdpIdentifierErrors gives the number of Bad LDP Identifier Fatal Errors detected for sessions associated with this LDP instance.
badMessageLengthErrors [Bad Message Length Errors] (vRtrLdpStatsBadMessageLengthErrors)	long	The value of vRtrLdpStatsBadMessageLengthErrors gives the number of Bad Message Length Fatal Errors detected for sessions associated with this LDP instance.
badPduLengthErrors [Bad Pdu Length Errors] (vRtrLdpStatsBadPduLengthErrors)	long	The value of vRtrLdpStatsBadPduLengthErrors gives the number of Bad Pdu Length Fatal Errors detected for sessions associated with this LDP instance.
badTlvLengthErrors [Bad Tlv Length Errors] (vRtrLdpStatsBadTlvLengthErrors)	long	The value of vRtrLdpStatsBadTlvLengthErrors gives the number of Bad TLV Length Fatal Errors detected for sessions associated with this LDP instance.

Table 541 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrFecPfxCount [Egr Fec Pfx Count] (vRtrLdpStatsEgrFecPfxCount)	long	The value of vRtrLdpStatsEgrFecPfxCount indicates the number of egress FEC prefix statistics configured for this LDP instance.
inactiveInterfaces [Inactive Interfaces] (vRtrLdpStatsInactiveInterfaces)	long	The value of vRtrLdpStatsInactiveInterfaces specifies the number of inactive (i.e. operationally down) interfaces associated with the LDP instance.
inactiveTargetedSessions [Inactive Targeted Sessions] (vRtrLdpStatsInactiveTargSessions)	long	The value of vRtrLdpStatsInactiveTargSessions specifies the number of inactive (i.e. operationally down) targeted sessions associated with the LDP instance.
keepAliveExpiredErrors [Keep Alive Expired Errors] (vRtrLdpStatsKeepAliveExpiredErrors)	long	The value of vRtrLdpStatsKeepAliveExpiredErrors gives the number of Session Keep Alive Timer Expired Errors detected for sessions associated with this LDP instance.
malformedTlvValueErrors [Malformed Tlv Value Errors] (vRtrLdpStatsMalformedTlvValueErrors)	long	The value of vRtrLdpStatsMalformedTlvValueErrors gives the number of Malformed TLV Value Fatal Errors detected for sessions associated with this LDP instance.
operDownEvents [Oper Down Events] (vRtrLdpStatsOperDownEvents)	long	The value of vRtrLdpStatsOperDownEvents specifies the number of times the LDP instance has gone operationally down since the instance was created.
serviceFECsReceived [Service FECs Received] (vRtrLdpStatsSvcFECRecv)	long	The value of vRtrLdpStatsSvcFECRecv specifies the number of Service FECs received by the LDP instance from its neighbors.
serviceFECsSent [Service FECs Sent] (vRtrLdpStatsSvcFECSent)	long	The value of vRtrLdpStatsSvcFECSent specifies the number of Service FECs sent by the LDP instance to its neighbors.

Table 541 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sessionRejectedAdvertisementModeErrors [Session Rejected Advertisement Mode Errors] (vRtrLdpStatsSessRejAdvErrors)	long	The value of vRtrLdpStatsSessRejAdvErrors gives the total number of Session Rejected/Parameters Advertisement Mode Error Notification Messages sent or received by this LDP instance.
sessionRejectedLabelRangeErrors [Session Rejected Label Range Errors] (vRtrLdpStatsSessRejLabelRangeErrors)	long	The value of vRtrLdpStatsSessRejLabelRangeErrors gives the total number of Session Rejected/Parameters Label Range Error Notification Messages sent or received by this LDP instance.
sessionRejectedMaxPduLengthErrors [Session Rejected Max Pdu Length Errors] (vRtrLdpStatsSessRejMaxPduErrors)	long	The value of vRtrLdpStatsSessRejMaxPduErrors gives the total number of Session Rejected/Parameters Max Pdu Length Error Notification Messages sent or received by this LDP instance.
sessionRejectedNoHelloErrors [Session Rejected No Hello Errors] (vRtrLdpStatsSessRejNoHelloErrors)	long	The value of vRtrLdpStatsSessRejNoHelloErrors gives the total number of Session Rejected/No Hello Error Notification Messages sent or received by this LDP instance.
shutdownNotificationsReceived [Shutdown Notifications Received] (vRtrLdpStatsShutdownNotifRecv)	long	The value of vRtrLdpStatsShutdownNotifRecv gives the number of Shutdown Notifications received related to sessions associated with this LDP instance.
shutdownNotificationsSent [Shutdown Notifications Sent] (vRtrLdpStatsShutdownNotifSent)	long	The value of vRtrLdpStatsShutdownNotifSent gives the number of Shutdown Notifications sent related to sessions associated with this LDP instance.
unknownTlvErrors [Unknown Tlv Errors] (vRtrLdpStatsUnknownTlvErrors)	long	The value of vRtrLdpStatsUnknownTlvErrors indicates the number of Unknown TLV Fatal Errors detected for sessions associated with this LDP instance.

Table 541 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SiteStatsExtension</p> <p>MIB entry name: vRtrLdpStatsEntry</p> <p>Entry description: A row in this table represents statistical information about an LDP instance.</p> <p>Table description (for vRtrLdpStatsTable): vRtrLdpStatsTable is a read-only table. The purpose of this table is to keep statistical information about an LDP Instance. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vRtrLdpGeneralTable, and the augmenting table, vRtrLdpStatsTable. p2mpFecReceived [P2 mp Fec Received] (vRtrLdpStatsP2MPFECRecv)	long	The value of vRtrLdpStatsP2MPFECRecv specifies the number of P2MP FECs received by the LDP instance from its neighbors.
p2mpFecSent [P2 mp Fec Sent] (vRtrLdpStatsP2MPFECSent)	long	The value of vRtrLdpStatsP2MPFECSent specifies the number of P2MP FECs sent by the LDP instance to its neighbors.

Table 541 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>TargetedPeerStats</p> <p>MIB entry name: vRtrLdpIfStatsEntry</p> <p>Entry description: A row in this table contains statistical information about an LDP Interface or Targeted peer. Some counters contained in a row are for fatal errors received during a former LDP Session associated with this entry. For example, an LDP Pdu received on a TCP connection during an LDP Session contains a fatal error. That error is counted here, because the session is terminated. If the error is NOT fatal (i.e. and the Session remains), then the error is counted in the vRtrLdpSessionStatsEntry.</p> <p>Table description (for vRtrLdpIfStatsTable): vRtrLdpIfStatsTable is a read-only table. The purpose of this table is to keep statistical information about the LDP Interfaces and Targeted peers on the LSR. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vRtrLdpIfTable, and the augmenting table, vRtrLdpIfStatsTable. This in effect extends the vRtrLdpIfTable with additional columns. Creation or deletion of a row in the vRtrLdpIfTable results in the same fate for the row in the vRtrLdpIfStatsTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ldp.TargetedPeer</p>		
existingAdjacencies [Existing Adjacencies] (vRtrLdpIfExistingAdjacencies)	long	The value of vRtrLdpIfExistingAdjacencies gives a count of the total active adjacencies on this LDP interface or with this targeted peer.

Table 542 Ildp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
LLDPRemoteSystemStats MIB entry name: IldpStatistics Supports realtime plotting Supports scheduled collection Monitored class: Ildp.LLDPConfiguration		
remTablesAgeouts [Rem Tables Ageouts] (IldpStatsRemTablesAgeouts)	long	The number of times the complete set of information advertised by a particular MSAP has been deleted from tables contained in IldpRemoteSystemsData and IldpExtensions objects because the information timeliness interval has expired. This counter should be incremented only once when the complete set of information is completely invalidated (aged out) from all related tables. Partial aging, similar to deletion case, is not allowed, and thus, should not change the value of this counter.
remTablesDeletes [Rem Tables Deletes] (IldpStatsRemTablesDeletes)	long	The number of times the complete set of information advertised by a particular MSAP has been deleted from tables contained in IldpRemoteSystemsData and IldpExtensions objects. This counter should be incremented only once when the complete set of information is completely deleted from all related tables. Partial deletions, such as deletion of rows associated with a particular MSAP from some tables, but not from all tables are not allowed, thus should not change the value of this counter.
remTablesDrops [Rem Tables Drops] (IldpStatsRemTablesDrops)	long	The number of times the complete set of information advertised by a particular MSAP could not be entered into tables contained in IldpRemoteSystemsData and IldpExtensions objects because of insufficient resources.

Table 542 Ildp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
remTablesInserts [Rem Tables Inserts] (IldpStatsRemTablesInserts)	long	The number of times the complete set of information advertised by a particular MSAP has been inserted into tables contained in IldpRemoteSystemsData and IldpExtensions objects. The complete set of information received from a particular MSAP should be inserted into related tables. If partial information cannot be inserted for a reason such as lack of resources, all of the complete set of information should be removed. This counter should be incremented only once after the complete set of information is successfully recorded in all related tables. Any failures during inserting information set which result in deletion of previously inserted information should not trigger any changes in IldpStatsRemTablesInserts since the insert is not completed yet or or in IldpStatsRemTablesDeletes, since the deletion would only be a partial deletion. If the failure was the result of lack of resources, the IldpStatsRemTablesDrops counter should be incremented once.
<p>LLDPRxPortStats</p> <p>MIB entry name: tmnxLldpStatsRxPortEntry</p> <p>Entry description: LLDP frame reception statistics for a particular port. The port must be contained in the same chassis as the LLDP agent. All counter values in a particular entry shall be maintained on a continuing basis and shall not be deleted upon expiration of rx Info TTL timing counters in the LLDP remote systems MIB of the receipt of a shutdown frame from a remote LLDP agent. All statistical counters associated with a particular port on the local LLDP agent become frozen whenever the admin status is disabled for the same port. Rows in this table can only be created for MAC addresses that can validly be used in association with the type of interface concerned, as defined by table 8-2. The contents of this table is persistent across re-initializations or re-boots.</p> <p>Table description (for tmnxLldpStatsRxPortTable): A table containing LLDP reception statistics for individual ports and destination MAC addresses. Entries are not required to exist in this table while the tmnxLldpPortCfgAdminStatus object is equal to 'disabled(4)'. Supports realtime plotting Supports scheduled collection Monitored class: Ildp.LLDPPortConfiguration</p>		

Table 542 lldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lldpStatsRxPortAgeouts [Lldp Stats Rx Port Ageouts] (tmnxLldpStatsRxPortAgeouts)	long	The counter that represents the number of age-outs that occurred on a given port. An age-out is the number of times the complete set of information advertised by a particular MSAP has been deleted from tables contained in tmnxLldpRemoteSystemsData and lldpExtensions objects because the information timeliness interval has expired. This counter is similar to lldpStatsRemTablesAgeouts, except that the counter is on a per port basis. This enables NMS to poll tables associated with the tmnxLldpRemoteSystemsData objects and all LLDP extension objects associated with remote systems on the indicated port only. This counter should be set to zero during agent initialization and its value should not be saved in non-volatile storage. When a port's admin status changes from 'disabled' to 'rxOnly', 'txOnly' or 'txAndRx', the counter associated with the same port should reset to 0. The agent should also flush all remote system information associated with the same port. This counter should be incremented only once when the complete set of information is invalidated (aged out) from all related tables on a particular port. Partial ageing is not allowed, and thus, should not change the value of this counter.
lldpStatsRxPortFrameDiscard [Lldp Stats Rx Port Frame Discard] (tmnxLldpStatsRxPortFrameDiscard)	long	The number of LLDP frames received by this LLDP agent on the indicated port, and then discarded for any reason. This counter can provide an indication that LLDP header formatting problems may exist with the local LLDP agent in the sending system or that LLDPDU validation problems may exist with the local LLDP agent in the receiving system.
lldpStatsRxPortFrameErrs [Lldp Stats Rx Port Frame Errs] (tmnxLldpStatsRxPortFrameErrs)	long	The number of invalid LLDP frames received by this LLDP agent on the indicated port, while this LLDP agent is enabled.
lldpStatsRxPortFrames [Lldp Stats Rx Port Frames] (tmnxLldpStatsRxPortFrames)	long	The number of valid LLDP frames received by this LLDP agent on the indicated port, while this LLDP agent is enabled.

Table 542 lldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lldpStatsRxPortTLVDiscard [Lldp Stats Rx Port TLVDiscard] (tmnxLldpStatsRxPortTLVDiscard)	long	The number of LLDP TLVs discarded for any reason by this LLDP agent on the indicated port.
lldpStatsRxPortTLVUnknown [Lldp Stats Rx Port TLVUnknown] (tmnxLldpStatsRxPortTLVUnknown)	long	The number of LLDP TLVs received on the given port that are not recognized by this LLDP agent on the indicated port. An unrecognized TLV is referred to as the TLV whose type value is in the range of reserved TLV types (000 1001 - 111 1110) in Table 9.1 of IEEE Std 802.1AB-2004. An unrecognized TLV may be a basic management TLV from a later LLDP version.
<p>LLDPTxPortStats</p> <p>MIB entry name: tmnxLldpStatsTxPortEntry</p> <p>Entry description: LLDP frame transmission statistics for a particular port and destination MAC address. The port must be contained in the same chassis as the LLDP agent. All counter values in a particular entry shall be maintained on a continuing basis and shall not be deleted upon expiration of rx Info TTL timing counters in the LLDP remote systems MIB of the receipt of a shutdown frame from a remote LLDP agent. All statistical counters associated with a particular port on the local LLDP agent become frozen whenever the admin status is disabled for the same port. Rows in this table can only be created for MAC addresses that can validly be used in association with the type of interface concerned, as defined by table 8-2. The contents of this table is persistent across re-initializations or re-boots.</p> <p>Table description (for tmnxLldpStatsTxPortTable): A table containing LLDP transmission statistics for individual port/destination address combinations. Entries are not required to exist in this table while the tmnxLldpPortConfigEntry object is equal to 'disabled(4)'.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: lldp.LLDPPortConfiguration</p>		
lldpStatsTxLLDPDULengthErrs [Lldp Stats Tx LLDPDULength Errs] (tmnxLldpStatsTxLLDPDULengthErrs)	long	The number of LLDPD Length Errors recorded for the Port.
lldpStatsTxPortFrames [Lldp Stats Tx Port Frames] (tmnxLldpStatsTxPortFrames)	long	The number of LLDP frames transmitted by this LLDP agent on the indicated port.

Table 543 Ite statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>GxCauseCodeStats</p> <p>MIB entry name: tmnxCardEntry</p> <p>Entry description: Each row entry represents an IOM card slot in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. When a tmnxChassisEntry is created, a tmnxCardEntry is created for each IOM card slot in that chassis. Before a tmnxChassisEntry can be deleted, each tmnxCardEntry for that chassis must be in the proper state for removal.</p> <p>Table description (for tmnxCardTable): The tmnxCardTable has an entry for each IOM card slot in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Ite.GxPeer</p>		
cardSlotNumber [Card Slot Number] (tmnxCardSlotNum)	long	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
epcId [Epc Id] (tmnxMobGwId)	long	The value of tmnxMobGwId uniquely identifies a mobile gateway configured in the system.
peerIpAddress [Peer Ip Address] (tmnxMobPdnGxPeerAddress)	String	The value of tmnxMobPdnGxPeerAddress indicates the IP address of the peer on Gx reference point.
peerIpAddressType [Peer Ip Address Type] (tmnxMobPdnGxPeerAddressType)	int	The value of tmnxMobPdnGxPeerAddressType indicates the type of address represented by tmnxMobPdnGxPeerAddress.

Table 543 lte statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
peerTcpPort [Peer Tcp Port] (tmnxMobPdnGxPeerPort)	int	The value of tmnxMobPdnGxPeerPort indicates the port number of this peer.
rxCcaAuthorReject [Rx Cca Author Reject] (tmnxMobPdnGxCcRxCcaAuthorReject)	long	The value of tmnxMobPdnGxCcRxCcaAuthorReject indicates the number of Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_AUTHORIZATION_REJECTED (5003).
rxCcaAvpNotAllowed [Rx Cca Avp Not Allowed] (tmnxMobPdnGxCcRxCcaAvpNotAllowed)	long	The value of tmnxMobPdnGxCcRxCcaAvpNotAllowed indicates the number of Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_AVP_NOT_ALLOWED (5008).
rxCcaAvpUnsupport [Rx Cca Avp Unsupport] (tmnxMobPdnGxCcRxCcaAvpUnsupport)	long	The value of tmnxMobPdnGxCcRxCcaAvpUnsupport indicates the number of Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_AVP_UNSUPPORTED (5001).
rxCcaBearerNotAuth [Rx Cca Bearer Not Auth] (tmnxMobPdnGxCcRxCcaBearerNotAuth)	long	The value of tmnxMobPdnGxCcRxCcaBearerNotAuth indicates the number of Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_ERROR_BEARER_NOT_AUTHORIZED (5143).
rxCcaConflictReq [Rx Cca Conflict Req] (tmnxMobPdnGxCcRxCcaConflictReq)	long	The value of tmnxMobPdnGxCcRxCcaConflictReq indicates the number of Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_ERROR_CONFLICTING_REQUEST (5147).
rxCcaInitialParams [Rx Cca Initial Params] (tmnxMobPdnGxCcRxCcaInitialParams)	long	The value of tmnxMobPdnGxCcRxCcaInitialParams indicates the number of Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_ERROR_INITIAL_PARAMETER (5140).
rxCcaInvalidAvpVal [Rx Cca Invalid Avp Val] (tmnxMobPdnGxCcRxCcaInvalidAvpVal)	long	The value of tmnxMobPdnGxCcRxCcaInvalidAvpVal indicates the number of Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_INVALID_AVP_VALUE (5004).

Table 543 lte statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxCcaMissingAvp [Rx Cca Missing Avp] (tmnxMobPdnGxCcRxCcaMissingAvp)	long	The value of tmnxMobPdnGxCcRxCcaMissingAvp indicates the number of the Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_MISSING_AVP (5005).
rxCcaOther3XXX [Rx Cca Other 3 XXX] (tmnxMobPdnGxCcRxCcaOther3XXX)	long	The value of tmnxMobPdnGxCcRxCcaOther3XXX indicates the number of the Credit Control Answer (CCA) messages received on this peer with cause code set to other protocol errors.
rxCcaOther4XXX [Rx Cca Other 4 XXX] (tmnxMobPdnGxCcRxCcaOther4XXX)	long	The value of tmnxMobPdnGxCcRxCcaOther4XXX indicates the number of the Credit Control Answer (CCA) messages received on this peer with cause code set to other transient failures.
rxCcaOther5XXX [Rx Cca Other 5 XXX] (tmnxMobPdnGxCcRxCcaOther5XXX)	long	The value of tmnxMobPdnGxCcRxCcaOther5XXX indicates the number of the Credit Control Answer (CCA) messages received on this peer with cause code set to other permanent failures.
rxCcaPccBearEvent [Rx Cca Pcc Bear Event] (tmnxMobPdnGxCcRxCcaPccBearEvent)	long	The value of tmnxMobPdnGxCcRxCcaPccBearEvent indicates the number of Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_PCC_BEARER_EVENT (4141).
rxCcaPccRuleEvent [Rx Cca Pcc Rule Event] (tmnxMobPdnGxCcRxCcaPccRuleEvent)	long	The value of tmnxMobPdnGxCcRxCcaPccRuleEvent indicates the number of Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_PCC_RULE_EVENT (5142).
rxCcaResourceExced [Rx Cca Resource Exced] (tmnxMobPdnGxCcRxCcaResourceExced)	long	The value of tmnxMobPdnGxCcRxCcaResourceExced indicates the number of Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_RESOURCES_EXCEEDED (5006).

Table 543 lte statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxCcaSessRecovReq [Rx Cca Sess Recov Req] (tmnxMobPdnGxCcRxCcaSessRecovReq)	long	The value of tmnxMobPdnGxCcRxCcaSessRecovReq indicates the number of the Credit Control Answer (CCA) messages received on this peer with the experimental cause code set to DIAMETER_SESSION_RECOVERY_REQUESTED (4197).
rxCcaTooBusy [Rx Cca Too Busy] (tmnxMobPdnGxCcRxCcaTooBusy)	long	The value of tmnxMobPdnGxCcRxCcaTooBusy indicates the number of the Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_TOO_BUSY (3004).
rxCcaTrafficMapRej [Rx Cca Traffic Map Rej] (tmnxMobPdnGxCcRxCcaTrafficMapRej)	long	The value of tmnxMobPdnGxCcRxCcaTrafficMapRej indicates the number of Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_ERROR_TRAFFIC_MAPPING_INFO_REJECTED (5144).
rxCcaTriggerEvent [Rx Cca Trigger Event] (tmnxMobPdnGxCcRxCcaTriggerEvent)	long	The value of tmnxMobPdnGxCcRxCcaTriggerEvent indicates the number of Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_ERROR_TRIGGER_EVENT (5141).
rxCcaUnableToDeliv [Rx Cca Unable To Deliv] (tmnxMobPdnGxCcRxCcaUnableToDeliv)	long	The value of tmnxMobPdnGxCcRxCcaUnableToDeliv indicates the number of Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_UNABLE_TO_DELIVER (3002).
rxCcaUnknownSessId [Rx Cca Unknown Sess Id] (tmnxMobPdnGxCcRxCcaUnknownSessId)	long	The value of tmnxMobPdnGxCcRxCcaUnknownSessId indicates the number of Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_UNKNOWN_SESSION_ID (5002).
rxNewerSessDetect [Rx Newer Sess Detect] (tmnxMobPdnGxCcRxNewerSessDetect)	long	The value of tmnxMobPdnGxCcRxNewerSessDetect indicates the number of the Credit Control Answer (CCA) messages received on this peer with the experimental cause code set to DIAMETER_NEWER_SESSION_DETECTED (5199).

Table 543 lte statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxOIRtryNotAllow [Rx OI Rtry Not Allow] (tmnxMobPdnGxCcRxOIRtryNotAllow)	long	The value of tmnxMobPdnGxCcRxOIRtryNotAllow indicates the number of Credit Control Answer (CCA) messages received on this peer with the experimental cause code set to DIAMETER_OVERLOAD_RETRY_NOT_ALLOWED_TO_ANY (5198).
txDiaAnGwFailed [Tx Dia An Gw Failed] (tmnxMobPdnGxCcTxDiaAnGwFailed)	long	The value of tmnxMobPdnGxCcTxDiaAnGwFailed indicates the number of Re-Auth-Answer (RAA) messages sent on this peer with the experimental cause code set to DIAMETER_AN_GW_FAILED (4143) due to failure to install/modify policy decisions due to SGW Restoration.
txRcaAvpNotAllowed [Tx Rca Avp Not Allowed] (tmnxMobPdnGxCcTxRcaAvpNotAllowed)	long	The value of tmnxMobPdnGxCcTxRcaAvpNotAllowed indicates the number of the Re-Auth-Answer (RAA) messages received on this peer with the experimental cause code set to DIAMETER_AVP_NOT_ALLOWED (5008).
txRcaAvpUnsupport [Tx Rca Avp Unsupport] (tmnxMobPdnGxCcTxRcaAvpUnsupport)	long	The value of tmnxMobPdnGxCcTxRcaAvpUnsupport indicates the number of the Re-Auth-Answer (RAA) messages received on this peer with the experimental cause code set to DIAMETER_AVP_UNSUPPORTED (5001).
txRcaPccRuleEvent [Tx Rca Pcc Rule Event] (tmnxMobPdnGxCcTxRcaPccRuleEvent)	long	The value of tmnxMobPdnGxCcTxRcaPccRuleEvent indicates the number of the Re-Auth-Answer (RAA) messages received on this peer with the experimental cause code set to DIAMETER_PCC_RULE_EVENT (5142).
txRcaUnableToCompl [Tx Rca Unable To Compl] (tmnxMobPdnGxCcTxRcaUnableToCompl)	long	The value of tmnxMobPdnGxCcTxRcaUnableToCompl indicates the number of the Re-Auth-Answer (RAA) messages received on this peer with the experimental cause code set to DIAMETER_UNABLE_TO_COMPLY (5012).
txRcaUnknownSessId [Tx Rca Unknown Sess Id] (tmnxMobPdnGxCcTxRcaUnknownSessId)	long	The value of tmnxMobPdnGxCcTxRcaUnknownSessId indicates the number of the Re-Auth-Answer (RAA) messages received on this peer with the experimental cause code set to DIAMETER_UNKNOWN_SESSION_ID (5002).

Table 543 lte statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txSdaAvpManyTimes [Tx Sda Avp Many Times] (tmnxMobPdnGxCcTxSdaAvpManyTimes)	long	The value of tmnxMobPdnGxCcTxSdaAvpManyTimes indicates the number of the Session Discovery Answer (SDA) messages transmitted from this peer with the experimental cause code set to DIAMETER_AVP_OCCURS_TOO_MANY_TIMES (5009).
txSdaAvpNotAllowed [Tx Sda Avp Not Allowed] (tmnxMobPdnGxCcTxSdaAvpNotAllowed)	long	The value of tmnxMobPdnGxCcTxSdaAvpNotAllowed indicates the number of the Session Discovery Answer (SDA) messages transmitted from this peer with the experimental cause code set to DIAMETER_AVP_NOT_ALLOWED (5008).
txSdaAvpUnsuported [Tx Sda Avp Unsuported] (tmnxMobPdnGxCcTxSdaAvpUnsuported)	long	The value of tmnxMobPdnGxCcTxSdaAvpUnsuported indicates the number of the Session Discovery Answer (SDA) messages transmitted from this peer with the experimental cause code set to DIAMETER_AVP_UNSUPPORTED (5001).
txSdaInvalidAvpVal [Tx Sda Invalid Avp Val] (tmnxMobPdnGxCcTxSdaInvalidAvpVal)	long	The value of tmnxMobPdnGxCcTxSdaInvalidAvpVal indicates the number of the Session Discovery Answer (SDA) messages transmitted from this peer with the experimental cause code set to DIAMETER_INVALID_AVP_VALUE (5004).
txSdaMissingAvp [Tx Sda Missing Avp] (tmnxMobPdnGxCcTxSdaMissingAvp)	long	The value of tmnxMobPdnGxCcTxSdaMissingAvp indicates the number of the Session Discovery Answer (SDA) messages transmitted from this peer with the experimental cause code set to DIAMETER_MISSING_AVP (5005).
txSdaSessNotFound [Tx Sda Sess Not Found] (tmnxMobPdnGxCcTxSdaSessNotFound)	long	The value of tmnxMobPdnGxCcTxSdaSessNotFound indicates the number of the Session Discovery Answer (SDA) messages transmitted from this peer with the experimental cause code set to DIAMETER_REQUESTED_SESSION_NOT_FOUND (4196).
txSdaUnableToCompl [Tx Sda Unable To Compl] (tmnxMobPdnGxCcTxSdaUnableToCompl)	long	The value of tmnxMobPdnGxCcTxSdaUnableToCompl indicates the number of the Session Discovery Answer (SDA) messages transmitted from this peer with the experimental cause code set to DIAMETER_UNABLE_TO_COMPLY (5012).

Table 543 lte statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txStrAdmin [Tx Str Admin] (tmnxMobPdnGxCcTxStrAdmin)	long	The value of tmnxMobPdnGxCcTxStrAdmin indicates the number of the Session-Termination-Request (STR) messages transmitted from this peer with Termination-Cause Attribute Value Pair (AVP) set to DIAMETER_ADMINISTRATIVE (4).
txStrBadAnswer [Tx Str Bad Answer] (tmnxMobPdnGxCcTxStrBadAnswer)	long	The value of tmnxMobPdnGxCcTxStrBadAnswer indicates the number of the Session-Termination-Request (STR) messages transmitted from this peer with Termination-Cause Attribute Value Pair (AVP) set to DIAMETER_BAD_ANSWER (3).
virtualRouterId [Virtual Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
<p>GxPeerStats</p> <p>MIB entry name: tmnxMobPdnGxStatEntry</p> <p>Entry description: Each row entry represents a peer on the Gx reference point and contain statistics for this peer on a card.</p> <p>Table description (for tmnxMobPdnGxStatTable): The tmnxMobPdnGxStatTable has an entry for each peer on the Gx reference point served by a Packet Data Network Gateway (PGW).</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: lte.GxPeer</p>		
activeSessions [Active Sessions] (tmnxMobPdnGxStatActiveSessions)	long	The value of tmnxMobPdnGxStatActiveSessions indicates the number of active Gx sessions on this peer.

Table 543 lte statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
bearerBindingAndEventReportingFunctionTransmitted [Bearer Binding And Event Reporting Function Transmitted] (tmnxMobPdnGxStatBberfs)	long	The value of tmnxMobPdnGxStatBberfs indicates the number of Bearer Binding and Event Reporting Function (BBERF) procedures transmitted by this peer.
capabilitiesExchangeAnswersReceived [Capabilities Exchange Answers Received] (tmnxMobPdnGxStatRxCea)	long	The value of tmnxMobPdnGxStatRxCea indicates the number of Capabilities Exchange Answer (CEA) messages received from this peer.
capabilitiesExchangeRequestsTransmitted [Capabilities Exchange Requests Transmitted] (tmnxMobPdnGxStatTxCer)	long	The value of tmnxMobPdnGxStatTxCer indicates the number of Capabilities Exchange Request (CER) messages transmitted to this peer.
cardSlotNumber [Card Slot Number] (tmnxCardSlotNum)	long	The unique value which identifies this IOM slot within a chassis in the system.
ccrIPendTranReTx [Ccr IPend Tran Re Tx] (tmnxMobPdnGxStatCcrIPendTranReTx)	long	The value of tmnxMobPdnGxStatCcrIPendTranReTx indicates the number of the retires for the pending transactions of Credit Control Request (CCR) Initial messages to this peer.
ccrUPendTranReTx [Ccr UPend Tran Re Tx] (tmnxMobPdnGxStatCcrUPendTranReTx)	long	The value of tmnxMobPdnGxStatCcrUPendTranReTx indicates the number of the retires for the pending transactions of Credit Control Request (CCR) Update messages to this peer.
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.

Table 543 lte statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
connectionAttempts [Connection Attempts] (tmnxMobPdnGxStatConnAttempts)	long	The value of tmnxMobPdnGxStatConnAttempts indicates the number of connections attempted to this peer.
connectionFailures [Connection Failures] (tmnxMobPdnGxStatConnFailures)	long	The value of tmnxMobPdnGxStatConnFailures indicates the number of failed connections with this peer.
creditControlAnswerInitial- MalformedPacketsReceived [Credit Control Answer Initial Malformed Packets Received] (tmnxMobPdnGxStatRxCcalMalformPkt)	long	The value of tmnxMobPdnGxStatRxCcalMalformPkt indicates the number of Credit Control Answer (CCA) Initial malformed packets received from this peer.
creditControlAnswerInitialM- issingMandatoryInformation- ElementPacketsReceived [Credit Control Answer Initial Missing Mandatory Information Element Packets Received] (tmnxMobPdnGxStatRxCcalMisslePkts)	long	The value of tmnxMobPdnGxStatRxCcalMisslePkts indicates the number of Credit Control Answer (CCA) Initial missing mandatory Information Element (IE) packets received from this peer.
creditControlAnswerInitialMs- gFailuresReceived [Credit Control Answer Initial Msg Failures Received] (tmnxMobPdnGxStatRxCcalInitialFail)	long	The value of tmnxMobPdnGxStatRxCcalInitialFail indicates the number of Credit Control Answer (CCA) Initial message failures received from this peer.
creditControlAnswerInitialUn- knownPacketsReceived [Credit Control Answer Initial Unknown Packets Received] (tmnxMobPdnGxStatRxCcalUnknownPkt)	long	The value of tmnxMobPdnGxStatRxCcalUnknownPkt indicates the number of Credit Control Answer (CCA) Initial unknown packets received from this peer.

Table 543 lte statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
creditControlAnswerInitialUnknownSessionPacketsReceived [Credit Control Answer Initial Unknown Session Packets Received] (tmnxMobPdnGxStatRxCcaUnkSession)	long	The value of tmnxMobPdnGxStatRxCcaUnkSession indicates the number of Credit Control Answer (CCA) Initial unknown session packets received from this peer.
creditControlAnswerRedirectRequestReceived [Credit Control Answer Redirect Request Received] (tmnxMobPdnGxStatCcaRedirectRx)	long	The value of tmnxMobPdnGxStatCcaRedirectRx indicates the number of Credit Control Answer (CCA) messages received that request redirection.
creditControlAnswerTerminationMalformedPacketsReceived [Credit Control Answer Termination Malformed Packets Received] (tmnxMobPdnGxStatRxCcaTMalformPkt)	long	The value of tmnxMobPdnGxStatRxCcaTMalformPkt indicates the number of Credit Control Answer (CCA) Termination malformed packets received from this peer.
creditControlAnswerTerminationMissingMandatoryInformationElementPacketsReceived [Credit Control Answer Termination Missing Mandatory Information Element Packets Received] (tmnxMobPdnGxStatRxCcaTMisslePkts)	long	The value of tmnxMobPdnGxStatRxCcaTMisslePkts indicates the number of Credit Control Answer (CCA) Termination missing mandatory Information Element (IE) packets received from this peer.
creditControlAnswerTerminationMsgFailuresReceived [Credit Control Answer Termination Msg Failures Received] (tmnxMobPdnGxStatRxCcaTermFail)	long	The value of tmnxMobPdnGxStatRxCcaTermFail indicates the number of Credit Control Answer (CCA) Termination message failures received from this peer.

Table 543 lte statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
creditControlAnswerTerminationUnknownPacketsReceived [Credit Control Answer Termination Unknown Packets Received] (tmnxMobPdnGxStatRxCcaTUnknownPkt)	long	The value of tmnxMobPdnGxStatRxCcaTUnknownPkt indicates the number of Credit Control Answer (CCA) Termination unknown packets received from this peer.
creditControlAnswerTerminationUnknownSessionPacketsReceived [Credit Control Answer Termination Unknown Session Packets Received] (tmnxMobPdnGxStatRxCcaTUnkSession)	long	The value of tmnxMobPdnGxStatRxCcaTUnkSession indicates the number of Credit Control Answer (CCA) Termination unknown session packets received from this peer.
creditControlAnswerUpdateMalformedPacketsReceived [Credit Control Answer Update Malformed Packets Received] (tmnxMobPdnGxStatRxCcaUMalformPkt)	long	The value of tmnxMobPdnGxStatRxCcaUMalformPkt indicates the number of Credit Control Answer (CCA) Update malformed packets received from this peer.
creditControlAnswerUpdateMissingMandatoryInformationElementPacketsReceived [Credit Control Answer Update Missing Mandatory Information Element Packets Received] (tmnxMobPdnGxStatRxCcaUMisslePkts)	long	The value of tmnxMobPdnGxStatRxCcaUMisslePkts indicates the number of Credit Control Answer (CCA) Update missing mandatory Information Element (IE) packets received from this peer.
creditControlAnswerUpdateMsgFailuresReceived [Credit Control Answer Update Msg Failures Received] (tmnxMobPdnGxStatRxCcaUpdateFail)	long	The value of tmnxMobPdnGxStatRxCcaUpdateFail indicates the number of Credit Control Answer (CCA) Update message failures received from this peer.

Table 543 Ite statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
creditControlAnswerUpdateUnknownPacketsReceived [Credit Control Answer Update Unknown Packets Received] (tmnxMobPdnGxStatRxCcaUUnknownPkt)	long	The value of tmnxMobPdnGxStatRxCcaUUnknownPkt indicates the number of Credit Control Answer (CCA) Update unknown packets received from this peer.
creditControlAnswerUpdateUnknownSessionPacketsReceived [Credit Control Answer Update Unknown Session Packets Received] (tmnxMobPdnGxStatRxCcaUUnkSession)	long	The value of tmnxMobPdnGxStatRxCcaUUnkSession indicates the number of Credit Control Answer (CCA) Update unknown session packets received from this peer.
creditControlAnswerWithUnknownRedirectHostReceived [Credit Control Answer With Unknown Redirect Host Received] (tmnxMobPdnGxStatCcaUnkRedHstRx)	long	The value of tmnxMobPdnGxStatCcaUnkRedHstRx indicates the number of Credit Control Answer (CCA) messages received that include one or more redirect hosts that does not match any of the configured associated redirect-hosts to the diameter-peer on the gateway.
creditControlRequestFailedToBeResentAfterRedirectReceived [Credit Control Request Failed To Be Resent After Redirect Received] (tmnxMobPdnGxStatCcrRedirectFITx)	long	The value of tmnxMobPdnGxStatCcrRedirectFITx indicates the number of Credit Control Request (CCR) messages that failed to be re-sent after receiving a redirection request.
creditControlRequestInitialAnswersReceived [Credit Control Request Initial Answers Received] (tmnxMobPdnGxStatRxCcaInitial)	long	The value of tmnxMobPdnGxStatRxCcaInitial indicates the number of Credit Control Answer (CCA) Initial messages received from this peer.
creditControlRequestInitialFailuresReceived [Credit Control Request Initial Failures Received] (tmnxMobPdnGxStatCcrInitFails)	long	The value of tmnxMobPdnGxStatCcrInitFails indicates the number of Credit Control Request (CCR) Initial message failures.

Table 543 lte statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
creditControlRequestInitialMsgsRetransmitted [Credit Control Request Initial Msgs Retransmitted] (tmnxMobPdnGxStatReTxCcrInitial)	long	The value of tmnxMobPdnGxStatReTxCcrInitial indicates the number of Credit Control Request (CCR) Initial messages re-transmitted to this peer.
creditControlRequestInitialRequestsTransmitted [Credit Control Request Initial Requests Transmitted] (tmnxMobPdnGxStatTxCcrInitial)	long	The value of tmnxMobPdnGxStatTxCcrInitial indicates the number of Credit Control Request (CCR) Initial messages transmitted to this peer.
creditControlRequestRetransmittedAfterRedirectReceived [Credit Control Request Retransmitted After Redirect Received] (tmnxMobPdnGxStatCcrRedirectTx)	long	The value of tmnxMobPdnGxStatCcrRedirectTx indicates the number of Credit Control Request (CCR) messages re-transmitted after receiving a redirection request.
creditControlRequestTerminationFailuresReceived [Credit Control Request Termination Failures Received] (tmnxMobPdnGxStatCcrTermFails)	long	The value of tmnxMobPdnGxStatCcrTermFails indicates the number of Credit Control Request (CCR) Termination message failures.
creditControlRequestTerminationMsgsRetransmitted [Credit Control Request Termination Msgs Retransmitted] (tmnxMobPdnGxStatReTxCcrTerm)	long	The value of tmnxMobPdnGxStatReTxCcrTerm indicates the number of Credit Control Request (CCR) Termination messages re-transmitted to this peer.
creditControlRequestTerminationRequestsReceived [Credit Control Request Termination Requests Received] (tmnxMobPdnGxStatRxCcaTerminate)	long	The value of tmnxMobPdnGxStatRxCcaTerminate indicates the number of Credit Control Answer (CCA) Termination messages received from this peer.

Table 543 lte statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
creditControlRequestTerminationRequestsTransmitted [Credit Control Request Termination Requests Transmitted] (tmnxMobPdnGxStatTxCCRterminate)	long	The value of tmnxMobPdnGxStatTxCCRterminate indicates the number of Credit Control Request (CCR) Termination messages transmitted to this peer.
creditControlRequestUpdateAnswersReceived [Credit Control Request Update Answers Received] (tmnxMobPdnGxStatRxCcaUpdate)	long	The value of tmnxMobPdnGxStatRxCcaUpdate indicates the number of Credit Control Answer (CCA) Update messages received from this peer.
creditControlRequestUpdateFailuresReceived [Credit Control Request Update Failures Received] (tmnxMobPdnGxStatCCRupdateFails)	long	The value of tmnxMobPdnGxStatCCRupdateFails indicates the number of Credit Control Request (CCR) Update message failures.
creditControlRequestUpdateMsgsRetransmitted [Credit Control Request Update Msgs Retransmitted] (tmnxMobPdnGxStatReTxCCRupdate)	long	The value of tmnxMobPdnGxStatReTxCCRupdate indicates the number of Credit Control Request (CCR) Update messages re-transmitted to this peer.
creditControlRequestUpdateRequestsTransmitted [Credit Control Request Update Requests Transmitted] (tmnxMobPdnGxStatTxCCRupdate)	long	The value of tmnxMobPdnGxStatTxCCRupdate indicates the number of Credit Control Request (CCR) Update messages transmitted to this peer.
deviceWatchdogAnswerMsgsTransmittedToThisPeer [Device Watchdog Answer Msgs Transmitted To This Peer] (tmnxMobPdnGxStatTxDwa)	long	The value of tmnxMobPdnGxStatTxDwa indicates the number of Device Watchdog Answer (DWA) messages transmitted to this peer.

Table 543 lte statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
deviceWatchdogAnswersReceived [Device Watchdog Answers Received] (tmnxMobPdnGxStatRxDwa)	long	The value of tmnxMobPdnGxStatRxDwa indicates the number of Device Watchdog Answer (DWA) messages received from this peer.
deviceWatchdogRequestMsgsRe- ceivedFromThisPeer [Device Watchdog Request Msgs Received From This Peer] (tmnxMobPdnGxStatRxDwr)	long	The value of tmnxMobPdnGxStatRxDwr indicates the number of Device Watchdog Request (DWR) messages received from this peer.
deviceWatchdogRequestsTransmitted [Device Watchdog Requests Transmitted] (tmnxMobPdnGxStatTxDwr)	long	The value of tmnxMobPdnGxStatTxDwr indicates the number of Device Watchdog Request (DWR) messages transmitted to this peer.
disconnectPeerAnswerMsgsRe- ceivedFromThisPeer [Disconnect Peer Answer Msgs Received From This Peer] (tmnxMobPdnGxStatRxDpa)	long	The value of tmnxMobPdnGxStatRxDpa indicates the number of Disconnect Peer Answer (DPA) messages received from this peer.
disconnectPeerAnswersTransmitted [Disconnect Peer Answers Transmitted] (tmnxMobPdnGxStatTxDpa)	long	The value of tmnxMobPdnGxStatTxDpa indicates the number of Disconnect Peer Answer (DPA) messages transmitted to this peer.
disconnectPeerRequestMsg- sTransmittedToThisPeer [Disconnect Peer Request Msgs Transmitted To This Peer] (tmnxMobPdnGxStatTxDpr)	long	The value of tmnxMobPdnGxStatTxDpr indicates the number of Disconnect Peer Request (DPR) messages transmitted to this peer.
disconnectPeerRequestsReceived [Disconnect Peer Requests Received] (tmnxMobPdnGxStatRxDpr)	long	The value of tmnxMobPdnGxStatRxDpr indicates the number of Disconnect Peer Request (DPR) messages received from this peer.

Table 543 lte statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
epcld [Epc Id] (tmnxMobGwld)	long	The value of tmnxMobGwld uniquely identifies a mobile gateway configured in the system.
invalidCapabilitiesExchangeAnswersReceived [Invalid Capabilities Exchange Answers Received] (tmnxMobPdnGxStatRxInvalidCea)	long	The value of tmnxMobPdnGxStatRxInvalidCea indicates the number of invalid Capabilities Exchange Answer (CEA) messages received from this peer.
invalidPrimaryOCSAddressesReceived [Invalid Primary OCSAddresses Received] (tmnxMobPdnGxStatInvPriOcsAddrRx)	long	The Value of tmnxMobPdnGxStatInvPriOcsAddrRx indicates the number of invalid primary Online Charging System (OCS) addresses received.
invalidSecondaryOCSAddressesReceived [Invalid Secondary OCSAddresses Received] (tmnxMobPdnGxStatInvSecOcsAddrRx)	long	The Value of tmnxMobPdnGxStatInvSecOcsAddrRx indicates the number of invalid secondary Online Charging System (OCS) addresses received.
numCCRIMsgDroppedCurrCongestion [Num CCRIMsg Dropped Curr Congestion] (tmnxMobPdnGxStatCurrCgCcrIMsg)	long	The value of tmnxMobPdnGxStatCurrCgCcrIMsg indicates the number of Credit Control Request (CCR) Initial messages to this peer dropped during the current congestion.
numCCRIMsgDroppedPrevCongestion [Num CCRIMsg Dropped Prev Congestion] (tmnxMobPdnGxStatPrevCgCcrIMsg)	long	The value of tmnxMobPdnGxStatPrevCgCcrIMsg indicates the number of Credit Control Request (CCR) Initial messages to this peer dropped during the prior congestion.
numCCRTMsgDroppedCurrCongestion [Num CCRTMsg Dropped Curr Congestion] (tmnxMobPdnGxStatCurrCgCcrTMsg)	long	The value of tmnxMobPdnGxStatCurrCgCcrTMsg indicates the number of Credit Control Request (CCR) Termination messages to this peer dropped during the current congestion.
numCCRTMsgDroppedPrevCongestion [Num CCRTMsg Dropped Prev Congestion] (tmnxMobPdnGxStatPrevCgCcrTMsg)	long	The value of tmnxMobPdnGxStatPrevCgCcrTMsg indicates the number of Credit Control Request (CCR) Termination messages to this peer dropped during the prior congestion.

Table 543 lte statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numCCRUMsgDroppedCurrCongestion [Num CCRUMsg Dropped Curr Congestion] (tmnxMobPdnGxStatCurrCgCcrUMsg)	long	The value of tmnxMobPdnGxStatCurrCgCcrUMsg indicates the number of Credit Control Request (CCR) Update messages to this peer dropped during the current congestion.
numCCRUMsgDroppedPrevCongestion [Num CCRUMsg Dropped Prev Congestion] (tmnxMobPdnGxStatPrevCgCcrUMsg)	long	The value of tmnxMobPdnGxStatPrevCgCcrUMsg indicates the number of Credit Control Request (CCR) Update messages to this peer dropped during the prior congestion.
numPendingMsgCurrCongestion [Num Pending Msg Curr Congestion] (tmnxMobPdnGxStatCurrCgPendMsg)	long	The value of tmnxMobPdnGxStatCurrCgPendMsg indicates the number of pending messages toward this peer during the current congestion.
numRAAMsgDroppedCurrCongestion [Num RAAMsg Dropped Curr Congestion] (tmnxMobPdnGxStatCurrCgRaaMsg)	long	The value of tmnxMobPdnGxStatCurrCgRaaMsg indicates the number of Re-Auth Answer (RAA) messages to this peer dropped during the current congestion.
numRAAMsgDroppedPrevCongestion [Num RAAMsg Dropped Prev Congestion] (tmnxMobPdnGxStatPrevCgRaaMsg)	long	The value of tmnxMobPdnGxStatPrevCgRaaMsg indicates the number of Re-Auth Answer (RAA) messages to this peer dropped during the prior congestion.
numSDAsDroppedCurrCongestion [Num SDAs Dropped Curr Congestion] (tmnxMobPdnGxStatCurrCgSdaMsg)	long	The value of tmnxMobPdnGxStatCurrCgSdaMsg indicates the number of Session Discovery Answer (SDA) messages to this peer dropped during the current congestion.
numSDAsDroppedPrevCongestion [Num SDAs Dropped Prev Congestion] (tmnxMobPdnGxStatPrevCgSdaMsg)	long	The value of tmnxMobPdnGxStatPrevCgSdaMsg indicates the number of Session Discovery Answer (SDA) messages to this peer dropped during the prior congestion.
numSessionDiscCcrUpdAnGwFail [Num Session Disc Ccr Upd An Gw Fail] (tmnxMobPdnGxStatCcrUpdAnGwFail)	long	The value of tmnxMobPdnGxStatCcrUpdAnGwFail indicates the number of Credit Control Request (CCR) update messages sent (AN_GW_FAILED) due to Serving Gateway (SGW) restoration.

Table 543 lte statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numSessionDiscMalformPktsRx [Num Session Disc Malform Pkts Rx] (tmnxMobPdnGxStatSdrMalformPktsRx)	long	The value of tmnxMobPdnGxStatSdrMalformPktsRx indicates the number of Session Discovery Request (SDR) malformed packets received from this peer.
numSessionDiscMissAvpPktsRx [Num Session Disc Miss Avp Pkts Rx] (tmnxMobPdnGxStatSdrMissAvpPktsRx)	long	The value of tmnxMobPdnGxStatSdrMissAvpPktsRx indicates the number of Session Discovery Request (SDR) packets with missing Attribute-Value Pair (AVP) received from this peer.
numSessionDiscMsgTx [Num Session Disc Msg Tx] (tmnxMobPdnGxStatSdaMessagesTx)	long	The value of tmnxMobPdnGxStatSdaMessagesTx indicates the number of Session Discovery Answer (SDA) messages transmitted to this peer.
numSessionDiscMsgTxFail [Num Session Disc Msg Tx Fail] (tmnxMobPdnGxStatSdaMessageTxFail)	long	The value of tmnxMobPdnGxStatSdaMessageTxFail indicates the number of Session Discovery Answer (SDA) messages failed to be transmitted to this peer.
numSessionDiscRaaAnGwFail [Num Session Disc Raa An Gw Fail] (tmnxMobPdnGxStatRaaAnGwFail)	long	The value of tmnxMobPdnGxStatRaaAnGwFail indicates the number of Re-Auth Answer (RAA) messages sent (AN_GW_FAILED) due to Serving Gateway (SGW) restoration.
numSessionDiscRaaDiaAnGwFail [Num Session Disc Raa Dia An Gw Fail] (tmnxMobPdnGxStatRaaDiaAnGwFail)	long	The value of tmnxMobPdnGxStatRaaDiaAnGwFail indicates the number of Re-Auth Answer (RAA) messages sent (DIAMETER_AN_GW_FAILED) due to Serving Gateway (SGW) restoration.
numSessionDiscReqMsgRx [Num Session Disc Req Msg Rx] (tmnxMobPdnGxStatSdrMessagesRx)	long	The value of tmnxMobPdnGxStatSdrMessagesRx indicates the number of Session Discovery Request (SDR) messages received from this peer.
numSessionDiscUnkSessPktsRx [Num Session Disc Unk Sess Pkts Rx] (tmnxMobPdnGxStatSdrUnkSessPktsRx)	long	The value of tmnxMobPdnGxStatSdrUnkSessPktsRx indicates the number of Session Discovery Request (SDR) packets with unknown session received from this peer.

Table 543 lte statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
oversizedMsgReceived [Oversized Msg Received] (tmnxMobPdnGxStatRxMsgTooBig)	long	The value of tmnxMobPdnGxStatRxMsgTooBig indicates the number of oversize messages received from this peer.
primaryOCSAddressesReceived [Primary OCSAddresses Received] (tmnxMobPdnGxStatPriOcsAddrRx)	long	The Value of tmnxMobPdnGxStatPriOcsAddrRx indicates the number of primary Online Charging System (OCS) addresses received.
rateLimCcrIDrops [Rate Lim Ccr IDrops] (tmnxMobPdnGxStatRateLimCcrIDrops)	long	The value of tmnxMobPdnGxStatRateLimCcrIDrops indicates the number of Credit Control Request (CCR) Initial messages to this peer dropped during the diameter message rate limiting.
rateLimCcrTDrops [Rate Lim Ccr TDrops] (tmnxMobPdnGxStatRateLimCcrTDrops)	long	The value of tmnxMobPdnGxStatRateLimCcrTDrops indicates the number of Credit Control Request (CCR) Termination messages to this peer dropped during the diameter message rate limiting.
rateLimCcrUDrops [Rate Lim Ccr UDrops] (tmnxMobPdnGxStatRateLimCcrUDrops)	long	The value of tmnxMobPdnGxStatRateLimCcrUDrops indicates the number of Credit Control Request (CCR) Update messages to this peer dropped during the diameter message rate limiting.
rateLimRaaDrops [Rate Lim Raa Drops] (tmnxMobPdnGxStatRateLimRaaDrops)	long	The value of tmnxMobPdnGxStatRateLimRaaDrops indicates the number of Credit Control Request (CCR) Event messages to this peer dropped during the diameter message rate limiting.
rateLimSdaDrops [Rate Lim Sda Drops] (tmnxMobPdnGxStatRateLimSdaDrops)	long	The value of tmnxMobPdnGxStatRateLimSdaDrops indicates the number of Abort Session Answer (ASA) messages to this peer dropped during the diameter message rate limiting.
reAuthorizationAnswersTransmitted [Re Authorization Answers Transmitted] (tmnxMobPdnGxStatTxRaa)	long	The value of tmnxMobPdnGxStatTxRaa indicates the number of Re-Auth Answer (RAA) messages transmitted to this peer.

Table 543 lte statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
reAuthorizationRequestsMalformedPacketsReceived [Re Authorization Requests Malformed Packets Received] (tmnxMobPdnGxStatRxRarMalformPkts)	long	The value of tmnxMobPdnGxStatRxRarMalformPkts indicates the number of Re-Auth Request (RAR) malformed packets received from this peer.
reAuthorizationRequestsMissingMandatoryInformationElementPacketsReceived [Re Authorization Requests Missing Mandatory Information Element Packets Received] (tmnxMobPdnGxStatRxRarMisslePkts)	long	The value of tmnxMobPdnGxStatRxRarMisslePkts indicates the number of Re-Auth Request (RAR) missing mandatory Information Element (IE) packets received from this peer.
reAuthorizationRequestsNacksTransmitted [Re Authorization Requests Nacks Transmitted] (tmnxMobPdnGxStatTxRaaNack)	long	The value of tmnxMobPdnGxStatTxRaaNack indicates the number of Re-Auth Answer (RAA) negative acknowledgement (NACK) messages transmitted to this peer.
reAuthorizationRequestsReceived [Re Authorization Requests Received] (tmnxMobPdnGxStatRxRar)	long	The value of tmnxMobPdnGxStatRxRar indicates the number of Re-Auth Request (RAR) messages received from this peer.
reAuthorizationRequestsUnknownPacketsReceived [Re Authorization Requests Unknown Packets Received] (tmnxMobPdnGxStatRxRarUnknownPkts)	long	The value of tmnxMobPdnGxStatRxRarUnknownPkts indicates the number of Re-Auth Request (RAR) unknown packets received from this peer.
reAuthorizationRequestsUnknownSessionPacketsReceived [Re Authorization Requests Unknown Session Packets Received] (tmnxMobPdnGxStatRxRarUnkSession)	long	The value of tmnxMobPdnGxStatRxRarUnkSession indicates the number of Re-Auth Request (RAR) unknown session packets received from this peer.

Table 543 lte statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
secondaryOCSAddressesReceived [Secondary OCSAddresses Received] (tmnxMobPdnGxStatSecOcsAddrRx)	long	The Value of tmnxMobPdnGxStatSecOcsAddrRx indicates the number of secondary Online Charging System (OCS) addresses received.
totalMalformedPacketsReceived [Total Malformed Packets Received] (tmnxMobPdnGxStatRxMalformedPkts)	long	The value of tmnxMobPdnGxStatRxMalformedPkts indicates the number of malformed packets received from this peer.
totalMissingMandatoryInformationElementPacketsReceived [Total Missing Mandatory Information Element Packets Received] (tmnxMobPdnGxStatRxMissinglePkts)	long	The value of tmnxMobPdnGxStatRxMissinglePkts indicates the number of missing mandatory Information Element (IE) packets received from this peer.
totalMsgReceived [Total Msg Received] (tmnxMobPdnGxStatRxMsgs)	long	The value of tmnxMobPdnGxStatRxMsgs indicates the total number of messages received from this peer.
totalMsgRetransmitted [Total Msg Retransmitted] (tmnxMobPdnGxStatTxRetransmitMsgs)	long	The value of tmnxMobPdnGxStatTxRetransmitMsgs indicates the number of retransmit messages transmitted to this peer.
totalMsgTransmitted [Total Msg Transmitted] (tmnxMobPdnGxStatTxMsgs)	long	The value of tmnxMobPdnGxStatTxMsgs indicates the total number of messages transmitted to this peer.
totalUnknownPacketsReceived [Total Unknown Packets Received] (tmnxMobPdnGxStatRxUnknownPkts)	long	The value of tmnxMobPdnGxStatRxRarMalformPkts indicates the number of unknown packets received from this peer.
transportDisconnectionMsgReceived [Transport Disconnection Msg Received] (tmnxMobPdnGxStatRxTransportDisc)	long	The value of tmnxMobPdnGxStatRxTransportDisc indicates the number of remote transport disconnect messages received from this peer.

Table 543 lte statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
undersizedMsgReceived [Undersized Msg Received] (tmnxMobPdnGxStatRxMsgTooSmall)	long	The value of tmnxMobPdnGxStatRxMsgTooSmall indicates the number of small messages received from this peer.
unexpectedVersionMsgReceived [Unexpected Version Msg Received] (tmnxMobPdnGxStatRxMsgUnexpectVer)	long	The value of tmnxMobPdnGxStatRxMsgUnexpectVer indicates the number of unexpected version messages received from this peer.
virtualRouterId [Virtual Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
IpPoolEntryStats MIB entry name: vRtrIpPoolStatEntry Entry description: Each row entry represents the statistics for an IP prefix configured in an IP pool in the system. Table description (for vRtrIpPoolStatTable): The vRtrIpPoolStatTable has an entry for each IP prefix configured in an IP pool in the system. Supports realtime plotting Supports scheduled collection Monitored class: lte.IpPoolEntry		
ipPoolNoOfAddressesAllocated [Ip Pool No Of Addresses Allocated] (vRtrIpPoolStatAllocated)	long	The value of the object vRtrIpPoolStatAllocated indicates the number of IP Addresses used.
ipPoolNoOfAddressesFree [Ip Pool No Of Addresses Free] (vRtrIpPoolStatFree)	long	The value of the object vRtrIpPoolStatFree indicates the number of free IP Addresses.

Table 543 Ite statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipPoolNoOfAddressesHeld [Ip Pool No Of Addresses Held] (vRtrIpPoolStatHeld)	long	The value of the object vRtrIpPoolStatHeld indicates the number of IP Addresses held.
<p>RfPeerStats</p> <p>MIB entry name: tmnxMobGwRfStatEntry</p> <p>Entry description: Each row entry represents a peer on the Rf reference point and contain statistics for this peer on a card.</p> <p>Table description (for tmnxMobGwRfStatTable): The tmnxMobGwRfStatTable has an entry for each peer on the Rf reference point served by a mobile gateway.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Ite.AgwRfPeer</p>		
acrInterimMsgTransmitFailed [Acr Interim Msg Transmit Failed] (tmnxMobGwRfStatTxAcrInterimFail)	long	The value of tmnxMobGwRfStatTxAcrInterimFail indicates the number of Accounting Request (ACR) Interim message failures.
acrInterimMsgTransmitted [Acr Interim Msg Transmitted] (tmnxMobGwRfStatTxAcrInterim)	long	The value of tmnxMobGwRfStatTxAcrInterim indicates the number of Accounting Request (ACR) Interim messages transmitted to this peer.
acrStartMsgTransmitFailed [Acr Start Msg Transmit Failed] (tmnxMobGwRfStatTxAcrStartFails)	long	The value of tmnxMobGwRfStatTxAcrStartFails indicates the number of Accounting Request (ACR) Start message failures.
acrStartMsgTransmitted [Acr Start Msg Transmitted] (tmnxMobGwRfStatTxAcrStart)	long	The value of tmnxMobGwRfStatTxAcrStart indicates the number of Accounting Request (ACR) Start messages transmitted to this peer.
acrStopMsgTransmitFailed [Acr Stop Msg Transmit Failed] (tmnxMobGwRfStatTxAcrStopFails)	long	The value of tmnxMobGwRfStatTxAcrStopFails indicates the number of Accounting Request (ACR) Stop message failures.

Table 543 lte statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
acrStopMsgTransmitted [Acr Stop Msg Transmitted] (tmnxMobGwRfStatTxAcrStop)	long	The value of tmnxMobGwRfStatTxAcrStop indicates the number of Accounting Request (ACR) Stop messages transmitted to this peer.
cardSlotNumber [Card Slot Number] (tmnxCardSlotNum)	long	The unique value which identifies this IOM slot within a chassis in the system.
ceaReceived [Cea Received] (tmnxMobGwRfStatRxCea)	long	The value of tmnxMobGwRfStatRxCea indicates the number of Capabilities Exchange Answer (CEA) messages received from this peer.
cerTransmitted [Cer Transmitted] (tmnxMobGwRfStatTxCer)	long	The value of tmnxMobGwRfStatTxCer indicates the number of Capabilities Exchange Request (CER) messages transmitted to this peer.
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
connAttempts [Conn Attempts] (tmnxMobGwRfStatConnAttempts)	long	The value of tmnxMobGwRfStatConnAttempts indicates the number of connections attempted to this peer.
connFailures [Conn Failures] (tmnxMobGwRfStatConnFailures)	long	The value of tmnxMobGwRfStatConnFailures indicates the number of failed connections with this peer.
currCongestionAcrInterMsg [Curr Congestion Acr Inter Msg] (tmnxMobGwRfStatCurrCgAcrInterMsg)	long	The value of tmnxMobGwRfStatCurrCgAcrInterMsg indicates the number of Accounting Request (ACR) Interim messages to this peer dropped during the current congestion.

Table 543 lte statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
currCongestionAcrStartMsg [Curr Congestion Acr Start Msg] (tmnxMobGwRfStatCurrCgAcrStartMsg)	long	The value of tmnxMobGwRfStatCurrCgAcrStartMsg indicates the number of Accounting Request (ACR) Start messages to this peer dropped during the current congestion.
currCongestionAcrStopMsg [Curr Congestion Acr Stop Msg] (tmnxMobGwRfStatCurrCgAcrStopMsg)	long	The value of tmnxMobGwRfStatCurrCgAcrStopMsg indicates the number of Accounting Request (ACR) Stop messages to this peer dropped during the current congestion.
currCongestionPendMsg [Curr Congestion Pend Msg] (tmnxMobGwRfStatCurrCgPendMsg)	long	The value of tmnxMobGwRfStatCurrCgPendMsg indicates the number of pending messages toward this peer during the current congestion.
dpaRecieved [Dpa Recieved] (tmnxMobGwRfStatRxDpa)	long	The value of tmnxMobGwRfStatRxDpa indicates the number of Disconnect Peer Answer (DPA) messages received from this peer.
dpaTransmitted [Dpa Transmitted] (tmnxMobGwRfStatTxDpa)	long	The value of tmnxMobGwRfStatTxDpa indicates the number of Disconnect Peer Answer (DPA) messages transmitted to this peer.
dprReceived [Dpr Received] (tmnxMobGwRfStatRxDpr)	long	The value of tmnxMobGwRfStatRxDpr indicates the number of Disconnect Peer Request (DPR) messages received from this peer.
dprTransmitted [Dpr Transmitted] (tmnxMobGwRfStatTxDpr)	long	The value of tmnxMobGwRfStatTxDpr indicates the number of Disconnect Peer Request (DPR) messages transmitted to this peer.
dwaReceived [Dwa Received] (tmnxMobGwRfStatRxDwa)	long	The value of tmnxMobGwRfStatRxDwa indicates the number of Device Watchdog Answer (DWA) messages received from this peer.
dwaTransmitted [Dwa Transmitted] (tmnxMobGwRfStatTxDwa)	long	The value of tmnxMobGwRfStatTxDwa indicates the number of Device Watchdog Answer (DWA) messages transmitted to this peer.

Table 543 lte statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dwrRecieved [Dwr Recieved] (tmnxMobGwRfStatRxDwr)	long	The value of tmnxMobGwRfStatRxDwr indicates the number of Device Watchdog Request (DWR) messages received from this peer.
dwrTransmitted [Dwr Transmitted] (tmnxMobGwRfStatTxDwr)	long	The value of tmnxMobGwRfStatTxDwr indicates the number of Device Watchdog Request (DWR) messages transmitted to this peer.
epcId [Epc Id] (tmnxMobGwId)	long	The value of tmnxMobGwId uniquely identifies a mobile gateway configured in the system.
invalidCeaReceived [Invalid Cea Received] (tmnxMobGwRfStatRxInvalidCea)	long	The value of tmnxMobGwRfStatRxInvalidCea indicates the number of invalid Capabilities Exchange Answer (CEA) messages received from this peer.
peerIpAddress [Peer Ip Address] (tmnxMobGwRfPeerAddress)	String	The value of tmnxMobGwRfPeerAddress indicates the IP address of the peer on Rf reference point.
peerIpAddressType [Peer Ip Address Type] (tmnxMobGwRfPeerAddressType)	int	The value of tmnxMobGwRfPeerAddressType indicates the type of address represented by tmnxMobGwRfPeerAddress.
peerTcpPort [Peer Tcp Port] (tmnxMobGwRfPeerPort)	int	The value of tmnxMobGwRfPeerPort indicates the port number of this peer.
prevCongestionAcrInterMsg [Prev Congestion Acr Inter Msg] (tmnxMobGwRfStatPrevCgAcrInterMsg)	long	The value of tmnxMobGwRfStatPrevCgAcrInterMsg indicates the number of Accounting Request (ACR) Interim messages to this peer dropped during the prior congestion.
prevCongestionAcrStartMsg [Prev Congestion Acr Start Msg] (tmnxMobGwRfStatPrevCgAcrStartMsg)	long	The value of tmnxMobGwRfStatPrevCgAcrStartMsg indicates the number of Accounting Request (ACR) Start messages to this peer dropped during the prior congestion.

Table 543 lte statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
prevCongestionAcrStopMsg [Prev Congestion Acr Stop Msg] (tmnxMobGwRfStatPrevCgAcrStopMsg)	long	The value of tmnxMobGwRfStatPrevCgAcrStopMsg indicates the number of Accounting Request (ACR) Stop messages to this peer dropped during the prior congestion.
tooBigMsgReceived [Too Big Msg Received] (tmnxMobGwRfStatRxMsgTooBig)	long	The value of tmnxMobGwRfStatRxMsgTooBig indicates the number of oversize messages received from this peer.
tooSmallMsgReceived [Too Small Msg Received] (tmnxMobGwRfStatRxMsgTooSmall)	long	The value of tmnxMobGwRfStatRxMsgTooSmall indicates the number of small messages received from this peer.
totalMsgReceived [Total Msg Received] (tmnxMobGwRfStatRxMsgs)	long	The value of tmnxMobGwRfStatRxMsgs indicates the total number of messages received from this peer.
totalMsgRetransmitted [Total Msg Retransmitted] (tmnxMobGwRfStatTxRetransmitMsgs)	long	The value of tmnxMobGwRfStatTxRetransmitMsgs indicates the number of retransmit messages transmitted to this peer.
totalMsgTransmitted [Total Msg Transmitted] (tmnxMobGwRfStatTxMsgs)	long	The value of tmnxMobGwRfStatTxMsgs indicates the total number of messages transmitted to this peer.
transportDiscMsgReceived [Transport Disc Msg Received] (tmnxMobGwRfStatRxTransportDisc)	long	The value of tmnxMobGwRfStatRxTransportDisc indicates the number of remote transport disconnect messages received from this peer.
unexpectedVerMsgReceived [Unexpected Ver Msg Received] (tmnxMobGwRfStatRxMsgUnexpectVer)	long	The value of tmnxMobGwRfStatRxMsgUnexpectVer indicates the number of unexpected version messages received from this peer.

Table 543 lte statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
virtualRouterId [Virtual Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.

receivedDEAUnabletoDeliver [Received DEAUnableto Deliver] (tmnxMobPdnSwmCcRxDeaUnableDelivr)	long	The value of tmnxMobPdnSwmCcRxDeaUnableDelivr indicates the number of the DE-Answer (DEA) messages received on this peer with cause code set to DIAMETER_UNABLE_TO_DELIVER (3002).
receivedDEAUnknownSessionId [Received DEAUnknown Session Id] (tmnxMobPdnSwmCcRxDeaUnkSessId)	long	The value of tmnxMobPdnSwmCcRxDeaUnkSessId indicates the number of the DE-Answer (DEA) messages received on this peer with cause code set to DIAMETER_UNKNOWN_SESSION_ID (5002).
receivedDEAUserNoApnSubscription [Received DEAUser No Apn Subscription] (tmnxMobPdnSwmCcRxDeaUserNoApnSub)	long	The value of tmnxMobPdnSwmCcRxDeaUserNoApnSub indicates the number of the DE-Answer (DEA) messages received on this peer with the experimental cause code set to DIAMETER_ERROR_USER_NO_APN_SUBSCRIPTION (5451).
receivedDEAUserUnknown [Received DEAUser Unknown] (tmnxMobPdnSwmCcRxDeaUserUnknown)	long	The value of tmnxMobPdnSwmCcRxDeaUserUnknown indicates the number of the DE-Answer (DEA) messages received on this peer with the experimental cause code set to DIAMETER_USER_UNKNOWN (5001).
strLogout [Str Logout] (tmnxMobPdnSwmCcTxStrLogout)	long	The value of tmnxMobPdnSwmCcTxStrLogout indicates the number of the Session-Termination-Request (STR) messages transmitted from this peer with Termination-Cause Attribute Value Pair (AVP) set to DIAMETER_LOGOUT (1).
strServNotProv [Str Serv Not Prov] (tmnxMobPdnSwmCcTxStrServNotProv)	long	The value of tmnxMobPdnSwmCcTxStrServNotProv indicates the number of the Session-Termination-Request (STR) messages transmitted from this peer with Termination-Cause Attribute Value Pair (AVP) set to DIAMETER_SERVICE_NOT_PROVIDED (2).
transmittedASAUnabletoComply [Transmitted ASAUnableto Comply] (tmnxMobPdnSwmCcTxAsaUnComply)	long	The value of tmnxMobPdnSwmCcTxAsaUnComply indicates the number of Abort-Session-Answer (ASA) the messages transmitted from this peer with cause code set to DIAMETER_UNABLE_TO_COMPLY (5012).

Table 544 lteepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transmittedASAUnknownSessionId [Transmitted ASAUnknown Session Id] (tmnxMobPdnSwmCcTxAsaUnkSessId)	long	The value of tmnxMobPdnSwmCcTxAsaUnkSessId indicates the number of the Abort-Session-Answer (ASA) messages transmitted from this peer with cause code set to DIAMETER_UNKNOWN_SESSION_ID (5002).
transmittedRAAUnabletoComply [Transmitted RAAUnableto Comply] (tmnxMobPdnSwmCcTxRaaUnComply)	long	The value of tmnxMobPdnSwmCcTxRaaUnComply indicates the number of Re-Auth-Answer (RAA) the messages transmitted from this peer with cause code set to DIAMETER_UNABLE_TO_COMPLY (5012).
transmittedRAAUnknownSessionId [Transmitted RAAUnknown Session Id] (tmnxMobPdnSwmCcTxRaaUnkSessId)	long	The value of tmnxMobPdnSwmCcTxRaaUnkSessId indicates the number of the Re-Auth-Answer (RAA) messages transmitted from this peer with cause code set to DIAMETER_UNKNOWN_SESSION_ID (5002).
transmittedSTRAdministrative [Transmitted STRAdministrative] (tmnxMobPdnSwmCcTxStrAdmin)	long	The value of tmnxMobPdnSwmCcTxStrAdmin indicates the number of the Session-Termination-Request (STR) messages transmitted from this peer with Termination-Cause Attribute Value Pair (AVP) set to DIAMETER_ADMINISTRATIVE (4).
transmittedSTRBadAnswer [Transmitted STRBad Answer] (tmnxMobPdnSwmCcTxStrBadAnswer)	long	The value of tmnxMobPdnSwmCcTxStrBadAnswer indicates the number of the Session-Termination-Request (STR) messages transmitted from this peer with Termination-Cause Attribute Value Pair (AVP) set to DIAMETER_BAD_ANSWER (3).
transmittedSTRSessiontimeout [Transmitted STRSessiontimeout] (tmnxMobPdnSwmCcTxStrSessTimeout)	long	The value of tmnxMobPdnSwmCcTxStrSessTimeout indicates the number of the Session-Termination-Request (STR) messages transmitted from this peer with Termination-Cause Attribute Value Pair (AVP) set to DIAMETER_SESSION_TIMEOUT (8).
virtualRouterId [Virtual Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.

Table 544 Iteepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SwmPeerStats</p> <p>MIB entry name: tmnxCardEntry</p> <p>Entry description: Each row entry represents an IOM card slot in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. When a tmnxChassisEntry is created, a tmnxCardEntry is created for each IOM card slot in that chassis. Before a tmnxChassisEntry can be deleted, each tmnxCardEntry for that chassis must be in the proper state for removal.</p> <p>Table description (for tmnxCardTable): The tmnxCardTable has an entry for each IOM card slot in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Iteepdg.SwmPeer</p>		
cardSlotNumber [Card Slot Number] (tmnxCardSlotNum)	long	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
epcId [Epc Id] (tmnxMobGwld)	long	The value of tmnxMobGwld uniquely identifies a mobile gateway configured in the system.
pdnSwmAARFinalTOTx [Pdn Swm AARFinal TOTx] (tmnxMobPdnSwmAARFinalTOTx)	long	The value of tmnxMobPdnSwmAARFinalTOTx indicates the number of AAR request retries aborted due to exhaustion of maximum allowable retries due to the lack of response from the Authentication, Authorization and Accounting (AAA) server.

Table 544 Iteepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pdnSwmASAUnknownSessTx [Pdn Swm ASAUnknown Sess Tx] (tmnxMobPdnSwmASAUnknownSessTx)	long	The value of tmnxMobPdnSwmASAUnknownSessTx indicates the number of Abort Session Answer (ASA) messages sent when the session identified in the Abort Session Request (ASR) message could not be found.
pdnSwmDERFinalTOTx [Pdn Swm DERFinal TOTx] (tmnxMobPdnSwmDERFinalTOTx)	long	The value of tmnxMobPdnSwmDERFinalTOTx indicates the number of DER request retries aborted due to exhaustion of maximum allowable retries due to the lack of response from the Authentication, Authorization and Accounting (AAA) server.
pdnSwmRAAUnknownSessTx [Pdn Swm RAAUnknown Sess Tx] (tmnxMobPdnSwmRAAUnknownSessTx)	long	The value of tmnxMobPdnSwmRAAUnknownSessTx indicates the number of Reauthorization Answer (RAA) messages sent when the session identified in the Reauthorization Request (RAR) could not be found.
pdnSwmSTRFinalTOTx [Pdn Swm STRFinal TOTx] (tmnxMobPdnSwmSTRFinalTOTx)	long	The value of tmnxMobPdnSwmSTRFinalTOTx indicates the number of STR request retries aborted due to exhaustion of maximum allowable retries due to the lack of response from the Authentication, Authorization and Accounting (AAA) server.
pdnSwmSTRUnknownSessAaaTx [Pdn Swm STRUnknown Sess Aaa Tx] (tmnxMobPdnSwmSTRUnknownSessAaaTx)	long	The value of tmnxMobPdnSwmSTRUnknownSessAaaTx indicates the number of STR requests the Packet Data Gateway (ePDG) sends upon receiving AA Answer (AAA) message for an unknown session.
pdnSwmSTRUnknownSessDeaTx [Pdn Swm STRUnknown Sess Dea Tx] (tmnxMobPdnSwmSTRUnknownSessDeaTx)	long	The value of tmnxMobPdnSwmSTRUnknownSessDeaTx indicates the number of STR requests the Packet Data Gateway (ePDG) sends upon receiving DE Answer (DEA) message for an unknown session.
pdnSwmStatAAAExtnRx [Pdn Swm Stat AAExt n Rx] (tmnxMobPdnSwmStatAAAExt n Rx)	long	The value of tmnxMobPdnSwmStatAAAExt n Rx indicates the number of AA Answer (AAA) messages received from this peer for a lifetime extension.

Table 544 Iteepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pdnSwmStatAAReauthRx [Pdn Swm Stat AAReauth Rx] (tmnxMobPdnSwmStatAAReauthRx)	long	The value of tmnxMobPdnSwmStatAAReauthRx indicates the number of AA Answer (AAA) messages received from this peer for a reauthorization.
pdnSwmStatAARejectRx [Pdn Swm Stat AAReject Rx] (tmnxMobPdnSwmStatAARejectRx)	long	The value of tmnxMobPdnSwmStatAARejectRx indicates the number of AAA messages received from this peer with Result-Code set to diameter-authorization-rejected.
pdnSwmStatAAASuccessRx [Pdn Swm Stat AAASuccess Rx] (tmnxMobPdnSwmStatAAASuccessRx)	long	The value of tmnxMobPdnSwmStatAAASuccessRx indicates the number of AAA messages received from this peer with Result-Code set to diameter success.
pdnSwmStatAARExtnTx [Pdn Swm Stat AARExtn Tx] (tmnxMobPdnSwmStatAARExtnTx)	long	The value of tmnxMobPdnSwmStatAARExtnTx indicates the number of AA Request (AAR) messages transmitted to this peer during a lifetime extension.
pdnSwmStatAARReauthTx [Pdn Swm Stat AARReauth Tx] (tmnxMobPdnSwmStatAARReauthTx)	long	The value of tmnxMobPdnSwmStatAARReauthTx indicates the number of AA Request (AAR) messages transmitted to this peer during a reauthorization.
pdnSwmStatAARRetries [Pdn Swm Stat AARRetries] (tmnxMobPdnSwmStatAARRetries)	long	The value of tmnxMobPdnSwmStatAARRetries indicates the number of times the Packet Data Gateway (ePDG) retried to send an AAR request.
pdnSwmStatASAnswerTx [Pdn Swm Stat ASAnswer Tx] (tmnxMobPdnSwmStatASAnswerTx)	long	The value of tmnxMobPdnSwmStatASAnswerTx indicates the number of Abort Session Answer (ASA) messages transmitted by the evolved Packet Data Gateway (ePDG).
pdnSwmStatASRequestRx [Pdn Swm Stat ASRequest Rx] (tmnxMobPdnSwmStatASRequestRx)	long	The value of tmnxMobPdnSwmStatASRequestRx indicates the number of Abort Session Request (ASR) messages received by the evolved Packet Data Gateway (ePDG).
pdnSwmStatCEAMsgsRx [Pdn Swm Stat CEAMsgs Rx] (tmnxMobPdnSwmStatCEAMsgsRx)	long	The value of tmnxMobPdnSwmStatCEAMsgsRx indicates the number of Capability Exchange Answer (CEA) messages received from this peer.

Table 544 lteepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pdnSwmStatCERMsgsTx [Pdn Swm Stat CERMsgs Tx] (tmnxMobPdnSwmStatCERMsgsTx)	long	The value of tmnxMobPdnSwmStatCERMsgsTx indicates the number of Capability Exchange Request (CER) messages transmitted to this peer.
pdnSwmStatConnAttempts [Pdn Swm Stat Conn Attempts] (tmnxMobPdnSwmStatConnAttempts)	long	The value of tmnxMobPdnSwmStatConnAttempts indicates the number of connections attempted to this peer.
pdnSwmStatConnFailures [Pdn Swm Stat Conn Failures] (tmnxMobPdnSwmStatConnFailures)	long	The value of tmnxMobPdnSwmStatConnFailures indicates the number of failed connections with this peer.
pdnSwmStatCurrCgAarMsg [Pdn Swm Stat Curr Cg Aar Msg] (tmnxMobPdnSwmStatCurrCgAarMsg)	long	The value of tmnxMobPdnSwmStatCurrCgAarMsg indicates the number of AA Request (AAR) messages to this peer dropped during the current congestion.
pdnSwmStatCurrCgAsaMsg [Pdn Swm Stat Curr Cg Asa Msg] (tmnxMobPdnSwmStatCurrCgAsaMsg)	long	The value of tmnxMobPdnSwmStatCurrCgAsaMsg indicates the number of Abort Session Answer (ASA) messages to this peer dropped during the current congestion.
pdnSwmStatCurrCgDerMsg [Pdn Swm Stat Curr Cg Der Msg] (tmnxMobPdnSwmStatCurrCgDerMsg)	long	The value of tmnxMobPdnSwmStatCurrCgAsaMsg indicates the number of Abort Session Answer (ASA) messages to this peer dropped during the current congestion.
pdnSwmStatCurrCgPendMsg [Pdn Swm Stat Curr Cg Pend Msg] (tmnxMobPdnSwmStatCurrCgPendMsg)	long	The value of tmnxMobPdnSwmStatCurrCgPendMsg indicates the number of pending messages toward this peer during the current congestion.
pdnSwmStatCurrCgRaaMsg [Pdn Swm Stat Curr Cg Raa Msg] (tmnxMobPdnSwmStatCurrCgRaaMsg)	long	The value of tmnxMobPdnSwmStatCurrCgRaaMsg indicates the number of Re-Authorization Answer (RAA) messages to this peer dropped during the current congestion.
pdnSwmStatCurrCgStrMsg [Pdn Swm Stat Curr Cg Str Msg] (tmnxMobPdnSwmStatCurrCgStrMsg)	long	The value of tmnxMobPdnSwmStatCurrCgStrMsg indicates the number of Session Termination Request (STR) messages to this peer dropped during the current congestion.

Table 544 lteepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pdnSwmStatDEAMultiRoundRx [Pdn Swm Stat DEAMulti Round Rx] (tmnxMobPdnSwmStatDEAMultiRoundRx)	long	The value of tmnxMobPdnSwmStatDEAMultiRoundRx indicates the number of DEA messages received from this peer with Result-Code set to diameter multi-round-auth.
pdnSwmStatDEAOtherCodeRx [Pdn Swm Stat DEAOther Code Rx] (tmnxMobPdnSwmStatDEAOtherCodeRx)	long	The value of tmnxMobPdnSwmStatDEAOtherCodeRx indicates the number of DEA messages received from this peer with Result-Code other than diameter success or diameter mutli-round-auth.
pdnSwmStatDEARedFailRx [Pdn Swm Stat DEARed Fail Rx] (tmnxMobPdnSwmStatDEARedFailRx)	long	The value of tmnxMobPdnSwmStatDEARedFailRx indicates the number of redirection DEA messages received from this peer with the failure Result-Code.
pdnSwmStatDEARedRx [Pdn Swm Stat DEARed Rx] (tmnxMobPdnSwmStatDEARedRx)	long	The value of tmnxMobPdnSwmStatDEARedRx indicates the number of redirection DEA messages received from this peer.
pdnSwmStatDEASuccessRx [Pdn Swm Stat DEASuccess Rx] (tmnxMobPdnSwmStatDEASuccessRx)	long	The value of tmnxMobPdnSwmStatDEASuccessRx indicates the number of DEA messages received from this peer with Result-Code set to diameter success.
pdnSwmStatDERFailIndTx [Pdn Swm Stat DERFail Ind Tx] (tmnxMobPdnSwmStatDERFailIndTx)	long	The value of tmnxMobPdnSwmStatDERFailIndTx indicates the number of Diameter EAP Request (DER) messages with AAA failure indication AVP transmitted to this peer.
pdnSwmStatDERInitAtchTx [Pdn Swm Stat DERInit Atch Tx] (tmnxMobPdnSwmStatDERInitAtchTx)	long	The value of tmnxMobPdnSwmStatDERInitAtchTx indicates the number of Diameter EAP Request (DER) messages transmitted to this peer for an initial attach.
pdnSwmStatDERRetries [Pdn Swm Stat DERRetries] (tmnxMobPdnSwmStatDERRetries)	long	The value of tmnxMobPdnSwmStatDERRetries indicates the number of times the Packet Data Gateway (ePDG) retried to send a DER request.

Table 544 lteepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pdnSwmStatDERSubsAtchTx [Pdn Swm Stat DERSubs Atch Tx] (tmnxMobPdnSwmStatDERSubsAtchTx)	long	The value of tmnxMobPdnSwmStatDERSubsAtchTx indicates the number of Diameter EAP Request (DER) messages transmitted to this peer for a subsequent attach.
pdnSwmStatDPAMsgsRx [Pdn Swm Stat DPAMsgs Rx] (tmnxMobPdnSwmStatDPAMsgsRx)	long	The value of tmnxMobPdnSwmStatDPAMsgsRx indicates the number of Disconnect Peer Answer (DPA) messages received from this peer.
pdnSwmStatDPAMsgsTx [Pdn Swm Stat DPAMsgs Tx] (tmnxMobPdnSwmStatDPAMsgsTx)	long	The value of tmnxMobPdnSwmStatDPAMsgsTx indicates the number of Disconnect Peer Answer (DPA) messages transmitted to this peer.
pdnSwmStatDPRMsgsRx [Pdn Swm Stat DPRMsgs Rx] (tmnxMobPdnSwmStatDPRMsgsRx)	long	The value of tmnxMobPdnSwmStatDPRMsgsRx indicates the number of Disconnect Peer Request (DPR) messages received from this peer.
pdnSwmStatDPRMsgsTx [Pdn Swm Stat DPRMsgs Tx] (tmnxMobPdnSwmStatDPRMsgsTx)	long	The value of tmnxMobPdnSwmStatDPRMsgsTx indicates the number of Disconnect Peer Request (DPR) messages transmitted to this peer.
pdnSwmStatDWAMsgsRx [Pdn Swm Stat DWAMsgs Rx] (tmnxMobPdnSwmStatDWAMsgsRx)	long	The value of tmnxMobPdnSwmStatDWAMsgsRx indicates the number of Device Watch Answer (DWA) messages received from this peer.
pdnSwmStatDWAMsgsTx [Pdn Swm Stat DWAMsgs Tx] (tmnxMobPdnSwmStatDWAMsgsTx)	long	The value of tmnxMobPdnSwmStatDWAMsgsTx indicates the number of Device Watch Answer (DWA) messages transmitted to this peer.
pdnSwmStatDWRMsgsRx [Pdn Swm Stat DWRMsgs Rx] (tmnxMobPdnSwmStatDWRMsgsRx)	long	The value of tmnxMobPdnSwmStatDWRMsgsRx indicates the number of Device Watchdog Request (DWR) messages received from this peer.
pdnSwmStatDWRMsgsTx [Pdn Swm Stat DWRMsgs Tx] (tmnxMobPdnSwmStatDWRMsgsTx)	long	The value of tmnxMobPdnSwmStatDWRMsgsTx indicates the number of Device Watchdog Request (DWR) messages transmitted to this peer.

Table 544 Iteepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pdnSwmStatMessagesRx [Pdn Swm Stat Messages Rx] (tmnxMobPdnSwmStatMessagesRx)	long	The value of tmnxMobPdnSwmStatMessagesRx indicates the total number of swm application messages received from this peer.
pdnSwmStatMessagesTx [Pdn Swm Stat Messages Tx] (tmnxMobPdnSwmStatMessagesTx)	long	The value of tmnxMobPdnSwmStatMessagesTx indicates the total number of swm application messages transmitted to this peer.
pdnSwmStatPrevCgAarMsg [Pdn Swm Stat Prev Cg Aar Msg] (tmnxMobPdnSwmStatPrevCgAarMsg)	long	The value of tmnxMobPdnSwmStatPrevCgAarMsg indicates the number of AA Request (AAR) messages to this peer dropped during the prior congestion.
pdnSwmStatPrevCgAsaMsg [Pdn Swm Stat Prev Cg Asa Msg] (tmnxMobPdnSwmStatPrevCgAsaMsg)	long	The value of tmnxMobPdnSwmStatPrevCgAsaMsg indicates the number of Abort Session Answer (ASA) messages to this peer dropped during the prior congestion.
pdnSwmStatPrevCgDerMsg [Pdn Swm Stat Prev Cg Der Msg] (tmnxMobPdnSwmStatPrevCgDerMsg)	long	The value of tmnxMobPdnSwmStatPrevCgAsaMsg indicates the number of Abort Session Answer (ASA) messages to this peer dropped during the prior congestion.
pdnSwmStatPrevCgRaaMsg [Pdn Swm Stat Prev Cg Raa Msg] (tmnxMobPdnSwmStatPrevCgRaaMsg)	long	The value of tmnxMobPdnSwmStatPrevCgRaaMsg indicates the number of Re-Authorization Answer (RAA) messages to this peer dropped during the prior congestion.
pdnSwmStatPrevCgStrMsg [Pdn Swm Stat Prev Cg Str Msg] (tmnxMobPdnSwmStatPrevCgStrMsg)	long	The value of tmnxMobPdnSwmStatPrevCgStrMsg indicates the number of Session Termination Request (STR) messages to this peer dropped during the prior congestion.
pdnSwmStatRAAnswerTx [Pdn Swm Stat RAAnswer Tx] (tmnxMobPdnSwmStatRAAnswerTx)	long	The value of tmnxMobPdnSwmStatRAAnswerTx indicates the number of Reauthorization Answer (RAA) messages transmitted by the evolved Packet Data Gateway (ePDG).
pdnSwmStatRARRequestRx [Pdn Swm Stat RARRequest Rx] (tmnxMobPdnSwmStatRARRequestRx)	long	The value of tmnxMobPdnSwmStatRARRequestRx indicates the number of Reauthorization Request (RAR) messages received by the evolved Packet Data Gateway (ePDG).

Table 544 Iteepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pdnSwmStatRxAaalInvlPkts [Pdn Swm Stat Rx Aaa Invl Pkts] (tmnxMobPdnSwmStatRxAaalInvlPkts)	long	The value of tmnxMobPdnSwmStatRxAaalInvlPkts indicates the number of AAA invalid packets received from this peer.
pdnSwmStatRxAsrInvlPkts [Pdn Swm Stat Rx Asr Invl Pkts] (tmnxMobPdnSwmStatRxAsrInvlPkts)	long	The value of tmnxMobPdnSwmStatRxAsrInvlPkts indicates the number of ASR invalid packets received from this peer.
pdnSwmStatRxDealInvlPkts [Pdn Swm Stat Rx Dea Invl Pkts] (tmnxMobPdnSwmStatRxDealInvlPkts)	long	The value of tmnxMobPdnSwmStatRxDealInvlPkts indicates the number of DEA invalid packets received from this peer.
pdnSwmStatRxInvalidCea [Pdn Swm Stat Rx Invalid Cea] (tmnxMobPdnSwmStatRxInvalidCea)	long	The value of tmnxMobPdnSwmStatRxInvalidCea indicates the number of invalid Capabilities Exchange Answer (CEA) messages received from this peer.
pdnSwmStatRxMsgTooBig [Pdn Swm Stat Rx Msg Too Big] (tmnxMobPdnSwmStatRxMsgTooBig)	long	The value of tmnxMobPdnSwmStatRxMsgTooBig indicates the number of oversize messages received from this peer.
pdnSwmStatRxMsgTooSmall [Pdn Swm Stat Rx Msg Too Small] (tmnxMobPdnSwmStatRxMsgTooSmall)	long	The value of tmnxMobPdnSwmStatRxMsgTooSmall indicates the number of small messages received from this peer.
pdnSwmStatRxMsgUnexpctVer [Pdn Swm Stat Rx Msg Unexpct Ver] (tmnxMobPdnSwmStatRxMsgUnexpctVer)	long	The value of tmnxMobPdnSwmStatRxMsgUnexpctVer indicates the number of unexpected version messages received from this peer.
pdnSwmStatRxRarInvlPkts [Pdn Swm Stat Rx Rar Invl Pkts] (tmnxMobPdnSwmStatRxRarInvlPkts)	long	The value of tmnxMobPdnSwmStatRxRarInvlPkts indicates the number of RAR invalid packets received from this peer.
pdnSwmStatRxStalInvlPkts [Pdn Swm Stat Rx Sta Invl Pkts] (tmnxMobPdnSwmStatRxStalInvlPkts)	long	The value of tmnxMobPdnSwmStatRxStalInvlPkts indicates the number of STA invalid packets received from this peer.

Table 544 lteepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pdnSwmStatRxTransportDisc [Pdn Swm Stat Rx Transport Disc] (tmnxMobPdnSwmStatRxTransportDisc)	long	The value of tmnxMobPdnSwmStatRxTransportDisc indicates the number of remote transport disconnect messages received from this peer.
pdnSwmStatSTASuccessRx [Pdn Swm Stat STASuccess Rx] (tmnxMobPdnSwmStatSTASuccessRx)	long	The value of tmnxMobPdnSwmStatSTASuccessRx indicates the number of STA messages received from this peer with Result-Code set to diameter success.
pdnSwmStatSTAnswerRx [Pdn Swm Stat STAnswer Rx] (tmnxMobPdnSwmStatSTAnswerRx)	long	The value of tmnxMobPdnSwmStatSTAnswerRx indicates the number of Session Termination Answer (STA) messages received by the evolved Packet Data Gateway (ePDG).
pdnSwmStatSTRRetries [Pdn Swm Stat STRRetries] (tmnxMobPdnSwmStatSTRRetries)	long	The value of tmnxMobPdnSwmStatSTRRetries indicates the number of times the Packet Data Gateway (ePDG) retried to send a STR request.
pdnSwmStatSTRequestTx [Pdn Swm Stat STRequest Tx] (tmnxMobPdnSwmStatSTRequestTx)	long	The value of tmnxMobPdnSwmStatSTRequestTx indicates the number of Session Termination Request (STR) messages transmitted by the evolved Packet Data Gateway (ePDG).
pdnSwmStatTxRetrnsmiMsgs [Pdn Swm Stat Tx Retrnsmi Msgs] (tmnxMobPdnSwmStatTxRetrnsmiMsgs)	long	The value of tmnxMobPdnSwmStatTxRetrnsmiMsgs indicates the number of retransmit messages transmitted to this peer.
virtualRouterId [Virtual Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.

Table 544 lteepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SwuCauseCodeStats</p> <p>MIB entry name: tmnxMobPdnSwuCauseCodeEntry</p> <p>Entry description: Each row entry represents a peer on the SWu reference point and contains cause code statistics for this peer on a card.</p> <p>Table description (for tmnxMobPdnSwuCauseCodeTable): The tmnxMobPdnSwuCauseCodeTable has an entry for each peer on the SWu reference point which is located between ePDG and AAA server/proxy.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: lteepdg.SwuReferencePoint</p>		
attESPropNtChosEA [Att ESProp Nt Chos EA] (tmnxMobPdnSwuCcAttESPropNtChosEA)	long	The value of tmnxMobPdnSwuCcAttESPropNtChosEA indicates the number of the rejected ePDG emergency attaches due to not chosen IKE SA proposal.
attTrafSelNoMatEA [Att Traf Sel No Mat EA] (tmnxMobPdnSwuCcAttTrafSelNoMatEA)	long	The value of tmnxMobPdnSwuCcAttTrafSelNoMatEA indicates the number of the rejected ePDG emergency attaches due to not matching traffic selector.
cardSlotNumber [Card Slot Number] (tmnxCardSlotNum)	long	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassis-Index are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
ePDGESInvKEPayload [EPDGESInv KEPayload] (tmnxMobPdnSwuCcEpdESInvKEPayload)	long	The value of tmnxMobPdnSwuCcEpdESInvKEPayload indicates the number of the ePDG initiated re-keying rejects due to ESP SA invalid KE payload.

Table 544 Iteepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ePDGESPropNotChosen [EPDGESProp Not Chosen] (tmnxMobPdnSwuCcEpdESPropNotChosn)	long	The value of tmnxMobPdnSwuCcEpdESPropNotChosn indicates the number of the ePDG initiated re-keying rejects due to no ESP SA proposal chosen.
ePDGISInvKEPayload [EPDGISInv KEPayload] (tmnxMobPdnSwuCcEpdISInvKEPayload)	long	The value of tmnxMobPdnSwuCcEpdISInvKEPayload indicates the number of the ePDG initiated re-keying rejects due to IKE SA invalid KE payload.
ePDGISPropNotChosen [EPDGISProp Not Chosen] (tmnxMobPdnSwuCcEpdISPropNotChosn)	long	The value of tmnxMobPdnSwuCcEpdISPropNotChosn indicates the number of the ePDG initiated re-keying rejects due to no IKE SA proposal chosen.
epcld [Epc Id] (tmnxMobGwld)	long	The value of tmnxMobGwld uniquely identifies a mobile gateway configured in the system.
epdESIgnoreRekey [Epd ESIgnore Rekey] (tmnxMobPdnSwuCcEpdESIgnoreRekey)	long	The value of tmnxMobPdnSwuCcEpdESIgnoreRekey indicates the number of UE initiated ESP-SA re-keying ignored by ePDG due to ESP re-keying being disabled.
epdISIgnoreRekey [Epd ISIgnore Rekey] (tmnxMobPdnSwuCcEpdISIgnoreRekey)	long	The value of tmnxMobPdnSwuCcEpdISIgnoreRekey indicates the number of UE initiated IKE-SA re-keying ignored by ePDG due to IKE re-keying being disabled.
mobRejInvalSrcAdr [Mob Rej Inval Src Adr] (tmnxMobPdnSwuCcMobRejInvalSrcAdr)	long	The value of tmnxMobPdnSwuCcMobRejInvalSrcAdr indicates the number of the MOBIKE rejects due to notification payload with status type UPDATE_SA_ADDRESSES received with invalid source address.
mobRejMobNotNegot [Mob Rej Mob Not Negot] (tmnxMobPdnSwuCcMobRejMobNotNegot)	long	The value of tmnxMobPdnSwuCcMobRejMobNotNegot indicates the number of the MOBIKE rejects due to notification payload with status type UPDATE_SA_ADDRESSES received while MOBIKE not negotiated.

Table 544 lteepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mobRejRetRoutMism [Mob Rej Ret Rout Mism] (tmnxMobPdnSwuCcMobRejRetRoutMism)	long	The value of tmnxMobPdnSwuCcMobRejRetRoutMism indicates the number of the MOBIKE rejects due to return routability check failed due to request/response mismatch of notification payload with status type COOKIE2.
mobRejRetRoutT0 [Mob Rej Ret Rout T0] (tmnxMobPdnSwuCcMobRejRetRoutT0)	long	The value of tmnxMobPdnSwuCcMobRejRetRoutT0 indicates the number of the MOBIKE rejects due return routability check failed due to timeout.
rejectedePDGAttApnAccesDenied [Rejectede PDGAtt Apn Acces Denied] (tmnxMobPdnSwuCcAttApnAccesDenied)	long	The value of tmnxMobPdnSwuCcAttApnAccesDenied indicates the number of the rejected ePDG attaches due to no APN subscription in AAA server.
rejectedePDGAttESPPropNotChosen [Rejectede PDGAtt ESPProp Not Chosen] (tmnxMobPdnSwuCcAttESPPropNotChosn)	long	The value of tmnxMobPdnSwuCcAttESPPropNotChosn indicates the number of the rejected ePDG attaches due to not chosen ESP SA proposal.
rejectedePDGAttISInvalidKEPayload [Rejectede PDGAtt ISInvalid KEPayload] (tmnxMobPdnSwuCcAttISInvKEPayload)	long	The value of tmnxMobPdnSwuCcAttISInvKEPayload indicates the number of the rejected ePDG attaches due to IKE SA invalid KE payload.
rejectedePDGAttISPropNotChosen [Rejectede PDGAtt ISProp Not Chosen] (tmnxMobPdnSwuCcAttISPropNotChosn)	long	The value of tmnxMobPdnSwuCcAttISPropNotChosn indicates the number of the rejected ePDG attaches due to not chosen IKE SA proposal.
rejectedePDGAttPdnTypeNotSupp [Rejectede PDGAtt Pdn Type Not Supp] (tmnxMobPdnSwuCcAttPdnTypeNotSupp)	long	The value of tmnxMobPdnSwuCcAttPdnTypeNotSupp indicates the number of the rejected ePDG attaches due to not supported PDN type.
rejectedePDGAttTrafSelNoMatch [Rejectede PDGAtt Traf Sel No Match] (tmnxMobPdnSwuCcAttTrafSelNoMatch)	long	The value of tmnxMobPdnSwuCcAttTrafSelNoMatch indicates the number of the rejected ePDG attaches due to not matching traffic selector.

Table 544 lteepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ueESInvKEPayload [Ue ESInv KEPayload] (tmnxMobPdnSwuCcUeESInvKEPayload)	long	The value of tmnxMobPdnSwuCcUeESInvKEPayload indicates the number of the UE initiated re-keying rejects due to ESP SA invalid KE payload.
ueESPropNotChosen [Ue ESProp Not Chosen] (tmnxMobPdnSwuCcUeESPropNotChosen)	long	The value of tmnxMobPdnSwuCcUeESPropNotChosen indicates the number of the UE initiated re-keying rejects due to no ESP SA proposal chosen.
ueISInvKEPayload [Ue ISInv KEPayload] (tmnxMobPdnSwuCcUeISInvKEPayload)	long	The value of tmnxMobPdnSwuCcUeISInvKEPayload indicates the number of the UE initiated re-keying rejects due to IKE SA invalid KE payload.
ueISPropNotChosen [Ue ISProp Not Chosen] (tmnxMobPdnSwuCcUeISPropNotChosen)	long	The value of tmnxMobPdnSwuCcUeISPropNotChosen indicates the number of the UE initiated re-keying rejects due to no IKE SA proposal chosen.
<p>SwuPeerStats</p> <p>MIB entry name: tmnxCardEntry</p> <p>Entry description: Each row entry represents an IOM card slot in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. When a tmnxChassisEntry is created, a tmnxCardEntry is created for each IOM card slot in that chassis. Before a tmnxChassisEntry can be deleted, each tmnxCardEntry for that chassis must be in the proper state for removal.</p> <p>Table description (for tmnxCardTable): The tmnxCardTable has an entry for each IOM card slot in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: lte.PDNGateway</p>		
cardSlotNumber [Card Slot Number] (tmnxCardSlotNum)	long	The unique value which identifies this IOM slot within a chassis in the system.

Table 544 Iteepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
epcId [Epc Id] (tmnxMobGwld)	long	The value of tmnxMobGwld uniquely identifies a mobile gateway configured in the system.
numberOfAuthDevIdFail [Number Of Auth Dev Id Fail] (tmnxMobPdnSwuStIkeAuthDevIdFail)	java. math. BigInteger	The value of tmnxMobPdnSwuStIkeAuthDevIdFail indicates the number of IMEI/IMEISV responses from UE on IKE_AUTH message, in which IMEI/IMEISV is included but validation of received value fails.
numberOfAuthDevIdResp [Number Of Auth Dev Id Resp] (tmnxMobPdnSwuStIkeAuthDevIdResp)	java. math. BigInteger	The value of tmnxMobPdnSwuStIkeAuthDevIdResp indicates the number of IMEI/IMEISV responses from UE on IKE_AUTH message, in which IMEI/IMEISV is included.
numberOfEmergencyCallReq [Number Of Emergency Call Req] (tmnxMobPdnSwuStEmerCallReq)	java. math. BigInteger	The value of tmnxMobPdnSwuStEmerCallReq indicates the total number of Emergency Call Requests towards ePDG.
numberOfEpdgDelEspRekey [Number Of Epdg Del Esp Rekey] (tmnxMobPdnSwuStEpdgDelEspRekey)	java. math. BigInteger	The value of tmnxMobPdnSwuStEpdgDelEspRekey indicates the number of deleted ESP-SA that were initiated from ePDG due to IKE re-keying being disabled.
numberOfEpdgDelIkeRekey [Number Of Epdg Del Ike Rekey] (tmnxMobPdnSwuStEpdgDelIkeRekey)	java. math. BigInteger	The value of tmnxMobPdnSwuStEpdgDelIkeRekey indicates the number of deleted IKE-SA that were initiated from ePDG due to IKE re-keying being disabled.

Table 544 Iteepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numberOfEspSAReKeyByEpdg [Number Of Esp SARe Key By Epdg] (tmnxMobPdnSwuStatEspSaRekeyEpdg)	java. math. BigInteger	The value of tmnxMobPdnSwuStatEspSaRekeyUE indicates the number of successful IKE-SA re-keys initiated by the ePDG.
numberOfEspSAReKeyByUE [Number Of Esp SARe Key By UE] (tmnxMobPdnSwuStatEspSaRekeyUE)	java. math. BigInteger	The value of tmnxMobPdnSwuStatEspSaRekeyUE indicates the number of successful IKE-SA re-keys initiated by the User Equipment.
numberOfEspSa [Number Of Esp Sa] (tmnxMobPdnSwuStatEspSa)	long	The value of tmnxMobPdnSwuStatEspSa indicates the number of Encapsulating Security Payload (ESP) Security Associations (SA).
numberOfEspSaEstablishd [Number Of Esp Sa Establishd] (tmnxMobPdnSwuStatEspSaEstablishd)	long	The value of tmnxMobPdnSwuStatEspSaEstablishd indicates the number of established ESP SA.
numberOfEspSaRekey [Number Of Esp Sa Rekey] (tmnxMobPdnSwuStatEspSaRekey)	long	The value of tmnxMobPdnSwuStatEspSaRekey indicates the number of ESP SA rekeys.
numberOfEspSaRekeyColis [Number Of Esp Sa Rekey Colis] (tmnxMobPdnSwuStatEspSaRekeyColis)	long	The value of tmnxMobPdnSwuStatEspSaRekeyColis indicates the number of collisions during ESP SA rekeying.
numberOfIkeAuthDevIdMiss [Number Of Ike Auth Dev Id Miss] (tmnxMobPdnSwuStIkeAuthDevIdMiss)	java. math. BigInteger	The value of tmnxMobPdnSwuStIkeAuthDevIdMiss indicates the number of IMEI/IMEISV responses from UE on IKE_AUTH message, in which IMEI/IMEISV is not included although ePDG requests.
numberOfIkeAuthDevIdReq [Number Of Ike Auth Dev Id Req] (tmnxMobPdnSwuStIkeAuthDevIdReq)	java. math. BigInteger	The value of tmnxMobPdnSwuStIkeAuthDevIdReq indicates the number of IMEI/IMEISV requests, on IKE_AUTH message, that are sent from ePDG to UE.

Table 544 Iteepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numberOfIkeDupRespMsg [Number Of Ike Dup Resp Msg] (tmnxMobPdnSwuStatIkeDupRespMsg)	long	The value of tmnxMobPdnSwuStatIkeDupRespMsg indicates the number of received duplicated IKE response messages.
numberOfIkeIkeSaInitExp [Number Of Ike Ike Sa Init Exp] (tmnxMobPdnSwuStatIkeIkeSaInitExp)	long	The value of tmnxMobPdnSwuStatIkeIkeSaInitExp indicates the number of expired IKE_SA_INIT exchanges.
numberOfIkeIntError [Number Of Ike Int Error] (tmnxMobPdnSwuStatIkeIntError)	long	The value of tmnxMobPdnSwuStatIkeIntError indicates the number of internal errors during processing of IKE messages.
numberOfIkeInvMsgHeader [Number Of Ike Inv Msg Header] (tmnxMobPdnSwuStatIkeInvMsgHeader)	long	The value of tmnxMobPdnSwuStatIkeInvMsgHeader indicates the number of IKE messages with invalid header format (syntax error).
numberOfIkeInvMsgLen [Number Of Ike Inv Msg Len] (tmnxMobPdnSwuStatIkeInvMsgLen)	long	The value of tmnxMobPdnSwuStatIkeInvMsgLen indicates the number of IKE messages with invalid length.
numberOfIkeInvPayloads [Number Of Ike Inv Payloads] (tmnxMobPdnSwuStatIkeInvPayloads)	long	The value of tmnxMobPdnSwuStatIkeInvPayloads indicates the number of IKE messages with invalid payload format (syntax error).
numberOfIkeInvRespMsg [Number Of Ike Inv Resp Msg] (tmnxMobPdnSwuStatIkeInvRespMsg)	long	The value of tmnxMobPdnSwuStatIkeInvRespMsg indicates the number of received invalid IKE response messages.
numberOfIkeLateReqRetx [Number Of Ike Late Req Retx] (tmnxMobPdnSwuStatIkeLateReqRetx)	long	The value of tmnxMobPdnSwuStatIkeLateReqRetx indicates the number of received late retransmissions of IKE messages.
numberOfIkeLocReqRetx [Number Of Ike Loc Req Retx] (tmnxMobPdnSwuStatIkeLocReqRetx)	long	The value of tmnxMobPdnSwuStatIkeLocReqRetx indicates the number of locally retransmitted request IKE messages.

Table 544 Ikeepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numberOfIkeManyLarvalIS [Number Of Ike Many Larval IS] (tmnxMobPdnSwuStatIkeManyLarvalIS)	long	The value of tmnxMobPdnSwuStatIkeManyLarvalIS indicates the number of discarded IKE messages due to high number of half-opened IKE SA for given peer.
numberOfIkeMsgAuthFail [Number Of Ike Msg Auth Fail] (tmnxMobPdnSwuStatIkeMsgAuthFail)	long	The value of tmnxMobPdnSwuStatIkeMsgAuthFail indicates the number of not authenticated IKE messages.
numberOfIkeNattKaInvLen [Number Of Ike Natt Ka Inv Len] (tmnxMobPdnSwuStatIkeNattKaInvLen)	long	The value of tmnxMobPdnSwuStatIkeNattKaInvLen indicates the number of IKE's NAT keep-alive messages with invalid length.
numberOfIkeNattNoEspMrk [Number Of Ike Natt No Esp Mrk] (tmnxMobPdnSwuStatIkeNattNoEspMrk)	long	The value of tmnxMobPdnSwuStatIkeNattNoEspMrk indicates the number of IKE messages with missing Non ESP marker.
numberOfIkeNoSkPayload [Number Of Ike No Sk Payload] (tmnxMobPdnSwuStatIkeNoSkPayload)	long	The value of tmnxMobPdnSwuStatIkeNoSkPayload indicates the number of received IKE messages with missing encryption payload.
numberOfIkeRemReqRetx [Number Of Ike Rem Req Retx] (tmnxMobPdnSwuStatIkeRemReqRetx)	long	The value of tmnxMobPdnSwuStatIkeRemReqRetx indicates the number of received retransmitted messages.
numberOfIkeReqMsgInvSpi [Number Of Ike Req Msg Inv Spi] (tmnxMobPdnSwuStatIkeReqMsgInvSpi)	long	The value of tmnxMobPdnSwuStatIkeReqMsgInvSpi indicates the number of IKE request messages with invalid Security Parameter Indexes (SPI).
numberOfIkeReqTimeout [Number Of Ike Req Timeout] (tmnxMobPdnSwuStatIkeReqTimeout)	long	The value of tmnxMobPdnSwuStatIkeReqTimeout indicates the number of unanswered request IKE messages.
numberOfIkeRspMsgInvSpi [Number Of Ike Rsp Msg Inv Spi] (tmnxMobPdnSwuStatIkeRspMsgInvSpi)	long	The value of tmnxMobPdnSwuStatIkeRspMsgInvSpi indicates the number of IKE response messages with invalid SPI.

Table 544 Iteepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numberOfIkeRxCrtChldReq [Number Of Ike Rx Crt Chld Req] (tmnxMobPdnSwuStatIkeRxCrtChldReq)	long	The value of tmnxMobPdnSwuStatIkeRxCrtChldReq indicates the number of received CREATE_CHILD_SA request messages.
numberOfIkeRxCrtChldRsp [Number Of Ike Rx Crt Chld Rsp] (tmnxMobPdnSwuStatIkeRxCrtChldRsp)	long	The value of tmnxMobPdnSwuStatIkeRxCrtChldRsp indicates the number of received CREATE_CHILD_SA response messages.
numberOfIkeRxDisc [Number Of Ike Rx Disc] (tmnxMobPdnSwuStatIkeRxDisc)	long	The value of tmnxMobPdnSwuStatIkeRxDisc indicates the number of received but discarded IKE messages.
numberOfIkeRxDiscardBF [Number Of Ike Rx Discard BF] (tmnxMobPdnSwuStIkeRxDiscardBF)	java. math. BigInteger	The value of tmnxMobPdnSwuStIkeRxDiscardBF indicates the number of IKE fragmentation received but discarded due to bad fragment.
numberOfIkeRxDiscardNFS [Number Of Ike Rx Discard NFS] (tmnxMobPdnSwuStIkeRxDiscardNFS)	java. math. BigInteger	The value of tmnxMobPdnSwuStIkeRxDiscardNFS indicates the number of IKE fragmentation received but discarded due to no fragmentation support.
numberOfIkeRxDiscardOF [Number Of Ike Rx Discard OF] (tmnxMobPdnSwuStIkeRxDiscardOF)	java. math. BigInteger	The value of tmnxMobPdnSwuStIkeRxDiscardOF indicates the number of IKE fragmentation received but discarded due to reassembly buffer overflow.
numberOfIkeRxDiscardTO [Number Of Ike Rx Discard TO] (tmnxMobPdnSwuStIkeRxDiscardTO)	java. math. BigInteger	The value of tmnxMobPdnSwuStIkeRxDiscardTO indicates the number of IKE fragmentation received but discarded due to reassembly time out.
numberOfIkeRxDpdReq [Number Of Ike Rx Dpd Req] (tmnxMobPdnSwuStatIkeRxDpdReq)	long	The value of tmnxMobPdnSwuStatIkeRxDpdReq indicates the number of received dead peer detection (informational exchange) request messages.

Table 544 Iteepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numberOfIkeRxDpdRsp [Number Of Ike Rx Dpd Rsp] (tmnxMobPdnSwuStatIkeRxDpdRsp)	long	The value of tmnxMobPdnSwuStatIkeRxDpdRsp indicates the number of received dead peer detection (informational exchange) response messages.
numberOfIkeRxFrag [Number Of Ike Rx Frag] (tmnxMobPdnSwuStatIkeRxFragNum)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIkeRxFragNum indicates the number of IKE fragmentation received.
numberOfIkeRxIkeAuthReq [Number Of Ike Rx Ike Auth Req] (tmnxMobPdnSwuStatIkeRxIkeAuthReq)	long	The value of tmnxMobPdnSwuStatIkeRxIkeAuthReq indicates the number of received IKE Authentication (IKE_AUTH) request messages.
numberOfIkeRxIkeInitReq [Number Of Ike Rx Ike Init Req] (tmnxMobPdnSwuStatIkeRxIkeInitReq)	long	The value of tmnxMobPdnSwuStatIkeRxIkeInitReq indicates the number of received IKE SA Initialization (IKE_SA_INIT) request messages.
numberOfIkeRxInfoReq [Number Of Ike Rx Info Req] (tmnxMobPdnSwuStatIkeRxInfoReq)	long	The value of tmnxMobPdnSwuStatIkeRxInfoReq indicates the number of received informational request messages.
numberOfIkeRxInfoRsp [Number Of Ike Rx Info Rsp] (tmnxMobPdnSwuStatIkeRxInfoRsp)	long	The value of tmnxMobPdnSwuStatIkeRxInfoRsp indicates the number of received informational response messages.
numberOfIkeRxMsg [Number Of Ike Rx Msg] (tmnxMobPdnSwuStatIkeRxMsg)	long	The value of tmnxMobPdnSwuStatIkeRxMsg indicates the number of received IKE messages.
numberOfIkeRxNattKa [Number Of Ike Rx Natt Ka] (tmnxMobPdnSwuStatIkeRxNattKa)	long	The value of tmnxMobPdnSwuStatIkeRxNattKa indicates the number of received Network Address Translation (NAT) Keep-alive IKE messages.

Table 544 Iteepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numberOfIkeSAReKeyByEpdg [Number Of Ike SARE Key By Epdg] (tmnxMobPdnSwuStatIkeSaRekeyEpdg)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIkeSaRekeyUE indicates the number of successful IKE-SA re-keys initiated by the ePDG.
numberOfIkeSAReKeyByUE [Number Of Ike SARE Key By UE] (tmnxMobPdnSwuStatIkeSaRekeyUE)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIkeSaRekeyUE indicates the number of successful IKE-SA re-keys initiated by the User Equipment.
numberOfIkeSa [Number Of Ike Sa] (tmnxMobPdnSwuStatIkeSa)	long	The value of tmnxMobPdnSwuStatIkeSa indicates the number of Internet Key Exchange (IKE) protocol Security Associations (SA).
numberOfIkeSaEstablishd [Number Of Ike Sa Establishd] (tmnxMobPdnSwuStatIkeSaEstablishd)	long	The value of tmnxMobPdnSwuStatIkeSaEstablishd indicates the number of established IKE SA.
numberOfIkeSaInitMsgNo0 [Number Of Ike Sa Init Msg No 0] (tmnxMobPdnSwuStatIkeSaInitMsgNo0)	long	The value of tmnxMobPdnSwuStatIkeSaInitMsgNo0 indicates the number of IKE_SA_INIT messages with non-zero message ID.
numberOfIkeSaRekey [Number Of Ike Sa Rekey] (tmnxMobPdnSwuStatIkeSaRekey)	long	The value of tmnxMobPdnSwuStatIkeSaRekey indicates the number of IKE SA rekeys.
numberOfIkeSaRekeyColis [Number Of Ike Sa Rekey Colis] (tmnxMobPdnSwuStatIkeSaRekeyColis)	long	The value of tmnxMobPdnSwuStatIkeSaRekeyColis indicates the number of collisions during IKE SA rekeying.
numberOfIkeStaleReqMsg [Number Of Ike Stale Req Msg] (tmnxMobPdnSwuStatIkeStaleReqMsg)	long	The value of tmnxMobPdnSwuStatIkeStaleReqMsg indicates the number of received retransmissions of too old IKE messages.

Table 544 Ikeepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numberOfIkeTxCrChldReq [Number Of Ike Tx Cr Chld Req] (tmnxMobPdnSwuStatIkeTxCrChldReq)	long	The value of tmnxMobPdnSwuStatIkeTxCrChldReq indicates the number of transmitted CREATE_CHILD_SA request IKE messages.
numberOfIkeTxCrChldRsp [Number Of Ike Tx Cr Chld Rsp] (tmnxMobPdnSwuStatIkeTxCrChldRsp)	long	The value of tmnxMobPdnSwuStatIkeTxCrChldRsp indicates the number of transmitted CREATE_CHILD_SA response IKE messages.
numberOfIkeTxDpdReq [Number Of Ike Tx Dpd Req] (tmnxMobPdnSwuStatIkeTxDpdReq)	long	The value of tmnxMobPdnSwuStatIkeTxDpdReq indicates the number of transmitted dead peer detection (informational exchange) request IKE messages.
numberOfIkeTxDpdResp [Number Of Ike Tx Dpd Resp] (tmnxMobPdnSwuStatIkeTxDpdResp)	long	The value of tmnxMobPdnSwuStatIkeTxDpdResp indicates the number of transmitted dead peer detection (informational exchange) response IKE messages.
numberOfIkeTxError [Number Of Ike Tx Error] (tmnxMobPdnSwuStatIkeTxError)	long	The value of tmnxMobPdnSwuStatIkeTxError indicates the number of unsuccessfully transmitted IKE messages.
numberOfIkeTxFrag [Number Of Ike Tx Frag] (tmnxMobPdnSwuStatIkeTxFragNum)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIkeTxFragNum indicates the number of IKE fragmentation transmitted.
numberOfIkeTxIkeAuthRsp [Number Of Ike Tx Ike Auth Rsp] (tmnxMobPdnSwuStatIkeTxIkeAuthRsp)	long	The value of tmnxMobPdnSwuStatIkeTxIkeAuthRsp indicates the number of transmitted IKE_AUTH response messages.
numberOfIkeTxIkeInitRsp [Number Of Ike Tx Ike Init Rsp] (tmnxMobPdnSwuStatIkeTxIkeInitRsp)	long	The value of tmnxMobPdnSwuStatIkeTxIkeInitRsp indicates the number of transmitted IKE_SA_INIT response messages.

Table 544 Iteepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numberOfIkeTxInfoReq [Number Of Ike Tx Info Req] (tmnxMobPdnSwuStatIkeTxInfoReq)	long	The value of tmnxMobPdnSwuStatIkeTxInfoReq indicates the number of transmitted informational request IKE messages.
numberOfIkeTxInfoResp [Number Of Ike Tx Info Resp] (tmnxMobPdnSwuStatIkeTxInfoResp)	long	The value of tmnxMobPdnSwuStatIkeTxInfoResp indicates the number of transmitted informational response IKE messages.
numberOfIkeTxMsg [Number Of Ike Tx Msg] (tmnxMobPdnSwuStatIkeTxMsg)	long	The value of tmnxMobPdnSwuStatIkeTxMsg indicates the number of transmitted IKE messages.
numberOfIkeTxNattKa [Number Of Ike Tx Natt Ka] (tmnxMobPdnSwuStatIkeTxNattKa)	long	The value of tmnxMobPdnSwuStatIkeTxNattKa indicates the number of transmitted NAT keep-alive IKE messages.
numberOfIpsInCrypImCfgKLn [Number Of Ips In Cryp Im Cfg KLn] (tmnxMobPdnSwuStIpsInCrypImCfgKLn)	java. math. BigInteger	The value of tmnxMobPdnSwuStIpsInCrypImCfgKLn indicates the number of inbound packets with improper configuration key length for inbound packet decryption.
numberOfIpsInCrypImMacSec [Number Of Ips In Cryp Im Mac Sec] (tmnxMobPdnSwuStIpsInCrypImMacSec)	java. math. BigInteger	The value of tmnxMobPdnSwuStIpsInCrypImMacSec indicates the number of inbound packets with improper length or format of MAC secret for inbound packet authentication.
numberOfIpsInCrypImprLen [Number Of Ips In Cryp Impr Len] (tmnxMobPdnSwuStIpsInCrypImprLen)	java. math. BigInteger	The value of tmnxMobPdnSwuStIpsInCrypImprLen indicates the number of inbound packets with improper packet length for crypto function.
numberOfIpsInCrypInSslErr [Number Of Ips In Cryp In Ssl Err] (tmnxMobPdnSwuStIpsInCrypInSslErr)	java. math. BigInteger	The value of tmnxMobPdnSwuStIpsInCrypInSslErr indicates the number of inbound packets with other inbound packet decryption/authentication failure.

Table 544 Iteepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numberOfIpsInCrypMissArgs [Number Of Ips In Cryp Miss Args] (tmnxMobPdnSwuStIpsInCrypMissArgs)	java. math. BigInteger	The value of tmnxMobPdnSwuStIpsInCrypMissArgs indicates the number of inbound packets with improper/missing arguments for crypto function.
numberOfIpsInCrypAuthErr [Number Of Ips In Cryp Auth Err] (tmnxMobPdnSwuStIpsInCrypAuthErr)	java. math. BigInteger	The value of tmnxMobPdnSwuStIpsInCrypAuthErr indicates the number of inbound packets with authentication error - invalid MAC address.
numberOfIpsInInvLclTepAdr [Number Of Ips In Inv Lcl Tep Adr] (tmnxMobPdnSwuStIpsInInvLclTepAdr)	java. math. BigInteger	The value of tmnxMobPdnSwuStIpsInInvLclTepAdr indicates the number of received ESP packets with an invalid local tunnel endpoint address.
numberOfIpsInInvRmtTepAdr [Number Of Ips In Inv Rmt Tep Adr] (tmnxMobPdnSwuStIpsInInvRmtTepAdr)	java. math. BigInteger	The value of tmnxMobPdnSwuStIpsInInvRmtTepAdr indicates the number of received ESP packets with an invalid remote tunnel endpoint address.
numberOfIpsInbCryptoErr [Number Of Ips Inb Crypto Err] (tmnxMobPdnSwuStatIpsInbCryptoErr)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIpsInbCryptoErr indicates the number of inbound packets received with a crypto error.
numberOfIpsInbDupEspSeq [Number Of Ips Inb Dup Esp Seq] (tmnxMobPdnSwuStatIpsInbDupEspSeq)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIpsInbDupEspSeq indicates the number of received ESP packets with a duplicate ESP sequence number.
numberOfIpsInbInvEncap [Number Of Ips Inb Inv Encap] (tmnxMobPdnSwuStatIpsInbInvEncap)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIpsInbInvEncap indicates the number of received ESP packets with an invalid encapsulation.
numberOfIpsInbInvEspLen [Number Of Ips Inb Inv Esp Len] (tmnxMobPdnSwuStatIpsInbInvEspLen)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIpsInbInvEspLen indicates the number of received ESP packets with an invalid ESP length.

Table 544 Iteepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numberOfIpsInbInvEspSeq [Number Of Ips Inb Inv Esp Seq] (tmnxMobPdnSwuStatIpsInbInvEspSeq)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIpsInbInvEspSeq indicates the number of received ESP packets with an invalid ESP sequence number.
numberOfIpsInbInvEspSpi [Number Of Ips Inb Inv Esp Spi] (tmnxMobPdnSwuStatIpsInbInvEspSpi)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIpsInbInvEspSpi indicates the number of received ESP packets with an invalid ESP SPI.
numberOfIpsInbInvIpProt [Number Of Ips Inb Inv Ip Prot] (tmnxMobPdnSwuStatIpsInbInvIpProt)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIpsInbInvIpProt indicates the number of received ESP packets with an invalid IPv4 protocol.
numberOfIpsInbInvPadByt [Number Of Ips Inb Inv Pad Byt] (tmnxMobPdnSwuStatIpsInbInvPadByt)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIpsInbInvPadByt indicates the number of inbound packets received with an invalid pad byte.
numberOfIpsInbInvPadLen [Number Of Ips Inb Inv Pad Len] (tmnxMobPdnSwuStatIpsInbInvPadLen)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIpsInbInvPadLen indicates the number of inbound packets received with an invalid pad length.
numberOfIpsInbInvTepTyp [Number Of Ips Inb Inv Tep Typ] (tmnxMobPdnSwuStatIpsInbInvTepTyp)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIpsInbInvTepTyp indicates the number of received ESP packets with an invalid tunnel endpoint address type.
numberOfIpsInbSadbEntry [Number Of Ips Inb Sadb Entry] (tmnxMobPdnSwuStatIpsInbSadbEntry)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIpsInbSadbEntry indicates the number of received ESP packets with an invalid Security Associations Database (SADB) entry.
numberOfIpsInbSadbMiss [Number Of Ips Inb Sadb Miss] (tmnxMobPdnSwuStatIpsInbSadbMiss)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIpsInbSadbMiss indicates the number of received ESP packets with ESP SPI pointing to an inactive SA.

Table 544 Iteepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numberOfIpsInbStlEspSeq [Number Of Ips Inb Stl Esp Seq] (tmnxMobPdnSwuStatIpsInbStlEspSeq)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIpsInbStlEspSeq indicates the number of received ESP packets with a stale (outside the window) ESP sequence number.
numberOfIpsInbTxPackets [Number Of Ips Inb Tx Packets] (tmnxMobPdnSwuStatIpsInbTxPackets)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIpsInbTxPackets indicates the number of transmitted inbound ESP packets.
numberOfIpsOutCryImCfgKLn [Number Of Ips Out Cry Im Cfg KLn] (tmnxMobPdnSwuStIpsOutCryImCfgKLn)	java. math. BigInteger	The value of tmnxMobPdnSwuStIpsOutCryImCfgKLn indicates the number of outbound packets with improper configuration key length for outbound packet decryption.
numberOfIpsOutCryImMacSec [Number Of Ips Out Cry Im Mac Sec] (tmnxMobPdnSwuStIpsOutCryImMacSec)	java. math. BigInteger	The value of tmnxMobPdnSwuStIpsOutCryImMacSec indicates the number of outbound packets with improper length or format of MAC secret for outbound packet authentication.
numberOfIpsOutCryInSslErr [Number Of Ips Out Cry In Ssl Err] (tmnxMobPdnSwuStIpsOutCryInSslErr)	java. math. BigInteger	The value of tmnxMobPdnSwuStIpsOutCryInSslErr indicates the number of outbound packets with other outbound packet decryption/authentication failure.
numberOfIpsOutCrypImprLen [Number Of Ips Out Cryp Impr Len] (tmnxMobPdnSwuStIpsOutCrypImprLen)	java. math. BigInteger	The value of tmnxMobPdnSwuStIpsOutCrypImprLen indicates the number of outbound packets with improper packet length for crypto function.
numberOfIpsOutCrypMissArg [Number Of Ips Out Cryp Miss Arg] (tmnxMobPdnSwuStIpsOutCrypMissArg)	java. math. BigInteger	The value of tmnxMobPdnSwuStIpsOutCrypMissArg indicates the number of outbound packets with improper/missing arguments for crypto function.
numberOfIpsOutInvIp4HdrLn [Number Of Ips Out Inv Ip 4 Hdr Ln] (tmnxMobPdnSwuStIpsOutInvIp4HdrLn)	java. math. BigInteger	The value of tmnxMobPdnSwuStIpsOutInvIp4HdrLn indicates the number of outbound packets received with an invalid IPv4 header length.

Table 544 lteepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numberOfIpsOutInvIp6HdrLn [Number Of Ips Out Inv Ip 6 Hdr Ln] (tmnxMobPdnSwuStIpsOutInvIp6HdrLn)	java. math. BigInteger	The value of tmnxMobPdnSwuStIpsOutInvIp6HdrLn indicates the number of outbound packets received with an invalid IPv6 header length.
numberOfIpsOutInvIpProt [Number Of Ips Out Inv Ip Prot] (tmnxMobPdnSwuStatIpsOutInvIpProt)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIpsOutInvIpProt indicates the number of outbound packets received with an invalid IP protocol.
numberOfIpsOutInvSadbEntr [Number Of Ips Out Inv Sadb Entr] (tmnxMobPdnSwuStIpsOutInvSadbEntr)	java. math. BigInteger	The value of tmnxMobPdnSwuStIpsOutInvSadbEntr indicates the number of outbound packets received with an invalid SADB entry.
numberOfIpsOutInvUdpHdrLn [Number Of Ips Out Inv Udp Hdr Ln] (tmnxMobPdnSwuStIpsOutInvUdpHdrLn)	java. math. BigInteger	The value of tmnxMobPdnSwuStIpsOutInvUdpHdrLn indicates the number of outbound packets received with an invalid UDP header length.
numberOfIpsOutTxPackets [Number Of Ips Out Tx Packets] (tmnxMobPdnSwuStatIpsOutTxPackets)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIpsOutTxPackets indicates the number of transmitted outbound GTP packets.
numberOfIpsOutbCryptErr [Number Of Ips Outb Crypt Err] (tmnxMobPdnSwuStatIpsOutbCryptErr)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIpsOutbCryptErr indicates the number of outbound packets with a crypto error.
numberOfIpsOutbInvUdpPort [Number Of Ips Outb Inv Udp Port] (tmnxMobPdnSwuStIpsOutbInvUdpPort)	java. math. BigInteger	The value of tmnxMobPdnSwuStIpsOutbInvUdpPort indicates the number of outbound packets received with an invalid UDP port.
numberOfIpsOutbIpFrag [Number Of Ips Outb Ip Frag] (tmnxMobPdnSwuStatIpsOutbIpFrag)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIpsOutbIpFrag indicates the number of received fragmented outbound packets.

Table 544 Iteepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numberOfIpsOutbSadbMiss [Number Of Ips Outb Sadb Miss] (tmnxMobPdnSwuStatIpsOutbSadbMiss)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIpsOutbSadbMiss indicates the number of outbound packets received on an inactive SA.
numberOfIpsOutbZeroSeq [Number Of Ips Outb Zero Seq] (tmnxMobPdnSwuStatIpsOutbZeroSeq)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIpsOutbZeroSeq indicates the number of outbound packets received with zero sequence number.
numberOfIpsSecLockoutRej [Number Of Ipsc Lockout Rej] (tmnxMobPdnSwuStatIpscLockoutRej)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIpscLockoutRej indicates the number of rejected attaches because user is in locked out state.
numberOfIpsmgInbIpFrag [Number Of Ipsmg Inb Ip Frag] (tmnxMobPdnSwuStatIpsmgInbIpFrag)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIpsmgInbIpFrag indicates the number of received fragmented ESP packets.
numberOfIpsmgInbRxBytes [Number Of Ipsmg Inb Rx Bytes] (tmnxMobPdnSwuStatIpsmgInbRxBytes)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIpsmgInbRxBytes indicates the number of received ESP bytes.
numberOfIpsmgInbRxPkts [Number Of Ipsmg Inb Rx Pkts] (tmnxMobPdnSwuStatIpsmgInbRxPkts)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIpsmgInbRxPkts indicates the number of received ESP packets.
numberOfIpsmgInterErr [Number Of Ipsmg Inter Err] (tmnxMobPdnSwuStatIpsmgInterErr)	long	The value of tmnxMobPdnSwuStatIpsmgInterErr indicates the number of received packets with an internal error.
numberOfIpsmgInvLen [Number Of Ipsmg Inv Len] (tmnxMobPdnSwuStatIpsmgInvLen)	long	The value of tmnxMobPdnSwuStatIpsmgInvLen indicates the number of received packets with invalid length (too short).

Table 544 lteepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numberOfIpsmgInvPort [Number Of Ipsmg Inv Port] (tmnxMobPdnSwuStatIpsmgInvPort)	long	The value of tmnxMobPdnSwuStatIpsmgInvPort indicates the number of received IP packets on wrong internal port.
numberOfIpsmgIpExc [Number Of Ipsmg Ip Exc] (tmnxMobPdnSwuStatIpsmgIpExc)	long	The value of tmnxMobPdnSwuStatIpsmgIpExc indicates the number of received IP packets with an exception.
numberOfIpsmgL4Error [Number Of Ipsmg L4 Error] (tmnxMobPdnSwuStatIpsmgL4Error)	long	The value of tmnxMobPdnSwuStatIpsmgL4Error indicates the number of received IP packets with L4 error.
numberOfIpsmgNotIp [Number Of Ipsmg Not Ip] (tmnxMobPdnSwuStatIpsmgNotIp)	long	The value of tmnxMobPdnSwuStatIpsmgNotIp indicates the number of received non IP packets.
numberOfIpsmgOutbRxByte [Number Of Ipsmg Outb Rx Byte] (tmnxMobPdnSwuStatIpsmgOutbRxByte)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIpsmgOutbRxByte indicates the number of transmitted ESP bytes.
numberOfIpsmgOutbRxPkts [Number Of Ipsmg Outb Rx Pkts] (tmnxMobPdnSwuStatIpsmgOutbRxPkts)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIpsmgOutbRxPkts indicates the number of transmitted ESP packets.
numberOfIpsmgRcvError [Number Of Ipsmg Rcv Error] (tmnxMobPdnSwuStatIpsmgRcvError)	long	The value of tmnxMobPdnSwuStatIpsmgRcvError indicates the number of received packets with an error.
numberOfIpsmgRxBytes [Number Of Ipsmg Rx Bytes] (tmnxMobPdnSwuStatIpsmgRxBytes)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIpsmgRxBytes indicates the number of received ESP and GTP bytes.

Table 544 Iteepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numberOfIpsmgRxPackets [Number Of Ipsmg Rx Packets] (tmnxMobPdnSwuStatIpsmgRxPackets)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIpsmgRxPackets indicates the number of received ESP and GTP packets.
numberOfIpsmgTxBytes [Number Of Ipsmg Tx Bytes] (tmnxMobPdnSwuStatIpsmgTxBytes)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIpsmgTxBytes indicates the number of transmitted ESP and GTP bytes.
numberOfIpsmgTxError [Number Of Ipsmg Tx Error] (tmnxMobPdnSwuStatIpsmgTxError)	long	The value of tmnxMobPdnSwuStatIpsmgTxError indicates the number of unsuccessfully transmitted packets from data plane card.
numberOfIpsmgTxPackets [Number Of Ipsmg Tx Packets] (tmnxMobPdnSwuStatIpsmgTxPackets)	java. math. BigInteger	The value of tmnxMobPdnSwuStatIpsmgTxPackets indicates the number of transmitted ESP and GTP packets.
numberOfLarvallkeSa [Number Of Larval Ike Sa] (tmnxMobPdnSwuStatLarvallkeSa)	long	The value of tmnxMobPdnSwuStatLarvallkeSa indicates the number of half-opened IKE SA.
numberOfRejAttachByBlackList [Number Of Rej Attach By Black List] (tmnxMobPdnSwuRejAttachByBlackLst)	java. math. BigInteger	The value of tmnxMobPdnSwuRejAttachByBlackLst indicates the number of the rejected attached caused by the black APN list.
numberOfRejAttachByWhiteList [Number Of Rej Attach By White List] (tmnxMobPdnSwuRejAttachByWhiteLst)	java. math. BigInteger	The value of tmnxMobPdnSwuRejAttachByWhiteLst indicates the number of the rejected attached caused by the white APN list.
numberOfInbInvlp4HdrLn [Number Ofs Inb Inv Ip 4 Hdr Ln] (tmnxMobPdnSwuStlpsInbInvlp4HdrLn)	java. math. BigInteger	The value of tmnxMobPdnSwuStlpsInbInvlp4HdrLn indicates the number of received ESP packets with an invalid IPv4 header length.

Table 544 Iteepdg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numberOfInbInvIp6HdrLn [Number Ofs Inb Inv Ip 6 Hdr Ln] (tmnxMobPdnSwuStlpsInbInvIp6HdrLn)	java. math. BigInteger	The value of tmnxMobPdnSwuStlpsInbInvIp6HdrLn indicates the number of received ESP packets with an invalid IPv6 header length.
numberOfInbInvUdpHdrLn [Number Ofs Inb Inv Udp Hdr Ln] (tmnxMobPdnSwuStlpsInbInvUdpHdrLn)	java. math. BigInteger	The value of tmnxMobPdnSwuStlpsInbInvUdpHdrLn indicates the number of received ESP packets with an invalid UDP header length.
numberOfInbInvUdpPort [Number Ofs Inb Inv Udp Port] (tmnxMobPdnSwuStlpsInbInvUdpPort)	java. math. BigInteger	The value of tmnxMobPdnSwuStlpsInbInvUdpPort indicates the number of received ESP packets with an invalid UDP port.

Table 545 Iteggns statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CtrlRefPtGtpv1v0Stats</p> <p>MIB entry name: tmnxMobGwCtrlRefPtGtpv1v0StEntry</p> <p>Entry description: Each row entry represents a peer on the General Packet Radio Service (GPRS) Tunneling Protocol Version 1 (GTPv1) or Version 0 (GTPv0) Control plane (GTP-C) reference point and contains statistics for this peer on a card.</p> <p>Table description (for tmnxMobGwCtrlRefPtGtpv1v0StTable): The tmnxMobGwCtrlRefPtGtpv1v0StTable has an entry for each peer on the General Packet Radio Service (GPRS) Tunneling Protocol Version 1 (GTPv1) or Version 0 (GTPv0) Control plane (GTP-C) reference point served by a Serving GPRS Support Note (SGSN).</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • Iteggns.GnPeer • Iteggns.GpPeer 		
pathMgmtFails [Path Mgmt Fails] (tmnxMobGwV1v0StatPathMgmtFails)	long	The value of tmnxMobGwV1v0StatPathMgmtFails indicates the number of path management failures for this peer.
peerRestartCount [Peer Restart Count] (tmnxMobGwV1v0StatPeerRestrtCount)	long	The value of tmnxMobGwV1v0StatPeerRestrtCount indicates the counter value that was received from this peer for the number of times this peer restarted.
peerRestarts [Peer Restarts] (tmnxMobGwV1v0StatPeerRestarts)	long	The value of tmnxMobGwV1v0StatPeerRestarts indicates the number of times this peer restarted after registering with the system.
recievedCreatePdpRequest [Recieved Create Pdp Request] (tmnxMobGwV1v0StatRxCrtpdpReq)	long	The value of tmnxMobGwV1v0StatRxCrtpdpReq indicates the number of create Packet Data Protocol (PDP) context request messages received from this peer.
recievedDeletePdpRequest [Recieved Delete Pdp Request] (tmnxMobGwV1v0StatRxDelPdpReq)	long	The value of tmnxMobGwV1v0StatRxDelPdpReq indicates the number of delete Packet Data Protocol (PDP) context request messages received from this peer.

Table 545 Itegsn statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
recievedDeletePdpResponseFail [Recieved Delete Pdp Response Fail] (tmnxMobGwV1v0StatRxDelPdpRspFail)	long	The value of tmnxMobGwV1v0StatRxDelPdpRspFail indicates the number of failed delete Packet Data Protocol (PDP) context response messages recieved from this peer.
recievedDeletePdpResponseSuccess [Recieved Delete Pdp Response Success] (tmnxMobGwV1v0StatRxDelPdpRspSucc)	long	The value of tmnxMobGwV1v0StatRxDelPdpRspSucc indicates the number of successful delete Packet Data Protocol (PDP) context response messages recieved from this peer.
recievedEchoRequests [Recieved Echo Requests] (tmnxMobGwV1v0StatRxEchoRequests)	long	The value of tmnxMobGwV1v0StatRxEchoRequests indicates the number of echo request messages received from this peer.
recievedEchoResponses [Recieved Echo Responses] (tmnxMobGwV1v0StatRxEchoResponses)	long	The value of tmnxMobGwV1v0StatRxEchoResponses indicates the number of echo response messages received from this peer.
recievedInitiatePdpResponseFail [Recieved Initiate Pdp Response Fail] (tmnxMobGwV1v0StatRxInPdpARspFail)	long	The value of tmnxMobGwV1v0StatRxInPdpARspFail indicates the number of failed initiate Packet Data Protocol (PDP) context activation response messages recieved from this peer.
recievedInitiatePdpResponseSuccess [Recieved Initiate Pdp Response Success] (tmnxMobGwV1v0StatRxInPdpARspSucc)	long	The value of tmnxMobGwV1v0StatRxInPdpARspSucc indicates the number of successful initiate Packet Data Protocol (PDP) context activation response messages recieved from this peer.
recievedMalformedPackets [Recieved Malformed Packets] (tmnxMobGwV1v0StatRxMalformedPkts)	long	The value of tmnxMobGwV1v0StatRxMalformedPkts indicates the number of malformed packets received from this peer.
recievedMissingInformation- ElementsPackets [Recieved Missing Information Elements Packets] (tmnxMobGwV1v0StatRxMissinglePkts)	long	The value of tmnxMobGwV1v0StatRxMissinglePkts indicates the number of messages with missing mandatory Information Elements (IE) received from this peer.

Table 545 Iteggsn statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
recievedUnknownPackets [Recieved Unknown Packets] (tmnxMobGwV1v0StatRxUnknownPkts)	long	The value of tmnxMobGwV1v0StatRxUnknownPkts indicates the number of unknown message type packets received from this peer.
recievedUpdPdpRequest [Recieved Upd Pdp Request] (tmnxMobGwV1v0StatRxUpdPdpReq)	long	The value of tmnxMobGwV1v0StatRxUpdPdpReq indicates the number of update Packet Data Protocol (PDP) context request messages received from this peer.
recievedUpdPdpResponseFail [Recieved Upd Pdp Response Fail] (tmnxMobGwV1v0StatRxUpdPdpRspFail)	long	The value of tmnxMobGwV1v0StatRxUpdPdpRspFail indicates the number of failed update Packet Data Protocol (PDP) context response messages recieved from this peer.
recievedUpdPdpResponseSuccess [Recieved Upd Pdp Response Success] (tmnxMobGwV1v0StatRxUpdPdpRspSucc)	long	The value of tmnxMobGwV1v0StatRxUpdPdpRspSucc indicates the number of successful update Packet Data Protocol (PDP) context response messages recieved from this peer.
recordCount [Record Count] (tmnxMobGwV1v0StatRecordCount)	long	The value of tmnxMobGwV1v0StatRecordCount indicates the number of sessions that this peer maintains.
refPtName [Ref Pt Name] (tmnxMobGwSigRefPtName)	String	The value of tmnxMobGwSigRefPtName specifies the name of this reference point. When an entry is created for a single interface, the value of tmnxMobGwSigRefPtName is set to 'default'.
rxMsInfoChgNtfReq [Rx Ms Info Chg Ntf Req] (tmnxMobGwV1v0RxMsInfoChgNtfReq)	long	The value of tmnxMobGwV1v0RxMsInfoChgNtfReq indicates the number of MS Info Change Notification request messages received.
transmittedCreatePdpResponseFail [Transmitted Create Pdp Response Fail] (tmnxMobGwV1v0StatTxCrtpdpRspFail)	long	The value of tmnxMobGwV1v0StatTxCrtpdpRspFail indicates the number of failed create Packet Data Protocol (PDP) context response messages transmitted to this peer.

Table 545 Itegnsn statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transmittedCreatePdpResponseSuccess [Transmitted Create Pdp Response Success] (tmnxMobGwV1v0StatTxCrtpdpRspSucc)	long	The value of tmnxMobGwV1v0StatTxCrtpdpRspSucc indicates the number of successful create Packet Data Protocol (PDP) context response messages transmitted to this peer.
transmittedDeletePdpRequest [Transmitted Delete Pdp Request] (tmnxMobGwV1v0StatTxDelPdpReq)	long	The value of tmnxMobGwV1v0StatTxDelPdpReq indicates the number of delete Packet Data Protocol (PDP) context request messages transmitted to this peer.
transmittedDeletePdpResponseFail [Transmitted Delete Pdp Response Fail] (tmnxMobGwV1v0StatTxDelPdpRspFail)	long	The value of tmnxMobGwV1v0StatTxDelPdpRspFail indicates the number of failed delete Packet Data Protocol (PDP) context response messages transmitted to this peer.
transmittedDeletePdpResponseSuccess [Transmitted Delete Pdp Response Success] (tmnxMobGwV1v0StatTxDelPdpRspSucc)	long	The value of tmnxMobGwV1v0StatTxDelPdpRspSucc indicates the number of successful delete Packet Data Protocol (PDP) context response messages transmitted to this peer.
transmittedEchoRequests [Transmitted Echo Requests] (tmnxMobGwV1v0StatTxEchoRequests)	long	The value of tmnxMobGwV1v0StatTxEchoRequests indicates the number of echo request messages transmitted to this peer.
transmittedEchoResponses [Transmitted Echo Responses] (tmnxMobGwV1v0StatTxEchoResponses)	long	The value of tmnxMobGwV1v0StatTxEchoResponses indicates the number of echo response messages transmitted to this peer.
transmittedInitiatePdpActivationRequest [Transmitted Initiate Pdp Activation Request] (tmnxMobGwV1v0StatTxInitPdpActReq)	long	The value of tmnxMobGwV1v0StatTxInitPdpActReq indicates the number of initiate Packet Data Protocol (PDP) context activation request messages transmitted to this peer.
transmittedUpdPdpRequest [Transmitted Upd Pdp Request] (tmnxMobGwV1v0StatTxUpdPdpReq)	long	The value of tmnxMobGwV1v0StatTxUpdPdpReq indicates the number of update Packet Data Protocol (PDP) context request messages transmitted to this peer.

Table 545 lteggns statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transmittedUpdPdpResponseFail [Transmitted Upd Pdp Response Fail] (tmnxMobGwV1v0StatTxUpdPdpRspFail)	long	The value of tmnxMobGwV1v0StatTxUpdPdpRspFail indicates the number of failed update Packet Data Protocol (PDP) context response messages transmitted to this peer.
transmittedUpdPdpResponseSuccess [Transmitted Upd Pdp Response Success] (tmnxMobGwV1v0StatTxUpdPdpRspSucc)	long	The value of tmnxMobGwV1v0StatTxUpdPdpRspSucc indicates the number of successful update Packet Data Protocol (PDP) context response messages transmitted to this peer.
txMsInfoChgNtfRsp [Tx Ms Info Chg Ntf Rsp] (tmnxMobGwV1v0TxMsInfoChgNtfRsp)	long	The value of tmnxMobGwV1v0TxMsInfoChgNtfRsp indicates the number of successful MS Info Change Notification response messages sent.
txMsInfoChgNtfRspFI [Tx Ms Info Chg Ntf Rsp FI] (tmnxMobGwV1v0TxMsInfoChgNtfRspFI)	long	The value of tmnxMobGwV1v0TxMsInfoChgNtfRspFI indicates the number of unsuccessful MS Info Change Notification response messages sent.
txUpdPdpReqErrInd [Tx Upd Pdp Req Err Ind] (tmnxMobGwV1v0TxUpdPdpReqErrInd)	long	The value of tmnxMobGwV1v0TxUpdPdpReqErrInd indicates the number of update Packet Data Protocol (PDP) context request messages with error indications that are transmitted to this peer.
type [Type] (tmnxMobGwSigRefPtType)	int	The value of tmnxMobGwSigRefPtType specifies the type of this reference point.

Table 545 Iteggsn statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>GyFailureCodeStats</p> <p>MIB entry name: tmnxCardEntry</p> <p>Entry description: Each row entry represents an IOM card slot in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. When a tmnxChassisEntry is created, a tmnxCardEntry is created for each IOM card slot in that chassis. Before a tmnxChassisEntry can be deleted, each tmnxCardEntry for that chassis must be in the proper state for removal.</p> <p>Table description (for tmnxCardTable): The tmnxCardTable has an entry for each IOM card slot in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Iteggsn.GyPeer</p>		
cardSlotNumber [Card Slot Number] (tmnxCardSlotNum)	long	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
diameterAuthRejected [Diameter Auth Rejected] (tmnxMobPdnGyCcDiaAuthRejected)	long	The value of tmnxMobPdnGyCcDiaAuthRejected indicates the number of service requests for which the user could not be authorized.
diameterCreditControlNotApplicable [Diameter Credit Control Not Applicable] (tmnxMobPdnGyCcDiaCreditCtrlINA)	long	The value of tmnxMobPdnGyCcDiaCreditCtrlINA indicates the number of service requests granted to the end user but with no further credit-control is needed.
diameterCreditLimitReached [Diameter Credit Limit Reached] (tmnxMobPdnGyCcDiaCrLimitReached)	long	The value of tmnxMobPdnGyCcDiaCrLimitReached indicates the number of denied service requests because the end user's account could not cover the requested service.

Table 545 Iteggns statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
diameterEndUserServiceDenied [Diameter End User Service Denied] (tmnxMobPdnGyCcDiaEndUsrSrvDenied)	long	The value of tmnxMobPdnGyCcDiaEndUsrSrvDenied indicates the number of denied service requests due to service restriction from the credit-control server.
diameterRatingFailed [Diameter Rating Failed] (tmnxMobPdnGyCcDiaRatingFailed)	long	The value of tmnxMobPdnGyCcDiaRatingFailed indicates the number of service requests for which credit-control server can not rate the service request due to insufficient rating input, an incorrect Attribute Value Pair (AVP) combination, or an AVP or an AVP value that is not recognized or supported in the rating.
diameterUnableToComply [Diameter Unable To Comply] (tmnxMobPdnGyCcDiaUnableToComply)	long	The value of tmnxMobPdnGyCcDiaUnableToComply indicates the number of service requests rejected for unspecified reasons.
diameterUnknownSessionId [Diameter Unknown Session Id] (tmnxMobPdnGyCcDiaUnknSessionId)	long	The value of tmnxMobPdnGyCcDiaUnknSessionId indicates the number of service requests which contained an unknown session identifier.
diameterUserUnknown [Diameter User Unknown] (tmnxMobPdnGyCcDiaUserUnknown)	long	The value of tmnxMobPdnGyCcDiaUserUnknown indicates the number of service requests with unknown end user in the credit-control server.
epcId [Epc Id] (tmnxMobGwld)	long	The value of tmnxMobGwld uniquely identifies a mobile gateway configured in the system.
msscCrLimitReached [Mssc Cr Limit Reached] (tmnxMobPdnGyCcMsscCrLimitReached)	long	The value of tmnxMobPdnGyCcMsscCrLimitReached indicates the number of denied service requests received within a MSCC AVP because the end user's account could not cover the requested service.
msscCreditCtrlINA [Mssc Credit Ctrl NA] (tmnxMobPdnGyCcMsscCreditCtrlINA)	long	The value of tmnxMobPdnGyCcMsscCreditCtrlINA indicates the number of service requests granted to the end user but with no further credit control is needed within a MSCC AVP.

Table 545 Iteggns statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
msscOther3XXX [Mssc Other 3 XXX] (tmnxMobPdnGyCcMsscOther3XXX)	long	The value of tmnxMobPdnGyCcMsscOther3XXX indicates the number of service requests received within a Multiple Services Credit Control (MSCC) Attribute Value Pair (AVP) with the other protocol failures defined in 3gpp standards.
msscOther4XXX [Mssc Other 4 XXX] (tmnxMobPdnGyCcMsscOther4XXX)	long	The value of tmnxMobPdnGyCcMsscOther4XXX indicates the number of service requests received within a MSCC AVP with other transient failures defined in 3gpp standards.
msscOther5XXX [Mssc Other 5 XXX] (tmnxMobPdnGyCcMsscOther5XXX)	long	The value of tmnxMobPdnGyCcMsscOther5XXX indicates the number of service requests received within a MSCC AVP with other permanent failures defined in 3gpp standards.
msscRatingFailed [Mssc Rating Failed] (tmnxMobPdnGyCcMsscRatingFailed)	long	The value of tmnxMobPdnGyCcMsscRatingFailed indicates the number of service requests received within a MSCC AVP for which credit control server can not rate the service request due to insufficient rating input, an incorrect Attribute Value Pair (AVP) combination, or an AVP or an AVP value that is not recognized or supported in the rating.
msscUsrSrvDenied [Mssc Usr Srv Denied] (tmnxMobPdnGyCcMsscUsrSrvDenied)	long	The value of tmnxMobPdnGyCcMsscUsrSrvDenied indicates the number of denied service requests received within a Multiple Services Credit Control (MSCC) Attribute Value Pair (AVP) due to the service restriction from the credit-control server.
other3xxx [Other 3 xxx] (tmnxMobPdnGyCcOther3XXX)	long	The value of tmnxMobPdnGyCcOther3XXX indicates the number of service requests with other protocol failures defined in 3gpp standards.
other4xxx [Other 4 xxx] (tmnxMobPdnGyCcOther4XXX)	long	The value of tmnxMobPdnGyCcOther4XXX indicates the number of service requests with other transient failures defined in 3gpp standards.

Table 545 Itegn statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
other5xxx [Other 5 xxx] (tmnxMobPdnGyCcOther5XXX)	long	The value of tmnxMobPdnGyCcOther5XXX indicates the number of service requests with other permanent failures defined in 3gpp standards.
peerIpAddress [Peer Ip Address] (tmnxMobPdnGyPeerAddress)	String	The value of tmnxMobPdnGyPeerAddress indicates the IP address of the peer on Gy reference point.
peerIpAddressType [Peer Ip Address Type] (tmnxMobPdnGyPeerAddressType)	int	The value of tmnxMobPdnGyPeerAddressType indicates the type of address represented by tmnxMobPdnGyPeerAddress.
peerTcpPort [Peer Tcp Port] (tmnxMobPdnGyPeerPort)	int	The value of tmnxMobPdnGyPeerPort indicates the port number of this peer.
pgwDiameterAdministrative [Pgw Diameter Administrative] (tmnxMobPdnGyCcDiaAdministrative)	long	The value of tmnxMobPdnGyCcDiaAdministrative indicates the number of users were not granted access, or were disconnected, due to administrative reasons, such as the receipt of a Abort-Session-Request message.
pgwDiameterBadAnswer [Pgw Diameter Bad Answer] (tmnxMobPdnGyCcDiaBadAnswer)	long	The value of tmnxMobPdnGyCcDiaBadAnswer indicates the number of the authorization answers received by the access device were not processed successfully.
pgwDiameterUnableToComply [Pgw Diameter Unable To Comply] (tmnxMobPdnGyCcPgwDiaUnblToComply)	long	The value of tmnxMobPdnGyCcPgwDiaUnblToComply indicates the number of Credit Control Requests (CCR) rejected for unspecified reasons which were sent by the Packet Data Network Gateway (PGW) or Gateway GPRS Service Node (GGSN).
pgwDiameterUnknownSessionId [Pgw Diameter Unknown Session Id] (tmnxMobPdnGyCcPgwDiaUnknSessId)	long	The value of tmnxMobPdnGyCcPgwDiaUnknSessId indicates the number of Credit Control Requests (CCR) which contained an unknown session identifier which were sent by the Packet Data Network Gateway (PGW) or Gateway GPRS Service Node (GGSN).

Table 545 Iteggsn statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
virtualRouterId [Virtual Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
<p>GyPeerStats MIB entry name: tmnxMobPdnGyStatEntry Entry description: Each row entry represents a peer on the Gy reference point and contain statistics for this peer on a card. Table description (for tmnxMobPdnGyStatTable): The tmnxMobPdnGyStatTable has an entry for each peer on the Gy reference point served by a Packet Data Network Gateway (PGW). Supports realtime plotting Supports scheduled collection Monitored class: Iteggsn.GyPeer</p>		
abortSessionAnswerMsgsTransmitted [Abort Session Answer Msgs Transmitted] (tmnxMobPdnGyStatAsaMsgTx)	long	The value of tmnxMobPdnGyStatAsaMsgTx indicates the number of Abort Session Answer (ASA) messages transmitted.
abortSessionAnswerNegativeAckMsgsTransmitted [Abort Session Answer Negative Ack Msgs Transmitted] (tmnxMobPdnGyStatAsaNackMsgTx)	long	The value of tmnxMobPdnGyStatAsaNackMsgTx indicates the number of Abort Session Answer (ASA) negative acknowledgement messages transmitted.
abortSessionRequestMalformedPktsReceived [Abort Session Request Malformed Pkts Received] (tmnxMobPdnGyStatAsrMalfPktRx)	long	The value of tmnxMobPdnGyStatAsrMalfPktRx indicates the number of Abort Session Request (ASR) malformed packets received.

Table 545 Itegnsn statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
abortSessionRequestMsgsReceived [Abort Session Request Msgs Received] (tmnxMobPdnGyStatAsrMsgRx)	long	The value of tmnxMobPdnGyStatAsrMsgRx indicates the number of Abort Session Request (ASR) messages received.
abortSessionRequestUnknownP- ktsReceived [Abort Session Request Unknown Pkts Received] (tmnxMobPdnGyStatAsrUnkPktRx)	long	The value of tmnxMobPdnGyStatAsrUnkPktRx indicates the number of Abort Session Request (ASR) unknown packets received.
capabilitiesExchangeRequest- MsgsReceivedFromThisPeer [Capabilities Exchange Request Msgs Received From This Peer] (tmnxMobPdnGyStatRxCea)	long	The value of tmnxMobPdnGyStatRxCea indicates the number of Capabilities Exchange Answer (CEA) messages received from this peer.
capabilitiesExchangeRequest- MsgsTransmittedToThisPeer [Capabilities Exchange Request Msgs Transmitted To This Peer] (tmnxMobPdnGyStatTxCer)	long	The value of tmnxMobPdnGyStatTxCer indicates the number of Capabilities Exchange Request (CER) messages transmitted to this peer.
cardSlotNumber [Card Slot Number] (tmnxCardSlotNum)	long	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassis-Index are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
connectionsAttemptedToThisPeer [Connections Attempted To This Peer] (tmnxMobPdnGyStatConnAttempts)	long	The value of tmnxMobPdnGyStatConnAttempts indicates the number of connections attempted to this peer.

Table 545 Itegsn statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
creditControlAnswerInitialMalformedPktsReceived [Credit Control Answer Initial Malformed Pkts Received] (tmnxMobPdnGyStatCCAInitMalfPktRx)	long	The value of tmnxMobPdnGyStatCCAInitMalfPktRx indicates the number of Credit Control Answer (CCA) initial malformed packets received.
creditControlAnswerInitialMsgRequestsReceived [Credit Control Answer Initial Msg Requests Received] (tmnxMobPdnGyStatCcalInitialMsgRx)	long	The value of tmnxMobPdnGyStatCcalInitialMsgRx indicates the number of Credit Control Answer (CCA) initial message requests received.
creditControlAnswerInitialUnknownPktsReceived [Credit Control Answer Initial Unknown Pkts Received] (tmnxMobPdnGyStatCcalInitUnkPktRx)	long	The value of tmnxMobPdnGyStatCcalInitUnkPktRx indicates the number of Credit Control Answer (CCA) initial unknown packets received.
creditControlAnswerTerminationMalformedPktsReceived [Credit Control Answer Termination Malformed Pkts Received] (tmnxMobPdnGyStatCCATermMalfPktRx)	long	The value of tmnxMobPdnGyStatCCATermMalfPktRx indicates the number of Credit Control Answer (CCA) termination malformed packets received.
creditControlAnswerTerminationMsgRequestsReceived [Credit Control Answer Termination Msg Requests Received] (tmnxMobPdnGyStatCcaTermMsgRx)	long	The value of tmnxMobPdnGyStatCcaTermMsgRx indicates the number of Credit Control Answer (CCA) termination message requests received.
creditControlAnswerTerminationUnknownPktsReceived [Credit Control Answer Termination Unknown Pkts Received] (tmnxMobPdnGyStatCcaTermUnkPktRx)	long	The value of tmnxMobPdnGyStatCcaTermUnkPktRx indicates the number of Credit Control Answer (CCA) termination unknown packets received.

Table 545 Iteggns statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
creditControlAnswerUpdateMalformedPktsReceived [Credit Control Answer Update Malformed Pkts Received] (tmnxMobPdnGyStatCCAUpdtMalfPktRx)	long	The value of tmnxMobPdnGyStatCCAUpdtMalfPktRx indicates the number of Credit Control Answer (CCA) update malformed packets received.
creditControlAnswerUpdateMsgRequestsReceived [Credit Control Answer Update Msg Requests Received] (tmnxMobPdnGyStatCcaUpdateMsgRx)	long	The value of tmnxMobPdnGyStatCcaUpdateMsgRx indicates the number of Credit Control Answer (CCA) update message requests received.
creditControlAnswerUpdateUnknownPktsReceived [Credit Control Answer Update Unknown Pkts Received] (tmnxMobPdnGyStatCcaUpdUnkPktRx)	long	The value of tmnxMobPdnGyStatCcaUpdUnkPktRx indicates the number of Credit Control Answer (CCA) update unknown packets received.
creditControlRequestInitialMsgRequestsFailed [Credit Control Request Initial Msg Requests Failed] (tmnxMobPdnGyStatCcrInitMsgFails)	long	The value of tmnxMobPdnGyStatCcrInitMsgFails indicates the number of Credit Control Request (CCR) initial message requests failed.
creditControlRequestInitialMsgRequestsTransmitted [Credit Control Request Initial Msg Requests Transmitted] (tmnxMobPdnGyStatCcrInitialMsgTx)	long	The value of tmnxMobPdnGyStatCcrInitialMsgTx indicates the number of Credit Control Request (CCR) initial message requests transmitted.
creditControlRequestMsgRequestsDenied [Credit Control Request Msg Requests Denied] (tmnxMobPdnGyStatCcrDenied)	long	The value of tmnxMobPdnGyStatCcrDenied indicates the number of Credit Control Request (CCR) message requests denied.

Table 545 Iteggsn statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
creditControlRequestMsgRequestsGranted [Credit Control Request Msg Requests Granted] (tmnxMobPdnGyStatCcrGranted)	long	The value of tmnxMobPdnGyStatCcrGranted indicates the number of Credit Control Request (CCR) message requests granted.
creditControlRequestTerminationMsgRequestsFailed [Credit Control Request Termination Msg Requests Failed] (tmnxMobPdnGyStatCcrTermMsgFails)	long	The value of tmnxMobPdnGyStatCcrTermMsgFails indicates the number of Credit Control Request (CCR) termination message requests failed.
creditControlRequestTerminationMsgRequestsTransmitted [Credit Control Request Termination Msg Requests Transmitted] (tmnxMobPdnGyStatCcrTermMsgTx)	long	The value of tmnxMobPdnGyStatCcrTermMsgTx indicates the number of Credit Control Request (CCR) termination message requests transmitted.
creditControlRequestUpdateMsgRequestsFailed [Credit Control Request Update Msg Requests Failed] (tmnxMobPdnGyStatCcrUpdMsgFails)	long	The value of tmnxMobPdnGyStatCcrUpdMsgFails indicates the number of Credit Control Request (CCR) update message requests failed.
creditControlRequestUpdateMsgRequestsTransmitted [Credit Control Request Update Msg Requests Transmitted] (tmnxMobPdnGyStatCcrUpdateMsgTx)	long	The value of tmnxMobPdnGyStatCcrUpdateMsgTx indicates the number of Credit Control Request (CCR) update message requests transmitted.
deviceWatchdogAnswerMsgsReceivedToThisPeer [Device Watchdog Answer Msgs Received To This Peer] (tmnxMobPdnGyStatRxDwa)	long	The value of tmnxMobPdnGyStatRxDwa indicates the number of Device Watchdog Answer (DWA) messages received from this peer.

Table 545 Iteggsn statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
deviceWatchdogAnswerMsgsTransmittedToThisPeer [Device Watchdog Answer Msgs Transmitted To This Peer] (tmnxMobPdnGyStatTxDwa)	long	The value of tmnxMobPdnGyStatTxDwa indicates the number of Device Watchdog Answer (DWA) messages transmitted to this peer.
deviceWatchdogRequestMsgsReceivedFromThisPeer [Device Watchdog Request Msgs Received From This Peer] (tmnxMobPdnGyStatRxDwr)	long	The value of tmnxMobPdnGyStatRxDwr indicates the number of Device Watchdog Request (DWR) messages received from this peer.
deviceWatchdogRequestMsgsTransmittedToThisPeer [Device Watchdog Request Msgs Transmitted To This Peer] (tmnxMobPdnGyStatTxDwr)	long	The value of tmnxMobPdnGyStatTxDwr indicates the number of Device Watchdog Request (DWR) messages transmitted to this peer.
disconnectPeerAnswerMsgsReceivedFromThisPeer [Disconnect Peer Answer Msgs Received From This Peer] (tmnxMobPdnGyStatRxDpa)	long	The value of tmnxMobPdnGyStatRxDpa indicates the number of Disconnect Peer Answer (DPA) messages received from this peer.
disconnectPeerAnswerMsgsTransmittedToThisPeer [Disconnect Peer Answer Msgs Transmitted To This Peer] (tmnxMobPdnGyStatTxDpa)	long	The value of tmnxMobPdnGyStatTxDpa indicates the number of Disconnect Peer Answer (DPA) messages transmitted to this peer.
disconnectPeerRequestMsgsReceivedFromThisPeer [Disconnect Peer Request Msgs Received From This Peer] (tmnxMobPdnGyStatRxDpr)	long	The value of tmnxMobPdnGyStatRxDpr indicates the number of Disconnect Peer Request (DPR) messages received from this peer.

Table 545 Itegnsn statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
disconnectPeerRequestMsgsTransmittedToThisPeer [Disconnect Peer Request Msgs Transmitted To This Peer] (tmnxMobPdnGyStatTxDpr)	long	The value of tmnxMobPdnGyStatTxDpr indicates the number of Disconnect Peer Request (DPR) messages transmitted to this peer.
epcId [Epc Id] (tmnxMobGwId)	long	The value of tmnxMobGwId uniquely identifies a mobile gateway configured in the system.
failedConnectionsWithThisPeer [Failed Connections With This Peer] (tmnxMobPdnGyStatConnFailures)	long	The value of tmnxMobPdnGyStatConnFailures indicates the number of failed connections with this peer.
invalidCapabilitiesExchangeAnswerMsgsReceivedFromThisPeer [Invalid Capabilities Exchange Answer Msgs Received From This Peer] (tmnxMobPdnGyStatRxInvalidCea)	long	The value of tmnxMobPdnGyStatRxInvalidCea indicates the number of invalid Capabilities Exchange Answer (CEA) messages received from this peer.
malformedPktsReceived [Malformed Pkts Received] (tmnxMobPdnGyStatMalformedPktsRx)	long	The value of tmnxMobPdnGyStatMalformedPktsRx indicates the number of malformed packets received.
missingAttributeValuePairPktsReceived [Missing Attribute Value Pair Pkts Received] (tmnxMobPdnGyStatMissingAvpPktRx)	long	The value of tmnxMobPdnGyStatMissingAvpPktRx indicates the number of missing Attribute Value Pair (AVP) packets received.
missingAvpPktsReceivedForAsrMsg [Missing Avp Pkts Received For Asr Msg] (tmnxMobPdnGyStatAsrMisAvpPktRx)	long	The value of tmnxMobPdnGyStatAsrMisAvpPktRx indicates the number of missing Attribute Value Pair (AVP) packets received for Abort Session Request (ASR) message.

Table 545 Itegn statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
missingAvpPktsReceivedForCcaInitialMsg [Missing Avp Pkts Received For Cca Initial Msg] (tmnxMobPdnGyStatCcaMisAvpPktRx)	long	The value of tmnxMobPdnGyStatCcaMisAvpPktRx indicates the number of missing Attribute Value Pair (AVP) packets received for Credit Control Answer (CCA) initial message.
missingAvpPktsReceivedForCca-TerminationMsg [Missing Avp Pkts Received For Cca Termination Msg] (tmnxMobPdnGyStatCcaTMisAvpPktRx)	long	The value of tmnxMobPdnGyStatCcaTMisAvpPktRx indicates the number of missing Attribute Value Pair (AVP) packets received for Credit Control Answer (CCA) termination message.
missingAvpPktsReceivedForCcaUpdateMsg [Missing Avp Pkts Received For Cca Update Msg] (tmnxMobPdnGyStatCcaUMisAvpPktRx)	long	The value of tmnxMobPdnGyStatCcaUMisAvpPktRx indicates the number of missing Attribute Value Pair (AVP) packets received for Credit Control Answer (CCA) update message.
missingAvpPktsReceivedForRarMsg [Missing Avp Pkts Received For Rar Msg] (tmnxMobPdnGyStatRarMisAvpPktRx)	long	The value of tmnxMobPdnGyStatRarMisAvpPktRx indicates the number of missing Attribute Value Pair (AVP) packets received for Re-authorization Request (RAR) message.
msgsReceivedFromThisPeer [Msgs Received From This Peer] (tmnxMobPdnGyStatRxMsgs)	long	The value of tmnxMobPdnGyStatRxMsgs indicates the total number of messages received from this peer.
msgsTransmittedToThisPeer [Msgs Transmitted To This Peer] (tmnxMobPdnGyStatTxMsgs)	long	The value of tmnxMobPdnGyStatTxMsgs indicates the total number of messages transmitted to this peer.
noOfActiveGySessionsOnThisPeer [No Of Active Gy Sessions On This Peer] (tmnxMobPdnGyStatActiveSessions)	long	The value of tmnxMobPdnGyStatActiveSessions indicates the number of active Gy sessions on this peer.
numASAMsgDroppedCurrCongestion [Num ASAMsg Dropped Curr Congestion] (tmnxMobPdnGyStatCurrCgAsaMsg)	long	The value of tmnxMobPdnGyStatCurrCgAsaMsg indicates the number of Abort Session Answer (ASA) messages to this peer dropped during the current congestion.

Table 545 Itegsn statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numASAMsgDroppedPrevCongestion [Num ASAMsg Dropped Prev Congestion] (tmnxMobPdnGyStatPrevCgAsaMsg)	long	The value of tmnxMobPdnGyStatPrevCgAsaMsg indicates the number of Abort Session Answer (ASA) messages to this peer dropped during the prior congestion.
numApplRgFuiRa [Num Appl Rg Fui Ra] (tmnxMobPdnGyStatApplRgFuiRa)	java. math. BigInteger	The value of tmnxMobPdnGyStatApplRgFuiRa indicates the number of RG instances with Final Unit Indication (FUI) restrict action applied.
numApplRgFuiRed [Num Appl Rg Fui Red] (tmnxMobPdnGyStatApplRgFuiRed)	java. math. BigInteger	The value of tmnxMobPdnGyStatApplRgFuiRed indicates the number of RG instances with Final Unit Indication (FUI) redirect action applied.
numApplRgFuiTer [Num Appl Rg Fui Ter] (tmnxMobPdnGyStatApplRgFuiTer)	java. math. BigInteger	The value of tmnxMobPdnGyStatApplRgFuiTer indicates the number of RG instances with Final Unit Indication (FUI) terminate action applied.
numCCRIMsgDroppedCurrCongestion [Num CCRIMsg Dropped Curr Congestion] (tmnxMobPdnGyStatCurrCgCcrIMsg)	long	The value of tmnxMobPdnGyStatCurrCgCcrIMsg indicates the number of Credit Control Request (CCR) Initial messages to this peer dropped during the current congestion.
numCCRIMsgDroppedPrevCongestion [Num CCRIMsg Dropped Prev Congestion] (tmnxMobPdnGyStatPrevCgCcrIMsg)	long	The value of tmnxMobPdnGyStatPrevCgCcrIMsg indicates the number of Credit Control Request (CCR) Initial messages to this peer dropped during the prior congestion.
numCCRTMsgDroppedCurrCongestion [Num CCRTMsg Dropped Curr Congestion] (tmnxMobPdnGyStatCurrCgCcrTMsg)	long	The value of tmnxMobPdnGyStatCurrCgCcrTMsg indicates the number of Credit Control Request (CCR) Termination messages to this peer dropped during the current congestion.
numCCRTMsgDroppedPrevCongestion [Num CCRTMsg Dropped Prev Congestion] (tmnxMobPdnGyStatPrevCgCcrTMsg)	long	The value of tmnxMobPdnGyStatPrevCgCcrTMsg indicates the number of Credit Control Request (CCR) Termination messages to this peer dropped during the prior congestion.

Table 545 Iteggsn statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numCCRUMsgDroppedCurrCongestion [Num CCRUMsg Dropped Curr Congestion] (tmnxMobPdnGyStatCurrCgCcrUMsg)	long	The value of tmnxMobPdnGyStatCurrCgCcrUMsg indicates the number of Credit Control Request (CCR) Update messages to this peer dropped during the current congestion.
numCCRUMsgDroppedPrevCongestion [Num CCRUMsg Dropped Prev Congestion] (tmnxMobPdnGyStatPrevCgCcrUMsg)	long	The value of tmnxMobPdnGyStatPrevCgCcrUMsg indicates the number of Credit Control Request (CCR) Update messages to this peer dropped during the prior congestion.
numCcrEMsgFail [Num Ccr EMsg Fail] (tmnxMobPdnGyStatCcrEMsgFail)	long	The value of tmnxMobPdnGyStatCcrEMsgFail indicates the number of Credit Control Request (CCR) Event message requests failed.
numCmdLvlFuiRed [Num Cmd Lvl Fui Red] (tmnxMobPdnGyStatCmdLvlFuiRed)	java. math. BigInteger	The value of tmnxMobPdnGyStatCmdLvlFuiRed indicates the number of command level Final Unit Indication (FUI) redirect action.
numPendingMsgCurrCongestion [Num Pending Msg Curr Congestion] (tmnxMobPdnGyStatCurrCgPendMsg)	long	The value of tmnxMobPdnGyStatCurrCgPendMsg indicates the number of pending messages toward this peer during the current congestion.
numRAAMsgDroppedCurrCongestion [Num RAAMsg Dropped Curr Congestion] (tmnxMobPdnGyStatCurrCgRaaMsg)	long	The value of tmnxMobPdnGyStatCurrCgRaaMsg indicates the number of Re-authorization Answer (RAA) messages to this peer dropped during the current congestion.
numRAAMsgDroppedPrevCongestion [Num RAAMsg Dropped Prev Congestion] (tmnxMobPdnGyStatPrevCgRaaMsg)	long	The value of tmnxMobPdnGyStatPrevCgRaaMsg indicates the number of Re-authorization Answer (RAA) messages to this peer dropped during the prior congestion.
numRcvdRgFuiRa [Num Rcvd Rg Fui Ra] (tmnxMobPdnGyStatRcvdRgFuiRa)	java. math. BigInteger	The value of tmnxMobPdnGyStatRcvdRgFuiRa indicates the number of RG instances with Final Unit Indication (FUI) restrict action received.

Table 545 Iteggns statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numRcvdRgFuiRed [Num Rcvd Rg Fui Red] (tmnxMobPdnGyStatRcvdRgFuiRed)	java. math. BigInteger	The value of tmnxMobPdnGyStatRcvdRgFuiRed indicates the number of RG instances with Final Unit Indication (FUI) redirect action received.
numRcvdRgFuiTer [Num Rcvd Rg Fui Ter] (tmnxMobPdnGyStatRcvdRgFuiTer)	java. math. BigInteger	The value of tmnxMobPdnGyStatRcvdRgFuiTer indicates the number of RG instances with Final Unit Indication (FUI) terminate action received.
numReTxCCRMsg [Num Re Tx Ccr EMsg] (tmnxMobPdnGyStatReTxCCRMsg)	long	The value of tmnxMobPdnGyStatReTxCCRMsg indicates the number of Credit Control Request (CCR) Event messages re-transmitted to this peer.
numReTxCCRInitial [Num Re Tx Ccr Initial] (tmnxMobPdnGyStatReTxCCRInitial)	long	The value of tmnxMobPdnGyStatReTxCCRInitial indicates the number of Credit Control Request (CCR) Initial messages re-transmitted to this peer.
numReTxCCRTerm [Num Re Tx Ccr Term] (tmnxMobPdnGyStatReTxCCRTerm)	long	The value of tmnxMobPdnGyStatReTxCCRTerm indicates the number of Credit Control Request (CCR) Termination messages re-transmitted to this peer.
numReTxCCRUpdate [Num Re Tx Ccr Update] (tmnxMobPdnGyStatReTxCCRUpdate)	long	The value of tmnxMobPdnGyStatReTxCCRUpdate indicates the number of Credit Control Request (CCR) Update messages re-transmitted to this peer.
numRxCcaEMalfPkt [Num Rx Cca EMalf Pkt] (tmnxMobPdnGyStatRxCcaEMalfPkt)	long	The value of tmnxMobPdnGyStatRxCcaEMalfPkt indicates the number of the malformed packets received for Credit Control Answer (CCA) Event message.
numRxCcaEMisAvpPkt [Num Rx Cca EMis Avp Pkt] (tmnxMobPdnGyStatRxCcaEMisAvpPkt)	long	The value of tmnxMobPdnGyStatRxCcaEMisAvpPkt indicates the number of the missing Attribute Value Pair (AVP) packets received for Credit Control Answer (CCA) Event message.

Table 545 Iteggns statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numRxCcaEMsg [Num Rx Cca EMsg] (tmnxMobPdnGyStatRxCcaEMsg)	long	The value of tmnxMobPdnGyStatRxCcaEMsg indicates the number of Credit Control Answer (CCA) Event messages received from this peer.
numRxCcaENackMsg [Num Rx Cca ENack Msg] (tmnxMobPdnGyStatRxCcaENackMsg)	long	The value of tmnxMobPdnGyStatRxCcaENackMsg indicates the number of Credit Control Answer (CCA) negative acknowledgement (NACK) event messages received from this peer.
numRxCcaEUnkwnPkt [Num Rx Cca EUnkwn Pkt] (tmnxMobPdnGyStatRxCcaEUnkwnPkt)	long	The value of tmnxMobPdnGyStatRxCcaEUnkwnPkt indicates the number of the unknown packets received for Credit Control Answer (CCA) Event message.
numTxCcrEMsg [Num Tx Ccr EMsg] (tmnxMobPdnGyStatTxCcrEMsg)	long	The value of tmnxMobPdnGyStatTxCcrEMsg indicates the number of Credit Control Request (CCR) Event messages transmitted to this peer.
oversizeMsgsReceivedFromThisPeer [Oversize Msgs Received From This Peer] (tmnxMobPdnGyStatRxMsgTooBig)	long	The value of tmnxMobPdnGyStatRxMsgTooBig indicates the number of oversize messages received from this peer.
reAuthorizationAnswerMsgsTransmitted [Re Authorization Answer Msgs Transmitted] (tmnxMobPdnGyStatRaaMsgTx)	long	The value of tmnxMobPdnGyStatRaaMsgTx indicates the number of Re-authorization Answer (RAA) messages transmitted.
reAuthorizationAnswerNegativeAckMsgsTransmitted [Re Authorization Answer Negative Ack Msgs Transmitted] (tmnxMobPdnGyStatRaaNackMsgTx)	long	The value of tmnxMobPdnGyStatRaaNackMsgTx indicates the number of Re-authorization Answer (RAA) negative acknowledgement messages transmitted.

Table 545 Iteggsn statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
reAuthorizationRequestMalformedPktsReceived [Re Authorization Request Malformed Pkts Received] (tmnxMobPdnGyStatRarMalfPktRx)	long	The value of tmnxMobPdnGyStatRarMalfPktRx indicates the number of Re-authorization Request (RAR) malformed packets received.
reAuthorizationRequestMsgsReceived [Re Authorization Request Msgs Received] (tmnxMobPdnGyStatRarMsgRx)	long	The value of tmnxMobPdnGyStatRarMsgRx indicates the number of Re-authorization Request (RAR) messages received.
reAuthorizationRequestUnknownPktsReceived [Re Authorization Request Unknown Pkts Received] (tmnxMobPdnGyStatRarUnkPktRx)	long	The value of tmnxMobPdnGyStatRarUnkPktRx indicates the number of Re-authorization Request (RAR) unknown packets received.
remoteTransportDisconnectMsgsReceivedFromThisPeer [Remote Transport Disconnect Msgs Received From This Peer] (tmnxMobPdnGyStatRxTransportDisc)	long	The value of tmnxMobPdnGyStatRxTransportDisc indicates the number of remote transport disconnect messages received from this peer.
retransmitMsgsTransmittedToThisPeer [Retransmit Msgs Transmitted To This Peer] (tmnxMobPdnGyStatTxRetransmitMsgs)	long	The value of tmnxMobPdnGyStatTxRetransmitMsgs indicates the number of retransmit messages transmitted to this peer.
smallMsgsReceivedFromThisPeer [Small Msgs Received From This Peer] (tmnxMobPdnGyStatRxMsgTooSmall)	long	The value of tmnxMobPdnGyStatRxMsgTooSmall indicates the number of small messages received from this peer.
unexpectedVersionMsgsReceivedFromThisPeer [Unexpected Version Msgs Received From This Peer] (tmnxMobPdnGyStatRxMsgUnexpectVer)	long	The value of tmnxMobPdnGyStatRxMsgUnexpectVer indicates the number of unexpected version messages received from this peer.

Table 545 Iteggsn statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
unknownPktsReceived [Unknown Pkts Received] (tmnxMobPdnGyStatUnkwnPktsRx)	long	The value of tmnxMobPdnGyStatUnkwnPktsRx indicates the number of unknown packets received.
unknownSessionPktsReceived- ForAbortSessionRequestMsgs [Unknown Session Pkts Received For Abort Session Request Msgs] (tmnxMobPdnGyStatAsrUnkSessPkts)	long	The value of tmnxMobPdnGyStatAsrUnkSessPkts indicates the number of unknown session packets received for Abort Session Request (ASR) messages.
unknownSessionPktsReceived- ForCreditControlAnswerInitialMsgs [Unknown Session Pkts Received For Credit Control Answer Initial Msgs] (tmnxMobPdnGyStatCcaUnkSessPkts)	long	The value of tmnxMobPdnGyStatCcaUnkSessPkts indicates the number of unknown session packets received for Credit Control Answer (CCA) initial messages.
unknownSessionPktsReceived- ForCreditControlAnswerTerminationMsgs [Unknown Session Pkts Received For Credit Control Answer Termination Msgs] (tmnxMobPdnGyStatCcaTUnkSessPkts)	long	The value of tmnxMobPdnGyStatCcaTUnkSessPkts indicates the number of unknown session packets received for Credit Control Answer (CCA) termination messages.
unknownSessionPktsReceived- ForCreditControlAnswerUpdateMsgs [Unknown Session Pkts Received For Credit Control Answer Update Msgs] (tmnxMobPdnGyStatCcaUUnkSessPkts)	long	The value of tmnxMobPdnGyStatCcaUUnkSessPkts indicates the number of unknown session packets received for Credit Control Answer (CCA) update messages.
unknownSessionPktsReceived- ForReAuthorizationRequestMsgs [Unknown Session Pkts Received For Re Authorization Request Msgs] (tmnxMobPdnGyStatRarUnkSessPkts)	long	The value of tmnxMobPdnGyStatRarUnkSessPkts indicates the number of unknown session packets received for Re-authorization Request (RAR) messages.

Table 545 Iteggsn statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
virtualRouterId [Virtual Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
<p>PgwGaPeerStats</p> <p>MIB entry name: tmnxMobPdnGaStatEntry</p> <p>Entry description: Each row entry represents a peer on the Ga reference point and contain statistics for this peer on a card.</p> <p>Table description (for tmnxMobPdnGaStatTable): The tmnxMobPdnGaStatTable has an entry for each peer on the Ga reference point served by a Packet Data Network Gateway (PGW).</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Iteggsn.PgwGaPeer</p>		
address [Address] (tmnxMobPdnGaStatAddress)	String	The value of tmnxMobPdnGaStatAddress indicates the IP address of the peer on Ga reference point. When the length of tmnxMobPdnGaStatAddress is equal to 0 then the peer is a Fully Qualified Domain Name (FQDN) address and this entry represents an aggregate of all the peer IP addresses that this FQDN resolves to. In this case the value of tmnxMobPdnGaStatAddressType is unknown and the value of tmnxMobPdnGaStatPort is equal to 0.
addressType [Address Type] (tmnxMobPdnGaStatAddressType)	int	The value of tmnxMobPdnGaStatAddressType indicates the type of address represented by tmnxMobPdnGaStatAddress. When the value of tmnxMobPdnGaStatAddressType is unknown then the peer is a Fully Qualified Domain Name (FQDN) address and this entry represents an aggregate of all the peer IP addresses that this FQDN resolves to.

Table 545 Iteggsn statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cdrsTx [Cdrs Tx] (tmnxMobPdnGaStatCdrsTx)	long	The value of tmnxMobPdnGaStatCdrsTx indicates the total number of Charging Data Records (CDR) sent from this peer.
epcld [Epc Id] (tmnxMobGwld)	long	The value of tmnxMobGwld uniquely identifies a mobile gateway configured in the system.
gaCardSlotNumber [Ga Card Slot Number] (tmnxCardSlotNum)	long	The unique value which identifies this IOM slot within a chassis in the system.
gaChassisIndex [Ga Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
gtpPriGrpName [Gtp Pri Grp Name] (tmnxMobGtpPriGrpName)	String	The value of tmnxMobGtpPriGrpName specifies the unique name of this GPRS Tunneling Protocol (GTP) Prime Server Group.
gtpPrimeFail [Gtp Prime Fail] (tmnxMobPdnGaStatGtpPrimeFail)	long	The value of tmnxMobPdnGaStatGtpPrimeFail indicates the number of GPRS Tunneling Protocol (GTP) prime message failures transmitted to this peer.
gtpVersion [Gtp Version] (tmnxMobPdnGaStatGtpVersion)	int	The value of tmnxMobPdnGaStatGtpVersion indicates the current GPRS Tunneling Protocol (GTP) version negotiated with the peer.
nodeAIReqRetried [Node AI Req Retried] (tmnxMobPdnGaStatNodeAIReqRetried)	long	The value of tmnxMobPdnGaStatNodeAIReqRetried indicates the number of node alive request retry messages transmitted from this peer.

Table 545 Itegsn statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
operState [Oper State] (tmnxMobPdnGaStatOperState)	int	The value of tmnxMobPdnGaStatOperState indicates the current operational state of this group. The operational state may be one of: 'up' - connection goes 'up' and is used by the Ga module to send Charging Data Records (CDRs). 'down' - connection goes 'down' and is used by the Ga module to send Charging Data Records (CDRs). 'active' - connection is 'active' and is used by the Ga module to send Charging Data Records (CDRs).
port [Port] (tmnxMobPdnGaStatPort)	int	The value of tmnxMobPdnGaStatPort indicates the port number of this peer. When the value of tmnxMobPdnGaStatPort is equal to 0 then the peer is a Fully Qualified Domain Name (FQDN) address and this entry represents an aggregate of all the peer IP addresses that this FQDN resolves to.
retrDataRecReqs [Retr Data Rec Reqs] (tmnxMobPdnGaStatRetrDataRecReqs)	long	The value of tmnxMobPdnGaStatRetrDataRecReqs indicates the number of Data record transfer requests retried to this peer.
rtrEchoRequests [Rtr Echo Requests] (tmnxMobPdnGaStatRtrEchoRequests)	long	The value of tmnxMobPdnGaStatRtrEchoRequests indicates the number of echo request messages retried to this peer.
rxCdrDupReqFf [Rx Cdr Dup Req Ff] (tmnxMobPdnGaStatRxCdrDupReqFf)	long	The value of tmnxMobPdnGaStatRxCdrDupReqFf indicates the number of Charging Data Records (CDR) responses with cause value 'duplicate requests already fulfilled' received from this peer.
rxCdrInvMsgFmat [Rx Cdr Inv Msg Fmat] (tmnxMobPdnGaStatRxCdrInvMsgFmat)	long	The value of tmnxMobPdnGaStatRxCdrInvMsgFmat indicates the number of Charging Data Records (CDR) responses with cause value 'invalid message format' received from this peer.
rxCdrMandleInc [Rx Cdr Mand le Inc] (tmnxMobPdnGaStatRxCdrMandleInc)	long	The value of tmnxMobPdnGaStatRxCdrMandleInc indicates the number of Charging Data Records (CDR) responses with cause value 'mandatory Information Element (IE) incorrect' received from this peer.

Table 545 Itegsn statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxCdrMandleMiss [Rx Cdr Mand le Miss] (tmnxMobPdnGaStatRxCdrMandleMiss)	long	The value of tmnxMobPdnGaStatRxCdrMandleMiss indicates the number of Charging Data Records (CDR) responses with cause value 'mandatory Information Element (IE) missing' received from this peer.
rxCdrNoResAva [Rx Cdr No Res Ava] (tmnxMobPdnGaStatRxCdrNoResAva)	long	The value of tmnxMobPdnGaStatRxCdrNoResAva indicates the number of Charging Data Records (CDR) responses with cause value 'no resources available' received from this peer.
rxCdrOptleInc [Rx Cdr Opt le Inc] (tmnxMobPdnGaStatRxCdrOptleInc)	long	The value of tmnxMobPdnGaStatRxCdrOptleInc indicates the number of Charging Data Records (CDR) responses with cause value 'optional Information Element (IE) incorrect' received from this peer.
rxCdrReqAcc [Rx Cdr Req Acc] (tmnxMobPdnGaStatRxCdrReqAcc)	long	The value of tmnxMobPdnGaStatRxCdrReqAcc indicates the number of Charging Data Records (CDR) responses with cause value 'requests accepted' received from this peer.
rxCdrReqFfilled [Rx Cdr Req Ffilled] (tmnxMobPdnGaStatRxCdrReqFfilled)	long	The value of tmnxMobPdnGaStatRxCdrReqFfilled indicates the number of Charging Data Records (CDR) responses with cause value 'requests already fulfilled' received from this peer.
rxCdrReqNotFf [Rx Cdr Req Not Ff] (tmnxMobPdnGaStatRxCdrReqNotFf)	long	The value of tmnxMobPdnGaStatRxCdrReqNotFf indicates the number of Charging Data Records (CDR) responses with cause value 'requests not fulfilled' received from this peer.
rxCdrSrvNotSupp [Rx Cdr Srv Not Supp] (tmnxMobPdnGaStatRxCdrSrvNotSupp)	long	The value of tmnxMobPdnGaStatRxCdrSrvNotSupp indicates the number of Charging Data Records (CDR) responses with cause value 'service not supported' received from this peer.
rxCdrSystemFail [Rx Cdr System Fail] (tmnxMobPdnGaStatRxCdrSystemFail)	long	The value of tmnxMobPdnGaStatRxCdrSystemFail indicates the number of Charging Data Records (CDR) responses with cause value 'system failure' received from this peer.

Table 545 Itegsn statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxCdrVerNotSupp [Rx Cdr Ver Not Supp] (tmnxMobPdnGaStatRxCdrVerNotSupp)	long	The value of tmnxMobPdnGaStatRxCdrVerNotSupp indicates the number of Charging Data Records (CDR) responses with cause value 'version not supported' received from this peer.
rxDataRecReqCan [Rx Data Rec Req Can] (tmnxMobPdnGaStatRxDataRecReqCan)	long	The value of tmnxMobPdnGaStatRxDataRecReqCan indicates the number of Cancelled Charging Data Records (CDR) responses with cause value 'requests accepted' received from this peer.
rxDataRecReqDup [Rx Data Rec Req Dup] (tmnxMobPdnGaStatRxDataRecReqDup)	long	The value of tmnxMobPdnGaStatRxDataRecReqDup indicates the number of Duplicate Charging Data Records (CDR) responses with cause value 'requests accepted' received from this peer.
rxDataRecReqEmp [Rx Data Rec Req Emp] (tmnxMobPdnGaStatRxDataRecReqEmp)	long	The value of tmnxMobPdnGaStatRxDataRecReqEmp indicates the number of Empty Charging Data Records (CDR) responses with cause value 'requests accepted' received from this peer.
rxDataRecReqRel [Rx Data Rec Req Rel] (tmnxMobPdnGaStatRxDataRecReqRel)	long	The value of tmnxMobPdnGaStatRxDataRecReqRel indicates the number of Released Charging Data Records (CDR) responses with cause value 'requests accepted' received from this peer.
rxDataRecReqs [Rx Data Rec Reqs] (tmnxMobPdnGaStatRxDataRecReqs)	long	The value of tmnxMobPdnGaStatRxDataRecReqs indicates the number of Data record transfer requests received by this peer.
rxEchoRequests [Rx Echo Requests] (tmnxMobPdnGaStatRxEchoRequests)	long	The value of tmnxMobPdnGaStatRxEchoRequests indicates the number of echo request messages received from this peer.
rxEchoResponses [Rx Echo Responses] (tmnxMobPdnGaStatRxEchoResponses)	long	The value of tmnxMobPdnGaStatRxEchoResponses indicates the number of echo response messages received from this peer.

Table 545 Iteggns statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxFragmentDrtRsp [Rx Fragment Drt Rsp] (tmnxMobPdnGaStatRxFragmentDrtRsp)	long	The value of tmnxMobPdnGaStatRxFragmentDrtRsp indicates the number of the responses for the fragmented Data Record Transfer requests received from this peer.
rxInvalidMsgs [Rx Invalid Msgs] (tmnxMobPdnGaStatRxInvalidMsgs)	long	The value of tmnxMobPdnGaStatRxInvalidMsgs indicates the number of invalid messages received from this peer.
rxNodeAIRequests [Rx Node AI Requests] (tmnxMobPdnGaStatRxNodeAIRequests)	long	The value of tmnxMobPdnGaStatRxNodeAIRequests indicates the number of node alive request messages received from this peer.
rxNodeAIResps [Rx Node AI Resps] (tmnxMobPdnGaStatRxNodeAIResps)	long	The value of tmnxMobPdnGaStatRxNodeAIResps indicates the number of node alive response messages received on this peer.
rxRedirectionReq [Rx Redirection Req] (tmnxMobPdnGaStatRxRedirectionReq)	long	The value of tmnxMobPdnGaStatRxRedirectionReq indicates the number of redirection request messages received from this peer.
rxVerNotSupp [Rx Ver Not Supp] (tmnxMobPdnGaStatRxVerNotSupp)	long	The value of tmnxMobPdnGaStatRxVerNotSupp indicates the number of version not supported messages received from this peer.
txCdrMaxChngCond [Tx Cdr Max Chng Cond] (tmnxMobPdnGaStatTxCdrMaxChngCond)	long	The value of tmnxMobPdnGaStatTxCdrMaxChngCond indicates the number of Charging Data Records (CDR) maximum change condition requests transmitted to this peer.
txCdrMgmtInterv [Tx Cdr Mgmt Interv] (tmnxMobPdnGaStatTxCdrMgmtInterv)	long	The value of tmnxMobPdnGaStatTxCdrMgmtInterv indicates the number of Charging Data Records (CDR) transferred due to management intervention on this peer.
txCdrMsTmzChng [Tx Cdr Ms Tmz Chng] (tmnxMobPdnGaStatTxCdrMsTmzChng)	long	The value of tmnxMobPdnGaStatTxCdrMsTmzChng indicates the number of Charging Data Records (CDR) MS Time Zone Change requests transmitted to this peer.

Table 545 Itegnsn statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txCdrPlmnChange [Tx Cdr Plmn Change] (tmnxMobPdnGaStatTxCdrPlmnChange)	long	The value of tmnxMobPdnGaStatTxCdrPlmnChange indicates the number of Charging Data Records (CDR) Public Land Mobile Network (PLMN) change requests transmitted to this peer.
txCdrRatChng [Tx Cdr Rat Chng] (tmnxMobPdnGaStatTxCdrRatChng)	long	The value of tmnxMobPdnGaStatTxCdrRatChng indicates the number of Charging Data Records (CDR) Radio Access Type (RAT) change requests transmitted to this peer.
txCdrSerNdChLmt [Tx Cdr Ser Nd Ch Lmt] (tmnxMobPdnGaStatTxCdrSerNdChLmt)	long	The value of tmnxMobPdnGaStatTxCdrSerNdChLmt indicates the number of Charging Data Records (CDR) Serving Node Change Limit requests transmitted to this peer.
txCdrTermination [Tx Cdr Termination] (tmnxMobPdnGaStatTxCdrTermination)	long	The value of tmnxMobPdnGaStatTxCdrTermination indicates the number of Charging Data Records (CDR) termination requests transmitted to this peer.
txCdrTimeLimit [Tx Cdr Time Limit] (tmnxMobPdnGaStatTxCdrTimeLimit)	long	The value of tmnxMobPdnGaStatTxCdrTimeLimit indicates the number of Charging Data Records (CDR) time limit requests transmitted to this peer.
txCdrVolLimit [Tx Cdr Vol Limit] (tmnxMobPdnGaStatTxCdrVolLimit)	long	The value of tmnxMobPdnGaStatTxCdrVolLimit indicates the number of Charging Data Records (CDR) volume limit requests transmitted to this peer.
txDataRecReqCan [Tx Data Rec Req Can] (tmnxMobPdnGaStatTxDataRecReqCan)	long	The value of tmnxMobPdnGaStatTxDataRecReqCan indicates the number of Cancelled Data record requests transmitted to this peer.
txDataRecReqDup [Tx Data Rec Req Dup] (tmnxMobPdnGaStatTxDataRecReqDup)	long	The value of tmnxMobPdnGaStatTxDataRecReqDup indicates the number of duplicate Data record transfer requests transmitted to this peer.

Table 545 Itegnsn statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txDataRecReqEmp [Tx Data Rec Req Emp] (tmnxMobPdnGaStatTxDataRecReqEmp)	long	The value of tmnxMobPdnGaStatTxDataRecReqEmp indicates the number of Empty Data record requests transmitted to this peer.
txDataRecReqRel [Tx Data Rec Req Rel] (tmnxMobPdnGaStatTxDataRecReqRel)	long	The value of tmnxMobPdnGaStatTxDataRecReqRel indicates the number of Released Data record requests transmitted to this peer.
txDataRecReqs [Tx Data Rec Reqs] (tmnxMobPdnGaStatTxDataRecReqs)	long	The value of tmnxMobPdnGaStatTxDataRecReqs indicates the number of Data record requests transmitted to this peer.
txDrtFragment [Tx Drt Fragment] (tmnxMobPdnGaStatTxDrtFragment)	long	The value of tmnxMobPdnGaStatTxDrtFragment indicates the number of the IP fragments for the fragmented Data Record Transfer requests transmitted to this peer.
txEchoRequests [Tx Echo Requests] (tmnxMobPdnGaStatTxEchoRequests)	long	The value of tmnxMobPdnGaStatTxEchoRequests indicates the number of echo request messages transmitted to this peer.
txEchoResponses [Tx Echo Responses] (tmnxMobPdnGaStatTxEchoResponses)	long	The value of tmnxMobPdnGaStatTxEchoResponses indicates the number of echo response messages transmitted to this peer.
txFragmentDrtReq [Tx Fragment Drt Req] (tmnxMobPdnGaStatTxFragmentDrtReq)	long	The value of tmnxMobPdnGaStatTxFragmentDrtReq indicates the number of the fragmented Data Record Transfer Requests transmitted to this peer.
txNodeAIRequests [Tx Node AI Requests] (tmnxMobPdnGaStatTxNodeAIRequests)	long	The value of tmnxMobPdnGaStatTxNodeAIRequests indicates the number of node alive request messages transmitted from this peer.
txNodeAIResps [Tx Node AI Resps] (tmnxMobPdnGaStatTxNodeAIResps)	long	The value of tmnxMobPdnGaStatTxNodeAIResps indicates the number of node alive response messages transmitted to this peer.

Table 545 Iteggns statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txRedrnResp [Tx Redrn Resp] (tmnxMobPdnGaStatTxRedrnResp)	long	The value of tmnxMobPdnGaStatTxRedrnResp indicates the number of redirection request messages transmitted to this peer.
txVerNotSupp [Tx Ver Not Supp] (tmnxMobPdnGaStatTxVerNotSupp)	long	The value of tmnxMobPdnGaStatTxVerNotSupp indicates the number of version not supported messages transmitted to this peer.
unackDataRexReqs [Unack Data Rex Reqs] (tmnxMobPdnGaStatUnackDataRexReqs)	long	The value of tmnxMobPdnGaStatUnackDataRexReqs indicates the number of Data record transfer requests unacknowledged by this peer.
upTime [Up Time] (tmnxMobPdnGaStatUpTime)	long	The value of tmnxMobPdnGaStatUpTime indicates the time when the connection comes up.
virtualRouterId [Virtual Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.

Table 546 ltegw statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>ControlRefPtGtpv2Stats</p> <p>MIB entry name: tmnxMobGwCtrlRefPtGtpv2StatEntry</p> <p>Entry description: Each row entry represents a peer on a General Packet Radio Service (GPRS) Tunneling Protocol Version 2 (GTPv2) reference points and contains statistics for this peer on a card.</p> <p>Table description (for tmnxMobGwCtrlRefPtGtpv2StatTable): The tmnxMobGwCtrlRefPtGtpv2StatTable has an entry for each peer on the General Packet Radio Service (GPRS) Tunneling Protocol Version 2 (GTPv2) reference points.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • lte.S11Peer • lte.S2aGtpPeer • lte.S5Peer • lte.S8Peer • ltepmip.S2bPeer • ltesgsn.S4cPeer 		
bearerIpv4v6 [Bearer Ipv 4 v 6] (tmnxMobGwStatBearerIpv4v6)	long	The value of tmnxMobGwStatBearerIpv4v6 indicates the number of IPv4v6 bearers being served by this peer.
bearerResourceCommand [Bearer Resource Command] (tmnxMobGwStatBearResCmd)	long	The value of tmnxMobGwStatBearResCmd indicates the number of bearer resource command packets on the gateway.
bearerResourceFailureIndication [Bearer Resource Failure Indication] (tmnxMobGwStatBearResFailInd)	long	The value of tmnxMobGwStatBearResFailInd indicates the number of bearer resource failure indication packets on the gateway.
bearersIpv4 [Bearers Ipv 4] (tmnxMobGwStatBearersIpv4)	long	The value of tmnxMobGwStatBearersIpv4 indicates the number of IPv4 bearers being served by this peer.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
bearersIpv6 [Bearers Ipv 6] (tmnxMobGwStatBearersIpv6)	long	The value of tmnxMobGwStatBearersIpv6 indicates the number of IPv6 bearers being served by this peer.
cardSlotNumber [Card Slot Number] (tmnxCardSlotNum)	long	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
createBearerRequest [Create Bearer Request] (tmnxMobGwStatCreBearReq)	long	The value of tmnxMobGwStatCreBearReq indicates the number of create bearer request messages received from or transmitted to this peer.
createBearerResponseFailure [Create Bearer Response Failure] (tmnxMobGwStatCreBearRspFail)	long	The value of tmnxMobGwStatCreBearRspFail indicates the number of create bearer response messages received from or transmitted to this peer with cause code not set to request accepted.
createBearerResponseSucceed [Create Bearer Response Succeed] (tmnxMobGwStatCreBearRspSucc)	long	The value of tmnxMobGwStatCreBearRspSucc indicates the number of create bearer response messages received from or transmitted to this peer with cause code set to request accepted.
createIndirectDataTunnelRequest [Create Indirect Data Tunnel Request] (tmnxMobGwStatCreIndrTnlReq)	long	The value of tmnxMobGwStatCreIndrTnlReq indicates the number of Create Indirect Data Forwarding Tunnel Request messages received from or transmitted to this peer.
createIndirectDataTunnelResponseFailure [Create Indirect Data Tunnel Response Failure] (tmnxMobGwStatCreIndrTnlRspFail)	long	The value of tmnxMobGwStatCreIndrTnlRspFail indicates the number of Create Indirect Data Forwarding Tunnel Response messages received from or transmitted to this peer with cause code not set to request accepted.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
createIndirectDataTunnelResponseSucceed [Create Indirect Data Tunnel Response Succeed] (tmnxMobGwStatCreIndrTnlRspSucc)	long	The value of tmnxMobGwStatCreIndrTnlRspSucc indicates the number of Create Indirect Data Forwarding Tunnel Response messages received from or transmitted to this peer with cause code set to request accepted.
createSessionRequest [Create Session Request] (tmnxMobGwStatCreSessReq)	long	The value of tmnxMobGwStatCreSessReq indicates the number of create session request messages received from this peer or transmitted to this peer.
createSessionResponseFailure [Create Session Response Failure] (tmnxMobGwStatCreSessRspFail)	long	The value of tmnxMobGwStatCreSessRspFail indicates the number of create session response messages received from or transmitted to this peer with cause code not set to request accepted.
createSessionResponseSucceed [Create Session Response Succeed] (tmnxMobGwStatCreSessRspSucc)	long	The value of tmnxMobGwStatCreSessRspSucc indicates the number of create session response messages received from this peer or transmitted to this peer with cause code set to request accepted.
csReqTotlTiedNoZero [Cs Req Totl Tied No Zero] (tmnxMobGwStatCsReqTotlTiedNoZero)	long	The value of tmnxMobGwStatCsReqTotlTiedNoZero indicates the total number of Create Session (CS) requests with non-zero TEID.
csReqUniqTiedNoZero [Cs Req Uniq Tied No Zero] (tmnxMobGwStatCsReqUniqTiedNoZero)	long	The value of tmnxMobGwStatCsReqUniqTiedNoZero indicates the number of unique Create Session (CS) requests with non-zero TEID.
dbPcscfRecvry [Db Pcscf Recvry] (tmnxMobGwStatDbPcscfRecvry)	long	The value of tmnxMobGwStatDbPcscfRecvry indicates the number of Delete Bearer (DB) with Proxy Call Session Control Function (P-CSCF) recovery received or transmitted from this peer.
dedicatedBearers [Dedicated Bearers] (tmnxMobGwStatDedctdBearers)	long	The value of tmnxMobGwStatDedctdBearers indicates the number of dedicated bearers being served by this peer.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
defaultBearers [Default Bearers] (tmnxMobGwStatDefBearers)	long	The value of tmnxMobGwStatDefBearers indicates the number of default bearers being served by this peer.
deleteBearerCommand [Delete Bearer Command] (tmnxMobGwStatDelBearCmd)	long	The value of tmnxMobGwStatDelBearCmd indicates the number of delete bearer command messages received from or transmitted to this peer.
deleteBearerFailureIndication [Delete Bearer Failure Indication] (tmnxMobGwStatDelBearFailInd)	long	The value of tmnxMobGwStatDelBearFailInd indicates the number of delete bearer failure messages received from or transmitted to this peer.
deleteBearerRequest [Delete Bearer Request] (tmnxMobGwStatDelBearReq)	long	The value of tmnxMobGwStatDelBearReq indicates the number of delete bearer request messages received from or transmitted to this peer.
deleteBearerResponseFailure [Delete Bearer Response Failure] (tmnxMobGwStatDelBearRspFail)	long	The value of tmnxMobGwStatDelBearRspFail indicates the number of delete bearer response messages received from or transmitted to this peer with cause code not set to request accepted.
deleteBearerResponseSucceed [Delete Bearer Response Succeed] (tmnxMobGwStatDelBearRspSucc)	long	The value of tmnxMobGwStatDelBearRspSucc indicates the number of delete bearer response messages received from or transmitted to this peer with cause code set to request accepted.
deleteIndirectDataTunnelRequest [Delete Indirect Data Tunnel Request] (tmnxMobGwStatDelIndrTnlReq)	long	The value of tmnxMobGwStatDelIndrTnlReq indicates the number of Delete Indirect Data Forwarding Tunnel Request messages received from or transmitted to this peer.
deleteIndirectDataTunnelResponseFailure [Delete Indirect Data Tunnel Response Failure] (tmnxMobGwStatDelIndrTnlRspFail)	long	The value of tmnxMobGwStatDelIndrTnlRspFail indicates the number of Delete Indirect Data Forwarding Tunnel Response messages received from or transmitted to this peer with cause code not set to request accepted.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
deleteIndirectDataTunnelResponseSucceed [Delete Indirect Data Tunnel Response Succeed] (tmnxMobGwStatDelIndrTnlRspSucc)	long	The value of tmnxMobGwStatDelIndrTnlRspSucc indicates the number of Delete Indirect Data Forwarding Tunnel Response messages received from or transmitted to this peer with cause code set to request accepted.
deleteSessionRequest [Delete Session Request] (tmnxMobGwStatDelSessReq)	long	The value of tmnxMobGwStatDelSessReq indicates the number of delete session request messages received from this peer or transmitted to this peer.
deleteSessionResponseFailure [Delete Session Response Failure] (tmnxMobGwStatDelSessRspFail)	long	The value of tmnxMobGwStatDelSessRspFail indicates the number of delete session response messages received from or transmitted to this peer with cause code not set to request accepted.
deleteSessionResponseSucceed [Delete Session Response Succeed] (tmnxMobGwStatDelSessRspSucc)	long	The value of tmnxMobGwStatDelSessRspSucc indicates the number of delete session response messages received from this peer or transmitted to this peer with cause code set to request accepted.
downlinkDataAckFailure [Downlink Data Ack Failure] (tmnxMobGwStatDIDDataAckFail)	long	The value of tmnxMobGwStatDIDDataAckFail indicates the number of downlink data notification acknowledgements received from or transmitted to this peer with cause code not set to request accepted.
downlinkDataAckSucceed [Downlink Data Ack Succeed] (tmnxMobGwStatDIDDataAckSucc)	long	The value of tmnxMobGwStatDIDDataAckSucc indicates the number of downlink data notification acknowledgements received from or transmitted to this peer with cause code set to request accepted.
downlinkDataFailureNotify [Downlink Data Failure Notify] (tmnxMobGwStatDIDDataFailNotify)	long	The value of tmnxMobGwStatDIDDataFailNotify indicates the number of downlink data notification failure indication messages received from or transmitted to this peer.
downlinkDataNotify [Downlink Data Notify] (tmnxMobGwStatDIDDataNotify)	long	The value of tmnxMobGwStatDIDDataNotify indicates the number of downlink data notification messages received from or transmitted to this peer.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dscpValue [Dscp Value] (tmnxMobGwStatDscpValue)	long	The value of tmnxMobGwStatDscpValue indicates the number of the changes of DSCP value included in DDN on S11 ref-point.
epcId [Epc Id] (tmnxMobGwId)	long	The value of tmnxMobGwId uniquely identifies a mobile gateway configured in the system.
mbPcscfRecvry [Mb Pcscf Recvry] (tmnxMobGwStatMbPcscfRecvry)	long	The value of tmnxMobGwStatMbPcscfRecvry indicates the number of Modify Bearer (MB) Request received or sent with Proxy Call Session Control Function (P-CSCF) recovery private IE.
mbReqSgwRest [Mb Req Sgw Rest] (tmnxMobGwStatMbReqSgwRest)	long	The value of tmnxMobGwStatMbReqSgwRest indicates the number of Modify Bearer Request packet for Serving Gateway (SGW) Restoration.
modifyAccessBearerRequest [Modify Access Bearer Request] (tmnxMobGwStatModAccBearReq)	long	The value of tmnxMobGwStatModAccBearReq indicates the number of modify access bearer request messages received from or transmitted to this peer.
modifyAccessBearerResponseFailure [Modify Access Bearer Response Failure] (tmnxMobGwStatModAccBearRspFail)	long	The value of tmnxMobGwStatModAccBearRspFail indicates the number of modify access bearer response messages received from or transmitted to this peer with cause code other than request accepted.
modifyAccessBearerResponseSucceed [Modify Access Bearer Response Succeed] (tmnxMobGwStatModAccBearRspSucc)	long	The value of tmnxMobGwStatModAccBearRspSucc indicates the number of modify access bearer response messages received from or transmitted to this peer with cause code set to request accepted.
modifyBearerCommand [Modify Bearer Command] (tmnxMobGwStatModBearCmd)	long	The value of tmnxMobGwStatModBearCmd indicates the number of modify bearer command messages received from or transmitted to this peer.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
modifyBearerCsgRequest [Modify Bearer Csg Request] (tmnxMobGwStatMbCsg)	long	The value of tmnxMobGwStatMbCsg indicates the number of Modify Bearer (MB) requests with Closed Subscriber Group (CSG) received or transmitted from this peer.
modifyBearerFailureIndication [Modify Bearer Failure Indication] (tmnxMobGwStatModBearFailInd)	long	The value of tmnxMobGwStatModBearFailInd indicates the number of modify bearer failure messages received from or transmitted to this peer.
modifyBearerRequest [Modify Bearer Request] (tmnxMobGwStatModBearReq)	long	The value of tmnxMobGwStatModBearReq indicates the number of modify bearer request messages received from or transmitted to this peer.
modifyBearerResponseFailure [Modify Bearer Response Failure] (tmnxMobGwStatModBearRspFail)	long	The value of tmnxMobGwStatModBearRspFail indicates the number of modify bearer response messages received from or transmitted to this peer with cause code not set to request accepted.
modifyBearerResponseSucceed [Modify Bearer Response Succeed] (tmnxMobGwStatModBearRspSucc)	long	The value of tmnxMobGwStatModBearRspSucc indicates the number of modify bearer response messages received from or transmitted to this peer with cause code set to request accepted.
pathMgmtFailures [Path Mgmt Failures] (tmnxMobGwStatPathMgmtFails)	long	The value of tmnxMobGwStatPathMgmtFails indicates the number of path management failures for this peer.
peerIpAddress [Peer Ip Address] (tmnxMobGwSigPeerAddress)	String	The value of tmnxMobGwSigPeerAddress indicates the IP address of this peer on signaling reference points.
peerIpAddressType [Peer Ip Address Type] (tmnxMobGwSigPeerAddressType)	int	The value of tmnxMobGwSigPeerAddressType indicates the type of address represented by tmnxMobGwSigPeerAddress.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
peerRestartCounter [Peer Restart Counter] (tmnxMobGwStatPeerRestartCnt)	long	The value of tmnxMobGwStatPeerRestartCnt indicates the counter value of the number of times this peer restarted.
peerRestarts [Peer Restarts] (tmnxMobGwStatPeerRestarts)	long	The value of tmnxMobGwStatPeerRestarts indicates the number of times this peer restarted.
peerType [Peer Type] (tmnxMobGwSigPeerType)	int	The tmnxMobGwSigPeerType is an enumerated integer that describes the type of a reference point peer.
pgwRestartNotify [Pgw Restart Notify] (tmnxMobGwStatPgwRestNotify)	long	The value of tmnxMobGwStatPgwRestNotify indicates the number of Packet Data Network Gateway (PGW) restart notifications received from or transmitted to this peer.
pgwRestartNotifyAck [Pgw Restart Notify Ack] (tmnxMobGwStatPgwRestNotifyAck)	long	The value of tmnxMobGwStatPgwRestNotifyAck indicates the number of Packet Data Network Gateway (PGW) restart notification acknowledgements received from or transmitted to this peer.
rabReqRadioLoss [Rab Req Radio Loss] (tmnxMobGwStatRabReqRadioLoss)	long	The value of tmnxMobGwStatRabReqRadioLoss indicates the number of Release Access Bearer packet with abnormal radio link loss indication Information Element (IE) bit set transmitted to this peer.
receivedEchoRequests [Received Echo Requests] (tmnxMobGwStatRxEchoRequests)	long	The value of tmnxMobGwStatRxEchoRequests indicates the number of echo request messages received from this peer.
receivedEchoResponse [Received Echo Response] (tmnxMobGwStatRxEchoResp)	long	The value of tmnxMobGwStatRxEchoResp indicates the number of echo response messages received from this peer.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedMalformedPkts [Received Malformed Pkts] (tmnxMobGwStatRxMalfrmedPkts)	long	The value of tmnxMobGwStatRxMalfrmedPkts indicates the number of malformed packets received from this peer.
receivedMissnglePkts [Received Missng le Pkts] (tmnxMobGwStatRxMissnglePkts)	long	The value of tmnxMobGwStatRxMissnglePkts indicates the number of missing mandatory Information Element (IE) packets received from this peer.
receivedUnknownPkts [Received Unknown Pkts] (tmnxMobGwStatRxUnknownPkts)	long	The value of tmnxMobGwStatRxUnknownPkts indicates the number of unknown message type packets received from this peer.
recordCount [Record Count] (tmnxMobGwStatRecordCount)	long	The value of tmnxMobGwStatRecordCount indicates the number of User Equipments (UEs) that are attached to this peer.
refPtName [Ref Pt Name] (tmnxMobGwSigRefPtName)	String	The value of tmnxMobGwSigRefPtName specifies the name of this reference point. When an entry is created for a single interface, the value of tmnxMobGwSigRefPtName is set to 'default'.
releaseAccessBearerRequest [Release Access Bearer Request] (tmnxMobGwStatRelAccBearReq)	long	The value of tmnxMobGwStatRelAccBearReq indicates the number of Release Access Bearers Request messages received from this peer or transmitted to this peer.
releaseAccessBearerResponseFailure [Release Access Bearer Response Failure] (tmnxMobGwStatRelAccBearRspFail)	long	The value of tmnxMobGwStatRelAccBearRspFail indicates the number of Release Access Bearers Response messages received from or transmitted to this peer with cause code not set to request accepted.
releaseAccessBearerResponseSucceed [Release Access Bearer Response Succeed] (tmnxMobGwStatRelAccBearRspSucc)	long	The value of tmnxMobGwStatRelAccBearRspSucc indicates the number of Release Access Bearers Response messages received from or transmitted to this peer with cause code set to request accepted.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
reqPauseChrg [Req Pause Chrg] (tmnxMobGwStatMbReqPauseChrg)	long	The value of tmnxMobGwStatMbReqPauseChrg indicates the number of Modify Bearer Request packet with pause charging indication Information Element (IE) bit set received from this peer.
reqUnpauseChrg [Req Unpause Chrg] (tmnxMobGwStatMbReqUnpauseChrg)	long	The value of tmnxMobGwStatMbReqUnpauseChrg indicates the number of Modify Bearer Request packet with unpause charging indication Information Element (IE) bit set received from this peer.
resumeNotification [Resume Notification] (tmnxMobGwStatResNotify)	long	The value of tmnxMobGwStatResNotify indicates the number of resume notification requests received from this peer or transmitted to this peer.
resumeNotificationAckFailure [Resume Notification Ack Failure] (tmnxMobGwStatResNotifyAckFail)	long	The value of tmnxMobGwStatResNotifyAckFail indicates the number of resume notification acknowledgement failures received from this peer or transmitted to this peer.
resumeNotificationAckSucceed [Resume Notification Ack Succeed] (tmnxMobGwStatResNotifyAckSucc)	long	The value of tmnxMobGwStatResNotifyAckSucc indicates the number of resume notification acknowledgements received from this peer or transmitted to this peer.
suspendNotification [Suspend Notification] (tmnxMobGwStatSuspNotify)	long	The value of tmnxMobGwStatSuspNotify indicates the number of suspend notification requests received from this peer or transmitted to this peer.
suspendNotificationAckFailure [Suspend Notification Ack Failure] (tmnxMobGwStatSuspNotifyAckFail)	long	The value of tmnxMobGwStatSuspNotifyAckFail indicates the number of suspend notification acknowledgement failures received from this peer or transmitted to this peer.
suspendNotificationAckSucceed [Suspend Notification Ack Succeed] (tmnxMobGwStatSuspNotifyAckSucc)	long	The value of tmnxMobGwStatSuspNotifyAckSucc indicates the number of suspend notification acknowledgements received from this peer or transmitted to this peer.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transmittedEchoRequests [Transmitted Echo Requests] (tmnxMobGwStatTxEchoRequests)	long	The value of tmnxMobGwStatTxEchoRequests indicates the number of echo request messages transmitted to this peer.
transmittedEchoResponse [Transmitted Echo Response] (tmnxMobGwStatTxEchoResp)	long	The value of tmnxMobGwStatTxEchoResp indicates the number of echo response messages transmitted to this peer.
type [Type] (tmnxMobGwSigRefPtType)	int	The value of tmnxMobGwSigRefPtType specifies the type of this reference point.
ubPcscfServer [Ub Pcsf Server] (tmnxMobGwStatUbPcscfServer)	long	The value of tmnxMobGwStatUbPcscfServer indicates the number of Update Bearer (UB) with Proxy Call Session Control Function (P-CSCF) servers received or transmitted from this peer.
uniqueDeleteSessionRequests [Unique Delete Session Requests] (tmnxMobGwStatDelSessReqUnique)	long	The value of tmnxMobGwStatDelSessReqUnique indicates the unique number of delete session request messages received from this peer or transmitted to this peer.
uniqueModifyBearerRequests [Unique Modify Bearer Requests] (tmnxMobGwStatModBearReqUnique)	long	The value of tmnxMobGwStatModBearReqUnique indicates the unique number of modify bearer request messages received from or transmitted to this peer.
updateBearerRequest [Update Bearer Request] (tmnxMobGwStatUpdBearReq)	long	The value of tmnxMobGwStatUpdBearReq indicates the number of update bearer request messages received from or transmitted to this peer.
updateBearerResponseFailure [Update Bearer Response Failure] (tmnxMobGwStatUpdBearRspFail)	long	The value of tmnxMobGwStatUpdBearRspFail indicates the number of update bearer response messages received from or transmitted to this peer with cause code not set to request accepted.

Table 546 ltegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
updateBearerResponseSucceed [Update Bearer Response Succeed] (tmnxMobGwStatUpdBearRspSucc)	long	The value of tmnxMobGwStatUpdBearRspSucc indicates the number of update bearer response messages received from or transmitted to this peer with cause code set to request accepted.
<p>DedicatedBearerIdleTimeOut</p> <p>MIB entry name: tmnxMobPdnApnEntry</p> <p>Entry description: Each row entry represents an Access Point Name (APN). Entries can be created and deleted by the user.</p> <p>Table description (for tmnxMobPdnApnTable): The tmnxMobPdnApnTable has an entry for each Access Point Name (APN). An APN identifies an external network that is accessible from a terminal.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: lte.PdnApn</p>		
apnName [Apn Name] (tmnxMobPdnApnName)	String	The value of tmnxMobPdnApnName specifies the Access Point Name (APN).
cardSlotNum [Card Slot Num] (tmnxMobPdnCardSlotNum)	long	The value of tmnxMobPdnCardSlotNum indicates the slot number of this card.
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
epcId [Epc Id] (tmnxMobGwId)	long	The value of tmnxMobGwId uniquely identifies a mobile gateway configured in the system.

Table 546 ltegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
qci [Qci] (tmnxMobPdnApnDedBrIdITmtQci)	long	The value of tmnxMobPdnApnDedBrIdITmtQci indicates the QoS Class Identifier (QCI) value.
timeout [Timeout] (tmnxMobPdnApnDedBrIdITmtTimeout)	long	The value of tmnxMobPdnApnDedBrIdITmtTimeout indicates the idle timeout interval for a specific QCI value.
<p>Gtpv1v0CauseCodeStats</p> <p>MIB entry name: tmnxMobGwGtpv1v0CauseCodeEntry</p> <p>Entry description: Each row entry represents a peer on the General Packet Radio Service (GPRS) Tunneling Protocol Version 1 (GTPv1) or Version 0 (GTPv0) Control plane (GTP-C) reference point and contains cause code statistics for this peer on a card.</p> <p>Table description (for tmnxMobGwGtpv1v0CauseCodeTable): The tmnxMobGwGtpv1v0CauseCodeTable has an entry for each peer on the General Packet Radio Service (GPRS) Tunneling Protocol Version 1 (GTPv1) or Version 0 (GTPv0) Control plane (GTP-C) reference point served by a Serving GPRS Support Node (SGSN).</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • ltegsn.GnPeer • ltegsn.GpPeer 		
allDynAddrOccupied [All Dyn Addr Occupied] (tmnxMobGwV1v0AllDynAddrOccupied)	long	The value of tmnxMobGwV1v0AllDynAddrOccupied indicates the number of messages received from or transmitted to this peer with cause code set to all dynamic Packet Data Protocol (PDP) addresses are occupied.
apnAccessDenied [Apn Access Denied] (tmnxMobGwV1v0ApnAccessDenied)	long	The value of tmnxMobGwV1v0ApnAccessDenied indicates the number of messages received from or transmitted to this peer with cause code set to Access Point Name (APN) access denied with no subscription.
apnCongestion [Apn Congestion] (tmnxMobGwV1v0ApnCongestion)	long	The value of tmnxMobGwV1v0ApnCongestion indicates the number of messages received from or transmitted to this peer with cause code set to Access Point Name (APN) congestion.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
apnRstrIncompatible [Apn Rstr Incompatible] (tmnxMobGwV1v0ApnRstrIncompatible)	long	The value of tmnxMobGwV1v0ApnRstrIncompatible indicates the number of messages received from or transmitted to this peer with cause code set to Access Point Name (APN) restriction type incompatibility with currently active Packet Data Protocol (PDP) contexts.
authFailure [Auth Failure] (tmnxMobGwV1v0AuthFailure)	long	The value of tmnxMobGwV1v0AuthFailure indicates the number of messages received from or transmitted to this peer with cause code set to authentication failure.
bcmViolation [Bcm Violation] (tmnxMobGwV1v0BcmViolation)	long	The value of tmnxMobGwV1v0BcmViolation indicates the number of messages received from or transmitted to this peer with cause code set to bearer control mode violation.
cardSlotNumber [Card Slot Number] (tmnxCardSlotNum)	long	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
collisionNwInitReq [Collision Nw Init Req] (tmnxMobGwV1v0CollisionNwInitReq)	long	The value of tmnxMobGwV1v0CollisionNwInitReq indicates the number of messages received from or transmitted to this peer with cause code set to collision with network initiated request.
contextNotFound [Context Not Found] (tmnxMobGwV1v0ContextNotFound)	long	The value of tmnxMobGwV1v0ContextNotFound indicates the number of messages received from or transmitted to this peer with cause code set to context not found.
epcId [Epc Id] (tmnxMobGwId)	long	The value of tmnxMobGwId uniquely identifies a mobile gateway configured in the system.

Table 546 ltegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
imsilmeiNotKnown [Imsi Imei Not Known] (tmnxMobGwV1v0ImsilmeiNotKnown)	long	The value of tmnxMobGwV1v0ImsilmeiNotKnown indicates the number of messages received from or transmitted to this peer with cause code set to International Mobile Subscriber Identity (IMSI) or International Mobile Equipment Identity (IMEI) not known.
ingrEgrDir [Ingr Egr Dir] (tmnxMobGwV1v0IngrEgrDir)	int	The value of tmnxMobGwV1v0IngrEgrDir indicates the transmission direction of the messages.
invCorrelationId [Inv Correlation Id] (tmnxMobGwV1v0InvCorrelationId)	long	The value of tmnxMobGwV1v0InvCorrelationId indicates the number of messages received from or transmitted to this peer with cause code set to invalid correlation identifier.
invMsgFormat [Inv Msg Format] (tmnxMobGwV1v0InvMsgFormat)	long	The value of tmnxMobGwV1v0InvMsgFormat indicates the number of messages received from or transmitted to this peer with cause code set to invalid message format.
mandleIncorrect [Mand le Incorrect] (tmnxMobGwV1v0MandleIncorrect)	long	The value of tmnxMobGwV1v0MandleIncorrect indicates the number of messages received from or transmitted to this peer with cause code set to mandatory Information Element (IE) incorrect.
mandleMissing [Mand le Missing] (tmnxMobGwV1v0MandleMissing)	long	The value of tmnxMobGwV1v0MandleMissing indicates the number of messages received from or transmitted to this peer with cause code set to mandatory Information Element (IE) missing.
missingOrUnknownApn [Missing Or Unknown Apn] (tmnxMobGwV1v0MissingOrUnknownApn)	long	The value of tmnxMobGwV1v0MissingOrUnknownApn indicates the number of messages received from or transmitted to this peer with cause code set to missing or unknown Access Point Name (APN).

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
msNotGprsResponding [Ms Not Gprs Responding] (tmnxMobGwV1v0MsNotGprsResponding)	long	The value of tmnxMobGwV1v0MsNotGprsResponding indicates the number of messages received from or transmitted to this peer with cause code set to Mobile Subscriber (MS) is not General Packet Radio Service (GPRS) responding.
msRefuses [Ms Refuses] (tmnxMobGwV1v0MsRefuses)	long	The value of tmnxMobGwV1v0MsRefuses indicates the number of messages received from or transmitted to this peer with cause code set to Mobile Subscriber (MS) refuses.
newPdpTypeNwPref [New Pdp Type Nw Pref] (tmnxMobGwV1v0NewPdpTypeNwPref)	long	The value of tmnxMobGwV1v0NewPdpTypeNwPref indicates the number of messages received from or transmitted to this peer with cause code set to new Packet Data Protocol (PDP) type due to network preference.
newPdpTypeSnglAdrBr [New Pdp Type Sngl Adr Br] (tmnxMobGwV1v0NewPdpTypeSnglAdrBr)	long	The value of tmnxMobGwV1v0NewPdpTypeSnglAdrBr indicates the number of messages received from or transmitted to this peer with cause code set to new Packet Data Protocol (PDP) type due to single address bearer only.
noMem [No Mem] (tmnxMobGwV1v0NoMem)	long	The value of tmnxMobGwV1v0NoMem indicates the number of messages received from or transmitted to this peer with cause code set to no memory is available.
noResources [No Resources] (tmnxMobGwV1v0NoResources)	long	The value of tmnxMobGwV1v0NoResources indicates the number of messages received from or transmitted to this peer with cause code set to no resources available.
nonExistent [Non Existent] (tmnxMobGwV1v0NonExistent)	long	The value of tmnxMobGwV1v0NonExistent indicates the number of messages received from or transmitted to this peer with cause code set to non-existent.
optleIncorrect [Opt le Incorrect] (tmnxMobGwV1v0OptleIncorrect)	long	The value of tmnxMobGwV1v0OptleIncorrect indicates the number of messages received from or transmitted to this peer with cause code set to optional Information Element (IE) incorrect.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
others [Others] (tmnxMobGwV1v0Others)	long	The value of tmnxMobGwV1v0Others indicates the number of messages received from or transmitted to this peer with cause code set to other values.
pdpAdrInactTimerExp [Pdp Adr Inact Timer Exp] (tmnxMobGwV1v0PdpAdrInactTimerExp)	long	The value of tmnxMobGwV1v0PdpAdrInactTimerExp indicates the number of messages received from or transmitted to this peer with cause code set to Packet Data Protocol (PDP) address inactivity timer expires.
pdpCtxActdWoTft [Pdp Ctx Actd Wo Tft] (tmnxMobGwV1v0PdpCtxActdWoTft)	long	The value of tmnxMobGwV1v0PdpCtxActdWoTft indicates the number of messages received from or transmitted to this peer with cause code set to Packet Data Protocol (PDP) context without Traffic Flow Template (TFT) already activated.
peerIpAddress [Peer Ip Address] (tmnxMobGwSigPeerAddress)	String	The value of tmnxMobGwSigPeerAddress indicates the IP address of this peer on signaling reference points.
peerIpAddressType [Peer Ip Address Type] (tmnxMobGwSigPeerAddressType)	int	The value of tmnxMobGwSigPeerAddressType indicates the type of address represented by tmnxMobGwSigPeerAddress.
peerType [Peer Type] (tmnxMobGwSigPeerType)	int	The tmnxMobGwSigPeerType is an enumerated integer that describes the type of a reference point peer.
reactivationReq [Reactivation Req] (tmnxMobGwV1v0ReactivationReq)	long	The value of tmnxMobGwV1v0ReactivationReq indicates the number of messages received from or transmitted to this peer with cause code set to reactivation requested.
refPtName [Ref Pt Name] (tmnxMobGwSigRefPtName)	String	The value of tmnxMobGwSigRefPtName specifies the name of this reference point. When an entry is created for a single interface, the value of tmnxMobGwSigRefPtName is set to 'default'.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
reqAccepted [Req Accepted] (tmnxMobGwV1v0ReqAccepted)	long	The value of tmnxMobGwV1v0ReqAccepted indicates the number of messages received from or transmitted to this peer with cause code set to request accepted.
semanticErrPktFlt [Semantic Err Pkt Flt] (tmnxMobGwV1v0SemanticErrPktFlt)	long	The value of tmnxMobGwV1v0SemanticErrPktFlt indicates the number of messages received from or transmitted to this peer with cause code set to semantic errors in packet filters.
semanticErrTft [Semantic Err Tft] (tmnxMobGwV1v0SemanticErrTft)	long	The value of tmnxMobGwV1v0SemanticErrTft indicates the number of messages received from or transmitted to this peer with cause code set to semantic error in the Traffic Flow Template (TFT) operation.
serviceNotSupported [Service Not Supported] (tmnxMobGwV1v0ServiceNotSupported)	long	The value of tmnxMobGwV1v0ServiceNotSupported indicates the number of messages received from or transmitted to this peer with cause code set to service not supported.
syntacticErrPktFlt [Syntactic Err Pkt Flt] (tmnxMobGwV1v0SyntacticErrPktFlt)	long	The value of tmnxMobGwV1v0SyntacticErrPktFlt indicates the number of messages received from or transmitted to this peer with cause code set to syntactic errors in packet filters.
syntacticErrTft [Syntactic Err Tft] (tmnxMobGwV1v0SyntacticErrTft)	long	The value of tmnxMobGwV1v0SyntacticErrTft indicates the number of messages received from or transmitted to this peer with cause code set to syntactic error in the Traffic Flow Template (TFT) operation.
sysFailure [Sys Failure] (tmnxMobGwV1v0SysFailure)	long	The value of tmnxMobGwV1v0SysFailure indicates the number of messages received from or transmitted to this peer with cause code set to system failure.
type [Type] (tmnxMobGwSigRefPtType)	int	The value of tmnxMobGwSigRefPtType specifies the type of this reference point.

Table 546 ltegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
unknownMandExtHdr [Unknown Mand Ext Hdr] (tmnxMobGwV1v0UnknownMandExtHdr)	long	The value of tmnxMobGwV1v0UnknownMandExtHdr indicates the number of messages received from or transmitted to this peer with cause code set to unknown mandatory extension header.
unknownPdpAdrOrType [Unknown Pdp Adr Or Type] (tmnxMobGwV1v0UnknownPdpAdrOrType)	long	The value of tmnxMobGwV1v0UnknownPdpAdrOrType indicates the number of messages received from or transmitted to this peer with cause code set to unknown Packet Data Protocol (PDP) address or PDP type.
userAuthFailed [User Auth Failed] (tmnxMobGwV1v0UserAuthFailed)	long	The value of tmnxMobGwV1v0UserAuthFailed indicates the number of messages received from or transmitted to this peer with cause code set to user authentication failed.
verNotSupported [Ver Not Supported] (tmnxMobGwV1v0VerNotSupported)	long	The value of tmnxMobGwV1v0VerNotSupported indicates the number of messages received from or transmitted to this peer with cause code set to version not supported.
<p>Gtpv2CauseCodeStats</p> <p>MIB entry name: tmnxMobGwGtpv2CauseCodeEntry</p> <p>Entry description: Each row entry represents a peer on a General Packet Radio Service (GPRS) Tunneling Protocol-Version 2 (GTPv2) reference point and contains cause code statistics for this peer on a card.</p> <p>Table description (for tmnxMobGwGtpv2CauseCodeTable): The tmnxMobGwGtpv2CauseCodeTable has an entry for each peer on the General Packet Radio Service (GPRS) Tunneling Protocol-Version 2 (GTPv2) reference points.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • lte.S11Peer • lte.S2aGtpPeer • lte.S5Peer • lte.S8Peer • ltepmip.S2bPeer • ltesgsn.S4cPeer 		

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
accesChngNo3gppTo3gpp [Acces Chng No 3 gpp To 3 gpp] (tmnxMobGwCcAccesChngNo3gppTo3gpp)	long	The value of tmnxMobGwCcAccesChngNo3gppTo3gpp indicates the number of messages received on/transmitted from this peer with cause code set to access changed from Non-3GPP to 3GPP.
allDynAddrOccupied [All Dyn Addr Occupied] (tmnxMobGwCcAllDynAddrOccupied)	long	The value of tmnxMobGwCcAllDynAddrOccupied indicates the number of messages received on/transmitted from this peer with cause code set to all dynamic addresses are occupied.
apnAccessDenied [Apn Access Denied] (tmnxMobGwCcApnAccessDenied)	long	The value of tmnxMobGwCcApnAccessDenied indicates the number of messages received on/transmitted from this peer with cause code set to Access Point Name (APN) access denied - no subscription.
apnCongestion [Apn Congestion] (tmnxMobGwCcApnCongestion)	long	The value of tmnxMobGwCcApnCongestion indicates the number of messages received on/transmitted from this peer with cause code set to Access Point Name (APN) congestion.
apnRestrTypeIncompat [Apn Restr Type Incompat] (tmnxMobGwCcApnRestrTypeIncompat)	long	The value of tmnxMobGwCcApnRestrTypeIncompat indicates the number of messages received on/transmitted from this peer with cause code set to APN restriction type incompatible with currently active PDN connection.
brrHandleNotSupprtd [Brr Handle Not Supprtd] (tmnxMobGwCcBrrHandleNotSupprtd)	long	The value of tmnxMobGwCcBrrHandleNotSupprtd indicates the number of messages received on/transmitted from this peer with cause code set to bearer handling not supported.
cardSlotNumber [Card Slot Number] (tmnxCardSlotNum)	long	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassis-Index are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
condleMissing [Cond le Missing] (tmnxMobGwCcCondleMissing)	long	The value of tmnxMobGwCcCondleMissing indicates the number of messages received on/transmitted from this peer with cause code set to conditional Information Elements (IE) missing.
contextNotFound [Context Not Found] (tmnxMobGwCcContextNotFound)	long	The value of tmnxMobGwCcContextNotFound indicates the number of messages received on/transmitted from this peer with cause code set to context not found.
deniedRat [Denied Rat] (tmnxMobGwCcDeniedRat)	long	The value of tmnxMobGwCcDeniedRat indicates the number of messages received on/transmitted from this peer with cause code set to denied in Radio Access Technology (RAT).
epcId [Epc Id] (tmnxMobGwId)	long	The value of tmnxMobGwId uniquely identifies a mobile gateway configured in the system.
greKeyNotFound [Gre Key Not Found] (tmnxMobGwCcGREKeyNotFound)	long	The value of tmnxMobGwCcGREKeyNotFound indicates the number of messages received on/transmitted from this peer with cause code set to GRE key not found.
gtpcEntityCongestion [Gtpc Entity Congestion] (tmnxMobGwCcGtpcEntityCongestion)	long	The value of tmnxMobGwCcGtpcEntityCongestion indicates the number of messages received on/transmitted from this peer with cause code set to GTP-C Entity Congestion.
handoverInProgress [Handover In Progress] (tmnxMobGwCcHandoverInProgress)	long	The value of tmnxMobGwCcInvalidPeer indicates the number of messages received on/transmitted from this peer with cause code set to temporarily rejected due to handover procedure in progress.
imsilmeiNotKnown [Imsi lmei Not Known] (tmnxMobGwCcImsilmeiNotKnown)	long	The value of tmnxMobGwCcImsilmeiNotKnown indicates the number of messages received on/transmitted from this peer with cause code set to International Mobile Subscriber Identity (IMSI) or International Mobile Equipment Identity (IMEI) not known.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingrEgrDir [Ingr Egr Dir] (tmnxMobGwIngrEgrDir)	int	The value of tmnxMobGwIngrEgrDir indicates the transmission direction of the messages.
invMsgFormat [Inv Msg Format] (tmnxMobGwCclInvMsgFormat)	long	The value of tmnxMobGwCclInvMsgFormat indicates the number of messages received on/transmitted from this peer with cause code set to invalid Message Format.
invalidLength [Invalid Length] (tmnxMobGwCclInvalidLength)	long	The value of tmnxMobGwCclInvalidLength indicates the number of messages received on/transmitted from this peer with cause code set to invalid length.
invalidOvllenTrigPg [Invalid Ovllen Trig Pg] (tmnxMobGwCclInvalidOvllenTrigPg)	long	The value of tmnxMobGwCclInvalidOvllenTrigPg indicates the number of messages received on/transmitted from this peer with cause code set to invalid overall length of the triggered response message and a piggybacked initial message.
invalidPeer [Invalid Peer] (tmnxMobGwCclInvalidPeer)	long	The value of tmnxMobGwCclInvalidPeer indicates the number of messages received on/transmitted from this peer with cause code set to invalid peer.
invalidReplyRemPeer [Invalid Reply Rem Peer] (tmnxMobGwCclInvalidReplyRemPeer)	long	The value of tmnxMobGwCclInvalidReplyRemPeer indicates the number of messages received on/transmitted from this peer with cause code set to invalid reply from remote peer.
isrDeactivation [Isr Deactivation] (tmnxMobGwCclISRDeactivation)	long	The value of tmnxMobGwCclISRDeactivation indicates the number of messages received on/transmitted from this peer with cause code set to ISR Deactivation.
mandleMissing [Mandle Missing] (tmnxMobGwCcMandleMissing)	long	The value of tmnxMobGwCcMandleMissing indicates the number of messages received on/transmitted from this peer with cause code set to mandatory Information Elements (IE) missing.

Table 546 ltegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
missingOrUnknownApn [Missing Or Unknown Apn] (tmnxMobGwCcMissingOrUnknownApn)	long	The value of tmnxMobGwCcMissingOrUnknownApn indicates the number of messages received on/transmitted from this peer with cause code set to missing or unknown Access Point Name (APN).
mndleIncorrect [Mnd le Incorrect] (tmnxMobGwCcMndleIncorrect)	long	The value of tmnxMobGwCcMndleIncorrect indicates the number of messages received on/transmitted from this peer with cause code set to mandatory Information Elements (IE) incorrect.
modifNoLimitS1uBearer [Modif No Limit S1 u Bearer] (tmnxMobGwCcModifNoLimitS1uBearer)	long	The value of tmnxMobGwCcModifNoLimitS1uBearer indicates the number of messages received on/transmitted from this peer with cause code set to modifications not limited to S1-U bearers.
multiPdnConNotAllowed [Multi Pdn Con Not Allowed] (tmnxMobGwCcMultiPdnConNotAllowed)	long	The value of tmnxMobGwCcMultiPdnConNotAllowed indicates the number of messages received on/transmitted from this peer with cause code set to multiple PDN connections for a given APN not allowed.
noMem [No Mem] (tmnxMobGwCcNoMem)	long	The value of tmnxMobGwCcNoMem indicates the number of messages received on/transmitted from this peer with cause code set to no memory available.
noResources [No Resources] (tmnxMobGwCcNoResources)	long	The value of tmnxMobGwCcNoResources indicates the number of messages received on/transmitted from this peer with cause code set to no resources available.
nwFailure [Nw Failure] (tmnxMobGwCcNetworkFailure)	long	The value of tmnxMobGwCcNetworkFailure indicates the number of messages received on/transmitted from this peer with cause code set to network failure.
others [Others] (tmnxMobGwCcOthers)	long	The value of tmnxMobGwCcOthers indicates the number of messages received on/transmitted from this peer with cause code set to other values.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pdnConInactivTimerExp [Pdn Con Inactiv Timer Exp] (tmnxMobGwCcPdnConInactivTimerExp)	long	The value of tmnxMobGwCcPdnConInactivTimerExp indicates the number of messages received on/transmitted from this peer with cause code set to PDN connection inactivity timer expired.
pdnNwPrefs [Pdn Nw Prefs] (tmnxMobGwCcPdnNwPrefs)	long	The value of tmnxMobGwCcPdnNwPrefs indicates the number of messages received on/transmitted from this peer with cause code set to new Packet Data Network (PDN) type due to network preference.
pdnReconToApnDisallow [Pdn Recon To Apn Disallow] (tmnxMobGwCcPdnReconToApnDisallow)	long	The value of tmnxMobGwCcPdnReconToApnDisallow indicates the number of messages received on/transmitted from this peer with cause code set to PDN reconnection to this APN disallowed.
pdnSingleAddrBearer [Pdn Single Addr Bearer] (tmnxMobGwCcPdnSingleAddrBearer)	long	The value of tmnxMobGwCcPdnSingleAddrBearer indicates the number of messages received on/transmitted from this peer with cause code set to new Packet Data Network (PDN) type due to single address bearer only.
peerIpAddress [Peer Ip Address] (tmnxMobGwSigPeerAddress)	String	The value of tmnxMobGwSigPeerAddress indicates the IP address of this peer on signaling reference points.
peerIpAddressType [Peer Ip Address Type] (tmnxMobGwSigPeerAddressType)	int	The value of tmnxMobGwSigPeerAddressType indicates the type of address represented by tmnxMobGwSigPeerAddress.
peerType [Peer Type] (tmnxMobGwSigPeerType)	int	The tmnxMobGwSigPeerType is an enumerated integer that describes the type of a reference point peer.
prefPdnTypeNotSuprt [Pref Pdn Type Not Suprt] (tmnxMobGwCcPrefPdnTypeNotSuprt)	long	The value of tmnxMobGwCcPrefPdnTypeNotSuprt indicates the number of messages received on/transmitted from this peer with cause code set to preferred Packet Data Network (PDN) type not supported.

Table 546 ltegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
protoNotSupported [Proto Not Supported] (tmnxMobGwCcProtoNotSupported)	long	The value of tmnxMobGwCcProtoNotSupported indicates the number of messages received on/transmitted from this peer with cause code set to protocol type not supported.
qosParameterMismatch [Qos Parameter Mismatch] (tmnxMobGwCcQoSParameterMismatch)	long	The value of tmnxMobGwCcQoSParameterMismatch indicates the number of messages received on/transmitted from this peer with cause code set to QoS parameter mismatch.
ratChgdNon3gpp [Rat Chgd Non 3 gpp] (tmnxMobGwCcRatChgdNon3gpp)	long	The value of tmnxMobGwCcRatChgdNon3gpp indicates the number of messages received on/transmitted from this peer with cause code set to Radio Access Technology (RAT) changed from 3rd Generation Partnership Project (3GPP) to Non-3GPP.
reactivationReq [Reactivation Req] (tmnxMobGwCcReactivationReq)	long	The value of tmnxMobGwCcReactivationReq indicates the number of messages received on/transmitted from this peer with cause code set to reactivation requested.
refPtName [Ref Pt Name] (tmnxMobGwSigRefPtName)	String	The value of tmnxMobGwSigRefPtName specifies the name of this reference point. When an entry is created for a single interface, the value of tmnxMobGwSigRefPtName is set to 'default'.
remPeerNoResponse [Rem Peer No Response] (tmnxMobGwCcRemPeerNoResponse)	long	The value of tmnxMobGwCcRemPeerNoResponse indicates the number of messages received on/transmitted from this peer with cause code set to remote peer not responding.
reqAccepted [Req Accepted] (tmnxMobGwCcReqAccepted)	long	The value of tmnxMobGwCcReqAccepted indicates the number of messages received on/transmitted from this peer with cause code set to request accepted.
reqAcceptedPar [Req Accepted Par] (tmnxMobGwCcReqAcceptedPar)	long	The value of tmnxMobGwCcReqAcceptedPar indicates the number of messages received on/transmitted from this peer with cause code set to request accepted partially.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
requestRejected [Request Rejected] (tmnxMobGwCcRequestRejected)	long	The value of tmnxMobGwCcRequestRejected indicates the number of messages received on/transmitted from this peer with cause code set to request rejected.
semanticErrPktFlt [Semantic Err Pkt Flt] (tmnxMobGwCcSemanticErrPktFlt)	long	The value of tmnxMobGwCcSemanticErrPktFlt indicates the number of messages received on/transmitted from this peer with cause code set to semantic errors in packet filters.
semanticErrTad [Semantic Err Tad] (tmnxMobGwCcSemanticErrTad)	long	The value of tmnxMobGwCcSemanticErrTad indicates the number of messages received on/transmitted from this peer with cause code set to semantic error in the Traffic Aggregate Description (TAD) operation.
semanticErrTft [Semantic Err Tft] (tmnxMobGwCcSemanticErrTft)	long	The value of tmnxMobGwCcSemanticErrTft indicates the number of messages received on/transmitted from this peer with cause code set to semantic error in the Traffic Flow Template (TFT) operation.
serviceDenied [Service Denied] (tmnxMobGwCcServiceDenied)	long	The value of tmnxMobGwCcServiceDenied indicates the number of messages received on/transmitted from this peer with cause code set to service denied.
serviceNotSupported [Service Not Supported] (tmnxMobGwCcServiceNotSupported)	long	The value of tmnxMobGwCcServiceNotSupported indicates the number of messages received on/transmitted from this peer with cause code set to service not supported.
sgwRecoveryIdle [Sgw Recovery Idle] (tmnxMobGwCcSgwRecoveryIdle)	long	The value of tmnxMobGwCcSgwRecoveryIdle indicates the number of messages received on/transmitted from this peer with cause code set to idle recover.
syntacticErrTad [Syntactic Err Tad] (tmnxMobGwCcSyntacticErrTad)	long	The value of tmnxMobGwCcSemanticErrTad indicates the number of messages received on/transmitted from this peer with cause code set to syntactic error in the Traffic Aggregate Description (TAD) operation.

Table 546 ltegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
syntaxErrPktFilter [Syntax Err Pkt Filter] (tmnxMobGwCcSyntaxErrPktFilter)	long	The value of tmnxMobGwCcSyntaxErrPktFilter indicates the number of messages received on/transmitted from this peer with cause code set to syntactic errors in packet filters.
syntaxErrTft [Syntax Err Tft] (tmnxMobGwCcSyntaxErrTft)	long	The value of tmnxMobGwCcSyntaxErrTft indicates the number of messages received on/transmitted from this peer with cause code set to syntactic error in the Traffic Flow Template (TFT) operation.
sysFailure [Sys Failure] (tmnxMobGwCcSysFailure)	long	The value of tmnxMobGwCcSysFailure indicates the number of messages received on/transmitted from this peer with cause code set to system failure.
type [Type] (tmnxMobGwSigRefPtType)	int	The value of tmnxMobGwSigRefPtType specifies the type of this reference point.
ueAlreadyReattached [Ue Already Reattached] (tmnxMobGwCcUeAlreadyReattached)	long	The value of tmnxMobGwCcUeAlreadyReattached indicates the number of messages received on/transmitted from this peer with cause code set to UE already re-attached.
ueCtxActdWithoutTft [Ue Ctx Actd Without Tft] (tmnxMobGwCcUeCtxActdWithoutTft)	long	The value of tmnxMobGwCcUeCtxActdWithoutTft indicates the number of messages received on/transmitted from this peer with cause code set to User Equipment (UE) context without Traffic Flow Template (TFT) already activated.
ueNotResponding [Ue Not Responding] (tmnxMobGwCcUeNotResponding)	long	The value of tmnxMobGwCcUeNotResponding indicates the number of messages received on/transmitted from this peer with cause code set to User Equipment (UE) not responding.
ueRefuses [Ue Refuses] (tmnxMobGwCcUeRefuses)	long	The value of tmnxMobGwCcUeRefuses indicates the number of messages received on/transmitted from this peer with cause code set to User Equipment (UE) refuses.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
unablePageDueSusp [Unable Page Due Susp] (tmnxMobGwCcUnablePageDueSusp)	long	The value of tmnxMobGwCcUnablePageDueSusp indicates the number of messages received on/transmitted from this peer with cause code set to unable to page User Equipment (UE) due to Suspension.
unableToPageUe [Unable To Page Ue] (tmnxMobGwCcUnableToPageUe)	long	The value of tmnxMobGwCcUnableToPageUe indicates the number of messages received on/transmitted from this peer with cause code set to unable to page User Equipment (UE).
userAuthFailed [User Auth Failed] (tmnxMobGwCcUserAuthFailed)	long	The value of tmnxMobGwCcUserAuthFailed indicates the number of messages received on/transmitted from this peer with cause code set to user authentication failed.
verNotSupported [Ver Not Supported] (tmnxMobGwCcVerNotSupported)	long	The value of tmnxMobGwCcVerNotSupported indicates the number of messages received on/transmitted from this peer with cause code set to version not supported by next peer.
<p>PcmdStats</p> <p>MIB entry name: tmnxMobGwEntry</p> <p>Entry description: Each row entry represents a mobile gateway. Entries can be created and deleted by the user. The values of tmnxMobGwRowStatus and tmnxMobGwType must be set in the same SNMP SET PDU for the row creation to succeed.</p> <p>Table description (for tmnxMobGwTable): The tmnxMobGwTable has an entry for each mobile gateway configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Ite.PDNGateway</p>		
epcId [Epc Id] (tmnxMobGwId)	long	The value of tmnxMobGwId uniquely identifies a mobile gateway configured in the system.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pcmdDataRecBytes [Pcmd Data Rec Bytes] (tmnxMobPdnPcmdDataRecBytes)	java. math. BigInteger	The value of tmnxMobPdnPcmdDataRecBytes indicates the number of bytes of all pcmd data records sent excluding IP/UDP.
pcmdDataRecCnt [Pcmd Data Rec Cnt] (tmnxMobPdnPcmdDataRecCnt)	java. math. BigInteger	The value of tmnxMobPdnPcmdDataRecCnt indicates the number of packets of all pcmd data records sent. Concatenation or fragmentation of records within packet is possible.
pcmdSessRecBytes [Pcmd Sess Rec Bytes] (tmnxMobPdnPcmdSessRecBytes)	java. math. BigInteger	The value of tmnxMobPdnPcmdSessRecBytes indicates the number of bytes of all pcmd session records sent excluding IP/UDP.
pcmdSessRecCnt [Pcmd Sess Rec Cnt] (tmnxMobPdnPcmdSessRecCnt)	java. math. BigInteger	The value of tmnxMobPdnPcmdSessRecCnt indicates the number of packets of all pcmd session records sent. Concatenation or fragmentation of records within packet is possible.
pcmdSessRecFailure [Pcmd Sess Rec Failure] (tmnxMobPdnPcmdSessRecFailure)	java. math. BigInteger	The value of tmnxMobPdnPcmdSessRecFailure indicates the number of pcmd session records with result failure.
pcmdSessRecLifeTimeFailure [Pcmd Sess Rec Life Time Failure] (tmnxMobPdnPcmdSessGenRecFailure)	java. math. BigInteger	The value of tmnxMobPdnPcmdSessGenRecFailure indicates the number of of all generated pcmd session records for failure cases. This includes sent and not sent records.
pcmdSessRecLifeTimeSuccess [Pcmd Sess Rec Life Time Success] (tmnxMobPdnPcmdSessGenRecSuccess)	java. math. BigInteger	The value of tmnxMobPdnPcmdSessGenRecSuccess indicates the number of of all generated pcmd session records for successful cases. This includes sent and not sent records.
pcmdSessRecSuccess [Pcmd Sess Rec Success] (tmnxMobPdnPcmdSessRecSuccess)	java. math. BigInteger	The value of tmnxMobPdnPcmdSessRecSuccess indicates the number of standard pcmd session records with result success.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pcmdSessRecSuccessExt [Pcmd Sess Rec Success Ext] (tmnxMobPdnPcmdSessRecSuccessExt)	java. math. BigInteger	The value of tmnxMobPdnPcmdSessRecSuccessExt indicates the number of extended pcmd session records with result success.
pcmdSessRecSuccessLtd [Pcmd Sess Rec Success Ltd] (tmnxMobPdnPcmdSessRecSuccessLtd)	java. math. BigInteger	The value of tmnxMobPdnPcmdSessRecSuccessLtd indicates the number of pcmd session records with result success downgraded from extended to standard due to CPU limitation.
slotId [Slot Id] (tmnxMobPdnCardSlotNum)	long	The value of tmnxMobPdnCardSlotNum indicates the slot number of this card.
<p>PdnApnAdditionalStats</p> <p>MIB entry name: tmnxMobPdnApnEntry</p> <p>Entry description: Each row entry represents an Access Point Name (APN). Entries can be created and deleted by the user.</p> <p>Table description (for tmnxMobPdnApnTable): The tmnxMobPdnApnTable has an entry for each Access Point Name (APN). An APN identifies an external network that is accessible from a terminal.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Ite.PdnApn</p>		
apnName [Apn Name] (tmnxMobPdnApnName)	String	The value of tmnxMobPdnApnName specifies the Access Point Name (APN).
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
empslmsSess [Emps lms Sess] (tmnxMobPdnApnStatEmpslmsSess)	long	The value of tmnxMobPdnApnStatEmpslmsSess indicates the number of Enhanced Multimedia Priority Service (eMPS) IMS sessions.
epcld [Epc Id] (tmnxMobGwld)	long	The value of tmnxMobGwld uniquely identifies a mobile gateway configured in the system.
epdgSvrAlloc [Epdg Svr Alloc] (tmnxMobPdnApnStatEpdgSvrAlloc)	long	The value of tmnxMobPdnApnStatEpdgSvrAlloc indicates the number of PDN Gateway (PGW) sessions with evolved Packet Data Gateway (ePDG) servers allocated.
epdgSvrReq [Epdg Svr Req] (tmnxMobPdnApnStatEpdgSvrReq)	long	The value of tmnxMobPdnApnStatEpdgSvrReq indicates the number of PDN Gateway (PGW) sessions with evolved Packet Data Gateway (ePDG) servers requested.
idl0mTo30m [Idl 0 m To 30 m] (tmnxMobPdnApnStatSessIdl0mTo30m)	long	The value of tmnxMobPdnApnStatSessIdl0mTo30m indicates the number of Packet Data Network (PDN) sessions that have been idle for zero to thirty minutes.
idl10dPlus [Idl 10 d Plus] (tmnxMobPdnApnStatSessIdl10dPlus)	long	The value of tmnxMobPdnApnStatSessIdl10dPlus indicates the number of Packet Data Network (PDN) sessions that have been idle for more than ten days.
idl12hTo24h [Idl 12 h To 24 h] (tmnxMobPdnApnStatSessIdl12hTo24h)	long	The value of tmnxMobPdnApnStatSessIdl12hTo24h indicates the number of Packet Data Network (PDN) sessions that have been idle for twelve hours to twenty four hours.
idl1dTo2d [Idl 1 d To 2 d] (tmnxMobPdnApnStatSessIdl1dTo2d)	long	The value of tmnxMobPdnApnStatSessIdl1dTo2d indicates the number of Packet Data Network (PDN) sessions that have been idle for one day to two days.
idl1hTo3h [Idl 1 h To 3 h] (tmnxMobPdnApnStatSessIdl1hTo3h)	long	The value of tmnxMobPdnApnStatSessIdl1hTo3h indicates the number of Packet Data Network (PDN) sessions that have been idle for one hour to three hours.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
idl2dTo5d [Idl 2 d To 5 d] (tmnxMobPdnApnStatSessIdl2dTo5d)	long	The value of tmnxMobPdnApnStatSessIdl2dTo5d indicates the number of Packet Data Network (PDN) sessions that have been idle for two days to five days.
idl30mTo1h [Idl 30 m To 1 h] (tmnxMobPdnApnStatSessIdl30mTo1h)	long	The value of tmnxMobPdnApnStatSessIdl30mTo1h indicates the number of Packet Data Network (PDN) sessions that have been idle for thirty minutes to one hour.
idl3hTo6h [Idl 3 h To 6 h] (tmnxMobPdnApnStatSessIdl3hTo6h)	long	The value of tmnxMobPdnApnStatSessIdl3hTo6h indicates the number of Packet Data Network (PDN) sessions that have been idle for three hours to six hours.
idl5dTo10d [Idl 5 d To 10 d] (tmnxMobPdnApnStatSessIdl5dTo10d)	long	The value of tmnxMobPdnApnStatSessIdl5dTo10d indicates the number of Packet Data Network (PDN) sessions that have been idle for five days to ten days.
idl6hTo12h [Idl 6 h To 12 h] (tmnxMobPdnApnStatSessIdl6hTo12h)	long	The value of tmnxMobPdnApnStatSessIdl6hTo12h indicates the number of Packet Data Network (PDN) sessions that have been idle for six hours to twelve hours.
nonIpPdnSess [Non Ip Pdn Sess] (tmnxMobPdnApnStatNonIpPdnSess)	long	The value of tmnxMobPdnApnStatNonIpPdnSess indicates the number of non-IP PDN Sessions being served.
rtrAdvPackTx [Rtr Adv Pack Tx] (tmnxMobPdnApnStatRtrAdvPackTx)	java. math. BigInte- ger	The value of tmnxMobPdnApnStatRtrAdvPackTx indicates the number of packets sent for Router Advertisement.
rtrSolPackDrop [Rtr Sol Pack Drop] (tmnxMobPdnApnStatRtrSolPackDrop)	java. math. BigInte- ger	The value of tmnxMobPdnApnStatRtrSolPackDrop indicates the number of packets dropped for Router Solicitation.

Table 546 ltegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rtrSolPackRx [Rtr Sol Pack Rx] (tmnxMobPdnApnStatRtrSolPackRx)	java. math. BigInteger	The value of tmnxMobPdnApnStatRtrSolPackRx indicates the number of packets received for Router Solicitation.
twagNswoSess [Twag NswoSess] (tmnxMobPdnApnStatTwagNswoSess)	long	The value of tmnxMobPdnApnStatTwagNswoSess indicates the number of Trusted WLAN Access Gateway (TWAG) NSW0 sessions.
twagSamogSess [Twag Samog Sess] (tmnxMobPdnApnStatTwagSamogSess)	long	The value of tmnxMobPdnApnStatTwagSamogSess indicates the number of Trusted WLAN Access Gateway (TWAG) SAMOG sessions.
<p>PdnApnAttachFailureStats</p> <p>MIB entry name: tmnxMobPdnApnAttFailureStatEntry</p> <p>Entry description: Each row entry represents a Access Point Name (APN) on a Packet Data Network Gateway (PGW) of Mobility Service Module (MSM) and contains session attach failure statistics for this card.</p> <p>Table description (for tmnxMobPdnApnAttFailureStatTable): The tmnxMobPdnApnAttFailureStatTable has an entry for each Access Point Name (APN) on a Packet Data Network Gateway (PGW) of Mobility Service Module (MSM) configured in the mobility system group defined for a Packet Data Network Gateway (PGW).</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: lte.PdnApn</p>		
acctResourceFail [Acct Resource Fail] (tmnxMobPdnApnAfAcctResourceFail)	java. math. BigInteger	The value of tmnxMobPdnApnAfAcctResourceFail indicates the number of session attach failures due to accounting resource failure.
addrAllocFail [Addr Alloc Fail] (tmnxMobPdnApnAfAddrAllocFail)	java. math. BigInteger	The value of tmnxMobPdnApnAfAddrAllocFail indicates the number of session attach failures due to address allocation failed for Access Point Name (APN) manager.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
addrPoolExhausted [Addr Pool Exhausted] (tmnxMobPdnApnAfAddrPoolExhausted)	java. math. BigInteger	The value of tmnxMobPdnApnAfAddrPoolExhausted indicates the number of session attach failures due to address pool is exhausted for Access Point Name (APN) manager.
addrPoolInvalMscp [Addr Pool Inval Mscp] (tmnxMobPdnApnAfAddrPoolInvalMscp)	java. math. BigInteger	The value of tmnxMobPdnApnAfAddrPoolInvalMscp indicates the number of session attach failures due to address pool's invalid MSCP for Access Point Name (APN) manager.
addrPoolMissing [Addr Pool Missing] (tmnxMobPdnApnAfAddrPoolMissing)	java. math. BigInteger	The value of tmnxMobPdnApnAfAddrPoolExhausted indicates the number of session attach failures due to address pool is missing for Access Point Name (APN) manager.
apnAccessDenied [Apn Access Denied] (tmnxMobPdnApnAfApnAccessDenied)	java. math. BigInteger	The value of tmnxMobPdnApnAfApnAccessDenied indicates the number of session attach failures due to access denied for given Access Point Name (APN).
apnMgrInternalErr [Apn Mgr Internal Err] (tmnxMobPdnApnAfApnMgrInternalErr)	java. math. BigInteger	The value of tmnxMobPdnApnAfApnMgrInternalErr indicates the number of session attach failures due to internal error into the Access Point Name (APN) manager.
apnMgrMsgSendFail [Apn Mgr Msg Send Fail] (tmnxMobPdnApnAfApnMgrMsgSendFail)	java. math. BigInteger	The value of tmnxMobPdnApnAfApnMgrMsgSendFail indicates the number of session attach failures due to message for Access Point Name (APN) manager could not be sent.
apnMgrNoResources [Apn Mgr No Resources] (tmnxMobPdnApnAfApnMgrNoResources)	java. math. BigInteger	The value of tmnxMobPdnApnAfApnMgrNoResources indicates the number of session attach failures due to resources not available in Access Point Name (APN) manager.
apnMgrSelModeMm [Apn Mgr Sel Mode Mm] (tmnxMobPdnApnAfApnMgrSelModeMm)	java. math. BigInteger	The value of tmnxMobPdnApnAfApnMgrSelModeMm indicates the number of session attach failures due to selection mode mismatch in Access Point Name (APN) manager.

Table 546 ltegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
apnMgrSvcNotSupp [Apn Mgr Svc Not Supp] (tmnxMobPdnApnAfApnmgrSvcNotSupp)	java. math. BigInteger	The value of tmnxMobPdnApnAfApnmgrSvcNotSupp indicates the number of session attach failures due to service is not supported.
apnName [Apn Name] (tmnxMobPdnApnName)	String	The value of tmnxMobPdnApnName specifies the Access Point Name (APN).
apnRestricted [Apn Restricted] (tmnxMobPdnApnAfApnRestricted)	java. math. BigInteger	The value of tmnxMobPdnApnAfApnRestricted indicates the number of session attach failures due to Access Point Name (APN) is restricted.
authFailed [Auth Failed] (tmnxMobPdnApnAfAuthFailed)	java. math. BigInteger	The value of tmnxMobPdnApnAfAuthFailed indicates the number of session attach failures due to authentication failed.
cardSlotNum [Card Slot Num] (tmnxMobPdnCardSlotNum)	long	The value of tmnxMobPdnCardSlotNum indicates the slot number of this card.
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
chrgMissingProf [Chrg Missing Prof] (tmnxMobPdnApnAfChrgMissingProf)	java. math. BigInteger	The value of tmnxMobPdnApnAfChrgMissingProf indicates the number of session attach failures due to charging characteristics and charging profile missing.
delReqAttInProg [Del Req Att In Prog] (tmnxMobPdnApnAfDelReqAttInProg)	java. math. BigInteger	The value of tmnxMobPdnApnAfDelReqAttInProg indicates the number of session attach failures due to delete request received while attach is in progress.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
diaAmsError [Dia Ams Error] (tmnxMobPdnApnAfDiaAmsError)	java. math. BigInteger	The value of tmnxMobPdnApnAfDiaAmsError indicates the number of session attach failures due to diameter module unable to send AMS error message.
diaAuthenticFail [Dia Authentic Fail] (tmnxMobPdnApnAfDiaAuthenticFail)	java. math. BigInteger	The value of tmnxMobPdnApnAfDiaAuthenticFail indicates the number of session attach failures due to diameter authentication rejected.
diaAuthorizeFail [Dia Authorize Fail] (tmnxMobPdnApnAfDiaAuthorizeFail)	java. math. BigInteger	The value of tmnxMobPdnApnAfDiaAuthorizeFail indicates the number of session attach failures due to diameter authorization rejected.
diaGenDecodeError [Dia Gen Decode Error] (tmnxMobPdnApnAfDiaGenDecodeError)	java. math. BigInteger	The value of tmnxMobPdnApnAfDiaGenDecodeError indicates the number of session attach failures due to decoding error in diameter protocol.
diaGenEncodeError [Dia Gen Encode Error] (tmnxMobPdnApnAfDiaGenEncodeError)	java. math. BigInteger	The value of tmnxMobPdnApnAfDiaGenEncodeError indicates the number of session attach failures due to encoding error in diameter protocol.
diaInternalError [Dia Internal Error] (tmnxMobPdnApnAfDiaInternalError)	java. math. BigInteger	The value of tmnxMobPdnApnAfDiaInternalError indicates the number of session attach failures due to internal error into the diameter module.
diaMemoryError [Dia Memory Error] (tmnxMobPdnApnAfDiaMemoryError)	java. math. BigInteger	The value of tmnxMobPdnApnAfDiaMemoryError indicates the number of session attach failures due to diameter module is going out of memory.
diaPcrfDisabled [Dia Pcrf Disabled] (tmnxMobPdnApnAfDiaPcrfDisabled)	java. math. BigInteger	The value of tmnxMobPdnApnAfDiaPcrfDisabled indicates the number of session attach failures due to Policy and Charging Rules Function (PCRF) is being disabled.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
diaPcrfDown [Dia Pcrf Down] (tmnxMobPdnApnAfDiaPcrfDown)	java. math. BigInteger	The value of tmnxMobPdnApnAfDiaPcrfDown indicates the number of session attach failures due to Policy and Charging Rules Function (PCRF) going down.
diaSessionDown [Dia Session Down] (tmnxMobPdnApnAfDiaSessionDown)	java. math. BigInteger	The value of tmnxMobPdnApnAfDiaSessionDown indicates the number of session attach failures due to diameter session was going down.
diaTimerError [Dia Timer Error] (tmnxMobPdnApnAfDiaTimerError)	java. math. BigInteger	The value of tmnxMobPdnApnAfDiaTimerError indicates the number of session attach failures due to unable to start timer in diameter protocol.
diaTxTimerExpire [Dia Tx Timer Expire] (tmnxMobPdnApnAfDiaTxTimerExpire)	java. math. BigInteger	The value of tmnxMobPdnApnAfDiaTxTimerExpire indicates the number of session attach failures due to timer expired while waiting for Credit Control Answer (CCA) in diameter protocol.
diaUsrUnknown [Dia Usr Unknown] (tmnxMobPdnApnAfDiaUsrUnknown)	java. math. BigInteger	The value of tmnxMobPdnApnAfDiaUsrUnknown indicates the number of session attach failures due to Diameter User Unknown error.
epcId [Epc Id] (tmnxMobGwld)	long	The value of tmnxMobGwld uniquely identifies a mobile gateway configured in the system.
epdgEmgProfDnsReject [Epdg Emg Prof Dns Reject] (tmnxMobPdnApnAfConRejEpdgEmerDns)	java. math. BigInteger	The value of tmnxMobPdnApnAfConRejEpdgEmerDns indicates the number of session attach failures of Packet Data Network (PDN) connections due to issues of DNS resolution from the evolved Packet Data Gateway (ePDG) emergency profile.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
epdgEmgProfReject [Epdg Emg Prof Reject] (tmnxMobPdnApnAfConRejEpdgEmer)	java. math. BigInteger	The value of tmnxMobPdnApnAfConRejEpdgEmer indicates the number of session attach failures of Packet Data Network (PDN) connections due to evolved Packet Data Gateway (ePDG) emergency profile rejection.
invalidle [Invalid Ie] (tmnxMobPdnApnAfInvalidle)	java. math. BigInteger	The value of tmnxMobPdnApnAfInvalidle indicates the number of session attach failures due to invalid Information Element (IE) in a request to the Access Point Name (APN) manager.
invidMandatoryIe [Invid Mandatory Ie] (tmnxMobPdnApnAfInvidMandatoryIe)	java. math. BigInteger	The value of tmnxMobPdnApnAfInvidMandatoryIe indicates the number of session attach failures due to invalid mandatory Information Element (IE).
mPDNperApnNA [MPDNper Apn NA] (tmnxMobPdnApnAfMpdnPerApnNARej)	java. math. BigInteger	The value of tmnxMobPdnApnAfMpdnPerApnNARej indicates the number of session attach failures of PDN connections due to multiple PDNs not being allowed for given APN.
missingle [Missing Ie] (tmnxMobPdnApnAfMissingle)	java. math. BigInteger	The value of tmnxMobPdnApnAfMissingle indicates the number of session attach failures due to missing Information Element (IE) in a request to the Access Point Name (APN) manager.
missingUknApn [Missing Ukn Apn] (tmnxMobPdnApnAfMissingUknApn)	java. math. BigInteger	The value of tmnxMobPdnApnAfMissingUknApn indicates the number of session attach failures due to missing or unknown Access Point Name (APN).
mnAAAFailWithApnMgr [Mn AAAFail With Apn Mgr] (tmnxMobPdnApnAfApnMgrMnAaaAuth)	java. math. BigInteger	The value of tmnxMobPdnApnAfApnMgrMnAaaAuth indicates the number of session attach failures due to Mobile Node Authentication, Authorization, and Accounting (MN-AAA) authentication fail in Access Point Name (APN) Manager.
pcrfSessRelease [Pcrf Sess Release] (tmnxMobPdnApnAfPcrfSessRelease)	java. math. BigInteger	The value of tmnxMobPdnApnAfPcrfSessRelease indicates the number of session attach failures due to Policy and Charging Rules Function (PCRF) session is released while session attach is in progress.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pdnConTypeNotSupp [Pdn Con Type Not Supp] (tmnxMobPdnApnAfPdnConTypeNotSupp)	java. math. BigInteger	The value of tmnxMobPdnApnAfPdnConTypeNotSupp indicates the number of session attach failures due to PDN connection type is not supported.
rlbsChgFailDefBr [Rlbs Chg Fail Def Br] (tmnxMobPdnApnAfRlbsChgFailDefBr)	java. math. BigInteger	The value of tmnxMobPdnApnAfRlbsChgFailDefBr indicates the number of session attach failures due to Online Charging System (OCS) rule base change failed on default bearer.
roSetupFail [Ro Setup Fail] (tmnxMobPdnApnAfRoSetupFail)	java. math. BigInteger	The value of tmnxMobPdnApnAfRoSetupFail indicates the number of session attach failures due to failure of Credit Control Answer (CCA) initial response to default bearer in online charging.
sendGxCcriFail [Send Gx Ccri Fail] (tmnxMobPdnApnAfSendGxCcriFail)	java. math. BigInteger	The value of tmnxMobPdnApnAfSendGxCcriFail indicates the number of session attach failures due to unable to send Credit Control Request (CCR) Initial message to Gx interface after Access Point Name (APN) manager response.
smgrBadParam [Smgr Bad Param] (tmnxMobPdnApnAfSmgrBadParam)	java. math. BigInteger	The value of tmnxMobPdnApnDsSmgrBadParam indicates the number of session attach failures due to session manager recieved bad parameters from GPRS Tunneling Protocol (GTP) protocol.
smgrMemoryError [Smgr Memory Error] (tmnxMobPdnApnAfSmgrMemoryError)	java. math. BigInteger	The value of tmnxMobPdnApnAfDiaMemoryError indicates the number of session attach failures due to session manager module is going out of memory.
smgrServNotSupp [Smgr Serv Not Supp] (tmnxMobPdnApnAfSmgrServNotSupp)	java. math. BigInteger	The value of tmnxMobPdnApnAfSmgrServNotSupp indicates the number of session attach failures due to service not supported in session manager.
userAuthFailed [User Auth Failed] (tmnxMobPdnApnAfUserAuthFailed)	java. math. BigInteger	The value of tmnxMobPdnApnAfUserAuthFailed indicates the number of session attach failures due to user authentication failed.

Table 546 ltegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PdnApnDeleteSessionStats</p> <p>MIB entry name: tmnxMobPdnApnDelSessionStatEntry</p> <p>Entry description: Each row entry represents a Access Point Name (APN) on a Packet Data Network Gateway (PGW) of Mobility Service Module (MSM) and contains statistics for this card.</p> <p>Table description (for tmnxMobPdnApnDelSessionStatTable): The tmnxMobPdnApnDelSessionStatTable has an entry for each Access Point Name (APN) on a Packet Data Network Gateway (PGW) of Mobility Service Module (MSM) configured in the mobility system group defined for a Packet Data Network Gateway (PGW).</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: lte.PdnApn</p>		
acctApnDenyNoSub [Acct Apn Deny No Sub] (tmnxMobPdnApnDsAcctApnDenyNoSub)	java. math. BigInteger	The value of tmnxMobPdnApnDsAcctApnDenyNoSub indicates the number of sessions deleted due to APN Denied No Subscription.
acctIdleTimeout [Acct Idle Timeout] (tmnxMobPdnApnDsAcctIdleTimeout)	java. math. BigInteger	The value of tmnxMobPdnApnDsAcctIdleTimeout indicates the number of sessions deleted due to accounting idle timeout.
acctResourceFail [Acct Resource Fail] (tmnxMobPdnApnDsAcctResourceFail)	java. math. BigInteger	The value of tmnxMobPdnApnDsAcctResourceFail indicates the number of sessions deleted due to accounting resource failure.
addrAllocFail [Addr Alloc Fail] (tmnxMobPdnApnDsAddrAllocFail)	java. math. BigInteger	The value of tmnxMobPdnApnDsAddrAllocFail indicates the number of sessions deleted due to address allocation failed for Access Point Name (APN) manager.
addrPoolExhausted [Addr Pool Exhausted] (tmnxMobPdnApnDsAddrPoolExhausted)	java. math. BigInteger	The value of tmnxMobPdnApnDsAddrPoolExhausted indicates the number of sessions deleted due to address pool is exhausted for Access Point Name (APN) manager.

Table 546 ltegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
addrPoolMissing [Addr Pool Missing] (tmnxMobPdnApnDsAddrPoolMissing)	java. math. BigInteger	The value of tmnxMobPdnApnDsAddrPoolExhausted indicates the number of sessions deleted due to address pool is missing for Access Point Name (APN) manager.
admnClearApn [Admn Clear Apn] (tmnxMobPdnApnDsAdmnClearApn)	java. math. BigInteger	The value of tmnxMobPdnApnDsAdmnClearApn indicates the number of sessions deleted due to clear APN operation from administrator.
admnClearImsi [Admn Clear Imsi] (tmnxMobPdnApnDsAdmnClearImsi)	java. math. BigInteger	The value of tmnxMobPdnApnDsAdmnClearImsi indicates the number of sessions deleted due to clear imsi operation from administrator.
admnClrImsiLocal [Admn Clr Imsi Local] (tmnxMobPdnApnDsAdmnClrImsiLocal)	java. math. BigInteger	The value of tmnxMobPdnApnDsAdmnClrImsiLocal indicates the number of sessions deleted due to local clear imsi operation from administrator.
admnClrImsiReatch [Admn Clr Imsi Reatch] (tmnxMobPdnApnDsAdmnClrImsiReatch)	java. math. BigInteger	The value of tmnxMobPdnApnDsAdmnClrImsiReatch indicates the number of sessions deleted due to clear imsi operation because of reattach.
admnGtwShutdown [Admn Gtw Shutdown] (tmnxMobPdnApnDsAdmnGtwShutdown)	java. math. BigInteger	The value of tmnxMobPdnApnDsAdmnGtwShutdown indicates the number of sessions deleted due to gateway shutdown operation from administrator.
apnAccessDenied [Apn Access Denied] (tmnxMobPdnApnDsApnAccessDenied)	java. math. BigInteger	The value of tmnxMobPdnApnDsApnAccessDenied indicates the number of sessions deleted due to access denied for given Access Point Name (APN).
apnMgrMissingle [Apn Mgr Missing Ie] (tmnxMobPdnApnDsApnMgrMissingle)	java. math. BigInteger	The value of tmnxMobPdnApnDsApnMgrMissingle indicates the number of sessions deleted due to missing Information Element (IE) in a request to the Access Point Name (APN) manager.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
apnMgrSessRel [Apn Mgr Sess Rel] (tmnxMobPdnApnDsApnMgrSessRel)	java. math. BigInteger	The value of tmnxMobPdnApnDsApnMgrSessRel indicates the number of sessions deleted due to Access Point Name (APN) Manager initiation.
apnMgrSvcNotSupp [Apn Mgr Svc Not Supp] (tmnxMobPdnApnDsApnmgrSvcNotSupp)	java. math. BigInteger	The value of tmnxMobPdnApnDsApnmgrSvcNotSupp indicates the number of sessions deleted due to service is not supported.
apnName [Apn Name] (tmnxMobPdnApnName)	String	The value of tmnxMobPdnApnName specifies the Access Point Name (APN).
apnRestricted [Apn Restricted] (tmnxMobPdnApnDsApnRestricted)	java. math. BigInteger	The value of tmnxMobPdnApnDsApnRestricted indicates the number of sessions deleted due to Access Point Name (APN) is restricted.
authFailed [Auth Failed] (tmnxMobPdnApnDsAuthFailed)	java. math. BigInteger	The value of tmnxMobPdnApnDsAuthFailed indicates the number of sessions deleted due to authentication failed.
cardSlotNum [Card Slot Num] (tmnxMobPdnCardSlotNum)	long	The value of tmnxMobPdnCardSlotNum indicates the slot number of this card.
ccfhVolLimit [Ccfh Vol Limit] (tmnxMobPdnApnDsCcfhVolLimit)	java. math. BigInteger	The value of tmnxMobPdnApnDsCcfhVolLimit indicates the number of session deleted due to CCFH volume expiry.
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ctxtNotFound [Ctxt Not Found] (tmnxMobPdnApnDsCtxtNotFound)	java. math. BigInteger	The value of tmnxMobPdnApnDsCtxtNotFound indicates the number of sessions deleted due to update request received for Serving GPRS Support Node (SGSN) relocation failed.
diaAmsError [Dia Ams Error] (tmnxMobPdnApnDsDiaAmsError)	java. math. BigInteger	The value of tmnxMobPdnApnDsDiaAmsError indicates the number of sessions deleted due to diameter module unable to send AMS error message.
diaAuthorizeFail [Dia Authorize Fail] (tmnxMobPdnApnDsDiaAuthorizeFail)	java. math. BigInteger	The value of tmnxMobPdnApnDsDiaAuthorizeFail indicates the number of sessions deleted due to diameter authorization failure.
diaGenDecodeError [Dia Gen Decode Error] (tmnxMobPdnApnDsDiaGenDecodeError)	java. math. BigInteger	The value of tmnxMobPdnApnDsDiaGenDecodeError indicates the number of sessions deleted due to decoding error in diameter protocol.
diaGenEncodeError [Dia Gen Encode Error] (tmnxMobPdnApnDsDiaGenEncodeError)	java. math. BigInteger	The value of tmnxMobPdnApnDsDiaGenEncodeError indicates the number of sessions deleted due to encoding error in diameter protocol.
diaInternalError [Dia Internal Error] (tmnxMobPdnApnDsDiaInternalError)	java. math. BigInteger	The value of tmnxMobPdnApnDsDiaInternalError indicates the number of sessions deleted due to internal error into the diameter module.
diaMemoryError [Dia Memory Error] (tmnxMobPdnApnDsDiaMemoryError)	java. math. BigInteger	The value of tmnxMobPdnApnDsDiaMemoryError indicates the number of sessions deleted due to diameter module is going out of memory.
diaPcrfDisabled [Dia Pcrf Disabled] (tmnxMobPdnApnDsDiaPcrfDisabled)	java. math. BigInteger	The value of tmnxMobPdnApnDsDiaPcrfDisabled indicates the number of sessions deleted due to Policy and Charging Rules Function (PCRF) is being disabled.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
diaPcrfDown [Dia Pcrf Down] (tmnxMobPdnApnDsDiaPcrfDown)	java. math. BigInteger	The value of tmnxMobPdnApnDsDiaPcrfDown indicates the number of sessions deleted due to Policy and Charging Rules Function (PCRF) going down.
diaSessionDown [Dia Session Down] (tmnxMobPdnApnDsDiaSessionDown)	java. math. BigInteger	The value of tmnxMobPdnApnDsDiaSessionDown indicates the number of sessions deleted due to diameter session was going down.
diaTimerError [Dia Timer Error] (tmnxMobPdnApnDsDiaTimerError)	java. math. BigInteger	The value of tmnxMobPdnApnDsDiaTimerError indicates the number of sessions deleted due to unable to start timer in diameter protocol.
diaTxTimerExpire [Dia Tx Timer Expire] (tmnxMobPdnApnDsDiaTxTimerExpire)	java. math. BigInteger	The value of tmnxMobPdnApnDsDiaTxTimerExpire indicates the number of sessions deleted due to timer expired while waiting for Credit Control Answer (CCA) in diameter protocol.
epcId [Epc Id] (tmnxMobGwld)	long	The value of tmnxMobGwld uniquely identifies a mobile gateway configured in the system.
epdgToLteHoFail [Epdg To Lte Ho Fail] (tmnxMobPdnApnDsEpdgToLteHoFail)	java. math. BigInteger	The value of tmnxMobPdnApnDsEpdgToLteHoFail indicates the number of sessions deleted due to failure in session handover from Evolved Packet Data Gateway (EPDG) to LTE.
fhSessContTimer [Fh Sess Cont Timer] (tmnxMobPdnApnDsFhSessContTimer)	java. math. BigInteger	The value of tmnxMobPdnApnDsFhSessContTimer indicates the number of sessions deleted due to expiry of Credit Control Failure Handling (CCFH) session continue timer in online charging.
fourGTo3gHoFail [Four GTo 3 g Ho Fail] (tmnxMobPdnApnDs4gTo3gHoFail)	java. math. BigInteger	The value of tmnxMobPdnApnDs4gTo3gHoFail indicates the number of sessions deleted due to 4G to 3G handover failed.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
geoRedAudit [Geo Red Audit] (tmnxMobPdnApnDsGeoRedAudit)	java. math. BigInteger	The value of tmnxMobPdnApnDsGeoRedAudit indicates the number of sessions deleted due to Geo redundancy audit.
gtpAddrAllocFail [Gtp Addr Alloc Fail] (tmnxMobPdnApnDsGtpAddrAllocFail)	java. math. BigInteger	The value of tmnxMobPdnApnDsGtpAddrAllocFail indicates the number of sessions deleted due to address allocation failed in GTP manager.
gtpBrNotFound [Gtp Br Not Found] (tmnxMobPdnApnDsGtpBrNotFound)	java. math. BigInteger	The value of tmnxMobPdnApnDsGtpBrNotFound indicates the number of sessions deleted due to bearer present on SGW but not on the PGW.
gtpCtxNotFound [Gtp Ctx Not Found] (tmnxMobPdnApnDsGtpCtxNotFound)	java. math. BigInteger	The value of tmnxMobPdnApnDsGtpCtxNotFound indicates the number of sessions deleted due to context not found in GTP manager.
gtpDedBrCrtFail [Gtp Ded Br Crt Fail] (tmnxMobPdnApnDsGtpDedBrCrtFail)	java. math. BigInteger	The value of tmnxMobPdnApnDsGtpDedBrCrtFail indicates the number of sessions deleted due to dedicated bearer creation failed.
gtpDellnProgress [Gtp Del In Progress] (tmnxMobPdnApnDsGtpDellnProgress)	java. math. BigInteger	The value of tmnxMobPdnApnDsGtpDellnProgress indicates the number of sessions deleted due to delete operation is in progress on the peer gateway.
gtpDwnlCrtFail [Gtp Dwnl Crt Fail] (tmnxMobPdnApnDsGtpDwnlCrtFail)	java. math. BigInteger	The value of tmnxMobPdnApnDsGtpDwnlCrtFail indicates the number of sessions deleted due to downlink creation failed.
gtpHoFail [Gtp Ho Fail] (tmnxMobPdnApnDsGtpHoFail)	java. math. BigInteger	The value of tmnxMobPdnApnDsGtpUeNwlnitDetach indicates the number of sessions deleted due to handover failed in the GTP manager.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
gtpInternalError [Gtp Internal Error] (tmnxMobPdnApnDsGtpInternalError)	java. math. BigInteger	The value of tmnxMobPdnApnDsGtpInternalError indicates the number of sessions deleted due to internal failure in the GTP.
gtpInvalidle [Gtp Invalid le] (tmnxMobPdnApnDsGtpInvalidle)	java. math. BigInteger	The value of tmnxMobPdnApnDsGtpInvalidle indicates the number of sessions deleted due to invalid IE detected in GTP manager.
gtpMissingle [Gtp Missing le] (tmnxMobPdnApnDsGtpMissingle)	java. math. BigInteger	The value of tmnxMobPdnApnDsGtpMissingle indicates the number of session attach failures due to missing Information Element (IE) in a request to the GTP manager.
gtpMmeNoResp [Gtp Mme No Resp] (tmnxMobPdnApnDsGtpMmeNoResp)	java. math. BigInteger	The value of tmnxMobPdnApnDsGtpMmeNoResp indicates the number of sessions deleted due to SGW does not receive any response messages from MME.
gtpNoBrResources [Gtp No Br Resources] (tmnxMobPdnApnDsGtpNoBrResources)	java. math. BigInteger	The value of tmnxMobPdnApnDsGtpNoBrResources indicates the number of sessions deleted due to bearer resources not found in GTP manager.
gtpPdnPresent [Gtp Pdn Present] (tmnxMobPdnApnDsGtpPdnPresent)	java. math. BigInteger	The value of tmnxMobPdnApnDsGtpPdnPresent indicates the number of sessions deleted due to PDN session already present on PGW.
gtpPdnSesNotFound [Gtp Pdn Ses Not Found] (tmnxMobPdnApnDsGtpPdnSesNotFound)	java. math. BigInteger	The value of tmnxMobPdnApnDsGtpPdnSesNotFound indicates the number of sessions deleted due to the PDN session is present on SGW but it is not present on PGW.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
gtpPeerRestart [Gtp Peer Restart] (tmnxMobPdnApnDsGtpPeerRestart)	java. math. BigInteger	The value of tmnxMobPdnApnDsGtpPeerRestart indicates the number of sessions deleted due to peer Serving GPRS Support Node (SGSN) or Serving Gateway (SGW) restarted for Packet Data Network Gateway (PGW) or peer PGW or Mobility Management Entity (MME) restarted for SGW.
gtpPgwNoResp [Gtp Pgw No Resp] (tmnxMobPdnApnDsGtpPgwNoResp)	java. math. BigInteger	The value of tmnxMobPdnApnDsGtpPgwNoResp indicates the number of sessions deleted due to peer Packet Data Network Gateway (PGW) is not sending response message to Serving Gateway (SGW).
gtpSessCrtFail [Gtp Sess Crt Fail] (tmnxMobPdnApnDsGtpSessCrtFail)	java. math. BigInteger	The value of tmnxMobPdnApnDsGtpSessCrtFail indicates the number of sessions deleted due to session creation failed on PGW.
gtpSgwChange [Gtp Sgw Change] (tmnxMobPdnApnDsGtpSgwChange)	java. math. BigInteger	The value of tmnxMobPdnApnDsGtpSgwChange indicates the number of sessions deleted due to Serving Gateway (SGW) relocation in GPRS Tunneling Protocol (GTP) manager.
gtpSgwNoResp [Gtp Sgw No Resp] (tmnxMobPdnApnDsGtpSgwNoResp)	java. math. BigInteger	The value of tmnxMobPdnApnDsGtpSgwNoResp indicates the number of sessions deleted due to PGW does not receive any response messages from SGW.
gtpUeNotFound [Gtp Ue Not Found] (tmnxMobPdnApnDsGtpUeNotFound)	java. math. BigInteger	The value of tmnxMobPdnApnDsGtpUeNotFound indicates the number of sessions deleted due to the User Equipment (UE) is present on SGW but it is not present on PGW.
gtpUeNwInitDetach [Gtp Ue Nw Init Detach] (tmnxMobPdnApnDsGtpUeNwInitDetach)	java. math. BigInteger	The value of tmnxMobPdnApnDsGtpUeNwInitDetach indicates the number of sessions deleted due to network initiated detach on SGW.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
gtpUnknownIe [Gtp Unknown Ie] (tmnxMobPdnApnDsGtpUnknownIe)	java. math. BigInteger	The value of tmnxMobPdnApnDsGtpUnknownIe indicates the number of sessions deleted due to unknown Information Element (IE) in a request to the GTP manager.
gxFhQuotaExhaust [Gx Fh Quota Exhaust] (tmnxMobPdnApnDsGxFhQuotaExhaust)	java. math. BigInteger	The value of tmnxMobPdnApnDsGxFhQuotaExhaust indicates the number of sessions deleted due to Gx failure-handling quota exhausted.
gxFhTimeExhaust [Gx Fh Time Exhaust] (tmnxMobPdnApnDsGxFhTimeExhaust)	java. math. BigInteger	The value of indicates the configured failure handling time exhausted for GxI failure.
gxSessionRel [Gx Session Rel] (tmnxMobPdnApnDsGxSessionRel)	java. math. BigInteger	The value of tmnxMobPdnApnDsGxSessionRel indicates the number of sessions deleted due to Policy and Charging Rules Function (PCRF) was initiating sessions release.
haAudit [Ha Audit] (tmnxMobPdnApnDsHaAudit)	java. math. BigInteger	The value of tmnxMobPdnApnDsHaAudit indicates the number of sessions deleted due to High Availability (HA) audit.
idleDisallowRecon [Idle Disallow Recon] (tmnxMobPdnApnDsIdleDisallowRecon)	java. math. BigInteger	The value of tmnxMobPdnApnDsIdleDisallowRecon indicates the number of sessions deleted due to the session is idle timeout and disallowed for reconnection.
interRatHoFail [Inter Rat Ho Fail] (tmnxMobPdnApnDsInterRatHoFail)	java. math. BigInteger	The value of tmnxMobPdnApnDsInterRatHoFail indicates the number of sessions deleted due to inter Radio Access Type (RAT) handover failed.
interSgsnHoFail [Inter Sgsn Ho Fail] (tmnxMobPdnApnDsInterSgsnHoFail)	java. math. BigInteger	The value of tmnxMobPdnApnDsInterSgsnHoFail indicates the number of sessions deleted due to inter Serving GPRS Support Node (SGSN) handover failed.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
interSgwHoFail [Inter Sgw Ho Fail] (tmnxMobPdnApnDsInterSgwHoFail)	java. math. BigInteger	The value of tmnxMobPdnApnDsInterSgwHoFail indicates the number of sessions deleted due to inter Serving Gateway (SGW) handover failed.
internalError [Internal Error] (tmnxMobPdnApnDsInternalError)	java. math. BigInteger	The value of tmnxMobPdnApnDsInternalError indicates the number of sessions deleted due to internal error into the Access Point Name (APN) manager.
invalidIe [Invalid Ie] (tmnxMobPdnApnDsInvalidIe)	java. math. BigInteger	The value of tmnxMobPdnApnDsInvalidIe indicates the number of sessions deleted due to invalid Information Element (IE) in a request to the Access Point Name (APN) manager.
ltePmipHoRspFail [Lte Pmip Ho Rsp Fail] (tmnxMobPdnApnDsLtePmipHoRspFail)	java. math. BigInteger	The value of tmnxMobPdnApnDsLtePmipHoRspFail indicates the number of sessions deleted due to LTE to Proxy Mobile IP (PMIP) handover is rejected from Access Point Name (APN) manager.
lteToEpdgHoFail [Lte To Epdg Ho Fail] (tmnxMobPdnApnDsLteToEpdgHoFail)	java. math. BigInteger	The value of tmnxMobPdnApnDsLteToEpdgHoFail indicates the number of sessions deleted due to failure in session handover from LTE to Evolved Packet Data Gateway (EPDG).
lteToWlanHoFail [Lte To Wlan Ho Fail] (tmnxMobPdnApnDsLteToWlanHoFail)	java. math. BigInteger	The value of tmnxMobPdnApnDsLteToWlanHoFail indicates the number of sessions deleted due to LTE to wireless local area network (WLAN) handover is rejected.
missCcaUsgThres [Miss Cca Usg Thres] (tmnxMobPdnApnDsMissCcaUsgThres)	java. math. BigInteger	The value of tmnxMobPdnApnDsMissCcaUsgThres indicates the number of sessions deleted due to Credit Control Request(CCR) update message reported thresholds but corresponding Credit Control Answer (CCA) is missing.
missingUknApn [Missing Ukn Apn] (tmnxMobPdnApnDsMissingUknApn)	java. math. BigInteger	The value of tmnxMobPdnApnDsMissingUknApn indicates the number of sessions deleted due to missing or unknown Access Point Name (APN).

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pdnConTypeNotSupp [Pdn Con Type Not Supp] (tmnxMobPdnApnDsPdnConTypeNotSupp)	java. math. BigInteger	The value of tmnxMobPdnApnDsPdnConTypeNotSupp indicates the number of sessions deleted due to PDN connection type is not supported.
peerDown [Peer Down] (tmnxMobPdnApnDsPeerDown)	java. math. BigInteger	The value of tmnxMobPdnApnDsPeerDown indicates the number of sessions deleted due to peer Serving GPRS Support Node (SGSN) or Serving Gateway (SGW) went down for Packet Data Network Gateway (PGW) or peer PGW or Mobility Management Entity (MME) went down for SGW.
pmipInstanceShut [Pmip Instance Shut] (tmnxMobPdnApnDsPmipInstanceShut)	java. math. BigInteger	The value of tmnxMobPdnApnDsPmipInstanceShut indicates the number of sessions deleted due to Proxy Mobile IP (PMIP) instance has been shutdown.
pmipInterHsgwHoFl [Pmip Inter Hsgw Ho Fl] (tmnxMobPdnApnDsPmipInterHsgwHoFl)	java. math. BigInteger	The value of tmnxMobPdnApnDsPmipInterHsgwHoFl indicates the number of sessions deleted due to inter High Rate Packet Data (HRPD) Serving Gateway (HSGW) handover failed.
pmipLifetimeExp [Pmip Lifetime Exp] (tmnxMobPdnApnDsPmipLifetimeExp)	java. math. BigInteger	The value of tmnxMobPdnApnDsPmipLifetimeExp indicates the number of sessions deleted due to Proxy Mobile IP (PMIP) lifetime expiry.
pmipLteHoFail [Pmip Lte Ho Fail] (tmnxMobPdnApnDsPmipLteHoFail)	java. math. BigInteger	The value of tmnxMobPdnApnDsPmipLteHoFail indicates the number of sessions deleted due to Proxy Mobile IP (PMIP) to LTE handover is rejected from Access Point Name (APN) manager.
pmipPbaReject [Pmip Pba Reject] (tmnxMobPdnApnDsPmipPbaReject)	java. math. BigInteger	The value of tmnxMobPdnApnDsPmipPbaReject indicates the number of sessions deleted due to Proxy Binding Acknowledgement (PBA) rejection.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmipPbaTimeout [Pmip Pba Timeout] (tmnxMobPdnApnDsPmipPbaTimeout)	java. math. BigInteger	The value of tmnxMobPdnApnDsPmipPbaTimeout indicates the number of sessions deleted due to Proxy Binding Acknowledgement (PBA) timeout.
pmipPeerDown [Pmip Peer Down] (tmnxMobPdnApnDsPmipPeerDown)	java. math. BigInteger	The value of tmnxMobPdnApnDsPmipPeerDown indicates the number of sessions deleted due to Proxy Mobile IP (PMIP) peer went down.
pmipReattach [Pmip Reattach] (tmnxMobPdnApnDsPmipReattach)	java. math. BigInteger	The value of tmnxMobPdnApnDsPmipReattach indicates the number of sessions deleted due to Proxy Mobile IP (PMIP) reattach event.
pmipToLteHoFailed [Pmip To Lte Ho Failed] (tmnxMobPdnApnDsPmipToLteHoFailed)	java. math. BigInteger	The value of tmnxMobPdnApnDsPmipToLteHoFailed indicates the number of sessions deleted due to Proxy Mobile IP to Long Term Evolution (LTE) handover failed.
pmipToWlanHoFail [Pmip To Wlan Ho Fail] (tmnxMobPdnApnDsPmipToWlanHoFail)	java. math. BigInteger	The value of tmnxMobPdnApnDsPmipToWlanHoFail indicates the number of sessions deleted due to Proxy Mobile Internet Protocol (PMIP) to WLAN handover failed.
radiusDisconnect [Radius Disconnect] (tmnxMobPdnApnDsRadiusDisconnect)	java. math. BigInteger	The value of tmnxMobPdnApnDsRadiusDisconnect indicates the number of sessions deleted due to radius disconnect.
rfNoAck [Rf No Ack] (tmnxMobPdnApnDsRfNoAck)	java. math. BigInteger	The value of tmnxMobPdnApnDsRfNoAck indicates the number of sessions deleted due to not getting an acknowledgement from the offline charging server (Rf).
roAsrDefBearer [Ro Asr Def Bearer] (tmnxMobPdnApnDsRoAsrDefBearer)	java. math. BigInteger	The value of tmnxMobPdnApnDsRoAsrDefBearer indicates the number of sessions deleted due to Abort-Session-Request on default bearer from online charging server.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
roBadAnsDefBr [Ro Bad Ans Def Br] (tmnxMobPdnApnDsRoBadAnsDefBr)	java. math. BigInteger	The value of tmnxMobPdnApnDsRoBadAnsDefBr indicates the number of sessions deleted due to bad answer in Credit Control Answer (CCA) initial or update packets for default bearer in online charging.
roSessGoneDefBr [Ro Sess Gone Def Br] (tmnxMobPdnApnDsRoSessGoneDefBr)	java. math. BigInteger	The value of tmnxMobPdnApnDsRoSessGoneDefBr indicates the number of sessions deleted due to session with online charging server gone for default bearer.
roSessionFail [Ro Session Fail] (tmnxMobPdnApnDsRoSessionFail)	java. math. BigInteger	The value of tmnxMobPdnApnDsRoSessionFail indicates the number of sessions deleted due to online charging failures other than abort, session gone and bad answer.
sessionTimeout [Session Timeout] (tmnxMobPdnApnDsSessionTimeout)	java. math. BigInteger	The value of tmnxMobPdnApnDsSessionTimeout indicates the number of sessions deleted due to duration exceeded the pre-configured timeout value.
smgrBadParam [Smgr Bad Param] (tmnxMobPdnApnDsSmgrBadParam)	java. math. BigInteger	The value of tmnxMobPdnApnDsSmgrBadParam indicates the number of sessions deleted due to session manager recieved bad parameters from GPRS Tunneling Protocol (GTP) protocol.
smgrMemoryError [Smgr Memory Error] (tmnxMobPdnApnDsSmgrMemoryError)	java. math. BigInteger	The value of tmnxMobPdnApnDsDiaMemoryError indicates the number of sessions deleted due to session manager module is going out of memory.
smgrServNotSupp [Smgr Serv Not Supp] (tmnxMobPdnApnDsSmgrServNotSupp)	java. math. BigInteger	The value of tmnxMobPdnApnDsSmgrServNotSupp indicates the number of sessions deleted due to service not supported in session manager.
staleToRelocation [Stale To Relocation] (tmnxMobPdnApnDsStaleToRelocation)	java. math. BigInteger	The value of tmnxMobPdnApnDsStaleToRelocation indicates the number of sessions deleted due to the session is stale and connected to a different PGW.

Table 546 ltegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
threeGTo4gHoFail [Three GTo 4 g Ho Fail] (tmnxMobPdnApnDs3gTo4gHoFail)	java. math. BigInteger	The value of tmnxMobPdnApnDs3gTo4gHoFail indicates the number of sessions deleted due to 3G to 4G handover failed.
ueNormalDetach [Ue Normal Detach] (tmnxMobPdnApnDsUeNormalDetach)	java. math. BigInteger	The value of tmnxMobPdnApnDsUeNormalDetach indicates the number of sessions deleted due to UE initiated normal detach.
unknown [Unknown] (tmnxMobPdnApnDsUnknown)	java. math. BigInteger	The value of tmnxMobPdnApnDsUnknown indicates the number of sessions deleted due to unknown delete causes that have not been handled yet.
userAuthFailed [User Auth Failed] (tmnxMobPdnApnDsUserAuthFailed)	java. math. BigInteger	The value of tmnxMobPdnApnDsUserAuthFailed indicates the number of sessions deleted due to user authentication failed.
wlanToLteHoFail [Wlan To Lte Ho Fail] (tmnxMobPdnApnDsWlanToLteHoFail)	java. math. BigInteger	The value of tmnxMobPdnApnDsWlanToLteHoFail indicates the number of sessions deleted due to wireless local area network (WLAN) to LTE handover is rejected.

An APN identifies an external network that is accessible from a terminal.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: lte.PdnApn</p>		

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
apnName [Apn Name] (tmnxMobPdnApnName)	String	The value of tmnxMobPdnApnName specifies the Access Point Name (APN).
cardSlotNum [Card Slot Num] (tmnxMobPdnCardSlotNum)	long	The value of tmnxMobPdnCardSlotNum indicates the slot number of this card.
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
epcId [Epc Id] (tmnxMobGwld)	long	The value of tmnxMobGwld uniquely identifies a mobile gateway configured in the system.
numDhcpRelAckRebindTx [Num Dhcp Rel Ack Rebind Tx] (tmnxMobPdnApnDhcpRelAckRebindTx)	int	The value of tmnxMobPdnApnDhcpRelAckRebindTx indicates the number of Rebind Acknowledgement responses sent by the DHCP relay.
numDhcpRelAckRenewTx [Num Dhcp Rel Ack Renew Tx] (tmnxMobPdnApnDhcpRelAckRenewTx)	int	The value of tmnxMobPdnApnDhcpRelAckRenewTx indicates the number of Renew Acknowledgement responses sent by the DHCP relay.
numDhcpRelAckTx [Num Dhcp Rel Ack Tx] (tmnxMobPdnApnDhcpRelAckTx)	int	The value of tmnxMobPdnApnDhcpRelAckTx indicates the number of Acknowledgement responses sent by the DHCP relay.
numDhcpRelDiscoverRx [Num Dhcp Rel Discover Rx] (tmnxMobPdnApnDhcpRelDiscoverRx)	int	The value of tmnxMobPdnApnDhcpRelDiscoverRx indicates the number of Discover messages received by the DHCP relay.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numDhcpRelDropDiscRx [Num Dhcp Rel Drop Disc Rx] (tmnxMobPdnApnDhcpRelDropDiscRx)	int	The value of tmnxMobPdnApnDhcpRelDropDiscRx indicates the number of Discover messages dropped by the DHCP relay.
numDhcpRelDropReqRx [Num Dhcp Rel Drop Req Rx] (tmnxMobPdnApnDhcpRelDropReqRx)	int	The value of tmnxMobPdnApnDhcpRelDropReqRx indicates the number of Request messages dropped by the DHCP relay.
numDhcpRelDrpRbndRxReq [Num Dhcp Rel Drp Rbnd Rx Req] (tmnxMobPdnApnDhcpRelDrpRbndRxReq)	int	The value of tmnxMobPdnApnDhcpRelDrpRbndRxReq indicates the number of Rebind messages dropped by the DHCP relay.
numDhcpRelDrpRnewRxReq [Num Dhcp Rel Drp Rnew Rx Req] (tmnxMobPdnApnDhcpRelDrpRnewRxReq)	int	The value of tmnxMobPdnApnDhcpRelDrpRnewRxReq indicates the number of Renew messages dropped by the DHCP relay.
numDhcpRelInvalidMsgRx [Num Dhcp Rel Invalid Msg Rx] (tmnxMobPdnApnDhcpRelInvalidMsgRx)	int	The value of tmnxMobPdnApnDhcpRelInvalidMsgRx indicates the number of Invalid Messages received by the DHCP relay.
numDhcpRelLeaseTimeout [Num Dhcp Rel Lease Timeout] (tmnxMobPdnApnDhcpRelLeaseTimeout)	int	The value of tmnxMobPdnApnDhcpRelLeaseTimeout indicates the number of Lease Timeout messages received by the DHCP relay.
numDhcpRelNackTx [Num Dhcp Rel Nack Tx] (tmnxMobPdnApnDhcpRelNackTx)	int	The value of tmnxMobPdnApnDhcpRelNackTx indicates the number of Negative Acknowledgements (NACK) sent by the DHCP relay.
numDhcpRelOfferTx [Num Dhcp Rel Offer Tx] (tmnxMobPdnApnDhcpRelOfferTx)	int	The value of tmnxMobPdnApnDhcpRelOfferTx indicates the number of Offer responses sent by the DHCP relay.
numDhcpRelRebindRx [Num Dhcp Rel Rebind Rx] (tmnxMobPdnApnDhcpRelRebindRx)	int	The value of tmnxMobPdnApnDhcpRelRebindRx indicates the number of Rebind messages received by the DHCP relay.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numDhcpRelReleaseRx [Num Dhcp Rel Release Rx] (tmnxMobPdnApnDhcpRelReleaseRx)	int	The value of tmnxMobPdnApnDhcpRelReleaseRx indicates the number of Release messages received by the DHCP relay.
numDhcpRelRenewRx [Num Dhcp Rel Renew Rx] (tmnxMobPdnApnDhcpRelRenewRx)	int	The value of tmnxMobPdnApnDhcpRelRenewRx indicates the number of Renew messages received by the DHCP relay.
numDhcpRelRequestRx [Num Dhcp Rel Request Rx] (tmnxMobPdnApnDhcpRelRequestRx)	int	The value of tmnxMobPdnApnDhcpRelRequestRx indicates the number of Request messages received by the DHCP relay.
PdnApnGyAPStats MIB entry name: tmnxMobPdnApnEntry Entry description: Each row entry represents an Access Point Name (APN). Entries can be created and deleted by the user. Supports realtime plotting Supports scheduled collection Monitored class: Ite.PdnApn		
apnName [Apn Name] (tmnxMobPdnApnName)	String	The value of tmnxMobPdnApnName specifies the Access Point Name (APN).
cardSlotNum [Card Slot Num] (tmnxMobPdnCardSlotNum)	long	The value of tmnxMobPdnCardSlotNum indicates the slot number of this card.

Table 546 ltegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
epcId [Epc Id] (tmnxMobGwId)	long	The value of tmnxMobGwId uniquely identifies a mobile gateway configured in the system.
gyApCumCcriMsgFail [Gy Ap Cum Ccri Msg Fail] (tmnxMobPdnApnGyApCumCcriMsgFail)	int	The value of tmnxMobPdnApnGyApCumCcriMsgFail indicates the cumulative number of Credit Control Request (CCR) Initial message errors that triggered Gy assume positive.
gyApCumCprtMsgFail [Gy Ap Cum Cprt Msg Fail] (tmnxMobPdnApnGyApCumCprtMsgFail)	int	The value of tmnxMobPdnApnGyApCumCprtMsgFail indicates the cumulative number of Credit Control Request (CCR) Termination message errors that triggered Gy assume positive.
gyApCumCcrumsgFail [Gy Ap Cum Ccru Msg Fail] (tmnxMobPdnApnGyApCumCcrumsgFail)	int	The value of tmnxMobPdnApnGyApCumCcrumsgFail indicates the cumulative number of Credit Control Request (CCR) Update message errors that triggered Gy assume positive.
gyApCumLinkDown [Gy Ap Cum Link Down] (tmnxMobPdnApnGyApCumLinkDown)	int	The value of tmnxMobPdnApnGyApCumLinkDown indicates the cumulative number of Link Down errors that triggered Gy assume positive.
gyApCumOtherFail [Gy Ap Cum Other Fail] (tmnxMobPdnApnGyApCumOtherFail)	int	The value of tmnxMobPdnApnGyApCumOtherFail indicates the cumulative number of unknown errors that triggered Gy assume positive.
gyApCumPpSess [Gy Ap Cum Pp Sess] (tmnxMobPdnApnGyApCumPpSess)	int	The value of tmnxMobPdnApnGyApCumPpSess indicates the cumulative number of pre-paid (PP) service type sessions in Gy assume positive.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
gyApCumRc3002 [Gy Ap Cum Rc 3002] (tmnxMobPdnApnGyApCumRc3002)	int	The value of tmnxMobPdnApnGyApCumRc3002 indicates the cumulative number of 3002 result codes that triggered Gy assume positive.
gyApCumRc3004 [Gy Ap Cum Rc 3004] (tmnxMobPdnApnGyApCumRc3004)	int	The value of tmnxMobPdnApnGyApCumRc3004 indicates the cumulative number of 3004 result codes that triggered Gy assume positive.
gyApCumRc3xxx [Gy Ap Cum Rc 3 xxx] (tmnxMobPdnApnGyApCumRc3xxx)	int	The value of tmnxMobPdnApnGyApCumRc3xxx indicates the cumulative number of 3xxx result codes that triggered Gy assume positive.
gyApCumRc4003 [Gy Ap Cum Rc 4003] (tmnxMobPdnApnGyApCumRc4003)	int	The value of tmnxMobPdnApnGyApCumRc4003 indicates the cumulative number of 4003 result codes that triggered Gy assume positive.
gyApCumRc4xxx [Gy Ap Cum Rc 4 xxx] (tmnxMobPdnApnGyApCumRc4xxx)	int	The value of tmnxMobPdnApnGyApCumRc4xxx indicates the cumulative number of 4xxx result codes that triggered Gy assume positive.
gyApCumRc5000 [Gy Ap Cum Rc 5000] (tmnxMobPdnApnGyApCumRc5000)	int	The value of tmnxMobPdnApnGyApCumRc5000 indicates the cumulative number of 5000 result codes that triggered Gy assume positive.
gyApCumRc5001 [Gy Ap Cum Rc 5001] (tmnxMobPdnApnGyApCumRc5001)	int	The value of tmnxMobPdnApnGyApCumRc5001 indicates the cumulative number of 5001 result codes that triggered Gy assume positive.
gyApCumRc5004To5030 [Gy Ap Cum Rc 5004 To 5030] (tmnxMobPdnApnGyApCumRc5004To5030)	int	The value of tmnxMobPdnApnGyApCumRc5004To5030 indicates the cumulative number of result codes from 5004 to 5030 that triggered Gy assume positive.
gyApCumRc5032To5999 [Gy Ap Cum Rc 5032 To 5999] (tmnxMobPdnApnGyApCumRc5032To5999)	int	The value of tmnxMobPdnApnGyApCumRc5032To5999 indicates the cumulative number of result codes from 5032 to 5999 that triggered Gy assume positive.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
gyApCumRc5xxx [Gy Ap Cum Rc 5 xxx] (tmnxMobPdnApnGyApCumRc5xxx)	int	The value of tmnxMobPdnApnGyApCumRc5xxx indicates the cumulative number of 5xxx result codes that triggered Gy assume positive.
gyApCumRtrSess [Gy Ap Cum Rtr Sess] (tmnxMobPdnApnGyApCumRtrSess)	int	The value of tmnxMobPdnApnGyApCumRtrSess indicates the cumulative number of Rela Time Reporting (RTR) service type sessions in Gy assume positive.
gyApCumTxTimeOut [Gy Ap Cum Tx Time Out] (tmnxMobPdnApnGyApCumTxTimeOut)	int	The value of tmnxMobPdnApnGyApCumTxTimeOut indicates the cumulative number of Tx Time Out errors that triggered Gy assume positive.
gyApCumUcSess [Gy Ap Cum Uc Sess] (tmnxMobPdnApnGyApCumUcSess)	int	The value of tmnxMobPdnApnGyApCumUcSess indicates the cumulative number of Usage Control (UC) service type sessions in Gy assume positive.
gyApCumUnknownSess [Gy Ap Cum Unknown Sess] (tmnxMobPdnApnGyApCumUnknownSess)	int	The value of tmnxMobPdnApnGyApCumUnknownSess indicates the cumulative number of unknown service type sessions in Gy assume positive.
gyApLastApSess [Gy Ap Last Ap Sess] (tmnxMobPdnApnGyApLastApSess)	String	The value of tmnxMobPdnApnGyApLastApSess indicates the last diameter session that went to Gy assume positive mode.
gyApLastApsReason [Gy Ap Last Aps Reason] (tmnxMobPdnApnGyApLastApsReason)	int	The value of tmnxMobPdnApnGyApLastApsReason indicates the failure reason for the last diameter session that went to Gy assume positive mode.
gyApLastApsTime [Gy Ap Last Aps Time] (tmnxMobPdnApnGyApLastApsTime)	long	The value of tmnxMobPdnApnGyApLastApsTime indicates the time stamp when the last diameter session went to Gy assume positive mode.
gyApStat5004To5030 [Gy Ap Stat 5004 To 5030] (tmnxMobPdnApnGyApStat5004To5030)	int	The value of tmnxMobPdnApnGyApStat5004To5030 indicates the number of result codes from 5004 to 5030 that triggered Gy assume positive.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
gyApStat5032To5999 [Gy Ap Stat 5032 To 5999] (tmnxMobPdnApnGyApStat5032To5999)	int	The value of tmnxMobPdnApnGyApStat5032To5999 indicates the number of result codes from 5032 to 5999 that triggered Gy assume positive.
gyApStatCcriMsgFail [Gy Ap Stat Ccri Msg Fail] (tmnxMobPdnApnGyApStatCcriMsgFail)	int	The value of tmnxMobPdnApnGyApStatCcriMsgFail indicates the number of Credit Control Request (CCR) Initial message errors that triggered Gy assume positive.
gyApStatCcrtMsgFail [Gy Ap Stat Ccrt Msg Fail] (tmnxMobPdnApnGyApStatCcrtMsgFail)	int	The value of tmnxMobPdnApnGyApStatCcrtMsgFail indicates the number of Credit Control Request (CCR) Termination message errors that triggered Gy assume positive.
gyApStatCcruMsgFail [Gy Ap Stat Ccru Msg Fail] (tmnxMobPdnApnGyApStatCcruMsgFail)	int	The value of tmnxMobPdnApnGyApStatCcruMsgFail indicates the number of Credit Control Request (CCR) Update message errors that triggered Gy assume positive.
gyApStatLinkDown [Gy Ap Stat Link Down] (tmnxMobPdnApnGyApStatLinkDown)	int	The value of tmnxMobPdnApnGyApStatLinkDown indicates the number of Link Down errors that triggered Gy assume positive.
gyApStatOtherFail [Gy Ap Stat Other Fail] (tmnxMobPdnApnGyApStatOtherFail)	int	The value of tmnxMobPdnApnGyApStatOtherFail indicates the number of unknown errors that triggered Gy assume positive.
gyApStatPpSess [Gy Ap Stat Pp Sess] (tmnxMobPdnApnGyApStatPpSess)	int	The value of tmnxMobPdnApnGyApStatPpSess indicates the number pre-paid (PP) service type sessions in Gy assume positive.
gyApStatRc3002 [Gy Ap Stat Rc 3002] (tmnxMobPdnApnGyApStatRc3002)	int	The value of tmnxMobPdnApnGyApStatRc3002 indicates the number of 3002 result codes that triggered Gy assume positive.
gyApStatRc3004 [Gy Ap Stat Rc 3004] (tmnxMobPdnApnGyApStatRc3004)	int	The value of tmnxMobPdnApnGyApStatRc3004 indicates the number of 3004 result codes that triggered Gy assume positive.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
gyApStatRc3xxx [Gy Ap Stat Rc 3 xxx] (tmnxMobPdnApnGyApStatRc3xxx)	int	The value of tmnxMobPdnApnGyApStatRc3xxx indicates the number of 3xxx result codes that triggered Gy assume positive.
gyApStatRc4003 [Gy Ap Stat Rc 4003] (tmnxMobPdnApnGyApStatRc4003)	int	The value of tmnxMobPdnApnGyApStatRc4003 indicates the number of 4003 result codes that triggered Gy assume positive.
gyApStatRc4xxx [Gy Ap Stat Rc 4 xxx] (tmnxMobPdnApnGyApStatRc4xxx)	int	The value of tmnxMobPdnApnGyApStatRc4xxx indicates the number of 4xxx result codes that triggered Gy assume positive.
gyApStatRc5000 [Gy Ap Stat Rc 5000] (tmnxMobPdnApnGyApStatRc5000)	int	The value of tmnxMobPdnApnGyApStatRc5000 indicates the number of 5000 result codes that triggered Gy assume positive.
gyApStatRc5001 [Gy Ap Stat Rc 5001] (tmnxMobPdnApnGyApStatRc5001)	int	The value of tmnxMobPdnApnGyApStatRc5001 indicates the number of 5001 result codes that triggered Gy assume positive.
gyApStatRc5xxx [Gy Ap Stat Rc 5 xxx] (tmnxMobPdnApnGyApStatRc5xxx)	int	The value of tmnxMobPdnApnGyApStatRc5xxx indicates the number of 5xxx result codes that triggered Gy assume positive.
gyApStatRtrSess [Gy Ap Stat Rtr Sess] (tmnxMobPdnApnGyApStatRtrSess)	int	The value of tmnxMobPdnApnGyApStatRtrSess indicates the number of Rela Time Reporting (RTR) service type sessions in Gy assume positive.
gyApStatTxTimeOut [Gy Ap Stat Tx Time Out] (tmnxMobPdnApnGyApStatTxTimeOut)	int	The value of tmnxMobPdnApnGyApStatTxTimeOut indicates the number of Tx Time Out errors that triggered Gy assume positive.
gyApStatUcSess [Gy Ap Stat Uc Sess] (tmnxMobPdnApnGyApStatUcSess)	int	The value of tmnxMobPdnApnGyApStatUcSess indicates the number of Usage Control (UC) service type sessions in Gy assume positive.

Table 546 ltegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
gyApStatUnknownSess [Gy Ap Stat Unknown Sess] (tmnxMobPdnApnGyApStatUnknownSess)	int	The value of tmnxMobPdnApnGyApStatUnknownSess indicates the number of unknown service type sessions in Gy assume positive.
<p>PdnApnStats</p> <p>MIB entry name: tmnxMobPdnApnStatEntry</p> <p>Entry description: Each row entry represents a Access Point Name (APN) on a Packet Data Network Gateway (PGW) of Mobility Service Module (MSM) and contains statistics for this card.</p> <p>Table description (for tmnxMobPdnApnStatTable): The tmnxMobPdnApnStatTable has an entry for each Access Point Name (APN) on a Packet Data Network Gateway (PGW) of Mobility Service Module (MSM) configured in the mobility system group defined for a Packet Data Network Gateway (PGW).</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: lte.PdnApn</p>		
aaalpv4Sess [Aaa Ipv 4 Sess] (tmnxMobPdnApnStatAaalpv4Sess)	int	The value of tmnxMobPdnApnStatAaalpv4Sess indicates the number of Authentication, Authorization and Accounting (AAA) IPv4 Packet Data Network (PDN) sessions.
aaalpv4v6Sess [Aaa Ipv 4 v 6 Sess] (tmnxMobPdnApnStatAaalpv4v6Sess)	int	The value of tmnxMobPdnApnStatAaalpv4v6Sess indicates the number of Authentication, Authorization and Accounting (AAA) IPv4 and Ipv6 Packet Data Network (PDN) sessions.
aaalpv6Sess [Aaa Ipv 6 Sess] (tmnxMobPdnApnStatAaalpv6Sess)	int	The value of tmnxMobPdnApnStatAaalpv6Sess indicates the number of Authentication, Authorization and Accounting (AAA) IPv6 Packet Data Network (PDN) sessions.
apnName [Apn Name] (tmnxMobPdnApnName)	String	The value of tmnxMobPdnApnName specifies the Access Point Name (APN).
cardSlotNum [Card Slot Num] (tmnxMobPdnCardSlotNum)	long	The value of tmnxMobPdnCardSlotNum indicates the slot number of this card.

Table 546 ltegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
dedicatedBearers [Dedicated Bearers] (tmnxMobPdnApnStatDedBearers)	int	The value of tmnxMobPdnApnStatDedBearers indicates the number of dedicated bearers being served.
dhcpIpv4Sess [Dhcp Ipv 4 Sess] (tmnxMobPdnApnStatDhcpIpv4Sess)	long	The value of tmnxMobPdnApnStatDhcpIpv4Sess indicates the number of Dynamic Host Configuration Protocol (DHCP) IPv4 Packet Data Network (PDN) sessions.
dhcpIpv4v6Sess [Dhcp Ipv 4 v 6 Sess] (tmnxMobPdnApnStatDhcpIpv4v6Sess)	long	The value of tmnxMobPdnApnStatDhcpIpv4v6Sess indicates the number of Dynamic Host Configuration Protocol (DHCP) IPv4 and Ipv6 Packet Data Network (PDN) sessions.
dhcpIpv6Sess [Dhcp Ipv 6 Sess] (tmnxMobPdnApnStatDhcpIpv6Sess)	long	The value of tmnxMobPdnApnStatDhcpIpv6Sess indicates the number of Dynamic Host Configuration Protocol (DHCP) IPv6 Packet Data Network (PDN) sessions.
dhcpV4RelaySess [Dhcp V4 Relay Sess] (tmnxMobPdnApnStatDhcpV4RelaySess)	long	The value of tmnxMobPdnApnStatDhcpV4RelaySess indicates the number of Dynamic Host Configuration Protocol (DHCP) Relay IPv4 Packet Data Network (PDN) sessions.
epcId [Epc Id] (tmnxMobGwld)	long	The value of tmnxMobGwld uniquely identifies a mobile gateway configured in the system.
homeSubServIpv4Sess [Home Sub Serv Ipv 4 Sess] (tmnxMobPdnApnStatHSSIpv4Sess)	int	The value of tmnxMobPdnApnStatHSSIpv4Sess indicates the number of Home Subscriber Server (HSS) IPv4 Packet Data Network (PDN) sessions.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
homeSubServIpv4v6Sess [Home Sub Serv Ipv 4 v 6 Sess] (tmnxMobPdnApnStatHSSIpv4v6Sess)	int	The value of tmnxMobPdnApnStatHSSIpv4v6Sess indicates the number of Home Subscriber Server (HSS) IPv4 and Ipv6 Packet Data Network (PDN) sessions.
homeSubServIpv6Sess [Home Sub Serv Ipv 6 Sess] (tmnxMobPdnApnStatHSSIpv6Sess)	int	The value of tmnxMobPdnApnStatHSSIpv6Sess indicates the number of Home Subscriber Server (HSS) IPv6 Packet Data Network (PDN) sessions.
homers [Homers] (tmnxMobPdnApnStatHomers)	int	The value of tmnxMobPdnApnStatHomers indicates the number of homers being served.
hrpdPDNSess [Hrpd PDNSess] (tmnxMobPdnApnStatHrpdSess)	long	The value of tmnxMobPdnApnStatHrpdSess indicates the number of High Rate Packet Data (HRPD) sessions.
idleTimeouts [Idle Timeouts] (tmnxMobPdnApnStatIdleTimeouts)	int	The value of tmnxMobPdnApnStatIdleTimeouts indicates the number of idle timeouts being served.
ipv4IpLclPool [Ipv 4 Ip Lcl Pool] (tmnxMobPdnApnStatIpv4IpLclPool)	int	The value of tmnxMobPdnApnStatIpv4IpLclPool indicates the number of IPv4 local pools being served.
ipv4PdnSess [Ipv 4 Pdn Sess] (tmnxMobPdnApnStatIpv4PdnSess)	int	The value of tmnxMobPdnApnStatIpv4PdnSess indicates the number of IPv4 PDN Sessions being served.
ipv4PdpContexts [Ipv 4 Pdp Contexts] (tmnxMobPdnApnStatIpv4PdpContexts)	int	The value of tmnxMobPdnApnStatIpv4PdpContexts indicates the number of IPv4 primary Packet Data Protocol (PDP) contexts being served.
ipv4v6IpLclPool [Ipv 4 v 6 Ip Lcl Pool] (tmnxMobPdnApnStatIpv4v6IpLclPool)	int	The value of tmnxMobPdnApnStatIpv4v6IpLclPool indicates the number of IPv4 and IPv6 local pools being served.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv4v6PdnSess [Ipv 4 v 6 Pdn Sess] (tmnxMobPdnApnStatIpv4v6PdnSess)	int	The value of tmnxMobPdnApnStatIpv4v6PdnSess indicates the number of IPv4 and Ipv6 PDN Sessions being served.
ipv6IpLclPool [Ipv 6 Ip Lcl Pool] (tmnxMobPdnApnStatIpv6IpLclPool)	int	The value of tmnxMobPdnApnStatIpv6IpLclPool indicates the number of IPv6 local pools being served.
ipv6PdnSess [Ipv 6 Pdn Sess] (tmnxMobPdnApnStatIpv6PdnSess)	int	The value of tmnxMobPdnApnStatIpv6PdnSess indicates the number of IPv6 PDN Sessions being served.
ipv6PdpContexts [Ipv 6 Pdp Contexts] (tmnxMobPdnApnStatIpv6PdpContexts)	int	The value of tmnxMobPdnApnStatIpv6PdpContexts indicates the number of IPv6 primary Packet Data Protocol (PDP) contexts being served.
l2tpSessions [L2 tp Sessions] (tmnxMobPdnApnStatL2tpSessions)	int	The value of tmnxMobPdnApnStatL2tpSessions indicates the number of Layer 2 Tunneling Protocol (L2TP) Sessions being served.
l2tpTunnels [L2 tp Tunnels] (tmnxMobPdnApnStatL2tpTunnels)	int	The value of tmnxMobPdnApnStatL2tpTunnels indicates the number of Layer 2 Tunneling Protocol (L2TP) tunnels being served.
nemoEhrpdSess [Nemo Ehrpd Sess] (tmnxMobPdnApnStatNemoEhrpdSess)	long	The value of tmnxMobPdnApnStatNemoEhrpdSess indicates the number of Network Mobility (NEMO) sessions over EHRPD.
nemoHaSess [Nemo Ha Sess] (tmnxMobPdnApnStatNemoHaSess)	long	The value of tmnxMobPdnApnStatNemoHaSess indicates the the number of Network Mobility (NEMO) sessions over Home Agent.
nemoIpv4Subnets [Nemo Ipv 4 Subnets] (tmnxMobPdnApnStatNemoIpv4Subnets)	long	The value of tmnxMobPdnApnStatNemoIpv4Subnets indicates the Network Mobility (NEMO) IPv4 Subnets.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
nemoLteSess [Nemo Lte Sess] (tmnxMobPdnApnStatNemoLteSess)	long	The value of tmnxMobPdnApnStatNemoLteSess indicates the number of Network Mobility (NEMO) sessions over LTE.
noOfIpv4PdnSessOverS2b [No Of Ipv 4 Pdn Sess Over S2 b] (tmnxMobPdnApnStatS2bIpv4Sess)	int	The value of tmnxMobPdnApnStatS2bIpv4Sess indicates the number of IPv4 Packet Data Network (PDN) sessions over S2b interface.
noOfIpv4n6PdnSessOverS2b [No Of Ipv 4 n 6 Pdn Sess Over S2 b] (tmnxMobPdnApnStatS2bIpv4v6Sess)	int	The value of tmnxMobPdnApnStatS2bIpv4v6Sess indicates the number of IPv4 and Ipv6 Packet Data Network (PDN) sessions over S2b interface.
noOfIpv6PdnSessOverS2b [No Of Ipv 6 Pdn Sess Over S2 b] (tmnxMobPdnApnStatS2bIpv6Sess)	int	The value of tmnxMobPdnApnStatS2bIpv6Sess indicates the number of Ipv6 Packet Data Network (PDN) sessions over S2b interface.
overrideTriggers [Override Triggers] (tmnxMobPdnApnStatOvrTrgr)	long	The value of tmnxMobPdnApnStatOvrTrgr indicates the number of Access Point Name (APN) override triggers.
ovrTrgrEstFailed [Ovr Trgr Est Failed] (tmnxMobPdnApnStatOvrEstFailed)	long	The value of tmnxMobPdnApnStatOvrEstFailed indicates the number of Access Point Name (APN) establishments failed override triggers.
ovrTrgrFailed [Ovr Trgr Failed] (tmnxMobPdnApnStatOvrTrgrFailed)	long	The value of tmnxMobPdnApnStatOvrTrgrFailed indicates the number of Access Point Name (APN) failed override triggers.
pcrfAmbrUpdates [Pcrf Ambr Updates] (tmnxMobPdnApnStatPcrfAmbrUpdates)	long	The value of tmnxMobPdnApnStatPcrfAmbrUpdates specifies the number of APN Aggregate Maximum Bit Rate (AMBR) updates (modifications) enforced locally as a result of PCRF initiated mid-session modifications.

Table 546 ltegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmiipv4Sess [Pmip Ipv 4 Sess] (tmnxMobPdnApnStatPmipIpv4Sess)	int	The value of tmnxMobPdnApnStatPmipIpv4Sess indicates the number of Proxy Mobile IPv6 (PMIPv6) IPv4 Packet Data Network (PDN) sessions.
pmiipv4v6Sess [Pmip Ipv 4 v 6 Sess] (tmnxMobPdnApnStatPmipIpv4v6Sess)	int	The value of tmnxMobPdnApnStatPmipIpv4v6Sess indicates the number of Proxy Mobile IPv6 (PMIPv6) IPv4 and Ipv6 Packet Data Network (PDN) sessions.
pmiipv6Sess [Pmip Ipv 6 Sess] (tmnxMobPdnApnStatPmipIpv6Sess)	int	The value of tmnxMobPdnApnStatPmipIpv6Sess indicates the number of Proxy Mobile IPv6 (PMIPv6) IPv6 Packet Data Network (PDN) sessions.
redirSessions [Redir Sessions] (tmnxMobPdnApnStatRedirSessions)	long	The value of tmnxMobPdnApnStatRedirSessions indicates the total number of redirected sessions per APN.
roamers [Roamers] (tmnxMobPdnApnStatRoamers)	int	The value of tmnxMobPdnApnStatRoamers indicates the number of roamers being served.
s2alpv4Sess [S2 a Ipv 4 Sess] (tmnxMobPdnApnStatS2alpv4Sess)	long	The value of tmnxMobPdnApnStatS2alpv4Sess indicates the number of IPv4 Packet Data Network (PDN) sessions over S2a interface.
s2alpv4v6Sess [S2 a Ipv 4 v 6 Sess] (tmnxMobPdnApnStatS2alpv4v6Sess)	long	The value of tmnxMobPdnApnStatS2alpv4v6Sess indicates the number of IPv4 and Ipv6 Packet Data Network (PDN) sessions over S2a interface.
s2alpv6Sess [S2 a Ipv 6 Sess] (tmnxMobPdnApnStatS2alpv6Sess)	long	The value of tmnxMobPdnApnStatS2alpv6Sess indicates the number of Ipv6 Packet Data Network (PDN) sessions over S2a interface.
sessTimeouts [Sess Timeouts] (tmnxMobPdnApnStatSessTimeouts)	int	The value of tmnxMobPdnApnStatSessTimeouts indicates the number of session timeouts being served.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sessUsedRealApn [Sess Used Real Apn] (tmnxMobPdnApnStatSessUsedRealApn)	long	The value of tmnxMobPdnApnStatSessUsedRealApn indicates the number of Packet Data Network (PDN) sessions using as real Access Point Name (APN).
tetherSessions [Tether Sessions] (tmnxMobPdnApnStatTetherSessions)	long	The value of tmnxMobPdnStatTetherSessions indicates the total number of tethered sessions per APN.
twagOpnSsidSess [Twag Opn Ssid Sess] (tmnxMobPdnApnStatTwagOpnSsidSess)	long	The value of tmnxMobPdnApnStatTwagOpnSsidSess indicates the number of Trusted WLAN Access Gateway (TWAG) Open Service Set Identifier (SSID) sessions.
v4SteerSess [V4 Steer Sess] (tmnxMobPdnApnStatV4SteerSess)	long	The value of tmnxMobPdnApnStatV4SteerSess indicates the number of IPv4 Steering Sessions.
v4v6SteerSess [V4 v 6 Steer Sess] (tmnxMobPdnApnStatV4v6SteerSess)	long	The value of tmnxMobPdnApnStatV4v6SteerSess indicates the number of IPv4v6 Steering Sessions.
v6SteerSess [V6 Steer Sess] (tmnxMobPdnApnStatV6SteerSess)	long	The value of tmnxMobPdnApnStatV6SteerSess indicates the number of IPv6 Steering Sessions.
visitors [Visitors] (tmnxMobPdnApnStatVisitors)	int	The value of tmnxMobPdnApnStatVisitors indicates the number of visitors being served.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PdnDhcpPeerStats</p> <p>MIB entry name: tmnxMobPdnDHCPStatEntry</p> <p>Entry description: Each row entry represents a peer on the DHCP server group and contain statistics for this peer on a card.</p> <p>Table description (for tmnxMobPdnDHCPStatTable): The tmnxMobPdnDHCPStatTable has an entry of statistics for each peer on the DHCP server group served by a Packet Data Network Gateway (PGW).</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Itegw.PdnDhcpSGPeer</p>		
ackRapidCommitRecieved [Ack Rapid Commit Recieved] (tmnxMobPdnDHCPsGackRapComRx)	long	The value of tmnxMobPdnDHCPsGackRapComRx indicates the number of rapid commit ack/dhcp6-good-reply messages received by Packet Data Network gateway/GPRS Service Node (PGW/GGSN).
ackRebindRecieved [Ack Rebind Recieved] (tmnxMobPdnDHCPsGackRebindRx)	long	The value of tmnxMobPdnDHCPsGackRebindRx indicates rebind ack/dhcp6-good-reply messages received by Packet Data Network/GPRS Service Node (PGW/GGSN).
ackRecieved [Ack Recieved] (tmnxMobPdnDHCPsGackRx)	long	The value of tmnxMobPdnDHCPsGackRx indicates the number of ack/dhcp6-good-reply messages received by Packet Data Network gateway/GPRS Service Node (PGW/GGSN).
ackRenewRecieved [Ack Renew Recieved] (tmnxMobPdnDHCPsGackRenewRx)	long	The value of tmnxMobPdnDHCPsGackRenewRx indicates the number of renew ack/dhcp6-good-reply messages received by Packet Data Network Gateway/GPRS Service Node (PGW/GGSN).
cardSlotNumber [Card Slot Number] (tmnxCardSlotNum)	long	The unique value which identifies this IOM slot within a chassis in the system.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
discoverFinalTimeOut [Discover Final Time Out] (tmnxMobPdnDHCPSTGDiscMsgFinalTO)	long	The value of tmnxMobPdnDHCPSTGDiscMsgFinalTO indicates the number of discover/solicit messages that timed out.
discoverRetransmitted [Discover Retransmitted] (tmnxMobPdnDHCPSTGDiscMsgReTx)	long	The value of tmnxMobPdnDHCPSTGDiscMsgReTx indicates the number of discover/solicit messages retransmitted by the Packet Data Network gateway/GPRS Service Node (PGW/GGSN).
discoverTransmitted [Discover Transmitted] (tmnxMobPdnDHCPSTGDiscMsgTx)	long	The value of tmnxMobPdnDHCPSTGDiscMsgTx indicates the number of discover/solicit messages sent by the Packet Data Network gateway/GPRS Service Node (PGW/GGSN).
droppedAckRecieved [Dropped Ack Recieved] (tmnxMobPdnDHCPSTGDroppedAckRx)	long	The value of tmnxMobPdnDHCPSTGDroppedAckRx indicates number of Ack messages received and dropped at the Packet Data Network Gateway/GPRS Service Node (PGW/GGSN).
droppedNakRecieved [Dropped Nak Recieved] (tmnxMobPdnDHCPSTGDroppedNackRx)	long	The value of tmnxMobPdnDHCPSTGDroppedNackRx indicates number of Nak messages received and dropped at the Packet Data Network Gateway/GPRS Service Node (PGW/GGSN).
droppedOfferRecieved [Dropped Offer Recieved] (tmnxMobPdnDHCPSTGSvrDropOfferRx)	long	The value of tmnxMobPdnDHCPSTGSvrDropOfferRx indicates the number of offer/advertise messages received and dropped by Packet Data Network/ GPRS Service Node (PGW/GGSN).
epcId [Epc Id] (tmnxMobGwId)	long	The value of tmnxMobGwId uniquely identifies a mobile gateway configured in the system.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
groupProfileName [Group Profile Name] (tmnxMobProfDHCPSSvrGrpName)	String	The value of tmnxMobProfDHCPSSvrGrpName specifies the unique name for this Dynamic Host Configuration Protocol (DHCP) server group.
invalidAckRecieved [Invalid Ack Recieved] (tmnxMobPdnDHCPSSGInvalidAckRx)	long	The value of tmnxMobPdnDHCPSSGInvalidAckRx indicates the number of ack messages received at the Packet Data Network/GPRS Service Node (PGW/GGSN) with incomplete information.
invalidOfferRecieved [Invalid Offer Recieved] (tmnxMobPdnDHCPSSGInvalidOfferRx)	long	The value of tmnxMobPdnDHCPSSGInvalidOfferRx indicates the number of offer/advertise messages received at the Packet Data Network/GPRS service Node (PGW/GGSN) with incomplete information.
leaseTimeTooShortRecieved [Lease Time Too Short Recieved] (tmnxMobPdnDHCPSSGLeaseTmShortRx)	long	The value of tmnxMobPdnDHCPSSGLeaseTmShortRx indicates the number of ack/dhcp6-good-reply messages recieved with lease time below the minimum value.
nakRecieved [Nak Recieved] (tmnxMobPdnDHCPSSGSvrNakRx)	long	The value of tmnxMobPdnDHCPSSGSvrNakRx indicates the number of nak/dhcp6-bad-reply messages received by Packet Data Network Gateway/ GPRS Service Node (PGW/GGSN).
offerRecieved [Offer Recieved] (tmnxMobPdnDHCPSSGOfferRx)	long	The value of tmnxMobPdnDHCPSSGOfferRx indicates the number of offer/advertise messages received by the Packet Data Network gateway/GPRS Service Node (PGW/GGSN).
otherErrors [Other Errors] (tmnxMobPdnDHCPSSGSvrOtherErrs)	long	The value of tmnxMobPdnDHCPSSGSvrOtherErrs indicates the number of other errors that are not covered by all the other counters above.
peerProfileIndex [Peer Profile Index] (tmnxMobProfDHCPSSGPeerIndex)	long	The value of tmnxMobProfDHCPSSGPeerIndex specifies the unique value which identifies this DHCP server group peer entry.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rebindFinalTimeOut [Rebind Final Time Out] (tmnxMobPdnDHCPsGRbindFinalTO)	long	The value of tmnxMobPdnDHCPsGRbindFinalTO indicates the number of rebind request messages that timed out.
rebindRetransmitted [Rebind Retransmitted] (tmnxMobPdnDHCPsGRbindReTx)	long	The value of tmnxMobPdnDHCPsGRbindReTx indicates the number of rebind request messages retransmitted by Packet Data Network gateway/GPRS Service Node (PGW/GGSN).
rebindTransmitted [Rebind Transmitted] (tmnxMobPdnDHCPsGRbindTx)	long	The value of tmnxMobPdnDHCPsGRbindTx indicates the number of rebind request messages sent by Packet Data Network gateway/GPRS Service Node (PGW/GGSN).
releaseFinalTimeOut [Release Final Time Out] (tmnxMobPdnDHCPsGSvrRelFinalTO)	long	The value of tmnxMobPdnDHCPsGSvrRelFinalTO indicates the number of release messages timed out for Packet Data Network Gateway/GPRS Service Node (PGW/GGSN).
releaseRecieved [Release Recieved] (tmnxMobPdnDHCPsGReleaseRx)	long	The value of tmnxMobPdnDHCPsGReleaseRx indicates the number of release dhcp6-good-reply messages received by Packet Data Network/GPRS Service Node (PGW/GGSN).
releaseRetransmitted [Release Retransmitted] (tmnxMobPdnDHCPsGSvrReleaseReTx)	long	The value of tmnxMobPdnDHCPsGSvrReleaseReTx indicates the number of release messages retransmitted by the Packet Data Network Gateway/GPRS Service Node (PGW/GGSN).
releaseTransmitted [Release Transmitted] (tmnxMobPdnDHCPsGSvrReleaseTx)	long	The value of tmnxMobPdnDHCPsGSvrReleaseTx indicates the number of release messages sent by Packet Data Network Gateway/GPRS Service Node (PGW/GGSN).
renewFinalTimeOut [Renew Final Time Out] (tmnxMobPdnDHCPsGRenewFinalTO)	long	The value of tmnxMobPdnDHCPsGRenewFinalTO indicates the number of renew request messages that timed out.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
renewReTransmitted [Renew Re Transmitted] (tmnxMobPdnDHCPsGRenewReTx)	long	The value of tmnxMobPdnDHCPsGRenewReTx indicates the number of renew request message retransmitted by Packet Data Network gateway/GPRS Service Node (PGW/GGSN).
renewTransmitted [Renew Transmitted] (tmnxMobPdnDHCPsGRenewTx)	long	The value of tmnxMobPdnDHCPsGRenewTx indicates the number of renew request messages sent by Packet Data Network gateway/GPRS Service Node (PGW/GGSN).
requestFinalTimeOut [Request Final Time Out] (tmnxMobPdnDHCPsGRequestFinalTO)	long	The value of tmnxMobPdnDHCPsGRequestFinalTO indicates the request messages timed out for Packet Data Network gateway/GPRS Service Node (PGW/GGSN).
requestRetransmitted [Request Retransmitted] (tmnxMobPdnDHCPsGRequestReTx)	long	The value of tmnxMobPdnDHCPsGRequestReTx indicates number of request messages retransmitted by Packet Data Network gateway/GPRS Service Node (PGW/GGSN).
requestTransmitted [Request Transmitted] (tmnxMobPdnDHCPsGRequestTx)	long	The value of tmnxMobPdnDHCPsGRequestTx indicates the number of request messages sent by Packet Data Network gateway/GPRS Service Node (PGW/GGSN).
serverFailover [Server Failover] (tmnxMobPdnDHCPsGSvrFailover)	long	The value of tmnxMobPdnDHCPsGSvrFailover indicates the number of time the DHCP server was declared dead because of retry exhaustion.
virtualRouterId [Virtual Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PdnDhcpSGPeerStats</p> <p>MIB entry name: tmnxMobGwEntry</p> <p>Entry description: Each row entry represents a mobile gateway. Entries can be created and deleted by the user. The values of tmnxMobGwRowStatus and tmnxMobGwType must be set in the same SNMP SET PDU for the row creation to succeed.</p> <p>Table description (for tmnxMobGwTable): The tmnxMobGwTable has an entry for each mobile gateway configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Itegw.PdnDhcpSGPeer</p>		
epcId [Epc Id] (tmnxMobGwId)	long	The value of tmnxMobGwId uniquely identifies a mobile gateway configured in the system.
groupProfileName [Group Profile Name] (tmnxMobProfDHCPsGrpName)	String	The value of tmnxMobProfDHCPsGrpName specifies the unique name for this Dynamic Host Configuration Protocol (DHCP) server group.
peerIpAddress [Peer Ip Address] (tmnxMobPdnDHCPsGPeerAddress)	String	The value of tmnxMobPdnDHCPsGPeerAddress indicates the IP address of the DHCP server group peer.
peerIpAddressType [Peer Ip Address Type] (tmnxMobPdnDHCPsGPeerAddressType)	int	The value of tmnxMobPdnDHCPsGPeerAddressType indicates the type of address represented by tmnxMobPdnDHCPsGPeerAddress.
peerProfileIndex [Peer Profile Index] (tmnxMobProfDHCPsGPeerIndex)	long	The value of tmnxMobProfDHCPsGPeerIndex specifies the unique value which identifies this DHCP server group peer entry.

Table 546 ltegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalLeases [Total Leases] (tmnxMobPdnDHCPSPGPeerTotalLeases)	long	The value of tmnxMobPdnDHCPSPGPeerTotalLeases indicates the current number of active Dynamic Host Configuration Protocol (DHCP) leases served by each DHCP server group peer.
virtualRouterId [Virtual Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
<p>PdnGtpErrorIndicationStats MIB entry name: tmnxMobGwEntry Entry description: Each row entry represents a mobile gateway. Entries can be created and deleted by the user. The values of tmnxMobGwRowStatus and tmnxMobGwType must be set in the same SNMP SET PDU for the row creation to succeed. Table description (for tmnxMobGwTable): The tmnxMobGwTable has an entry for each mobile gateway configured in the system. Supports realtime plotting Supports scheduled collection Monitored class: lte.PDNGateway</p>		
epcId [Epc Id] (tmnxMobGwId)	long	The value of tmnxMobGwId uniquely identifies a mobile gateway configured in the system.
gtpErrIndLocalAddr [Gtp Err Ind Local Addr] (tmnxMobPdnGtpErrIndLocalAddr)	String	The value of tmnxMobPdnGtpErrIndLocalAddr indicates the local IP address of the interface of the reference point.
gtpErrIndLocalAddrType [Gtp Err Ind Local Addr Type] (tmnxMobPdnGtpErrIndLocalAddrType)	int	The value of tmnxMobPdnGtpErrIndLocalAddrType indicates the type of address represented by tmnxMobPdnGtpErrIndLocalAddr.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
gtpErrIndNumDelBr [Gtp Err Ind Num Del Br] (tmnxMobPdnGtpErrIndNumDelBr)	long	The value of tmnxMobPdnGtpErrIndNumDelBr indicates the the number of bearers that were deleted due to error indication.
gtpErrIndNumDelSess [Gtp Err Ind Num Del Sess] (tmnxMobPdnGtpErrIndNumDelSess)	long	The value of tmnxMobPdnGtpErrIndNumDelSess indicates the number of sessions that were deleted due to error indication.
gtpErrIndNumUeIdle [Gtp Err Ind Num Ue Idle] (tmnxMobPdnGtpErrIndNumUeIdle)	long	The value of tmnxMobPdnGtpErrIndNumUeIdle indicates the number of User Equipments (UE) that went to idle due to error indication.
gtpErrIndPeerSrcAddr [Gtp Err Ind Peer Src Addr] (tmnxMobPdnGtpErrIndPeerSrcAddr)	String	The value of tmnxMobPdnGtpErrIndPeerSrcAddr indicates the IP address of the gtp source peer.
gtpErrIndPeerSrcAddrType [Gtp Err Ind Peer Src Addr Type] (tmnxMobPdnGtpErrIndPeerSrcAddrTy)	int	The value of tmnxMobPdnGtpErrIndPeerSrcAddrTy indicates the type of address represented by tmnxMobPdnGtpErrIndPeerSrcAddr.
gtpErrIndTxPkts [Gtp Err Ind Tx Pkts] (tmnxMobPdnGtpErrIndTxPkts)	long	The value of tmnxMobPdnGtpErrIndTxPkts indicates the number of the of the transmitted packets with error indication.
vRtrID [VRtr ID] (vRtrID)	long	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PdnGtpLocalOverloadCtrlStats</p> <p>MIB entry name: tmnxMobGwEntry</p> <p>Entry description: Each row entry represents a mobile gateway. Entries can be created and deleted by the user. The values of tmnxMobGwRowStatus and tmnxMobGwType must be set in the same SNMP SET PDU for the row creation to succeed.</p> <p>Table description (for tmnxMobGwTable): The tmnxMobGwTable has an entry for each mobile gateway configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Ite.PDNGateway</p>		
epcld [Epc Id] (tmnxMobGwld)	long	The value of tmnxMobGwld uniquely identifies a mobile gateway configured in the system.
lcOvLdStatCumBRCmDp [Lc Ov Ld Stat Cum BRCm Dp] (tmnxMobPdnGtpLcOvLdStatCum-BRCmDp)	long	The value of tmnxMobPdnGtpLcOvLdStatCumBRCmDp indicates the number of Cumulative Dropped Bearer Resource Commands due to Overload Control by this Packet Data Network Gateway(PGW).
lcOvLdStatCumCBRqDp [Lc Ov Ld Stat Cum CBRq Dp] (tmnxMobPdnGtpLcOvLdStatCumCBRqDp)	long	The value of tmnxMobPdnGtpLcOvLdStatCumCBRqDp indicates the number of Cumulative Dropped create bearer requests due to Overload Control by this Packet Data Network Gateway(PGW).
lcOvLdStatCumCSRqDp [Lc Ov Ld Stat Cum CSRq Dp] (tmnxMobPdnGtpLcOvLdStatCumCSRqDp)	long	The value of tmnxMobPdnGtpLcOvLdStatCumCSRqDp indicates the number of Cumulative Dropped create session requests due to Overload Control by this Packet Data Network Gateway(PGW).
lcOvLdStatCumMBCmDp [Lc Ov Ld Stat Cum MBCm Dp] (tmnxMobPdnGtpLcOvLdStatCumMB-CmDp)	long	The value of tmnxMobPdnGtpLcOvLdStatCumMBCmDp indicates the number of Cumulative Dropped Modify Bearer Commands due to Overload Control by this Packet Data Network Gateway(PGW).

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lcOvLdStatCumUBRqDp [Lc Ov Ld Stat Cum UBRq Dp] (tmnxMobPdnGtpLcOvLdStatCumUBRqDp)	long	The value of tmnxMobPdnGtpLcOvLdStatCumUBRqDp indicates the number of Cumulative Dropped update bearer requests due to Overload Control by this Packet Data Network Gateway(PGW).
lcOvLdStatCurrOvld [Lc Ov Ld Stat Curr Ovld] (tmnxMobPdnGtpLcOvLdStatCurrOvld)	boolean	The value of tmnxMobPdnGtpLcOvLdStatCurrOvld indicates if the local node is currently in Overload.
lcOvLdStatLstOvldRp [Lc Ov Ld Stat Lst Ovld Rp] (tmnxMobPdnGtpLcOvLdStatLstOvldRp)	long	The value of tmnxMobPdnGtpLcOvLdStatLstOvldRp indicates the time of the last Overload Control Information (OCI) received by this Packet Data Network Gateway(PGW).
lcOvLdStatRemValdTime [Lc Ov Ld Stat Rem Vald Time] (tmnxMobPdnGtpLcOvLdStatRemValTme)	int	The value of tmnxMobPdnGtpLcOvLdStatRemValTme indicates validity time of the Overload control on this Packet Data Network Gateway(PGW).
lcOvLdStatTrfRedVal [Lc Ov Ld Stat Trf Red Val] (tmnxMobPdnGtpLcOvLdStatTrfRedVal)	int	The value of tmnxMobPdnGtpLcOvLdStatTrfRedVal indicates percentage of traffic reduction requested by the local node.
<p>PdnGtpOverloadCtrlStats</p> <p>MIB entry name: tmnxMobGwEntry</p> <p>Entry description: Each row entry represents a mobile gateway. Entries can be created and deleted by the user. The values of tmnxMobGwRowStatus and tmnxMobGwType must be set in the same SNMP SET PDU for the row creation to succeed.</p> <p>Table description (for tmnxMobGwTable): The tmnxMobGwTable has an entry for each mobile gateway configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Ite.PDNGateway</p>		

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
epcId [Epc Id] (tmnxMobGwId)	long	The value of tmnxMobGwId uniquely identifies a mobile gateway configured in the system.
ovLdStatAttchReqRej [Ov Ld Stat Attch Req Rej] (tmnxMobPdnGtpOvLdStatAttchReqRej)	long	The value of tmnxMobPdnGtpOvLdStatAttchReqRej indicates the cumulative number of attach requests that were rejected due to the Packet Data Network Gateway (PGW) being in overloaded state.
ovLdStatCurrOvld [Ov Ld Stat Curr Ovld] (tmnxMobPdnGtpOvLdStatCurrOvld)	boolean	The value of tmnxMobPdnGtpOvLdStatCurrOvld indicates if the remote node is currently in Overload.
ovLdStatDrpCreatBR [Ov Ld Stat Drp Creat BR] (tmnxMobPdnGtpOvLdStatDrpCreatBR)	long	The value of tmnxMobPdnGtpOvLdStatDrpCreatBR indicates the number of Dropped create bearer requests due to Overload Control by this Packet Data Network Gateway(PGW).
ovLdStatDrpDeletBR [Ov Ld Stat Drp Delet BR] (tmnxMobPdnGtpOvLdStatDrpDeletBR)	long	The value of tmnxMobPdnGtpOvLdStatDrpDeletBR indicates the number of Dropped delete bearer requests due to Overload Control by this Packet Data Network Gateway(PGW).
ovLdStatDrpUpdatBR [Ov Ld Stat Drp Updat BR] (tmnxMobPdnGtpOvLdStatDrpUpdatBR)	long	The value of tmnxMobPdnGtpOvLdStatDrpUpdatBR indicates the number of Dropped update bearer requests due to Overload Control by this Packet Data Network Gateway(PGW).
ovLdStatLstOvAttRej [Ov Ld Stat Lst Ov Att Rej] (tmnxMobPdnGtpOvLdStatLstOvAttRej)	long	The value of tmnxMobPdnGtpOvLdStatLstOvAttRej indicates the number of attach requests that were rejected due to the Packet Data Network Gateway (PGW) in the last overloaded state.
ovLdStatLstOvDrpCBR [Ov Ld Stat Lst Ov Drp CBR] (tmnxMobPdnGtpOvLdStatLstOvDrpCBR)	long	The value of tmnxMobPdnGtpOvLdStatLstOvDrpCBR indicates the number of Dropped create bearer requests due to Overload Control by this Packet Data Network Gateway(PGW) in the last overloaded state.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ovLdStatLstOvDrpDBR [Ov Ld Stat Lst Ov Drp DBR] (tmnxMobPdnGtpOvLdStatLstOvDrpDBR)	long	The value of tmnxMobPdnGtpOvLdStatLstOvDrpDBR indicates the number of Dropped delete bearer requests due to Overload Control by this Packet Data Network Gateway(PGW) in the last overloaded state.
ovLdStatLstOvDrpUBR [Ov Ld Stat Lst Ov Drp UBR] (tmnxMobPdnGtpOvLdStatLstOvDrpUBR)	long	The value of tmnxMobPdnGtpOvLdStatLstOvDrpUBR indicates the number of Dropped update bearer requests due to Overload Control by this Packet Data Network Gateway(PGW) in the last overloaded state.
ovLdStatLstOvMobRej [Ov Ld Stat Lst Ov Mob Rej] (tmnxMobPdnGtpOvLdStatLstOvMobRej)	long	The value of tmnxMobPdnGtpOvLdStatLstOvMobRej indicates the number of mobility attach requests that were rejected due to the Packet Data Network Gateway (PGW) being in the last overloaded state.
ovLdStatLstOvSesRej [Ov Ld Stat Lst Ov Ses Rej] (tmnxMobPdnGtpOvLdStatLstOvSesRej)	long	The value of tmnxMobPdnGtpOvLdStatLstOvSesRej indicates the number of modify session requests initiated from AAA/HSS that were rejected due to the Packet Data Network Gateway (PGW) being in the last overloaded state.
ovLdStatLstOvldRep [Ov Ld Stat Lst Ovlid Rep] (tmnxMobPdnGtpOvLdStatLstOvldRep)	long	The value of tmnxMobPdnGtpOvLdStatLstOvldRep indicates the time of the last Overload Control Information (OCI) received by this Packet Data Network Gateway(PGW).
ovLdStatMobReqRej [Ov Ld Stat Mob Req Rej] (tmnxMobPdnGtpOvLdStatMobReqRej)	long	The value of tmnxMobPdnGtpOvLdStatMobReqRej indicates the cumulative number of mobility attach requests that were rejected due to the Packet Data Network Gateway (PGW) being in overloaded state.
ovLdStatNdAddr [Ov Ld Stat Nd Addr] (tmnxMobPdnGtpOvLdStatNdAddr)	String	The value of tmnxMobPdnGtpOvLdStatNdAddr indicates the IP address of the Serving Gateway (SGW) or Mobility Management Entity (MME) node.
ovLdStatNdAddrTyp [Ov Ld Stat Nd Addr Typ] (tmnxMobPdnGtpOvLdStatNdAddrTyp)	int	The value of tmnxMobPdnGtpOvLdStatNdAddrTyp indicates the type of address represented by tmnxMobPdnGtpOvLdStatNdAddr.

Table 546 ltegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ovLdStatNodeId [Ov Ld Stat Node Id] (tmnxMobPdnGtpOvLdStatNodeId)	int	The value of tmnxMobPdnGtpOvLdStatNodeId indicates if the node is Serving Gateway (SGW) or Mobility Management Entity (MME) node.
ovLdStatPgwLoadMet [Ov Ld Stat Pgw Load Met] (tmnxMobPdnGtpOvLdStatPgwLoadMet)	long	The value of tmnxMobPdnGtpOvLdStatPgwLoadMet indicates the current load metric for the Packet Data Network Gateway (PGW).
ovLdStatRemValdTime [Ov Ld Stat Rem Vald Time] (tmnxMobPdnGtpOvLdStatRemValdTime)	int	The value of tmnxMobPdnGtpOvLdStatRemValdTime indicates validity time of the Overload control on this Packet Data Network Gateway(PGW).
ovLdStatSessModRej [Ov Ld Stat Sess Mod Rej] (tmnxMobPdnGtpOvLdStatSessModRej)	long	The value of tmnxMobPdnGtpOvLdStatSessModRej indicates the cumulative number of modify session requests initiated from AAA/HSS that were rejected due to the Packet Data Network Gateway (PGW) being in overloaded state.
ovLdStatTrfRedVal [Ov Ld Stat Trf Red Val] (tmnxMobPdnGtpOvLdStatTrfRedVal)	int	The value of tmnxMobPdnGtpOvLdStatTrfRedVal indicates percentage of traffic reduction requested by the remote node.
<p>PdnIpsecLockoutStatStats</p> <p>MIB entry name: tmnxMobPdnIpsecLockoutStatEntry</p> <p>Entry description: Each row entry represents statistics of users which are locked out from further attach to ePDG.</p> <p>Table description (for tmnxMobPdnIpsecLockoutStatTable): The tmnxMobPdnIpsecLockoutStatTable an entry for the statistics of users which are temporarily locked out from further attach to evolved Packet Data Gateway (ePDG) due to frequent authentication failure.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: lte.PDNGateway</p>		
numOfUsers [Num Of Users] (tmnxMobPdnIpsecLockoutNumUser)	long	The value of tmnxMobPdnIpsecLockoutNumUser indicates the total number of users that are locked out from further attach to ePDG.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>RestorationPriorityLevel</p> <p>MIB entry name: tmnxMobPdnApnEntry</p> <p>Entry description: Each row entry represents an Access Point Name (APN). Entries can be created and deleted by the user.</p> <p>Table description (for tmnxMobPdnApnTable): The tmnxMobPdnApnTable has an entry for each Access Point Name (APN). An APN identifies an external network that is accessible from a terminal.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Ite.PdnApn</p>		
apnName [Apn Name] (tmnxMobPdnApnName)	String	The value of tmnxMobPdnApnName specifies the Access Point Name (APN).
cardSlotNum [Card Slot Num] (tmnxMobPdnCardSlotNum)	long	The value of tmnxMobPdnCardSlotNum indicates the slot number of this card.
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
epcId [Epc Id] (tmnxMobGwId)	long	The value of tmnxMobGwId uniquely identifies a mobile gateway configured in the system.
restPrioLvIlevel [Rest Prio Lvl Level] (tmnxMobPdnApnRestPrioLvIlevel)	long	The value of tmnxMobPdnApnRestPrioLvIlevel indicates the restoration priority level of the PDN connection.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
restPrioLvIPdnConns [Rest Prio Lvl Pdn Conns] (tmnxMobPdnApnRestPrioLvIPdnConns)	long	The value of tmnxMobPdnApnRestPrioLvIPdnConns indicates the number of PDN connections for a specific restoration priority level.
<p>SigPathStats</p> <p>MIB entry name: tmnxMobGwEntry</p> <p>Entry description: Each row entry represents a mobile gateway. Entries can be created and deleted by the user. The values of tmnxMobGwRowStatus and tmnxMobGwType must be set in the same SNMP SET PDU for the row creation to succeed.</p> <p>Table description (for tmnxMobGwTable): The tmnxMobGwTable has an entry for each mobile gateway configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Itegw.SigPath</p>		
epcId [Epc Id] (tmnxMobGwId)	long	The value of tmnxMobGwId uniquely identifies a mobile gateway configured in the system.
localAddress [Local Address] (tmnxMobGwSigPathLocAddress)	String	The value of tmnxMobGwSigPathLocAddress indicates the local IP address of the interface of the path.
localAddressType [Local Address Type] (tmnxMobGwSigPathLocAddressType)	int	The value of tmnxMobGwSigPathLocAddressType indicates the type of address represented by tmnxMobGwSigPathLocAddress.
mgmtFails [Mgmt Fails] (tmnxMobGwSigPathMgmtFails)	long	The value of tmnxMobGwSigPathMgmtFails indicates the number of path management failures on the GTP path.
peerRestartCnt [Peer Restart Cnt] (tmnxMobGwSigPathPeerRestartCnt)	long	The value of tmnxMobGwSigPathPeerRestartCnt indicates the counter value of the number of times the peer restarted on the GTP path.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
peerRestarts [Peer Restarts] (tmnxMobGwSigPathPeerRestarts)	long	The value of tmnxMobGwSigPathPeerRestarts indicates the number of times the peer restarted on the GTP path.
planeType [Plane Type] (tmnxMobGwSigPlaneType)	int	The tmnxMobGwSigPlaneType is an enumerated integer that describes the type of a reference point peer's plane - control or data.
remoteAddress [Remote Address] (tmnxMobGwSigPathRemAddress)	String	The value of tmnxMobGwSigPathRemAddress indicates the remote IP address of the interface of the path.
remoteAddressType [Remote Address Type] (tmnxMobGwSigPathRemAddressType)	int	The value of tmnxMobGwSigPathRemAddressType indicates the type of address represented by tmnxMobGwSigPathRemAddress.
rxEchoReq [Rx Echo Req] (tmnxMobGwSigPathRxEchoReq)	long	The value of tmnxMobGwSigPathRxEchoReq indicates the number of echo request messages transmitted on the GTP path.
rxEchoRsp [Rx Echo Rsp] (tmnxMobGwSigPathRxEchoRsp)	long	The value of tmnxMobGwSigPathRxEchoRsp indicates the number of echo response messages received on the GTP path.
txEchoReq [Tx Echo Req] (tmnxMobGwSigPathTxEchoReq)	long	The value of tmnxMobGwSigPathTxEchoReq indicates the number of echo request messages received on the GTP path.
txEchoRsp [Tx Echo Rsp] (tmnxMobGwSigPathTxEchoRsp)	long	The value of tmnxMobGwSigPathTxEchoRsp indicates the number of echo response messages transmitted on the GTP path.

Table 546 ltegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
virtualRouterId [Virtual Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
<p>UserRefPtStats</p> <p>MIB entry name: tmnxMobGwUserRefPtStatEntry</p> <p>Entry description: Each row entry represents a peer on the GPRS Tunneling Protocol- User plane (GTP-U) reference point and contains statistics for this peer on a card.</p> <p>Table description (for tmnxMobGwUserRefPtStatTable): The tmnxMobGwUserRefPtStatTable has an entry for each peer on the GPRS Tunneling Protocol-User plane (GTP-U) reference point served by a Serving Gateway (SGW) / Packet Data Network (PDN) Gateway (PGW).</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • lte.S1uPeer • ltesgsn.S12uPeer 		
bearerContextNotFound [Bearer Context Not Found] (tmnxMobGwUserStatBcNotFound)	long	The value of tmnxMobGwUserStatBcNotFound indicates the number of bearer context not found errors on this peer.
bearers [Bearers] (tmnxMobGwUserStatBearers)	long	The value of tmnxMobGwUserStatBearers indicates the total number of bearers being served by this peer.
cardSlotNumber [Card Slot Number] (tmnxCardSlotNum)	long	The unique value which identifies this IOM slot within a chassis in the system.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
downlinkBytes [Downlink Bytes] (tmnxMobGwUserStatDIBytes)	long	The value of tmnxMobGwUserStatDIBytes indicates the number of downlink bytes transmitted to this peer.
downlinkPackets [Downlink Packets] (tmnxMobGwUserStatDIPackets)	long	The value of tmnxMobGwUserStatDIPackets indicates the number of downlink packets transmitted to this peer.
epcId [Epc Id] (tmnxMobGwId)	long	The value of tmnxMobGwId uniquely identifies a mobile gateway configured in the system.
pathMgmtFails [Path Mgmt Fails] (tmnxMobGwUserStatPathMgmtFails)	long	The value of tmnxMobGwUserStatPathMgmtFails indicates the number of path management failures for this peer.
peerIpAddress [Peer Ip Address] (tmnxMobGwSigPeerAddress)	String	The value of tmnxMobGwSigPeerAddress indicates the IP address of this peer on signaling reference points.
peerIpAddressType [Peer Ip Address Type] (tmnxMobGwSigPeerAddressType)	int	The value of tmnxMobGwSigPeerAddressType indicates the type of address represented by tmnxMobGwSigPeerAddress.
peerRestartCnt [Peer Restart Cnt] (tmnxMobGwUserStatPeerRestartCnt)	long	The value of tmnxMobGwUserStatPeerRestartCnt indicates the counter value of the number of times this peer restarted.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
peerRestarts [Peer Restarts] (tmnxMobGwUserStatPeerRestarts)	long	The value of tmnxMobGwUserStatPeerRestarts indicates the number of times this peer restarted.
peerType [Peer Type] (tmnxMobGwSigPeerType)	int	The tmnxMobGwSigPeerType is an enumerated integer that describes the type of a reference point peer.
receivedEchoRequests [Received Echo Requests] (tmnxMobGwUserStatRxEchoRequests)	long	The value of tmnxMobGwUserStatRxEchoRequests indicates the number of echo request messages received from this peer.
receivedEchoResponse [Received Echo Response] (tmnxMobGwUserStatRxEchoResponse)	long	The value of tmnxMobGwUserStatRxEchoResponse indicates the number of echo response messages received from this peer.
refPtName [Ref Pt Name] (tmnxMobGwSigRefPtName)	String	The value of tmnxMobGwSigRefPtName specifies the name of this reference point. When an entry is created for a single interface, the value of tmnxMobGwSigRefPtName is set to 'default'.
transmittedEchoRequests [Transmitted Echo Requests] (tmnxMobGwUserStatTxEchoRequests)	long	The value of tmnxMobGwUserStatTxEchoRequests indicates the number of echo request messages transmitted to this peer.
transmittedEchoResponse [Transmitted Echo Response] (tmnxMobGwUserStatTxEchoResponse)	long	The value of tmnxMobGwUserStatTxEchoResponse indicates the number of echo response messages transmitted to this peer.
type [Type] (tmnxMobGwSigRefPtType)	int	The value of tmnxMobGwSigRefPtType specifies the type of this reference point.

Table 546 Itegw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
uplinkBytes [Uplink Bytes] (tmnxMobGwUserStatUIBytes)	long	The value of tmnxMobGwUserStatUIBytes indicates the number of uplink bytes received from this peer.
uplinkPackets [Uplink Packets] (tmnxMobGwUserStatUIPackets)	long	The value of tmnxMobGwUserStatUIPackets indicates the number of uplink packets received from this peer.

Table 547 Itehomeagent statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PiPeerStats</p> <p>MIB entry name: tmnxCardEntry</p> <p>Entry description: Each row entry represents an IOM card slot in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. When a tmnxChassisEntry is created, a tmnxCardEntry is created for each IOM card slot in that chassis. Before a tmnxChassisEntry can be deleted, each tmnxCardEntry for that chassis must be in the proper state for removal.</p> <p>Table description (for tmnxCardTable): The tmnxCardTable has an entry for each IOM card slot in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Itehomeagent.PiPeer</p>		
cardSlotNumber [Card Slot Number] (tmnxCardSlotNum)	long	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
epcId [Epc Id] (tmnxMobGwId)	long	The value of tmnxMobGwId uniquely identifies a mobile gateway configured in the system.
numberOfDeRegReAccpt [Number Of De Reg Re Accpt] (tmnxMobPdnPiStatRegReAccpt)	long	The value of tmnxMobPdnPiStatRegReAccpt indicates the total number of successful registration replies sent.
numberOfDeRegReqAccpt [Number Of De Reg Req Accpt] (tmnxMobPdnPiStatDeRegReqAccpt)	long	The value of tmnxMobPdnPiStatDeRegReqAccpt indicates the total number of requests for de-registration accepted.

Table 547 Itehomeagent statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numberOfDeRegReqDeny [Number Of De Reg Req Deny] (tmnxMobPdnPiStatDeRegReqDenied)	long	The value of tmnxMobPdnPiStatDeRegReqDenied indicates the total number of requests for de-registration denied.
numberOfDeRegReqRx [Number Of De Reg Req Rx] (tmnxMobPdnPiStatDeRegReqRx)	long	The value of tmnxMobPdnPiStatDeRegReqRx indicates the total number of requests for de-registration recieved.
numberOfHoReqAccpt [Number Of Ho Req Accpt] (tmnxMobPdnPiStatHoReqAccpt)	long	The value of tmnxMobPdnPiStatHoReqAccpt indicates the total number of handoff requests accepted by Home Agent (HA).
numberOfHoReqDenied [Number Of Ho Req Denied] (tmnxMobPdnPiStatHoReqDenied)	long	The value of tmnxMobPdnPiStatHoReqDenied indicates the total number of handoff requests denied by Home Agent (HA).
numberOfHoReqRx [Number Of Ho Req Rx] (tmnxMobPdnPiStatHoReqRx)	long	The value of tmnxMobPdnPiStatHoReqRx indicates the total number of handoff requests recieved by Home Agent (HA) for an existing session.
numberOfHoReqUdpEncapUa [Number Of Ho Req Udp Encap Ua] (tmnxMobPdnPiStatHoReqUdpEncapUa)	long	The value of tmnxMobPdnPiStatHoReqUdpEncapUa indicates the total number of registration requests denied with the error code 'ERROR_HA_UDP_ENCAP_UNAVAIL': requested UPD tunnel encapsulation unavailable.
numberOfHoReqUnkCvseRx [Number Of Ho Req Unk Cvse Rx] (tmnxMobPdnPiStatHoReqUnkCvseRx)	long	The value of tmnxMobPdnPiStatHoReqUnkCvseRx indicates the total number of messages discarded because of an Foreign Agent (FA) reply code of 'ERROR-FA-1 100': unsupported Vendor-ID or unable to interpret Vendor Critical Vendor Specific Extension Type (Vendor-CVSE-Type).
numberOfHoReqUnsRsn [Number Of Ho Req Uns Rsn] (tmnxMobPdnPiStatHoReqUnsRsn)	long	The value of tmnxMobPdnPiStatHoReqUnsRsn indicates the total number of denied registration replies that were sent with a reply code of '80H': Registration Denied - reason unspecified.

Table 547 Itehomeagent statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numberOfInitRegReqAccept [Number Of Init Reg Req Accept] (tmnxMobPdnPiStatInitRegReqAccpt)	long	The value of tmnxMobPdnPiStatInitRegReqAccpt indicates the total number of initial registration requests accepted.
numberOfInitRegReqDeny [Number Of Init Reg Req Deny] (tmnxMobPdnPiStatInitRegReqDenied)	long	The value of tmnxMobPdnPiStatInitRegReqDenied indicates the total number of initial registration requests denied.
numberOfInitRegReqRx [Number Of Init Reg Req Rx] (tmnxMobPdnPiStatInitRegReqRx)	long	The value of tmnxMobPdnPiStatInitRegReqRx indicates the total number of initial registration requests received.
numberOfInitRnwReqDeny [Number Of Init Rnw Req Deny] (tmnxMobPdnPiStatRnwRegReqDenied)	long	The value of tmnxMobPdnPiStatRnwRegReqDenied indicates the total number of renewal registration requests denied.
numberOfInitRnwReqRx [Number Of Init Rnw Req Rx] (tmnxMobPdnPiStatRnwRegReqRx)	long	The value of tmnxMobPdnPiStatRnwRegReqRx indicates the total number of renewal registration requests received.
numberOfRegReTotal [Number Of Reg Re Total] (tmnxMobPdnPiStatRegReTotal)	long	The value of tmnxMobPdnPiStatRegReTotal indicates the total number of registration replies sent.
numberOfRegRvcAckRx [Number Of Reg Rvc Ack Rx] (tmnxMobPdnPiStatRegRvcAckRx)	long	The value of tmnxMobPdnPiStatRegRvcAckRx indicates the total number of registration revocation request acknowledgements received from Foreign Agent (FA).
numberOfRegRvcAckSent [Number Of Reg Rvc Ack Sent] (tmnxMobPdnPiStatRegRvcAckSent)	long	The value of tmnxMobPdnPiStatRegRvcAckSent indicates the total number of registration revocation request acknowledgements sent to the Foreign Agent (FA).

Table 547 Itehomeagent statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numberOfRegRvcNoAck [Number Of Reg Rvc No Ack] (tmnxMobPdnPiStatRegRvcNoAck)	long	The value of tmnxMobPdnPiStatRegRvcNoAck indicates the total number of registration revocation request messages that are timeout before an acknowledgement was received from the Foreign Agent (FA).
numberOfRegRvcReSent [Number Of Reg Rvc Re Sent] (tmnxMobPdnPiStatRegRvcReSent)	long	The value of tmnxMobPdnPiStatRegRvcReSent indicates the total number of registration revocation messages re-sent to the Foreign Agent (FA).
numberOfRegRvcRxTotal [Number Of Reg Rvc Rx Total] (tmnxMobPdnPiStatRegRvcRxTotal)	long	The value of tmnxMobPdnPiStatRegRvcRxTotal indicates the total number of registration revocation request messages received from the Foreign Agent (FA).
numberOfRegRvcSent [Number Of Reg Rvc Sent] (tmnxMobPdnPiStatRegRvcSent)	long	The value of tmnxMobPdnPiStatRegRvcSent indicates the total number of registration revocation messages sent to the Foreign Agent (FA).
peerIpAddress [Peer Ip Address] (tmnxMobPdnPiPeerAddress)	String	The value of tmnxMobPdnPiPeerAddress indicates the IP address of the peer on Pi reference point.
peerIpAddressType [Peer Ip Address Type] (tmnxMobPdnPiPeerAddressType)	int	The value of tmnxMobPdnPiPeerAddressType indicates the type of address represented by tmnxMobPdnPiPeerAddress.
peerTcpPort [Peer Tcp Port] (tmnxMobPdnPiPeerPort)	int	The value of tmnxMobPdnPiPeerPort indicates the port number of this peer.
refPtName [Ref Pt Name] (tmnxMobGwMipSigRefPtName)	String	The value of tmnxMobGwMipSigRefPtName specifies the name of this reference point.

Table 547 Itehomeagent statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
virtualRouterId [Virtual Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.

Table 548 Iteli statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>DFPeerCardGroupStat</p> <p>MIB entry name: tmnxMobLiDfPeerStatusEntry</p> <p>Entry description: Each row entry represents the status of the Delivery Function (DF) peer associated with a card group for Lawful Interception (LI).</p> <p>Table description (for tmnxMobLiDfPeerStatusTable): The tmnxMobLiDfPeerStatusTable has an entry for each Delivery Function (DF) peer associated with a card group for the Lawful Interception (LI).</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Iteli.DFPeerCardGroup</p>		
df2TxPackets [Df 2 Tx Packets] (tmnxMobLiDf2PeerStatusPktsTx)	long	The value of tmnxMobLiDf2PeerStatusPktsTx indicates the number of packets transmitted to the Delivery Function 2 peer associated with this card group.
df3TxPackets [Df 3 Tx Packets] (tmnxMobLiDf3PeerStatusPktsTx)	long	The value of tmnxMobLiDf3PeerStatusPktsTx indicates the number of packets transmitted to the Delivery Function 3 peer associated with this card group.
dfPeerId [Df Peer Id] (tmnxMobLiDfPeer)	long	The value of tmnxMobLiDfPeer uniquely identifies a Delivery Function (DF) peer configured for Lawful Interception (LI) in the system.
groupId [Group Id] (tmnxMobLiDfPeerStatusCardGroup)	long	The value of tmnxMobLiDfPeerStatusCardGroup indicates the card group to which this Delivery Function peer belongs.

Table 548 Iteli statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>DFPeerStat</p> <p>MIB entry name: tmnxMobLiDfPeerEntry</p> <p>Entry description: Each row entry represents a Delivery Function (DF) peer for Lawful Interception (LI).</p> <p>Table description (for tmnxMobLiDfPeerTable): The tmnxMobLiDfPeerTable has an entry for each Delivery Function (DF) peer for the Lawful Interception (LI).</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Iteli.DFPeer</p>		
df2TxPackets [Df 2 Tx Packets] (tmnxMobLiDf2PeerPktsTx)	long	The value of tmnxMobLiDf2PeerPktsTx indicates the number of packets transmitted to the Delivery Function 2 peer.
df3TxPackets [Df 3 Tx Packets] (tmnxMobLiDf3PeerPktsTx)	long	The value of tmnxMobLiDf3PeerPktsTx indicates the number of packets transmitted to the Delivery Function 3 peer.
peerId [Peer Id] (tmnxMobLiDfPeer)	int	The value of tmnxMobLiDfPeer uniquely identifies a Delivery Function (DF) peer configured for Lawful Interception (LI) in the system.

Table 549 Itepmip statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
S2aPeerStats MIB entry name: tmnxMobPdnS2aStatEntry Entry description: Each row entry represents a peer on the S2a reference point and contain statistics for this peer on a card. Table description (for tmnxMobPdnS2aStatTable): The tmnxMobPdnS2aStatTable has an entry for each peer on the S2a reference point. Supports realtime plotting Supports scheduled collection Monitored class: Itepmip.S2aPeer		
bindingRevocationMesReceived [Binding Revocation Mes Received] (tmnxMobPdnS2aStatBri)	long	The value of tmnxMobPdnS2aStatBri indicates the number of Binding Revocation Indication messages transmitted to this peer.
cardSlotNumber [Card Slot Number] (tmnxCardSlotNum)	long	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassis-Index are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
failedBindingRevocationAck [Failed Binding Revocation Ack] (tmnxMobPdnS2aStatBraFailure)	long	The value of tmnxMobPdnS2aStatBraFailure indicates the number of failed Binding Revocation Acknowledgements received from this peer.
failedProxyBindingAckTransmitted [Failed Proxy Binding Ack Transmitted] (tmnxMobPdnS2aStatPbaFailure)	long	The value of tmnxMobPdnS2aStatPbaFailure indicates the number of failed Proxy Binding Acknowledgements transmitted to this peer.

Table 549 Itepmip statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
heartBeatReqMsgReceived [Heart Beat Req Msg Received] (tmnxMobPdnS2aStatHeartBeatReqRx)	long	The value of tmnxMobPdnS2aStatHeartBeatReqRx indicates the number of heartbeat request messages received from this peer.
heartBeatReqMsgTransmitted [Heart Beat Req Msg Transmitted] (tmnxMobPdnS2aStatHeartBeatReqTx)	long	The value of tmnxMobPdnS2aStatHeartBeatReqTx indicates the number of heartbeat request messages transmitted to this peer.
heartBeatResponseMsgReceived [Heart Beat Response Msg Received] (tmnxMobPdnS2aStatHeartBeatRespRx)	long	The value of tmnxMobPdnS2aStatHeartBeatRespRx indicates the number of heartbeat response messages received from this peer.
heartBeatResponseMsgTransmitted [Heart Beat Response Msg Transmitted] (tmnxMobPdnS2aStatHeartBeatRespTx)	long	The value of tmnxMobPdnS2aStatHeartBeatRespTx indicates the number of heartbeat response messages transmitted to this peer.
isPGWcompatiblewithIPV6 [Is PGWcompatiblewith IPV6] (tmnxMobPdnS2aStatHBCCompatible)	boolean	The value of tmnxMobPdnS2aStatHBCCompatible indicates if the Packet Data Network Gateway (PGW) detects the peer to be compatible with Proxy Mobile IPv6 (PMIPv6) heartbeat mechanism.
malformedPacketsReceived [Malformed Packets Received] (tmnxMobPdnS2aStatRxMalformedPkts)	long	The value of tmnxMobPdnS2aStatRxMalformedPkts indicates the number of malformed packets received from this peer.
missingInfoElementPacketsReceived [Missing Info Element Packets Received] (tmnxMobPdnS2aStatRxMissinglePkts)	long	The value of tmnxMobPdnS2aStatRxMissinglePkts indicates the number of missing mandatory Information Element (IE) packets received from this peer.
pathManagementFailures [Path Management Failures] (tmnxMobPdnS2aStatPathMgmtFail)	long	The value of tmnxMobPdnS2aStatPathMgmtFail indicates the number of path management failures for this peer.

Table 549 Itepmip statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
peerIpAddress [Peer Ip Address] (tmnxMobPdnS2aPeerAddress)	String	The value of tmnxMobPdnS2aPeerAddress indicates the IP address of the peer on S2a reference point.
peerIpAddressType [Peer Ip Address Type] (tmnxMobPdnS2aPeerAddressType)	int	The value of tmnxMobPdnS2aPeerAddressType indicates the type of address represented by tmnxMobPdnS2aPeerAddress.
peerRestartCount [Peer Restart Count] (tmnxMobPdnS2aStatPeerRestartCnt)	long	The value of tmnxMobPdnS2aStatPeerRestartCnt indicates the counter value of the number of times this peer restarted.
peerRestarts [Peer Restarts] (tmnxMobPdnS2aStatPeerRestart)	long	The value of tmnxMobPdnS2aStatPeerRestart indicates if the peer has restarted after registering with the Packet Data Network Gateway (PGW).
peerTcpPort [Peer Tcp Port] (tmnxMobPdnS2aPeerPort)	int	The value of tmnxMobPdnS2aPeerPort indicates the port number of this peer.
proxyBindingUpdatesReceived [Proxy Binding Updates Received] (tmnxMobPdnS2aStatPbu)	long	The value of tmnxMobPdnS2aStatPbu indicates the number of Proxy Binding Updates received from this peer.
successfulBindingRevocationAck [Successful Binding Revocation Ack] (tmnxMobPdnS2aStatBraSuccess)	long	The value of tmnxMobPdnS2aStatBraSuccess indicates the number of successful Binding Revocation Acknowledgements received from this peer.
successfulProxyBindingTransmitted [Successful Proxy Binding Transmitted] (tmnxMobPdnS2aStatPbaSuccess)	long	The value of tmnxMobPdnS2aStatPbaSuccess indicates the number of successful Proxy Binding transmitted to this peer.
unknownTypePacketsReceived [Unknown Type Packets Received] (tmnxMobPdnS2aStatRxUnknownPkts)	long	The value of tmnxMobPdnS2aStatRxUnknownPkts indicates the number of unknown message type packets received from this peer.

Table 549 Itepmp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
virtualRouterId [Virtual Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
<p>S6bFailureCodeStats</p> <p>MIB entry name: tmnxCardEntry</p> <p>Entry description: Each row entry represents an IOM card slot in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. When a tmnxChassisEntry is created, a tmnxCardEntry is created for each IOM card slot in that chassis. Before a tmnxChassisEntry can be deleted, each tmnxCardEntry for that chassis must be in the proper state for removal.</p> <p>Table description (for tmnxCardTable): The tmnxCardTable has an entry for each IOM card slot in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Itepmp.S6bPeer</p>		
cardSlotNumber [Card Slot Number] (tmnxCardSlotNum)	long	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassis-Index are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
epcId [Epc Id] (tmnxMobGwId)	long	The value of tmnxMobGwId uniquely identifies a mobile gateway configured in the system.

Table 549 Itepmip statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxAVPNotAllowed [Rx AVPNot Allowed] (tmnxMobPdnS6bCcRxAvpNotAllowed)	long	The value of tmnxMobPdnS6bCcRxAvpNotAllowed indicates the number of the AA-Answer (AAA) messages received on this peer with cause code set to DIAMETER_AVP_NOT_ALLOWED (5008).
rxAVPUnSupport [Rx AVPUn Support] (tmnxMobPdnS6bCcRxAvpUnsupport)	long	The value of tmnxMobPdnS6bCcRxAvpUnsupport indicates the number of the AA-Answer (AAA) messages received on this peer with cause code set to DIAMETER_AVP_UNSUPPORTED (5001).
rxAuthReject [Rx Auth Reject] (tmnxMobPdnS6bCcRxAuthZReject)	long	The value of tmnxMobPdnS6bCcRxAuthZReject indicates the number of the AA-Answer (AAA) messages received on this peer with cause code set to DIAMETER_AUTHORIZATION_REJECTED (5003).
rxIdNotRegist [Rx Id Not Regist] (tmnxMobPdnS6bCcRxIdNotRegist)	long	The value of tmnxMobPdnS6bCcRxIdNotRegist indicates the number of the AA-Answer (AAA) messages received on this peer with the experimental cause code set to DIAMETER_ERROR_IDENTITY_NOT_REGISTERED (5003).
rxIdRegistered [Rx Id Registered] (tmnxMobPdnS6bCcRxIdRegistered)	long	The value of tmnxMobPdnS6bCcRxIdRegistered indicates the number of the AA-Answer (AAA) messages received on this peer with the experimental cause code set to DIAMETER_ERROR_IDENTITY_ALREADY_REGISTERED (5005).
rxInvalAVPVal [Rx Inval AVPVal] (tmnxMobPdnS6bCcRxInvalAvpVal)	long	The value of tmnxMobPdnS6bCcRxInvalAvpVal indicates the number of the AA-Answer (AAA) messages received on this peer with cause code set to DIAMETER_INVALID_AVP_VALUE (5004).
rxMissingAVP [Rx Missing AVP] (tmnxMobPdnS6bCcRxMissingAvp)	long	The value of tmnxMobPdnS6bCcRxMissingAvp indicates the number of the AA-Answer (AAA) messages received on this peer with cause code set to DIAMETER_MISSING_AVP (5005).

Table 549 Itepmip statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxNewerSessDetect [Rx Newer Sess Detect] (tmnxMobPdnS6bCcRxNewerSessDetect)	long	The value of tmnxMobPdnS6bCcRxNewerSessDetect indicates the number of the AA-Answer (AAA) messages received on this peer with the experimental cause code set to DIAMETER_NEWER_SESSION_DETECTED (5199).
rxNoNon3gppSub [Rx No Non 3 gpp Sub] (tmnxMobPdnS6bCcRxNoNon3gppSub)	long	The value of tmnxMobPdnS6bCcRxNoNon3gppSub indicates the number of the AA-Answer (AAA) messages received on this peer with the experimental cause code set to DIAMETER_ERROR_USER_NO_NON_3GPP_SUBSCRIPTION (5450).
rxOIRtryNotAllow [Rx OI Rtry Not Allow] (tmnxMobPdnS6bCcRxOIRtryNotAllow)	long	The value of tmnxMobPdnS6bCcRxOIRtryNotAllow indicates the number of the AA-Answer (AAA) messages received on this peer with the experimental cause code set to DIAMETER_OVERLOAD_RETRY_NOT_ALLOWED_TO_ANY (5198).
rxRatNotAllow [Rx Rat Not Allow] (tmnxMobPdnS6bCcRxRatNotAllow)	long	The value of tmnxMobPdnS6bCcRxRatNotAllow indicates the number of the AA-Answer (AAA) messages received on this peer with the experimental cause code set to DIAMETER_ERROR_USER_RAT_TYPE_NOT_ALLOWED (5452).
rxRoamNotAllow [Rx Roam Not Allow] (tmnxMobPdnS6bCcRxRoamNotAllow)	long	The value of tmnxMobPdnS6bCcRxRoamNotAllow indicates the number of the AA-Answer (AAA) messages received on this peer with the experimental cause code set to DIAMETER_ERROR_ROAMING_NOT_ALLOWED (5004).
rxRsrcExceed [Rx Rsrc Exceed] (tmnxMobPdnS6bCcRxResourceExceed)	long	The value of tmnxMobPdnS6bCcRxResourceExceed indicates the number of AA-Answer (AAA) the messages received on this peer with cause code set to DIAMETER_RESOURCES_EXCEEDED (5006).
rxTooBusy [Rx Too Busy] (tmnxMobPdnS6bCcRxTooBusy)	long	The value of tmnxMobPdnS6bCcRxTooBusy indicates the number of the AA-Answer (AAA) messages received on this peer with cause code set to DIAMETER_TOO_BUSY (3004).

Table 549 Itepmip statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxUnableToDeliver [Rx Unable To Deliver] (tmnxMobPdnS6bCcRxUnableToDeliver)	long	The value of tmnxMobPdnS6bCcRxUnableToDeliver indicates the number of the AA-Answer (AAA) messages received on this peer with cause code set to DIAMETER_UNABLE_TO_DELIVER (3002).
rxUnknownSessId [Rx Unknown Sess Id] (tmnxMobPdnS6bCcRxUnkSessId)	long	The value of tmnxMobPdnS6bCcRxUnkSessId indicates the number of the AA-Answer (AAA) messages received on this peer with cause code set to DIAMETER_UNKNOWN_SESSION_ID (5002).
rxUserUnknown [Rx User Unknown] (tmnxMobPdnS6bCcRxUserUnknown)	long	The value of tmnxMobPdnS6bCcRxUserUnknown indicates the number of the AA-Answer (AAA) messages received on this peer with the experimental cause code set to DIAMETER_USER_UNKNOWN (5001).
rxUsrNoApnSubscr [Rx Usr No Apn Subscr] (tmnxMobPdnS6bCcRxUserNoApnSub)	long	The value of tmnxMobPdnS6bCcRxUserNoApnSub indicates the number of the AA-Answer (AAA) messages received on this peer with the experimental cause code set to DIAMETER_ERROR_USER_NO_APN_SUBSCRIPTION (5451).
txASAUncapableComply [Tx ASAUncapable Comply] (tmnxMobPdnS6bCcTxAsaUnComply)	long	The value of tmnxMobPdnS6bCcTxAsaUnComply indicates the number of Abort-Session-Answer (ASA) the messages transmitted from this peer with cause code set to DIAMETER_UNABLE_TO_COMPLY (5012).
txASAUncapableSess [Tx ASAUncapable Sess] (tmnxMobPdnS6bCcTxAsaUnkSessId)	long	The value of tmnxMobPdnS6bCcTxAsaUnkSessId indicates the number of the Abort-Session-Answer (ASA) messages transmitted from this peer with cause code set to DIAMETER_UNKNOWN_SESSION_ID (5002).
txOther3XXX [Tx Other 3 XXX] (tmnxMobPdnS6bCcRxOther3XXX)	long	The value of tmnxMobPdnS6bCcRxOther3XXX indicates the number of the AA-Answer (AAA) messages received on this peer with cause code set to other protocol errors.
txOther4XXX [Tx Other 4 XXX] (tmnxMobPdnS6bCcRxOther4XXX)	long	The value of tmnxMobPdnS6bCcRxOther4XXX indicates the number of the AA-Answer (AAA) messages received on this peer with cause code set to other transient failures.

Table 549 Itepmip statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txOther5XXX [Tx Other 5 XXX] (tmnxMobPdnS6bCcRxOther5XXX)	long	The value of tmnxMobPdnS6bCcRxOther5XXX indicates the number of the AA-Answer (AAA) messages received on this peer with cause code set to other permanent failures.
txRAAUnableComply [Tx RAAUnable Comply] (tmnxMobPdnS6bCcTxRaaUnComply)	long	The value of tmnxMobPdnS6bCcTxRaaUnComply indicates the number of Re-Auth-Answer (RAA) the messages transmitted from this peer with cause code set to DIAMETER_UNABLE_TO_COMPLY (5012).
txRAAUnknownSess [Tx RAAUnknown Sess] (tmnxMobPdnS6bCcTxRaaUnkSessId)	long	The value of tmnxMobPdnS6bCcTxRaaUnkSessId indicates the number of the Re-Auth-Answer (RAA) messages transmitted from this peer with cause code set to DIAMETER_UNKNOWN_SESSION_ID (5002).
txStrAdmin [Tx Str Admin] (tmnxMobPdnS6bCcTxStrAdmin)	long	The value of tmnxMobPdnS6bCcTxStrAdmin indicates the number of the Session-Termination-Request (STR) messages transmitted from this peer with Termination-Cause Attribute Value Pair (AVP) set to DIAMETER_ADMINISTRATIVE (4).
txStrBadAnswer [Tx Str Bad Answer] (tmnxMobPdnS6bCcTxStrBadAnswer)	long	The value of tmnxMobPdnS6bCcTxStrBadAnswer indicates the number of the Session-Termination-Request (STR) messages transmitted from this peer with Termination-Cause Attribute Value Pair (AVP) set to DIAMETER_BAD_ANSWER (3).
txStrLogout [Tx Str Logout] (tmnxMobPdnS6bCcTxStrLogout)	long	The value of tmnxMobPdnS6bCcTxStrLogout indicates the number of the Session-Termination-Request (STR) messages transmitted from this peer with Termination-Cause Attribute Value Pair (AVP) set to DIAMETER_LOGOUT (1).
txStrServNotProv [Tx Str Serv Not Prov] (tmnxMobPdnS6bCcTxStrServNotProv)	long	The value of tmnxMobPdnS6bCcTxStrServNotProv indicates the number of the Session-Termination-Request (STR) messages transmitted from this peer with Termination-Cause Attribute Value Pair (AVP) set to DIAMETER_SERVICE_NOT_PROVIDED (2).

Table 549 Itepmip statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txStrSessTimeOut [Tx Str Sess Time Out] (tmnxMobPdnS6bCcTxStrSessTimeout)	long	The value of tmnxMobPdnS6bCcTxStrSessTimeout indicates the number of the Session-Termination-Request (STR) messages transmitted from this peer with Termination-Cause Attribute Value Pair (AVP) set to DIAMETER_SESSION_TIMEOUT (8).
virtualRouterId [Virtual Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
<p>S6bPeerStats</p> <p>MIB entry name: tmnxCardEntry</p> <p>Entry description: Each row entry represents an IOM card slot in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. When a tmnxChassisEntry is created, a tmnxCardEntry is created for each IOM card slot in that chassis. Before a tmnxChassisEntry can be deleted, each tmnxCardEntry for that chassis must be in the proper state for removal.</p> <p>Table description (for tmnxCardTable): The tmnxCardTable has an entry for each IOM card slot in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Itepmip.S6bPeer</p>		
cardSlotNumber [Card Slot Number] (tmnxCardSlotNum)	long	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassis-Index are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.

Table 549 Itepmip statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
epcId [Epc Id] (tmnxMobGwld)	long	The value of tmnxMobGwld uniquely identifies a mobile gateway configured in the system.
numAARMsgDroppedCurrCongestion [Num AARMsg Dropped Curr Congestion] (tmnxMobPdnS6bStatCurrCgAarMsg)	long	The value of tmnxMobPdnS6bStatCurrCgAarMsg indicates the number of AA Request (AAR) messages to this peer dropped during the current congestion.
numAARMsgDroppedPrevCongestion [Num AARMsg Dropped Prev Congestion] (tmnxMobPdnS6bStatPrevCgAarMsg)	long	The value of tmnxMobPdnS6bStatPrevCgAarMsg indicates the number of AA Request (AAR) messages to this peer dropped during the prior congestion.
numASAMsgDroppedCurrCongestion [Num ASAMsg Dropped Curr Congestion] (tmnxMobPdnS6bStatCurrCgAsaMsg)	long	The value of tmnxMobPdnS6bStatCurrCgAsaMsg indicates the number of Abort Session Answer (ASA) messages to this peer dropped during the current congestion.
numASAMsgDroppedPrevCongestion [Num ASAMsg Dropped Prev Congestion] (tmnxMobPdnS6bStatPrevCgAsaMsg)	long	The value of tmnxMobPdnS6bStatPrevCgAsaMsg indicates the number of Abort Session Answer (ASA) messages to this peer dropped during the prior congestion.
numPendingMsgCurrCongestion [Num Pending Msg Curr Congestion] (tmnxMobPdnS6bStatCurrCgPendMsg)	long	The value of tmnxMobPdnS6bStatCurrCgPendMsg indicates the number of pending messages toward this peer during the current congestion.
numRAAMsgDroppedCurrCongestion [Num RAAMsg Dropped Curr Congestion] (tmnxMobPdnS6bStatCurrCgRaaMsg)	long	The value of tmnxMobPdnS6bStatCurrCgRaaMsg indicates the number of Re-Authorization Answer (RAA) messages to this peer dropped during the current congestion.
numRAAMsgDroppedPrevCongestion [Num RAAMsg Dropped Prev Congestion] (tmnxMobPdnS6bStatPrevCgRaaMsg)	long	The value of tmnxMobPdnS6bStatPrevCgRaaMsg indicates the number of Re-Authorization Answer (RAA) messages to this peer dropped during the prior congestion.

Table 549 Itepmip statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numRARPcscfRecvry [Num RARPcscf Recvry] (tmnxMobPdnS6bStatRARPcscfRecvry)	long	The value of tmnxMobPdnS6bStatRARPcscfRecvry indicates the number of reauthorization request primary Proxy Call Session Control Function (PCSCF) recovery messages received by the Packet Data Network Gateway (PGW).
numSTRMsgDroppedCurrCongestion [Num STRMsg Dropped Curr Congestion] (tmnxMobPdnS6bStatCurrCgStrMsg)	long	The value of tmnxMobPdnS6bStatCurrCgStrMsg indicates the number of Session Termination Request (STR) messages to this peer dropped during the current congestion.
numSTRMsgDroppedPrevCongestion [Num STRMsg Dropped Prev Congestion] (tmnxMobPdnS6bStatPrevCgStrMsg)	long	The value of tmnxMobPdnS6bStatPrevCgStrMsg indicates the number of Session Termination Request (STR) messages to this peer dropped during the prior congestion.
pdnS6bAAABadAVPValue [Pdn S6 b AAABad AVPValue] (tmnxMobPdnS6bAAABadAVPValue)	long	The value of tmnxMobPdnS6bAAABadAVPValue indicates the number of AA Answer (AAA) messages received with a bad Attribute Value Pair (AVP) parameter.
pdnS6bAAAMalformedPktsRx [Pdn S6 b AAAMalformed Pkts Rx] (tmnxMobPdnS6bAAAMalformedPktsRx)	long	The value of tmnxMobPdnS6bAAAMalformedPktsRx indicates the number of malformed AA Answer (AAA) messages received at the Packet Data Network Gateway (PGW).
pdnS6bAARFinalTOTx [Pdn S6 b AARFinal TOTx] (tmnxMobPdnS6bAARFinalTOTx)	long	The value of tmnxMobPdnS6bAARFinalTOTx indicates the number of AA Request (AAR) retries aborted due to exhaustion of maximum allowable retries due to the lack of response from the Authentication, Authorization and Accounting (AAA) server.
pdnS6bASAUnknownSessTx [Pdn S6 b ASAUnknown Sess Tx] (tmnxMobPdnS6bASAUnknownSessTx)	long	The value of tmnxMobPdnS6bASAUnknownSessTx indicates the number of Abort Session Answer (ASA) messages sent when the session identified in the Abort Session Request (ASR) message could not be found.
pdnS6bASRBadAVPValueRx [Pdn S6 b ASRBad AVPValue Rx] (tmnxMobPdnS6bASRBadAVPValueRx)	long	The value of tmnxMobPdnS6bASRBadAVPValueRx indicates the number of Abort Session Request (ASR) messages received with a bad Attribute Value Pair (AVP) parameter.

Table 549 Itepmip statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pdnS6bASRDuplicateRx [Pdn S6 b ASRDuplicate Rx] (tmnxMobPdnS6bASRDuplicateRx)	long	The value of tmnxMobPdnS6bASRDuplicateRx indicates the number of Abort Session Request (ASR) messages received for a session that is currently processing a previously received ASR message.
pdnS6bRAAUnknownSessTx [Pdn S6 b RAAUnknown Sess Tx] (tmnxMobPdnS6bRAAUnknownSessTx)	long	The value of tmnxMobPdnS6bRAAUnknownSessTx indicates the number of Reauthorization Answer (RAA) messages sent when the session identified in the Reauthorization Request (RAR) could not be found.
pdnS6bRARBadAVPValueRx [Pdn S6 b RARBad AVPValue Rx] (tmnxMobPdnS6bRARBadAVPValueRx)	long	The value of tmnxMobPdnS6bRARBadAVPValueRx indicates the number of Reauthorization Request (RAR) messages received with a bad Attribute Value Pair (AVP) parameter.
pdnS6bRARDuplicateRx [Pdn S6 b RARDuplicate Rx] (tmnxMobPdnS6bRARDuplicateRx)	long	The value of tmnxMobPdnS6bRARDuplicateRx indicates the number of Reauthorization Request (RAR) messages received for a session that is currently processing a previously received RAR message.
pdnS6bSTABadAVPValueRx [Pdn S6 b STABad AVPValue Rx] (tmnxMobPdnS6bSTABadAVPValueRx)	long	The value of tmnxMobPdnS6bSTABadAVPValueRx indicates the number of Session Termination Answer (STA) messages received with a bad Attribute Value Pair (AVP) parameter.
pdnS6bSTAMalformedPktsRx [Pdn S6 b STAMalformed Pkts Rx] (tmnxMobPdnS6bSTAMalformedPktsRx)	long	The value of tmnxMobPdnS6bSTAMalformedPktsRx indicates the number of malformed Session Termination Answer (STA) messages received at the Packet Data Network Gateway (PGW).
pdnS6bSTRFinalTOTx [Pdn S6 b STRFinal TOTx] (tmnxMobPdnS6bSTRFinalTOTx)	long	The value of tmnxMobPdnS6bSTRFinalTOTx indicates the number of Session Termination Request (STR) retries aborted due to exhaustion of maximum allowable retries due to the lack of response from the Authentication, Authorization and Accounting(AAA) server.
pdnS6bSTRUnknownSessTx [Pdn S6 b STRUnknown Sess Tx] (tmnxMobPdnS6bSTRUnknownSessTx)	long	The value of tmnxMobPdnS6bSTRUnknownSessTx indicates the number of Session Termination Requests (STR) the Packet Data Network Gateway (PGW) sends upon receiving AA Answer (AAA) message for an unknown session.

Table 549 Itepmip statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pdnS6bStatAADetachRx [Pdn S6 b Stat AADetach Rx] (tmnxMobPdnS6bStatAADetachRx)	long	The value of tmnxMobPdnS6bStatAADetachRx indicates the number of AA Answer messages received from this peer for a detach.
pdnS6bStatAAExtnRx [Pdn S6 b Stat AAExtn Rx] (tmnxMobPdnS6bStatAAExtnRx)	long	The value of tmnxMobPdnS6bStatAAExtnRx indicates the number of AA Answer messages received from this peer for a lifetime extension.
pdnS6bStatAAInitAtchRx [Pdn S6 b Stat AAInit Atch Rx] (tmnxMobPdnS6bStatAAInitAtchRx)	long	The value of tmnxMobPdnS6bStatAAInitAtchRx indicates the number of AA Answer messages received from this peer for an initial attach.
pdnS6bStatAAAMissAVPPktRx [Pdn S6 b Stat AAAMiss AVPPkt Rx] (tmnxMobPdnS6bStatAAAMissAVPPktRx)	long	The value of tmnxMobPdnS6bStatAAAMissAVPPktRx indicates the number of AA Answer messages missing a mandatory attribute received by Packet Data Network Gateway (PGW).
pdnS6bStatAAReauthRx [Pdn S6 b Stat AAReauth Rx] (tmnxMobPdnS6bStatAAReauthRx)	long	The value of tmnxMobPdnS6bStatAAReauthRx indicates the number of AA Answer messages received from this peer for a reauthorization.
pdnS6bStatAAARedRx [Pdn S6 b Stat AAARed Rx] (tmnxMobPdnS6bStatAAARedRx)	long	The value of tmnxMobPdnS6bStatAAARedRx indicates the number of AA Answers messages received for the AA Request (AAR) message requesting redirection to a new AAA host.
pdnS6bStatAAARectRx [Pdn S6 b Stat AAARect Rx] (tmnxMobPdnS6bStatAAARectRx)	long	The value of tmnxMobPdnS6bStatAAARectRx indicates the number of AA Answer messages received from this peer with Result-Code not set to diameter success.
pdnS6bStatAAASuccessRx [Pdn S6 b Stat AAASuccess Rx] (tmnxMobPdnS6bStatAAASuccessRx)	long	The value of tmnxMobPdnS6bStatAAASuccessRx indicates the number of AA Answer messages received from this peer with Result-Code set to diameter success.

Table 549 Itepmip statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pdnS6bStatAAUnknSesPktRx [Pdn S6 b Stat AAUnkn Ses Pkt Rx] (tmnxMobPdnS6bStatAAUnknSesPktRx)	long	The value of tmnxMobPdnS6bStatAAUnknSesPktRx indicates the number of AA answer messages received by the Packet Data Network Gateway (PGW) for which a session does not exist.
pdnS6bStatAARDetachTx [Pdn S6 b Stat AARDetach Tx] (tmnxMobPdnS6bStatAARDetachTx)	long	The value of tmnxMobPdnS6bStatAARDetachTx indicates the number of AA Request messages transmitted to this peer when detaching a session.
pdnS6bStatAARExtnTx [Pdn S6 b Stat AARExtn Tx] (tmnxMobPdnS6bStatAARExtnTx)	long	The value of tmnxMobPdnS6bStatAARExtnTx indicates the number of AA Request messages transmitted to this peer on behalf of a lifetime extension.
pdnS6bStatAARInitTx [Pdn S6 b Stat AARInit Tx] (tmnxMobPdnS6bStatAARInitTx)	long	The value of tmnxMobPdnS6bStatAARInitTx indicates the number of AA Request messages transmitted to this peer on behalf of an initial attach.
pdnS6bStatAARReauthTx [Pdn S6 b Stat AARReauth Tx] (tmnxMobPdnS6bStatAARReauthTx)	long	The value of tmnxMobPdnS6bStatAARReauthTx indicates the number of AA Request messages transmitted to this peer during a reauthorization.
pdnS6bStatAARRedFailTx [Pdn S6 b Stat AARRed Fail Tx] (tmnxMobPdnS6bStatAARRedFailTx)	long	The value of tmnxMobPdnS6bStatAARRedFailTx indicates the number of AA Request (AAR) transmitted that failed to be re-sent after receiving a redirection request.
pdnS6bStatAARRedTx [Pdn S6 b Stat AARRed Tx] (tmnxMobPdnS6bStatAARRedTx)	long	The value of tmnxMobPdnS6bStatAARRedTx indicates the number of AA Requests (AAR) re-sent after receiving a redirection request. This does not include messages that are sent to the redirected host when redirection has already been established.
pdnS6bStatAARRetries [Pdn S6 b Stat AARRetries] (tmnxMobPdnS6bStatAARRetries)	long	The value of tmnxMobPdnS6bStatAARRetries indicates the number of times the Packet Data Network Gateway (PGW) retried to send an AA Request.

Table 549 Itepmip statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pdnS6bStatASAnswerTx [Pdn S6 b Stat ASAnswer Tx] (tmnxMobPdnS6bStatASAnswerTx)	long	The value of tmnxMobPdnS6bStatASAnswerTx indicates the number of Abort session answer messages transmitted by the Packet Data Network Gateway (PGW).
pdnS6bStatASRMissAVPPktRx [Pdn S6 b Stat ASRMiss AVPPkt Rx] (tmnxMobPdnS6bStatASRMissAVPPktRx)	long	The value of tmnxMobPdnS6bStatASRMissAVPPktRx indicates the number of abort session request messages missing a mandatory parameter received by the Packet Data Network Gateway (PGW).
pdnS6bStatASRequestRx [Pdn S6 b Stat ASRequest Rx] (tmnxMobPdnS6bStatASRequestRx)	long	The value of tmnxMobPdnS6bStatASRequestRx indicates the number of abort session request messages received by the Packet Data Network Gateway (PGW).
pdnS6bStatCEAMsgsRx [Pdn S6 b Stat CEAMsgs Rx] (tmnxMobPdnS6bStatCEAMsgsRx)	long	The value of tmnxMobPdnS6bStatCEAMsgsRx indicates the number of Capability Exchange Answer (CEA) messages received from this peer.
pdnS6bStatCERMsgsTx [Pdn S6 b Stat CERMsgs Tx] (tmnxMobPdnS6bStatCERMsgsTx)	long	The value of tmnxMobPdnS6bStatCERMsgsTx indicates the number of Capability Exchange Request (CER) messages transmitted to this peer.
pdnS6bStatConnAttempts [Pdn S6 b Stat Conn Attempts] (tmnxMobPdnS6bStatConnAttempts)	long	The value of tmnxMobPdnS6bStatConnAttempts indicates the number of connections attempted to this peer.
pdnS6bStatConnFailures [Pdn S6 b Stat Conn Failures] (tmnxMobPdnS6bStatConnFailures)	long	The value of tmnxMobPdnS6bStatConnFailures indicates the number of failed connections with this peer.
pdnS6bStatDPAMsgsRx [Pdn S6 b Stat DPAMsgs Rx] (tmnxMobPdnS6bStatDPAMsgsRx)	long	The value of tmnxMobPdnS6bStatDPAMsgsRx indicates the number of Disconnect Peer Answer (DPA) messages received from this peer.

Table 549 Itepmip statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pdnS6bStatDPAMsgsTx [Pdn S6 b Stat DPAMsgs Tx] (tmnxMobPdnS6bStatDPAMsgsTx)	long	The value of tmnxMobPdnS6bStatDPAMsgsTx indicates the number of Disconnect Peer Answer (DPA) messages transmitted to this peer.
pdnS6bStatDPRMMsgsRx [Pdn S6 b Stat DPRMMsgs Rx] (tmnxMobPdnS6bStatDPRMMsgsRx)	long	The value of tmnxMobPdnS6bStatDPRMMsgsRx indicates the number of Disconnect Peer Request (DPR) messages received from this peer.
pdnS6bStatDPRMMsgsTx [Pdn S6 b Stat DPRMMsgs Tx] (tmnxMobPdnS6bStatDPRMMsgsTx)	long	The value of tmnxMobPdnS6bStatDPRMMsgsTx indicates the number of Disconnect Peer Request (DPR) messages transmitted to this peer.
pdnS6bStatDWAMsgsRx [Pdn S6 b Stat DWAMsgs Rx] (tmnxMobPdnS6bStatDWAMsgsRx)	long	The value of tmnxMobPdnS6bStatDWAMsgsRx indicates the number of Device Watch Answer (DWA) messages received from this peer.
pdnS6bStatDWAMsgsTx [Pdn S6 b Stat DWAMsgs Tx] (tmnxMobPdnS6bStatDWAMsgsTx)	long	The value of tmnxMobPdnS6bStatDWAMsgsTx indicates the number of Device Watch Answer (DWA) messages transmitted to this peer.
pdnS6bStatDWRMMsgsRx [Pdn S6 b Stat DWRMMsgs Rx] (tmnxMobPdnS6bStatDWRMMsgsRx)	long	The value of tmnxMobPdnS6bStatDWRMMsgsRx indicates the number of Device Watchdog Request (DWR) messages received from this peer.
pdnS6bStatDWRMMsgsTx [Pdn S6 b Stat DWRMMsgs Tx] (tmnxMobPdnS6bStatDWRMMsgsTx)	long	The value of tmnxMobPdnS6bStatDWRMMsgsTx indicates the number of Device Watchdog Request (DWR) messages transmitted to this peer.
pdnS6bStatMessagesRx [Pdn S6 b Stat Messages Rx] (tmnxMobPdnS6bStatMessagesRx)	long	The value of tmnxMobPdnS6bStatMessagesRx indicates the total number of s6b application messages received from this peer.
pdnS6bStatMessagesTx [Pdn S6 b Stat Messages Tx] (tmnxMobPdnS6bStatMessagesTx)	long	The value of tmnxMobPdnS6bStatMessagesTx indicates the total number of s6b application messages transmitted to this peer.

Table 549 Itepmip statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pdnS6bStatRAAnswerTx [Pdn S6 b Stat RAAnswer Tx] (tmnxMobPdnS6bStatRAAnswerTx)	long	The value of tmnxMobPdnS6bStatRAAnswerTx indicates the number of reauthorization answer messages transmitted by the Packet Data Network Gateway (PGW).
pdnS6bStatRARMissAVPPktRx [Pdn S6 b Stat RARMiss AVPPkt Rx] (tmnxMobPdnS6bStatRARMissAVPPktRx)	long	The value of tmnxMobPdnS6bStatRARMissAVPPktRx indicates the number of reauthorization request messages missing a mandatory attribute received by the Packet Data Network Gateway (PGW).
pdnS6bStatRARRequestRx [Pdn S6 b Stat RARRequest Rx] (tmnxMobPdnS6bStatRARRequestRx)	long	The value of tmnxMobPdnS6bStatRARRequestRx indicates the number of reauthorization request messages received by the Packet Data Network Gateway (PGW).
pdnS6bStatRxInvalidCea [Pdn S6 b Stat Rx Invalid Cea] (tmnxMobPdnS6bStatRxInvalidCea)	long	The value of tmnxMobPdnS6bStatRxInvalidCea indicates the number of invalid Capabilities Exchange Answer (CEA) messages received from this peer.
pdnS6bStatRxMsgTooBig [Pdn S6 b Stat Rx Msg Too Big] (tmnxMobPdnS6bStatRxMsgTooBig)	long	The value of tmnxMobPdnS6bStatRxMsgTooBig indicates the number of oversize messages received from this peer.
pdnS6bStatRxMsgTooSmall [Pdn S6 b Stat Rx Msg Too Small] (tmnxMobPdnS6bStatRxMsgTooSmall)	long	The value of tmnxMobPdnS6bStatRxMsgTooSmall indicates the number of small messages received from this peer.
pdnS6bStatRxMsgUnexpctVer [Pdn S6 b Stat Rx Msg Unexpct Ver] (tmnxMobPdnS6bStatRxMsgUnexpctVer)	long	The value of tmnxMobPdnS6bStatRxMsgUnexpctVer indicates the number of unexpected version messages received from this peer.
pdnS6bStatRxTransportDisc [Pdn S6 b Stat Rx Transport Disc] (tmnxMobPdnS6bStatRxTransportDisc)	long	The value of tmnxMobPdnS6bStatRxTransportDisc indicates the number of remote transport disconnect messages received from this peer.

Table 549 Itepmip statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pdnS6bStatSTAMissAVPPktRx [Pdn S6 b Stat STAMiss AVPPkt Rx] (tmnxMobPdnS6bStatSTAMissAVPPktRx)	long	The value of tmnxMobPdnS6bStatSTAMissAVPPktRx indicates the number of session termination answer messages missing a mandatory attribute received by the Packet Data Network Gateway (PGW).
pdnS6bStatSTAnswerRx [Pdn S6 b Stat STAnswer Rx] (tmnxMobPdnS6bStatSTAnswerRx)	long	The value of tmnxMobPdnS6bStatSTAnswerRx indicates the number of session termination answer messages received by the Packet Data Network Gateway (PGW).
pdnS6bStatSTRRetries [Pdn S6 b Stat STRRetries] (tmnxMobPdnS6bStatSTRRetries)	long	The value of tmnxMobPdnS6bStatSTRRetries indicates the number of times the Packet Data Network Gateway (PGW) retried to send an session termination request.
pdnS6bStatSTRequestTx [Pdn S6 b Stat STRequest Tx] (tmnxMobPdnS6bStatSTRequestTx)	long	The value of tmnxMobPdnS6bStatSTRequestTx indicates the number of session termination request messages transmitted by the Packet Data Network Gateway (PGW).
pdnS6bStatTxRetrnsmiMsgs [Pdn S6 b Stat Tx Retrnsmi Msgs] (tmnxMobPdnS6bStatTxRetrnsmiMsgs)	long	The value of tmnxMobPdnS6bStatTxRetrnsmiMsgs indicates the number of retransmit messages transmitted to this peer.
pdnS6bStatUnkAAARedHostRx [Pdn S6 b Stat Unk AAARed Host Rx] (tmnxMobPdnS6bStatUnkAAARedHostRx)	long	The value of tmnxMobPdnS6bStatUnkAAARedHostRx indicates the number of AA Answers messages received that include request for redirection to an unknown AAA host address.
peerIpAddress [Peer Ip Address] (tmnxMobPdnS6bPeerAddress)	String	The value of tmnxMobPdnS6bPeerAddress indicates the IP address of the peer on S6b reference point.
peerIpAddressType [Peer Ip Address Type] (tmnxMobPdnS6bPeerAddressType)	int	The value of tmnxMobPdnS6bPeerAddressType indicates the type of address represented by tmnxMobPdnS6bPeerAddress.

Table 549 Itepmip statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
peerTcpPort [Peer Tcp Port] (tmnxMobPdnS6bPeerPort)	int	The value of tmnxMobPdnS6bPeerPort indicates the port number of this peer.
virtualRouterId [Virtual Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.

Table 550 Iteradius statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PdnRadiusPeerStats</p> <p>MIB entry name: tmnxCardEntry</p> <p>Entry description: Each row entry represents an IOM card slot in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. When a tmnxChassisEntry is created, a tmnxCardEntry is created for each IOM card slot in that chassis. Before a tmnxChassisEntry can be deleted, each tmnxCardEntry for that chassis must be in the proper state for removal.</p> <p>Table description (for tmnxCardTable): The tmnxCardTable has an entry for each IOM card slot in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Iteradius.PdnRadiusPeer</p>		
cardSlotNumber [Card Slot Number] (tmnxCardSlotNum)	long	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
epcId [Epc Id] (tmnxMobGwId)	long	The value of tmnxMobGwId uniquely identifies a mobile gateway configured in the system.
pdnRadStatAccessAcceptRx [Pdn Rad Stat Access Accept Rx] (tmnxMobPdnRadStatAccessAcceptRx)	long	The value of tmnxMobPdnRadStatAccessAcceptRx indicates the number of Access-Accept messages received by the PGW/GGSN. This includes messages that may be discarded due to errors.
pdnRadStatAccessChallngRx [Pdn Rad Stat Access Challng Rx] (tmnxMobPdnRadStatAccessChallngRx)	long	The value of tmnxMobPdnRadStatAccessChallngRx indicates the number of the challenged access requests recieved by the PGW/GGSN.

Table 550 Iteradius statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pdnRadStatAccessRejectRx [Pdn Rad Stat Access Reject Rx] (tmnxMobPdnRadStatAccessRejectRx)	long	The value of tmnxMobPdnRadStatAccessRejectRx indicates the number of Access-Reject messages received by the PGW/GGSN.
pdnRadStatAccessReqTx [Pdn Rad Stat Access Req Tx] (tmnxMobPdnRadStatAccessReqTx)	long	The value of tmnxMobPdnRadStatAccessReqTx indicates the number of Access-Request messages sent by the Packet Data Network Gateway (PGW)/Gateway GPRS Service Node (GGSN).
pdnRadStatAcctReqIntrmTx [Pdn Rad Stat Acct Req Intrm Tx] (tmnxMobPdnRadStatAcctReqIntrmTx)	long	The value of tmnxMobPdnRadStatAcctReqIntrmTx indicates the number of Accounting-Request interim messages sent by the PGW/GGSN.
pdnRadStatAcctReqStartTx [Pdn Rad Stat Acct Req Start Tx] (tmnxMobPdnRadStatAcctReqStartTx)	long	The value of tmnxMobPdnRadStatAcctReqStartTx indicates the number of Accounting-Request start messages sent by the PGW/GGSN.
pdnRadStatAcctReqStopTx [Pdn Rad Stat Acct Req Stop Tx] (tmnxMobPdnRadStatAcctReqStopTx)	long	The value of tmnxMobPdnRadStatAcctReqStopTx indicates the number of Accounting-Request stop messages sent by the PGW/GGSN.
pdnRadStatAcctResponseRx [Pdn Rad Stat Acct Response Rx] (tmnxMobPdnRadStatAcctResponseRx)	long	The value of tmnxMobPdnRadStatAcctResponseRx indicates the number of Accounting-Response messages received by the PGW/GGSN.
pdnRadStatAuthError [Pdn Rad Stat Auth Error] (tmnxMobPdnRadStatAuthError)	long	The value of tmnxMobPdnRadStatAuthError indicates the number of invalid authenticator values in the Access-Response or Accounting-Response messages.
pdnRadStatDiscAckTx [Pdn Rad Stat Disc Ack Tx] (tmnxMobPdnRadStatDiscAckTx)	long	The value of tmnxMobPdnRadStatDiscAckTx indicates the number of Disconnect-ACK messages sent by the PGW/GGSN.

Table 550 Iteradius statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pdnRadStatDiscAuthError [Pdn Rad Stat Disc Auth Error] (tmnxMobPdnRadStatDiscAuthError)	long	The value of tmnxMobPdnRadStatDiscAuthError indicates the number of invalid authenticator values in the Disconnect-Request messages.
pdnRadStatDiscMandAtrMiss [Pdn Rad Stat Disc Mand Atr Miss] (tmnxMobPdnRadStatDiscMandAtrMiss)	long	The value of tmnxMobPdnRadStatDiscMandAtrMiss indicates the number of Disconnect-Request messages with missing mandatory attribute.
pdnRadStatDiscNakTx [Pdn Rad Stat Disc Nak Tx] (tmnxMobPdnRadStatDiscNakTx)	long	The value of tmnxMobPdnRadStatDiscNakTx indicates the number of The number of Disconnect-NAK messages sent by the PGW/GGSN.
pdnRadStatDiscReqRx [Pdn Rad Stat Disc Req Rx] (tmnxMobPdnRadStatDiscReqRx)	long	The value of tmnxMobPdnRadStatDiscReqRx indicates the number of Disconnect-Request messages received by the PGW/GGSN.
pdnRadStatDiscSessNotFnd [Pdn Rad Stat Disc Sess Not Fnd] (tmnxMobPdnRadStatDiscSessNotFnd)	long	The value of tmnxMobPdnRadStatDiscSessNotFnd indicates the number of inactive sessions found by Disconnect-Request messages.
pdnRadStatDiscUnexpcCode [Pdn Rad Stat Disc Unexpc Code] (tmnxMobPdnRadStatDiscUnexpcCode)	long	The value of tmnxMobPdnRadStatDiscUnexpcCode indicates the number of unexpected messages recieved by the PGW/GGSN for Disconnect Requests.
pdnRadStatDiscUnsupprAttr [Pdn Rad Stat Disc Unsuppr Attr] (tmnxMobPdnRadStatDiscUnsupprAttr)	long	The value of tmnxMobPdnRadStatDiscUnsupprAttr indicates the number of Disconnect-Request messages with an unrecognized/unsupported attribute.
pdnRadStatLastChanged [Pdn Rad Stat Last Changed] (tmnxMobPdnRadStatLastChanged)	long	The value of tmnxMobPdnRadStatLastChanged indicates the timestamp of the last change to this row in tmnxMobPdnRadStatTable.
pdnRadStatMandAttrErrors [Pdn Rad Stat Mand Attr Errors] (tmnxMobPdnRadStatMandAttrErrors)	long	The value of tmnxMobPdnRadStatMandAttrErrors indicates the number of Access-Accept messages contains an invalid or errored mandatory attribute.

Table 550 Iteradius statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pdnRadStatMandAttrMissing [Pdn Rad Stat Mand Attr Missing] (tmnxMobPdnRadStatMandAttrMissing)	long	The value of tmnxMobPdnRadStatMandAttrMissing indicates the number of Access-Accept messages with missing mandatory attribute. When the Access-Request is intended for IP address allocation, the response must contain a Framed-IP-Address, Framed-Pool, Framed-IPv6-Prefix or Framed-IPv6-Pool. When the Access-Request is used for pre-authentication, the Timetra-APN-Name attribute should be considered mandatory.
pdnRadStatMsgFinalTimeout [Pdn Rad Stat Msg Final Timeout] (tmnxMobPdnRadStatMsgFinalTimeout)	long	The value of tmnxMobPdnRadStatMsgFinalTimeout indicates the number of times when PGW/GGSN has exhausted its attempts to deliver this message.
pdnRadStatOptionalAttrErr [Pdn Rad Stat Optional Attr Err] (tmnxMobPdnRadStatOptionalAttrErr)	long	The value of tmnxMobPdnRadStatOptionalAttrErr indicates the number of Access-Accept messages contains an invalid or errored optional attribute.
pdnRadStatPrFinalTimeout [Pdn Rad Stat Pr Final Timeout] (tmnxMobPdnRadStatPrFinalTimeout)	long	The value of tmnxMobPdnRadStatPrFinalTimeout indicates the number of times when PGW/GGSN has exhausted retries and timeouts for Access-Request or Accounting-Request.
pdnRadStatRespTime1to4 [Pdn Rad Stat Resp Time 1 to 4] (tmnxMobPdnRadStatRespTime1to4)	long	The value of tmnxMobPdnRadStatRespTime1to4 indicates the number of Access-Request/Access-Response messages received between 1 and 4 seconds after the Access-Request/Accounting-Request was generated.
pdnRadStatRespTimeAbove4 [Pdn Rad Stat Resp Time Above 4] (tmnxMobPdnRadStatRespTimeAbove4)	long	The value of tmnxMobPdnRadStatRespTimeAbove4 indicates the number of Access-Request/Access-Response messages received in more than 4 seconds after the Access-Request/Accounting-Request was generated. This should include messages received after the configured retry-timeout.
pdnRadStatRespTimeBelow1 [Pdn Rad Stat Resp Time Below 1] (tmnxMobPdnRadStatRespTimeBelow1)	long	The value of tmnxMobPdnRadStatRespTimeBelow1 indicates the number of Access-Request/Access-Response messages received in less than 1 second after the Access-Request/Accounting-Request was generated.

Table 550 Iteradius statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pdnRadStatRetries [Pdn Rad Stat Retries] (tmnxMobPdnRadStatRetries)	long	The value of tmnxMobPdnRadStatRetries indicates the number of retries done to send a RADIUS message. This counter covers all RADIUS message types the PGW/GGSN is sending.
pdnRadStatUnexpectedCode [Pdn Rad Stat Unexpected Code] (tmnxMobPdnRadStatUnexpectedCode)	long	The value of tmnxMobPdnRadStatUnexpectedCode indicates the number of unexpected messages recieved by the PGW/GGSN. The unexpected messages can be such as an Access-Request, Accounting-Request or any response for a request that it did not send or it received for the RADIUS code that is not supported.
pdnRadStatUnsupportedAttr [Pdn Rad Stat Unsupported Attr] (tmnxMobPdnRadStatUnsupportedAttr)	long	The value of tmnxMobPdnRadStatUnsupportedAttr indicates the number of Access-Accept messages contains an unrecognized/unsupported attribute.
radiusGroupProfileName [Radius Group Profile Name] (tmnxMobProfRadGrpName)	String	The value of tmnxMobProfRadGrpName specifies the unique name of this radius group.
virtualRouterId [Virtual Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.

Table 551 Itessg statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SdCauseCodeStats</p> <p>MIB entry name: tmnxCardEntry</p> <p>Entry description: Each row entry represents an IOM card slot in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. When a tmnxChassisEntry is created, a tmnxCardEntry is created for each IOM card slot in that chassis. cardSlotNumber [Card Slot Number] (tmnxCardSlotNum)	long	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
epcld [Epc Id] (tmnxMobGwld)	long	The value of tmnxMobGwld uniquely identifies a mobile gateway configured in the system.
rxCcaAuthorReject [Rx Cca Author Reject] (tmnxMobPdnSdCcRxCcaAuthorReject)	long	The value of tmnxMobPdnSdCcRxCcaAuthorReject indicates the number of Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_AUTHORIZATION_REJECTED (5003).

Table 551 Itessg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxCcaAvpNotAllowed [Rx Cca Avp Not Allowed] (tmnxMobPdnSdCcRxCcaAvpNotAllowed)	long	The value of tmnxMobPdnSdCcRxCcaAvpNotAllowed indicates the number of Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_AVP_NOT_ALLOWED (5008).
rxCcaAvpUnsupport [Rx Cca Avp Unsupport] (tmnxMobPdnSdCcRxCcaAvpUnsupport)	long	The value of tmnxMobPdnSdCcRxCcaAvpUnsupport indicates the number of Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_AVP_UNSUPPORTED (5001).
rxCcaBearerNotAuth [Rx Cca Bearer Not Auth] (tmnxMobPdnSdCcRxCcaBearerNotAuth)	long	The value of tmnxMobPdnSdCcRxCcaBearerNotAuth indicates the number of Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_ERROR_BEARER_NOT_AUTHORIZED (5143).
rxCcaConflictReq [Rx Cca Conflict Req] (tmnxMobPdnSdCcRxCcaConflictReq)	long	The value of tmnxMobPdnSdCcRxCcaConflictReq indicates the number of Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_ERROR_CONFLICTING_REQUEST (5147).
rxCcaInitialParams [Rx Cca Initial Params] (tmnxMobPdnSdCcRxCcaInitialParams)	long	The value of tmnxMobPdnSdCcRxCcaInitialParams indicates the number of Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_ERROR_INITIAL_PARAMETER (5140).
rxCcaInvalidAvpVal [Rx Cca Invalid Avp Val] (tmnxMobPdnSdCcRxCcaInvalidAvpVal)	long	The value of tmnxMobPdnSdCcRxCcaInvalidAvpVal indicates the number of Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_INVALID_AVP_VALUE (5004).
rxCcaMissingAvp [Rx Cca Missing Avp] (tmnxMobPdnSdCcRxCcaMissingAvp)	long	The value of tmnxMobPdnSdCcRxCcaMissingAvp indicates the number of the Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_MISSING_AVP (5005).
rxCcaOther3XXX [Rx Cca Other 3 XXX] (tmnxMobPdnSdCcRxCcaOther3XXX)	long	The value of tmnxMobPdnSdCcRxCcaOther3XXX indicates the number of the Credit Control Answer (CCA) messages received on this peer with cause code set to other protocol errors.

Table 551 Itessg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxCcaOther4XXX [Rx Cca Other 4 XXX] (tmnxMobPdnSdCcRxCcaOther4XXX)	long	The value of tmnxMobPdnSdCcRxCcaOther4XXX indicates the number of the Credit Control Answer (CCA) messages received on this peer with cause code set to other transient failures.
rxCcaOther5XXX [Rx Cca Other 5 XXX] (tmnxMobPdnSdCcRxCcaOther5XXX)	long	The value of tmnxMobPdnSdCcRxCcaOther5XXX indicates the number of the Credit Control Answer (CCA) messages received on this peer with cause code set to other permanent failures.
rxCcaPccBearEvent [Rx Cca Pcc Bear Event] (tmnxMobPdnSdCcRxCcaPccBearEvent)	long	The value of tmnxMobPdnSdCcRxCcaPccBearEvent indicates the number of Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_PCC_BEARER_EVENT (4141).
rxCcaPccRuleEvent [Rx Cca Pcc Rule Event] (tmnxMobPdnSdCcRxCcaPccRuleEvent)	long	The value of tmnxMobPdnSdCcRxCcaPccRuleEvent indicates the number of Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_PCC_RULE_EVENT (5142).
rxCcaPendingTrans [Rx Cca Pending Trans] (tmnxMobPdnSdCcRxCcaPendingTrans)	long	The value of tmnxMobPdnSdCcRxCcaPendingTrans indicates the number of Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_ERROR_PENDING-TRANSACTION (4144).
rxCcaResourceExced [Rx Cca Resource Exced] (tmnxMobPdnSdCcRxCcaResourceExced)	long	The value of tmnxMobPdnSdCcRxCcaResourceExced indicates the number of Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_RESOURCES_EXCEEDED (5006).
rxCcaTooBusy [Rx Cca Too Busy] (tmnxMobPdnSdCcRxCcaTooBusy)	long	The value of tmnxMobPdnSdCcRxCcaTooBusy indicates the number of the Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_TOO_BUSY (3004).
rxCcaTrafficMapRej [Rx Cca Traffic Map Rej] (tmnxMobPdnSdCcRxCcaTrafficMapRej)	long	The value of tmnxMobPdnSdCcRxCcaTrafficMapRej indicates the number of Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_ERROR_TRAFFIC_MAPPING_INFO_REJECTED (5144).

Table 551 Itessg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxCcaTriggerEvent [Rx Cca Trigger Event] (tmnxMobPdnSdCcRxCcaTriggerEvent)	long	The value of tmnxMobPdnSdCcRxCcaTriggerEvent indicates the number of Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_ERROR_TRIGGER_EVENT (5141).
rxCcaUnableToDeliv [Rx Cca Unable To Deliv] (tmnxMobPdnSdCcRxCcaUnableToDeliv)	long	The value of tmnxMobPdnSdCcRxCcaUnableToDeliv indicates the number of Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_UNABLE_TO_DELIVER (3002).
rxCcaUnknownSessId [Rx Cca Unknown Sess Id] (tmnxMobPdnSdCcRxCcaUnknownSessId)	long	The value of tmnxMobPdnSdCcRxCcaUnknownSessId indicates the number of Credit Control Answer (CCA) messages received on this peer with cause code set to DIAMETER_UNKNOWN_SESSION_ID (5002).
txRTsaAvpNotAllowedd [Tx RTsa Avp Not Allowed] (tmnxMobPdnSdCcTxRTsaAvpNotAllowedd)	long	The value of tmnxMobPdnSdCcTxRTsaAvpUnsupport indicates the number of Redirected TDF session acknowledge (R-TSA) messages received on this peer with cause code set to DIAMETER_AVP_NOT_ALLOWED (5008).
txRTsaAvpUnsupport [Tx RTsa Avp Unsupport] (tmnxMobPdnSdCcTxRTsaAvpUnsupport)	long	The value of tmnxMobPdnSdCcTxRTsaAvpUnsupport indicates the number of Redirected TDF session acknowledge (R-TSA) messages received on this peer with cause code set to DIAMETER_AVP_UNSUPPORTED (5001).
txRTsaFeatreUnsupp [Tx RTsa Featre Unsupp] (tmnxMobPdnSdCcTxRTsaFeatreUnsupp)	long	The value of tmnxMobPdnSdCcTxRTsaFeatreUnsupp indicates the number of Redirected TDF session acknowledge (TSA) messages received on this peer with cause code set to DIAMETER_UNSUPPORTED_VERSION (5011).
txRTsaInvalidAvpVal [Tx RTsa Invalid Avp Val] (tmnxMobPdnSdCcTxRTsaInvalidAvpVal)	long	The value of tmnxMobPdnSdCcTxRTsaInvalidAvpVal indicates the number of Redirected TDF session acknowledge (R-TSA) messages received on this peer with cause code set to DIAMETER_INVALID_AVP_VALUE (5004).
txRTsaOther3XXX [Tx RTsa Other 3 XXX] (tmnxMobPdnSdCcTxRTsaOther3XXX)	long	The value of tmnxMobPdnSdCcTxRTsaOther3XXX indicates the number of the Redirected TDF session acknowledge (TSA) messages received on this peer with cause code set to other protocol errors.

Table 551 Itessg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txRTsaOther4XXX [Tx RTsa Other 4 XXX] (tmnxMobPdnSdCcTxRTsaOther4XXX)	long	The value of tmnxMobPdnSdCcTxRTsaOther4XXX indicates the number of the Redirected TDF session acknowledge (TSA) messages received on this peer with cause code set to other transient failures.
txRTsaOther5XXX [Tx RTsa Other 5 XXX] (tmnxMobPdnSdCcTxRTsaOther5XXX)	long	The value of tmnxMobPdnSdCcTxRTsaOther5XXX indicates the number of the Redirected TDF session acknowledge (TSA) messages received on this peer with cause code set to other permanent failures.
txRTsaOutOfSpace [Tx RTsa Out Of Space] (tmnxMobPdnSdCcTxRTsaOutOfSpace)	long	The value of tmnxMobPdnSdCcTxRTsaOutOfSpace indicates the number of Redirected TDF session acknowledge (R-TSA) messages received on this peer with cause code set to DIAMETER_OUT_OF_SPACE (4002).
txRTsaPccRuleEvent [Tx RTsa Pcc Rule Event] (tmnxMobPdnSdCcTxRTsaPccRuleEvent)	long	The value of tmnxMobPdnSdCcTxRTsaPccRuleEvent indicates the number of Redirected TDF session acknowledge (TSA) messages received on this peer with cause code set to DIAMETER_PCC_RULE_EVENT (5142).
txRTsaRealmNoServe [Tx RTsa Realm No Serve] (tmnxMobPdnSdCcTxRTsaRealmNoServe)	long	The value of tmnxMobPdnSdCcTxRTsaRealmNoServe indicates the number of Redirected TDF session acknowledge (R-TSA) messages received on this peer with cause code set to DIAMETER_REALM_NOT_SERVED (3003).
txRTsaUnablToCompl [Tx RTsa Unabl To Compl] (tmnxMobPdnSdCcTxRTsaUnablToCompl)	long	The value of tmnxMobPdnSdCcTxRTsaUnablToCompl indicates the number of Redirected TDF session acknowledge (R-TSA) messages received on this peer with cause code set to DIAMETER_UNABLE_TO_COMPLY (5012).
txRTsaUnablToDeliv [Tx RTsa Unabl To Deliv] (tmnxMobPdnSdCcTxRTsaUnablToDeliv)	long	The value of tmnxMobPdnSdCcTxRTsaUnablToDeliv indicates the number of Redirected TDF session acknowledge (R-TSA) messages received on this peer with cause code set to DIAMETER_UNABLE_TO_DELIVER (3002).
txRTsaUnknSessId [Tx RTsa Unkn Sess Id] (tmnxMobPdnSdCcTxRTsaUnknSessId)	long	The value of tmnxMobPdnSdCcTxRTsaUnknSessId indicates the number of Redirected TDF session acknowledge (R-TSA) messages received on this peer with cause code set to DIAMETER_UNKNOWN_SESSION_ID (5002).

Table 551 Itessg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txRaaAvpNotAllowed [Tx Raa Avp Not Allowed] (tmnxMobPdnSdCcTxRaaAvpNotAllowed)	long	The value of tmnxMobPdnSdCcTxRaaAvpNotAllowed indicates the number of the Re-Auth-Answer (RAA) messages received on this peer with the experimental cause code set to DIAMETER_AVP_NOT_ALLOWED (5008).
txRaaAvpUnsupport [Tx Raa Avp Unsupport] (tmnxMobPdnSdCcTxRaaAvpUnsupport)	long	The value of tmnxMobPdnSdCcTxRaaAvpUnsupport indicates the number of the Re-Auth-Answer (RAA) messages received on this peer with the experimental cause code set to DIAMETER_AVP_UNSUPPORTED (5001).
txRaaOther3XXX [Tx Raa Other 3 XXX] (tmnxMobPdnSdCcTxRaaOther3XXX)	long	The value of tmnxMobPdnSdCcTxRaaOther3XXX indicates the number of the Re-Auth-Answer (RAA) messages received on this peer with cause code set to other protocol errors.
txRaaOther4XXX [Tx Raa Other 4 XXX] (tmnxMobPdnSdCcTxRaaOther4XXX)	long	The value of tmnxMobPdnSdCcTxRaaOther4XXX indicates the number of the Re-Auth-Answer (RAA) messages received on this peer with cause code set to other transient failures.
txRaaOther5XXX [Tx Raa Other 5 XXX] (tmnxMobPdnSdCcTxRaaOther5XXX)	long	The value of tmnxMobPdnSdCcTxRaaOther5XXX indicates the number of the Re-Auth-Answer (Raa) messages received on this peer with cause code set to other permanent failures.
txRaaPccRuleEvent [Tx Raa Pcc Rule Event] (tmnxMobPdnSdCcTxRaaPccRuleEvent)	long	The value of tmnxMobPdnSdCcTxRaaPccRuleEvent indicates the number of the Re-Auth-Answer (RAA) messages received on this peer with the experimental cause code set to DIAMETER_PCC_RULE_EVENT (5142).
txRaaPendingTrans [Tx Raa Pending Trans] (tmnxMobPdnSdCcTxRaaPendingTrans)	long	The value of tmnxMobPdnSdCcTxRaaPendingTrans indicates the number of the Re-Auth-Answer (RAA) messages received on this peer with the experimental cause code set to DIAMETER_PENDING-TRANSACTION (4144).
txRaaRealmNoServed [Tx Raa Realm No Served] (tmnxMobPdnSdCcTxRaaRealmNoServed)	long	The value of tmnxMobPdnSdCcTxRaaRealmNoServed indicates the number of Re-Auth-Answer (RAA) messages received on this peer with cause code set to DIAMETER_REALM_NOT_SERVED (3003).

Table 551 Itessg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txRaaUnableToCompl [Tx Raa Unable To Compl] (tmnxMobPdnSdCcTxRaaUnableToCompl)	long	The value of tmnxMobPdnSdCcTxRaaUnableToCompl indicates the number of the Re-Auth-Answer (RAA) messages received on this peer with the experimental cause code set to DIAMETER_UNABLE_TO_COMPLY (5012).
txRaaUnableToDeliv [Tx Raa Unable To Deliv] (tmnxMobPdnSdCcTxRaaUnableToDeliv)	long	The value of tmnxMobPdnSdCcTxRaaUnableToDeliv indicates the number of Re-Auth-Answer (RAA) messages received on this peer with cause code set to DIAMETER_UNABLE_TO_DELIVER (3002).
txRaaUnknownSessId [Tx Raa Unknown Sess Id] (tmnxMobPdnSdCcTxRaaUnknownSessId)	long	The value of tmnxMobPdnSdCcTxRaaUnknownSessId indicates the number of the Re-Auth-Answer (RAA) messages received on this peer with the experimental cause code set to DIAMETER_UNKNOWN_SESSION_ID (5002).
txTsaAvpNotAllowed [Tx Tsa Avp Not Allowed] (tmnxMobPdnSdCcTxTsaAvpNotAllowed)	long	The value of tmnxMobPdnSdCcTxTsaAvpNotAllowed indicates the number of the TDF session acknowledge (TSA) messages received on this peer with the experimental cause code set to DIAMETER_AVP_NOT_ALLOWED (5008).
txTsaAvpUnsupport [Tx Tsa Avp Unsupport] (tmnxMobPdnSdCcTxTsaAvpUnsupport)	long	The value of tmnxMobPdnSdCcTxTsaAvpUnsupport indicates the number of the TDF session acknowledge (TSA) messages received on this peer with the experimental cause code set to DIAMETER_AVP_UNSUPPORTED (5001).
txTsaFeatureUnsupp [Tx Tsa Feature Unsupp] (tmnxMobPdnSdCcTxTsaFeatureUnsupp)	long	The value of tmnxMobPdnSdCcTxTsaFeatureUnsupp indicates the number of TDF session acknowledge (TSA) messages received on this peer with cause code set to DIAMETER_UNSUPPORTED_VERSION (5011).
txTsaInvalidAvpVal [Tx Tsa Invalid Avp Val] (tmnxMobPdnSdCcTxTsaInvalidAvpVal)	long	The value of tmnxMobPdnSdCcTxTsaInvalidAvpVal indicates the number of TDF session acknowledge (TSA) messages received on this peer with cause code set to DIAMETER_INVALID_AVP_VALUE (5004).
txTsaOther3XXX [Tx Tsa Other 3 XXX] (tmnxMobPdnSdCcTxTsaOther3XXX)	long	The value of tmnxMobPdnSdCcTxTsaOther3XXX indicates the number of the TDF session acknowledge (TSA) messages received on this peer with cause code set to other protocol errors.

Table 551 Itessg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txTsaOther4XXX [Tx Tsa Other 4 XXX] (tmnxMobPdnSdCcTxTsaOther4XXX)	long	The value of tmnxMobPdnSdCcTxTsaOther4XXX indicates the number of the TDF session acknowledge (TSA) messages received on this peer with cause code set to other transient failures.
txTsaOther5XXX [Tx Tsa Other 5 XXX] (tmnxMobPdnSdCcTxTsaOther5XXX)	long	The value of tmnxMobPdnSdCcTxTsaOther5XXX indicates the number of the TDF session acknowledge (TSA) messages received on this peer with cause code set to other permanent failures.
txTsaOutOfSpace [Tx Tsa Out Of Space] (tmnxMobPdnSdCcTxTsaOutOfSpace)	long	The value of tmnxMobPdnSdCcTxTsaOutOfSpace indicates the number of TDF session acknowledge (TSA) messages received on this peer with cause code set to DIAMETER_OUT_OF_SPACE (4002).
txTsaPccRuleEvent [Tx Tsa Pcc Rule Event] (tmnxMobPdnSdCcTxTsaPccRuleEvent)	long	The value of tmnxMobPdnSdCcTxTsaPccRuleEvent indicates the number of the TDF session acknowledge (TSA) messages received on this peer with the experimental cause code set to DIAMETER_PCC_RULE_EVENT (5142).
txTsaRealmNoServed [Tx Tsa Realm No Served] (tmnxMobPdnSdCcTxTsaRealmNoServed)	long	The value of tmnxMobPdnSdCcTxTsaRealmNoServed indicates the number of TDF session acknowledge (TSA) messages received on this peer with cause code set to DIAMETER_REALM_NOT_SERVED (3003).
txTsaUnableToCompl [Tx Tsa Unable To Compl] (tmnxMobPdnSdCcTxTsaUnableToCompl)	long	The value of tmnxMobPdnSdCcTxTsaUnableToCompl indicates the number of the TDF session acknowledge (TSA) messages received on this peer with the experimental cause code set to DIAMETER_UNABLE_TO_COMPLY (5012).
txTsaUnableToDeliv [Tx Tsa Unable To Deliv] (tmnxMobPdnSdCcTxTsaUnableToDeliv)	long	The value of tmnxMobPdnSdCcTxTsaUnableToDeliv indicates the number of TDF session acknowledge (TSA) messages received on this peer with cause code set to DIAMETER_UNABLE_TO_DELIVER (3002).
txTsaUnknownSessId [Tx Tsa Unknown Sess Id] (tmnxMobPdnSdCcTxTsaUnknownSessId)	long	The value of tmnxMobPdnSdCcTxTsaUnknownSessId indicates the number of the TDF session acknowledge (TSA) messages received on this peer with the experimental cause code set to DIAMETER_UNKNOWN_SESSION_ID (5002).

Table 551 Itessg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
virtualRouterId [Virtual Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
<p>SdPeerStats</p> <p>MIB entry name: tmnxCardEntry</p> <p>Entry description: Each row entry represents an IOM card slot in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. When a tmnxChassisEntry is created, a tmnxCardEntry is created for each IOM card slot in that chassis. Before a tmnxChassisEntry can be deleted, each tmnxCardEntry for that chassis must be in the proper state for removal.</p> <p>Table description (for tmnxCardTable): The tmnxCardTable has an entry for each IOM card slot in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Itessg.SdPeer</p>		
cardSlotNumber [Card Slot Number] (tmnxCardSlotNum)	long	The unique value which identifies this IOM slot within a chassis in the system.
ccatUnknSessPkts [Ccat Unkn Sess Pkts] (tmnxMobPdnSdStatCcatUnknSessPkts)	long	The value of tmnxMobPdnSdStatCcatUnknSessPkts indicates the number of Credit Control Answer Terminate (CCA-T) unknown session packets received from this peer.
ccauUnknSessPkts [Ccau Unkn Sess Pkts] (tmnxMobPdnSdStatCcauUnknSessPkts)	long	The value of tmnxMobPdnSdStatCcauUnknSessPkts indicates the number of Credit Control Answer Update (CCA-U) unknown session packets received from this peer.
ccrTermFail [Ccr Term Fail] (tmnxMobPdnSdStatCcrTermFail)	long	The value of tmnxMobPdnSdStatCcrTermFail indicates the number of Credit Control Request (CCR) termination message requests failed.

Table 551 Itessg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ccrUPendTranReTx [Ccr UPend Tran Re Tx] (tmnxMobPdnSdStatCcrUPendTranReTx)	long	The value of tmnxMobPdnSdStatCcrUPendTranReTx indicates the number of the retires for the pending transactions of Credit Control Request (CCR) Update messages to this peer.
ccrUpdtFail [Ccr Updt Fail] (tmnxMobPdnSdStatCcrUpdtFail)	long	The value of tmnxMobPdnSdStatCcrUpdtFail indicates the number of Credit Control Request (CCR) update message requests failed.
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassis-Index are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
connAttempts [Conn Attempts] (tmnxMobPdnSdStatConnAttempts)	long	The value of tmnxMobPdnSdStatConnAttempts indicates the number of connections attempted to this peer.
connFailures [Conn Failures] (tmnxMobPdnSdStatConnFailures)	long	The value of tmnxMobPdnSdStatConnFailures indicates the number of failed connections with this peer.
currCgCcrTMsg [Curr Cg Ccr TMsg] (tmnxMobPdnSdStatCurrCgCcrTMsg)	long	The value of tmnxMobPdnSdStatCurrCgCcrTMsg indicates the number of Credit Control Request (CCR) Termination messages to this peer dropped during the current congestion.
currCgCcrUMsg [Curr Cg Ccr UMsg] (tmnxMobPdnSdStatCurrCgCcrUMsg)	long	The value of tmnxMobPdnSdStatCurrCgCcrUMsg indicates the number of Credit Control Request (CCR) Update messages to this peer dropped during the current congestion.
currCgPendMsg [Curr Cg Pend Msg] (tmnxMobPdnSdStatCurrCgPendMsg)	long	The value of tmnxMobPdnSdStatCurrCgPendMsg indicates the number of pending messages toward this peer during the current congestion.

Table 551 Itessg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
currCgRaaMsg [Curr Cg Raa Msg] (tmnxMobPdnSdStatCurrCgRaaMsg)	long	The value of tmnxMobPdnSdStatCurrCgRaaMsg indicates the number of Re-authorization Answer (RAA) messages to this peer dropped during the current congestion.
currCgTsaMsg [Curr Cg Tsa Msg] (tmnxMobPdnSdStatCurrCgTsaMsg)	long	The value of tmnxMobPdnSdStatCurrCgTsaMsg indicates the number of TDF session acknowledge (TSA) messages to this peer dropped during the current congestion.
epclId [Epc Id] (tmnxMobGwld)	long	The value of tmnxMobGwld uniquely identifies a mobile gateway configured in the system.
eventTriggers [Event Triggers] (tmnxMobPdnSdStatEventTriggers)	long	The value of tmnxMobPdnSdStatEventTriggers indicates the number of event triggers received from this peer.
intRxTsrMsg [Int Rx Tsr Msg] (tmnxMobPdnSdStatIntRxTsrMsg)	long	The value of tmnxMobPdnSdStatIntRxTsrMsg indicates the number of internal TDF session request (TSR) messages received from this peer.
intTxTsaMsg [Int Tx Tsa Msg] (tmnxMobPdnSdStatIntTxTsaMsg)	long	The value of tmnxMobPdnSdStatIntTxTsaMsg indicates the number of internal TDF session acknowledge (TSA) messages sent to this peer.
invPriOcsAddrRx [Inv Pri Ocs Addr Rx] (tmnxMobPdnSdStatInvPriOcsAddrRx)	long	The Value of tmnxMobPdnSdStatInvPriOcsAddrRx indicates the number of invalid primary Online Charging System (OCS) addresses received.
invSecOcsAddrRx [Inv Sec Ocs Addr Rx] (tmnxMobPdnSdStatInvSecOcsAddrRx)	long	The Value of tmnxMobPdnSdStatInvSecOcsAddrRx indicates the number of invalid secondary Online Charging System (OCS) addresses received.
peerIpAddress [Peer Ip Address] (tmnxMobPdnSdPeerAddress)	String	The value of tmnxMobPdnSdPeerAddress indicates the IP address of the peer on Sd reference point.

Table 551 Itessg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
peerIpAddressType [Peer Ip Address Type] (tmnxMobPdnSdPeerAddressType)	int	The value of tmnxMobPdnSdPeerAddressType indicates the type of address represented by tmnxMobPdnSdPeerAddress.
peerTcpPort [Peer Tcp Port] (tmnxMobPdnSdPeerPort)	int	The value of tmnxMobPdnSdPeerPort indicates the port number of this peer.
prevCgCcrTMsg [Prev Cg Ccr TMsg] (tmnxMobPdnSdStatPrevCgCcrTMsg)	long	The value of tmnxMobPdnSdStatPrevCgCcrTMsg indicates the number of Credit Control Request (CCR) Termination messages to this peer dropped during the prior congestion.
prevCgCcrUMsg [Prev Cg Ccr UMsg] (tmnxMobPdnSdStatPrevCgCcrUMsg)	long	The value of tmnxMobPdnSdStatPrevCgCcrUMsg indicates the number of Credit Control Request (CCR) Update messages to this peer dropped during the prior congestion.
prevCgRaaMsg [Prev Cg Raa Msg] (tmnxMobPdnSdStatPrevCgRaaMsg)	long	The value of tmnxMobPdnSdStatPrevCgRaaMsg indicates the number of Re-authorization Answer (RAA) messages to this peer dropped during the prior congestion.
prevCgTsaMsg [Prev Cg Tsa Msg] (tmnxMobPdnSdStatPrevCgTsaMsg)	long	The value of tmnxMobPdnSdStatPrevCgTsaMsg indicates the number of TDF session acknowledge (TSA) messages to this peer dropped during the prior congestion.
priOcsAddrRx [Pri Ocs Addr Rx] (tmnxMobPdnSdStatPriOcsAddrRx)	long	The Value of tmnxMobPdnSdStatPriOcsAddrRx indicates the number of primary Online Charging System (OCS) addresses received.
rarUnknSessPkts [Rar Unkn Sess Pkts] (tmnxMobPdnSdStatRarUnknSessPkts)	long	The value of tmnxMobPdnSdStatCcatUnknSessPkts indicates the number of Re-Auth Request (RAR) unknown session packets received from this peer.
reTxCcrTerminate [Re Tx Ccr Terminate] (tmnxMobPdnSdStatReTxCcrTerminate)	long	The value of tmnxMobPdnSdStatReTxCcrTerminate indicates the number of Credit Control Request (CCR) Termination messages re-transmitted to this peer.

Table 551 Itessg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
reTxCcrUpdate [Re Tx Ccr Update] (tmnxMobPdnSdStatReTxCcrUpdate)	long	The value of tmnxMobPdnSdStatReTxCcrUpdate indicates the number of Credit Control Request (CCR) Update messages re-transmitted to this peer.
rtsrUnknSessPkts [Rtsr Unkn Sess Pkts] (tmnxMobPdnSdStatRtsrUnknSessPkts)	long	The value of tmnxMobPdnSdStatRtsrUnknSessPkts indicates the number of Redirect TDF session request (R-TSR) unknown session packets received from this peer.
rxAvpMissPkts [Rx Avp Miss Pkts] (tmnxMobPdnSdStatRxAvpMissPkts)	long	The value of tmnxMobPdnSdStatRxAvpMissPkts indicates the number of missing Attribute Value Pair (AVP) packets received.
rxCcaTermFail [Rx Cca Term Fail] (tmnxMobPdnSdStatRxCcaTermFail)	long	The value of tmnxMobPdnSdStatRxCcaTermFail indicates the number of Credit Control Answer (CCA) Terminate message failures received from this peer.
rxCcaTermMalFpkt [Rx Cca Term MalFpkt] (tmnxMobPdnSdStatRxCcaTermMalFpkt)	long	The value of tmnxMobPdnSdStatRxCcaTermMalFpkt indicates the number of Credit Control Answer (CCA) Termination malformed packets received from this peer.
rxCcaTermUnknPkt [Rx Cca Term Unkn Pkt] (tmnxMobPdnSdStatRxCcaTermUnknPkt)	long	The value of tmnxMobPdnSdStatRxCcaTermUnknPkt indicates the number of Credit Control Answer (CCA) Termination unknown host packets received from this peer.
rxCcaTerminate [Rx Cca Terminate] (tmnxMobPdnSdStatRxCcaTerminate)	long	The value of tmnxMobPdnSdStatRxCcaTerminate indicates the number of Credit Control Request (CCR) Terminate messages received from this peer.
rxCcaUpdate [Rx Cca Update] (tmnxMobPdnSdStatRxCcaUpdate)	long	The value of tmnxMobPdnSdStatRxCcaUpdate indicates the number of Credit Control Answer (CCA) Update messages received from this peer.
rxCcaUpdtFail [Rx Cca Updt Fail] (tmnxMobPdnSdStatRxCcaUpdtFail)	long	The value of tmnxMobPdnSdStatRxCcaUpdtFail indicates the number of Credit Control Answer (CCA) Update message failures received from this peer.

Table 551 Itessg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxCcaUpdtMalFPkt [Rx Cca Updt Malf Pkt] (tmnxMobPdnSdStatRxCcaUpdtMalFPkt)	long	The value of tmnxMobPdnSdStatRxCcaUpdtMalFPkt indicates the number of Credit Control Answer (CCA) Update malformed packets received from this peer.
rxCcaUpdtUnknPkt [Rx Cca Updt Unkn Pkt] (tmnxMobPdnSdStatRxCcaUpdtUnknPkt)	long	The value of tmnxMobPdnSdStatRxCcaUpdtUnknPkt indicates the number of Credit Control Answer (CCA) Tterm unknown host packets received from this peer.
rxCcatMissAvpPkt [Rx Ccat Miss Avp Pkt] (tmnxMobPdnSdStatRxCcatMissAvpPkt)	long	The value of tmnxMobPdnSdStatRxCcatMissAvpPkt indicates the number of missing Attribute Value Pair (AVP) packets received for Credit Control Answer Termination (CCA-T) message.
rxCcauMissAvpPkt [Rx Ccau Miss Avp Pkt] (tmnxMobPdnSdStatRxCcauMissAvpPkt)	long	The value of tmnxMobPdnSdStatRxCcauMissAvpPkt indicates the number of missing Attribute Value Pair (AVP) packets received for Credit Control Answer Update (CCA-U) message.
rxCea [Rx Cea] (tmnxMobPdnSdStatRxCea)	long	The value of tmnxMobPdnSdStatRxCea indicates the number of Capabilities Exchange Answer (CEA) messages received from this peer.
rxDpa [Rx Dpa] (tmnxMobPdnSdStatRxDpa)	long	The value of tmnxMobPdnSdStatRxDpa indicates the number of Disconnect Peer Answer (DPA) messages received from this peer.
rxDpr [Rx Dpr] (tmnxMobPdnSdStatRxDpr)	long	The value of tmnxMobPdnSdStatRxDpr indicates the number of Disconnect Peer Request (DPR) messages received from this peer.
rxDwa [Rx Dwa] (tmnxMobPdnSdStatRxDwa)	long	The value of tmnxMobPdnSdStatRxDwa indicates the number of Device Watchdog Answer (DWA) messages received from this peer.

Table 551 Itessg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxDwr [Rx Dwr] (tmnxMobPdnSdStatRxDwr)	long	The value of tmnxMobPdnSdStatRxDwr indicates the number of Device Watchdog Request (DWR) messages received from this peer.
rxInvalidCea [Rx Invalid Cea] (tmnxMobPdnSdStatRxInvalidCea)	long	The value of tmnxMobPdnSdStatRxInvalidCea indicates the number of invalid Capabilities Exchange Answer (CEA) messages received from this peer.
rxMalformedPkts [Rx Malformed Pkts] (tmnxMobPdnSdStatRxMalformedPkts)	long	The value of tmnxMobPdnSdStatRxMalformedPkts indicates the number of malformed packets received from this peer.
rxMsgTooBig [Rx Msg Too Big] (tmnxMobPdnSdStatRxMsgTooBig)	long	The value of tmnxMobPdnSdStatRxMsgTooBig indicates the number of oversize messages received from this peer.
rxMsgTooSmall [Rx Msg Too Small] (tmnxMobPdnSdStatRxMsgTooSmall)	long	The value of tmnxMobPdnSdStatRxMsgTooSmall indicates the number of small messages received from this peer.
rxMsgUnexpectVer [Rx Msg Unexpect Ver] (tmnxMobPdnSdStatRxMsgUnexpectVer)	long	The value of tmnxMobPdnSdStatRxMsgUnexpectVer indicates the number of unexpected version messages received from this peer.
rxMsgs [Rx Msgs] (tmnxMobPdnSdStatRxMsgs)	long	The value of tmnxMobPdnSdStatRxMsgs indicates the total number of messages received from this peer.
rxRar [Rx Rar] (tmnxMobPdnSdStatRxRar)	long	The value of tmnxMobPdnSdStatRxRar indicates the number of Re-Auth Request (RAR) messages received from this peer.
rxRarAvpMissPkts [Rx Rar Avp Miss Pkts] (tmnxMobPdnSdStatRxRarAvpMissPkts)	long	The value of tmnxMobPdnSdStatRxRarAvpMissPkts indicates the number of missing Attribute Value Pair (AVP) packets received for Re-Auth Request (RAR) message.

Table 551 Itessg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxRarMalFPkts [Rx Rar Malf Pkts] (tmnxMobPdnSdStatRxRarMalFPkts)	long	The value of tmnxMobPdnSdStatRxRarMalFPkts indicates the number of Re-Auth Request (RAR) malformed packets received from this peer.
rxRarRelSess [Rx Rar Rel Sess] (tmnxMobPdnSdStatRxRarRelSess)	long	The value of tmnxMobPdnSdStatRxRarRelSess indicates the number of Re-Auth Request (RAR) Release Session messages received from this peer.
rxRarUnknHostPkt [Rx Rar Unkn Host Pkt] (tmnxMobPdnSdStatRxRarUnknHostPkt)	long	The value of tmnxMobPdnSdStatRxRarUnknHostPkt indicates the number of Re-Auth Request (RAR) Update unknown host packets received from this peer.
rxRtsr [Rx Rtsr] (tmnxMobPdnSdStatRxRtsr)	long	The value of tmnxMobPdnSdStatRxRtsr indicates the number of Redirect TDF session request (R-TSR) messages received from this peer.
rxRtsrAvpMissPkt [Rx Rtsr Avp Miss Pkt] (tmnxMobPdnSdStatRxRtsrAvpMissPkt)	long	The value of tmnxMobPdnSdStatRxRtsrAvpMissPkt indicates the number of missing Attribute Value Pair (AVP) packets received for Redirect TDF session request (R-TSR) message.
rxRtsrMalFPkts [Rx Rtsr Malf Pkts] (tmnxMobPdnSdStatRxRtsrMalFPkts)	long	The value of tmnxMobPdnSdStatRxRtsrMalFPkts indicates the number of Redirect TDF session request (R-TSR) malformed packets received from this peer.
rxRtsrUnkHstPk [Rx Rtsr Unk Hst Pk] (tmnxMobPdnSdStatRxRtsrUnkHstPk)	long	The value of tmnxMobPdnSdStatRxRtsrUnkHstPk indicates the number of Redirect TDF session request (R-TSR) unknown host packets received from this peer.
rxRtsrUnknPkts [Rx Rtsr Unkn Pkts] (tmnxMobPdnSdStatRxRtsrUnknPkts)	long	The value of tmnxMobPdnSdStatRxRtsrUnknPkts indicates the number of Redirect TDF session request (R-TSR) unknown packets received from this peer.
rxTransportDisc [Rx Transport Disc] (tmnxMobPdnSdStatRxTransportDisc)	long	The value of tmnxMobPdnSdStatRxTransportDisc indicates the number of remote transport disconnect messages received from this peer.

Table 551 Itessg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxTsrAvpMissPkts [Rx Tsr Avp Miss Pkts] (tmnxMobPdnSdStatRxTsrAvpMissPkts)	long	The value of tmnxMobPdnSdStatRxTsrAvpMissPkts indicates the number of missing Attribute Value Pair (AVP) packets received for Redirect TDF session request (R-TSR) message.
rxTsrMalfrmdPkts [Rx Tsr Malfrmd Pkts] (tmnxMobPdnSdStatRxTsrMalfrmdPkts)	long	The value of tmnxMobPdnSdStatRxTsrMalfrmdPkts indicates the number of TDF session request (TSR) malformed packets received from this peer.
rxTsrMsg [Rx Tsr Msg] (tmnxMobPdnSdStatRxTsrMsg)	long	The value of tmnxMobPdnSdStatRxTsrMsg indicates the number of TDF session request (TSR) messages received from this peer.
rxTsrUnknHostPkt [Rx Tsr Unkn Host Pkt] (tmnxMobPdnSdStatRxTsrUnknHostPkt)	long	The value of tmnxMobPdnSdStatRxTsrUnknHostPkt indicates the number of TDF session request (TSR) unknown host packets received from this peer.
rxUnknownPkts [Rx Unknown Pkts] (tmnxMobPdnSdStatRxUnknownPkts)	long	The value of tmnxMobPdnSdStatRxUnknownPkts indicates the number of unknown packets received from this peer.
secOcsAddrRx [Sec Ocs Addr Rx] (tmnxMobPdnSdStatSecOcsAddrRx)	long	The Value of tmnxMobPdnSdStatSecOcsAddrRx indicates the number of secondary Online Charging System (OCS) addresses received.
tsrDiscarded [Tsr Discarded] (tmnxMobPdnSdStatTsrDiscarded)	long	The value of tmnxMobPdnSdStatTsrDiscarded indicates the number of TDF session request (TSR) messages that are discarded because of reattach.
txCcrTerminate [Tx Ccr Terminate] (tmnxMobPdnSdStatTxCcrTerminate)	long	The value of tmnxMobPdnSdStatTxCcrTerminate indicates the number of Credit Control Request (CCR) Terminate messages transmitted to this peer.
txCcrUpdate [Tx Ccr Update] (tmnxMobPdnSdStatTxCcrUpdate)	long	The value of tmnxMobPdnSdStatTxCcrUpdate indicates the number of Credit Control Request (CCR) Update messages transmitted to this peer.

Table 551 Itessg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txCer [Tx Cer] (tmnxMobPdnSdStatTxCer)	long	The value of tmnxMobPdnSdStatTxCer indicates the number of Capabilities Exchange Request (CER) messages transmitted to this peer.
txDpa [Tx Dpa] (tmnxMobPdnSdStatTxDpa)	long	The value of tmnxMobPdnSdStatTxDpa indicates the number of Disconnect Peer Answer (DPA) messages transmitted to this peer.
txDpr [Tx Dpr] (tmnxMobPdnSdStatTxDpr)	long	The value of tmnxMobPdnSdStatTxDpr indicates the number of Disconnect Peer Request (DPR) messages transmitted to this peer.
txDwa [Tx Dwa] (tmnxMobPdnSdStatTxDwa)	long	The value of tmnxMobPdnSdStatTxDwa indicates the number of Device Watchdog Answer (DWA) messages received from this peer.
txDwr [Tx Dwr] (tmnxMobPdnSdStatTxDwr)	long	The value of tmnxMobPdnSdStatTxDwr indicates the number of Device Watchdog Request (DWR) messages transmitted to this peer.
txMsgs [Tx Msgs] (tmnxMobPdnSdStatTxMsgs)	long	The value of tmnxMobPdnSdStatTxMsgs indicates the total number of messages transmitted to this peer.
txRaa [Tx Raa] (tmnxMobPdnSdStatTxRaa)	long	The value of tmnxMobPdnSdStatRxRar indicates the number of Re-Auth Answer (RAR) messages transmitted to this peer.
txRaaNack [Tx Raa Nack] (tmnxMobPdnSdStatTxRaaNack)	long	The value of tmnxMobPdnSdStatTxRaaNack indicates the number of Re-Auth Answer (RAA) negative acknowledgement (NACK) messages transmitted to this peer.
txRaaRelSess [Tx Raa Rel Sess] (tmnxMobPdnSdStatTxRaaRelSess)	long	The value of tmnxMobPdnSdStatTxRaaRelSess indicates the number of Re-Auth Answer (RAA) Release Session messages transmitted to this peer.

Table 551 Itessg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txRetransmitMsgs [Tx Retransmit Msgs] (tmnxMobPdnSdStatTxRetransmitMsgs)	long	The value of tmnxMobPdnSdStatTxRetransmitMsgs indicates the number of retransmit messages transmitted to this peer.
txRtsa [Tx Rtsa] (tmnxMobPdnSdStatTxRtsa)	long	The value of tmnxMobPdnSdStatTxRtsa indicates the number of Redirect TDF session request (R-TSR) messages transmitted to this peer.
txRtsaFail [Tx Rtsa Fail] (tmnxMobPdnSdStatTxRtsaFail)	long	The value of tmnxMobPdnSdStatTxRtsaFail indicates the number of Redirect TDF session acknowledge (R-TSA) message failures received from this peer.
txTsaMsg [Tx Tsa Msg] (tmnxMobPdnSdStatTxTsaMsg)	long	The value of tmnxMobPdnSdStatTxTsaMsg indicates the number of TDF session acknowledge (TSA) messages sent to this peer.
txTsaMsgFail [Tx Tsa Msg Fail] (tmnxMobPdnSdStatTxTsaMsgFail)	long	The value of tmnxMobPdnSdStatTxTsaMsgFail indicates the number of TDF session acknowledge (TSA) message failures.
txTsaRedMsg [Tx Tsa Red Msg] (tmnxMobPdnSdStatTxTsaRedMsg)	long	The value of tmnxMobPdnSdStatTxTsaRedMsg indicates the number of TDF session acknowledge (TSA) redirect messages sent to this peer.
virtualRouterId [Virtual Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.

Table 552 Itetwag statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>StaCauseCodeStats</p> <p>MIB entry name: tmnxMobPdnStaCauseCodeEntry</p> <p>Entry description: Each row entry represents a peer on the Sta reference point and contains cause code statistics for this peer on a card.</p> <p>Table description (for tmnxMobPdnStaCauseCodeTable): The tmnxMobPdnStaCauseCodeTable has an entry for each peer on the Sta reference point which is located between ePDG and AAA server/proxy.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Itetwag.StaPeer</p>		
aaaldNotRegist [Aaa Id Not Regist] (tmnxMobPdnStaCcRxAaaldNotRegist)	long	The value of tmnxMobPdnStaCcRxAaaldNotRegist indicates the number of the AA-Answer (AAA) messages received on this peer with the experimental cause code set to DIAMETER_ERROR_IDENTITY_NOT_REGISTERED (5003).
aaaldRegistered [Aaa Id Registered] (tmnxMobPdnStaCcRxAaaldRegistered)	long	The value of tmnxMobPdnStaCcRxAaaldRegistered indicates the number of the AA-Answer (AAA) messages received on this peer with the experimental cause code set to DIAMETER_ERROR_IDENTITY_ALREADY_REGISTERED (5005).
aaaRatNotAllow [Aaa Rat Not Allow] (tmnxMobPdnStaCcRxAaaRatNotAllow)	long	The value of tmnxMobPdnStaCcRxAaaRatNotAllow indicates the number of the AA-Answer (AAA) messages received on this peer with the experimental cause code set to DIAMETER_ERROR_USER_RAT_TYPE_NOT_ALLOWED (5452).
cardSlotNumber [Card Slot Number] (tmnxCardSlotNum)	long	The unique value which identifies this IOM slot within a chassis in the system.

Table 552 Itetwag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
dealdNotRegist [Dea Id Not Regist] (tmnxMobPdnStaCcRxDealdNotRegist)	long	The value of tmnxMobPdnStaCcRxDealdNotRegist indicates the number of the DE-Answer (DEA) messages received on this peer with the experimental cause code set to DIAMETER_ERROR_IDENTITY_NOT_REGISTERED (5003).
dealdRegistered [Dea Id Registered] (tmnxMobPdnStaCcRxDealdRegistered)	long	The value of tmnxMobPdnStaCcRxDealdRegistered indicates the number of the DE-Answer (DEA) messages received on this peer with the experimental cause code set to DIAMETER_ERROR_IDENTITY_ALREADY_REGISTERED (5005).
deaRatNotAllow [Dea Rat Not Allow] (tmnxMobPdnStaCcRxDeaRatNotAllow)	long	The value of tmnxMobPdnStaCcRxDeaRatNotAllow indicates the number of the DE-Answer (DEA) messages received on this peer with the experimental cause code set to DIAMETER_ERROR_USER_RAT_TYPE_NOT_ALLOWED (5452).
epcId [Epc Id] (tmnxMobGwId)	long	The value of tmnxMobGwId uniquely identifies a mobile gateway configured in the system.
numAAAMsgNoNon3gppSub [Num AAAMsg No Non 3 gpp Sub] (tmnxMobPdnStaCcRxAaaNoNon3gppSub)	long	The value of tmnxMobPdnStaCcRxAaaNoNon3gppSub indicates the number of the AA-Answer (AAA) messages received on this peer with the experimental cause code set to DIAMETER_ERROR_USER_NO_NON_3GPP_SUBSCRIPTION (5450).
numAAAMsgRoamNotAllowed [Num AAAMsg Roam Not Allowed] (tmnxMobPdnStaCcRxAaaRoamNotAllowed)	long	The value of tmnxMobPdnStaCcRxAaaRoamNotAllowed indicates the number of the AA-Answer (AAA) messages received on this peer with the experimental cause code set to DIAMETER_ERROR_ROAMING_NOT_ALLOWED (5004).

Table 552 Ietwag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numDEAMsgNoNon3gppSub [Num DEAMsg No Non 3 gpp Sub] (tmnxMobPdnStaCcRxDeaNoNon3gppSub)	long	The value of tmnxMobPdnStaCcRxDeaNoNon3gppSub indicates the number of the DE-Answer (DEA) messages received on this peer with the experimental cause code set to DIAMETER_ERROR_USER_NO_NON_3GPP_SUBSCRIPTION (5450).
numDEAMsgRoamNotAllowed [Num DEAMsg Roam Not Allowed] (tmnxMobPdnStaCcRxDeaRoamNotAllowed)	long	The value of tmnxMobPdnStaCcRxDeaRoamNotAllowed indicates the number of the DE-Answer (DEA) messages received on this peer with the experimental cause code set to DIAMETER_ERROR_ROAMING_NOT_ALLOWED (5004).
peerIpAddress [Peer Ip Address] (tmnxMobPdnStaPeerAddress)	String	The value of tmnxMobPdnStaPeerAddress indicates the IP address of the peer on Sta reference point.
peerIpAddressType [Peer Ip Address Type] (tmnxMobPdnStaPeerAddressType)	int	The value of tmnxMobPdnStaPeerAddressType indicates the type of address represented by tmnxMobPdnStaPeerAddress.
peerTcpPort [Peer Tcp Port] (tmnxMobPdnStaPeerPort)	int	The value of tmnxMobPdnStaPeerPort indicates the port number of this peer.
receivedAAAAPVNotAllowed [Received AAAAPVNot Allowed] (tmnxMobPdnStaCcRxAaaAvpNotAllowed)	long	The value of tmnxMobPdnStaCcRxAaaAvpNotAllowed indicates the number of the AA-Answer (AAA) messages received on this peer with cause code set to DIAMETER_AVP_NOT_ALLOWED (5008).
receivedAAAAPVUnsupported [Received AAAAPVUnsupported] (tmnxMobPdnStaCcRxAaaAvpUnsupported)	long	The value of tmnxMobPdnStaCcRxAaaAvpUnsupported indicates the number of the AA-Answer (AAA) messages received on this peer with cause code set to DIAMETER_AVP_UNSUPPORTED (5001).
receivedAAAAuthenticationRejected [Received AAAAuthentication Rejected] (tmnxMobPdnStaCcRxAaaAuthNReject)	long	The value of tmnxMobPdnStaCcRxAaaAuthNReject indicates the number of the AA-Answer (AAA) messages received on this peer with cause code set to DIAMETER_AUTHENTICATION_REJECTED (4001).

Table 552 Ietwag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedAAAAuthorizationRejected [Received AAAAuthorization Rejected] (tmnxMobPdnStaCcRxAaaAuthZReject)	long	The value of tmnxMobPdnStaCcRxAaaAuthZReject indicates the number of the AA-Answer (AAA) messages received on this peer with cause code set to DIAMETER_AUTHORIZATION_REJECTED (5003).
receivedAAAInvalidAVPValue [Received AAAInvalid AVPValue] (tmnxMobPdnStaCcRxAaaInvalAvpVal)	long	The value of tmnxMobPdnStaCcRxAaaInvalAvpVal indicates the number of the AA-Answer (AAA) messages received on this peer with cause code set to DIAMETER_INVALID_AVP_VALUE (5004).
receivedAAAMissingAVP [Received AAAMissing AVP] (tmnxMobPdnStaCcRxAaaMissingAvp)	long	The value of tmnxMobPdnStaCcRxAaaMissingAvp indicates the number of the AA-Answer (AAA) messages received on this peer with cause code set to DIAMETER_MISSING_AVP (5005).
receivedAAAOtherPermanentFailures [Received AAAOther Permanent Failures] (tmnxMobPdnStaCcRxAaaOther5XXX)	long	The value of tmnxMobPdnStaCcRxAaaOther5XXX indicates the number of the AA-Answer (AAA) messages received on this peer with cause code set to other permanent failures.
receivedAAAOtherProtocolsErrors [Received AAAOther Protocols Errors] (tmnxMobPdnStaCcRxAaaOther3XXX)	long	The value of tmnxMobPdnStaCcRxAaaOther3XXX indicates the number of the AA-Answer (AAA) messages received on this peer with cause code set to other protocol errors.
receivedAAAOtherTransitFailures [Received AAAOther Transit Failures] (tmnxMobPdnStaCcRxAaaOther4XXX)	long	The value of tmnxMobPdnStaCcRxAaaOther4XXX indicates the number of the AA-Answer (AAA) messages received on this peer with cause code set to other transient failures.
receivedAAAResourcesExceeded [Received AAAResources Exceeded] (tmnxMobPdnStaCcRxAaaResrcExceed)	long	The value of tmnxMobPdnStaCcRxAaaResrcExceed indicates the number of AA-Answer (AAA) the messages received on this peer with cause code set to DIAMETER_RESOURCES_EXCEEDED (5006).
receivedAAATooBusy [Received AAAToo Busy] (tmnxMobPdnStaCcRxAaaTooBusy)	long	The value of tmnxMobPdnStaCcRxAaaTooBusy indicates the number of the AA-Answer (AAA) messages received on this peer with cause code set to DIAMETER_TOO_BUSY (3004).

Table 552 Iletwag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedAAAUnabletoDeliver [Received AAAUnableto Deliver] (tmnxMobPdnStaCcRxAaaUnableDelivr)	long	The value of tmnxMobPdnStaCcRxAaaUnableDelivr indicates the number of the AA-Answer (AAA) messages received on this peer with cause code set to DIAMETER_UNABLE_TO_DELIVER (3002).
receivedAAAUnknownSessionId [Received AAAUnknown Session Id] (tmnxMobPdnStaCcRxAaaUnkSessId)	long	The value of tmnxMobPdnStaCcRxAaaUnkSessId indicates the number of the AA-Answer (AAA) messages received on this peer with cause code set to DIAMETER_UNKNOWN_SESSION_ID (5002).
receivedAAAUserNoApnSubscription [Received AAAUser No Apn Subscription] (tmnxMobPdnStaCcRxAaaUserNoApnSub)	long	The value of tmnxMobPdnStaCcRxAaaUserNoApnSub indicates the number of the AA-Answer (AAA) messages received on this peer with the experimental cause code set to DIAMETER_ERROR_USER_NO_APN_SUBSCRIPTION (5451).
receivedAAAUserUnknown [Received AAAUser Unknown] (tmnxMobPdnStaCcRxAaaUserUnknown)	long	The value of tmnxMobPdnStaCcRxAaaUserUnknown indicates the number of the AA-Answer (AAA) messages received on this peer with the experimental cause code set to DIAMETER_USER_UNKNOWN (5001).
receivedDEAAVPNotAllowed [Received DEAAVPNot Allowed] (tmnxMobPdnStaCcRxDeaAvpNotAllowed)	long	The value of tmnxMobPdnStaCcRxDeaAvpNotAllowed indicates the number of the DE-Answer (DEA) messages received on this peer with cause code set to DIAMETER_AVP_NOT_ALLOWED (5008).
receivedDEAAVPUnsupported [Received DEAAVPUnsupported] (tmnxMobPdnStaCcRxDeaAvpUnsupport)	long	The value of tmnxMobPdnStaCcRxDeaAvpUnsupport indicates the number of the DE-Answer (DEA) messages received on this peer with cause code set to DIAMETER_AVP_UNSUPPORTED (5001).
receivedDEAAAuthenticationRejected [Received DEAAAuthentication Rejected] (tmnxMobPdnStaCcRxDeaAuthNReject)	long	The value of tmnxMobPdnStaCcRxDeaAuthNReject indicates the number of the DE-Answer (DEA) messages received on this peer with cause code set to DIAMETER_AUTHENTICATION_REJECTED (4001).

Table 552 Iletwag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedDEAAuthorizationRejected [Received DEAAuthorization Rejected] (tmnxMobPdnStaCcRxDeaAuthZReject)	long	The value of tmnxMobPdnStaCcRxDeaAuthZReject indicates the number of the DE-Answer (DEA) messages received on this peer with cause code set to DIAMETER_AUTHORIZATION_REJECTED (5003).
receivedDEAInvalidAVPValue [Received DEAInvalid AVPValue] (tmnxMobPdnStaCcRxDeaInvalAvpVal)	long	The value of tmnxMobPdnStaCcRxDeaInvalAvpVal indicates the number of the DE-Answer (DEA) messages received on this peer with cause code set to DIAMETER_INVALID_AVP_VALUE (5004).
receivedDEAMissingAVP [Received DEAMissing AVP] (tmnxMobPdnStaCcRxDeaMissingAvp)	long	The value of tmnxMobPdnStaCcRxDeaMissingAvp indicates the number of the DE-Answer (DEA) messages received on this peer with cause code set to DIAMETER_MISSING_AVP (5005).
receivedDEAOtherPermanentFailures [Received DEAOther Permanent Failures] (tmnxMobPdnStaCcRxDeaOther5XXX)	long	The value of tmnxMobPdnStaCcRxDeaOther5XXX indicates the number of the DE-Answer (DEA) messages received on this peer with cause code set to other permanent failures.
receivedDEAOtherProtocolsErrors [Received DEAOther Protocols Errors] (tmnxMobPdnStaCcRxDeaOther3XXX)	long	The value of tmnxMobPdnStaCcRxDeaOther3XXX indicates the number of the DE-Answer (DEA) messages received on this peer with cause code set to other protocol errors.
receivedDEAOtherTransitFailures [Received DEAOther Transit Failures] (tmnxMobPdnStaCcRxDeaOther4XXX)	long	The value of tmnxMobPdnStaCcRxDeaOther4XXX indicates the number of the DE-Answer (DEA) messages received on this peer with cause code set to other transient failures.
receivedDEAResourcesExceeded [Received DEAResources Exceeded] (tmnxMobPdnStaCcRxDeaResrcExceed)	long	The value of tmnxMobPdnStaCcRxDeaResrcExceed indicates the number of DE-Answer (DEA) the messages received on this peer with cause code set to DIAMETER_RESOURCES_EXCEEDED (5006).
receivedDEATooBusy [Received DEAToo Busy] (tmnxMobPdnStaCcRxDeaTooBusy)	long	The value of tmnxMobPdnStaCcRxDeaTooBusy indicates the number of the DE-Answer (DEA) messages received on this peer with cause code set to DIAMETER_TOO_BUSY (3004).

Table 552 Iletweg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedDEAUnabletoDeliver [Received DEAUnableto Deliver] (tmnxMobPdnStaCcRxDeaUnableDelivr)	long	The value of tmnxMobPdnStaCcRxDeaUnableDelivr indicates the number of the DE-Answer (DEA) messages received on this peer with cause code set to DIAMETER_UNABLE_TO_DELIVER (3002).
receivedDEAUnknownSessionId [Received DEAUnknown Session Id] (tmnxMobPdnStaCcRxDeaUnkSessId)	long	The value of tmnxMobPdnStaCcRxDeaUnkSessId indicates the number of the DE-Answer (DEA) messages received on this peer with cause code set to DIAMETER_UNKNOWN_SESSION_ID (5002).
receivedDEAUserNoApnSubscription [Received DEAUser No Apn Subscription] (tmnxMobPdnStaCcRxDeaUserNoApnSub)	long	The value of tmnxMobPdnStaCcRxDeaUserNoApnSub indicates the number of the DE-Answer (DEA) messages received on this peer with the experimental cause code set to DIAMETER_ERROR_USER_NO_APN_SUBSCRIPTION (5451).
receivedDEAUserUnknown [Received DEAUser Unknown] (tmnxMobPdnStaCcRxDeaUserUnknown)	long	The value of tmnxMobPdnStaCcRxDeaUserUnknown indicates the number of the DE-Answer (DEA) messages received on this peer with the experimental cause code set to DIAMETER_USER_UNKNOWN (5001).
strLogout [Str Logout] (tmnxMobPdnStaCcTxStrLogout)	long	The value of tmnxMobPdnStaCcTxStrLogout indicates the number of the Session-Termination-Request (STR) messages transmitted from this peer with Termination-Cause Attribute Value Pair (AVP) set to DIAMETER_LOGOUT (1).
strServNotProv [Str Serv Not Prov] (tmnxMobPdnStaCcTxStrServNotProv)	long	The value of tmnxMobPdnStaCcTxStrServNotProv indicates the number of the Session-Termination-Request (STR) messages transmitted from this peer with Termination-Cause Attribute Value Pair (AVP) set to DIAMETER_SERVICE_NOT_PROVIDED (2).
transmittedASAUnabletoComply [Transmitted ASAUnableto Comply] (tmnxMobPdnStaCcTxAsaUnComply)	long	The value of tmnxMobPdnStaCcTxAsaUnComply indicates the number of Abort-Session-Answer (ASA) the messages transmitted from this peer with cause code set to DIAMETER_UNABLE_TO_COMPLY (5012).

Table 552 Ietwag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transmittedASAUnknownSessionId [Transmitted ASAUnknown Session Id] (tmnxMobPdnStaCcTxAsaUnkSessId)	long	The value of tmnxMobPdnStaCcTxAsaUnkSessId indicates the number of the Abort-Session-Answer (ASA) messages transmitted from this peer with cause code set to DIAMETER_UNKNOWN_SESSION_ID (5002).
transmittedRAAUnabletoComply [Transmitted RAAUnableto Comply] (tmnxMobPdnStaCcTxRaaUnComply)	long	The value of tmnxMobPdnStaCcTxRaaUnComply indicates the number of Re-Auth-Answer (RAA) the messages transmitted from this peer with cause code set to DIAMETER_UNABLE_TO_COMPLY (5012).
transmittedRAAUnknownSessionId [Transmitted RAAUnknown Session Id] (tmnxMobPdnStaCcTxRaaUnkSessId)	long	The value of tmnxMobPdnStaCcTxRaaUnkSessId indicates the number of the Re-Auth-Answer (RAA) messages transmitted from this peer with cause code set to DIAMETER_UNKNOWN_SESSION_ID (5002).
transmittedSTRAdministrative [Transmitted STRAdministrative] (tmnxMobPdnStaCcTxStrAdmin)	long	The value of tmnxMobPdnStaCcTxStrAdmin indicates the number of the Session-Termination-Request (STR) messages transmitted from this peer with Termination-Cause Attribute Value Pair (AVP) set to DIAMETER_ADMINISTRATIVE (4).
transmittedSTRBadAnswer [Transmitted STRBad Answer] (tmnxMobPdnStaCcTxStrBadAnswer)	long	The value of tmnxMobPdnStaCcTxStrBadAnswer indicates the number of the Session-Termination-Request (STR) messages transmitted from this peer with Termination-Cause Attribute Value Pair (AVP) set to DIAMETER_BAD_ANSWER (3).
transmittedSTRSessiontimeout [Transmitted STRSessiontimeout] (tmnxMobPdnStaCcTxStrSessTimeout)	long	The value of tmnxMobPdnStaCcTxStrSessTimeout indicates the number of the Session-Termination-Request (STR) messages transmitted from this peer with Termination-Cause Attribute Value Pair (AVP) set to DIAMETER_SESSION_TIMEOUT (8).
virtualRouterId [Virtual Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.

Table 552 Itetwag statistics (continued)

<p>StaPeerStats</p> <p>MIB entry name: tmnxCardEntry</p> <p>Entry description: Each row entry represents an IOM card slot in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. When a tmnxChassisEntry is created, a tmnxCardEntry is created for each IOM card slot in that chassis. Before a tmnxChassisEntry can be deleted, each tmnxCardEntry for that chassis must be in the proper state for removal.</p> <p>Table description (for tmnxCardTable): The tmnxCardTable has an entry for each IOM card slot in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Itetwag.StaPeer</p>		
cardSlotNumber [Card Slot Number] (tmnxCardSlotNum)	long	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
epcId [Epc Id] (tmnxMobGwId)	long	The value of tmnxMobGwId uniquely identifies a mobile gateway configured in the system.
pdnStaAARFinalTOTx [Pdn Sta AARFinal TOTx] (tmnxMobPdnStaAARFinalTOTx)	long	The value of tmnxMobPdnStaAARFinalTOTx indicates the number of AAR request retries aborted due to exhaustion of maximum allowable retries due to the lack of response from the Authentication, Authorization and Accounting (AAA) server.

Table 552 Iletwag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pdnStaASAUnknownSessTx [Pdn Sta ASAUnknown Sess Tx] (tmnxMobPdnStaASAUnknownSessTx)	long	The value of tmnxMobPdnStaASAUnknownSessTx indicates the number of Abort Session Answer (ASA) messages sent when the session identified in the Abort Session Request (ASR) message could not be found.
pdnStaDERFinalTOTx [Pdn Sta DERFinal TOTx] (tmnxMobPdnStaDERFinalTOTx)	long	The value of tmnxMobPdnStaDERFinalTOTx indicates the number of DER request retries aborted due to exhaustion of maximum allowable retries due to the lack of response from the Authentication, Authorization and Accounting (AAA) server.
pdnStaRAAUnknownSessTx [Pdn Sta RAAUnknown Sess Tx] (tmnxMobPdnStaRAAUnknownSessTx)	long	The value of tmnxMobPdnStaRAAUnknownSessTx indicates the number of Reauthorization Answer (RAA) messages sent when the session identified in the Reauthorization Request (RAR) could not be found.
pdnStaSTRFinalTOTx [Pdn Sta STRFinal TOTx] (tmnxMobPdnStaSTRFinalTOTx)	long	The value of tmnxMobPdnStaSTRFinalTOTx indicates the number of STR request retries aborted due to exhaustion of maximum allowable retries due to the lack of response from the Authentication, Authorization and Accounting (AAA) server.
pdnStaSTRUnknownSessAaaTx [Pdn Sta STRUnknown Sess Aaa Tx] (tmnxMobPdnStaSTRUnknownSessAaaTx)	long	The value of tmnxMobPdnStaSTRUnknownSessAaaTx indicates the number of STR requests the Packet Data Gateway (ePDG) sends upon receiving AA Answer (AAA) message for an unknown session.
pdnStaSTRUnknownSessDeaTx [Pdn Sta STRUnknown Sess Dea Tx] (tmnxMobPdnStaSTRUnknownSessDeaTx)	long	The value of tmnxMobPdnStaSTRUnknownSessDeaTx indicates the number of STR requests the Packet Data Gateway (ePDG) sends upon receiving DE Answer (DEA) message for an unknown session.
pdnStaStatAAAExtnRx [Pdn Sta Stat AAExtn Rx] (tmnxMobPdnStaStatAAAExtnRx)	long	The value of tmnxMobPdnStaStatAAAExtnRx indicates the number of AA Answer (AAA) messages received from this peer for a lifetime extension.

Table 552 Iletwag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pdnStaStatAAAReauthRx [Pdn Sta Stat AAAReauth Rx] (tmnxMobPdnStaStatAAAReauthRx)	long	The value of tmnxMobPdnStaStatAAAReauthRx indicates the number of AA Answer (AAA) messages received from this peer for a reauthorization.
pdnStaStatAAARejectRx [Pdn Sta Stat AAAReject Rx] (tmnxMobPdnStaStatAAARejectRx)	long	The value of tmnxMobPdnStaStatAAARejectRx indicates the number of AAA messages received from this peer with Result-Code set to diameter-authorization-rejected.
pdnStaStatAAASuccessRx [Pdn Sta Stat AAASuccess Rx] (tmnxMobPdnStaStatAAASuccessRx)	long	The value of tmnxMobPdnStaStatAAASuccessRx indicates the number of AAA messages received from this peer with Result-Code set to diameter success.
pdnStaStatAARExtnTx [Pdn Sta Stat AARExtn Tx] (tmnxMobPdnStaStatAARExtnTx)	long	The value of tmnxMobPdnStaStatAARExtnTx indicates the number of AA Request (AAR) messages transmitted to this peer during a lifetime extension.
pdnStaStatAARReauthTx [Pdn Sta Stat AARReauth Tx] (tmnxMobPdnStaStatAARReauthTx)	long	The value of tmnxMobPdnStaStatAARReauthTx indicates the number of AA Request (AAR) messages transmitted to this peer during a reauthorization.
pdnStaStatAARRetries [Pdn Sta Stat AARRetries] (tmnxMobPdnStaStatAARRetries)	long	The value of tmnxMobPdnStaStatAARRetries indicates the number of times the Packet Data Gateway (ePDG) retried to send an AAR request.
pdnStaStatASAnswerTx [Pdn Sta Stat ASAnswer Tx] (tmnxMobPdnStaStatASAnswerTx)	long	The value of tmnxMobPdnStaStatASAnswerTx indicates the number of Abort Session Answer (ASA) messages transmitted by the evolved Packet Data Gateway (ePDG).
pdnStaStatASRequestRx [Pdn Sta Stat ASRequest Rx] (tmnxMobPdnStaStatASRequestRx)	long	The value of tmnxMobPdnStaStatASRequestRx indicates the number of Abort Session Request (ASR) messages received by the evolved Packet Data Gateway (ePDG).
pdnStaStatCEAMsgsRx [Pdn Sta Stat CEAMsgs Rx] (tmnxMobPdnStaStatCEAMsgsRx)	long	The value of tmnxMobPdnStaStatCEAMsgsRx indicates the number of Capability Exchange Answer (CEA) messages received from this peer.

Table 552 Iletwag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pdnStaStatCERMsgsTx [Pdn Sta Stat CERMsgs Tx] (tmnxMobPdnStaStatCERMsgsTx)	long	The value of tmnxMobPdnStaStatCERMsgsTx indicates the number of Capability Exchange Request (CER) messages transmitted to this peer.
pdnStaStatConnAttempts [Pdn Sta Stat Conn Attempts] (tmnxMobPdnStaStatConnAttempts)	long	The value of tmnxMobPdnStaStatConnAttempts indicates the number of connections attempted to this peer.
pdnStaStatConnFailures [Pdn Sta Stat Conn Failures] (tmnxMobPdnStaStatConnFailures)	long	The value of tmnxMobPdnStaStatConnFailures indicates the number of failed connections with this peer.
pdnStaStatCurrCgAarMsg [Pdn Sta Stat Curr Cg Aar Msg] (tmnxMobPdnStaStatCurrCgAarMsg)	long	The value of tmnxMobPdnStaStatCurrCgAarMsg indicates the number of AA Request (AAR) messages to this peer dropped during the current congestion.
pdnStaStatCurrCgAsaMsg [Pdn Sta Stat Curr Cg Asa Msg] (tmnxMobPdnStaStatCurrCgAsaMsg)	long	The value of tmnxMobPdnStaStatCurrCgAsaMsg indicates the number of Abort Session Answer (ASA) messages to this peer dropped during the current congestion.
pdnStaStatCurrCgDerMsg [Pdn Sta Stat Curr Cg Der Msg] (tmnxMobPdnStaStatCurrCgDerMsg)	long	The value of tmnxMobPdnStaStatCurrCgAsaMsg indicates the number of Abort Session Answer (ASA) messages to this peer dropped during the current congestion.
pdnStaStatCurrCgPendMsg [Pdn Sta Stat Curr Cg Pend Msg] (tmnxMobPdnStaStatCurrCgPendMsg)	long	The value of tmnxMobPdnStaStatCurrCgPendMsg indicates the number of pending messages toward this peer during the current congestion.
pdnStaStatCurrCgRaaMsg [Pdn Sta Stat Curr Cg Raa Msg] (tmnxMobPdnStaStatCurrCgRaaMsg)	long	The value of tmnxMobPdnStaStatCurrCgRaaMsg indicates the number of Re-Authorization Answer (RAA) messages to this peer dropped during the current congestion.
pdnStaStatCurrCgStrMsg [Pdn Sta Stat Curr Cg Str Msg] (tmnxMobPdnStaStatCurrCgStrMsg)	long	The value of tmnxMobPdnStaStatCurrCgStrMsg indicates the number of Session Termination Request (STR) messages to this peer dropped during the current congestion.

Table 552 Iletwag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pdnStaStatDEAMultiRoundRx [Pdn Sta Stat DEAMulti Round Rx] (tmnxMobPdnStaStatDEAMultiRoundRx)	long	The value of tmnxMobPdnStaStatDEAMultiRoundRx indicates the number of DEA messages received from this peer with Result-Code set to diameter multi-round-auth.
pdnStaStatDEAOtherCodeRx [Pdn Sta Stat DEAOther Code Rx] (tmnxMobPdnStaStatDEAOtherCodeRx)	long	The value of tmnxMobPdnStaStatDEAOtherCodeRx indicates the number of DEA messages received from this peer with Result-Code other than diameter success or diameter mutli-round-auth.
pdnStaStatDEARedFailRx [Pdn Sta Stat DEARed Fail Rx] (tmnxMobPdnStaStatDEARedFailRx)	long	The value of tmnxMobPdnStaStatDEARedFailRx indicates the number of redirection DEA messages received from this peer with the failure Result-Code.
pdnStaStatDEARedRx [Pdn Sta Stat DEARed Rx] (tmnxMobPdnStaStatDEARedRx)	long	The value of tmnxMobPdnStaStatDEARedRx indicates the number of redirection DEA messages received from this peer.
pdnStaStatDEASuccessRx [Pdn Sta Stat DEASuccess Rx] (tmnxMobPdnStaStatDEASuccessRx)	long	The value of tmnxMobPdnStaStatDEASuccessRx indicates the number of DEA messages received from this peer with Result-Code set to diameter success.
pdnStaStatDERInitAtchTx [Pdn Sta Stat DERInit Atch Tx] (tmnxMobPdnStaStatDERInitAtchTx)	long	The value of tmnxMobPdnStaStatDERInitAtchTx indicates the number of Diameter EAP Request (DER) messages transmitted to this peer for an initial attach.
pdnStaStatDERReAuthenTx [Pdn Sta Stat DERRe Authen Tx] (tmnxMobPdnStaStatDERReAuthenTx)	long	The value of tmnxMobPdnStaStatDERReAuthenTx indicates the number of Diameter EAP Request (DER) messages transmitted to this peer for re-authentication.
pdnStaStatDERRetries [Pdn Sta Stat DERRetries] (tmnxMobPdnStaStatDERRetries)	long	The value of tmnxMobPdnStaStatDERRetries indicates the number of times the Packet Data Gateway (ePDG) retried to send a DER request.

Table 552 Iletwag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pdnStaStatDERSubsAtchTx [Pdn Sta Stat DERSubs Atch Tx] (tmnxMobPdnStaStatDERSubsAtchTx)	long	The value of tmnxMobPdnStaStatDERSubsAtchTx indicates the number of Diameter EAP Request (DER) messages transmitted to this peer for a subsequent attach.
pdnStaStatDPAMsgsRx [Pdn Sta Stat DPAMsgs Rx] (tmnxMobPdnStaStatDPAMsgsRx)	long	The value of tmnxMobPdnStaStatDPAMsgsRx indicates the number of Disconnect Peer Answer (DPA) messages received from this peer.
pdnStaStatDPAMsgsTx [Pdn Sta Stat DPAMsgs Tx] (tmnxMobPdnStaStatDPAMsgsTx)	long	The value of tmnxMobPdnStaStatDPAMsgsTx indicates the number of Disconnect Peer Answer (DPA) messages transmitted to this peer.
pdnStaStatDPRMsgsRx [Pdn Sta Stat DPRMsgs Rx] (tmnxMobPdnStaStatDPRMsgsRx)	long	The value of tmnxMobPdnStaStatDPRMsgsRx indicates the number of Disconnect Peer Request (DPR) messages received from this peer.
pdnStaStatDPRMsgsTx [Pdn Sta Stat DPRMsgs Tx] (tmnxMobPdnStaStatDPRMsgsTx)	long	The value of tmnxMobPdnStaStatDPRMsgsTx indicates the number of Disconnect Peer Request (DPR) messages transmitted to this peer.
pdnStaStatDWAMsgsRx [Pdn Sta Stat DWAMsgs Rx] (tmnxMobPdnStaStatDWAMsgsRx)	long	The value of tmnxMobPdnStaStatDWAMsgsRx indicates the number of Device Watch Answer (DWA) messages received from this peer.
pdnStaStatDWAMsgsTx [Pdn Sta Stat DWAMsgs Tx] (tmnxMobPdnStaStatDWAMsgsTx)	long	The value of tmnxMobPdnStaStatDWAMsgsTx indicates the number of Device Watch Answer (DWA) messages transmitted to this peer.
pdnStaStatDWRMsgsRx [Pdn Sta Stat DWRMsgs Rx] (tmnxMobPdnStaStatDWRMsgsRx)	long	The value of tmnxMobPdnStaStatDWRMsgsRx indicates the number of Device Watchdog Request (DWR) messages received from this peer.
pdnStaStatDWRMsgsTx [Pdn Sta Stat DWRMsgs Tx] (tmnxMobPdnStaStatDWRMsgsTx)	long	The value of tmnxMobPdnStaStatDWRMsgsTx indicates the number of Device Watchdog Request (DWR) messages transmitted to this peer.

Table 552 Iletwag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pdnStaStatMessagesRx [Pdn Sta Stat Messages Rx] (tmnxMobPdnStaStatMessagesRx)	long	The value of tmnxMobPdnStaStatMessagesRx indicates the total number of sta application messages received from this peer.
pdnStaStatMessagesTx [Pdn Sta Stat Messages Tx] (tmnxMobPdnStaStatMessagesTx)	long	The value of tmnxMobPdnStaStatMessagesTx indicates the total number of sta application messages transmitted to this peer.
pdnStaStatPrevCgAarMsg [Pdn Sta Stat Prev Cg Aar Msg] (tmnxMobPdnStaStatPrevCgAarMsg)	long	The value of tmnxMobPdnStaStatPrevCgAarMsg indicates the number of AA Request (AAR) messages to this peer dropped during the prior congestion.
pdnStaStatPrevCgAsaMsg [Pdn Sta Stat Prev Cg Asa Msg] (tmnxMobPdnStaStatPrevCgAsaMsg)	long	The value of tmnxMobPdnStaStatPrevCgAsaMsg indicates the number of Abort Session Answer (ASA) messages to this peer dropped during the prior congestion.
pdnStaStatPrevCgDerMsg [Pdn Sta Stat Prev Cg Der Msg] (tmnxMobPdnStaStatPrevCgDerMsg)	long	The value of tmnxMobPdnStaStatPrevCgAsaMsg indicates the number of Abort Session Answer (ASA) messages to this peer dropped during the prior congestion.
pdnStaStatPrevCgRaaMsg [Pdn Sta Stat Prev Cg Raa Msg] (tmnxMobPdnStaStatPrevCgRaaMsg)	long	The value of tmnxMobPdnStaStatPrevCgRaaMsg indicates the number of Re-Authorization Answer (RAA) messages to this peer dropped during the prior congestion.
pdnStaStatPrevCgStrMsg [Pdn Sta Stat Prev Cg Str Msg] (tmnxMobPdnStaStatPrevCgStrMsg)	long	The value of tmnxMobPdnStaStatPrevCgStrMsg indicates the number of Session Termination Request (STR) messages to this peer dropped during the prior congestion.
pdnStaStatRAAnswerTx [Pdn Sta Stat RAAnswer Tx] (tmnxMobPdnStaStatRAAnswerTx)	long	The value of tmnxMobPdnStaStatRAAnswerTx indicates the number of Reauthorization Answer (RAA) messages transmitted by the evolved Packet Data Gateway (ePDG).
pdnStaStatRARRequestRx [Pdn Sta Stat RARRequest Rx] (tmnxMobPdnStaStatRARRequestRx)	long	The value of tmnxMobPdnStaStatRARRequestRx indicates the number of Reauthorization Request (RAR) messages received by the evolved Packet Data Gateway (ePDG).

Table 552 Iletweg statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pdnStaStatRxAaaInvlDPkts [Pdn Sta Stat Rx Aaa InvlD Pkts] (tmnxMobPdnStaStatRxAaaInvlDPkts)	long	The value of tmnxMobPdnStaStatRxAaaInvlDPkts indicates the number of AAA invalid packets received from this peer.
pdnStaStatRxAsrInvlDPkts [Pdn Sta Stat Rx Asr InvlD Pkts] (tmnxMobPdnStaStatRxAsrInvlDPkts)	long	The value of tmnxMobPdnStaStatRxAsrInvlDPkts indicates the number of ASR invalid packets received from this peer.
pdnStaStatRxDealInvlDPkts [Pdn Sta Stat Rx Dea InvlD Pkts] (tmnxMobPdnStaStatRxDealInvlDPkts)	long	The value of tmnxMobPdnStaStatRxDealInvlDPkts indicates the number of DEA invalid packets received from this peer.
pdnStaStatRxInvalidCea [Pdn Sta Stat Rx Invalid Cea] (tmnxMobPdnStaStatRxInvalidCea)	long	The value of tmnxMobPdnStaStatRxInvalidCea indicates the number of invalid Capabilities Exchange Answer (CEA) messages received from this peer.
pdnStaStatRxMsgTooBig [Pdn Sta Stat Rx Msg Too Big] (tmnxMobPdnStaStatRxMsgTooBig)	long	The value of tmnxMobPdnStaStatRxMsgTooBig indicates the number of oversize messages received from this peer.
pdnStaStatRxMsgTooSmall [Pdn Sta Stat Rx Msg Too Small] (tmnxMobPdnStaStatRxMsgTooSmall)	long	The value of tmnxMobPdnStaStatRxMsgTooSmall indicates the number of small messages received from this peer.
pdnStaStatRxMsgUnexpctVer [Pdn Sta Stat Rx Msg Unexpct Ver] (tmnxMobPdnStaStatRxMsgUnexpctVer)	long	The value of tmnxMobPdnStaStatRxMsgUnexpctVer indicates the number of unexpected version messages received from this peer.
pdnStaStatRxRarInvlDPkts [Pdn Sta Stat Rx Rar InvlD Pkts] (tmnxMobPdnStaStatRxRarInvlDPkts)	long	The value of tmnxMobPdnStaStatRxRarInvlDPkts indicates the number of RAR invalid packets received from this peer.
pdnStaStatRxStaInvlDPkts [Pdn Sta Stat Rx Sta InvlD Pkts] (tmnxMobPdnStaStatRxStaInvlDPkts)	long	The value of tmnxMobPdnStaStatRxStaInvlDPkts indicates the number of STA invalid packets received from this peer.

Table 552 Iletwag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pdnStaStatRxTransportDisc [Pdn Sta Stat Rx Transport Disc] (tmnxMobPdnStaStatRxTransportDisc)	long	The value of tmnxMobPdnStaStatRxTransportDisc indicates the number of remote transport disconnect messages received from this peer.
pdnStaStatSTASuccessRx [Pdn Sta Stat STASuccess Rx] (tmnxMobPdnStaStatSTASuccessRx)	long	The value of tmnxMobPdnStaStatSTASuccessRx indicates the number of STA messages received from this peer with Result-Code set to diameter success.
pdnStaStatSTAnswerRx [Pdn Sta Stat STAnswer Rx] (tmnxMobPdnStaStatSTAnswerRx)	long	The value of tmnxMobPdnStaStatSTAnswerRx indicates the number of Session Termination Answer (STA) messages received by the evolved Packet Data Gateway (ePDG).
pdnStaStatSTRRetries [Pdn Sta Stat STRRetries] (tmnxMobPdnStaStatSTRRetries)	long	The value of tmnxMobPdnStaStatSTRRetries indicates the number of times the Packet Data Gateway (ePDG) retried to send a STR request.
pdnStaStatSTRequestTx [Pdn Sta Stat STRequest Tx] (tmnxMobPdnStaStatSTRequestTx)	long	The value of tmnxMobPdnStaStatSTRequestTx indicates the number of Session Termination Request (STR) messages transmitted by the evolved Packet Data Gateway (ePDG).
pdnStaStatTxRetransmitMsgs [Pdn Sta Stat Tx Retransmit Msgs] (tmnxMobPdnStaStatTxRetransmitMsgs)	long	The value of tmnxMobPdnStaStatTxRetransmitMsgs indicates the number of retransmit messages transmitted to this peer.
peerIpAddress [Peer Ip Address] (tmnxMobPdnStaPeerAddress)	String	The value of tmnxMobPdnStaPeerAddress indicates the IP address of the peer on Sta reference point.
peerIpAddressType [Peer Ip Address Type] (tmnxMobPdnStaPeerAddressType)	int	The value of tmnxMobPdnStaPeerAddressType indicates the type of address represented by tmnxMobPdnStaPeerAddress.
peerTcpPort [Peer Tcp Port] (tmnxMobPdnStaPeerPort)	int	The value of tmnxMobPdnStaPeerPort indicates the port number of this peer.

Table 552 Iletwag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
virtualRouterId [Virtual Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
<p>SwwRadPeerStats</p> <p>MIB entry name: tmnxCardEntry</p> <p>Entry description: Each row entry represents an IOM card slot in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. When a tmnxChassisEntry is created, a tmnxCardEntry is created for each IOM card slot in that chassis. Before a tmnxChassisEntry can be deleted, each tmnxCardEntry for that chassis must be in the proper state for removal.</p> <p>Table description (for tmnxCardTable): The tmnxCardTable has an entry for each IOM card slot in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Iletwag.SwwRadPeer</p>		
cardSlotNumber [Card Slot Number] (tmnxCardSlotNum)	long	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
epcId [Epc Id] (tmnxMobGwId)	long	The value of tmnxMobGwId uniquely identifies a mobile gateway configured in the system.

Table 552 Ietwag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lclAddr [Lcl Addr] (tmnxMobPdnSwwRadStatLclAddr)	String	The value of tmnxMobPdnSwwRadStatLclAddr indicates the local IP address of the peer on SWw radius reference point.
lclAddrType [Lcl Addr Type] (tmnxMobPdnSwwRadStatLclAddrType)	int	The value of tmnxMobPdnSwwRadStatLclAddrType indicates the type of address represented by tmnxMobPdnSwwRadStatLclAddr.
numberOfAccessAccTx [Number Of Access Acc Tx] (tmnxMobPdnSwwRadStatAccessAccTx)	long	The value of tmnxMobPdnSwwRadStatAccessAccTx indicates the number of the accepted access requests transmitted to this peer.
numberOfAccessChaTx [Number Of Access Cha Tx] (tmnxMobPdnSwwRadStatAccessChaTx)	long	The value of tmnxMobPdnSwwRadStatAccessChaTx indicates the number of the challenged access requests transmitted to this peer.
numberOfAccessRejTx [Number Of Access Rej Tx] (tmnxMobPdnSwwRadStatAccessRejTx)	long	The value of tmnxMobPdnSwwRadStatAccessRejTx indicates the number of the rejected access requests transmitted to this peer.
numberOfAccessReqRx [Number Of Access Req Rx] (tmnxMobPdnSwwRadStatAccessReqRx)	long	The value of tmnxMobPdnSwwRadStatAccessReqRx indicates the number of the access requests received from this peer.
numberOfAcctReqStart [Number Of Acct Req Start] (tmnxMobPdnSwwRadStatAcctReqStart)	long	The value of tmnxMobPdnSwwRadStatAcctReqStart indicates the number of the accounting request start message received from this peer.
numberOfAcctReqStop [Number Of Acct Req Stop] (tmnxMobPdnSwwRadStatAcctReqStop)	long	The value of tmnxMobPdnSwwRadStatAcctReqStop indicates the number of the accounting request stop message received from this peer.
numberOfAcctRespTx [Number Of Acct Resp Tx] (tmnxMobPdnSwwRadStatAcctRespTx)	long	The value of tmnxMobPdnSwwRadStatAcctRespTx indicates the number of the accounting response messages transmitted to this peer.

Table 552 lletwag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numberOfAuthenErr [Number Of Authen Err] (tmnxMobPdnSwwRadStatAuthenErr)	long	The value of tmnxMobPdnSwwRadStatAuthenErr indicates the number of the access requests with the authentication errors.
numberOfDisconnAckRx [Number Of Disconn Ack Rx] (tmnxMobPdnSwwRadStatDisconnAckRx)	long	The value of tmnxMobPdnSwwRadStatDisconnAckRx indicates the number of the disconnect ACK responses received from this peer.
numberOfDisconnNakRx [Number Of Disconn Nak Rx] (tmnxMobPdnSwwRadStatDisconnNakRx)	long	The value of tmnxMobPdnSwwRadStatDisconnNakRx indicates the number of the disconnect NAK responses received from this peer.
numberOfDisconnReqTx [Number Of Disconn Req Tx] (tmnxMobPdnSwwRadStatDisconnReqTx)	long	The value of tmnxMobPdnSwwRadStatDisconnReqTx indicates the number of the disconnect requests messages transmitted to this peer.
numberOfMandAttrErr [Number Of Mand Attr Err] (tmnxMobPdnSwwRadStatMandAttrErr)	long	The value of tmnxMobPdnSwwRadStatMandAttrErr indicates the number of the access requests with the mandatory attribute errors.
numberOfMandAttrMiss [Number Of Mand Attr Miss] (tmnxMobPdnSwwRadStatMandAttrMiss)	long	The value of tmnxMobPdnSwwRadStatMandAttrMiss indicates the number of the access requests with the missing mandatory attributes.
numberOfOptAttrErr [Number Of Opt Attr Err] (tmnxMobPdnSwwRadStatOptAttrErr)	long	The value of tmnxMobPdnSwwRadStatOptAttrErr indicates the number of the access requests with the optional attribute errors.
numberOfUnexpectCode [Number Of Unexpect Code] (tmnxMobPdnSwwRadStatUnexpectCode)	long	The value of tmnxMobPdnSwwRadStatUnexpectCode indicates the number of the access requests with the unexpected code.
numberOfUnsupportErr [Number Of Unsupport Err] (tmnxMobPdnSwwRadStatUnsupportErr)	long	The value of tmnxMobPdnSwwRadStatUnsupportErr indicates the number of the access requests with the unsupported errors.

Table 552 Itetwag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
peerIpAddress [Peer Ip Address] (tmnxMobGwSigPeerAddress)	String	The value of tmnxMobGwSigPeerAddress indicates the IP address of this peer on signaling reference points.
peerIpAddressType [Peer Ip Address Type] (tmnxMobGwSigPeerAddressType)	int	The value of tmnxMobGwSigPeerAddressType indicates the type of address represented by tmnxMobGwSigPeerAddress.
refPtName [Ref Pt Name] (tmnxMobGwSigRefPtName)	String	The value of tmnxMobGwSigRefPtName specifies the name of this reference point. When an entry is created for a single interface, the value of tmnxMobGwSigRefPtName is set to 'default'.
<p>SwwTnlPeerStats</p> <p>MIB entry name: tmnxCardEntry</p> <p>Entry description: Each row entry represents an IOM card slot in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. When a tmnxChassisEntry is created, a tmnxCardEntry is created for each IOM card slot in that chassis. Before a tmnxChassisEntry can be deleted, each tmnxCardEntry for that chassis must be in the proper state for removal.</p> <p>Table description (for tmnxCardTable): The tmnxCardTable has an entry for each IOM card slot in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Itetwag.SwwTnlPeer</p>		
cardSlotNumber [Card Slot Number] (tmnxCardSlotNum)	long	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	long	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassis-Index are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.

Table 552 Ietwag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
epcld [Epc Id] (tmnxMobGwld)	long	The value of tmnxMobGwld uniquely identifies a mobile gateway configured in the system.
numberOfAckPktTx [Number Of Ack Pkt Tx] (tmnxMobPdnSwwTnlStatAckPktTx)	long	The value of tmnxMobPdnSwwTnlStatAckPktTx indicates the number of the packets for the ack messages transmitted to this peer.
numberOfDeclinePktRx [Number Of Decline Pkt Rx] (tmnxMobPdnSwwTnlStatDeclinePktRx)	long	The value of tmnxMobPdnSwwTnlStatDeclinePktRx indicates the number of the packets for the decline messages received from this peer.
numberOfDiscovrPktRx [Number Of Discovr Pkt Rx] (tmnxMobPdnSwwTnlStatDiscovrPktRx)	long	The value of tmnxMobPdnSwwTnlStatDiscovrPktRx indicates the number of the packets for the discover messages received from this peer.
numberOfInformPktRx [Number Of Inform Pkt Rx] (tmnxMobPdnSwwTnlStatInformPktRx)	long	The value of tmnxMobPdnSwwTnlStatInformPktRx indicates the number of the packets for the inform messages received from this peer.
numberOfMalformPktRx [Number Of Malform Pkt Rx] (tmnxMobPdnSwwTnlStatMalformPktRx)	long	The value of tmnxMobPdnSwwTnlStatMalformPktRx indicates the number of the malformed packets received from this peer.
numberOfNakPktTx [Number Of Nak Pkt Tx] (tmnxMobPdnSwwTnlStatNakPktTx)	long	The value of tmnxMobPdnSwwTnlStatNakPktTx indicates the number of the packets for the nak messages transmitted to this peer.
numberOfNbrAdvtPktTx [Number Of Nbr Advt Pkt Tx] (tmnxMobPdnSwwTnlStatNbrAdvtPktTx)	long	The value of tmnxMobPdnSwwTnlStatNbrAdvtPktTx indicates the number of the neighbor advertisement packets transmitted to this peer.
numberOfNbrSlctPktRx [Number Of Nbr Slct Pkt Rx] (tmnxMobPdnSwwTnlStatNbrSlctPktRx)	long	The value of tmnxMobPdnSwwTnlStatNbrSlctPktRx indicates the number of the neighbor solicitation packets received from this peer.

Table 552 Iletwag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numberOfOfferPktTx [Number Of Offer Pkt Tx] (tmnxMobPdnSwwTnlStatOfferPktTx)	long	The value of tmnxMobPdnSwwTnlStatOfferPktTx indicates the number of the packets for the offer messages transmitted to this peer.
numberOfReleasePktRx [Number Of Release Pkt Rx] (tmnxMobPdnSwwTnlStatReleasePktRx)	long	The value of tmnxMobPdnSwwTnlStatReleasePktRx indicates the number of the packets for the release messages received from this peer.
numberOfRequestPktRx [Number Of Request Pkt Rx] (tmnxMobPdnSwwTnlStatRequestPktRx)	long	The value of tmnxMobPdnSwwTnlStatRequestPktRx indicates the number of the packets for the request messages received from this peer.
numberOfRtrAdvtPktTx [Number Of Rtr Advt Pkt Tx] (tmnxMobPdnSwwTnlStatRtrAdvtPktTx)	long	The value of tmnxMobPdnSwwTnlStatRtrAdvtPktTx indicates the number of the router advertisement packets transmitted to this peer.
numberOfRtrSlctPktRx [Number Of Rtr Slct Pkt Rx] (tmnxMobPdnSwwTnlStatRtrSlctPktRx)	long	The value of tmnxMobPdnSwwTnlStatRtrSlctPktRx indicates the number of the router solicitation packets received from this peer.
numberOfUE [Number Of UE] (tmnxMobPdnSwwTnlStatNumOfUe)	long	The value of tmnxMobPdnSwwTnlStatNumOfUe indicates the number of User Equipments (UE) connected to this sww-tunnel diameter peer.
numberOfUnkwHstPktRx [Number Of Unkw Hst Pkt Rx] (tmnxMobPdnSwwTnlStatUnkwHstPktRx)	long	The value of tmnxMobPdnSwwTnlStatUnkwHstPktRx indicates the number of the unknown host packets received from this peer.
numberOfUnkwMsgPktRx [Number Of Unkw Msg Pkt Rx] (tmnxMobPdnSwwTnlStatUnkwMsgPktRx)	long	The value of tmnxMobPdnSwwTnlStatUnkwMsgPktRx indicates the number of the packets for the unknown messages received from this peer.
peerIpAddress [Peer Ip Address] (tmnxMobGwSigPeerAddress)	String	The value of tmnxMobGwSigPeerAddress indicates the IP address of this peer on signaling reference points.

Table 552 Ietwag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
peerIpAddressType [Peer Ip Address Type] (tmnxMobGwSigPeerAddressType)	int	The value of tmnxMobGwSigPeerAddressType indicates the type of address represented by tmnxMobGwSigPeerAddress.
peerType [Peer Type] (tmnxMobPdnSwwTnlStatType)	int	The value of tmnxMobPdnSwwTnlStatType indicates the type of this peer.
refPtName [Ref Pt Name] (tmnxMobGwSigRefPtName)	String	The value of tmnxMobGwSigRefPtName specifies the name of this reference point. When an entry is created for a single interface, the value of tmnxMobGwSigRefPtName is set to 'default'.
tunnelType [Tunnel Type] (tmnxMobPdnSwwTnlStatTunnelType)	String	The value of tmnxMobPdnSwwTnlStatTunnelType indicates the tunnel type of this peer.

Table 553 mld statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>GroupSourceSummaryStats</p> <p>MIB entry name: vRtrMldGrpSrcSummaryEntry</p> <p>Entry description: An entry in the vRtrMldGrpSrcSummaryTable. Each entry represents the summary counters for each Group/Source combination.</p> <p>Table description (for vRtrMldGrpSrcSummaryTable): The table listing the IP multicast Group/Source summary counters.</p> <p>Does not support realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mld.Site</p>		
blockedGrpIntfSaps [Blocked Grp Intf Saps] (vRtrMldGrpSrcSummBlkGrpIfSaps)	long	vRtrMldGrpSrcSummBlkGrpIfSaps indicates the number of Grp If SAP's having this Group/Source combination in the blocking list.
blockedHosts [Blocked Hosts] (vRtrMldGrpSrcSummBlkHosts)	long	vRtrMldGrpSrcSummBlkHosts indicates the number of hosts having this Group/Source combination in the blocking list.
blockedInterfaces [Blocked Interfaces] (vRtrMldGrpSrcSummBlkInterfaces)	long	vRtrMldGrpSrcSummBlkInterfaces indicates the number of interfaces having this Group/Source combination in the blocking list.
fwdGrpIntfSaps [Fwd Grp Intf Saps] (vRtrMldGrpSrcSummFwdGrpIfSaps)	long	vRtrMldGrpSrcSummFwdGrpIfSaps indicates the number of Grp If SAP's having this Group/Source combination in the forwarding list.
fwdHosts [Fwd Hosts] (vRtrMldGrpSrcSummFwdHosts)	long	vRtrMldGrpSrcSummFwdHosts indicates the number of hosts having this Group/Source combination in the forwarding list.
fwdInterfaces [Fwd Interfaces] (vRtrMldGrpSrcSummFwdInterfaces)	long	vRtrMldGrpSrcSummFwdInterfaces indicates the number of interfaces having this Group/Source combination in the forwarding list.

Table 553 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
routerId [Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
<p>GrpInterfaceSapStats MIB entry name: sapBaseInfoEntry Entry description: Information about a specific SAP. Table description (for sapBaseInfoTable): A table that contains basic SAP information. Supports realtime plotting Supports scheduled collection Monitored class: mld.GrpInterfaceSap</p>		
encapValue [Encap Value] (sapEncapValue)	long	The value of the label used to identify this SAP on the access port specified by sapPortId.
fwdServiceId [Fwd Service Id] (vRtrIfFwdSvcId)	long	The value of vRtrIfFwdSvcId specifies the forwarding service ID for a subscriber interface in a retailer context.
groupIfIndex [Group If Index] (vRtrGrpIfIndex)	long	The unique value which identifies this interface of this virtual router in the Tmnx system. This field provides an identifier for virtual router interfaces similar to the ifIndex values used in the mib-2 interfaces table for physical interfaces. The vRtrGrpIfIndex values can be reused for different virtual routers, but are unique within those entries with the same vRtrID. The vRtrGrpIfIndex value for each virtual interface must remain constant at least from one re-initialization of the system management processor to the next.

Table 553 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
importPolicyDrops [Import Policy Drops] (vRtrMldGrpIfSapImportPlcyDrops)	long	The value of vRtrMldGrpIfSapImportPlcyDrops indicates the total number of times MLD protocol instance matched the host IP address or group/source addresses specified in the import policy.
mcacPolicyDrops [Mcac Policy Drops] (vRtrMldGrpIfSapStatsMcacPlcyDrp)	long	The value of the object vRtrMldGrpIfSapStatsMcacPlcyDrp indicates the number times an MLD Group is dropped because of applying a multicast CAC policy for this SAP.
portId [Port Id] (sapPortId)	long	The ID of the access port where this SAP is defined.
routerId [Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
rxBadChecksumPkts [Rx Bad Checksum Pkts] (vRtrMldGrpIfSapRxBadChksumPkts)	long	The value of vRtrMldGrpIfSapRxBadChksumPkts indicates the total number of MLD packets with bad checksum received for this SAP.
rxBadEncodings [Rx Bad Encodings] (vRtrMldGrpIfSapRxBadEncodings)	long	The value of vRtrMldGrpIfSapRxBadEncodings indicates the total number of MLD packets received for this SAP which were not encoded correctly.
rxBadLenPkts [Rx Bad Len Pkts] (vRtrMldGrpIfSapRxBadLenPkts)	long	The value of vRtrMldGrpIfSapRxBadLenPkts indicates the total number of MLD packets with bad length received for this SAP.
rxBadReceiveIfPkts [Rx Bad Receive If Pkts] (vRtrMldGrpIfSapRxBadRecvIfPkts)	long	The value of vRtrMldGrpIfSapRxBadRecvIfPkts indicates the total number of MLD packets incorrectly received for this SAP.

Table 553 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxGenQueries [Rx Gen Queries] (vRtrMldGrpIfSapRxGenQueries)	long	The value of vRtrMldGrpIfSapRxGenQueries indicates the total number of MLD General Queries received for this SAP.
rxGrpQueries [Rx Grp Queries] (vRtrMldGrpIfSapRxGrpQueries)	long	The value of vRtrMldGrpIfSapRxGrpQueries indicates the number of MLD Group Specific Queries received for this SAP.
rxGrpSrcQueries [Rx Grp Src Queries] (vRtrMldGrpIfSapRxGrpSrcQueries)	long	The value of vRtrMldGrpIfSapRxGrpSrcQueries indicates the number of MLD Group and Source Specific Queries received for this SAP.
rxLeaves [Rx Leaves] (vRtrMldGrpIfSapRxLeaves)	long	The value of vRtrMldGrpIfSapRxLeaves indicates the total number of MLD Leaves received for this SAP.
rxLocalScopePkts [Rx Local Scope Pkts] (vRtrMldGrpIfSapRxLocalScopePkts)	long	The value of the object vRtrMldGrpIfSapRxLocalScopePkts indicates the number of MLD packets received on the link-local scope IPv4 multicast address.
rxNoRtrAlertPkts [Rx No Rtr Alert Pkts] (vRtrMldGrpIfSapRxNoRtrAlertPkts)	long	The value of vRtrMldGrpIfSapRxNoRtrAlertPkts indicates the total number of MLDv2 packets received for this SAP which did not have the router alert flag set.
rxNonLocal [Rx Non Local] (vRtrMldGrpIfSapRxNonLocal)	long	The value of vRtrMldGrpIfSapRxNonLocal indicates the total number of MLD packets received from a non-local sender.
rxPktDrops [Rx Pkt Drops] (vRtrMldGrpIfSapRxPktDrops)	long	The value of vRtrMldGrpIfSapRxPktDrops indicates the total number of MLD packets that were received for this SAP but were dropped.
rxRsvdScopePkts [Rx Rsvd Scope Pkts] (vRtrMldGrpIfSapRxRsvdScopePkts)	long	The value of the object vRtrMldGrpIfSapRxRsvdScopePkts indicates the number of MLD packets received on the reserved scope IPv4 multicast address.

Table 553 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxUnknownTypePkts [Rx Unknown Type Pkts] (vRtrMldGrpIfSapRxUnknTypePkts)	long	The value of vRtrMldGrpIfSapRxUnknTypePkts indicates the total number of MLD packets with unknown type received for this SAP.
rxV1Reports [Rx V1 Reports] (vRtrMldGrpIfSapRxV1Reports)	long	The value of vRtrMldGrpIfSapRxV1Reports indicates the total number of MLD V1 Reports received for this SAP.
rxV2Reports [Rx V2 Reports] (vRtrMldGrpIfSapRxV2Reports)	long	The value of vRtrMldGrpIfSapRxV2Reports indicates the total number of MLD V2 Reports received for this SAP.
rxWrongVersions [Rx Wrong Versions] (vRtrMldGrpIfSapRxWrongVersions)	long	The value of vRtrMldGrpIfSapRxWrongVersions indicates the total number of MLD packets with wrong versions received for this SAP.
sgTypes [Sg Types] (vRtrMldGrpIfSapStatsSGTypes)	long	The value of vRtrMldGrpIfSapStatsSGTypes indicates the number of entries for this SAP for which the source type is 'sg'.
starGTypes [Star GTypes] (vRtrMldGrpIfSapStatsStarGTypes)	long	vRtrMldGrpIfSapStatsStarGTypes indicates the number of entries for this SAP for which the source type is 'starG'.
txErrors [Tx Errors] (vRtrMldGrpIfSapTxErrors)	long	The value of vRtrMldGrpIfSapTxErrors indicates the total number of times there was an error transmitting MLD packets for this SAP.
txGenQueries [Tx Gen Queries] (vRtrMldGrpIfSapTxGenQueries)	long	The value of vRtrMldGrpIfSapTxGenQueries indicates the number of MLD General Queries transmitted for this SAP.
txGrpQueries [Tx Grp Queries] (vRtrMldGrpIfSapTxGrpQueries)	long	The value of vRtrMldGrpIfSapTxGrpQueries indicates the number of MLD Group Specific Queries transmitted for this SAP.

Table 553 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txGrpSrcQueries [Tx Grp Src Queries] (vRtrMldGrpIfSapTxGrpSrcQueries)	long	The value of vRtrMldGrpIfSapTxGrpSrcQueries indicates the number of MLD Group and Source Specific Queries transmitted for this SAP.
txLeaves [Tx Leaves] (vRtrMldGrpIfSapTxLeaves)	long	The value of vRtrMldGrpIfSapTxLeaves indicates the total number of MLD Leaves transmitted for this SAP.
txV1Reports [Tx V1 Reports] (vRtrMldGrpIfSapTxV1Reports)	long	The value of vRtrMldGrpIfSapTxV1Reports indicates the total number of MLD V1 Reports transmitted for this SAP.
txV2Reports [Tx V2 Reports] (vRtrMldGrpIfSapTxV2Reports)	long	The value of vRtrMldGrpIfSapTxV2Reports indicates the total number of MLD V2 Reports transmitted for this SAP.
InterfaceStats MIB entry name: vRtrMldIfStatsEntry Entry description: An entry in the vRtrMldIfStatsTable. Table description (for vRtrMldIfStatsTable): The vRtrMldIfStatsTable contains objects corresponding to the MLD statistics for a particular interface. Supports realtime plotting Supports scheduled collection Monitored class: mld.Interface		
importPolicyDrops [Import Policy Drops] (vRtrMldIfImportPolicyDrops)	long	The value of vRtrMldIfImportPolicyDrops indicates the total number of times the MLD protocol instance matched the host IP address or group or source addresses specified in the import policy vRtrMldIfImportPolicy.
rxBadChecksumPkts [Rx Bad Checksum Pkts] (vRtrMldIfRxBadChecksumPkts)	long	The value of vRtrMldIfRxBadChecksumPkts indicates the total number of MLD packets with bad checksum received on this interface.

Table 553 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxBadEncodings [Rx Bad Encodings] (vRtrMldIfRxBadEncodings)	long	The value of vRtrMldIfRxBadEncodings indicates the total number of MLD packets received on this interface which were not encoded correctly.
rxBadLenPkts [Rx Bad Len Pkts] (vRtrMldIfRxBadLenPkts)	long	The value of vRtrMldIfRxBadLenPkts indicates the total number of MLD packets with bad length received on this interface.
rxBadReceiveIfPkts [Rx Bad Receive If Pkts] (vRtrMldIfRxBadReceiveIfPkts)	long	The value of vRtrMldIfRxBadReceiveIfPkts indicates the total number of MLD packets incorrectly received on this interface.
rxGenQueries [Rx Gen Queries] (vRtrMldIfRxGenQueries)	long	The value of vRtrMldIfRxGenQueries indicates the total number of MLD General Queries received on this interface.
rxGrpQueries [Rx Grp Queries] (vRtrMldIfRxGrpQueries)	long	The value of vRtrMldIfRxGrpQueries indicates the number of MLD Group Specific Queries received on this interface.
rxGrpSrcQueries [Rx Grp Src Queries] (vRtrMldIfRxGrpSrcQueries)	long	The value of vRtrMldIfRxGrpSrcQueries indicates the number of MLD Group and Source Specific Queries received on this interface.
rxLeaves [Rx Leaves] (vRtrMldIfRxLeaves)	long	The value of vRtrMldIfRxLeaves indicates the total number of MLD V2 Leaves received on this interface.
rxLocalScopePkts [Rx Local Scope Pkts] (vRtrMldIfRxLocalScopePkts)	long	The value of the object vRtrMldIfRxLocalScopePkts indicates the number of MLD packets received on the link-local scope IPv6 multicast address.
rxNoRtrAlertPkts [Rx No Rtr Alert Pkts] (vRtrMldIfRxNoRtrAlertPkts)	long	The value of vRtrMldIfRxNoRtrAlertPkts indicates the total number of MLDv2 packets received on this interface which did not have the router alert flag set.

Table 553 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxNonLocal [Rx Non Local] (vRtrMldIfRxNonLocal)	long	The value of vRtrMldIfRxNonLocal indicates the total number of MLD packets received from a non-local sender.
rxPktDrops [Rx Pkt Drops] (vRtrMldIfRxPktDrops)	long	The value of vRtrMldIfRxPktDrops indicates the total number of MLD packets that were received on this interface but were dropped.
rxRsvdScopePkts [Rx Rsvd Scope Pkts] (vRtrMldIfRxRsvdScopePkts)	long	The value of the object vRtrMldIfRxRsvdScopePkts indicates the number of MLD packets received on the reserved scope IPv6 multicast address.
rxUnknownTypePkts [Rx Unknown Type Pkts] (vRtrMldIfRxUnknownTypePkts)	long	The value of vRtrMldIfRxUnknownTypePkts indicates the total number of MLD packets with unknown type received on this interface.
rxV1Reports [Rx V1 Reports] (vRtrMldIfRxV1Reports)	long	The value of vRtrMldIfRxV1Reports indicates the total number of MLD V1 Reports received on this interface.
rxV2Reports [Rx V2 Reports] (vRtrMldIfRxV2Reports)	long	The value of vRtrMldIfRxV2Reports indicates the total number of MLD V2 Reports received on this interface.
rxWrongVersions [Rx Wrong Versions] (vRtrMldIfRxWrongVersions)	long	The value of vRtrMldIfRxWrongVersions indicates the total number of MLD packets with wrong versions received on this interface.
statsSGTypes [Stats SGTypes] (vRtrMldIfStatsSGTypes)	long	The value of vRtrMldIfStatsSGTypes indicates the number of entries on this interface for which the source type is 'sg'.
statsStarGTypes [Stats Star GTypes] (vRtrMldIfStatsStarGTypes)	long	vRtrMldIfStatsStarGTypes indicates the number of entries on this interface for which the source type is 'starG'.

Table 553 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txErrors [Tx Errors] (vRtrMldIfTxErrors)	long	The value of vRtrMldIfTxErrors indicates the total number of times there was an error transmitting the MLD packets on this interface.
txGenQueries [Tx Gen Queries] (vRtrMldIfTxGenQueries)	long	The value of vRtrMldIfTxGenQueries indicates the number of MLD General Queries transmitted on this interface.
txGrpQueries [Tx Grp Queries] (vRtrMldIfTxGrpQueries)	long	The value of vRtrMldIfTxGrpQueries indicates the number of MLD Group Specific Queries transmitted on this interface.
txGrpSrcQueries [Tx Grp Src Queries] (vRtrMldIfTxGrpSrcQueries)	long	The value of vRtrMldIfTxGrpSrcQueries indicates the number of MLD Group and Source Specific Queries transmitted on this interface.
txLeaves [Tx Leaves] (vRtrMldIfTxLeaves)	long	The value of vRtrMldIfTxLeaves indicates the total number of MLD Leaves transmitted on this interface.
txV1Reports [Tx V1 Reports] (vRtrMldIfTxV1Reports)	long	The value of vRtrMldIfTxV1Reports indicates the total number of MLD V1 Reports transmitted on this interface.
txV2Reports [Tx V2 Reports] (vRtrMldIfTxV2Reports)	long	The value of vRtrMldIfTxV2Reports indicates the total number of MLD V2 Reports transmitted on this interface.

Table 553 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>MldHostStats</p> <p>MIB entry name: vRtrMldHostStatsEntry</p> <p>Entry description: An entry in the vRtrMldHostStatsTable.</p> <p>Table description (for vRtrMldHostStatsTable): The table listing the MLD statistics for a particular host.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: mld.MldHost</p>		
importPolicyDrops [Import Policy Drops] (vRtrMldHostImportPolicyDrops)	long	The value of vRtrMldHostImportPolicyDrops indicates the total number of times MLD protocol instance matched the host IP address or group/source addresses specified in the import policy.
ipAddrType [Ip Addr Type] (vRtrMldHostAddressType)	int	The value of vRtrMldHostAddressType indicates the type of address to be used for vRtrMldHostAddress.
ipAddress [Ip Address] (vRtrMldHostAddress)	String	The IP host address for which this entry contains information.
macAddress [Mac Address] (vRtrMldHostMacAddress)	String	The value of vRtrMldHostMacAddress specifies the MAC address of this subscriber host.
mcacPolicyDrops [Mcac Policy Drops] (vRtrMldHostStatsMcacPolicyDrops)	long	The value of the object vRtrMldHostStatsMcacPolicyDrops indicates the number times an MLD Group is dropped because of applying a multicast CAC policy for this host.
pppoeSessionId [Pppoe Session Id] (vRtrMldHostPppoeSessionId)	long	The value of vRtrMldHostPppoeSessionId specifies the PPPoE session id of this subscriber host.

Table 553 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
redirectionDrops [Redirection Drops] (vRtrMldHostRedirectionDrops)	long	The value of the object vRtrMldHostRedirectionDrops indicates the number times an MLD Group is dropped because of a failure while applying a redirection policy for this host.
routerId [Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
rxBadChecksumPkts [Rx Bad Checksum Pkts] (vRtrMldHostRxBadChecksumPkts)	long	The value of vRtrMldHostRxBadChecksumPkts indicates the total number of MLD packets with bad checksum received for this host.
rxBadEncodings [Rx Bad Encodings] (vRtrMldHostRxBadEncodings)	long	The value of vRtrMldHostRxBadEncodings indicates the total number of MLD packets received for this host which were not encoded correctly.
rxBadLenPkts [Rx Bad Len Pkts] (vRtrMldHostRxBadLenPkts)	long	The value of vRtrMldHostRxBadLenPkts indicates the total number of MLD packets with bad length received for this host.
rxBadReceiveIfPkts [Rx Bad Receive If Pkts] (vRtrMldHostRxBadReceiveIfPkts)	long	The value of vRtrMldHostRxBadReceiveIfPkts indicates the total number of MLD packets incorrectly received for this host.
rxGenQueries [Rx Gen Queries] (vRtrMldHostRxGenQueries)	long	The value of vRtrMldHostRxGenQueries indicates the total number of MLD General Queries received for this host.
rxGrpQueries [Rx Grp Queries] (vRtrMldHostRxGrpQueries)	long	The value of vRtrMldHostRxGrpQueries indicates the number of MLD Group Specific Queries received for this host.

Table 553 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxGrpSrcQueries [Rx Grp Src Queries] (vRtrMldHostRxGrpSrcQueries)	long	The value of vRtrMldHostRxGrpSrcQueries indicates the number of MLD Group and Source Specific Queries received for this host.
rxLeaves [Rx Leaves] (vRtrMldHostRxLeaves)	long	The value of vRtrMldHostRxLeaves indicates the total number of MLD Leaves received for this host.
rxLocalScopePkts [Rx Local Scope Pkts] (vRtrMldHostRxLocalScopePkts)	long	The value of the object vRtrMldHostRxLocalScopePkts indicates the number of MLD packets received on the link-local scope IPv4 multicast address.
rxNoRtrAlertPkts [Rx No Rtr Alert Pkts] (vRtrMldHostRxNoRtrAlertPkts)	long	The value of vRtrMldHostRxNoRtrAlertPkts indicates the total number of MLDv2 packets received for this host which did not have the router alert flag set.
rxNonLocal [Rx Non Local] (vRtrMldHostRxNonLocal)	long	The value of vRtrMldHostRxNonLocal indicates the total number of MLD packets received from a non-local sender.
rxPktDrops [Rx Pkt Drops] (vRtrMldHostRxPktDrops)	long	The value of vRtrMldHostRxPktDrops indicates the total number of MLD packets that were received for this host but were dropped.
rxRsvdScopePkts [Rx Rsvd Scope Pkts] (vRtrMldHostRxRsvdScopePkts)	long	The value of the object vRtrMldHostRxRsvdScopePkts indicates the number of MLD packets received on the reserved scope IPv4 multicast address.
rxUnknownTypePkts [Rx Unknown Type Pkts] (vRtrMldHostRxUnknownTypePkts)	long	The value of vRtrMldHostRxUnknownTypePkts indicates the total number of MLD packets with unknown type received for this host.
rxV1Reports [Rx V1 Reports] (vRtrMldHostRxV1Reports)	long	The value of vRtrMldHostRxV1Reports indicates the total number of MLD V1 Reports received for this host.

Table 553 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxV2Reports [Rx V2 Reports] (vRtrMldHostRxV2Reports)	long	The value of vRtrMldHostRxV2Reports indicates the total number of MLD V2 Reports received for this host.
rxWrongVersions [Rx Wrong Versions] (vRtrMldHostRxWrongVersions)	long	The value of vRtrMldHostRxWrongVersions indicates the total number of MLD packets with wrong versions received for this host.
sgTypes [Sg Types] (vRtrMldHostStatsSGTypes)	long	The value of vRtrMldHostStatsSGTypes indicates the number of entries for this host for which the source type is 'sg'.
starGTypes [Star GTypes] (vRtrMldHostStatsStarGTypes)	long	vRtrMldHostStatsStarGTypes indicates the number of entries for this host for which the source type is 'starG'.
txErrors [Tx Errors] (vRtrMldHostTxErrors)	long	The value of vRtrMldHostTxErrors indicates the total number of times there was an error transmitting MLD packets for this host.
txGenQueries [Tx Gen Queries] (vRtrMldHostTxGenQueries)	long	The value of vRtrMldHostTxGenQueries indicates the number of MLD General Queries transmitted for this host.
txGrpQueries [Tx Grp Queries] (vRtrMldHostTxGrpQueries)	long	The value of vRtrMldHostTxGrpQueries indicates the number of MLD Group Specific Queries transmitted for this host.
txGrpSrcQueries [Tx Grp Src Queries] (vRtrMldHostTxGrpSrcQueries)	long	The value of vRtrMldHostTxGrpSrcQueries indicates the number of MLD Group and Source Specific Queries transmitted for this host.
txLeaves [Tx Leaves] (vRtrMldHostTxLeaves)	long	The value of vRtrMldHostTxLeaves indicates the total number of MLD Leaves transmitted for this host.

Table 553 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txV1Reports [Tx V1 Reports] (vRtrMldHostTxV1Reports)	long	The value of vRtrMldHostTxV1Reports indicates the total number of MLD V1 Reports transmitted for this host.
txV2Reports [Tx V2 Reports] (vRtrMldHostTxV2Reports)	long	The value of vRtrMldHostTxV2Reports indicates the total number of MLD V2 Reports transmitted for this host.
SiteStats MIB entry name: vRtrMldGenStatsEntry Entry description: Each row entry represents statistics for an instance of the MLD protocol running within a virtual router. Table description (for vRtrMldGenStatsTable): The vRtrMldGenStatsTable contains objects for general statistics for the MLD protocol instance within a virtual router. Supports realtime plotting Supports scheduled collection Monitored class: mld.Site		
statsSGTypes [Stats SGTypes] (vRtrMldGenStatsSGTypes)	long	The value of vRtrMldGenStatsSGTypes indicates the number of entries in vRtrMldGrpSrcTable for which the source type is 'sg'.
statsStarGTypes [Stats Star GTypes] (vRtrMldGenStatsStarGTypes)	long	The value of vRtrMldGenStatsStarGTypes indicates the number of entries in vRtrMldGrpSrcTable for which the source type is 'starG'.

Table 554 mpls statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>DynamicLspStats</p> <p>MIB entry name: vRtrMplsLspStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspStatTable): The vRtrMplsLspStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • mpls.DynamicLsp • mpls.SegmentRoutingTeLsp 		
configuredPaths [Configured Paths] (vRtrMplsLspConfiguredPaths)	long	The number of paths configured for this LSP.
operationalPaths [Operational Paths] (vRtrMplsLspOperationalPaths)	long	The number of operational paths for this LSP. This includes the path currently active, as well as operational standby paths.
pathChanges [Path Changes] (vRtrMplsLspPathChanges)	long	The number of path changes this LSP has had. For every path change (path down, path up, path change), a corresponding syslog/trap (if enabled) is generated for it.
standbyPaths [Standby Paths] (vRtrMplsLspStandbyPaths)	long	The number of standby paths configured for this LSP.
timeSinceLastPathChange [Time Since Last Path Change] (vRtrMplsLspLastPathChange)	long	The time in 10-millisecond units since the last change occurred on this LSP.

Table 554 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
timeSinceLastPrimaryUpState [Time Since Last Primary Up State] (vRtrMplsLspPrimaryTimeUp)	long	The total time in 10-millisecond units that this LSP's primary path has been operational. For example, the percentage contribution of the primary path to the operational time is given by (vRtrMplsLspPrimaryTimeUp/vRtrMplsLspTimeUp * 100) %.
<p>LspPathStats MIB entry name: vRtrMplsLspPathStatEntry Entry description: Each row entry represents a collection of statistics for an association between a Labeled Switch Path (LSP) in the vRtrMplsLspTable and a path (or tunnel) entry in the mplsTunnelTable. Entries cannot be created and deleted via SNMP SET operations. Table description (for vRtrMplsLspPathStatTable): The vRtrMplsLspPathStatTable has an entry for an association between a Labeled Switch Path (LSP) in the vRtrMplsLspTable and a path (or tunnel) entry in the mplsTunnelTable. Supports realtime plotting Supports scheduled collection Monitored class: mpls.LspPath</p>		
cspfQueries [Cspf Queries] (vRtrMplsLspPathCspfQueries)	long	The value of vRtrMplsLspPathCspfQueries specifies the number of CSPF queries that have been made for this LSP path.
retryAttempts [Retry Attempts] (vRtrMplsLspPathRetryAttempts)	long	The number of unsuccessful attempts which have been made to signal this path. As soon as the path gets signalled, this is set to 0.
timeDown [Time Down] (vRtrMplsLspPathTimeDown)	long	The total time in 10-millisecond units that this LSP Path has not been operational.
timeUp [Time Up] (vRtrMplsLspPathTimeUp)	long	The total time in 10-millisecond units that this LSP path has been operational. For example, the percentage up time can be determined by computing (vRtrMplsLspPathTimeUp/vRtrMplsLspAge * 100 %).

Table 554 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transitionCount [Transition Count] (vRtrMplsLspPathTransitionCount)	long	The object vRtrMplsLspPathTransitionCount maintains the number of transitions that have occurred for this LSP.
<p>LspStats</p> <p>MIB entry name: vRtrMplsLspStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspStatTable): The vRtrMplsLspStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • mpls.BypassOnlyLsp • mpls.DynamicLsp • mpls.SegmentRoutingTeLsp • mpls.StaticLsp 		
age [Age] (vRtrMplsLspAge)	long	The age (i.e., time from creation till now) of this LSP in 10-millisecond periods.
timeSinceLastDownState [Time Since Last Down State] (vRtrMplsLspTimeDown)	long	The total time in 10-millisecond units that this LSP has not been operational.
timeSinceLastTransition [Time Since Last Transition] (vRtrMplsLspLastTransition)	long	The time in 10-millisecond units since the last transition occurred on this LSP.
timeSinceLastUpState [Time Since Last Up State] (vRtrMplsLspTimeUp)	long	The total time in 10-millisecond units that this LSP has been operational. For example, the percentage up time can be determined by computing (vRtrMplsLspTimeUp/ vRtrMplsLspAge * 100 %).

Table 554 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transitions [Transitions] (vRtrMplsLspTransitions)	long	The number of state transitions (up -> down and down -> up) this LSP has undergone.
<p>MplsInterfaceStats MIB entry name: vRtrMplsIfStatEntry Entry description: Each row entry represents a collection of statistics for an interface on this virtual router that participates in the MPLS protocol. Entries cannot be created and deleted via SNMP SET operations. Table description (for vRtrMplsIfStatTable): The vRtrMplsIfStatTable has an entry for each router interface configured for MPLS in the system. Supports realtime plotting Supports scheduled collection Monitored class: mpls.Interface</p>		
receiveOctets [Receive Octets] (vRtrMplsIfRxOctetCount)	java. math. BigInteger	The total number of bytes in MPLS labeled packets received on this interface.
receivePackets [Receive Packets] (vRtrMplsIfRxPktCount)	java. math. BigInteger	The total number of MPLS labeled packets received on this interface.
transmitOctets [Transmit Octets] (vRtrMplsIfTxOctetCount)	java. math. BigInteger	The total number of bytes in MPLS labeled packets transmitted on this interface.
transmitPackets [Transmit Packets] (vRtrMplsIfTxPktCount)	java. math. BigInteger	The total number of MPLS labeled packets transmitted from this interface.

Table 554 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>MplsLspEgressStats</p> <p>MIB entry name: vRtrMplsLspStatisticsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspStatisticsTable): The vRtrMplsLspStatisticsTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • mpls.DynamicLsp • mpls.P2MPDynamicLsp 		
lspType [Lsp Type] (vRtrMplsLspStatsLspType)	int	The value of vRtrMplsLspStatsLspType indicates whether the statistics apply to MPLS-TP, P2P, P2MP, Auto P2P or Auto P2MP LSP. When the value of vRtrMplsLspStatsTpOnly is 'true', the statistics apply for MPLS-TP LSP only and vRtrMplsLspStatsLspType is set to 'tpLsp'. When the value of vRtrMplsLspStatsTpOnly is 'false', the statistics apply for regular RSVP-TE signalled terminating LSP and the value of vRtrMplsLspStatsLspType can be set to either p2p, p2mp, autoP2p or autoP2mp.
mplsInProfileOctetsFc0 [Mpls In Profile Octets Fc 0] (vRtrMplsInProfileOctetsFc0)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc0 indicates the number of in profile octets received for Forwarding Class 0.
mplsInProfileOctetsFc1 [Mpls In Profile Octets Fc 1] (vRtrMplsInProfileOctetsFc1)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc1 indicates the number of in profile octets received for Forwarding Class 1.
mplsInProfileOctetsFc2 [Mpls In Profile Octets Fc 2] (vRtrMplsInProfileOctetsFc2)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc2 indicates the number of in profile octets received for Forwarding Class 2.

Table 554 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsInProfileOctetsFc3 [Mpls In Profile Octets Fc 3] (vRtrMplsInProfileOctetsFc3)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc3 indicates the number of in profile octets received for Forwarding Class 3.
mplsInProfileOctetsFc4 [Mpls In Profile Octets Fc 4] (vRtrMplsInProfileOctetsFc4)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc4 indicates the number of in profile octets received for Forwarding Class 4.
mplsInProfileOctetsFc5 [Mpls In Profile Octets Fc 5] (vRtrMplsInProfileOctetsFc5)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc5 indicates the number of in profile octets received for Forwarding Class 5.
mplsInProfileOctetsFc6 [Mpls In Profile Octets Fc 6] (vRtrMplsInProfileOctetsFc6)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc6 indicates the number of in profile octets received for Forwarding Class 6.
mplsInProfileOctetsFc7 [Mpls In Profile Octets Fc 7] (vRtrMplsInProfileOctetsFc7)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc7 indicates the number of in profile octets received for Forwarding Class 7.
mplsInProfilePktsFc0 [Mpls In Profile Pkts Fc 0] (vRtrMplsInProfilePktsFc0)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc0 indicates the number of in profile packets received for Forwarding Class 0.
mplsInProfilePktsFc1 [Mpls In Profile Pkts Fc 1] (vRtrMplsInProfilePktsFc1)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc1 indicates the number of in profile packets received for Forwarding Class 1.
mplsInProfilePktsFc2 [Mpls In Profile Pkts Fc 2] (vRtrMplsInProfilePktsFc2)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc2 indicates the number of in profile packets received for Forwarding Class 2.

Table 554 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsInProfilePktsFc3 [Mpls In Profile Pkts Fc 3] (vRtrMplsInProfilePktsFc3)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc3 indicates the number of in profile packets received for Forwarding Class 3.
mplsInProfilePktsFc4 [Mpls In Profile Pkts Fc 4] (vRtrMplsInProfilePktsFc4)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc4 indicates the number of in profile packets received for Forwarding Class 4.
mplsInProfilePktsFc5 [Mpls In Profile Pkts Fc 5] (vRtrMplsInProfilePktsFc5)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc5 indicates the number of in profile packets received for Forwarding Class 5.
mplsInProfilePktsFc6 [Mpls In Profile Pkts Fc 6] (vRtrMplsInProfilePktsFc6)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc6 indicates the number of in profile packets received for Forwarding Class 6.
mplsInProfilePktsFc7 [Mpls In Profile Pkts Fc 7] (vRtrMplsInProfilePktsFc7)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc7 indicates the number of in profile packets received for Forwarding Class 7.
mplsOutOfProfOctetsFc0 [Mpls Out Of Prof Octets Fc 0] (vRtrMplsOutOfProfOctetsFc0)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc0 indicates the number of out of profile octets received for Forwarding Class 0.
mplsOutOfProfOctetsFc1 [Mpls Out Of Prof Octets Fc 1] (vRtrMplsOutOfProfOctetsFc1)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc1 indicates the number of out of profile octets received for Forwarding Class 1.
mplsOutOfProfOctetsFc2 [Mpls Out Of Prof Octets Fc 2] (vRtrMplsOutOfProfOctetsFc2)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc2 indicates the number of out of profile octets received for Forwarding Class 2.

Table 554 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsOutOfProfOctetsFc3 [Mpls Out Of Prof Octets Fc 3] (vRtrMplsOutOfProfOctetsFc3)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc3 indicates the number of out of profile octets received for Forwarding Class 3.
mplsOutOfProfOctetsFc4 [Mpls Out Of Prof Octets Fc 4] (vRtrMplsOutOfProfOctetsFc4)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc4 indicates the number of out of profile octets received for Forwarding Class 4.
mplsOutOfProfOctetsFc5 [Mpls Out Of Prof Octets Fc 5] (vRtrMplsOutOfProfOctetsFc5)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc5 indicates the number of out of profile octets received for Forwarding Class 5.
mplsOutOfProfOctetsFc6 [Mpls Out Of Prof Octets Fc 6] (vRtrMplsOutOfProfOctetsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc6 indicates the number of out of profile octets received for Forwarding Class 6.
mplsOutOfProfOctetsFc7 [Mpls Out Of Prof Octets Fc 7] (vRtrMplsOutOfProfOctetsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc7 indicates the number of out of profile octets received for Forwarding Class 7.
mplsOutOfProfPktsFc0 [Mpls Out Of Prof Pkts Fc 0] (vRtrMplsOutOfProfPktsFc0)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc0 indicates the number of out of profile packets received for Forwarding Class 0.
mplsOutOfProfPktsFc1 [Mpls Out Of Prof Pkts Fc 1] (vRtrMplsOutOfProfPktsFc1)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc1 indicates the number of out of profile packets received for Forwarding Class 1.
mplsOutOfProfPktsFc2 [Mpls Out Of Prof Pkts Fc 2] (vRtrMplsOutOfProfPktsFc2)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc2 indicates the number of out of profile packets received for Forwarding Class 2.

Table 554 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsOutOfProfPktsFc3 [Mpls Out Of Prof Pkts Fc 3] (vRtrMplsOutOfProfPktsFc3)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc3 indicates the number of out of profile packets received for Forwarding Class 3.
mplsOutOfProfPktsFc4 [Mpls Out Of Prof Pkts Fc 4] (vRtrMplsOutOfProfPktsFc4)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc4 indicates the number of out of profile packets received for Forwarding Class 4.
mplsOutOfProfPktsFc5 [Mpls Out Of Prof Pkts Fc 5] (vRtrMplsOutOfProfPktsFc5)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc5 indicates the number of out of profile packets received for Forwarding Class 5.
mplsOutOfProfPktsFc6 [Mpls Out Of Prof Pkts Fc 6] (vRtrMplsOutOfProfPktsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc6 indicates the number of out of profile packets received for Forwarding Class 6.
mplsOutOfProfPktsFc7 [Mpls Out Of Prof Pkts Fc 7] (vRtrMplsOutOfProfPktsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc7 indicates the number of out of profile packets received for Forwarding Class 7.
psbMatch [Psb Match] (vRtrMplsLspStatsPSBMatch)	boolean	The value of vRtrMplsLspStatsPSBMatch indicates if a path state block (PSB) match was made against this LSP name.
tpOnly [Tp Only] (vRtrMplsLspStatsTpOnly)	boolean	The value of vRtrMplsLspStatsTpOnly indicates whether the statistics apply to mpls-tp lsp or for regular rsvp-te signalled terminating LSP. The value of 'true' indicates the statistics apply to mpls-tp LSP only. The value of 'false' indicates the statistics apply for regular rsvp-te signalled terminating LSP.

mplsOutOfProfPktsFc4 [Mpls Out Of Prof Pkts Fc 4] (vRtrMplsOutOfProfPktsFc4)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc4 indicates the number of out of profile packets received for Forwarding Class 4.
mplsOutOfProfPktsFc5 [Mpls Out Of Prof Pkts Fc 5] (vRtrMplsOutOfProfPktsFc5)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc5 indicates the number of out of profile packets received for Forwarding Class 5.
mplsOutOfProfPktsFc6 [Mpls Out Of Prof Pkts Fc 6] (vRtrMplsOutOfProfPktsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc6 indicates the number of out of profile packets received for Forwarding Class 6.
mplsOutOfProfPktsFc7 [Mpls Out Of Prof Pkts Fc 7] (vRtrMplsOutOfProfPktsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc7 indicates the number of out of profile packets received for Forwarding Class 7.
psbMatch [Psb Match] (vRtrMplsLspStatsPSBMatch)	boolean	The value of vRtrMplsLspStatsPSBMatch indicates if a path state block (PSB) match was made against this LSP name.
tpOnly [Tp Only] (vRtrMplsLspStatsTpOnly)	boolean	The value of vRtrMplsLspStatsTpOnly indicates whether the statistics apply to mpls-tp lsp or for regular rsvp-te signalled terminating LSP. The value of 'true' indicates the statistics apply to mpls-tp LSP only. The value of 'false' indicates the statistics apply for regular rsvp-te signalled terminating LSP.

Table 554 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>P2MPInstanceStats</p> <p>MIB entry name: vRtrMplsP2mplInstStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a P2MP Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsP2mplInstStatTable): The vRtrMplsP2mplInstStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.P2MPInstance</p>		
configuredS2Is [Configured S2 Is] (vRtrMplsP2mplInstStatConfiguredS2Is)	long	The value of vRtrMplsP2mplInstStatConfiguredS2Is indicates the number of S2Is configured for this P2MP LSP.
lastS2IChange [Last S2 I Change] (vRtrMplsP2mplInstStatLastS2IChange)	long	The value of vRtrMplsP2mplInstStatLastS2IChange indicates the time since the last change occurred on this P2MP LSP.
lastS2ITimeDown [Last S2 I Time Down] (vRtrMplsP2mplInstStatLastS2ITimeDown)	long	The value of vRtrMplsP2mplInstStatLastS2ITimeDown indicates the total time that this S2I has not been operational.
lastTrans [Last Trans] (vRtrMplsP2mplInstStatLastTrans)	long	The value of vRtrMplsP2mplInstStatLastTrans indicates the time since the last transition occurred on this P2mp instance.
operationalS2Is [Operational S2 Is] (vRtrMplsP2mplInstStatOperationalS2Is)	long	The value of vRtrMplsP2mplInstStatOperationalS2Is indicates the number of operational S2Is for this P2MP LSP. This includes the S2Is currently active.
s2IChanges [S2 I Changes] (vRtrMplsP2mplInstStatS2IChanges)	long	The value of vRtrMplsP2mplInstStatS2IChanges indicates the number of S2I changes this P2MP LSP has had. For every S2I change (S2I down, S2I up, S2I change), a corresponding syslog/trap (if enabled) is generated for it.

Table 554 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
s2lTimeUp [S2l Time Up] (vRtrMplsP2mplInstStatLastS2lTimeUp)	long	The value of vRtrMplsP2mplInstStatLastS2lTimeUp indicates the total time that this S2l has been operational.
timeDown [Time Down] (vRtrMplsP2mplInstStatTimeDown)	long	The value of vRtrMplsP2mplInstStatTimeDown indicates the total time that this P2MP instance has not been operational.
timeUp [Time Up] (vRtrMplsP2mplInstStatTimeUp)	long	The value of vRtrMplsP2mplInstStatTimeUp indicates the total time that this P2MP instance has been operational.
transitions [Transitions] (vRtrMplsP2mplInstStatTransitions)	long	The The value of vRtrMplsP2mplInstStatTransitions indicates the number of state transitions (up -> down and down -> up) this P2mp instance has undergone.
S2LPathStats MIB entry name: vRtrMplsS2lSubLspStatEntry Entry description: Each row entry represents a collection of statistics for a P2MP Source to Leaf (S2L) Sub Labeled Switch Path (LSP) configured for a i virtual router in the system. Entries cannot be created and deleted via SNMP SET operations. Table description (for vRtrMplsS2lSubLspStatTable): The vRtrMplsS2lSubLspStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system. Supports realtime plotting Supports scheduled collection Monitored class: mpls.S2LPath		
cspfQueries [Cspf Queries] (vRtrMplsS2lSubLspCspfQueries)	long	The value of vRtrMplsS2lSubLspCspfQueries indicates the number of CSPF queries that have been made for this LSP S2l.

Table 554 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
retryAttempts [Retry Attempts] (vRtrMplsS2ISubLspRetryAttempts)	long	The value of vRtrMplsS2ISubLspRetryAttempts indicates the number of unsuccessful attempts which have been made to signal this S2I. As soon as the S2I gets signalled, this is set to 0.
timeDown [Time Down] (vRtrMplsS2ISubLspTimeDown)	long	The value of vRtrMplsS2ISubLspTimeUp indicates the total time that this LSP S2I has not been operational.
timeUp [Time Up] (vRtrMplsS2ISubLspTimeUp)	long	The value of vRtrMplsS2ISubLspTimeUp indicates the total time that this LSP S2I has been operational. For example, the percentage up time can be determined by computing $(vRtrMplsS2ISubLspTimeUp/vRtrMplsLspAge * 100 \%)$.
transitionCount [Transition Count] (vRtrMplsS2ISubLspTransitionCount)	long	The value of vRtrMplsS2ISubLspTransitionCount indicates the number of transitions that have occurred for this LSP.
<p>SiteStats</p> <p>MIB entry name: vRtrMplsGeneralStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an instance of the MPLS protocol running within a virtual router. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsGeneralStatTable): The vRtrMplsGeneralStatTable contains statistics for an MPLS protocol instance within a virtual router.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.Site</p>		
detourOriginate [Detour Originate] (vRtrMplsGeneralDetourLspOriginate)	long	The value of vRtrMplsGeneralDetourLspOriginate indicates the number of detour LSPs that originate at this virtual router.
detourTerminate [Detour Terminate] (vRtrMplsGeneralDetourLspTerminate)	long	The value of vRtrMplsGeneralDetourLspTerminate indicates the number of detour LSPs that terminate at this virtual router.

Table 554 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
detourTransit [Detour Transit] (vRtrMplsGeneralDetourLspTransit)	long	The value of vRtrMplsGeneralDetourLspTransit indicates the number of detour LSPs that transit through this virtual router.
dynamicOriginate [Dynamic Originate] (vRtrMplsGeneralDynamicLspOriginate)	long	The value of vRtrMplsGeneralDynamicLspOriginate indicates the number of dynamic LSPs that originate at this virtual router.
dynamicTerminate [Dynamic Terminate] (vRtrMplsGeneralDynamicLspTerminate)	long	The value of vRtrMplsGeneralDynamicLspTerminate indicates the number of dynamic LSPs that terminate at this virtual router.
dynamicTransit [Dynamic Transit] (vRtrMplsGeneralDynamicLspTransit)	long	The value of vRtrMplsGeneralDynamicLspTransit indicates the number of dynamic LSPs that transit through this virtual router.
staticOriginate [Static Originate] (vRtrMplsGeneralStaticLspOriginate)	long	The value of vRtrMplsGeneralStaticLspOriginate indicates the number of static LSPs that originate at this virtual router.
staticTerminate [Static Terminate] (vRtrMplsGeneralStaticLspTerminate)	long	The value of vRtrMplsGeneralStaticLspTerminate indicates the number of static LSPs that terminate at this virtual router.
staticTransit [Static Transit] (vRtrMplsGeneralStaticLspTransit)	long	The value of vRtrMplsGeneralStaticLspTransit indicates the number of static LSPs that transit through this virtual router.

Table 555 mplsTp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PathMepStats</p> <p>MIB entry name: vRtrMplsTpLspPtPathMepStatEntry</p> <p>Entry description: The vRtrMplsTpLspPathMepEntry represents a Maintenance Endpoint for a MPLS-TP LSP protection Path. Rows are created and destroyed by the system based on the configuration of the MEP protection-type.</p> <p>Table description (for vRtrMplsTpLspPtPathMepStatTable): The vRtrMplsTpLspPtPathMepStatTable maintains the Maintenance End Points (MEPs) statistics for MPLS-TP LSP protection paths.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: mplsTp.PathMep</p>		
wtrTimer [Wtr Timer] (vRtrMplsTpLspPtPathMepWTRTimer)	long	The value of vRtrMplsTpLspPtPathMepWTRTimer indicates the remaining Wait-To-Restore time, in seconds, before the protection path can switch back to the working path. A value of zero (0) indicates that there is no WTR timer in effect.
<p>SiteStats</p> <p>MIB entry name: vRtrMplsGeneralStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an instance of the MPLS protocol running within a virtual router. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsGeneralStatTable): The vRtrMplsGeneralStatTable contains statistics for an MPLS protocol instance within a virtual router.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mplsTp.Site</p>		
mplsTpLspOriginate [Mpls Tp Lsp Originate] (vRtrMplsGenMplsTpLspOriginate)	long	The value of vRtrMplsGenMplsTpLspOriginate indicates the number of MPLS TP LSPs that originate at this virtual router.
mplsTpLspTerminate [Mpls Tp Lsp Terminate] (vRtrMplsGenMplsTpLspTerminate)	long	The value of vRtrMplsGenMplsTpLspTerminate indicates the number of MPLS TP LSPs that terminate at this virtual router.

Table 555 mplsTp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsTpLspTransit [Mpls Tp Lsp Transit] (vRtrMplsGenMplsTpLspTransit)	long	The value of vRtrMplsGenMplsTpLspTransit indicates the number of MPLS TP LSPs that transit through this virtual router.
mplsTpOrigPathInst [Mpls Tp Orig Path Inst] (vRtrMplsGenMplsTpOrigPathInst)	long	The value of vRtrMplsGenMplsTpOrigPathInst indicates the number of MPLS TP LSPs originate path instances.
mplsTpTermPathInst [Mpls Tp Term Path Inst] (vRtrMplsGenMplsTpTermPathInst)	long	The value of vRtrMplsGenMplsTpTermPathInst indicates the number of MPLS TP LSPs terminated path instances.
mplsTpTranPathInst [Mpls Tp Tran Path Inst] (vRtrMplsGenMplsTpTranPathInst)	long	The value of vRtrMplsGenMplsTpTranPathInst indicates the number of MPLS TP LSPs transit path instances.
TpLspEgressStats MIB entry name: vRtrMplsLspStatisticsEntry Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations. Table description (for vRtrMplsLspStatisticsTable): The vRtrMplsLspStatisticsTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system. Supports realtime plotting Supports scheduled collection Monitored class: mplsTp.TPLsp		
mplsInProfileOctetsFc0 [Mpls In Profile Octets Fc 0] (vRtrMplsInProfileOctetsFc0)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc0 indicates the number of in profile octets received for Forwarding Class 0.
mplsInProfileOctetsFc1 [Mpls In Profile Octets Fc 1] (vRtrMplsInProfileOctetsFc1)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc1 indicates the number of in profile octets received for Forwarding Class 1.

Table 555 mplsIp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsInProfileOctetsFc2 [Mpls In Profile Octets Fc 2] (vRtrMplsInProfileOctetsFc2)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc2 indicates the number of in profile octets received for Forwarding Class 2.
mplsInProfileOctetsFc3 [Mpls In Profile Octets Fc 3] (vRtrMplsInProfileOctetsFc3)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc3 indicates the number of in profile octets received for Forwarding Class 3.
mplsInProfileOctetsFc4 [Mpls In Profile Octets Fc 4] (vRtrMplsInProfileOctetsFc4)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc4 indicates the number of in profile octets received for Forwarding Class 4.
mplsInProfileOctetsFc5 [Mpls In Profile Octets Fc 5] (vRtrMplsInProfileOctetsFc5)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc5 indicates the number of in profile octets received for Forwarding Class 5.
mplsInProfileOctetsFc6 [Mpls In Profile Octets Fc 6] (vRtrMplsInProfileOctetsFc6)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc6 indicates the number of in profile octets received for Forwarding Class 6.
mplsInProfileOctetsFc7 [Mpls In Profile Octets Fc 7] (vRtrMplsInProfileOctetsFc7)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc7 indicates the number of in profile octets received for Forwarding Class 7.
mplsInProfilePktsFc0 [Mpls In Profile Pkts Fc 0] (vRtrMplsInProfilePktsFc0)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc0 indicates the number of in profile packets received for Forwarding Class 0.
mplsInProfilePktsFc1 [Mpls In Profile Pkts Fc 1] (vRtrMplsInProfilePktsFc1)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc1 indicates the number of in profile packets received for Forwarding Class 1.

Table 555 mplsIp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsInProfilePktsFc2 [Mpls In Profile Pkts Fc 2] (vRtrMplsInProfilePktsFc2)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc2 indicates the number of in profile packets received for Forwarding Class 2.
mplsInProfilePktsFc3 [Mpls In Profile Pkts Fc 3] (vRtrMplsInProfilePktsFc3)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc3 indicates the number of in profile packets received for Forwarding Class 3.
mplsInProfilePktsFc4 [Mpls In Profile Pkts Fc 4] (vRtrMplsInProfilePktsFc4)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc4 indicates the number of in profile packets received for Forwarding Class 4.
mplsInProfilePktsFc5 [Mpls In Profile Pkts Fc 5] (vRtrMplsInProfilePktsFc5)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc5 indicates the number of in profile packets received for Forwarding Class 5.
mplsInProfilePktsFc6 [Mpls In Profile Pkts Fc 6] (vRtrMplsInProfilePktsFc6)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc6 indicates the number of in profile packets received for Forwarding Class 6.
mplsInProfilePktsFc7 [Mpls In Profile Pkts Fc 7] (vRtrMplsInProfilePktsFc7)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc7 indicates the number of in profile packets received for Forwarding Class 7.
mplsOutOfProfOctetsFc0 [Mpls Out Of Prof Octets Fc 0] (vRtrMplsOutOfProfOctetsFc0)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc0 indicates the number of out of profile octets received for Forwarding Class 0.
mplsOutOfProfOctetsFc1 [Mpls Out Of Prof Octets Fc 1] (vRtrMplsOutOfProfOctetsFc1)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc1 indicates the number of out of profile octets received for Forwarding Class 1.

Table 555 mplsdp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsOutOfProfOctetsFc2 [Mpls Out Of Prof Octets Fc 2] (vRtrMplsOutOfProfOctetsFc2)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc2 indicates the number of out of profile octets received for Forwarding Class 2.
mplsOutOfProfOctetsFc3 [Mpls Out Of Prof Octets Fc 3] (vRtrMplsOutOfProfOctetsFc3)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc3 indicates the number of out of profile octets received for Forwarding Class 3.
mplsOutOfProfOctetsFc4 [Mpls Out Of Prof Octets Fc 4] (vRtrMplsOutOfProfOctetsFc4)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc4 indicates the number of out of profile octets received for Forwarding Class 4.
mplsOutOfProfOctetsFc5 [Mpls Out Of Prof Octets Fc 5] (vRtrMplsOutOfProfOctetsFc5)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc5 indicates the number of out of profile octets received for Forwarding Class 5.
mplsOutOfProfOctetsFc6 [Mpls Out Of Prof Octets Fc 6] (vRtrMplsOutOfProfOctetsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc6 indicates the number of out of profile octets received for Forwarding Class 6.
mplsOutOfProfOctetsFc7 [Mpls Out Of Prof Octets Fc 7] (vRtrMplsOutOfProfOctetsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc7 indicates the number of out of profile octets received for Forwarding Class 7.
mplsOutOfProfPktsFc0 [Mpls Out Of Prof Pkts Fc 0] (vRtrMplsOutOfProfPktsFc0)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc0 indicates the number of out of profile packets received for Forwarding Class 0.
mplsOutOfProfPktsFc1 [Mpls Out Of Prof Pkts Fc 1] (vRtrMplsOutOfProfPktsFc1)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc1 indicates the number of out of profile packets received for Forwarding Class 1.

Table 555 mplsdp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsOutOfProfPktsFc2 [Mpls Out Of Prof Pkts Fc 2] (vRtrMplsOutOfProfPktsFc2)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc2 indicates the number of out of profile packets received for Forwarding Class 2.
mplsOutOfProfPktsFc3 [Mpls Out Of Prof Pkts Fc 3] (vRtrMplsOutOfProfPktsFc3)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc3 indicates the number of out of profile packets received for Forwarding Class 3.
mplsOutOfProfPktsFc4 [Mpls Out Of Prof Pkts Fc 4] (vRtrMplsOutOfProfPktsFc4)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc4 indicates the number of out of profile packets received for Forwarding Class 4.
mplsOutOfProfPktsFc5 [Mpls Out Of Prof Pkts Fc 5] (vRtrMplsOutOfProfPktsFc5)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc5 indicates the number of out of profile packets received for Forwarding Class 5.
mplsOutOfProfPktsFc6 [Mpls Out Of Prof Pkts Fc 6] (vRtrMplsOutOfProfPktsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc6 indicates the number of out of profile packets received for Forwarding Class 6.
mplsOutOfProfPktsFc7 [Mpls Out Of Prof Pkts Fc 7] (vRtrMplsOutOfProfPktsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc7 indicates the number of out of profile packets received for Forwarding Class 7.
psbMatch [Psb Match] (vRtrMplsLspStatsPSBMatch)	boolean	The value of vRtrMplsLspStatsPSBMatch indicates if a path state block (PSB) match was made against this LSP name.

Table 555 mplsdp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>TpLspGeneralStats</p> <p>MIB entry name: vRtrMplsLspStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspStatTable): The vRtrMplsLspStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mplsdp.TPLsp</p>		
age [Age] (vRtrMplsLspAge)	long	The age (i.e., time from creation till now) of this LSP in 10-millisecond periods.
configuredPaths [Configured Paths] (vRtrMplsLspConfiguredPaths)	long	The number of paths configured for this LSP.
operationalPaths [Operational Paths] (vRtrMplsLspOperationalPaths)	long	The number of operational paths for this LSP. This includes the path currently active, as well as operational standby paths.
pathChanges [Path Changes] (vRtrMplsLspPathChanges)	long	The number of path changes this LSP has had. For every path change (path down, path up, path change), a corresponding syslog/trap (if enabled) is generated for it.
standbyPaths [Standby Paths] (vRtrMplsLspStandbyPaths)	long	The number of standby paths configured for this LSP.
timeSinceLastDownState [Time Since Last Down State] (vRtrMplsLspTimeDown)	long	The total time in 10-millisecond units that this LSP has not been operational.

Table 555 mplsdp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
timeSinceLastPathChange [Time Since Last Path Change] (vRtrMplsLspLastPathChange)	long	The time in 10-millisecond units since the last change occurred on this LSP.
timeSinceLastPrimaryUpState [Time Since Last Primary Up State] (vRtrMplsLspPrimaryTimeUp)	long	The total time in 10-millisecond units that this LSP's primary path has been operational. For example, the percentage contribution of the primary path to the operational time is given by $(vRtrMplsLspPrimaryTimeUp/vRtrMplsLspTimeUp * 100) \%$.
timeSinceLastTransition [Time Since Last Transition] (vRtrMplsLspLastTransition)	long	The time in 10-millisecond units since the last transition occurred on this LSP.
timeSinceLastUpState [Time Since Last Up State] (vRtrMplsLspTimeUp)	long	The total time in 10-millisecond units that this LSP has been operational. For example, the percentage up time can be determined by computing $(vRtrMplsLspTimeUp/vRtrMplsLspAge * 100 \%)$.
transitions [Transitions] (vRtrMplsLspTransitions)	long	The number of state transitions (up -> down and down -> up) this LSP has undergone.
<p>TpLspIngressStats</p> <p>MIB entry name: vRtrMplsLspStatisticsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Table 555 mplsIp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsInProfileOctetsFc0 [Mpls In Profile Octets Fc 0] (vRtrMplsInProfileOctetsFc0)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc0 indicates the number of in profile octets received for Forwarding Class 0.
mplsInProfileOctetsFc1 [Mpls In Profile Octets Fc 1] (vRtrMplsInProfileOctetsFc1)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc1 indicates the number of in profile octets received for Forwarding Class 1.
mplsInProfileOctetsFc2 [Mpls In Profile Octets Fc 2] (vRtrMplsInProfileOctetsFc2)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc2 indicates the number of in profile octets received for Forwarding Class 2.
mplsInProfileOctetsFc3 [Mpls In Profile Octets Fc 3] (vRtrMplsInProfileOctetsFc3)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc3 indicates the number of in profile octets received for Forwarding Class 3.
mplsInProfileOctetsFc4 [Mpls In Profile Octets Fc 4] (vRtrMplsInProfileOctetsFc4)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc4 indicates the number of in profile octets received for Forwarding Class 4.
mplsInProfileOctetsFc5 [Mpls In Profile Octets Fc 5] (vRtrMplsInProfileOctetsFc5)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc5 indicates the number of in profile octets received for Forwarding Class 5.
mplsInProfileOctetsFc6 [Mpls In Profile Octets Fc 6] (vRtrMplsInProfileOctetsFc6)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc6 indicates the number of in profile octets received for Forwarding Class 6.
mplsInProfileOctetsFc7 [Mpls In Profile Octets Fc 7] (vRtrMplsInProfileOctetsFc7)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc7 indicates the number of in profile octets received for Forwarding Class 7.

Table 555 mplsIp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsInProfilePktsFc0 [Mpls In Profile Pkts Fc 0] (vRtrMplsInProfilePktsFc0)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc0 indicates the number of in profile packets received for Forwarding Class 0.
mplsInProfilePktsFc1 [Mpls In Profile Pkts Fc 1] (vRtrMplsInProfilePktsFc1)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc1 indicates the number of in profile packets received for Forwarding Class 1.
mplsInProfilePktsFc2 [Mpls In Profile Pkts Fc 2] (vRtrMplsInProfilePktsFc2)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc2 indicates the number of in profile packets received for Forwarding Class 2.
mplsInProfilePktsFc3 [Mpls In Profile Pkts Fc 3] (vRtrMplsInProfilePktsFc3)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc3 indicates the number of in profile packets received for Forwarding Class 3.
mplsInProfilePktsFc4 [Mpls In Profile Pkts Fc 4] (vRtrMplsInProfilePktsFc4)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc4 indicates the number of in profile packets received for Forwarding Class 4.
mplsInProfilePktsFc5 [Mpls In Profile Pkts Fc 5] (vRtrMplsInProfilePktsFc5)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc5 indicates the number of in profile packets received for Forwarding Class 5.
mplsInProfilePktsFc6 [Mpls In Profile Pkts Fc 6] (vRtrMplsInProfilePktsFc6)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc6 indicates the number of in profile packets received for Forwarding Class 6.
mplsInProfilePktsFc7 [Mpls In Profile Pkts Fc 7] (vRtrMplsInProfilePktsFc7)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc7 indicates the number of in profile packets received for Forwarding Class 7.

Table 555 mplsdp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsOutOfProfOctetsFc0 [Mpls Out Of Prof Octets Fc 0] (vRtrMplsOutOfProfOctetsFc0)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc0 indicates the number of out of profile octets received for Forwarding Class 0.
mplsOutOfProfOctetsFc1 [Mpls Out Of Prof Octets Fc 1] (vRtrMplsOutOfProfOctetsFc1)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc1 indicates the number of out of profile octets received for Forwarding Class 1.
mplsOutOfProfOctetsFc2 [Mpls Out Of Prof Octets Fc 2] (vRtrMplsOutOfProfOctetsFc2)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc2 indicates the number of out of profile octets received for Forwarding Class 2.
mplsOutOfProfOctetsFc3 [Mpls Out Of Prof Octets Fc 3] (vRtrMplsOutOfProfOctetsFc3)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc3 indicates the number of out of profile octets received for Forwarding Class 3.
mplsOutOfProfOctetsFc4 [Mpls Out Of Prof Octets Fc 4] (vRtrMplsOutOfProfOctetsFc4)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc4 indicates the number of out of profile octets received for Forwarding Class 4.
mplsOutOfProfOctetsFc5 [Mpls Out Of Prof Octets Fc 5] (vRtrMplsOutOfProfOctetsFc5)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc5 indicates the number of out of profile octets received for Forwarding Class 5.
mplsOutOfProfOctetsFc6 [Mpls Out Of Prof Octets Fc 6] (vRtrMplsOutOfProfOctetsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc6 indicates the number of out of profile octets received for Forwarding Class 6.
mplsOutOfProfOctetsFc7 [Mpls Out Of Prof Octets Fc 7] (vRtrMplsOutOfProfOctetsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc7 indicates the number of out of profile octets received for Forwarding Class 7.

Table 555 mplsdp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsOutOfProfPktsFc0 [Mpls Out Of Prof Pkts Fc 0] (vRtrMplsOutOfProfPktsFc0)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc0 indicates the number of out of profile packets received for Forwarding Class 0.
mplsOutOfProfPktsFc1 [Mpls Out Of Prof Pkts Fc 1] (vRtrMplsOutOfProfPktsFc1)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc1 indicates the number of out of profile packets received for Forwarding Class 1.
mplsOutOfProfPktsFc2 [Mpls Out Of Prof Pkts Fc 2] (vRtrMplsOutOfProfPktsFc2)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc2 indicates the number of out of profile packets received for Forwarding Class 2.
mplsOutOfProfPktsFc3 [Mpls Out Of Prof Pkts Fc 3] (vRtrMplsOutOfProfPktsFc3)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc3 indicates the number of out of profile packets received for Forwarding Class 3.
mplsOutOfProfPktsFc4 [Mpls Out Of Prof Pkts Fc 4] (vRtrMplsOutOfProfPktsFc4)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc4 indicates the number of out of profile packets received for Forwarding Class 4.
mplsOutOfProfPktsFc5 [Mpls Out Of Prof Pkts Fc 5] (vRtrMplsOutOfProfPktsFc5)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc5 indicates the number of out of profile packets received for Forwarding Class 5.
mplsOutOfProfPktsFc6 [Mpls Out Of Prof Pkts Fc 6] (vRtrMplsOutOfProfPktsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc6 indicates the number of out of profile packets received for Forwarding Class 6.
mplsOutOfProfPktsFc7 [Mpls Out Of Prof Pkts Fc 7] (vRtrMplsOutOfProfPktsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc7 indicates the number of out of profile packets received for Forwarding Class 7.

Table 555 mplsstp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
psbMatch [Psb Match] (vRtrMplsLspStatsPSBMatch)	boolean	The value of vRtrMplsLspStatsPSBMatch indicates if a path state block (PSB) match was made against this LSP name.

Table 556 msdp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PeerStats</p> <p>MIB entry name: tmnxMsdpPeerStatsEntry</p> <p>Entry description: tmnxMsdpPeerStatsEntry is an entry (conceptual row) in the tmnxMsdpPeerStatsTable. Each entry represents a MSDP peer related statistics information.</p> <p>Table description (for tmnxMsdpPeerStatsTable): The table tmnxMsdpPeerStatsTable is the statistics information related to a MSDP peer.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • msdp.GroupPeer • msdp.Peer 		
errorMsgsReceived [Error Msgs Received] (tmnxMsdpPeerStatsErrorMsgsRecvd)	long	The value of tmnxMsdpPeerStatsErrorMsgsRecvd indicates number of error messages received.
keepAliveMsgsReceived [Keep Alive Msgs Received] (tmnxMsdpPeerStatsKAMsgsRecvd)	long	The value of tmnxMsdpPeerStatsKAMsgsRecvd indicates the number of keep-alive messages received.
keepAliveMsgsSent [Keep Alive Msgs Sent] (tmnxMsdpPeerStatsKAMsgsSent)	long	The value of tmnxMsdpPeerStatsKAMsgsSent indicates the number of keep-alive messages sent.
lastMsgPeer [Last Msg Peer] (tmnxMsdpPeerStatsLastMsgPeer)	long	The value of tmnxMsdpPeerStatsLastMsgPeer indicates how long ago the last message was received from this peer instance.
lastStateChange [Last State Change] (tmnxMsdpPeerStatsLastStChange)	long	The value of tmnxMsdpPeerStatsLastStChange indicates how long ago the peer state changed.

Table 556 msdp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
peerTimeouts [Peer Timeouts] (tmnxMsdpPeerStatsPeerTimeouts)	long	The value of tmnxMsdpPeerStatsPeerTimeouts indicates the number of peer timeouts.
remoteCloses [Remote Closes] (tmnxMsdpPeerStatsRemoteCloses)	long	The value of tmnxMsdpPeerStatsRemoteCloses indicates the number of times the remote peer closed.
reservedMsgsReceived [Reserved Msgs Received] (tmnxMsdpPeerStatsResvMsgsRcvd)	long	The value of tmnxMsdpPeerStatsResvMsgsRcvd indicates the number of MSDP messages received with type 'Reserved'.
rpfFailures [Rpf Failures] (tmnxMsdpPeerStatsRPFFailures)	long	The value of tmnxMsdpPeerStatsRPFFailures indicates number of reverse path forwarding (RPF) failures.
saLearned [Sa Learned] (tmnxMsdpPeerStatsSALearnt)	long	The value of tmnxMsdpPeerStatsSALearnt indicates the number of unique source active entries in the cache learned from the peer.
saLimitExceeded [Sa Limit Exceeded] (tmnxMsdpPeerStatsActSrcLimExcd)	long	The value of tmnxMsdpPeerStatsActSrcLimExcd indicates the number of times the global active source limit has been exceeded by this peer instance.
saMsgsReceived [Sa Msgs Received] (tmnxMsdpPeerStatsSAMsgsRcvd)	long	The value of tmnxMsdpPeerStatsSAMsgsRcvd indicates the number of source-active messages received.
saMsgsSent [Sa Msgs Sent] (tmnxMsdpPeerStatsSAMsgsSent)	long	The value of tmnxMsdpPeerStatsSAMsgsSent indicates the number of source-active messages sent.
saRejectExportPolicy [Sa Reject Export Policy] (tmnxMsdpPeerStatsSARejImpPolicy)	long	The value of tmnxMsdpPeerStatsSARejImpPolicy indicates the number of source active messages from the peer that were rejected due to import policy.

Table 556 msdp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
saRejectImportPolicy [Sa Reject Import Policy] (tmnxMsdpPeerStatsSARejExpPolicy)	long	The value of tmnxMsdpPeerStatsSARejExpPolicy indicates the number of source active messages from the peer that were not sent due to export policy.
saRequestMsgsReceived [Sa Request Msgs Received] (tmnxMsdpPeerStatsSAReqMsgsRecvd)	long	The value of tmnxMsdpPeerStatsSAReqMsgsRecvd indicates the number of source-active request messages received.
saRequestMsgsSent [Sa Request Msgs Sent] (tmnxMsdpPeerStatsSAReqMsgsSent)	long	The value of tmnxMsdpPeerStatsSAReqMsgsSent indicates the number of source-active request messages sent.
saResponseMsgsReceived [Sa Response Msgs Received] (tmnxMsdpPeerStatsSAResMsgsRecvd)	long	The value of tmnxMsdpPeerStatsSAResMsgsRecvd indicates the number of source-active response messages received.
saResponseMsgsSent [Sa Response Msgs Sent] (tmnxMsdpPeerStatsSAResMsgsSent)	long	The value of tmnxMsdpPeerStatsSAResMsgsSent indicates the number of source-active response messages sent.
unknownMsgsReceived [Unknown Msgs Received] (tmnxMsdpPeerStatsUnknMsgsRecvd)	long	The value of tmnxMsdpPeerStatsUnknMsgsRecvd indicates the number of unknown messages received.

Table 557 multicast statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>McastCacChannelServiceStats</p> <p>MIB entry name: tmnxMcacServStatsEntry</p> <p>Entry description: An entry in the tmnxMcacServStatsTable</p> <p>Table description (for tmnxMcacServStatsTable): The tmnxMcacServStatsTable has an entry for each service protocol (igmp-snooping on sap/sdp) channel that was either accepted/discarded by the applied multicast cac policy.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: multicast.McastCacPolicy</p>		
action [Action] (tmnxMcacServStatsAction)	int	The value of tmnxMcacServStatsAction indicates the action specified by the mcac policy for the service application to act upon.
algorithmReapply [Algorithm Reapply] (tmnxMcacServStatsAlgoReapply)	boolean	The value of tmnxMcacServStatsAlgoReapply indicates if the mcac policy was reapplied on the already accepted channel due lag constraints or if this was the first request for this channel from the service application.
bundleAvailBw [Bundle Avail Bw] (tmnxMcacServStatsBundleAvailBW)	long	The value of tmnxMcacServStatsBundleAvailBW indicates the available bundle bandwidth after the requested channel was either accepted or discarded by the mcac policy.
channelBw [Channel Bw] (tmnxMcacServStatsChannelBW)	long	The value of tmnxMcacServStatsChannelBW indicates the channel bandwidth configured at the mcac policy at the time of request from the service application.
channelRequestCount [Channel Request Count] (tmnxMcacServStatsApplyAttempts)	long	The value of tmnxMcacServStatsApplyAttempts indicates the number of times the mcac policy was applied for a particular channel entry by the service application.
channelType [Channel Type] (tmnxMcacServStatsChannelType)	int	The value of tmnxMcacServStatsChannelType indicates the channel type configured at the mcac policy at the time of request from the service application.

Table 557 multicast statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
encapValueOrVcId [Encap Value Or VcId] (tmnxMcacServStatsEncapValue)	String	The value of tmnxMcacServStatsEncapValue indicates the SAP/SDP Encap value of which the mcac policy is applied.
interfaceAvailBw [Interface Avail Bw] (tmnxMcacServStatsIntfAvailBW)	long	The value of tmnxMcacServStatsIntfAvailBW indicates the available interface bandwidth after the requested channel was either accepted or discarded by the mcac policy.
portIdOrTunnelId [Port Id Or Tunnel Id] (tmnxMcacServStatsPortId)	String	The value of tmnxMcacServStatsPortId indicates the port Id of the SAP/SDP on which the mcac policy is applied.
reason [Reason] (tmnxMcacServStatsReason)	int	The value of tmnxMcacServStatsReason indicates the reason for the action specified by the mcac policy for the service application to act upon.
timeStamp [Time Stamp] (tmnxMcacServStatsTimeStamp)	long	The value of tmnxMcacServStatsTimeStamp indicates the timestamp of the last time the mcac policy was applied for this channel entry.
McastCacChannelStats MIB entry name: tmnxMcacStatsEntry Entry description: An entry in the tmnxMcacStatsTable Table description (for tmnxMcacStatsTable): The tmnxMcacStatsTable has an entry for each protocol interface channel that was either accepted/discarded by the applied multicast cac policy. This table is deprecated and replaced by tmnxMcacStatsNgTable. Supports realtime plotting Supports scheduled collection Monitored class: multicast.McastCacPolicy		
action [Action] (tmnxMcacStatsAction)	int	The value of tmnxMcacStatsAction indicates the action specified by the mcac policy for the application interface to act upon.

Table 557 multicast statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
algorithmReapply [Algorithm Reapply] (tmnxMcacStatsAlgoReapply)	boolean	The value of tmnxMcacStatsAlgoReapply indicates if the mcac policy was reapplied on the already accepted channel due lag constraints or if this was the first request for this channel from the application.
bundleAvailBw [Bundle Avail Bw] (tmnxMcacStatsBundleAvailBW)	long	The value of tmnxMcacStatsBundleAvailBW indicates the available bundle bandwidth after the requested channel was either accepted or discarded by the mcac policy.
bundleName [Bundle Name] (tmnxMcacStatsBundleName)	String	The value of tmnxMcacStatsBundleName indicates the name of the multicast CAC policy bundle. The value of tmnxMcacStatsBundleName could be an empty string, meaning that this particular statistics entry's channel did not belong to any bundle in the policy.
channelAddress [Channel Address] (tmnxMcacStatsChlAddr)	String	The value of tmnxMcacStatsChlAddr indicates the address of the multicast channel that mcac policy was applied upon when requested by the application interface. Address type is indicated by tmnxMcacStatsChlAddrType.
channelAddressType [Channel Address Type] (tmnxMcacStatsChlAddrType)	int	The value of tmnxMcacStatsChlAddrType indicates the address type of tmnxMcacStatsChlAddr.
channelBw [Channel Bw] (tmnxMcacStatsChannelBW)	long	The value of tmnxMcacStatsChannelBW indicates the channel bandwidth configured at the mcac policy at the time of request from the application interface.
channelRequestCount [Channel Request Count] (tmnxMcacStatsApplyAttempts)	long	The value of tmnxMcacStatsApplyAttempts indicates the number of times the mcac policy was applied for a particular channel entry by the application.
channelType [Channel Type] (tmnxMcacStatsChannelType)	int	The value of tmnxMcacStatsChannelType indicates the channel type configured at the mcac policy at the time of request from the application interface.

Table 557 multicast statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
interfaceAvailBw [Interface Avail Bw] (tmnxMcacStatsIntfAvailBW)	long	The value of tmnxMcacStatsIntfAvailBW indicates the available interface bandwidth after the requested channel was either accepted or discarded by the mcac policy.
interfaceId [Interface Id] (tmnxMcacStatsIfIndex)	long	The value of tmnxMcacStatsIfIndex indicates the application interface index that has applied mcac policy.
protocolName [Protocol Name] (tmnxMcacStatsProtocolIndex)	int	The value of tmnxMcacStatsProtocolIndex indicates the application that has applied mcac policy.
reason [Reason] (tmnxMcacStatsReason)	int	The value of tmnxMcacStatsReason indicates the reason for the action specified by the mcac policy for the application interface to act upon.
timeStamp [Time Stamp] (tmnxMcacStatsTimeStamp)	long	The value of tmnxMcacStatsTimeStamp indicates the timestamp of the last time the mcac policy was applied for this channel entry.
McastCacOper MIB entry name: tmnxMcacOperEntry Entry description: An entry in the tmnxMcacOperTable Table description (for tmnxMcacOperTable): The tmnxMcacOperTable has an entry for each protocol interface that has active channels on a bundle that were accepted by the mcac policy. Supports realtime plotting Supports scheduled collection Monitored class: multicast.McastCacPolicy		
activeChannels [Active Channels] (tmnxMcacOperActiveChannels)	long	The value of tmnxMcacOperActiveChannels indicates the number of active channels for this entry.

Table 557 multicast statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
availMandBw [Avail Mand Bw] (tmnxMcacOperAvailMandBw)	long	The value of tmnxMcacOperAvailMandBw indicates the operational pre-reserved bandwidth in kilo-bits per second(kbps) for the mandatory channels on the bundle for this protocol interface instance.
availOptionalBw [Avail Optional Bw] (tmnxMcacOperAvailOptnlBw)	long	The value of tmnxMcacOperAvailOptnlBw indicates the operational available bandwidth in kilo-bits per second(kbps) on the bundle for this protocol interface instance.
currConstrtlvl [Curr Constrt Lvl] (tmnxMcacOperCurrConstrtlvl)	long	The value of tmnxMcacOperCurrConstrtlvl indicates the current lag constraints bundle level id for the number of ports down (tmnxMcacOperPortsDown). This value is used to index the table tmnxMcacLevelTable to get the bundle level bandwidth.
inUseMandBw [In Use Mand Bw] (tmnxMcacOperInUseMandBw)	long	The value of tmnxMcacOperInUseMandBw indicates the operational in-use bandwidth in kilo-bits per second(kbps) for the mandatory channels on the bundle for this protocol interface instance.
inUseOptionalBw [In Use Optional Bw] (tmnxMcacOperInUseOptnlBw)	long	The value of tmnxMcacOperInUseOptnlBw indicates the operational in-use bandwidth in kilo-bits per second(kbps) for the optional channels on the bundle for this protocol interface instance.
maxBw [Max Bw] (tmnxMcacOperMaxBw)	long	The value of tmnxMcacOperMaxBw indicates the operational maximum bandwidth in kilo-bits per second(kbps) on the bundle for this protocol interface instance.
portsDown [Ports Down] (tmnxMcacOperPortsDown)	long	The value of tmnxMcacOperPortsDown indicates the the number of ports down on the application interface. This value is used to index the table tmnxMcacLagTable to get the bundle level id.

Table 557 multicast statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
valuesInTransit [Values In Transit] (tmnxMcacOperValuesInTransit)	boolean	The value of tmnxMcacOperValuesInTransit indicates that the operational (available and in-use mandatory/optional) value for the following objects are in transition due to configuration change: tmnxMcacOperAvailOptnlBw tmnxMcacOperAvailMandBw tmnxMcacOperInUseMandBw tmnxMcacOperInUseOptnlBw When Multicast CAC Policy is applied on the interface for the join of the next channel, the operational values will be recalculated and applied to the above objects and the value for tmnxMcacOperValuesInTransit will be set to 'false'. If the value of tmnxMcacOperValuesInTransit is 'true' then the values are in transition.
McastCacServOperStats MIB entry name: tmnxMcacServOperEntry Entry description: An entry in the tmnxMcacServOperTable Table description (for tmnxMcacServOperTable): The tmnxMcacServOperTable has an entry for each service application (igmp-snooping on sap/sdp) that has active channels on a bundle that were accepted by the mcac policy. Supports realtime plotting Supports scheduled collection Monitored class: multicast.McastCacPolicy		
activeChannels [Active Channels] (tmnxMcacServOperActiveChannels)	long	The value of tmnxMcacServOperActiveChannels indicates the number of active channels for this entry.
availMandBw [Avail Mand Bw] (tmnxMcacServOperAvailMandBw)	long	The value of tmnxMcacServOperAvailMandBw indicates the operational pre-reserved bandwidth in kilo-bits per second(kbps) for the mandatory channels on the bundle for this service application on sap/sdp instance.
availOptionalBw [Avail Optional Bw] (tmnxMcacServOperAvailOptnlBw)	long	The value of tmnxMcacServOperAvailOptnlBw indicates the operational available bandwidth in kilo-bits per second(kbps) on the bundle for this service application on sap/sdp instance.

Table 557 multicast statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
currConstrLvl [Curr Constrt Lvl] (tmnxMcacServOperCurrConstrLvl)	long	The value of tmnxMcacServOperCurrConstrLvl indicates the current lag constraints bundle level id for the number of ports down (tmnxMcacServOperPortsDown). This value is used to index the table tmnxMcacLevelTable to get the bundle level bandwidth.
inUseMandBw [In Use Mand Bw] (tmnxMcacServOperInUseMandBw)	long	The value of tmnxMcacServOperInUseMandBw indicates the operational in-use bandwidth in kilo-bits per second(kbps) for the mandatory channels on the bundle for this service application on sap/sdp instance.
inUseOptionalBw [In Use Optional Bw] (tmnxMcacServOperInUseOptnlBw)	long	The value of tmnxMcacServOperInUseOptnlBw indicates the operational in-use bandwidth in kilo-bits per second(kbps) for the optional channels on the bundle for this service application on sap/sdp instance.
maxBw [Max Bw] (tmnxMcacServOperMaxBw)	long	The value of tmnxMcacServOperMaxBw indicates the operational maximum bandwidth in kilo-bits per second(kbps) on the bundle for this service application on sap/sdp instance.
portsDown [Ports Down] (tmnxMcacServOperPortsDown)	long	The value of tmnxMcacServOperPortsDown indicates the the number of ports down on the service application on sap/sdp. This value is used to index the table tmnxMcacLagTable to get the bundle level id.
valuesInTransit [Values In Transit] (tmnxMcacServOperValuesInTransit)	boolean	The value of tmnxMcacServOperValuesInTransit indicates that the operational (available and in-use mandatory/optional) value for the following objects are in transition due to configuration change: tmnxMcacServOperAvailOptnlBw tmnxMcacServOperAvailMandBw tmnxMcacServOperInUseMandBw tmnxMcacServOperInUseOptnlBw When Multicast CAC Policy is applied on the sap/sdp for the join of the next channel, the operational values will be recalculated and applied to the above objects and the value for tmnxMcacServOperValuesInTransit will be set to 'false'. If the value of tmnxMcacServOperValuesInTransit is 'true' then the values are in transition.

Table 557 multicast statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>McastReportDestinationStats</p> <p>MIB entry name: tmnxMcPathRprtDestEntry</p> <p>Entry description: Each row entry represents a particular multicast reporting destination. Entries are created/deleted by the user.</p> <p>Table description (for tmnxMcPathRprtDestTable): The tmnxMcPathRprtDestTable has an entry for each multicast reporting destination configured on this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: multicast.McastReportDestination</p>		
framesLost [Frames Lost] (tmnxMcPathRprtDestFrmsLost)	long	The value of tmnxMcPathRprtDestFrmsLost specifies the number of frames lost for this mcast reporting destination.
framesSent [Frames Sent] (tmnxMcPathRprtDestFrmsSent)	long	The value of tmnxMcPathRprtDestFrmsSent specifies the number of frames sent to this mcast reporting destination.
recordsLost [Records Lost] (tmnxMcPathRprtDestRecsLost)	long	The value of tmnxMcPathRprtDestRecsLost specifies the number of records lost for this mcast reporting destination.
recordsSent [Records Sent] (tmnxMcPathRprtDestRecsSent)	long	The value of tmnxMcPathRprtDestRecsSent specifies the number of records sent to this mcast reporting destination.

Table 558 multichassis statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>McEPPeerStats</p> <p>MIB entry name: tmnxMcEPPeerStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a multi-chassis peer. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxMcEPPeerStatsTable): The tmnxMcEPPeerStatsTable has an entry for each multi-chassis peer configured on this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: multichassis.MultiChassisEndpoint</p>		
configPacketsReceived [Config Packets Received] (tmnxMcEPPeerStatsPktsRxConfig)	long	The value of tmnxMcEPPeerStatsPktsRxConfig indicates how many valid MC-Endpoint control packets of type end-point config were received on this system from the peer.
failedMD5AuthenticationPacketsDropped [Failed MD5 Authentication Packets Dropped] (tmnxMcEPPeerStatsDropMD5)	long	The value of tmnxMcEPPeerStatsDropMD5 indicates how many MC-Endpoint control packets were dropped on this system from the peer because the packet failed MD5 authentication.
failedPacketsTransmitted [Failed Packets Transmitted] (tmnxMcEPPeerStatsPktsTxFailed)	long	The value of tmnxMcEPPeerStatsPktsTxFailed indicates how many MC-Endpoint control packets failed to be transmitted from this system to the peer.
invalidLagIdPacketsDropped [Invalid Lag Id Packets Dropped] (tmnxMcEPPeerStatsDropTlvInvlId)	long	The value of tmnxMcEPPeerStatsDropTlvInvlId indicates how many MC-Endpoint control packets were dropped on this system from the peer because the packet referred to an invalid or non multi-chassis end-point.
invalidSizePacketsDropped [Invalid Size Packets Dropped] (tmnxMcEPPeerStatsDropTlvInvlSz)	long	The value of tmnxMcEPPeerStatsDropTlvInvlSz indicates how many MC-Endpoint control packets were dropped on this system from the peer because the packet size was invalid.

Table 558 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
keepAlivePacketsReceived [Keep Alive Packets Received] (tmnxMcEPPeerStatsPktsRxKpalive)	long	The value of tmnxMcEPPeerStatsPktsRxKpalive indicates how many valid MC-Endpoint control packets of type keepalive were received on this system from the peer.
keepalivePacketsTransmitted [Keepalive Packets Transmitted] (tmnxMcEPPeerStatsPktsTxKpalive)	long	The value of tmnxMcEPPeerStatsPktsTxKpalive indicates how many MC-Endpoint control packets of type keepalive were transmitted from this system to the peer.
noEpPeerPacketsDropped [No Ep Peer Packets Dropped] (tmnxMcEPPeerStatsDropEpNoPeer)	long	The value of tmnxMcEPPeerStatsDropEpNoPeer indicates how many pkts were dropped because MC-Endpoint does not have a MC-peer assigned yet or MC-Endpoint is attached to a different peer.
outOfSequencePacketsDropped [Out Of Sequence Packets Dropped] (tmnxMcEPPeerStatsDropOutOfSeq)	long	The value of tmnxMcEPPeerStatsDropOutOfSeq indicates how many MC-Endpoint control packets were dropped on this system from the peer because the packet was out of sequence.
packetsReceived [Packets Received] (tmnxMcEPPeerStatsPktsRx)	long	The value of tmnxMcEPPeerStatsPktsRx indicates how many valid MC-Endpoint control packets were received on this system from the peer.
packetsTransmitted [Packets Transmitted] (tmnxMcEPPeerStatsPktsTx)	long	The value of tmnxMcEPPeerStatsPktsTx indicates how many MC-Endpoint control packets were transmitted from this system to the peer.
peerConfigPacketsReceived [Peer Config Packets Received] (tmnxMcEPPeerStatsPktsRxPeerCfg)	long	The value of tmnxMcEPPeerStatsPktsRxPeerCfg indicates how many valid MC-Endpoint control packets of type peer config were received on this system from the peer.
peerConfigPacketsTransmitted [Peer Config Packets Transmitted] (tmnxMcEPPeerStatsPktsTxPeerCfg)	long	The value of tmnxMcEPPeerStatsPktsTxPeerCfg indicates how many MC-Endpoint control packets of type peer config were transmitted from this system to the peer.

Table 558 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
stateDisabledPacketsDropped [State Disabled Packets Dropped] (tmnxMcEPPeerStatsDropStateDsblld)	long	The value of tmnxMcEPPeerStatsDropStateDsblld indicates how many MC-Endpoint control packets were dropped on this system from the peer because the peer was administratively disabled.
statePacketsReceived [State Packets Received] (tmnxMcEPPeerStatsPktsRxState)	long	The value of tmnxMcEPPeerStatsPktsRxState indicates how many valid MC-Endpoint control packets of type end-point state were received on this system from the peer.
tooShortPacketsDropped [Too Short Packets Dropped] (tmnxMcEPPeerStatsDropPktTooShrt)	long	The value of tmnxMcEPPeerStatsDropPktTooShrt indicates how many MC-Endpoint control packets were dropped on this system from the peer because the packet was too short.
unknownTlvPacketsDropped [Unknown Tlv Packets Dropped] (tmnxMcEPPeerStatsDropUnknownTlv)	long	The value of tmnxMcEPPeerStatsDropUnknownTlv indicates how many MC-Endpoint control packets were dropped on this system from the peer because the packet contained an unknown TLV.
<p>McPeerIPSecTunnelGroupStats MIB entry name: tMcPeerTnlGrpStatEntry Entry description: Each row entry represents a particular ipsec tunnel statistics group of multi-chassis peer. Table description (for tMcPeerTnlGrpStatTable): The tMcPeerTnlGrpStatTable has statistics entry for each ipsec tunnel group specific to multi-chassis peer configured on this system. Supports realtime plotting Supports scheduled collection Monitored class: multichassis.McPeerIPSecTunnelGroup</p>		
dynamicAwaitConf [Dynamic Await Conf] (tMcPeerTnlGrpStatDynAwaitConf)	long	The value of tMcPeerTnlGrpStatDynAwaitConf indicates the number of dynamic multi-chassis tunnel awaiting configuration on this tunnel-group to be synchronized on this multi-chassis peer.
dynamicFailed [Dynamic Failed] (tMcPeerTnlGrpStatDynFailed)	long	The value of tMcPeerTnlGrpStatDynFailed indicates the number of dynamic multi-chassis tunnel failed to install on this tunnel-group to be synchronized on this multi-chassis peer.

Table 558 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dynamicInstalled [Dynamic Installed] (tMcPeerTnlGrpStatDynInstalled)	long	The value of tMcPeerTnlGrpStatDynInstalled indicates the number of dynamic multi-chassis tunnel installed on this tunnel-group to be synchronized on this multi-chassis peer.
dynamicInstalling [Dynamic Installing] (tMcPeerTnlGrpStatDynInstalling)	long	The value of tMcPeerTnlGrpStatDynInstalled indicates the number of dynamic multi-chassis tunnel being installed on this tunnel-group to be synchronized on this multi-chassis peer.
staticAwaitConf [Static Await Conf] (tMcPeerTnlGrpStatAwaitConf)	long	The value of tMcPeerTnlGrpStatAwaitConf indicates the number of static multi-chassis tunnel awaiting configuration on this tunnel-group to be synchronized on this multi-chassis peer.
staticFailed [Static Failed] (tMcPeerTnlGrpStatFailed)	long	The value of tMcPeerTnlGrpStatFailed indicates the number of static multi-chassis tunnel failed to install on this tunnel-group to be synchronized on this multi-chassis peer.
staticInstalled [Static Installed] (tMcPeerTnlGrpStatInstalled)	long	The value of tMcPeerTnlGrpStatInstalled indicates the number of static multi-chassis tunnel installed on this tunnel-group to be synchronized on this multi-chassis peer.
staticInstalling [Static Installing] (tMcPeerTnlGrpStatInstalling)	long	The value of tMcPeerTnlGrpStatInstalled indicates the number of static multi-chassis tunnel being installed on this tunnel-group to be synchronized on this multi-chassis peer.

Table 558 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>McWppPeerStats</p> <p>MIB entry name: tmnxMcWppPeerStatsEntry</p> <p>Entry description: Each conceptual row represents multi-chassis WPP peer statistics of a specific instance. Entries in this table are created and destroyed by the system. Rows are only created where the statistics value is nonzero; this allows faster walking through this table; hence, it is recommended to perform only get-next-request operations to retrieve information from this table.</p> <p>Table description (for tmnxMcWppPeerStatsTable): The tmnxMcWppPeerStatsTable shows multi-chassis WPP peer statistics.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: multichassis.Peer</p>		
noResources [No Resources] (tmnxMcWppPeerStatsVal)	long	The value of the object tmnxMcWppPeerStatsVal indicates the value of the statistics contained in this conceptual row.
statsInstance [Stats Instance] (tmnxMcWppPeerStatsInstance)	long	The value of the object tmnxMcWppPeerStatsInstance indicates the instance identifier of the statistics contained in this conceptual row.
<p>McsClientAppStats</p> <p>MIB entry name: tmnxMcsClientAppEntry</p> <p>Entry description: Each row entry represents a particular multi-chassis peer synchronization protocol application. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxMcsClientAppTable): The tmnxMcsClientAppTable has an entry for each application using the multi-chassis peer synchronization protocol configured on this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: multichassis.PeerSynchronizationProtocol</p>		

Table 558 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
alarmedEntries [Alarmed Entries] (tmnxMcsClientAlarmedEntries)	long	The value of tmnxMcsClientAlarmedEntries indicates the number of alarmed entries in the MCS database per multi-chassis peer for a particular application. Entries with an alarm are entries that are not being used by the local client application due to resource constraints.
application [Application] (tmnxMcsClientApplication)	int	The value of tmnxMcsClientApplication indicates the type of application using multi-chassis synchronization.
lclDeletedEntries [Lcl Deleted Entries] (tmnxMcsClientLclDeletedEntries)	long	The value of tmnxMcsClientLclDeletedEntries indicates the number of locally deleted entries in the MCS database per multi-chassis peer for a particular application. Locally deleted entries are entries that are not being used by the local MCS client application.
numEntries [Num Entries] (tmnxMcsClientNumEntries)	long	The value of tmnxMcsClientNumEntries indicates the total number of entries in the MCS database per multi-chassis peer for a particular application.
omcrAlarmedEntries [Omcr Alarmed Entries] (tmnxMcsClientOmcrAlarmed)	long	The value of tmnxMcsClientOmcrAlarmed indicates the number of Oversubscribed Multi-Chassis Redundancy (OMCR) alarmed entries in the MCS database of this multi-chassis peer for this particular application.
omcrStandbyEntries [Omcr Standby Entries] (tmnxMcsClientOmcrStandby)	long	The value of tmnxMcsClientOmcrStandby indicates the number of Oversubscribed Multi-Chassis Redundancy (OMCR) standby entries in the MCS database of this multi-chassis peer for this particular application.
remAlarmedEntries [Rem Alarmed Entries] (tmnxMcsClientRemAlarmedEntries)	long	The value of tmnxMcsClientRemAlarmedEntries indicates the number of alarmed entries in the MCS database on the multi-chassis peer for a particular application. Entries with an alarm are entries that are not being used by the remote client application due to resource constraints.

Table 558 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
remLclDelEntries [Rem Lcl Del Entries] (tmnxMcsClientRemLclDelEntries)	long	The value of tmnxMcsClientRemLclDelEntries indicates the number of locally deleted entries in the MCS database on the multi-chassis peer for a particular application. Locally deleted entries are entries that are not being used by the remote MCS client application.
remNumEntries [Rem Num Entries] (tmnxMcsClientRemNumEntries)	long	The value of tmnxMcsClientRemNumEntries indicates the total number of entries in the MCS database on the multi-chassis peer for a particular application.
remOmcrAlarmedEntries [Rem Omcr Alarmed Entries] (tmnxMcsClientOmcrRemAlarmed)	long	The value of tmnxMcsClientOmcrRemAlarmed indicates the number of Oversubscribed Multi-Chassis Redundancy (OMCR) alarmed entries for this particular application reported by the remote MCR system.
remOmcrStandbyEntries [Rem Omcr Standby Entries] (tmnxMcsClientOmcrRemStandby)	long	The value of tmnxMcsClientOmcrRemStandby indicates the number of Oversubscribed Multi-Chassis Redundancy (OMCR) standby entries for this particular application reported by the remote MCR system.
<p>McsStatusStats</p> <p>MIB entry name: tmnxMcPeerSyncEntry</p> <p>Entry description: Each row entry represents a particular multi-chassis peer synchronization protocol. Entries are create/deleted by the user.</p> <p>Table description (for tmnxMcPeerSyncTable): The tmnxMcPeerSyncTable has an entry for each multi-chassis peer synchronization protocol.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: multichassis.PeerSynchronizationProtocol</p>		
alarmedEntries [Alarmed Entries] (tmnxMcPeerSyncAlarmedEntries)	long	The value of tmnxMcPeerSyncAlarmedEntries indicates the number of alarmed entries in the MCS database per multi-chassis peer. Entries with an alarm are entries that are not being used by the local client application due to resource constraints.

Table 558 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lclDeletedEntries [Lcl Deleted Entries] (tmnxMcPeerSyncLclDeletedEntries)	long	The value of tmnxMcPeerSyncLclDeletedEntries indicates the number of locally deleted entries in the MCS database per multi-chassis peer. Locally deleted entries are entries that are not being used by the local MCS client application.
numEntries [Num Entries] (tmnxMcPeerSyncNumEntries)	long	The value of tmnxMcPeerSyncNumEntries indicates the total number of entries in the MCS database per multi-chassis peer.
omcrAlarmedEntries [Omcr Alarmed Entries] (tmnxMcPeerSyncOmcrAlarmed)	long	The value of tmnxMcPeerSyncOmcrAlarmed indicates the number of Oversubscribed Multi-Chassis Redundancy (OMCR) alarmed entries in the MCS database of this multi-chassis peer.
omcrStandbyEntries [Omcr Standby Entries] (tmnxMcPeerSyncOmcrStandby)	long	The value of tmnxMcPeerSyncOmcrStandby indicates the number of Oversubscribed Multi-Chassis Redundancy (OMCR) standby entries in the MCS database of this multi-chassis peer.
remAlarmedEntries [Rem Alarmed Entries] (tmnxMcPeerSyncRemAlarmedEntries)	long	The value of tmnxMcPeerSyncRemAlarmedEntries indicates the number of alarmed entries in the MCS database of the multi-chassis peer. Entries with an alarm are entries that are not being used by the remote client application due to resource constraints.
remLclDelEntries [Rem Lcl Del Entries] (tmnxMcPeerSyncRemLclDelEntries)	long	The value of tmnxMcPeerSyncRemLclDelEntries indicates the number of locally deleted entries in the MCS database of the multi-chassis peer. Locally deleted entries are entries that are not being used by the remote MCS client application.
remNumEntries [Rem Num Entries] (tmnxMcPeerSyncRemNumEntries)	long	The value of tmnxMcPeerSyncRemNumEntries indicates the total number of entries in the MCS database of the multi-chassis peer.
remOmcrAlarmedEntries [Rem Omcr Alarmed Entries] (tmnxMcPeerSyncOmcrRemAlarmed)	long	The value of tmnxMcPeerSyncOmcrRemAlarmed indicates the number of Oversubscribed Multi-Chassis Redundancy (OMCR) alarmed entries reported by the remote MCR system.

Table 558 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
remOmcrStandbyEntries [Rem Omcr Standby Entries] (tmnxMcPeerSyncOmcrRemStandby)	long	The value of tmnxMcPeerSyncOmcrRemStandby indicates the number of Oversubscribed Multi-Chassis Redundancy (OMCR) standby entries reported by the remote MCR system.
<p>MultiChassisPeerMobileStats MIB entry name: tmnxMcPeerMobileStatsEntry Entry description: Each row entry represents the multi-chassis statistics of the mobile-gateway which is configured to participate in the geo-redundancy. Table description (for tmnxMcPeerMobileStatsTable): The tmnxMcPeerMobileStatsTable has entries for the multi-chassis statistics of each mobile-gateway participating in the geo-redundancy. Supports realtime plotting Supports scheduled collection Monitored class: multichassis.MultiChassisPeerMobileSpecifics</p>		
malformPacketRecieved [Malform Packet Recieved] (tmnxMcPeerMobStatsMalformPktRx)	long	The value of tmnxMcPeerMobStatsMalformPktRx indicates the number of badly formed packets received from the peer.
malformTLVRecieved [Malform TLVRecieved] (tmnxMcPeerMobStatsMalformTLVRx)	long	The value of tmnxMcPeerMobStatsMalformTLVRx indicates the number of badly formed Type-Length-Values (TLV) received from the peer.
mismatchPacketRecieved [Mismatch Packet Recieved] (tmnxMcPeerMobStatsMismatchPktRx)	long	The value of tmnxMcPeerMobStatsMismatchPktRx indicates the number of packets with wrong gateway instance received from the peer.
newPeerConnectionRequestRecieved [New Peer Connection Request Recieved] (tmnxMcPeerMobStatsPeerConnReqRx)	long	The value of tmnxMcPeerMobStatsPeerConnReqRx indicates the number of new peer connections received at this mobile-gateway.
newPeerConnectionRequestTransmitted [New Peer Connection Request Transmitted] (tmnxMcPeerMobStatsPeerConnReqTx)	long	The value of tmnxMcPeerMobStatsPeerConnReqTx indicates the number of new peer connections sent by this mobile-gateway.

Table 558 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
peerDisconnectRequestRecieved [Peer Disconnect Request Recieved] (tmnxMcPeerMobStatsPeerDiscReqRx)	long	The value of tmnxMcPeerMobStatsPeerDiscReqRx indicates the number of peer disconnect requests received at this mobile-gateway.
peerDisconnectRequestTransmitted [Peer Disconnect Request Transmitted] (tmnxMcPeerMobStatsPeerDiscReqTx)	long	The value of tmnxMcPeerMobStatsPeerDiscReqTx indicates the number of disconnect requests sent by this mobile-gateway.
peerDownPacketsRecieved [Peer Down Packets Recieved] (tmnxMcPeerMobStatsPeerDwnPktsRx)	long	The value of tmnxMcPeerMobStatsPeerDwnPktsRx indicates the number of peer down events received from the peer.
peerUpPacketsRecieved [Peer Up Packets Recieved] (tmnxMcPeerMobStatsPeerUpPktsRx)	long	The value of tmnxMcPeerMobStatsPeerUpPktsRx indicates the number of peer up events received from the peer.
unknownTLVRecieved [Unknown TLVRecieved] (tmnxMcPeerMobStatsUnkTLVRx)	long	The value of tmnxMcPeerMobStatsUnkTLVRx indicates the number of unknown Type-Length-Values (TLV) received from the peer.
<p>MultiChassisPeerRingStats</p> <p>MIB entry name: tmnxMcrPeerStatsEntry</p> <p>Entry description: Each row entry in the tmnxMcrPeerStatsTable represents additional columns of operational data for a multi-chassis peer.</p> <p>Table description (for tmnxMcrPeerStatsTable): The tmnxMcrPeerStatsTable has an entry for each multi-chassis peer.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: multichassis.Peer</p>		
keepAlivePacketsTransmitted [Keep Alive Packets Transmitted] (tmnxMcrPeerStatsTxKeepAlive)	long	The value of tmnxMcrPeerStatsTxKeepAlive indicates how many valid MC-Ring control packets of type 'keepalive' were transmitted to the peer.

Table 558 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mcsIdRequestPacketsReceived [Mcs Id Request Packets Received] (tmnxMcrPeerStatsRxMcsIdReq)	long	The value of tmnxMcrPeerStatsRxMcsIdReq indicates how many valid MCS ID requests were received from the peer.
mcsIdRequestPacketsTransmitted [Mcs Id Request Packets Transmitted] (tmnxMcrPeerStatsTxMcsIdReq)	long	The value of tmnxMcrPeerStatsTxMcsIdReq indicates how many valid MCS ID requests were transmitted to the peer.
mcsIdResponsePacketsReceived [Mcs Id Response Packets Received] (tmnxMcrPeerStatsRxMcsIdRsp)	long	The value of tmnxMcrPeerStatsRxMcsIdRsp indicates how many valid MCS ID responses were received from the peer.
mcsIdResponsePacketsTransmitted [Mcs Id Response Packets Transmitted] (tmnxMcrPeerStatsTxMcsIdRsp)	long	The value of tmnxMcrPeerStatsTxMcsIdRsp indicates how many valid MCS ID responses were transmitted to the peer.
ringExistsRequestPacketsReceived [Ring Exists Request Packets Received] (tmnxMcrPeerStatsRxRingExistsReq)	long	The value of tmnxMcrPeerStatsRxRingExistsReq indicates how many valid 'ring exists' requests were received from the peer.
ringExistsRequestPacketsTransmitted [Ring Exists Request Packets Transmitted] (tmnxMcrPeerStatsTxRingExistsReq)	long	The value of tmnxMcrPeerStatsTxRingExistsReq indicates how many valid 'ring exists' requests were transmitted to the peer.
ringExistsResponsePacketsReceived [Ring Exists Response Packets Received] (tmnxMcrPeerStatsRxRingExistsRsp)	long	The value of tmnxMcrPeerStatsRxRingExistsRsp indicates how many valid 'ring exists' responses were received from the peer.
ringExistsResponsePacketsTransmitted [Ring Exists Response Packets Transmitted] (tmnxMcrPeerStatsTxRingExistsRsp)	long	The value of tmnxMcrPeerStatsTxRingExistsRsp indicates how many valid 'ring exists' responses were transmitted to the peer.

Table 558 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ringKeepAlivePacketsReceived [Ring Keep Alive Packets Received] (tmnxMcrPeerStatsRxKeepAlive)	long	The value of tmnxMcrPeerStatsRxKeepAlive indicates how many valid MC-Ring control packets of type 'keepalive' were received from the peer.
ringSignallingPacketsReceived [Ring Signalling Packets Received] (tmnxMcrPeerStatsRx)	long	The value of tmnxMcrPeerStatsRx indicates how many valid MC-Ring signalling messages were received from the peer.
ringSignallingPacketsTransmitted [Ring Signalling Packets Transmitted] (tmnxMcrPeerStatsTx)	long	The value of tmnxMcrPeerStatsTx indicates how many valid MC-Ring signalling messages were transmitted to the peer.
MultiChassisRingGlobalStats MIB entry name: tmnxMcRedundancyStatsObjs Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement		
deliveredToPeerPacketsReceived [Delivered To Peer Packets Received] (tmnxMcrStatsRxDelivrdToPeer)	long	The value of tmnxMcrStatsRxDelivrdToPeer indicates how many MC-Ring signalling packets were received by this system that were correctly delivered to their peer.
deliveredToRingNodePacketsReceived [Delivered To Ring Node Packets Received] (tmnxMcrStatsRxDelivrdToRingNode)	long	The value of tmnxMcrStatsRxDelivrdToRingNode indicates how many MC-R signalling packets were received by this system that were correctly delivered to their ring node.
deliveredToRingPacketsReceived [Delivered To Ring Packets Received] (tmnxMcrStatsRxDelivrdToRing)	long	The value of tmnxMcrStatsRxDelivrdToRing indicates how many MC-Ring signalling packets were received by this system that were correctly delivered to their ring.
incompletePacketsReceived [Incomplete Packets Received] (tmnxMcrStatsRxIncomplete)	long	The value of tmnxMcrStatsRxIncomplete indicates how many MC-Ring signalling packets were received by this system that were incomplete.

Table 558 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
invalidTlvPacketsReceived [Invalid Tlv Packets Received] (tmnxMcrStatsRxInvalidTlv)	long	The value of tmnxMcrStatsRxInvalidTlv indicates how many MC-Ring signalling packets were received by this system with invalid TLV.
missedBfdEvents [Missed Bfd Events] (tmnxMcrStatsMissedBfdEvent)	long	The value of tmnxMcrStatsMissedBfdEvent indicates the number of missed BFD events on this system.
missedConfigEvents [Missed Config Events] (tmnxMcrStatsMissedConfigEvent)	long	The value of tmnxMcrStatsMissedConfigEvent indicates the number of missed configuration events on this system.
noBufferPacketsNotTransmitted [No Buffer Packets Not Transmitted] (tmnxMcrStatsTxNoBuffer)	long	The value of tmnxMcrStatsTxNoBuffer indicates how many MC-Ring signalling packets could not be transmitted by this system due to a lack of packet buffers.
signallingPacketsNotTransmitted [Signalling Packets Not Transmitted] (tmnxMcrStatsTxTransmitFailed)	long	The value of tmnxMcrStatsTxTransmitFailed indicates how many MC-Ring signalling packets could not be transmitted by this system due to a transmission failure.
signallingPacketsReceived [Signalling Packets Received] (tmnxMcrStatsRx)	long	The value of tmnxMcrStatsRx indicates how many MC-Ring signalling packets were received by this system.
signallingPacketsTransmitted [Signalling Packets Transmitted] (tmnxMcrStatsTx)	long	The value of tmnxMcrStatsTx indicates how many MC-Ring signalling packets were transmitted by this system.
tooShortPacketsReceived [Too Short Packets Received] (tmnxMcrStatsRxTooShort)	long	The value of tmnxMcrStatsRxTooShort indicates how many MC-Ring signalling packets were received by this system that were too short.
unknownDestinationPacketsDropped [Unknown Destination Packets Dropped] (tmnxMcrStatsTxUnknownDest)	long	The value of tmnxMcrStatsTxUnknownDest indicates how many MC-R signalling packets were dropped because the destination was unknown.

Table 558 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
unknownPeerPacketsReceived [Unknown Peer Packets Received] (tmnxMcrStatsRxUnknownPeer)	long	The value of tmnxMcrStatsRxUnknownPeer indicates how many MC-Ring signalling packets were received by this system that were related to an unknown peer.
unknownRingNodePacketsReceived [Unknown Ring Node Packets Received] (tmnxMcrStatsRxUnknownRingNode)	long	The value of tmnxMcrStatsRxUnknownRingNode indicates how many MC-Ring signalling packets were received by this system that were related to an unknown ring node.
unknownRingPacketsReceived [Unknown Ring Packets Received] (tmnxMcrStatsRxUnknownRing)	long	The value of tmnxMcrStatsRxUnknownRing indicates how many MC-Ring signalling packets were received by this system that were related to an unknown ring.
unknownTypePacketsReceived [Unknown Type Packets Received] (tmnxMcrStatsRxUnknownType)	long	The value of tmnxMcrStatsRxUnknownType indicates how many MC-Ring signalling packets were received by this system that were of unknown type.
wrongAuthenticationPacketsReceived [Wrong Authentication Packets Received] (tmnxMcrStatsRxWrongAuth)	long	The value of tmnxMcrStatsRxWrongAuth indicates how many MC-Ring signalling packets were received by this system with invalid authentication.
MultiChassisRingNodeStats MIB entry name: tmnxMcrRingNodeStatsEntry Entry description: Each row entry represents statistics related to an access node that participates in a multi-chassis ring configuration with a given peer. Rows are created or removed automatically by the system. Table description (for tmnxMcrRingNodeStatsTable): The tmnxMcrRingNodeStatsTable has an entry for each access node that participates in a multi-chassis ring configuration for the indicated peer. Supports realtime plotting Supports scheduled collection Monitored class: multichassis.MultiChassisRingNode		
detectedPacketsAcknowledged [Detected Packets Acknowledged] (tmnxMcrRingNodeStatsTxDetectAck)	long	The value of tmnxMcrRingNodeStatsTxDetectAck indicates how many valid 'detected ring node' signalling messages were acknowledged to the peer for this multi-chassis ring node.

Table 558 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
detectedPacketsPeerAcknowledged [Detected Packets Peer Acknowledged] (tmnxMcrRingNodeStatsRxDetectAck)	long	The value of tmnxMcrRingNodeStatsRxDetectAck indicates how many valid 'detected ring node' signalling messages were acknowledged by the peer for this multi-chassis ring node.
detectedPacketsReceived [Detected Packets Received] (tmnxMcrRingNodeStatsRxDetect)	long	The value of tmnxMcrRingNodeStatsRxDetect indicates how many valid 'detected ring node' signalling messages were received from the peer for this multi-chassis ring node.
detectedPacketsTransmitted [Detected Packets Transmitted] (tmnxMcrRingNodeStatsTxDetect)	long	The value of tmnxMcrRingNodeStatsTxDetect indicates how many valid 'detected ring node' signalling messages were transmitted to the peer for this multi-chassis ring node.
rcvPacketsReceived [Rcv Packets Received] (tmnxMcrRingNodeStatsRncvRxResp)	long	The value of tmnxMcrRingNodeStatsRncvRxResp indicates how many valid connectivity verification messages were received from this multi-chassis ring node.
rcvPacketsRoundTripTime [Rcv Packets Round Trip Time] (tmnxMcrRingNodeStatsRncvRtTime)	long	The value of tmnxMcrRingNodeStatsRncvRtTime indicates the round-trip-time of the last successful connectivity verification for this multi-chassis ring node. If there has not been a successful connectivity verification, the value of tmnxMcrRingNodeStatsRncvRtTime is zero.
rcvPacketsTransmitted [Rcv Packets Transmitted] (tmnxMcrRingNodeStatsRncvTxReq)	long	The value of tmnxMcrRingNodeStatsRncvTxReq indicates how many valid connectivity verification messages were transmitted to this multi-chassis ring node.

Table 558 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>MultiChassisRingStats</p> <p>MIB entry name: tmnxMcrRingStatsEntry</p> <p>Entry description: Each row entry in the tmnxMcrRingStatsTable represents additional columns of operational data for a ring that participates in a multi-chassis operation with a given peer.</p> <p>Table description (for tmnxMcrRingStatsTable): The tmnxMcrRingStatsTable has an entry for each multi-chassis ring that participates in a multi-chassis configuration for the indicated peer.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: multichassis.MultiChassisRing</p>		
opaquePacketsReceivedDelivered [Opaque Packets Received Delivered] (tmnxMcrRingStatsRxOpaqueDelivrd)	long	The value of tmnxMcrRingStatsRxOpaqueDelivrd indicates how many valid opaque signalling messages were received from the peer and delivered for this multi-chassis ring.
opaquePacketsReceivedNoDestination [Opaque Packets Received No Destination] (tmnxMcrRingStatsRxOpaqueNoDest)	long	The value of tmnxMcrRingStatsRxOpaqueNoDest indicates how many valid opaque signalling messages were received from the peer and for which no destination could be found.
opaquePacketsTransmitted [Opaque Packets Transmitted] (tmnxMcrRingStatsTxOpaque)	long	The value of tmnxMcrRingStatsTxOpaque indicates how many valid opaque signalling messages were transmitted to the peer for this multi-chassis ring.
sapsChangedPacketsReceived [Saps Changed Packets Received] (tmnxMcrRingStatsRxSapsChanged)	long	The value of tmnxMcrRingStatsRxSapsChanged indicates how many valid 'SAPs changed info' signalling messages were received from the peer for this multi-chassis ring.
sapsChangedPacketsTransmitted [Saps Changed Packets Transmitted] (tmnxMcrRingStatsTxSapsChanged)	long	The value of tmnxMcrRingStatsTxSapsChanged indicates how many valid 'SAPs changed info' signalling messages were transmitted to the peer for this multi-chassis ring.

Table 558 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PeerStats</p> <p>MIB entry name: tmnxMcLagPeerStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a multi-chassis peer. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxMcLagPeerStatsTable): The tmnxMcLagPeerStatsTable has an entry for each multi-chassis peer configured on this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • multichassis.PSSPeer • multichassis.Peer 		
configPacketsReceived [Config Packets Received] (tmnxMcLagPeerStatsPktsRxConfig)	long	The value of tmnxMcLagPeerStatsPktsRxConfig indicates how many valid MC-Lag control packets of type lag config were received on this system from the peer.
failedMD5AuthenticationPacketsDropped [Failed MD5 Authentication Packets Dropped] (tmnxMcLagPeerStatsDropMD5)	long	The value of tmnxMcLagPeerStatsDropMD5 indicates how many MC-Lag control packets were dropped on this system from the peer because the packet failed MD5 authentication.
failedPacketsTransmitted [Failed Packets Transmitted] (tmnxMcLagPeerStatsPktsTxFailed)	long	The value of tmnxMcLagPeerStatsPktsTxFailed indicates how many MC-Lag control packets failed to be transmitted from this system to the peer.
invalidLagIdPacketsDropped [Invalid Lag Id Packets Dropped] (tmnxMcLagPeerStatsDropTlvInvlId)	long	The value of tmnxMcLagPeerStatsDropTlvInvlId indicates how many MC-Lag control packets were dropped on this system from the peer because the packet referred to an invalid or non multi-chassis lag.
invalidSizePacketsDropped [Invalid Size Packets Dropped] (tmnxMcLagPeerStatsDropTlvInvlSz)	long	The value of tmnxMcLagPeerStatsDropTlvInvlSz indicates how many MC-Lag control packets were dropped on this system from the peer because the packet size was invalid.

Table 558 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
keepAlivePacketsReceived [Keep Alive Packets Received] (tmnxMcLagPeerStatsPktsRxKpalive)	long	The value of tmnxMcLagPeerStatsPktsRxKpalive indicates how many valid MC-Lag control packets of type keepalive were received on this system from the peer.
keepalivePacketsTransmitted [Keepalive Packets Transmitted] (tmnxMcLagPeerStatsPktsTxKpalive)	long	The value of tmnxMcLagPeerStatsPktsTxKpalive indicates how many MC-Lag control packets of type keepalive were transmitted from this system to the peer.
outOfSequencePacketsDropped [Out Of Sequence Packets Dropped] (tmnxMcLagPeerStatsDropOutOfSeq)	long	The value of tmnxMcLagPeerStatsDropOutOfSeq indicates how many MC-Lag control packets were dropped on this system from the peer because the packet was out of sequence.
packetsReceived [Packets Received] (tmnxMcLagPeerStatsPktsRx)	long	The value of tmnxMcLagPeerStatsPktsRx indicates how many valid MC-Lag control packets were received on this system from the peer.
packetsTransmitted [Packets Transmitted] (tmnxMcLagPeerStatsPktsTx)	long	The value of tmnxMcLagPeerStatsPktsTx indicates how many MC-Lag control packets were transmitted from this system to the peer.
peerConfigPacketsReceived [Peer Config Packets Received] (tmnxMcLagPeerStatsPktsRxPeerCfg)	long	The value of tmnxMcLagPeerStatsPktsRxPeerCfg indicates how many valid MC-Lag control packets of type peer config were received on this system from the peer.
peerConfigPacketsTransmitted [Peer Config Packets Transmitted] (tmnxMcLagPeerStatsPktsTxPeerCfg)	long	The value of tmnxMcLagPeerStatsPktsTxPeerCfg indicates how many MC-Lag control packets of type peer config were transmitted from this system to the peer.
stateDisabledPacketsDropped [State Disabled Packets Dropped] (tmnxMcLagPeerStatsDropStateDsblD)	long	The value of tmnxMcLagPeerStatsDropStateDsblD indicates how many MC-Lag control packets were dropped on this system from the peer because the peer was administratively disabled.

Table 558 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
statePacketsReceived [State Packets Received] (tmnxMcLagPeerStatsPktsRxState)	long	The value of tmnxMcLagPeerStatsPktsRxState indicates how many valid MC-Lag control packets of type lag state were received on this system from the peer.
tooShortPacketsDropped [Too Short Packets Dropped] (tmnxMcLagPeerStatsDropPktTooShrt)	long	The value of tmnxMcLagPeerStatsDropPktTooShrt indicates how many MC-Lag control packets were dropped on this system from the peer because the packet was too short.
unknownTlvPacketsDropped [Unknown Tlv Packets Dropped] (tmnxMcLagPeerStatsDropUnknownTlv)	long	The value of tmnxMcLagPeerStatsDropUnknownTlv indicates how many MC-Lag control packets were dropped on this system from the peer because the packet contained an unknown TLV.
<p>PeerSynchronizationProtocolStats MIB entry name: tmnxMcPeerSyncStatsEntry Entry description: Each row entry represents a collection of statistics for a multi-chassis synchronization protocol entry. Entries cannot be created and deleted via SNMP SET operations. Table description (for tmnxMcPeerSyncStatsTable): The tmnxMcPeerSyncStatsTable has an entry for each multi-chassis peer synchronization protocol entry. Supports realtime plotting Supports scheduled collection Monitored class: multichassis.PeerSynchronizationProtocol</p>		
bodyDecodeErrorPacketsReceived [Body Decode Error Packets Received] (tmnxMcPeerSyncPktsRxErrBody)	long	The value of tmnxMcPeerSyncPktsRxErrBody indicates the number of packets with body decode errors received from the multi-chassis peer.
dataPacketsReceived [Data Packets Received] (tmnxMcPeerSyncPktsRxData)	long	The value of tmnxMcPeerSyncPktsRxData indicates the number of hello packets received from the multi-chassis peer.
dataPacketsTransmitted [Data Packets Transmitted] (tmnxMcPeerSyncPktsTxData)	long	The value of tmnxMcPeerSyncPktsTxData indicates the number of data packets transmitted to the multi-chassis peer.

Table 558 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
erroneousPacketsReceived [Erroneous Packets Received] (tmnxMcPeerSyncPktsRxErr)	long	The value of tmnxMcPeerSyncPktsRxErr indicates the number of erroneous packets received from the multi-chassis peer.
headerDecodeErrorPacketsReceived [Header Decode Error Packets Received] (tmnxMcPeerSyncPktsRxErrHeader)	long	The value of tmnxMcPeerSyncPktsRxErrHeader indicates the number of packets with header decode errors received from the multi-chassis peer.
helloPacketsReceived [Hello Packets Received] (tmnxMcPeerSyncPktsRxHello)	long	The value of tmnxMcPeerSyncPktsRxHello indicates the number of hello packets received from the multi-chassis peer.
helloPacketsTransmitted [Hello Packets Transmitted] (tmnxMcPeerSyncPktsTxHello)	long	The value of tmnxMcPeerSyncPktsTxHello indicates the number of hello packets transmitted to the multi-chassis peer.
otherPacketsReceived [Other Packets Received] (tmnxMcPeerSyncPktsRxOther)	long	The value of tmnxMcPeerSyncPktsRxOther indicates the number of all other packet types received from the multi-chassis peer.
otherPacketsTransmitted [Other Packets Transmitted] (tmnxMcPeerSyncPktsTxOther)	long	The value of tmnxMcPeerSyncPktsTxOther indicates the number of all other packet types transmitted to the multi-chassis peer.
packetTransmissionErrors [Packet Transmission Errors] (tmnxMcPeerSyncPktsTxErr)	long	The value of tmnxMcPeerSyncPktsTxErr indicates the number of packet transmission errors.
sequenceNumberErrorPacketsReceived [Sequence Number Error Packets Received] (tmnxMcPeerSyncPktsRxErrSeqNum)	long	The value of tmnxMcPeerSyncPktsRxErrSeqNum indicates the number of packets with sequence number errors received from the multi-chassis peer.

Table 558 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalPacketsReceived [Total Packets Received] (tmnxMcPeerSyncPktsRxAll)	long	The value of tmnxMcPeerSyncPktsRxAll indicates the total number of packets received from the multi-chassis peer.
totalPacketsTransmitted [Total Packets Transmitted] (tmnxMcPeerSyncPktsTxAll)	long	The value of tmnxMcPeerSyncPktsTxAll indicates the total number of packets transmitted to the multi-chassis peer.

Table 559 nat statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>IsaMemberUsageStats</p> <p>MIB entry name: tmnxNatIsaMemberEntry</p> <p>Entry description: Each conceptual row contains status and basic statistics information about a member of a NAT ISA Group. Entries in this table are created and removed automatically by the system.</p> <p>Table description (for tmnxNatIsaMemberTable): The tmnxNatIsaMemberTable contains status and statistics information about the members of a NAT-capable ISA Group. A member of a NAT ISA Group can be mapped to a physical NAT ISA MDA.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • nat.IsaMda • nat.IsaMember 		
priSessions [Pri Sessions] (tmnxNatIsaMemberSessionsPrio)	long	The value of tmnxNatIsaMemberSessionsPrio indicates the current number of active prioritized sessions of the MDA associated with this member.
sessionUsage [Session Usage] (tmnxNatIsaMemberSessionUsage)	long	The value of tmnxNatIsaMemberSessionUsage indicates the session usage of the MDA associated with this member.
sessionUsageHi [Session Usage Hi] (tmnxNatIsaMemberSessionUsageHi)	int	The value of tmnxNatIsaMemberSessionUsageHi indicates if the session usage of the MDA associated with this member is high according to the values of the objects tmnxNatGrpCfgSessionWatermarkHi and tmnxNatGrpCfgSessionWatermarkLo.

Table 559 nat statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>L2AwSubscriberStats</p> <p>MIB entry name: tmnxNatL2AwSubStatEntry</p> <p>Entry description: Each conceptual row represents a Layer-2-Aware NAT subscriber. Entries in this table are created and destroyed automatically by the system.</p> <p>Table description (for tmnxNatL2AwSubStatTable): The tmnxNatL2AwSubStatTable contains status and basic statistics information about Layer-2-Aware NAT subscribers.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: nat.L2AwSubscriber</p>		
icmpPortUsage [Icmp Port Usage] (tmnxNatL2AwSubStatIcmpPortUsage)	int	The value of the object tmnxNatL2AwSubStatIcmpPortUsage indicates the ICMP port usage of this NAT subscriber.
icmpPortUsageHi [Icmp Port Usage Hi] (tmnxNatL2AwSubStatIcmpPortUsageH)	boolean	The value of the object tmnxNatL2AwSubStatIcmpPortUsageH indicates if the ICMP port usage of this NAT subscriber is high according to the values of the objects tmnxNatPlcyPortWatermarkHigh and tmnxNatPlcyPortWatermarkLow.
residentialSubscriber [Residential Subscriber] (tmnxSubInfoSubIdent)	String	The value of tmnxSubInfoSubIdent specifies the subscriber identification of this subscriber.
sessionUsage [Session Usage] (tmnxNatL2AwSubStatSessionUsage)	int	The value of the object tmnxNatL2AwSubStatSessionUsage indicates the session usage of this NAT subscriber.
sessions [Sessions] (tmnxNatL2AwSubStatSessions)	int	The value of tmnxNatL2AwSubStatSessions indicates the current number of active sessions of this NAT subscriber. In other words, it is the number of ports in use out of the nonreserved range.

Table 559 nat statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sessionsPrio [Sessions Prio] (tmnxNatL2AwSubStatSessionsPrio)	int	The value of tmnxNatL2AwSubStatSessionsPrio indicates the current number of active prioritized sessions of this subscriber. In other words, it is the number of reserved ports in use.
tcpPortUsage [Tcp Port Usage] (tmnxNatL2AwSubStatTcpPortUsage)	int	The value of the object tmnxNatL2AwSubStatTcpPortUsage indicates the TCP port usage of this NAT subscriber.
tcpPortUsageHi [Tcp Port Usage Hi] (tmnxNatL2AwSubStatTcpPortUsageHi)	boolean	The value of the object tmnxNatL2AwSubStatTcpPortUsageHi indicates if the TCP port usage of this NAT subscriber is high according to the values of the objects tmnxNatPlyPortWatermarkHigh and tmnxNatPlyPortWatermarkLow.
udpPortUsage [Udp Port Usage] (tmnxNatL2AwSubStatUdpPortUsage)	int	The value of the object tmnxNatL2AwSubStatUdpPortUsage indicates the UDP port usage of this NAT subscriber.
udpPortUsageHi [Udp Port Usage Hi] (tmnxNatL2AwSubStatUdpPortUsageHi)	boolean	The value of the object tmnxNatL2AwSubStatUdpPortUsageHi indicates if the UDP port usage of this NAT subscriber is high according to the values of the objects tmnxNatPlyPortWatermarkHigh and tmnxNatPlyPortWatermarkLow.
<p>NatlsaMemberStats</p> <p>MIB entry name: tmnxNatlsaMemberStatsEntry</p> <p>Entry description: Each conceptual row contains detailed statistics information about a member of a NAT ISA Group. Entries in this table are created and removed automatically by the system.</p> <p>Table description (for tmnxNatlsaMemberStatsTable): The tmnxNatlsaMemberStatsTable contains detailed statistics information about the members of a NAT-capable ISA Group.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: nat.IsaMember</p>		

Table 559 nat statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
noTcpUdpChecksum [No Tcp Udp Checksum] (tmnxNatIsaMemberStatsValue)	java. math. BigInteger	The value of the object tmnxNatIsaMemberStatsValue indicates the value of the statistics contained in this conceptual row.
statsType [Stats Type] (tmnxNatIsaMemberStatsType)	int	The value of tmnxNatIsaMemberStatsType indicates the type of NAT session statistics contained in this conceptual row.
<p>NatIsaResourceStats</p> <p>MIB entry name: tmnxCardEntry</p> <p>Entry description: Each row entry represents an IOM card slot in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. When a tmnxChassisEntry is created, a tmnxCardEntry is created for each IOM card slot in that chassis. Before a tmnxChassisEntry can be deleted, each tmnxCardEntry for that chassis must be in the proper state for removal.</p> <p>Table description (for tmnxCardTable): The tmnxCardTable has an entry for each IOM card slot in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: nat.IsaMda</p>		
cardSlot [Card Slot] (tmnxCardSlotNum)	int	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	int	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.

Table 559 nat statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mdaSlot [Mda Slot] (tmnxMDASlotNum)	int	The unique value which identifies this MDA slot within a specific IOM card in the system. Rows with a tmnxMDASlotNum value of zero (0) represent the special case of an IOM card without MDA slots but that instead has its ports directly on the IOM card itself. In that case, there should be only that one row entry in the tmnxMDATable for that IOM card.
statsId [Stats Id] (tmnxNatlsaResrcStatsId)	int	The value of tmnxNatlsaResrcStatsId indicates the identifier of this conceptual row. It is a meaningless number generated by the system as identifier of this conceptual row.
statsMaxValue [Stats Max Value] (tmnxNatlsaResrcStatsValMax)	java. math. BigInteger	The value of the object tmnxNatlsaResrcStatsValMax indicates the maximum available value of the resource statistics contained in this conceptual row.
statsName [Stats Name] (tmnxNatlsaResrcStatsName)	String	The value of the object tmnxNatlsaResrcStatsName indicates the human-readable identifier of the statistics contained in this conceptual row.
statsValue [Stats Value] (tmnxNatlsaResrcStatsVal)	java. math. BigInteger	The value of the object tmnxNatlsaResrcStatsVal indicates the actual value of the resource statistics contained in this conceptual row.

Table 559 nat statistics (continued)

blkUsage [Blk Usage] (tmnxNatPIL2AwBlockUsage)	long	The value of the object tmnxNatPIL2AwBlockUsage indicates the block usage of this Layer-2-Aware NAT address pool.
blkUsageHi [Blk Usage Hi] (tmnxNatPIL2AwBlockUsageHi)	boolean	The value of the object tmnxNatPIL2AwBlockUsage indicates if the block usage of this Layer-2-Aware NAT address pool is high according to the values of the objects tmnxNatPIWatermarkHigh and tmnxNatPIWatermarkLow.
natPIName [Nat PI Name] (tmnxNatPIName)	String	The value of tmnxNatPIName specifies the name of this NAT address pool.

Table 559 nat statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vrtrId [Vrtr Id] (vRtrID)	long	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
<p>NatPoolLsnStats</p> <p>MIB entry name: tmnxNatPILsnMemberEntry</p> <p>Entry description: Each conceptual row represents Large Scale NAT address pool information in a NAT ISA group member. Entries in this table are automatically created and deleted by the system.</p> <p>Table description (for tmnxNatPILsnMemberTable): The tmnxNatPILsnMemberTable contains information about the Large Scale NAT address pools per ISA group member.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: nat.NatPool</p>		
mbrBlockUsage [Mbr Block Usage] (tmnxNatPILsnMemberBlockUsage)	long	The value of the object tmnxNatPILsnMemberBlockUsage indicates the block usage of this Large Scale NAT address pool.
mbrBlockUsageHi [Mbr Block Usage Hi] (tmnxNatPILsnMemberBlockUsageHi)	boolean	The value of the object tmnxNatPILsnMemberBlockUsage indicates if the block usage of this Large Scale NAT address pool is high according to the values of the objects tmnxNatPIWatermarkHigh and tmnxNatPIWatermarkLow.
mbrIsaGrpId [Mbr Isa Grp Id] (tmnxNatPILsnMemberIsaGrpId)	int	The value of the object tmnxNatPILsnMemberIsaGrpId indicates the identifier of the NAT Integrated Service Adaptor group where this member belongs to.
natIsaMbrID [Nat Isa Mbr ID] (tmnxNatIsaMemberId)	int	The value of the object tmnxNatIsaMemberId indicates the identifier of this NAT ISA Group member.

Table 559 nat statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
natPIName [Nat PI Name] (tmnxNatPIName)	String	The value of tmnxNatPIName specifies the name of this NAT address pool.
vrtrId [Vrtr Id] (vRtrID)	long	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
<p>NatReassemblyStats MIB entry name: tmnxNatReassemblyStatsEntry Entry description: Each conceptual row contains reassembly statistics information about a member of a NAT-capable ISA Group. Entries in this table are created and removed automatically by the system. Table description (for tmnxNatReassemblyStatsTable): The tmnxNatReassemblyStatsTable contains statistics information about IP datagram reassembly on NAT-capable ISA Groups. Note that the IP reassembly function can be activated while the NAT function is not. Supports realtime plotting Supports scheduled collection Monitored class: nat.IsaMember</p>		
statsName [Stats Name] (tmnxNatReassemblyStatsName)	String	The value of the object tmnxNatReassemblyStatsName indicates the human-readable identifier of the statistics contained in this conceptual row.
statsType [Stats Type] (tmnxNatReassemblyStatsType)	int	The value of tmnxNatReassemblyStatsType indicates the type of IP datagram reassembly statistics contained in this conceptual row.
statsValue [Stats Value] (tmnxNatReassemblyStatsVal)	java. math. BigInteger	The value of the object tmnxNatReassemblyStatsVal indicates the statistics value contained in this conceptual row.

Table 559 nat statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PcpServerInterfaceStats</p> <p>MIB entry name: vRtrIfEntry</p> <p>Entry description: Each row entry represents a virtual router interface in the system. Entries can be created and deleted via SNMP SET operations using the vRtrIfRowStatus variable.</p> <p>Table description (for vRtrIfTable): The vRtrIfTable has an entry for each router interface configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: nat.PcpServerInterface</p>		
pcpSrvIfIndex [Pcp Srv If Index] (vRtrIfIndex)	long	The unique value which identifies this interface of this virtual router in the TmNx system. This field provides an identifier for virtual router interfaces similar to the ifIndex values used in the mib-2 interfaces table for physical interfaces. The vRtrIfIndex values can be reused for different virtual routers, but are unique within those entries with the same vRtrID. The vRtrIfIndex value for each virtual interface must remain constant at least from one re-initialization of the system management processor to the next.
pcpSrvIfStatsName [Pcp Srv If Stats Name] (tmnxNatPcpSrvIfStatsName)	String	The value of the object tmnxNatPcpSrvIfStatsName indicates the human-readable identifier of the statistics contained in this conceptual row.
pcpSrvIfStatsType [Pcp Srv If Stats Type] (tmnxNatPcpSrvIfStatsType)	int	The value of tmnxNatPcpSrvIfStatsType indicates the type of PCP statistics contained in this conceptual row. It is merely a numerical index, the meaning of the PCP statistics in this conceptual row is indicated by the value of the object tmnxNatPcpSrvIfStatsName.
pcpSrvIfStatsVal [Pcp Srv If Stats Val] (tmnxNatPcpSrvIfStatsVal)	java. math. BigInteger	The value of the object tmnxNatPcpSrvIfStatsVal indicates the value of the statistics contained in this conceptual row.

Table 559 nat statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pcpSrvName [Pcp Srv Name] (tmnxNatPcpSrvName)	String	The value of tmnxNatPcpSrvName specifies the name of this PCP server.
routerId [Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
<p>QueryBasedLsnSubscriberStats</p> <p>MIB entry name: tmnxNatQryLsnSubResEntry</p> <p>Entry description: Each conceptual row represents a Large Scale NAT subscriber. Conceptual rows in this table are created and destroyed automatically by the system. Conceptual rows in this table are volatile: they are lost upon reboot or switchover. The system creates rows in this table as a result of the creation of a row in the query table tmnxNatQryLsnSubTable, and destroys them when that row is destroyed.</p> <p>Table description (for tmnxNatQryLsnSubResTable): The tmnxNatQryLsnSubResTable contains the results of one or more queries for LSN subscribers.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • nat.ClassicLsnHost • nat.DsLiteSubscriber • nat.Nat64Subscriber 		
icmpPortUsage [Icmp Port Usage] (tmnxNatQryLsnSubResIcmpPortUsg)	int	The value of the object tmnxNatQryLsnSubResIcmpPortUsg indicates the ICMP port usage of this NAT subscriber and policy.
icmpPortUsageHi [Icmp Port Usage Hi] (tmnxNatQryLsnSubResIcmpPortUsgHi)	boolean	The value of the object tmnxNatQryLsnSubResIcmpPortUsgHi indicates if the ICMP port usage of this NAT subscriber and policy is high according to the values of the objects tmnxNatPlcyPortWatermarkHigh and tmnxNatPlcyPortWatermarkLow.

Table 559 nat statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lsnSubId [Lsn Sub Id] (tmnxNatQryLsnSubResId)	long	The value of tmnxNatQryLsnSubResId indicates the identifier of this Large Scale NAT subscriber.
sessionUsage [Session Usage] (tmnxNatQryLsnSubResSessionUsg)	int	The value of the object tmnxNatQryLsnSubResSessionUsg indicates the session usage of this NAT subscriber and policy.
sessionUsageHi [Session Usage Hi] (tmnxNatQryLsnSubResSessionUsgHi)	boolean	The value of the object tmnxNatQryLsnSubResSessionUsgHi indicates if the session usage of this NAT subscriber and policy is high according to the values of the objects tmnxNatPlcySessionWatermarkHigh and tmnxNatPlcySessionWatermarkLow.
sessions [Sessions] (tmnxNatQryLsnSubResSessions)	int	The value of tmnxNatQryLsnSubResSessions indicates the current number of active sessions of this NAT subscriber and policy. In other words, it is the number of ports in use out of the nonreserved range.
sessionsPeak [Sessions Peak] (tmnxNatQryLsnSubResSessionsPeak)	int	The value of tmnxNatQryLsnSubResSessionsPeak indicates the maximum number of sessions that were active together up to this point in time.
sessionsPrio [Sessions Prio] (tmnxNatQryLsnSubResSessionsPrio)	int	The value of tmnxNatQryLsnSubResSessionsPrio indicates the current number of active prioritized sessions of this subscriber and policy. In other words, it is the number of reserved ports in use.
tcpPortUsage [Tcp Port Usage] (tmnxNatQryLsnSubResTcpPortUsg)	int	The value of the object tmnxNatQryLsnSubResTcpPortUsg indicates the TCP port usage of this NAT subscriber and policy.
tcpPortUsageHi [Tcp Port Usage Hi] (tmnxNatQryLsnSubResTcpPortUsgHi)	boolean	The value of the object tmnxNatQryLsnSubResTcpPortUsgHi indicates if the TCP port usage of this NAT subscriber and policy is high according to the values of the objects tmnxNatPlcyPortWatermarkHigh and tmnxNatPlcyPortWatermarkLow.

Table 559 nat statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
udpPortUsage [Udp Port Usage] (tmnxNatQryLsnSubResUdpPortUsg)	int	The value of the object tmnxNatQryLsnSubResUdpPortUsg indicates the UDP port usage of this NAT subscriber and policy.
udpPortUsageHi [Udp Port Usage Hi] (tmnxNatQryLsnSubResUdpPortUsgHi)	boolean	The value of the object tmnxNatQryLsnSubResUdpPortUsgHi indicates if the UDP port usage of this NAT subscriber and policy is high according to the values of the objects tmnxNatPlcyPortWatermarkHigh and tmnxNatPlcyPortWatermarkLow.

Table 560 netw statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
SnmpAgentStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement		
sgiSnmplnGetBulks [Sgi Snmp In Get Bulks] (sgiSnmplnGetBulks)	long	The value of sgiSnmplnGetBulks indicates the total number of SNMP Get-Next PDUs which have been accepted and processed by the SNMP protocol entity.
snmplnASNParseErrs [Snmp In ASNParse Errs] (snmplnASNParseErrs)	long	The total number of ASN.1 or BER errors encountered by the SNMP entity when decoding received SNMP messages.
snmplnBadCommunityNames [Snmp In Bad Community Names] (snmplnBadCommunityNames)	long	The total number of community-based SNMP messages (for example, SNMPv1) delivered to the SNMP entity which used an SNMP community name not known to said entity. Also, implementations which authenticate community-based SNMP messages using check(s) in addition to matching the community name (for example, by also checking whether the message originated from a transport address allowed to use a specified community name) MAY include in this value the number of messages which failed the additional check(s). It is strongly RECOMMENDED that the documentation for any security model which is used to authenticate community-based SNMP messages specify the precise conditions that contribute to this value.

Table 560 netw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
snmpInBadCommunityUses [Snmp In Bad Community Uses] (snmpInBadCommunityUses)	long	The total number of community-based SNMP messages (for example, SNMPv1) delivered to the SNMP entity which represented an SNMP operation that was not allowed for the SNMP community named in the message. The precise conditions under which this counter is incremented (if at all) depend on how the SNMP entity implements its access control mechanism and how its applications interact with that access control mechanism. It is strongly RECOMMENDED that the documentation for any access control mechanism which is used to control access to and visibility of MIB instrumentation specify the precise conditions that contribute to this value.
snmpInBadVersions [Snmp In Bad Versions] (snmpInBadVersions)	long	The total number of SNMP messages which were delivered to the SNMP entity and were for an unsupported SNMP version.
snmpInPkts [Snmp In Pkts] (snmpInPkts)	long	The total number of messages delivered to the SNMP entity from the transport service.
snmpProxyDrops [Snmp Proxy Drops] (snmpProxyDrops)	long	The total number of Confirmed Class PDUs (such as GetRequest-PDUs, GetNextRequest-PDUs, GetBulkRequest-PDUs, SetRequest-PDUs, and InformRequest-PDUs) delivered to the SNMP entity which were silently dropped because the transmission of the (possibly translated) message to a proxy target failed in a manner (other than a time-out) such that no Response Class PDU (such as a Response-PDU) could be returned.

Table 560 netw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
snmpSilentDrops [Snmp Silent Drops] (snmpSilentDrops)	long	The total number of Confirmed Class PDUs (such as GetRequest-PDUs, GetNextRequest-PDUs, GetBulkRequest-PDUs, SetRequest-PDUs, and InformRequest-PDUs) delivered to the SNMP entity which were silently dropped because the size of a reply containing an alternate Response Class PDU (such as a Response-PDU) with an empty variable-bindings field was greater than either a local constraint or the maximum message size associated with the originator of the request.

Table 561 openflow statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>OFChannelStats</p> <p>MIB entry name: tmnxOFChannelStatsEntry</p> <p>Entry description: The value of tmnxOFChannelStatsEntry specifies statistics information for the various packets exchanged between an open-flow switch and the controller.</p> <p>Table description (for tmnxOFChannelStatsTable): The tmnxOFChannelStatsTable contains channel statistics information.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: openflow.OFChannelTable</p>		
pktsErr [Pkts Err] (tmnxOFChannelPacketErr)	java. math. BigInteger	The value of tmnxOFChannelPacketErr indicates the total number of error packets exchanged by open-flow switch specified by tmnxOFSwitchName with the controller.
pktsRx [Pkts Rx] (tmnxOFChannelPacketRx)	java. math. BigInteger	The value of tmnxOFChannelPacketRx indicates the total number of packets received by an open-flow switch specified by tmnxOFSwitchName.
pktsTx [Pkts Tx] (tmnxOFChannelPacketTx)	java. math. BigInteger	The value of tmnxOFChannelPacketTx indicates the total number of packets transmitted by an open-flow switch specified by tmnxOFSwitchName.
pktsType [Pkts Type] (tmnxOFChannelPacketType)	int	The value of tmnxOFChannelPacketType specifies the packet type exchanged between an open-flow switch and the controller.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>OFPortStats</p> <p>MIB entry name: tmnxOFPortStatsEntry</p> <p>Entry description: The value of tmnxOFPortStatsEntry specifies statistics information related to port associated with an open-flow switch.</p> <p>Table description (for tmnxOFPortStatsTable): The tmnxOFPortStatsTable contains port statistics information.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: openflow.OFPortDescription</p>		
portId [Port Id] (tmnxOFPortID)	long	The value of tmnxOFPortID specifies the port identifier for uniquely identifying a port within an open-flow switch instance specified by tmnxOFSwitchName.
portName [Port Name] (tmnxOFPortName)	String	The value of tmnxOFPortName specifies the textual name of the interface. The value of this object should be the name of the interface as assigned by the open-flow switch.
portTxBytes [Port Tx Bytes] (tmnxOFPortTxBytes)	java. math. BigInteger	The value of tmnxOFPortTxBytes indicates the total number of bytes transmitted by this open-flow port.
portTxPkts [Port Tx Pkts] (tmnxOFPortTxPackets)	java. math. BigInteger	The value of tmnxOFPortTxPackets indicates the total number of packets transmitted by this open-flow port.

Table 561 openflow statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portType [Port Type] (tmnxOFPortType)	int	The value of tmnxOFPortType indicates the port-type for port identifier specified by tmnxOFPortID. openFlowPhysicalPort (1) - corresponds to hardware interface of an open-flow switch. openFlowLogicalPort (2) - corresponds to higher level abstractions defined by an open-flow switch (e.g. link aggregation groups, tunnels, loopback interfaces). openFlowReservedPort (3) - specifies generic forwarding actions such as sending to the controller, flooding, or forwarding using non open-flow methods, such as 'normal' switch processing.

Table 562 ospf statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AreaBasicStats</p> <p>MIB entry name: tmnxOspfAreaEntry</p> <p>Entry description: The tmnxOspfAreaEntry contains information describing the configured parameters and cumulative statistics of one of the router's attached areas.</p> <p>Table description (for tmnxOspfAreaTable): The tmnxOspfAreaTable contains information describing the configured parameters and cumulative statistics of the router's attached areas.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.AreaSite</p>		
nssaTranslatorEvents [Nssa Translator Events] (tmnxOspfAreaNssaTranslatorEvents)	long	The value of tmnxOspfAreaNssaTranslatorEvents indicates the number of Translator State changes that have occurred since the last boot-up.
totalLSACount [Total LSACount] (tmnxOspfAreaScopeLsaCount)	long	The value of tmnxOspfAreaScopeLsaCount indicates the total number of Area-Scope link state advertisements in this area's link-state database.
totalSpfRuns [Total Spf Runs] (tmnxOspfAreaSpfRuns)	long	The value of tmnxOspfAreaSpfRuns indicates the number of times that the intra-area route table has been calculated using this area's link-state database. This is typically done using Dijkstra's algorithm.
totalUnknownLSACount [Total Unknown LSACount] (tmnxOspfAreaScopeUnkLsaCount)	long	The value of tmnxOspfAreaScopeUnkLsaCount indicates the total number of unknown Area-Scope link-state advertisements in this area's link-state database.

Table 562 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AreaSiteLfaStats</p> <p>MIB entry name: tmnxOspfLfaStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfLfaStatsTable represents information on LFA coverage for a given OSPF area</p> <p>Table description (for tmnxOspfLfaStatsTable): The tmnxOspfLfaStatsTable maintains information on loopfree-alternate (LFA) coverage for each instance of OSPF protocol.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.AreaSite</p>		
ospfLfaCoverage [Ospf Lfa Coverage] (tmnxOspfLfaCoverage)	long	The value of tmnxOspfLfaCoverage indicates how much LFA coverage is being obtained for the set of available LFA eligible nodes.
ospfLfaNodesCovered [Ospf Lfa Nodes Covered] (tmnxOspfLfaNodesCovered)	long	The value of tmnxOspfLfaNodesCovered indicates in absolute numbers the number of nodes for which an LFA is found.
ospfLfaPrefixCoverage [Ospf Lfa Prefix Coverage] (tmnxOspfLfaPfxCoverage)	long	The value of tmnxOspfLfaPfxCoverage indicates how much LFA prefix coverage is being obtained for the set of available LFA eligible prefixes.
ospfLfaPrefixCovered [Ospf Lfa Prefix Covered] (tmnxOspfLfaPfxCovered)	long	The value of tmnxOspfLfaPfxCovered indicates in absolute numbers the number of prefixes for which an LFA is found.
ospfLfaTotalNodes [Ospf Lfa Total Nodes] (tmnxOspfLfaTotalNodes)	long	The value of tmnxOspfLfaTotalNodes indicates in absolute numbers the number of nodes eligible for LFA calculation.
ospfLfaTotalPrefix [Ospf Lfa Total Prefix] (tmnxOspfLfaTotalPfx)	long	The value of tmnxOspfLfaTotalPfx indicates in absolute numbers the number of prefixes eligible for LFA calculation.

<p>InterfaceGeneralStats</p> <p>MIB entry name: tmnxOspfNgIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgIfStatsTable represents additional columns for statistics for an OSPF interface.</p> <p>Table description (for tmnxOspfNgIfStatsTable): The tmnxOspfNgIfStatsTable provides an extension of the tmnxOspfNgIfTable for statistics for an OSPF interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Interface</p>		
events [Events] (tmnxOspfNgIfEvents)	long	The value of tmnxOspfNgIfEvents indicates the number of times this OSPF interface has changed its state, or an error has occurred.
<p>InterfaceReceiveStats</p> <p>MIB entry name: tmnxOspfNgIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgIfStatsTable represents additional columns for statistics for an OSPF interface.</p> <p>Table description (for tmnxOspfNgIfStatsTable): The tmnxOspfNgIfStatsTable provides an extension of the tmnxOspfNgIfTable for statistics for an OSPF interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Interface</p>		
databaseDescriptionPackets [Database Description Packets] (tmnxOspfNgIfRxDBDs)	long	The value of tmnxOspfNgIfRxDBDs indicates the total number of OSPF Database Description packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.
helloPackets [Hello Packets] (tmnxOspfNgIfRxHellos)	long	The value of tmnxOspfNgIfRxHellos indicates the total number of OSPF Hello packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.

Table 562 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfNgIfRxLSAcks)	long	The value of tmnxOspfNgIfRxLSAcks indicates the total number of Link State Acknowledgements received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateRequests [Link State Requests] (tmnxOspfNgIfRxLSRs)	long	The value of tmnxOspfNgIfRxLSRs indicates the total number of Link State Requests (LSRs) received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateUpdates [Link State Updates] (tmnxOspfNgIfRxLSUs)	long	The value of tmnxOspfNgIfRxLSUs indicates the total number of Link State Updates (LSUs) received on this interface since tmnxOspfAdminState was last set to 'enabled'.
lsasWithBadChecksums [Lsas With Bad Checksums] (tmnxOspfNgIfRxBadChecksums)	long	The value of tmnxOspfNgIfRxBadChecksums indicates the count of LSAs received with bad checksums.
totalPackets [Total Packets] (tmnxOspfNgIfRxPackets)	long	The value of tmnxOspfNgIfRxPackets indicates the total number of OSPF packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.
InterfaceStatusStats MIB entry name: tmnxOspfNgIfStatsEntry Entry description: Each row entry in the tmnxOspfNgIfStatsTable represents additional columns for statistics for an OSPF interface. Table description (for tmnxOspfNgIfStatsTable): The tmnxOspfNgIfStatsTable provides an extension of the tmnxOspfNgIfTable for statistics for an OSPF interface. Supports realtime plotting Supports scheduled collection Monitored class: ospf.Interface		
authorizationFailures [Authorization Failures] (tmnxOspfNgIfAuthFailures)	long	The value of tmnxOspfNgIfAuthFailures indicates the total number of OSPF packets received with an invalid authorization key since tmnxOspfAdminState was last set to 'enabled'.

Table 562 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badAreas [Bad Areas] (tmnxOspfNglfBadAreas)	long	The value of tmnxOspfNglfBadAreas indicates the total number of OSPF packets received with an area mismatch since tmnxOspfAdminState was last set to 'enabled'.
badAuthorizationTypes [Bad Authorization Types] (tmnxOspfNglfBadAuthTypes)	long	The value of tmnxOspfNglfBadAuthTypes indicates the total number of OSPF packets received with an invalid authorization type since tmnxOspfAdminState was last set to 'enabled'.
badDeadIntervals [Bad Dead Intervals] (tmnxOspfNglfBadDeadIntervals)	long	The value of tmnxOspfNglfBadDeadIntervals indicates the total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this interface since tmnxOspfAdminState was last set to 'enabled'.
badDestinationAddresses [Bad Destination Addresses] (tmnxOspfNglfBadDstAddrs)	long	The value of tmnxOspfNglfBadDstAddrs indicates the total number of OSPF packets received with the incorrect IP destination address since tmnxOspfAdminState was last set to 'enabled'.
badHelloIntervals [Bad Hello Intervals] (tmnxOspfNglfBadHelloIntervals)	long	The value of tmnxOspfNglfBadHelloIntervals indicates the total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this interface since tmnxOspfAdminState was last set to 'enabled'.
badLengths [Bad Lengths] (tmnxOspfNglfBadLengths)	long	The value of tmnxOspfNglfBadLengths indicates the total number of OSPF packets received on this interface with a total length not equal to the length given in the packet itself since tmnxOspfAdminState was last set to 'enabled'.
badNeighbors [Bad Neighbors] (tmnxOspfNglfBadNeighbors)	long	The value of tmnxOspfNglfBadNeighbors indicates the total number of OSPF packets received where the neighbor information does not match the information this router has for the neighbor since tmnxOspfAdminState was last set to 'enabled'.

Table 562 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badNetworks [Bad Networks] (tmnxOspfNgIfBadNetworks)	long	The value of tmnxOspfNgIfBadNetworks indicates the total number of OSPF packets received with invalid network or mask since tmnxOspfAdminState was last set to 'enabled'.
badOptions [Bad Options] (tmnxOspfNgIfBadOptions)	long	The value of tmnxOspfNgIfBadOptions indicates the total number of OSPF packets received with an option that does not match those configured for this interface or area since tmnxOspfAdminState was last set to 'enabled'.
badPacketTypes [Bad Packet Types] (tmnxOspfNgIfBadPacketTypes)	long	The value of tmnxOspfNgIfBadPacketTypes indicates the total number of OSPF packets received with an invalid OSPF packet type since tmnxOspfAdminState was last set to 'enabled'.
badVersions [Bad Versions] (tmnxOspfNgIfBadVersions)	long	The value of tmnxOspfNgIfBadVersions indicates the total number of OSPF packets received with bad OSPF version numbers since tmnxOspfAdminState was last set to 'enabled'.
badVirtualLinks [Bad Virtual Links] (tmnxOspfNgIfBadVirtualLinks)	long	The value of tmnxOspfNgIfBadVirtualLinks indicates the total number of OSPF packets received on this interface that are destined to a virtual link that does not exist since tmnxOspfAdminState was last set to 'enabled'.
discardPackets [Discard Packets] (tmnxOspfNgIfDiscardPackets)	long	The value of tmnxOspfNgIfDiscardPackets indicates the total number of OSPF packets discarded on this interface since tmnxOspfAdminState was last set to 'enabled'.
retransmitOuts [Retransmit Outs] (tmnxOspfNgIfRetransmitOuts)	long	The value of tmnxOspfNgIfRetransmitOuts indicates the total number of OSPF Retransmits sent on this interface since tmnxOspfAdminState was last set to 'enabled'.

authorizationFailures [Authorization Failures] (tmnxOspfShamIfAuthFailures)	long	The value of tmnxOspfShamIfAuthFailures indicates the total number of OSPF packets received with an invalid authorization key since tmnxOspfAdminState was last set to 'enabled'.
badAreas [Bad Areas] (tmnxOspfShamIfBadAreas)	long	The value of tmnxOspfShamIfBadAreas indicates the total number of OSPF packets received with an area mismatch since tmnxOspfAdminState was last set to 'enabled'.
badAuthorizationTypes [Bad Authorization Types] (tmnxOspfShamIfBadAuthTypes)	long	The value of tmnxOspfShamIfBadAuthTypes indicates the total number of OSPF packets received with an invalid authorization type since tmnxOspfAdminState was last set to 'enabled'.
badDeadIntervals [Bad Dead Intervals] (tmnxOspfShamIfBadDeadIntervals)	long	The value of tmnxOspfShamIfBadDeadIntervals indicates the total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this sham link since tmnxOspfAdminState was last set to 'enabled'.
badDestinationAddresses [Bad Destination Addresses] (tmnxOspfShamIfBadDstAddrs)	long	The value of tmnxOspfShamIfBadDstAddrs indicates the total number of OSPF packets received with the incorrect IP destination address since tmnxOspfAdminState was last set to 'enabled'.

Table 562 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badHelloIntervals [Bad Hello Intervals] (tmnxOspfShamIfBadHelloIntervals)	long	The value of tmnxOspfShamIfBadHelloIntervals indicates the total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this sham link since tmnxOspfAdminState was last set to 'enabled'.
badLengths [Bad Lengths] (tmnxOspfShamIfBadLengths)	long	The value of tmnxOspfShamIfBadLengths indicates the total number of OSPF packets received on this sham link with a total length not equal to the length given in the packet itself since tmnxOspfAdminState was last set to 'enabled'.
badNeighbors [Bad Neighbors] (tmnxOspfShamIfBadNeighbors)	long	The value of tmnxOspfShamIfBadNeighbors indicates the total number of OSPF packets received where the neighbor information does not match the information this router has for the neighbor since tmnxOspfAdminState was last set to 'enabled'.
badNetworks [Bad Networks] (tmnxOspfShamIfBadNetworks)	long	The value of tmnxOspfShamIfBadNetworks indicates the total number of OSPF packets received with invalid network or mask since tmnxOspfAdminState was last set to 'enabled'.
badOptions [Bad Options] (tmnxOspfShamIfBadOptions)	long	The value of tmnxOspfShamIfBadOptions indicates the total number of OSPF packets received with an option that does not match those configured for this sham link or area since tmnxOspfAdminState was last set to 'enabled'.
badPacketTypes [Bad Packet Types] (tmnxOspfShamIfBadPacketTypes)	long	The value of tmnxOspfShamIfBadPacketTypes indicates the total number of OSPF packets received with an invalid OSPF packet type since tmnxOspfAdminState was last set to 'enabled'.
badVersions [Bad Versions] (tmnxOspfShamIfBadVersions)	long	The value of tmnxOspfShamIfBadVersions indicates the total number of OSPF packets received with bad OSPF version numbers since tmnxOspfAdminState was last set to 'enabled'.

Table 562 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
discardPackets [Discard Packets] (tmnxOspfShamIfDiscardPackets)	long	The value of tmnxOspfShamIfDiscardPackets indicates the total number of OSPF packets discarded on this sham link since tmnxOspfAdminState was last set to 'enabled'.
retransmitOuts [Retransmit Outs] (tmnxOspfShamIfRetransmitOuts)	long	The value of tmnxOspfShamIfRetransmitOuts indicates the total number of OSPF Retransmits sent on this sham link since tmnxOspfAdminState was last set to 'enabled'.
<p>ShamLinkTransmitStats MIB entry name: tmnxOspfShamIfStatsEntry Entry description: Each row entry in the tmnxOspfShamIfStatsTable represents additional columns for statistics for an OSPF sham link. Table description (for tmnxOspfShamIfStatsTable): The tmnxOspfShamIfStatsTable provides an extension of the tmnxOspfShamIfTable for statistics for an OSPF sham link. Supports realtime plotting Supports scheduled collection Monitored class: ospf.ShamLink</p>		
databaseDescriptionPackets [Database Description Packets] (tmnxOspfShamIfRxDBDs)	long	The value of tmnxOspfShamIfRxDBDs indicates the total number of OSPF Database Description packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
helloPackets [Hello Packets] (tmnxOspfShamIfRxHellos)	long	The value of tmnxOspfShamIfRxHellos indicates the total number of OSPF Hello packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfShamIfRxLSAcks)	long	The value of tmnxOspfShamIfRxLSAcks indicates the total number of Link State Acknowledgements received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateRequests [Link State Requests] (tmnxOspfShamIfRxLSRs)	long	The value of tmnxOspfShamIfRxLSRs indicates the total number of Link State Requests (LSRs) received on this sham link since tmnxOspfAdminState was last set to 'enabled'.

Table 562 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
linkStateUpdates [Link State Updates] (tmnxOspfShamIfRxLSUs)	long	The value of tmnxOspfShamIfRxLSUs indicates the total number of Link State Updates (LSUs) received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
totalPackets [Total Packets] (tmnxOspfShamIfRxPackets)	long	The value of tmnxOspfShamIfRxPackets indicates the total number of OSPF packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
<p>SiteStats</p> <p>MIB entry name: tmnxOspfStatisticsEntry</p> <p>Entry description: Each row entry in the tmnxOspfStatisticsTable represents additional columns for statistics for an OSPF instance.</p> <p>Table description (for tmnxOspfStatisticsTable): The tmnxOspfStatisticsTable provides an extension of the tmnxOspfGeneralTable for statistics for an OSPF instance.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Site</p>		
addRouteFailed [Add Route Failed] (tmnxOspfRoutesAddsFailed)	long	The value of tmnxOspfRoutesAddsFailed indicates the number of times an attempt to add a route to the Route Table Manager (RTM) failed for this OSPF instance.
cspfDroppedRequests [Cspf Dropped Requests] (tmnxOspfCSPFDroppedRequests)	long	The value of tmnxOspfCSPFDroppedRequests indicates the number of dropped CSPF requests made by the OSPF protocol.
cspfPathsFound [Cspf Paths Found] (tmnxOspfCSPFPathsFound)	long	The value of tmnxOspfCSPFPathsFound indicates the number of of paths found for the requests made to OSPF protocol.
cspfPathsNotFound [Cspf Paths Not Found] (tmnxOspfCSPFPathsNotFound)	long	The value of tmnxOspfCSPFPathsNotFound indicates the number of of paths not found for the requests made to OSPF protocol.

Table 562 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cspfRequests [Cspf Requests] (tmnxOspfCSPFRequests)	long	The value of tmnxOspfCSPFRequests indicates the number of CSPF requests made to the OSPF protocol.
deleteRouteFailed [Delete Route Failed] (tmnxOspfRoutesDelsFailed)	long	The value of tmnxOspfRoutesDelsFailed indicates the number of times an attempt to delete a route from the Route Table Manager (RTM) failed for this instance of OSPF.
inOverflowCount [In Overflow Count] (tmnxOspfNumTimesInOverflow)	long	The value of tmnxOspfNumTimesInOverflow indicates the count of the number of times the system was in the overflow state.
inOverloadCount [In Overload Count] (tmnxOspfNumTimesInOverload)	long	The value of tmnxOspfNumTimesInOverload indicates the count of the number of times the system was overloaded.
modifyRouteFailed [Modify Route Failed] (tmnxOspfRoutesModsFailed)	long	The value of tmnxOspfRoutesModsFailed indicates the number of times an attempt to modify a route in the Route Table Manager (RTM) failed for this instance of OSPF.
newLsasOriginated [New Lsas Originated] (tmnxOspfOriginateNewLsas)	long	The value of tmnxOspfOriginateNewLsas indicates the number of new link-state advertisements that have been originated. This number is incremented each time the router originates a new LSA.
newLsasReceived [New Lsas Received] (tmnxOspfRxNewLsas)	long	The value of tmnxOspfRxNewLsas indicates the number of link-state advertisements received determined to be new instantiations. This number does not include newer instantiations of self-originated link-state advertisements.
spfAttemptsFailed [Spf Attempts Failed] (tmnxOspfSpfAttemptsFailed)	long	The value of tmnxOspfSpfAttemptsFailed indicates the number of times an attempt to run SPF has failed because SPF runs have been stopped as a result of insufficient memory resources.

<p>VirtualLinkGeneralStats</p> <p>MIB entry name: tmnxOspfVirtIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfVirtIfStatsTable represents additional columns for statistics for an OSPF virtual interface.</p> <p>Table description (for tmnxOspfVirtIfStatsTable): The tmnxOspfVirtIfStatsTable provides an extension of the tmnxOspfVirtIfTable for statistics for an OSPF virtual interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.VirtualLink</p>		
events [Events] (tmnxOspfVirtIfEvents)	long	The value of tmnxOspfVirtIfEvents indicates the number of state changes or error events on this Virtual Link
<p>VirtualLinkReceiveStats</p> <p>MIB entry name: tmnxOspfVirtIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfVirtIfStatsTable represents additional columns for statistics for an OSPF virtual interface.</p> <p>Table description (for tmnxOspfVirtIfStatsTable): The tmnxOspfVirtIfStatsTable provides an extension of the tmnxOspfVirtIfTable for statistics for an OSPF virtual interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.VirtualLink</p>		
databaseDescriptionPackets [Database Description Packets] (tmnxOspfVirtIfRxDBDs)	long	The value of tmnxOspfVirtIfRxDBDs indicates the total number of OSPF Database Description packets received on this virtual interface.
helloPackets [Hello Packets] (tmnxOspfVirtIfRxHellos)	long	The value of tmnxOspfVirtIfRxHellos indicates the total number of OSPF Hello packets received on this virtual interface.

Table 562 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfVirtIfRxLSAcks)	long	The value of tmnxOspfVirtIfRxLSAcks indicates the total number of Link State Acknowledgements received on this virtual interface.
linkStateRequests [Link State Requests] (tmnxOspfVirtIfRxLSRs)	long	The value of tmnxOspfVirtIfRxLSRs indicates the total number of OSPF Link State Requests (LSRs) received on this virtual interface.
linkStateUpdates [Link State Updates] (tmnxOspfVirtIfRxLSUs)	long	The value of tmnxOspfVirtIfRxLSUs indicates the total number of OSPF Link State Updates (LSUs) received on this virtual interface.
lsasWithBadChecksums [Lsas With Bad Checksums] (tmnxOspfVirtIfRxBadChecksums)	long	The value of tmnxOspfVirtIfRxBadChecksums indicates the count of LSAs received with bad checksums.
totalPackets [Total Packets] (tmnxOspfVirtIfRxPackets)	long	The value of tmnxOspfVirtIfRxPackets indicates the total number of OSPF packets received on this virtual interface since it was created.
VirtualLinkStatusStats MIB entry name: tmnxOspfVirtIfStatsEntry Entry description: Each row entry in the tmnxOspfVirtIfStatsTable represents additional columns for statistics for an OSPF virtual interface. Table description (for tmnxOspfVirtIfStatsTable): The tmnxOspfVirtIfStatsTable provides an extension of the tmnxOspfVirtIfTable for statistics for an OSPF virtual interface. Supports realtime plotting Supports scheduled collection Monitored class: ospf.VirtualLink		
authorizationFailures [Authorization Failures] (tmnxOspfVirtIfAuthFailures)	long	The value of tmnxOspfVirtIfAuthFailures indicates the total number of OSPF packets received on this virtual interface with invalid authentication keys.

Table 562 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badAreas [Bad Areas] (tmnxOspfVirtIfBadAreas)	long	The value of tmnxOspfVirtIfBadAreas indicates the total number of OSPF packets received on this virtual interface with area mismatches.
badAuthorizationTypes [Bad Authorization Types] (tmnxOspfVirtIfBadAuthTypes)	long	The value of tmnxOspfVirtIfBadAuthTypes indicates the total number of OSPF packets received on this virtual interface with invalid authentication types.
badDeadIntervals [Bad Dead Intervals] (tmnxOspfVirtIfBadDeadIntervals)	long	The value of tmnxOspfVirtIfBadDeadIntervals indicates the total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this virtual interface since tmnxOspfAdminState was last set to 'enabled'.
badDestinationAddresses [Bad Destination Addresses] (tmnxOspfVirtIfBadDstAdrs)	long	The value of tmnxOspfVirtIfBadDstAdrs indicates the total number of OSPF packets received on this virtual interface with invalid destination IP address.
badHelloIntervals [Bad Hello Intervals] (tmnxOspfVirtIfBadHelloIntervls)	long	The value of tmnxOspfVirtIfBadHelloIntervls indicates the total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this virtual interface since tmnxOspfAdminState was last set to 'enabled'.
badLengths [Bad Lengths] (tmnxOspfVirtIfBadLengths)	long	The value of tmnxOspfVirtIfBadLengths indicates the total number of OSPF packets received on this virtual interface with a total length not equal to the length given in the packet itself since tmnxOspfAdminState was last set to 'enabled'.
badNeighbors [Bad Neighbors] (tmnxOspfVirtIfBadNeighbors)	long	The value of tmnxOspfVirtIfBadNeighbors indicates the total number of OSPF packets received where the neighbor information does not match the configuration this router has for the neighbor.
badNetworks [Bad Networks] (tmnxOspfVirtIfBadNetworks)	long	The value of tmnxOspfVirtIfBadNetworks indicates the total number of OSPF packets received on this virtual interface with invalid network or mask fields.

Table 562 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badOptions [Bad Options] (tmnxOspfVirtIfBadOptions)	long	The value of tmnxOspfVirtIfBadOptions indicates the total number of OSPF packets received with an option that does not match those configured for this virtual interface or transit-area since tmnxOspfAdminState was last set to 'enabled'.
badPacketTypes [Bad Packet Types] (tmnxOspfVirtIfBadPacketTypes)	long	The value of tmnxOspfVirtIfBadPacketTypes indicates the total number of OSPF packets received on this virtual interface with invalid OSPF packet types.
badVersions [Bad Versions] (tmnxOspfVirtIfBadVersions)	long	The value of tmnxOspfVirtIfBadVersions indicates the total number of OSPF packets received on this virtual interface with invalid OSPF version numbers.
discardPackets [Discard Packets] (tmnxOspfVirtIfDiscardPackets)	long	The value of tmnxOspfVirtIfDiscardPackets indicates the total number of OSPF packets discarded on this virtual interface.
retransmitOuts [Retransmit Outs] (tmnxOspfVirtIfRetransmitOuts)	long	The value of tmnxOspfVirtIfRetransmitOuts indicates the total number of OSPF packets retransmitted on this virtual interface.
<p>VirtualLinkTransmitStats MIB entry name: tmnxOspfVirtIfStatsEntry Entry description: Each row entry in the tmnxOspfVirtIfStatsTable represents additional columns for statistics for an OSPF virtual interface. Table description (for tmnxOspfVirtIfStatsTable): The tmnxOspfVirtIfStatsTable provides an extension of the tmnxOspfVirtIfTable for statistics for an OSPF virtual interface. Supports realtime plotting Supports scheduled collection Monitored class: ospf.VirtualLink</p>		

Table 562 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
databaseDescriptionPackets [Database Description Packets] (tmnxOspfVirtIfRxDBDs)	long	The value of tmnxOspfVirtIfRxDBDs indicates the total number of OSPF Database Description packets received on this virtual interface.
helloPackets [Hello Packets] (tmnxOspfVirtIfRxHellos)	long	The value of tmnxOspfVirtIfRxHellos indicates the total number of OSPF Hello packets received on this virtual interface.
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfVirtIfRxLSAcks)	long	The value of tmnxOspfVirtIfRxLSAcks indicates the total number of Link State Acknowledgements received on this virtual interface.
linkStateRequests [Link State Requests] (tmnxOspfVirtIfRxLSRs)	long	The value of tmnxOspfVirtIfRxLSRs indicates the total number of OSPF Link State Requests (LSRs) received on this virtual interface.
linkStateUpdates [Link State Updates] (tmnxOspfVirtIfRxLSUs)	long	The value of tmnxOspfVirtIfRxLSUs indicates the total number of OSPF Link State Updates (LSUs) received on this virtual interface.
totalPackets [Total Packets] (tmnxOspfVirtIfRxPackets)	long	The value of tmnxOspfVirtIfRxPackets indicates the total number of OSPF packets received on this virtual interface since it was created.
<p>VirtualNeighborGeneralStats</p> <p>MIB entry name: tmnxOspfVirtNbrStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfVirtNbrStatsTable represents additional columns for statistics for an OSPF virtual neighbor.</p> <p>Table description (for tmnxOspfVirtNbrStatsTable): The tmnxOspfVirtNbrStatsTable provides an extension of the tmnxOspfVirtNbrTable for statistics for an OSPF virtual neighbor.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.VirtualNeighbor</p>		

Table 562 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
events [Events] (tmnxOspfVirtNbrEvents)	long	The value of tmnxOspfVirtNbrEvents indicates the number of times this virtual link has changed its state, or an error has occurred.
retransmissionQueueLength [Retransmission Queue Length] (tmnxOspfVirtNbrLsRetransQLen)	long	The value of tmnxOspfVirtNbrLsRetransQLen indicates the current length of the retransmission queue.
<p>VirtualNeighborStatusStats MIB entry name: tmnxOspfVirtNbrStatsEntry Entry description: Each row entry in the tmnxOspfVirtNbrStatsTable represents additional columns for statistics for an OSPF virtual neighbor. Table description (for tmnxOspfVirtNbrStatsTable): The tmnxOspfVirtNbrStatsTable provides an extension of the tmnxOspfVirtNbrTable for statistics for an OSPF virtual neighbor. Supports realtime plotting Supports scheduled collection Monitored class: ospf.VirtualNeighbor</p>		
badMtus [Bad Mtus] (tmnxOspfVirtNbrBadMTUs)	long	The value of tmnxOspfVirtNbrBadMTUs indicates the total number of times when the MTU in a received database description packet was larger than the MTU of the receiving interface since tmnxOspfAdminState was last set to 'enabled'.
badPackets [Bad Packets] (tmnxOspfVirtNbrBadPackets)	long	The value of tmnxOspfVirtNbrBadPackets indicates the total number of times when an LS update was received with an illegal LS type or an option mismatch since tmnxOspfAdminState was last set to 'enabled'.
badSequenceNumbers [Bad Sequence Numbers] (tmnxOspfVirtNbrBadSeqNums)	long	The value of tmnxOspfVirtNbrBadSeqNums indicates the total number of times when a database description packet was received with a sequence number mismatch since tmnxOspfAdminState was last set to 'enabled'.

Table 562 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badVirtualNeighborStates [Bad Virtual Neighbor States] (tmnxOspfVirtNbrBadNbrStates)	long	The value of tmnxOspfVirtNbrBadNbrStates indicates the total number of OSPF packets received when the virtual neighbor state was not expecting to receive this packet type since tmnxOspfAdminState was last set to 'enabled'.
duplicates [Duplicates] (tmnxOspfVirtNbrDuplicates)	long	The value of tmnxOspfVirtNbrDuplicates indicates the total number of times when a duplicate database description packet was received during the Exchange state since tmnxOspfAdminState was last set to 'enabled'.
lsaInstallFailed [Lsa Install Failed] (tmnxOspfVirtNbrLsaInstallFail)	long	The value of tmnxOspfVirtNbrLsaInstallFail indicates the total number of times when an LSA could not be installed into the LSDB due to a resource allocation issue since tmnxOspfAdminState was last set to 'enabled'.
lsaNotInLSDB [Lsa Not In LSDB] (tmnxOspfVirtNbrLsaNotInLsdb)	long	The value of tmnxOspfVirtNbrLsaNotInLsdb indicates the total number of times when an LS request was received for an LSA not installed in the LSDB of this router since tmnxOspfAdminState was last set to 'enabled'.
numberOfRestarts [Number Of Restarts] (tmnxOspfVirtNbrNumRestarts)	long	The value of tmnxOspfVirtNbrNumRestarts indicates the number of times the virtual neighbor has attempted restart since tmnxOspfAdminState was last set to 'enabled'.
optionMismatches [Option Mismatches] (tmnxOspfVirtNbrOptionMismatch)	long	The value of tmnxOspfVirtNbrOptionMismatch indicates the total number of times when a LS update was received with an option mismatch since tmnxOspfAdminState was last set to 'enabled'.

Table 563 pae802_1x statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PaePortAuthenticatorDiagStats</p> <p>MIB entry name: dot1xAuthDiagEntry</p> <p>Entry description: The diagnostics information for an Authenticator PAE.</p> <p>Table description (for dot1xAuthDiagTable): A table that contains the diagnostics objects for the Authenticator PAE associated with each Port. An entry appears in this table for each port that may authenticate access to itself.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort 		
dot1xAuthAuthEapLogoffWhileAuthenticated [Dot 1 x Auth Auth Eap Logoff While Authenticated] (dot1xAuthAuthEapLogoffWhileAuthenticated)	long	Counts the number of times that the state machine transitions from AUTHENTICATED to DISCONNECTED, as a result of an EAPOL-Logoff message being received from the Supplicant.
dot1xAuthAuthEapLogoffWhileAuthenticating [Dot 1 x Auth Auth Eap Logoff While Authenticating] (dot1xAuthAuthEapLogoffWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of an EAPOL-Logoff message being received from the Supplicant.
dot1xAuthAuthEapStartsWhileAuthenticated [Dot 1 x Auth Auth Eap Starts While Authenticated] (dot1xAuthAuthEapStartsWhileAuthenticated)	long	Counts the number of times that the state machine transitions from AUTHENTICATED to CONNECTING, as a result of an EAPOL-Start message being received from the Supplicant.
dot1xAuthAuthEapStartsWhileAuthenticating [Dot 1 x Auth Auth Eap Starts While Authenticating] (dot1xAuthAuthEapStartsWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of an EAPOL-Start message being received from the Supplicant.

Table 563 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthAuthFailWhileAuthenticating [Dot 1 x Auth Auth Fail While Authenticating] (dot1xAuthAuthFailWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to HELD, as a result of the Backend Authentication state machine indicating authentication failure (authFail = TRUE).
dot1xAuthAuthReauthsWhileAuthenticated [Dot 1 x Auth Auth Reauths While Authenticated] (dot1xAuthAuthReauthsWhileAuthenticated)	long	Counts the number of times that the state machine transitions from AUTHENTICATED to CONNECTING, as a result of a reauthentication request (reAuthenticate = TRUE).
dot1xAuthAuthReauthsWhileAuthenticating [Dot 1 x Auth Auth Reauths While Authenticating] (dot1xAuthAuthReauthsWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of a reauthentication request (reAuthenticate = TRUE).
dot1xAuthAuthSuccessWhileAuthenticating [Dot 1 x Auth Auth Success While Authenticating] (dot1xAuthAuthSuccessWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to AUTHENTICATED, as a result of the Backend Authentication state machine indicating successful authentication of the Supplicant (authSuccess = TRUE).
dot1xAuthAuthTimeoutsWhileAuthenticating [Dot 1 x Auth Auth Timeouts While Authenticating] (dot1xAuthAuthTimeoutsWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of the Backend Authentication state machine indicating authentication timeout (authTimeout = TRUE).
dot1xAuthBackendAccessChallenges [Dot 1 x Auth Backend Access Challenges] (dot1xAuthBackendAccessChallenges)	long	Counts the number of times that the state machine receives an initial Access-Challenge packet from the Authentication server (i.e., aReq becomes TRUE, causing exit from the RESPONSE state). Indicates that the Authentication Server has communication with the Authenticator.
dot1xAuthBackendAuthFails [Dot 1 x Auth Backend Auth Fails] (dot1xAuthBackendAuthFails)	long	Counts the number of times that the state machine receives an EAP-Failure message from the Authentication Server (i.e., aFail becomes TRUE, causing a transition from RESPONSE to FAIL). Indicates that the Supplicant has not authenticated to the Authentication Server.

Table 563 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthBackendAuthSuccesses [Dot 1 x Auth Backend Auth Successes] (dot1xAuthBackendAuthSuccesses)	long	Counts the number of times that the state machine receives an EAP-Success message from the Authentication Server (i.e., aSuccess becomes TRUE, causing a transition from RESPONSE to SUCCESS). Indicates that the Supplicant has successfully authenticated to the Authentication Server.
dot1xAuthBackendNonNakResponsesFromSupplicant [Dot 1 x Auth Backend Non Nak Responses From Supplicant] (dot1xAuthBackendNonNakResponsesFromSupplicant)	long	Counts the number of times that the state machine receives a response from the Supplicant to an initial EAP-Request, and the response is something other than EAP-NAK (i.e., rxResp becomes TRUE, causing the state machine to transition from REQUEST to RESPONSE, and the response is not an EAP-NAK). Indicates that the Supplicant can respond to the Authenticator's chosen EAP-method.
dot1xAuthBackendOtherRequestsToSupplicant [Dot 1 x Auth Backend Other Requests To Supplicant] (dot1xAuthBackendOtherRequestsToSupplicant)	long	Counts the number of times that the state machine sends an EAP-Request packet (other than an Identity, Notification, Failure or Success message) to the Supplicant (i.e., executes txReq on entry to the REQUEST state). Indicates that the Authenticator chose an EAP-method.
dot1xAuthBackendResponses [Dot 1 x Auth Backend Responses] (dot1xAuthBackendResponses)	long	Counts the number of times that the state machine sends an initial Access-Request packet to the Authentication server (i.e., executes sendRespToServer on entry to the RESPONSE state). Indicates that the Authenticator attempted communication with the Authentication Server.
dot1xAuthEapLogoffsWhileConnecting [Dot 1 x Auth Eap Logoffs While Connecting] (dot1xAuthEapLogoffsWhileConnecting)	long	Counts the number of times that the state machine transitions from CONNECTING to DISCONNECTED as a result of receiving an EAPOL-Logoff message.
dot1xAuthEntersAuthenticating [Dot 1 x Auth Enters Authenticating] (dot1xAuthEntersAuthenticating)	long	Counts the number of times that the state machine transitions from CONNECTING to AUTHENTICATING, as a result of an EAP-Response/Identity message being received from the Supplicant.

Table 563 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthEntersConnecting [Dot 1 x Auth Enters Connecting] (dot1xAuthEntersConnecting)	long	Counts the number of times that the state machine transitions to the CONNECTING state from any other state.
<p>PaePortAuthenticatorSessionStats MIB entry name: dot1xAuthSessionStatsEntry Entry description: The session statistics information for an Authenticator PAE. This shows the current values being collected for each session that is still in progress, or the final values for the last valid session on each port where there is no session currently active. Table description (for dot1xAuthSessionStatsTable): A table that contains the session statistics objects for the Authenticator PAE associated with each Port. An entry appears in this table for each port that may authenticate access to itself. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort 		
dot1xAuthSessionAuthenticMethod [Dot 1 x Auth Session Authentic Method] (dot1xAuthSessionAuthenticMethod)	int	The authentication method used to establish the session.
dot1xAuthSessionFramesRx [Dot 1 x Auth Session Frames Rx] (dot1xAuthSessionFramesRx)	long	The number of user data frames received on this Port during the session.
dot1xAuthSessionFramesTx [Dot 1 x Auth Session Frames Tx] (dot1xAuthSessionFramesTx)	long	The number of user data frames transmitted on this Port during the session.
dot1xAuthSessionOctetsRx [Dot 1 x Auth Session Octets Rx] (dot1xAuthSessionOctetsRx)	java. math. BigInteger	The number of octets received in user data frames on this Port during the session.

dot1xAuthEapLengthErrorFramesRx [Dot 1 x Auth Eap Length Error Frames Rx] (dot1xAuthEapLengthErrorFramesRx)	long	The number of EAPOL frames that have been received by this Authenticator in which the Packet Body Length field is invalid.
dot1xAuthEapolFramesRx [Dot 1 x Auth Eapol Frames Rx] (dot1xAuthEapolFramesRx)	long	The number of valid EAPOL frames of any type that have been received by this Authenticator.

Table 563 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthEapolFramesTx [Dot 1 x Auth Eapol Frames Tx] (dot1xAuthEapolFramesTx)	long	The number of EAPOL frames of any type that have been transmitted by this Authenticator.
dot1xAuthEapolLogoffFramesRx [Dot 1 x Auth Eapol Logoff Frames Rx] (dot1xAuthEapolLogoffFramesRx)	long	The number of EAPOL Logoff frames that have been received by this Authenticator.
dot1xAuthEapolReqFramesTx [Dot 1 x Auth Eapol Req Frames Tx] (dot1xAuthEapolReqFramesTx)	long	The number of EAP Request frames (other than Rq/Id frames) that have been transmitted by this Authenticator.
dot1xAuthEapolReqIdFramesTx [Dot 1 x Auth Eapol Req Id Frames Tx] (dot1xAuthEapolReqIdFramesTx)	long	The number of EAP Req/Id frames that have been transmitted by this Authenticator.
dot1xAuthEapolRespFramesRx [Dot 1 x Auth Eapol Resp Frames Rx] (dot1xAuthEapolRespFramesRx)	long	The number of valid EAP Response frames (other than Resp/Id frames) that have been received by this Authenticator.
dot1xAuthEapolRespIdFramesRx [Dot 1 x Auth Eapol Resp Id Frames Rx] (dot1xAuthEapolRespIdFramesRx)	long	The number of EAP Resp/Id frames that have been received by this Authenticator.
dot1xAuthEapolStartFramesRx [Dot 1 x Auth Eapol Start Frames Rx] (dot1xAuthEapolStartFramesRx)	long	The number of EAPOL Start frames that have been received by this Authenticator.
dot1xAuthInvalidEapolFramesRx [Dot 1 x Auth Invalid Eapol Frames Rx] (dot1xAuthInvalidEapolFramesRx)	long	The number of EAPOL frames that have been received by this Authenticator in which the frame type is not recognized.
dot1xAuthLastEapolFrameVersion [Dot 1 x Auth Last Eapol Frame Version] (dot1xAuthLastEapolFrameVersion)	long	The protocol version number carried in the most recently received EAPOL frame.

Table 564 pim statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceAdditionalStats MIB entry name: vRtrPimNgIfStatsEntry Entry description: An entry in the vRtrPimNgIfStatsTable. Table description (for vRtrPimNgIfStatsTable): The table listing the PIM statistics for a particular interface. Supports realtime plotting Supports scheduled collection Monitored class: pim.Interface</p>		
bootstrapExpPolicyDrops [Bootstrap Exp Policy Drops] (vRtrPimNgIfBtrExpPolicyDrops)	long	The value of vRtrPimNgIfBtrExpPolicyDrops indicates the number of Bootstrap Messages that were not transmitted on this interface because of Bootstrap export policy. PIM Bootstrap export policies are configured using bootstrap export policy objects in vRtrPimNgGenPolicyTable.
bootstrapImpPolicyDrops [Bootstrap Imp Policy Drops] (vRtrPimNgIfBtrImpPolicyDrops)	long	The value of vRtrPimNgIfBtrImpPolicyDrops indicates the number of Bootstrap Messages received on this interface but were dropped because of Bootstrap import policy. PIM Bootstrap import policies are configured using bootstrap import policy objects in vRtrPimNgGenPolicyTable.
joinPolicyDrops [Join Policy Drops] (vRtrPimNgIfJoinPolicyDrops)	long	The value of vRtrPimNgIfJoinPolicyDrops indicates the number of times the join policy match resulted in dropping PIM Join-Prune Message or one of the source group contained in the message. PIM Join policies are configured using join policy objects in vRtrPimNgGenPolicyTable.
registerPolicyDrops [Register Policy Drops] (vRtrPimNgIfRegisterPolicyDrops)	long	The value of vRtrPimNgIfRegisterPolicyDrops indicates the number of times the register policy match resulted in dropping PIM Register Message. PIM Register policies are configured using the register policy objects in vRtrPimNgGenPolicyTable.
rxBSMNoRouterAlertDrops [Rx BSMNo Router Alert Drops] (vRtrPimNgIfRxBSMNoRouterAlertDrops)	long	The value of vRtrPimNgIfRxBSMNoRouterAlertDrops indicates the number of BSM messages that were dropped because router alert option was not present.

Table 564 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxBSMWrongIfDrops [Rx BSMWrong If Drops] (vRtrPimNgIfRxBSMWrongIfDrops)	long	The value of vRtrPimNgIfRxBSMWrongIfDrops indicates the number of BSM messages that were dropped either because they were not sent by the correct RPF neighbor or because they arrived on the wrong interface.
rxInvalidJoinPrunes [Rx Invalid Join Prunes] (vRtrPimNgIfRxInvalidJoinPrunes)	long	The value of vRtrPimNgIfRxInvalidJoinPrunes indicates the number of invalid PIM Join Prune messages received on this interface. A Join Prune message is invalid when the RP address in the message is not the RP for the group specified in the message. If such a message arrives, a vRtrPimNgInvalidJoinPrune notification is sent.
rxInvalidRegisters [Rx Invalid Registers] (vRtrPimNgIfRxInvalidRegisters)	long	The value of vRtrPimNgIfRxInvalidRegisters indicates the number of invalid PIM Register messages received on this interface. A Register message is invalid when the RP address in the message is not the RP for the group specified in the message. If such a message arrives, a vRtrPimNgInvalidRegister notification is sent.
rxJoinPruneErrs [Rx Join Prune Errs] (vRtrPimNgIfRxJoinPruneErrs)	long	The value of vRtrPimNgIfRxJoinPruneErrs indicates the number of errors while processing Join-Prune messages received on this interface.
rxJoinPrunes [Rx Join Prunes] (vRtrPimNgIfRxJoinPrunes)	long	The value of vRtrPimNgIfRxJoinPrunes indicates the number of PIM Join Prune messages received on this interface.
txJoinPrunes [Tx Join Prunes] (vRtrPimNgIfTxJoinPrunes)	long	The value of vRtrPimNgIfTxJoinPrunes indicates the number of PIM Join Prune messages transmitted on this interface.

Table 564 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
InterfaceStats MIB entry name: vRtrPimNgIfStatsEntry Entry description: An entry in the vRtrPimNgIfStatsTable. Table description (for vRtrPimNgIfStatsTable): The table listing the PIM statistics for a particular interface. Supports realtime plotting Supports scheduled collection Monitored class: pim.Interface		
bsmErrs [Bsm Errs] (vRtrPimNgIfTxBsmErrs)	long	The value of vRtrPimNgIfTxBsmErrs indicates the number of errors while transmitting PIM Bootstrap Messages (BSM) on this interface.
bsmPdus [Bsm Pdus] (vRtrPimNgIfTxBsmPdus)	long	The value of vRtrPimNgIfTxBsmPdus indicates the number of PIM Bootstrap Messages (BSM) transmitted on this interface.
mcacPolicyDrops [Mcac Policy Drops] (vRtrPimNgIfMcacPolicyDrops)	long	The value of the object vRtrPimNgIfMcacPolicyDrops indicates the number times a PIM Group is dropped because of applying a multicast CAC policy on this interface.
registerStopErrs [Register Stop Errs] (vRtrPimNgIfTxRegisterStopErrs)	long	The value of vRtrPimNgIfTxRegisterStopErrs indicates the number of PIM errors while trasmitting PIM Register Stop messages on this interface.
registerStops [Register Stops] (vRtrPimNgIfTxRegisterStops)	long	The value of vRtrPimNgIfTxRegisterStops indicates the number of PIM Register Stop messages transmitted on this interface.
rxAssertErrs [Rx Assert Errs] (vRtrPimNgIfRxAssertErrs)	long	The value of vRtrPimNgIfRxAssertErrs indicates the number of errors while processing Assert messages received on this interface.

Table 564 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxAsserts [Rx Asserts] (vRtrPimNgIfRxAsserts)	long	The value of vRtrPimNgIfRxAsserts indicates the number of PIM Assert messages received on this interface.
rxAutoRpAnnounce [Rx Auto Rp Announce] (vRtrPimNgIfRxAutoRpAnnounce)	long	The value of the object vRtrPimNgIfRxAutoRpAnnounce indicates the number Auto-RP announcements received on this interface.
rxAutoRpAnnounceErrs [Rx Auto Rp Announce Errs] (vRtrPimNgIfRxAutoRpAnnounceErrs)	long	The value of the object vRtrPimNgIfRxAutoRpAnnounceErrs indicates the number of errors while processing Auto-RP announcements received on this interface.
rxAutoRpGenErrs [Rx Auto Rp Gen Errs] (vRtrPimNgIfRxAutoRpGenErrs)	long	The value of the object vRtrPimNgIfRxAutoRpGenErrs indicates the number of errors while processing Auto-RP messages received on this interface.
rxAutoRpMapping [Rx Auto Rp Mapping] (vRtrPimNgIfRxAutoRpMapping)	long	The value of the object vRtrPimNgIfRxAutoRpMapping indicates the number of Auto-RP mappings received on this interface.
rxAutoRpMappingErrs [Rx Auto Rp Mapping Errs] (vRtrPimNgIfRxAutoRpMappingErrs)	long	The value of the object vRtrPimNgIfRxAutoRpMappingErrs indicates the number of errors while processing Auto-RP mappings received on this interface.
rxBadChecksumDiscards [Rx Bad Checksum Discards] (vRtrPimNgIfRxBadChecksumDiscard)	long	The value of vRtrPimNgIfRxBadChecksumDiscard indicates the number of PIM messages received on this interface which were discarded because of bad checksum.
rxBadEncodings [Rx Bad Encodings] (vRtrPimNgIfRxBadEncodings)	long	The value of vRtrPimNgIfRxBadEncodings indicates the number of PIM messages with bad encodings received on this interface.
rxBadVersionDiscards [Rx Bad Version Discards] (vRtrPimNgIfRxBadVersionDiscard)	long	The value of vRtrPimNgIfRxBadVersionDiscard indicates the number of PIM messages with bad versions received on this interface.

Table 564 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxBsmPduDrops [Rx Bsm Pdu Drops] (vRtrPimNgIfRxBsmPduDrops)	long	The value of vRtrPimNgIfRxBsmPduDrops indicates the number of Bootstrap Messages received on this interface but were dropped.
rxBsmPdus [Rx Bsm Pdus] (vRtrPimNgIfRxBsmPdus)	long	The value of vRtrPimNgIfRxBsmPdus indicates the number of Bootstrap Messages received on this interface.
rxCRPAdvNoRouterAlert [Rx CRPAdv No Router Alert] (vRtrPimNgIfRxCRPAdvNoRtrAlert)	long	The value of vRtrPimNgIfRxCRPAdvNoRtrAlert indicates the number of Candidate-RP Advertizements(C-RP-Adv) received on this interface which had no router alert option set.
rxHellos [Rx Hellos] (vRtrPimNgIfRxHellos)	long	The value of vRtrPimNgIfRxHellos indicates the number of PIM hello messages received on this interface.
rxHellosDropped [Rx Hellos Dropped] (vRtrPimNgIfRxHellosDropped)	long	The value of vRtrPimNgIfRxHellosDropped indicates the number of PIM Hello messages which were received on this interface but were dropped.
rxNbrUnknown [Rx Nbr Unknown] (vRtrPimNgIfRxNbrUnknown)	long	The value of vRtrPimNgIfRxNbrUnknown indicates the number of PIM messages (other than Hello messages) which were received on this interface and were rejected because the adjacency with the neighbor router was not already established.
rxNullRegisters [Rx Null Registers] (vRtrPimNgIfRxNullRegisters)	long	The value of vRtrPimNgIfRxNullRegisters indicates the number of PIM Null Register messages received on this interface.
rxPkts [Rx Pkts] (vRtrPimNgIfRxPkts)	long	The value of vRtrPimNgIfRxPkts indicates the number of multicast data packets received on this interface.

Table 564 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxRegisterErrs [Rx Register Errs] (vRtrPimNgIfRxRegisterErrs)	long	The value of vRtrPimNgIfRxRegisterErrs indicates the number of errors while processing Register messages received on this interface.
rxRegisterStopErrs [Rx Register Stop Errs] (vRtrPimNgIfRxRegisterStopErrs)	long	The value of vRtrPimNgIfRxRegisterStopErrs indicates the number of errors while processing Register Stop messages received on this interface.
rxRegisterStops [Rx Register Stops] (vRtrPimNgIfRxRegisterStops)	long	The value of vRtrPimNgIfRxRegisterStops indicates the number of PIM Register Stop messages received on this interface.
rxRegisters [Rx Registers] (vRtrPimNgIfRxRegisters)	long	The value of vRtrPimNgIfRxRegisters indicates the number of PIM Register messages received on this interface.
rxUnknownPdus [Rx Unknown Pdus] (vRtrPimNgIfRxUnknownPdus)	long	The value of vRtrPimNgIfRxUnknownPdus indicates the number of packets received with an unsupported PIM type.
sgTypes [Sg Types] (vRtrPimNgIfSGTypes)	long	The value of vRtrPimNgIfSGTypes indicates the number of entries in vRtrPimNgIfGrpSrcTable for which vRtrPimNgIf-GrpSrcType is 'sg'.
starGTypes [Star GTypes] (vRtrPimNgIfStarGTypes)	long	The value of vRtrPimNgIfStarGTypes indicates the number of entries in vRtrPimNgIfGrpSrcTable for which vRtrPimNgIf-GrpSrcType is 'starG'.
starStarRPTypes [Star Star RPTypes] (vRtrPimNgIfStarStarRPTypes)	long	The value of vRtrPimNgIfStarStarRPTypes indicates the number of entries in vRtrPimNgIfGrpSrcTable for which vRtrPimNgIfGrpSrcType is 'starStarRP'.
txAsserts [Tx Asserts] (vRtrPimNgIfTxAsserts)	long	The value of vRtrPimNgIfTxAsserts indicates the number of PIM Assert messages transmitted on this interface.

Table 564 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txAutoRpAnnounce [Tx Auto Rp Announce] (vRtrPimNgIfTxAutoRpAnnounce)	long	The value of the object vRtrPimNgIfTxAutoRpAnnounce indicates the number of Auto-RP announcements transmitted on this interface.
txAutoRpAnnounceErrs [Tx Auto Rp Announce Errs] (vRtrPimNgIfTxAutoRpAnnounceErrs)	long	The value of the object vRtrPimNgIfTxAutoRpAnnounceErrs indicates the number of errors while transmitting Auto-RP announcements on this interface.
txAutoRpMapping [Tx Auto Rp Mapping] (vRtrPimNgIfTxAutoRpMapping)	long	The value of the object vRtrPimNgIfTxAutoRpMapping indicates the number of Auto-RP mappings transmitted on this interface.
txAutoRpMappingErrs [Tx Auto Rp Mapping Errs] (vRtrPimNgIfTxAutoRpMappingErrs)	long	The value of the object vRtrPimNgIfTxAutoRpMappingErrs indicates the number of errors while transmitting Auto-RP mappings on this interface.
txHellos [Tx Hellos] (vRtrPimNgIfTxHellos)	long	The value of vRtrPimNgIfTxHellos indicates the number of PIM Hello messages transmitted on this interface.
txPkts [Tx Pkts] (vRtrPimNgIfTxPkts)	long	The value of vRtrPimNgIfTxPkts indicates the number of multicast data packets transmitted on this interface.
PimGenSiteStats MIB entry name: vRtrPimNgGenStatEntry Entry description: An entry in the vRtrPimNgGenStatTable. Table description (for vRtrPimNgGenStatTable): vRtrPimNgGenStatTable lists PIM statistics for a particular PIM instance. Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • pim.Site • pim.SiteExtension 		

Table 564 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
forwardCrpaDrops [Forward Crpa Drops] (vRtrPimNgGenStatFwdCrpaDrops)	long	The value of vRtrPimNgGenStatFwdCrpaDrops indicates the number of times the Candidate-RP Advertizements(C-RP-Adv) could not be forwarded by the router.
forwardCrpaPdus [Forward Crpa Pdu] (vRtrPimNgGenStatForwardCrpaPdus)	long	The value of vRtrPimNgGenStatForwardCrpaPdus indicates the number of Candidate-RP Advertizements(C-RP-Adv) that were forwarded by the router. C-RP-Adv's are forwarded when the received advertizement has a router alert set and the destination address is not the router's local address.
rxActiveMdts [Rx Active Mdts] (vRtrPimNgGenStatRxActiveMdts)	long	The value of vRtrPimNgGenStatRxActiveMdts indicates number of active Mdts on which the PE is receiving packets. This object is applicable to VPRNs only.
rxCrpaPduDrops [Rx Crpa Pdu Drops] (vRtrPimNgGenStatRxCrpaPduDrops)	long	The value of vRtrPimNgGenStatRxCrpaPduDrops indicates the number of PIM Candidate-RP Advertizements (C-RP-Adv) received by this instance, but were dropped.
rxCrpaPdus [Rx Crpa Pdu] (vRtrPimNgGenStatRxCrpaPdus)	long	The value of vRtrPimNgGenStatRxCrpaPdus indicates the number of PIM Candidate-RP Advertizements (C-RP-Adv) received by this instance.
rxMdtJoinTlvErrs [Rx Mdt Join Tlv Errs] (vRtrPimNgGenStatRxMdtJnTlvErrs)	long	The value of vRtrPimNgGenStatRxMdtJnTlvErrs indicates indicates number of times MDT Join TLVs were dropped due to errors in the received TLV.
rxMdtJoinTlvs [Rx Mdt Join Tlvs] (vRtrPimNgGenStatRxMdtJoinTlvs)	long	The value of vRtrPimNgGenStatRxMdtJoinTlvs indicates the number of times MDT Join TLV were received.
sgTypes [Sg Types] (vRtrPimNgGenStatSGTypes)	long	The value of vRtrPimNgGenStatSGTypes indicates the number of entries in vRtrPimNgGrpSrcTable for which vRtrPimNgGrpSrcType is 'sg'.

Table 564 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
starGTypes [Star GTypes] (vRtrPimNgGenStatStarGTypes)	long	The value of vRtrPimNgGenStatStarGTypes indicates the number of entries in vRtrPimNgGrpSrcTable for which vRtrPimNgGrpSrcType is 'starG'.
starStarRPTypes [Star Star RPTypes] (vRtrPimNgGenStatStarStarRPTypes)	long	The value of vRtrPimNgGenStatStarStarRPTypes indicates the number of entries in vRtrPimNgGrpSrcTable for which vRtrPimNgGrpSrcType is 'starStarRP'.
txActiveMdts [Tx Active Mdts] (vRtrPimNgGenStatTxActiveMdts)	long	The value of vRtrPimNgGenStatTxActiveMdts indicates the number of active MDTs on which the PE is forwarding packets. This object is applicable to VPRNs only.
txCrpaPduErrs [Tx Crpa Pdu Errs] (vRtrPimNgGenStatTxCrpaPduErrs)	long	The value of vRtrPimNgGenStatTxCrpaPduErrs indicates the number of errors while transmitting PIM Candidate-RP Advertisements (C-RP-Adv).
txCrpaPdus [Tx Crpa Pdus] (vRtrPimNgGenStatTxCrpaPdus)	long	The value of vRtrPimNgGenStatTxCrpaPdus indicates the number of PIM Candidate-RP Advertisements (C-RP-Adv) transmitted by this router instance.
txMdtJoinTlvErrs [Tx Mdt Join Tlv Errs] (vRtrPimNgGenStatTxMdtJnTlvErrs)	long	The value of vRtrPimNgGenStatTxMdtJnTlvErrs indicates the number of times MDT Join TLV could not be transmitted.
txMdtJoinTlvs [Tx Mdt Join Tlvs] (vRtrPimNgGenStatTxMdtJoinTlvs)	long	The value of vRtrPimNgGenStatTxMdtJoinTlvs indicates the number of times MDT Join TLV were transmitted.
txNullRegisters [Tx Null Registers] (vRtrPimNgGenStatTxNullRegisters)	long	The value of vRtrPimNgGenStatTxNullRegisters indicates the number of PIM Null Register messages transmitted by this instance.
txRegisterErrs [Tx Register Errs] (vRtrPimNgGenStatTxRegisterErrs)	long	The value of vRtrPimNgGenStatTxRegisterErrs indicates the number the times there was an error while transmitting PIM Register messages by this instance.

Table 564 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txRegisterTTL Drops [Tx Register TTL Drops] (vRtrPimNgGenStatTxRegTTL Drops)	long	The value of vRtrPimNgGenStatTxRegTTL Drops indicates the number of multicast data packets which could not be encapsulated in Register messages because the Time To Live (TTL) was zero.
txRegisters [Tx Registers] (vRtrPimNgGenStatTxRegisters)	long	The value of vRtrPimNgGenStatTxRegisters indicates the number of PIM Register messages transmitted by this instance.
<p>PimGroupStats MIB entry name: vRtrPimNgGrpSrcStatEntry Entry description: An entry in the vRtrPimNgGrpSrcStatTable. Table description (for vRtrPimNgGrpSrcStatTable): vRtrPimNgGrpSrcStatTable contains statistics for the entries in the vRtrPimNgGrpSrcTable. These statistics are collected by the forwarding engine. Supports realtime plotting Supports scheduled collection Monitored class: pim.Groups</p>		
discardedPkts [Discarded Pkts] (vRtrPimNgGrpSrcStatDscrdPkts)	java. math. BigInteger	The value of vRtrPimNgGrpSrcStatDscrdPkts indicates the number of multicast packets that matched this source group entry but were discarded. For (S,G) entries, if the traffic is getting forwarded on the SPT, the packets arriving from the RPT will be discarded.
forwardedOctets [Forwarded Octets] (vRtrPimNgGrpSrcStatFrdedOct)	java. math. BigInteger	The value of vRtrPimNgGrpSrcStatFrdedOct indicates the number of multicast octets that were forwarded to the interfaces in the outgoing interface list. vRtrPimNgGrpSrcIfTable lists all the interfaces in the outgoing interface list.
forwardedPkts [Forwarded Pkts] (vRtrPimNgGrpSrcStatFrwdedPkts)	java. math. BigInteger	The value of vRtrPimNgGrpSrcStatFrwdedPkts indicates the number of multicast packets that were forwarded to the interfaces in the outgoing interface list. vRtrPimNgGrpSrcIfTable lists all the interfaces in the outgoing interface list. This packet count is calculated before ingress QoS policing or shaping is applied.

Table 564 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rpfMismatches [Rpf Mismatches] (vRtrPimNgGrpSrcStatRPFMsmtch)	java. math. BigInteger	The value of vRtrPimNgGrpSrcStatRPFMsmtch indicates the number of multicast packets that matched this source group entry but they did not arrive on the the interface indicated by vRtrPimNgGrpSrcRpflIndex.

Table 565 ppp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PppStats</p> <p>MIB entry name: tmnxPppEntry</p> <p>Entry description: Each row entry represents a port from the tmnxPortTable that is configured for PPP. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxPppTable): The tmnxPppTable has an entry for each port in the system that is configured for PPP.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ppp.Interface</p>		
keepaliveEchoReplyPacketsReceived [Keepalive Echo Reply Packets Received] (tmnxPppKaInPktCount)	long	The number of echo-reply packets received.
keepaliveEchoRequestPacketsSent [Keepalive Echo Request Packets Sent] (tmnxPppKaOutPktCount)	long	The number of echo-request packets sent.
keepaliveThresholdExceedsCount [Keepalive Threshold Exceeds Count] (tmnxPppKaThresholdExceedsCount)	long	The number of times that tmnxPppKaDropCount was reached.
lqmInRate [Lqm In Rate] (tmnxPppLqmInRate)	long	The average of 'SaveInPackets'/'PeerOutPackets' in the last five consecutive LQRs received.
lqmLqrPacketsReceived [Lqm Lqr Packets Received] (tmnxPppLqmInPktCount)	long	The number of LQR packets received.
lqmLqrPacketsSent [Lqm Lqr Packets Sent] (tmnxPppLqmOutPktCount)	long	The number of LQR packets sent.

Table 565 ppp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lqmOutRate [Lqm Out Rate] (tmnxPppLqmOutRate)	long	The average of 'PeerInPackets'/'LastOutPackets' in the last five consecutive LQRs received.
lqmThresholdExceedsCount [Lqm Threshold Exceeds Count] (tmnxPppLqmThresholdExceedsCount)	long	The number of times that either tmnxPppLqmInRate or tmnxPppLqmOutRate falls below the specified quality percentage when PPP quality or LQM is enforced.

Table 566 ptp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PTPClockPacketStats</p> <p>MIB entry name: tmnxPtpClockPacketStatsEntry</p> <p>Entry description: The tmnxPtpClockPacketStatsEntry contain the directional packet statistics for the Precision Time Protocol (PTP). Rows are created and destroyed by the system.</p> <p>Table description (for tmnxPtpClockPacketStatsTable): The tmnxPtpClockPacketStatsTable consists of the packet statistics associated with the Precision Time Protocol (PTP).</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ptp.IEEEPTPClock</p>		
ptpClkPktStatsAnnounce [Ptp Clk Pkt Stats Announce] (tmnxPtpClkPktStatsAnnounce)	long	The value of tmnxPtpClkPktStatsAnnounce indicates the accumulated packet statistics for PTP Announce messages.
ptpClkPktStatsDelayRequest [Ptp Clk Pkt Stats Delay Request] (tmnxPtpClkPktStatsDelayRequest)	long	The value of tmnxPtpClkPktStatsDelayRequest indicates the accumulated packet statistics for PTP Delay Request messages.
ptpClkPktStatsDelayResp [Ptp Clk Pkt Stats Delay Resp] (tmnxPtpClkPktStatsDelayResp)	long	The value of tmnxPtpClkPktStatsDelayResp indicates the accumulated packet statistics for PTP Delay Response messages.
ptpClkPktStatsDirection [Ptp Clk Pkt Stats Direction] (tmnxPtpClkPktStatsDirection)	int	The value of tmnxPtpClkPktStatsDirection specifies which direction the packet statistics for the particular row are accumulated.
ptpClkPktStatsDropAltMaster [Ptp Clk Pkt Stats Drop Alt Master] (tmnxPtpClkPktStatsDropAltMaster)	long	The value of tmnxPtpClkPktStatsDropAltMaster indicates the accumulated packet statistics for PTP packets dropped because the PTP header has the 'alternateMasterFlag' set. This object is accumulated for the 'rx' direction only.

Table 566 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ptpClkPktStatsDropBadDomain [Ptp Clk Pkt Stats Drop Bad Domain] (tmnxPtpClkPktStatsDropBadDomain)	long	The value of tmnxPtpClkPktStatsDropBadDomain indicates the accumulated packet statistics for PTP packets dropped because the PTP domain indicated in the packet does not match the configured PTP domain. This object is accumulated for the 'rx' direction only.
ptpClkPktStatsDropOther [Ptp Clk Pkt Stats Drop Other] (tmnxPtpClkPktStatsDropOther)	long	The value of tmnxPtpClkPktStatsDropOther indicates the accumulated packet statistics for PTP packets dropped and not counted in the 'tmnxPtpClkPktStatsDropBadDomain', 'tmnxPtpClkPktStatsDropAltMaster', 'tmnxPtpClkPktStatsDropOutOfSeq', and 'tmnxPtpClkPktStatsDropPeerShut' objects. This object is accumulated for the 'rx' direction only.
ptpClkPktStatsDropOutOfSeq [Ptp Clk Pkt Stats Drop Out Of Seq] (tmnxPtpClkPktStatsDropOutOfSeq)	long	The value of tmnxPtpClkPktStatsDropOutOfSeq indicates the accumulated packet statistics for PTP packets dropped because the packets were received out of sequence. This object is accumulated for the 'rx' direction only.
ptpClkPktStatsDropPeerShut [Ptp Clk Pkt Stats Drop Peer Shut] (tmnxPtpClkPktStatsDropPeerShut)	long	The value of tmnxPtpClkPktStatsDropPeerShut indicates the accumulated packet statistics for PTP packets dropped because the packets were received from a PTP peer that has been administratively disabled. This object is accumulated for the 'rx' direction only.
ptpClkPktStatsFollowUp [Ptp Clk Pkt Stats Follow Up] (tmnxPtpClkPktStatsFollowUp)	long	The value of tmnxPtpClkPktStatsFollowUp indicates the accumulated packet statistics for PTP Follow Up messages.
ptpClkPktStatsOther [Ptp Clk Pkt Stats Other] (tmnxPtpClkPktStatsOther)	long	The value of tmnxPtpClkPktStatsOther indicates the accumulated packet statistics for all other PTP messages. This object is accumulated in the 'rx' direction only.
ptpClkPktStatsOtherTLVs [Ptp Clk Pkt Stats Other TLVs] (tmnxPtpClkPktStatsOtherTLVs)	long	The value of tmnxPtpClkPktStatsOtherTLVs indicates the accumulated packet statistics for other PTP TLV signaling messages. This object is accumulated for the 'rx' direction only.

Table 566 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ptpClkPktStatsSignaling [Ptp Clk Pkt Stats Signaling] (tmnxPtpClkPktStatsSignaling)	long	The value of tmnxPtpClkPktStatsSignaling indicates the accumulated packet statistics for PTP signaling messages.
ptpClkPktStatsSync [Ptp Clk Pkt Stats Sync] (tmnxPtpClkPktStatsSync)	long	The value of tmnxPtpClkPktStatsSync indicates the accumulated packet statistics for PTP Sync messages.
ptpClkPktStatsTimeStampCpm [Ptp Clk Pkt Stats Time Stamp Cpm] (tmnxPtpClkPktStatsTimeStampCpm)	long	The value of tmnxPtpClkPktStatsTimeStampCpm indicates the accumulated packet statistics for PTP event packets where the timestamp point is at the operating system kernel.
ptpClkPktStatsTimeStampPort [Ptp Clk Pkt Stats Time Stamp Port] (tmnxPtpClkPktStatsTimeStampPort)	long	The value of tmnxPtpClkPktStatsTimeStampPort indicates the accumulated packet statistics for PTP event packets where the timestamp point is at the physical layer.
ptpClkPktStatsUniAckCnclAnno [Ptp Clk Pkt Stats Uni Ack Cncl Anno] (tmnxPtpClkPktStatsUniAckCnclAnno)	long	The value of tmnxPtpClkPktStatsUniAckCnclAnno indicates the accumulated packet statistics for Unicast Acknowledge Cancel Announce TLVs.
ptpClkPktStatsUniAckCnclDly [Ptp Clk Pkt Stats Uni Ack Cncl Dly] (tmnxPtpClkPktStatsUniAckCnclDly)	long	The value of tmnxPtpClkPktStatsUniAckCnclDly indicates the accumulated packet statistics for Unicast Acknowledge Cancel Delay Response TLVs.
ptpClkPktStatsUniAckCnclSync [Ptp Clk Pkt Stats Uni Ack Cncl Sync] (tmnxPtpClkPktStatsUniAckCnclSync)	long	The value of tmnxPtpClkPktStatsUniAckCnclSync indicates the accumulated packet statistics for Unicast Acknowledge Cancel Sync TLVs.
ptpClkPktStatsUniCancelAnno [Ptp Clk Pkt Stats Uni Cancel Anno] (tmnxPtpClkPktStatsUniCancelAnno)	long	The value of tmnxPtpClkPktStatsUniCancelAnno indicates the accumulated packet statistics for Unicast Cancel Announce TLVs.
ptpClkPktStatsUniCancelDelay [Ptp Clk Pkt Stats Uni Cancel Delay] (tmnxPtpClkPktStatsUniCancelDelay)	long	The value of tmnxPtpClkPktStatsUniCancelDelay indicates the accumulated packet statistics for Unicast Cancel Delay TLVs.

Table 566 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ptpClkPktStatsUniCancelSync [Ptp Clk Pkt Stats Uni Cancel Sync] (tmnxPtpClkPktStatsUniCancelSync)	long	The value of tmnxPtpClkPktStatsUniCancelSync indicates the accumulated packet statistics for Unicast Cancel Sync TLVs.
ptpClkPktStatsUniDenyAnno [Ptp Clk Pkt Stats Uni Deny Anno] (tmnxPtpClkPktStatsUniDenyAnno)	long	The value of tmnxPtpClkPktStatsUniDenyAnno indicates the accumulated packet statistics for Unicast Grant Announce TLVs, where the request was denied. The request was denied if the duration indicated in the TLV was zero.
ptpClkPktStatsUniDenyDelRsp [Ptp Clk Pkt Stats Uni Deny Del Rsp] (tmnxPtpClkPktStatsUniDenyDelRsp)	long	The value of tmnxPtpClkPktStatsUniDenyDelRsp indicates the accumulated packet statistics for Unicast Grant Delay Response TLVs, where the request was denied. The request was denied if the duration indicated in the TLV was zero.
ptpClkPktStatsUniDenySync [Ptp Clk Pkt Stats Uni Deny Sync] (tmnxPtpClkPktStatsUniDenySync)	long	The value of tmnxPtpClkPktStatsUniDenySync indicates the accumulated packet statistics for Unicast Grant Sync TLVs, where the request was denied. The request was denied if the duration indicated in the TLV was zero.
ptpClkPktStatsUniGrantAnno [Ptp Clk Pkt Stats Uni Grant Anno] (tmnxPtpClkPktStatsUniGrantAnno)	long	The value of tmnxPtpClkPktStatsUniGrantAnno indicates the accumulated packet statistics for Unicast Grant Announce TLVs, where the request was granted. The request was granted if the duration indicated in the TLV was non-zero.
ptpClkPktStatsUniGrantDelRsp [Ptp Clk Pkt Stats Uni Grant Del Rsp] (tmnxPtpClkPktStatsUniGrantDelRsp)	long	The value of tmnxPtpClkPktStatsUniGrantDelRsp indicates the accumulated packet statistics for Unicast Grant Delay Response TLVs, where the request was granted. The request was granted if the duration indicated in the TLV was non-zero.
ptpClkPktStatsUniGrantSync [Ptp Clk Pkt Stats Uni Grant Sync] (tmnxPtpClkPktStatsUniGrantSync)	long	The value of tmnxPtpClkPktStatsUniGrantSync indicates the accumulated packet statistics for Unicast Grant Sync TLVs, where the request was granted. The request was granted if the duration indicated in the TLV was non-zero.
ptpClkPktStatsUniReqAnno [Ptp Clk Pkt Stats Uni Req Anno] (tmnxPtpClkPktStatsUniReqAnno)	long	The value of tmnxPtpClkPktStatsUniReqAnno indicates the accumulated packet statistics for Unicast Request Announce TLVs.

Table 566 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ptpClkPktStatsUniReqDelayRsp [Ptp Clk Pkt Stats Uni Req Delay Rsp] (tmnxPtpClkPktStatsUniReqDelayRsp)	long	The value of tmnxPtpClkPktStatsUniReqDelayRsp indicates the accumulated packet statistics for Unicast Request Delay Response TLVs.
ptpClkPktStatsUniReqSync [Ptp Clk Pkt Stats Uni Req Sync] (tmnxPtpClkPktStatsUniReqSync)	long	The value of tmnxPtpClkPktStatsUniReqSync indicates the accumulated packet statistics for Unicast Request Sync TLVs.
PTPClockRecoveryEventStats MIB entry name: tmnxPtpClockRecoveryStatistics Supports realtime plotting Supports scheduled collection Monitored class: ptp.IEEEEPTPClock		
tmnxPtpClockRecStatsDlyHiPktLss [Tmnx Ptp Clock Rec Stats Dly Hi Pkt Lss] (tmnxPtpClockRecStatsDlyHiPktLss)	long	The value of tmnxPtpClockRecStatsDlyHiPktLss indicates the number of times that the clock recovery process detected a large amount of packet loss in the delay request/response flow from the remote master clock. When this event occurs, the clock recovery process restarts.
tmnxPtpClockRecStatsDlyHighPDV [Tmnx Ptp Clock Rec Stats Dly High PDV] (tmnxPtpClockRecStatsDlyHighPDV)	long	The value of tmnxPtpClockRecStatsDlyHighPDV indicates the number of times that the clock recovery process has determined that a sample of delay request packets to the best master clock had too much packet delay variation to be useful in recovering the clock from the best master. When this event occurs, the entire sample of packets is not used in the clock recovery process.
tmnxPtpClockRecStatsDlyPktLoss [Tmnx Ptp Clock Rec Stats Dly Pkt Loss] (tmnxPtpClockRecStatsDlyPktLoss)	long	The value of tmnxPtpClockRecStatsDlyPktLoss indicates the number of times that the clock recovery process detected packet loss in the delay request/response packet flow from the best master clock.

Table 566 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tmnxPtpClockRecStatsDlyStep [Tmnx Ptp Clock Rec Stats Dly Step] (tmnxPtpClockRecStatsDlyStep)	long	The value of tmnxPtpClockRecStatsDlyStep indicates the number of times that the clock recovery process detected a large change in the amount of time taken for delay request packets to be sent to the best master clock. This normally occurs if the route taken by packets to the best master changes.
tmnxPtpClockRecStatsSyncHiPktLss [Tmnx Ptp Clock Rec Stats Sync Hi Pkt Lss] (tmnxPtpClockRecStatsSyncHiPktLss)	long	The value of tmnxPtpClockRecStatsSyncHiPktLss indicates the number of times that the clock recovery process detected a large amount of packet loss in the sync flow from the remote master clock. When this event occurs, the clock recovery process restarts.
tmnxPtpClockRecStatsSyncHighPDV [Tmnx Ptp Clock Rec Stats Sync High PDV] (tmnxPtpClockRecStatsSyncHighPDV)	long	The value of tmnxPtpClockRecStatsSyncHighPDV indicates the number of times that the clock recovery process has determined that a sample of sync packets from the best master clock had too much packet delay variation to be useful in recovering the clock from the best master. When this event occurs, the entire sample of packets is not used in the clock recovery process.
tmnxPtpClockRecStatsSyncPktLoss [Tmnx Ptp Clock Rec Stats Sync Pkt Loss] (tmnxPtpClockRecStatsSyncPktLoss)	long	The value of tmnxPtpClockRecStatsSyncPktLoss indicates the number of times that the clock recovery process detected packet loss in the sync packet flow from the best master clock.
tmnxPtpClockRecStatsSyncStep [Tmnx Ptp Clock Rec Stats Sync Step] (tmnxPtpClockRecStatsSyncStep)	long	The value of tmnxPtpClockRecStatsSyncStep indicates the number of times that the clock recovery process detected a large change in the amount of time taken for sync packets to be sent from the best master clock. This normally occurs if the route taken by packets from the best master changes.
PTPClockRecoveryStateStats MIB entry name: tmnxPtpClockRecoveryStatistics Supports realtime plotting Supports scheduled collection Monitored class: ptp.IEEEPTPClock		

Table 566 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tmnxPtpClockRecStatsAcquiring [Tmnx Ptp Clock Rec Stats Acquiring] (tmnxPtpClockRecStatsAcquiring)	java. math. BigInteger	The value of tmnxPtpClockRecStatsAcquiring indicate the number of seconds that the clock recovery system has been in the acquiring state.
tmnxPtpClockRecStatsHoldover [Tmnx Ptp Clock Rec Stats Holdover] (tmnxPtpClockRecStatsHoldover)	java. math. BigInteger	The value of tmnxPtpClockRecStatsHoldover indicate the number of seconds that the clock recovery system has been in the hold-over state.
tmnxPtpClockRecStatsInitial [Tmnx Ptp Clock Rec Stats Initial] (tmnxPtpClockRecStatsInitial)	java. math. BigInteger	The value of tmnxPtpClockRecStatsInitial indicates the number of seconds that the clock recovery system has been in the initial state.
tmnxPtpClockRecStatsLocked [Tmnx Ptp Clock Rec Stats Locked] (tmnxPtpClockRecStatsLocked)	java. math. BigInteger	The value of tmnxPtpClockRecStatsLocked indicate the number of seconds that the clock recovery system has been in the locked state.
tmnxPtpClockRecStatsPhaseTrack [Tmnx Ptp Clock Rec Stats Phase Track] (tmnxPtpClockRecStatsPhaseTrack)	java. math. BigInteger	The value of tmnxPtpClockRecStatsPhaseTrack indicate the number of seconds that the clock recovery system has been in the phase tracking state.
<p>PTPPeerPacketStats</p> <p>MIB entry name: tmnxPtpPeerPacketStatsEntry</p> <p>Entry description: The tmnxPtpPeerPacketStatsEntry contain the directional packet statistics for the Precision Time Protocol (PTP). Rows are created and destroyed by the system.</p> <p>Table description (for tmnxPtpPeerPacketStatsTable): The tmnxPtpPeerPacketStatsTable consists of the per peer packet statistics associated with the Precision Time Protocol (PTP).</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ptp.IEEEEPTPPeer</p>		

Table 566 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ptpPeerPktStatAnnounce [Ptp Peer Pkt Stat Announce] (tmnxPtpPeerPktStatAnnounce)	long	The value of tmnxPtpPeerPktStatAnnounce indicates the accumulated packet statistics for PTP Announce messages.
ptpPeerPktStatDelayRequest [Ptp Peer Pkt Stat Delay Request] (tmnxPtpPeerPktStatDelayRequest)	long	The value of tmnxPtpPeerPktStatDelayRequest indicates the accumulated packet statistics for PTP Delay Request messages.
ptpPeerPktStatDelayResp [Ptp Peer Pkt Stat Delay Resp] (tmnxPtpPeerPktStatDelayResp)	long	The value of tmnxPtpPeerPktStatDelayResp indicates the accumulated packet statistics for PTP Delay Response messages.
ptpPeerPktStatDirection [Ptp Peer Pkt Stat Direction] (tmnxPtpPeerPktStatDirection)	int	The value of tmnxPtpPeerPktStatDirection specifies which direction the packet statistics for the particular row are accumulated.
ptpPeerPktStatDropAltMaster [Ptp Peer Pkt Stat Drop Alt Master] (tmnxPtpPeerPktStatDropAltMaster)	long	The value of tmnxPtpPeerPktStatDropAltMaster indicates the accumulated packet statistics for PTP packets dropped because the PTP header has the 'alternateMasterFlag' set. This object is accumulated for the 'rx' direction only.
ptpPeerPktStatDropBadDomain [Ptp Peer Pkt Stat Drop Bad Domain] (tmnxPtpPeerPktStatDropBadDomain)	long	The value of tmnxPtpPeerPktStatDropBadDomain indicates the accumulated packet statistics for PTP packets dropped because the PTP domain indicated in the packet does not match the configured PTP domain. This object is accumulated for the 'rx' direction only.
ptpPeerPktStatDropOther [Ptp Peer Pkt Stat Drop Other] (tmnxPtpPeerPktStatDropOther)	long	The value of tmnxPtpPeerPktStatDropOther indicates the accumulated packet statistics for PTP packets dropped and not counted in the 'tmnxPtpPeerPktStatDropBadDomain', 'tmnxPtpPeerPktStatDropAltMaster', 'tmnxPtpPeerPktStat-DropOutOfSeq', and 'tmnxPtpPeerPktStatDropPeerShut' objects. This object is accumulated for the 'rx' direction only.

Table 566 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ptpPeerPktStatDropOutOfSeq [Ptp Peer Pkt Stat Drop Out Of Seq] (tmnxPtpPeerPktStatDropOutOfSeq)	long	The value of tmnxPtpPeerPktStatDropOutOfSeq indicates the accumulated packet statistics for PTP packets dropped because the packets were received out of sequence. This object is accumulated for the 'rx' direction only.
ptpPeerPktStatDropPeerShut [Ptp Peer Pkt Stat Drop Peer Shut] (tmnxPtpPeerPktStatDropPeerShut)	long	The value of tmnxPtpPeerPktStatDropPeerShut indicates the accumulated packet statistics for PTP packets dropped because the packets were received from a PTP peer that has been administratively disabled. This object is accumulated for the 'rx' direction only.
ptpPeerPktStatFollowUp [Ptp Peer Pkt Stat Follow Up] (tmnxPtpPeerPktStatFollowUp)	long	The value of tmnxPtpPeerPktStatFollowUp indicates the accumulated packet statistics for PTP Follow Up messages.
ptpPeerPktStatOther [Ptp Peer Pkt Stat Other] (tmnxPtpPeerPktStatOther)	long	The value of tmnxPtpPeerPktStatOther indicates the accumulated packet statistics for all other PTP messages. This object is accumulated in the 'rx' direction only.
ptpPeerPktStatOtherTLVs [Ptp Peer Pkt Stat Other TLVs] (tmnxPtpPeerPktStatOtherTLVs)	long	The value of tmnxPtpPeerPktStatOtherTLVs indicates the accumulated packet statistics for other PTP TLV signaling messages. This object is accumulated for the 'rx' direction only.
ptpPeerPktStatSignaling [Ptp Peer Pkt Stat Signaling] (tmnxPtpPeerPktStatSignaling)	long	The value of tmnxPtpPeerPktStatSignaling indicates the accumulated packet statistics for PTP signaling messages.
ptpPeerPktStatSync [Ptp Peer Pkt Stat Sync] (tmnxPtpPeerPktStatSync)	long	The value of tmnxPtpPeerPktStatSync indicates the accumulated packet statistics for PTP Sync messages.
ptpPeerPktStatUniAckCnclAnno [Ptp Peer Pkt Stat Uni Ack Cncl Anno] (tmnxPtpPeerPktStatUniAckCnclAnno)	long	The value of tmnxPtpPeerPktStatUniAckCnclAnno indicates the accumulated packet statistics for Unicast Acknowledge Cancel Announce TLVs.

Table 566 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ptpPeerPktStatUniAckCnclDly [Ptp Peer Pkt Stat Uni Ack Cncl Dly] (tmnxPtpPeerPktStatUniAckCnclDly)	long	The value of tmnxPtpPeerPktStatUniAckCnclDly indicates the accumulated packet statistics for Unicast Acknowledge Cancel Delay Response TLVs.
ptpPeerPktStatUniAckCnclSync [Ptp Peer Pkt Stat Uni Ack Cncl Sync] (tmnxPtpPeerPktStatUniAckCnclSync)	long	The value of tmnxPtpPeerPktStatUniAckCnclSync indicates the accumulated packet statistics for Unicast Acknowledge Cancel Sync TLVs.
ptpPeerPktStatUniCancelAnno [Ptp Peer Pkt Stat Uni Cancel Anno] (tmnxPtpPeerPktStatUniCancelAnno)	long	The value of tmnxPtpPeerPktStatUniCancelAnno indicates the accumulated packet statistics for Unicast Cancel Announce TLVs.
ptpPeerPktStatUniCancelDelay [Ptp Peer Pkt Stat Uni Cancel Delay] (tmnxPtpPeerPktStatUniCancelDelay)	long	The value of tmnxPtpPeerPktStatUniCancelDelay indicates the accumulated packet statistics for Unicast Cancel Delay TLVs.
ptpPeerPktStatUniCancelSync [Ptp Peer Pkt Stat Uni Cancel Sync] (tmnxPtpPeerPktStatUniCancelSync)	long	The value of tmnxPtpPeerPktStatUniCancelSync indicates the accumulated packet statistics for Unicast Cancel Sync TLVs.
ptpPeerPktStatUniDenyAnno [Ptp Peer Pkt Stat Uni Deny Anno] (tmnxPtpPeerPktStatUniDenyAnno)	long	The value of tmnxPtpPeerPktStatUniDenyAnno indicates the accumulated packet statistics for Unicast Grant Announce TLVs, where the request was denied. The request was denied if the duration indicated in the TLV was zero.
ptpPeerPktStatUniDenyDelRsp [Ptp Peer Pkt Stat Uni Deny Del Rsp] (tmnxPtpPeerPktStatUniDenyDelRsp)	long	The value of tmnxPtpPeerPktStatUniDenyDelRsp indicates the accumulated packet statistics for Unicast Grant Delay Response TLVs, where the request was denied. The request was denied if the duration indicated in the TLV was zero.
ptpPeerPktStatUniDenySync [Ptp Peer Pkt Stat Uni Deny Sync] (tmnxPtpPeerPktStatUniDenySync)	long	The value of tmnxPtpPeerPktStatUniDenySync indicates the accumulated packet statistics for Unicast Grant Sync TLVs, where the request was denied. The request was denied if the duration indicated in the TLV was zero.

Table 566 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ptpPeerPktStatUniGrantAnno [Ptp Peer Pkt Stat Uni Grant Anno] (tmnxPtpPeerPktStatUniGrantAnno)	long	The value of tmnxPtpPeerPktStatUniGrantAnno indicates the accumulated packet statistics for Unicast Grant Announce TLVs, where the request was granted. The request was granted if the duration indicated in the TLV was non-zero.
ptpPeerPktStatUniGrantDelRsp [Ptp Peer Pkt Stat Uni Grant Del Rsp] (tmnxPtpPeerPktStatUniGrantDelRsp)	long	The value of tmnxPtpPeerPktStatUniGrantDelRsp indicates the accumulated packet statistics for Unicast Grant Delay Response TLVs, where the request was granted. The request was granted if the duration indicated in the TLV was non-zero.
ptpPeerPktStatUniGrantSync [Ptp Peer Pkt Stat Uni Grant Sync] (tmnxPtpPeerPktStatUniGrantSync)	long	The value of tmnxPtpPeerPktStatUniGrantSync indicates the accumulated packet statistics for Unicast Grant Sync TLVs, where the request was granted. The request was granted if the duration indicated in the TLV was non-zero.
ptpPeerPktStatUniReqAnno [Ptp Peer Pkt Stat Uni Req Anno] (tmnxPtpPeerPktStatUniReqAnno)	long	The value of tmnxPtpPeerPktStatUniReqAnno indicates the accumulated packet statistics for Unicast Request Announce TLVs.
ptpPeerPktStatUniReqDelayRsp [Ptp Peer Pkt Stat Uni Req Delay Rsp] (tmnxPtpPeerPktStatUniReqDelayRsp)	long	The value of tmnxPtpPeerPktStatUniReqDelayRsp indicates the accumulated packet statistics for Unicast Request Delay Response TLVs.
ptpPeerPktStatUniReqSync [Ptp Peer Pkt Stat Uni Req Sync] (tmnxPtpPeerPktStatUniReqSync)	long	The value of tmnxPtpPeerPktStatUniReqSync indicates the accumulated packet statistics for Unicast Request Sync TLVs.
ptpPeerPktStatsTimeStampCpm [Ptp Peer Pkt Stats Time Stamp Cpm] (tmnxPtpPeerPktStatTimeStampCpm)	long	The value of tmnxPtpPeerPktStatTimeStampCpm indicates the accumulated packet statistics for PTP event packets where the timestamp point is at the operating system kernel.
ptpPeerPktStatsTimeStampPort [Ptp Peer Pkt Stats Time Stamp Port] (tmnxPtpPeerPktStatTimeStampPort)	long	The value of tmnxPtpPeerPktStatTimeStampPort indicates the accumulated packet statistics for PTP event packets where the timestamp point is at the physical layer.

Table 567 radiusaccounting statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PolicyStats</p> <p>MIB entry name: tmnxSubAcctPlcyStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a subscriber RADIUS accounting policy in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxSubAcctPlcyStatsTable): The tmnxSubAcctPlcyStatsTable has an entry for each subscriber RADIUS accounting policy configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: radiusaccounting.Policy</p>		
receiveResponses [Receive Responses] (tmnxSubAcctPlcyRxResponses)	long	The value of tmnxSubAcctPlcyRxResponses indicates the number of accounting responses received for this policy.
requestRetries [Request Retries] (tmnxSubAcctPlcySendRetries)	long	The value of tmnxSubAcctPlcySendRetries indicates the number of retries to a different server for a single accounting request for this policy.
requestTimeOut [Request Time Out] (tmnxSubAcctPlcyReqTimeouts)	long	The value of tmnxSubAcctPlcyReqTimeouts indicates the number of accounting requests which have timed out for this policy.
requestsFail [Requests Fail] (tmnxSubAcctPlcySendFail)	long	The value of tmnxSubAcctPlcySendFail indicates how many accounting requests failed because the packet could not be sent out.
transferRequests [Transfer Requests] (tmnxSubAcctPlcyTxRequests)	long	The value of tmnxSubAcctPlcyTxRequests indicates the number of accounting requests transmitted for this policy.

Table 567 radiusaccounting statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>RadiusEntryStats</p> <p>MIB entry name: tmnxSubAcctPlcyRadStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a specific RADIUS server in a subscriber accounting policy in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxSubAcctPlcyRadStatsTable): The tmnxSubAcctPlcyRadStatsTable has an entry for each RADIUS accounting server configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: radiusaccounting.RadiusEntry</p>		
receiveResponses [Receive Responses] (tmnxSubAcctPlcyRadRxResponses)	long	The value of tmnxSubAcctPlcyRadRxResponses indicates the number of accounting responses received for this server.
requestTimeOut [Request Time Out] (tmnxSubAcctPlcyRadReqTimeouts)	long	The value of tmnxSubAcctPlcyRadReqTimeouts indicates the number of accounting requests which have timed out for this server.
requestsFail [Requests Fail] (tmnxSubAcctPlcyRadReqSendFail)	long	The value of tmnxSubAcctPlcyRadReqSendFail indicates the number of accounting requests failed because the packet could not be sent out.
transferRequests [Transfer Requests] (tmnxSubAcctPlcyRadTxRequests)	long	The value of tmnxSubAcctPlcyRadTxRequests indicates the number of accounting requests transmitted for this server.

Table 568 resubscr statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>BsxSubCustRecAppGrpStats</p> <p>MIB entry name: tmnxBsxStatAaSubEntry</p> <p>Entry description: Each tmnxBsxStatAaSubEntry contains the application assurance per-subscriber statistics for a combination of group, partition, statistics interval, subscriber, statistics type, and statistics name.</p> <p>Table description (for tmnxBsxStatAaSubTable): The tmnxBsxStatAaSubTable contains an entry for each application-assurance subscriber for each statistics type within a group, partition and statistics interval. Each row contains the application assurance per-subscriber statistics collected for the subscriber. A subscriber is uniquely identified by a tmnxBsxAaSubscriberType and tmnxBsxAaSubscriber.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: resubscr.ResidentialSubscriberInstance</p>		
aaSubscriber [Aa Subscriber] (tmnxBsxAaSubscriber)	String	The Application Assurance Subscriber identifier. The format of this object is determined by the value of the tmnxBsxAaSubscriberType.
activeFlowsFromSub [Active Flows From Sub] (tmnxBsxStatAaSubActFlwsFmSb)	long	The value of tmnxBsxStatAaSubActFlwsFmSb indicates the number of allowed flows in the subscriber to network direction that are active.
activeFlowsToSub [Active Flows To Sub] (tmnxBsxStatAaSubActFlwsToSb)	long	The value of tmnxBsxStatAaSubActFlwsToSb indicates the number of allowed flows in the network to subscriber direction that are active.
durationFlowsLong [Duration Flows Long] (tmnxBsxStatAaSubHCLngDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCLngDurFlws indicates the total number of flows with a duration greater than 180 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubLngDurFlws.
durationFlowsMedium [Duration Flows Medium] (tmnxBsxStatAaSubHCMedDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCMedDurFlws indicates the total number of flows with a duration less than or equal to 180 seconds, but greater than 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubMedDurFlws.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
durationFlowsShort [Duration Flows Short] (tmnxBsxStatAaSubHCSHrtDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCSHrtDurFlws indicates the total number of flows with a duration less than or equal to 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubShrtDurFlws.
flowsAdmitFromSub [Flows Admit From Sub] (tmnxBsxStatAaSubHCFIwsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCFIwsAdmFmSb indicates the total number of flows permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubFlwsAdmFmSb.
flowsAdmitToSub [Flows Admit To Sub] (tmnxBsxStatAaSubHCFIwsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCFIwsAdmToSb indicates the total number of flows permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubFlwsAdmToSb.
flowsDenyFromSub [Flows Deny From Sub] (tmnxBsxStatAaSubHCFIwsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCFIwsDnyFmSb indicates the total number of flows that dropped subsequent packets in the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubFlwsDnyFmSb.
flowsDenyToSub [Flows Deny To Sub] (tmnxBsxStatAaSubHCFIwsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCFIwsDnyToSb indicates the total number of flows that dropped subsequent packets in the network to subscriber direction. This object is the 64-bit version of tmnxBsxStatAaSubFlwsDnyToSb.
octsAdmitFromSub [Octs Admit From Sub] (tmnxBsxStatAaSubHCOctsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCOctsAdmFmSb indicates the total number of bytes permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubOctsAdmFmSb.
octsAdmitToSub [Octs Admit To Sub] (tmnxBsxStatAaSubHCOctsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCOctsAdmToSb indicates the total number of bytes permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubOctsAdmToSb.
octsDenyFromSub [Octs Deny From Sub] (tmnxBsxStatAaSubHCOctsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCOctsDnyFmSb indicates the total number of bytes dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubOctsDnyFmSb.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
octsDenyToSub [Octs Deny To Sub] (tmnxBsxStatAaSubHCOctsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCOctsDnyToSb indicates the total number of bytes dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubOctsDnyToSb.
pktsAdmitFromSub [Pkts Admit From Sub] (tmnxBsxStatAaSubHCPktsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsAdmFmSb indicates the total number of packets permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsAdmFmSb.
pktsAdmitToSub [Pkts Admit To Sub] (tmnxBsxStatAaSubHCPktsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsAdmToSb indicates the total number of packets permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsAdmToSb.
pktsDenyFromSub [Pkts Deny From Sub] (tmnxBsxStatAaSubHCPktsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsDnyFmSb indicates the total number of packets dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsDnyFmSb.
pktsDenyToSub [Pkts Deny To Sub] (tmnxBsxStatAaSubHCPktsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsDnyToSb indicates the total number of packets dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsDnyToSb.
statsInterval [Stats Interval] (tmnxBsxAaSubStatsInterval)	int	The tmnxBsxAaSubStatsInterval specifies the interval for the retrieval of application assurance subscriber statistics.
termFlowDuration [Term Flow Duration] (tmnxBsxStatAaSubHCTermFlwDur)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCTermFlwDur indicates the sum of all flow durations from first packet seen to last packet seen for flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubTermFlwDur.
termFlows [Term Flows] (tmnxBsxStatAaSubHCTermFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCTermFlws indicates the total number of allowed flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubTermFlws.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>BsxSubCustRecAppGrpUsageMonStats</p> <p>MIB entry name: tmnxBsxAaSubUsageMonEntry</p> <p>Entry description: The value of object tmnxBsxAaSubUsageMonEntry specifies an entry which stores the Application Assurance usage monitoring statistics for a combination of group, partition, statistics interval, subscriber, statistics type, and statistics name. An entry is added when a new rule is sent from the policy server. As protocols are not supported by Application Assurance usage monitoring, the tmnxBsxStatAaType value of 'protocol (1)' will never appear as part of the index. As only snapshot statistics collection is supported by Application Assurance usage monitoring, the tmnxBsxAaSubStatsInterval value of 'snapshot (2)' will always appear as part of the index.</p> <p>Table description (for tmnxBsxAaSubUsageMonTable): The value of object tmnxBsxAaSubUsageMonTable specifies an entry for each Application-Assurance subscriber for each statistics type within a group, partition and statistics interval. Each row contains the Application Assurance usage monitoring statistics collected for the subscriber, based on configuration in tmnxBsxStatAaSubCfgTable. Entries are based on Policy and Charging Control (PCC) rules received from the policy server which contain subscriber, and statistic type/name information. A subscriber is uniquely identified by a tmnxBsxAaSubscriberType and tmnxBsxAaSubscriber. The typical usage of this table is to fill in the part of the index that identifies a subscriber (tmnxBsxAaGrpPartIndex, tmnxBsxAaSubStatsInterval, tmnxBsxAaSubscriberType and tmnxBsxAaSubscriber), and perform a partial walk to retrieve the usage information. In order to prevent real-time issues, an SNMP get next request which results in a change in subscriber will return not-found.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: ressubscr.ResidentialSubscriberInstance</p>		
operationStatus [Operation Status] (tmnxBsxAaSubUMOperStatus)	int	The value of tmnxBsxAaSubUMOperStatus indicates the operational state for the usage monitor. When 'active (2)', a rule has been received and credits have been sent from policy server. When 'inactive (1)', a rule has been received but no credits have been sent from policy server. When 'adminDisabled (0)', a rule has been 'shutdown' on the policy server.
umBothGrantCredit [Um Both Grant Credit] (tmnxBsxAaSubUMBothGrantCredit)	java. math. BigInteger	The value of tmnxBsxAaSubUMBothGrantCredit indicates the amount of credits allocated by the policy server for either direction.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
umBothGrantStatus [Um Both Grant Status] (tmnxBsxAaSubUMBothGrantStatus)	int	The value of tmnxBsxAaSubUMBothGrantStatus indicates grant status for the network to subscriber direction.
umBothUsedCredit [Um Both Used Credit] (tmnxBsxAaSubUMBothUsedCredit)	java. math. BigInteger	The value of tmnxBsxAaSubUMBothUsedCredit indicates the amount of credits used by either direction.
umFromSubGrantCredit [Um From Sub Grant Credit] (tmnxBsxAaSubUMFmSubGrantCredit)	java. math. BigInteger	The value of tmnxBsxAaSubUMFmSubGrantCredit indicates the amount of credits allocated by the policy server for the subscriber to network direction.
umFromSubGrantStatus [Um From Sub Grant Status] (tmnxBsxAaSubUMFmSubGrantStatus)	int	The value of tmnxBsxAaSubUMFmSubGrantStatus indicates grant status for the subscriber to network direction.
umFromSubUsedCredit [Um From Sub Used Credit] (tmnxBsxAaSubUMFmSubUsedCredit)	java. math. BigInteger	The value of tmnxBsxAaSubUMFmSubUsedCredit indicates the amount of credits used by the subscriber to network direction.
umToSubGrantCredit [Um To Sub Grant Credit] (tmnxBsxAaSubUMToSubGrantCredit)	java. math. BigInteger	The value of tmnxBsxAaSubUMToSubGrantCredit indicates the amount of credits allocated by the policy server for the network to subscriber direction.
umToSubGrantStatus [Um To Sub Grant Status] (tmnxBsxAaSubUMToSubGrantStatus)	int	The value of tmnxBsxAaSubUMToSubGrantStatus indicates grant status for the network to subscriber direction.
umToSubUsedCredit [Um To Sub Used Credit] (tmnxBsxAaSubUMToSubUsedCredit)	java. math. BigInteger	The value of tmnxBsxAaSubUMToSubUsedCredit indicates the amount of credits used by the network to subscriber direction.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>BsxSubCustRecAppStats</p> <p>MIB entry name: tmnxBsxStatAaSubEntry</p> <p>Entry description: Each tmnxBsxStatAaSubEntry contains the application assurance per-subscriber statistics for a combination of group, partition, statistics interval, subscriber, statistics type, and statistics name.</p> <p>Table description (for tmnxBsxStatAaSubTable): The tmnxBsxStatAaSubTable contains an entry for each application-assurance subscriber for each statistics type within a group, partition and statistics interval. Each row contains the application assurance per-subscriber statistics collected for the subscriber. A subscriber is uniquely identified by a tmnxBsxAaSubscriberType and tmnxBsxAaSubscriber.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: ressubscr.ResidentialSubscriberInstance</p>		
aaSubscriber [Aa Subscriber] (tmnxBsxAaSubscriber)	String	The Application Assurance Subscriber identifier. The format of this object is determined by the value of the tmnxBsxAaSubscriberType.
activeFlowsFromSub [Active Flows From Sub] (tmnxBsxStatAaSubActFlwsFmSb)	long	The value of tmnxBsxStatAaSubActFlwsFmSb indicates the number of allowed flows in the subscriber to network direction that are active.
activeFlowsToSub [Active Flows To Sub] (tmnxBsxStatAaSubActFlwsToSb)	long	The value of tmnxBsxStatAaSubActFlwsToSb indicates the number of allowed flows in the network to subscriber direction that are active.
durationFlowsLong [Duration Flows Long] (tmnxBsxStatAaSubHCLngDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCLngDurFlws indicates the total number of flows with a duration greater than 180 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubLngDurFlws.
durationFlowsMedium [Duration Flows Medium] (tmnxBsxStatAaSubHCMedDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCMedDurFlws indicates the total number of flows with a duration less than or equal to 180 seconds, but greater than 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubMedDurFlws.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
durationFlowsShort [Duration Flows Short] (tmnxBsxStatAaSubHCShrtDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCShrtDurFlws indicates the total number of flows with a duration less than or equal to 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubShrtDurFlws.
flowsAdmitFromSub [Flows Admit From Sub] (tmnxBsxStatAaSubHCFIwsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCFIwsAdmFmSb indicates the total number of flows permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubFlwsAdmFmSb.
flowsAdmitToSub [Flows Admit To Sub] (tmnxBsxStatAaSubHCFIwsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCFIwsAdmToSb indicates the total number of flows permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubFlwsAdmToSb.
flowsDenyFromSub [Flows Deny From Sub] (tmnxBsxStatAaSubHCFIwsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCFIwsDnyFmSb indicates the total number of flows that dropped subsequent packets in the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubFlwsDnyFmSb.
flowsDenyToSub [Flows Deny To Sub] (tmnxBsxStatAaSubHCFIwsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCFIwsDnyToSb indicates the total number of flows that dropped subsequent packets in the network to subscriber direction. This object is the 64-bit version of tmnxBsxStatAaSubFlwsDnyToSb.
octsAdmitFromSub [Octs Admit From Sub] (tmnxBsxStatAaSubHCOctsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCOctsAdmFmSb indicates the total number of bytes permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubOctsAdmFmSb.
octsAdmitToSub [Octs Admit To Sub] (tmnxBsxStatAaSubHCOctsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCOctsAdmToSb indicates the total number of bytes permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubOctsAdmToSb.
octsDenyFromSub [Octs Deny From Sub] (tmnxBsxStatAaSubHCOctsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCOctsDnyFmSb indicates the total number of bytes dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubOctsDnyFmSb.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
octsDenyToSub [Octs Deny To Sub] (tmnxBsxStatAaSubHCOctsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCOctsDnyToSb indicates the total number of bytes dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubOctsDnyToSb.
pktsAdmitFromSub [Pkts Admit From Sub] (tmnxBsxStatAaSubHCPktsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsAdmFmSb indicates the total number of packets permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsAdmFmSb.
pktsAdmitToSub [Pkts Admit To Sub] (tmnxBsxStatAaSubHCPktsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsAdmToSb indicates the total number of packets permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsAdmToSb.
pktsDenyFromSub [Pkts Deny From Sub] (tmnxBsxStatAaSubHCPktsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsDnyFmSb indicates the total number of packets dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsDnyFmSb.
pktsDenyToSub [Pkts Deny To Sub] (tmnxBsxStatAaSubHCPktsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsDnyToSb indicates the total number of packets dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsDnyToSb.
statsInterval [Stats Interval] (tmnxBsxAaSubStatsInterval)	int	The tmnxBsxAaSubStatsInterval specifies the interval for the retrieval of application assurance subscriber statistics.
termFlowDuration [Term Flow Duration] (tmnxBsxStatAaSubHCTermFlwDur)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCTermFlwDur indicates the sum of all flow durations from first packet seen to last packet seen for flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubTermFlwDur.
termFlows [Term Flows] (tmnxBsxStatAaSubHCTermFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCTermFlws indicates the total number of allowed flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubTermFlws.

BigInteger	The value of tmnxBsxStatAaSubSdyHCShrtDurFlws indicates the total number of flows with a duration less than or equal to 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubSdyShrtDurFlws.
flowsAdmitFromSub [Flows Admit From Sub] (tmnxBsxStatAaSubSdyHCFIwsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFIwsAdmFmSb indicates the total number of flows permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsAdmFmSb.
flowsAdmitToSub [Flows Admit To Sub] (tmnxBsxStatAaSubSdyHCFIwsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFIwsAdmToSb indicates the total number of flows permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsAdmToSb.
flowsDenyFromSub [Flows Deny From Sub] (tmnxBsxStatAaSubSdyHCFIwsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFIwsDnyFmSb indicates the total number of flows that dropped subsequent packets in the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsDnyFmSb.
flowsDenyToSub [Flows Deny To Sub] (tmnxBsxStatAaSubSdyHCFIwsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFIwsDnyToSb indicates the total number of flows that dropped subsequent packets in the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsDnyToSb.
octsAdmitFromSub [Octs Admit From Sub] (tmnxBsxStatAaSubSdyHCOctsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsAdmFmSb indicates the total number of bytes permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsAdmFmSb.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
octsAdmitToSub [Octs Admit To Sub] (tmnxBsxStatAaSubSdyHCOctsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsAdmToSb indicates the total number of bytes permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsAdmToSb.
octsDenyFromSub [Octs Deny From Sub] (tmnxBsxStatAaSubSdyHCOctsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsDnyFmSb indicates the total number of bytes dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsDnyFmSb.
octsDenyToSub [Octs Deny To Sub] (tmnxBsxStatAaSubSdyHCOctsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsDnyToSb indicates the total number of bytes dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsDnyToSb.
pktsAdmitFromSub [Pkts Admit From Sub] (tmnxBsxStatAaSubSdyHCPktsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsAdmFmSb indicates the total number of packets permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsAdmFmSb.
pktsAdmitToSub [Pkts Admit To Sub] (tmnxBsxStatAaSubSdyHCPktsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsAdmToSb indicates the total number of packets permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsAdmToSb.
pktsDenyFromSub [Pkts Deny From Sub] (tmnxBsxStatAaSubSdyHCPktsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsDnyFmSb indicates the total number of packets dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsDnyFmSb.
pktsDenyToSub [Pkts Deny To Sub] (tmnxBsxStatAaSubSdyHCPktsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsDnyToSb indicates the total number of packets dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsDnyToSb.
termFlowDuration [Term Flow Duration] (tmnxBsxStatAaSubSdyHCTermFlwDur)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCTermFlwDur indicates the sum of all flow durations from first packet seen to last packet seen for flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubSdyTermFlwDur.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
termFlows [Term Flows] (tmnxBsxStatAaSubSdyHCTermFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCTermFlws indicates the total number of allowed flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubSdyTermFlws.
<p>BsxSubStudyProtStats</p> <p>MIB entry name: tmnxBsxStatAaSubEntry</p> <p>Entry description: Each tmnxBsxStatAaSubEntry contains the application assurance per-subscriber statistics for a combination of group, partition, statistics interval, subscriber, statistics type, and statistics name.</p> <p>Table description (for tmnxBsxStatAaSubTable): The tmnxBsxStatAaSubTable contains an entry for each application-assurance subscriber for each statistics type within a group, partition and statistics interval. Each row contains the application assurance per-subscriber statistics collected for the subscriber. A subscriber is uniquely identified by a tmnxBsxAaSubscriberType and tmnxBsxAaSubscriber.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: ressubscr.ResidentialSubscriberInstance</p>		
aaSubscriber [Aa Subscriber] (tmnxBsxAaSubscriber)	String	The Application Assurance Subscriber identifier. The format of this object is determined by the value of the tmnxBsxAaSubscriberType.
activeFlowsFromSub [Active Flows From Sub] (tmnxBsxStatAaSubSdyActFlwsFmSb)	long	The value of tmnxBsxStatAaSubSdyActFlwsFmSb indicates the number of allowed flows in the subscriber to network direction that are active.
activeFlowsToSub [Active Flows To Sub] (tmnxBsxStatAaSubSdyActFlwsToSb)	long	The value of tmnxBsxStatAaSubSdyActFlwsToSb indicates the number of allowed flows in the network to subscriber direction that are active.
durationFlowsLong [Duration Flows Long] (tmnxBsxStatAaSubSdyHCLngDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCLngDurFlws indicates the total number of flows with a duration greater than 180 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubSdyLngDurFlws.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
durationFlowsMedium [Duration Flows Medium] (tmnxBsxStatAaSubSdyHCMedDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCMedDurFlws indicates the total number of flows with a duration less than or equal to 180 seconds, but greater than 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubSdyMedDurFlws.
durationFlowsShort [Duration Flows Short] (tmnxBsxStatAaSubSdyHCShrtDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCShrtDurFlws indicates the total number of flows with a duration less than or equal to 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubSdyShrtDurFlws.
flowsAdmitFromSub [Flows Admit From Sub] (tmnxBsxStatAaSubSdyHCFlwsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFlwsAdmFmSb indicates the total number of flows permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsAdmFmSb.
flowsAdmitToSub [Flows Admit To Sub] (tmnxBsxStatAaSubSdyHCFlwsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFlwsAdmToSb indicates the total number of flows permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsAdmToSb.
flowsDenyFromSub [Flows Deny From Sub] (tmnxBsxStatAaSubSdyHCFlwsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFlwsDnyFmSb indicates the total number of flows that dropped subsequent packets in the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsDnyFmSb.
flowsDenyToSub [Flows Deny To Sub] (tmnxBsxStatAaSubSdyHCFlwsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFlwsDnyToSb indicates the total number of flows that dropped subsequent packets in the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsDnyToSb.
octsAdmitFromSub [Octs Admit From Sub] (tmnxBsxStatAaSubSdyHCOctsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsAdmFmSb indicates the total number of bytes permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsAdmFmSb.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
octsAdmitToSub [Octs Admit To Sub] (tmnxBsxStatAaSubSdyHCOctsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsAdmToSb indicates the total number of bytes permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsAdmToSb.
octsDenyFromSub [Octs Deny From Sub] (tmnxBsxStatAaSubSdyHCOctsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsDnyFmSb indicates the total number of bytes dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsDnyFmSb.
octsDenyToSub [Octs Deny To Sub] (tmnxBsxStatAaSubSdyHCOctsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsDnyToSb indicates the total number of bytes dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsDnyToSb.
pktsAdmitFromSub [Pkts Admit From Sub] (tmnxBsxStatAaSubSdyHCPktsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsAdmFmSb indicates the total number of packets permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsAdmFmSb.
pktsAdmitToSub [Pkts Admit To Sub] (tmnxBsxStatAaSubSdyHCPktsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsAdmToSb indicates the total number of packets permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsAdmToSb.
pktsDenyFromSub [Pkts Deny From Sub] (tmnxBsxStatAaSubSdyHCPktsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsDnyFmSb indicates the total number of packets dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsDnyFmSb.
pktsDenyToSub [Pkts Deny To Sub] (tmnxBsxStatAaSubSdyHCPktsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsDnyToSb indicates the total number of packets dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsDnyToSb.
protName [Prot Name] (tmnxBsxStatAaName)	String	The value of tmnxBsxStatAaName specifies either the ISA-AA protocol, application or app-group name for which statistics are requested. The tmnxBsxStatAaType is used to determine the statistics type.

Table 568 resubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
termFlowDuration [Term Flow Duration] (tmnxBsxStatAaSubSdyHCTermFlwDur)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCTermFlwDur indicates the sum of all flow durations from first packet seen to last packet seen for flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubSdyTermFlwDur.
termFlows [Term Flows] (tmnxBsxStatAaSubSdyHCTermFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCTermFlws indicates the total number of allowed flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubSdyTermFlws.
HostTrackStats MIB entry name: sapBaselInfoEntry Entry description: Information about a specific SAP. Table description (for sapBaselInfoTable): A table that contains basic SAP information. Supports realtime plotting Does not support scheduled collection Monitored class: resubscr.ResidentialSubscriberInstance		
sapInnerEncapValue [Sap Inner Encap Value] (sapEncapValue)	long	The value of the label used to identify this SAP on the access port specified by sapPortId.
sapPortId [Sap Port Id] (sapPortId)	String	The ID of the access port where this SAP is defined.
serviceId [Service Id] (svclId)	long	The value of the object svclId specifies the Service identifier. This value should be unique within the service domain.
statsType [Stats Type] (tmnxSubHostTrkStatsType)	int	The value of tmnxSubHostTrkStatsType indicates the type of host tracking statistics contained in tmnxSubHostTrkStatsVal.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
statsValue [Stats Value] (tmnxSubHostTrkStatsVal)	long	The value of tmnxSubHostTrkStatsType indicates the value of the host tracking statistics of the type indicated by tmnxSubHostTrkStatsType, for this subscriber host.
subscrIdent [Subscr Ident] (tmnxSubInfoSubIdent)	String	The value of tmnxSubInfoSubIdent specifies the subscriber identification of this subscriber.
subscriberHostAddress [Subscriber Host Address] (tmnxSubHostInfoV2IpAddress)	String	The value of tmnxSubHostInfoV2IpAddress specifies the IP address of this subscriber host.
subscriberHostAddressType [Subscriber Host Address Type] (tmnxSubHostInfoV2IpAddressType)	int	The value of tmnxSubHostInfoV2IpAddressType specifies the type of address stored in tmnxSubHostInfoV2IpAddress.
<p>HostTrackStatsOnSap</p> <p>MIB entry name: tmnxSubHostSapTrkStatsEntry</p> <p>Entry description: Each row entry represents host tracking status and statistics information about a particular host. Rows are created or removed automatically by the system. Rows are only created where the statistics value is nonzero; this allows faster walking through this table; hence, it is recommended to perform only get-next-request operations to retrieve information from this table.</p> <p>Table description (for tmnxSubHostSapTrkStatsTable): The tmnxSubHostSapTrkStatsTable shows statistics information about the video viewership of hosts, ordered by SAP.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • ies.ServiceAccessPoint • vpls.AbstractL2AccessInterface • vprn.ServiceAccessPoint 		

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
statsType [Stats Type] (tmnxSubHostSapTrkStatsType)	int	The value of tmnxSubHostSapTrkStatsType indicates the type of host tracking statistics contained in tmnxSubHostSapTrkStatsVal.
statsValue [Stats Value] (tmnxSubHostSapTrkStatsVal)	long	The value of tmnxSubHostSapTrkStatsType indicates the value of the host tracking statistics of the type indicated by tmnxSubHostSapTrkStatsType, for this host.
subscriberHostAddress [Subscriber Host Address] (tmnxSubHostSapTrkHostAddr)	String	The value of tmnxSubHostSapTrkHostAddr indicates the address of the host.
subscriberHostAddressType [Subscriber Host Address Type] (tmnxSubHostSapTrkHostAddrType)	int	The value of tmnxSubHostSapTrkHostAddrType indicates the address type of tmnxSubHostSapTrkHostAddr.
<p>PppSubscrSessionStats</p> <p>MIB entry name: tmnxSubPppSvcTypeEntry</p> <p>Entry description: Each conceptual row represents information about a specific type of subscriber PPP in a specific service. Entries in this table are created and destroyed by the system.</p> <p>Table description (for tmnxSubPppSvcTypeTable): The tmnxSubPppSvcTypeTable has information for each each type of subscriber PPP Session, ordered per service.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • ies.Site • vprn.Site 		
pPPType [PPPType] (tmnxSubPppSvcTypeIndex)	int	The value of the object tmnxSubPppSvcTypeIndex indicates the type of subscriber PPP.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pPPoL2tp [PPPo L2 tp] (tmnxSubPppSvcTypeSessions)	long	The value of the object tmnxSubPppSvcTypeSessions indicates the actual number of PPP session of this type.
<p>SLAEgrQoS SchedStats</p> <p>MIB entry name: tmnxSPIEgrQoS SchedStatsEntry</p> <p>Entry description: Each row entry contains egress statistics about a particular SLA profile instance QoS scheduler.</p> <p>Table description (for tmnxSPIEgrQoS SchedStatsTable): The tmnxSPIEgrQoS SchedStatsTable contains egress QoS scheduler statistics about SLA profile instances. In the descriptions below 'Pchip' refers to the Nokia SROS series Packet Processing chip, while 'Qchip' refers to the Nokia SROS series QoS Queueing Engine chip.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ressubscr.ResidentialSubscriberInstance</p>		
egrQoS SchedStatsFwdOctets [Egr Qos Sched Stats Fwd Octets] (tmnxSPIEgrQoS SchedStatsFwdOctets)	java. math. BigInteger	The value of tmnxSPIEgrQoS SchedStatsFwdOctets indicates the number of forwarded octets by the egress Qchip, as determined by the SLA profile instance egress scheduler policy.
egrQoS SchedStatsFwdPkts [Egr Qos Sched Stats Fwd Pkts] (tmnxSPIEgrQoS SchedStatsFwdPkts)	java. math. BigInteger	The value of tmnxSPIEgrQoS SchedStatsFwdPkts indicates the number of forwarded packets by the egress Qchip, as determined by the SLA profile instance egress scheduler policy.
egrQoS SchedStatsName [Egr Qos Sched Stats Name] (tmnxSPIEgrQoS SchedStatsName)	String	The value of tmnxSPIEgrQoS SchedStatsName specifies the egress QoS scheduler of this SLA profile instance.
encapValue [Encap Value] (sapEncapValue)	long	The value of the label used to identify this SAP on the access port specified by sapPortId.
portId [Port Id] (sapPortId)	long	The ID of the access port where this SAP is defined.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
slaProfileName [Sla Profile Name] (tmnxSLAProfName)	String	The value of tmnxSLAProfName specifies the name of the SLA profile.
subIdent [Sub Ident] (tmnxSubInfoSubIdent)	String	The value of tmnxSubInfoSubIdent specifies the subscriber identification of this subscriber.
<p>SLAProfInstEgrPStats</p> <p>MIB entry name: tmnxSLAProfInstEgrPStatsEntry</p> <p>Entry description: Each row entry contains egress statistics about a particular SLA profile instance QoS policer.</p> <p>Table description (for tmnxSLAProfInstEgrPStatsTable): The tmnxSLAProfInstEgrPStatsTable contains egress QoS policer statistics about SLA profile instances. ingQStatsDropV6Packets [Ing QStats Drop V6 Packets] (tmnxSPInQStatsDropLoPrioPkts)	java. math. BigInteger	The value of tmnxSPInQStatsDropLoPrioPkts indicates the number of low priority packets, as determined by the SLA profile ingress QoS policy, dropped by the Qchip.
ingQStatsFwdV4Octets [Ing QStats Fwd V4 Octets] (tmnxSPInQStatsFwdInProfOctets)	java. math. BigInteger	The value of tmnxSPInQStatsFwdInProfOctets indicates the number of in-profile octets (rate below CIR) forwarded by the ingress Qchip.
ingQStatsFwdV4Packets [Ing QStats Fwd V4 Packets] (tmnxSPInQStatsFwdInProfPkts)	java. math. BigInteger	The value of tmnxSPInQStatsFwdInProfPkts indicates the number of in-profile packets (rate below CIR) forwarded by the ingress Qchip.
ingQStatsFwdV6Octets [Ing QStats Fwd V6 Octets] (tmnxSPInQStatsFwdOutProfOctets)	java. math. BigInteger	The value of tmnxSPInQStatsFwdOutProfOctets indicates the number of out-of-profile octets (rate above CIR) forwarded by the ingress Qchip.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingQStatsFwdV6Packets [Ing QStats Fwd V6 Packets] (tmnxSPIngQStatsFwdOutProfPkts)	java. math. BigInteger	The value of tmnxSPIngQStatsFwdOutProfPkts indicates the number of out-of-profile packets (rate above CIR) forwarded by the ingress Qchip.
ingQStatsOffHiPriorityOctets [Ing QStats Off Hi Priority Octets] (tmnxSPIngQStatsOffHiPrioOctets)	java. math. BigInteger	The value of tmnxSPIngQStatsOffHiPrioOctets indicates the number of high priority octets, as determined by the SLA profile ingress QoS policy, offered by the Pchip to the Qchip.
ingQStatsOffHiPriorityPackets [Ing QStats Off Hi Priority Packets] (tmnxSPIngQStatsOffHiPrioPkts)	java. math. BigInteger	The value of tmnxSPIngQStatsOffHiPrioPkts indicates the number of high priority packets, as determined by the SLA profile ingress QoS policy, offered by the Pchip to the Qchip.
ingQStatsOffLoPriorityOctets [Ing QStats Off Lo Priority Octets] (tmnxSPIngQStatsOffLoPrioOctets)	java. math. BigInteger	The value of tmnxSPIngQStatsOffLoPrioOctets indicates the number of low priority octets, as determined by the SLA profile ingress QoS policy, offered by the Pchip to the Qchip.
ingQStatsOffLoPriorityPackets [Ing QStats Off Lo Priority Packets] (tmnxSPIngQStatsOffLoPrioPkts)	java. math. BigInteger	The value of tmnxSPIngQStatsOffLoPrioPkts indicates the number of low priority packets, as determined by the SLA profile ingress QoS policy, offered by the Pchip to the Qchip.
ingQStatsQueueId [Ing QStats Queue Id] (tmnxSPIngQStatsQueueId)	long	The value of tmnxSPIngQStatsQueueId specifies the index of the ingress QoS queue of this SLA profile instance.
portId [Port Id] (sapPortId)	long	The ID of the access port where this SAP is defined.
slaProfileName [Sla Profile Name] (tmnxSLAProfName)	String	The value of tmnxSLAProfName specifies the name of the SLA profile.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SLAProfInstStats</p> <p>MIB entry name: tmnxSLAProfInstStatsEntry</p> <p>Entry description: Each row entry contains basic statistics about a particular SLA profile instance.</p> <p>Table description (for tmnxSLAProfInstStatsTable): The tmnxSLAProfInstStatsTable contains basic statistics about SLA profile instances. egrQchipDropV6Octets [Egr Qchip Drop V6 Octets] (tmnxSPIStatsEgrQchipDropV6Octets)	java. math. BigInteger	The value of tmnxSPIStatsEgrQchipDropV6Octets indicates the number of V6 octets dropped by the egress Qchip.
egrQchipDropV6Packets [Egr Qchip Drop V6 Packets] (tmnxSPIStatsEgrQchipDropV6Pkts)	java. math. BigInteger	The value of tmnxSPIStatsEgrQchipDropV6Pkts indicates the number of V6 packets dropped by the egress Qchip.
egrQchipFwdInProfileOctets [Egr Qchip Fwd In Profile Octets] (tmnxSPIStatsEgrQchipFwdInProfOctets)	java. math. BigInteger	The value of tmnxSPIStatsEgrQchipFwdInProfOctets indicates the number of in-profile octets (rate below CIR) forwarded by the egress Qchip.
egrQchipFwdInProfilePackets [Egr Qchip Fwd In Profile Packets] (tmnxSPIStatsEgrQchipFwdInProfPkts)	java. math. BigInteger	The value of tmnxSPIStatsEgrQchipFwdInProfPkts indicates the number of in-profile packets (rate below CIR) forwarded by the egress Qchip.
egrQchipFwdOutProfileOctets [Egr Qchip Fwd Out Profile Octets] (tmnxSPIStatsEgrQchipFwdOutProfOctets)	java. math. BigInteger	The value of tmnxSPIStatsEgrQchipFwdOutProfOctets indicates the number of out-of-profile octets (rate above CIR) forwarded by the egress Qchip.
egrQchipFwdOutProfilePackets [Egr Qchip Fwd Out Profile Packets] (tmnxSPIStatsEgrQchipFwdOutProfPkts)	java. math. BigInteger	The value of tmnxSPIStatsEgrQchipFwdOutProfPkts indicates the number of out-of-profile packets (rate above CIR) forwarded by the egress Qchip.
egrQchipFwdV4Octets [Egr Qchip Fwd V4 Octets] (tmnxSPIStatsEgrQchipFwdV4Octets)	java. math. BigInteger	The value of tmnxSPIStatsEgrQchipFwdV4Octets indicates the number of V4 octets forwarded by the egress Qchip.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrQchipFwdV4Packets [Egr Qchip Fwd V4 Packets] (tmnxSPIStatsEgrQchipFwdV4Pkts)	java. math. BigInteger	The value of tmnxSPIStatsEgrQchipFwdV4Pkts indicates the number of V4 packets forwarded by the egress Qchip.
egrQchipFwdV6Octets [Egr Qchip Fwd V6 Octets] (tmnxSPIStatsEgrQchipFwdV6Octets)	java. math. BigInteger	The value of tmnxSPIStatsEgrQchipFwdV6Octets indicates the number of V6 octets forwarded by the egress Qchip.
egrQchipFwdV6Packets [Egr Qchip Fwd V6 Packets] (tmnxSPIStatsEgrQchipFwdV6Pkts)	java. math. BigInteger	The value of tmnxSPIStatsEgrQchipFwdV6Pkts indicates the number of V6 packets forwarded by the egress Qchip.
encapValue [Encap Value] (sapEncapValue)	long	The value of the label used to identify this SAP on the access port specified by sapPortId.
ingPchipOffHiPriorityOctets [Ing Pchip Off Hi Priority Octets] (tmnxSPIStatsIngPchipOffHiPrioOctets)	java. math. BigInteger	The value of tmnxSPIStatsIngPchipOffHiPrioOctets indicates the number of high priority octets as determined by the SLA profile ingress QoS policy, offered by the Pchip to the Qchip.
ingPchipOffHiPriorityPackets [Ing Pchip Off Hi Priority Packets] (tmnxSPIStatsIngPchipOffHiPrioPkts)	java. math. BigInteger	The value of tmnxSPIStatsIngPchipOffHiPrioPkts indicates the number of high priority packets as determined by the SLA profile ingress QoS policy, offered by the Pchip to the Qchip.
ingPchipOffLoPriorityOctets [Ing Pchip Off Lo Priority Octets] (tmnxSPIStatsIngPchipOffLoPrioOctets)	java. math. BigInteger	The value of tmnxSPIStatsIngPchipOffLoPrioOctets indicates the number of low priority octets as determined by the SLA profile ingress QoS policy, offered by the Pchip to the Qchip.
ingPchipOffLoPriorityPackets [Ing Pchip Off Lo Priority Packets] (tmnxSPIStatsIngPchipOffLoPrioPkts)	java. math. BigInteger	The value of tmnxSPIStatsIngPchipOffLoPrioPkts indicates the number of low priority packets as determined by the SLA profile ingress QoS policy, offered by the Pchip to the Qchip.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingPchipOffUncoloredOctets [Ing Pchip Off Uncolored Octets] (tmnxSPIStatsIngPchipOffUncolOctets)	java. math. BigInteger	The value of tmnxSPIStatsIngPchipOffUncolOctets indicates the number of uncolored octets as determined by the SLA profile ingress QoS policy, offered by the Pchip to the Qchip.
ingPchipOffUncoloredPackets [Ing Pchip Off Uncolored Packets] (tmnxSPIStatsIngPchipOffUncolPkts)	java. math. BigInteger	The value of tmnxSPIStatsIngPchipOffUncolPkts indicates the number of uncolored packets as determined by the SLA profile ingress QoS policy, offered by the Pchip to the Qchip.
ingPchipOffV4Octets [Ing Pchip Off V4 Octets] (tmnxSPIStatsIngPchipOffV4Octets)	java. math. BigInteger	The value of tmnxSPIStatsIngPchipOffV4Octets indicates the number of V4 octets offered by the Pchip to the Qchip.
ingPchipOffV4Packets [Ing Pchip Off V4 Packets] (tmnxSPIStatsIngPchipOffV4Pkts)	java. math. BigInteger	The value of tmnxSPIStatsIngPchipOffV4Pkts indicates the number of V4 packets offered by the Pchip to the Qchip.
ingPchipOffV6Octets [Ing Pchip Off V6 Octets] (tmnxSPIStatsIngPchipOffV6Octets)	java. math. BigInteger	The value of tmnxSPIStatsIngPchipOffV6Octets indicates the number of V6 octets offered by the Pchip to the Qchip.
ingPchipOffV6Packets [Ing Pchip Off V6 Packets] (tmnxSPIStatsIngPchipOffV6Pkts)	java. math. BigInteger	The value of tmnxSPIStatsIngPchipOffV6Pkts indicates the number of V6 packets offered by the Pchip to the Qchip.
ingQchipDropHiPriorityOctets [Ing Qchip Drop Hi Priority Octets] (tmnxSPIStatsIngQchipDropHiPrioOctets)	java. math. BigInteger	The value of tmnxSPIStatsIngQchipDropHiPrioOctets indicates the number of high priority octets as determined by the SLA profile ingress QoS policy, dropped by the Qchip.
ingQchipDropHiPriorityPackets [Ing Qchip Drop Hi Priority Packets] (tmnxSPIStatsIngQchipDropHiPrioPkts)	java. math. BigInteger	The value of tmnxSPIStatsIngQchipDropHiPrioPkts indicates the number of high priority packets as determined by the SLA profile ingress QoS policy, dropped by the Qchip.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingQchipDropLoPriorityOctets [Ing Qchip Drop Lo Priority Octets] (tmnxSPIStatsIngQchipDropLoPrioOctets)	java. math. BigInteger	The value of tmnxSPIStatsIngQchipDropLoPrioOctets indicates the number of low priority octets as determined by the SLA profile ingress QoS policy, dropped by the Qchip.
ingQchipDropLoPriorityPackets [Ing Qchip Drop Lo Priority Packets] (tmnxSPIStatsIngQchipDropLoPrioPkts)	java. math. BigInteger	The value of tmnxSPIStatsIngQchipDropLoPrioPkts indicates the number of low priority packets as determined by the SLA profile ingress QoS policy, dropped by the Qchip.
ingQchipDropV4Octets [Ing Qchip Drop V4 Octets] (tmnxSPIStatsIngQchipDropV4Octets)	java. math. BigInteger	The value of tmnxSPIStatsIngQchipDropV4Octets indicates the number of V4 octets dropped by the ingress Qchip.
ingQchipDropV4Packets [Ing Qchip Drop V4 Packets] (tmnxSPIStatsIngQchipDropV4Pkts)	java. math. BigInteger	The value of tmnxSPIStatsIngQchipDropV4Pkts indicates the number of V4 packets dropped by the ingress Qchip.
ingQchipDropV6Octets [Ing Qchip Drop V6 Octets] (tmnxSPIStatsIngQchipDropV6Octets)	java. math. BigInteger	The value of tmnxSPIStatsIngQchipDropV6Octets indicates the number of V6 octets dropped by the ingress Qchip.
ingQchipDropV6Packets [Ing Qchip Drop V6 Packets] (tmnxSPIStatsIngQchipDropV6Pkts)	java. math. BigInteger	The value of tmnxSPIStatsIngQchipDropV6Pkts indicates the number of V6 packets dropped by the ingress Qchip.
ingQchipFwdInProfileOctets [Ing Qchip Fwd In Profile Octets] (tmnxSPIStatsIngQchipFwdInProfOctets)	java. math. BigInteger	The value of tmnxSPIStatsIngQchipFwdInProfOctets indicates the number of in-profile octets (rate below CIR) forwarded by the ingress Qchip.
ingQchipFwdInProfilePackets [Ing Qchip Fwd In Profile Packets] (tmnxSPIStatsIngQchipFwdInProfPkts)	java. math. BigInteger	The value of tmnxSPIStatsIngQchipFwdInProfPkts indicates the number of in-profile packets (rate below CIR) forwarded by the ingress Qchip.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingQchipFwdOutProfileOctets [Ing Qchip Fwd Out Profile Octets] (tmnxSPIStatsIngQchipFwdOutProfOctets)	java. math. BigInteger	The value of tmnxSPIStatsIngQchipFwdOutProfOctets indicates the number of out-of-profile octets (rate above CIR) forwarded by the ingress Qchip.
ingQchipFwdOutProfilePackets [Ing Qchip Fwd Out Profile Packets] (tmnxSPIStatsIngQchipFwdOutProfPkts)	java. math. BigInteger	The value of tmnxSPIStatsIngQchipFwdOutProfPkts indicates the number of out-of-profile packets (rate above CIR) forwarded by the ingress Qchip.
ingQchipFwdV4Octets [Ing Qchip Fwd V4 Octets] (tmnxSPIStatsIngQchipFwdV4Octets)	java. math. BigInteger	The value of tmnxSPIStatsIngQchipFwdV4Octets indicates the number of V4 octets forwarded by the ingress Qchip.
ingQchipFwdV4Packets [Ing Qchip Fwd V4 Packets] (tmnxSPIStatsIngQchipFwdV4Pkts)	java. math. BigInteger	The value of tmnxSPIStatsIngQchipFwdV4Pkts indicates the number of V4 packets forwarded by the ingress Qchip.
ingQchipFwdV6Octets [Ing Qchip Fwd V6 Octets] (tmnxSPIStatsIngQchipFwdV6Octets)	java. math. BigInteger	The value of tmnxSPIStatsIngQchipFwdV6Octets indicates the number of V6 octets forwarded by the ingress Qchip.
ingQchipFwdV6Packets [Ing Qchip Fwd V6 Packets] (tmnxSPIStatsIngQchipFwdV6Pkts)	java. math. BigInteger	The value of tmnxSPIStatsIngQchipFwdV6Pkts indicates the number of V6 packets forwarded by the ingress Qchip.
portId [Port Id] (sapPortId)	long	The ID of the access port where this SAP is defined.
slaProfileName [Sla Profile Name] (tmnxSLAProfName)	String	The value of tmnxSLAProfName specifies the name of the SLA profile.

BigInteger	The value of tmnxSubEgrOvrCntrlDropInProfOctets indicates the number of high-priority octets dropped for the egress counter, specified by the index tmnxSubEgrOvrCntrlId, on this subscriber.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subEgrOvrCounterDropV4Packets [Sub Egr Ovr Counter Drop V4 Packets] (tmnxSubEgrOvrCntrDropInProfPkts)	java. math. BigInteger	The value of tmnxSubEgrOvrCntrDropInProfPkts indicates the number of high-priority packets dropped for the egress counter, specified by the index tmnxSubEgrOvrCntrId, on this subscriber.
subEgrOvrCounterDropV6Octets [Sub Egr Ovr Counter Drop V6 Octets] (tmnxSubEgrOvrCntrDropOutProfOcts)	java. math. BigInteger	The value of tmnxSubEgrOvrCntrDropOutProfOcts indicates the number of low-priority octets dropped for the egress counter, specified by the index tmnxSubEgrOvrCntrId, on this subscriber.
subEgrOvrCounterDropV6Packets [Sub Egr Ovr Counter Drop V6 Packets] (tmnxSubEgrOvrCntrDropOutProfPkts)	java. math. BigInteger	The value of tmnxSubEgrOvrCntrDropOutProfPkts indicates the number of low-priority packets dropped for the egress counter, specified by the index tmnxSubEgrOvrCntrId, on this subscriber.
subEgrOvrCounterFwdV4Octets [Sub Egr Ovr Counter Fwd V4 Octets] (tmnxSubEgrOvrCntrFwdInProfOcts)	java. math. BigInteger	The value of tmnxSubEgrOvrCntrFwdInProfOcts indicates the number of in-profile octets forwarded for the egress counter, specified by the index tmnxSubEgrOvrCntrId, on this subscriber.
subEgrOvrCounterFwdV4Packets [Sub Egr Ovr Counter Fwd V4 Packets] (tmnxSubEgrOvrCntrFwdInProfPkts)	java. math. BigInteger	The value of tmnxSubEgrOvrCntrFwdInProfPkts indicates the number of in-profile packets forwarded for the egress counter, specified by the index tmnxSubEgrOvrCntrId, on this subscriber.
subEgrOvrCounterFwdV6Octets [Sub Egr Ovr Counter Fwd V6 Octets] (tmnxSubEgrOvrCntrFwdOutProfOcts)	java. math. BigInteger	The value of tmnxSubEgrOvrCntrFwdOutProfOcts indicates the number of out-of-profile octets forwarded for the egress counter, specified by the index tmnxSubEgrOvrCntrId, on this subscriber.
subEgrOvrCounterFwdV6Packets [Sub Egr Ovr Counter Fwd V6 Packets] (tmnxSubEgrOvrCntrFwdOutProfPkts)	java. math. BigInteger	The value of tmnxSubEgrOvrCntrFwdOutProfPkts indicates the number of out-of-profile packets forwarded for the egress counter, specified by the index tmnxSubEgrOvrCntrId, on this subscriber.
subEgrOvrCounterId [Sub Egr Ovr Counter Id] (tmnxSubEgrOvrCntrId)	long	The value of tmnxSubEgrOvrCntrId indicates the counter ID for the statistics.

Table 568 resubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subEgrOvrCounterSubPortId [Sub Egr Ovr Counter Sub Port Id] (tmnxSubEgrOvrCntrSubPortId)	long	The value of tmnxSubEgrOvrCntrSubPortId indicates the access port for this entry.
<p>SubscriberEgrQStats</p> <p>MIB entry name: tmnxSubscriberEgrQStatsEntry</p> <p>Entry description: Egress statistics about a specific subscriber's HSMDA queue.</p> <p>Table description (for tmnxSubscriberEgrQStatsTable): A table that contains subscriber egress HSMDA queue statistics.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: resubscr.ResidentialSubscriberInstance</p>		
subEgrQStatsHsmdaQueueId [Sub Egr QStats Hsmda Queue Id] (tmnxSubEgrQStatsQueueId)	long	The value of tmnxSubEgrQStatsQueueId index specifies the Hsmda egress queue for this entry.
subEgrQStatsSubPortId [Sub Egr QStats Sub Port Id] (tmnxSubEgrQStatsSubPortId)	long	The value of tmnxSubEgrQStatsSubPortId indicates the access port for this entry.
<p>SubscriberEgrQV4V6Stats</p> <p>MIB entry name: tmnxSubscriberEgrQStatsEntry</p> <p>Entry description: Egress statistics about a specific subscriber's HSMDA queue.</p> <p>Table description (for tmnxSubscriberEgrQStatsTable): A table that contains subscriber egress HSMDA queue statistics.</p> <p>Does not support realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: resubscr.ResidentialSubscriberInstance</p>		
subEgrQStatsDropV4Octets [Sub Egr QStats Drop V4 Octets] (tmnxSubEgrQStatsDropInProfOcts)	java. math. BigInteger	The value of tmnxSubEgrQStatsDropInProfOcts indicates the number of high-priority octets dropped on egress on this subscriber.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subEgrQStatsDropV4Packets [Sub Egr QStats Drop V4 Packets] (tmnxSubEgrQStatsDropInProfPkts)	java. math. BigInteger	The value of tmnxSubEgrQStatsDropInProfPkts indicates the number of high-priority packets dropped on egress on this subscriber.
subEgrQStatsDropV6Octets [Sub Egr QStats Drop V6 Octets] (tmnxSubEgrQStatsDropOutProfPkts)	java. math. BigInteger	The value of tmnxSubEgrQStatsDropOutProfPkts indicates the number of low-priority octets dropped on egress on this subscriber.
subEgrQStatsDropV6Packets [Sub Egr QStats Drop V6 Packets] (tmnxSubEgrQStatsDropOutProfPkts)	java. math. BigInteger	The value of tmnxSubEgrQStatsDropOutProfPkts indicates the number of low-priority packets dropped on egress on this subscriber.
subEgrQStatsFwdV4Octets [Sub Egr QStats Fwd V4 Octets] (tmnxSubEgrQStatsFwdInProfPkts)	java. math. BigInteger	The value of tmnxSubEgrQStatsFwdInProfPkts indicates the number of out-of-profile octets forwarded on egress on this subscriber.
subEgrQStatsFwdV4Packets [Sub Egr QStats Fwd V4 Packets] (tmnxSubEgrQStatsFwdInProfPkts)	java. math. BigInteger	The value of tmnxSubEgrQStatsFwdInProfPkts indicates the number of in-profile packets forwarded on egress on this subscriber.
subEgrQStatsFwdV6Octets [Sub Egr QStats Fwd V6 Octets] (tmnxSubEgrQStatsFwdOutProfPkts)	java. math. BigInteger	The value of tmnxSubEgrQStatsFwdOutProfPkts indicates the number of out-of-profile octets forwarded on egress on this subscriber.
subEgrQStatsFwdV6Packets [Sub Egr QStats Fwd V6 Packets] (tmnxSubEgrQStatsFwdOutProfPkts)	java. math. BigInteger	The value of tmnxSubEgrQStatsFwdOutProfPkts indicates the number of out-of-profile packets forwarded on egress on this subscriber.
subEgrQStatsHsmdaQueueId [Sub Egr QStats Hsmda Queue Id] (tmnxSubEgrQStatsQueueId)	long	The value of tmnxSubEgrQStatsQueueId index specifies the Hsmda egress queue for this entry.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subEgrQStatsSubPortId [Sub Egr QStats Sub Port Id] (tmnxSubEgrQStatsSubPortId)	long	The value of tmnxSubEgrQStatsSubPortId indicates the access port for this entry.
<p>SubscriberHsmdaStats MIB entry name: tmnxSubscriberHsmdaStatsEntry Entry description: HSMDA statistics for a specific subscriber. Table description (for tmnxSubscriberHsmdaStatsTable): A table that contains HSMDA subscriber statistics. Supports realtime plotting Supports scheduled collection Monitored class: ressubscr.ResidentialSubscriberInstance</p>		
hsmdaStatsSubPortId [Hsmda Stats Sub Port Id] (tmnxSubHsmdaStSubPortId)	long	The value of tmnxSubHsmdaStSubPortId indicates the access port for this entry.
subEgrDropInProfileOctets [Sub Egr Drop In Profile Octets] (tmnxSubHsmdaStEgrDropInProfOct)	java. math. BigInteger	The value of tmnxSubHsmdaStEgrDropInProfOct indicates the number of high-priority octets discarded by the egress Qchip for this subscriber.
subEgrDropInProfilePackets [Sub Egr Drop In Profile Packets] (tmnxSubHsmdaStEgrDropInProfPkt)	java. math. BigInteger	The value of tmnxSubHsmdaStEgrDropInProfPkt indicates the number of high-priority packets discarded by the egress Qchip for this subscriber.
subEgrDropOutProfileOctets [Sub Egr Drop Out Profile Octets] (tmnxSubHsmdaStEgrDropOutProfOct)	java. math. BigInteger	The value of tmnxSubHsmdaStEgrDropOutProfOct indicates the number of low-priority octets discarded by the egress Qchip for this subscriber.
subEgrDropOutProfilePackets [Sub Egr Drop Out Profile Packets] (tmnxSubHsmdaStEgrDropOutProfPkt)	java. math. BigInteger	The value of tmnxSubHsmdaStEgrDropOutProfPkt indicates the number of low-priority packets discarded by the egress Qchip for this subscriber.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subEgrFwdInProfilePackets [Sub Egr Fwd In Profile Packets] (tmnxSubHsmdaStEgrFwdInProfPkt)	java. math. BigInteger	The value of tmnxSubHsmdaStEgrFwdInProfPkt indicates the number of in-profile packets forwarded by the egress Qchip for this subscriber.
subEgrFwdOutProfileOctets [Sub Egr Fwd Out Profile Octets] (tmnxSubHsmdaStEgrFwdOutProfOct)	java. math. BigInteger	The value of tmnxSubHsmdaStEgrFwdOutProfOct indicates the number of out-of-profile octets forwarded by the egress Qchip for this subscriber.
subEgrFwdOutProfilePackets [Sub Egr Fwd Out Profile Packets] (tmnxSubHsmdaStEgrFwdOutProfPkt)	java. math. BigInteger	The value of tmnxSubHsmdaStEgrFwdOutProfPkt indicates the number of out-of-profile packets forwarded by the egress Qchip for this subscriber.
subIngDropHiPriorityOctets [Sub Ing Drop Hi Priority Octets] (tmnxSubHsmdaStIngDropHiPrioOct)	java. math. BigInteger	The value of tmnxSubHsmdaStIngDropHiPrioOct indicates the number of high-priority octets discarded by the ingress Qchip for this subscriber.
subIngDropHiPriorityPackets [Sub Ing Drop Hi Priority Packets] (tmnxSubHsmdaStIngDropHiPrioPkt)	java. math. BigInteger	The value of tmnxSubHsmdaStIngDropHiPrioPkt indicates the number of high-priority packets discarded by the ingress Qchip for this subscriber.
subIngDropLoPriorityOctets [Sub Ing Drop Lo Priority Octets] (tmnxSubHsmdaStIngDropLoPrioOct)	java. math. BigInteger	The value of tmnxSubHsmdaStIngDropLoPrioOct indicates the number of low-priority octets discarded by the ingress Qchip for this subscriber.
subIngDropLoPriorityPackets [Sub Ing Drop Lo Priority Packets] (tmnxSubHsmdaStIngDropLoPrioPkt)	java. math. BigInteger	The value of tmnxSubHsmdaStIngDropLoPrioPkt indicates the number of low-priority packets discarded by the ingress Qchip for this subscriber.
subIngFwdInProfileOctets [Sub Ing Fwd In Profile Octets] (tmnxSubHsmdaStIngFwdInProfOct)	java. math. BigInteger	The value of tmnxSubHsmdaStIngFwdInProfOct indicates the number of out-of-profile octets forwarded by the ingress Qchip for this subscriber.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subIngFwdInProfilePackets [Sub Ing Fwd In Profile Packets] (tmnxSubHsmdaStIngFwdInProfPkt)	java. math. BigInteger	The value of tmnxSubHsmdaStIngFwdInProfPkt indicates the number of in-profile packets forwarded by the ingress Qchip for this subscriber.
subIngFwdOutProfileOctets [Sub Ing Fwd Out Profile Octets] (tmnxSubHsmdaStIngFwdOutProfOct)	java. math. BigInteger	The value of tmnxSubHsmdaStIngFwdOutProfOct indicates the number of out-of-profile octets forwarded by the ingress Qchip for this subscriber.
subIngFwdOutProfilePackets [Sub Ing Fwd Out Profile Packets] (tmnxSubHsmdaStIngFwdOutProfPkt)	java. math. BigInteger	The value of tmnxSubHsmdaStIngFwdOutProfPkt indicates the number of out-of-profile packets forwarded by the ingress Qchip for this subscriber.
subIngOffHiPrioOct [Sub Ing Off Hi Prio Oct] (tmnxSubHsmdaStIngOffHiPrioOct)	java. math. BigInteger	The value of tmnxSubHsmdaStIngOffHiPrioOct indicates the number of high priority octets offered by the Pchip to the Qchip for this subscriber. This is only supported for subscribers on an HSM DA-2.
subIngOffHiPrioOctHw [Sub Ing Off Hi Prio Oct Hw] (tmnxSubHsmdaStIngOffHiPrioOctHw)	long	The value of tmnxSubHsmdaStIngOffHiPrioPktHw indicates the higher 32-bits word of the value of tmnxSubHsmdaStIngOffHiPrioOct.
subIngOffHiPrioOctLw [Sub Ing Off Hi Prio Oct Lw] (tmnxSubHsmdaStIngOffHiPrioOctLw)	long	The value of tmnxSubHsmdaStIngOffHiPrioPktLw indicates the lower 32-bits word of the value of tmnxSubHsmdaStIngOffHiPrioOct.
subIngOffHiPrioPkt [Sub Ing Off Hi Prio Pkt] (tmnxSubHsmdaStIngOffHiPrioPkt)	java. math. BigInteger	The value of tmnxSubHsmdaStIngOffHiPrioPkt indicates the number of high priority packets offered by the Pchip to the Qchip for this subscriber. This is only supported for subscribers on an HSM DA-2.
subIngOffHiPrioPktHw [Sub Ing Off Hi Prio Pkt Hw] (tmnxSubHsmdaStIngOffHiPrioPktHw)	long	The value of tmnxSubHsmdaStIngOffHiPrioPktHw indicates the higher 32-bits word of the value of tmnxSubHsmdaStIngOffHiPrioPkt.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subIngOffHiPrioPktLw [Sub Ing Off Hi Prio Pkt Lw] (tmnxSubHsmdaStIngOffHiPrioPktLw)	long	The value of tmnxSubHsmdaStIngOffHiPrioPktLw indicates the lower 32-bits word of the value of tmnxSubHsmdaStIngOffHiPrioPkt.
subIngOffLoPrioOct [Sub Ing Off Lo Prio Oct] (tmnxSubHsmdaStIngOffLoPrioOct)	java. math. BigInteger	The value of tmnxSubHsmdaStIngOffLoPrioOct indicates the number of low priority octets offered by the Pchip to the Qchip for this subscriber. This is only supported for subscribers on an HSM DA-2.
subIngOffLoPrioOctHw [Sub Ing Off Lo Prio Oct Hw] (tmnxSubHsmdaStIngOffLoPrioOctHw)	long	The value of tmnxSubHsmdaStIngOffLoPrioOctHw indicates the higher 32-bits word of the value of tmnxSubHsmdaStIngOffLoPrioOct.
subIngOffLoPrioOctLw [Sub Ing Off Lo Prio Oct Lw] (tmnxSubHsmdaStIngOffLoPrioOctLw)	long	The value of tmnxSubHsmdaStIngOffHiPrioPktLw indicates the lower 32-bits word of the value of tmnxSubHsmdaStIngOffLoPrioOct.
subIngOffLoPrioPkt [Sub Ing Off Lo Prio Pkt] (tmnxSubHsmdaStIngOffLoPrioPkt)	java. math. BigInteger	The value of tmnxSubHsmdaStIngOffLoPrioPkt indicates the number of low priority packets offered by the Pchip to the Qchip for this subscriber. This is only supported for subscribers on an HSM DA-2.
subIngOffLoPrioPktHw [Sub Ing Off Lo Prio Pkt Hw] (tmnxSubHsmdaStIngOffLoPrioPktHw)	long	The value of tmnxSubHsmdaStIngOffLoPrioPktHw indicates the higher 32-bits word of the value of tmnxSubHsmdaStIngOffLoPrioPkt.
subIngOffLoPrioPktLw [Sub Ing Off Lo Prio Pkt Lw] (tmnxSubHsmdaStIngOffLoPrioPktLw)	long	The value of tmnxSubHsmdaStIngOffHiPrioPktLw indicates the lower 32-bits word of the value of tmnxSubHsmdaStIngOffLoPrioPkt.
subIngOffTotalOctets [Sub Ing Off Total Octets] (tmnxSubHsmdaStIngOffTotalOct)	java. math. BigInteger	The value of tmnxSubHsmdaStIngOffTotalOct indicates the total number of octets offered on ingress for this subscriber.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subIngOffTotalPackets [Sub Ing Off Total Packets] (tmnxSubHsmdaStIngOffTotalPkt)	java. math. BigInteger	The value of tmnxSubHsmdaStIngOffTotalPkt indicates the total number of packets offered on ingress for this subscriber.
subIngOffUncolOct [Sub Ing Off Uncol Oct] (tmnxSubHsmdaStIngOffUncolOct)	java. math. BigInteger	The value of tmnxSubHsmdaStIngOffUncolOct indicates the number of uncolored octets offered by the Pchip to the Qchip for this subscriber. This is only supported for subscribers on an HSM DA-2.
subIngOffUncolOctHw [Sub Ing Off Uncol Oct Hw] (tmnxSubHsmdaStIngOffUncolOctHw)	long	The value of tmnxSubHsmdaStIngOffUncolOctHw indicates the higher 32-bits word of the value of tmnxSubHsmdaStIngOffUncolOct.
subIngOffUncolOctLw [Sub Ing Off Uncol Oct Lw] (tmnxSubHsmdaStIngOffUncolOctLw)	long	The value of tmnxSubHsmdaStIngOffUncolOctLw indicates the lower 32-bits word of the value of tmnxSubHsmdaStIngOffUncolOct.
subIngOffUncolPkt [Sub Ing Off Uncol Pkt] (tmnxSubHsmdaStIngOffUncolPkt)	java. math. BigInteger	The value of tmnxSubHsmdaStIngOffUncolPkt indicates the number of uncolored packets offered by the Pchip to the Qchip for this subscriber. This is only supported for subscribers on an HSM DA-2.
subIngOffUncolPktHw [Sub Ing Off Uncol Pkt Hw] (tmnxSubHsmdaStIngOffUncolPktHw)	long	The value of tmnxSubHsmdaStIngOffUncolPktHw indicates the higher 32-bits word of the value of tmnxSubHsmdaStIngOffUncolPkt.
subIngOffUncolPktLw [Sub Ing Off Uncol Pkt Lw] (tmnxSubHsmdaStIngOffUncolPktLw)	long	The value of tmnxSubHsmdaStIngOffUncolPktLw indicates the lower 32-bits word of the value of tmnxSubHsmdaStIngOffUncolPkt.

subIngFwdV6Octets [Sub Ing Fwd V6 Octets] (tmnxSubHsmdaStIngFwdV6Octets)	java. math. BigInteger	The value of tmnxSubHsmdaStIngFwdV6Octets indicates the number of IPv6 octets forwarded by the ingress Qchip for this subscriber.
subIngFwdV6Packets [Sub Ing Fwd V6 Packets] (tmnxSubHsmdaStIngFwdV6Packets)	java. math. BigInteger	The value of tmnxSubHsmdaStIngFwdV6Packets indicates the number of IPv6 packets forwarded by the ingress Qchip for this subscriber.
subIngOffV4Octets [Sub Ing Off V4 Octets] (tmnxSubHsmdaStIngOffV4Octets)	java. math. BigInteger	The value of tmnxSubHsmdaStIngOffV4Octets indicates the number of IPv4 octets offered on ingress for this subscriber.
subIngOffV4Packets [Sub Ing Off V4 Packets] (tmnxSubHsmdaStIngOffV4Packets)	java. math. BigInteger	The value of tmnxSubHsmdaStIngOffV4Packets indicates the number of IPv4 packets offered on ingress for this subscriber.
subIngOffV6Octets [Sub Ing Off V6 Octets] (tmnxSubHsmdaStIngOffV6Octets)	java. math. BigInteger	The value of tmnxSubHsmdaStIngOffV6Octets indicates the number of IPv6 octets offered on ingress for this subscriber.
subIngOffV6Packets [Sub Ing Off V6 Packets] (tmnxSubHsmdaStIngOffV6Packets)	java. math. BigInteger	The value of tmnxSubHsmdaStIngOffV6Packets indicates the number of IPv6 packets offered on ingress for this subscriber.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SubscriberIngPStats</p> <p>MIB entry name: tmnxSubIngPStatsEntry</p> <p>Entry description: Each row entry contains ingress QoS policer statistics about a particular HSMDA-2 subscriber and policer. In the descriptions below 'Pchip' refers to the Nokia SROS series Packet Processing chip, while 'Qchip' refers to the Nokia SROS series QoS Queueing Engine chip.</p> <p>Table description (for tmnxSubIngPStatsTable): The tmnxSubIngPStatsTable contains ingress QoS policer statistics about HSMDA-2 subscribers.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ressubscr.ResidentialSubscriberInstance</p>		
subIngPStatsDrpHiPrioOctsH [Sub Ing PStats Drp Hi Prio Octs H] (tmnxSubIngPStatsDrpHiPrioOctsH)	long	Indicates the upper 32 bits of tmnxSubIngPStatsDrpHiPrioOcts.
subIngPStatsDrpHiPrioOctsL [Sub Ing PStats Drp Hi Prio Octs L] (tmnxSubIngPStatsDrpHiPrioOctsL)	long	Indicates the lower 32 bits of tmnxSubIngPStatsDrpHiPrioOcts.
subIngPStatsDrpHiPrioPktsH [Sub Ing PStats Drp Hi Prio Pkts H] (tmnxSubIngPStatsDrpHiPrioPktsH)	long	Indicates the upper 32 bits of tmnxSubIngPStatsDrpHiPrioPkts.
subIngPStatsDrpHiPrioPktsL [Sub Ing PStats Drp Hi Prio Pkts L] (tmnxSubIngPStatsDrpHiPrioPktsL)	long	Indicates the lower 32 bits of tmnxSubIngPStatsDrpHiPrioPkts.
subIngPStatsDrpLoPrioOctsH [Sub Ing PStats Drp Lo Prio Octs H] (tmnxSubIngPStatsDrpLoPrioOctsH)	long	Indicates the upper 32 bits of tmnxSubIngPStatsDrpLoPrioOcts.
subIngPStatsDrpLoPrioOctsL [Sub Ing PStats Drp Lo Prio Octs L] (tmnxSubIngPStatsDrpLoPrioOctsL)	long	Indicates the lower 32 bits of tmnxSubIngPStatsDrpLoPrioOcts.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subIngPStatsDrpLoPrioPktsH [Sub Ing PStats Drp Lo Prio Pkts H] (tmnxSubIngPStatsDrpLoPrioPktsH)	long	Indicates the upper 32 bits of tmnxSubIngPStatsDrpLoPrioPkts.
subIngPStatsDrpLoPrioPktsL [Sub Ing PStats Drp Lo Prio Pkts L] (tmnxSubIngPStatsDrpLoPrioPktsL)	long	Indicates the lower 32 bits of tmnxSubIngPStatsDrpLoPrioPkts.
subIngPStatsFwdInProfOctsH [Sub Ing PStats Fwd In Prof Octs H] (tmnxSubIngPStatsFwdInProfOctsH)	long	Indicates the upper 32 bits of tmnxSubIngPStatsFwdInProfOcts.
subIngPStatsFwdInProfOctsL [Sub Ing PStats Fwd In Prof Octs L] (tmnxSubIngPStatsFwdInProfOctsL)	long	Indicates the lower 32 bits of tmnxSubIngPStatsFwdInProfOcts.
subIngPStatsFwdInProfPktsH [Sub Ing PStats Fwd In Prof Pkts H] (tmnxSubIngPStatsFwdInProfPktsH)	long	Indicates the upper 32 bits of tmnxSubIngPStatsFwdInProfPkts.
subIngPStatsFwdInProfPktsL [Sub Ing PStats Fwd In Prof Pkts L] (tmnxSubIngPStatsFwdInProfPktsL)	long	Indicates the lower 32 bits of tmnxSubIngPStatsFwdInProfPkts.
subIngPStatsFwdOutProfOctsH [Sub Ing PStats Fwd Out Prof Octs H] (tmnxSubIngPStatsFwdOutProfOctsH)	long	Indicates the upper 32 bits of tmnxSubIngPStatsFwdOutProfOcts.
subIngPStatsFwdOutProfOctsL [Sub Ing PStats Fwd Out Prof Octs L] (tmnxSubIngPStatsFwdOutProfOctsL)	long	Indicates the lower 32 bits of tmnxSubIngPStatsFwdOutProfOcts.
subIngPStatsFwdOutProfPktsH [Sub Ing PStats Fwd Out Prof Pkts H] (tmnxSubIngPStatsFwdOutProfPktsH)	long	Indicates the upper 32 bits of tmnxSubIngPStatsFwdOutProfPkts.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subIngPStatsFwdOutProfPktsL [Sub Ing PStats Fwd Out Prof Pkts L] (tmnxSubIngPStatsFwdOutProfPktsL)	long	Indicates the lower 32 bits of tmnxSubIngPStatsFwdOutProfPkts.
subIngPStatsMode [Sub Ing PStats Mode] (tmnxSubIngPStatsMode)	int	The value of tmnxSPIngpStatsMode indicates the stat mode used by the policer.
subIngPStatsOffHiPrioPktsH [Sub Ing PStats Off Hi Prio Pkts H] (tmnxSubIngPStatsOffHiPrioPktsH)	long	Indicates the upper 32 bits of tmnxSubIngPStatsOffHiPrioPkts.
subIngPStatsOffHiPrioPktsL [Sub Ing PStats Off Hi Prio Pkts L] (tmnxSubIngPStatsOffHiPrioPktsL)	long	Indicates the lower 32 bits of tmnxSubIngPStatsOffHiPrioPkts.
subIngPStatsOffHiPrioPktsH [Sub Ing PStats Off Hi Prio Pkts H] (tmnxSubIngPStatsOffHiPrioPktsH)	long	Indicates the upper 32 bits of tmnxSubIngPStatsOffHiPrioPkts.
subIngPStatsOffHiPrioPktsL [Sub Ing PStats Off Hi Prio Pkts L] (tmnxSubIngPStatsOffHiPrioPktsL)	long	Indicates the lower 32 bits of tmnxSubIngPStatsOffHiPrioPkts.
subIngPStatsOffLoPrioPktsH [Sub Ing PStats Off Lo Prio Pkts H] (tmnxSubIngPStatsOffLoPrioPktsH)	long	Indicates the upper 32 bits of tmnxSubIngPStatsOffLoPrioPkts.
subIngPStatsOffLoPrioPktsL [Sub Ing PStats Off Lo Prio Pkts L] (tmnxSubIngPStatsOffLoPrioPktsL)	long	Indicates the lower 32 bits of tmnxSubIngPStatsOffLoPrioPkts.
subIngPStatsOffLoPrioPktsH [Sub Ing PStats Off Lo Prio Pkts H] (tmnxSubIngPStatsOffLoPrioPktsH)	long	Indicates the upper 32 bits of tmnxSubIngPStatsOffLoPrioPkts.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subIngPStatsOffLoPrioPktsL [Sub Ing PStats Off Lo Prio Pkts L] (tmnxSubIngPStatsOffLoPrioPktsL)	long	Indicates the lower 32 bits of tmnxSubIngPStatsOffLoPrioPkts.
subIngPStatsOffUncolOcts [Sub Ing PStats Off Uncol Octs] (tmnxSubIngPStatsOffUncolOcts)	java. math. BigInteger	The value of tmnxSubIngPStatsOffUncolOcts indicates the number of uncolored octets offered to the ingress Pchip.
subIngPStatsOffUncolOctsH [Sub Ing PStats Off Uncol Octs H] (tmnxSubIngPStatsOffUncolOctsH)	long	Indicates the upper 32 bits of tmnxSubIngPStatsOffUncolOcts.
subIngPStatsOffUncolOctsL [Sub Ing PStats Off Uncol Octs L] (tmnxSubIngPStatsOffUncolOctsL)	long	Indicates the lower 32 bits of tmnxSubIngPStatsOffUncolOcts.
subIngPStatsOffUncolPkts [Sub Ing PStats Off Uncol Pkts] (tmnxSubIngPStatsOffUncolPkts)	java. math. BigInteger	The value of tmnxSubIngPStatsOffUncolPkts indicates the number of uncolored packets offered to the ingress Pchip.
subIngPStatsOffUncolPktsH [Sub Ing PStats Off Uncol Pkts H] (tmnxSubIngPStatsOffUncolPktsH)	long	Indicates the upper 32 bits of tmnxSubIngPStatsOffUncolPkts.
subIngPStatsOffUncolPktsL [Sub Ing PStats Off Uncol Pkts L] (tmnxSubIngPStatsOffUncolPktsL)	long	Indicates the lower 32 bits of tmnxSubIngPStatsOffUncolPkts.

Table 568 resubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SubscriberIngQStats</p> <p>MIB entry name: tmnxSubscriberIngQStatsEntry</p> <p>Entry description: Ingress statistics about a specific subscriber's HSMDA queue.</p> <p>Table description (for tmnxSubscriberIngQStatsTable): A table that contains subscriber ingress HSMDA queue statistics.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: resubscr.ResidentialSubscriberInstance</p>		
subIngQStatsHsmdaQueueId [Sub Ing QStats Hsmda Queue Id] (tmnxSubIngQStatsQueueId)	long	The value of tmnxSubIngQStatsQueueId index specifies the Hsmda ingress queue for this entry.
subIngQStatsOffHiPrioOctsHw [Sub Ing QStats Off Hi Prio Octs Hw] (tmnxSubIngQStatsOffHiPrioOctsHw)	long	The value of tmnxSubIngQStatsOffHiPrioOctsHw indicates the higher 32-bits word of the value of tmnxSubIngQStatsOffHiPrioOcts.
subIngQStatsOffHiPrioOctsLw [Sub Ing QStats Off Hi Prio Octs Lw] (tmnxSubIngQStatsOffHiPrioOctsLw)	long	The value of tmnxSubIngQStatsOffHiPrioOctsLw indicates the lower 32-bits word of the value of tmnxSubIngQStatsOffHiPrioOcts.
subIngQStatsOffHiPrioPktsHw [Sub Ing QStats Off Hi Prio Pkts Hw] (tmnxSubIngQStatsOffHiPrioPktsHw)	long	The value of tmnxSubIngQStatsOffHiPrioPkts indicates the higher 32-bits word of the value of tmnxSubIngQStatsOffHiPrioPkts.
subIngQStatsOffHiPrioPktsLw [Sub Ing QStats Off Hi Prio Pkts Lw] (tmnxSubIngQStatsOffHiPrioPktsLw)	long	The value of tmnxSubIngQStatsOffHiPrioPktsLw indicates the lower 32-bits word of the value of tmnxSubIngQStatsOffHiPrioPkts.
subIngQStatsOffLoPrioOctsHw [Sub Ing QStats Off Lo Prio Octs Hw] (tmnxSubIngQStatsOffLoPrioOctsHw)	long	The value of tmnxSubIngQStatsOffLoPrioOctsHw indicates the higher 32-bits word of the value of tmnxSubIngQStatsOffLoPrioOcts.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subIngQStatsOffLoPrioOctsLw [Sub Ing QStats Off Lo Prio Octs Lw] (tmnxSubIngQStatsOffLoPrioOctsLw)	long	The value of tmnxSubIngQStatsOffLoPrioOctsLw indicates the lower 32-bits word of the value of tmnxSubIngQStatsOffLoPrioOcts.
subIngQStatsOffLoPrioPktsHw [Sub Ing QStats Off Lo Prio Pkts Hw] (tmnxSubIngQStatsOffLoPrioPktsHw)	long	The value of tmnxSubIngQStatsOffLoPrioPktsHw indicates the higher 32-bits word of the value of tmnxSubIngQStatsOffLoPrioPkts.
subIngQStatsOffLoPrioPktsLw [Sub Ing QStats Off Lo Prio Pkts Lw] (tmnxSubIngQStatsOffLoPrioPktsLw)	long	The value of tmnxSubIngQStatsOffLoPrioPktsLw indicates the lower 32-bits word of the value of tmnxSubIngQStatsOffLoPrioPkts.
subIngQStatsOffTotalOctets [Sub Ing QStats Off Total Octets] (tmnxSubIngQStatsOffTotalOcts)	java. math. BigInteger	The value of tmnxSubIngQStatsOffTotalOcts indicates the total number of octets offered on ingress on this subscriber.
subIngQStatsOffTotalPackets [Sub Ing QStats Off Total Packets] (tmnxSubIngQStatsOffTotalPkts)	java. math. BigInteger	The value of tmnxSubIngQStatsOffTotalPkts indicates the total number of packets offered for this subscriber.
subIngQStatsOffUncolOcts [Sub Ing QStats Off Uncol Octs] (tmnxSubIngQStatsOffUncolOcts)	java. math. BigInteger	The value of tmnxSubIngQStatsOffUncolOcts indicates the number of uncolored octets offered by the Pchip to the Qchip for this subscriber and this HSMDA-2 queue.
subIngQStatsOffUncolOctsHw [Sub Ing QStats Off Uncol Octs Hw] (tmnxSubIngQStatsOffUncolOctsHw)	long	The value of tmnxSubIngQStatsOffUncolOctsHw indicates the higher 32-bits word of the value of tmnxSubIngQStatsOffUncolOcts.
subIngQStatsOffUncolOctsLw [Sub Ing QStats Off Uncol Octs Lw] (tmnxSubIngQStatsOffUncolOctsLw)	long	The value of tmnxSubIngQStatsOffUncolOctsLw indicates the lower 32-bits word of the value of tmnxSubIngQStatsOffUncolOcts.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subIngQStatsOffUncolPkts [Sub Ing QStats Off Uncol Pkts] (tmnxSubIngQStatsOffUncolPkts)	java. math. BigInteger	The value of tmnxSubIngQStatsOffUncolPkts indicates the number of uncolored packets offered by the Pchip to the Qchip for this subscriber and this HSMDA-2 queue.
subIngQStatsOffUncolPktsHw [Sub Ing QStats Off Uncol Pkts Hw] (tmnxSubIngQStatsOffUncolPktsHw)	long	The value of tmnxSubIngQStatsOffUncolPktsHw indicates the higher 32-bits word of the value of tmnxSubIngQStatsOffUncolPkts.
subIngQStatsOffUncolPktsLw [Sub Ing QStats Off Uncol Pkts Lw] (tmnxSubIngQStatsOffUncolPktsLw)	long	The value of tmnxSubIngQStatsOffUncolPktsLw indicates the lower 32-bits word of the value of tmnxSubIngQStatsOffUncolPkts.
subIngQStatsSubPortId [Sub Ing QStats Sub Port Id] (tmnxSubIngQStatsSubPortId)	long	The value of tmnxSubIngQStatsSubPortId indicates the access port for this entry.
<p>SubscriberIngQV4V6Stats MIB entry name: tmnxSubscriberIngQStatsEntry Entry description: Ingress statistics about a specific subscriber's HSMDA queue. Table description (for tmnxSubscriberIngQStatsTable): A table that contains subscriber ingress HSMDA queue statistics. Does not support realtime plotting Supports scheduled collection Monitored class: ressubscr.ResidentialSubscriberInstance</p>		
subIngQStatsDropV4Octets [Sub Ing QStats Drop V4 Octets] (tmnxSubIngQStatsDropHiPrioOcts)	java. math. BigInteger	The value of tmnxSubIngQStatsDropHiPrioOcts indicates the number of high-priority octets dropped on ingress on this subscriber.
subIngQStatsDropV4Packets [Sub Ing QStats Drop V4 Packets] (tmnxSubIngQStatsDropHiPrioPkts)	java. math. BigInteger	The value of tmnxSubIngQStatsDropHiPrioPkts indicates the number of high-priority packets dropped on ingress on this subscriber.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subIngQStatsDropV6Octets [Sub Ing QStats Drop V6 Octets] (tmnxSubIngQStatsDropLoPrioOcts)	java. math. BigInteger	The value of tmnxSubIngQStatsDropLoPrioOcts indicates the number of low-priority octets dropped on ingress on this subscriber.
subIngQStatsDropV6Packets [Sub Ing QStats Drop V6 Packets] (tmnxSubIngQStatsDropLoPrioPkts)	java. math. BigInteger	The value of tmnxSubIngQStatsDropLoPrioPkts indicates the number of low-priority packets dropped on ingress on this subscriber.
subIngQStatsFwdV4Octets [Sub Ing QStats Fwd V4 Octets] (tmnxSubIngQStatsFwdInProfOcts)	java. math. BigInteger	The value of tmnxSubIngQStatsFwdInProfOcts indicates the number of out-of-profile octets forwarded on ingress on this subscriber.
subIngQStatsFwdV4Packets [Sub Ing QStats Fwd V4 Packets] (tmnxSubIngQStatsFwdInProfPkts)	java. math. BigInteger	The value of tmnxSubIngQStatsFwdInProfPkts indicates the number of in-profile packets forwarded on ingress on this subscriber.
subIngQStatsFwdV6Octets [Sub Ing QStats Fwd V6 Octets] (tmnxSubIngQStatsFwdOutProfOcts)	java. math. BigInteger	The value of tmnxSubIngQStatsFwdOutProfOcts indicates the number of out-of-profile octets forwarded on ingress on this subscriber.
subIngQStatsFwdV6Packets [Sub Ing QStats Fwd V6 Packets] (tmnxSubIngQStatsFwdOutProfPkts)	java. math. BigInteger	The value of tmnxSubIngQStatsFwdOutProfPkts indicates the number of out-of-profile packets forwarded on ingress on this subscriber.
subIngQStatsHsmdaQueueId [Sub Ing QStats Hsmda Queue Id] (tmnxSubIngQStatsQueueId)	long	The value of tmnxSubIngQStatsQueueId index specifies the Hsmda ingress queue for this entry.
subIngQStatsOffV4Octs [Sub Ing QStats Off V4 Octs] (tmnxSubIngQStatsOffHiPrioOcts)	java. math. BigInteger	The value of tmnxSubIngQStatsOffHiPrioOcts indicates the number of high-priority octets offered by the Pchip to the Qchip for this subscriber and this HSMDDA-2 queue.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subIngQStatsOffV4Pkts [Sub Ing QStats Off V4 Pkts] (tmnxSubIngQStatsOffHiPrioPkts)	java. math. BigInteger	The value of tmnxSubIngQStatsOffHiPrioPkts indicates the number of high-priority packets offered by the Pchip to the Qchip for this subscriber and this HSMDA-2 queue.
subIngQStatsOffV6Octs [Sub Ing QStats Off V6 Octs] (tmnxSubIngQStatsOffLoPrioOcts)	java. math. BigInteger	The value of tmnxSubIngQStatsOffLoPrioOcts indicates the number of low-priority octets offered by the Pchip to the Qchip for this subscriber and this HSMDA-2 queue.
subIngQStatsOffV6Pkts [Sub Ing QStats Off V6 Pkts] (tmnxSubIngQStatsOffLoPrioPkts)	java. math. BigInteger	The value of tmnxSubIngQStatsOffLoPrioPkts indicates the number of low-priority packets offered by the Pchip to the Qchip for this subscriber and this HSMDA-2 queue.
subIngQStatsSubPortId [Sub Ing QStats Sub Port Id] (tmnxSubIngQStatsSubPortId)	long	The value of tmnxSubIngQStatsSubPortId indicates the access port for this entry.
<p>SubscriberServiceStats</p> <p>MIB entry name: tmnxSubHostInfoV2Entry</p> <p>Entry description: Each row entry contains information about a particular subscriber host available in the system.</p> <p>Table description (for tmnxSubHostInfoV2Table): The tmnxSubHostInfoV2Table has an entry for each subscriber host found in the system.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: ressubscr.SubscriberService</p>		
ipAddress [Ip Address] (tmnxSubHostInfoV2IpAddress)	String	The value of tmnxSubHostInfoV2IpAddress specifies the IP address of this subscriber host.
ipAddressType [Ip Address Type] (tmnxSubHostInfoV2IpAddressType)	int	The value of tmnxSubHostInfoV2IpAddressType specifies the type of address stored in tmnxSubHostInfoV2IpAddress.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
macAddress [Mac Address] (tmnxSubHostInfoV2MacAddress)	String	The value of tmnxSubHostInfoV2MacAddress specifies the MAC address of this subscriber host.
portId [Port Id] (sapPortId)	long	The ID of the access port where this SAP is defined.
pppoeSessionId [Pppoe Session Id] (tmnxSubHostInfoV2PppoeSessionId)	long	The value of tmnxSubHostInfoV2PppoeSessionId specifies the PPPoE session id of this subscriber host.
sapEncapValue [Sap Encap Value] (sapEncapValue)	long	The value of the label used to identify this SAP on the access port specified by sapPortId.
subSvcId [Sub Svc Id] (tmnxSubSvcId)	long	The value of tmnxSubSvcId indicates the identifier of this subscriber service.
subSvcInOcts [Sub Svc In Octs] (tmnxSubSvcInOcts)	java. math. BigInteger	The value of tmnxSubSvcInOcts indicates the number of ingress octets sent for this subscriber service.
subSvcInPkts [Sub Svc In Pkts] (tmnxSubSvcInPkts)	java. math. BigInteger	The value of tmnxSubSvcInPkts indicates the number of ingress packets sent for this subscriber service.
subSvcOutOcts [Sub Svc Out Octs] (tmnxSubSvcOutOcts)	java. math. BigInteger	The value of tmnxSubSvcOutOcts indicates the number of egress octets sent for this subscriber service.

Table 568 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subSvcOutPckts [Sub Svc Out Pckts] (tmnxSubSvcOutPckts)	java. math. BigInteger	The value of tmnxSubSvcOutPckts indicates the number of egress packets sent for this subscriber service.
svclId [Svc Id] (svclId)	long	The value of the object svclId specifies the Service identifier. This value should be unique within the service domain.
<p>TotalPppSubscrSessionStats</p> <p>MIB entry name: tmnxSubPppTypeEntry</p> <p>Entry description: Each conceptual row represents information about a specific type of subscriber PPP. Entries in this table are created and destroyed by the system.</p> <p>Table description (for tmnxSubPppTypeTable): The tmnxSubPppTypeTable has an entry for each each type of subscriber PPP Session.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: netw.NetworkElement</p>		
pPpType [PPPTType] (tmnxSubPppTypeIndex)	int	The value of the object tmnxSubPppTypeIndex indicates the type of subscriber PPP.
pPpL2tp [PPPo L2 tp] (tmnxSubPppTypeSessions)	long	The value of the object tmnxSubPppTypeSessions indicates the actual number of PPP session of this type.

Table 569 rip statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
InterfaceReceiveStats MIB entry name: tmnxRipNgIfStatEntry Entry description: tmnxRipNgIfStatEntry is an entry (conceptual row) in the tmnxRipNgIfStatTable. Each entry represents statistical information for a RIP/RIP-NG interface. Table description (for tmnxRipNgIfStatTable): tmnxRipNgIfStatTable is a read-only table which keeps statistical information about the interfaces monitoring RIP/RIP-NG. Supports realtime plotting Supports scheduled collection Monitored class: rip.Interface
